The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

INTERNATIONAL CENTER FOR FOREIGN CHANCERIES

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 93, S. 1235.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The assistant legislative clerk read as follows:

S. 1235, to amend Public Law 90-553, authorizing an additional appropriation for an International Center for Foreign Chanceries.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1235

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first sentence of section 6 of Public Law 90-553 (82 Stat. 958) is hereby amended to read as follows:

"There is hereby authorized to be appropriated, without fiscal year limitation, not to exceed \$2,200,000 to carry out the purposes of section 5 of this Act: *Provided*, That such sums as may be appropriated hereunder shall be reimbursed to the Treasury from proceeds of the sale or lease of property to foreign governments and international organizations as provided for in the first section of this Act."

MEAT PRICE CONTROLS—THE FARMER IS THE SCAPEGOAT

Mr. MANSFIELD. Mr. President, once again, the farmer has been made the scapegoat because of events affecting the economy and, in that respect, he finds himself in the company of Members of Congress who are, all too often, blamed for the ills of the Nation.

The latest action by the President on Thursday last in imposing a ceiling on meat prices is, I think, both unjust and unnecessary. The average rancher today has an income of somewhere around \$12,000 a year and he has earned that the hard way over a number of years; I believe I could say the last two decades, because of the increase from a low point of somewhere around \$6,000 up to the present figure.

The farmer does not work an 8-hour day. The farmer represents, at the most, 6 percent of the total population and because of the difficulties which have been his, that percentage is steadily going down. The latest move by the President will not be of benefit to the farmer or to

the economy. Why pinpoint meat prices? Why not clothing, automobiles, lumber, and many other commodities and products which I could mention? Why should the farmer, alone, be penalized?

Mr. President, let me read a portion of a commentary by Mr. James J. Kilpatrick, a conservative columnist for whom I have the highest regard because, while we may differ, I appreciate his honesty and his forthrightness, and I can understand his logic. The excerpt reads as follows:

The Springfield News & Leader, out in Greene County, Mo., came up with a pointed editorial. Steers were then selling at around \$44 to \$45 per hundredweight.

If beef prices had increased since 1950 at the same rate as postage stamps, the editor observed, beef would have been at \$77. If beef prices had merely kept pace with increases in hourly pay in industry, the figure would have been \$80. If the price on beef had followed the price of medical care, a producer would have been getting \$179 per hundredweight. Granted, meat prices are high today compared to meat prices a few years ago, but these are not the only comparisons that ought to be made.

Mr. President, in 1951, the beef producer received an average of \$34.92 per hundredweight. This was the highest price until 1972 when the average annual price was \$35.83 per hundred. Prices have gone up in the last 2 or 3 months and, at the present time, stand somewhere in the vicinity of approximately \$44, based on the best estimate possible, and this is a result of a decline over the past several weeks. When comparing these prices, one should keep in mind that during the two decades since the Korean war, the costs to the farmers in all categories have increased substantially. Furthermore, over the years, the farmers have had their ups and downs because the very nature of his occupation makes him a gambler. He has to be because of weather, prices, and other factors inherent in his profession.

The President, instead of penalizing the farmer, should take a new look at the inflationary picture and the first thing he should do would be to abolish phase III with its "flexibility" and a "club in the closet" approach because it just will not work, and return to phase II which did work reasonably well. It did keep inflation down and it did give a sense of security and stability to the American people, as a whole.

The time to act is now, not just on a piecemeal basis, and the time to act is now because of four factors:

First. Inflation, in practically all segments of the economy;

Second. The two devaluations of the dollar which have already occurred and now the "floating" of the dollar;

Third. The drop in the stock market; and

Fourth. The continued adverse balance of trade.

Mr. President, the farmer is a consumer, too, and he is entitled to parity with labor and not a "club in the closet" to be used against him alone.

Mr. President, I ask unanimous consent that the column entitled "Everything Is Going Up, So Why Pick On the Farmer?" written by James J. Kilpatrick, and published in the Baltimore Sun of

Sunday, April 1, 1973, and also a table on "Choice Steer Prices, Omaha Market—All Weights" covering annual average 1950-72 and also monthly averages for 1951, 1952, 1971, and 1972 be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHOICE STEER PRICES, OMAHA MARKET—ALL WEIGHTS

EVERYTHING IS GOING UP, SO WHY PICK ON THE FARMER

(By James J. Kilpatrick)

SCRABBLE, VA.—The Black Angus cows move across our quiet meadows, here in the Blue Ridge Mountains as slowly as shadows, as softly as dark seaweed in some great gray-green rolling sea. Until this past year or so, local farmers might have been better off investing in seaweed or shadows than in cows and calves. They have known hard times. Now they're solvent, and they want to stay that way.

This is cattle country, and in some ways fairly typical cattle country. Virginia has a few large producers, dealing in thousands of animals a year, but most of our livestock men are small operators. This is the picture elsewhere. In the nation as a whole, an estimated 250,000 large producers account for 80 per cent of the beef, but another 1.7 million farm families also earn their living on livestock.

It has been, to put the matter mildly, a very poor living. A typical small rancher in the Southwest, according to a recent study, netted only \$327 in actual profits on his few head of cattle last year. A major producer in Idaho or Montana, according to the same report, netted \$30,000 on an investment of \$460,000—a return of less than 7 per cent without taking his years of labor into account.

In recent months, as meat prices have increased, livestock producers have begun to share in the general increase in disposable income that city dwellers have been enjoying right along. These farm families are getting a pleasant taste of new cars, color television, new furniture and electric appliances. Now they turn on the TV, and see that the wives of workers who make automobiles, furniture and electric appliances are mounting a boycott on meat in an effort to drive the price back down. My country friends are burned up, and justifiably so.

It is a curious notion, or so it seems to me, which holds that food costs should stay down while everything else goes up. No one has proposed a boycott on housing or clothing or automobiles. The housewives who are leading this movement would be angry and alarmed if their own husbands' salaries were subjected to organized assault. Why do they want to hurt the farm family whose average income last year was under \$6,800.

The Springfield News & Leader, out in Greene county, Mo., came up with a pointed editorial. Steers were then selling at around \$44 to \$45 per hundredweight. If beef prices had increased since 1950 at the same rate as postage stamps, the editor observed, beef would have been at \$77. If beef prices had merely kept pace with increases in hourly pay in industry, the figure would have been \$80. If the price on beef had followed the price of medical care, a producer would have been getting \$179 per hundredweight. Granted, meat prices are high today compared to meat prices a few years ago, but these are not the only comparisons that ought to be made.

Why does beef cost so much? The answer lies, at bottom, in the inexorable law of supply and demand. Meat production has remained relatively stable, but thousands of families who couldn't afford sirloin steak in the past are now able, willing and eager to put steak on the table. Their cumulative demand drives the price up. Other factors, of course, are involved—import controls, price controls on other goods, even the impact of the food-stamp program. The basic factor is old-fashioned demand.

The housewives' boycott may produce illusory benefits. Temporarily, meat prices may be driven down; over the long haul, organized consumer resistance is bound to be self-defeating. Instead of responding to increased demand by increasing their herds

livestock men will counter by keeping production stable. The farmer has to have some incentive for increasing his investment and thus increasing his risk. The housewives, if they succeed, will take that incentive away.

If we will be patient, a satisfactory answer can be found in simply leaving the market alone. Even at today's prices, livestock producers are not getting rich. For a whole lot of hard work, they're earning a little more money. In simple justice, who can fairly object to that?

Mr. GRIFFIN. Mr. President, there is a great deal of criticism of President Nixon's order of last Thursday because he did not roll back the price of beef, pork, and lamb. Surely the action of the President was a balanced decision which took into account the fact that meat prices at the supermarkets have reached a point just about as high as the housewife can possibly tolerate. President Nixon's order says that prices shall not go higher.

I believe there are a number of things that can be done to fight the battle against inflation. One of the most important actions could be taken right here tomorrow when the Senate will decide, at 2 o'clock, whether to sustain the President's veto of the first major budget-busting bill of this session. At that time, we will see whether or not Congress—particularly this body—will play a responsible role in trying to hold a ceiling on Federal expenditures.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GRIFFIN. I yield to the distinguished majority leader.

Mr. MANSFIELD. The distinguished acting minority leader has used the word "balance." I do not think any balance is entailed when the farmer is singled out for specific action, as he was last Thursday.

So far as budget busting is concerned, I would point out that Congress will again, for the fifth time in a row under the present administration, reduce the President's budget request below the figure he requested.

I point out that in the last 4 years, the first 4 years of the Nixon administration, Congress did reduce the President's budget requests by \$20.2 billion, but that in that period, the administration accumulated an additional deficit of \$104.3 billion.

I am confident that again this year, Congress will reduce the overall spending requests proposed by the administration and it will add some of the savings to matters of higher priority. This is the issue at stake tomorrow, when the Senate confronts the question of whether to override the President's veto of the vocational rehabilitation measure. To this vital proposal, Congress has given a higher priority than has the administration. In turn, Congress will place in a lower priority status certain administration spending requests and will cut those items accordingly. In this fashion, I am confident Congress will reorder the Nation's priorities and will reduce overall spending in doing so.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under the previous order, the Senator from

North Carolina is recognized for not to exceed 15 minutes.

THE CONFRONTATION AT WOUNDED KNEE

Mr. HELMS. Mr. President, every day there is a new crisis involving the Indians at Wounded Knee. The confrontation grows uglier and uglier. Although the hostages have been released, a Federal marshal was wounded last week. Even the TV crews have pulled out, because of the tenseness of the situation. If the American public were to believe everything that they see and hear in the Nation's media, they would think the American Indians were rising up as one body against their Federal oppressors, driven to desperation by their grievances, and making a dramatic stand to appeal for justice.

There is only one thing wrong with this picture: It is simply not so.

The handful of Indians at Wounded Knee are surrounded by U.S. marshals. But the U.S. marshals are surrounded by protective forces of the Oglala Sioux Tribe just waiting to get their hands on the seedy band of militants that has besmirched their proud name.

In other words, this dramatic confrontation is nothing but hogwash and hokum. The bullets are real, but any idea that the militants holed up at Wounded Knee are truly representative of the Oglala Sioux, or even of that hypothetical group which the press refers to simply as "the Indians," strains the credulity of the American people. The social problems on the Indian reservations are no doubt real, too, but neither the tactics of the militants nor their official political program gives any confidence that they could solve these problems.

There is a confrontation all right, but it is a staged one. It is contrived. It is intended to exploit the feelings of the Indian people on the one hand and the propensity of the press to wallow in sympathy with anyone who asserts a so-called "grievance" against the U.S. Government. Now that the black militants, the student radicals, and the Vietcong have been squeezed dry of sensationalism, the media need a new cause to help undermine free government.

As for the Indian militants themselves, it is a classic exercise in the highly refined techniques of radical politicization. It is designed to force the Indian people—and principally those upon the reservations—to accept the narrow, extremist social and political views of the so-called American Indian Movement—AIM. It is well-known that AIM is primarily an urban organization, with no understanding or experience of problems on the reservation. Its principal leadership is drawn heavily from criminal elements. It is using gangster-style activities to intimidate and overthrow the traditional leadership of the Indian tribes. Simultaneously, AIM is trying to browbeat the U.S. Government into accepting AIM as sole spokesman for the Indian tribes. The real target of AIM is power.

Suffice it to say that these facts make it very disturbing that AIM with few exceptions, is already presented in the

press as the normal and natural expression of Indian aspirations. No inquiry is made into AIM's social demands. No analysis is offered as to the probable effect of AIM's revolutionary proposals. No exhaustive investigative reporting is trained upon AIM's past activities. The overall picture given is that "the Indians" have grievances, that they have been treacherously betrayed by the bureaucracy in Washington, and that in sheer desperation the noble reformers of AIM are making a last-ditch attempt to appeal to the conscience of the American people.

Frankly, I doubt that there is a single citizen of the United States who does not have grievances against the bureaucracy in Washington, but most of us refrain from going on the warpath. We use the constitutional processes of Government to make necessary changes. We do not adopt terrorist and destructive activities. I, myself, as a U.S. citizen, have a grievance against the bureaucracy, and that grievance is the way in which the officials of the Office of Economic Opportunity developed a cozy working relationship with AIM and poured thousands of U.S. tax dollars into an organization whose principle occupation has been to overthrow the orderly processes of the U.S. Government. But that is a subject to which I will return in a few minutes.

The fact is that AIM is advancing its program without any real concern for the hard problems of the Indian tribes or for their wishes. It is conducting political and terrorist agitation to overthrow the tribal leaders who have been elected through orderly techniques of local government. I make no brief for any particular Indian leader or group of leaders. I will leave the workings of the Bureau of Indian Affairs to those who are regularly concerned with those problems. But no one should be allowed to short-circuit the constitutional system and threaten U.S. citizens whether those citizens be Indians or anyone else.

AIM's program is so absurd that it can scarcely bear the light of public scrutiny. Few people realize that AIM is calling for the virtual secession of the Indian tribes from U.S. jurisdiction, while at the same time demanding special privileges with respect to judicial intervention, tribal lands, and the Federalization of crimes against Indians. They are seeking \$15 billion in Federal aid. They demand that relations with the Indians be regulated entirely by treaties, even though the Indians have been U.S. citizens since 1871. The concept of a nation making treaties with its own citizens is absurd.

But all these demands—and they are made in great detail—are irrelevant in so far as they are made by self-appointed spokesmen whose only claim to representation is that they claim loudly. They call for the consolidation of all Indian groups into one—obviously their own. They call for Indian sovereignty, and they demand that the Government deal with them. All of this is without reference—indeed, often in direct opposition—to the opinions, decisions, and plans of the tribal chiefs, and their peoples.

In short, it is the typical demand of a revolutionary elite asserting that they

know more about the situation than the people on behalf of whom they present their claim. The people are always the biggest obstacle to revolution because they are too dumb to understand. Therefore the revolution must be imposed whether they like it or not. It is this sense of revolution that is most attractive to the sympathizers of revolution in some branches of the media and in some branches of the Government. Just as Mao Tse-tung was identified as an agrarian reformer, and Castro as a Christian leader, and the Vietcong as beleaguered underdogs in a civil war against corrupt imperialists, so too the self-appointed would-be ruling elite of Wounded Knee is hailed as the flower of the Indian nations.

The libel upon the Indian people is totally unacceptable. The half-dozen leaders of AIM are nothing more than common criminals and men of despicable character. Their police records have even seeped through to public notice, although I have taken the trouble to do a little more investigating on this score. It is not surprising then that AIM provided the impetus for the criminal destruction of the BIA building contents last November, nor that circumstances have implicated AIM leaders in other cases involving arson, riot, and destruction of property. One should certainly have expected the criminal activities for which the AIM leaders are under indictment at Wounded Knee. Their previous convictions ranged from repeated common drunkenness through assault and battery, forgery, burglary, and armed robbery. Indeed, according to one Indian leader, AIM "was cooked up in the Minnesota penitentiary." But now we are asked to forgive everything, because they commit their crimes in the name of politics.

Mr. President, I would like to recount the police records of the principal leaders in the siege at Wounded Knee. It is unpleasant to go in such details. I believe that every man should be allowed to pay his debt to society and given the opportunity for a fresh start. These men, however, apparently used the opportunity for a fresh start in crime, even though they dress up their actions with the trappings of injustice and politics.

Russell Chares Means, the principal spokesman at Wounded Knee; has a string of arrest dating back to 1957 for petty theft, common drunkenness, assault with a deadly weapon, disorderly conduct, and failure to provide for a minor child. As he became involved in AIM activities, such bookings escalated into trespass, unlawful entry, carrying a concealed weapon, and arson. He is the only AIM leader who is a Sioux.

Dennis Banks, a cofounder of AIM, according to news reports was convicted 15 times on charges including assault and battery and burglary. He was also arrested for forgery of a Government check, although the charge was later dismissed.

Carter Augustus Camp has a record similar to Means for repeated drunk driving, resisting officers, aiding and abetting a felon, and possession of marijuana.

Vernon Franklin Bellecourt, another

cofounder of AIM, was convicted of burglary in 1950 and sentenced to 5 to 40 years. In 1956, he was again convicted of armed robbery. He was also held as a parole violator and for check fraud. When he began working with AIM, his activities led to charges of rioting and inciting a riot.

Clyde Thomas Bellecourt, brother of Franklin, was convicted of armed robbery in 1954 and sentenced to serve 2 to 15 years. After parole, he was convicted again in 1958 of burglary, sentenced to 5 years in prison; paroled again; convicted of burglary in 1960, and paroled in 1964. In 1969, he was charged with aggravated robbery and pleaded guilty to simple assault. Thereupon he took up his AIM activities.

Mr. President, some of these details are spelled out in an article that appeared in the Washington Evening Star for November 12, 1972, and I ask unanimous consent that the article be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE THREE INDIAN LEADERS HAD LONG RECORDS

(By Michael Satchell)

Three of the principal leaders of the Indians who looted files, destroyed or stole irreplaceable Indian artifacts and caused nearly \$2 million in damage during the occupation of the Bureau of Indian Affairs building are well known to police in Minneapolis, where they have extensive criminal records.

A high police official there said Denis Banks, Clyde Bellecourt and his brother, Vernon Bellecourt, have served sentences in Minnesota penitentiaries for a variety of felony offenses, including burglary, aggravated assault and armed robbery.

All three are leaders of the American Indian Movement. Banks, one of the cofounders of AIM is the national field director and lives in Minneapolis. Vernon Bellecourt is a national codirector of the organization and also runs the Denver, Colo., chapter. Clyde Bellecourt is executive director of the Minneapolis group, one of the largest with more than 100 members.

A \$113,000 U.S. GRANT

AIM also has a \$113,000 federal grant to operate educational facilities for Indians.

The FBI is conducting a "full-scale" investigation into the destruction and theft at the Bureau of Indian Affairs and Justice Department sources said, "We will prosecute in any area we can."

The two Bellecourts, Banks and a fourth Indian, Russell Means of Porcupine, S.D., emerged as the leaders of the six-day occupation of the bureau. Means was formerly an AIM National Director, but resigned and returned to the Oglala Sioux Pine Ridge reservation in South Dakota.

During the siege, Vernon Bellecourt and Means were the most visible leaders, serving as spokesman for the protesters and handling inquiries from the news media. Inside the building, Banks and Clyde Bellecourt were involved in security and other internal aspects of the occupation.

BURNETT CRITICAL

The AIM leaders took over the Trail of Broken Treaties campaign, a peaceful lobbying effort organized principally by Robert Burnett, a Rosebud, S.D., Sioux. Burnett gradually lost control of the program and has since condemned the AIM leaders for

their theft of Indian documents and destruction of art.

A Minneapolis police official said Banks has been convicted 15 times on charges including assault and battery and burglary.

Clyde Bellecourt, the officials said, was found guilty of armed robbery in 1954 and was sentenced to serve 2 to 15 years in prison. After parole, police said, he was convicted in 1958 of burglary, sentenced to 5 years in prison, paroled again and then was convicted of burglary in 1960 and paroled in 1964.

Police said Clyde Bellecourt now is facing charges of aggravated criminal property damage involving vandalism at a Minneapolis restaurant.

Vernon Bellecourt was convicted of burglary in 1950 and armed robbery in 1953, receiving a prison sentence of 5 to 40 years, police said.

VOWED TO FIGHT

Members of the American Indian Movement formed the nucleus of the group that occupied bureau headquarters, armed themselves with deadly makeshift weapons, including gasoline bombs, clubs and lances, and vowed to fight to the death to prevent the government from retaking the building.

The organization, according to one national Indian activist, "was cooked up in the Minnesota penitentiary." AIM is described by other leaders as "militant" and "action oriented," and from their descriptions of tactics, operation and goals, seems to exhibit some characteristics of the more militant black activist groups such as the Black Panthers.

George Mitchell of Washington, a codirector with Vernon Bellecourt, said AIM operates "survival schools" for Indian children, with schools in Cleveland, Milwaukee and Minneapolis and on the West Coast.

"SURVIVAL SCHOOLS"

The curriculum, Mitchell said, is about 80 percent "true Indian history" and about 20 percent "the three Rs."

A spokesman for the Office of Economic Opportunity confirmed this week that AIM received the \$113,000 grant on May 1 to fund the schools in Milwaukee, Minneapolis and St. Paul. The schools were described on grant applications as institutions for rehabilitating dropouts.

"We call them survival schools because in this society, you've got to condition youngsters to survive," Mitchell said.

AIM was started July 28, 1968, in Minneapolis, Mitchell said. He said he was a cofounder with Banks and Vernon Bellecourt. The organization now has about 4,500 members in 67 chapters in the United States and two in Canada.

Financial support is provided through the Department of Health, Education and Welfare, and the Office of Economic Opportunity, along with substantial funds from church groups and private individuals.

AIM chapters operate with virtually autonomy, with about half located on reservations and the others in urban areas. A feature of their broad program for economic and social gain and tribal self determination is the "security force."

During the occupation of the bureau, several of the weapon-carrying guards were red berets signifying membership in the AIM security patrol. "We have quite a bunch of them," Mitchell said in describing the AIM security guards. "They are our own police."

AIM maintains a six-man office in Washington headed by Mitchell and a 20-man office in Milwaukee. It has full-time staffers on salary, including the Bellecourt brothers and Banks. An approximate number of full-time employees could not be determined.

Mitchell confirmed that AIM leaders were in possession of treaties and documents stolen from the bureau, but said he did not

know who had them, or where they were. He said that if the leaders were prosecuted, he had heard there was a possibility the documents would be destroyed.

"I cannot justify the destruction of the art and artifacts," Mitchell acknowledged. "I am appalled that they were destroyed or taken. I hope they are returned, intact, to the proper people."

Mr. HELMS. It was a pretty crew, therefore, that appointed themselves spokesmen for all the Indians. Recently, the Washington Post printed a letter from the president of the Oglala Sioux Tribe, Dick Wilson. His letter is eloquent and speaks for itself. However, I would like to call attention to one particular paragraph:

I believe in tribal self-government and Indian people speaking up for themselves. But I don't believe in taking hostages, in threatening lives. And, I don't believe in disrupting government operations. I think that is plain stupid, and it doesn't help a single Indian. It sure doesn't help my people. That's why I have been opposed to the AIM movement and have made no bones about saying how I feel. Because I spoke my mind, the AIM people have been against me and have made threats against me and my family.

Mr. President, I ask unanimous consent that the entire text of Mr. Wilson's letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE OGLALA SIOUX PRESIDENT ON INDIAN GOVERNMENT AND THE AIM MOVEMENT

During the last few days I have been reading what the white man's newspapers have been saying about the goings-on on our reservations. It has made me really wonder. Why don't the reporters try to find out what's going on before they start writing?

If you want to know what is going on at Wounded Knee now you have to understand what has been happening to our people for the last hundred years. After the United States army invaded our country and our warriors finally had to surrender in 1877, the United States set up an occupation government for us. We were run by the Bureau of Indian Affairs and on our reservation, the superintendent was the mayor, the city council, and the chief judge, all rolled in one. He really was a tin god. Yes, there were also some Indian spokesmen, but they were nothing but puppets.

Our occupation government lasted for a long time. More than 50 years passed before the first change came. Under the Indian Reorganization Act of 1934 we were finally given a chance to set up our own government. We did that by vote of the people in 1935. A majority of the people voted to set up our self government, but there was a strong minority against it. A lot of people were accustomed to being run by the Bureau of Indian Affairs and wanted to keep it that way. Our self government was set up by a vote of 1,348 for and 1,041 against. The opponents of self government, the people who preferred paternalism, have been agitating against our tribal government for a long, long time.

But our tribal self government has existed since 1935. The people elected a president and a tribal council in accordance with our tribal constitution. The council passes ordinances and the president and his staff have to carry them out.

The present council and I, as president, were elected by the voters of the Oglala Sioux Tribe in the tribal election of December 1971. I received 1,554 votes and my opponent received 1,130 votes. We were the top two candidates in the primary, where there

were six candidates. The councilmen were elected in the same election, each of them running from his district. We have no political parties in our tribe. Each candidate runs on his own.

Since we took office in 1972, the council and I have tried to run the affairs of the tribe to the best of our ability. It is a hard job. Our people have lots of problems and we sure need more help than we have been getting. But we have tried hard and we have tried to do our best. Everybody knows now who is in charge of this reservation. It is the tribal government, not the Bureau of Indian Affairs.

As I have said, there are some people who haven't liked the tribal government ever since it was set up and they still have supporters today. When they are agitating, they are not just agitating against me personally but against a tribal government that takes charge; they really don't want their own people to run the affairs of the reservation. They have more faith in being run by outsiders than in their own people they believe in paternalism.

I believe in tribal self government and Indian people speaking up for themselves. But I don't believe in taking hostages, in threatening lives. And I don't believe in disrupting government operations. I think that is plain stupid, it doesn't help a single Indian. It sure doesn't help my people. That's why I have been opposed to the AIM movement and have made no bones about saying how I feel. Because I spoke my mind, the AIM people have been against me and have made threats against me and my family.

It would really be funny, if it weren't so serious, that some of the paternalists on our reservation who want to abolish the tribal government and go back to being run by the superintendent have linked up with the same people who tore up the Bureau of Indian Affairs in Washington. But that is what has happened at Wounded Knee. Both sides have only one interest, to embarrass the tribal government of the Oglala Sioux Tribe.

But we are going to stick to our job. We are going to do what is right. We are going to see to it that we have law and order on our reservation and we are going to do our very best to give our people a better life. What we are asking the newspapers to do is to be fair to us. Is that too much?

DICK WILSON,

President of the Oglala Sioux Tribe.

PINE RIDGE, S. DAK.

Mr. HELMS. Mr. Wilson is the elected representative of the Oglala Sioux, but he is by no means the only Indian leader who opposes AIM. The Mohawk Indian publication *Akwesasne Notes* recently printed a partial list of tribal chiefs throughout the United States who disagreed with the activities of AIM.

Mr. President, I ask unanimous consent that the partial list of tribal chiefs opposed to AIM be printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST

Donald R. Antona, President of Intertribal Council of Arizona.

Juan B. Abeita, Iseto Pueblo Governor.

Paul Tafoya, Santa Clara Pueblo.

James Porter, Navajo Governor.

Leonard C. Burch, Southern Uts Mountain Tribal Chairman.

Hubert Velarde, President, Jicarilla Apache Tribe.

Pat Toya, Jemez Pueblo Governor.

Harry L. Martinez, Acoma Pueblo Governor.

Clarence Hamilton, Hopi Tribal Council Chairman.

Noah Powell, Principal Chief, Eastern Band of Cherokee Indians, North Carolina.

Enos J. Francisco, Jr., Vice Chairman of the Papago Tribal Council.

Buffalo Tiger, Chairman of the Miccosukee Tribal Council, Frog Station, Florida.

Antone Gonzales, Sr. Chairman of Colorado River Indian Tribes.

Bruce Townsend, President, Oklahoma Intertribal Council.

B. Bob Stopp, Cherokee Nation of Oklahoma.

Joseph Upicksovn, President, Arctic Slove Regional Corporation.

H. Lee Motah, President, United Tribes, Western Oklahoma and Kansas.

Peter Masten, Jr., Chairman, Hoopa Valley Business Council.

James Henry, Tribal Chairman, Turtle Mountain Band of Chippewa.

Mr. HELMS. I might also add that the facts tend to support Mr. Wilson's views. The dissidents on the Oglala Sioux Reservation have tried to impeach him four times, and have been repudiated as many times by their own people. It was the latest rejection that led AIM to indulge in terrorist tactics by seizing hostages, making threats, and assaulting Federal marshals with deadly fire at Wounded Knee. The AIM leaders have been driven to desperation not by their treatment by the U.S. Government, but by their rejection by the bulk of their own people.

What, then, gave AIM its start? At crucial stages in its development, AIM has been given material and moral assistance from the very Federal Government it is attacking.

One of AIM's first activities was the organization of so-called survival schools for Indian children in Milwaukee, Minneapolis, and St. Paul. These are apparently organized along the lines of the infamous Black Panther schools for the political indoctrination of the young. According to the Evening Star article I referred to earlier, the curriculum contained about 80 percent so-called true Indian history, and about 20 percent the three R's. Incredibly, these schools were funded with a \$113,000 grant from OEO. Despite the notorious and unsavory character of the leaders of AIM, whose records were easily available if the slightest check had been made, OEO put them in charge of molding the characters of young Indian children. The curriculum alone is suspicious enough, but funding a group led by criminals with Federal funds is inexcusable.

It was this group, then, that came to Washington under the name of "The Trail of Broken Treaties," to lay waste to the BIA. OEO spokesmen have denied that any OEO funds were used for the planning and organization of "The Trail of Broken Treaties." Nevertheless, the \$113,000 grant was suspended in November of the then OEO Director Philip Sanchez, when it became apparent that a tie might exist between the BIA takeover and the AIM school grant.

However, an emergency OEO grant of \$66,500 was made for the announced purpose of sending the invaders home. This grant was made under very unusual circumstances which demonstrate the close working relationship between OEO and the invaders.

Testimony before the House Interior

Committee shows that, in the first place, the money was given personally to two AIM spokesmen in the form of cash, all \$66,500 of it. No accounting was ever received as to how the money was distributed, if it was. What seems to be simply a pro forma request was made for an accounting, but none was received at the time or subsequently. OEO said that they seldom got an accounting of money spent for "family" matters. In fact, the representatives of OEO were escorted from BIA after delivering the currency, but before it was allegedly distributed.

Second, this testimony further shows that the money was made available on a crash basis, even before the grant could be processed, because OEO promised to reimburse AIM for funds they already had in the Riggs Bank in Washington. These funds were \$45,000 proceeds from an earlier OEO grant. OEO negotiated with Riggs to allow an overdraft of \$20,500 for a few days while the emergency grant was processed.

Thirdly, the peculiar justification presented for the grant needs special scrutiny. The Government was essentially faced with a blackmail situation and it chose to give in to blackmail. To put it bluntly, the Government chose to make a \$66,500 cash payoff to AIM to get them to give up their illegal actions. Evidently, this is what has given AIM the feeling that crime, indeed, does pay.

The legal basis for the grant was pure slight of hand. The general counsel of OEO, Burt A. Gallegos, testified that the money was given on the basis of emergency provision in the Economic Opportunity Act of 1964. This law provided—

Financial assistance for the provision of such medical supplies and services, nutritional foodstuffs, and related services, as may be necessary to counteract conditions of starvation or malnutrition among the poor.

One would hardly have thought that this clause would be invoked when the alleged starvation was willingly undertaken by the victims themselves on behalf of a program of illegal actions. Yet Gallegos, without batting an eye, summed it up this way:

We were also satisfied that the necessary providing to the Indians, most of whom are poor, an effective but orderly opportunity to present important grievances that they legitimately wish to present to the government, and which they were entitled to present under the Constitution, laws and treaties was consonant with the policy of the EOA [Economic Opportunity Act]. . . . The statutory provision, although of course it centers on problems of nutrition and health is not narrowly construed nor narrowly intended, and it is our understanding that it was intended by the Congress to present a strong and flexible authority for dealing with emergency conditions.

Buttressed by such apologists in government, AIM left with its booty. However, they did not go home. AIM went to Scottsbluff, Nebr., in mid-January to organize another demonstration that ended in a junior high school being fire-bombed with two molotov cocktails. Five members of AIM were arrested by local authorities on arson-connected charges.

The demonstrations were then taken to Custer, S. Dak. AIM-led mobs broke into the courthouse. The chamber of

commerce building was burned to the ground. Two police cars were heavily damaged, and police equipment was stolen.

At this point, AIM was also hot in the middle of its ill-fated campaign to impeach Oglala Sioux President Dick Wilson. The selection of Wounded Knee, with all of its highly emotional historical connotations, was carefully done with an eye to inducing sympathetic elements in the media to play up the confrontation as though the Indians and the U.S. Cavalry were meeting eyeball to eyeball. The truth of the matter is that the real confrontation is between the handful of militants among the Indians, and the great majority of Indians and authentic Indian leaders who reject the militants and their radical program.

Mr. President, I want to make it clear that nothing I have said here today reflects upon the Indian people as a whole, or minimizes the very real problems which they have in today's society. The Indians are the victims of AIM; they are the real target. AIM's aim is to polarize the Indian community in order to split off the real leaders from as much of the community as possible. In any human society there are going to be shortcomings and failures; it is a plain fact of human nature that difficulties and hardships can be nurtured into grievances, and grievances into hostility. The difference is that the objective situation is overlaid with emotional rancor, and the victim is thus prepared to sunder his ties with the society that has supposedly made him unhappy.

It is an old story. By now the techniques have been perfected by revolutionaries of all stripes and motivations. First comes the zeroing in on any local problem that can be identified in a sharply defined class of people. Then comes the so-called development of class consciousness, that is to say, agitation to reinforce the idea that they are being discriminated against as a group. If this is successful, then the group has been alienated first from its old leaders, then from the society in which it occupies a niche. Those who do not go along are induced to remain passive through social pressures, threats, and even terror.

The whole scenario need not be played through, but AIM is making a blatant attempt to play the part as arrogantly as it can. Fortunately, the Indian peoples are not going along; AIM's most important source of support comes from simplistic white men. The Indians reject AIM because it is totalitarian in its philosophy and techniques. It is unconstitutional in its demands, and criminal in its activities. Its proposal for the reassertion of Indian sovereignty and retrocession of U.S. citizenship would be a step backward from which the Indians would never emerge into the modern world. The appointment of AIM as sole Indian representative would grant enormous power to a group of gangsters who are grasping for control.

The Indians today already enjoy a semiprivileged status as long as they live within the tribal structure of the reservation. It is up to the freely elected Indian leaders to govern the tribes; the

United States should not arbitrarily impose self-appointed leaders such as AIM upon the Indians. As the Supreme Court stated as recently as Monday, March 26, in *McClanahan* against Arizona State Tax Commission:

Indians today are American citizens. They have the right to vote, to use state courts, and they receive some state services. But it is nonetheless true, as it was in the last century, "that the relation of the Indian tribes living within the borders of the United States is an anomalous one and of a complex character. . . . They were, and always have been, regarded as having a semi-independent position when they preserved their tribal relations; not as States, not as nations, not as possessed of the full attributes of sovereignty, but as a separate people, with the power of regulating their internal and social relations, and thus far not brought under the laws of the Union of the State within whose limits they reside."

Mr. President, since many of my colleagues may not be familiar with the 20 demands of AIM, I ask unanimous consent that they be printed in the *RECORD* at the conclusion of my remarks, and that they be followed by the commentary on them prepared by Mr. Frank Carlucci, Deputy Director of OMB.

There being no objection, the material was ordered to be printed in the *RECORD*, as follows:

"*TRAIL OF BROKEN TREATIES*": FOR RENEWAL OF CONTRACTS—RECONSTRUCTION OF INDIAN COMMUNITIES AND SECURING AN INDIAN FUTURE IN AMERICA

1. *Restoration of Constitutional Treaty-Making Authority.*—The U.S. President should propose by executive message, and the Congress should consider and enact legislation to repeal the provision in the 1871 Indian Appropriations Act, which withdrew federal recognition from Indian Tribes and Nations as political entities which could be contract by treaties with the United States, in order that the President may resume the exercise of his full constitutional authority for acting in the matters of Indian Affairs—and in order that Indian Nations may represent their own interests in the manner and method envisioned and provided in the Federal Constitution.

2. *Establishment of Treaty Commission to make New Treaties.*—The President should impanel and the Congress establish, within the next year, a Treaty Commission to contract a security and assistance treaty, or treaties, with Indian people to negotiate a national commitment to the future of Indian people for the last quarter of the Twentieth Century. Authority should be granted to allow Tribes to contract by separate and individual treaty, multi-tribal or regional groupings, or national collective, respecting general or limited subject matter—and provide that no provisions of existing treaty agreements may be withdrawn or in any manner affected without the explicit consent and agreement of any particularly-related Indian Nation.

3. *An address to the American People and Joint Session of Congress.*—The President and the leadership of Congress should make commitment now and next January to request and arrange for four Native Americans—selected by Indian people at a future date—the President of the United States and any designated U.S. Senators and U.S. Representatives to address a Joint Session of Congress and the American people through national communications media, regarding the Indian future within the American Nation, and relationships between the Federal Government and Indian Nations—on or be-

fore June 2, 1974, the half-century anniversary of the 1924 "Indian Citizenship Act".

4. *Commission to Review Treaty Commitments and Violations.*—The President should immediately create a multi-lateral, Indian and non-Indian Commission to review domestic treaty commitments and complaints of chronic violations and to recommend or act for corrective actions, including the imposition of mandatory sanctions or interim restraints upon violative activities, and including formulation of legislation designed to protect the jeopardized Indian rights and eliminate the unending patterns of prohibitively expensive lawsuits and legal defenses—which habitually have produced indecisive and indeterminate results, only too frequently forming guidelines for more court battles or additional challenges and attacks against Indian rights. (Indians have paid attorneys and lawyers more than \$40,000,000 since 1962. Yet many Indian people are virtually imprisoned in the nation's courtrooms in being forced constantly to defend their rights, and while many Tribes are forced to maintain a multitude of suits in numerous jurisdictions relating to the same or a single issue, or a few similar issues. There is less need for more attorney assistance than there is for institution of protections that reduce violations and minimize the possibilities for attacks upon Indian rights.)

5. *Resubmission of Unratified Treaties to the Senate.*—The President should submit to the U.S. Senate of the next Congress those treaties negotiated with Indian Nations or their representatives, but never heretofore ratified nor rendered moot by subsequent treaty contract with such Indians not having ratified treaties with the United States. The primary purpose to be served shall be that of restoring the rule of law to the relationships between such Indians and the United States, and resuming a recognition of rights controlled by treaty relations. Where the failure to ratify prior treaties operated to affirm the cessions and loss of title to Indian lands and territory, but failed to secure and protect the reservations of lands, rights, and resources reserved against cession, relinquishment or loss, the Senate adopt resolutions certifying that a prior *de facto* ratification has been effected by the Government of the United States and direct that appropriate actions be undertaken to restore to such Indians an equitable measure of their reserved rights and ownership in lands, resources and rights of self-government. Additionally, the President and Congress should direct that reports be concluded upon the disposition of land rights and title which were to be protected, when such rights and land title were lawfully vested or held, for people of Native Indian blood under the 1848 Treaty of Guadalupe Hidalgo with Mexico.

6. *All Indians To Be Governed by Treaty Relations.*—The Congress should enact Joint Resolution declaring that, as a matter of public policy and good faith, all Indian people in the United States shall be considered to be in treaty relations with the Federal Government and governed by doctrines of such relationship.

7. *Mandatory Relief Against Treaty Rights Violations.*—The Congress should add a new section to Title 28 of the United States Code to provide for the judicial enforcement and protection of Indian Treaty Rights. Such section should direct that, upon petition of an Indian Tribe or prescribed Indian groups and individuals claiming substantial injury to, or interference in the equitable and good faith exercise of any rights, governing authority, or utilization and preservation of resources, secured by Treaty, mandatorily the Federal District Courts shall grant immediate injunctive or injunctive relief against any non-Indian party or defendants, including State governments and their subdivisions or officers, alleged to be engaged in

such injurious or interfering actions, until such time as the District U.S. Court may be reasonably satisfied that a Treaty violation is not being committed, or otherwise satisfied that the Indians' interests and rights, in equity and in law, are preserved and protected from jeopardy and secure from harm.

8. *Judicial Recognition of Indian Right to Interpret Treaties.*—The Congress should by law provide for a new system of federal court jurisdiction and procedure, when Indian treaty or governmental rights are at issue, and when there are non-Indian parties involved in the controversy, whereby an Indian Tribe or Indian party may by motion advance the case from a federal District Court for hearing and decision by the related U.S. Circuit Court of Appeals. The law should provide that, once an interpretation upon the matter has been rendered by either a federal district or circuit court, an Indian Nation may, on its own behalf or on behalf of any of its members, if dissatisfied with the federal court ruling or regarding it in error respecting treaty or tribal rights, certify directly to the United States Supreme Court a "Declaratory Judgment or Interpretation"; regarding contested rights and drawn at the direction or under the auspices of the affected Indian Nation, which that Court shall be mandated to receive with the contested decision for hearing and final judgment and resolution of the controversy—except and unless that any new treaties which might be contracted may provide for some other impartial body for making ultimate and final interpretations of treaty provisions and their application. In addition, the law should provide that an Indian Nation, to protect its exercise of rights or the exercise of treaty or tribal rights by its members, or when engaging in new activities based upon sovereign or treaty rights, may issue an interim "Declaratory Opinion Interpretation of Rights", which shall be controlling upon the exercise of police powers or administrative authorities of that Indian Nation, the United States or any State(s) unless or until successfully challenged or modified upon certification to and decision the United States Supreme Court—and notwithstanding any contrary U.S. Attorney General's Opinion(s), Solicitor's Opinion(s), or Attorney General's Opinion(s) for any of the States.

9. *Creation of Congressional Joint Committee on Reconstruction of Indian Relations.*—The next Congress of the United States, and its respective houses, should agree at its outset and in its organization to withdraw jurisdiction over Indian Affairs and Indian-related program authorizations from all existing Committees, except Appropriations, of the House and Senate, and create a Joint House-Senate "Committee on Reconstruction of Indian Relations and Programs" to assume such jurisdiction and responsibilities for recommending new legislation and program authorizations to both houses of Congress—including consideration and action upon all proposals presented herewith by the "Trail of Broken Treaties Caravan", as well as matters originating from other sources. The Joint Committee membership should consist of Senators and Representatives who would be willing to commit considerable amounts of time and labors and conscientious thought to an exhaustive review and examining evaluation of past and present policies, programs and practices of the Federal Government relating to Indian people; to the development of a comprehensive broadly-inclusive "American Indian Community Reconstruction Act", which shall provide for certain of the measures herein proposed, repeal numerous laws which have oppressively disallowed the existence of a viable 'Indian life' in this country, and effect the purposes while constructing the provisions which shall allow and ensure a secure Indian future in America.

10. *Land Reform and Restoration of an 110 million-Acre Native Land Base.*—The next

Congress and Administration should commit themselves and effect a national commitment, implement by statutes or executive and administrative actions, to restore a permanent non-diminishing Native American land base of not less than 110 million acres by July 4, 1976. This land base, and its separate parts, should be vested with the recognized rights and conditions of being perpetually non-taxable, except by autonomous and sovereign Indian authority, and should never again be permitted to be alienated from Native American or Indian ownership and control.

10-A. *Priorities in Restoration of the Native American Land Base.*—When Congress acted to delimit the President's authority and the Indian Nations' powers for making treaties in 1871, approximately 135,000,000 acres of land and territory had been secured to Indian ownership against cession or relinquishment. This acreage did not include the 1867 treaty-secured recognition of land title and rights of Alaskan Natives, nor millions of acres otherwise retained by Indians in what were to become "unratified" treaties of Indian land cession, as in California, nor other land areas authorized to be set aside for Indian Nations contracted by, but never benefitting from, their treaties. When the Congress in 1837, under the General Allotment Act and other measures of the period and "single system of legislation", delegated treaty-assigned Presidential responsibilities to the Secretary of the Interior and his Commissioner of Indian Affairs and agents in the Bureau of Indian Affairs relating to the government of Indian relations under the treaties, the 135-million acres, collectively held, immediately became subject to loss. The 1887 Act provided for the sale of "surplus" Indian lands—and contained a formula for the assignment or allocation of land tracts to Indian individuals, dependent partly on family size, which would have allowed for an average-sized allotment of 135 acres to one million Indians—at a time when the number of tribally-related Indians was less than a quarter million or fewer more than 200,000. The Interior Department efficiently managed the loss of 90 million acres of Indian land, and its transfer to non-Indian ownership (frequently by homestead, not direct purchase), in little more than the next quarter-century. When Congress prohibited allotments to Indian individuals, by its 1934 Indian Reorganization Act, it effectively determined that future generations of Indian people would be "landless Indians", except by heirship and inheritance. (110 million acres, including 40 million acres in Alaska, would approximate an average 135 acres multiplied by 8 million Native Americans, a number indicated by the 1970 U.S. Census.)

Simple justice would seem to demand that priorities in restorations of land bases be granted to those Indian Nations who are landless by fault of unratified or unfulfilled treaty provisions; Indian Nations, landless because of congressional and administrative actions reflective of criminal abuse of trust responsibilities; and other groupings of landless Indians, particularly of the landless generations, including many urban Indians and non-reservation Indian people—many of whom have been forced to pay, in forms of deprivations, loss of rights and entitlements, and other extreme costs upon their lives, an "emigration-migration-education-training" tax for their unfulfilled pursuit of opportunity in America—a "tax" as unwarranted and unjustified as it is unprecedented in the history of human rights in mature nations possessed of a modern conscience.

10-B. *Consolidation of Indians' Land, Water, Natural and Economic Resources.*—The restoration of an equitable Native American Land Base should be accompanied by enlightened revision in the present character of

alleged "trust" relationships, and by reaffirmation of the creative and positive characters of Indian sovereignty and sovereign rights. The past pattern of treating "trust status" as wrongful "non-ownership" of properties, beyond control of individual interests and "owners", could be converted to a beneficial method of consolidating usable land, water, forests, fisheries and other exploitable and renewable natural resources into productive economic, cultural, or other community-purpose units, benefiting both individual and tribal interests in direct forms under autonomous control of properly-defined, appropriate levels of Indian government. For example, the 13.5 million acres of multiple and fractionated heirship lands should not represent a collective denial of beneficial ownership and interests of inheriting individuals, but be considered for plans of collective and consolidated use. (The alternatives and complexities of this subject and its discussion require the issuance of a separate essay at a later date.)

10-C. Termination of Leases and Condemnation of Non-Indian Land Title.—Most short-term and long-term leases of some four million acres of Indians' agricultural and industrial-use lands represent a constant pattern of mismanagement of trust responsibilities—with the federal trustees knowingly and willfully administering properties in methods and terms which are adverse or inimical to the interests of the Indian beneficiaries and their Tribes. Non-Indians have benefit of the best of Indian agricultural range and dry farm lands, and of some irrigation systems, generally having the lowest investment-highest return ratios, while Indians are relegated to lands requiring high investments for low returns. A large-scale, if selective, program of lease cancellations and non-renewals should be instituted under congressional authorization as quickly as possible. As well, Indian Tribes should be authorized to rescure Indian Ownership of alienated lands within reservation boundaries under a system of condemnation for national policy purposes, with the federal government bearing the basic costs of "just compensation" as burden for unjustified betrayals of its trust responsibilities to Indian people. These actions would no way be as extreme as the termination, nationalization, confiscation and sale of millions of acres of reservation Indian land by a single measure as in the cases of the Menominee and Klamath Indian Tribes, and attempted repeatedly with the Colvilles.

10-D. Repeal of the Menominee, Klamath and Other Termination Acts.—The Congress should act immediately to repeal the Termination Acts of the 1950s and 1960s and restore ownership of the several million acres of land to the Indian people involved, perpetually non-alienable and tax-exempt. The Indians' rights to autonomous self-government and sovereign control of their resources and development should be re-instated. Repeal of the terminal legislation would also advance a commitment toward a collective 110 million acre land base for Native Americans—when added to the near 55 million acres already held by Indians, apart from the additional 40 million acres allocated in Alaska. (The impact of termination and its various forms have never been fully understood by the American people, the Congress, and many Indian people. Few wars between nations have ever accomplished as much in the dispossession of a people of their rights and resources as have the total victories and total surrenders legislated by the Termination laws. In the Arab States of the present Mid-East could comparably presume the same authority over the State of Israel, they could eliminate Israel by purchase or by declaring it an Arab State or subdivision thereof; on the one hand, evicting the Israelis from the newly-acquired Arab lands, or on the other, allowing the Israelis to remain as part of the larger Arab Nation—and justify the

disposition to the world by claim that, whether leaving or remaining, but without their nation, the Jewish people would still be Jewish. Such an unacceptable outrage to American people could quickly succeed to World War III—except when such actions are factually taken against Menominees, Klamaths, Senecas, Utes, and threatened against many other landed nations of Indian people.)

11. Revision of 25 U.S.C. 163; Restoration of Rights to Indians Terminated by Enrollments and Revocation of Prohibitions Against Dual Benefits.—The Congress should enact new measures fully in support of the doctrine that an Indian Nation has complete power to govern and control its own membership—but eradicating the extortive and coercive devices in federal policy and programming which have subverted and denied the natural human relationships and natural development of Indian communities, and committed countless injuries upon Indian families and individuals. The general prohibition against benefitting dually from federal assistances or tribal resources by having membership or maintaining relationships in more than one Indian Tribe has frequently resulted in denial of rights and benefits from any sources. Blood quantum criteria, closed and restrictive enrollments and "dual benefits" prohibitions, have generated minimal problems for Indians having successive non-Indian parentage involved in their ancestry—while creating vast problems and complexities for full-blood and predominant-Indian-blood persons when ancestry or current relationships involve two separate Indian tribes or more. Full-blood Indians can fail to qualify for membership in any of several tribes to which they may be directly related if quantum-relationships happen to be in wrong configuration or non-qualifying fractions. Families have been divided to be partly included upon enrollments, while some children of the same parents are wrongly (if there are at all to be enrollments) excluded. There should be a restoration of Indian and tribal rights to all individual Indians who have been victimized and deprived by the vicious forms of termination effected by forces choices between multiply-related Tribes, abusive application of blood-quantum criteria, and federally-engineered and federally-approved enrollments. The right of Indian person to maintain, sever, or resume valid relations with several Indian Nations or communities unto which they are born, or acquire relations through natural marriage relationships or parenthood and other customary forms, must again be recognized under law and practice, and also the right of Indian Nations to receive other Indian people into relations with them—or to maintain relations with all their own people, without regard to blood-quantum criteria and federal standards for exclusion or restrictions upon benefits. (It may be recognized that the general Indian leadership has become conditioned to accept and give application to these forms of terminating rights, patterns which are an atrocious aberration from any concepts of Indian justice and sovereignty.)

12. Repeal of State Laws Enacted Under Public Law 280 (1953).—State enactments under the authority conferred by the Congress in Public Law 280 has posed the most serious threat to Indian sovereignty and local self-government of any measure in recent decades. Congress must now nullify those State statutes. Represented as a "law enforcement" measure, PL 280 robs Indian communities of the core of their governing authority and operates to convert reservation areas into refuges from responsibilities where many people, not restricted by race, can take full advantage of a veritable vacuum of controlling law, or law which commands its first respect for justice by encouraging an absence of offenses. These States' acceptance of condition for their own

statehood in their Enabling Acts—that they forever disclaim sovereignty and jurisdiction over Indian lands and Indian people—should be binding upon them and that restrictive condition upon their sovereignty be reinstated. They should not be permitted further to gain from the conflict of interest engaged by such States' participation in enactment of Public Law 280—at the expense of the future of Indian people in our own communities, as well as our present welfare and well-being.

13. Resume Federal Protective Jurisdiction for Offenses Against Indians.—The Congress should enact, the Administration support and seek passage of, new provisions under Titles 18 and 25 of the U.S. Code, which shall extend the protective jurisdiction of the United States over Indian persons wherever situated in its territory and the territory of the several States, outside of Indian Reservations or Country, and provide that prescribed offenses of violence against Indian persons shall be federal crimes, punishable by prescribed penalties through prosecutions in the Federal judiciary, and enforced in arrest actions by the Federal Bureau of Investigation, U.S. Marshals, and other commissioned police agents of the United States—who shall be compelled to act upon the commission of such crimes, and upon any written complaint or sworn request alleging an offense, which by itself would be deemed probable cause for arresting actions.

13-A. Establishment of a National Federal Indian Grand Jury.—The Congress should establish a special national grand jury, consisting solely of Indian members selected in part by the President and in part by Indian people, having a continuous life and equipped with its own investigative and legal staff, and presided over by competent judicial officers, while vested with prescribed authorities of indictments to be prosecuted in the federal and Indian court systems, and equipped with the standard powers of process, and subpoena exercised by grand juries. This grand jury should be granted jurisdiction to act in the bringing of indictments on basis of evidence and probable cause within any federal judicial district where a crime of violence has been committed against an Indian and resulted in an Indian's death, or resulted in bodily injury and involved lethal weapons or aggressive force, when finding reason to be not satisfied with handling or disposition of a case or incident by local authorities, and operating consistent with federal constitutional standards respecting the rights of an accused. More broadly and generally, the grand jury should be granted broad authority to monitor the enforcements of law under Titles 18, 25, and 42, respecting Indian jurisdiction and civil rights protections; the administration of law enforcement, confinement facilities and juvenile detention centers, and judicial systems in Indian country; corrupt practices or violations of law in the administration of federal Indian agencies or of federally-funded programs for Indian people—including administration by tribal officials or tribal governmental units—and federal employees; and issue special reports, bringing indictments when warranted, directed toward elimination of wrong-doing, wrongful administration or practices; and improvements recommendations for systems to ensure proper services and benefits to communities, or Indian people.

13-B. Jurisdiction Over Non-Indians Within Indian Reservations.—The Congress should eliminate the immunity of non-Indians to the general application of law and law enforcement within Reservation Boundaries, without regard to land or property titles. Title 18 of the U.S. Code should be amended to clarify and compel that all persons within the originally established bound-

aries of an Indian Reservation are subject to the laws of the sovereign Indian Nation in the exercise of its autonomous governing authority. A system of concurrent jurisdiction should be minimum requirement in incorporated towns.

13-C. Accelerated Rehabilitation and Release Program for State and Federal Indian Prisoners.—The Administration should immediately contract an appropriately-staffed Commission of Review on Rehabilitation of Indian Prisoners in Federal and State Institutions, funded from Safe Streets & Crime Control funds, or discretionary funds under control of the President, and consisting of Indian membership. The review commission would conduct census and survey of all Indian prisoners presently confined, compile information on records of offenses, sentences, actions of committing jurisdictions (courts, police pre-sentence reports, probation and parole systems), and related pertinent data. The basic objective of the review commission would be to arrange for the development of new systems of community treatment centers or national-regional rehabilitation centers as alternative to existing prison situations; to work with Bureau of Prison and federal parole systems to arrange for accelerated rehabilitation and release programs as justified; and to give major attention to the reduction of offenses and recidivism in Indian communities. The commission would act to provide forms by which Indian people may assume the largest measures of responsibility in reversing the rapidly increasing crime rates on Indian reservations, and reapproaching situations where needs for jails and prisoner institutions may again be virtually eliminated. The Congress should provide appropriate authorizations in support of such effort—perhaps extending the protective jurisdiction of the United States over Indians in State Institutions, to provide for transfer to Indian-operated rehabilitation and treatment center, at least probation systems, in a bargain of responsibility for bringing about vast reduction in incidences of offenses among Indian communities. (The \$8,000,000 BIA Budget for Law & Order is not directed toward such purpose—spending nearly half its present increases on new cards to gauge the increases in reported offenses.)

Note on 13—13C: The U.S. has asserted its jurisdiction over Indians nation-wide and may now do so again protectively. The Congress controlled liquor sales to Indians nationally until 1953, allowing prosecution for non-Indian offenders. Education of Indians in public state schools is essentially a contracting of jurisdiction to States.

14. Abolition of the Bureau of Indian Affairs by 1976: A New Structure.—The Congress working through the proposed Senate-House "Joint Committee on Reconstruction of Indian Relations and Programs", in formulation of an Indian Community Reconstruction Act, should direct that the Bureau of Indian Affairs shall be abolished as an agency on or before July 4, 1976; provide for an alternative structure of government for sustaining and revitalizing the federal-Indian relationship between the President and Congress of the United States, respectively, and the respective Indian Nations and Indian people at large, consistent with constitutional criteria, national treaty commitments, and Indian sovereignty; and provide for transformation and transition into the new system as rapidly as possible prior to abolition of the BIA.

15. Creation of an "Office of Federal Indian Relations and Community Reconstruction."—The Bureau of Indian Affairs should be replaced by a new unit in the federal government which represents an equality of responsibility among and between the President, the Congress and the Governments of the separate Indian Nations (or their respective people, collectively), and equal standing in

the control of relations between the Federal Government and Indian Nations. The following standards and conditions should be obtained:

A. The Office would structurally be placed in the Executive Offices of the President, but be directed by a tri-partite Commission of three Commissioners; one being appointed by the President, one being appointed by the joint congressional committee; and one being selected by national election among Indian people, and all three requiring confirmation by the U.S. Senate.

B. The Office would be directly responsible to each the President, the Congress, and Indian people, represented by a newly-established National Indian Council of no more than twenty members selected by combination national and regional elections, for two year terms, with half expiring each year.

C. All existing federal agencies and program units presently involved or primarily directed toward serving Indians would be consolidated under the new Office, together with the budget allocations to the Department assisting Indians although primarily oriented toward other concerns. All programs would be reviewed for revision of form, or eliminating altogether, or continuance.

D. A total personnel and employee structure ceiling of no more than 1,000 employees in all categories should be placed upon the new office for its first five years of operation. Employment in the Office would be exempt from Civil Service regulations and provisions. (The Civil Service Commission and federal employee unions should be requested to propose a plan for preference hiring in other agencies and for transfer of benefits to new employment, for presentation to Congress, incident to abolition of the BIA and other Indian-related federal programs.)

E. The Office would maintain responsibility over its own budget and planning functions, independent from any control by the Office of Management & Budget (OMB), and should be authorized a \$15,000,000,000 budget for the remainder of the 1970s to plan from manage, control, and grant in direct assistance to Indian communities for effecting their reconstruction and qualified indigenous programming, or to otherwise program or provide for assistance. The Office would also recognize needs of non-reservation Indians, and be responsible to them as well as through the National Indian Council.

F. The Appropriations Committees of the Congress should give consideration to the justifications for long-range plans in funding, but maintain oversight over the annual incremental spending under a \$15,000,000,000 budget, reviewing the efficiency of the Office and the impact and progress of the programming. The Appropriations Committees should not impose undue interferences in plans—but should insist upon equitable treatment of all Indian Nations and general Indian people who would not be denied their respective direct relations with the Congress, or with the President.

G. The Office of Federal Indian Relations would assume the administrative responsibility as trustee of Indian properties and property rights, until revision of the trust responsibility might be accomplished and delegated for administration as a function and expression of the sovereign authority of the respective Indian Nations.

16. Priorities and Purpose of the Proposed New Office.—The central purpose of the proposed "Office of Federal Indian Relations and Community Reconstruction" is to remedy the break-down in constitutionally-prescribed relationships between the United States and Indian Nations and people and to alleviate the destructive impact that distortions in those relationships has rendered upon the lives of Indian people. More directly it is proposed for allowing broad attacks upon the multitude or millions of problems which confront Indian lives, or consume

them, and which can not be eliminated by piece-meal approaches, jerry-built structures or bureaucracies, or by taking on one problem at a time, always to be confronted by many more. The Congress, with assent the Courts, has developed its constitutional mandate to "regulate Indian commerce" into a doctrine of absolute control and total power over the lives of Indians—they failed to give these concerns the time and attention that the responsibilities of such power demand. The Congress restricted the highest authority of the President for dealing with Indian matters and affairs, then abandoned Indian people to the lowest levels of bureaucratic government for administration of its part-time care and asserted all-powerful control. The constitution maintained Indian people in citizenship and allegiance to our own Nations, but the Congress and the Bureau of Indian Affairs have converted this constitutional standard into the most bastardized forms of acknowledged autonomy and "sovereign self-governing control"—scarcely worthy of the terms, if remaining divested of their meaning. A central priority of the proposed Office should be the formulation of legislation designed to repeal the body of "Indian Law" that continues to operate most harmfully against Indian communities—including sections of the 1934 Indian Reorganization Act and prior legislation which instituted foreign forms of government upon our Nations, or which have served to divorce tribal government from responsibilities and accountability to Indian people.

At this point in time, there is demonstrable need for the Congress to exercise highest responsibilities to Indian people in order that we might have a future in our homeland. This requires that Congress now recognize some restrictions upon its own authority to intervene in Indian communities and act to totally exclude the exercises local tribal sovereignty and self-governing control. The proposed Office of Federal Indian Relations and Community Reconstruction should be authorized the greatest latitude to act and to remove restrictions from the positive actions of Indian people. This can be achieved if the Congress establishes a new Office in the manner proposed, and authorizing it in promising degree to operate as instrumentality of its responsibilities.

17. Indian Commerce and Tax Immunities.—The Congress should enact a statute or Joint Resolution certifying that trade, commerce, and transportation of Indians remain wholly outside the authority, control, and regulation of the several States. Congressional acts should provide that complete taxing authority upon properties, use of properties and incomes derived therefrom, and business activities within the exterior boundaries of Indian reservations, as well as commerce between reservations and Indian Nations, shall be vested with the respective or related tribal governments or their appropriate subdivisions—or certify that, consistent with the Fourteenth Amendment, section 2, statehood enabling acts, prevailing treaty commitments, and the general policy of the United States, that total Indian immunity to taxing authority of states is reaffirmed and extended with uniformity to all Indian Nations as a matter/established or vested right. (These questions should not have to be constantly carried to the courts for reaffirmation—disregarded as general law and attacked by challenge with every discernible variation or difference in fact not considered at a prior trial.) (Tribes have been restricted in their taxing authorities by some of the same laws which exclude federal or state authority. However, there are areas where taxing authorities might be used beneficially in the generation of revenues for financing government functions, services and community installations.) (The Congress should remove any obstacles to the development of free trade and commerce with various other foreign na-

tions; respect the rights of Indian people to travel freely between Indian nations without being blocked in movement, commerce or trade barriers of borders, customs, duties, or tax.)

18. Protection of Indians' Religious Freedom and Cultural Integrity.—The Congress should proclaim its insistence that the religious freedom and cultural integrity of Indian people should be respected and protected throughout the United States, and provide that Indian religion and culture, even in regenerating or renaissance or developing stages or when manifested in the personal character and treatment of one's own body, shall not be interfered with, disrespected or denied. (No Indian should be forced to cut their hair by any institution or public agency or official, including military authority or prison regulation, for example.) It should be an insistence by Congress that impose strict penalty for its violation.

19. National Referendums, Legal Options, and Forms of Indian Organization.—The Indian population is small enough to be amenable to voting and elective processes of national referendums, local option referendums, and other elections for rendering decisions, approvals or disapprovals on many issues and matters. The steady proliferation of Indian and Indian-interest organizations, Indian advisory boards and the like, the multiplication of Indian officials and the emergence of countless Indian "leaders," represent a less preferable form for decision-making, a state of disorganization, and a clear deflection of deterioration in the relations between the United States and Indian people as contracting sovereigns holding a high standard of accountability and responsibility. Some Indians seem to stand by to ratify any viewpoints relating to any or all Indians; others conditioned to accept any viewpoint or proposal from official source. Whereas Indian people were to be secure from political manipulation and the general political system in the service of Indian needs, political favor and cut-throat competition for funds with grants made among limited alliances of agency-Indian friends have become the rule, while responsibilities and accountability to Indian people and Indian communities have been forgotten. While the treaty relationship allows that we should not be deprived by power that we are possessed of by right—little personal power and political games are being played by a few Indians while we are being deprived our rights. This dissipation of strength, energies and commitment should end. We should consolidate our resources and purpose to restore relations born of our sovereignty and to resume command of our communities, our rights, our resources, and our destiny. (The National Council on Indian Opportunity; Association on American Indian Affairs; and Indian directed, and Indian organizations which are among many which could and should be eliminated.) (At least, none should be funded from federal sources.)

20. Health, Housing, Employment, Economic Development, and Education.—The Congress and Administration and proposed Indian Community Reconstruction office must allow for the most creative, if demanding and disciplined, forms of community development and purposeful initiatives. The proposed \$15,000,000,000 budget for the 1970s remainder could provide for completed construction of 100,000 new housing units; create more than 100,000 new, permanent, income and tribal revenue-producing jobs on reservations and lay foundation for as many more in years following; meet all the economic and industrial development needs of numerous communities; and make education at all levels and provide health services or medical care to all Indians as a matter of entitlement and fulfilled right. Yet, we now find most Indians unserved and programs not keeping pace with growing

problems under a Billion Dollar-plus budget annually—approximating a service cost of \$10,000 per reservation Indian family per year, or \$100,000 in this decade. Our fight is not over a \$50 Million Dollar Cutback in a mismanaged and misdirected budget, and cannot be ended with restoration of that then invisible amount—but over the part that it, any and all amounts, have come to play in a perennial Billion Dollar indignity upon the lives of Indian people, our aged, our young, our parents and our children. Death remains a standard cure for environmentally-induced diseases afflicting many Indian children without adequate housing facilities, heating systems, and pure water sources. Their delicate bodies provide their only defense and protection—and too often their own body processes become allies to the quickening of their deaths, as with numerous cases of dysentery and diarrhea. Still, more has been spent on hotel bills for Indian-related, problem-solving meetings, conferences and conventions than has been spent on needed housing in recent years. More is being spent from federal and tribal fund sources on such decision-making activities than is being committed to assist but two-thirds of Indian college students having desperate financial need. Rather, few decisions are made, and less problems solved, because there has developed an insensitivity to conscience which has eliminated basic standards of accountability. Indian communities have become fragmented in governmental, social, and institutional functions as they have been restructured or destructed to accommodate the fragmentation in government programming and contradictions in federal policies. There is need to reintegrate these functions into the life and fabric of the communities. Of treaty provisions standard to most treaties, none has been breached more viciously and often as those dealing with education—first by withdrawing education processes from jurisdiction and responsibility of Indian communities, and from the powers of Indian self-government—and failing yet to restore authority to our people, except through increased funding of old advisory and contract-delegation laws, or through control to conduct school in the conditioned forms and systems devised by non-Indians, or otherwise commended by current popularity. At minimum, Indian Nations have to reclaim community education authority to allow creative education processes in forms of their free choice, in a system of federally-sanctioned unit or consolidated Indian districts, supported by a mandatory recognition of accreditation in all other systems in this land.

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF MANAGEMENT AND BUDGET,
Washington, D.C., January, 16, 1973.

Hon. JAMES A. HALEY,
Chairman, Committee on Interior and Insular Affairs, House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: When I appeared before your Committee in early December I told you that we had undertaken to prepare an answer to the 20 questions which the Trail of Broken Treaties caravan had laid before us. On January 9, 1973 we transmitted our answers. I thought you would still be interested so I am enclosing a copy for your use.

Sincerely,

FRANK CARLUCCI,
Deputy Director.

1. RESTORATION OF TREATY-MAKING AUTHORITY

The first proposal is that Indian nations should again become sovereign political entities which would contract treaties with the United States—the purpose being "in order that Indian Nations may represent their own interests."

Over one hundred years ago the Congress decided that it was no longer appropriate for the United States to make treaties with Indian tribes. By 1924, all Indians were citizens of the United States and of the states in which they resided. The citizenship relationship with one's government and the treaty relationship are mutually exclusive; a government makes treaties with foreign nations, not with its own citizens. If renunciation of citizenship is implied here, or secession, these are wholly backward steps, inappropriate for a nation which is a Union.

Indians do need to "represent their own interests" and Indian tribes, groups and communities are finding increasingly effective ways of expressing these interests. There are several active and vocal nationwide Indian organizations; there are many tribal governments and these are being strengthened with full Administration support and endorsement. The President has even proposed that the administration and control of most BIA and HEW Indian programs be transferred to Indian tribal government, at the latter's option, but the Congress has not yet approved this legislative proposal.

The President has proposed the creation of an Indian Trust Counsel Authority to represent Indian interests in the vital field of natural resources rights, but the Congress has not enacted this legislation.

The White House and every Department in this Administration meets frequently with Indian leaders and groups, listens to and pays attention to Indian recommendations and, as for example in the development of the Alaska Native Claims legislation, works with Indian representatives on matters vitally affecting Indian people. We will continue to go forward with these many, close relationships.

2. ESTABLISHMENT OF TREATY COMMISSION TO MAKE NEW TREATIES

The points stated in the first response apply to this proposal also.

3. THE PRESIDENT AND INDIANS SHOULD ADDRESS THE CONGRESS

The Congress has been addressed—two and one-half years ago—when the President sent the Congress a Special Message on July 8, 1970 dealing exclusively with American Indian matters. Indian advice about those program proposals was sought and obtained at that time in a series of meetings held throughout Indian country. With two exceptions, none of the President's legislative proposals made in that Message have been enacted by the Congress; some have not even been given hearings.

What is needed is not more addresses and messages; the President will again submit in 1973 legislative proposals to implement his progressive policy for Indians. What is needed is congressional action.

It would be up to the Congress to determine whether it would like to invite four Indians to address a Joint Session. As important, or more so, will be the appearance of Indian representatives at congressional committee sessions which hopefully will be called soon to take up the bills the President has proposed. Administration witnesses will be on hand and fully ready to explain the President's program.

At the present time, the Administration, as well as congressional committees, is again open to any specific Indian suggestions as to how our proposals could be improved or strengthened.

4. CREATE A COMMISSION TO REVIEW TREATY COMMITMENTS AND VIOLATIONS

We already have a Commission: the Indian Claims Commission, a quasi-judicial agency created by the Congress in 1946. Its mandate is to settle finally any and all legal, equitable and moral obligations the United States might owe to the Indians, including the loss of aboriginal lands or in-

adequate payment for them through treaties or otherwise. The Commission has decided on some 190 awards, and has certified \$424 million for appropriation as award payments. There are about 250 dockets still pending before the Commission, and in the last Congress the Commission's life was extended another five years.

It is asked that a new Commission formulate legislation to protect jeopardized Indian rights. This legislation has already been formulated and the President proposed it to the Congress two and one-half years ago: the creation of an Indian Trust Counsel Authority. The Authority would be a quasi-independent part of the Executive Branch of the United States Government, would be governed by a three-man Board of Directors, two of whom would be Indians, would have the right to bring suit against the United States or otherwise to intervene in any State or Federal regulatory proceeding to protect Indian natural resources rights, speaking for the United States as trustee for those rights. The Congress has not enacted this legislation: it will be re-submitted to the new Congress and this Administration will again defend and support it, and we are confident we will again have the endorsement and assistance of Indian witnesses also.

Pending the enactment of the Trust Counsel Authority, this Administration has actively defended Indian treaty and trust rights. We have persuaded Congress to restore the Blue Lake lands to the Taos Pueblo; the President has acted to restore to the Yakima Nation the 21,000 acres of land mistakenly alienated from their control 66 years ago: the Administration has filed a number of suits to protect Indian water rights including a suit in the Supreme Court to protect the rights of Indians in Pyramid Lake; the Administration has initiated a procedure whereby, on the request of the Secretary of the Interior, briefs stating the United States' position as trustee of Indian land and water rights will be filed in any Court cases in which the Department of Justice takes a position contrary to those trust interests, so that no Court is ever unaware of the trustee position of the United States concerning these rights.

Briefs supporting Indian trust rights have been filed in the *McClahanan, Kahn, Mesclero, and Tonasket* Supreme Court tax cases, the *Stevens* tax case was won in the Ninth Circuit on the strength of the Interior Department's brief as trustee for the Indian defendant.

The Secretary of the Interior has established a special Water Rights Office in the Department of the Interior to give special attention to any Indian water rights problems and allegations of invasion of rights. This Office is headed by an Indian lawyer.

With respect to the stated wish to "eliminate the unending patterns" of lawsuits and legal defense, this desire is rather theoretical, since public life today is full of controversy and legal dialogue. No one can guarantee an end to controversy; what we are trying to guarantee is effective defense, in those controversies, of Indian trust rights by the United States which is itself the trustee of those rights.

The Departments of the Interior and Justice are and will continue to be alert to any specific allegations of violation of Indian trust rights, and will continue to work with Indian leaders and their representatives to ensure effective defense of Indian trust interests.

5. RESUBMIT UNRATIFIED TREATIES TO THE SENATE

As was explained under Point 1, we are now a Union and we have a citizenship rather than a treaty relationship with the people who make up that Union, American Indians included.

The injustices and inequities which were in fact suffered by Indian tribes and peoples because of either unfair or unratified treaties are being dealt with as the Congress has provided in the Indian Claims Commission. This is particularly true in the case of many California Indians, the treaties with whom were negotiated but not ratified, and whose claims have been decided by the Indian Claims Commission and confirmed by the Congress, with award payments even now being disbursed totaling \$29,100,000.

The Claims Commission will continue to be diligent and fair as it moves through the remainder of the 250 dockets still pending.

6. ALL INDIAN PEOPLE SHOULD BE IN A TREATY RELATIONSHIP WITH THE UNITED STATES

The Treaties that were concluded and ratified with Indian tribes are still in force and will be respected by the United States. But as explained in points 1 and 5, we are a Union and, since 1871, no longer negotiate new treaties with our citizens as if they were foreign entities.

American Indian people have many needs and concerns; these needs and concerns are being addressed and must be addressed further by both the Executive and Legislative branches of our government. We, in this Administration, want Indian people to continue to work with us in formulating and carrying out specific proposals and actions to meet the pressing economic, legal, educational, health, and housing problems of Indian people.

To call for new treaties is to raise a false issue, unconstitutional in concept, misleading to Indian people, and diversionary from the real problems that do need our combined energies.

7. MANDATORY COURT INJUNCTIONS AGAINST ALLEGED TREATY VIOLATIONS

This demand apparently is based upon a misunderstanding of the judicial process. It is proposed that mandatory injunctions be granted upon the mere filing of an Indian complaint that a treaty right is being violated and that such injunctions continue until the court is satisfied a violation is not being committed. It is not clear what is meant by a "mandatory" injunction, although there is a clear implication that concepts of due process should not apply to litigation to enforce treaty rights.

As near as can be determined from the demand, much of what is desired is attainable through existing judicial process, by use of temporary restraining orders (and subsequent injunctive relief) whenever a citizen can show he will suffer irreparable harm. The courts now give priority to requests for temporary restraining orders and injunctions. It seems highly unlikely that the Congress would pass such legislation, and it is questionable as to the authority to do so under the constitution.

8. JUDICIAL RECOGNITION OF INDIAN RIGHT TO INTERPRET TREATIES

This proposal would require the fundamental revision of our judicial processes in order to give Indian groups highly preferential positions in controversies about their treaty rights. To the extent the revision would impinge on the judicial powers of the courts, it would present constitutional problems. Granting a right of appeal to the Supreme Court in Indian cases would necessitate amendment of 28 U.S.C. 1254 and 1257.

At present, all Indian tribes have the right to take a position in any case or controversy on the meaning of their own treaties and to advocate their interpretation through the courts, as any State, locality, citizen, or group of citizens can press for favorite judicial interpretation of their rights. Due process and equal access, however, must be accorded to all citizens involved.

We would reemphasize here the matters stressed in Point 4: this Administration,

more than any in American history, has been alert to defend Indian natural resources rights and to urge both the Legislative and Judicial Branches to do the same. What is needed from now on is not the skewing of America's judicial principles or the creation of any new built-in preferences for or against specific groups or institutions. What is needed is a continuing alertness by the Executive Branch, which we pledge, and in addition perhaps a better system by which Indian leaders can bring alleged trust violations more promptly to the Government's attention.

9. A NEW CONGRESSIONAL COMMITTEE STRUCTURE

This proposal, to create a new joint congressional committee, should be addressed to the Congress, and would not be appropriate for Executive Branch comment.

10. LAND REFORM AND RESTORATION OF A 110 MILLION-ACRE NATIVE LAND BASE

The Federal Government now holds in trust about 40 million acres of tribal land owned in common, plus approximately 10 million acres of land held in trust for individual tribal members. In addition, the title to 40 million acres has been confirmed by the Congress as belonging to Alaska Natives. In accordance with their wishes, it will not be held in trust but will be under their full control and inalienable for twenty years.

Assuming the above land is included in the suggested 110 million acres land base, this proposal calls for giving to Indians an additional 20 million acres of land. But what is omitted is the fact that claims concerning some of this additional land (it is difficult to know how much since the 110 million acres are not identified) are undoubtedly involved in the 250 cases now pending before the Indian Claims Commission.

The proposal that this 110 million acres be perpetually nontaxable and inalienable would be in part repetitive of existing rights, would deprive Indians of their right to deal with their lands for the benefit of all their people, and is a legal impossibility as one Congress cannot bind future Congresses amending or repealing such a law. With the consent of the Secretary of the Interior as trustee, individual Indians may exchange or sell their land when it is to their advantage to do so for a worthy purpose. These land owners might not want this right eliminated. Alienation of tribal land requires an Act of Congress. Some tribes for special reasons have obtained this right with the approval of the Secretary of the Interior and would probably be opposed to its being withdrawn from them.

10-A. PRIORITIES IN RESTORATION OF THE NATIVE AMERICAN LAND BASE

The proposal is that the following priorities be followed in connection with the requested 20 million acres of land:

1. The Indian Nations landless because of unratified treaties or unfulfilled treaty provisions.
2. Indian Nations landless because of abuse of trust responsibilities.
3. Urban Indians and non-reservation Indians in some grouping who are landless.

There would be considerable differences of opinion on the proposed priorities. The Federally-recognized tribes with reservations are also interested in obtaining additional land.

In the light of the many individual, piecemeal proposals for the creation of additional parcels of trust land for specific Indian groups, a study of trust land status and eligibility policy has been begun in the Department of the Interior. The study has been delayed by the disruption of the building and records of the Bureau of Indian Affairs during the occupation by the Trail of Broken Treaties two months ago, but it is now resuming.

As the Washington Conference of Eastern Indian peoples recently made clear, the process of identifying these options and costs

is going to require a great deal of research: which Indian groups not now federally recognized live on what land now; what is the status of that land, what services are available and not available to them from what sources, etc. In the end it is the Congress that must set the policy and provide the additional resources, if any. We shall be working with Indian leaders in giving these questions the thorough and detailed attention they deserve. We solicit the cooperation of Indian people, especially those not now federally recognized, in helping us with the rigorous economic and financial research which will be a prerequisite of any conclusions or recommendations.

10-B. CONSOLIDATION OF INDIANS' LAND, WATER, NATURAL AND ECONOMIC RESOURCES

Land owned in common by a number of heirs has long been a difficult unresolved problem. The separate essay promised to the Government on this subject will be given careful study when received.

10-C. TERMINATION OF LEASES AND CONDEMNATION OF NON-INDIAN LAND TITLES

Indian land owners, as individuals or tribes, decide themselves how they want to use their land or whether to lease it to others to obtain income. The Indian owners have to approve any lease. They and the trustee jointly determine the particular way in which the land is to be used. The Indian land owners are being encouraged to use their land themselves whenever they can and whenever it is to their advantage to do so. In many instances, it is impractical for the elderly, a child or woman, or those who are not interested in working on the land to do so. In other instances, because of the size or location of the land or the capital required, a greater return is obtained by lease than self operation.

The Trail of Broken Treaties representatives are free to recommend to their Indian colleagues who are land owners that there should be a large-scale program of lease cancellations and non-renewals. However, some questions need to be faced. Who would pay the lessees who certainly seek damages for cancellation of leases without cause?

It is also proposed here that tribes be given the authority by Congress to condemn any land owned by non-Indians within reservation boundaries, the cost to be borne by the Federal Government. No mention is made of repaying any monies already received for the lands. Such condemnation would involve a large amount of land and money, particularly for the checkerboarded reservations of the plains States. It is doubtful that the Federal Government could or should delegate its powers of eminent domain to non-Federal entities, even if this amount of money were available under present stringent budget strictures.

Enactment of the President's credit legislation would give Indians a further basis for obtaining land necessary for economic development; we look forward to early Congressional hearings on this legislation.

The study referred to under point 10 A. will also pertain to the recommendation made here concerning the resecuring of alienated lands within reservation boundaries.

10-D. REPEAL OF THE MENOMINEE, KLAMATH, AND OTHER TERMINATION ACTS

The Administration has expressed very firmly its strong opposition to any forced termination of the special relationship between the United States of America and Indian tribes involving the trusteeship of tribal land and the providing of special services. The President has specifically asked the Congress to rescind the outdated Termination Resolution of 1953, but the Congress has not yet taken the action the President recommended. Some years ago, Congress did terminate certain tribes based on its con-

clusion that they were prepared and able to manage their own affairs. Whether the Federal Government should now attempt to unscramble all of the situations that have since intervened and somehow restore the land that was conveyed in fee to the tribes and individuals and the numerous other matters that would be involved, will have to be considered at greater length and, in fact, is part of the study referred to under section 10 A.

With respect to the Menominees specifically, we repeat the pledge made by our convention in the Republican Platform:

"We are fully aware of the severe problems facing the Menominee Indians in seeking to have Federal recognition restored to their tribe, and promise a complete and sympathetic examination of their pleas."

11. REVISION OF 25 U.S.C. 163; RESTORATION OF RIGHTS TO INDIANS TERMINATED BY ENROLLMENT AND REVOCATION OF PROHIBITIONS AGAINST "DUAL BENEFITS"

This proposal urges Congressional recognition of complete and unfettered authority of a tribe to determine its own membership for all purposes, including membership in more than one tribe resulting in dual Federal and tribal benefits. Only in a very few special situations has the Congress enacted legislation affecting the requirements for tribal membership. On occasions when bills have been introduced in Congress that would define tribal membership, the Department has generally opposed enactment as an invasion of tribal rights to self-determination.

It has long been the policy and practice, supported by the courts, to permit tribes by the adoption of their own constitutional provisions or special membership ordinances to determine the qualifications for membership in their tribes. Often a tribe will require that a member may not be enrolled in another tribe. While the Department of the Interior does not have a prohibition against dual membership in tribes, it does not permit individuals to receive distribution of tribal assets held in trust usually in the form of a per capita payment, from more than one tribe.

The Trail of Broken Treaties' authors recognize that their recommendation is contrary to the position taken by the members of tribes in their referendums adopting constitutions setting forth their membership requirements. The TBT argument is really with the tribes who prescribe their membership provisions pursuant to constitutions and by-laws that have been adopted.

12. REPEAL OF STATE LAWS ENACTED UNDER PUBLIC LAW 280 (1953)

Public Law 280 permits a State to acquire civil and criminal jurisdictions in Indian areas but only with the consent of the involved tribe. A State's assumption of jurisdiction under P.L. 280 is voluntary and whether a State repeals the law involved (or any other State law) is also within the discretion of the State. There is a provision in the Indian Civil Rights Act of 1968 which permits States which have acquired jurisdiction under P.L. 280 to retrocede their jurisdiction back to the U.S. They are not required to do so at the request of the tribe.

It is not true that P.L. 280 deprived any Indian tribe of any of its civil or criminal jurisdiction over its members. The jurisdiction of the Federal Government over "major crimes" and under the Assimilated Crimes Act was divided and transferred to the States, but nothing in the Act strips the tribe of its powers.

The Congress possesses the power to provide for the reassuming of Federal jurisdiction in Indian country where the States have acquired it under P.L. 280. The Congress, no doubt, would want to have the views of tribes which had consented to State jurisdiction before taking the action recommended under this proposal.

13. RESUME FEDERAL PROTECTIVE JURISDICTION FOR OFFENSES AGAINST INDIANS

We have difficulty with the constitutionality of the concept that Congress can, by statute, require the judiciary to issue warrants for arrests on the basis of a "written complaint or sworn statement," since in our view, "probable cause" is determined by constitutional rather than legislative standards.

13-A. ESTABLISHMENT OF A NATIONAL FEDERAL INDIAN GRAND JURY

In the first 13 lines of this proposal, one would substitute in place of "Indian" the categories "Black", "Asian", "Chicano", etc. It would be misguided choice indeed to subdivide our American system of justice into ethnic slices, each skewed to give special attention on a racial basis. Our task is to improve our local and Federal systems so that they function in a manner utterly devoid of considerations of race or creed or culture.

Insofar as the proposed Grand Jury would be permitted to return indictments for prosecution in tribal courts and also against tribal officials, the proposal seems to conflict with the idea of tribal self-determination. Congress would also have to make an alteration in the existing concepts of the immunity of Federal officials from criminal actions arising from duties performed under color of their Federal authority.

13-B. JURISDICTION OVER NON-INDIANS WITHIN INDIAN RESERVATIONS

Indian tribal courts currently, we contend, have no judicial jurisdiction over non-Indians in criminal matters and have jurisdiction in civil matters only where the non-Indian consents to jurisdiction. A tribe may have legislative jurisdiction over non-Indians on a reservation, but whether tribal laws can be enforced against non-Indians remains unsettled.

The proposal would, therefore, affect the rights of non-Indians who reside within the "originally-established" exterior boundaries of a reservation and present severe problems of whether it would deprive them of the rights of citizenship in the States in which they reside. Further, it would affect those who are merely traveling through a reservation and arguably could deprive such persons of their immunity and privileges as citizens of the United States.

Finally, it must be noted that the 1968 Civil Rights Act requires that a tribe afford every person under its jurisdiction the fundamental rights of due process and equal protection of the laws. The greater the extent of tribal jurisdiction over non-Indians, the greater claim they have to the right to participate in tribal affairs, i.e., not only would they have a right to protection in judicial proceedings, but they might also have a valid claim to participate in the tribal legislative process.

Before taking any action in the direction of this recommendation, we would wish to have the views of the elected Tribal Chairmen and Tribal Councils, since they are the most competent representatives of Indian Reservation people.

13-C. ACCELERATED REHABILITATION AND RELEASE PROGRAM FOR STATE AND FEDERAL INDIAN PRISONERS

A new cooperative program has been in effect between Interior and Justice for the past two years under which contracts are entered into with tribes for them to provide a rehabilitation program, including vocational training and counselling for Indians in Federal and State prisons.

14-C. ABOLITION OF THE BUREAU OF INDIAN AFFAIRS BY 1976: A NEW STRUCTURE

Two and one-half years ago, the President's message foreshadowed the longer-term nature of the Bureau of Indian Affairs: it will become, in effect, an Indian Trust and Technical Assistance Agency, responding to requests from elected Indian tribal leaders

who will themselves be taking over the management and operation of the Federal programs which serve their reservations. The pace of this change i.e., the degree of transfer of control over program operations, will be at Indian option; the President specifically does not intend to force Indian groups into running their Reservation affairs on any time-table except each Tribe's own.

The trust responsibility will, of course, remain—as long as each Tribe wishes it; the President has repudiated termination.

Whether the changed Bureau would remain within the Department of the Interior, or within a new Department of Natural Resources, or be placed in another Cabinet Department would be a matter which the President would not propose to the Congress until after close consultation with Indian leaders themselves.

15. CREATION OF AN "OFFICE OF FEDERAL INDIAN RELATIONS AND COMMUNITY RECONSTRUCTION"

This proposal would create a three-headed agency in the Executive Office, one head being a Presidential appointee, another a Congressional appointee and the third appointed by Indian people; it would be directly responsible to all three sources, would be authorized a 7-year budget of \$15,000,000,000 and would have few if any restrictions on its program or operations from OMB, the Congress or the Civil Service Commission.

This suggestion may have come from the best of intentions, but it would create a helpless, irresponsible administrative freak, able to spend vast sums without any clear accountability. Indian people, no less than the President and the Congress, could and would be defrauded by such an administrative aberration; neither the President nor the Congress would permit it to be created.

What Indian people ought to have is an effective trust protector and service-delivery system, which makes sure that every dollar of the more than \$1 billion in the federal government's current overall budget for Indians actually is put to work directly helping Indian people. To get this requires perhaps tighter rather than looser Departmental management and OMB review, may require closer scrutiny by the Congress or the General Accounting Office or the Civil Rights Commission. In any case it requires unified direction and clear responsibility to the officer to whom the Constitution gives the Executive power: the President.

In the four years that President Nixon has been in office, he has increased the budget of the Bureau of Indian Affairs from \$261 million to \$571 million and he has brought new talent, mostly Indians, into the senior positions of the Bureau. Other changes will come also (see the response under Section 14) and Indian leaders will be consulted in the process.

16. PRIORITIES AND PURPOSE OF THE PROPOSED NEW OFFICE

Most of this section in the Trail of Broken Treaties paper seems to be directed at the Congress and it would seem appropriate to let the response be primarily from the Congress.

We would add that the principal thrust of the President's own legislative proposals for Indians is toward self-determination and self-government for Indian tribes. If problems have arisen concerning the responsibility and accountability of tribal governments to their people, these should be brought to our attention in the Task Force which was set up to explore this among several other aspects of Indian needs and problems. We would welcome specific legislative or administrative proposals.

17. INDIAN COMMERCE AND TAX IMMUNITIES

Indian land held in trust, either for tribes or individuals, may not be taxed by the States or their subdivisions. States can tax

non-Indians within Indian reservations, except licensed Indian traders on sales to Indians. Tribes do have the authority to levy taxes within their reservations. Indian trust lands and proceeds from them are immune from property taxation. Unless current litigation changes this, Indian owners must pay all other taxes such as that on their earned income unrelated to their tax exempt property. No justification is offered as to why as citizens of a State they should be set apart from their fellow citizens in matters not related to the trust relationship, even if Congress had the authority to give them this exemption.

Having the advantage of the special tax exemption, Indians will want to take the steps necessary to enforce it. Indians, like others, will have to employ attorneys and undertake the burden and expense of litigation to assert their rights, although the access of courts to enforce rights is a precious right in itself. The tribes, however, have the additional benefit of being able to call on the legal services of the Department of Justice and Interior in certain kinds of actions.

The proposal that tribes be treated as sovereign nations in relation to trade with foreign nations by removal of barriers of "borders, customs, duties, or tax" is entirely inconsistent with their status as American citizens and could lead to erosion of their special relationship with the Federal Government.

18. PROTECTION OF INDIANS' RELIGIOUS FREEDOM AND CULTURAL INTEGRITY

The American people and their government are particularly concerned that the Indians' religions and culture be protected, and there is no policy or program to remove this protection. Indians, like all citizens, are protected in their religious rights by the First Amendment. If Congress attempts to secure, for Indians greater religious rights than the First Amendment itself provides, it runs the danger of conflicting with the establishment clause, particularly when it is remembered that Indians, like all Americans, belong to different faiths.

The Supreme Court so far has refused to review, and the Courts of Appeals are divided on the question of whether public schools can require students to cut their hair. However, the cases have focused on the issue of the First Amendment freedom of expression rather than on that of religion, and the latter argument would seem to present a stronger case.

19. NATIONAL REFERENDUMS, LOCAL OPTIONS, AND FORMS OF INDIAN ORGANIZATIONS

The Federal Government recognizes the elected tribal governing bodies as the principal spokesmen for the members of their tribes. It is also willing to hear and interested in obtaining the views of individual Indians or groups, such as school boards, Indian women's organizations, Indian professional organizations, etc., and giving them due consideration. (The Trail of Broken Treaties' authors seem to be addressing themselves under this point to various privately organized association and groups of Indians rather than to the Federal Government.)

Certainly not now and probably never will one Indian group have a monopoly of being "the spokesman" for all Indian people.

We might add at this point that the conduct of certain members of the Trail of Broken Treaties during their visit to Washington two months ago was reprehensible and is being investigated for possible criminal prosecution; their actions represented not leadership but a betrayal of the interests of Indian people.

20. HEALTH, HOUSING, EMPLOYMENT, ECONOMIC DEVELOPMENT AND EDUCATION

This is a request for \$15 billion in Federal funds to be appropriated for Indians in the

remaining years of the 1970's for the enumerated purposes. There is also a very generally stated objection to the manner in which past appropriated funds have been spent.

The Trail of Broken Treaties paper makes no acknowledgment of the fact that under this President and the last two Congresses, the budget for the Bureau of Indian Affairs alone has increased from \$261.3 to \$571.4 millions, or 218.6%.

The question is not whether Indian people have acute needs in education, housing, health and economic development. The question is whether pumping more money in the direction of those problems in the same old way is the best method of solving them.

This Administration has doubled the Indian budget—but it has done something much more important: it has proposed new and more effective ways of bringing to bear the resources that are available. We want Indian control of the programs operating on reservations; we want Indian parents to have a say in the off-reservation schools which their children attend; we want to see reservation hospitals staffed and managed by responsible Indian officials.

The watchword in the federal human resources budgets of the Second Term is not "more" but "more effective"—and we solicit the cooperation and suggestions of all Indian groups and leaders as to how to ensure that the available resources do in fact accomplish the results for which those resources are invested.

It is urged here that Indian communities reclaim their authority over the education process and that Indian operated schools be recognized by all other school systems through a mandatory accreditation system. It is the President's policy to encourage Indian communities to take over the control and operation of the BIA schools. The movement toward contract schools is a visible commitment to this policy. With the passage of recommended legislation providing for taking over of BIA programs by tribes and permitting Federal employees employed by tribal governments to retain their Civil Service benefits, the move to Indian community control and operation will accelerate.

Accrediting of a school is accomplished by a school joining the privately supported accrediting system and seeking accrediting. Indian schools wanting their students to be prepared to enter accredited schools elsewhere should adhere to certain minimum standards in order to adequately serve their students. It would seem inappropriate for Congress, even if it could, to require on a blanket basis the accrediting of Indian operated schools.

Mr. HELMS. Mr. President, even though some Americans have been misled, I think that it is obvious that AIM is thoroughly disreputable and divisive in its leadership and programs. It certainly does not deserve the sympathy of U.S. citizens whether Indian or otherwise. It is divisive and destructive and tears at the fabric of society. It cannot contribute to solving the problems of poverty or the problems of bureaucracy. Only when the authentic Indian leaders, as many of them have done, are able to engage their people in suitable educational and training programs to overcome the years of neglect will economic progress be made. The only programs which can be successful in the long run are those which are supportive of stability, initiative, and private investment. I join in criticizing Government programs of the handout and paternalism. I think that they have had a deadly effect not only upon many Indians, but upon

many other U.S. citizens as well. Successful social revolution comes through steady organic growth, and can never be enforced by totalitarian political methods.

I cannot leave this topic without commenting upon the whirlwind reaped by OEO from its grants to AIM. We do not have the evidence at this time to show, conclusively, that the criminal activities of AIM are the direct result of OEO programs. Yet OEO funds have provided the juice in which the whole thing has steeped. At the heart of it is the whole philosophy of the Community Action programs which the President has wisely sought to bring to a screaming halt. Implicit in the idea of CAP is the idea that poverty can somehow be cured through political action—that is through manipulating the processes of Government by coercion, organization, pressure, and even blackmail.

This may best be described as the para-governmental approach, since its aim is to circumvent the normal organization of constitutional government. The notion is prevalent that poverty can be eliminated only by boldly wresting political power from the established system. The OEO mentality results in Government financing its own destruction.

Our constitutional system was carefully constructed with a system of checks and balances. The object was to prevent any one sector of society from acquiring enough power to tyrannize over the rest. It is a system that is slow and full of setbacks and disappointments. But it is also a system that results in a broad consensus for the support of political and economic freedoms. It creates the stability necessary for economic growth—and only economic growth can solve the problem of poverty.

U.S. citizens—whether Indian or otherwise—do not need AIM or other OEO supported organizations of that sort. We do not need demonstrations and demands. We do not need totalitarian groups trying to blackmail us into setting aside our normal political processes. And we do not need criminals setting themselves up as social reformers. It is time to recognize AIM for what it is.

Mr. President, I reserve the remainder of my time.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under the previous order, the Senator from Vermont is recognized for not to exceed 15 minutes.

Mr. MANSFIELD. Mr. President, will the distinguished Senator yield to me for not to exceed 2 minutes of his time?

Mr. STAFFORD. Mr. President, I am happy to yield 2 minutes to the Senator from Montana, or more time if he needs it.

Mr. MANSFIELD. I thank the Senator. The PRESIDING OFFICER. The Senator from Montana is recognized.

THE BASIS FOR U.S. INVOLVEMENT IN CAMBODIA

Mr. MANSFIELD. Mr. President, the staff of the Committee on Foreign Rela-

tions has assembled a concise selection of documents relating to the basis for the U.S. involvement in Cambodia, as defined by the executive branch in 1970, and certain legislative responses thereto. This records reveals that, at the outset, the stress in the Senate and in the Congress, clearly, was to limit and to terminate what has since come to be such an ill-fated adventure in Cambodia. Thanks in great part to the leadership and efforts of the Senator from Idaho (Mr. CHURCH), the former Senator from Kentucky (Mr. COOPER), the Senator from Vermont (Mr. AIKEN) and the Senator from Missouri (Mr. SYMINGTON), legislation was passed which required American ground forces to be kept out of Cambodia. Our involvement with the futile government which succeeded that of Prince Sihanouk in Phnom Penh was also limited by legislation. At that time, the President, the State Department indicated that the executive branch was of the same mind as the Congress in holding that the interests of the United States required us to get clear of the Cambodian internal situation and stay clear of it. Since then, however, we have seen the transfer of the focus of the U.S. military involvement from Vietnam to Cambodia, in the form of U.S. airpower coming to the aid of the Lon Nol forces.

The likelihood exists that there will be renewed efforts in the Congress to close the last legislative gap regarding our involvement in Cambodia in the event it is not ended before then. In the circumstances, I think it would be useful to have before the entire Senate the background documents to which I have referred.

I ask unanimous consent, therefore, that they be included in the RECORD at this point.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

COMMITTEE ON FOREIGN RELATIONS,
U.S. SENATE,
April 30, 1970.

HON. WILLIAM P. ROGERS,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: At a meeting of the Foreign Relations Committee this morning, the members agreed unanimously that American participation in South Vietnamese operations in Cambodia raises important questions concerning United States policy. These are some of the questions which are of deep concern to the Committee:

1. Does the Executive Branch consider that the SEATO Treaty has any application to the current situation in Cambodia? Is the Tonkin Gulf Resolution considered to be applicable?

2. What authority is being relied upon to support the sending of United States Forces in Cambodia? If it is to protect American forces in Vietnam, where will the line be drawn? Is it considered that this authority would permit sending U.S. ground forces to knock out enemy bases in Cambodia? Air strikes in support of South Vietnamese or Cambodian troops? The defense of the Cambodian capital? If the enemy forces re-establish bases in another area of Cambodia, or a third country, does the Executive Branch believe it has authority to assist the South Vietnamese in attacking those bases?

3. Does the Administration plan to consult with the Committee on Foreign Rela-

tions concerning the sending of additional advisors or additional U.S. military forces of any kind into Cambodia? Is there any intention to ask the Congress to approve U.S. military involvement in Cambodia or the sending of military aid? Will the Administration make public any agreement to provide military aid to Cambodia, directly or indirectly?

4. Is the present operation unique or the beginning of a pattern?

5. Why does the Administration consider that eliminating the enemy bases in Cambodia is more important now than before the overthrow of Sihanouk? Was the existence of these bases an element in planning the Vietnamization strategy?

6. Did either the United States or South Vietnam consult with and obtain the Cambodian Government's approval for conducting the current operation? If its approval was obtained, what, if any, limits were imposed?

7. What impact has this operation had, or is it likely to have, on the efforts by Indonesia and others to bring about an Asian conference to discuss the Cambodian problem?

The Committee has reserved judgment on possible courses of action until it has been more fully informed. Answers to the above questions will be helpful in its consideration of the policy issues involved. The Committee would, therefore, appreciate having this information as soon as possible.

Sincerely yours,

J. W. FULBRIGHT,
Chairman.

DEPARTMENT OF STATE,
Washington, D.C., May 30, 1970.

HON. J. W. FULBRIGHT,
Chairman, Committee on Foreign Relations,
U.S. Senate.

DEAR MR. CHAIRMAN: Thank you for your letter of April 30 to Secretary Rogers posing questions about United States policy in Cambodia. Some of these questions have, of course, been answered by the President's speech of April 30 and by other statements of this Administration. I am glad, however, to have an opportunity to put more specific answers on the record, and I hope the following will be helpful to the Committee in the consideration which it is giving to United States policy in Cambodia. My answers correspond to the numbering of your questions.

1. The SEATO Treaty has no application to the current situation in Cambodia. The Protocol to the Treaty designates Cambodia as one of the States covered by Article IV of the Treaty. In 1964 and again in 1965, the Government of Cambodia informed the Secretary-General of SEATO, and its members, that Cambodia categorically refused the protection of SEATO. Neither Cambodia nor any Party to the Treaty has suggested that the Parties should take any action under Article IV.

In his letter to you of March 12, 1970, Mr. Torbert stated that the Administration does not depend on the Tonkin Gulf Resolution, as legal or constitutional authority for its present conduct of foreign relations, or its contingency plans. This continues to be the Department's position.

2. The entry of United States forces into Cambodia was directed by the President in the exercise of his constitutional authority as Commander-in-Chief to protect United States forces which had previously been committed to action in Viet-Nam. From the point of view of international law, the action in Cambodia was an exercise by the United States and the Government of Viet-Nam of their right of individual and collective self-defense under Article 51 of the UN Charter. I enclose a copy of our report to the Security Council which sets out in more detail the basis in international law for our action.

The President has set and announced explicit limits on the actions of U.S. forces in Cambodia. In response to your question about the actions of U.S. ground forces, these limits clearly restrict the action of such forces to the direct threat posed to American and allied forces in Viet-Nam by the existence of the border sanctuaries.

3. It will continue to be the Administration's policy to consult with the Committee on Foreign Relations to the fullest extent feasible in advance of any significant new United States decisions concerning Cambodia and other important foreign policy matters.

As you are aware, we have informed the Congress and announced the decision to provide U.S. military assistance to Cambodia in the amount of \$7.9 million in fiscal year 1970. As is the case with other military assistance programs, it will not be possible in most cases to announce publicly the exact levels or types of aid and thereby to reveal military and other information which must remain protected. We will, of course, as is required by law and past practice, inform the Committee on Foreign Relations of the annual proposals for military aid to Cambodia for future years.

4. The present operation in Cambodia is limited in extent, purpose, and duration. Our objective has been to capture enemy stores and supplies; to disrupt Communist logistics and communications capabilities; and to prevent the enemy from building his forces in the sanctuary areas in preparation for attacks on our troops and those of our allies in South Viet-Nam. With the achievement of these objectives our forces will withdraw into South Viet-Nam. As announced by the President, American troops will be out of Cambodia by July 1. Our action was in response to a specific and unique situation.

5. For five years, neither the United States nor South Viet-Nam has moved against these North Vietnamese/Viet Cong sanctuaries because we did not wish to put ourselves at odds with the Sihanouk Government. Even after the Vietnamese Communists began to expand the sanctuaries several weeks ago, we counseled patience to our South Vietnamese allies and imposed restraints upon our own commanders.

In the last two weeks in April, however, the enemy moved to expand the sanctuary areas, and threatened to establish a vast staging area for attacks along the 600-mile Cambodia-South Viet-Nam border.

When the North Vietnamese/Viet Cong forces began to move out of the their sanctuaries in an effort to establish a solid, Communist-held zone, they posed an increased threat to the remaining U.S. forces across the South Vietnamese border. By this time it was clear that the new Cambodian Government of Lon Nol would not object to our acting against the sanctuaries.

6. The United States Government informed the Cambodian Government of its actions against the North Vietnamese and Viet Cong forces in the sanctuaries inside the Cambodian frontier. While Prime Minister Lon Nol was not asked to approve the joint military operations against the sanctuaries, he has said that this action represents a positive United States response to Cambodia's appeal for help in restoring its neutrality and repelling North Vietnamese and Viet Cong invaders.

7. Our operations in Cambodia had no appreciable impact upon the recent 12-nation conference held in Djakarta. We have noted that the communique issued from this conference is a significant manifestation of the determination of countries of the region to restore and maintain peace in Southeast Asia.

I hope the above information will prove helpful to you.

With kindest regards,

Sincerely,

ELLIOT RICHARDSON,
Acting Secretary.

[Press Release, May 5, 1970]

[Following is the text of a letter from Ambassador Charles W. Yost, United States Representative to the United Nations, transmitted today to Ambassador Jacques Kosciuszko-Morizet, President of the United Nations Security Council.]

His Excellency

Mr. JACQUES KOSCIUSKO-MORIZET,
President of the Security Council,
United Nations, N.Y.

DEAR MR. PRESIDENT: I have the honor to refer to the letters of February 7 and 27, 1965, from the Permanent Representative of the United States of America to the President of the Security Council concerning the aggression against the Republic of Viet-Nam and to inform you of the following acts of armed aggression by forces of North Viet-Nam based in Cambodia which have required appropriate measures of collective self-defense by the armed forces of the Republic of Viet-Nam and the United States of America.

For five years North Viet-Nam has maintained base areas in Cambodia against the expressed wishes of the Cambodian Government. These bases have been used in violation of Cambodian neutrality as supply points and base areas for military operations against the Republic of Viet-Nam. In recent weeks North Vietnamese forces have rapidly expanded the perimeters of these base areas and expelled the remaining Cambodian Government presence from the areas. The North Vietnamese forces have moved quickly to link the bases along the border with South Viet-Nam into one continuous chain as well as to push the bases deeper into Cambodia. Concurrently, North Viet-Nam has stepped up guerrilla actions into South Viet-Nam and is concentrating its main forces in these base areas in preparation for further massive attacks into South Viet-Nam.

These military actions against the Republic of Viet-Nam and its armed forces and the armed forces of the United States require appropriate defensive measures. In his address to the American people on April 30, President Nixon stated:

"... if this enemy effort succeeds, Cambodia would become a vast enemy staging area and a springboard for attacks on South Vietnam along 600 miles of frontier: a refuge where enemy troops could return from combat without fear of retaliation.

North Vietnamese men and supplies could then be poured into that country, jeopardizing not only the lives of our men but the people of South Vietnam as well..."

The measures of collective self-defense being taken by U.S. and South Vietnamese forces are restricted in extent, purpose and time. They are confined to the border areas over which the Cambodian Government has ceased to exercise any effective control and which has been completely occupied by North Vietnamese and Viet Cong forces. Their purpose is to destroy the stocks and communications equipment that are being used in aggression against the Republic of Viet-Nam. When that purpose is accomplished, our forces and those of the Republic of Viet-Nam will promptly withdraw. These measures are limited and proportionate to the aggressive military operations of the North Vietnamese forces and the threat they pose.

The United States wishes to reiterate its continued respect for the sovereignty, independence, neutrality, and territorial integrity of Cambodia. Our purpose in taking these defensive measures was stated by President Nixon, in his address of April 30, as follows:

"We take this action not for the purpose of expanding the war into Cambodia but for the purpose of ending the war in Vietnam, and winning the just peace we all desire.

We have made and will continue to make every possible effort to end this war through

negotiation at the conference table rather than through more fighting in the battlefield."

I would request that my letter be circulated to the members of the Security Council.

Accept, Excellency, the assurances of my highest consideration.

CHARLES W. YOST.

CAMBODIA'S RELATIONSHIP WITH SEATO

THE LIBRARY OF CONGRESS,
Washington, D.C., April 30, 1970.

(By Larry A. Niksch, Analyst in Asian Affairs,
Foreign Affairs Division)

The international agreements provide the basic framework for Cambodia's relationship to the SEATO Treaty: the 1954 Geneva Agreement on Cambodia and the SEATO Pact itself. Article 7 of the Geneva Agreement contained a provision which discusses the limitations on Cambodia's right to join a military alliance or to accept the protection of one.¹ The Article, however, clearly did not bar membership in an alliance and reserved Cambodia's right to call for assistance if threatened. Article 7 read:

"The Royal Government of Cambodia will not join in any agreement with other States, if this agreement carries for Cambodia the obligation to enter into a military alliance not in conformity with the principles of the Charter of the United Nations, or, as long as its security is not threatened, the obligation to establish bases on Cambodian territory for the military forces of foreign powers."

Following Geneva, Cambodia actively sought a direct U.S. defense guarantee² but was ultimately persuaded to accept the status of a protocol state under the SEATO Pact. The protocol to the treaty read:

"The parties to the South-East Asia Collective Defense Treaty unanimously designate, for the purposes of Article 4 of the treaty, the States of Cambodia and Laos and the free territory under the jurisdiction of the State of Vietnam."

This protocol remains a part of the treaty; Prince Sihanouk, however, subsequently renounced SEATO protection.

Article 8 of the treaty provides that the signatories may amend the treaty area only by unanimous agreement. However, Article 4 declares that the signatories can take no action under the pact on any territory in the treaty area "except at the invitation or with the consent of the Government concerned." The United States has given explicit recognition to the right of the governments of the protocol states to define their relationship to SEATO. In discussing the Government of Laos' decision to reject SEATO's protection (under the 1962 Geneva Agreement on Laos), Secretary Rusk stated on July 12, 1962:

"Under the SEATO arrangements, the protocol would apply only on the request of the government of one of the protocol states, so that if the Laotian Government announces that it does not expect to call upon that protection, there is no particular problem from the point of view of the law of the matter or the arrangements concerned."

In 1955, Prince Sihanouk began to move Cambodia's foreign policy toward a neutralist stance. In May 1955, he informed the British Government that:

"As regards SEATO, Cambodia is not a member of this organization and is not bound under (the agreement) to support any action by SEATO unless it decides to do so to safeguard the defense of its territory. Again, this commitment is subject to mutual agreement and it is open to Cambodia to refuse to give such aid."

At this point, however, the Prince did not reject SEATO's protection but only stated

Footnotes at end of article.

that Cambodia did not feel obligated to support actions taken by the alliance. However, later in 1955 and during his trip to Peking in 1956, he did take this step. In September 1955 he rejected the protection offered by SEATO. The National Congress (Cambodia) of December 30-31, 1955 resolved that the government might accept aid "from any quarter, provided that it does not prejudice the sovereignty and the naturalty of the Kingdom."⁵

On February 18, 1956, while on a visit to China, Sihanouk said: "Cambodia is neutral. The people themselves request me to remain neutral whatever may happen. The SEATO has told us that we would be automatically protected. We reject such protection which can only bring us dishonor."⁶

Sihanouk had visited the Philippines prior to his trip to China because of an invitation to "participate in a reciprocal pact but I did not want it," but said after he returned home in late February (1956) that "I have refused the proposals of the Philippines to adhere to SEATO."⁷

In 1965, he informed the British Government in a communication:

"I am convinced that you will agree that the Cambodian people have the right to live in peace and also categorically to reject the protective umbrella of SEATO which has brought it only affliction and destruction."

As of today, Sihanouk's statement still stands as Cambodia's policy toward SEATO. The Lon Nol Government, stressing its desire to keep Cambodia neutral, has not moved to restore the SEATO umbrella.

LEGISLATIVE BACKGROUND OF THE COOPER-CHURCH AMENDMENT ON CAMBODIA

I. FY 1970 DEFENSE APPROPRIATION BILL

On December 15, 1969, Senator Church offered an amendment as a substitute for an amendment offered to the Defense Appropriation bill by Senators Cooper and Mansfield. The Church amendment, as modified, read:

"SEC. 643. In line with the expressed intention of the President of the United States none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos or Thailand."

It was adopted by a vote of 73-17 and the Cooper-Mansfield amendment was subsequently adopted by a vote of 80-9.

II. FOREIGN MILITARY SALES BILL—H.R. 15628

Following the President's decision to send U.S. military forces into Cambodia, Senators Church, Cooper, Aiken and Mansfield introduced an amendment to H.R. 15628 designed to prohibit further U.S. involvement in Cambodia, except the furnishing of military aid, and limited air action, without Congressional approval. On May 11 the amendment was adopted, with modification, by the Committee by a vote of 9-5.

Debate on the bill began in the Senate on May 13 and ended on June 30 after the amendment, with certain changes, was adopted 58-37. The amendments offered to it, and the action taken on them, were as follows:

1. Cooper—Rewrite of the preambular language; adopted 82-11 on May 26.

2. Dole—Make amendment inoperative if President determines POW's were being held in Cambodia; rejected 36-54 on June 3.

3. Byrd of W. Va.—Allow President to retain U.S. forces in Cambodia if he thought it necessary to protect the lives of American forces—defeated 47-50 on June 11.

4. Mansfield—No impugning of the Constitutional powers of the President—adopted 91-0 on June 11.

5. Byrd of W. Va.—Relating to the Constitutional powers of the President as Commander-in-Chief—adopted 79-5 on June 22.

6. Javits—Relating to the Constitutional powers of the Congress—adopted 73-0 on June 26.

7. Griffin—To permit U.S. to pay for foreign military advisers and mercenaries in Cambodia—rejected 45-50 on June 30.

8. Jackson—Allowing U.S. air activities if not in "direct" support of Cambodia—adopted 69-27 on June 30.

The text of the Cooper-Church amendment to H.R. 15628, as passed by the Senate, was:

"SEC. 47. LIMITATIONS ON UNITED STATES INVOLVEMENT IN CAMBODIA.—In concert with the declared objectives of the President of the United States to avoid the involvement of the United States in Cambodia after July 1, 1970, and to expedite the withdrawal of American forces from Cambodia, it is hereby provided that unless specifically authorized by law hereafter enacted, no funds authorized or appropriated pursuant to this Act or any other law may be expended after July 1, 1970, for the purposes of—

"(1) retaining United States forces in Cambodia;

"(2) paying the compensation or allowances of, or otherwise supporting, directly or indirectly, any United States personnel in Cambodia who furnish military instruction to Cambodian forces or engage in any combat activity in support of Cambodian forces;

"(3) entering into or carrying out any contract or agreement to provide military instruction in Cambodia, or to provide persons to engage in any combat activity in support of Cambodian forces; or

"(4) conducting any combat activity in the air above Cambodia in direct support of Cambodian forces."

Subsequently, in view of the passage of the Cooper-Church amendment to the Supplemental Foreign Assistance Bill, the amendment was deleted from H.R. 15628 by the conference committee.

III. FY 1971 DEFENSE APPROPRIATION BILL—H.R. 19590

The Defense Appropriation Bill was amended by the Senate Appropriations Committee at the request of Senators Cooper and Church to add Cambodia to the prohibition against involvement of U.S. ground personnel in Laos and Thailand. The bill was approved by the Senate on December 15, without any objection to this provision. The conference committee reported back with a proviso which made the section read as follows (proviso added in conference is in *italics*):

"SEC. 843. In line with the expressed intention of the President of the United States, none of the funds appropriated by this Act shall be used to finance the introduction of American ground combat troops into Laos, Thailand, or Cambodia: *Provided, That nothing contained in this section shall be construed to prohibit the President from taking action in said areas designed to promote the safe and orderly withdrawal or disengagement of U.S. Forces from Southeast Asia or to aid in the release of Americans held as prisoners of war.*"

On December 28 the Senate disagreed to the conference report because of this and another proviso added in conference and the bill was returned to the conference committee. It was reported from conference again on December 29 after deleting both the

proviso and "Cambodia" from coverage of the amendment, thus leaving the text as it was adopted in the FY 1970 Defense Appropriations Bill. In the meantime, the Cooper-Church amendment to the Supplemental Foreign Assistance Bill was agreed to on December 22.

IV. SUPPLEMENTAL FOREIGN ASSISTANCE AUTHORIZATION BILL—H.R. 19911

On December 13 the Committee adopted, without opposition, an amendment to the Supplemental Foreign Assistance Authorization Act, proposed by Senators Cooper, Church, Javits, Case, and Mansfield, which prohibited sending U.S. ground troops or military advisers into Cambodia. A second amendment, sponsored primarily by Senator Javits, specified that any U.S. aid should not be construed as a commitment to defend Cambodia. The text of the two amendments follows:

"SEC. 6. (a) In line with the expressed intention of the President of the United States, none of the funds authorized or appropriated pursuant to this or any other Act may be used to finance the introduction of United States ground combat troops into Cambodia, or to provide United States advisers to or for Cambodian military forces in Cambodia.

"(b) Military and economic assistance provided by the United States to Cambodia and authorized or appropriated pursuant to this or any other Act shall not be construed as a commitment by the United States to Cambodia for its defense."

The amendment was not contested in the Senate and the bill passed on December 16. The amendment was accepted by the House conferees—and both the House and the Senate agreed to the conference report on December 22.

COMMENDATION OF ROGER T. KELLEY, ASSISTANT SECRETARY OF DEFENSE FOR MANPOWER AND RESERVE AFFAIRS

Mr. STAFFORD. Mr. President, on March 21, Secretary Richardson announced that the administration would not seek an extension of the induction authority of the Selective Service Act. The President is to be congratulated for his efforts in leading the country toward eliminating a system of conscription that has been with us, except for a brief pause, for over 30 years.

I personally have awaited this particular announcement since the early days of 1967 when a small group of us in Congress began working toward the day when the power to induct, with all its ramifications, for military manpower affairs and Defense costs, would be removed from the lawbooks. Our recommendations at that time were published in a book entitled "How To End the Draft."

Mr. President, the drive for an all-volunteer force recorded another historic event recently. March 12 was the fourth anniversary of the day Roger T. Kelley assumed his responsibilities as Assistant Secretary of Defense for Manpower and Reserve Affairs. That anniversary was the occasion for an announcement that he would be returning to private life as of June 1.

I have followed closely the progress of the all-volunteer force and I have watched Roger Kelley pursue that goal from his leadership position as Chairman of the Project Volunteer Committee. With the President's support, Kelley has been the driving force behind the

move to a volunteer system and, as such, he deserves the respect and thanks of us all.

I know that Secretary Kelley is deeply respected on Capitol Hill for the quality of his testimony, for his forthrightness and understanding of the complex issues of military manpower. He has demonstrated to a sometimes very skeptical Congress that the all-volunteer force is in the best interests of both the military and civilian sectors of our Government.

In the 4 years which Roger Kelley has served as head of the manpower area, he has laid the groundwork for a future that now promises hope of settling the manpower problems which have plagued the services for generations. His accomplishments reveal his understanding of the importance of the all-volunteer force as an underpinning for manpower policy—a policy which must seek to attract and retain the best talent in society for the purpose of providing our national defense.

He has shown that by creating a professional, volunteer force, the services can expect better quality and better performance, increased readiness and increased effectiveness for what ultimately will be a much more cost-effective defense program.

Much of Secretary Kelley's related work has gone unrecognized by many who do not follow Defense policy, but it shall not go unrecorded. In the years ahead, the Congress will come to realize the important contribution he has made. It would be an impossible task to list those accomplishments, but I would like to take the time to mention just a few of the more significant accomplishments.

Secretary Kelley has provided a new direction for the reserve forces. Having been given the mission of first-line defense behind the active forces, the Reserves were in need of rebuilding. Kelley provided the design and direction for that when he ordered the restocking of Reserve inventories, reoriented their training to accomplish their new mission, initiated new recruiting policies to bolster their ranks with volunteers, and mobilized civilian employers to recognize the important role of the reservist to our Nation, in part by giving their reserve employees the opportunities to serve without sacrifice to their jobs or income.

Secretary Kelley has led the Defense Department in its superior effort to insure equal opportunity to all its members. In many ways, the work he has done at Defense will serve to lead the way for the civilian sector as it continues to move toward an open society for all. Each of the services has lived through its own racial crises over the last several years, and with Kelley's guidance, has come out the better for it.

The Defense Race Relations Institute which Kelley created works. It is a model for the rest of the Nation in reforming an establishment as tradition-bound as the military by teaching it to recognize the needs of all its members and to eliminate imbedded forms of institutionalized discrimination.

Secretary Kelley can be justly proud for having tackled and solved problems which much of America still must face.

Reform of the military compensation and retirement system has been high on Secretary Kelley's list of achievements. In establishing the concept of more compensation to the specific skills and needs of the services and needs of the services and by establishing principles of job-differential and cost-effective spending, as personified by the Uniformed Services Special Pay Act, Secretary Kelley has moved the military toward an ultimate resolution of personnel budget costs.

These are only a few of the areas of responsibility to which Secretary Kelley has contributed so much. There is no doubt that the next generation of managers in Defense manpower will find its jobs easier for Kelley's initiatives. I highly value the association I have had with Roger Kelley. I commend him for his superb performance and extend my thanks to him for his efforts. He will be missed in Washington.

Mr. President, I reserve the remainder of my time.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under the previous order, the Senator from Michigan (Mr. GRIFFIN) is recognized for not to exceed 15 minutes.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum. I ask that the time be charged against the Senator from Michigan.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, does the Senator from North Carolina (Mr. HELMS) have some time remaining?

The PRESIDING OFFICER. The Senator from North Carolina has 5 minutes remaining.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senator from North Carolina may utilize the remainder of his time under the order at this time.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator from North Carolina is recognized.

(The remarks Senator HELMS made at this point when he introduced S. 1431, to extend the Vocational Rehabilitation Act, are printed in the RECORD under Statements on Introduced Bills and Joint Resolutions.)

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum. I ask unanimous consent that the time be charged against the time of the Senator from Michigan (Mr. GRIFFIN).

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President,

I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL 10:45 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 10:45 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR EAGLETON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, following the recognition of the two leaders or their designees under the standing order, the distinguished Senator from Missouri (Mr. EAGLETON) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR THURMOND IN LIEU OF SENATOR GRIFFIN TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, with respect to the order which has been previously entered for the recognition of the Senator from Michigan (Mr. GRIFFIN), the name of the Senator from South Carolina (Mr. THURMOND) be substituted therefor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, am I recognized on my own time?

The PRESIDING OFFICER. Under the previous order, the Senator from West Virginia is recognized for not to exceed 15 minutes.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, and I ask that the time be charged against my order.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING OF CERTAIN REPORTS OF STANDING COMMITTEES AS SPECIAL REPORTS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reports to be submitted by the 17 standing committees of the Senate pursuant to section 136(a) of the Legislative Reorganization Act of 1946, as amended, be printed as special reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I yield such time as he may desire, from

the time allotted to me, to the distinguished Senator from Oklahoma (Mr. BARTLETT).

Mr. BARTLETT. Mr. President, I thank the distinguished Senator from the great State of West Virginia.

WOUNDED KNEE AND THE SO-CALLED TRAIL OF BROKEN TREATIES

Mr. BARTLETT. Mr. President, most Americans have a guilt feeling regarding the American Indian and rightfully so. Most would like to square things with our good Indian friends. Wounded Knee offers that opportunity.

The "Trail of Broken Treaties" slogan of AIM militants has strong emotional appeal to support these leaders in their supposed efforts to improve the poverty, health, and low unemployment of the Oglala-Sioux tribe.

But Americans must be careful of just what trail they are going to be taken down.

The primary goal of AIM leaders is to remove Mr. Richard Wilson as chairman of the tribe—by whatever means is possible.

First, a 14 to 4 vote of the tribal council against impeachment took place in December 1972.

Then, in February 1973, AIM used hostages as blackmail in an attempt to remove Mr. Wilson illegally and arbitrarily. The BIA is to be congratulated for resisting this arm twisting and for supporting the Oglala-Sioux's constitution of democratic self-government.

This was followed by intimidations and threats to tribal leaders including three being assaulted.

Now an initiative petition, circulated by tribal members who were apparently encouraged by AIM leadership, calls for a vote to eliminate their constitution and a return to the old paternalistic system of tribal leadership appointed by the BIA. Democratic self-government would be out the window. The validity and the sufficiency of signatures on this petition will be determined by the BIA.

AIM claims the welfare of a poor and impoverished Indian tribe is at stake.

What really is at stake is democratic constitutional government of the Oglala Sioux tribe. AIM is challenging the rights of tribal members to settle any differences they may have by constitutional means without interference and intimidation.

Individual freedom is threatened by armed anarchists.

Is this AIM's answer to self-determination for the American Indian?

And what about the welfare of the tribe?

AIM occupies approximately 4 square miles of Sioux land illegally by force.

All tribal schools were closed for 3 weeks. Two schools with approximately 200 children have been closed for 1 month and will be for the duration. Is this AIM's solution to Indian educational problems?

Some tribal members are prevented by the armed occupation from obtaining medical care in a normal manner. A helicopter is available to fly the sick to

a hospital and doctors—is this AIM's answer to poor health care?

The Oglala Sioux's housing construction program of 360 units is shut down completely, costing \$3,600 a day in interest, according to Eagle Bull and Vocu. Is this AIM's answer to the Indian housing problem?

I am advised that all tribal improvement programs are stopped by the illegal and unwanted occupancy.

The cost of the marshals already has reached a million dollars—and this expense continues.

The Justice Department expects to be paid by the Interior Department. Will this money come from the programs for the Oglala Sioux or from Indian programs in general?

Why should well-meaning people prolong the suffering of the Oglala Sioux by helping those who are causing it?

Americans can help by working through the Oglala Sioux tribal leaders to meet the real needs of the tribe—and by supporting the democratic principles of the Oglala Sioux—by resisting the AIM efforts of anarchy.

AIM's victory at Wounded Knee would be another loss for the American Indian.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time for the quorum call be charged to my allocation.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, there will now be a period for the transaction of routine morning business, for not to exceed 30 minutes, with statements therein limited to 3 minutes each.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ROBERT C. BYRD) laid before the Senate the following communication and letters, which were referred as indicated:

PROPOSED LEGISLATION FROM THE PRESIDENT

A communication from the President of the United States, transmitting a draft of pro-

posed legislation to authorize reduction or suspension of import barriers to restrain inflation (with an accompanying paper). Referred to the Committee on Finance.

PROPOSED LEGISLATION FROM NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Administrator, National Aeronautics and Space Administration, transmitting a draft of proposed legislation to amend section 203 of the National Aeronautics and Space Act of 1958, and for other purposes (with accompanying papers). Referred to the Committee on Aeronautical and Space Sciences.

REPORT OF NATIONAL ADVISORY COUNCIL ON CHILD NUTRITION

A letter from the Assistant Secretary of Agriculture, and Chairman, National Advisory Council on Child Nutrition, transmitting, pursuant to law, a report of that Council, for the year 1972 (with an accompanying report). Referred to the Committee on Agriculture and Forestry.

REPORT ON OVEROBLIGATIONS OF APPROPRIATIONS

A letter from the Deputy Secretary of Defense, transmitting, pursuant to law, three reports on overobligations of appropriations within the Department of Defense (with accompanying reports). Referred to the Committee on Appropriations.

PROPOSED LEGISLATION FROM CENTRAL INTELLIGENCE AGENCY

A letter from the Director, Central Intelligence Agency, transmitting a draft of proposed legislation to amend the Central Intelligence Agency Retirement Act of 1964 for certain employees, as amended, and for other purposes (with accompanying papers). Referred to the Committee on Armed Services.

PROPOSED LEGISLATION FROM DEPARTMENT OF DEFENSE

A letter from the General Counsel of the Department of Defense, transmitting a draft of proposed legislation to amend titles 10 and 14, United States Code, and certain other laws, to modernize the retirement structure relating to members of the uniformed services (with accompanying papers). Referred to the Committee on Armed Services.

PROPOSED LEGISLATION FROM CANAL ZONE GOVERNMENT

A letter from the Governor, Canal Zone Government, transmitting a draft of proposed legislation to authorize the President to prescribe regulations relating to the purchase, possession, consumption, use, and transportation of alcoholic beverages in the Canal Zone (with an accompanying paper). Referred to the Committee on Armed Services.

REPORT ON BARGE MIXING RULE PROBLEM

A letter from the Secretary of Transportation, transmitting, pursuant to law, a report on the Barge Mixing Rule Problem (with an accompanying report). Referred to the Committee on Commerce.

REPORTS OF NATIONAL RAILROAD PASSENGER CORPORATION

A letter from the Vice President, Public and Government Affairs, National Railroad Passenger Corporation (Amtrak), transmitting, pursuant to law, a report of that Corporation, for the month of December, 1972 (with an accompanying report). Referred to the Committee on Commerce.

A letter from the Vice President, Public and Government Affairs, National Railroad Passenger Corporation (Amtrak), transmitting, pursuant to law, a report of that Corporation, for the month of February, 1973 (with an accompanying report). Referred to the Committee on Commerce.

PROPOSED LEGISLATION FROM THE ATTORNEY GENERAL

A letter from the Attorney General, transmitting a draft of proposed legislation to

amend sections 101 and 902 of the Federal Aviation Act of 1958 and Chapter 2, Title 18, United States Code, to implement the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation, and for other purposes (with accompanying papers). Referred to the Committee on Commerce.

NOMINATION FOR MEMBER OF THE DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

A letter from the Commissioner of the District of Columbia, nominating, pursuant to law, Alfred P. Love for reappointment as a Member of the District of Columbia Redevelopment Land Agency. Referred to the Committee on the District of Columbia.

REPORT OF U.S. TARIFF COMMISSION

A letter from the Chairman, United States Tariff Commission, transmitting, pursuant to law, a report of that Commission, for the fiscal year ended June 30, 1972 (with an accompanying report). Referred to the Committee on Finance.

PROPOSED LEGISLATION FROM THE RENEGOTIATION BOARD

A letter from the Chairman, The Renegotiation Board, transmitting a draft of proposed legislation to extend the Renegotiation Act of 1951 (with an accompanying paper). Referred to the Committee on Finance.

INTERNATIONAL AGREEMENTS, OTHER THAN TREATIES

A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties, entered into by the United States (with accompanying papers). Referred to the Committee on Foreign Relations.

PROPOSED LEGISLATION FROM DEPARTMENT OF STATE

A letter from the Acting Assistant Secretary for Congressional Relations, Department of State, transmitting a draft of proposed legislation to amend the International Organizations Immunities Act to authorize the President to extend certain privileges and immunities to the Organization of African Unity (with an accompanying paper). Referred to the Committee on Foreign Relations.

PROPOSED LEGISLATION FROM THE OFFICE OF MANAGEMENT AND BUDGET

A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a draft of proposed legislation to extend the period within which the President may transmit to the Congress plans for the reorganization of agencies of the Executive Branch of the Government, and for other purposes (with an accompanying paper). Referred to the Committee on Government Operations.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Examination of Financial Statements of the Tennessee Valley Authority for Fiscal Year 1972", dated March 27, 1973 (with an accompanying report). Referred to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Protecting the Consumer From Potentially Harmful Shellfish (Clams, Mussel, and Oysters)", Food and Drug Administration, Department of Health, Education, and Welfare, dated March 29, 1973 (with an accompanying report). Referred to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Problems in Obtaining and Enforcing Compliance With Good Manufacturing Practices for Drugs", Food and Drug Administration, Department of Health, Education, and Welfare, dated March 29, 1973 (with an accompanying report). Referred to the Committee on Government Operations.

REPORT ON FEDERAL COLUMBIA RIVER POWER SYSTEM

A letter from the Acting Secretary of the Interior, transmitting, pursuant to law, a report on the Federal Columbia River Power System, for the year 1972 (with an accompanying report). Referred to the Committee on Interior and Insular Affairs.

PROCEEDINGS OF MEETINGS OF THE JUDICIAL CONFERENCE

A letter from the Chief Justice, Supreme Court of the United States, transmitting, pursuant to law, the proceedings of the meeting of the Judicial Conference held in Washington, D.C., on October 26, 27, 1972 (with accompanying papers). Referred to the Committee on the Judiciary.

PROPOSED LEGISLATION FROM THE ATTORNEY GENERAL

A letter from the Attorney General, transmitting a draft of proposed legislation to amend Section 215, Title 18, United States Code, Receipt of Commissions or Gifts for procuring Loans, to expand the institutions covered; to encompass indirect payments to bank officials; to make violation of the Section a felony; and to specifically include offerors and givers of the proscribed payments; and for other related purposes (with accompanying papers). Referred to the Committee on the Judiciary.

A letter from the Attorney General, transmitting a draft of proposed legislation to prohibit the unauthorized possession within any Federal penal or correctional institution, of any substance or thing designed to damage the institution or to injure any persons within or part of the institution, and for other purposes (with an accompanying paper). Referred to the Committee on the Judiciary.

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting temporary admission into the United States of certain aliens (with accompanying papers). Referred to the Committee on the Judiciary.

REPORTS RELATING TO THIRD PREFERENCE AND SIXTH PREFERENCE FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports relating to third preference and sixth preference for certain aliens (with accompanying papers). Referred to the Committee on the Judiciary.

PERMANENT RESIDENCE STATUS FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders granting permanent residence status to certain aliens (with accompanying papers). Referred to the Committee on the Judiciary.

REPORTS ON DEFECTOR ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders relating to defector aliens (with accompanying papers). Referred to the Committee on the Judiciary.

PROPOSED LEGISLATION FROM DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend for three years the programs for comprehensive State and areawide health planning, and for comprehensive public health service and health services development, and to repeal a requirement that at least 15 per centum of a State's formula allotment for public health

services be available only for mental health services (with an accompanying paper). Referred to the Committee on Labor and Public Welfare.

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to make permanent the authority to conduct national health surveys and studies (with an accompanying paper). Referred to the Committee on Labor and Public Welfare.

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Drug Abuse Office and Treatment Act of 1972 to modify the authorization of appropriations for the program of special project grants and contracts, and for other purposes (with an accompanying paper). Referred to the Committee on Labor and Public Welfare.

A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to make permanent the program of research and demonstrations relating to health facilities and services (with an accompanying paper). Referred to the Committee on Labor and Public Welfare.

PROPOSED LEGISLATION FROM COMMITTEE FOR PURCHASE OF PRODUCTS AND SERVICES OF THE BLIND AND OTHER SEVERELY HANDICAPPED

A letter from the Chairman, Committee for Purchase of Products and Services of the Blind and Other Severely Handicapped, transmitting a draft of proposed legislation to increase the authorization for fiscal year 1974 for the Committee for Purchase of Products and Services of the Blind and Other Severely Handicapped (with an accompanying paper). Referred to the Committee on Labor and Public Welfare.

REPORT OF GIRL SCOUTS OF AMERICA

A letter from the President, and National Executive Director, Girl Scouts of the United States of America, transmitting, pursuant to law, a report of that Organization, for the fiscal year ended September 30, 1972 (with an accompanying report). Referred to the Committee on Labor and Public Welfare.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ROBERT C. BYRD):

A concurrent resolution of the Legislature of the State of West Virginia. Referred to the Committee on Interior and Insular Affairs:

"SENATE CONCURRENT RESOLUTION No. 3

"Memorializing the Congress of the United States to recognize the natural beauty, scenic splendor and historical significance of the New River and the New River Gorge and expressing the sentiments of the West Virginia Legislature that Congress should, by appropriate legislation, preserve the area in its natural state for posterity and provide the necessary funds to develop it as a national park

"Whereas, The New River and the New River Gorge abound in natural beauty, scenic splendor and historical significance; and

"Whereas, This is an area which should be preserved in its natural state for all posterity and made available for recreational use for people from throughout the country; and

"Whereas, The Federal Government is possessed with the resources to develop this area as a national park, thereby preserving its natural beauty, scenic splendor and historical significance for posterity and enable people from throughout the country to enjoy recreational uses of this area with the people of West Virginia; therefore, be it

"Resolved by the Legislature of West Virginia: That it memorialize the Congress of the United States to recognize the natural beauty, scenic splendor and historical significance

cance of the New River and New River Gorge and expresses its sentiments that the Congress, by appropriate legislation, preserve the area in its natural state for posterity and provide the necessary funds to develop it as a national park; and, be it

Resolved further, That certified copies of this resolution be sent to the Clerk of the United States Senate and Clerk of the House of Representatives and to members of the West Virginia congressional delegation."

A resolution of the Sacramento County Central Committee of the American Independent Party of the State of California, praying for a rejection of the United Nations Genocide Convention. Referred to the Committee on Foreign Relations.

RESOLUTION OF THE GENERAL COURT OF NEW HAMPSHIRE ON VIETNAM

Mr. MCINTYRE. Mr. President, I ask unanimous consent to have House Concurrent Resolution No. 3 of the General Court of New Hampshire, March 22, 1973, regarding the setting of an official date for the start of the Vietnam conflict, inserted in the RECORD at this point and be referred to the appropriate Committee.

There being no objection, the resolution was ordered to be printed in the RECORD and referred to the Committee on Armed Services, as follows:

HOUSE CONCURRENT RESOLUTION No. 3
Memorializing the Congress of the United States to enact legislation setting February 1, 1955, as the starting date of the Vietnam Conflict in order to give recognition to all who served in the Vietnam theatre of war

Whereas, on November 8, 1950, the first American United States Air Force advisers arrived in Vietnam to assist the French and South Vietnamese, who at that time were deeply engaged in the Indochina War, and we have remained in Vietnam during twenty years of continuing combat, and

Whereas, after the fall of Dien Bien Phu in May 1954 and the partitioning of Vietnam at the 17th parallel, French forces withdrew and the American presence was gradually increased and escalated as more and more Americans were committed during the ensuing years of insurgency, and

Whereas, many Americans were killed and injured during the twenty years of continuous strife, the first combat death that the government officially recognizes occurred in 1961, over three and one-half years before the date now set as the start of the Vietnam Conflict, August 5, 1964, and

Whereas, the United States Senate has twice voted to repeal the Gulf of Tonkin Resolution that was passed as a result of the attack by the North Vietnamese on August 5, 1964, against United States Navy ships cruising in the Tonkin Gulf. The administration has publicly stated that it does not regard the Gulf of Tonkin Resolution as the basis for its authority to operate in Vietnam, therefore there no longer exists any validity for retaining August 5, 1964 as the starting date of the Vietnam Conflict, now therefore be it

Resolved by the House of Representatives of the State of New Hampshire, the Senate concurring: That the Congress of the United States is hereby memorialized to set February 1, 1955 as the starting date of the Vietnam Conflict for the purposes of veterans administration and all other branches of the federal government so that all Vietnam Veterans may receive their full entitlement to benefits; and be it further

Resolved, that the secretary of state be instructed to forward a copy of this concurrent resolution to the President of the United

States, the Vice President of the United States, the Speaker of the House of Representatives, and to each member of the congressional delegation from New Hampshire.

LEGISLATIVE HISTORY OF THE COMMITTEE ON FOREIGN RELATIONS REPORT ON THE 92D CONGRESS [S. REPT. NO. 93-98]

Mr. FULBRIGHT, from the Committee on Foreign Relations, pursuant to section 136 of the Legislative Reorganization Act of 1946, as amended, submitted a report entitled "Legislative History of the Committee on Foreign Relations, United States Senate, Ninety-Second Congress," which was ordered to be printed.

EXTENSION OF TIME FOR FILING REPORT OF SPECIAL COMMITTEE ON AGING

Mr. CHURCH. Mr. President, I ask unanimous consent to move from April 2 to April 30 the date by which the report of the Senate Special Committee on Aging shall be submitted. I am asking for this additional time because: First, new developments in aging are occurring and should be alluded to in the report, and second, I wish to assure that the members of the committee have ample time to review the manuscript of the report.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. WILLIAMS, from the Committee on Labor and Public Welfare:

John H. Stender, of Washington, to be an Assistant Secretary of Labor.

The above nomination was reported with the recommendation that the nomination be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HELMS (for himself, Mr. McCURE, Mr. BARTLETT, Mr. PACKWOOD, and Mr. BEALL):

S. 1431. A bill to provide for the continuation of programs authorized under the Vocational Rehabilitation Act, and for other purposes. Referred to the Committee on Labor and Public Welfare.

S. 1432. A bill to amend the Federal Aviation Act of 1958 to authorize free or reduced rate transportation for widows, widowers, and minor children of employees who have died while employed by an air carrier or foreign air carrier after twenty or more years of such employment. Referred to the Committee on Commerce.

By Mr. SPARKMAN:

S. 1433. A bill for the relief of James Agudelo. Referred to the Committee on the Judiciary.

By Mr. ROTH (for himself, Mr. HUMPHREY, Mr. BEALL, Mr. BIBLE, Mr. BIDEN, Mr. BROCK, Mr. BURDICK, Mr. COOK, Mr. DOMENICI, Mr. HART, Mr. HATHAWAY, Mr. HUGHES, Mr. INOUE, Mr. MONDALE, Mr. MOSS, Mr. PASTORE, Mr. SCOTT of Pennsylvania, Mr. STEVENSON, Mr. THURMOND, Mr. TUNNEY, Mr. WILLIAMS, and Mr. YOUNG):

S. 1434. A bill to amend the Internal Revenue Code of 1954 to disregard children's benefits received by an individual under the Social Security Act in determining whether that individual is a dependent of a taxpayer. Referred to the Committee on Finance.

By Mr. EAGLETON (for himself, Mr. MATHIAS, Mr. INOUE, Mr. STEVENSON, and Mr. TUNNEY):

S. 1435. A bill to provide an elected Mayor and City Council for the District of Columbia, and for other purposes. Referred to the Committee on the District of Columbia.

By Mr. HARTKE:

S. 1436. A bill to amend title II of the Social Security Act and the Internal Revenue Code of 1954 to provide that an individual may elect to have any employment of self-employment performed by him after attaining age 65 excluded (for both tax and benefit purposes) from coverage under the old-age, survivors, and disability insurance system. Referred to the Committee on Finance.

By Mr. McCURE:

S. 1437. A bill for the relief of Mr. Bhagwan Mirchandani. Referred to the Committee on the Judiciary.

By Mr. GURNEY:

S. 1438. A bill to authorize and request the President to issue annually a proclamation designating August 26 of each year as "Equal Rights Day." Referred to the Committee on the Judiciary.

By Mr. MUSKIE:

S. 1439. A bill to reform the Federal income, estate, and gift tax laws. Referred to the Committee on Finance.

By Mr. PROXMIER:

S. 1440. A bill to assure that Federal housing assistance programs are carried out to the full extent authorized by Congress. Referred to the Committee on Banking, Housing, and Urban Affairs.

By Mr. WILLIAMS:

S. 1441. A bill to extend certain benefits to National Guard technicians, to correct certain inequities in the crediting of National Guard technician service in connection with civil service retirement, and for other purposes. Referred to the Committee on Post Office and Civil Service.

By Mr. COOK (for himself and Mr. BAKER):

S. 1442. A bill to amend the Rural Electrification Act of 1936, as amended, to establish a Rural Electrification and Telephone Revolving Fund to provide adequate funds for rural electric and telephone systems through insured and guaranteed loans at interest rates which will allow them to achieve the objectives of the Act, and for other purposes. Referred to the Committee on Agriculture and Forestry.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HELMS (for himself, Mr. McCURE, Mr. BARTLETT, Mr. PACKWOOD, and Mr. BEALL):

S. 1431. A bill to provide for the continuation of programs authorized under the Vocational Rehabilitation Act, and for other purposes. Referred to the Committee on Labor and Public Welfare.

Mr. HELMS. Mr. President, today I am introducing a bill to extend the Voca-

tional Rehabilitation Act through fiscal year 1974. This bill has the full support of the administration and was offered for consideration in the House by Congressman CARL LANDGREBE.

I am offering this bill in the midst of the public discussion over the President's veto of the bill, S. 7, providing authorizations for vocational rehabilitation. It is my hope that this bill will provide a constructive alternative to the excessive spending encompassed in S. 7, thereby giving the Members of this body the opportunity to vote against uncontrolled Federal spending, against inflation, but not against full and adequate support for the Federal effort to rehabilitate and train the handicapped.

Let me briefly outline the purposes of my bill:

First. Continue existing programs authorized under the Vocational Rehabilitation Act;

Second. Extend for 2 years authorization for appropriations under the act, eliminate the specific dollar amounts authorized for both formula grants and project grants, and combine into one authorization for appropriations the several existing authorizations under the act. These changes are designed to provide flexibility in the use of Federal resources and to simplify the structure of the existing program and;

Third. Authorize grant funds to be used for assisting in the development of projects for individuals with spinal cord injuries and for low-achieving deaf individuals.

My proposal would authorize for fiscal year 1973, this current fiscal year, \$697,482,000 for the traditional program for vocational rehabilitation. For fiscal year 1974, this bill would authorize a total figure of \$700,096,000.

The 2-year program would provide a total of \$1,397,600.

Mr. President, this is a reasonable amount, an amount that will allow the current vocational rehabilitation program to grow and expand in an orderly manner. The handicapped in this Nation deserve fair and honest treatment. They do not deserve inflated promises and false representations. The person who is handicapped feels the bite of inflation as strongly as any other citizen. Therefore, what I propose is a Federal funding level which is both fiscally responsible and responsive to the vocational rehabilitation needs of handicapped Americans. This bill would not duplicate such existing programs as medicare, medicaid, social services, the Social Security Act, the development disabilities program, and the education programs for the handicapped, as were duplicated in S. 7, the bill vetoed by the President.

As we all know, President Nixon has been an ardent supporter of the vocational rehabilitation program, which is directed toward assisting vulnerable individuals who, without vocational rehabilitation would not be able to function physically in a working setting, as their more fortunate peers can. The President's support is emphasized by the fact that during his administration

amounts spent for that program have gone from \$371 million a year to \$650 million a year, a 75-percent increase. In fact, it is considered one of the most successful of the Federal Government funded programs.

The fashionable idea that the defense budget is bloated at the expense of spending for human needs is a pernicious myth which has no foundation in fact. The defense budget has been reduced to its lowest level—in terms of buying power and percentage of gross national product—in almost a quarter of a century. We are at the razor's edge. Any further cuts in the current, barebones defense budget would weaken the United States at the very time it is realizing the greatest negotiating breakthroughs of its history, including the second round of SALT and the upcoming mutual balanced force reduction talks.

The proposed defense budget is at 6.2 percent of our GNP, the lowest since pre-Korean war days and drastically below the 8.8-percent defense spending taken from the GNP in 1964, or the 9.4 percent it took in 1961.

In fiscal 1968, defense spending consumed 43.95 percent of the Federal budget. In fiscal 1974 it would take only 29.2 percent of the budget. Compare this to the 64 percent which defense took from the fiscal 1953 budget.

While the fiscal 1974 defense budget is only \$600 million more than it was 6 years ago—that is about the same—Federal spending for social and economic programs has more than doubled, from \$72.8 billion to \$153.4 billion.

The national defense share of total public spending—Federal, State, and local—is at the lowest level since 1940.

Military and related civil service manpower has been reduced by 1,588,000 or 32 percent, in the last 6 years.

President Nixon has eliminated the Armed Forces draft, and one cost of achieving an all-volunteer force is that over half of today's defense budget is for personnel. Personnel costs have increased by over \$11 billion since 1968.

In terms of constant buying power, there has been a 31-percent cutback in the national defense budget since fiscal year 1968—hardly a misallocation of priorities.

Arguments raised on the theory of reducing defense spending rather than domestic program spending are specious and invalid in that the Congress has the sole responsibility for the national defense, while the programs in the domestic area are not purely Federal in nature. Welfare and social funding, Federal, State, and local, as well as private money, is now more than double the amount spent by the Congress in the defense area.

I hope that my colleagues will support this bill, which I feel represents a prudent, reasonable approach to the need for an extension of the Vocational Rehabilitation Act.

I can understand how tempting the prospect of overriding the President's veto of S. 7 is to some of my colleagues, for there are few causes more worthy than providing an opportunity, through

rehabilitation, for the handicapped to become self-sufficient and productive members of society.

But let me add a final word of caution: The American people want to hold down inflation; they want to stabilize Federal spending and halt the increase in prices, because the only alternative to this restraint is a substantial tax increase.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1431

A bill to provide for the continuation of programs authorized under the Vocational Rehabilitation Act, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Vocational Rehabilitation Amendments of 1973".

CONSOLIDATION AND EXTENSION OF APPROPRIATIONS AUTHORIZATIONS

SEC. 2 (a) Section 1(b) of the Vocational Rehabilitation Act is amended to read as follows:

"(b) There are authorized to be appropriated for carrying out this Act \$697,482,000 for the fiscal year ending June 30, 1973, \$700,096,000 for the fiscal year ending June 30, 1974. Sums so appropriated for carrying out section 4, 12, or 13 shall remain available until expended."

(b) Section 7 of such Act is amended by striking out subsection (d) thereof and redesignating subsection (e) as subsection (d).

(c) Section 10 of such Act is repealed. (d) Section 12 of such Act is amended by striking out subsection (i) thereof and redesignating subsection (j) as subsection (i).

(e) Section 13 of such Act is amended by striking out subsection (f) thereof.

(f) Subsection (a) of section 15 of such Act is amended by striking out paragraph (2) thereof and redesignating paragraphs (3) and (4) thereof as paragraphs (2) and (3), respectively.

INCLUSION OF PROGRAMS FOR THE LOW-ACHIEVING DEAF AND SPINAL CORD INJURED IN SPECIAL PROJECTS PROVISION

SEC. 3. Subsection (a) of new section 4 of the Vocational Rehabilitation Act is amended by striking out "and" at the end of clause (2)(C) and by inserting before the period at the end of clause (2)(D) the following: ", and (E) make grants to public or non-profit private agencies for paying part of the cost of planning, preparing for, and initiating programs to provide vocational rehabilitation services to individuals with spinal cord injuries or to low-achieving deaf individuals".

INCLUSION OF SERVICES FOR MIGRATORY AGRICULTURAL WORKERS IN SPECIAL PROJECTS PROVISION

SEC. 4. (a) Subsection (a) of section 4 of the Vocational Rehabilitation Act, as amended by section 3 of this Act, is further amended by striking out "and" at the end of clause (2)(D) and by inserting before the period at the end of clause (2)(E) the following: ", and (F) make grants to any State agency designated pursuant to a plan approved under section 5, or to any local agency participating in the administration of such a plan, for paying part of the cost of pilot or demonstration projects for the provision of vocational rehabilitation services to handicapped individuals who, as determined in accordance with regulations prescribed by

the Secretary of Labor, are migratory agricultural workers, and to members of their families (whether or not handicapped) who are with them, including maintenance and transportation of any such individual and members of his family where necessary to the rehabilitation of that individual. Maintenance payments under clause (2) (F) of the first sentence of this subsection shall be consistent with any maintenance payments made to other handicapped individuals in the State under a State plan approved under this Act. Grants under such clause shall be conditioned upon satisfactory assurance that in the provision of such services there will be appropriate cooperation between the grantee and other public or nonprofit private agencies having special skills or experience in the provision of services to migratory agricultural workers or their families. In administering the program authorized by clause (2) (F) of the first sentence of this subsection, the Secretary shall, for the purpose of achieving appropriate coordination, periodically consult with other Federal officials who administer programs for migratory agricultural workers under other provisions of law, including title I of the Elementary and Secondary Education Act of 1965, section 311 of the Economic Opportunity Act of 1964, and the Farm Labor Contractor Registration Act of 1963.

(b) The Vocational Rehabilitation Act is further amended by striking out section 17 thereof.

REALLOTMENT OF STATE GRANTS

SEC. 5. Section 2 of the Vocational Rehabilitation Act is amended by adding at the end thereof the following new subsection:

"(d) Whenever the Secretary determines that any amount of an allotment to a State for any fiscal year will not be utilized by such State in carrying out the purposes of this section, he may make such amount available for carrying out the purposes of this section to one or more other States to the extent he determines such other State will be able to use such additional amount during such year for carrying out such purposes. Any amount made available to a State for any fiscal year pursuant to the preceding sentence shall, for purposes of this Act, be regarded as part of such State's allotment (as determined under the preceding provisions of this section) for such year."

MODIFICATION OF ALLOTMENT PROVISIONS

SEC. 6. (a) Subsection (a) of section 2 of the Vocational Rehabilitation Act is amended by striking out "authorized to be appropriated by paragraph (1) of section 1(b) for meeting the cost of vocational rehabilitation services" in the first sentence and inserting in lieu thereof "appropriated for grants to States under this section", by striking out the second sentence of such section, and by striking out "two sentences" wherever it appears in the third sentence of such section inserting in lieu thereof "sentence".

(b) Subsection (a) of section 2 of such Act is further amended by striking out "\$1,000,000" and inserting in lieu thereof "an amount equal to one quarter of 1 per centum of the amount appropriated for such year for grants to States under this section".

(c) Paragraph (1) of section 15(a) of such Act is amended by striking out "authorized to be appropriated by paragraph (2) of this subsection of meeting the costs described in paragraph (3) of this subsection" in the first sentence and inserting in lieu thereof "appropriated for payments under this section".

PROVISIONS FOR OUTLYING AREAS

Extension of Minimum Allotment to Outlying Areas

SEC. 7. (a) Subsection (a) of section 2 of the Vocational Rehabilitation Act is amended

by striking out "(other than the Virgin Islands, Puerto Rico, and Guam)".

Inclusion of American Samoa and Trust Territory of the Pacific Islands in State Programs

(b) Subsection (f) of section 11 of such Act is amended by striking out "and Guam; and, for purposes of sections 4, 7, 12, and 13 only of this Act, American Samoa and the Trust Territory of the Pacific Islands, and for such purposes" and inserting in lieu thereof "Guam, American Samoa, and the Trust Territory of the Pacific Islands; for American Samoa and the Trust Territory of the Pacific Islands".

Application of Minimum Allotment Percentage

(c) Clause (B) of section 11(g) (1) of such Act is amended by inserting "the Trust Territory of the Pacific Islands, American Samoa," following "Guam,".

PROVISION TO ALLOW STATE AGENCY TO SHARE FUNDING WITH ANOTHER PUBLIC AGENCY

SEC. 8. Clause (1) of section 5(a) (1) (A) of the Vocational Rehabilitation Act is amended by inserting "or any other public agency" following "another agency of the State".

TAKING INTO ACCOUNT OUTSIDE VIEWS

SEC. 9. Subsection (a) of section 5 of the Vocational Rehabilitation Act is amended by striking out "and" at the end of clause (13), by striking out the period at the end of clause (14) (C) and inserting in lieu thereof "; and", and by adding at the end of such subsection the following new clause:

"(15) provide satisfactory assurance to the Secretary that the State agency designated pursuant to paragraph (1) (or each State agency if two are so designated) and any sole local agency administering the plan in a political subdivision of the State will take into account, in connection with matters of general policy arising in the administration of the plan, the views of, among others, individuals who are recipients of vocational rehabilitation services, individuals who represent citizen groups, individuals who represent professional groups, and individuals who are providers of vocational rehabilitation services."

INCREASE IN TRAINING ALLOWANCES

SEC. 10. Paragraph (B) of section 13(a) (2) of the Vocational Rehabilitation Act is amended by striking out "\$25" and inserting in lieu thereof "\$30".

INCREASE IN AMOUNT FOR EVALUATION

SEC. 11. The subsection redesignated as subsection (d) of section 7 of the Vocational Rehabilitation Act by section 2(b) of this Act is amended by striking out "\$1,000,000" and inserting in lieu thereof "\$3,000,000".

PARTICIPATION IN THE COST OF SERVICES

SEC. 12. Subsection (a) of section 5 of the Vocational Rehabilitation Act, as amended by section 9 of this Act, is further amended by striking out "and" at the end of clause (14) (C), by striking out the period at the end of clause (15) and inserting in lieu thereof "; and", and by adding at the end of such subsection the following new clause:

"(16) provide, in any case in which an individual is able to participate in the cost of his rehabilitation under the State plan, for such participation in accordance with regulations prescribed by the Secretary in the light of such ability."

TIME LIMITATION ON WORK EXPERIENCE

SEC. 13. Subsection (a) of section 5 of the Vocational Rehabilitation Act, as amended by sections 9 and 12 of this Act, is further amended by striking out "and" at the end of clause (15), by striking out the period at the end of clause (16) and inserting in lieu thereof "; and", and by adding at the end of such subsection the following new clause:

"(17) provide that where an individual participates in a program of work experience under the State plan, such participation shall not exceed one year in duration."

ALLOWING STATE AGENCY FOR THE BLIND TO ACT AS STATE EVALUATION AND WORK ADJUSTMENT AGENCY

SEC. 14. Paragraph (1) of section 15(c) of the Vocational Rehabilitation Act is amended by striking out "(other than the State blind commission or other agency providing assistance or services to the adult blind)".

INCLUSION OF INNOVATION IN REGULAR STATE PROGRAM

SEC. 15. (a) The Vocational Rehabilitation Act is amended by striking out section 3 thereof and redesignating sections 4, 5, 6, 7, 8, 9, 11, 12, 13, 14, 15, 16, and 18, and all references thereto, as sections 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 16, respectively.

(b) The Vocational Rehabilitation Act is further amended by striking out—

(1) "(except for expenditures with respect to which the State is entitled to payments under section 3)" in section 2(b);

(2) "and section 3" in section 2(c);

(3) "or 3" wherever it appears in the section redesignated as section 4(c) by subsection (a) of this section;

(4) "or 3" in the first sentence of the section redesignated as section 5 by subsection (a) of this section; and

(5) "and 3" in the section designated as section 14(d) by subsection (a) of this section.

APPLICATION OF PROVISIONS OF FEDERAL LAW

SEC. 16. The Vocational Rehabilitation Act is amended by inserting after the section redesignated as section 14 by section 15(a) of this Act the following new section:

"APPLICATION OF PROVISIONS OF FEDERAL LAW

"Sec. 15. An individual who, as a part of his rehabilitation under a State plan approved under section 4 of this Act, participates in a program of work experience in a Federal agency, shall not, by reason thereof, be considered to be a Federal employee or to be subject to the provisions of law relating to Federal employment, including those relating to hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits."

EFFECTIVE DATE

SEC. 17. The amendments made by this Act shall become effective with respect to appropriations for fiscal years beginning after June 30, 1973.

By Mr. ROTH (for himself, Mr. HUMPHREY, Mr. BEALL, Mr. BIBLE, Mr. BIDEN, Mr. BROCK, Mr. BURDICK, Mr. COOK, Mr. DOMENICI, Mr. HART, Mr. HATHAWAY, Mr. HUGHES, Mr. INOUE, Mr. MONDALE, Mr. MOSS, Mr. PASTORE, Mr. SCOTT of Pennsylvania, Mr. STEVENSON, Mr. THURMOND, Mr. TUNNEY, Mr. WILLIAMS, and Mr. YOUNG):

S. 1434. A bill to amend the Internal Revenue Code of 1954 to disregard children's benefits received by an individual under the Social Security Act in determining whether that individual is a dependent of a taxpayer. Referred to the Committee on Finance.

Mr. ROTH. Mr. President, late in the last Congress I introduced a simple but nonetheless badly needed amendment to H.R. 1, the welfare reform legislation. The amendment was accepted on October 5, 1972, by a rollcall vote of 43 to 31, when Members rejected a motion to table. Unfortunately, however, the amendment was deleted during conference, and

failed to become law. Therefore, Senator HUMPHREY and I, together with several other Members, are reintroducing the bill now in the hope that it will be enacted during this session.

Essentially, our bill provides that social security survivor benefits paid on behalf of a child shall not be taken into account in determining whether the child is receiving more than one-half his support from a surviving parent. The purpose of the legislation is to correct what I consider to be a gross inequity in the present law.

Under the present law, a parent must prove that he or she has contributed more than one-half of the support of a child before the child can be claimed as a dependent. If the child receives social security survivor benefits because of the death of a parent, the social security payments are considered as the child's contribution to his or her own support. Consequently, the widow or widower must be able to prove that he or she contributed more to the support of the child than the child received in survivor's benefits. While this requirement may appear at first glance to be reasonable, its effect is to discriminate unjustly against widows or widowers in the low or lower middle income brackets and to encourage individuals to accept public assistance rather than work.

Let me illustrate with a simple, but true, example:

One of my constituents was a widow with four children. After the death of her husband, she applied for and received social security survivor benefits on behalf of her children. Her application was approved, and during 1970, she received roughly \$2,400 on behalf of the children. Obviously, a family of five cannot live on an annual income of \$2,400. So my constituent worked as a secretary and earned \$3,700 during 1970. I would like to point out that if my constituent had chosen not to work, she could have applied for and received public assistance—above and beyond the social security payments—valued at more than \$5,000. Instead, however, she chose what I consider the more commendable although less financially rewarding alternative: work.

During 1970, my constituent and her children had a total income of about \$6,100. Naturally, when she filed her 1970 tax return, she claimed the children as dependents and took deductions accordingly. Unfortunately, the Internal Revenue Service denied her claim and demanded that she pay an additional tax of \$433. The Service insisted that she prove—through the presentation of receipts, canceled checks and the like—that she had contributed more than \$2,400 to the support of her four children.

I would like to point out that if my constituent had earned \$20,000 instead of \$3,700, she would have had no difficulty sustaining her burden of proof. Or, if my constituent's income had been supplemented by an annuity or other income so that the survivor benefits could have been placed in savings instead of being spent for food and clothing, she would have had no difficulty sustaining her burden of proof. Or, if she had

chosen to draw public assistance instead of working, she would have had no taxes to pay at all. But my constituent made the grievous error of working; and she made the even more grievous error of earning \$3,700 instead of \$20,000. For those unpardonable sins, we—and I say we because the Congress wrote the law which penalizes my constituent and the other widows like her—subjected her to harassment and intimidation. I hesitate to add taxation because my constituent was able to produce the required canceled checks, receipts, bills, and the like. She was unusual, however. Another of my constituents—a widow with two children—was forced to borrow \$350 to pay her taxes. The widow with four children, I might add, has since learned her lesson: She now has the taxes withheld and does not attempt to claim the children as dependents. It is, in some situations, easier to pay than fight.

In many of these cases, Mr. President, these widows are denied the deductions because they are unable to sustain their burdens of proof, not because they failed to contribute the requisite levels of support. I think we will all admit that the retention of bills, receipts, and canceled checks presupposes a degree of knowledge and sophistication that is normally lacking in cases where the widows are earning such small incomes. In cases where the widows are legally denied the deductions, it is because the widow earns such a small income that it is impossible for her to contribute more than one-half to the support of her children.

The irony of these cases is of course obvious: the issue of dependency does not arise if the widow is earning a large income. Rather, the dependency deduction is questioned or denied only if the widow has chosen to work rather than go on welfare, and only if she earns an extremely small amount of money. Even in the cases where the widow is working and earning a small income, the question will not arise if her husband was able to afford an annuity or a large savings account. In those situations, the widow can bank the social security payments; and, if she does, the money is not considered as a child's contribution to his own support. It is only if the monthly payments must be spent for food, clothing, medical care, and like items—in other words, when money is so dear and so scarce that a savings account is impossible—that they are considered as the child's contribution to his own support.

Mr. President, I can honestly say that during my 6 years in the Congress, I have never encountered such systematic and unjust discrimination. It is almost as if this particular provision were designed solely to increase the already heavy burden of impoverished widows. I have no doubt that the situation is only the result of an unhappy convergence of otherwise just and equitable laws. But I also believe that we should change the law as quickly as possible. I hope that this bill will receive early consideration and speedy passage.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1434

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 152 of the Internal Revenue Code of 1954 (relating to definition of dependent) is amended by adding at the end thereof the following new subsection:

"(f) CHILD'S SOCIAL SECURITY BENEFITS.—For purposes of subsection (a), child's insurance benefits received by or on behalf of an individual under section 202(d) of the Social Security Act shall not be taken into account in determining whether the individual received more than half his support from the taxpayer."

(b) The amendment made by subsection (a) shall apply to taxable years ending after the date of the enactment of this Act.

Mr. SCOTT of Pennsylvania. Mr. President, I am pleased to join my colleagues in sponsoring this bill to disregard children's benefits received by an individual under the Social Security Act in determining whether that individual is a dependent of a taxpayer.

In order to claim their children as dependents under existing law, widows—or widowers—must show that they contributed more to the support of the children than the children received in social security survivor's benefits. The effect of this law is to deny the dependency deduction to those who need it most—low income earners—but grant it to those who need it least—high income earners.

Mr. President, this is a good bill and I hope that our Finance Committee will consider it in its deliberations on tax reform during the 93d Congress.

By Mr. EAGLETON (for himself, Mr. MATHIAS, Mr. INOUE, Mr. STEVENSON, and Mr. TUNNEY):

S. 1435. A bill to provide an elected Mayor and City Council for the District of Columbia, and for other purposes. Referred to the Committee on the District of Columbia.

HOME RULE FOR THE DISTRICT OF COLUMBIA

Mr. EAGLETON. Mr. President, on October 12, 1971, this body by a vote of 64 to 8 passed my bill providing for home rule for the District of Columbia. Unfortunately, the other body failed to act at all on this legislation. So, on behalf of myself, and Senators INOUE, MATHIAS, STEVENSON, and TUNNEY, I am again introducing a bill to provide for home rule for the District of Columbia.

The bill is virtually identical to the one which passes the Senate in the last Congress and provides for an elected Mayor and City Council, a set formula for a Federal payment to be automatically appropriated by Congress, and delegates the congressional powers necessary to govern the city to the Mayor and City Council. The bill at the same time continues the historic and constitutional role of the Congress in the affairs of the Nation's Capital by providing that no act of the City Council may go into effect if either body of the Congress disapproves of such act within 30 days of its passage.

We have also modified the provision in the previous bill regarding the appointment of judges. The new provision allows the Mayor to appoint judges under what is commonly referred to as the Missouri system. Under this system a board com-

posed of five members will make recommendations for any judicial openings and the Mayor will be limited in his selection to persons whose names are on the submitted list. The selection of the Mayor must then be confirmed by the Senate.

I am sure that many of you have also seen the red and white bumper stickers on cars around this town which describe the District of Columbia as the last colony. It is. We have granted self-government to Puerto Rico, to the United States Virgin Islands and made States of both Alaska and Hawaii, while allowing over 800,000 of our fellow citizens to remain wards of the Congress. Of course we have amended the Constitution to allow those same citizens to vote for President and Vice President. But set their own taxes and pass the laws regulating the health and commerce of the District? No. Those powers we have held unto ourselves. We have so far failed to delegate the licensing of professions, the charting of a firefighting museum, the regulation of kite flying, and the expansion of the police department band.

The time of the Senate is too valuable to be taken up with the routine governance of the District of Columbia. James Madison in the Federalist Papers noted that the framers of the Constitution intended that—

A municipal legislature for local purposes, derived from their own suffrages, will, of course, be allowed them.

The home rule bill which we are introducing today would allow just that—a municipal legislature for local purposes—almost 200 years later. The Congress would continue its oversight over the District of Columbia as the Nation's Capital, but it would not waste its time on the flying of kites.

Mr. President, I am proud to serve as chairman of the District of Columbia Committee. I believe, however, that it is the Senate's wish, as it is mine, to substantially reduce the time spent on the conduct of municipal affairs in favor of work on matters of national interest.

The League of Women Voters is beginning a national drive in favor of home rule for the District of Columbia. I commend them for their action. I hope that other groups will join in bringing the plight of the citizens of the District of Columbia to the consciousness and the conscience of the rest of the Nation. For my part I promise prompt hearings and I hope for prompt action to bring home rule to the District of Columbia.

By Mr. HARTKE:

S. 1436. A bill to amend title II of the Social Security Act and the Internal Revenue Code of 1954 to provide that an individual may elect to have any employment or self-employment performed by him after attaining age 65 excluded (for both tax and benefit purposes) from coverage under the old-age, survivors, and disability insurance system. Referred to the Committee on Finance.

Mr. HARTKE. Mr. President, there are many inequities in the current social security system, but none is more blatant than the requirement that those over 65 who remain in the work force while receiving benefits continue to have

the social security payroll tax deducted from their paychecks. Today, I introduce legislation to eliminate this inequity.

Mr. President, this Hartke legislation defines the term "employment" to exclude any service performed by an individual who has attained age 65. Individuals who reach that age may apply for a certificate which entitles that person, at his election, to have any or all service performed by him excluded from the provisions of the payroll tax. Similar provisions are made for those in self-employment occupations.

The Social Security Administration claims that those over 65 who remain in the work force receive substantially higher benefits, and, therefore, the requirement that such persons continue to contribute to the social security trust fund is a justifiable one. The facts, however, show that the average increase in benefits for such persons is only \$6 a month. This rather modest increase is undoubtedly more than offset by the amount of social security payroll taxes which workers over 65 are required to pay.

Mr. President, I emphasize that the Hartke proposal is a voluntary alternative. Workers over 65 may elect to have their earnings excluded from the payroll tax if they so choose. Those workers who might receive higher social security retirement benefits because of their work after 65 would not be likely to make such an election; but 3½ million older Americans would benefit from my proposal at a modest cost to the trust fund of only \$800 million for 1974—or between 0.1 to 0.2 percent of payroll.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 210 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"Service Performed After Attaining Age 65

"(p) Notwithstanding any other provision of this section, the term 'employment' shall not include any service performed by an individual who has attained age 65 if such individual is the holder of a certificate issued under section 3121 (s) (2) of the Internal Revenue Code of 1954 and has elected to make such certificate applicable to such service as provided in section 3121 (s) (3) of such Code."

(b) Section 3121 of the Internal Revenue Code of 1954 (definitions applicable to tax under Federal Insurance Contributions Act) is amended by adding at the end thereof the following new subsection:

"(s) SERVICE PERFORMED AFTER ATTAINING AGE SIXTY-FIVE.—

"(1) EXCLUSION OF SERVICE FROM EMPLOYMENT.—Notwithstanding any other provision of this section, the term 'employment' shall not for purposes of this chapter include any service performed by an individual who has attained age 65 if such individual is the holder of a certificate issued under paragraph (2) and has elected to make such certificate applicable to such service as provided in paragraph (3).

"(2) CERTIFICATE.—Any individual who has attained age 65 shall, upon application made

to the Secretary or his delegate (in such manner and from as may be prescribed by regulations under this chapter), be issued a certificate entitling him at his election to have any or all service performed by him for employers excluded from 'employment' for purposes of this chapter and title II of the Social Security Act. Application for such certificate may be filed at any time on or after the day on which such individual attains age 65.

"(3) APPLICATION OF CERTIFICATE TO SPECIFIC SERVICE.—An individual holding a certificate issued under paragraph (2) may at any time, by filing such certificate or a certified copy thereof with his employer, elect to have all service performed by him for such employer excluded from 'employment' for purposes of this chapter and title II of Social Security Act; and such election shall be effective with respect to all service performed by such individual for that employer on and after the date on which it is made and until terminated or revoked. An election made under this paragraph with respect to service performed for any employer shall terminate if such individual ceases to perform service for that employer on a continuous or regular basis, and may at any time be revoked by such individual by notifying the employer and withdrawing the certificate or copy thereof which was filed with the employer at the time of election; but any such revocation shall not be effective until the close of the calendar month in which it is made.

"(4) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations (including regulations providing for the interchange of information between him and the Secretary of Health, Education, and Welfare) as he deems necessary or appropriate to carry out this subsection."

SEC. 2. (a) Section 211 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"Income Derived After Attaining Age Sixty-Five

"(h) Notwithstanding any other provision of this section, the term 'net earnings from self-employment' shall not include any income derived by an individual from a trade or business in any taxable year if (1) at the close of such year such individual has attained age 65, and (2) such individual elects as provided in section 1302 (j) (2) of the Internal Revenue Code of 1954 to have such income exempted from the tax imposed by section 1401 of such Code."

(b) Section 1402 of the Internal Revenue Code of 1954 (definitions applicable to tax under Self-Employment Contributions Act of 1954) is amended by adding at the end thereof the following new subsection:

"(j) INCOME DERIVED AFTER ATTAINING AGE SIXTY-FIVE.—

"(1) EXCLUSION FROM NET EARNINGS.—Notwithstanding any other provision of this section, the term 'net earnings from self-employment' shall not for purposes of this chapter include any income derived by an individual from a trade or business in any taxable year if (A) at the close of such year such individual has attained age 65, and (B) such individual elects as provided in paragraph (2) to have such income exempted from the tax imposed by section 1401.

"(2) ELECTION.—Any individual who at the close of a taxable year has attained age 65, and during such year has derived any income from a trade or business carried on by him, may by including a statement to that effect in self-employment income tax return for such year elect to have such income exempted from the tax imposed by section 1401. Any such election shall be effective only for the taxable year with respect to which it is made, and shall apply to all of the individual's income derived during such year from a trade or business, or (if he carries on more

than one) from the trades or businesses, carried on by him.

"(3) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations (including regulations providing for appropriate refunds of any payments of estimated self-employment tax which may have been made during the taxable year with respect to income exempted from tax by an election made under paragraph (2), and for the interchange of information between him and the Secretary of Health, Education, and Welfare) as he deems necessary or appropriate to carry out this subsection."

Sec. 3. The amendments made by the first section of this Act shall apply only with respect to service performed on or after the first day of the month following the month in which this Act is enacted. The amendments made by section 2 of this Act shall apply only with respect to taxable years ending after the date of the enactment of this Act.

By Mr. GURNEY:

S. 1438. A bill to authorize and request the President to issue annually a proclamation designating August 26 of each year as "Equal Rights Day." Referred to the Committee on the Judiciary.

Mr. GURNEY. Mr. President, I am submitting a proposal to call for the annual designation of August 26 as "Equal Rights Day." Specifically, the bill calls upon the President to set aside this day for the purpose of commemorating our achievements in the field of women's rights.

Last year, I introduced a similar bill, S. 3490, to proclaim August 26 as "Women's Rights Day." This legislation passed the Senate on August 16, 1972. The House amended the bill to make it effective for 1972 only, and passed it in that form on August 18.

Immediately after House passage, Congress adjourned until early September. In view of the fact that further congressional action was impossible before August 26, the President subsequently issued a proclamation calling for the observance of Women's Rights Day.

This year, I am hopeful that Congress will take more expeditious action on my proposal so that time will allow complete passage as well as the necessary planning for appropriate programs and activities commemorating equal rights for women.

Just a little over 1 year ago—on March 22, 1972—this body passed the equal rights amendment by an overwhelming margin of 84 to 8. Since that time 30 States have ratified the ERA. Eleven States have yet to vote on the issue, and 38 votes are needed for ratification.

August 26 is a significant date in the history of the equal rights movement. It was on that date, in the year 1920, that the 19th amendment guaranteeing women the right to vote was officially certified as a part of our constitution. Like equal rights, the successful consideration of the suffrage movement was a long and arduous process. It took Congress nearly 75 years to pass the suffrage amendment, and a little over a year for the States to ratify it.

Passage of the ERA by Congress took nearly 50 years. I hope that history's habit of repeating itself will be borne out with ratification of this important amendment.

In the meantime, I urge my colleagues to support this proposed proclamation of Equal Rights Day on August 26.

I ask unanimous consent that my bill and also President Nixon's proclamation of August 26, 1972, as "Women's Rights Day" be printed in the RECORD.

There being no objection, the bill and proclamation were ordered to be printed in the RECORD, as follows:

S. 1438

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in commemoration of the anniversary of the adoption on August 26, 1920, of the nineteenth amendment to the Constitution granting women the right to vote, the President is authorized and requested to issue annually a proclamation designating August 26 of each year as "Equal Rights Day", and calling upon the people of the United States and interested groups and organizations to observe such day with appropriate ceremonies and activities.

WOMEN'S RIGHTS DAY

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Fifty-two years ago the Secretary of State issued a proclamation declaring the addition of the Nineteenth Amendment to our Constitution. That act marked the culmination of a long struggle by the women of this country to achieve the basic right to participate in our electoral process.

As significant as the ratification of the Nineteenth Amendment was, it was not cause for ending women's efforts to achieve their full rights in our society. Rather, it brought an increased awareness of other rights not yet realized.

In recent years there have been great strides in extending the protection of the law to the rights of women, and in promoting equal opportunities for women. Today more women than ever before serve in policy-making positions in the executive branch of our Government. Throughout the Nation, in State and local government and in the private sphere women are playing a more active role.

Although every woman may not desire a career outside the home, every woman should have the freedom to pursue whatever career she wishes. Although women today have a greater opportunity to do that, we still must do more to ensure women every opportunity to make the fullest contribution to our progress as a Nation.

Now, therefore, I, Richard Nixon, President of the United States of America, do hereby designate Saturday, August 26, 1972, as Women's Rights Day and call upon all our citizens and particularly those organizations concerned with the protection of human rights to observe this day with appropriate ceremonies and activities.

In witness whereof, I have hereunto set my hand this 26th day of August, in the year of our Lord nineteen hundred seventy-two and of the Independence of the United States of America the one hundred ninety-seventh.

RICHARD NIXON.

By MR. MUSKIE:

S. 1439. A bill to reform the Federal income, estate, and gift tax laws. Referred to the Committee on Finance.

THE TAX REFORM ACT OF 1973

Mr. MUSKIE. Mr. President, today I introduce The Tax Reform Act of 1973. This bill represents the technical implementation of the detailed proposals I discussed in the Senate on January 23. It would close unjustifiable tax loopholes which benefit large corporations, wealthy

individuals, and special interests. And it would raise a substantial amount of additional tax revenue totaling \$18 billion in fiscal year 1975 and even more in later fiscal years. But it would not in any way increase the burden on middle-income or low-income taxpayers.

Mr. President, we all recognize the need to control Federal expenditures. We all recognize the need to avoid a tax increase. But we must also recognize that it is possible to raise substantial additional revenues to reduce the budget deficit and pay for important Government programs without raising the tax burden on middle- and low-income Americans.

This is exactly what the Tax Reform Act of 1973 does. The act does not change the existing standard deductions; it does not repeal the deduction for State and local gasoline taxes; it does not change the existing exemption of \$100 for qualifying dividends; and it does not affect the present homeowner's deduction for interest paid on mortgages.

Some of these provisions and others which benefit low- and middle-income earners have been criticized as being inequitable and unfair. But I believe that before any of such sections in our tax code are changed, we must rid our tax system of its fundamental inequities: Those loopholes which benefit only the rich, and allow millionaires and multi-billion-dollar corporations to evade their fair share of taxes.

The Tax Reform Act of 1973 attacks these upper-income and corporate loopholes thoroughly and comprehensively—yet without making changes that could have disruptive effects on our economy. This act would make moderate changes—for instance, by marginally increasing the capital gains tax; by allowing a 5-year period for phasing-in taxes on capital gains at death; by marginally decreasing percentage depletion rates; by allowing farm losses in excess of the permitted deduction to be carried forward to future years; and by marginally increasing the minimum tax.

The Tax Reform Act of 1973 would raise \$8.1 billion by lessening the unfair advantage of tax shelters and by moderating or abolishing a number of tax preferences. By tightening up our treatment of depreciation, it would raise \$5.3 billion. It would give State and local governments an additional \$1.3 billion, at a net cost to the Federal Treasury of only \$300 million, by allowing taxation of interest on State and municipal bonds. And it would raise \$4.9 billion by more equitably taxing the transfer of large estates.

Many tax preferences and tax shelters are being justified for the contributions they are said to make to important social or economy policy goals. The revenues the Federal Government does not collect because of these special provisions are in reality "tax expenditures," almost as if they were direct appropriations from the Federal Treasury. They should be subject to the same scrutiny that we give to the Federal budget: How much do they cost? What goals do they supposedly serve? What benefits do they actually provide? And, finally, are their benefits worth their costs?

Many of these preferences supposedly serve goals with which I agree. But just as I would not vote for an appropriation until I was assured it would produce benefits worth its cost, I cannot condone continued tax expenditure unless I am satisfied that it produces worthwhile results for the people of this country. And the benefits of these tax preferences have not been proven. We know at least one thing for certain—that their costs go directly into the pockets of the wealthy.

In general, the goals of these provisions are better served through direct subsidies and incentives. We can know exactly how much is being spent on such programs. And we can have the benefit of reports assessing their effectiveness. For instance, I agree with the goals of increasing the supply of low-income housing or bolstering foreign trade or the economies of undeveloped areas. I would, therefore, urge Congress to consider responsible Federal programs to replace the tax preferences repealed or modified by the Tax Reform Act of 1973. But there is no justification for retaining these preferences as they now stand.

Following this philosophy, the Tax Reform Act of 1973 contains provisions which would moderate or eliminate tax shelters and tax preferences, to create total increased revenue of \$8.1 billion. These provisions, and the extra Federal income they would produce by fiscal year 1975, include:

Increasing the long-term capital gains rates to a maximum of 42 percent for individuals and 35 percent for corporations—instead of current rates of 25 percent for individuals on the first \$50,000 and 36.5 percent on the remainder and 30 percent for corporations—\$2.1 billion;

Tightening the minimum tax on tax preference items, including reducing the existing \$30,000 exemption to \$10,000, imposing graduated minimum tax rates, and eliminating the tax carry-forward—\$300 million;

Tightening treatment of the farm loss tax shelter by reducing to \$15,000 per year the amount of farm loss which can be deducted from nonfarm income—\$100 million;

Uniformly reducing by 20 percent the rates for percentage depletion of mineral resources—\$300 million;

Requiring capitalization and recapture of intangible drilling and development costs and of mine exploration and development costs—\$800 million;

Tightening existing provisions which restrict the amount of deductions of interest on large investments—\$300 million;

Six provisions restricting preferential treatment for foreign income and investment—\$1.5 billion;

Reforming the investment tax credit given to investments in machinery and equipment by allowing credits only for net increases in investment—\$2.5 billion; and

Disallowing excessive deductions by banks of bad debt reserves—\$200 million.

In addition, the Tax Reform Act of 1973 would raise \$5.3 billion through provisions that reform tax treatment of depreciation. These include:

Modifying ADR, the system which allows corporations to depreciate assets 20 percent faster than the industry average, to permit depreciation only at average industry rates—\$4.2 billion;

Reforming tax treatment of real estate investment—\$1 billion; and

Repealing rapid amortization provisions for the rehabilitation of low-income housing, railroad rolling stock, and pollution control facilities—\$100 million.

Interest on State and local municipal bonds is now tax free. The Tax Reform Act of 1973 would, at the option of State and local governments, make interest on those bonds taxable, thus producing \$1 billion in additional revenue for the Federal Treasury. If State and local governments choose to make their bonds taxable, the act contains provisions which would grant a Federal subsidy to States and municipalities of 50 percent of their interest costs. The net effect would be to incur additional Federal expenditures of \$300 million, but provide an extra \$1.3 billion each year for States and municipalities.

Finally, the Tax Reform Act of 1973 includes five specific measures, raising a total of \$4.9 billion, to tax the transfer of large estates more equitably. The amount of \$2.4 billion would be raised by taxing the appreciation of capital gains held at the time of death, gains which now entirely escape tax. An additional \$2.5 billion would be raised by establishing a unified gift and estate tax, imposing a special tax on generation-skipping transfers of wealth, allowing a spouse to deduct from the estate one half of its value plus \$100,000, and changing the rate structure to include a maximum rate of 80 percent on estates and gifts.

Mr. President, I am impressed by the beginning this Congress has made on tax reform. The thorough hearings being conducted by the Committee on Ways and Means in the House of Representatives have, I believe, generated much interest and thought about our tax code. I hope that my contribution to this discussion can help us enact meaningful tax reform this year. On February 28 I introduced S. 1036, a bill to amend the tax code with respect to legislative activity by certain types of exempt organizations. On March 15 I introduced S. 1255, a measure to reform State property taxes by relieving excessive property taxes on the poor and the elderly and encourage States to reform unsatisfactory local property tax administration. Soon I hope to present a proposal to reform the social security payroll tax.

I hope that this Congress, and its distinguished Members who are primarily responsible for writing tax reform legislation, will carefully consider these proposals, and the Tax Reform Act of 1973, which I introduce today. In my judgment passage of a bill such as the Tax Reform Act of 1973 should be a top priority for this Congress.

I ask unanimous consent that a summary of the provisions of the Tax Reform Act of 1973 be printed in the RECORD at this point.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF THE CONTENTS OF THE TAX REFORM ACT OF 1973

Section 1.—Short Title, Etc.

This section provides that the Act may be cited as the Tax Reform Act of 1973, includes a table of contents, and provides for technical and conforming changes.

TITLE I—AMENDMENTS PRIMARILY AFFECTING INDIVIDUALS

Section 101.—Minimum Tax for Tax Preferences.

This section strengthens the minimum tax on certain items of "tax preference" by (1) reducing the existing \$30,000 exemption to \$10,000; (2) imposing a graduated rate of tax of 10 percent on the first \$10,000, 15 percent on the second \$10,000, and 20 percent of additional amounts of tax preferences; and (3) eliminates deferral of the minimum tax.

Section 102.—Gains and Losses on Property Held at Death or Transferred by Gift.

This section imposes a tax on the appreciation of capital assets transferred at death, or by gift, but provides a marital exclusion of one-half of the assets plus \$100,000 and an exemption for property given to charity. This section includes a five-year phase-in period for these provisions.

Section 103.—Interest on Investment Indebtedness.

This section strengthens current laws which disallows deductions of certain interest paid by an individual for borrowings for large investments. This section reduces the existing \$25,000 interest exemptions to \$10,000; disallows all investment interest deductions in excess of the exemption level, while present law only limits one-half; and expands the definition of "investment interest" to include interest paid on passive oil, gas, mineral, or real estate investments.

Section 104.—Earned Income from Sources Without the United States.

This section terminates the present law which allows U.S. citizens who live abroad to exclude from their taxable income \$25,000 (if they are bona fide residents of a foreign country) or \$20,000 (if they live abroad for at least 17 out of 18 months).

Section 105.—Capital Gains.

This section changes taxation of capital gains for individuals by repealing the provision that permits the first \$50,000 of long-term capital gains to be taxed at no more than 25 percent. The section also requires that individuals include 55 percent of their long-term capital gains in their income in the first year of enactment, and 60 percent in their income thereafter, rather than only 50 percent as permitted under present law. The effect would be to have long-term capital gains taxed at 60 percent of normal income tax rates.

Section 106.—Clerical Amendments.

This section makes changes in the table of contents of part of the Internal Revenue Code.

Section 107.—Effective Date.

This section provides that the changes made by this title apply to taxable years beginning after the date of enactment, unless otherwise specified.

TITLE II—AMENDMENTS PRIMARILY AFFECTING CORPORATIONS

Section 201.—Limitation of Investment Credit.

This section restricts the investment tax credit, given to corporations and individuals for investments in machinery and equipment, to allow a credit only for net increases in investment.

Section 202.—*Modification of Class Life System.*

This section modifies the ADR system, under which businesses may take depreciation 20 percent faster than the industry average. The section requires that depreciation rates be no more favorable than the industry average.

Section 203.—*Repeal of Rapid Amortization Provisions.*

This section repeals the rapid amortization allowed under current law for rehabilitation of low-income rental housing, emergency facilities, pollution control facilities, certain railroad rolling stock, certain coal mine safety equipment, and certain expenditures for on-the-job training and child care facilities.

Section 204.—*Termination of Special Treatment of Bad Debt Reserves of Financial Institutions.*

This section would allow commercial banks, mutual savings banks, and savings and loan associations to create bad debt reserves based solely upon their actual loss experience. For purposes of transition, this section would not take effect until 1975.

Section 205.—*Repeal of Deduction for Western Hemisphere Trade Corporations.*

This section terminates the current law which allows U.S. businesses operating in Western Hemisphere countries other than the United States to be taxed at 34 percent, rather than the normal 48 percent corporate rate.

Section 206.—*Taxation of Earnings and Profits of Controlled Foreign Corporations.*

This section adds new provisions to the tax code to eliminate the tax deferral available to United States shareholders of foreign corporations they control, and to tighten the definition of a "controlled foreign corporation" to frustrate tax evasion schemes.

Section 207.—*Termination of Special Tax Treatment for Domestic International Sales Corporations.*

This section terminates the DISC provisions, which now allow export corporations to indefinitely defer from tax up to 50 percent of their income.

Section 208.—*Capital Gains.*

This section increases the corporate tax rate on long-term capital gains from 30 percent to 35 percent.

Section 209.—*Clerical Amendment.*

This section makes changes in the table of contents of part of the Internal Revenue Code.

Section 210.—*Effective Date.*

This section provides that, unless otherwise specified, the changes made by this Title apply only to taxable years beginning after the date this Act is enacted.

TITLE III—AMENDMENTS AFFECTING INDIVIDUALS AND CORPORATIONS

Section 301.—*Real Property.*

This section reforms the present highly favorable tax rules for investments in real estate (such as apartment buildings). The section would: (1) restrict depreciation to the straight line method and to the owner's actual equity; (2) require capitalization of interest and taxes incurred on undeveloped real estate held for investment and during construction; (3) recapture in full at the time of sale the excess depreciation taken on real property; (4) include in taxable income, up to the amount of depreciation previously taken, any proceeds from a mortgage loan which exceed the depreciated cost of the real property to the investor; and (5) provide for

review of the useful lives of buildings to determine if present depreciation guidelines are too liberal.

Section 302.—*Intangible Drilling and Development Costs in the Case of Oil and Gas Wells; Intangible Exploration and Development Costs in the Case of Mining Property.*

This section requires that intangible drilling and development costs, and mine exploration and development costs, be capitalized rather than deducted immediately from income. It also provides for the recapture of past deductions when such mineral property is sold.

Section 303.—*Tax Shelter Farm Losses.*

This section reduces from \$25,000 to \$15,000 the amount of farm losses which can be deducted from non-farm income in any year. It also provides that losses in excess of the limit may be carried over to future years for deduction from farm income. The yearly limit on farm loss deductions is adjusted upward for taxes, interest, losses from fire, storm, or other casualties, abandonment or theft, drought, and losses from sales, exchanges, and involuntary conversions.

Section 304.—*Reduction in Percentage Depletion.*

This section reduces by one-fifth all existing percentage depletion rates for mines, wells, and other natural deposits. For example, it would reduce the depletion rate for oil and gas wells from 22 percent to 17.6 percent.

Section 305.—*Income from Sources Within United States Possessions.*

This section terminates the provision which exempts from federal income taxation certain income earned in possessions of the United States, but it does not affect binding commitments made on or before the date of enactment.

Section 306.—*Foreign Tax Credit.*

This section requires that the foreign tax credit be computed only by the "per country" method, which requires that the computation be made with reference to the income earned in the foreign country whose tax is being credited. In addition, this section prohibits corporations operating in less-developed countries from deducting foreign taxes from income as well as crediting them against United States tax.

Section 307.—*Clerical Amendments.*

This section makes changes in the table of contents of part of the Internal Revenue Code.

Section 308.—*Effective Date.*

This section provides that, unless otherwise specified, the changes made by this title apply only to taxable years beginning after the date this Act is enacted.

TITLE IV—ESTATE AND GIFT TAX AMENDMENTS

Section 401.—*Integration of Estate and Gift Taxes.*

This section enacts the same exemption and tax rate schedule for estate and gift taxation. It exempts \$25,000, over and above the liberalized marital deduction contained in Section 402. For estates exceeding exemptions and deductions, the new marginal rate schedule would range from 20 percent for the smallest taxable estates to 80 percent for taxable estates over \$5 million.

Section 402.—*Increase in Estate Tax Marital Deduction.*

This section would increase the estate tax deduction allowed to the spouse from one half of the value of the adjusted gross estate to one half of the value of the adjusted gross estate plus \$100,000.

Section 403.—*Generation-Skipping Transfers.*

This section imposes a special tax on generation-skipping transfers, such as bequests to grandchildren and great grandchildren, which currently are used to avoid the gift and estate tax. Generation-skipping transfers are defined as distributions to persons other than children, contemporary relatives or friends, or tax-exempt organizations. The tax imposed by this section is three-fifths of the normal estate tax.

Section 404.—*Clerical Amendments.*

This section makes changes in the table of contents of part of the Internal Revenue Code.

TITLE V—STATE AND LOCAL BONDS

Section 501.—*Interest on Certain Governmental Obligations.*

This section allows state and local governments, at their option, to issue bonds which pay taxable interest.

Section 502.—*United States To Pay 50 Percent of Interest Yield On Taxable Issues.*

This section provides that the federal government shall pay 50 percent of the interest cost of state and local government bonds if state and local governments elect to make interest on their bonds taxable.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have the text of the bill printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 1439

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) this Act may be cited as the "Tax Reform Act of 1973".

(b) AMENDMENT OF 1954 CODE.—Except as otherwise expressly provided, whenever in this title an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference is to a section or other provision of the Internal Revenue Code of 1954.

(c) TECHNICAL AND CONFORMING AMENDMENTS.—The Secretary of the Treasury or his delegate shall, as soon as practicable but in any event not later than 90 days after the date of the enactment of this Act, submit to the Committee on Ways and Means of the House of Representatives and the Committee on Finance of the Senate a draft of the technical and conforming changes in the Internal Revenue Code of 1954 which are necessary to reflect throughout such Code the changes in the substantive provisions of law made by this Act.

(d) TABLE OF CONTENTS.—

TITLE I—AMENDMENTS PRIMARILY AFFECTING INDIVIDUALS

- Sec. 101. Minimum tax for tax preferences.
- Sec. 102. Gains and losses on property held at death or transferred by gift.
- Sec. 103. Interest on investment indebtedness.
- Sec. 104. Earned income from sources without the United States.
- Sec. 105. Capital gains.
- Sec. 106. Clerical amendments.
- Sec. 107. Effective date.

TITLE II—AMENDMENTS PRIMARILY AFFECTING CORPORATIONS

- Sec. 201. Limitation of investment credit.
- Sec. 202. Modification of class life system.
- Sec. 203. Repeal of rapid amortization provisions.
- Sec. 204. Termination of special treatment of bad debt reserves of financial institutions.
- Sec. 205. Repeal of deduction for Western Hemisphere trade corporations.

- Sec. 206. Taxation of earnings and profits of controlled foreign corporations.
 Sec. 207. Termination of special tax treatment for domestic international sales corporations.
 Sec. 208. Capital gains.
 Sec. 209. Clerical amendment.
 Sec. 210. Effective date.

TITLE III—AMENDMENTS AFFECTING INDIVIDUALS AND CORPORATIONS

- Sec. 301. Real property.
 Sec. 302. Intangible drilling and development costs in the case of oil and gas wells; intangible exploration and development costs in the case of mining property.
 Sec. 303. Tax shelter farm losses.
 Sec. 304. Reduction in percentage depletion.
 Sec. 305. Income from sources within United States possessions.
 Sec. 306. Foreign tax credit.
 Sec. 307. Clerical amendments.
 Sec. 308. Effective date.

TITLE IV—ESTATE AND GIFT TAX AMENDMENTS

- Sec. 401. Integration of estate and gift taxes.
 Sec. 402. Increase in estate tax marital deduction.
 Sec. 403. Generation-skipping transfers.
 Sec. 404. Clerical amendments.

TITLE V—STATE AND LOCAL BONDS

- Sec. 501. Interest on certain governmental obligations.
 Sec. 502. United States to pay 50 percent of interest yield on taxable issues.

TITLE I—AMENDMENTS PRIMARILY AFFECTING INDIVIDUALS

- SEC. 101. MINIMUM TAX FOR TAX PREFERENCES.
 (a) Section 56(a) (relating to minimum tax for tax preferences) is amended to read as follows:

"(a) IN GENERAL.—

"(1) IMPOSITION OF TAX.—In addition to the other taxes imposed by this chapter, there is hereby imposed for each taxable year, with respect to the income of every person, a tax (computed as provided in paragraph (2)) on the amount (if any) by which—

"(A) the sum of the items of tax preference in excess of "\$10,000, is greater than
 "(B) the sum of the taxes imposed by this chapter for the taxable year (computed without regard to this part and without regard to the taxes imposed by sections 531 and 541), reduced by the sum of the credits allowable under—

"(i) section 33 (relating to foreign tax credit),

"(ii) section 37 (relating to retirement income),

"(iii) section 38 (relating to investment credit),

"(iv) section 40 (relating to expenses of work incentive program), and

"(v) section 41 (relating to contributions to candidates for public office).

"(2) COMPUTATION OF TAX.—The tax imposed by paragraph (1) is—

"If the amount described in paragraph (1) is: The tax is:
 Not over \$10,000..... 10% of such amount.
 Over \$10,000 but not over \$20,000..... 10% plus 15% of the excess over \$10,000.
 over \$20,000..... \$2,500, plus 20% of the excess over \$20,000."

(b) Section 56(b) (relating to deferral of tax liability in case of certain net operating losses) is amended by striking out "\$30,000" in paragraph (1)(B) and inserting in lieu thereof "\$10,000".

(c) Section 56(c) (relating to tax carryovers) is repealed.

(d) Section 57(a) (9) (A) (relating to

capital gains of individuals) is amended to read as follows:

"(A) INDIVIDUALS.—In the case of a taxpayer other than a corporation, an amount equal to the amount allowable as a capital gains deduction under section 1202 for the taxable year."

(e) Section 58 (relating to rules for application of minimum tax for tax preferences) is amended—

(1) by striking out "\$30,000" each place it appears therein and inserting in lieu thereof "\$10,000", and

(2) by striking out "\$15,000" in subsection (a) and inserting in lieu thereof "\$5,000".

SEC. 102. GAINS AND LOSSES ON PROPERTY HELD AT DEATH OR TRANSFERRED BY GIFT.

(a) Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding at the end thereof the following new sections:

"SEC. 84. GAINS AND LOSSES ON PROPERTY AT TIME OF DEATH.

"(a) IN GENERAL.—Upon the death of an individual, there shall be taken into account in computing taxable income for the taxable period in which falls the date of his death, a percentage (determined under subsection (c)) of the gains and losses which would have been realized and taken into account in computing taxable income (of the decedent or some other person) if all the property (other than property described in subsection (b)) required to be included in determining the value of the decedent's gross estate under chapter 11 had been sold immediately before his death at the estate tax fair market value. This subsection shall not apply unless the aggregate amount of such fair market value exceeds \$60,000.

"(b) EXCLUDED PROPERTY.—Subsection (a) shall not apply to—
 "(1) property which passes or has passed from the decedent to his surviving spouse and which qualifies for the deduction provided by section 2056;
 "(2) property which passes or has passed to a corporation, organization, or other entity described in section 2055 and which qualifies for the deduction provided by such section;
 "(3) items of gross income in respect of a decedent described in section 691; or
 "(4) any other property includable in the gross estate of the decedent under chapter 11 for which basis is not provided for in section 1014(a).

"(c) RULES FOR APPLICATION OF SUBSECTION (a).—For purposes of subsection (a)—

"(1) The estate tax fair market value of property is the fair market value of the property at the date of the decedent's death, or, in the case of an election under section 2032, its value at the application valuation date prescribed by that section.
 "(2) If the aggregate adjusted basis of all property subject to the provisions of subsection (a) is less than \$60,000, and the gains under subsection (a) (without the application of this paragraph) exceed the losses, then the aggregate adjusted basis of such property shall be increased to \$60,000.
 "(3) Losses shall be taken into account without regard to the provisions of section 1091.
 "(4) The percentage of gains and losses taken into account shall be determined in accordance with the following table:

"For taxable years beginning: Percent
 Less than 1 year after the date of enactment of the Tax Reform Act of 1973..... 0
 1 year or more but less than 2 years after such date..... 20
 2 years or more but less than 3 years after such date..... 40
 3 years or more but less than 4 years after such date..... 60

"(c) RULES FOR APPLICATION OF SUBSECTION (a).—For purposes of subsection (a)—

"(1) The estate tax fair market value of property is the fair market value of the property at the date of the decedent's death, or, in the case of an election under section 2032, its value at the application valuation date prescribed by that section.
 "(2) If the aggregate adjusted basis of all property subject to the provisions of subsection (a) is less than \$60,000, and the gains under subsection (a) (without the application of this paragraph) exceed the losses, then the aggregate adjusted basis of such property shall be increased to \$60,000.
 "(3) Losses shall be taken into account without regard to the provisions of section 1091.
 "(4) The percentage of gains and losses taken into account shall be determined in accordance with the following table:

"For taxable years beginning: Percent
 Less than 1 year after the date of enactment of the Tax Reform Act of 1973..... 0
 1 year or more but less than 2 years after such date..... 20
 2 years or more but less than 3 years after such date..... 40
 3 years or more but less than 4 years after such date..... 60

"(3) EXCEPTION.—Paragraph (1) shall not apply to any charitable contribution of property if section 85(a) (relating to gains and losses on inter vivos gifts) applied with respect to the transfer of such property."

(5) Section 6161(a) (relating to extension of time for paying tax) is amended—

(A) by inserting "or income tax for a decedent's final taxable period" after "estate tax" in paragraph (1),

(B) by redesignating subsections (j) and (k) as death after "Estate tax" in the heading of paragraph (2), and

(C) by inserting at the end of paragraph (2) (A) "or of any part of the tax imposed by

4 years or more but less than 5 years after such date..... 80
 5 years or more after such date..... 100"

"(d) TIME FOR FILING RETURN.—If subsection (a) applies to the taxable year, the time for filing the return for such year shall be the date nine months after the date of the decedent's death if such date is later than the time prescribed in section 6072 for filing such return.

"(e) LIABILITY WITH RESPECT TO PROPERTY TRANSFERRED BEFORE DEATH.—If gain is taken into account under subsection (a) with respect to property transferred by the decedent during his lifetime, the executor shall be entitled, unless the decedent directs otherwise in his will, to recover from the transferee of such property the amount of income tax imposed with respect to such gain.

"SEC. 85. GAINS AND LOSSES ON INTER VIVOS GIFTS.

"(a) IN GENERAL.—In the case of the transfer of property by an individual by inter vivos gift, there shall be taken into account in computing taxable income for the taxable period in which the transfer was made, the gain or loss which would have been realized and taken into account in computing taxable income if the taxpayer had sold the property at its fair market value at the time of the transfer.

"(b) EXCEPTIONS.—

"(1) IN GENERAL.—Subsection (a) shall not apply to a transfer of property, to the extent that, at the time of the transfer, the aggregate fair market value of—

"(A) property (including the transferred property) held by the taxpayer, and

"(B) property previously transferred by the taxpayer after the date of the enactment of the Tax Reform Act of 1973, does not exceed \$60,000.

"(2) GIFTS TO SPOUSE.—Subsection (a) shall not apply to a transfer of property to the taxpayer's spouse.

"(3) GIFTS TO CHARITY.—Subsection (a) shall not apply to a transfer which is a charitable contribution as defined in section 170(c).

(b) (1) Section 1014(b) (relating to basis of property acquired from a decedent) is amended by striking out paragraphs (5) and (6).

(2) Paragraph (9) of section 1014(b) is amended by inserting "and" at the end of subparagraph (A), by striking out subparagraph (B) and by redesignating subparagraph (C) as subparagraph (B).

(3) Section 1015 (relating to basis of property acquired by gifts and transfers in trust) is amended by adding at the end thereof the following new subsection:

"(e) PROPERTY SUBJECT TO TAX UPON TRANSFER.—If the property was acquired by gift in a transfer to which section 85(a) (relating to gains and losses on inter vivos gifts) applied, the basis shall be the fair market value of the property at the time of the transfer."

(4) Section 170(e) (relating to certain contributions of ordinary income and capital gain property) is amended by adding at the end thereof the following new paragraph:

"(3) EXCEPTION.—Paragraph (1) shall not apply to any charitable contribution of property if section 85(a) (relating to gains and losses on inter vivos gifts) applied with respect to the transfer of such property."

(5) Section 6161(a) (relating to extension of time for paying tax) is amended—

(A) by inserting "or income tax for a decedent's final taxable period" after "estate tax" in paragraph (1),

(B) by redesignating subsections (j) and (k) as death after "Estate tax" in the heading of paragraph (2), and

(C) by inserting at the end of paragraph (2) (A) "or of any part of the tax imposed by

chapter 1 attributable to the application of section 84."

(6) Section 6166 (relating to extension of time for payment of estate tax where estate consists largely of interest in closely held business) is amended—

(A) by inserting "AND INCOME TAX ON GAINS AT DEATH" after "ESTATE TAX" in the heading, and

(B) by redesignating subsections (j) and (k) as (k) and (l), respectively, and by inserting after subsection (l) the following new subsection:

"(j) TAX ON GAINS AT DEATH.—Under regulations prescribed by the Secretary or his delegate, the provisions of this section shall apply with respect to so much of the tax imposed by chapter 1 as is attributable to the application of section 84 (relating to gains and losses on property at time of death) in the same manner as it applies to the tax imposed by section 2001."

(c) Section 84 of the Internal Revenue Code of 1954 (as added by subsection (a)) and the amendments made by paragraphs (1), (2), (5), and (6) of subsection (b) shall apply with respect to decedents dying after the date of the enactment of this Act. Sections 85 of such Code (as added by subsection (a)) and the amendments made by paragraphs (3) and (4) of subsection (b) shall apply with respect to transfers of property by inter vivos gift after such date.

SEC. 103. INTEREST ON INVESTMENT INDEBTEDNESS.

Section 163(d) (relating to limitation on interest on investment indebtedness) is amended—

(1) by striking out "\$25,000" each place it appears in paragraphs (1) and (2) and inserting in lieu thereof "\$10,000";

(2) by striking out "\$12,500" in paragraph (1)(A) and inserting in lieu thereof "\$5,000";

(3) by striking out "plus" at the end of paragraph (1)(C) and inserting in lieu thereof a period,

(4) by striking out paragraph (1)(D),

(5) by striking out "one-half of" in paragraph (2)(A), and

(6) by adding at the end thereof the following new paragraphs:

"(8) OIL, GAS, OR OTHER MINERAL PROPERTY.—For purposes of this subsection, a passive interest (as defined by the Secretary or his delegate by regulation) in any oil, gas, or other mineral property shall be treated as property held for investment and not as property used in a trade or business.

"(9) COMMERCIAL AND RESIDENTIAL PROPERTY.—For purposes of this subsection, property used for commercial or residential purposes by any person other than the taxpayer shall be treated as property held for investment and not as property used in a trade or business, unless the taxpayer furnishes substantial services in connection with the use of the property."

SEC. 104. EARNED INCOME FROM SOURCES WITHOUT THE UNITED STATES.

Section 911 (relating to earned income from sources without the United States) is repealed.

SEC. 105. CAPITAL GAINS

(a) Section 1201(d) (relating to definition of subsection (d) gain) is amended—

(1) by inserting "and" at the end of paragraph (1),

(2) by striking out "and" at the end of paragraph (2) and inserting in lieu thereof a period, and

(3) by striking out paragraph (3).

(b) Section 1202 (relating to deduction for capital gains) is amended by striking out the first sentence and inserting in lieu thereof the following: "If a taxpayer (other than a corporation) has a net section 1201 gain for a taxable year, the following percentage of such gain shall be allowed as a deduction from gross income:

"(1) 50 percent, in the case of a taxable

year beginning on or before the date of the enactment of the Tax Reform Act of 1973,

"(2) 45 percent, in the case of a taxable year beginning within 1 year after the date of the enactment of the Tax Reform Act of 1973, and

"(3) 40 percent, in the case of a taxable year beginning more than 1 year after the date of the enactment of the Tax Reform Act of 1973."

SEC. 106. CLERICAL AMENDMENT

The section analysis of part II of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 84. Gains and losses on property at time of death.

"Sec. 85. Gains and losses on inter vivos gifts."

SEC. 107. EFFECTIVE DATE.

Except as otherwise provided, the amendments and repeals made by this title shall apply to taxable years beginning after the date of the enactment of this Act.

TITLE II—AMENDMENTS PRIMARILY AFFECTING CORPORATIONS

SEC. 201. LIMITATION OF INVESTMENT CREDIT.

(a) Section 46(a)(1) (relating to determination of amount) is amended by striking out "qualified investment" and inserting "net qualified investment".

(b) Section 46(c) (relating to qualified investment) is amended by—

(1) striking out "QUALIFIED INVESTMENT" and inserting "NET QUALIFIED INVESTMENT";

(2) redesignating paragraphs (1), (2), and (3) as (2), (3), and (4), respectively;

(3) striking out "IN GENERAL" in paragraph (2) (as redesignated by this subsection) and inserting "QUALIFIED INVESTMENT"; and

(4) inserting before such paragraph (2) the following new paragraph:

"(1) IN GENERAL.—For purposes of this subpart, the term 'net qualified investment' means, with respect to any taxable year, the aggregate amount of the qualified investment for that taxable year reduced by the aggregate amount allowable as a deduction for that year for depreciation (or amortization in lieu thereof) with respect to section 38 property acquired prior to, and in service during, that taxable year."

SEC. 202. MODIFICATION OF CLASS LIFE SYSTEM.

Section 167(m)(1) (relating to class lives in general) is amended by adding at the end thereof the following new sentence: "The preceding sentence shall not apply to property placed in service in any taxable year beginning after January 23, 1973."

SEC. 203. REPEAL OF RAPID AMORTIZATION PROVISIONS.

(a) The following sections are repealed:

(1) section 167(k) (relating to expenditures to rehabilitate low-income rental housing),

(2) section 168 (relating to amortization of emergency facilities),

(3) section 169 (relating to amortization of pollution control facilities),

(4) section 184 (relating to amortization of certain railroad rolling stock),

(5) section 187 (relating to amortization of certain coal mine safety equipment), and

(6) section 188 (relating to amortization of certain expenditures for on-the-job training and child care facilities).

(b) Section 48(a) (relating to definition of section 38 property) is amended by striking out paragraph (8).

SEC. 204. TERMINATION OF SPECIAL TREATMENT OF BAD DEBT RESERVES OF FINANCIAL INSTITUTIONS.

(a) Section 585 (relating to reserves for losses on loans of banks) is amended by adding at the end thereof the following new subsection:

"(c) NO SPECIAL ADDITIONS FOR YEARS AFTER 1974.—Subsection (b) shall not apply in the case of taxable years beginning after

December 31, 1974, and the reasonable addition to the reserve for bad debts for any taxable year beginning after such date shall be computed under section 166(c) on the basis of the actual experience of the taxpayer."

(b) Section 593(b) (relating to addition to reserves for losses on loans of mutual savings banks and certain other financial organizations) is amended by adding at the end thereof the following new paragraph:

"(6) NO SPECIAL ADDITIONS FOR YEARS AFTER 1974.—This subsection (other than this paragraph) shall not apply in the case of taxable years beginning after December 31, 1974, and the reasonable addition to the reserve for bad debts for any taxable year beginning after such date shall be computed under section 166(c) on the basis of the actual experience of the taxpayer."

SEC. 205. REPEAL OF DEDUCTION FOR WESTERN HEMISPHERE CORPORATIONS.

(a) Section 921 (relating to Western Hemisphere trade corporations) is amended by—

(1) inserting "(a)" before the first word of the text of that section; and

(2) adding at the end thereof the following new subsection:

"(b) No corporation shall be treated as a Western Hemisphere trade corporation for any taxable year beginning after the date of enactment of the Tax Reform Act of 1973."

(b) (1) Section 170(b)(2) (relating to charitable deductions for corporations) is amended by striking out subparagraph (D).

(2) Section 172(d)(5) (relating to the net operating loss deduction) is amended by striking out "or under section 922 (relating to Western Hemisphere trade corporations)".

(3) Section 1503 (relating to consolidated returns) is amended by striking out subsection (b), and deleting "(a) GENERAL RULE" from such section.

(4) Section 1562(b)(4) (relating to multiple surtax exemptions) is amended by—

(1) inserting "and" before "804(a)(3) (relating to deductions for partially tax-exempt utilities)" and

(2) striking out "and 922 (relating to special deduction for Western Hemisphere trade corporations)".

SEC. 206. TAXATION OF EARNINGS AND PROFITS OF CONTROLLED FOREIGN CORPORATIONS.

(a) Part III of subchapter N of chapter 1 (relating to income from sources without the United States) is amended by inserting after subpart H thereof the following new subpart:

"Subpart I—Controlled Foreign Corporations

"Sec. 985. Amounts included in gross income of United States shareholders.

"Sec. 986. Definitions.

"Sec. 987. Rules for determining stock ownership.

"Sec. 988. Exclusion from gross income of previously taxed earnings and profits.

"Sec. 989. Adjustments to basis of stock in controlled foreign corporations and of other property.

"Sec. 990. Records and accounts of United States shareholders.

"Sec. 985. AMOUNTS INCLUDED IN GROSS INCOME OF UNITED STATES SHAREHOLDERS.

"(a) AMOUNTS INCLUDED.—

"(1) IN GENERAL.—If a foreign corporation is a controlled foreign corporation for an uninterrupted period of 30 days or more during any taxable year, every United States shareholder of such corporation who owns (within the meaning of section 987(a)) stock in such corporation on the last day in such year on which such corporation is a controlled foreign corporation shall include in its gross income, for its taxable year in which or with which such taxable year of the corporation ends, its pro rata share of the corporation's earnings and profits for such year.

"(2) PRO RATA SHARE OF EARNINGS AND PROFITS.—A United States shareholder's pro rata share referred to in paragraph (1) is the amount—

"(A) which would have been distributed with respect to the stock which such shareholder owns (within the meaning of section 987(a)) in such corporation if on the last day, in its taxable year, on which the corporation is a controlled foreign corporation it had distributed pro rata to its shareholders an amount (i) which bears the same ratio to its earnings and profits for the taxable year, as (ii) the part of such year during which the corporation is a controlled foreign corporation bears to the entire year, reduced by

"(B) an amount (i) which bears the same ratio to the amount determined under subparagraph (A), as (ii) the part of such year described in subparagraph (A)(ii) during which such shareholder did not own (within the meaning of section 987(a)) such stock bears to the entire year.

"(b) EARNINGS AND PROFITS.—For purposes of this subpart, under regulations prescribed by the Secretary or his delegate, the earnings and profits of any foreign corporation, and the deficit in earnings and profits of any foreign corporation, for any taxable year—

"(1) except as provided in section 312(m) (3), shall be determined according to rules substantially similar to those applicable to domestic corporations,

"(2) shall be appropriately adjusted for deficits in earnings and profits of such corporation for any prior taxable year beginning after the date of the enactment of the Tax Reform Act of 1973,

"(3) shall not include any item of income which is effectively connected with the conduct by such corporation of a trade or business within the United States unless such item is exempt from taxation (or is subject to a reduced rate of tax) pursuant to a treaty obligation of the United States, and

"(4) shall not include any amount of earnings and profits which could not have been distributed by such corporation because of currency or other restrictions or limitations imposed under the laws of any foreign country.

"(c) COORDINATION WITH ELECTION OF A FOREIGN INVESTMENT COMPANY TO DISTRIBUTE INCOME.—A United States shareholder who, for his taxable year, is a qualified shareholder (within the meaning of section 1247 (c)) of a foreign investment company with respect to which an election under section 1247 is in effect shall not be required to include in gross income, for such taxable year, any amount under subsection (a) with respect to such company.

"(d) COORDINATION WITH FOREIGN PERSONAL HOLDING COMPANY PROVISIONS.—In the case of a United States shareholder who, for his taxable year, is subject to tax under section 551(b) (relating to foreign personal holding company income included in gross income of United States shareholders) on income of a controlled foreign corporation, the amount required to be included in gross income by such shareholder under subsection (a) with respect to such company shall be reduced by the amount included in gross income by such shareholder under section 551(b).

"SEC. 986. DEFINITIONS.

"(a) UNITED STATES SHAREHOLDER DEFINED.—For purposes of this subpart, the term 'United States shareholder' means, with respect to any foreign corporation, a domestic corporation which owns (within the meaning of section 987(a)), or is considered as owning by applying the rules of ownership of section 987(b), 1 percent or more of the total value or total combined voting power of all classes of stock.

"(b) CONTROLLED FOREIGN CORPORATION DE-

FINED.—For purposes of this subpart, the term 'controlled foreign corporation' means any foreign corporation of which more than 50 percent of the total combined voting power of all classes of stock entitled to vote is owned (within the meaning of section 987 (a)), or is considered as owned by applying the rules of ownership of section 987(b), by United States shareholders on any day during the taxable year of such foreign corporation.

"SEC. 987. RULES FOR DETERMINING STOCK OWNERSHIP.

"(a) DIRECT AND INDIRECT OWNERSHIP.—

"(1) GENERAL RULE.—For purposes of this subpart, stock owned means—

"(A) stock owned directly, and

"(B) stock owned with the application of paragraph (2).

"(2) STOCK OWNERSHIP THROUGH FOREIGN ENTITIES.—For purposes of subparagraph (B) of paragraph (1), stock owned, directly or indirectly, by or for a foreign corporation or foreign estate (within the meaning of section 7701(a) (31)) or by or for a partnership or trust shall be considered as being owned proportionately by its shareholders, partners, or beneficiaries. Stock considered to be owned by a person by reason of the application of the preceding sentence shall, for purposes of applying such sentence, be treated as actually owned by such person.

"(b) CONSTRUCTIVE OWNERSHIP.—For purposes of section 986, section 318(a) (relating to constructive ownership of stock) shall apply to the extent that the effect is to treat any domestic corporation as a United States shareholder within the meaning of section 986(a), or to treat a foreign corporation as a controlled foreign corporation under section 986(b), except that—

"(1) in applying subparagraphs (A), (B), and (C) of section 318(a) (2), if a partnership, estate, trust, or corporation owns, directly or indirectly, more than 50 percent of the total combined voting power of all classes of stock entitled to vote for a corporation, it shall be considered as owning all of the stock entitled to vote, and

"(2) in applying subparagraph (C) of section 318(a) (2), the phrase '10 percent' shall be substituted for the phrase '50 percent' used in paragraph (C).

"SEC. 988. EXCLUSION FROM GROSS INCOME OF PREVIOUSLY TAXED EARNINGS AND PROFITS

(a) EXCLUSION FROM GROSS INCOME.—For purposes of this chapter, the earnings and profits for a taxable year of a foreign corporation attributable to amounts which are, or have been, included in the gross income of a United States shareholder under section 985(a), shall not, when such amounts are distributed directly, or indirectly through a chain of ownership described under section 987(a), to—

"(1) such shareholder (or any domestic corporation which acquires from any person any portion of the interest of such United States shareholder in such foreign corporation, but only to the extent of such portion, and subject to such proof of the identity of such interest as the Secretary or his delegate may by regulations prescribe), or

"(2) a trust (other than a foreign trust) of which such shareholder is a beneficiary, be again included in the gross income of such United States shareholder (or of such domestic corporation or of such trust).

"(b) EXCLUSION FROM GROSS INCOME OF CERTAIN FOREIGN SUBSIDIARIES.—For purposes of section 985(a), the earnings and profits for a taxable year of a controlled foreign corporation attributable to amounts which are, or have been, included in the gross income of a United States shareholder under section 985(a), shall not, when distributed through a chain of ownership described under section 987(a), be also included in the gross income of another controlled foreign corporation in such chain for purposes of the application of

section 985(a) to such other controlled foreign corporation with respect to such United States shareholder (or to any other United States shareholder who acquires from any person any portion of the interest of such United States shareholder in the controlled foreign corporation, but only to the extent of such portion, and subject to such proof of identity of such interest as the Secretary or his delegate may prescribe by regulations).

"(c) ALLOCATION OF DISTRIBUTIONS.—For purposes of subsections (a) and (b), section 316(a) shall be applied by applying paragraph (2) thereof, and then paragraph (1) thereof—

"(1) first, to earnings and profits attributable to amounts included in gross income under section 985(a), and

"(2) then to other earnings and profits.

"(d) DISTRIBUTIONS EXCLUDED FROM GROSS INCOME NOT TO BE TREATED AS DIVIDENDS.—Any distribution excluded from gross income under subsection (a) shall be treated, for purposes of this chapter, as a distribution which is not a dividend.

"SEC. 989. ADJUSTMENTS TO BASIS OF STOCK IN CONTROLLED FOREIGN CORPORATIONS AND OF OTHER PROPERTY.

"(a) INCREASE IN BASIS.—Under regulations prescribed by the Secretary or his delegate, the basis of a United States shareholder's stock in a controlled foreign corporation, and the basis of property of a United States shareholder by reason of which it is considered under section 987(a) (2) as owning stock of a controlled foreign corporation, shall be increased by the amount required to be included in its gross income under section 985(a) with respect to such stock or with respect to such property, as the case may be, but only to the extent to which such amount was included in the gross income of such United States shareholder.

"(b) REDUCTION IN BASIS.—

"(1) IN GENERAL.—Under regulations prescribed by the Secretary or his delegate, the adjusted basis of stock or other property with respect to which a United States shareholder or a United States person receives an amount which is excluded from gross income under section 988(a) shall be reduced by the amount so excluded.

"(2) AMOUNT IN EXCESS OF BASIS.—To the extent that an amount excluded from gross income under section 988(a) exceeds the adjusted basis of the stock or other property with respect to which it is received, the amount shall be treated as gain from the sale or exchange of property.

"SEC. 990. RECORDS AND ACCOUNTS OF UNITED STATES SHAREHOLDERS.

"(a) RECORDS AND ACCOUNTS TO BE MAINTAINED.—The Secretary or his delegate may by regulations require each person who is, or has been, a United States shareholder of a controlled foreign corporation to maintain such records and accounts as may be prescribed by such regulations as necessary to carry out the provisions of this subpart.

"(b) TWO OR MORE PERSONS REQUIRED TO MAINTAIN OR FURNISH THE SAME RECORDS AND ACCOUNTS WITH RESPECT TO THE SAME FOREIGN CORPORATION.—Where, but for this subsection, two or more persons would be required to maintain or furnish the same records and accounts as may be required under subsection (a) with respect to the same controlled foreign corporation for the same period, the Secretary or his delegate may by regulations provide that the maintenance or furnishing of such records and accounts by only one such person shall satisfy the requirements of subsection (a) for such other persons."

(b) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) Section 864(c) (4) (D) is amended to read as follows:

"(D) No income from sources without the United States shall be treated as effectively connected with the conduct of a trade or business within the United States if it consists of dividends, interest, or royalties paid by a foreign corporation in which the taxpayer owns (within the meaning of section 958(a)), or is considered as owning (by applying the ownership rules of section 958(b)), more than 50 percent of the total combined voting power of all classes of stock entitled to vote."

(2) Section 951 is amended by adding at the end thereof the following:

"(e) TAXABLE YEARS ENDING AFTER ENACTMENT OF THE TAX REFORM ACT OF 1973.—No amount shall be required to be included in the gross income of a United States shareholder under subsection (a) (other than paragraph (1)(A)(ii), or paragraph (1)(B) of such subsection) with respect to a taxable year of a controlled foreign corporation beginning after the date of the enactment of the Tax Reform Act of 1973."

(3) Section 1016(a)(20) is amended by striking out "section 961" and inserting in lieu thereof "sections 961 and 990".

(4) Section 1246 (a) (2) (B) is amended by inserting "or 985" after "section 951" and by inserting "or 988" after "section 959".

(5) Section 1248 is amended—

(A) by striking out subsection (b);

(B) by amending subsection (d)(1) to read as follows:

"(1) AMOUNTS INCLUDED IN GROSS INCOME UNDER SECTION 951 OR 985.—Earnings and profits of the foreign corporation attributable to any amount previously included in the gross income of such person under section 951 or 985, with respect to the stock sold or exchanged, but only to the extent the inclusion of such amount did not result in an exclusion of an amount from gross income under section 959 or 988."

(C) by striking out in subsection (d) (3) "section 902(d)" and inserting in lieu thereof "subsection (h)", and by adding at the end of such subsection "No amount shall be excluded from the earnings and profits of a foreign corporation under this paragraph with respect to any United States person which is a domestic corporation for any taxable year of such foreign corporation ending after the enactment of this Act"; and

(D) by adding at the end thereof the following:

"(h) LESS DEVELOPED COUNTRY CORPORATION DEFINED.—For purposes of this section, the term 'less developed country corporation' means—

"(1) a foreign corporation which, for its taxable year, is a less developed country corporation within the meaning of section 955(c) (1) or (2), and

"(2) a foreign corporation which owns 10 percent or more of the total combined voting power of all classes of stock entitled to vote of a foreign corporation which is a less developed country corporation within the meaning of section 955(c) (1), and—

"(A) 80 percent or more of the gross income of which for its taxable year meets the requirement of section 955(c) (1) (A); and

"(B) 80 percent or more in value of the assets of which on each day of such year consists of property described in section 955(c) (1) (B)."

(c) EFFECTIVE DATES.—

(1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to taxable years of foreign corporations beginning after the date of the enactment of this Act, and to taxable years of United States shareholders within which or with which such taxable years of such foreign corporations end.

(2) The amendments made by subsection (b) (4) shall apply with respect to sales or exchanges occurring in taxable years beginning after the date of the enactment of this Act.

SEC. 207. TERMINATION OF SPECIAL TAX TREATMENT FOR DOMESTIC INTERNATIONAL SALES CORPORATIONS.

(a) Section 991 (relating to tax exemption of a DISC) is amended by adding at the end thereof the following: "This section shall not apply to any taxable year beginning after the date of the enactment of the Tax Reform Act of 1973."

(b) Section 992(a) (relating to definition of DISC) is amended by adding at the end thereof the following new paragraph:

"(4) TERMINATION.—Notwithstanding any other provision of this part, no corporation shall be treated as a DISC or former DISC for any taxable year beginning after the date of the enactment of the Tax Reform Act of 1973."

SEC. 208. CAPITAL GAINS.

Section 1201(a) (relating to corporations) is amended to read as follows:

"(a) CORPORATIONS.—If for any taxable year a corporation has a net section 1201 gain, then, in lieu of the tax imposed by sections 11, 511, 821 (a) or (c), and 831(a), there is hereby imposed a tax (if such tax is less than the tax imposed by such sections) which shall consist of the sum of a tax computed on the taxable income reduced by the amount of the net section 1201 gain, at the rates and in the manner as if this subsection had not been enacted, plus 35 percent of the net section 1201 gain for that taxable year."

SEC. 209. CLERICAL AMENDMENT.

The subpart analysis of part III of subchapter N of chapter 1 is amended by adding at the end thereof the following:

"Subpart H. Income of certain nonresident United States citizens subject to foreign community property laws.

"Subpart I. Controlled foreign corporations."

SEC. 210. EFFECTIVE DATE.

Except as otherwise provided, the amendments and repeals made by this title shall apply to taxable years beginning after the date of the enactment of this Act.

TITLE III—AMENDMENTS AFFECTING INDIVIDUALS AND CORPORATIONS

SEC. 301. REAL PROPERTY.

(a) Section 167(j) (relating to special rules for section 1250 property) is amended to read as follows:

"(j) SECTION 1250 PROPERTY.—

"(1) GENERAL RULE.—In the case of section 1250 property (as defined in section 1250 (c)), subsection (b) shall not apply and the term 'reasonable allowance' as used in subsection (a) means an allowance, computed in accordance with regulations prescribed by the Secretary or his delegate, under the straight line method.

"(2) CHANGE IN METHOD OF DEPRECIATION.—Any change in the computation of the allowance for depreciation required by reason of the application of paragraph (1) shall not be considered a change in method of accounting.

"(3) LIMITATION BASED ON TAXPAYER'S EQUITY.—In the case of section 1250 property, the deduction for depreciation for the taxable year with respect to such property shall not be allowed to the extent it would reduce the adjusted basis of the property at the end of the year below an amount equal to any mortgage indebtedness at the end of the year on the property minus the adjusted basis of the land allocable to such property.

"(4) CARRYOVER OF UNUSED DEPRECIATION.—If the amount of depreciation determined with respect to property to which this subsection applies for any taxable year exceeds the limitation provided by paragraph (3) for that year (hereinafter referred to as the 'unused deduction year'), such excess shall be a depreciation deduction carryover to succeeding taxable years. The amount of the unused deduction shall first be carried over

to the taxable year next following the unused deduction year, and then carried over to each succeeding taxable year to the extent that, because of the limitation contained in paragraph (3), such unused deduction may not be used for a prior taxable year to which it might have been carried. The amount of the unused deduction which may be added under this paragraph to any taxable year succeeding the unused deduction year shall not exceed the amount by which the maximum amount allowable under the limitation provided by paragraph (3) exceeds the sum of—

"(A) the deduction allowable under subsection (a) and this subsection for section 1250 property, and

"(B) the amounts which, by reason of this paragraph, are added to the amount allowable for such taxable year and attributable to taxable years preceding the unused deduction year."

(b) Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding after section 279 the following new section:

"SEC. 280. INTEREST AND TAXES ON INVESTMENT REAL PROPERTY.

"(a) INTEREST AND TAXES DURING CONSTRUCTION OF REAL PROPERTY.—No deduction shall be allowed for interest and real property taxes paid or incurred in respect of investment real property which is under construction. The interest and real property taxes so paid or incurred shall be charged to capital account.

"(b) INTEREST AND TAXES ON UNDEVELOPED REAL PROPERTY.—No deduction shall be allowed for interest on real property taxes paid or incurred in respect of investment real property acquired for the purpose of development (other than for use as the taxpayer's residence or for use in his trade or business). The interest or real property taxes so paid or incurred shall be charged to capital account.

"(c) COMMERCIAL AND RESIDENTIAL REAL PROPERTY.—For purposes of this section, property used for commercial or residential purposes by any person other than the taxpayer shall be treated as property held for investment and not as property used in a trade or business, unless the taxpayer furnishes substantial services in connection with the use of the property."

(c) (1) Section 1250 (relating to gain from dispositions of certain depreciable realty) is amended by striking out subsections (a) and (b) and inserting in lieu thereof the following:

"(a) ORDINARY INCOME.—Except as otherwise provided in this section, if section 1250 property is disposed of after the date of the enactment of the Tax Reform Act of 1973, the amount by which the lower of—

"(1) the recomputed basis of the property, or

"(2) (A) in the case of a sale, exchange, or involuntary conversion, the amount realized, or

"(B) in the case of any other disposition, the fair market value of such property, exceeds the adjusted basis of such property shall be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231. Such gain shall be recognized notwithstanding any other provision of this subtitle.

"(b) RECOMPUTED BASIS.—For purposes of this section, the term 'recomputed basis' with respect to any property means its adjusted basis recomputed by adding thereto all adjustments, attributable to periods after December 31, 1963, reflected in such adjusted basis on account of deductions (whether in respect of the same or other property) allowed or allowable to the taxpayer or to any other person for depreciation or amortization (other than amortization under section 168, 169, 185, or 188). For purposes of the preceding sentence, if the taxpayer can establish by adequate records or other suffi-

cient evidence that the amount allowed as a deduction for any period was less than the amount allowable, the amount taken into account for such period shall be the amount allowed."

(2) Section 1250(d) (relating to exceptions and limitations) is amended—

- (A) by striking out paragraph (4) (E),
- (B) by striking out paragraph (6) (B),
- (C) by striking out paragraph (8) (D), and
- (D) by striking out paragraph (8) (E).

(3) Section 1250 is further amended by striking out subsection (e) (relating to holding period), subsection (f) (relating to treatment of separate elements), and subsection (g) (relating to special rules for low-income housing).

(d) The Secretary of the Treasury or his delegate shall review the useful lives assigned to real property for purposes of determining depreciation allowable under section 167 of the Internal Revenue Code of 1954 (relating to depreciation) with respect to such property and determine whether the lives so assigned should in any cases, be reduced.

(e) (1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to property acquired by the taxpayer after January 23, 1973, or the construction, reconstruction, or erection of which is begun after such date.

(2) The amendments made by this section shall not apply to property described in paragraph (1) if such property was acquired, constructed, reconstructed, or erected after January 23, 1973, pursuant to a binding contract into which the taxpayer has entered before January 24, 1973.

SEC. 302. INTANGIBLE DRILLING AND DEVELOPMENT COSTS IN THE CASE OF OIL AND GAS WELLS; INTANGIBLE EXPLORATION AND DEVELOPMENT COSTS IN THE CASE OF MINING PROPERTY.

(a) Section 263(c) (relating to the deduction of intangible drilling and development costs) is repealed.

(b) (1) Section 263 (a) (1) (A) (relating to expenditures for the development of mines or deposits) is amended to read as follows:

"(A) expenditures deductible under section 616 or 617."

(2) (A) Section 616 (relating to development expenditures) is amended by adding at the end thereof the following new subsection:

"(d) TERMINATION OF DEDUCTION.—No deduction shall be allowed under this section for any expenditure paid or incurred in any taxable year beginning after the date of enactment of the Tax Reform Act of 1973."

(B) Section 617 (relating to deduction and recapture of certain mining exploration expenditure) is amended by adding at the end thereof the following new subsection:

"(1) TERMINATION OF DEDUCTION.—No deduction shall be allowed under this section for any expenditure paid or incurred in any taxable year beginning after the date of enactment of the Tax Reform Act of 1973."

(c) Part IV of subchapter P of chapter 1 (relating to special rules for determining capital gains and losses) is amended by adding at the end thereof the following new section:

"SEC. 1254. GAIN FROM DISPOSITION OF CERTAIN OIL, GAS, OR MINERAL PROPERTY.

"(a) GENERAL RULE.—"

"(1) ORDINARY INCOME.—Except as otherwise provided in this section, if oil, gas, or mineral property is disposed of during a taxable year beginning after the date of the enactment of the Tax Reform Act of 1973 the amount by which the lower of—

- "(A) the cost of the property, or
- "(B) (1) in the case of a sale, exchange, or involuntary conversion, the amount realized, or

"(1) in the case of any other disposition, the fair market value of such property.

exceeds the adjusted basis of such property shall be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231. Such gain shall be recognized notwithstanding any other provision of this subtitle.

"(2) OIL, GAS, OR MINERAL PROPERTY.—For purposes of this section, the term 'oil, gas, or mineral property' means property as defined in section 614 (relating to definition of property).

"(b) EXCEPTIONS AND LIMITATIONS.—Under regulations prescribed by the Secretary or his delegate, rules similar to the provisions of section 1245(b) shall apply for purposes of subsection (a).

"(c) ADJUSTMENTS TO BASIS.—The Secretary or his delegate shall prescribe such regulations as he may deem necessary to provide for adjustments to the basis of property to reflect gain recognized under subsection (a).

"(d) APPLICATION OF SECTION.—This section shall apply notwithstanding any other provision of this subtitle."

SEC. 303. TAX SHELTER FARM LOSSES.

(a) Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding after section 280 (as added by section 301(b) of this Act) the following new section:

"SEC. 280A. LIMITATION ON DEDUCTIONS ATTRIBUTABLE TO FARMING.

"(a) GENERAL RULE.—In the case of a taxpayer engaged in the business of farming, the deductions attributable to such business which, but for this section, would be allowable under this chapter for the taxable year shall not exceed the sum of—

"(1) the gross income derived from the business of farming for such taxable year, and

"(2) in the case of an individual, the higher of (A) \$15,000, or (B) the amount of the special deductions (as defined in subsection (e) (1)) for the taxable year, or

"(3) in the case of any other taxpayer, the amount of the special deductions for the taxable year.

For purposes of this subsection, the term 'individual' does not include a trust.

"(b) MARRIED INDIVIDUALS AND MEMBERS OF CONTROLLED GROUPS.—

"(1) MARRIED INDIVIDUALS.—In the case of a husband and wife who file a separate return, the \$15,000 amount specified in subsection (a) shall be \$7,500. The preceding sentence shall not apply if the spouse of the taxpayer does not have any income or deductions attributable to the business of farming for the taxable year.

"(2) MEMBERS OF CONTROLLED GROUPS.—In the case of a controlled group of corporations (as defined in section 1563(a)) the \$15,000 amount specified in subsection (a) shall be divided equally among the component members of such group unless all component members consent (at such time and in such manner as the Secretary or his delegate prescribes by regulations) to an apportionment plan providing for an unequal allocation of such amounts.

"(c) EXCEPTION FOR TAXPAYERS USING CERTAIN ACCOUNTING METHODS.—

"(1) IN GENERAL.—Subsection (a) shall not apply to a taxpayer who elects to compute taxable income from farming (A) by using inventories, and (B) by charging to capital account all expenditures paid or incurred which are properly chargeable to capital account (including such expenditures which the taxpayer may, under this chapter or regulations prescribed thereunder, otherwise treat or elect to treat as expenditures which are not chargeable to capital account).

"(2) TIME, MANNER, AND EFFECT OF ELECTION.—An election under paragraph (1) for

any taxable year shall be filed within the time prescribed by law (including extensions thereof) for filing the return for such taxable year, and shall be made and filed in such manner as the Secretary or his delegate shall prescribe by regulations. Such election shall be binding on the taxpayer for such taxable year and for all subsequent taxable years and may not be revoked except with the consent of the Secretary or his delegate.

"(3) CHANGE OF METHOD OF ACCOUNTING, ETC.—If, in order to comply with the election made under paragraph (1), a taxpayer changes his method of accounting in computing taxable income from the business of farming, such change shall be treated as having been made with the consent of the Secretary or his delegate and for purposes of section 481(a)(2) shall be treated as a change not initiated by the taxpayer.

"(d) CARRYOVER OF FARM OPERATING LOSSES.—The amount not allowed as deductions by reason of subsection (a) for any taxable year shall be treated as a deduction attributable to the business of farming for each succeeding taxable year (to the extent not allowed as a deduction under this subsection for any prior taxable year), except that the amount so treated shall be allowable as a deduction for any such succeeding taxable year only in an amount not to exceed the amount by which—

"(1) the gross income derived from the business of farming for such succeeding taxable year exceeds

"(2) the deductions allowable by this chapter (computed without regard to this subsection) for such succeeding taxable year which are attributable to the business of farming.

"(e) DEFINITIONS AND SPECIAL RULES.—For purposes of this section—

"(1) SPECIAL DEDUCTIONS.—The term 'special deductions' means the deductions allowable under this chapter which are attributable to the business of farming and which are attributable to—

- "(A) taxes,
- "(B) interest,
- "(C) losses arising from fire, storm, or other casualty, or from abandonment or theft,

"(D) losses and expenses directly attributable to drought, and

"(E) recognized losses from sales, exchanges, and involuntary conversions.

"(2) INCOME AND DEDUCTIONS.—The determination of whether any item of income is derived from the business of farming and whether any deduction is attributable to the business of farming shall be made under regulations prescribed by the Secretary or his delegate, but gains or losses which for the taxable year are treated under section 1231 (a) (after the application of section 1245) as gains and losses from sales or exchanges of capital assets held for more than six months shall not be taken into account.

"(3) BUSINESS OF FARMING.—

"(A) HORSE RACING.—In the case of a taxpayer engaged in the raising of horses, the business of farming includes the racing of horses.

"(B) SEVERAL BUSINESSES OF FARMING.—If a taxpayer is engaged in more than one business of farming, all such businesses shall be treated as one business.

"(C) RELATED INTEGRATED BUSINESSES.—If a taxpayer is engaged in the business of farming and is also engaged in one or more businesses which are directly related to his business of farming and are conducted on an integrated basis with his business of farming, the taxpayer may elect to treat all such businesses as a single business of farming. An election under this paragraph shall be made in such manner, at such time, and subject to such conditions as the Secretary or his delegate may prescribe by regulations.

"(4) PARTNERSHIPS.—A business of farming carried on by a partnership shall be treated

as carried on by the members of such partnership in proportion to their interest in such partnership."

(b) Section 1251(b)(2) (relating to additions to excess deductions account) is amended by adding at the end thereof the following new subparagraph:

"(E) TERMINATION.—Subparagraph (A) shall not apply to any taxable year beginning after the date of the enactment of the Tax Reform Act of 1973."

SEC. 304. REDUCTION IN PERCENTAGE DEPLETION.

(a) Section 613(a) (relating to percentage depletion) is amended by striking out "50 percent" and inserting in lieu thereof "40 percent".

(b) Section 613(b) (relating to percentage depletion rates) is amended—

(1) by striking out "22 percent" and inserting in lieu thereof "17.6 percent",

(2) by striking out "15 percent" and inserting in lieu thereof "12 percent",

(3) by striking out "14 percent" each place it appears and inserting in lieu thereof "11.2 percent",

(4) by striking out "10 percent" and inserting in lieu thereof "8 percent",

(5) by striking out "7½ percent" and inserting in lieu thereof "6 percent", and

(6) by striking out "6 percent" and inserting in lieu thereof "4 percent".

SEC. 305. INCOME FROM SOURCES WITHIN UNITED STATES POSSESSIONS.

Section 931 (relating to income from sources within possessions of the United States) is amended by adding at the end thereof the following new subsection:

"(j) TERMINATION.—This section generally shall not apply with respect to taxable years beginning after the date of enactment of the Tax Reform Act of 1973, but it shall continue to apply to taxable years ending before January 1, 1984, in the case of any domestic corporation which qualified before such date of enactment under this section with respect to a trade or business conducted within a possession of the United States, but only with respect to income from that trade or business."

SEC. 306. FOREIGN TAX CREDIT.

(a) Section 902(d) (relating to definition of less developed country corporation) is amended by adding at the end thereof the following new sentence: "No foreign corporation shall be treated as a less developed country corporation for any of its taxable years which begin after the date of enactment of the Tax Reform Act of 1973."

(b) Section 904 (relating to limitation on credit) is amended by—

(1) striking out subsections (a), (b), (e), and (f)(3),

(2) redesignating subsections (f) and (g) as (e) and (f), respectively, and

(3) inserting before subsection (c) the following new subsections:

"(a) IN GENERAL.—The amount of the credit in respect of the tax paid or accrued to any foreign country or possession of the United States shall not exceed the same proportion of the tax against which such credit is taken which the taxpayer's taxable income from sources within such country or possession (but not in excess of the taxpayer's entire taxable income) bears to his entire taxable income for the taxable year.

"(b) SPECIFIC SOURCE RULE.—For purposes of applying subsection (a), the source of income shall be determined under regulations prescribed by the Secretary or his delegate."

SEC. 307. CLERICAL AMENDMENTS.

(a) The section analysis of part IX of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 280. Interest and taxes on investment real property.

"Sec. 280A. Limitation on deductions attributable to farming."

(b) The section analysis of part IV of subchapter P of chapter 1 is amended by adding at the end thereof the following:

"Sec. 1254. Gain from disposition of certain oil, gas, or mineral property."

SEC. 308. EFFECTIVE DATE.

Except as otherwise provided the amendments and repeals made by this title shall apply to taxable years beginning after the date of the enactment of this Act.

"If the taxable estate is:

TITLE IV—ESTATE AND GIFT TAX AMENDMENTS

SEC. 401. INTEGRATION OF ESTATE AND GIFT TAXES.

(a) Section 2001 (relating to rate of estate tax) is amended to read as follows:

"SEC. 2001. IMPOSITION OF TAX.

"(a) GENERAL RULE.—A tax computed in accordance with the following table is hereby imposed on the transfer of the taxable estate (determined as provided in section 2051) of every decedent, citizen or resident of the United States:

The tax is:

20% of the taxable estate.	\$3,000, plus 24% of excess over \$15,000.
\$3,000, plus 24% of excess over \$15,000.	\$6,600, plus 27% of excess over \$50,000.
\$6,600, plus 27% of excess over \$50,000.	\$12,000, plus 30% of excess over \$50,000.
\$12,000, plus 30% of excess over \$50,000.	\$19,500, plus 33% of excess over \$75,000.
\$19,500, plus 33% of excess over \$75,000.	\$34,350, plus 37% of excess over \$120,000.
\$34,350, plus 37% of excess over \$120,000.	\$54,700, plus 40% of excess over \$175,000.
\$54,700, plus 40% of excess over \$175,000.	\$84,700, plus 44% of excess over \$250,000.
\$84,700, plus 44% of excess over \$250,000.	\$128,700, plus 47% of excess over \$350,000.
\$128,700, plus 47% of excess over \$350,000.	\$187,450, plus 50% of excess over \$475,000.
\$187,450, plus 50% of excess over \$475,000.	\$262,450, plus 53% of excess over \$625,000.
\$262,450, plus 53% of excess over \$625,000.	\$355,200, plus 57% of excess over \$800,000.
\$355,200, plus 57% of excess over \$800,000.	\$469,200, plus 60% of excess over \$1,000,000.
\$469,200, plus 60% of excess over \$1,000,000.	\$619,200, plus 63% of excess over \$1,250,000.
\$619,200, plus 63% of excess over \$1,250,000.	\$776,700, plus 66% of excess over \$1,500,000.
\$776,700, plus 66% of excess over \$1,500,000.	\$1,106,700, plus 69% of excess over \$2,000,000.
\$1,106,700, plus 69% of excess over \$2,000,000.	\$1,451,700, plus 72% of excess over \$2,500,000.
\$1,451,700, plus 72% of excess over \$2,500,000.	\$2,171,700, plus 76% of excess over \$3,500,000.
\$2,171,700, plus 76% of excess over \$3,500,000.	\$3,311,700, plus 80% of excess over \$5,000,000.

inter vivos gifts" means the sum of (A) the amount of taxable gifts (within the meaning of section 2503) made by the decedent on or after the first day of the first calendar quarter beginning after the date of the enactment of the Tax Reform Act of 1973, and (B) the amount of gift taxes, imposed by chapter 12 and paid by the decedent on such taxable gifts, minus the amount (if any) in respect of any gift included in such taxable gifts which is required to be included in the value of the gross estate of the decedent in computing his taxable estate."

(b) Section 2052 (relating to exemption in computing taxable estate) is amended by striking out "exemption of \$60,000" and inserting in lieu thereof "exemption of \$25,000, less the aggregate of the amounts claimed and allowed as specific exemption to the decedent under section 2521 (relating to specific exemption in computing taxable gifts)".

(c) The rate schedule contained in section 2502(a) (relating to rate of gift tax) is amended to read as follows:

"RATE SCHEDULE

The tax is:

20% of the taxable gifts.	\$3,000, plus 24% of excess over \$15,000.
\$3,000, plus 24% of excess over \$15,000.	\$6,600, plus 27% of excess over \$50,000.
\$6,600, plus 27% of excess over \$50,000.	\$12,000, plus 30% of excess over \$50,000.
\$12,000, plus 30% of excess over \$50,000.	\$19,500, plus 33% of excess over \$75,000.
\$19,500, plus 33% of excess over \$75,000.	\$34,350, plus 37% of excess over \$120,000.
\$34,350, plus 37% of excess over \$120,000.	\$54,700, plus 40% of excess over \$175,000.
\$54,700, plus 40% of excess over \$175,000.	\$84,700, plus 44% of excess over \$250,000.
\$84,700, plus 44% of excess over \$250,000.	\$128,700, plus 47% of excess over \$350,000.
\$128,700, plus 47% of excess over \$350,000.	\$187,450, plus 50% of excess over \$475,000.
\$187,450, plus 50% of excess over \$475,000.	\$262,450, plus 53% of excess over \$625,000.
\$262,450, plus 53% of excess over \$625,000.	\$355,200, plus 57% of excess over \$800,000.
\$355,200, plus 57% of excess over \$800,000.	\$469,200, plus 60% of excess over \$1,000,000.
\$469,200, plus 60% of excess over \$1,000,000.	\$619,200, plus 63% of excess over \$1,250,000.
\$619,200, plus 63% of excess over \$1,250,000.	\$776,700, plus 66% of excess over \$1,500,000.
\$776,700, plus 66% of excess over \$1,500,000.	\$1,106,700, plus 69% of excess over \$2,000,000.
\$1,106,700, plus 69% of excess over \$2,000,000.	\$1,451,700, plus 72% of excess over \$2,500,000.
\$1,451,700, plus 72% of excess over \$2,500,000.	\$2,171,700, plus 76% of excess over \$3,500,000.
\$2,171,700, plus 76% of excess over \$3,500,000.	\$3,311,700, plus 80% of excess over \$5,000,000."

(d) Section 2521 (relating to specific exemption in computing taxable gifts) is amended by striking out "\$30,000" and inserting in lieu thereof "\$25,000".

(e) The amendments made by subsections (a) and (b) shall apply with respect to decedents dying after the date of the enactment of this Act. The amendments made by subsections (c) and (d) shall apply with respect to gifts made on or after the first day of the first calendar quarter which commences after the date of the enactment of this Act.

SEC. 402. INCREASES IN ESTATE TAX MARITAL DEDUCTION.

(a) Section 2056(c) (relating to limitation of aggregate marital deduction) is amended by inserting after "shall not exceed" in paragraph (1) "the sum of \$100,000, plus".

(b) The amendment made by subsection (a) shall apply with respect to decedents dying after the date of enactment of this Act.

SEC. 403. GENERATION-SKIPPING TRANSFERS.

(a) Subchapter A of chapter 11 (relating to estates of citizens or residents) is amended by inserting after part IV the following new part:

"PART V—GENERATION-SKIPPING TRANSFERS"

"Sec. 2060. Imposition of tax.

"Sec. 2061. Transfers in trust.

"Sec. 2062. Election by skipped generation.

"Sec. 2063. Generation-skipping defined.

"Sec. 2060. IMPOSITION OF TAX.

"(a) IN GENERAL.—A tax is hereby imposed on the transfer of that portion of the taxable estate (determined under section 2051) of every decedent to which this subchapter applies which consists of a generation-skipping transfer (as defined in section 2063).

"(b) RATE OF TAX.—The rate of the tax imposed by subsection (a) shall be 60 percent of the highest rate of tax imposed on the taxable estate under section 2001.

"(c) PARENTS OF TRANSFEREE DECEASED.—If a transferee has no living parents at the date of the decedent's death, the rate of the tax imposed by subsection (a) with respect to transfers to such person shall be the lower of—

"(1) the highest rate of tax imposed under section 2001 on the estate of the last surviving parent, or

"(2) the rate determined under subsection (b) of this section.

This subsection shall apply only if distributions to such parent would not be a generation-skipping transfer.

"SEC. 2061. TRANSFERS IN TRUST.

"(a) IN GENERAL.—If an election is not made under section 2063(b) and as of the beginning of any calendar year there are no survivors among the persons described in subsection (b), then a tax shall be imposed on the trust at the rate determined under section 2060 (b) or (c), whichever is applicable. The tax under this section may be imposed on more than one occasion, and in applying section 2060(c) the date the tax is imposed shall be substituted for the date of the decedent's death.

"(b) PERSONS REFERRED TO.—The persons referred to in subsection (a) are the settlor, his children, and any beneficiaries of the trust to whom a distribution would not be a generation-skipping transfer. Once a tax is imposed under this section the persons referred to in subsection (a) are beneficiaries of the trust described in paragraph (2) or (3) of section 2063(c), whichever is applicable.

"SEC. 2062. ELECTION BY SKIPPED-GENERATION.

"(a) IN GENERAL.—The tax imposed by section 2060 or 2061 shall not be imposed to the extent that a distribution to a parent of the transferee would not be a generation-skipping transfer and such parent elects to have

any property treated as transferred to him and retransferred to the actual transferee. In applying this part, a person making such election shall be treated as the transferor of the property.

"(b) TIME FOR ELECTION.—An election under subsection (a) shall be made on a transfer tax return for the period in which the decedent's death has occurred and must be made on or before the due date for filing the estate tax return under section 6075 (including extensions).

"(c) TRUSTS.—In the case of a transfer in trust, an election under subsection (a) may, under regulations prescribed by the Secretary or his delegate, be made at any time before the due date of the tax under section 2060 or section 2061. Such election is effective only to the extent the trust property is distributed or is vested in the electing person and his descendants.

"SEC. 2063. GENERATION-SKIPPING DEFINED.

"(a) IN GENERAL.—A generation-skipping transfer is a distribution to a person other than—

"(1) a child of the transferor,

"(2) a brother or sister of the transferor (by whole or half blood);

"(3) a child of an individual described in paragraph (2),

"(4) an ancestor of the transferor,

"(5) a spouse of any of the persons described in paragraph (1), (2), (3), or (4) or of the transferor,

"(6) a person who is older than the transferor or is less than 25 years younger than the transferor, or

"(7) an organization which is exempt from taxation by reason of section 501.

"(b) TRANSFERS IN TRUST.—A transfer in trust is not a generation-skipping transfer unless the decedent by will directs that it be so treated.

"(c) DISTRIBUTIONS BY TRUSTS.—

"(1) IN GENERAL.—Distributions from a trust made after the death of the grantor which would be generation-skipping transfers if made directly by the grantor of the trust shall be considered generation-skipping transfers. The rate of tax shall be determined under section 2060, except that, in applying section 2060(c), the date of the trust distribution shall be substituted for the date of the decedent's death. The tax shall be withheld from the distribution by the trustee.

"(2) TRUST SUBJECT TO TAX.—If the trust has been subject to tax under section 2061, then distributions to the following persons shall not be considered generation-skipping transfers:

"(A) grandchildren of the transferor,

"(B) grandchildren of the transferor's brother or sister (of the whole or half blood),

"(C) a spouse of any of the persons described in subparagraphs (A) or (B), and

"(D) a person who is less than 50 years younger than the transferor.

"(3) MULTIPLE TAX ON TRUST.—Under regulations prescribed by the Secretary or his delegate, rules similar to those prescribed by paragraph (2) shall apply in determining the extent of generation-skipping transfers in the event a trust is subject to tax under section 2061 on more than one occasion."

(b) Section 2512 (relating to valuation of gifts) is amended by inserting after subsection (b) the following new subsections:

"(c) In the case of a generation-skipping transfer (as defined in section 2063(a)) the amount of the gift shall be considered to be 160 percent of the value determined under subsection (a). A transfer in trust shall not be considered a generation-skipping transfer unless the donor so elects on his return. Distributions from a trust during the lifetime of the donor which are generation-skipping transfers under section 2063(c) shall be considered a transfer by the donor in an amount equal to 60 percent of the value of the trust distribution.

"(d) Subsection (c) shall not apply if—

"(1) a transfer to a parent of the transferee would not be a generation-skipping transfer and such parent elects on or before the due date of the donor's return to have the property treated as transferred to him and retransferred to the actual transferee, or

"(2) the transferee has no living parent at the time of the gift and the donor elects to treat the transfer as a transfer to the last surviving parent. In such case a tax at the highest rate of tax imposed under section 2001 on the estate of such parent shall be payable by the donor and deducted from the amount of the gift. This paragraph shall apply only if a gift to such parent would not be a generation-skipping distribution."

(c) The amendment made by subsection (a) shall apply with respect to decedents dying after the date of the enactment of this Act. The amendment made by subsection (b) shall apply with respect to transfers after such date.

SEC. 404. CLERICAL AMENDMENTS.

(a) The part analysis of subchapter A of Chapter 11 is amended by adding at the end thereof the following:

"Part V. Generation-skipping transfers."

(b) The section analysis of Part I of subchapter A of chapter 11 is amended by striking out the item relating to section 2001 and inserting in lieu thereof the following:

"Sec. 2001. Imposition of tax."

TITLE V—STATE AND LOCAL BONDS

SEC. 501. INTEREST ON CERTAIN GOVERNMENTAL OBLIGATIONS.

(a) Section 103 (relating to interest on certain governmental obligations) is amended by redesignating subsection (e) as subsection (f) and by inserting after subsection (d) the following new subsection:

"(e) ELECTION TO ISSUE TAXABLE BONDS.—

"(1) SUBSECTION (a)(1) NOT TO APPLY.—The issuer of obligations described in subsection (a)(1) may elect to issue obligations to which subsection (a)(1) does not apply.

"(2) ELECTION.—The election described in paragraph (1) shall be made at such time, in such manner, and subject to such conditions as the Secretary or his delegate by regulation prescribes with respect to each issue of obligations to which it is to apply. An election with respect to any issue once made shall be irrevocable.

"(3) CROSS REFERENCE.—

"For provisions relating to the payment by the United States of one-half of the interest cost of an obligation which is part of an issue for which the election described in this subsection has been made, see section 502 of the Tax Reform Act of 1973."

(b) The amendment made by this section shall apply to obligations issued after the date of the enactment of this Act.

SEC. 502. UNITED STATES TO PAY 50 PERCENT OF INTEREST YIELD ON TAXABLE ISSUES

(a) There are appropriated, out of any moneys in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this section; and such appropriations shall be deemed permanent annual appropriations.

(b) The Secretary of the Treasury or his delegate shall pay to the issuer 50 percent of the interest yield on each issue of obligations to which an election under section 103 (e) of the Internal Revenue Code of 1954 applies. For purposes of this section, the interest yield on any issue of obligations shall be determined immediately after such obligations are issued. Payment of any interest required pursuant to this subsection shall be made by the Secretary of the Treasury or his delegate not later than 10 days before the time at which the interest payment on the obligation is required to be made by the issuer.

(c) This section shall apply only to obligations which, but for an election under

section 103(e) of the Internal Revenue Code of 1954, would be obligations to which section 103(a)(1) of such Code applies.

(d) The Secretary of the Treasury or his delegate shall prescribe such regulations as may be necessary to carry out this section.

By Mr. PROXMIER:

S. 1440. A bill to assure that Federal housing assistance programs are carried out to the full extent authorized by Congress. Referred to the Committee on Banking, Housing and Urban Affairs.

Mr. PROXMIER. Mr. President, I am introducing a bill today which would direct the Secretary of Housing and Urban Development to cease the present suspension, or moratorium, on the several HUD programs which provide assistance to families of low and moderate income. These programs are the 235 and 236 interest assistance programs, the rent supplement program, and the public housing program.

As we all know, these programs were suspended without prior warning by the then Secretary of Housing and Urban Development, George Romney, on January 5 of this year. This action was taken without any consultation with the Congress and is, I believe, completely contrary to the expressed intent of the Congress that these very necessary programs be carried out to provide the housing so desperately needed by millions of low and moderate income families. This action was contrary to the national housing goals, of which I was the principal sponsor in 1968, to provide 26 million new or rehabilitated dwelling units in the 10-year period from 1968 to 1978 with 6 million of these units to be provided for low and moderate income families.

The excuses used by the administration to suspend these programs were that they were scandal ridden, ineffective, and not doing the job they were designed for. I thoroughly disagree with this assessment. While I, and many other Members of the Congress, recognize that there have been problems in connection with these programs, these problems have, as stated in a recent report by the Subcommittee on Priorities and Economy in Government of the Joint Economic Committee, resulted due to faulty administration by the Department of Housing and Urban Development rather than to any inherent defects in the legislation. As that report indicated, while there are some legislative improvements needed, the programs are not inherently unworkable as some White House spokesmen have charged.

It is amazing that an administration, which a few short weeks prior to the declaration of the moratorium took credit for producing hundreds of thousands of decent dwelling units for low- and moderate-income families under these programs, should now claim that they are truly unworkable. I can only speculate that this action was taken, not because of some inherent defects in the programs, but instead at the expense of those low and moderate income families who most need help. Mr. President, this

is inexcusable when we still have millions of families living in inadequate housing, who cannot obtain decent housing within their present limited resources.

I, as much as any other member of the Senate, am interested in achieving true economy in the operations of our Government. I believe that there are a good many changes that can be made in the existing programs to make them more efficient and less costly. I intend to work for such necessary changes and I would hope that the administration has the same intention. However, to make the flatout statement that the programs are not workable and new means of housing low- and moderate-income families must be found without any backup, and then to suspend these programs for as long as 18 months, is not the way to handle the problem. We should proceed with full use of the present programs to the extent authorized by Congress, while at the same time we study what alternative means are available to provide this much needed low- and moderate-income housing and act on such needed changes as quickly as possible.

I, therefore, introduce this bill to reinstitute HUD's 235, 236, rent supplement and public housing programs and to direct the Secretary of HUD to carry out these programs to the extent of the funds appropriated or otherwise authorized by the Congress. Mr. President at the same time I pledge myself to work diligently in cooperation with the administration to bring about such changes as are merited in these programs.

By Mr. WILLIAMS:

S. 1441. A bill to extend certain benefits to National Guard technicians, to correct certain inequities in the crediting of National Guard technician service in connection with civil service retirement, and for other purposes. Referred to the Committee on Post Office and Civil Service.

NATIONAL GUARD TECHNICIANS

Mr. WILLIAMS. Mr. President, I am pleased to introduce again this year a bill that would correct several inequities of the 1968 National Guard Technicians Act. Under that law, these technicians were granted status as Federal employees. However, they were not granted all of the benefits normally extended to Federal employees. My bill intends to correct those inequities.

Specifically, the legislation authorizes the Secretaries of the Army and Air Force to establish and implement a uniform merit promotion program for National Guard technicians. Another major provision is the guarantee of a retirement program which is at least equitable with those of other Federal employees. This retirement program would entitle a technician over 50 years of age with 20 years of service to an annuity if the Secretary of his branch of the military and the Civil Service Commission approves his retirement.

In addition, my legislation concerns other problems which these technicians have been facing. For example, a condi-

tion of serving as a National Guard technician is that the individual performs maintenance functions on the Guard's equipment during the week and must also meet all the other requirements of National Guardsmen. However, too frequently, State Adjutant Generals require that these people wear their uniforms at all times. I share the technicians' belief that this is excessive and have included in my bill a provision so that they would no longer be required to wear military uniforms during the week, when they are not actually serving on National Guard duty.

Furthermore, the bill extends to the technicians the right to appeal decisions by the State Adjutant Generals to the Civil Service Commission and it would make them eligible for overtime compensation pay.

Mr. President, I believe the inequities this bill is directed at are clear and the need for it are apparent. I am pleased that it has been endorsed by the National Federation of Federal Employees and hope that the Senate will investigate and resolve the problems which I have addressed today during this session of Congress.

I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1441

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (b) of section 709 of title 32, United States Code, is amended by adding at the end thereof the following new sentence: "The Secretary of the Army and the Secretary of the Air Force shall jointly establish and implement a uniform merit promotion program for technicians which shall apply in all States and the Commonwealth of Puerto Rico."

(b) Subsection (d) of such section 709 is amended by adding at the end thereof the following new sentence: "A technician may not be required to wear a military uniform while performing duties within the scope of his employment as a technician."

(c) Subsection (e) of such section 709 is amended by inserting "and" after the semicolon at the end of paragraph (4), and by striking out paragraphs (5) and (6) and inserting in lieu thereof the following:

"(5) A right of appeal to the adjutant general of the jurisdiction concerned exists with respect to paragraph (1), (2), (3), or (4) and if such appeal is made the adjutant general concerned shall make a written record of his decision and his findings supporting such decision. The technician concerned may appeal the decision by the adjutant general concerned to the Civil Service Commission in the manner provided for under chapter 77 of title 5, United States Code, with respect to adverse decisions affecting employees in the civil service. The adjutant general concerned shall take the corrective action which the Civil Service Commission finally recommends."

(d) (1) Paragraph (1) of subsection (g) of such section 709 is amended—

(A) by striking out "Secretary concerned may" and inserting in lieu thereof "Secretary concerned shall," and

(B) by striking out "may be fixed on an annual basis" and inserting in lieu thereof "shall be fixed on an annual basis".

(2) Paragraph (1) of such subsection (g) is further amended by striking out the period at the end thereof and inserting in lieu thereof the following: ", except that such additional compensation shall be paid if such unusual or irregular duty or work on nonworkdays exceeds an average of eight hours per week. For the purpose of computing additional compensation, a technician shall be credited with twenty-hour hours for each twenty-four-hour period he is required to be on duty."

(3) Subsection (g) of such section 709 is amended by adding at the end thereof the following new paragraph:

"(3) Notwithstanding any other provision of law, any technician who is required to fulfill annual training requirements in order to qualify for his technician's position shall, during any calendar year, be granted appropriate military leave for the purpose of meeting such qualifications, and such military leave shall be in addition to any other annual military leave authorized by law or regulation in the case of such technician."

Sec. 2. (a) Section 8332(b) of title 5, United States Code, relating to creditable service for civil service retirement purposes, is amended by striking out the last sentence thereof which reads as follows: "Service referred to in paragraph (6) is allowable only in the case of persons performing service under section 709 of title 32, United States Code, on or after the effective date of the National Guard Technicians Act of 1968."

(b) Section 8334(c) of title 5, United States Code, relating to deposits for periods of creditable service for civil service retirement purposes, is amended by striking out the last sentence thereof which reads as follows: "Notwithstanding the foregoing provisions of this subsection, the deposit with respect to a period of service referred to in section 8332(b)(6) which was performed prior to the effective date of the National Guard Technicians Act of 1968 shall be an amount equal to 55 per centum of a deposit computed in accordance with such provisions."

(c) Section 8336 of title 5, United States Code, is amended by adding the following new subsection at the end thereof:

"(h) A person performing service under section 709 of title 32, United States Code, who is separated from such service after becoming fifty years of age and completing twenty years of service in the performance of such duty is entitled to an annuity if the Secretary of the military department concerned recommends his retirement and the Civil Service Commission approves the recommendation."

(d) Section 8339 of title 5, United States Code, relating to computation of civil service retirement annuities, is amended by striking out subsection (1) thereof which reads as follows:

"(1) In determining service for the purpose of computing an annuity under each paragraph of this section, 45 per centum of each year, or fraction thereof, of service referred to in section 8332(b)(6) which was performed prior to the effective date of the National Guard Technicians Act of 1968 shall be disregarded."

(e) Section 3(c) of the National Guard Technicians Act of 1968 (82 Stat. 757; Public Law 90-486), relating to crediting of National Guard technician service for Federal employees' leave, death, and disability compensation, group life and health insurance, severance pay, tenure, and status, is amended by striking out the last sentence thereof which reads as follows: "The subsection shall

apply only in the case of persons who perform service under section 709 of title 32, United States Code, on or after the effective date of this Act."

(f) The foregoing provisions of this section (except subsection (c)) shall become effective as of January 1, 1969.

By Mr. COOK (for himself and Mr. BAKER):

S. 1442. A bill to amend the Rural Electrification Act of 1936, as amended, to establish a Rural Electrification and Telephone Revolving Fund to provide adequate funds for rural electric and telephone systems through insured and guaranteed loans at interest rates which will allow them to achieve the objectives of the act, and for other purposes. Referred to the Committee on Agriculture and Forestry.

Mr. COOK. Mr. President, on December 29 of last year the U.S. Department of Agriculture announced that the REA Electric and telephone 2-percent direct loan programs would be terminated. In the meantime, the 2-percent direct loan program under the Rural Electrification Act of 1936, as amended, has been replaced by guaranteed and insured loan programs at somewhat higher interest rates provided for in the Rural Development Act of 1972. Under this new arrangement, loans are made to rural electric and telephone cooperatives on an insured basis at 5-percent interest and guaranteed loans are available to electric cooperatives when private capital is available on advantageous terms.

By virtue of the 2-percent direct loan program promulgated in the 1936 act, rural electrification has proved to be a huge success. In the 53-year period from 1882, when the first central generating system went into service, to 1935, when REA was created, only 10.9 percent of all farms in the United States had obtained electric service. Today, however, 98.4 percent of the 2.8 million U.S. farms are electrified and REA-financed systems serve slightly more than half these farms. Therefore, it is obvious that in view of this success over the past 37 years, our rural electric co-ops are in a position to be more self-sustaining financially than they were at the inception of the Rural Electrification Administration in 1936.

However, it has been the low cost money over the years which has enabled the rural electric co-ops to meet the power needs of their sparsely settled clientele at reasonable rates. As I indicated, although a majority of the Nation's over 900 rural electric co-ops can indeed afford to pay higher interest on their operating capital, there is still a substantial minority of co-ops that are not fiscally independent and still desperately need the 2-percent low-cost money. It is for this reason that as early as January 24 of this year I advocated that instead of a rigid adherence to 5 percent money, as proposed by the Rural Electrification Administration at the termination of the 2-percent direct loan program on December 29, there should be a formula adopted by the REA which would take

into account the ability to pay of the individual rural electric co-ops. At that time I advocated a three-tier program with loans, available at 2 percent, 5 percent, and at the market rate. The first category of borrowers would be composed of the approximately 88 rural electric co-ops serving such thinly populated areas that they are not eligible for financing outside the Government. This group would be eligible for a 2-percent REA loan. The second category of borrowers would be those rural electric co-ops that were more viable financially than the first group but not quite so fiscally sound that they could pay the market rate. This second category of borrowers could, therefore, have been eligible for insured loans at 5 percent interest. The last category of borrowers would be those co-ops that were so independent financially that they could pay interest at the market rate on their loans which would be guaranteed by the Rural Electrification Administration.

Since I made this original proposal on January 24, I have patiently waited to see the exact course that Congress and the Department of Agriculture were ready to pursue in this vital area of rural electrification. Several matters of note have occurred since that time.

The Senate, by virtue of S. 394, approved a bill which basically reinstates the original 2-percent loan program. The administration has presented its own proposal to Congress, and the House Agriculture Committee has worked for several months on compromise legislation which was ordered to be reported out of committee on March 20. I must say that I have not found any of the above approaches to be completely satisfactory, although the Denholm bill which was just reported out of the House Agriculture Committee does in my estimation have a great deal of merit. Nevertheless, it is because of my belief that none of the three approaches just mentioned are completely satisfactory that I introduce the legislation which I do today.

The bill which I am introducing today incorporates the basic features of the compromise bill which was so laboriously arrived at by the House Agriculture Committee, with one very notable exception, the conditions of eligibility pertaining to the 2-percent loan interest REA loans. Therefore, as in the House bill, this legislation would establish a Rural Electrification and telephone revolving fund which would consist of "all notes, bonds, obligations, and property delivered or assigned to the Administrator pursuant to loans heretofore or hereafter made" including all collections of principal and interest received on and after July 1, 1972, all appropriations for interest subsidies and losses which Congress may make, and moneys which the Administration would be authorized to borrow from the Secretary of the Treasury. I feel, as do those who voted for this proposal on the House Agriculture Committee, that the assets of this fund would sufficiently finance most of the future needs of the program.

Second, the bill provides that the Administrator of the Rural Electrification Administration is "authorized and directed" to make loans to the full extent of the assets available in the fund, subject only to limitations as to amounts authorized for loans and advances as may be imposed by Congress. This provision is of particular note since the intent of the language is to preclude the impoundment of the appropriated funds and the termination of the program by the executive branch as occurred on December 29, 1972.

The loan rates, 2 percent, 5 percent, and the market rate, are the same as those in the House bill. However, the criteria regarding the eligibility of rural electric co-ops for 2-percent loans from REA are substantially different. In the bill I am introducing today, any electric or telephone borrower which has an average consumer or subscriber density of 3 or fewer per mile will be eligible for the "special rate" of 2-percent interest if its earnings or margin coverage of interest is less than 1.50, or such coverage of debt service is less than 1.25. In addition, the Administrator of REA in his discretion can approve a 2-percent loan although the borrower does not meet the above criteria if he finds the borrower has experienced extenuating circumstances or extreme hardship or if the borrower is experiencing extreme difficulty in maintaining retail rates which are comparable to those paid by consumers of other suppliers in its general area. Thus, the primary difference between the conditions in the House bill and my proposal is that whereas in the Denholm bill approximately 180 electric cooperatives would be entitled to the 2-percent money by right—as opposed to by discretion of the Administrator—approximately 90 would be entitled to 2-percent money by right under the bill I am introducing today.

It is envisioned, however, that a majority of the loans, as provided for in sections 305(c) and 306, would be insured loans at the "standard rate" of 5 percent, or loans guaranteed up to 90 percent by REA at the market rate. The legislation also provides that the borrower may receive a combination of these two; part 5-percent money and part market-rate money.

Finally, section 310 of the bill I am submitting would provide, at the request of the borrower, refinancing for any loans received by the borrower under the provisions of the Consolidated Farm and Rural Development Act from the time of first utilization by REA for electric and telephone loans until the enactment into law of the bill being submitted today.

Mr. President, it is my hope that the legislation that I am offering today will be accepted as a compromise between the positions of the Department of Agriculture and that of the Rural Electric Cooperative Associations throughout the country. In my opinion, it is this kind of middle-of-the-road meeting of the minds which will enable the Congress to suc-

cessfully enact legislation to solve the current rural electrification dilemma.

Mr. President, I ask unanimous consent that the text of this bill appear in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1442

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is hereby declared to be the policy of the Congress that adequate funds should be made available to rural electric and telephone systems through direct, insured and guaranteed loans at interest rates which will allow them to achieve the objectives of the Rural Electrification Act of 1936, as amended, and that such rural electric and telephone systems should be encouraged and assisted to develop their resources and ability to achieve the financial strength needed to enable them to satisfy their credit needs from their own financial organizations and other sources at reasonable rates and terms consistent with the loan applicant's ability to pay and achievement of the Act's objectives. The Rural Electrification Act of 1936, as amended (7 U.S.C. 901-950 (b)), is therefore further amended as hereinafter provided.

Sec. 2. Title III of the Rural Electrification Act of 1936, as amended, is amended by striking out all of sections 301 and 302 and inserting in lieu thereof the following new sections:

RURAL ELECTRIFICATION AND TELEPHONE REVOLVING FUND

"SEC. 301. (a) There is hereby established in the Treasury of the United States a fund, to be known as the Rural Electrification and Telephone Revolving Fund (hereinafter referred to as the "fund"), consisting of—

"(1) all notes, bonds, obligations, liens, mortgages, and property delivered or assigned to the Administrator pursuant to loans heretofore or hereafter made under sections 4, 5, and 201 of this Act and under this title, as of the effective date of this title, as revised herein, and all proceeds from the sales hereunder of such notes, bonds, obligations, liens, mortgages, and property, which shall be transferred to and be assets of the fund;

"(2) undisbursed balances of electric and telephone loans made under sections 4, 5, and 201, which as of the effective date of this title, as revised herein, shall be transferred to and be assets of the fund;

"(3) notwithstanding section 3 (a) and (f) of title I, all collections of principal and interest received on and after July 1, 1972, on notes, bonds, judgments, or other obligations made or held under titles I and II of this Act and under this title, except for net collection proceeds previously appropriated for the purchase of class A stock in the Rural Telephone Bank, which shall be paid into and be assets of the fund;

"(4) all appropriations for interest subsidies and losses required under this title which may hereafter be made by the Congress;

"(5) moneys borrowed from the Secretary of the Treasury pursuant to section 304 (a); and

"(6) shares of the capital stock of the Rural Telephone Bank purchased by the United States pursuant to section 406(a) of this Act and moneys received from said bank upon retirement of said shares of stock in accordance with the provisions of title IV of this Act, which said shares and moneys shall be assets of the fund.

LIABILITIES AND USES OF FUND

"SEC. 302. (a) The notes of the Administrator to the Secretary of the Treasury to

obtain funds for loans under sections 4, 5, and 201 of this Act, and all other liabilities against the appropriations or assets in the funds in connection with electrification and telephone loan operations shall be liabilities of the fund, and all other obligations against such appropriations or assets in the fund arising out of electrification and telephone loan operations shall be obligations of the fund.

"(b) The assets of the fund shall be available only for the following purposes:

"(1) loans which could be insured under this title, and for advances in connection with such loans and loans previously made, as of the effective date of this title, as revised herein, under sections 4, 5, and 201 of this Act;

"(2) payment of principal when due on outstanding loans to the Administrator from the Secretary of the Treasury for electrification and telephone purposes pursuant to section 3(a) of this Act and payment of principal and interest when due on loans to the Administrator from the Secretary of the Treasury pursuant to section 304(a) of this title;

"(3) payment of amounts to which the holder of notes is entitled on insured loans: *Provided*, That payments other than final payments need not be remitted to the holder until due or until the next agreed annual, semiannual, or quarterly remittance date;

"(4) payment to the holder of insured notes of any defaulted installment or, upon assignment of the note to the Administrator at his request, the entire balance due on the note;

"(5) purchase of notes in accordance with contracts of insurance entered into by the Administrator;

"(6) payment in compliance with contracts of guarantee;

"(7) payment of taxes, insurance, prior liens, expenses necessary to make fiscal adjustments in connection with the application, and transmittal of collections as necessary to obtain credit reports on applicants or borrowers, expenses for necessary services, including construction inspections, commercial appraisals, loan servicing, consulting business advisory or other commercial and technical services, and other program services, and other expenses and advances authorized in section 7 of this Act in connection with insured loans. Such items may be paid in connection with guaranteed loans after or in connection with the acquisition of such loans or security thereof after default, to the extent determined to be necessary to protect the interest of the Government, or in connection with any other activity authorized in this Act;

"(8) payment of the purchase price and any costs and expenses incurred in connection with the purchase, acquisition, or operation of property pursuant to section 7 of this Act.

"DEPOSIT OF FUND MONEYS

"SEC. 303. Moneys in the fund shall remain on deposit in the Treasury of the United States until disbursed.

"FINANCIAL TRANSACTIONS OF THE FUND

"SEC. 304. (a) The Administrator is authorized to make and issue interim notes to the Secretary of the Treasury for the purpose of obtaining funds necessary for discharging obligations of the fund and for making loans, advances and authorized expenditures out of the fund. Such notes shall be in such form and denominations and have such maturities and be subject to such terms and conditions as may be agreed upon by the Administrator and the Secretary of the Treasury. Such notes shall bear interest at a rate fixed by the Secretary of the Treasury, taking into consideration the current average market yield of out-

standing marketable obligations of the United States having maturities comparable to the notes issued by the Administrator under this section. The Secretary of the Treasury is authorized and directed to purchase any notes of the Administrator issued hereunder, and, for that purpose, the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which such securities may be issued under such Act, as amended, are extended to include the purchase of notes issued by the Administrator. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes shall be treated as public debt transactions of the United States: *Provided, however*, That such interim notes to the Secretary of the Treasury shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States.

"(b) The Secretary of the Treasury is authorized and directed to purchase for resale obligations insured through the fund when offered by the Administrator. Such resales shall be upon such terms and conditions as the Secretary of the Treasury shall determine. Purchases and resales by the Secretary of the Treasury hereunder shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States.

"(c) The Administrator may, on an insured basis or otherwise, sell and assign any notes in the fund or sell certificates of beneficial ownership therein to the Secretary of the Treasury or in the private market. Any sale by the Administrator of notes individually or in blocks shall be treated as a sale of assets for the purposes of the Budget and Accounting Act, 1921, notwithstanding the fact that the Administrator, under an agreement with the purchaser or purchasers, holds the debt instruments evidencing the loans and holds or reinvests payments thereon as trustee and custodian for the purchaser or purchasers of the individual note or of the certificate of beneficial ownership in a number of such notes. Security instruments taken by the Administrator in connection with any notes in the fund may constitute liens running to the United States notwithstanding the fact that such notes may be thereafter held by purchasers thereof.

INSURED LOANS; INTEREST RATES AND LENDING LEVELS

"Sec. 305. (a) The Administrator is authorized and directed to make insured loans under this title and at the interest rates hereinafter provided to the full extent of the assets available in the fund, subject only to limitations as to amounts authorized for loans and advances as may be from time to time imposed by the Congress of the United States for loans to be made in any one year, which amounts shall remain available until expended: *Provided*, That any such loans and advances shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States.

"(b) Insured loans made under this title shall bear interest at either 2 per centum per annum (hereinafter called the 'special rate'), or 5 per centum per annum (hereinafter called the 'standard rate'). Loans bearing the

special rate shall be reserved for and made by the Administrator to the full extent of the authorities contained herein for any electric or telephone borrower which meets the following conditions:

"(1) has an average consumer or subscriber density of three or less per mile, and

"(2) its earnings or margin coverage of interest is less than 1.50, or such coverage of debt service is less than 1.25, each determined on the basis of the average of the two highest of the preceding three calendar years: *Provided, however*, That the Administrator may in his sole discretion make a loan, including electric generating and transmission loans, at the special rate if he finds that the borrower:

"(A) has experienced extenuating circumstances or extreme hardship, or

"(B) is experiencing extreme difficulty in maintaining retail rates which are comparable to those paid by consumers of other electric supplies in its general area.

"(c) Loans made under this section shall be insured by the Administrator when purchased by a lender. As used in this Act, an insured loan is one which is made, held, and serviced by the Administrator, and sold and insured by the Administrator hereunder; such loans shall be sold and insured by the Administrator without undue delay.

"GUARANTEED LOANS; ACCOMMODATION AND SUBORDINATION OF LIENS

"Sec. 306. The Administrator may provide financial assistance to borrowers for purposes provided in the Rural Electrification Act of 1936, as amended, by guaranteeing loans, to the extent of 90 percent thereof, made by the Rural Telephone Bank, National Rural Utilities Cooperative Finance Corporation, and any other legally organized lending agency, or by accommodating or subordinating liens or mortgages in the fund held by the Administrator as owner or as trustee or custodian for purchasers of notes from the fund, or any combination of such guarantee, accommodation, or subordination. No fees or charges shall be assessed for any such guarantee, accommodation, or subordination. Guaranteed loans shall bear interest at the rate agreed upon by the borrower and the lender. Guaranteed loans, and accommodation and subordination of liens of mortgages, may be made concurrently with a loan insured at the standard rate. The amount of guaranteed loans shall be subject only to such limitations as to amounts as may be authorized from time to time by the Congress of the United States: *Provided*, That any amounts guaranteed hereunder shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States. As used in this title a guaranteed loan is one which is made, held, and serviced by a legally organized lending agency and which is guaranteed by the Administrator hereunder.

"OTHER FINANCING

"Sec. 307. When it appears to the Administrator that the loan applicant is able to obtain a loan for part of his credit needs from a responsible cooperative or other credit source at reasonable rates and terms consistent with the loan applicant's ability to pay and the achievement of the Act's objectives, he may request the loan applicant to apply for and accept such a loan concurrently with a loan insured at the standard rate, subject, however, to full use being made by the Administrator of the funds made available hereunder for such insured loans under this title.

"FULL FAITH AND CREDIT OF THE UNITED STATES

"Sec. 308. Any contract of insurance or guarantee executed by the Administrator under this title shall be an obligation supported by the full faith and credit of the United States and incontestable except for fraud or misrepresentation of which the holder has actual knowledge.

"LOAN TERMS AND CONDITIONS

"Sec. 309. Loans made from or insured through the fund shall be for the same purposes and on the same terms and conditions as are provided for loans in titles I and II of this Act except as otherwise provided for in sections 303 to 308 inclusive.

"REFINANCING OF RURAL DEVELOPMENT ACT LOANS

"Sec. 310. At the request of the borrowers, the Administrator is authorized and directed to refinance with loans which may be insured under this Act, any loans made for rural electric and telephone facilities under any provision of the Consolidated Farm and Rural Development Act."

Sec. 3. Section 3(f) of the Rural Electrification Act of 1936, as amended, is amended by striking "Except as otherwise provided in section 301 and 406(a) of this Act," and by inserting "*Provided, however*, That notwithstanding subsection (a) of this section, payments of such loans heretofore or hereafter made to the Administrator for use in making loans to borrowers under titles I and II shall not include any interest" immediately before the semicolon.

Sec. 4. Section 405 of the Rural Electrification Act of 1936, as amended, is further amended by striking subsection (e) in its entirety and by inserting in lieu thereof a new subsection (e), as follows:

"(e) Thereafter, the cooperative-type entities and organizations holding class B and class C stock, voting as a separate class, shall elect three directors to represent their class by a majority vote of the stockholders voting in such class; and the commercial-type entities and organizations holding class B and C stock, voting as a separate class, shall elect three directors to represent their class by a majority vote of the stockholders voting in such class. Limited proxy voting may be permitted, as authorized by the by-laws of the telephone bank. Cumulative voting shall not be permitted."

Sec. 5. The second sentence of section 406 (a) of the Rural Electrification Act of 1936, as amended, is further amended by striking "from net collection proceeds in the rural telephone account created under title III of this Act" immediately after the word "appropriated".

Sec. 6. Subsection (a) of section 407 of the Rural Electrification Act of 1936, as amended, is amended by striking out "eight" in the second sentence and inserting in lieu thereof "twenty", and by striking out all of the third sentence.

Sec. 7. Section 407 of the Rural Electrification Act of 1936, as amended, is amended by adding a new subsection (c) as follows:

"(c) Purchases and resales by the Secretary of the Treasury as authorized in subsection (b) of this section shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States."

Sec. 8. Subsection (a) of section 408 of the Rural Electrification Act of 1936, as amended, is amended (a) by inserting the words "or which have been certified by the Administrator to be eligible for such a loan or loan commitment," immediately following the term "this Act," where it first

appears; and (b) by adding at the end thereof the following sentence: "Loans and advances made under this section shall not be included in the totals of the budget of the United States Government and shall be exempt from any general limitation imposed by statute on expenditures and net lending (budget outlays) of the United States."

Sec. 9. Subsection (b) of section 408 of the Rural Electrification Act of 1936, as amended, is amended by striking out all of paragraph (3) and inserting in lieu thereof a new paragraph (3) reading:

"(3) Loans under this section shall bear interest at the 'cost of money rate.' The cost of money rate is defined as the average cost of moneys to the telephone bank as determined by the Governor, but not less than 5 per centum per annum."

Sec. 10. The right to repeal, alter, or amend this Act is expressly reserved.

Sec. 11. This Act shall take effect upon enactment.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

S. 180

At the request of Mr. WILLIAMS, the Senator from Oregon (Mr. PACKWOOD) was added as a cosponsor of S. 180, the Coastal Environment Protection Act.

S. 413

At the request of Mr. HATFIELD, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 413, a bill to permit American citizens to hold gold in the event of the removal of the requirement that gold reserves be held against currency in circulation.

S. 422

At the request of Mr. HATFIELD, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 422, a bill to authorize the issuance of \$25 gold pieces bearing the seal or symbol of the American Revolution Bicentennial Commission.

S. 740

At the request of Mr. WILLIAMS, the Senator from Rhode Island (Mr. PASTORE), the Senator from Wyoming (Mr. McGEE), the Senator from Utah (Mr. MOSS), the Senator from Iowa (Mr. CLARK), the Senator from Michigan (Mr. HART), the Senator from Colorado (Mr. HASKELL), the Senator from Minnesota (Mr. HUMPHREY), the Senator from South Carolina (Mr. HOLLINGS), and the Senator from South Dakota (Mr. McGOVERN) were added as cosponsors of S. 740, a bill to extend the Migrant Health Act for 4 years.

S. 868

At the request of Mr. WILLIAMS, the Senator from Wyoming (Mr. McGEE), the Senator from New Mexico (Mr. DOMENICI), and the Senator from Michigan (Mr. HART) were added as cosponsors of S. 868, a bill to provide computation of social security benefits based on combined earnings of married couples.

S. 869

At the request of Mr. WILLIAMS, the Senator from Wyoming (Mr. McGEE), the Senator from Rhode Island (Mr.

PASTORE), the Senator from New Mexico (Mr. DOMENICI), and the Senator from Michigan (Mr. HART) were added as cosponsors of S. 869, a bill to provide computation of social security benefits for men at age 62.

S. 904

At the request of Mr. WILLIAMS, the Senator from Wyoming (Mr. McGEE) and the Senator from Nevada (Mr. BIBLE) were added as cosponsors of S. 904, the Truth in Food Labeling Act.

S. 928

At the request of Mr. ROTH, the Senator from New York (Mr. JAVITS) was added as a cosponsor of S. 928, to create a catalog of Federal assistance programs.

S. 1094, S. 1095, AND S. 1097

At the request of Mr. SCOTT of Pennsylvania, the Senator from Colorado (Mr. DOMINICK) was added as a cosponsor of S. 1094, to improve the regulation of Federal election campaign activities; S. 1095, a bill to amend the Communications Act with respect to the application of the equal time provisions to candidates for Federal elective office; and S. 1097, a bill to provide that political contributions are not subject to the gift tax.

S. 1147

At the request of Mr. DOMINICK, the Senator from Texas (Mr. BENTSEN), the Senator from Kansas (Mr. DOLE), the Senator from North Carolina (Mr. HELMS), and the Senator from Nebraska (Mr. HRUSKA) were added as cosponsors of S. 1147, a bill to amend the Occupational Safety and Health Act of 1970.

S. 1322

At the request of Mr. WILLIAMS, the Senator from Minnesota (Mr. HUMPHREY), the Senator from Idaho (Mr. CHURCH), and the Senator from Nevada (Mr. CANNON) were added as cosponsors of S. 1322, the Full Benefits for Elderly Tenants Act.

SENATE JOINT RESOLUTION 24

At the request of Mr. MCINTYRE, the Senator from Minnesota (Mr. MONDALE) and the Senator from Oregon (Mr. HATFIELD) were added as cosponsors of Senate Joint Resolution 24, to designate "National Hunting and Fishing Day."

SENATE JOINT RESOLUTION 70

At the request of Mr. WILLIAMS, the Senator from New Hampshire (Mr. COTTON) was added as a cosponsor of Senate Joint Resolution 70, to authorize the President to proclaim annually the last Friday in April as "National Arbor Day."

SENATE JOINT RESOLUTION 74

At the request of Mr. SPARKMAN, the Senator from Illinois (Mr. STEVENSON) was added as a cosponsor of Senate Joint Resolution 74, to authorize the President to issue a proclamation designating the last full calendar week in April of each year as "National Secretaries Week."

SENATE JOINT RESOLUTION 80

At the request of Mr. ROTH, the Senator from Tennessee (Mr. BAKER), the Senator from Maryland (Mr. BEALL), the

Senator from Nevada (Mr. BIBLE), the Senator from Delaware (Mr. BIDEN), the Senator from New York (Mr. JAVITS), the Senator from Maine (Mr. MUSKIE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Alabama (Mr. SPARKMAN), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. TAFT) were added as cosponsors of Senate Joint Resolution 80, to authorize the President to issue annually a proclamation designating the month of May in each year as "National Arthritis Month."

SENATE RESOLUTION 88—SUBMISSION OF A RESOLUTION AUTHORIZING THE PRINTING OF THE REPORT ENTITLED "SECURITIES INDUSTRY STUDY" AS A SENATE DOCUMENT

(Referred to the Committee on Rules and Administration.)

Mr. WILLIAMS submitted the following resolution:

S. RES. 88

Resolved, That the report of the Subcommittee on Securities of the Committee on Banking, Housing and Urban Affairs entitled "Securities Industry Study" be printed as a Senate document, and that there be printed two thousand additional copies of such document for the use of that committee.

NOTICE OF HEARING BEFORE COMMITTEE ON BANKING, HOUSING AND URBAN AFFAIRS

Mr. JOHNSTON, Mr. President, the Subcommittee on Production and Stabilization of the Committee on Banking, Housing and Urban Affairs will commence hearings on S. 395, S. 359, S. 413, and S. 741 at 10 a.m. on May 1 and 2, in room 5302 Dirksen Office Building.

All persons wishing to testify should contact Mr. Gerald Allen, room 5300, Dirksen Office Building; telephone 225-7391.

NOTICE OF HEARINGS ON DEEP SEABED HARD MINERAL RESOURCES ACT

Mr. METCALF, Mr. President, I take this means to notify my colleagues that the Subcommittee on Minerals, Materials, and Fuels of the Senate Committee on Interior and Insular Affairs has scheduled hearings on May 17, June 5, 18, and 19 on the Deep Seabed Hard Mineral Resources Act, subject of my remarks at page 6820 in the CONGRESSIONAL RECORD of March 8, 1973.

On May 17, representatives of industry are invited to state the case for it.

On June 5, administration witnesses will give us a status report from the United Nations on negotiations which hopefully will lead to international agreement on the conservation and orderly development of the hard mineral resources of the deep seabed. We also will ask them for their predictions on the progress which may be made during

the meetings of the United Nations Seabed Committee in Geneva, July 2 to August 24 in preparation for the 1974 Law of the Sea Conference. We will tell administration witnesses that we will request another progress report soon after the end of the Geneva meetings.

On June 18 and 19 the subcommittee will hear from environmental and conservation groups concerned with the impact of ocean mining on our marine environment and the living resources of the ocean, and from organizations and individuals interested in international management of the deep seabed. Each of these latter groups will have 1 day before the subcommittee.

The hearings will be held in room 3110, Dirksen Senate Office Building, and will begin at 10 a.m. each day.

In this connection, I call the attention of my colleagues to two recent articles in the New York Times.

One article states that the U.S. delegation to the U.N. Seabed Committee has now accredited 109 members and that the delegation consists of persons representing oil, mineral, and fisheries interests and that such representatives "hold views at variance with the official stance taken by the United States." The article further states that if it is learned that any of these delegates express views to other governments contrary to the U.S. position, the credentials of such delegates will be withdrawn.

It is well known that the large advisory group from the industry which assists the Government members of the U.S. delegation were recruited so that the delegation could more adequately represent U.S. industry interests in the law of the sea negotiations. The State Department is to be commended for its foresight in recognizing that the U.N. Seabed Committee negotiations will entail policy issues having potentially significant impact on the well-being of many of our Nation's industrial activities.

Further, State Department recognized that it was in the national interest to seek to accommodate the interests of U.S. citizens engaged in various industrial activities pertaining to ocean resource development. The State Department, as the New York Times article clearly indicated, recognized that the Senate will be deeply concerned about how well U.S. national interests have been represented in the text of any future treaty which the Senate will be called upon to review. To this extent, Mr. President, the State Department is to be commended.

I would oppose any effort that the State Department might consider making to prevent an industrial adviser from freely discussing his personal views or his company's views with members of foreign delegations so long as the adviser clearly distinguishes his personal views from those of the Government representatives on his delegation.

Mr. President, I ask unanimous consent that the New York Times article of March 23, 1973, and an earlier Times piece, this one headlined "U.S. Asking

Rules on Mining of the Sea," in the issue of March 20, be printed at this point in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the New York Times, Mar. 23, 1973]

U.N. UNIT AT WORK ON A LAW OF SEA

(By Robert Alden)

UNITED NATIONS, N.Y.—Complex negotiations are under way here in an effort to lay groundwork for a law of the sea that will govern on the waters that cover 70 per cent of the earth's surface.

Christopher M. Phillips, a member of the United States delegation, called these talks here "unquestionably the most crucial international negotiations now being undertaken by the United Nations."

At stake are economic resources whose value can only be estimated in the trillions of dollars—nickel, copper, cobalt, manganese, oil, thermal energy and, of course, fish. At stake also is the security of nuclear powers such as the United States and the Soviet Union who feel their atomic submarines must have free access through certain straits.

A CONFLICT IN DELEGATION

At stake also is the ability of the oceans themselves to support sea life. There already exists a considerable body of evidence suggesting that unless there is effective international regulation of the pollution of the seas, the ocean will be poisoned and all living things in it killed.

So important are these talks considered by the United States that it has now accredited 109 delegates to the negotiations.

The unusual size of this delegation has been a matter of some controversy. Some persons on the delegation—representing oil, mineral and fishery interests—hold views at variance with the official stance taken by the United States at the meetings here.

"But we feel that having this kind of broad cross section on the delegation not only gives us a better understanding of the entire complex problem," Mr. Phillips said, "but also gives these people a greater understanding of the over-all problems of drawing an international law of this magnitude."

"Also when the international law is finally drawn and requires Senate ratification, having this kind of broad representation will help a great deal to get that ratification," he added.

So far there are no known instances when members of a delegation have taken positions opposite to the official United States position in talks with members of other delegations. It was made clear by the United States mission here that if contrary views were expressed to other governments the credentials of the delegate involved would be withdrawn.

This week the United States proposed in the seabed committee that temporary regulations be established to cover undersea mining until a permanent treaty could be worked out and ratified.

WORLD BENEFIT SOUGHT

In the United States view such an agreement would make certain that seabed exploitation would begin under an internationally agreed-upon regime and its benefits would accrue to the international community.

With the technology of sea-mining approaching the stage where it will be commercially feasible in a matter of years, some private companies in the United States and in Japan have favored proceeding without international regulation.

Yet because the private investment involved would be so large, they have been unwilling to undertake sea-mining ventures without some assurance from their governments that their rights at sea would be protected.

In support of their position they wrote that since early in the 17th century the doctrine of freedom of the seas has prevailed, under which a private company would have the right to tap the resources of the ocean bottom. Millions of acres of the ocean floor are lined with a dense covering of what are called manganese nodules, about the size and color of a piece of coal. These nodules are rich in copper, nickel, cobalt, manganese and some 17 other metallic elements.

Below the surface there are rich mineral deposits, including oil, natural gas and thermal heat.

Although the views of nations have a wide divergence, particularly with respect to fishing rights and coastal waters, there is now a general body of agreement that the mineral treasures of the deep ocean should be used for the common good.

Thus the enormously complicated effort has been undertaken to achieve an international agreement that would modify the doctrine of the freedom of the seas.

This session is scheduled to end here early in April with a new preparatory session to be convened in Geneva for 10 weeks this summer.

The hope is that the summer meeting will make it possible to convene a law-of-the-sea conference formally during the fall session of the General Assembly.

A working session of the conference would then get under way early in 1974 in Santiago, Chile, and the work on the law of the sea would be scheduled to be completed in 1975.

[From the New York Times, Mar. 20, 1973]

UNITED STATES ASKING RULES ON MINING OF SEA

UNITED NATIONS, N.Y.—The United States proposed today that temporary regulations be established to cover undersea mining of minerals until a United Nations seabed treaty goes into effect.

The complex treaty is being drafted, but it may take years before it is completed, signed and ratified by enough governments to go into operation.

In urging action now, John Norton Moore of the United States told a 91-nation subcommittee of the General Assembly's Committee on the Peaceful Uses of the Seabed that accelerated technology would make it possible to mine the seabed commercially in three to five years. He said that large sums of money were already being invested on preparatory work by some companies in the United States and other companies.

The preliminary response to the American policy statement from a number of Latin-American and African countries, from Canada, Singapore and others, was favorable.

CONCERN OF SMALL COUNTRIES

There has been concern among many of the smaller countries that the few industrial powers that have the technology for undersea mining would begin operating before the United Nations could approve a treaty providing at least some sharing of the ocean wealth.

Largely at their insistence, the General Assembly called two years ago for a moratorium on such exploitation until the treaty went into effect. The United States opposed the Assembly resolution.

Three private concerns in the United States, among them the Hughes Tool Company, have committed a total of \$90-million toward deep-sea exploration. Approval by

Congress also has been sought for legislation that, in effect, would authorize the Government to license explorations without waiting for a United Nations treaty.

The Nixon Administration has opposed the pending legislation. Mr. Moore told the United Nations committee. But, he said the Administration was also mindful of the need of private companies for security for their growing financial commitment.

Consequently, he said, the United States proposed to bring into force provisionally these treaty articles that will set up regulations for the seabeds.

NOTICE OF HEARINGS ON CERTAIN JOINT RESOLUTIONS

Mr. ROBERT C. BYRD. Mr. President, on behalf of the distinguished Senator from Mississippi (Mr. EASTLAND), chairman of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday and Wednesday, April 10 and 11, 1973, at 10:30 a.m., in room 2228, Dirksen Office Building, on the following joint resolutions:

S.J. Res. 9—Proposing an amendment to the Constitution of the United States relating to the assignment and transportation of pupils to public schools.

S.J. Res. 14—Proposing an amendment to the Constitution of the United States relating to open admissions to public schools.

S.J. Res. 28—Proposing an amendment to the Constitution of the United States relative to neighborhood schools.

S.J. Res. 35—Proposing an amendment to the Constitution of the United States.

S.J. Res. 36—Proposing an amendment to the Constitution of the United States relative to freedom from forced assignment to schools or jobs because of race, creed, or color.

S.J. Res. 47—Proposing an amendment to the Constitution of the United States relating to open admissions to public schools.

S.J. Res. 62—Proposing an amendment to the Constitution relating to school-busing.

NOTICE OF HEARING ON COAL SURFACE MINING AND RECLAMATION STUDY ON APRIL 30, 1973

Mr. METCALF. Mr. President, enactment of legislation to control surface mining activities is one of the highest priorities of the 93d Congress. Too often, the Federal Government deals with critical public policy problems without paying adequate attention to the full consequences of proposed solutions. This has frequently been true in matters involving degradation of our environment, where actions have been proposed, based on emotional reactions without full consideration of all of the impacts of the proposal.

To better understand the problems presented by the admitted abuses of surface mining, the chairman of the committee, Senator JACKSON, requested the Council on Environmental Quality to do

a study of various regulatory alternatives, their costs and benefits, their impact on the environment, and how they would influence the social and economic conditions of local communities. This study was received by the committee just prior to the hearings on surface mining legislation held March 13, 14, 15, and 16.

Because witnesses at those hearings had not had an adequate opportunity to study the report, the Subcommittee on Minerals, Materials and Fuels of the Committee on Interior and Insular Affairs has scheduled a hearing on the study on April 30.

The subcommittee has asked a panel of witnesses to appear and give their reactions to the study. It is our hope that their comments, combined with the study itself, will help Congress to enact better legislation. The hearing will be held in room 3110, Dirksen Senate Office Building, beginning at 10 a.m.

ADDITIONAL STATEMENTS

REQUIREMENT FOR SENATORS AND CERTAIN EMPLOYEES TO FILE FINANCIAL DISCLOSURES

Mr. BENNETT. Mr. President, it has become customary each year about this time for the Select Committee on Standards and Conduct to remind Senators and certain employees who are paid by the Senate of their duty to file personal financial disclosure statements as required by Senate Rule 44. Each Senator is required to file two statements before May 15. The first statement, which must be filed with the Secretary of the Senate where it becomes available for public inspection, contains a report of contributions accepted by a Senator and honorariums received by him during the year 1972. The second report is to be filed with the Comptroller General of the United States and includes a copy of the Federal income tax return and supplementary statements of certain personal interests in property, securities, income, and debts.

Each employee who was paid by the Senate at a rate in excess of \$15,000 a year at any time during 1972 must also file these same reports.

Also due on May 15 itself is the so-called moonlighting report by each employee, regardless of salary level, who through outside employment or the practice of a profession performs personal service for compensation. This report is made to his supervising Senator in accordance with Senate Rule 41.

Mr. President, the Committee on Standards and Conduct desires to assist Senators and employees in complying with the Senate Rules of Conduct, especially in the filing of disclosure reports. The staff of the committee will counsel in detail on request. Printed instructions and report forms have been revised this year and may be obtained upon telephoning the committee office on extension 2981.

This year we are endeavoring to make these instructions, forms and any other routine help available through a central source in each office, namely the administrative assistant or staff director. But any inquiry from any individual Senator or employee will, of course, be honored.

A NEED FOR AN IMPROVEMENT IN OUR ENVIRONMENT

Mr. TUNNEY. Mr. President, man is a careless despoiler, and throughout history has ravaged his environment. In the 1960's, however, he began to react against the self-destructive fall out of reckless pollution, and Congress cracked down with the National Environmental Policy Act. When it became law on January 1, 1970, the decade of the environment began.

In late 1970, Congress enacted the Clean Air Act amendments, which gave the Environmental Protection Agency sweeping powers to eliminate smog. Under the act, States are required to establish plans to fight smog, subject to the approval of the EPA Administrator. Recently, EPA proposed possible gasoline rationing in Los Angeles. This is far too drastic.

Consequently, I have introduced legislation for a crash research program to develop, within 3 years, an efficient, smog-free alternative to the internal combustion engine.

The cost could run as high as \$900 million, this would be a mere fraction of the \$23 billion that the National Academy of Science estimates car owners will pay yearly for smog devices on internal combustion engine.

The legislation provides for investigation of a variety of possible financing, including a minimal 1-year motor vehicle registration fee, an appropriation from general revenues and an appropriate increase in gas taxes. The most sensible way to finance this research, however, is to break open the highway trust fund. The fund, which has encouraged our overdependence on the automobiles by funding up to 90 percent of costs for highway construction, at least should contribute to the development of a private vehicle which is smog free.

Over and above that, I believe the fund should be tapped for mass transit. The Government's share of mass transportation costs is pitifully small in relation to its share of highway costs. During recent debate on the highway bill, I supported an amendment which would allow up to \$850 million for mass transit.

WATER QUALITY

Industrial, municipal, and agricultural wastes are the chief source of water pollution.

Last year, the Congress passed a tough water pollution control bill, but so far the administration has stood in the way of its implementation. First, the President vetoed it, and when overridden, he impounded funds Congress had appropriated to clean up our waterways.

As a member of the committee which

spent countless hours refining this crucial legislation, I am distressed by the President's actions for two reasons: First, California will lose more than \$293 million in 1973 and again in 1974, sharply curtailing construction of treatment facilities to halt discharge of pollutants into navigable waterways by 1985; second, the administration's action represents a usurpation of the congressional function and threatens the balance of powers set forth in the Constitution. I will continue to urge the President to release this money, but resolution of this question may ultimately be decided by the Supreme Court.

SOLID WASTES

Bottles, cans, cartons, paper, and other trash fill our dump sites and litter our countryside and cities. Scattered refuse is one of the most evident forms of pollution.

I have sponsored legislation to promote recycling and to develop improved methods of sewage and solid waste disposal. In addition, I have cosponsored a bill to assist the States in carrying out programs to dispose of abandoned or junked cars.

NOISE POLLUTION

In March 1972 I introduced the Environmental Noise Pollution Control Act. Big business interests fought the bill, and the majority leader of the Senate said its adoption was a "legislative miracle." The law provides for the first concerted Federal assault on the din which has become a part of modern living.

Within 2 years, the Environmental Protection Agency must develop statistics on the health effects of noise and, after an opportunity for public comment and participation, set standards reducing noise emissions for everything from vacuum cleaners to jackhammers.

Separate provisions are provided for regulating noise from interstate carriers and aircraft. The EPA will set standards for trains within 9 months. In the same period, EPA will review the adequacy of the Federal Aviation Administration's efforts to reduce aircraft and airport noise and make recommendations on possible additional controls. The FAA is then required to follow through. Citizens can sue to enforce the provisions of the act.

CONSERVATION

In America, nearly 70 percent of the population lives in urban areas. Polluted air, noisy surroundings, and general congestion have increased dramatically the demand for more beaches, parks, and wilderness areas. At the same time, increasing acres of coastline and open space rapidly are losing out to ill-planned resort facilities, shopping centers, and parking lots.

I do not believe economic development and environmental quality are mutually exclusive, but to have both will take coordinated planning at local, State, and Federal levels.

This kind of cooperation should be encouraged—especially in fields which promise improved conservation and management of our natural resources.

Congress recognized this need by enacting, for example, the Coastal Zone Management Act, which encourages States to develop a comprehensive set of standards to guide the public and private uses of land and waters in coastal zones.

California voters responded with great foresight by adopting the coastline initiative. They recognized that the Federal legislation depends on the States coming to grip with their coastal land use problems.

I believe the six regional commissions established by proposition 20 can resolve local disputes over development and offer an effective and consolidated statewide plan for our 1,000-mile coastline by the federally set 1975 deadline.

The sad truth is, however, that the \$5 million allocated by the State is wholly inadequate. Worse yet is the fact that, once again, the administration has eliminated funds for the Coastal Zone Management Act. I will work to have these vital funds reinstated.

WILDERNESS AREAS

The California wilderness, where man can meet nature on nature's own terms, is in great need of protection. Recreational use of these areas is among the fastest growing forms of leisure pursuit. Furthermore, wilderness areas serve as outdoor classrooms in natural history, laboratories for ecological and a living example of the original American landscape.

Already, Congress has designated 18 wilderness areas in California. These areas are a good first step in setting aside untouched land, but more needs to be done. I have joined Senator CRANSTON in introducing legislation to add an additional 883,000 acres of wilderness in our State (S. 110-115). These bills include Agua Tibia—Cleveland National Forest—Emigrant—Stanislaus National Forest—North and South Yosemite, Santa Lucia—in and near Los Padres National Forest—Snow Mountain—Mendocino National Forest—and Pinnacles—Pinnacles National Monument. Clearly, there are other areas which should be designated and I plan to introduce further wilderness legislation soon.

AN URBAN PARK

I have introduced legislation (S. 1270) to establish the Santa Monica Mountain and Seashore National Urban Park. The bill, cosponsored by Senator CRANSTON, would create a major national park along the beaches of Santa Monica Bay and the mountains and valleys of the Santa Monica Mountains in Los Angeles and Ventura Counties.

Never before in America has such a large, concentrated population suffered from such a scarcity of recreational resources. Ten million people live in metropolitan Los Angeles; yet the city has less open space than any other metropolitan area in the country, including New York. To compound this, over 8 million Americans visit southern California yearly.

If these mountains are developed, residents and visitors will lose the only remaining open space in the Los Angeles

basin and the city's last remaining non-polluting buffer will disappear.

THE FUTURE

I am committed to legislation which is directed at improving the quality of our life. Congress must adopt and oversee legislation which is both innovative and responsive. We must embrace and implement the sense of environmental balance which is absolutely indispensable to our survival.

COMMONWEALTH ELECTRIC CO., INC., OF LINCOLN, NEBR.

Mr. CURTIS. Mr. President, today marks a milestone in the history of one of Nebraska's important industries.

Commonwealth Electric Co., Inc., with headquarters in Lincoln, was founded on April 2, 1923, and during its half century of operations has helped this Nation move from conventional electrical usage by homes, farms, commerce, and industry into a new era of technology requiring massive installations of the highest complexity.

Commonwealth has grown into one of the few contracting and engineering firms with the overall capability of handling all electrical requirements involved in the generation, transmission, distribution, and use of electricity practically anywhere in the United States and Canada.

During its 50 years of service in both peace and war, Commonwealth has been recognized by our Government and by distinguished members of the business and industrial community for technical expertise, management competence, and employee relations.

Many of Commonwealth's present employees have been with the company for 25 years and longer. And the firm's relationship with the International Brotherhood of Electrical Workers is a strong asset in establishing an unblemished record of contract completions.

Founded by Paul Schorr, Commonwealth is still owned and operated by the Schorr family. In addition to managing a successful company, the Schorr family devotes much time and energy to civic activities working continually toward the improvement of community life.

At this milestone in the history of Commonwealth, we pause to recognize this company, its management, and its employees for giving this Nation another great example of the free enterprise system at its best.

INCREASED VIOLENCE REPORTED IN PUBLIC SCHOOLS

Mr. SYMINGTON. Mr. President, according to the Christian Science Monitor, 16 gun-shooting incidents in Kansas City schools have been reported since September.

Everett Copeland, security manager for Kansas City schools, is quoted as saying:

Kids carry guns for different reasons. Some say they have been threatened. Some involve extortion attempts. Some kids just say it's a status symbol.

Violence in our public school systems has ballooned to proportions unheard of a decade ago—not to mention 20 years ago.

Mr. J. Glenn Travis, Deputy to the Superintendent of the School District of Kansas City, Mo., has reported to my staff that \$231,801 will be spent in 1973 for guards and other security measures in the public schools; whereas in 1953 no funds were spent for security provisions and it is unlikely that such a plan was even considered at that time.

In the past violence in high schools or elementary schools seldom seemed to amount to more than sporadic vandalism, isolated fist fights, and occasional outbursts by over-enthusiastic students after a football game.

Today students in many cases appear to have found it necessary to carry weapons as an equalizer against possible assailants.

Mr. President, I ask unanimous consent to have printed in the RECORD a recent editorial from the Christian Science Monitor which sums up the unfortunate picture characteristic today, and which could well be a warning for the future.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROBLEM: GUNS IN HIGH SCHOOLS

Gunfire in U.S. high schools is becoming more frequent.

Students are carrying and using more guns in school, and some school guards have armed themselves as a result.

Most incidents occur at inner-city high schools. The weapons are usually cheap, small-caliber handguns, the so-called "Saturday night specials." Officials relate the increase to the revival of juvenile gangs in some cities and the persistence of racial tension.

An Associated Press survey around the country indicates the scope of the problem:

There have been 60 gun episodes in Los Angeles schools since September. Shots from a passing car killed a 16-year-old pupil near Locke High School. The car sped into the school parking lot, and three pupils were later arrested.

Fifteen handguns were confiscated last year in Atlanta schools. A 12-year-old boy, angered when schoolmates chided him for disobeying a traffic signal, got a pistol from home and opened fire on the school playground. He hit no one.

Four high-school pupils, three of them girls, were expelled in January in San Francisco for carrying guns.

School officials in Topeka, Kan., took a gun from a girl who said she needed it for protection.

There were 15 school gun cases in Detroit and four in Seattle during the last year. Since September, 15 incidents were reported in New York and 16 in Kansas City.

"We have a problem and it is increasing," says Everett Copeland, security manager for Kansas City schools. "Kids carry guns for different reasons. Some say they have been threatened. Some involve extortion attempts. Some kids just say it's a status symbol."

RETIREMENT OF WILBURN CARTWRIGHT

Mr. BARTLETT. Mr. President, on January 8, 1973, a truly great Oklahoman retired from public life. Mr. Wilburn Cartwright has one of the longest and most distinguished political careers in Oklahoma history. Mr. Cartwright will always be remembered by Members of the U.S. Congress because of his excellent service as a Member of the House of Representatives from 1927 to 1943. During this tenure Congressman Cartwright served as chairman of the House Roads and Highways Committee. He left his influence on this Nation when he authored, with Senator Hayden of Arizona, the Hayden-Cartwright Highway Act which became a major step in the development of the Federal Interstate Highway System.

In Oklahoma Mr. Cartwright will be remembered as an individual whose honesty has never been questioned and whose dedication to serving the citizens of the State and Nation is to this day unsurpassed.

The Oklahoma Legislature has passed a resolution commending Mr. Cartwright for his distinguished service to the State and Nation.

I now join in saying thank you to Wilburn Cartwright and wish him God's blessings in all he does.

Mr. President, I ask unanimous consent that the resolution printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SENATE CONCURRENT RESOLUTION No. 2

A resolution commending the distinguished career of the Honorable Wilburn Cartwright; expressing the grateful appreciation of the legislature and people of the State of Oklahoma for his fifty years of dedicated and productive public service; expressing sadness and regret for his recent accident and tendering our sincere and heartfelt wishes for a speedy and complete recovery; extending best wishes for a happy eighty-first birthday and for health and happiness upon his retirement from public service; and directing distribution

Whereas, on January 8, 1973, a unique and singularly outstanding career of public service came to a close upon the retirement from the Oklahoma Corporation Commission of the Honorable Wilburn Cartwright, member of the Commission since 1954 and holder of high elective office for most of the years since his initial election to the Oklahoma House of Representatives in 1914; and

Whereas, prior to his eighteen years of service as a member of the Corporation Commission, Mr. Cartwright distinguished himself during eight years as a member of the House of Representatives and Senate of the Oklahoma Legislature; sixteen years as a member of the United States House of Representatives from the Third Congressional District; four years as Oklahoma's Secretary of State; and four years as State Auditor of the State of Oklahoma; and

Whereas, during his membership in the House of Representatives of the United States Congress, Mr. Cartwright served with energy, vision and distinction as the Chairman of the Committee on Roads and Highways and, through the Hayden-Cartwright Act of 1934,

was instrumental in the establishment of our present national highway system; and

Whereas, as a member of the United States House of Representatives, Mr. Cartwright also served as an active member of the Committee on Indian Affairs and Veterans Legislation and, as Chairman of the Committee on Insular Affairs, was influential in the enactment of legislation granting independence to the Philippine Islands; and

Whereas, Mr. Cartwright's life as dedicated and loyal public servant and citizen also includes several years as teacher and administrator of public schools in Coal, Atoka, Bryan and Pittsburg Counties; as teacher of history and government at Southeastern State College, Durant; as a soldier in World Wars I and II, rising to the rank of Major in the latter war during volunteer service in North Africa, the Mediterranean and Italy prior to being injured at Foglia, Italy; as civil servant with the Veterans Administration, following his service with the United States Army in the second World War; and as a member of several civic and fraternal organizations and associations; and

Whereas, born in a log cabin near Georgetown, Meigs County, Tennessee, on January 12, 1892, Mr. Cartwright moved with his pioneer parents, Jackson Robert and Emma Cartwright, and several brothers and sisters to near Wapanucka, Indian Territory, in 1903, where the family farmed and earned for itself a leading role in the life of this frontier community; and

Whereas, tenacity of will and purpose guided Mr. Cartwright through difficult times and circumstances to an education in the public schools of Tennessee and Oklahoma and to a law degree from the University of Oklahoma in 1920; and

Whereas, an early and abiding concern for the well-being of his community and its people led Mr. Cartwright at a young age into the arena of politics and government and to a larger constituency, to be followed by other members of this public-spirited family, including his father, J.R., who served in the Oklahoma House of Representatives; his brothers Clifford (Buck) and Keith, each of whom served in both the House of Representatives and State Senate; and by his nephew Jan Eric, presently serving in the House of Representatives; and

Whereas, vigorous and energetic throughout his life, Mr. Cartwright, one week short of his eighty-first birthday, suffered an unfortunate injury, as a result of a fall on the ice which struck the capital city and state on Friday, January 5, 1973, while making his accustomed walk from home to his office and, coincidentally, his last full working day as a member of the Corporation Commission; and

Whereas, Mr. Cartwright's career of public service, spanning, as it does, virtually the entire history of our great state, stands without parallel in the annals of his beloved Oklahoma, and his contributions to his state and its people will long endure as a memorial to the dedication, energy and integrity which characterized his public trust, and will serve as a beacon for future generations as they seek examples from the past to point the way toward a better and brighter tomorrow.

Now, therefore, be it resolved by the Senate of the 1st session of the 34th Oklahoma Legislature, the House of Representatives concurring therein:

Section 1. That the distinguished career of public service of the Honorable Wilburn Cartwright, spanning half a century and much of the entire history of our great State of Oklahoma, be and hereby is officially commended and extolled.

Section 2. That the many outstanding con-

tributions of the Honorable Wilburn Cartwright to his state and its people be and hereby are commended to the annals of the great State of Oklahoma and offered as inspiring examples to all who aspire to public service.

Section 3. That our best and most heartfelt wishes are extended to Mr. Cartwright for a speedy and full recovery from the serious injury sustained in his recent accident.

Section 4. That our most sincere and grateful appreciation be and hereby is extended on behalf of the people of this state to a dedicated and loyal public servant upon the occasion of his retirement from public office, and our deepest wishes are offered to Mr. Cartwright for a happy eighty-first birthday, to be celebrated on January 12, 1973, and for health, happiness and continued productivity in all his endeavors during his retirement years.

Section 5. That a duly authenticated copy of this Resolution be presented to the Honorable Wilburn Cartwright as a measure of the high esteem of the Legislature and the people of the State of Oklahoma.

SHELLFISH

Mr. RIBICOFF. Mr. President, the GAO has released a study of Government regulation of sanitation and health practices with respect to shellfish. The study concludes that Federal, State, and industry programs designed to guard against health hazards from contaminated shellfish are failing to protect American consumers. Potential health hazards associated with contaminated shellfish include the risk of infectious viral hepatitis, typhoid, salmonellosis, gastroenteritis, and polio. Nearly one-third of the samples analyzed by agencies under the GAO's review exceeded allowable bacteriological standards.

Shocking reports on food inspection programs have by this time become commonplace. Over the past 2 years, the public has learned from reports by the GAO and other Government sources that meat and poultry are processed in insanitary facilities, that frozen and canned fruits and vegetables are processed in similar conditions, and that meat, poultry, eggs, and milk may be contaminated with cancer-causing substances. The latest GAO report, concerning shellfish, is unfortunately typical of what we have seen in other areas.

It is absolutely intolerable for these conditions to continue. One cause of the problem has been the disposition of Federal regulatory authority among several agencies. I shall introduce legislation to centralize responsibilities for these functions and help assure that consumers may finally begin to receive the protection they deserve.

I ask unanimous consent that a digest of the GAO report on shellfish be inserted in the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

[Comptroller General's Report to the Congress]

DIGEST

WHY THE REVIEW WAS MADE

The General Accounting Office (GAO) wanted to know whether the National Shell-

fish Sanitation Program (NSSP)—a voluntary, tripartite cooperative program of Federal, State, and shellfish industry representatives—is effectively insuring that potentially harmful shellfish are not reaching the American consumer and that imported shellfish are meeting U.S. domestic standards.

Background

Under the Food, Drug, and Cosmetic Act (FD&C Act), the Food and Drug Administration (FDA) is responsible for insuring that food—including shellfish—shipped in interstate commerce is safe, pure, wholesome, and processed under sanitary conditions. Shellfish, as defined under NSSP, include all edible species of oysters, clams, and mussels, either shucked or in the shell, fresh or frozen. Processed shellfish, whether domestic or imported, are monitored by FDA under the FD&C Act.

For fresh and frozen shellfish shipped interstate, FDA seldom uses the regulatory powers of the FD&C Act but relies, instead, on its participation in NSSP.

FDA administers this tripartite program for the Federal Government. FDA annually reviews each State's compliance with NSSP requirements and endorses, or withholds endorsement of, a State's program. If FDA withdraws its endorsement of a State's program, other member States must refuse shellfish shipments from that State.

There are 20 shellfish-producing States. During 1971 about 136 million pounds of shellfish were harvested by these States and another 16 million pounds were imported.

About 2 million acres of the national shellfish-harvesting acreage, or about 20 percent, have been closed to domestic harvesting because of contaminated waters. About 1,620 shellfish plants are certified under the program to ship their products in interstate commerce.

GAO reviewed selected activities of four shellfish-producing States—Maryland, Massachusetts, New York, and Washington—to assess the effectiveness of the four FDA district offices responsible for monitoring the activities of these States. These shellfish-producing States accounted for about 53 percent of the dollar value of the national shellfish production in 1971.

GAO asked FDA to analyze water samples collected from 10 approved growing areas in these States and accompanied FDA on its inspection of 30 shellfish plants selected by GAO. These plants represent about 5 percent of the certified plants in the four States and account for about 11 percent of the shellfish sales by these States.

Shellfish meat samples were collected during the plant inspections, and, at GAO's request, FDA analyzed them for bacteria counts and for the presence of toxic metals—mercury, lead, and cadmium—and pesticides.

GAO also used water and shellfish meat sample results previously collected and analyzed by the States to evaluate the timeliness of State actions and the effectiveness of FDA monitoring under the program.

FINDINGS AND CONCLUSIONS

Overall findings

1. Shellfish not meeting NSSP bacteriological standards are reaching the consumer in quantities sufficient for GAO to question NSSP's effectiveness.

2. FDA is not adequately monitoring the States to insure that shellfish reaching the consumer are pure, safe, and wholesome.

3. The States included in GAO's review are not fulfilling their responsibilities for insuring that shellfish are harvested from only safe waters and are processed under sanitary plant conditions.

Potentially harmful shellfish reaching the consumer

There is a potential health hazard associated with eating contaminated shellfish because they can carry infectious viral hepatitis, typhoid, salmonellosis, certain forms of gastroenteritis, and polio.

FDA has not established Federal standards for bacteria or toxic metals, except mercury, in shellfish and has not requested the Environmental Protection Agency—which regulates pesticides—to establish pesticide standards. Instead, FDA relies upon the States to enforce the NSSP bacteriological and pesticide standards. Toxic metal guidelines which NSSP has had under consideration for several years have not yet been made a part of the program.

Analyses of shellfish meat samples furnished to FDA by 14 States in 1970 showed that 24 percent of the samples exceeded allowable limits under the NSSP bacteriological standards. Of the samples analyzed during 1971 by the four States included in GAO's review, 31 percent exceeded the allowable limits.

An FDA analysis of shellfish meat collected during the joint FDA-GAO plant inspections showed that 17 percent of the samples exceeded allowable bacteriological limits. The sample results indicated that the shellfish had fecal contamination—a potential health hazard—and probably had been harvested from improperly classified or closed growing areas.

The shellfish meat samples also contained other contaminants.

The States are not required to sample shellfish. FDA is not required under NSSP to evaluate States' sampling programs that do exist and does not generally collect shellfish samples during its own plant inspections.

Of the four States reviewed, one had a State-wide market-sampling program, two had limited programs, and one had no meaningful program. Neither FDA nor the four States routinely trace violative shellfish to their source to determine whether the waters are misclassified and unsafe for harvesting.

Need for improved monitoring of shellfish-growing waters

Neither approved nor closed shellfish-growing areas were monitored effectively by FDA to insure that shellfish harvested were safe to eat. Timely action was not taken to close areas that had poor water quality, and low-rated areas were not closed, contrary to NSSP requirements. States have not always adequately posted or patrolled closed growing areas to deter illegal harvesting.

Plant sanitation conditions

Of the 30 shellfish plants inspected by FDA at GAO's request, 12, or 40 percent, had insanitary conditions, of which 8, or about 27 percent, were considered to be significant.

FDA is not aware of industrywide sanitation conditions because of the limited number of inspections and methods of selecting plants to be inspected. FDA plant evaluation procedures do not give adequate consideration to the effectiveness of States' actions to obtain correction of prior insanitary conditions or to the significance of current plant deficiencies. FDA does not notify violators officially of sanitation standards violated or monitor cases to promote corrective action.

Control over imported shellfish

About 15.8 million pounds of fresh, frozen, and processed (cooked, smoked, etc.) shellfish were imported into this country in 1971, of which 12.4 million pounds were harvested from waters uncertified under NSSP standards. Since the quality of the shellfish harvested and the conditions under which they

were processed were unknown, the domestic safeguards to insure the marketing of safe and sanitary shellfish were not always available. Further, an apparent inequity exists in that foreign shellfishermen are not required to harvest from only certified waters.

RECOMMENDATIONS

With respect to NSSP, GAO recommends that the Secretary, HEW, direct the Commissioner, FDA, to:

Notify States to close growing areas rated below standard unless the States justify, in writing, that there is no health hazard.

Develop with the States a systematic survey plan for monitoring all growing areas, including a minimum number of sampling stations and frequency of sampling.

Develop an effective patrol program with each State specifying frequency of patrols and posting criteria for closed areas.

Withdraw endorsement of a State's program if the State does not take aggressive and timely action to correct program deficiencies relating to control over approved and closed growing areas.

Annually assess the overall sanitation conditions of a representative number of shellfish plants.

GAO has also recommended a number of changes for incorporation into NSSP. The changes, if enacted by the tripartite, will strengthen the existing program by requiring the States to have an effective market-sampling program and to consider the significance of conditions found and the adequacy of followup actions when evaluating plant inspection activities.

Additionally, to carry out its responsibilities under the FD&C Act, GAO recommends that the Secretary, HEW, direct the Commissioner, FDA, to:

Use the regulatory powers under the FD&C Act in those instances where NSSP is not effective in correcting insanitary conditions.

Establish Federal bacteriological standards of quality for shellfish and enforce them if satisfactory compliance cannot be obtained under NSSP.

Establish Federal standards for toxic metals in shellfish and request the Environmental Protection Agency to establish standards for pesticides in shellfish.

Collect and analyze market samples of shellfish meat taken during inspections of shellfish plants.

Issue written notices in all cases where FDA finds insanitary conditions in shellfish plants and request written responses on action taken or planned to correct the violations and to insure continued compliance.

Obtain and monitor the results of all State inspections of shellfish plants and the follow-up actions taken when insanitary conditions are found.

AGENCY ACTIONS AND UNRESOLVED ISSUES

GAO submitted drafts of this report to the Secretary, HEW; the States agencies responsible for shellfish activities in the four States included in GAO's review; and a representative of the shellfish industry, for comments.

The recipients agreed generally with the findings discussed in the report. HEW concurred in GAO's recommendations and advised that a number of corrective actions had been, or would be, taken.

HEW stated that one of the principal reasons FDA had not played a more active role during the last several years was due to the fact that FDA's limited manpower resources have been directed toward attempting to cope with what appeared to be even more critical problems, such as microbiological contamination and drug hazards.

Need for additional substantive increases in FDA staffing for inspection activities has been recognized by the President, HEW, and FDA, according to HEW, and a substantial increase for such activities was included in the Department's most recent (fiscal year 1973) budget request.

MATTERS FOR CONSIDERATION BY THE CONGRESS

The Congress should consider enacting legislation which permits importing fresh, frozen, and processed shellfish from only those countries that harvest and process shellfish under conditions which are at least equal to domestic standards to insure that only safe and wholesome shellfish are imported.

Under the Federal Meat Inspection Act, a similar requirement exists to insure that imported meat has been slaughtered and processed under conditions at least equal to domestic standards.

PROPER NUTRITIONAL PRACTICES

Mr. CASE. Mr. President, public interest in good nutrition has grown considerably in recent years and attention has been directed to what can be done in schools to teach children proper nutritional practices.

One innovative program has been carried on by Miss Lynn Ketcham, a nutritionist in Washington, D.C.

I ask unanimous consent that an article on Miss Ketcham's project which appeared in the Sunday Star be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

1 [From the Washington Star, Mar. 25, 1973]

THE SAGA OF TWO WHITE RATS—THEY SHOW SIXTH GRADERS THE EFFECTS OF GOOD AND BAD DIETS

(By Ruth Dean)

This is the saga of "Mickey" and "Mighty"—two white rats who live on a windowsill at Gibbs Elementary School and show the children how to eat.

To the sixth graders in the Northeast Washington school, this is more than a classroom nutrition experiment with laboratory rodents.

Every day, they see before their eyes what four weeks of good and bad diets have wrought on their classroom companions.

You would hardly believe "Mickey" and "Mighty" came from the same litter. Or that "Mighty," the larger one weighed less than "Mickey" at birth.

"Mighty" has been fed what nutritionists would call "a well-balanced diet," made from foods the children bring every day, grind up in a blender and feed to him in cake form. His liquid nourishment is a bottle of water he sucks on at will through the day.

As a result, "Mighty" is a frisky, bouncy rodent with good, smooth coat, erect tail and the strength to jump up on the bottom bar of his cage.

His companion by contrast is a forlorn-looking runt who sucks diffidently all day on a bottle of soda pop at cage side. His food wafer from the blender ingredients is loaded with carbohydrates and starches.

"Mickey's" tail is stiff and scaly, his hair is splotchy and broken at the ends. He is fidgety, nervous and timid. His red eyes have a dull look, and he sleeps a lot, according to his sharp classroom observers.

"The children are worried about 'Mickey,'" says their teacher, Mrs. Barbara Bullock. "They can hardly wait for the experiment to end, so they can feed him 'a good diet.'"

The experiment is more than an exercise in classroom curiosity. It has a message for the class itself.

For "Mickey's" diet is exactly the fare on which many of the youngsters in this poor neighborhood subsist.

The experiment, and one like it at the Miner Elementary School, is the brain child of Miss Lynn Ketcham, a nutritionist from the neighborhood mother and child clinic at 18th and E Streets NE.

Miss Ketcham, 27, is a dedicated young woman whose job at the clinic as counselor to mothers and children up to 12, may be phased out in the near future due to reapportionment of federal funds.

(The project comes under the Maternal and Child Health Services of the Department of Health, Education and Welfare, which after June 30 will lose its authorization to administer project grants. Reapportionment of funds for services such as the Northeast center offers will be folded into state foundation grants.)

(Dr. Roselyn Epps, chief of the District's Division of Maternal and Child Health, when contacted by the Star-News, acknowledged that the fund cutback may mean the closing of some local centers, but that she and her staff "are hopeful" congressional efforts to secure supplementary funding "will succeed." Otherwise remaining centers will have to double up on services.)

Miss Ketcham views almost with despair what the fund cutback may do to the northeast neighborhood which so badly needs mother and child services such as prenatal and postnatal care, well baby clinics, supplementary food programs and nutrition education.

"It's like throwing a piece of meat in front of them; then snatching it away," she said bitterly.

"What we see here in the clinic," she said, "is anemia, obesity, lead poisoning and failure to thrive." Anemia is probably the biggest problem. "It's the disease of the malnourished," she said.

"This is the syndrome the child is suffering from on the diet we're feeding 'Mickey' in the Gibbs School experiment—soda pop, potato chips, jelly sandwiches, sugar-coated cereals, candy bars and lots of milk."

Milk is a necessary part of diet, but not when the child is exclusively fed "lots of milk by baby-sitters so his stomach is too full for other foods," she explained.

"Milk is low in iron. And if the other foods consist of cookies and potato chips, you're going to have an anemic child on your hands."

Miss Ketcham concedes "a family on public assistance, like most of our families are, is not getting an adequate balanced diet, with foods processed as they are now. They're even putting sugar in baby foods," she lamented. "Can't you see someone on welfare trying to stay on the Weight Watchers diet? Fresh fruit and vegetables are expensive."

"Sometimes I feel that everything's programmed against us, including food coupons."

Referring to a New York Times news clipping on her desk, dated March 7, she observed, "It's discouraging when you read that the Department of Agriculture is cutting out buying canned luncheon meat for its needy families program because it is too expensive, when you already know they've cut out non-dry milk solids."

"What do you do? These cuts strike right at the working poor."

As an outgrowth of her "frustration at seeing what people have to live on under some of these food programs," Miss Ketcham said she organized a nutritional legislative committee last year, as a local chapter of the National Society of Nutrition Education.

"I feel if we nutritionists band together and pick up a phone and call our congressmen, maybe we'll get some action," she said.

Despite the gloomy prospects ahead, including limited commodity support of the school lunch program, Miss Ketcham hopes she is sowing the seeds for whatever city or private funding may take its place. Or at least, within the limits of her own program, to inculcate ideas in the young generation that will stick with them for the future.

Every Wednesday, she visits Gibbs and Miner's first, second and third grades with a bag of plastic food models, from which she asks them to grab blindfolded and identify

the "food" they hold in their hands. It is an hour the children look forward to.

"We have fun with foods," she explained. "Sometimes I'll bring a fruit they've never tasted before like cantaloupe, or apricots—even raw spinach, which I tell them can be used as a salad green."

Last year, she had a "class" of overweight children whom she encouraged to substitute carrot and celery sticks for candy bars. What does the mischief, she said, "Is an overindulgent grandparent with 15 cents and the availability of a corner store."

"By supper time, he's so stuffed on junk food, he has no room for what may be a nutritious meal at home."

Miss Ketcham pointed out that the ghetto child "who has the Southern black heritage has the advantages of the richest food heritage in America. Having collard greens two or three times a week probably saves him from a worse vitamin deficiency," she said.

"Greens are rich in vitamins A, C and E and iron. But if the child is not hungry when he gets home, it will do him little good."

URBAN RENEWAL: WHERE WOULD CITIES BE WITHOUT IT?

Mr. SYMINGTON. Mr. President, the Kansas City Star recently carried an editorial which presents a realistic evaluation of the urban renewal program as it has operated in that city for the past 20 years.

The article points out that urban renewal has been slow, in some cases unsuccessful, in preventing the spread of blight. As the Kansas City experience demonstrates, however, the program has been effective in many areas in both restoring and stabilizing neighborhoods which might otherwise have deteriorated.

To cite a few examples of the accomplishments, the Land Clearance for Redevelopment Authority in its 20-year history has cleared close to 100 acres of land in the central city and undertaken projects covering almost 8 square miles outside the downtown business district. Among the most notable achievements under urban renewal in Kansas City is the Hospital Hill health complex, in addition to expansion of other hospitals.

This year President Nixon has proposed a new approach to urban development—community development special revenue sharing. Next week, the Senate Subcommittee on Housing and Urban Affairs will begin hearings to examine present urban programs and proposals for restructuring them.

I ask unanimous consent that this interesting editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star, Mar. 19, 1973]
URBAN RENEWAL: WHERE WOULD CITIES BE WITHOUT IT?

In the long history of the American city no single event has had a more profound effect on the way people live together than federal urban renewal.

It was a program born of necessity. At the end of the Second World War the cities were in miserable condition, the victims of long neglect. First it had been the depression years when dollars were short and little construction took place.

Then came the war. Even routine maintenance was deferred because of national priorities that ranked higher. From 1929 to 1946

little happened in the way of improvement but the forces of decay were not idle.

Washington's answer was urban renewal. It became a gigantic attack on blight, costing billions of dollars. Directly or indirectly it stimulated private and public investments costing tens of billions.

Now it appears that the program, at least in its present form, has become a casualty of President Nixon's "New Federalism." As A. J. Harmon, executive director of Kansas City's Land Clearance for Redevelopment Authority, puts it:

"It's still there but you can't see it. Six months ago I wouldn't have thought complete cutbacks possible, to stop projects in the middle of the stream. Now I believe it. It is being done."

At first it looked as though Kansas City's Convention Center would be an early casualty. Funds were in hand to finish acquisition of the south block of the 2-block site (Central to Broadway, 12th to 14th).

Some leeway was granted to complete projects under way. Federal assistance will be available to acquire the remainder of the site. But that's the lone exception for Kansas City.

UNCERTAINTY IN WASHINGTON

No one can predict what Congress will do, or if a compromise will be worked out with the White House. As of now it seems almost certain that federal urban renewal will not be around after July 1, 1974. That date falls almost exactly 25 years after Congress included urban renewal in the Housing Act of 1949 as an experiment.

It has been charged that President Nixon has written off the cities. This is unfair because it is not true. His plan is to substitute community development revenue sharing, or direct grants to the cities, in place of the present categorical aid grants that are available under urban renewal, Model Cities, the Open Space Act and allied programs.

The President wants the priorities set by the communities involved instead of the bureaucrats in Washington and he has expressed it about that bluntly. Although he will not establish the point without a fight with Congress, perhaps a bitter one, most urban observers believe Mr. Nixon will win in the end.

"It has often been said the cities can make decisions better than Washington," John L. Taylor, city manager, observed recently. "Now we, I think are going to get a chance to demonstrate that. We have a chance to succeed. And, I suppose, a chance to fail."

Harmon adds: "It could become a real dogfight at City Hall to determine who gets what, if all guidelines are removed."

The future is so much in doubt that it is difficult to speculate on what course might be adopted in Washington. It is not premature to look back over the last 24 years to appraise what has occurred. This question seems appropriate: Has urban renewal been a boondoggle of epic proportions, as some have charged, or did it save the American city, as others contend? The answer would seem to lie somewhere in the middle.

Even with a vast expenditure of money the cities are still in trouble and a growing number of people find them unfit places to live. The point, however, is where the cities would be today if the funds had not been spent to wipe away decay. The job is far from complete, but enormous strides have been made since 1949.

"The problem keeps growing," Harmon says. "Blight creeps. Unless we can find some way to stem it, Ward Parkway is going to be a blighted area. Not soon, but one day."

There are many local illustrations. Many neighborhoods that were strong and thriving when the Land Clearance for Redevelopment Authority was organized here in 1953 have slipped badly in the last two decades. Twenty years ago no one would have dreamed that

Block 92 (Main to Baltimore, 11th to 12th) would be declared a blighted area and all the buildings demolished. Or that the Emery, Bird, Thayer Building would be rated as one of the two priority sites for redevelopment in Downtown Kansas City.

"If we cut off urban renewal, what is going to happen to the inner city?" Harmon asks. "What is going to happen to Downtown? We think we have made a real bite into it. But there is so much that remains to be done."

The final decision will be made sometime in the next 12 months by Congress and the White House.

Recently Harmon prepared a summary of the Kansas City experience under urban renewal. It is an impressive record that tells a story of gradual but extensive change. The impact of urban renewal, along with the Missouri Redevelopment Act, a companion program, has been so profound that a native son returning after an absence of 20 years would have to ask directions to find his way around Downtown.

Although Harmon is a modest, quiet man who makes no claims, a great deal of the success of the Kansas City program can be credited to his imagination and thoroughness in adapting the Washington guidelines to local needs.

In the last 20 years almost 100 acres in the core of the city have been cleared of blight. This work has directly, and in a few instances indirectly, stimulated new construction with a value of about a quarter billion dollars.

All of the Downtown improvements have not been built on land cleared under the federal or state laws. But it seems fair to say that most of the buildings that have gone up on private property nearby would never have been built if the environment had not been congenial to a major financial investment.

No one in his right mind would build a 20-story building on a site surrounded by worn-out, dilapidated structures almost ready to fall down. Their removal not only upgrade the property they were built on but also adjacent locations. It is the old chain reaction where one improvement encourages others to proceed.

IMPACT BEYOND DOWNTOWN

Because so much emphasis has been placed on the need to save the core cities of America, many people are unaware of the tremendous impact urban renewal has had in the older residential neighborhoods and the areas that border Downtown.

Harmon's report lists projects outside the Central Business District that encompass almost eight square miles. Planned or completed construction in those areas carries a value of about \$170 million. Urban renewal had a key role in the new health-care complex on Hospital Hill and in the expansion of St. Mary's and Trinity Lutheran hospitals.

As far as the daily life of individuals is concerned the neighborhood stabilization program has had the most far-reaching effect. Here the effort has been directed at removing the few deteriorating buildings in an otherwise sound neighborhood in order to reverse a downhill trend.

This work, now well under way, cannot be halted without jeopardizing the investment and well-being of tens of thousands of Kansas City families. Neither can Downtown renewal be stopped before the job is completed.

Whether urban renewal continues in its present form, or under Mr. Nixon's proposed community development revenue-sharing plan, is basically immaterial. The important point is that the job of saving the American city is far from completed. The work must go on whether priorities are established at City Hall or in Washington. If it does not proceed, America could, in time, be plunged into a domestic crisis without parallel in its history.

FINANCIAL AID TO NORTH VIETNAM

Mr. HARRY F. BYRD, JR. Mr. President, I have opposed the proposal to extend financial aid to North Vietnam ever since it was first advanced.

I do not believe that we have any obligation to North Vietnam, at whose hands Americans have suffered so much.

Furthermore, the argument that aid to Hanoi would be a parallel to our assistance to Germany and Japan after World War II does not stand up. Unlike Germany and Japan, North Vietnam has not been destroyed, and its militaristic and aggressive government is still in power.

My opposition to proposed assistance for North Vietnam has been strengthened in the last few days with the revelations by former American prisoners of war about the conditions in their prison camps and the brutal treatment accorded them by their captors.

The treatment of our prisoners can only be described as barbarian. It violated the laws of warfare and every standard of humanity and civilization.

For the United States to extend aid to the government responsible for these outrages would be a travesty.

One of the most revealing articles to be published in the press concerning the treatment of our prisoners was an Associated Press story dated March 30 and originating from Portsmouth, Va. It was based on interviews conducted at the Portsmouth Naval Hospital and disclosed much detail about the brutality of the North Vietnamese.

I ask unanimous consent that the text of this article as published in the Northern Virginia Daily on Friday, March 30, be included at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POW'S SUBJECTED TO INTENSE PHYSICAL AND MENTAL PAIN

PORTSMOUTH, VA.—American prisoners of war were subjected to intense physical and mental pain and in some cases were placed in isolation for as long as four years, four former POWs said Thursday.

Navy Capt. James A. Mulligan Jr. told a news conference at Portsmouth Naval Hospital that no man was immune from what he called "inhumane treatment" and that the North Vietnamese used physical force, beatings and drugs to make the POWs bend to will.

Mulligan spoke out at the news conference along with Lt. Cmdr. William M. Tschudy, Capt. Allen C. Brady and Cmdr. John H. Fellowes.

"I think you can say treatment was very bad, was inhumane," in the prison camps, Mulligan said.

He said he, personally, spent 42 months in solitary and that another Navy officer, Capt. Jeremiah A. Denton, Jr., was isolated for four years.

Mulligan said the North Vietnamese withheld food, water and medical treatment in addition to administering beatings and various other tortures in order to force men to make antiwar statements.

Ninety-five per cent of the American prisoners were physically tortured, Mulligan said—and torture finally induced more than 80 per cent to make some sort of statement for the enemy.

Asked about the means of torture, Mulligan said men spent long periods of time in

stocks, shackles and leg irons; were beaten or tied with ropes, and that men in solitary were placed in tiny rooms in which the windows were bricked up.

Fellowes said the worst torture he underwent was when the North Vietnamese interrogated him "about an aircraft I didn't know anything about."

He said his hands were cuffed behind his back and ropes were tied around his elbows until they met. He then was left for hours, he said.

When he continued to refuse to make any statements, he said, he was blindfolded, gagged and trussed with ropes for nine hours.

Fellowes said the mistreatment severely damaged him physically and that he lost all control of his hands and arms and had to be cared for by his roommate.

He said it was a year before he was able to shave himself, and that he still suffers some effects of the torture.

At one time, Fellowes said, he was in a prison camp in which he was close enough to continually hear beatings and what the POWs referred to as "the fan belts hitting Americans and the screams."

Tschudy said the most trying ordeal for him was that the North Vietnamese would handcuff his hands so tightly that "they would swell up and turn black."

He said one man was cuffed this way for 23 hours, and that when he was freed "his hands were as black as this microphone stand, and blood was coming through the pores of his skin."

Tschudy said the North Vietnamese "experimented" to find out what each man's pain tolerance was.

He said each man had some form of pain he could not tolerate, and that once the North Vietnamese found out what it was, they concentrated on it.

Referring to the years of torture at the hands of the North Vietnamese, Mulligan said in regard to the pain the men suffered: "I've been broken. I think everyone here has been broken. We went through agony, over and over again."

All four Navy officers said prison camp food basically was bad, although there was slight improvement in 1969, which they credited to American pressures in the form of letter-writing campaigns to the North Vietnamese.

Mulligan, who was shot down in 1966, said his weight was down to about 110 pounds by 1969.

The North Vietnamese refused for years to give the prisoners salt, Mulligan said, because they considered them "war criminals" and feared that salt would reward them.

He said the North Vietnamese finally were convinced the men were suffering from severe dehydration and needed salt.

After the North Vietnamese brought salt into the prison he said, "we stole it and hid it in our rooms for an afternoon snack."

Talking of the eternal hunger felt by the men, Mulligan said:

"If I had dropped a piece of rice on the deck—and it was a very dirty deck, I might add—I picked it up and ate it."

Obviously embittered toward his captors, Mulligan said:

"The North Vietnamese are signatories to the Geneva Convention. It is unfortunate they never saw fit to implement the provisions called for."

He said his captors "used everything to get what they wanted."

"They withheld medical treatment, they withheld food, they withheld water, they used forms of harassment . . . they used threats to our families back home" in addition to physical punishment, he said.

But apparently worst of all for Mulligan, "They used darkness."

Describing his years in solitary confinement, Mulligan, in a barely audible voice, said:

"I was kept like an animal in a cage.

You've been to the zoo. Animals there can look through the bars. I didn't have any bars to look through. I didn't see the moon for years—maybe four or five. 'It's a very pretty sight.'"

The Navy captain said the only way to "beat" isolation was through the prisoners' system of communication.

He said a man in solitary could send and receive messages by tapping on a wall, but men on the outside used various forms of code, including hand signs similar to those used by the deaf and a "coughing code."

While in solitary, he said, "You could keep in contact, but you never saw any people."

Punishment for communicating with other prisoners were common, all the ex-POWs said, as were "purgings" in which there were mass punishments.

Asked about prisoners killed by the North Vietnamese, Mulligan recounted what he knew of two escape attempts in which all the men were recaptured.

He said one of the men involved disappeared.

"I don't know what happened to him," Mulligan said.

The former prisoners of war said each prisoner worked to keep a mental record on each man he knew to be in captivity in order that all could be accounted for if and when they returned to the United States.

"As POWs, our No. 1 objective was to get an angle on every man in Hanoi," Mulligan said. "We tried to account for every man."

All four men said they know of other Americans who had been severely injured for lack of medical attention.

Brady said many returning prisoners "are deformed today" because they received no treatment for broken bones.

In 1967, Brady said, when many new prisoners were coming in "Men with broken bones were left for days at a time. Many of them never had bones set."

In many instances, Mulligan said, medical treatment purposely was withheld to force the prisoners to capitulate.

Recounting his own experience, Fellowes recalled that his roommate had urgently requested aid after the torture session in which Fellowes lost use of his limbs.

"It took 17 days for them to even come look at me," Fellowes said.

Tschudy said despite all the years of "torment," it was not until shortly before the POWs returned that he got what he called a full picture of communism.

After being tortured so many times, he said, finally "They torture you for a statement saying how well you were treated."

WILDERNESS AREAS

Mr. TUNNEY. Mr. President, the American wilderness—what remains of it—is a precious and nonrenewable resource. Today, recreational use of wilderness areas, where man can meet nature on nature's own terms, is among the fastest growing forms of leisure pursuit.

Furthermore, these areas serve as outdoor classrooms in natural history, as laboratories for ecological research and as living samples of the original American landscape.

Already, the Congress has designated 18 wilderness areas in California under the protection of the national wilderness preservation system established by the 1964 Wilderness Act. These areas are a good first step in setting aside untouched land.

But more needs to be done. I have joined with my colleague, Senator CRANSTON, in introducing legislation to

create six additional wilderness areas in California.

First, is the Agua Tibia Wilderness. This area is a part of the Cleveland National Forest situated north of San Diego at the northern end of the Palomar Mountain Range. The total acreage will be approximately 16,410 acres.

Second, is the Emigrant Wilderness, an important area in the High Sierras. Basically, the area will comprise land in the Stanislaus National Forest totaling about 113,000 acres.

Third, is an area of about 692,500 acres in Yosemite which will be known as Yosemite North and South Wilderness Areas.

Fourth, is a bill to create the Santa Lucia Wilderness, 22,250 acres in and near the Los Padres National Forest.

Fifth, the Snow Mountain Wilderness, will comprise nearly 37,000 acres in the Mendocino National Forest.

Sixth, is the Pinnacles Wilderness, an area within the Pinnacles National Monument comprising about 13,000 acres.

Clearly, there are many other areas in California which should be included in the wilderness system and I plan to introduce legislation to include other areas.

Frankly, I found the Forest Service inventory superficial. It is a strange paradox today to find Federal agencies insisting upon complete purity in wilderness areas—an interpretation which co-incidentally has resulted in severely limiting the size of the recommended wilderness areas.

It appears that many areas have not been inventoried as roadless which deserve consideration. The Forest Service has developed its own interpretation of what can qualify as wilderness and that interpretation seems to have strayed from the standards set down by the Wilderness Act.

It is my hope that instead, the Congress will abide by the spirit of the wilderness law in developing and giving final approval to wilderness area proposals.

Finally, Mr. President, I ask unanimous consent to have printed the text of the six proposed wilderness bills (S. 110-115).

There being no objection, the bills were ordered to be printed in the RECORD, as follows:

S. 110

A bill to designate certain lands in the Cleveland National Forest, California, as the "Agua Tibia Wilderness" for inclusion in the National Wilderness Preservation System

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(b) of the Wilderness Act (78 Stat. 891; 16 U.S.C. 1132(b)), certain lands in the Cleveland National Forest, California, which comprise approximately sixteen thousand four hundred and ten acres and which are generally depicted on a map entitled "Agua Tibia Wilderness—Proposed" and dated March 1972, are hereby designated as wilderness.

SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the wilderness area with the Interior and Insular Affairs Committees of the United States Senate and House of Representatives, and such

map and description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The wilderness area designated by this Act shall be known as the "Agua Tibia Wilderness" and shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas.

S. 111

A bill to designate certain lands in the Stanislaus National Forest, California, as the "Emigrant Wilderness" for inclusion in the National Wilderness Preservation System

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(b) of the Wilderness Act (78 Stat. 891; 16 U.S.C. 1132(b)), certain lands in the Stanislaus National Forest, California, which comprises approximately one hundred and thirteen thousand acres and which are generally depicted on a map entitled "Emigrant Wilderness—Proposed" and dated March 1972, are hereby designated as wilderness.

SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the wilderness area with the Interior and Insular Affairs Committees of the United States Senate and House of Representatives, and such map and description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The wilderness area designated by this Act shall be known as the "Emigrant Wilderness" and shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas.

S. 112

A bill to designate certain lands in the Yosemite National Park in California as wilderness

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with subsection 3(c) of the Wilderness Act (78 Stat. 890; 16 U.S.C. 1132(c)), certain lands in the Yosemite National Park, California, which comprise about six hundred and ninety-two thousand five hundred acres and which are depicted on a map entitled "Yosemite North Wilderness and Yosemite South Wilderness—Proposed" and dated October 1972, are hereby designated as wilderness: *Provided, however,* That each tract identified on said map as "Wilderness Reserve" is designated as wilderness, subject only to the removal from each such tract of the existing nonconforming improvements, at which times the Secretary of the Interior is directed to publish notice thereof in the Federal Register. Pending such notice, and subject only to the existing nonconforming improvements, each such tract shall be managed as wilderness in accordance with section 3 of this Act.

SEC. 2. As soon as practicable after this Act takes effect, a map and a legal description of the wilderness areas designated by and pursuant to this Act shall be filed with the Interior and Insular Affairs Committees of the United States Senate and House of Representatives, and such map and description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The wilderness areas designated by and pursuant to this Act shall be known as

the "Yosemite North Wilderness" and the "Yosemite South Wilderness" and shall be administered in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the Secretary of Agriculture shall be deemed to be a reference to the Secretary of the Interior.

S. 113

A bill to designate certain lands in San Luis Obispo County, California, as the "Santa Lucia Wilderness" for inclusion in the National Wilderness Preservation System

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in furtherance of the purposes of the Wilderness Act (78 Stat. 890), certain lands in and adjacent to the Los Padres National Forest, San Luis Obispo County, California, which comprise about twenty-one thousand two hundred and fifty acres and which are generally depicted on a map entitled "Santa Lucia Wilderness—Proposed" and dated January 1973, are hereby designated as wilderness: *Provided, however,* That the tract identified on said map as "Wilderness Reserve" is designated as wilderness, subject only to the removal of the existing and temporary nonconforming improvement, at which time the Secretary of Agriculture is directed to publish notice thereof in the Federal Register. Pending such notice, and subject only to the maintenance of the existing nonconforming improvement, said tract shall be managed as wilderness in accordance with section 3 of this Act.

SEC. 2. As soon as practicable after this Act takes effect, a map and a legal description of the wilderness area designated by and pursuant to this Act shall be filed with the Interior and Insular Affairs Committee of the United States Senate and House of Representatives, and such map and description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. (a) The wilderness area designated by and pursuant to this Act shall be known as the "Santa Lucia Wilderness" and shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that portion outside the boundary of the Los Padres National Forest shall be so administered by the Secretary of the Interior.

(b) Notwithstanding the provisions of section 5 of the Wilderness Act, the Secretary of Agriculture, and, within the portion of such area outside the boundary of the Los Padres National Forest, the Secretary of the Interior, are authorized to acquire by donation, purchase with donated or appropriated funds, exchange or otherwise any non-Federal lands located within the area designated as wilderness by this Act as the appropriate Secretary may determine necessary or desirable for the purposes of this Act and the Wilderness Act.

SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

S. 114

A bill to designate certain lands in the Mendocino National Forest, California, as the "Snow Mountain Wilderness" for inclusion in the national wilderness preservation system

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in furtherance of the purposes of the Wilderness Act (78 Stat. 890), certain lands in the Mendocino National Forest, California, which comprise approximately thirty-seven thou-

sand acres, and which are generally depicted on a map entitled "Snow Mountain DeFacto Wilderness Area" and dated June 1971, are hereby designated as wilderness.

Sec. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the wilderness area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such map and description shall have the same force and effect as if included in this Act: *Provided, however*, That correction of clerical and typographical errors in such legal description and map may be made.

Sec. 3. The wilderness area designated by this Act shall be known as the "Snow Mountain Wilderness" and shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas.

S. 115

A bill to designate certain lands in the Pinnacles National Monument in California as wilderness

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(c) of the Wilderness Act (78 Stat. 890), certain lands in the Pinnacles National Monument, California, which comprise about thirteen thousand acres and which are generally depicted on a map entitled "Pinnacles Wilderness—Proposed" and dated April 1968, are hereby designated as wilderness.

Sec. 2. As soon as practicable after this Act takes effect, a map and legal description of the wilderness area designated by and pursuant to this Act shall be filed with the Interior and Insular Affairs Committees of the United States Senate and House of Representatives, and such map and description shall have the same force and effect as if included in this Act: *Provided, however*, That correction of clerical and typographical errors in such legal description and map may be made.

Sec. 3. The wilderness area designated by this Act shall be known as the "Pinnacles Wilderness" and shall be administered in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the Secretary of Agriculture shall be deemed to be a reference to the Secretary of the Interior.

METHAQUALONE BY THE MILLIONS: MORE STRINGENT CONTROLS NEEDED

Mr. PERCY. Mr. President, in the early 1900's, a nonaddictive so-called wonder drug was marketed as a substitute for morphine. It was called heroin. That treacherous drug still plagues this Nation, leaving us with over 600,000 heroin addicts. Today, another brand of poison saturates our society, and the insidious consequences of drug abuse surface once again. Quaalude, Parest, Sopor, Optimil, and Somnafac are brand names for the drug methaqualone. Methaqualone is the name of a dangerous drug.

Labeled a safe, nonaddictive sleeping pill, methaqualone is promoted as a substitute for barbiturates. Despite advertisements to the contrary, the Medical Letter on Drugs and Therapeutics in 1966 reported methaqualone addiction cases in England. Methaqualone abusers in Japan comprised half the drug addicts hospitalized in that country between 1963 and 1967. German medical journals

also record methaqualone poisoning cases. Clinics throughout this Nation now indicate that the tranquilizer is indeed physically addicting. Yet, users find the drug easily obtainable.

The handwriting is on the wall and it is not very hard to read. Dangerous drugs produced in mass quantities invite mass abuse. Methaqualone sales have increased 360-fold since 1965. It quite possibly ranks as the most abused drug on the streets today. Yet, methaqualone is legally made, legally advertised as non-addicting, and legally prescribed in much the same way as vitamins.

The "underground" did not produce the methaqualone used on the streets. Mass availability of the drug is a product of the conduct of legitimate drug companies. Methaqualone addicts are products of our own negligence.

Methaqualone occupies the dubious position once held by heroin, LSD, and amphetamines among the drug abuse cult. It occupies no position on the Bureau of Narcotics and Dangerous Drugs list of schedule II controlled drugs. The evidence gathered to date suggests that methaqualone is a highly dangerous substance. But until recently, Federal officials considered methaqualone safe. These officials, however, are now beginning to take appropriate action to warn the public of the dangerous physical and mental effects of this drug.

There is a 4- to 5-year interval, even after certification by the Food and Drug Administration, before any drug side effects can be fully realized. We are not certain how this drug affects body chemistry. We are not certain how to treat methaqualone abusers. We are learning, however, and we do know something of the tragedy which can befall such abusers.

Methaqualone's immediate effect is a numbing of the central nervous system. It was never really intended to cause sleep, just sleepiness. The dreamlike, euphoric sensation is lauded by those who abuse it. Abusers receive an exhilarating "high" along with a stupefying drunken sensation. The "thrill" is in resisting the urge to sleep.

Methaqualone is preferred among multiple drug users. When taken in combination with other controlled narcotic substance depressants, such as alcohol or barbiturates, a dangerous or even fatal synergistic effect has been observed. Alcohol reacts adversely with methaqualone, thus increasing the drug's effects and making overdose quite possible. Acute poisoning may result from this mixture, especially in the intoxicated person, who in a judgment-impaired condition may not realize the amount of either drug ingested.

The Rorer Co., original American processors of methaqualone, found that "single doses ranging from 8 to 20 grams have produced severe toxicity and death." According to doctors who have treated methaqualone addicts, most of the patients were taking only four pills, or 1,200 milligrams, a day. BNDD has recently concluded that even these minimal doses produce a severe physical dependence characteristic of the barbiturate-alcohol type. Physicians contend that any sedative-hypnotic can result

in a fatal withdrawal. The victim is seized by sudden convulsions and requires immediate medical attention. BNDD studies confirm that abrupt withdrawal causes severe headaches, cramps, compulsive shaking, chills, and loss of appetite.

Users obtain methaqualone with minimum difficulty. Some steal prescription pads and forge them. Others do not need a written prescription. A short call from a sympathetic physician or black marketer can be sufficient. Drug firm representatives flood medical centers with free samples. Presented as harmless by high-pressure mass advertising, experimenting youth become enticed and entrapped.

In the past, Government has fought drugs with police. We have banned uncontrolled manufacturing of drugs. The President has made great strides toward international drug control. Yet, what good has Government regulation done if we cannot control the distribution of an addicting drug, still being mass produced by our own domestic drug companies?

We know there is a distribution problem. Drug firms make money supplying methaqualone which finds its way to the pusher. In a recently published report entitled "Control Recommendations for Methaqualone," BNDD demonstrated how serious the distribution problem has become. The following tables, supplied by BNDD, reveal the alarming yearly increases in manufacturers' distribution of this drug:

Company No. 1: Methaqualone yearly distribution figures

Date of distribution; 400 mg. dosage units distributed:
Prior to Oct. 1969, 0.
1970, 2,100,000 (approx.).
1971, 3,100,000 (approx.).
1972, 4,000,000 (approx.).

Company No. 2: Methaqualone yearly distribution figures

Date of distribution; 400 mg. dosage units distributed:
Prior to Oct. 1971, 0.
1972, 7,000,000 (approx.).

Company No. 3: Methaqualone yearly distribution figures

Date of distribution; 300 mg. dosage units distributed:
Prior to Feb. 1969, 0.
1970, 3,500,000 (approx.).
1971, 6,000,000 (approx.).
1972, 9,000,000 (approx.).

Company No. 4: Methaqualone yearly distribution figures

Date of distribution; 400 mg. dosage units distributed:
Prior to Sep. 1970, 0.
1971, 10,000,000 (approx.).
1972, 22,000,000 (approx.).

Company No. 5: Methaqualone yearly distribution figures

Date of distribution; 300 mg. dosage units distributed:
Prior to Sept. 1967, 0.
1968, 8,000,000 (approx.).
1969, 47,000,000 (approx.).
1970, 70,000,000 (approx.).
1971, 80,000,000 (approx.).
1972, 105,000,000 (approx.).

We know how to handle the distribution problem. A short time ago, amphetamines were in abundant supply. They are now far more difficult to acquire. Amphetamines were reclassified as

schedule II drugs and removed from the streets. Federal drug officials should consider immediate curtailment of methaqualone production by putting in to effect distribution controls which would limit methaqualone use to legitimate medical purposes.

Mr. President, the drug abuse problem is a malignant disease. Small children accidentally swallow powerful chemical agents. Youths seek artificial tranquility from pure poison. Adults resort to heavy drug doses to cover, but not solve, their problems. Government policy must be so structured as to safeguard the public from distorted advertising which would shackle human volition.

In January of this year, I wrote Attorney General Richard Kleindienst, Dr. Jerome Jaffe, Director of the Special Action Office for Drug Abuse Prevention, and then-Food and Drug Administration Commissioner Charles Edwards calling their attention to the increasing abuse of methaqualone throughout the United States. I urged each of these officials to report to me on the feasibility and desirability of curtailing methaqualone production and distribution.

The Justice Department forwarded a response in mid-February. It reported that an investigation by the Bureau of Narcotics and Dangerous Drugs was in the final stages at that time. The results would be submitted to the Secretary of Health, Education, and Welfare for his scientific and medical evaluation.

Dr. Jaffe's response stated that—

There is no question that methaqualone causes physical and psychological dependence and is responsible for intoxication and overdose deaths.

Commenting on the widespread availability and the increasing use of this drug, Dr. Jaffe concluded that—

More stringent controls seem needed, and it seems to me that bringing this drug under the Comprehensive Drug Abuse Prevention and Control Act of 1970 is a necessary step.

FDA Commissioner Edwards reached the same conclusion. After describing the remarkable similarity of the effects of barbiturate and methaqualone abuse, the Commissioner wrote:

Production of this preparation can be curtailed by transfer of Schedule II of the Comprehensive Drug Abuse Prevention and Control Act of 1970.

Dr. Jaffe and Dr. Edwards both pointed out, however, that before a schedule II classification can be made, the Bureau of Narcotics and Dangerous Drugs must first submit a report outlining the patterns and extent of abuse, accompanied by recommendations for control, to the Secretary of Health, Education, and Welfare. With this report and the scientific and medical evaluation report compiled by the FDA, the Secretary then determines whether to recommend to the Attorney General that proceedings to add methaqualone to Schedule II be initiated.

On March 15, 1973, John Ingersoll, Director of BNDD, submitted a 36-page report on methaqualone to HEW Secretary Caspar Weinberger. The report concluded that this drug produces a severe dependence effect and is abused by

several varying segments of American society. Mr. Ingersoll recommended that methaqualone be placed in Schedule II of the Controlled Substances Act.

Thus, the first step toward curtailment now has been taken. The BNDD report and the Justice Department's recommendation have been completed.

Indeed, the problem has aroused considerable interest in the Senate also. Senator BAYH is currently conducting hearings in the Senate Judiciary Subcommittee on Juvenile Delinquency in order to assure prompt distribution control and production curtailment.

It is clear to me that the necessary evidence and data are complete and sufficient to warrant immediate action on the part of Secretary Weinberger declaring that methaqualone is medically and scientifically dangerous enough to necessitate a schedule II classification. The three officials I contacted all agree that the drug is inherently dangerous. In particular, Commissioner—now HEW Assistant Secretary-designate—Edwards informed me that—

Methaqualone, which differs chemically from the barbiturates (is remarkably similar in its pharmacological actions.

In a letter dated February 23, 1973, to Mr. Ingersoll, Dr. Edwards stated:

We believe there are other sedative-hypnotic drugs which currently constitute a national health hazard due to their abuse liability. (emphasis added)

He specifically referred to methaqualone as falling within that category. In his response to me, Dr. Edwards included examples of literature reports and articles concerning methaqualone abuse which tend to demonstrate that there is already compiled sufficient information to justify a schedule II classification for methaqualone. I, therefore, urge Secretary Weinberger to submit his determinations to the Attorney General forthwith.

At this point, I ask unanimous consent that the following documents be included in the RECORD: My initial inquiry to the Special Action Office for Drug Abuse Prevention, the Food and Drug Administration, and the Department of Justice; the responses from Dr. Jaffe dated March 9, 1973, Deputy Attorney General Sneed dated February 14, 1973, and Commissioner Edwards dated March 2, 1973, responding to my original inquiry; a summary of literature reports of methaqualone misuse, attached to Dr. Edwards' letter of March 2; Commissioner Edwards' letter to BNDD Director John Ingersoll dated February 23, 1973; the letter from Mr. Ingersoll to me, advising me of his recommendation regarding methaqualone; the BNDD report, "Control Recommendations for Methaqualone," containing the findings and conclusions of the Bureau; an outstanding article titled "Methaqualone: The 'Safe' Drug That Isn't Very" by Danied Zwerdling, appearing in the Washington Post, November 12, 1972; recent articles entitled "Warning on Sopors," and "The Deadly Downer," appearing in Newsweek—February 12, 1973—and Time—March 5, 1973—respectively; and a still more recent piece, "New 'Jekyll-Hyde'

Drugs: U.S. Seeks Speedy Action," from the Christian Science Monitor—March 26, 1973.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JANUARY 19, 1973.

DR. JEROME JAFFE,
Director, Special Action Office for Drug Abuse Prevention, New Executive Office Building, Washington, D.C.

DEAR DR. JAFFE: It has recently come to my attention that a drug known as methaqualone is being widely abused in this country, and I would appreciate your investigation into the matter.

Since 1965 when the Rorer drug firm first introduced methaqualone as a "nonbarbiturate" tranquilizer and sleeping pill (under the trade name Quaalude), many other drug manufacturers have entered the methaqualone business: Arnar-Stone with Sopor, Parke-Davis with Parest, Wallace with Opti-mil.

Advertised as being safe and non-addictive, evidence now indicates that methaqualone can hook persons on a habit as invidious as that brought on by barbiturates and produce withdrawal effects far worse than heroin. As early as 1966, the Medical Letter on Drugs and Therapeutics warned doctors in the United States that the British Medical Journal had discovered instances of physical addiction to methaqualone. According to doctors who have treated methaqualone addicts, most of those hooked were taking only four pills, or 1200 milligrams, a day.

According to reports, there is also a sharp increase in the number of methaqualone overdose cases. Rorer Company itself reportedly found that single doses ranging from 8 to 20 grams have produced severe toxicity and death. In addition, when methaqualone users mix these pills with even small amounts of alcohol, the ill-effects of the drug are multiplied.

Even my own conversations and from accounts I have seen, methaqualone now has a larger market on the streets and college campuses of this country than even marihuana and LSD. Drug clinics around the country report that they have never seen any drugs available so freely in this quantity. Unlike most illicit drugs on the streets, methaqualone is not manufactured underground—almost all of it is produced legitimately by reputable drug manufacturing companies.

Sales of methaqualone have increased 360 times since the year it was introduced. Drug companies are making money even from the methaqualone sold on the black market, since the companies must increase production of the drug to replace the drugs that are diverted from legal channels.

Although the drug manufacturing companies are said to have received many complaints from drug clinics around the country, to date they have refused to change even their advertising or labeling practices.

In view of these circumstances, I would appreciate it if an investigation could be scheduled at the earliest possible date and a report submitted to me describing what can and should be done at this time to curtail production of these pills and to limit their use to legitimate medical purposes, and specifically whether more rigid controls are necessary under the schedules set forth in the Controlled Substances Act of 1970.

In the final analysis, aren't our youth confronted with enough grotesque enticements to wreck their lives through illicit drug use, such that the Federal government need not, by continuing its current policy, aid and abet that tragic development?

Sincerely yours,
CHARLES H. PERCY,
U.S. Senator.

OFFICE OF THE DEPUTY ATTORNEY

GENERAL,

Washington, D.C., February 14, 1973.

HON. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: This is in response to your letter of January 19, 1973, calling attention to the increasing abuse of methaqualone in the United States.

You may be assured that the Department is not unmindful of this problem and the need to bring this drug under appropriate Federal controls. To that end, the Bureau of Narcotics and Dangerous Drugs is in the final stages of an investigation of the nature and extent of methaqualone abuse in this country, and will, in the near future, submit a control recommendation to the Secretary of the Department of Health, Education, and Welfare for his scientific and medical evaluation thereof. At the present time, a decision as to which schedule of the Controlled Substances Act of 1970, (CSA), methaqualone should be assigned has not been made. However, once that decision has been made and the recommendation paper submitted, the Bureau will be happy to send you a copy.

Inasmuch as the investigation reveals that the methaqualone being abused derives from legitimately manufactured products, controls sufficient to cut down diversion must be imposed. These controls as prescribed in Schedules II and III of the CSA would include stringent security measures, thorough and readily retrievable records, and restrictions on prescriptions. Such controls would have an impact on bulk manufacturers, dosage form manufacturers, distributors, and, of particular importance with regard to methaqualone, on the minority of physicians whose prescribing habits are such that an uncontrolled drug will be dispensed in substantial quantities with little or no professional scrutiny (especially where that drug is touted to be a "safe" alternative to barbiturates).

In closing, I would like to thank you for your interest in this problem, and request that you notify the Bureau of Narcotics and Dangerous Drugs if you have any information that would assist them in the preparation of their recommendation and in the presentation of the government's position in any administrative or judicial proceeding which may result from that recommendation.

Sincerely,

JOSEPH T. SNEED,
Deputy Attorney General.EXECUTIVE OFFICE OF THE PRESIDENT,
SPECIAL ACTION OFFICE FOR
DRUG ABUSE PREVENTION,

Washington, D.C., March 9, 1973.

HON. CHARLES PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: Thank you for your letter concerning the abuse of the drug methaqualone. Please excuse our delay in not responding sooner to your inquiry.

It is quite true that methaqualone is causing an increasing number of problems in the current youth drug scene. As you may know, the Bureau of Narcotics and Dangerous Drugs has established a Drug Abuse Warning Network (DAWN), a system by which reports are received from emergency rooms all over the country, indicating drugs being abused, reactions to the drugs, etc. We first became aware of widespread methaqualone abuse some months ago when reports from the DAWN system began to show increasing numbers of cases of adverse reaction to the use of this drug. There is no question that methaqualone causes physical and psychological dependence, and is responsible for intoxication and overdose deaths. It appears that this drug which is so easily available is now being widely used, in part because of such availability. More stringent

controls seem needed and it seems to me that bringing this drug under the Comprehensive Drug Abuse Prevention Control Act of 1970 is a necessary step. However, that Act specifically requires that before a drug be scheduled the Attorney General must make certain findings and then request an opinion from the Secretary of HEW relating to medical and scientific considerations set forth in Section 201(b) of PL 91-513. In light of this clear legislative directive, the Attorney General is precluded from even requesting such an opinion until he receives sufficient evidence that the drug or substance in question has a potential for abuse and, among other things, is being abused. I have been advised that the Bureau of Narcotics and Dangerous Drugs has been working, for some time, to develop the necessary evidence of abuse requested under this Title.

In order to bring methaqualone under these appropriate Federal controls the Bureau of Narcotics and Dangerous Drugs has been conducting an investigation of the nature and extent of methaqualone abuse in the United States. This investigation is now in its final stages. Inasmuch as the investigation has revealed that the methaqualone being abused derives from legitimately manufactured products, control sufficient to substantially reduce diversion must be imposed. My Office has been advised that, in the near future, the Bureau of Narcotics and Dangerous Drugs will submit a recommendation to the Secretary of Health, Education, and Welfare to move methaqualone into Schedule Two under the Controlled Substances Act of 1970. However, at the present time, this is not public information and we will appreciate your holding this information in confidence until the recommendation is sent by the Bureau of Narcotics and Dangerous Drugs to the Secretary.

In addition to tighter controls on methaqualone, we are seeking to educate physicians in practice to the hazards inherent in the indiscriminate use of this drug. The Programs Division of the Special Action Office is preparing to distribute to the medical profession, and to other health and drug abuse treatment agencies and programs, information on the hazards of the use of this drug and suggestions for appropriate intervention.

You may be assured that we share your deep concern over the problem of methaqualone abuse and will continue to work toward solutions.

With kind personal regards, I remain,
Respectfully yours,

JEROME H. JAFFE, M.D.,
Director.DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
March 2, 1973.HON. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: This is in further reply to your January 19 letter about methaqualone.

As you are aware, the Food and Drug Administration (FDA) is very much concerned about methaqualone abuse, particularly among young drug users, and has been gathering data on the use and misuse of this drug for several months. Methaqualone, a prescription-restricted drug, is a sedative-hypnotic which differs chemically from the barbiturates but is remarkably similar to these agents in its pharmacological actions.

Production of this preparation can be curtailed by transfer to Schedule II of the Comprehensive Drug Abuse Prevention and Control Act of 1970. Drugs in Schedule II are those which have a high potential for abuse, while at the same time have a currently accepted medical use. It is the Attorney General who establishes annual production quotas for drugs in Schedule II.

At the request of the Attorney General, the Secretary of Health, Education, and Welfare furnishes the Attorney General with a scientific and medical evaluation of the drug and his recommendations as to whether the drug should be controlled. Although the Attorney General initiates proceedings to control drugs, the Act does make provision for the Secretary to request that action be taken.

The Bureau of Narcotics and Dangerous Drugs of the Department of Justice, which has primary responsibility for enforcing the laws against the misuse of dangerous drugs, has been documenting actual instances of "street" use and making seizures of methaqualone. At the same time, FDA is now evaluating the available data necessary to determine whether to recommend to the Secretary of Health, Education, and Welfare that he request the Attorney General to initiate proceedings to add methaqualone to Schedule II. In the meantime, we have communicated our concern to the Director of the Bureau of Narcotics and Dangerous Drugs (BNDD), Department of Justice, and requested that he complete investigations necessary to determine whether additional controls are warranted to reduce or prevent further widespread abuse of methaqualone. A copy of this letter is enclosed.

As examples of the kinds of information upon which our scientific and medical evaluation are based, we enclose a summary of literature reports of misuse of methaqualone and also copies of several articles on the subject.

We hope this information will be helpful, and we will keep you fully informed of any decisions made concerning the distribution and availability of this drug. If there is any additional assistance we can provide, please let us know.

Sincerely yours,
CHARLES C. EDWARDS, M.D.,
Commissioner of Food and Drugs.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
Rockville, Md., February 23, 1973.
JOHN E. INGERSOLL,
Director, Bureau of Narcotics and Dangerous
Drugs, Department of Justice, Washington, D.C.

DEAR MR. INGERSOLL: We have recently received your document concerning the abuse of the sedative-hypnotic derivatives of barbituric acid with the recommendations for control under Schedule II of PL 91-513 of nine specific drugs. We will evaluate the data which you have submitted with particular emphasis on the factors specified in Sec. 201(b) of PL 91-513.

In addition, we believe there are other sedative-hypnotic drugs which currently constitute a national health hazard due to their abuse liability. We, therefore, request that you consider investigating the following drugs to determine whether additional controls are warranted to reduce or prevent widespread abuse.

Glutethimide (Doriden of Ciba Laboratories):

Listed as having a high abuse liability by the WHO, currently in Schedule III.

Methypyrrol (Noludar of Roche Laboratories):

Listed as having a high abuse liability by the WHO, currently in Schedule III.

Meprobamate (Miltown of Wallace Laboratories):

Listed as having a high abuse liability by the WHO, currently in Schedule IV.

Methaqualone (Quaalude of Rorer Laboratories):

Current reports of widespread abuse among the youth in the U.S. Listed in the Convention of Psychotropic Substances in Schedule IV with methypyrrol and meprobamate, not presently scheduled.

In order to expedite any recommendations

which you may make after gathering the data, we are currently studying the scientific and medical aspects of the potential for abuse of these drugs.

Sincerely yours,

CHARLES C. EDWARDS, M.D.,
Commissioner of Food and Drugs.

METHAQUALONE: SUMMARY OF LITERATURE OF MISUSE

Madden, J. S. (1966) Brit. Med. J. 1, 676: "Dependency on Methaqualone Hydrochloride (Melsedin)."

Four patients were found to exhibit the following features while taking Mandrax, a combination of methaqualone and diphenhydramine: a strong desire to continue the drug, a tendency to increase the dose, and a psychic dependence on the drug's effects. The first case was an alcoholic who took 1200 mg. daily and died two years later from cardiac failure ("unrelated" to Mandrax). Another alcoholic, after abstaining from alcohol, consumed Mandrax at the rate of 7500 mg. daily, but was so spaced over the day as to enable him to continue working. One other was a woman who ingested 1600 mg. daily and the last, another woman, transferred to Mandrax after establishing a dependence on at least four other barbiturates and she took 3000 mg. daily. Madden notes that he had not had the opportunity to observe the patients when methaqualone was removed, so that he could not in fact confirm the presence of withdrawal symptoms.

DeAlarcon, R. (1969) Brit. Med. J. 1, 122-123: "Methaqualone."

A "number" of depression and anxiety patients who had been prescribed methaqualone for insomnia were found difficult to transfer to less powerful hypnotics even after the main psychiatric illness had been treated. Methaqualone was a high preference drug among patients for dealing with chronic insomnia; it was also found to give them a "buzz".

DeAlarcon, R. (1969) Brit. Med. J. 1, 319: "Mandrax and Methaqualone."

Three cases of accidental overdose of Mandrax, all in young people with a prior history of drug abuse were indicated.

Benady, D. R. (1969), Brit. Med. J. 1, 577-578: "Mandrax".

The author cites two of his own patients as "addicted" to Mandrax including evidence of craving and increase of dosage to 2100 mg. per day. Both patients reported using Mandrax to "escape the conflicts in their lives." Three further cases of "addiction" were said to have been presented by other consultants, details omitted.

"An Epidemiological Analysis of the Fluctuation of Drug Dependence in Japan" Kato, Mutsaki, M.D., The International Journal of the Addictions 4(4), pp. 591-621, Dec. 1969.

Methaqualone, known in Japan by the trade name Hyminal, began to be abused after 1960, through December, 1962 when the number of arrested youths rose to 1,942 and further increased until 1964, when it became available by prescription only, and exhibited the word "powerful" as a labeling requirement. The year 1962 showed 58% of the abusers residing in Tokyo (prior to the subsequent spread throughout the country), 72% of them male, 28% female, and 22% in the 15-year-old age bracket, 58% of whom were high and middle school students, 20.8% employed and 21.2% unemployed non-students. In this age group 81.4% of those arrested involved delinquent behavior.

In a survey of drug abusers and addicts treated in 853 mental hospitals in Japan from 1963 to 1966, methaqualone was abused by 42.8% with the greatest concentration falling between ages 21-25, with a 3:1 ratio of male to female. The chief motivation, by self-disclosure, for their drug use was influence of friends to use of mq. The main reason for admission was anti-social behavior as a function of drug action for mq., rather than withdrawal symptoms, although 16% did exhibit withdrawal symptoms, 7% of the convulsive type and 9% of the delirium type. ("Some of the arrested male delinquent abusers continued using mq. until increased "tolerance" toward it required their using larger and larger doses until they were admitted to mental hospitals for the treatment of withdrawal symptoms or antisocial behavior.")

In another hospital (out-patient) population an investigation of 63 drug addicts of all ages was conducted from May 1963 to July 1967 by N. Takahashi to correlate drug choice with three personality syndromes as defined by Takahashi. Most of the addicts were in their twenties and thirties, with the former composing the greater part. The abused drugs were mq, other hypnotics, minor tranquilizers and analgesics. The three personality classes were taken by Takahashi from observations in daily life and psychotherapeutic sessions. They were: historic, acting out, and defensive. "Histrionic" behavior patterns were defined by egocentric, overproud, emotionally unstable behavior of active and talented persons in a particular field who were easily frustrated by ordinary daily life. They abused drugs to overcome frustration and to promote and cultivate their talents and activities and they preferred to use drugs independently, rather than in groups; the second, "Acting out" defined by rebellious, suggestive, immoral, purposeless, immature behavior, was exhibited by persons who preferred to choose "any" fashionable and attractive object and used drugs recreationally. This type liked to use drugs in groups, frequently changed from one drug to another, and they were closely connected with delinquency and crime; the third, the "Defensive" type included nervous, anxious, sensitive behavior and complaints of insomnia, fatigue, inferiority feelings, and other "neurotic" symptoms; they used drugs to overcome the neurotic complaints, particularly, insomnia.

Of those found to abuse methaqualone, 56% were from the histrionic group, 19% were from the defensive group (the least frequently), and 85% were from the acting-out group (the most frequently). The acting-out group expected the exciting effect of methaqualone to be the same as that of alcohol. "Methaqualone (Qualalude-300 and Rem Sleep" Med. Letts. on Drugs & Therapeutics, II, 65-7, 8 Aug. 1969.

Medical Letter consultants have observed reactions resembling delirium tremors following sudden withdrawal of mq. and they believe that it should be classified as a physical dependence-producing drug, susceptible to abuse.

H. Brill and T. Hirose; Seminars in Psychiatry, 1:179, May 1969.

Authors report abuse of methaqualone is widespread in Japan. Med Letters, Aug. 1969 (above).

Authors conclude that mq. can cause addiction and is susceptible to abuse. They quote the manufacturer of Qualalude (Rorer): "single doses ranging from 8 to 20 grams have produced severe toxicity and death" with the characteristic clinical features: coma, hypertonia, muscle spasm, and convulsions.

Wallace, M. R.: "Recovery after Massive Overdose of Diphenhydramine and Methaqualone" Lancet 2, 1247-8, 7 Dec. 1968:

Wallace documents an attempted suicide in the case of a 38 year old woman who ingested 180 tablets of Mandrax (mq + diphenhydramine—mg. dosage not stated) and was found unconscious later that evening. The patient recovered completely following hospitalization for 19 days.

Ibe, Karla, "Acute Methadone Poisoning" Archiv fur Toxikologie, (Berlin) 21 (3), 179-198, 1965:

At the time of this article, Methaqualone ("Revonal") was a high preference drug for suicide attempts among Berlin youth, due to its easy access as an over-the-counter drug.

Fifteen cases of mq. use for suicide are described—four of them successful. In total there were 9 males and 6 females spanning ages 15 through 72 with the majority in their late twenties, early thirties. Dosage ranged from 8000 to 16,000 mg. of mq. the average dose approximately 11,060 mg. Almost all of them had become unconscious after taking the drug, and about half experienced convulsions at a later time.

Of the four who died, two had taken alcohol concomitantly. Two died from cerebral edema, one, who had taken the alcohol—the third, a man who had not received medical attention until 54 hours had elapsed, and the remaining case, a 72 year-old woman who had other medical complications of a serious nature (lung problems and heart failure).

Matthew, Henry; "Methaqualone: Efficacy As a Hypnotic and Side Effects" Medical Journal of Australia 2, p. 546, 4, Sept. 1971:

Matthew takes issue with the view of Mandrax as safe and effective. He contends that in his experience Mandrax possesses very strong addictive properties, but he does not elaborate further. He also contends that Mandrax is ("presently") misused in Britain.

Sanderson, J. H.; Cowdell, R. H.; Higgins, G., "Fatal Poisoning with Methaqualone and Diphenhydramine" The Lancet; Oct. 8, 1966, II, 803:

A case of lethal Mandrax poisoning is presented as well as a summary of similar findings of other cases of fatal Methaqualone overdose. The case found by the three co-authors was that of a 62 year old woman who took 7000-12,500 mg. of Mandrax and exhibited unconsciousness, convulsions, and hemorrhaging. Postmortem examination revealed acute respiratory infection as the cause of death. Five other fatal cases (from Gellmacher, Mallinckrodt and Lautenbach; Schmidt) featured convulsions, tonic & clonic, hemorrhaging and vomiting of blood.

From the documentation report of two patients who died just under 8000 mg dosage, the speculation is made that this may be the minimum fatal dose, although the authors point out that as far as Mandrax is concerned and with each tablet containing 25 mg. diphenhydramine to 250 mg. methaqualone it is difficult to identify methaqualone as the casual agent, particularly when the two components exhibit the same symptoms in poisoning.

As for the dangers of overdose, mention is made of Schmidt's discovery that in his hospital "not a single case of attempted suicide with barbiturate had died in the year under consideration unless there were very substantial complications, while there were 2 fatal cases of poisoning with Revonal out of a much smaller but unspecified number of cases."

Brown, Stanley S.; Cameron, Jean C.; Methew, Henry "Tolerance to Mandrax" British Medical Journal, No. 5560; 309, 1967:

These authors report that they have not yet encountered withdrawal features indicative of physical or psychic dependence to methaqualone but argue for the acquisition of tolerance to the drug similar to that of barbiturates.

Evidence is presented in the form of a survey of 107 cases of Mandrax poisoning at different dosage levels. The first 57 patients were hospitalized with levels of 0.2 to 3.5 mg./100 ml. plasma and the remaining patients with levels of 0.2 to 8.3 mg./100 ml. plasma. Very few of the patients in the high dosage group exhibited the features of severe poisoning that characterized a high proportion of the low dosage group—and this, in a population 78 of whom had been actively prescribed mq. over a period of barely two years. Furthermore, the authors claim knowledge of at least two non-fatal cases of poisoning at mq. levels of about 10 mg./100 ml.

Evart, R. B. 2 and Priest, R. G., "Metha-

qualone Addiction and Delirium Tremens" Brit. Med. J. 3, 92:

A case of delirium tremens upon the withdrawal of mq. is documented and offered as evidence of physical dependence (of the barbiturate-alcohol type) upon mq. The example is that of a 47 year old man with a history of barbiturates, which included methaqualone the latter four years. Found unconscious one night, the man was admitted to a hospital the next day in a state of delirium with tremor with anxiousness, restlessness, reporting visual hallucinations.

The author incidentally comment that Melsed, the British trade name for mq., had been described by its manufacturer as neither tolerance nor addiction producing, but that they have since become aware of the four cases of addiction in addition to the one reported here. Three of the patients had a history of addiction to barbiturates and alcohol as well.

Matthew, Henry, "Methaqualone: Efficacy As a Hypnotic and Side Effects" Med. J. Aust. 2, 546, 4 Sept. 1971:

Matthew takes issue with mq. being described as safe based upon reports of addiction (Kessell) and the author's own finding of "very strong addictive properties." He further contends that the drug is considerably misused in his country (Scotland) by teenagers for "kicks" and notes that it is also taken in overdose acts of suicide and self-poisoning in the country. He asserts that similar misuse in Britain has prompted the scheduling of methaqualone under the Drugs Prevention of Misuse Act.

Burston, G. R., "Self Poisoning with Mandrax" Practitioner (London) 109:340-344, 1967:

The effects of Mandrax poisoning in 12 cases lead to the possible conclusion that acute Mandrax poisoning is the cause of unconsciousness in patients concurrently presenting hyperreflexia, hypertonia, clonus, muscle twitching, carpopedal spasm, and depressed body temperature. A note is made that simultaneous chlorpromazine and Mandrax overdose may present a particularly lethal combination.

"Mandrax," Canadian Medical Association Journal (Toronto) 100 (10): 491-492, 1969:

These doctors contend that there is no evidence of addictive potential, but that all other precautions indicated with barbiturates should be followed with respect to Mandrax. Overdose symptoms such as hypotonia, hypothermia, respiratory and circulatory collapse, pulmonary edema, bronchopneumonia, and bleeding tendencies have been observed.

Haider, Ijaz and Oswald, Ian, "Late Brain Recovery Processes after Drug Overdose," Brit. Med. J.; 2, 318, 9 May, 1970:

The authors propose that a withdrawal syndrome indicating a high degree of drug-tolerance and dependence acquired rapidly after drug overdose can manifest itself one to three weeks after ingestion in the expression of restlessness, insomnia, raised paradoxical (R.E.M.) sleep, epileptic phenomena and delirium. This appears true in the case of two overdose patients on Mandrax.

The first patient was a 47 year old woman who took 275-550 mg. Mandrax nightly for three months, then took 11,000 mg. at one time, became unconscious, and regained consciousness 105 hours later; in two days she developed a mild delirium with visual hallucination and disorientation, which cleared at 11 days, and an increased R.E.M. pattern which normalized at 16 nights.

The second case was that of a 69 year old woman who also took about 11,000 mg. Mandrax, fell unconscious and showed a high R.E.M. pattern on the sixth night, in addition to three one-minute spike-and-wave E.E.G. paroxysms of the type in seen epileptic patients. She had no seizures neither current nor past.

"Mandrax," Canadian Medical Assn. Jnl. (100) (10), 491-2, 1969:

In this pharmaceutical breakdown of Man-

drax, the precaution is made to see the drug with caution when evidence of depression or suicidal tendencies exists. "Experience has shown that this drug, like other hypnotics, has a suicidal risk." The addiction potential of the drug is not known but chronic clinical investigations of 6 weeks duration and an interim report at 6 months have shown no evidence of addictive properties. Long-term studies to date show no teratogenic potential. As overdose symptoms, the article lists: hypertonia, increased tendon reflexes, myoclonia; in gross Mandrax overdose—respiratory and circulatory collapse, pulmonary edema, bronchopneumonia, and bleeding tendencies. Hypothermia was present from time to time.

Wilkinson, Margaret: Young, J. P. W., "Poisoning with Mandrax," British Medical Journal, Vol. 1, 4 Feb. 1967, p. 301:

Documentation is made of the case of an elderly woman suffering from hypothyroidism, subject to depression who committed suicide from a dosage of 5250 mg. of Mandrax. Her admission to a hospital was delayed until about four hours after ingestion. (From letter by Wilkinson)

Young, in a separate letter advocates that poisoning and gross overdose (in the case of Mandrax) should not be confused with fatality. He refers to the 28 cases of gross overdose cited by Brown (see Stanley S.; Br. Med. J. '67) all of which survived, and he claims to have on record, cases of complete recovery following intake levels much higher than 3.0 mg/100 ml. blood plasma (cited by Brown as dangerous), one in particular in the amount of 10.5 mg./100 ml.—in addition to reports of overdose from 3,500-10,500 mg. (including three patients at 10,500 mg.)

"Mandrax and Mogadon: Overdose," Drug and Therapeutics Bulletin, Vol. 4, Mar. 18, 1966; p. 24:

Taken from two German sources, (1, 2*) seven cases of mg. overdose are reported. Of the seven, three died: two after taking 8000 mg., one after an unknown quantity. The remaining four had taken 4000 mg., 8000 mg., and 20,000 mg. and recovered after treatment.

Three cases of overdose resulting in convulsions and circulatory collapse and three cases followed by pulmonary edema (2, 3*) are also referred to.

U.S. DEPARTMENT OF JUSTICE,
BUREAU OF NARCOTICS AND
DANGEROUS DRUGS,
Washington, D.C., March 15, 1973.

HON. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: I have recommended to the Secretary of Health, Education, and Welfare that methaqualone be placed in Schedule II of the Controlled Substances Act. This schedule places stringent controls on the manufacturing, distribution and prescribing of the drug. It also permits the setting of annual production quotas.

Attached is a copy of the survey made by the Bureau of Narcotics and Dangerous Drugs upon which my recommendation is predicated.

Sincerely,
JOHN E. INGERSOLL, Director.

CONTROL RECOMMENDATIONS FOR
METHAQUALONE

I. INTRODUCTION

Methaqualone¹ is a non-barbiturate sedative-hypnotic. Abuse of this drug is increasing in the 1970's in a manner paralleling

the abuse of amphetamine in the 1960's. Therefore, the question under consideration by the Bureau of Narcotics and Dangerous Drugs is the extent of controls necessary to prevent illicit diversion and to protect the people.

Review by this Bureau was compelled by information received through our own intelligence capabilities and from sources outside the Bureau (members of Congress, the media, State and local medical examiners, drug clinics, and concerned parents and educators), which demonstrated that with the drug's increasing availability on the legitimate market, a concomitant availability for other than medical use is increasing. Accordingly, the Bureau has determined that methaqualone is a dangerous drug that must be included in an appropriate schedule of the Controlled Substances Act.

In November, 1965, the Food and Drug Administration approved the first New Drug Application for a methaqualone preparation. Since that time production and use have increased dramatically. This increase was due largely to the fact that the drug was promoted as an alternative to barbiturates which was efficacious for daytime sedation and nighttime sleep, but which was not accompanied by many of the harmful side effects of barbiturates nor the abuse potential. However, as use and abuse of methaqualone grew it became apparent that the drug did in fact present serious threats to the abuser, primarily due to its ability to produce physical dependence with the accompanying dangers of fatal withdrawal. Although many of the dangers of methaqualone had been reported and documented in medical and scientific literature outside the United States (emanating from Great Britain, West Germany, and Japan where epidemic-like outbreaks occurred during the early and mid-1960's), little was written until recently of methaqualone's impact on the public health of the United States.

This report will examine methaqualone and its abuse. The Bureau does not intend to implicate a particular product as the major source for methaqualone abuse, nor does the Bureau intend, at this time, to suggest which manufacturers are more susceptible to diversion than others.

II. CHEMISTRY

The chemical name for methaqualone is 2-methyl-3-(3-tolyl)-4(3H)-quinazolinone or 2-methyl-3-(3-tolyl)-4-quinazolinone. The empirical formula is C₁₈H₁₇N₂O and the structural formula is represented thus:

Methaqualone base is a white, odorless crystalline structure with a molecular weight of 250.3. The free base is sparingly soluble in water and alcohol and practically insoluble in ether. The hydrochloride salt is also a white, crystalline substance and is slightly soluble in water.

The first significant analysis of methaqualone synthesis appeared in Indian literature between 1951 and 1956. References authored by Kacker et al.² Rani,³ and Gujral^{4,5,6} reported a methaqualone synthesis involving the condensation of N-acetyl-anthranilic acid (obtained by the action of acetic anhydride on anthranilic acid suspended in benzene) with aniline, ortho, meta, or para toluidine in the presence of phosphorus. This process is essentially the same as that currently being used by methaqualone manufacturers in the United States. This synthesis can be quite easily performed without elaborate laboratory procedures; therefore, a chemist, for example, could produce methaqualone.

Footnotes at end of article.

III. PHARMACOLOGY

Since the American use of methaqualone began so recently, the amount of scientific information produced in the United States cannot be compared to the volume available on much older drugs of abuse, such as amphetamines and barbiturates. This discussion is based upon American and foreign pharmacological studies where the effects of methaqualone have been observed in humans, as well as monkeys, dogs, fish and rodents.

Methaqualone is a central nervous system depressant, with depression ranging from mild sedation to suppression of the respiratory drive, depending on the dose given. Recommended dosage range from 75 mg. four times daily for daytime sedation to between 150 to 400 mg. for hypnotic effect.⁷ The route of administration is oral with onset of effects occurring within 30 minutes of ingestion, and the duration of effects lasting between 6 to 10 hours.^{8,9,10}

Methaqualone is readily absorbed from the gastrointestinal tract, and is metabolized almost entirely in the liver and excreted through the bile, urine and feces.^{11,12} Because of this metabolic route through the liver, it is important to note that liver damage will slow the rate of metabolism, thus permitting even repeated safe doses to accumulate which may result in the buildup on the drug to toxic concentrations. Inasmuch as abuse of alcohol is a major cause of liver damage, the conjunctive use of methaqualone and alcohol, a prevalent abuse pattern,¹³ presents substantial dangers to the individual in situations where the liver becomes damaged.

The toxic effects of methaqualone resulting from excessive or non-therapeutic use are very similar to those resulting from barbiturate abuse, and like the barbiturates, may cause death. Non-fatal side effects include headache, dizziness, drowsiness, nausea, gastro intestinal discomfort, transient paraesthesia, dry mouth and tachycardia. The effects of mild to acute methaqualone poisoning may include respiratory depression, peripheral vascular collapse, feeble heartbeat, lowered body temperature, renal failure, and depressed reflexes. Severe toxic overdose causes pronounced depression of the respiratory centers, which can ultimately lead to asphyxial convulsions, pulmonary edema, coma, and death. Also important to the toxicology of methaqualone, is the potentiating effects of other central nervous system (CNS) depressants, most notably alcohol and barbiturates.¹⁴ As will be seen in Section V on abuse, the most prevalent pattern of methaqualone abuse is the pattern of conjunctive drug taking. Consequently, the dangers inherent in the abuse of each drug are heightened by the other drugs involved.

IV. DEPENDENCE

The World Health Organization has set four requirements in order to establish drug dependence of the barbiturate type:

- (1) Strong desire to continue taking the drug.
- (2) Tendency to increase the dose (partly due to a development of tolerance).
- (3) A psychic dependence on the effects of the drug.
- (4) An abstinence syndrome when the drug is withdrawn, indicating physical dependence.

Madden,¹⁵ in 1966, observed four cases of methaqualone abuse which demonstrated the first three criteria of drug dependence set out above. Benady¹⁶ also observed methaqualone abusers who increased their daily dose and "crave for it." Brown, Cameron and Matthew¹⁷ observed the development of tolerance to methaqualone.

The abstinence syndrome is a complex of symptoms arising after a person dependent

upon the drug abruptly stops taking it. These symptoms are evidenced by the progressive development of anxiety, involuntary twitching of muscles, tremor of hands and fingers, progressive weakness, dizziness, headaches, distortion in visual perception, nausea, vomiting, insomnia, weight loss, a precipitous drop in blood pressure on standing, convulsions of a grand mal type, and a delirium resembling alcoholic delirium tremens.

The abstinence syndrome has been seen by Ewart and Priest¹⁸ in 1967, who characterized methaqualone withdrawal as a delirium tremens syndrome of the barbiturate-alcohol type of dependence.

Out of 411 addicts observed by Kato from 1966 through 1969, 176 (42.8%) were methaqualone abusers. Of the 176, 9% exhibited withdrawal symptoms of delirium tremens, and 7% of the 176 had convulsions.¹⁹

Most recently, American physicians have observed methaqualone abusers exhibiting withdrawal symptoms, and have admitted them into hospitals for the administration of a withdrawal treatment program. Swartzburg reports cases of methaqualone abuse which convince him that the persons developed tolerance to methaqualone and exhibited withdrawal symptoms when it was withdrawn.²⁰ The withdrawal symptoms were controlled with pentobarbital withdrawal therapy, a customary withdrawal treatment program which consists of administering the Sodium Pentobarbital Tolerance Test. Under this test a dose of pentobarbital is cross-substituted for an equivalent dose of methaqualone. The pentobarbital dose is then decreased by 10% per day until the abuser is completely detoxified.²¹

Kunnes has observed several cases of methaqualone abusers showing withdrawal symptoms, including convulsion. When he re-introduced methaqualone, the symptoms disappeared. Kunnes has referred those persons to neuropsychiatric hospital facilities to be treated by pentobarbital withdrawal therapy.²²

Schulte has also observed methaqualone abusers showing withdrawal symptoms, and has successfully administered the Sodium Pentobarbital Tolerance Test.²³

Schnoll reports of withdrawal symptoms in methaqualone abusers and has advised them not to withdraw themselves abruptly, but rather to decrease their daily intake by tapering off, in order to avoid the fatal consequences of abrupt withdrawal.²⁴

Addicts themselves have stated in interviews with BNDD representatives that when they stop taking methaqualone they notice the onset of withdrawal symptoms, including:

- "the worst headaches I ever had"
- "... began crying ..."
- "... terrible pain"
- "doubled up with cramps"
- "stomach tied in knots"
- "I experienced a lot of shaking when I stopped taking them."
- "I sort of got climbing the walls. I couldn't eat anything and keep it down."
- "It felt like somebody was tightening a band around my head."
- "I shook so bad I couldn't walk."
- "I had cold chills, I couldn't sleep, I was just very confused, I'd change my mind two million times; I was just totally scattered. I couldn't even drink anything and keep it down, water, anything."
- "I couldn't keep my balance—my equilibrium."

One addict states, "When I got up into the really high doses, I wasn't getting high on them anymore. I just needed them to function."²⁵

Cross-substitution confirms that methaqualone is capable of producing a barbiturate-type physical dependence. Deneau has demonstrated in dogs that cross-substituting methaqualone for sodium barbital has com-

pletely suppressed the abstinence syndrome created by the primary drug of dependence, sodium barbital; upon withdrawal of methaqualone following the substitution technique, Deneau observed the appearance of a typical abstinence syndrome.²⁶

Bakewell²⁷ states that persons who are suspected of being physically dependent upon CNS depressants, including methaqualone, should be administered a test dose of pentobarbital 200 mg. If this leads to gross intoxication and, especially, impaired coordination during the test conditions, the person is assumed to have no tolerance to the suspected drug and the likelihood of drug dependence is discounted. However, if a person is not put to sleep nor grossly intoxicated after administration of 200 mg. of pentobarbital every six hours for one day, then he has significant tolerance and merits treatment for drug dependence. After the first 200 mg. dose is administered to the person, if he is alert, comfortable and steady, he has developed marked tolerance.

Schulte,²⁸ Kunnes²⁹ and Swartzburg³⁰ now report such observations after treating methaqualone-dependent persons by using the above-described test.

There is not yet a published methaqualone withdrawal study similar to the chronic barbiturate intoxication study by Dr. Isbell.³¹ Dr. Isbell published his study in 1950.

Barbiturates have had a medical use in the United States since 1903 and their abuse was observed in 1904. Dr. Isbell's study, therefore, had the benefit of relying on 47 years of scientific exposure to barbiturates. Forty-six of those years saw abuse of barbiturates.

In the case of Methaqualone, however, several obvious reasons exist to show why there are not the volumes of scientific material concerning methaqualone-produced physical dependence as there are showing the dependence liability of barbiturates.

Methaqualone has only recently (1965) been made available for medical use in the United States. With its introduction, methaqualone was heralded as being free from the barbiturate-type physical dependence characteristic, largely on the basis of it being a non-barbiturate chemically.

Essig, however, disregards a drug's chemical structure for purposes of determining its physical dependence liability, and states that newer depressants can cause physical dependence regardless of their non-barbiturate chemical structure.³² Bakewell includes methaqualone among those non-barbiturate depressants which share the physical dependence liability of barbiturates. It is now common pharmacological knowledge that non-barbiturate sedatives carry an abuse potential, including likelihood of inducing physical dependence.³³

Ongoing clinical treatment programs have produced clinical evidence which documents cases of methaqualone withdrawal treatment under conditions strikingly similar to those employed by Isbell in his study. This demonstrates physical dependence upon methaqualone.

Kunnes³⁴ and Whitehead³⁵ state that, as with barbiturates, if methaqualone is abruptly discontinued and no withdrawal treatment is administered to the methaqualone-dependent persons, convulsions will likely occur, sometimes leading to death.

Therefore, we conclude that methaqualone produces a severe physical dependence characteristic of the barbiturate-alcohol type.

Psychological dependence has been described by Dr. Jerome H. Jaffe in *The Pharmacological Basis of Therapeutics*, Goodman & Gilman, 1970, page 276, as "effects produced by a drug or conditions associated with its use necessary to maintain an optimal state of well-being. The intensity of the dependence may vary from a mild desire to a 'craving' or 'compulsion' to take the drug."

Addicts themselves have stated:

Footnotes at end of article.

"I just needed them to function."

"I sort of got climbing walls [without methaqualone]."

During the time interval from September 1972 through January 1973, drug abuse information obtained from Project DAWN (a drug-information gathering project by the Bureau) indicates that out of approximately 1,440 incidents involving methaqualone abusers, 675 (46.9%) self-administered the drug to obtain the psychic effect of euphoria; 219 (15.2%), for unhappiness; 167 (11.4%) for dependence; 90 (6.3%), for self-destruction; and 278 (20.2%), for unknown reasons. The motivation for taking methaqualone, as seen by the percentages of methaqualone abuse and evidenced by the addicts' stated need to take the drug, is indicative of methaqualone's severe psychological dependence capabilities.

V. CURRENT PATTERNS OF ABUSE

This section of the report has been divided into three key areas which give a broad picture of methaqualone abuse:

1. method of administration as indicative of different abuse patterns;
2. abuse of methaqualone in conjunction with other drugs;
3. methaqualone abuse within society.

1. *Method of Administration.* Although some "downer-freaks" may attempt injection, the most practical method of administration of methaqualone is oral, largely because its insolubility does not lend itself to injection.

Since methaqualone is commercially manufactured as a tablet or capsule, it is convenient to take, carry and store. These dosage forms are inconspicuous, and therefore may be easily and discreetly sold and transferred. As an oral dosage form, methaqualone retains a lengthy shelf life. A drug abuser need not bother with injectable paraphernalia—spoons, droppers and needles, for methaqualone can be "popped" or "dropped" with the same ease as an amphetamine tablet or a barbiturate capsule.

Methaqualone is particularly attractive to drug abusers because its effects are rapid and long lasting.^{36, 37, 38} It lowers the human inhibitions for those seeking a successful social encounter. A perpetual state of sedation can be maintained by merely taking a pill whenever life's pressures are felt; for the heroin addict who is faced with a short street supply of his drug of choice, or who is unable to maintain his "high" due to low heroin purity, or who is being maintained on methadone, oral administration of methaqualone can compensate for the absence of satisfactory heroin effects;³⁹ and finally, for the suicide-prone person, the excessive oral overdose of the sedative-hypnotic methaqualone is an efficient method of suicide.⁴⁰

It is the magnitude of the oral methaqualone abuse problem and diversion of these tablets and capsules from licit channels which when considered in conjunction with the same problems of barbiturate abuse and diversion, mandates the need for stringent state and federal controls over methaqualone.

2. *Abuse of Methaqualone in Conjunction with Other Drugs.* Methaqualone is a major drug of choice among multiple drug users. Current BNDD Intelligence documents over a thousand cases were hard drug users were also taking methaqualone. These reports show mepharmacaine is taken with heroin, with barbiturates, with methadone, with alcohol, and with hundreds of other abusable drugs. This is particularly true in connection with alcohol, where two general abuse patterns are manifested. Many abusers use methaqualone to reduce or remove inhibitions prior to and during a social occasion where they take alcohol.⁴¹ Others may use methaqualone and alcohol to achieve a "tranquility" when unable to cope with day-to-day pressures.

When methaqualone is taken in combination with other CNS depressants, such as alcohol or barbiturates, a synergistic effect will result, potentiating the effects of methaqualone to dangerous or even fatal levels. A further danger exists because the person who combines methaqualone with alcohol, for example, cannot possibly predict the extent and degree of the synergistic effect which results. Acute poisoning may result from automatism, a drug induced state of confusion in which the person forgets having taken certain amounts of the drug, or even whether he had taken any of it at all. Such a state arises in the intoxicated person who, in a judgment-impaired condition, may not realize the amount of either drug ingested and may seek to take more alcohol, or methaqualone, or both. These additional quantities will produce even more marked synergism which can cause a fatal overdose of methaqualone, as well as the other depressants taken with it.⁴²

A recent study shows use of alcohol among school age children is dramatic and increasing.⁴³ The study revealed that 20 percent of sixth graders, 62 percent of seventh graders, 52 percent of eighth graders, and 62 percent of high school students have used hard liquor (the figures for those grades with regard to intoxication are 9, 11, 28, and 38 percent, respectively).

This increase in alcohol use among school-age children and teenagers has been accompanied by an increase in barbiturate abuse. Similarly, a vast, concurrent increase in methaqualone abuse has been seen.

Methaqualone abuse in conjunction with heroin abuse is increasing as successful efforts to interdict the heroin traffic increase.⁴⁴ Recent BNDD field reports show that the purity of heroin available on the street is, in most cases, less than 5 percent due to the shortage of the drug. Consequently, addicts supplement their habits with methaqualone,⁴⁵ both to potentiate the effects of heroin as well as to ease the withdrawal from heroin.⁴⁶

Closely associated with the problem of methaqualone-heroin abuse is the tendency of heroin addicts participating in methadone maintenance programs to supplement their methadone treatment with methaqualone.⁴⁷ Although their physiological need for heroin is adequately substituted by methadone, many heroin addicts miss the feelings and sensations produced by heroin and thus seek an additional drug outlet which will not jeopardize their participation in the program, but will enable them to obtain, inexpensively, the satisfaction they seek. It would be a national tragedy if the solid achievements of the methadone programs were even remotely jeopardized by an uncontrolled flow of methaqualone.

Methaqualone can be used to "draw a person" down from the effects of a psychoactive drug such as "speed." As is the case with any conjunction drug use, the abuser is not fully aware of the consequences of such drug interaction.

3. *Methaqualone Abuse Within Society.* Many adults take excessive doses of properly prescribed drugs either out of habit or to enable themselves to cope with or cloud out unsatisfactory aspects of their lives.

Adults frequently run to the medicine chest for relief from each and every ache, pain, or fit of restlessness or sleeplessness. These patterns are impressionable upon children; to the point of kids mimicking their parents' drug-taking.

Adults generally have easy access to a supply of methaqualone coming from physicians and pharmacies. This group comes to the attention of police or hospitals after an overdose or suicide. A result of this ready access is the ease with which a teenager, for example, could get at this supply of drugs and abuse them.

The dreamlike, euphoric effects of methaqualone have been lauded by those who abuse

it and they display their approval by wearing T-shirts emblazoned with one manufacturer's initials. Parties are planned and enjoyed where the sole highlight consists of taking enough methaqualone to "knock yourself out," then resisting the urge to sleep. This produces an exhilarating "high" along with a stupefying drunk effect. At these gatherings special recordings are played, presumably because they can only be enjoyed to the fullest while their listeners are on the effects of methaqualone.

Several dangers come with taking methaqualone for "highs." Among his peers, no one wants to be a "prude," "chicken" or "out of it," so he takes the drug offered to him.

The methodology of methaqualone includes a notion that the drug produces a tingling effect and is therefore an aphrodisiac. While manufacturers of methaqualone have not asserted this claim, a recent headline heralding methaqualone as "Heroin For Lovers"⁴⁸ is an example of how the myth is being converted into the "fact". Thus, a unique (if unfounded) dimension of attractiveness has been added to methaqualone for abusers of the drug.

Methaqualone is popular for suicidal purposes. In Dade County, Florida, 11 methaqualone-related deaths have been reported in approximately a one year period.⁴⁹

Methaqualone has had an extensive abuse history in foreign countries, and world literature indicates that from 1960 until the present date, 2,931 (106 suicides; 2,825 poisonings) cases of methaqualone abuse have been reported.

Methaqualone drug abuse is viewed from a number of sources. Physicians, hospital centers, government agencies, state universities, local police officials and BNDD agents have all provided valuable data for the evaluation of methaqualone drug abuse. The recent trend of abuse data, as reported from these sources are indicative of methaqualone's widespread present abuse and potential for even greater future abuse.

Donald J. Foley, Chief of Drug Control of the New Jersey State Department of Health has advised the Bureau of a survey of methaqualone abuse in 60 randomly selected communities located in all areas of the state. The period covered by this survey was May 1, 1972, through January 31, 1973, and showed the following results:

- (1) 210 arrests for being under the influence of methaqualone or for possession of methaqualone without a prescription,
- (2) 28 hospitalizations for methaqualone overdoses,
- (3) 3 methaqualone-related deaths.

Mr. Foley stated that New Jersey is acting to bring methaqualone into Schedule II of the New Jersey Uniform State Act, a schedule similar in drugs covered and in controls to Schedule II of the Federal law.

Between June 1971 and November of 1972, the National Clearinghouse for Poison Control Centers reported a total of 197 methaqualone self-poisonings. Documentation also is available to BNDD indicating the increasing and high incidence of methaqualone abuse relative to suicide and other drug related deaths such as accidental overdoses. From January 1, 1971, through May 1, 1972, reports within the Bureau of Narcotics and Dangerous Drugs alone cited methaqualone abuse involved in 53 suicide deaths, 267 arrests and 313 overdoses.

The Drug Abuse Warning Network (DAWN) has also contributed to the numerous instances of abuse. DAWN, a project conceived by BNDD, tabulates reports of instances of drug abuse from over 300 selected reporting units. Data collected represents drug abuse information from a wide geographic base and from the following sources: Medical records, hospital out-patient and laboratory records, medical examiner reports, student clinic and health cen-

ters, hot-lines, counseling and crisis programs, and free clinics.

For the 4-month period from September to December, 1972, DAWN tabulated 1,373 instances of methaqualone abuse from these reporting units. This was sufficient to place methaqualone among the top ten drugs of abuse in the United States, among such notorious drugs of abuse as, amphetamines, and barbiturates.

Legitimately manufactured methaqualone is easily diverted from licit drug channels because methaqualone is not currently controlled under the Controlled Substances Act.

At this time, evidence does not show that methaqualone is clandestinely manufactured. There are five manufacturers of six marketed dosage form methaqualone products in the United States. Methaqualone may only be dispensed pursuant to a legitimate prescription. Although the regulations of the Bureau do not require a manufacturer of drugs not controlled under the Controlled Substances Act to report production figures, the Bureau does have approximate distribution figures for these five manufacturers, derived from various surveys. These figures reveal large yearly increases in the manufacturers' distribution of methaqualone in the hypnotic dosage level. These increases are shown in each of the tables below.

COMPANY NO. 1.—METHAQUALONE YEARLY
DISTRIBUTION FIGURES

Date of distribution and 400 mg. dosage units
distributed

Prior to Oct. 1969	0
1970 (approx.)	2, 100, 000
1971 (approx.)	3, 100, 000
1972 (approx.)	4, 000, 000

COMPANY NO. 2.—METHAQUALONE YEARLY
DISTRIBUTION FIGURES

Date of distribution and 400 mg. dosage units
distributed

Prior to Oct. 1971	0
--------------------	---

COMPANY NO. 3.—METHAQUALONE YEARLY
DISTRIBUTION FIGURES

Date of distribution and 300 mg. dosage units
distributed

Prior to Feb. 1969	0
1970 (approx.)	3, 500, 000
1971 (approx.)	6, 000, 000
1972 (approx.)	9, 000, 000

COMPANY NO. 4.—METHAQUALONE YEARLY
DISTRIBUTION FIGURES

Date of distribution and 400 mg. dosage units
distributed

Prior to Sept. 1970	0
1971 (approx.)	10, 000, 000
1972 (approx.)	22, 000, 000

One large manufacturer shows a tremendous increase of methaqualone distribution over the last five years, in the hypnotic dosage form of 300 mg. These distribution figures are represented in the table below.

COMPANY NO. 5.—METHAQUALONE YEARLY
DISTRIBUTION FIGURES

Date of distribution and 300 mg. dosage units
distributed

Prior to Sept. 1967	0
1968 (approx.)	8, 000, 000
1969 (approx.)	47, 000, 000
1970 (approx.)	70, 000, 000
1971 (approx.)	80, 000, 000
1972 (approx.)	105, 000, 000

This distribution increase is due in large part to the promotion of the drug as a "safe" alternative to barbiturate sedative-hypnotics, and its acceptance as such by many physicians. Consequently, the legitimate "pipeline" of methaqualone has been filled to capacity, and the possibility for diversion has increased apace. Diversion from domestic production covers all types of illegal diversion from the legitimate drug pipeline: manufacturer through wholesaler through dispenser

(pharmacy, hospital, or physician) to the patient. These include thefts (a storage facility is robbed), employee pilferage (an insider removes drugs from the location), unauthorized sales (a pharmacy sells without a prescription or a wholesaler sells to a person not registered to procure the drug), and in some cases excessive prescribing and dispensing (a physician gives the patient more than is required medically).

Because the Bureau's regulations do not require manufacturers or distributors of non-controlled substances to report thefts of those substances, a total picture of diversion by theft is not available.

However, several incidents have been reported to the Bureau, and it is apparent that had certain physical security controls been in effect pursuant to the Controlled Substances Act, the thefts might well have been averted. For example, one large manufacturer reported the theft of 600,000 methaqualone capsules, which were stolen while contained in bulk shipping drums during processing. According to the manufacturer, approximately 10 days elapsed before the theft was discovered. In another case, an audit performed by the state pharmacy board revealed a shortage of between 300,000 and 400,000 methaqualone tablets while in the possession of a wholesaler, and disclosed that the firm had made several shipments to non-existent firms. In another case involving the arrest of a defendant for the illegal sale of barbiturates, the defendant had in his possession 2,200 methaqualone tablets apparently diverted from a distributor.

Other examples of methaqualone diversion include the case of a defendant pharmacist in the Rocky Mountain area who reported to an undercover agent that methaqualone was readily available, and that he had 250,000 tablets for sale. In addition, he admitted that he diverted 300,000 tablets. A BNDD agent reports that this pharmacist had revealed that, for the past year and a half, he shipped large quantities (25,000 to 200,000 units) to customers in Boston, New York and Columbus, Ohio.

In addition it appears that much of methaqualone's availability is due to the improper prescribing habits of a minority of doctors. This fact is mentioned repeatedly in interviews conducted by Bureau personnel with pharmacists, student health center directors, counselors at drug clinics, and members of the medical community. Again, the facile prescribing of methaqualone is due in large part to the promotion of the drug as a "safe" alternative to barbiturates. It is now necessary for the medical community to become increasingly aware of the fact that these same dangers are inherent in methaqualone.

V. CONCLUSION AND RECOMMENDATION

This report has examined the nature, extent, and danger of methaqualone abuse in the United States for the purpose of instituting proceedings under Section 201 of the Controlled Substances Act of 1970 (CSA), to place methaqualone in the appropriate Schedule prescribed therein.

Based upon the evidence obtained by the Bureau, and presented in this report, it is the recommendation of the Director of the Bureau of Narcotics and Dangerous Drugs that methaqualone be controlled under Schedule II of the CSA and the regulations promulgated thereunder. Although the information available on methaqualone abuse is not of the same magnitude and refinement as that available of barbiturates, due to the fact that barbiturates have a much longer history of use and abuse in this country, we believe that we have met the requirement of the CBA that we support our control actions with "substantial evidence of potential for abuse."

The legislative history of the CSA states that as used in the phrase "substantial evidence of potential for abuse," the word "...

'substantial' means more than a mere scintilla of isolated abuse, but less than a preponderance." In explaining the meaning of that definition, the Committee on Interstate and Foreign Commerce indicated that:

"... documentation that, say several hundred thousand dosage units of a drug have been diverted would be 'substantial' evidence of abuse despite the fact that tens of millions of dosage units of that drug are legitimately used in the same time period ...

Misuse of drugs in suicides and attempted suicides, as well as injuries resulting from unsupervised use are regarded as indicative of a drug's potential for abuse."

With regard to the term "potential for abuse," the Committee adopted the definition appearing in the regulations adopted pursuant to the Federal Food, Drug, and Cosmetic Act (21 CFR 166.2(e)). The definition provides four alternative indicia of a drug's potential for abuse:

"(1) There is evidence that individuals are taking the drug or drugs containing such a substance in amounts sufficient to create a hazard to their health or to the safety of other individuals or of the community; or

(2) There is significant diversion of the drug or drugs containing such a substance from legitimate drug channels; or

(3) Individuals are taking the drug or drugs containing such a substance on their own initiative rather than on the basis of medical advice from a practitioner licensed by law to administer such drugs in the course of his professional practice; or

(4) The drug or drugs containing such a substance are new drugs so related in their action to a drug or drugs already listed as having a potential for abuse, to make it likely that the drug will have the same potentiality for abuse as such drugs, thus making it reasonable to assume that there may be significant use contrary to or without medical advice, or that it has a substantial capability of creating hazards to the health of the user or to the safety of the community."

The Bureau believes that the information presented in this report is such that the criteria of the above definitions and explanations of Congressional intent have been easily met with regard to the decision to initiate proceedings to control methaqualone in Schedule II of the CSA. The following is a list of the important controls that would be imposed on methaqualone as a Schedule II controlled drug:

1. *Security.* The control of methaqualone in Schedule II would subject it to the rigid security requirements imposed by regulations implementing the Controlled Substances Act. Manufacturers or wholesalers would have to store the products in a safe or vault which had a self-locking day-gate, thereby limiting access to only a few authorized individuals. Manufacturing would have to be done in a limited access area under continuous monitoring by supervisory personnel. Storage in pharmacies, hospitals, and physician offices would have to be in a securely locked, substantially constructed cabinet.

All of these controls would reduce the chance for employee pilferage and theft.

2. *Prescription Limitations.* One of the most significant effects of control under Schedule II would be to restrict the prescribing flexibility of a physician. A Schedule III or Schedule IV controlled substance is allowed to be prescribed orally (that is, by telephone) and refills may be authorized up to five times and for a period of six months. Schedule II drugs, on the other hand, must be prescribed in writing (except in limited emergency situations) and may not be refilled.

Thus, the control of methaqualone in Schedule II would greatly reduce the chances

Footnotes at end of article.

for overprescribing by a physician. In addition, the restrictions would compel the patient to receive closer monitoring of his drug use by his physician; in the case of these addictive and overdose-prone drugs, such physician monitoring is imperative.

3. *Quotas.* Controlled substances in Schedule II are subject to quotas on the production permitted in the United States; non-controlled drugs are not so subject. Quotas have long been recognized as a useful regulatory tool to control the manufacture of substances which have legitimate medical or industrial uses but which also possess high potentials for abuse. A quota represents the quantity or number of dosage units of a drug that may flow through given points in the drug distribution pipeline so that overproduction will be prevented, while assuring that there are sufficient quantities available at the patient end of the pipeline to satisfy the legitimate medical needs.

It has been documented that excessive production of a controlled substance will increase the potential for diversion throughout the pipeline. As production exceeds demand, large quantities of the controlled substance will be added to inventories. This decreases the inventory turnover rate, creating financial pressures to sell the controlled substances to convert inventory into cash, with little regard for the purpose for which the controlled substances are to be used by the buyer. Larger stocks of controlled substances also increase the potential for employee theft and pilferage, and make more attractive targets for burglars.

Quotas properly established to provide for legitimate medical needs may also reduce diversion in another manner. Ethical manufacturers, distributors and dispensers would realize that there will be only a limited quantity of a controlled substance available for legitimate patient use, and thus would scrutinize every transaction involving a controlled substance to be sure that it would be used for a valid medical purpose.

Normally, quotas are used to prevent production from growing faster than legitimate needs. However, when there is a decrease in legitimate medical use of a controlled substance (and a resulting increase in reserve supplies), a quota may be utilized to decrease or "dry up" the excess inventories. As the quota is lowered, the quantity of controlled substances placed into the pipeline is decreased and the manufacturers, distributors, and dispensers would be required to draw from their reserve supplies to satisfy the legitimate medical need.

4. *Import/Export Requirements.* The control of methaqualone in Schedule II would subject the drug to the very rigid controls of the Controlled Substances Import and Export Act.

Currently, methaqualone may be exported from the United States without restriction. Since many countries of the world have no controls whatsoever on nonnarcotic drugs, this permits shipments into those countries for re-shipment elsewhere. It is thus possible for drugs exported from the United States to move through several countries, find their way to the illicit traffic, and ultimately return to the streets of the United States. By being placed in Schedule II, methaqualone could not be exported unless it was shown that the drug was to be used exclusively for medical, scientific, or other legitimate purposes in the country to which it is exported, that it would not be re-exported from that country, and that there was an actual need for the drug for legitimate purposes in that country.

On the import side, it is now possible to import an uncontrolled drug in the United States for legitimate purposes. Transfer to Schedule II would limit importation to situations where there was either a shortage of domestic supplies during an emergency,

or competition among domestic manufacturers was found to be inadequate.

5. *Order Forms and Reports.* Control of methaqualone in Schedule II would require that all persons selling or purchasing the drug (other than actual patients) use order forms issued by BNDD. The order forms guarantee that only persons specifically authorized to handle these drugs are able to order them, and that all shipments are to be made directly to the address on the form. This avoids the fraudulent use of a BNDD registration number or the diversion of drugs through the theft and misuse of order forms.

In addition, these drugs would become subject to more detailed reports from manufacturers and wholesalers regarding production and inventory. The reports and order forms allow the Bureau to monitor continuously the production and distribution of these drugs throughout the United States and provide investigative leads as to possible points of diversion or other illicit activity.

6. *Recordkeeping.* Schedule II requires that complete records must be maintained. Records of substances in Schedule II must be kept separate and apart from records regarding any other controlled or noncontrolled substances. The Bureau regularly audits all registrants and performs special audits on suspected points of diversion. Through the requirement of separate records, the Bureau's investigators can more effectively perform audits and increase the efficiency of accountability checks.

METHAQUALONE: THE "SAFE" DRUG THAT ISN'T VERY

(By Daniel Zwerdling)

When the William H. Rorer drug corporation introduced its new tranquilizer and sleeping pill methaqualone on the American market in 1965, president John Eckman knew just what he'd call it. "Our antacid Maalox has been a fantastic seller," he told an FDA official. "If the double A gave us so much luck with Maalox it should do it again with Qualude."

Since then, the double A in Qualude has stood not only for growing profits—it's the

number six best-selling sedative—but for addiction and abuse as well. Quaaludes "pave the streets in Columbus, Ohio," according to a street drug clinic, and people carry them "by the bagful" in College Park. In New York City "it's all over the place, and getting even bigger," says a spokeswoman at the city's Addiction Service Agency. Growing numbers of methaqualone poppers are being rushed from "Quaalude parties" with near-lethal overdoses.

Even more troubling is the still little-known fact that methaqualone, far from being "safe" and "nonaddictive" as advertised, can hook people on a habit as tight as barbiturates and give a withdrawal "far worse than heroin," to quote University of Michigan Hospital psychiatrist Richard Kunnes, because, unlike heroin, methaqualone can cause "fatal convulsions."

"The potential threat is equally dangerous as barbiturates," warns Ernest Caraballo of the federal Bureau of Narcotics and Dangerous Drugs. "For every Quaalude addict we come across, that addict seems to know five or six others," says Dr. Kunnes. "We're only seeing the tip of the Quaalude addict iceberg."

THE FIRST ADDICTS

When Rorer started promoting Quaalude as a "non-barbiturate" tranquilizer, doctors welcomed the drug as a valuable alternative. Soon, other drug manufacturers jumped into the methaqualone business: Arnar-Stone with Sopor, Parke-Davis with Parest, Wallace with Optimil, and others. Barbiturates are highly addicting—sudden withdrawal can kill an addict—and highly toxic. Empty barbiturate bottles have become a familiar sight in countless motel room suicides. Rorer and the other methaqualone manufacturers insist their product is different. "Psychological dependence rarely occurs, physical dependence rarely reported," proclaim the Quaalude ads. The PDR (for Physician's Desk Reference), the doctor's bible published by physicians and drug companies reports that "physical dependence has not been clearly demonstrated."

Spurred by these advertising claims, methaqualone has become the hottest drug on the streets and college campus market—bigger than marijuana and LSD. "People who are into downers are constantly looking for a non-addicting drug which will give them a 'buzz' but not get them hooked," says Kunnes. Quaaludes seemed a perfect solution.

"My skin was tingling and I was feeling nice," says John Steinbeck IV, describing a methaqualone trip in the October University Review. "A feeling not unlike what a couple of pipes of opium and a cup of hot tea give you." "For a while you're as light and hollowed out as a marshmallow and inhibitions disappear," says Straight Creek Journal.

Methaqualone poppers claim the drug has aphrodisiac qualities: They call it "heroin for lovers."

The euphoria over methaqualone started cracking this summer as drug takers reported that the stuff was getting them hooked despite the drug companies' claims. "When the first methaqualone addict came in to us this summer she freaked everybody out," says Mike Castleman, a director of Ann Arbor's Drug Help clinic. "She was doing seven 300-milligram tabs a day, and she started to withdraw because she got scared about what she was doing. She got headaches and bad cramps—the first signs of withdrawal. So we immediately called the drug companies and asked about it—and they told us methaqualone's not addictive," Castleman says. "Well, they were wrong."

Since then the University of Michigan Hospital has treated a handful of methaqualone addicts in its psychiatric ward. "Most of them were taking about 1,200 milligrams a

day, or just four pills," says resident James Shapiro. Doctors don't know much yet about the addictive qualities of Methaqualone, so they treat addicts by transferring the habit to barbiturates and then gradually reducing the daily dose until they're cured. "It usually takes five days to withdraw the Quaalude addicts completely," Shapiro says.

Dr. Kunnes has seen addicts withdrawing from methaqualone going into convulsions at New York's Bronx Municipal Hospital and in Haight-Ashbury. So far, no one has reported an actual death from methaqualone withdrawal, but doctors believe that it must be the logical result of convulsions that are not treated.

The university hospital also gets methaqualone overdose cases, including three from a recent blues festival. When methaqualone takers start to feel mellow, they drink a little beer or wine to wash the pills down. Alcohol potentiates—or multiplies—the effects of the drug. "These people turn blue, and their breathing is very slow and shallow," Shapiro says. "We have to give them oxygen through a trachea tube for 24 hours."

"We just got an overdose case two nights ago," he told me. "She took 14 300-mg. pills." A few more pills, or a little more time before treatment, and she probably would have died.

German, English and Japanese medical journals have reported numerous methaqualone poisoning cases, including some successful suicides. Rorer itself finds that "single doses ranging from 8 to 20 grams have produced severe toxicity and death."

Another danger which most users don't know about is that methaqualone may produce fetal deformities in women who get pregnant. The drug has produced mutations in laboratory animals; the Quaalude label insert warns that the drug is "contraindicated in women who are or may become pregnant."

CONTROLS ARE COMING

The methaqualone craze worries officials at FDA and the Bureau of Narcotics and Dangerous Drugs, who have always endorsed the "safe" image which the drug's producers have fostered. BNDD still rates methaqualone on a level with aspirin and vitamins on its drug control list, which means it's a drug doctors don't need to worry about. Anybody can buy it: Just ask a doctor to give your neighborhood pharmacy a call, no written prescription needed. But since the epidemic has hit the college campuses and the street freaks and news of Quaaludes fills the underground press, BNDD has assigned its Project DAWN (Drug Abuse Warning Network) investigators to find just how much methaqualone is really abused. FDA is reviewing medical literature on the drug. BNDD officials expect to place methaqualone on their control list before the end of the year, perhaps at a level with barbiturates.

Drug manufacturers have received piles of letters from drug clinics around the country reporting dangers of methaqualone, but they don't seem ruffled. "We're unaware of any true addiction cases," says Dr. John Zarosinski, vice president for research at Arnar-Stone. "Addiction is a fuzzy area," says Rorer vice president C. Charles McCallister. "According to reports in our hands, methaqualone has been declared nonaddictive. We have heard reports from widely separated areas—doctors who say they are seeing signs of addiction. But it's unlike anything they've seen before."

And if methaqualone is getting pill takers hooked, drug corporation and government officials say, it's a new phenomenon brought on by irresponsible uses of the drug. "This problem has only come up in the last year," says FDA Bureau of Drugs director Henry Simmons. "We hadn't heard of it before because people weren't abusing it."

But the problem of methaqualone addiction is not new. Surveys in Japan where

drug companies have been selling methaqualone since the '50's, show that half the drug addicts in hospitals between 1963 and 1967 were hooked on the stuff. Medical literature contains numerous similar reports dating to the first year Rorer hawked Quaaludes on the American market. The Medical Letter on Drugs and Therapeutics warned U.S. doctors in April, 1966, that the British Medical Journal was finding cases of physical addiction to methaqualone. As the Medical Letter said then, "the claim that methaqualone is nonaddicting has little meaning; even meperidine (Demerol), a highly addicting narcotic, was thought to be nonaddicting when it was new." Doctors thought glutethimide, a non-barbiturate sedative commonly sold as Doriden, was safe but after sales soared they discovered they were wrong about that one, too.

The British Medical Journal has continued over the years to monitor addiction to methaqualone, which English drug manufacturers combine with an antihistamine and call Mandrax. "Addiction to Mandrax is frequently reported," says Dr. Harold Aaron, executive director of the Medical Letter. "Addicts take two Mandrax with a glass of cider. And you don't get addicted to antihistamines—it's the methaqualone."

One issue of the Medical Letter consultants have observed reactions resembling delirium tremens following sudden withdrawal of methaqualone, and believe that it should be classified as a physical dependence-producing drug (emphasis added). That was in August, 1969.

FLOODING THE MARKET

With this medical history as a backdrop, the federal government should have cracked down on methaqualone long ago, when it first hit the market. And now FDA should be forcing drug manufacturers to change their advertising claims. "We've known for a year now that methaqualone is just like barbiturates," says Dr. Edward Tocus, director of FDA's drug abuse staff.

But FDA isn't acting. "There's no drug that doesn't have some problem that isn't stated on its label," says Bureau of Drugs director Simmons. Nor will the drug companies volunteer to change their advertising claims. "From a practical standpoint, it takes several months or longer to change a package label and informational brochures," explains Dr. Zarosinski at Arnar-Stone. And a change wouldn't do any good anyways, he says: "It would seem unlikely that a street pusher would hand out a package insert with the drugs."

There's one question which puzzles both local drug clinics and Project DAWN investigators: Where are all the methaqualone pills coming from? "I have never ever seen any drugs in this quantity," says David Furr, director of Help Center in College Park. "Pushers tell me if you give them a week, chances are 80 per cent they can get you anywhere from 300 to 1,000 pills."

"Most other drugs on the street are very rarely company-made—they're manufactured underground," Furr says. "But almost all the methaqualone we get around here is legitimate." BNDD confirms the same story nationwide: It's company pills everyone's popping.

Much of the methaqualone supply comes via stolen prescription pads, and some doctors sell prescriptions outright. One Pharmacist in the Washington metropolitan area does a brisk black market business in methaqualone, taking a percentage of the street profits—much higher than he'd get on a doctor's order. And at least two dealers at the University of Maryland buy their stocks from a clerk in a drug company, who buys his supplies from a night watchman.

Doctors in Ann Arbor complain that the drug companies themselves encourage abuse of methaqualone by flooding their offices

with free samples. "Just two months ago a Rorer salesman left a box of 1,000 Quaaludes on a desk in the outpatient clinic, even though we ordered him not to and told him we'd destroy the samples if he did," says University Hospital resident Shapiro. "The next morning they were gone—stolen."

Some drug clinic workers expound a political conspiracy theory: the drug companies and the federal government, as they see it, flood the streets with disabling drugs whenever the "people" start getting dangerous. Heroin did flood the ghettos after the Watts, Detroit and Newark riots; now underground newspapers report that massive quantities of Quaaludes flooded Flamingo Park in Miami, headquarters for demonstrators, during the national political conventions last summer.

But one thing is certain about the methaqualone epidemic: It's making the drug manufacturers a bundle. Sales of the drug have increased 360 times since the year it was introduced. The better methaqualone does on the black market, the more money its producers make—because the more drugs that are diverted from legal channels, the more the companies must produce to replace them. "The drug companies always tell us that once the drug leaves their warehouse platform they're not responsible any more," says one FDA scientist who is studying methaqualone. "But in the final analysis, it's illegal sales of their drugs and there's a profit in it."

CLAIMS ARE DISPUTED

The Government will probably put methaqualone under control, doctors will have a bit more difficulty prescribing it, pharmacists will have to keep special dispensing records and perhaps sales will level off. But if the methaqualone supply dries up on the streets, it will be because street clinics and methaqualone freaks learn on their own what the drug companies wouldn't tell them: that methaqualone is dangerous.

One of the great ironies of the whole episode is that methaqualone isn't much medically anyway, addiction potential aside. The drug companies promote its unique and superior sedative qualities, but "most of these claims are not supported by the published clinical trials," according to the Medical Letter.

For example: Rorer claims that patients on Quaalude awake "refreshed without hangover, drowsiness, headache or other side effects"; the Medical Letter says clinical tests show they do wake up with hangover and dizziness. Rorer claims that Quaaludes cause "little or no suppression of the essential REM or dream stage sleep"—although the Medical Letter finds that "contrary to advertising claims, methaqualone in the usual hypnotic dose of 300 mg. produced a significant suppression of REM sleep." Rorer says Quaalude induces sleep "without drugging the higher centers of the brain" as barbiturates do—but as the Medical Letter notes, "there is no evidence."

Methaqualone is a powerful sedative and sleeping pill just like any other. It's useful in some cases under careful medical supervision, but it's dangerous and even deadly. In fact, some BNDD officials say that methaqualone is more dangerous than barbiturates and even heroin—simply because people who take it don't know what they're getting into.

The methaqualone boom should make an interesting case study in future medical textbooks: How skillful public relations and advertising created a best seller—and helped cause a medical crisis in the process.

[From Newsweek, Feb. 12, 1973]

WARNING ON "SOPERS"

There was widespread rejoicing among youthful pill-poppers when a new drug called methaqualone reached the counter-culture circuit early last year, accompanied

by a reputation for producing a high that was pleasant, safe and supposedly non-addictive. But now the Federal and state investigators suggest that methaqualone may be much more dangerous than anyone realized. Last week, the U.S. Bureau of Narcotics and Dangerous Drugs (BNDD) was preparing a proposal that the manufacture, distribution and prescription of the drug be more tightly controlled.

Methaqualone, which is sold under the brand names Quaalude, Sopor, Parest and Optimal, is a sedative-sleeping pill, available only by prescription. It is administered in dosages of 150 to 300 mgs. to induce sleep, and 75 mgs. for "daytime sedation." Because methaqualone was believed to be non-addictive when it first went on the U.S. market in 1965, it was not placed under the special Federal restrictions that govern substances whose harmful potential has been proved, including morphine, barbiturates, LSD and amphetamines.

BOOM

As a result of its availability and reputation for safety, methaqualone has become the sixth best-selling sedative in the U.S. on the legal market; in addition, a huge supply of the drug has been diverted to campus and street pushers, who have found an apparently insatiable market for the "sopers" (catchall slang for the several brands of methaqualone) at 25 to 50 cents a pill.

The methaqualone boom is still on the rise in many areas of the country. In Berkeley, reports Dr. George Gay of the Haight-Ashbury Free Medical Clinic, "the surge definitely hasn't peaked yet; we've hospitalized a dozen people since December who've overdosed on Quaalude." Doctors cite the manufacturers' explicit warnings that the drug can occasionally produce psychological dependence, should not be combined with alcohol or other drugs and can, in large quantities, lead to delirium, coma, convulsions, liver and kidney damage, pulmonary edema, respiratory arrest—and death. But by now, a number of users have discovered these perilous side effects for themselves; in 1972 alone there were 275 reported poisonings, overdoses and attempted suicides related to methaqualone, with sixteen deaths.

[From Time magazine, Mar. 5, 1973]

THE DEADLY DOWNER

According to its manufacturers, methaqualone is a dependable and effective sleeping pill. Blurbs in the standard *Physicians' Desk Reference* attest to its "sedative and hypnotic" effects and its ability to induce prompt sleep, but warn that the drug may also produce dependency. The warning is appropriate. Though the drug may be safe if it is taken as prescribed by a physician, increasing numbers of Americans—especially on campuses and in ghettos—are obtaining the drug illegally and taking it indiscriminately. Methaqualone is rapidly becoming one of the most popular—and dangerous—drugs of abuse in the U.S. The Government has only recently recognized its dangers and moved toward establishing controls.

On the street and on campus, methaqualone is known by various corruptions of its trade names: "quads" (from Quaalude, made by William H. Rorer Inc.), "French Quaalude" (from mispronunciation of Parest, the Parke, Davis & Co. brand name), and as "soapers" (from Sopor, made by Arnar-Stone Laboratories Inc.). It was so popular among the young people who camped out at last year's political conventions that Miami Beach's Flamingo Park was dubbed "Quaalude Alley." Its abuse is now a major problem at many colleges and high schools. It is currently favored by the addict community in the New York City borough of the Bronx, and is so fashionable among some drug culturists that bowls of it have replaced peanuts as a cocktail-party staple.

Users—who are mostly youngsters—are

rhapsodic about the euphoric, spaced-out state the drug can produce. Many, calling methaqualone "heroin for lovers," also believe that it is an aphrodisiac. They are mistaken. As a "downer," or depressant, the drug may release the user from his normal sexual restraints. But it is also likely to make a male incapable of normal sexual performance. As one Vassar man puts it, "All your inhibitions are definitely broken down—like everything else in your body."

The drug's effects on the body can, in fact, be deadly. Most doctors prescribe methaqualone in capsules of 150 mg. to 300 mg., one of which should be enough to put the average adult to sleep. But drug abusers are not content with such tame dosages. Their usual pattern is to take two or more, and then wash them down with a few pints of beer.

The combination can be catastrophic. Methaqualone and alcohol are synergistic: one multiplies the effects of the other. Taken together, they can depress the respiratory center and stop breathing; they may also slow the reflexes in the back of the throat, so that if a user vomits (which may happen after a large dose of methaqualone), he can choke and die.

NO CONTROLS

On top of this, methaqualone is addictive. Unlike insomniacs who abide by their doctor's prescriptions, abusers develop a tolerance for the drug and begin taking increasingly larger doses. Then they may become addicted. "Resistance can develop after only four days," says Mike, a 20-year-old San Franciscan. "Then it takes four to do what one used to do for you. The withdrawals are much worse than heroin, with the same kind of convulsion as in an epileptic fit."

Despite these dangers, however, controls over methaqualone are virtually nonexistent. Federal authorities have been considering regulations for methaqualone for the past few months, but have not yet proposed any controls on production or sales. The individual states have also been slow in acting. In New York, methaqualone is classed as a dangerous drug; that means that pharmacists cannot refill the prescription without written authorization from a doctor. Connecticut and Maryland are considering controls. But in the rest of the country, the drug and its dangers are unrestricted.

[From the Christian Science Monitor, Mar. 26, 1973]

NEW "JEKYLL-HYDE" DRUG: UNITED STATES SEEKS SPEEDY ACTION (By Robert P. Hey)

WASHINGTON.—A new drug has burst onto the American drug-abuse scene. Virtually unknown two years ago, it now can be bought almost as easily as candy near many American college campuses, high schools, and in ghettos as well.

Two years ago no one had heard of it being used illegally. Yet today it is "among the top 10 drugs of abuse in the United States, among such notorious drugs of abuse as amphetamines and barbiturates," says the Department of Justice's Bureau of Narcotics and Dangerous Drugs. It is mostly abused by the young—from teen-age through mid-20's.

The new drug is methaqualone (pronounced "meth-ah'-kwa-lone"), a sedative medically useful as an aid in sleeping, among other purposes. Drug control authorities say it is especially sinister because until now youths had thought it a "safe" drug—that it gave an escape from reality, like alcoholic drunkenness, but that it was not addictive. That was what its manufacturers had been telling physicians; no one had said differently.

But now, "methaqualone is capable of producing a barbiturate-type physical dependence," warns the Bureau of Narcotics and

Dangerous Drugs. Experts say it is as difficult to shake addiction to it as to heroin, and that medical supervision is required. For untold thousands of pill-popping youths it is a rude shock: They now are methaqualone addicts.

Sen. Birch Bayh (D) of Indiana calls it "a Dr. Jekyll and Mr. Hyde drug—seemingly safe while actually deadly."

He says that "many law enforcement and drug program staffers claim that it is the 'hottest drug on the street,' and that its abuse is rising in 'geometric proportions.'"

Official concern and action suddenly have erupted in Washington. In recent days the Department of Justice has begun the process of placing this drug in a category with other dangerous ones. When the process is complete it will be able to force a reduction in the number of pills produced annually and take several other steps that will make it much harder for youths to get the drug without a medical need.

HEARINGS THIS WEEK

Next Wednesday and Thursday, March 28 and 29, the Senate juvenile delinquency subcommittee, chaired by Senator Bayh, will hold hearings on the new problem. Senator Bayh has introduced a bill that would require that the drug be placed in a dangerous-drug category.

He wants the hearing to spotlight the problem and to prod the other arms of government into fastest possible action to stem the massive illegal flow of methaqualone to youths.

The subcommittee will hear testimony that methaqualone use has spread across much of the United States—among black youths in Chicago, white youths in Texas, and in the heartland of Indiana, where Senator Bayh says that abuse "has increased substantially in the past six months, particularly among youths [aged] 13 to 20."

The subcommittee also will hear of the unique New York City network of social bars geared exclusively to users of methaqualone: Some estimates are as many as 20 such bars. There addicts can obtain pills, drink nonalcoholic juices, and dance—much as in the illicit prohibition speakeasies of the '20's, except that today the patrons become tipsy on methaqualone, not homemade booze.

(In most such bars alcoholic beverages are not served: Combining alcohol and methaqualone can be fatal.)

WASHINGTON HEARS IN 1972

Washington got its first taste of the problem last year, during hearings by Senator Bayh's subcommittee into illegal use of barbiturates. The term "methaqualone" began to crop up increasingly as a similarly abused drug.

By January of this year Sen. Charles H. Percy (R) of Illinois was sufficiently concerned by what he had learned to fire off letters to federal officials. In a letter to Dr. Charles C. Edwards, then commissioner of the Food and Drug Administration, Senator Percy asked for an investigation into methaqualone, which he said "is being widely abused in this country."

Although "advertised as being safe and non-addictive, evidence now indicates that methaqualone can hook persons on a habit as invidious as that brought on by barbiturates and produces withdrawal effects far worse than heroin," the Senator said.

WHY NO PRIOR WARNING?

Why, he asked, has the addictive aspect of the drug not been widely known? The drug first was introduced in the United States in 1965, he noted. "As early as 1966, the Medical Letter on Drugs and Therapeutics warned doctors in the United States that the British Medical Journal had discovered instances of physical addiction."

Senator Percy said that, unlike most illicit drugs on the street, methaqualone "is not

manufactured underground, almost all of it is produced legitimately by reputable drug manufacturing companies.

"Sales . . . have increased 360 times since the year it was introduced. Drug companies are making money even from the methaqualone sold on the black market, since the companies must increase production to replace the drugs that are diverted from legal channels."

"Although the drug manufacturing companies are said to have received many complaints from drug clinics around the country, to date they have refused to change even their advertising or labeling practices."

ACTION OFFICERS REPLIES

Dr. Jerome H. Jaffe, director of the President's Special Action Office for Drug Abuse Prevention, responded:

"There is no question that methaqualone causes physical and psychological dependence, and is responsible for intoxication and overdose deaths. It now appears that this drug which is so easily available is now being widely used, in part because of such availability. More stringent controls seem needed and it seems to me that bringing this drug under the Comprehensive Drug Abuse Prevention Control Act of 1970 is a necessary step."

Dr. Jaffe understood that the Bureau of Narcotics and Dangerous Drugs was gathering evidence necessary to taking this step, which the Department of Justice and other federal agencies are in the process of taking right now. Some here think that within a month or two the process will be complete. At that time, stricter controls will be possible: Prodded by congressional scrutiny, they are likely to be clamped quickly on methaqualone.

PAKISTANI PRISONERS OF WAR

Mr. PERCY. Mr. President, today, 15 months since the end of the hostilities which involved India, Pakistan, and Bangladesh in 1971, some 92,000 Pakistani prisoners of war are still held in India. It is my feeling that the prisoners could have been released a year ago. But certainly there can be no further excuse to detain them.

It is clear that the reputations of the Governments of India and Bangladesh will continue to suffer in world opinion if they do not agree quickly to release the Pakistani prisoners. I regret this, because both India and Bangladesh can contribute substantial leadership to humane conduct in international relations.

India and Bangladesh have a joint responsibility for the release of the prisoners, although they are held in India, since they were captured by the joint India-Bangladesh Command.

The various preconditions apparently placed by India and Bangladesh on prisoner release do not justify detaining the POW's any longer. The war ended in December 1971. The prisoners should be released to rejoin their families in Pakistan. Moreover, they constitute an unnecessary burden and expense to India and contribute nothing to better international relations for Bangladesh.

THE FUTURE OF STUDENT FINANCIAL AID

Mr. SYMINGTON. Mr. President, since 1958 when the first student assistance program, the national direct student loan, was authorized, the Congress has been committed to the goal of providing

postsecondary education to all who wished to pursue it.

In support of that goal, several grant and loan programs have been instituted to assist students who otherwise might not be able to afford a college education. It would be impossible to assess the return on the investment of this Federal money, for we cannot gage the social and economic contribution these students have made that an education placed within their grasp.

Now the administration has proposed to cut back substantially these grant and loan programs and place the greatest emphasis on the new basic opportunity grant, which was first authorized by the Congress last year. According to college financial aid officials, parents, and students, this grant will not be adequate to meet the increasing financial needs of many students—especially as educational institutions have been forced to raise tuition and other fees, and the cost of living for the average family has risen dramatically.

Even if the basic opportunity grant were sufficient, it is unlikely it could be in operation before the school year begins in September. Implementation is 2 to 5 months behind schedule. In any event, September is not the time when students and college officials need to know what financial assistance will be available. They need to know now.

The basic opportunity grant is needed to assist students, but it was not enacted by Congress to replace other student aid programs. Rather it was designed to provide a foundation of financial support for needy students. I would hope that implementation of the basic opportunity grant could be delayed until the 1974-75 school year, and the student aid programs which already have proven their workability and worth could be adequately funded for this school year.

Mr. Lawrence E. Taylor, a Washington correspondent of the St. Louis Post-Dispatch, has recently written two insightful articles on the possible effects of the administration's proposals for student financial assistance, both at the undergraduate and graduate levels. Mr. President, I ask unanimous consent that these two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Mar. 18, 1973]

POOR STUDENTS FACING CUTS IN AID (By Lawrence E. Taylor)

WASHINGTON, March 17.—When Gregory Rood began to think about attending the St. Louis College of Pharmacy more than four years ago, his approach was in the oldest of American traditions.

Because his parents, with nine children, could not afford to help him financially, Rood, of St. Charles, set out to put himself through school.

He won a science scholarship that paid half his tuition, he worked long hours in a hot St. Louis bakery and as an appliance deliveryman.

And—in an American tradition that is not so old—he obtained educational grants and loans from the Federal Government. When he is graduated next year, Rood will have borrowed \$3600 through the National Direct

Student Loan Program. Another \$1600 will have come to him through federal educational grants that he will not have to repay.

But even as Rood, 22 years old, prepares for his last year in school, the Nixon Administration is proposing to alter or abolish the programs he has used to pay for his education.

The Administration's plan is to phase out most existing loan and grant programs. These would be replaced with a more expensive system that would increase the number of student aid recipients while reducing the amount any one student could receive.

Thus, while federal student aid would be upped by about \$250,000,000 a year, the Gregory Roods of this country—deserving but short of money—would get less.

Critics of the Administration's proposal have charged that the new program would make it harder for poor students to pay for their education.

More ominous, they argue, is the likelihood that the most expensive schools would be beyond the financial reach of poor students, no matter how capable they are. Once again, the prestigious schools, just recently opened to the poor, would be attended only by the sons and daughters of the well-to-do.

For students who, like Rood, want to pursue a graduate or special study program like pharmacy, the Administration has made still more proposals that could affect their chances for an education.

In his budget, Mr. Nixon broadly outlined a series of changes that could hit hard at poor students by reducing the availability of federal scholarships for pharmacy, medicine, nursing, dentistry and the like.

The budget asks Congress to cut health scholarships by one third in fiscal 1974, reducing the amount available to \$10,000,000.

More important, the budget outlines a scholarship program that would require recipients to work one year in public health for each year they received assistance.

Although this sounds like a reasonable way to bolster public health manpower, it apparently has its drawbacks, particularly for pharmacy students.

William Skinner, assistant executive secretary for the American Association of Colleges of Pharmacy, said that the new program, called the National Health Service Corps, would reduce sharply the number of pharmacy students eligible for aid.

The scholarships would be based on requests from public health organizations for specialized help, he said. Thus, for each doctor requested, a medical student could be granted a scholarship.

But of 600 persons who recently entered the corps as professionals, only one was a pharmacy student, Skinner said. "There is very little hope of any pharmacists being taken into the scholarship program," he said.

So serious is the situation that dozens of pharmacy schools across the country—including the St. Louis College of Pharmacy—have reported that poor students planning to enroll next fall may find themselves short of funds, Skinner said. He said the St. Louis school estimated it would lose more than 40 students.

At the University of California at San Francisco 55 per cent of the pharmacy students are receiving some form of financial aid. Jere Goyen, dean of pharmacy, said in a telephone interview that half of the school's students were blacks, Orientals or Chicanos.

If the scholarship cuts are put into effect, this group is likely to dwindle as the poor students drop out.

"I suggested at a recent staff meeting that we would have to recruit from a brand new minority: rich kids," Goyen said. He said that the pharmacy school's enrollment probably would not drop because there were more applicants than vacancies each year.

If the outlook is bleak at the graduate level, it is no less so for undergraduates hoping to enroll next fall or the following year if the Administration's proposals are adopted by Congress.

But on Capitol Hill the outlook is murky, and chances are increasing that Congress will refuse to accept Mr. Nixon's educational ideas.

The Administration wants Congress to phase out the National Direct Student Loan Program, begun in 1958, which provides federal loans at an interest rate of 3 per cent.

This would force students to turn for money to commercial banks under a guaranteed student loan program that charges 7 per cent interest. This program would be increased in value under the creation of the Student Loan Marketing Association (called "Sally Mae" in bureaucratic language). This association would act as a holding company for the signed notes, buying them from the banks which could then reinvest the money in still more student loans.

Educators, however, are skeptical that this system would meet the demand.

They point out that students have been turned down by banks that were unwilling to make loans at 7 per cent when the money could be invested elsewhere at 8 per cent or more.

Estimates on the turndown range up to 20 per cent from some university financial aid officers, who said they saw little chance for the Administration program to succeed.

One of these is Allan W. Purdy, director of financial student aid services at the University of Missouri. Purdy, in Washington for a conference with Missouri members of Congress, said that the result of the White House proposal "could be a considerable reduction in the ability of the low-income student to get his education."

Under the current system, he said, students can use an assortment of programs to acquire enough money to attend college. These include education grants, work-study programs where students are paid to work in the school library or elsewhere, and National Direct student loans. If these still do not add up to enough, then the student can turn as a last resort to the guaranteed loans from banks, he said.

The Administration, in addition to neutralizing the direct student loans, would set up a new grant system that would provide a maximum of \$1400 a year to a student who could not afford to pay any educational costs.

To accomplish this, the Administration has asked Congress to appropriate \$622,000,000 to be spent for grants this fall and \$959,000,000 the following year.

Despite this sizeable increase over the existing grant program, the new system would be diluted, critics contend. Congressional sources said the program, called Basic Opportunity Grants, would spread the money so thinly among so many students that no one would receive the maximum amount for which he was eligible.

This new system is in keeping with Mr. Nixon's assertion that every qualified student should have a foundation of financial support for post-secondary education, including vocational training.

After all the talk, the question still boils down to whether low-income students can scrape together enough cash. Gregory Rood did it by blending three or four programs. He said he could not have made it otherwise.

"I don't think I could carry the weight if the Government didn't provide these programs," Rood said. "Without the scholarship in particular I couldn't have made it."

"I didn't want to borrow from a bank," he said. "The interest was a lot higher. Besides, I went to a bank. They didn't mention a guaranteed loan. I wouldn't have gone that route at all."

For Rood and other students already in school, the Administration would keep the existing programs in effect. But he and his colleagues could be the last group to have available to it a flexible program of federal aid.

[From the St. Louis Post-Dispatch, Mar. 19, 1973]

AID TO STUDENTS: DEBATE GOES ON (By Lawrence E. Taylor)

WASHINGTON.—Back in 1963, college debating teams across the nation struggled with the burning issue: "Resolved, that the Federal Government should guarantee a college education to all qualified high school graduates."

A decade later the same question still is being debated, only now the forum is Congress and the answers that are given bear on the lives and futures of millions of students. Moreover, it is difficult to tell who is on what side.

President Richard M. Nixon has announced that he is committed to providing financial aid for students entering institutions of higher learning. He has introduced some legislation which he says will help accomplish that and he plans to introduce still more.

Congressional liberals, on the other hand, have proclaimed the Administration's program unworkable and there are suspicions that it may be designed to thwart the educational ambitions of low-income students.

The Administration's opponents assert that more funds are needed for existing programs to provide flexible sources of money so students could attend the school of their choice.

Thus, Representative Carl Perkins, chairman of the House Education and Labor Committee, has urged his colleagues on the Appropriations Committee to fund Mr. Nixon's proposals and at the same time keep in effect programs the President wants eliminated.

Perkins (Dem.), Kentucky, has advocated approval of the \$622,000,000 sought by the President for a new Basic Opportunity Grants program along with \$250,000,000 for a continued student work-study program. Both would be in effect the next school year.

Along with this, Perkins has recommended \$130,000,000 for supplemental educational grants and \$296,000,000 for direct student loans, programs Mr. Nixon wants phased out.

Where all this will end up is uncertain. Mr. Nixon has not yet delivered his State of the Union message dealing with education, and some of his bills have not yet reached Congress.

While these proposals form the backbone of federal aid to education, there are many more student assistance programs scattered throughout the government. Some of them are found in the Agriculture Department and others in the budget of the National Institutes of Health.

Although the Administration has proposed changes—Some of them drastic—in these programs, the final result has not yet been determined. But enough has emerged that educators and legislative strategists are beginning to piece together both the function and the purpose of Mr. Nixon's educational plans.

The philosophy underlying many of the Presidents' ideas appears to be the conservative one that the greatest beneficiaries of higher education are the students themselves.

Aside from any contributions they may make to society, they will earn more money and enjoy better living standards. If this is so, the argument goes, then students clearly ought to pay for most of their own education.

Essentially, this is what Mr. Nixon's educational proposals would do.

His recommendations thus far would provide substantially more money for more students for more fields of study. But it would also reduce the amount for each student and, for lower-income students, limit their choices of schools.

For example, the President's basic educational grant concept would provide a maximum of \$14,000 a year, but only to students whose families were in the lowest income group of about \$7,500 a year for four persons.

Above that level the grant would fall off sharply until a student whose family earns \$10,000 a year would receive only \$441 to attend a college costing \$4,100 a year. This is because his family would be expected to put up \$959.

But these two contributions would total only \$1,400 a year, leaving the student still \$2,700 short. Where does that come from?

From private banks at an interest rate of 7 per cent, if the President has his way. This would leave the student after four years with a debt of \$12,800.

"At 7 per cent interest, the kid could end up paying as much as \$30,000 before the loan was wiped out," said staff member of the Education and Labor Committee. "That's saddling the student with an enormous debt."

It means also that students from low-income families are unlikely to attend better, expensive schools if they face a substantial debt when they are graduated.

What is left for these youths? Many are believed likely to attend community colleges where the fees are lower and so is the quality of education in some cases.

Others may find their way into vocational training programs. Still others may give it all up and join the military.

Whatever the options under the Administration's program, they appear to be limited compared with those currently available to students from poor families.

All this has raised the suspicion that the Administration intended it to be this way all along. It also seems to substantiate the contention by some that the commitment to education for all falls short of the mark.

One university financial aid officer, who asked not to be identified, said that Mr. Nixon's proposals "seem to be leaning the other way" from a guaranteed higher education for all students.

Apparently many colleges agree with this position, including Harvard University, where 40 per cent of the student body is receiving some form of student aid.

Last week, the university's board of overseers, a policymaking group, met to discuss academic problems, among them student aid.

To their dismay, the overseers learned that their alma mater would suffer not only from student assistance cutbacks but also from reductions in federal research and other grants to the school itself. Such grants provide money for faculty salaries as well as repay for part-time student jobs.

Among the most cynical opponents of the Administration's proposals, the rumor has spread that the reductions and the new plans are to last for only one year.

Next year, the rumor goes, the White House will propose sweeping new program to cash in on the fall election campaigns.

But the Harvard spokesman disputed this. "This is not a one-time budget," he said. "It is a pattern for the future. It reflects a disenchantment with education, especially graduate education."

Education authorities in Washington report that up to 10 per cent of the students attending medical schools receive federal scholarships. If these are eliminated where will future low-income students go, they ask.

"The scholarships are essential to allow schools to broaden their enrollment of blacks, Puerto Ricans, poor whites and other groups," said a spokesman for the Association of American Medical Colleges.

"But they are terminating scholarships for medicine, dentistry, nursing, veterinarians and other health students. Now if students want scholarships they must promise to work one year in a public health field for every year of assistance. The program was not designed to work this way."

THE QUALITY OF WORKING LIFE IN AMERICA

Mr. TAFT. Mr. President, I have recently read a speech delivered by my colleague, the senior Senator from Illinois (Mr. PERCY) at the national conference on the changing work ethic in New York on March 26. Senator PERCY's subject was the changed quality of American working life. His speech is a perceptive, most persuasive discussion of a phenomenon of growing importance to our society. Senator PERCY's argument is that Americans have changed with accelerating rapidity in the past 2 decades; they are far better educated, less respectful of our traditional social institutions, more individualistic, and more skeptical of the validity of traditional industrial and work organizations. Yet, although the American worker has changed and has forced almost all other social institutions to change, the workplace has hardly changed. It is still very largely a highly regimented, rigid, authoritarian establishment. American workers forced to work in restrictive jobs have naturally rebelled—and the result has been documented in endless articles and reports on a complex of phenomena that have come to be labelled "blue-collar blues" and "white-collar woes."

I believe that Senator PERCY has correctly identified this problem. He said:

A negative way to analyze this problem is . . . to believe that there is something wrong with the American worker—that he is newly prone to alcoholism and drug abuse, that he is innately rebellious, that he bears an inborn grudge against the industrial organization, rather than against the nature of the work he is asked to do. I believe that this is just plain wrong. I believe Americans want to express themselves in creative, valuable ways and that we can so structure their work.

The solution, the Senator suggests, lies mainly with management and labor. He urges them to begin cooperative efforts, perhaps aided by the quality of work program of the National Commission on Productivity, to develop worker participation in job design and the organization of work.

I commend Senator PERCY's address and ask unanimous consent that it and a New York Times article of March 27 relating to it be printed in the RECORD at this point.

There being no objection, the speech and article were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CHARLES H. PERCY

I am honored by your invitation to speak here today on the theme of quality of work in America. I know that in this audience are the men and women who have been most adventurous and most creative in this challenging new field. For you are helping to chip away—through experimentation, research and innovation in the American workplace—at an entrenched, authoritarian industrial system that has taken decades and decades to build.

I have asked myself why such change is so

difficult, why many people have tended to resist the simple proposition that by improving the nature of jobs we can both make people better satisfied and become a more productive society.

I think the central reason why change of this kind is so difficult is that our industries have been so enormously successful. With the jobs, income and products created by America's industrial machine we have created very great prosperity and enormous economic muscle. And so we encounter the problem of institutional rigidity. If it works, why change it? And even if it doesn't seem to be working as well it used to, we are accustomed to established ways of doing things, and have difficulty taking the mental leap that is often necessary to break our old habits and find new solutions.

We continue, for example, to think in terms of the idea that work should be broken down into increasingly finer details of specialization and that people should be organized in formal, pyramidal ways, all in the name of efficiency. But if such ideas or organization have now become obsolete because of their adverse effects on people and on the quality of output, efficiency becomes a myth. Then it is time to change.

I would like to suggest four separate but interrelated reasons why I think we are now on the brink of a major breakthrough in the effort to change our ideas about work.

First, we find we are suddenly an educationally affluent society. In quantity, if not yet in quality, Americans must be the best educated society on earth. A short generation ago, 40 percent of all American workers were high-school graduates, up from five percent in 1900. Today, almost 80 percent of the men and women under 34 have at least a high-school diploma, and a third of those go on to a year or more of college.

Second, there has been a collapse of respect for our traditional values and institutions, as documented both by our own observations and national surveys. A Harris poll revealed, for example, that public confidence in the executive branch of government fell from 41 percent to 27 percent between 1966 and 1972; confidence in Congress dropped from 42 percent to 21 percent; confidence in corporations, from 55 percent to 27 percent.

Third, we are becoming perhaps a more conservative, individualistic society. President Nixon's call for a return to individual responsibility finds a response in all levels of the contemporary public, perhaps as a reaction to the fact that many of the Great Society's programs have—unfortunately—not delivered what they promised.

Fourth, I perceive an acute feeling that some parts of the giant, all-powerful industrial machine that we built in the great period of American industrial expansion since the Civil War have developed profound shortcomings. There is a strong feeling that managerial and labor institutions have sometimes grown too rigid. Too often they have become selfish, insensitive to the needs of consumers and blind to the broader needs of our society. There is a growing feeling that American productive know-how is no longer considered—and might never again be—the last best hope for solution of the earth's pressing problems.

These forces have measurably changed almost every social institution in the country from marriage and family through community, church and school. In some cases—for example, the educational establishment—they have been transfiguring.

But, for the most part, the forces visibly whipsawing our society have operated, and continue to operate, outside the plant gate and office door.

As a social institution, the American workplace has stubbornly remained virtually the last redoubt of yesterday's values.

This is the key to the need now for a new awareness of work quality: Americans who

work have significantly changed. But the work they perform and the way they are organized to perform it have not changed.

In the way we structure and organize work, we frequently seem to apply the old paternalistic notions that father—or management—knows best; and that the children—or employees—should be neither expected nor permitted to ask how or why. A question-asker is frequently considered a trouble-maker because his questionings seem to challenge the institution itself. In many of our organizations, the suggestion box is considered proof of enlightenment. Both management and labor tend to view the worker as a person whose value stems only from his function as a fractional part of the vast productive machine.

These attitudes, and the systems that are built on them, are now under serious attack, and I wholeheartedly join in it.

Outside the plant gate or office door is the new American: A future-oriented, demanding, expectant, educated, freedom-loving individual. Inside that gate or door this interesting, creative, inventive American is required to conform to a past-oriented, authoritarian, hierarchical, class-based freedom-fearing social system.

Is there any wonder then that, in the past two years, the national media have given us example after example of the grinding effects of old-style jobs on new workers? Two Washington Post investigative reporters, Haynes Johnson and Nick Kotz, wrote in a major series of articles based on months of interviewing that:

"The worker's complaint is simple. He says he hates the job, particularly the monotonous factory job. At times he hates it so much that he deliberately will throw a monkey wrench in the machinery, or turn to drugs to escape the boredom. To him, whether the job is better than it used to be or pays more and gives greater benefits is beside the point."

Again and again the same theme is stressed: In spite of more pay and benefits than ever before, all kinds of working men and women, "blue collar" and "white collar," are unhappy in their work, and thus unhappy and unfulfilled in a large and very important part of their lives.

In my recent Senate campaign in Illinois this fact was brought home to me again and again. In countless encounters with people in their places of work, it was acutely clear to me how frustrated people seem to be in their jobs.

To me, the fact of job dissatisfaction and the need for a new quality in work is a very clear, very compelling problem.

To my surprise, this conclusion is not as widely accepted as I had thought. I find that the idea is often labelled a fad; it is derogated as pop sociology, or sidewalk psychology. It is even called a threat to free enterprise.

These attitudes are echoed in government, where I have discovered there is a stronger urge to study the problem of worker alienation and job dissatisfaction than there is to do something about it.

We already have a great deal of knowledge—enough to warrant action. We have the results of successful quality of work experiments, some of which are being discussed in this conference. To me, they are proof enough both that there is an immediate and perceivable problem, and that there are available techniques of solving the problem.

A negative way to analyze this problem is to view the cause as worker alienation, to believe that there is something wrong with the American worker—that he is newly prone to alcoholism and drug abuse, that he is innately rebellious, that he bears an inborn grudge against the industrial organization, rather than against the nature of the work he is asked to do. I believe that this is just plain wrong. I believe Americans want

to express themselves in creative, valuable ways and that we can so structure their work. Simply measuring how alienated or dissatisfied we have become is nothing more than a superbly bureaucratic way to avoid facing and solving the problem.

The costs to our society of increasing worker frustration are only beginning to be studied, but there is some evidence that profound dissatisfaction with work has a kind of polluting effect on the larger society.

The dissatisfied worker doesn't just shrug off the bad psychological effect of his frustration. It is often expressed in anti-social, harmful, unproductive ways—in absenteeism, high quit rates, wildcat strikes, sabotage, poor quality; in drug and alcohol addiction, aggression, and delinquency; in a decline in physical and mental health, family stability, and community participation and cohesiveness.

For all these reasons government has a stake and must take a part in changing the conditions of work in America. Government can help by creating demonstration projects that reorganize work on the basis of quality of work principles. The Quality of Work Program of the National Commission on Productivity is gearing up to provide such assistance through advice and seed-money.

But the primary responsibility for improving the quality of work lies with the private sector. What can labor and management do together to implement job satisfaction programs?

I suggest the following kinds of initiatives, both for companies and unions:

Question old ways of organizing work. Find ways to put highly fragmented, fractionated jobs back together into whole jobs.

Use the workers' own knowledge and insights to design work so that they can begin to participate in the management of their jobs, and thus have a personal stake in good job performance.

Look especially closely for unnecessary levels of supervision: There is nothing more damaging to a responsible individual than the lack of trust constantly shown by subjecting his work to unnecessary oversight. Instead, find ways to permit the employee and his co-workers to check their own work.

Most important, stop thinking that you, the manager, the industrial engineer, the fellow with the degree, know all there is to know about the job, the plant and its people. The more you ask the people who do the work how to improve it, the more you'll learn from them.

And finally, share the rewards of increased productivity. Design incentive pay plans based on worker teams or identifiable worker groups, so that the people who work together to increase productivity get the rewards of their group effort.

I am pleased that an amendment I offered to the 1971 Economic Stabilization Act Amendments to provide an exemption from wage controls for incentive pay plans seems to have worked: 75 such plans have been approved for 85 companies in the nine full months since the plan has been available. Though pay alone has been shown to matter increasingly less, particularly to younger workers, it is still an important motivator.

These types of quality of work techniques have worked. One of the leading corporations of my state, Motorola, has dismantled one of its old assembly lines and put jobs back together. One worker now assembles a complex piece of electronic equipment. This has required patience and it has not been cheap, but the experiment has paid off in terms of higher quality and a more satisfied work force.

The NBC-TV First Tuesday program on March 6 impressed me deeply because it showed first-hand how workers involved in quality of work efforts respond to their experience. I've taken this statement by an installer for Chesapeake and Potomac Tele-

phone Company in Northern Virginia from the program's transcript:

"I was ready to quit at one time, 'cause I felt the telephone company had no use for me: I was just another body that came in daily, did what I was told to do, and gave them their answers just the way they wanted them. Now I've got my own area I take care of, and as far as I'm concerned I'm the telephone company, the whole telephone company, in this certain area. It really develops a sense of responsibility and pride in your job, something that I didn't have before."

To me, this is a perfect capsule example of a human response to responsibility and trust. It shows the persistent, obstinate hunger a man has for pride in his work.

I know that many of you can provide similar examples from your own immediate experience. I can only reiterate that it is in your interest—and in the national interest—that we build on these successful experiences and accelerate our efforts to expand them.

We have wonderful raw material to work with: A work force that is well-educated, creative, vigorous, and willing—when motivated. The result will be better use of our human resources—which benefits everyone. Quality of work is as effective for affluent white as for poor minorities. Its goal is to improve work and utilize American human potential. It is an everybody-wins effort because it improves the quality of working life and at the same time makes us a more productive, more competitive, better fulfilled society.

Quality of work is an idea whose time has come. You represent the groups that have the power to implement it. Your survival and our future national economic strength may well depend upon your decisions and the extent of your commitment.

[From the New York Times, Mar. 27, 1973] PERCY SAYS UNITED STATES IS ON "BRINK OF A MAJOR BREAKTHROUGH" IN ATTEMPT TO CHANGE IDEAS ON WORK

(By Philip Shabecoff)

The United States is "on the brink of a major breakthrough in the effort to change our ideas about work," Senator Charles H. Percy said here yesterday in a speech to the National Conference on the Changing Work Ethic.

Most of the representatives of major corporations and other business and management consulting concerns at the conference appeared to agree with the Illinois Republican that "quality of work is an idea whose time has come."

In a series of workshops, companies now conducting programs to deal with worker alienation, job dissatisfaction and other problems related to the quality of work reported almost without exception that these programs had "paid off" in terms of higher productivity and lower costs.

But labor union officials at the meeting expressed skepticism about the new concern by "management and intellectuals for the in-plant happiness of workers, voicing fears that programs to improve the quality of work were simply an excuse to speed up assembly lines and lay off employees.

OPPOSITION VOICED

"In my union," said William W. Wimplinger, vice president of the International Association of Machinists and Aerospace Workers, "we will never let our members be used as guinea pigs in a speedup designed as a job enrichment program."

All the union officials insisted that the restructuring of work could only be accomplished through collective bargaining. And Peter Ranick of the United Auto Workers said that such programs would not work unless employers viewed "employee relations as human relations."

"First democratize the work-place," he

said. "Higher productivity should not be the goal, although it may follow."

The conference, now going at the New York Hilton Hotel, is the second of three such meetings sponsored by Urban Research Corporation. These meetings reflect a rising interest in the issue of worker alienation among industry, Government and the academic authority.

This interest has been awakened in the last year by the rising incidence of such apparent signs of worker dissatisfaction as absenteeism, inplant crime, drug abuse, vandalism, declining productivity—or hourly output per worker—and indications of rebellion against traditional management authority.

However, a new survey presented at the conference Sunday night by George Gallup, Jr., president of the American Institute of Public Opinion, indicated, he said, "that worker morale in the United States is not on the verge of collapse—that the typical American in both white-collar and blue-collar jobs is, by and large, content."

In the Gallup Poll of 1,520 adults conducted in late January, 77 per cent responded that they were satisfied with the work they do and 48 per cent of the sample said they were very satisfied. Only 11 per cent responded that they were dissatisfied and 12 per cent had no opinion.

But Mr. Gallup pointed out that the number of those satisfied with their work had declined by 10 per cent since the same question was asked in April, 1960. What is more, he reported, young workers under 30 years of age were substantially more dissatisfied with their jobs than others in the survey.

"AN ENTRENCHED SYSTEM"

Mr. Gallup asserted the results indicated "a greater degree of discontent today than we have found for a number of years—particularly among young persons. I think it is safe to say that young workers dissatisfied with their jobs pose a growing threat to United States industrial output."

Senator Percy placed much of the blame for this dissatisfaction on "an entrenched, authoritarian industrial system that has taken decades and decades to build."

"There is a strong feeling," he asserted, "that management and labor institutions have sometimes grown too rigid. Too often they have become blind to the broader needs of our society."

The Senator from Illinois contended that new forces was changing every American institution, from marriage and the family to schools and churches. But these changes, he said, have stopped at the plant gate and "the American workplace has stubbornly remained virtually the last redoubt of yesterday's values."

But experiments now going on, Mr. Percy said, suggest that there already are techniques available to solve the problems of worker dissatisfaction.

Some of these programs and experiments were described at the conference by experts of the companies involved in them. They included the Chase Manhattan Bank, Corning Glass, Donnelly Mirrors, the General Motors Corporation, the General Foods Corporation, the General Electric Company and others.

Donnelly Mirrors, which makes automobile mirrors, not only has divided its work force into teams with decision-making powers, but also shares productivity gains and guarantees that its workers will not be unemployed because of technology.

A NATIONAL SECRECY ACT?

Mr. HART. Mr. President, last evening my distinguished colleague from Maine, Senator MUSKIE, delivered a

speech which raises grave questions about a recent legislative proposal of the administration. Buried deep within S. 1400, the revision of the criminal code, are proposed new criminal code provisions which, taken together, can only be described as a "national secrecy act." I commend Senator MUSKIE's speech to my colleagues and hope that the points it raises will be carefully considered in our deliberation over the criminal code revision.

Mr. President, I ask unanimous consent that Senator MUSKIE's speech, a background memorandum, and the relevant provisions of S. 1400 be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR EDMUND S. MUSKIE, FROSTBURG STATE COLLEGE, FROSTBURG, MD., APRIL 1, 1973

This week in Vietnam America reached the end of that famous tunnel where the light of peace flickered for eight long years. This week the last American troops flew out of Vietnam and the last officially recorded American prisoners of war were released to freedom.

This week should have been a joyous and a healing one. It should have signalled a new period in American life, a new era of good feelings such as the one that followed the War of 1812, a new time of reconstruction such as the one that should have followed our own Civil War, a new and constructive engagement with the tasks of restoring unity and advancing the quality of American life.

It was at such a time when Abraham Lincoln, over a century ago, uttered these words: "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

It is such a summons to greatness and unity which Americans want to hear.

But what did they hear?

It was the week that an American official in Saigon told a reporter: "The first thing that needs to be said about the ceasefire is that the firing hasn't ceased."

It was the week that an American Secretary of Defense in Washington defended the continued daily bombing by our B-52s in Cambodia as necessary "to support our ally there against the continuing efforts to disrupt communications, to isolate Phnom Penh."

It was the week that the President in the White House vetoed legislation to provide vocational rehabilitation to Americans who are crippled, blind or otherwise disabled.

It was also the week when the President asked the Nation to "put aside those honest differences about the war which have divided us" and then sowed new division in America by claiming for himself a monopoly of wisdom about inflation, taxation and responsible government spending.

You can say, perhaps, that it was a week of politics as usual. I would say it was a week of opportunities lost. And I regard that loss as a bad omen. If we could not, in this week of joy, begin, as Abraham Lincoln wanted, "to bind up the Nation's wounds," when will we begin?

Nine years ago, Lyndon Johnson told the Congress in his first state of the Union message: "We seek to establish a harmony be-

tween man and society which will allow each of us to enlarge the meaning of his life and all of us to elevate the quality of our civilization."

President Johnson worked to create harmony through shared purpose, yet his efforts fell short. The waste of war killed his hopes.

Now that the war is over, as far as America is concerned, we should be resuming the search for harmony and be moving with new energy and purpose against the poverty, ignorance and disease Lyndon Johnson identified as the common enemies of mankind.

But instead, I fear, we are tangled still in angry and important disputes about presidential and congressional power, about spending and taxation, about social needs and governmental indifference, about the whole structure of our Federal system and about the integrity of our political process.

And to those disputes we must now add a new one brought on by this administration's latest attempt to stifle the flow of official information to the public. The attempt is hidden deep in a lengthy and complex legislative proposal introduced in the Congress this week as a revision of the federal criminal code. Five sections of that proposal, taken together, would establish in peacetime a system of government censorship that a democracy could hardly tolerate in a time of war.

The official secrets act being proposed would punish government officials who disclosed almost any kind of defense and foreign policy information, whether or not its disclosure would endanger national security.

It would punish newsmen who received such information unless they promptly reported the disclosure and returned the material to a government official.

It would punish not only reporters but all responsible officials of their publications or broadcasting companies who participated in making the unauthorized information public.

It would punish government employees who knew of a colleague's unauthorized disclosure and failed to report their co-worker's action.

The law's penalties—from three to seven years in jail, from \$25,000 to \$50,000 in fines—would be imposed on actions which are not now considered crimes, which are, instead, the applauded work of investigative journalists.

For instance, part of the law would make any unauthorized disclosure of what is called classified information a crime.

And the law would explicitly prevent officials who disclosed such information from defending their action by proving that the information was improperly classified.

Well, what is classified information? According to the administration proposal, it is "any information, regardless of its origin, which is marked or designated pursuant to the provisions of a statute or executive order or a regulation or rule thereunder, as information requiring a specific degree of protection against unauthorized disclosure for reasons of national security."

On its surface, that language sounds reasonable, it does what existing law already does by insuring secrecy of data about our defense codes, about our electronic surveillance techniques, about military installations and weapons, about our atomic secrets and about plans and operations which might aid our enemies. All that information is already kept secret by laws which punish its disclosure with intent to damage America and its security.

But this new law would go farther. It would prohibit and penalize disclosure of any classified information, regardless of whether or not it damaged security.

Classified information, you should know, is any document or record or other material

which any one of over 20,000 government officials might have decided—for reasons they need never explain—should be kept secret? It is any piece of paper marked top secret, secret, or confidential, because someone, sometime, supposedly decided that its disclosure could prejudice the defense interests of the nation.

In practice, however, classified information is material which some individual in the government decides he does not want made public. He could make that decision to hide incompetence. Many have.

He could be trying to conceal waste. Many have.

He could even be attempting to camouflage corrupt behavior and improper influence. Many have.

He could simply be covering up facts which might embarrass him or his bosses. Many have.

Classified information is the 20 million documents the pentagon's own most experienced security officer has estimated to be in defense department files. Classified information is the 26-year backlog of foreign policy records in the state department archives.

And most of that information is improperly classified—not out of evil motives, but out of a mistaken interpretation by conscientious employees of what security actually requires. They do not limit the use of secrecy stamps just to information which would really affect our national defense, if disclosed. They often use them simply to keep material out of the newspapers—to make it a little harder, perhaps, for a foreign nation to get the information, whether the information is defense-related or not.

Let me give you a few examples.

Around 1960, a sign in front of a monkey cage in the national zoo explained that the monkey on display was a research animal who had traveled into space in American rockets. But at the same time the pentagon was classifying all information that showed we were using monkeys in space.

The reason given for trying to keep the information secret was someone's concern that it might damage our relationship with India where some religious sects worship monkeys.

Another example deals with India. Over a year ago when India and Pakistan were at war over the independence of Bangladesh, the Nixon administration insisted in public that it was not interfering in the conflict, that it was trying to be neutral. But Jack Anderson revealed classified information that proved that President Nixon had instructed Dr. Kissinger and others to "tilt" toward Pakistan. That information was being kept secret to conceal a lie.

India and Pakistan knew the truth. Only Americans were being deceived.

Again, back before the Korean war, the Navy Chief of Staff sent a memorandum to his colleagues complaining that too much paper was being circulated marked top secret. His memo itself was marked top secret.

In 1970, the Rand Corporation produced a document for the Defense Department listing the unclassified electronic equipment on U.S. aircraft. Nothing in the document was secret or even drew on any secret data, but the Air Force classified the listing as confidential anyway.

Similarly, a laboratory at M.I.T. prepared an assembly manual last February for a gyroscopic device used in missiles. Again the Air Force classified the manual and put the following words on its front page: "Each section of this volume is in itself unclassified. To protect the compilation of information contained in the complete volume, the complete volume is confidential."

And then in 1969 it was disclosed that someone in the Navy Department was clipping newspaper articles that contained facts that were embarrassing to the Navy, pasting

those articles onto sheets of paper and stamping the paper secret. It turned out that such a practice was common throughout the Defense Department.

If newspaper articles can be stamped secret as a matter of course, what else is systematically being hidden from the public? Should this administration proposal become law, you and I will never know the answer to that question.

The examples I have given should indicate to you the folly of any blanket prohibition against the disclosure of classified information, as long as our system of classification is so erratic, arbitrary and unmanageable.

Not only would the proposed law perpetuate the widespread abuses of secrecy I have listed, it would enforce public ignorance by making criminals out of honest men and women who put the public interest above bureaucratic secrecy. Indeed, the administration's proposed secrecy law goes far beyond protection of what might be legitimate secrets as determined by a workable classification system, should one be developed.

Additionally, it would punish the unauthorized disclosure of "information relating to the national defense . . . regardless of its origin" which relates, among other things, to "the conduct of foreign relations affecting the national defense." That broad definition could bar intelligent public scrutiny of America's most significant foreign policy decisions.

What could the enactment of such a sweeping gag rule mean to the flow of information to the public?

For one thing, the proposed law would mean that Robert Kennedy, where he alive and writing now, would risk prosecution for publishing in his book, "Thirteen Days," the secret cable Nikita Krushchev sent the White House during the Cuba missile crisis of October 1962.

It would mean that Seymour Hersh of the New York Times could not write, as he did last year, about the still-classified Peers Report—the Army's own investigation of the My Lai Massacre and the responsibility of Army officers for concealing the facts of that event.

It would mean that knowledgeable and conscientious government employees could be brought to trial for telling newsmen about waste in defense contracts, or about fraud in the management of the military P.X. system.

It could mean denying the public the information necessary to understand how cost estimates on 47 weapons systems rose by over \$2 billion between March 31 and June 30 last year.

Thus, the administration's official secrets act would create staggering penalties for disclosure of information even when the information is totally misclassified or classified only to prevent public knowledge of waste, error, dishonesty or corruption.

We already have the criminal sanctions we need against disclosure of true defense secrets. To expand the coverage of those penalties can only stifle the flow of important but not injurious information to the press, and therefore, to the public.

With the criminal penalties already in the law and with the proven record of responsible behavior by the great majority of government employees and newsmen, the only purpose behind further expansion of the secrecy laws would be the effort to silence dissent within the government and hide incompetence and misbehavior.

New penalties will not further deter espionage and spying. They will only harm those who want the public to know what the government is doing.

Nothing could be better designed to restrict the news you get to the pasteurized jargon of official press releases than a law which would punish a newsmen for receiving sen-

sitive information unless he returned the material promptly to an authorized official.

Nothing could damage the press more than a provision which would make a newsmen an accomplice in crime unless he revealed the source of information disclosed to him.

The administration proposal carries an even greater danger in the power it would give to the officials who now determine what shall be secret and what shall be disclosed. Not only would they be able to continue to make those decisions without regard to any real injury disclosure might cause, they would be empowered to prosecute anyone who defied their judgment. Their imposition of secrecy could not be reviewed in the courts. And a violation of their decision would be a crime involving not only government employees but journalists as well.

The Justice Department proposal goes far beyond any laws we have had, even the emergency requirements of World War I and II. No law now gives the government such power to prosecute newsmen not only for revealing what they determine the public should know but just for possessing information the government says they should not have.

Under this proposal, a reporter who catches the government in a lie, who uncovers fraud, who unearths examples of monumental waste could go to jail—even if he could show, beyond any question, that the government had not right to keep the information secret and that its release could not possibly harm national defense.

This law then would force journalists to rely on self-serving press releases manufactured by timid bureaucrats—or risk going to jail for uncovering the truth.

It would force Government employees to spy on each other in a manner familiar in communist or fascist states but abhorrent to our concept of an open democracy.

We have had enough of that abuse of secrecy in the attempts to hide the facts about our conduct in Vietnam from the American people. Official secrecy has even been used to keep back vital facts about Government meat inspection programs or pesticide regulations or drug tests or import restrictions or rulings that interpret income tax regulations.

In a democracy there will always be a necessary tension between the right of the people to know and the requirement that Government officials be able to voice their opinions with full candor. To assure that frankness, confidential advice on grave questions of policy should be protected from disclosure. But in the balance between secrecy and disclosure, the public interest requires that the greatest weight be given to informing and involving the people in policy decisions.

Arguments made in private may be persuasive. They may even be correct. But where the public interest is at stake, argument must be open so that it can be rebutted. To be enforceable in a society built on trust, decisions must be reached in a manner that permits all those concerned to have equal access to the decision makers.

So the greatest danger in the proposal is the danger to America as a society built on law and on trust. This law would weaken the first amendment protections of free press and free speech, but it would also further isolate the American people from the information they must have to judge the conduct of Government.

In an emergency situation, censorship can be understandable and acceptable. But this effort to inaugurate a constructive period of peacetime cooperation by throttling dissent and debate is unworthy and dangerous.

Unity in America can only be built out of an informed consensus of all the people, trusting in their leaders and trusting their leaders to trust them. Extinguishing public discussion of policy will not produce har-

mony. The silence such a law would enforce would be the silence of democracy's graveyard.

MEMORANDUM: THE NIXON ADMINISTRATION'S PROPOSALS TO RESTRICT PRESS ACCESS TO GOVERNMENT CONFIDENTIAL SOURCES

On March 14, 1973, President Nixon sent to Congress his message on the federal system of criminal justice in which he proposed a sweeping reform of the Federal Criminal Code in the "Criminal Code Reform Act of 1973;" the actual bill was sent to Congress on Thursday, March 22, 1973 and introduced as S. 1400 on Wednesday, March 28. This legislation, which is approximately 600 pages long, contains some major revisions of the Federal criminal code including the near abolition of the insanity defense, an attempt to revive the death penalty, and other controversial changes in our present Federal criminal laws.

Buried in this massive legislation, and unmentioned in the President's message about it, lies four new sections to Title 18 which would, if enacted, be the equivalent of a National Secrecy Act. This memorandum discusses the scope of these proposed new federal crimes dealing with government secrecy, relates them to the present controversy regarding newspapermen's privilege, and urges that you speak to this issue in the immediate future.

I. THE PROPOSED NIXON NATIONAL SECURITY ACT

a. Limitations on the Disclosure of "Classified" Information

Two new sections of the proposed revised criminal code deal with disclosure of classified information by government employees. Section 1124 of the proposed code makes it a felony for persons having authorized possession or control of classified information to knowingly communicate such information to unauthorized persons. Classified information is broadly defined meaning "any information, regardless of its origin, which is marked or designated pursuant to the provisions of a statute or executive order, or a regulation or rule thereunder, as information requiring a specific degree of protection against unauthorized disclosure;" this means any information classified not only under the appropriate executive order but under any agency rule or regulation promulgated thereunder is covered.

Section 1124(b) creates an exception to criminal liability for accomplices or conspirators to such unauthorized disclosure if they are persons receiving such classified information. The ostensible purpose of Subsection (b) is to limit the offense to the illegal disclosure by the government employees and to leave the reporter or other recipient of the information without criminal liability. However, as discussed below, this exception has no meaning whatsoever since the reporter will commit a felony if he uses that information in any way whatsoever or fails to turn the information over to the government. Indeed, its purpose may well be to eliminate a Fifth Amendment defense when the government seeks from the reporter compulsory disclosure of the source of the information which he obtained. This will also be discussed below.

Section 1124(d) eliminates as a defense to prosecution under this Section the fact that the information divulged was improperly classified either at the time of its classification or at the time of its divulgence. The penalty under this Section is imprisonment of not more than three years and a fine of not more than \$25,000, unless the information is communicated to an agent of foreign powers.

A companion section is Section 1125 dealing with unlawfully obtaining classified information. This Section makes it a felony for a person "being an agent of a foreign power" knowingly to obtain or collect classi-

fied information which he is not authorized to receive. This Section, to which there can be little objection, clearly exempts reporters from prosecution. The penalty for this felony is not more than seven years imprisonment and \$50,000 fine.

These two Sections, on their face, appear to limit the imposition of criminal penalties to those within the government who violate security classification regulations and rules and give classified information, regardless of the reasonability of such classification or regularity of the system under which they were classified, to unauthorized persons. These Sections appear to leave the reporters free from criminal liability.

Such sweeping felony penalties for disclosure of information, even when the information is totally misclassified or classified for the obvious reason of preventing disclosure of waste, mistakes, dishonesty or corruption, should be objected to. It can be convincingly argued that present criminal sanctions against unauthorized disclosure of classified information are adequate, as experience has abundantly shown, and to increase the penalties will only severely hamper the flow of information that should be given to the press, and therefore, to the public.

Both the persons who now have access to this information and the press who could publish it are both responsible enough to avoid the public disclosure of information that would be harmful to the real security interests of the United States. There are few examples of a violation of these standards. The self-censorship of the *New York Times* and the *Washington Post* and other papers in not publishing parts of the material revealed in the Pentagon Papers is a good example of this responsible behavior.

The relevant criminal statutes now in effect dealing with disclosure of classified information are as follows:

18 U.S.C. § 952, forbidding government employees to publish or give to unauthorized persons any diplomatic or military code or any diplomatic or military material that has been encoded.

18 U.S.C. § 954, forbidding any person from knowingly making untrue statements under oath which that person has reason to believe will influence a foreign government and thereby injure the United States.

18 U.S.C. § 793, forbidding persons from stealing documents, from making copies of documents or photographs of military installations, equipment, or of photographs, blueprints, plans, maps, or models of such military installations or material, and forbidding anyone from communicating information relating to the national defense "which information the possessor has reason to believe could be to the injury of the United States or the advantage of the foreign nation" and communicates such information to any person not entitled to receive it.

18 U.S.C. § 794, forbidding people to gather or deliver defense information with the intent or reason to believe that is to be used to the injury of the United States or the advantage of a foreign government.

18 U.S.C. § 798, forbidding persons from knowingly and willfully communicating or making available to an unauthorized person any classified information which is related to codes or cryptographic systems, their design, construction, use, maintenance, etc. that may be used "in any manner prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States."

All of these Sections, which are not restricted to classified information, are limited in two ways: they deal with strictly military related matters and/or they require an intent to injure the United States or to aid a foreign nation.

With the present criminal penalties and

responsibility of government employees and reporters, the only purpose that the further expansion of the secrecy laws could have is to silence dissent within the government, and to hide incompetence and waste. New penalties will not further deter espionage and spying, they will only stop those who want the public to know what is occurring in their government.

b. The Limitations on Reporters' Use of Unauthorized Classified Information

Although the two Sections of the proposed new federal criminal code discussed above appear to carefully carve out the newsmen from criminal liability for obtaining classified information, other carefully drawn sections of the criminal code make any use of that material by a reporter a felony. For example, Section 1122 makes it a felony for any person knowingly to communicate information "relating to the national defense" to a person not authorized to receive it. Thus, any reporter who communicates such information to anyone else i.e., gives it to his paper, television station or causes it to be published and transmitted to the general public has committed a felony. "Information relating to the national defense" is defined as information, regardless of its origin, that relates to U.S. military capabilities, planning, communication, installation, weaponry, weapon development or weapons research, to any intelligence activities of the United States, and to "the conduct of foreign relations affecting the national defense." This sweeping definition is ever broader than the definition of classified information used in the two Sections discussed above. A felony under Section 1122 is punishable by imprisonment of not more than seven years or a fine of not more than \$50,000.

If this deterrent to a reporter for using unauthorized communications from government sources were not enough, the proposed revised criminal law contains another section, Section 1123, which again makes it an offense for a person being in possession or control of information relating to national defense to communicate it to a person not authorized to receive it. (Section 1123(a)(1)). The penalty is as in Section 1122.

Thus the proposed revision of the federal criminal code makes it abundantly clear that this proposed legislation intends to make reporters directly criminally liable for any use of information obtained from the federal government by confidential sources when this information pertains to a very broadly defined concept of national defense. Attaching criminal penalties to the use of information by the press is unprecedented in American history except for the Alien and Sedition Acts. In this case, the proposed legislation is not only attempting to tighten up the retention of this information within its own bureaucracy, but is perfectly willing to jail reporters up to seven years for publishing such information, even if that information was improperly classified, related to abuses, dishonesty or waste in the federal government, and it clearly served the national interest to make it public.

When these four provisions are taken together, they can only be described as a "national secrecy act." They impose severe criminal penalties upon all unauthorized distribution of information relating to national defense and foreign relations. Any person involved with such dissemination would be liable, including the editors, publishers, and distributors of newspapers. It would seem that anyone who repeated the original publication would also be liable.

c. Methods To Force Disclosure Of The Source Of Unauthorized Government Leaks

Of course, for a national secrecy legislation to be effective, not only must government be able to prosecute the publishers and reporters involved in such dissemination of unauthorized material but also, and more

important, the political leaders of any government must be able to identify the source of such leaks promptly and eliminate them. The legislation is not unkindful of this need to identify the sources of unauthorized disclosures and has provided an effective means for so doing within the statutory framework of its "National Secrecy Act."

First, the Administration has proposed that it be made a felony for a reporter to fail to report that he has received unauthorized information, even if he does not disclose that information to anyone else. Section 1123(a) (3) makes it a felony for an unauthorized person in possession or control of information relating to national defense to "knowingly fail to deliver it promptly to a federal public service servant entitled to receive it." Thus, if a reporter receives the information on a background basis and does not intend to publish it, or he uses that information merely to obtain confirmation from other legal sources, he is still committing a felony unless he reports the illegal receipt of this information to a government official. Thus all reporters not only commit a felony when they use the information, but they commit a felony if they don't turn themselves in when they receive it.

In addition, Section 1123(a) (2) (B) makes it a felony for a person in authorized possession or control of information relating to national defense to "knowingly fail to report promptly to the agency authorizing him to possess or control such information . . . communication to a person not authorized to receive it." Thus, anybody who leaks the information or knows about a co-worker who leaks the information has committed a felony if he does not report such unauthorized disclosure. This Section makes each person in the bureaucracy a spy of all his coworkers to report any unauthorized disclosure of national security information by imposing a felony for failure to make such a report.

But most important for discovering the source of the unauthorized leak is the power that the government would have if the "National Secrecy Act" were enacted to force disclosure of the source by using the present state of the newspaperman's privilege. Under the *Branzburg v. Hayes* (408 U.S. 665 [1972]) decision of last summer, newsmen are not provided a constitutional protection for keeping their sources of information confidential or for failing to reveal the contents of the confidential information. Until the enactment of any newspapermen's shield legislation by the Congress, the only protection a reporter has from compulsory disclosure of his sources are those few cases following the *Branzburg* decision that try to salvage some protection from dicta in that decision and the guidelines set forth by the Attorney General in 1970 which limit the federal use of compulsory testimony of reporters to certain situations. It just so happens that if the "National Secrecy Act" were enacted in law, the dicta in the *Branzburg* decision and the Attorney General's guidelines would provide a reporter no defenses whatsoever for a refusal to divulge his sources.

Under the *Branzburg* decision, the Court clearly stated that of all the situations calling for possible constitutional protection under the First Amendment for a newsmen's privilege, the one case that merited no protection under any circumstances was the case where a reporter was protecting the identity of a person who actually committed a crime. Justice White, writing the majority decision, said:

Although stealing documents or private wiretapping could provide newsworthy information, neither reporter nor source are immune from conviction for such conduct, whatever the impact on the flow of news. (408 U.S. 665, at 691).

Insofar as any reporter in these cases undertook not to reveal or testify about the crime he witnessed, his claim of privilege

under the First Amendment presents no substantial question. (*Id.* at 692).

These two sentences in the majority opinion of *Branzburg* make it almost impossible for any lower court judge to hold that a reporter's failure to divulge the source of his information is privileged when disclosure of such information was a felony under the "National Secrecy Act." The reporter who received the information, although not a conspirator or an accessory to the crime, would clearly be a witness to it. His refusal to testify would be, in no uncertain terms, the refusal to identify a felon, and it is clear that the *Branzburg* decision grants no privilege whatsoever to such a refusal.

The Attorney General's guidelines, which claimed to limit and apparently have limited the use by federal prosecutors of subpoenas for reporters' sources of information and confidential information would also clearly permit the forced disclosure of such information. Those guidelines require, in order to issue a subpoena: that a serious crime had been committed, that the information not be available from non-press sources, and that the subpoena be strictly limited in time and scope to the criminal action involved. Once again, the reporter would have no protection. He is a witness to a felony; in fact he probably is the only witness to the felony. A serious crime is under investigation, a felony involving national security. And the subpoena could clearly be limited in time or scope to the communication that was involved.

As Roger C. Crampton, Assistant Attorney General, testified before the House Judiciary Committee on September 21, 1972 about the Attorney General's guidelines: "Compulsory process is utilized only when information necessary to determine the guilt of innocence of persons under investigation for commission of serious crimes can only be obtained from the press."

Thus, once a reporter has printed information that he obtained through unauthorized disclosure, he will be subject to subpoena and can be forced to reveal the sources of his information because the fact of the information's very existence is *prima facie* evidence of a felony having been committed in his presence. In addition, by creating two distinct felonies, one for the disclosure of information (where the reporter is not liable), and the other for the distribution of that information to any other party, it is quite likely that the reporter will not have a Fifth Amendment defense when he is subpoenaed, for his receipt of the information itself was not criminal. The printing of the information proves that the reporter possessed it, thus making the revelation of its source in no way increasing his jeopardy of conviction of the felony of passing that information on to others. With no Fifth Amendment defense available, the reporter would face the choice of going to jail for contempt or revealing a source. Naturally, the prosecuting attorney has the availability of the other felony for bargaining purposes with the reporter.

Thus, the proposals constitute a comprehensive and effective "national secrecy act." They create a felony for the unauthorized disclosure of a broad category of information, and the publication of such information; it makes it a felony for a reporter to retain that information or for co-employees of the unauthorized source to fail to report the unauthorized disclosure. And it utilizes the present state of the law of compulsory disclosure of newsmen's confidential sources to ensure that the government could obtain the identity of the sources of information or incarcerate the reporters involved.

This situation makes the Administration's refusal to support a newspaper shield law, in either qualified or unqualified form, all the more understandable.

RELEVANT PROVISIONS OF S. 1400

"§ 1122. Disclosing National Defense Information.

"(a) Offense. A person is guilty of an offense if he knowingly communicates information relating to the national defense to a person not authorized to receive it.

"(b) Grading. An offense described in this section is:

"(1) a Class C felony if committed during time of war or during a national defense emergency;

"(2) a Class D felony in any other case.

"§ 1123. Mishandling National Defense Information

"(a) Offense. A person is guilty of an offense if:

"(1) being in possession or control of information relating to the national defense, he recklessly permits its loss, destruction, or theft, or communication to a person not authorized to receive it;

"(2) being in authorized possession or control of information relating to the national defense:

"(A) he intentionally fails to deliver it on demand to a federal public servant authorized to demand it;

"(B) he knowingly fails to report promptly, to the agency authorizing him to possess or control such information, its loss, destruction, or theft, or communication to a person not authorized to receive it; or

"(C) he recklessly violates a duty imposed upon him by a statute or executive order, or by a regulation or a rule of the agency authorizing him to possess or control such information, which statute, order, regulation, or rule is designed to safeguard such information; or

"(3) being in possession or control of information relating to the national defense which he is not authorized to possess or retain, he knowingly fails to deliver it promptly to a federal public servant entitled to receive it.

"(b) Grading. An offense described in this section is:

"(1) a Class E felony in the circumstances set forth in subsection (a) (2) (C);

"(2) a Class D felony in any other case.

"§ 1124. Disclosing Classified Information

"(a) Offense. A person is guilty of an offense if, being or having been in authorized possession or control of classified information, or having obtained such information as a result of his being or having been a federal public servant, he knowingly communicates such information to a person not authorized to receive it.

"(b) Exceptions to Liability as an Accomplice or Conspirator. A person not authorized to receive classified information is not subject to prosecution as an accomplice within the meaning of section 401 for an offense under this section, and is not subject to prosecution for conspiracy to commit an offense under this section.

"(c) Defense. It is a defense to a prosecution under this section that the information was communicated only to a regularly constituted committee of the Senate or the House of Representatives of the United States, or a joint committee thereof, pursuant to lawful demand.

"(d) Defense Precluded. It is not a defense to a prosecution under this section that the classified information was improperly classified at the time of its classification or at the time of the offense.

"(e) Grading. An offense described in this section is:

"(1) a Class D felony if the person to whom the information is communicated is an agent of a foreign power;

"(2) a Class E felony in any other case.

"§ 1125. Unlawfully Obtaining Classified Information.

"(a) Offense. A person is guilty of an offense if, being an agent of a foreign power,

he knowingly obtains or collects classified information which, in fact, he is not authorized to receive.

"(b) Defense Precluded. It is not a defense to a prosecution under this section that the classified information was improperly classified at the time of its classification or at the time of the offense.

"(c) Grading. An offense described in this section is a Class D felony.

"§ 1126. Definitions for Sections 1121 through 1125.

"(a) 'authorized,' when used in relation to the receipt, possession, or control of classified information or information relating to the national defense, means with authority to have access to, to receive, to possess, or to control such information as a result of the provisions of a statute or executive order, or a regulation or rule thereunder;

"(b) 'classified information' means any information, regardless of its origin, which is marked or designated pursuant to the provisions of a statute or executive order, or a regulation or rule thereunder, as information requiring a specific degree of protection against unauthorized disclosure for reasons of national security;

"(c) 'communicate' means to impart information, to transfer information, or otherwise to make information available by any means, to a person or to the general public;

"(d) 'communications intelligence information' means information:

"(1) regarding any procedures and methods used by the United States or any foreign power in the interception of communications and the obtaining of information from such communications by other than the intended recipients;

"(2) regarding the use, design, construction, maintenance or repair of a device or apparatus used, or prepared or planned for use, by the United States or a foreign power in the interception of communications and the obtaining of information from such communications by other than the intended recipients; or

"(3) obtained by use of the procedures or methods described in paragraph (1), or by a device or apparatus described in paragraph (2);

"(e) 'cryptographic information' means information:

"(1) regarding the nature, preparation, use or interpretation of a code, cipher, cryptographic system, or any other method of any nature used for the purpose of disguising or concealing the contents or significance or means of communications, whether of the United States or a foreign power;

"(2) regarding the use, design, construction, maintenance, repair of a device or apparatus used, or prepared or planned for use, for cryptographic purposes, by the United States or a foreign power; or

"(3) obtained by interpreting an original communication by the United States or a foreign power which was in the form of a code or cipher or which was transmitted by means of a cryptographic system or any other method of any nature used for the purpose of disguising or concealing the contents or significance or means of communications;

"(f) 'information' includes any property from which information may be obtained;

"(g) 'information relating to the national defense' includes information, regardless of its origin, relating to:

"(1) the military capability of the United States or of an associate nation;

"(2) military planning or operations of the United States;

"(3) military communications of the United States;

"(4) military installations of the United States;

"(5) military weaponry, weapons development, or weapons research of the United States;

"(6) restricted data as defined in section 11 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2014);

"(7) intelligence of the United States, and information relating to intelligence operations, activities, plans, estimates, analyses, sources, and methods, of the United States;

"(8) communications intelligence information or cryptographic information as defined in subsection (d) or (e);

"(9) the conduct of foreign relations affecting the national defense; or

"(10) in time of war, any other matter involving the security of the United States which might be useful to the enemy;

"(h) 'restricted area' means any area of land, water, air or space which includes any facility of the United States, or of a contractor with or for the United States, to which access is restricted pursuant to a statute or executive order, or a regulation or rule issued pursuant thereto, for reasons of national defense.

THE VETO OF THE REHABILITATION ACT

Mr. PERCY. Mr. President, I share the President's resolve to put a ceiling on spending and to hold a firm line on prices, taxes, and inflation. However, I am disappointed that the President has again found it necessary to veto the Rehabilitation Act of 1972, approved so overwhelmingly by the Senate and the House in both 1972 and 1973.

The Rehabilitation Act of 1972 is not a big spending bill that would jeopardize the taxpayers' pocketbooks or the stability of our economy. This bill, though admittedly more than the President requested, provides \$900,000 less in authorization than last year's vetoed bill, a reduction of over 25 percent.

This bill should not be looked upon as a big spending measure. I would go as far as to say that it is prime investment material. For many of our physically and mentally handicapped citizens, the only alternative to rehabilitation is custodial care under public assistance, which is often costlier than rehabilitation. In 1972 alone, State vocational rehabilitation agencies served 51,084 public assistance recipients. It is estimated that the public assistance cost for those individuals would have amounted to \$34,275,000 just for the first year following rehabilitation.

Vocational rehabilitation is a proven cost-effective program. A number of cost-benefit analyses of the rehabilitation program have agreed on one crucial fact—the benefits of the rehabilitation program are many times its cost. Conservative estimates of the ratio of benefits to cost have ranged from between 8 to 1 and 35 to 1. In other words, for every dollar spent on rehabilitation, \$8 to \$35 have been returned in welfare costs saved and income taxes paid by workers restored to usefulness.

For example, the total annual earnings of 291,272 individuals rehabilitated in 1971 totaled approximately \$1 billion, a net increase of \$750,000 over the earnings of these people before rehabilitation. In addition to this contribution to the GNP, the Rehabilitation Services Administration estimates that these individuals, at a minimum, contributed approximately 5 percent of their total income of \$58 million to Federal, State,

and local governments for taxes. In addition to this tax contribution, there are further Government savings because of the removal of these persons from welfare dependency.

The Illinois Vocational Rehabilitation Agency, I am very proud to say, is a successful example of the cost effectiveness of rehabilitation. In fiscal 1971, the agency served some 55,288 individuals, and 14,001 of them were completely rehabilitated. The total annual earnings of these people in 1971 totaled approximately \$47.2 million, showing a net increase of \$30 million over their earnings before rehabilitation. If these rehabilitated wage earners contribute 5 percent of their total income to Federal, State, and local governments, their tax contribution for 1 year alone would equal \$2.4 million.

In fiscal 1972, the agency served some 58,922 people and completely rehabilitated 314 more persons than in 1971. Of the 14,315 individuals completely rehabilitated, 11 percent or 1,581, were public assistance recipients. Of this total, 741 were removed entirely from the public aid rolls, saving the State approximately \$1.2 million in 1 year alone. Coincidentally, it cost the agency about \$1.2 million to rehabilitate these people. Moreover, 1,096 of these rehabilitated individuals increased their earning power by \$3.9 million per year.

Today, developments in medical science and technology have made rehabilitation cost effective even for the severely handicapped. Therefore, I applaud the major change in the concept of rehabilitation services under the Rehabilitation Act of 1972—the added emphasis on vocational rehabilitation services to the severely handicapped. Until now the severely handicapped in this country have been doomed to a kind of living death, immobilized, hidden away, and written off as beyond redemption. This shortsightedness, in addition to the cost in human agony and waste, has cost society a huge maintenance bill. Liberty Mutual estimates that the lifetime cost of maintaining one paraplegic is \$150,000; and the cost jumps to \$250,000 to \$500,000 for a quadriplegic. HEW estimates that there are 985,000 Americans who suffer from paralysis. Without rehabilitation services, the lifetime maintenance cost for these individuals can amount to \$246 billion.

I am convinced that money spent on the rehabilitation of our physically and mentally handicapped citizens is a sound investment, not only in making life more livable for our handicapped citizens but also in returning dollars to the Federal, State, and local treasuries.

Vocational rehabilitation makes good business sense. For this reason I must regretfully vote to override the President's veto of the Rehabilitation Act of 1972. We should find other areas where budget cuts can be made. I intend to sustain certain of the Presidents vetoes and to vote against other spending bills in the authorization or appropriation stage before they are ever sent to the President.

But I cannot walk away from my commitment to the important area vocational rehabilitation for the physically or mentally handicapped. It is one of the best investments, we as a society, can make in one human resources.

MANUFACTURING PRACTICES IN THE DRUG INDUSTRY

Mr. RIBICOFF. Mr. President, the GAO has released a report which states that the FDA has failed to exercise its statutory mandate to assure that drugs are processed under proper manufacturing practices. GAO found that 48 percent of the drug producers studied were found to be deviating from good manufacturing practices on successive inspections by the FDA. In one plant, 78 deviations were found in three inspections, of which 39 were deemed "critical." In spite of this appalling record, FDA failed to take legal action to insure that the requirements of law were met.

Drugs manufactured improperly may cause severe health hazards. Examples of the dangers of improperly manufactured drugs include the so-called Cutter incident in which improperly manufactured polio vaccines caused the paralysis of hundreds of people and the Abbot Laboratory case in which hundreds of people died as a result of receiving contaminated intravenous solutions.

The failure of FDA to enforce a law designed to protect consumers in unfortunately all too typical of our experience with Federal regulatory agencies. Time and again, Congress has passed laws to protect consumers, only to find that inadequate enforcement of those laws renders them useless. I have introduced legislation to establish within the Federal Government a strong and effective consumer advocate to assure that regulatory agencies enforce the laws Congress has enacted. The existence of such an advocate could help preclude the continuance of ineffective regulation.

I ask unanimous consent that a digest of the GAO report be inserted in the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

PROBLEMS IN OBTAINING AND ENFORCING COMPLIANCE WITH GOOD MANUFACTURING PRACTICES FOR DRUGS

WHY THE REVIEW WAS MADE

Drugs sold in the United States during recent years have been produced by about 6,400 firms. Although each is accountable for the quality of its products, the Congress placed upon the Food and Drug Administration (FDA) the responsibility that drugs, shipped across State borders, be of satisfactory quality when sold to consumers.

The Federal Food, Drug, and Cosmetic Act (FD&C Act) makes FDA responsible for insuring that adulterated drugs are prevented from reaching the market. This law defines an adulterated drug as one, among other things, which has not been produced in conformity with good manufacturing practices, and requires FDA to inspect drug manufacturers and repackers (referred to hereinafter as drug producers) at least once every 2 years.

Good manufacturing practices include (1) maintaining formula and batch-production control records and procedures, (2) establishing test procedures to insure that drug

components or the finished product conform to appropriate standards of identity, strength, quality, and purity, and (3) keeping distribution records of each batch of a drug to facilitate its recall from distribution, if necessary.

In this review the General Accounting Office (GAO) has evaluated FDA's program for inspecting drug producers and enforcing compliance with good manufacturing practices. GAO reviewed the inspection records of 73 drug producers inspected during the 2-year period ended March 31, 1971, and the inspection records of 98 drug producers which were not inspected during this period.

Except for five large drug producers, firms were randomly selected for review. The drug producers were in three FDA districts in which nearly 25 percent of the Nation's 6,400 drug producers were located.

FINDINGS AND CONCLUSIONS

Overall findings

Several factors have hindered FDA's obtaining and insuring compliance with good manufacturing practices by drug producers.

FDA has not always enforced aggressively compliance with good manufacturing practices by many of the drug producers it has inspected, even though deviations from these practices can lead to adulterated products.

Proper and timely written notification of needed corrections was not provided to drug producers' top management; and followup inspections were usually untimely, hampering, in many instances, FDA's efforts to obtain voluntary compliance with good manufacturing practices.

Some drug producers have not been inspected as often as required, although FDA considers its inspection to be an integral part of its defense against adulterated products reaching the consumer.

FDA did not have a complete and accurate list of drug producers required to be registered and inspected.

FDA has taken some steps to overcome these problems. More are needed.

According to FDA, two factors have contributed to existing conditions: (1) its limited resources and (2) its need to be concerned with good manufacturing practices for drugs posing the most significant potential health hazard.

Limited enforcement

FDA inspections have shown a large number of producers to be deviating from good manufacturing practices. Although such deviations can lead to adulterated drugs, FDA has not enforced compliance with good manufacturing practices by many of the drug producers it has inspected.

During fiscal year 1971, FDA made 7,124 inspections of drug producers. Of these, nearly 4,000 were followup inspections where deviations from good manufacturing practices had been reported previously. Over 2,174, showed that producers still were not complying with good manufacturing practices.

In reviewing inspection records of 73 drug producers, GAO found that 48 percent of the producers critically deviated from good manufacturing practices on successive inspections. FDA identifies critical deviations as those having the greatest probability of creating adulterated products.

FDA has taken relatively few legal actions to enforce compliance. During fiscal years 1970 and 1971, FDA approved only 51 seizures, 2 injunctions, and 5 prosecutions for deviating from good manufacturing practices.

GAO believes that producers chronically deviating from good manufacturing practices do not have sufficient incentive to correct their practices because FDA has not used available legal options.

For example, FDA inspected one firm's manufacturing practices three times during

the 32-month period ended December 15, 1971, concluding each time that the firm was not complying with good manufacturing practices such as formula and production control records not being maintained.

The number of deviations increased from 6 in the first inspection, to 23 in the second, to 49 in the third inspection. Although 78 deviations were found, of which 39 were critical, legal action was not taken. Instead, FDA relied primarily on oral and written communications with the firm and followup inspections to promote voluntary corrective actions.

The shortcomings in FDA's enforcement are believed to stem primarily from a lack of instructions on when legal actions should be taken and the resultant confusion between district office personnel responsible for recommending legal action and FDA headquarters personnel responsible for approving it.

A February 1972 policy change indicates FDA's intention to enforce good manufacturing practices more aggressively. GAO believes that the continuing lack of guidelines to the district offices will hamper the effectiveness of this change.

Followup actions inadequate

Some drug producers have not corrected deviations from good manufacturing practices because FDA frequently did not take proper followup actions to insure that drug producers' top management was aware of inspection findings.

GAO's examination of reports and other records relating to 150 inspections of 58 producers included in the sample showed that FDA issued a post inspection letter to top management in only 75 of 150 inspections made and that such letters were often untimely.

FDA lacked guidelines for timely scheduling of followup inspections to determine whether producers take needed corrective action. GAO reviewed 83 inspection cases involving deviations from good manufacturing practices for which followup inspections were scheduled to be made during a specific month prior to December 31, 1971. GAO found that only 25 were made when scheduled, 32 were made late, and 26 were not made by December 31, 1971. The timing of followup inspections is left to the discretion of each FDA district office.

The February 1972 policy change discontinued the use of post inspection letters as a means of notifying drug producers of inspection findings. Instead, warning letters will be used for minor deviations. Action to seize products or cite firms for prosecution will be used for critical deviations. Subsequent to the completion of GAO's fieldwork FDA rescinded its policy statement of February 1972 and issued a new policy statement.

However, the policy change does not provide guidelines to insure that drug producers' replies to warning letters or citations will be properly monitored and that timely followup inspections will be made when needed.

Warning letters—unlike post inspection letters and citations—do not specify a time limit in which a drug producer must notify FDA of corrective actions planned or taken.

Inspection coverage

FDA lacks an effective means of insuring that all drug producers are inspected at least once every 2 years as required by law. In the three FDA districts reviewed, at least 213 drug producers, or about 16 percent, had not been inspected during the 2-year period April 1969 through March 1971. Another 123 firms were listed as not inspected but records were not available to substantiate that the firms were in fact subject to inspection.

Records of 98 of the 213 firms not inspected showed that an average of 36 months had elapsed (as of March 31, 1971) since 74 of these firms were last inspected.

The remaining 24 firms had registered for the first time during the 2-year period and were not required to have been inspected by March 31, 1971. The 24 firms had been registered an average of 9 months—7 for over 12 months.

FDA had not established guidelines on how soon firms should be inspected after registration. Since newly registered firms are permitted to produce and distribute drug products for consumer use, FDA should consider making an earlier initial inspection of such firms.

The failure to inspect some producers when required can be attributed to weaknesses in the inspection scheduling process, the priority given to reinspecting other producers with a history of deviating from good management practices, diversion of manpower to crisis situations, and the lack of manpower.

Although GAO found that noninspected firms generally were small producers of non-prescription drugs, the FDC Act clearly requires that FDA inspect all drug producers regardless of size or product type.

Inaccurate drug firm listings

FDA maintains two master firm listings for management and control purposes: the drug firm registration listing and the official establishment inventory.

The purpose of the registration listing is to identify all drug producers subject to the 2-year inspection requirement. The official establishment inventory is FDA's official record of all firms producing products which fall into FDA's regulatory purview. The official establishment inventory is one tool headquarters uses to decide the annual allocation of each district's inspection manpower resources among various types of inspections.

GAO found that these two listings for calendar year 1971 were inaccurate and FDA had neither monitored nor enforced annual registration of drug producers as required by law. In GAO's opinion, the usefulness of the listings has been significantly reduced as a basis for management decisionmaking and control.

Recommendations

The Secretary of Health, Education, and Welfare (HEW) should direct the Commissioner, FDA, to:

Establish more definitive guidelines to be followed by FDA headquarters and district offices, specifying (1) when products should be seized—especially those posing a questionable health hazard, (2) the amount and type of documentation needed to adequately support the seizure action, and (3) when firms should be cited for prosecution.

Consider establishing a time limit for receipt of the written response requested in warning letters.

Correct the inventory of drug products subject to the 2-year inspection requirement so that FDA will have complete and accurate knowledge of the scope of its inspection responsibilities.

Establish an inspection scheduling system monitored by FDA headquarters to insure that all drug producers are inspected at least every 2 years.

Establish guidelines to insure timely initial inspection of newly registered drug producers.

Properly enforce the annual drug producers' registration requirement and effectively monitor the accuracy and completeness of the registration listing to permit its use as a cross-check on the official establishment inventory listing.

AGENCY ACTIONS AND UNRESOLVED ISSUES

HEW concurred in GAO's recommendations and advised that a number of corrective actions had been or would be taken. (See pp. 22, 29, 35, 36, and 41.)

MATTERS FOR CONSIDERATION BY THE CONGRESS

This report provides the Congress with information on FDA's drug firm inspection cov-

erage and enforcement of good manufacturing practices.

RETIREMENT OF ROBERT BALL

Mr. COTTON. Mr. President, as a member of the Health, Education, and Welfare Appropriations Subcommittee which also deals with appropriations for the administration of our vast social security program, I have on many occasions during the last decade listened to and been impressed by the testimony of Commissioner Robert Ball and feel that his outstanding services deserve comment in the Senate.

Robert Ball has retired as Commissioner of Social Security, but the influence he has had on the development and management of the social security program will continue to be felt by many generations. His understanding of the role of the social security program in our country has been evidenced time and again during his appearances before congressional committees. His brilliance is reflected in countless pages of testimony presented in support of some of the most important social legislation in the history of our country.

Robert Ball will no doubt be remembered longest for the role he has had in the development of the social security program. However, I believe he has made equally great and lasting contributions toward assuring the program's responsiveness to its contributors and beneficiaries. Chairman WILBUR D. MILLS of the House Ways and Means Committee called Mr. Ball "a near genius in administration." His success is in large part due to his personal philosophy; his humanitarian ideals have permeated deep into the Social Security Administration.

He is responsible for establishing much of the foundation of administrative excellence in the Social Security Administration. In 1958, when Mr. Ball was the Deputy Director of the Bureau of Old-Age and Survivors Insurance—the predecessor of the Social Security Administration—he originated a statement of objectives of the organization which has since served as a guidepost for employees of the Social Security Administration.

The American people will miss Robert Ball as Commissioner of Social Security. His personal impact on social legislation has not ended though. He soon begins a new career at the National Academy of Sciences' Institute of Medicine as a scholar in residence. I am sure that Robert Ball will continue his selfless efforts on behalf of the American people.

I ask unanimous consent to enter in the RECORD an excellent story based on an interview with Mr. Ball which appeared in the Baltimore Sun. The story really captures some of the personal warmth and caring of Robert Ball's personality as well as an indication of his clear-minded thinking on social matters.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY'S ROBERT BALL—THE COMPLEAT BUREAUCRAT BOWS OUT

(By Theo Lippman, Jr.)

When Robert M. Ball took over as Commissioner of Social Security back in 1962, the New York Times described him as "the compleat bureaucrat." He certainly seemed to fit the description. He had spent practically all his life in the bureaucracy, progressing up through jobs with titles that were dripping with red tape words such as "analyst," "research," "program planning." Yet there is probably no less a bureaucratic executive officer in the government today than Bob Ball. Partly that is because of the nature and traditions of the Social Security Administration, and partly it is because of the kind of person Ball is.

He went into public service back in the middle Thirties, one of that breed of young men and women who came out of college with New Deal stars in their eyes. Ball, a native of New York, majored in English at Wesleyan, then took a master's degree in economics. One of his professors was a consultant to the federal government when it established the Old Age and Survivors Insurance agency (the predecessor of what is called the Social Security Administration today). He got Ball interested enough to file for a Civil Service examination in the summer of 1936, the year he got his master's.

For over two years, there were no job openings for Ball in the social security field. He turned down other Civil Service appointments, among them fingerprint specialist for the FBI. Meanwhile, he married the former Laura Elizabeth Crump, and began supporting himself first by working in the office of Stern's department store in midtown Manhattan, then as one member of a two-man staff on an activist labor union newspaper in Newark and Paterson, N.J.

In January, 1939, he was hired by the government and assigned to the Newark district office of Social Security (which for convenience will be used here throughout to designate both the old agency and the new one). That specialization of function that is the hallmark of bureaucracy had not reached the degree then that it has now. Ball's first job was "kind of the outside man," he puts it. "What we did in those days was to call on big employers and talk with them about keeping Social Security records. Also, explaining to them what the program was all about. There was quite a lot of resistance to Social Security in those days, and also a lot of misunderstanding. We were also the outside person on claims. I took many claims in people's homes, people too ill to come to the office. We also ran outside contact stations in smaller communities where once a week or say once every two weeks you would be there for several hours, so people could come in there rather than go to the main district office."

From that job, Ball progressed to manager of the Bayonne office (two employees), to assistant manager of the larger Elizabeth office, to the analysis division in the central office in Baltimore.

That was in 1942. The central office was in the Equitable Building at Calvert and Fayette. The Balls lived on a small farm on Weems creek in west Annapolis. He commuted to a job in which he was expected to do research concerning then existing programs and to plan for future changes in the program. He spent much of his time working out ways to extend coverage to agricultural and domestic workers.

Before long Ball was transferred to the training office, to become the number-two man. He conducted classes in the Candler Building near the waterfront. "We were running quite intensive background courses in what Social Security was all about. Not just how you figure benefits and so on, but the history, the philosophy, the ideas, the

alternatives, the foreign systems. I think really it was in the training office that I had the opportunity to learn a great deal about, and think through my own attitudes and views toward Social Security as an historical movement and its relationship to private efforts in this area. Because if you're going to sort things out to teach people, you really start to grapple with it yourself."

Shortly after the end of World War II, Ball temporarily left Social Security to teach what he had learned to people active in the general field of retirement insurance planning both outside and inside government. This was as director of a special committee of the American Council on Education in Washington. After two years in that job, he went to work for a Senate committee studying Social Security. In late 1949, he was named assistant director of Social Security (the predecessor agency), in charge of analysis, legislative and program planning, statistics and research, and moved from the Washington suburbs to Loch Raven. Before long he was deputy director of the growing agency. He was still a Civil Service appointee, and when the top man resigned with the advent of the Republican Eisenhower administration in 1953, Ball was not seriously considered for the job—but he ran the place as acting director for a year. He resumed the deputy's job and title when a presidential appointee came in.

In 1962 President Kennedy, at the urging of Secretary of Health, Education, and Welfare Abraham Ribicoff and his assistant Wilbur Cohen, decided to pick a career man. Ball was the logical choice, as the highest ranking Civil Service executive in Social Security, and with Cohen's and Ribicoff's enthusiastic endorsement, Ball got the job. He immediately did an unusual if not unprecedented thing in the annals of bureaucracy. Instead of empire-building, he cut his realm in half.

"When I became commissioner, the Social Security Administration had in its responsibility not only the contributory social insurance program, but also the Children's Bureau, the federal end of all welfare programs, Cuban refugee programs and some other things. I had always thought that it was a mistake to put under one person the responsibility for the federal-state program for welfare and the direct line operation of what we call Social Security. So I went to work to get a reorganization that would divest me of half my responsibility. I thought it would work better if I would take only half the job, if there were a Social Security commissioner and a Welfare commissioner." It was done.

By 1962 the Balls (they have a son and a daughter) had moved to the Villa Rica section of Baltimore county, a choice made because it would be convenient to the new Social Security headquarters at Woodlawn. Ball had a great deal to do not only with selecting the site, but also with such details as approving the brick used and some of the furniture. He's the kind of person who likes to have his hand in everything. But in addition to that, there is that other, traditional force at work which makes him unlike the general public impression of a bureaucrat. (The word has an unflattering definition in some modern dictionaries.) Each previous chief of Social Security has, like him, been only part administrator. Each has also been part thinker or improviser. That is, unlike agency heads in most of government, Social Security commissioners have been leading policy advocates.

Asked what exactly his job is, Ball replies this way:

"I guess I'd have to plead guilty to being really a social planner, a social reformer, at least as much as an administrator. I really think that to head an organization of this

kind, it's best to be able to combine program skills—what the program should be and where it is going—with being able to lead the administration of that program after it is in effect. You find so many people who divide the thing. You have an administrator who is just focused on managing. Theoretically he's a person who can move from one place to another. I don't fully buy that. . . ."

It is possible that Ball has more of an impact on Social Security than any other single man. For twenty years now there has not been an idea that became part of the system with which he personally was not "significantly involved" (his own quote) in the development of. Certainly that is unquestionable in the past decade in which he has served as commissioner. It is a reflection of his own liberalism that Social Security has been liberalized far more than most people who are not directly affected by it realize today. It is, in fact, not really the same program it was 10 years ago. In just the past five years, the level of benefits has gone up by 70 per cent. In addition to that, for the first time there is an automatic provision that makes future benefits inflation proof. And, of course, there is Medicare. Social Security has grown so much in the past decade that beginning next year it will be handling something like one-fourth of all federal spending.

Ball's admitted liberalism has not been the most precious asset in the past four years. He almost was not retained in the job in 1969, and is not being kept after 1973. His routine letter of resignation has been accepted by the President. The only reason it wasn't accepted four years ago is believed to be that House Ways and Means Chairman Wilbur Mills warned the new President that dumping Ball would be unwise. When Mills learned this year that the dumping was at last taking place, he said that he hoped no "political" appointee would be named.

Ball is of two minds about this—both personally and professionally. "I think this is a good time for me to leave. Congress isn't going to do much more to Social Security in the near future. I'd like to help get a national health insurance plan going, and I think I can do that better from the outside than from the inside."

So after three decades of working for Social Security, Robert Ball is leaving for good. He will apparently continue to live in Baltimore, but not work here. Though there have been some "interesting" job offers in Baltimore, he seems to be leaning toward others in Washington. Probably some foundation will pay him to start thinking full time, absolutely no administrative chores. He will also be lecturing, writing, lobbying—and devoting a little more time than in the past to such leisure time activities as going to plays and concerts here, in Washington and in New York, to loafing at his New Hampshire lake cottage, to badminton and hiking.

At the end of a recent long interview conducted in his handsome offices on the top floor of the main building at Woodlawn, Ball said, "Could I take the initiative on one point I'd like to make? I've been somewhat concerned in recent months at the number of people who are making generalizations across the board about the ineffectiveness of the federal government's programs. I don't know enough about some other programs to make a blanket defense, but if it's true of many programs, it's not true of Social Security, and that's not a small exception."

"I think it's a big mistake for people to fall into the trap that because a few anti-poverty programs didn't work, that everything about the federal government is a mess. . . . I can tell you a lot of programs that didn't turn out as good as they should have, yes, but personally I don't think the

problems of America are going to be solved by turning them back over to the states and localities. Some of this [criticism of federal programs] sounds like an excuse for the federal government to withdraw from a role that is perfectly appropriate for the federal government. People who are developing such a thesis forget the successful programs. Take food and drug, the environment thing, aid to education, and so on. The idea of dismantling the federal machinery—I don't want to do that. I am concerned. I feel that the federal government would need to retain more of a role than seems to be the opinion of many people . . . including many in this administration."

TRIBUTE TO JOHN FORD, FILM DIRECTOR

Mr. TUNNEY. Mr. President, on March 31 the American Film Institute, an organization chartered by the Congress, honored John Ford, the distinguished American film director.

In the charter of the American Film Institute, that organization is charged with the preservation of the American film heritage and the advancement of the film art. The American Film Institute, in making the first of its Lifetime Achievement Awards, has chosen wisely. John Ford embodies both elements of that charge given the AFI by the Congress. John Ford represents both the American film heritage and the highest advancement of the film art.

John Ford's career covers more than five decades, from the earliest days of the motion pictures to the present. He directed great silent pictures and his mastery of the art carried him into the sound era as a pioneer and innovator. The names of some of his films give a clue—*Arrowsmith*, *The Informer*, *The Grapes of Wrath*, *How Green Was My Valley*. It is for these and other achievements that the American Film Institute bestows on John Ford its award. His films, his special movie genius, have provided not only entertainment for millions throughout the world, but a special vision of America.

John Ford, when his country needed him during World War II, also put his talents at his country's service. Some of the films he made for his country are as fine and ennobling as anything he did for his art. It is for this and other services that President Nixon presented him with this Government's Freedom Medal, the highest civilian award.

But it is not only John Ford who is honored by the President and by the American Film Institute. In a measure he symbolizes the whole field of which he is such a glorious part. I mean the American motion picture.

Far too often Hollywood and its films have been a convenient object of attack. Sometimes perhaps they have merited attack. But in the long history of the film—short by other arts, but long in this frantically developing age—in that history there is so much that is fine. It is time, and past time, that a President honor the great spirit of the movie pioneers, the men and women who had a piece of the American dream and who projected it throughout the world by means of the motion picture.

It is these men and women whom John Ford symbolizes in this first American Film Institute Award.

It is particularly fitting that so many of John Ford's films should have been concerned with American history and the growth—in agony and glory—of the American dream. He has recorded all sides of it; all aspects. Now he, through his heroic accomplishments, personifies that American promise and fulfillment.

CURRENT U.S. POPULATION

Mr. PACKWOOD. Mr. President, I would like to report that, according to current Census Bureau approximations, the total population of the United States as of April 1 was 210,508,767. In spite of the widely publicized reductions in our fertility levels, this represents an increase of 1,540,229 since April 1, 1972. It also represents an increase of 128,607 in just the last month.

Over the year, therefore, we have added enough additional people to fill two cities the size of Washington, D.C., and, in just 1 short month, we have added about the equivalent of Little Rock, Ark.

SWEDISH-AMERICAN RELATIONS

Mr. CHURCH. Mr. President, Sweden is one of our most traditional European friends. Millions of its people have come to the United States and contributed to the physical and intellectual development of our own country. In recent years, Sweden's high standards for the common good at home and abroad, and its practical prescription for self-preservation—freedom from alliances to be neutral in time of war—provide this democratic country a unique place in the annals of nations.

Presently, our Government has been cold-shouldering this important country because of Sweden's disapproval of our military conduct in Indochina. Holding a grudge toward those who oppose our actions, however, is neither good policy nor good politics, especially in light of the fact that the negotiated settlement reached at Paris in January was an event the Swedes were urging all along.

The Government of Sweden last week attempted to warm the current chill in the relationship with a forthright and friendly statement in the Riksdag, the Parliament in Stockholm. I ask unanimous consent, Mr. President, that an excerpt from the Government's declaration on foreign policy of March 21 be inserted in the RECORD at this point. I look forward to a similar statement of reconciliation from our Government soon.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM THE SWEDISH GOVERNMENT'S DECLARATION ON FOREIGN POLICY

During the last few years Sweden's relations with the United States have been in the centre of attention. The reason has been the American participation in the Vietnam war. With the support of an overwhelming public opinion the Swedish Government has taken a strongly critical attitude towards the United States' Vietnam policy. The intensity of our reaction has been based on an awareness of

the suffering especially afflicting the civilian population as well as on a conviction that a small people must have the right to form its own future without interference from the outside. The American Government has reacted by scaling down the diplomatic relations.

We believe that the Swedish-American relations in the long run are better served if we make clear our determination to uphold principles fundamental to us than if we attempt to hide our views. We have noted the reassessment of important elements of American foreign policy which now seems to be under way. This ought to contribute to an international development characterized by détente. In this perspective we can hope that differences of view of the kind that have been caused by the Vietnam conflict will not need to arise in the future.

In this context it could be emphasized that the traditional, lively exchange between Sweden and the United States continues. The personal ties between the two peoples are strong. The American and Swedish societies have many common traits and are basically founded on the same democratic ideals. Both face the task to solve the many complicated technical and social problems of the modern industrial society.

In a time of increased international co-operation and interdependence diplomatic channels are valuable means of contact and information. No nation is served by weakening these channels. Not the least in situations where there are differences of political views we find it important to maintain the possibility of dialogue on a high level. It is our wish that normal diplomatic relations shall exist between Sweden and the United States.

NO-STRIKE STEEL PLAN

Mr. PACKWOOD. Mr. President, the United Steelworkers and the Big 10 steel companies last week completed arrangements and approved in final form a no-strike pact designed to bring stability back to the steel industry and regain the business which has been lost in recent years to foreign competition. The so-called experimental negotiating agreement, approved on March 29 by the United Steelworkers basic steel conference, pledges no industrywide strike over the next 4 years, and provides, as an alternative to the strike, binding arbitration of all unresolved issues after a certain date in contract negotiations. Savings from the no-strike pact will be shared with steelworkers through use of a bonus system.

Mr. President, I for one would like to congratulate and commend the steelworkers and the steel companies for achieving this landmark agreement. As many of my colleagues know, I have been deeply involved in seeking alternatives to the devastation of strikes and lockouts. Without voluntary agreements such as this excellent pact, we in Congress, sworn to protect the public, have no alternative but to seek governmental solutions. But let me be the first to state my conviction that the voluntary approach is far preferable to Government coercion, and the private agreement far more effective than one imposed by Congress or the Executive.

Mr. President, again, I would like to express my heartiest congratulations to the parties involved in working out this forward-looking plan, and my deep and sincere hope that other industries are

able to duplicate what will surely be an alternative leading to significant mutual benefits.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD two Washington Post articles describing the pact and its impact.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

NO-STRIKE STEEL PLAN IS APPROVED

(By John Moody)

PITTSBURGH, March 29.—The United Steelworkers Basic Steel Conference today overwhelmingly approved a pioneering agreement pledging workers not to strike their industry nationwide over the next four years.

The "Experimental Negotiating Agreement," approved earlier by the Big 10 companies of the steel industry, is intended to bring stability to mills that have been losing business and jobs to foreign imports.

Shortly after the 600 delegates, representing 400,000 basic steel employees, shouted approval and celebrated at a cocktail party, I. W. Abel, president of the nation's second largest union, said:

"We have today embarked on an unprecedented experiment that we think will prove there is a better way for labor and management to negotiate contracts."

R. Heath Larry, vice chairman of the U.S. Steel Corp., the nation's No. 1 producer, and chief negotiator of the Big 10 firms, told the joint meeting:

"This experimental agreement should work for the union, the corporations, the customers and the nation."

Flanked by other high officials of both the union and the steel industry at a press conference, Abel and Larry called the agreement "historic."

The unique program specifies that all issues in dispute after a certain date in contract negotiations will be submitted to binding arbitration.

The 11-page agreement sets a specific timetable for basic steel contract negotiations, which begin in February, 1974. All issues must be settled and arbitration decisions made before the current agreement ends July 31, 1974.

The plan assures workers a 3 per cent wage increase in each of the three years of the forthcoming contracts, 1974, 1975 and 1976. It also guarantees a \$150 bonus for each worker.

While Abel, at the press conference, stressed the experimental nature of the agreement, officials of the steel industry, which has seen foreign-produced steel take nearly one-fifth of the domestic market in recent years, expressed pleasure with the union's decision.

Larry said the agreement "should help us recapture part of the market we have been losing."

In answer to a question, Abel said he "is sure other international unions are watching the experiment." He named the Seafarers' International Union specifically.

He said he did not see how the plan would have any adverse effect on auto industry or any other labor negotiations scheduled for this year.

Abel said there has been no monetary pattern set in the experimental plan that would put a ceiling on what other unions may ask.

"We have a completely wide-open set of negotiations coming up with no holds barred," he said.

"This is an experiment," Abel said. "It will may last only one term. It very well may fail."

He said George Meany, president of the AFL-CIO, of which the USW is the single biggest member with 1.4 million members,

has expressed keen interest in the experiment. But he said the White House has not been advised and has not commented.

STEEL UNION OFFICIALS OFFER NO-STRIKE PLAN (By John Moody)

PITTSBURGH, March 28.—United Steelworkers officers today asked representatives of 400,000 basic steel workers to approve an "experimental agreement" that could end nationwide steel strikes and stabilize an industry under constant pressure from foreign competition.

I. W. Abel, USW president, in an innovative move, proposed binding arbitration to settle knotty contract issues. He said the plan would allay customers' fears of strikes and eliminate the need for traditional stockpiling of steel when contracts are being negotiated.

After a day of discussion by 600 members of the Basic Steel Conference, the sentiment was running heavily in favor of approving the plan, an informed source said. The delegates are scheduled to vote Thursday.

The plan, which if approved would become effective May 15, calls for a five-man arbitration board that would convene when the union and negotiators for the Big Ten companies of the steel industry are unable to agree on contract terms.

Steel sources said they know of no such plan in any major industry at the present time. It could, some sources said, have an effect on automobile industry and over-the-road trucking negotiations scheduled for later this year. The plan, which establishes timetables for the 1974 Basic Steel contract negotiations, assures workers a 3 per cent wage increase each year in 1974, 1975 and 1976. It also guarantees a \$150 bonus for each worker.

Both the wage figure and the bonus are minimums that could be improved during the 1974 contract negotiations. They will begin in February, 1974.

The average hourly wage for basic steel industry workers currently is just over \$5.

Abel, one source said, told the closed conference that the Big Ten steel producers lost \$80 million as a result of steel inventory buildups during the 1971 contract talks.

By eliminating the strike threat, the source said, the companies believe they can share profits by paying each worker a bonus and still be ahead.

Both the union and the industry have been seeking ways to eliminate what Abel calls the boom-bust cycle in the steel industry.

The union leader claims that over 100,000 job opportunities have been eliminated in basic steel mills in recent years as a result of foreign steel coming into this country.

In 1971, when the last steel contract was negotiated, steel imports reached a record 18.3 million tons. Despite voluntary agreements with some of the major foreign producers, the import tonnage remained at 17.7 million tons last year.

The pioneer proposal does provide for local union officers to strike an individual plant over local issues at contract time. The strike, though, could be called only after a secret vote and with Abel's approval.

In reality, there has not been an industry-wide steel strike since 1959, when the mills were closed for 116 days. But each year that the steel agreement expires, customers begin worrying about a strike and order extra steel. That requires producers to use obsolete equipment and to pay considerable overtime.

Also, after the 1971 settlement was reached without a strike, customers began using their stockpiles and more than 100,000 steel workers were laid off, some for as long as seven and eight months.

At the same time, many customers find it

difficult to get emergency orders filled during the rush period and turn to foreign producers to avert shortages.

For Abel, the no-strike proposal is a second big industrial relations innovation. He set precedents among industrial unions in 1971 by agreeing with the companies to help increase productivity.

That program met with considerable rank-and-file resistance for a time. But recent reports indicate that at least local union officers are now working with plant officials of the company to cut costs and improve output.

ARTHUR SPITZER, BEVERLY HILLS, CALIF.—PHILANTHROPIST

Mr. TUNNEY. Mr. President, a fellow Californian and philanthropist, whom I have known for many years, Mr. Arthur Spitzer of Beverly Hills and Rancho Santa Fe, Calif., has made a substantial donation to the University of Colorado.

The board of regents of the University of Colorado has approved the establishment of the Edward Teller Center for the Advancement of Science, Technology, and Politics, it was announced by Dr. Frederick P. Thieme, the university's president. The center honors Dr. Teller, noted nuclear physicist, who is currently university professor of physics at the University of California.

Dr. Teller has been an outspoken critic of the antitechnology trend in the United States.

He said recently:

This is clearly illustrated by our present energy crisis, in which insufficient use is being made of scientific research to develop new and improved energy sources.

It is my fervent hope that this new Center at the University of Colorado will help reverse the anti-technology trend and therefore help maintain our country's technological leadership.

Mr. Spitzer said his donation was motivated—

By what I regard as an urgent need to encourage students and teachers to pursue careers in science and technology.

When I met Professor Edward Teller, whose scientific contribution to America and the free world was so enormous, I was very impressed with his philosophy and political realism, which I felt has never been fully explored or recognized.

I hope that the Edward Teller Institute will advance science and will help shape a strong and progressive America. It will be an important contributor to this country's future and the world at large.

The advisory board consists of:

Dr. J. R. Maxfield, noted radiologist expert of Dallas, Tex.

Walter Cunningham, former astronaut.

Prof. Edward Rozek, professor of political science of the University of Colorado.

Mr. Arthur Spitzer.

Dr. Robert V. West, Jr., Ph. D., in geology of San Antonio, Tex.

Gen. John Alison of Northrop of Los Angeles.

Additional public figures and distinguished scholars will be invited to join the advisory board of this center.

Mr. President, Mr. Spitzer's philanthropic efforts and goals are a credit to the American way of life and the betterment of the American people.

THREE POW'S BLAME PROTESTERS, MEDIA FOR PROLONGING WAR

Mr. SCOTT of Pennsylvania. Mr. President, I would like to bring to the attention of the Senate an article published in the March 22 issue of the Philadelphia Inquirer and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE POW'S BLAME PROTESTERS, MEDIA FOR PROLONGING WAR

(By Thomas B. Niece, Jr.)

Three former prisoners of war at Valley Forge Army Hospital said on Wednesday that the antiwar movement in America prolonged the Vietnam war and delayed their release from Vietcong prisons.

"The war could have ended three or four years ago if it hadn't been for the antiwar movement and the news media," said Sgt. Carroll Flora Jr., of Brunswick, Md.

Flora, 31, a POW for nearly six years, said he blamed the media for giving too much coverage to antiwar protests.

"Most of the news we got in prison was about the antiwar protests," added CWO Joseph Rose 3d, of Morgantown, W. Va.

When asked if they were affected by news of anti-Vietnam protests, Flora said, "I just looked at the caliber of the people in the movement—hippies, beatniks and bums—people who don't want to work."

The third POW, CWO Roger Miller, 30, of Sharon, Conn., agreed protests prolonged the war, but added, "I think a lot of those people were sincere and if they were doing it out of sincerity, fine."

The three men made their remarks at a news conference prior to leaving the hospital for a convalescent leave. Rose, 26, who married his childhood sweetheart last week, said he planned to go on a honeymoon.

He and his wife Donna, 26, also of Morgantown, were driving off in an Army sedan. Rose said he was due back at the hospital for another checkup on April 30.

Asked if he ever lost faith while in prison, Rose replied, "We were all convinced we were coming back. We always knew we would come home."

Rose said he was pleased by the welcome the men received when they returned to the United States. "It definitely made us feel welcome," he said.

The three former prisoners said they planned to stay in the Army.

When asked if they would go back to Vietnam if ordered, Rose answered, "Yes, I would volunteer." The other two men nodded in agreement.

GIANTS BEYOND FLAG AND COUNTRY

Mr. CHURCH. Mr. President, as chairman of the Multinational Corporation Subcommittee, I welcome the spurt of publications which are now appearing on the complex question of multinational corporations.

Scholars have been making forays into this question only recently. Journalists have also picked up the torch, and Congress, too, has joined in the effort.

Senator Ribicoff has chaired hearings in his Subcommittee on International Trade of the Finance Committee on the domestic economic effect of the multinational corporation. The Foreign Relations Subcommittee is, at the moment, holding a set of hearings on the ITT involvement in Chile.

These hearings will be followed by others delving into specific economic and political issues raised by the operation of multinational corporations in an increasingly interdependent world.

In this regard, I wish to bring to the attention of my colleagues an article on multinational corporations which appeared in the March 19 magazine section of the New York Times. The author, Harvey D. Shapiro, sums up several of the questions which our subcommittee intends to study in depth.

Mr. President, I ask unanimous consent that this article be inserted here in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MULTINATIONALS: GIANTS BEYOND FLAG AND COUNTRY

(By Harvey D. Shapiro)

The meeting at the Palace of Versailles last March had all the trappings of a diplomatic congress. For three days the 90-odd delegates from nine nations held closed-door meetings to discuss international monetary problems, tariffs and foreign-investment restrictions, and they concluded with a joint communiqué setting forth their views. The delegates did not represent any governments, however. The participants included David Rockefeller, chairman of Chase Manhattan Bank, J. Kenneth Jamieson, chairman of Exxon Corporation, and Giovanni Agnelli of Fiat, as well as the top executives from such giant firms as I.B.M., Caterpillar Tractor and Imperial Chemical Industries. Altogether, the 50 European and 40 American executives represented multinational corporations with assets well over \$300-billion.

Both the setting and the substance of this meeting may be a commentary on the growing importance of multinational corporations and the questions they raise about the existing system of nation-states. A multinational corporation is one which not only sells in more than one country but also obtains its raw materials and capital, and produces its goods, in several countries. Most important, it is, in some sense, managed from a global point of view.

According to recent estimates, the gross world product is valued at \$3-trillion, of which some \$450-billion, or 15 per cent, is produced by multinational corporations. This sector is growing at the rate of 10 per cent a year, faster than the economies of many nations, and Prof. Howard V. Perlmutter of the Wharton School has estimated that by 1985 some 300 giant multinational firms will produce more than half of the world's goods and services.

About 200 giant U.S.-based corporations are regarded as multinational, while some 3,600 additional American firms already have at least one foreign subsidiary. American-based firms account for nearly half of total multinational output, but many multinational corporations are based in Europe and Japan, including giants like Unilever and British Petroleum, and 500 or so smaller foreign firms have plants in the U.S.

This month the Senate Finance Subcommittee on International Trade, headed by Senator Abraham Ribicoff, is holding hearings to assess the impact of multinational corporations on the troubled American economy. Multinational firms have been accused of deepening the nation's trade deficit and participating in the currency speculations which helped produce two devaluations of the dollar. According to Burton Teague, a senior research associate at the business-sponsored Conference Board, "Many businessmen look at multinationals as a means of distributing the fruits of technology and managerial expertise throughout the globe, but

American labor views them as exporting jobs, while some less developed countries see them as a new generation of exploiters." Political leaders aren't sure what to make of them, but this much seems certain: For the first time since the clash between the emerging nations and the medieval church was settled in favor of the nation-state, a powerful and unique new international entity has emerged in the world that is raising important political, social and legal questions.

Almost everybody knows Hershey bars come from Hershey, Pa., but where do Nestlé's chocolate bars come from? Well, these days they're made in Pereira, Colombia; Tempelhof, West Germany; Cacapava, Brazil, and Fulton, N.Y., as well as dozens of other places around the world. Though many U.S. shoppers think of Nestlé's as another little American chocolate maker, the Nestlé Company of White Plains, N.Y., is actually a subsidiary of Nestlé Alimentana, S.A. The name does not evoke an image of massive, many-tentacled power like that of I.B.M. or ITT. Nonetheless, the corporation is the 29th largest in the world in terms of sales, and ranks with Unilever as the largest of the food processors.

The firm had total income of \$4.2-billion last year, of which 53 per cent came from Europe, 33 per cent from the Americas, 11 per cent from Asia and 3 per cent from Africa. At headquarters in Vevey, Switzerland, on Lake Geneva, a cosmopolitan group of Nestlé executives orchestrates the activities of the firm's hundreds of subsidiaries, which operate 300 factories, maintain 677 sales offices and employ 110,000 people in 60 countries.

Nestlé Alimentana, a direct descendant of the baby-food business launched by Henri Nestlé in 1866, is now a holding company sitting atop a mind-boggling array of subsidiary companies which it has formed or acquired. It controls two other holding companies, Unilac, Inc., of Panama and Nestlé Holdings Ltd., of Nassau, and beneath this superstructure operates dozens of companies using the Nestlé name and selling Nestlé products such as Nescafé and Nesquik cocoa all over the world. It also controls, or is allied with, dozens of other firms which don't fly the Nestlé flag, like Libby, McNeil & Libby, the giant American canner, Bachmann Bakeries of the Netherlands and the United Milk Company of Thailand. These firms sell their products under hundreds of brand names, including such popular labels as Crosse & Blackwell soups and Deer Park Mountain Spring Water.

The actual production of the firm's coffees, chocolates, baby foods, dairy products and frozen foods is highly decentralized. Cocoa, coffee beans and other raw materials are bought in local markets by individual subsidiaries, and "we vary each product according to local tastes," say Gerard J. Gogniat, chairman of Nestlé's in White Plains. Nestlé's companies make their soups thick and creamy in West Germany and thin, like bouillon, in Latin America.

While the products may be adapted locally, the recipes for marketing and operations are written in Vevey. Headquarters receives regular projections on sales and profits from the subsidiaries, along with plans on how they will achieve their goals, and the parent company takes an active part in developing marketing strategies, brand names and even packages to insure success in each market. Some 25 million foreigners visited Spain last year, and while many may have been mystified by the local food, Nestlé Alimentana made sure they could find their old friend Nescafé in a familiar package.

When new products, marketing techniques or technologies prove successful in one country, they are transmitted via the parent organization to other subsidiaries. And if a Nestlé affiliate should falter, the trouble shooters at Nestlé Products Technical Assistance Co. Ltd. (Nestec) will parachute onto the scene to straighten things out. Headquarters also keeps an eye on coffee and cocoa

markets, where Nestlé is among the world's largest customers, and it scans global political and social developments. Are there threats in Chile? New Markets opening in China? A shift to consumer goods in Eastern Europe? A bad cocoa crop in Ghana? A new taste for wine in the U.S.? From listening posts all over the world, reports flow into Vevey. Ultimately, headquarters also coordinates the massive flow of funds among the subsidiaries, lending money to some, drawing down profits from others, always keeping abreast of impending changes in currency exchange rates, and, some say, manipulating the overall flow of funds to minimize the firm's worldwide tax burden and maximize profits.

Nestlé's top executives come from several countries, but they all seem to regard nation-states more like sales territories than sacred ties of blood and history. For example, Nestlé's U.S. chairman, Gerard Gogniat, who is also a director of Libby's, is a native of Switzerland who joined Nestlé Alimentana in 1946. He moved 12 times over the next 20 years, rising through various executive positions with Nestlé affiliates in Canada, Latin America, Stamford, Conn., Vevey and Paris before coming to White Plains in 1966. This summer, the 47-year-old executive, who speaks softly—in five languages—will return to Vevey to become one of the parent company's seven top-level "general managers."

When Gogniat leaves White Plains, Nestlé president David E. Guerrant, an American, will become chief executive of the corporation while remaining chairman of Libby's. His successor as chief executive officer at Libby's was Douglas B. Wells, an American who joined Nestlé's in White Plains in 1949 and served tours of duty with Nestlé affiliates in New Zealand and South Africa before Vevey installed him as president of Libby's last July. To insure a steady crop of good Nestlé men, last fall the parent company converted an old hotel in Rive-Reine to house its International Training Center, at which Nestlé executives from around the world come to prepare for senior management roles. After a little postgraduate training there, one suspects, they go forth to sell chocolates to the world with passports stamped "Swiss" or "French" or "American," but with an outlook marked simply "Nestlé."

The rise of multinational corporations like Nestlé Alimentana is rooted in the logic of economics. Growth is the *sine qua non* of capitalism: As firms saturate their local markets, they broaden their horizons and seek new markets. Instead of expanding existing plants to supply these new markets, it is often more economical to open new factories near them and to buy raw materials in the area. When a new market is in another country, political concerns may require this choice. There are often political dangers for a product labeled "imported," as the Japanese are finding out, but tariffs and quotas on imported goods don't apply to the same goods if they are produced domestically by foreign-owned corporations. So, as the Japanese economist Chiaki Nishiyama notes, "The higher trade barriers become, the more attractive it will be for foreign capital to go into that country for investment." And once a corporation invests in another country, like a person who buys a house in a community, the firm begins an involvement that broadens its interests and its outlook. In contrast to a firm which simply ships in some goods to be sold, a company which makes a direct investment in plant and equipment in another nation becomes an employer and taxpayer, citizen and political participant. It brings in not only goods, but technology and a way of life.

The extractive industries had no choice but to invest wherever natural resources were to be found; so firms like Anaconda, Exxon, British Petroleum and United Fruit were becoming multinational in the 19th

century. Rising tariffs after World War I led many manufacturing companies abroad for the first time, but this movement was slowed by the Depression and World War II. The development of truly multinational corporations began on a broad front in the late nineteenth-early twentieth centuries. The movement was led by American corporations which saw lucrative new markets in countries rebuilding their war-torn economies, as well as opportunities to produce cheaply abroad for sale at home. U.S. overseas direct investment increased from \$11.8-billion in 1950 to \$32-billion in 1960 and \$86-billion in 1971. Two-thirds of this postwar growth was in Western Europe, and most of that was concentrated in such fast-growing, nonextractive industries as chemicals, electronics, autos and computers. The number of foreign subsidiaries of U.S. firms increased from 2,300 in 1950 to more than 8,000 in 1970, while total foreign assets controlled reached \$125-billion.

In his 1967 book "The American Challenge," J. J. Servan-Schreiber warned of an impending takeover of the European economy by American-based multinationals.* However, Servan-Schreiber sketched only part of the picture. The rise of the Common Market since 1958 has reduced European trade and investment barriers and permitted American-sized economies of scale, while government-encouraged mergers have created a number of trans-European firms that can generate surplus capital. As a result, an impressive number of European firms have been quietly expanding foreign operations recently.

In contrast to the early European investments in raw materials in colonial areas, the recent European foreign investment has been in the U.S., primarily in technologically sophisticated industries such as chemicals and synthetic fibers, as well as consumer goods. These days, the manufacturers of such "all-American" products as 20-Mule Team Borax, Bic pens, Librium, Ovaltine and even Good Humor ice cream are owned by European companies. Two devaluations of the dollar, which have made investments in the U.S. relatively less expensive, serve to accelerate the trend.

Not only are European firms pulled here by the world's largest and richest market and by the sophisticated R. and D. community, they are also being forced to become multinational by competition from American-based multinational companies. Joseph Rubin of the International accounting firm of Alexander Grant, Tansley, Witt, explains: "In order to remain competitive, European firms in multinational industries have had to obtain a foothold in the world's largest market in order to dilute their over-all costs over a greater sales base and lower their per-unit costs."

Japanese companies are also belatedly becoming multinational. Despite its success as an exporter, Japan has only \$4.5-billion in overseas direct investments, mainly in raw materials in nearby, less-developed countries. Now that the Japanese Government has eased its stiff controls on the export of capital, however, foreign investment is likely to rise to \$10-billion by 1977. Some of this will flow to the U.S., but a significant amount is being directed toward Europe, where Japan's mushrooming export sales totaled \$1.6-billion last year and where the kind of protectionist rumblings that have endangered her American markets are beginning to be heard.

*"The American Challenge" was fore-shadowed by Fred McKenzie's "The American Invaders," which warned: "The most serious aspect of the American industrial invasion lies in the fact that these newcomers have acquired control of every new industry created during the past 15 years." McKenzie's book was a best seller when it was published in London in 1902.

Dr. Peter Gabriel, the new dean of Boston University's College of Business Administration, predicts: "The L.D.C.'s [less developed countries] and the Eastern bloc [the Soviet Union, China and Eastern Europe] represent the biggest single growth area for multinational corporations in the remainder of this century." Gabriel, a former partner in McKinsey & Co., an international consulting firm, argues, "The needs of the Third World and the Eastern bloc countries for the resources and capabilities the multinationals possess are almost infinite, but the multinational involvement will be very different from that in the West."

Rising nationalism in the former colonial areas has fostered a suspicion of any new exploitation. Billions of dollars of investments have been expropriated in such countries as Algeria, Argentina, Indonesia and, most recently, Chile. The oil-producing nations have been demanding not only a larger share of profits, but of ownership as well. And in 1970, the Andean Common Market countries stipulated that foreign companies had to turn over ownership of their operations to local control within 15 to 20 years.

"The era of the multinational corporation as a traditional direct investor in the L.D.C.'s is coming to an end," Gabriel says. Instead, firms which once sought 100 per cent ownership of foreign subsidiaries are becoming more flexible. For example, du Pont and American Cyanamid have accepted minority interests in Mexican ventures. Gabriel sees the management contract, in which firms "invest" their skills instead of their money, as an even more likely model for the future. T.W.A. has managed Ethiopian Airlines since World War II, for example, while Goodyear has agreed to operate two state-owned tire companies in Indonesia for a fee based on sales and profits.

Multinationals don't have any opportunities to acquire ownership interests in Eastern bloc countries, except for Rumania and Yugoslavia, but Dr. Gabriel argues these countries will increasingly seek management contracts with multinational firms to obtain the technology, managerial skills and capital they need to compete in the growing East-West trade. These days, a variety of firms have management contracts with the Soviet Union, among them Fiat, which built the Togliatti auto factory in Russia for a reported \$50-million, as well as International Harvester and Renault, which have similar arrangements in Eastern Europe.

Some Eastern bloc countries are even developing their own state-owned multinational enterprises. The Soviet Union has a group of eight banks in Western Europe. In a joint venture with Belgian interests called Society Scaldia-Volga, the Russians have opened a small plant near Brussels where Volgas and Moskvitches are assembled largely for the Belgian market. Meanwhile, in October several oil-rich sheikdoms began talking about "downstream" investments in refineries or even gas stations; perhaps Europeans will soon be filling up with Faisal Supreme or Saudi Ethyl.

Whether as owners or managers, as senior or junior partners, multinational enterprises seem destined to continue expanding their role. Only such giants, or major governments, can now afford to develop new technologies and new products. Few institutions in the world, public or private, for example, could have mustered the \$5-billion I.B.M. spent to develop its 360 series of computers. Moreover, as multinational firms operate in more and more markets, Joseph Rubin points out, firms in one country must either acquire, or be acquired by, competitors in other nations, just as local and regional industries in the U.S. gradually were consolidated into a nationwide economy earlier in this century.

Earlier this year Carl A. Gerstacker, chairman of Dow Chemical, told the White House

Conference on the Industrial World Ahead, "We appear to be moving in the direction of what will not really be multinational or international companies as we know them today, but what we might call 'anational' companies—companies without any nationality, belonging to all nationalities." European firms are leading the way in this. S.K.F., a Swedish ballbearing manufacturer changed its "official language" on all memos and even conversations in its headquarters from Swedish to English, the *lingua franca* of multinational business. Royal Dutch-Shell and Unilever operate companies which, in each case, are controlled by a pair of holding companies, one based in England and the other in the Netherlands; their executives and employees are even more polyglot than their shareholders. Most American-based multinationals still tend to do 70 per cent of their business at home, but a few American firms are also submerging their nationalities. More and more firms are staffing overseas subsidiaries with local citizens, and foreigners have become executives and directors of such corporations as I.B.M., H. J. Heinz and Xerox; in addition, shares of G.E., du Pont, Ford, Kodak and Goodyear are sold on stock exchanges in Paris, Amsterdam, Brussels, and Frankfurt or Düsseldorf.

Paralleling the rise of more "anational" firms, the world's major banks have divided themselves into multinational consortia. The largest, Orion Bank Ltd., was founded in October, 1970, by Chase Manhattan, Royal Bank of Canada, Britain's National Westminster Bank, Westdeutsche Landesbank Girozentrale, Credito Italiano and Mitsubishi Bank. Orion is represented in more than 100 countries and headquartered in London, but it has no real "nationality."

Instantaneous global communications, the computer and the rise of professionally trained managers have made control of these far-flung enterprises feasible, though managerial styles vary from tightly controlled empires to loose confederations. When the Cummins Engine Company of Columbus, Ind., launched Kirloskar-Cummins Ltd. as a joint venture in India a decade ago, Cummins vice president George Thurston recalls, "All the machinery we brought in was based on the concept of a man standing at a machine while doing his work. But we learned the Indian is much more content if he can squat, so we had to re-engineer the machinery and lower the controls so a guy could work squatting." Like many multinationals, Cummins has adopted Nestlé's approach of defining goals but leaving local managers some discretion in how to achieve them. However, the multinational headquarters almost always reserves for itself the tasks of long-range planning, research and development, and finance.

Because they introduce advanced technology and management on a large scale, the corporations have been telescoping the process of development in many countries. In the Third World, Nestlé is teaching new agricultural methods to its suppliers and new child-rearing and health-care practices to mothers to whom it hopes to sell baby food and dairy products. Ultimately, multinational companies "may be a more effective device than foreign trade in improving the standard of living in the L.D.C.'s," says Charles P. Kindleberger, professor of economics at M.I.T. He explains, "You didn't get an equalized standard of living and wage scale in the U.S. until capital moved out through the country, and national companies helped do this, though the populists hated these companies, especially the chain stores." Although multinational firms may move to an area because of its low wages, the firm's payroll may increase local income dramatically. When Cummins opened its Poonja, India, plant, George Thurston recalls, "We used to have three buses to pick

up the workers. Now our biggest problem is parking space for their cars and bicycles. People have reached that economic level."

A free flow of goods, investments and technology may heighten worldwide productivity and economic efficiency in the long run, but such free movements could also lead to instability and painful dislocations. Higher living standards, moreover, require new styles of living. For instance, when Sears helped introduce mass merchandising in Mexico, its retail stores provided more varied goods and created new jobs and industries to supply the stores. But these stores, with their impersonal cash-and-carry operations, also replaced the social life that surrounded local markets. Thus, multinational corporations hasten and exacerbate the social changes that accompany development, and sometimes sow tensions which lead to their own expropriation.

While Third World nations would like to acquire the managerial expertise, capital markets and research facilities that come along with multinational headquarters, they are more likely—with their uneducated labor force, low wages and uncluttered land—to attract chemical plants, oil refineries and sprawling, messy, labor-intensive industries. This is particularly so, says Dr. John Hackett, executive vice president at Cummins Engine Company, because "countries like Brazil aren't nearly as concerned about ecology as the U.S. and Japan." Thus, as pollution legislation grows more stringent in the developed countries, multinational corporations are likely to tempt the less-developed nations with incomes approaching New York or Chicago—at the cost of looking and smelling like northern New Jersey or South Chicago.

Trade unions in the industrialized nations are, of course, concerned that the movement of plants to other countries will mean loss of jobs. However, American labor's claim that multinationals "export jobs" from the U.S. is challenged by Prof. Robert B. Stobaugh in a study financed by the U.S. Department of Commerce. Stobaugh and his associates at the Harvard Business School examined nine major overseas investment and concluded they created more jobs for U.S. workers than they eliminated; if these investments hadn't been made, the study asserted, America would have lost 600,000 jobs, since the firms would have been unable to compete successfully. However, the study noted that these investments tended to "displace" production workers, while increasing managerial, research and service jobs.

Union leaders also worry that multinational companies can undermine collective bargaining by threatening to move rather than meet union demands. Henry Ford II, for example, told Prime Minister Edward Heath in 1971 that if striking workers at Ford's Dagenham, England, plant weren't tamed, the company might abandon the factory.

"International bargaining doesn't exist anywhere and I don't see how it can," says Gus Tyler, assistant president of the International Ladies Garment Workers. Garment workers making \$3 an hour in the U.S. and 16 cents an hour on Taiwan have little common ground for negotiating with an employer, Tyler says, so to help stanch the flow of jobs abroad American labor is relying for the present on legislation. The A.F.L.-C.I.O. supports the Burke-Hartke bill, which seeks to tighten controls on foreign investment and restrict imports. "In the long run," Tyler admits, "we have to hope wage levels elsewhere will come up."

Perhaps they will, for in an economy dominated by multinational companies, all roads are supposed to lead to equilibrium. In theory, industry would gradually be moved from high-rent, cluttered areas to cheap, vacant land, thus evening out global land use, and global wages, interest and prices would all tend to become more equal. However, the uniformity resulting from thus tying together various national economies is a double-edged sword. Multinationals are making the

world's business procedures, measures and standards more uniform, as goods are being made and used in widely varied settings. But they are also fostering a growing sameness in the world's major cities. "It's sad, but work habits are going to become the same everywhere," says Giorgio Della Seta, a vice president of the Pirelli Tire Corporation, who bemoans the decline of the long Italian lunch break. All the typewriters and radios and toys and underwear in the world sometimes seem to be made in the same Hong Kong factory. An effective marketing program demands that all British Petroleum stations look pretty much alike. McDonald's golden arches will soon be everywhere. And a Hilton is a Hilton is a Hilton.

This growing sameness applies to people as well. Professor Kindleberger sees multinationals as creating a new cadre of international managers who will be committed to the aggrandizement of their firms and to their own salaries and stock options, but to little else. Like the mobile American executives who shuttle among the bedroom suburbs outside U.S. industrial centers, these international managers will be efficient and useful to be sure, but bland and interchangeable as well. They will be the merchants in the Global Village they're helping to create. They will, that is, unless they are checked by political forces.

The sovereignty of the state requires that it be responsible for all that occurs within its borders. But the multinational corporation requires a free flow of capital, goods, and labor as if there were no borders. Which is to govern: the law of the land or the law of supply and demand? Prof. Raymond Vernon, the director of Harvard's Center for International Affairs, argues this "asymmetry" between multinational corporations and nations can be tolerated only up to a point; the threat, as he sees it, is reflected in the title of his recent book about multinationals, "Sovereignty at Bay."

Business spokesmen often deny there is any conflict. Burton Teague of the Conference Board says, "I'm not convinced by any means that the multinational corporations are exercising political power. They make their decisions on the basis of hard, cold business facts." True enough. The treasurers of many multinational firms acted like textbook examples of profit-maximizing managers when they began speculating in currencies in 1971. By all accounts, their movement out of dollars helped set off the worldwide monetary crisis that became a political issue in several countries and led to the first devaluation of the dollar and the revaluation of the yen. They also are said to have joined in the speculation that led to the second devaluation, though it is impossible to say which of the various types of currency speculators was most responsible for our recent troubles. Whatever their monetary role, it is clear that multinational corporations have economic power, and economic power is political power.

Multinational companies might have caused fewer problems in a 19th-century night-watchman state concerned only with maintaining order, but modern governments have assumed the obligation of managing the economy and promoting the general welfare. "How can a national government operate a domestic financial and economic policy when it can't control the decisions of all the factors within the economy?" George Ball, a senior partner at Lehman Brothers and a former Under Secretary of State, asks. In a democratic society, the government manipulates the environment in which economic decisions are made. But multinational companies inhabit a different environment. A central bank may raise interest rates to slow inflation, but a multinational corporation may borrow funds in a low-interest country. The Canadian Government may attempt to change its unemployment rate, but the nearly 50 per cent of Canada's manufacturing and

mining companies controlled by U.S. firms may determine their hiring policies in response to American rather than Canadian economic policies. The U.S. seeks to maintain its military superiority on the basis of its sophisticated weaponry, yet companies like G.E. that build those weapons want to export their military technology through their subsidiaries in other nations.

One alternative is for a nation to lock the door on movements of capital and goods. By taking such a step, however, a country risks falling behind in economic and technological progress in the rest of the world. Despite General de Gaulle's opposition to the American challenge, the French Government found it had to permit G.E. to take over troubled Machines Bull, the principal French computer company. (Honeywell recently acquired it from G.E.) Although the auto industry is often a matter of national pride, France permitted Chrysler to acquire a 77 per cent interest in Simca. After U. S. investment was restricted by France in 1963, U.S. companies set up shop in other Common Market countries, ultimately forcing the Pompidou government to relax the restrictions in order to share in the jobs and income gained by its neighbors.

Whatever their benefits, though, multinational corporations cannot simply be left to their own devices. What's good for General Motors is not always good for the U.S., and even when it is, it may not also be good for the people of Norway, Brazil or other countries. Under chairman Harold Geneen, ITT has become a model of efficiency and "good management," but it has been accused of manipulating governments for its own purposes from Santiago to San Diego. The important decisions about the world's resources cannot be left solely to the profit-maximizing managers of multinational corporations because their calculations leave out the social costs of their actions. They won't pay for cleaning up their pollution or supporting their discarded workers unless someone makes them. The 19th-century experience with *laissez faire* economics demonstrated that there must be a social and legal framework to insure that corporations ultimately serve the public interest.

But multinational corporations have shaken off the traditional sources of countervailing power. They've outgrown trade unions, consumer groups, local and state governments. Currently, multinational corporations are responsible to both their home country and their host countries, and the jurisdictions are sometimes overlapping but often absent. The host governments' fear of losing the benefits of multinational operations leaves the companies with sufficient bargaining power to forestall regulation in many areas.

The traditional, good liberal, common-sense solution is clear: Global corporations should be responsible to a global regulatory authority. Despite the United Nations' impotence, many still call for a multinational solution. George Ball, for example, proposes a treaty creating a supernatural regulatory authority to charter multinational corporations and specify their rights and obligations, while also standardizing host government regulations and taxes. Such a treaty would begin with the developed nations—"The less-developed countries are too concerned with their nationalism right now," Ball says—and, like the International Monetary Fund or the General Agreement on Tariffs and Trade, it would gain signatories over time.

However, even if the dislocations caused by multinational companies were to be regulated by international agreement and cushioned by some form of financial assistance, many nations might still be reluctant to shift part of their economic fate out of their own hands. The less-developed countries may lead rather than follow the industrialized nations in dealing with multinationals, for the

Third World is demonstrating that it can obtain many of the benefits multinational firms offer while retaining national control of its economy. Dr. Gabriel of Boston University foresees a growth in "bilateral relationships" in which corporations and governments will bargain over new and existing investments one by one. "Such a situation would resemble nothing so much as true capitalists in a free market, each seeking his own self-interest," he says. The result would be an untidy and uneven process, as corporations sought outlets for their capital and products and nations looked for corporations to fulfill their plans for national development. When those national aspirations didn't accord with the multinationals' plans—if India wants a steel industry or Norway wants fishermen—then the nation might create *ad hoc* or permanent subsidies and penalties to change the economic landscape and persuade the multinational corporation to do its bidding.

Economic rationality demands that a nation be what it is best equipped to be, but politics holds the promise of being what a nation wants to be. There need not be a conflict, of course, but the nations of managers and researchers and financiers are more likely to accept their lot than those who seem destined to be the world's factory workers and hewers of wood and haulers of water. They may not maximize global economic efficiency that way, but as Professor Kindleberger says: "The political solution to the question of multinational corporations depends on what it is that people want to maximize."

CORPS OF ENGINEERS HARBOR INSPECTORS

Mr. JAVITS. Mr. President, as a result of the request of one of my constituents, whom I wish to commend for his dedication and suggestion, I share with my colleagues the result of his suggestion which will benefit all civilian Corps of Engineers harbor inspectors.

Mr. Edward Canfora, an inspector with the U.S. Army Corps of Engineers, Harbor Supervision and Compliance Section, New York City, made the suggestion to me that corps harbor inspectors be afforded the same status as certain other Federal employees who are protected against acts of intimidation and violence under the provisions of sections 111 and 1114 of title 18 of the United States Code, while performing their duties.

The major duties of Corps of Engineers Harbor Inspectors are to inspect activities and circumstances in navigable waters or which may affect navigable waters, and to insure compliance with the provisions of Federal laws governing navigable waters. He inspects the disposal of refuse and the status of wrecks and abandoned vessels as well as the construction of piers, bulkheads, pilings, breakwaters, and other structures. He is further charged with the duty of identifying violations of Federal navigation laws, report such violations and direct the persons violating such laws to desist in their unlawful activities. These inspectors are threatened and even assaulted as they perform their duties.

As a result of Mr. Canfora's request, I contacted the Office of the Chief of Engineers, and, with their permission, I ask unanimous consent that the complete text of the response be printed in the RECORD.

There being no objection, the text of

the response was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D.C., Mar. 23, 1973.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: Thank you for your letter of March 6, 1973 in which you inclosed a request to you from Mr. Edward Canfora that Corps harbor inspectors be afforded the same status as certain other Federal employees who are protected against acts of intimidation and violence under the provisions of Sections 111 and 1114 of Title 18 of the United States Code.

I believe that all Corps employees who perform investigative and law enforcement functions and are exposed to possible acts of violence should be afforded the protection which Mr. Canfora requests. These Corps employees should include all of those who are charged with the responsibility of enforcing Corps recreation regulations under the authority of Section 234 of the Flood Control Act of 1970 (Public Law 91-611) as well as all of the Corps employees who are charged with investigation and enforcement concerning the various Corps regulatory responsibilities over navigable waters.

I have directed my staff to gather the necessary background material and prepare a comprehensive legislative proposal to accomplish this purpose for consideration by the Executive and the Congress during the 93d Congress.

I have inclosed an explanation of the major duties of Corps harbor inspectors as you requested. I do not, however, suggest their inclusion within the protective provisions of Title 18 as a separate segment of Corps employees engaged in enforcement activities since harbor inspectors will be included in the aforementioned comprehensive legislative proposal together with all other Corps employees who are similarly situated as to their exposure to possible acts of violence.

Sincerely yours,

F. J. CLARKE,
Lieutenant General, USA Chief of Engineers.

THE INFLATION BLUES

Mr. ALLEN. Mr. President, inflation is a scourge. It must be controlled by whatever means are necessary. The average citizen is not content to sit idly by and twiddle his thumbs while economists debate and Congress flounders.

We have seen evidence of buyers resistance. But those who can bring pressure to bear by this device are among the fortunate. Consider the aged. Consider the social security beneficiary who lives on a fixed income and has long since been compelled to scrimp and scrounge merely to keep a roof over his head, clothes on his back, and food on his table.

Of all those who are innocent victims of inflation, and there are few who escape its effects, no group of citizens is hurt more than the aged. They have no intention of fighting inflation in a rocking chair. They are speaking out and preparing for battle. It would be wise to lend an attentive ear.

Mr. President, my good friend, Rubin Morris Hanan, president of the Alabama League of Aging Citizens, sent me a copy of a letter to President Nixon and enclosed a copy of verse which is making the rounds in his organization. The verse is entitled "The Inflation Blues." Mr. President, I ask unanimous consent that

the letter and verse be printed in the RECORD.

Mr. President, "The Inflation Blues" is not a candidate for anybody's anthology of great verse, nor was it intended to be. Yet, the sentiments expressed are universal and socially significant. Who among us will read these lines and fail to hear the plaintive cry which characterized similar verse originating in the bleak depression days of the 1930's. The causes of deprivations of those days are different from those of today but the results are the same and the needs are the same for our senior citizens.

There being no objection, the letter and verse were ordered to be printed in the RECORD, as follows:

ALABAMA LEAGUE OF
AGING CITIZENS, INC.,

Montgomery, Ala., March 8, 1973.

President RICHARD M. NIXON,
White House,
Washington, D.C.

DEAR MR. PRESIDENT: If you will permit me to say, in behalf of our Senior Citizens, and as state chairman for Senior Citizens Committee for Nixon in your last campaign, that unprecedented inflation has swept our own nation. The situation is awful and is growing progressively worse.

Man's ancient desire to live longer is at last being realized. Life expectancy in America has risen to 72 years.

We find our Senior Citizens, recently reduced in spirit by the smoldering fire of inflation and neglect, is once again rising in renewed pride and splendor. They are again endeavoring to assume their rightful place in society, if given an opportunity, but they must survive with dignity to assume such a responsibility.

This can be possible only through price control to safeguard the meager Social Security Pension, with no other income.

Also enclosed is a copy of "The Inflation Blues" which vividly expresses the problems and tribulations that confront our Senior Citizens today.

Respectfully yours,

RUBIN MORRIS HANAN,
President, Alabama's League of Aging
Citizens, Inc.

THE INFLATION BLUES

I've got the blues that I can't lose,
And I do mean inflation.
I'm out of luck when just a buck
Buys nothing in our nation.
Now when do we eat, not greens or white
meat,

At seventy-five cents by the pound—
Not black-eyed peas, for a helping of these
Costs more than I've got, I have found.

Social Security I get, but you can bet,
With utilities and rent,
Though hard I try I just can't get by
On what has to be spent.

Chorus:
Oh, dollar, my poor dollar, inflation's got
me beat—

Never seems to be anything left so I can
eat.

So step right up, Mr. President, and we will
ever praise

What you can do to help us through in our
old-age days.

Verses:

I never go to see a show
Unless it is for free,
Got no TV or Radio,

So it's solitaire for me.

Once I was able to put on the table
Maybe sirloin steak or roast duck,

But now you can see it's oatmeal for me—
But what can you do for a buck?

Because of inflation our sad situation
Is one only you can mend.

To get us all through we're appealing to you
As the One on whom we depend.
So for our sake we hope you will make
A dollar worth one hundred cents,
That peace we may find in body and mind,
And not at our expense!

THE MEAT BOYCOTT AND THE FARM FAMILY

Mr. METCALF. Mr. President, as the week of the meat boycott begins, I believe attention should be called to a most relevant letter from a Montana constituent addressed to President Nixon. However, it should be read by all who are concerned about food prices.

This poignant lament for the passing of the family farm points up a loss to our country way of life that has contributed to every phase of American life including cheaper food prices. So remember when the boycott hits Oppenheimer and the tax-loss farmers, they will just take it out of their income taxes. The family farmers, who for the first time have seen a chance to make a long deferred payment on the mortgage, may have to give up finally and leave their fields to the corporations.

Mr. President, I ask unanimous consent that the letter to which I have referred be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 26, 1973.

To President Nixon: (and to all the secretaries that screen the tons of mail: please pass this one on to the President, please don't reduce this, please have patience with my lack of eloquence, and read on):

I see a problem coming. Some of the symptoms of the problem are the cost of beef, the cost of oranges, the cost of other food products. Not only is this problem very apparent to the lower class, but also to the middle class and now the middle-upper as well. That is a lot of people, a majority even.

You are more aware of the problem than I am, I hope.

The cause I see on a very humble scale here in Montana, yet I am positive it occurs throughout the entire nation on that same humble scale. But when the ruler is read in sixteenths of an inch, it measures out in miles.

The small farmer is becoming extinct. J. D. Salinger's "salt of the earth" is pouring into the cities and becoming salt no more. It is happening in this generation, it is happening now.

The breed of men who can take an old machine, within the budget of the farm that is, who will grease it, add a bolt, a piece of haywire, a little welding, perhaps grind the valves, put in rings, inserts and coax that machine into harvesting just one more crop, one more economically produced crop, are about gone; that same breed of men who will wake up three or four times in a night, night after night, to change irrigating water or deliver a calf or sheep into the world; the same type of men who will build, plumb and wire his own house, barn, chicken coop, pigpen, lambing shed, fix his own fence, tend his own land. They are all departing.

Their departure is a sign of a famine to come.

What is their replacement?

The large corporate farmer or rancher buys a lot of land, lives in the city, and hires it done. But it doesn't get done. Here is why:

The foreman sees the old machine going, perhaps even the other hired men. Who

cares? Why should they? It isn't their machine. "Let Mr. Bossman buy a new one. He has the money. Why should we mess with the old, make more work for ourselves. What is there to gain? The salaries are set. What he doesn't know won't hurt him." The mechanic who works on a sales commission will tell him it is beyond repair anyway. The boss buys a new one.

The result is sky-rocketing food costs. So many dollars spent to produce a certain quantity of food.

The same thing goes for beef. Why get up at midnight, check the cows or change the water. Let the cow in birth die. Let the ditches wash out, the grain snow under or rattle loose overripe in the wind, the hay dry out so there is nothing left but straws.

The boss is so busy in the city playing profit and loss. Well, who cares anyway. Besides, the Johnny Carson show is in color and its thirty below outside and the house is warm.

When it is time to harvest the hay and the sickle bar rattles from loose teeth in the mower, let the boss see it, hear it. He will think it's broken, he knows no better. The teeth can be tightened, but instead he will think it is time to trade off the five hundred dollar mower for a five thousand dollar swather. The boss likes the idea anyway. A swather is a status symbol among his neighbors, makes him feel big as he brags at the bar. Now the hundred ton of hay has \$5,000 divided into its cost not to mention labor. Hay and cows sell for more and more each year, cows need hay to make the winter.

The small old-time farmer made the mower go, still does. He budgets.

Along comes, pardon the expression, Dude. He doesn't know the difference between a combine and a thrashing machine; between a backwards calf and a forwards one. The cow dies, the calf dies, trying to turn the backward calf out of the womb. He asks the veterinarian why. The vet shakes his head, shrugs his shoulders and says: "Better call me next time when you are calving. Backwards calf." Vet bill added to loss of cows and calves. Added to cost of beef.

The old breed, which my father and myself and many others are, would have been up at 3 a.m., would have by ourselves gone in against the pressure of the womb up to our shoulders inside the cow, got a hold of the calf's front legs, turned the calf around and pulled it out all in rhythm with the contractions of the cow. By 4 a.m. we would be mothering up the calf, holding his wobbly head under the udder and with a teat in its mouth, be moving the calf's jaws teaching it to suck, while the cow moored on in approval; and not like the dudes the next morning hooking a chain around the dead cow's leg and dragging it off somewhere with their new tractor to rot and fill the air with waste.

Consequently, the dude heads on a collision course with bankruptcy. If it (the farm isn't just a tax dodge to him) doesn't pay off, he has two choices: sell the whole chunk of land at a higher price than he paid for it to land speculators or another dude. Or subdivide. He likes living on the land and playing the part even though he plays the part poorly. So he decides to subdivide. Maybe he starts with a section or two of land. His figuring goes: "Well, I'll sell forty acres in increments of ten acre lots at a thousand an acre." He puts it on the market and to his amazement it sells. Then he again has money. "Oh boy!" Time to buy a new car, new combine, swather, tractor and even hire a man to run them, and in not too long of a time, he is once again on that same collision course with bankruptcy. Better subdivide again; it will be easier this time because the road is now decent and people have moved in. A community has started, call it the Sunrise Community. Put up a big sign that says "come and join us, acreage for sale." They do and they do and they do.

On a small scale this seems all very fine. But, back your way up and look at it. Get your people to subtract all the ten acre, five acre tracts alone (not even the forty acre ones) sold this year alone, and subtract it from the amount of total useable land. It will give you a headache.

Perhaps one could argue that the land is still useable although it is subdivided. What use is made of ten acre tracts. It is a place to have the kids run around in. We don't eat kids. It is a place to build a house. We don't eat houses. It is a place to have a horse or two or three; have to buy hay then, but that doesn't matter. Just raises the cost of beef is all; raising the cost of hay, subtracting the fields to grow it in. We don't eat horses yet, although a few people are considering it. In Korea and Viet Nam, they eat dogs, horses, cats and rats. Where are we going to?

My wife, four year old son and myself took a vacation this last winter. We drove from Livingston, Montana to Albuquerque, New Mexico to Los Angeles. As we drove along, we played a game. One of us would pick horses to count, another sheep, and the first one to ten counting in groups won. Near any large metropolitan area from fifteen thousand up, you could see horses, horses, and more horses. To find cows you had to drive a long ways. Denver, Colorado is an example. We drove over sixty miles south and beyond Denver proper to count one cow. I remember well as I had cows. Sheep were even less frequent and horses almost always won no matter where we went.

Direct result of multiple subdivision. In California, orange groves I had seen on an earlier visit are now housing projects, industrial sites or buried by freeways.

It is time to reconnoiter.

I have stated a problem.

I have stated a cause.

I wish I could give something more than an abstract solution. Maybe freeze the sale of land. Let the subdivision occur only in places where it is already surveyed down to ten acre plots. There are a lot of lots on ten acres.

Somehow get the old farmers to hold on. Make it financially possible for the farmers' sons to carry on. We are the only ones who can produce economical food. If the teachers of agriculture were so good they would still be farming, not teaching. Don't have us, the farmers' sons, forced into the city because we cannot afford the cost of a farm. We are not happy at other guilds, other jobs. Some are; let them go.

What good is a color T.V. . . . two cars and tons upon tons of gadgetry if there is a food shortage?

The land goes under, rich fertile river bottom land, for utility dams. What good is electricity without food? The utilities hold a strong lobby. They gain more strength by threatening shortage. The land goes under in many ways and it makes me sad and makes me afraid.

Perhaps if people were made aware of the growing shortage of useable land they would hold off, but perhaps it would only make a rush on the bank, the bank of land which provides our food.

In Russia I read that they are finding out that the big communal farms don't work. The fertile Ukraine, bread basket of the world, is not fertile when a man cannot own his own land. They are buying our wheat now. I hear they are giving the land back to the farms. Their farmers will produce under democracy. In ten years or less we will be buying their wheat.

The big corporate farms in our country will always be an uneconomical way to grow food as they were in Russia. The big corporate farm is the place where the subdividing should be taking place but not on a ten acre basis, but rather of a size and proportion a farm family might live on. If it is a tax loss they shouldn't mind just giving it to

you, but they won't. Tax loss ... tax dodge ... I just don't know.

Farming on a small scale, small budget is a highly learned and skilled trade. It incorporates the knowledge of carpentry, plumbing, electrical work, budgeting, mechanical knowhow and veterinary skills. It takes a sense of timing one can only acquire by the doing. When to plant, when to irrigate, mow, plow, and harvest, when the calf and lamb gelt is due.

You are a wise man, have wise men at your counsel.

Farmers, farmers' sons are wise men also. We have a gift, a talent, a knowledge. I am not alone in this knowledge. Many, many young strong men know what I know. We were born into and trained for eighteen years at least. We go to the cities, farmers' sons, and are as fools here. With hands as strong as a wrench, we wither away in the bars and businesses.

What an incredible waste of natural resource; knowledge slipped away that will be gone forever, unless ...

I am completely helpless to change any of this. I hope and pray you are not.

If I can be of any help, I am at your disposal.

Respectfully yours,

EARL MARTIN.

THE FIRST UNDERSTANDING OF THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, during the protracted and intensive efforts to ratify the Genocide Convention, careful attention has been paid to certain sections which have been criticized by opponents of the convention. The results of this careful attention have been four understandings recommended by the Committee on Foreign Relations which could clear up any alleged ambiguities in the language of the convention.

The first understanding deals with the definition of genocide in article II of the convention as any of certain acts "committed with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such. * * * While the Committee on Foreign Relations explicitly stated that it "had no particular problem with the meaning of these words," it recommended an understanding which stipulated that the acts of article II were performed "in such a manner as to effect a substantial part of the group concerned."

This first understanding emphasizes the importance of the word "intent" in article II. The committee noted that "basic to any charge of genocide must be the intent to destroy an entire group because of the fact that it is a certain * * * group, in such a manner as to affect a substantial part of the group." There is no genocide unless intent to destroy the group as a group is proven. Thus, such actions as school busing, birth control clinics, lynchings, police actions with respect to the Black Panthers, and the incidents at My Lai, do not constitute genocide under the terms of the convention, contrary to what opponents of the convention would have us believe.

The convention requires an intent to destroy a group as such, and if that intent is not present, the killing of isolated individuals cannot be construed as falling within the purview of the Genocide Convention.

Mr. President, we should ratify the convention without delay, in order to

reaffirm this Nation's commitment to the principles of international law and justice.

EFFECT OF BUDGET REDUCTIONS ON SOCIAL WORK EDUCATION AT THE UNIVERSITY OF MISSOURI

Mr. EAGLETON. Mr. President, the administration has announced its intention to phase out during fiscal 1974 those training programs for social workers and vocational rehabilitation and aging specialists administered by the Social and Rehabilitation Service in the Department of Health, Education, and Welfare.

The President's budget requests funds only for continuation grants to those currently receiving assistance. No new awards are to be made.

Severe reductions are also being proposed in training programs administered by the National Institute of Mental Health.

These budget reductions are part of a general policy decision on the part of the administration to eliminate support for specialized training in a number of professional disciplines on the theory that adequate support will be available through general student aid programs.

Mr. President, I ask unanimous consent that there be printed at the conclusion of my remarks a letter I have received from Dr. J. F. X. Paiva which describes the effect that the elimination of Federal support would have on the program of the School of Social Work at the University of Missouri-Columbia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF MISSOURI-COLUMBIA,
Columbia, Mo., March 13, 1973.

HON. THOMAS EAGLETON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR EAGLETON: As someone who is deeply interested in and committed to the meeting of human needs within the State of Missouri and the nation, you must be quite distressed over the unanticipated cuts in federal funds directed to these purposes. Programs of service delivery and training of professionals and paraprofessionals in many disciplines concerned with human resources may be greatly reduced and in some instances eliminated. While no one will disagree with the need to have a continuing research and evaluation component related to program funding to insure the best possible use of resources, the arbitrary discontinuance or reduction of programs on a purely fiscal basis seems illogical.

The School of Social Work at the University of Missouri-Columbia is the only public institution in this state which educates professional social workers at the Master's level. Graduates from the program have traditionally assumed leadership roles in many of the state's public and private organizations and institutions concerned with social welfare. Our undergraduate majors in social work are increasingly filling positions of direct service delivery. The rise of interest in social work as a career as demonstrated by choice of a major among college undergraduates has increased 100% in the past two years at this institution. Manpower studies indicate an ever-increasing need for such personnel at all educational levels.

A large number of our students have only been able to receive their education through the provision of federal funds in the form

of training grants which support traineeships and faculty. We have very recently been informed that these grants will all be terminated either on June 30, 1973 or at the completion of the project period—in most instances by June 30, 1974. Funds for the training grants come from either Social and Rehabilitation Services or the National Institute of Mental Health. The effects of the withdrawal of these funds on the education of professional social work personnel, manpower supply, state public and private social welfare institutions and the residents of the State of Missouri is almost impossible to estimate.

In order to provide you with some facts about the anticipated effects of the funding cuts on the program of the School of Social Work at the University of Missouri-Columbia, two enclosures have been made: 1) a copy of a letter to the Region VII Office of HEW concerning the immediate impact of the projected budget cut of the SRS-Training Grant for the period of 7/1/73 to 6/30/74 and 2) a fact sheet developed to outline the progressive loss of traineeships and faculty support from both SRS and NIMH if current plans are realized.

It is hoped that these materials will be of maximum use to you in your efforts to restore and improve funding for the human services programs. If we can be of help in providing any additional information, please contact us immediately. We would appreciate you keeping in touch with us on the situation as it is appropriate.

Very truly yours,

J. F. X. PAIVA, Ph. D.,

Director.

UNIVERSITY OF MISSOURI-COLUMBIA,
Columbia, Mo., February 8, 1973.

Mr. RALPH ROGERS,
Regional Manpower Development & Training
Specialist, Department of Health, Education
and Welfare, Federal Building,
Region VII, Kansas City, Mo.

DEAR MR. ROGERS: This is in response to our telephone conversation of February 5, 1973, at which time you advised us of the decision to provide no new stipends and to commensurately reduce faculty support under Section 426 of our Social and Rehabilitation Services Social Work Training Grant. We feel that it is of urgent importance to apprise you of the anticipated effects of such an action on the program of the School of Social Work at the University of Missouri-Columbia.

The School of Social Work at the University of Missouri-Columbia has for a period of years taken the leadership role in social work education in the State for meeting the manpower needs for the development of human resources and for the development of professional educational programs in both public and private educational institutions.

In the new grant proposal which we developed last year, we indicated the fact that the School has developed a new curriculum which is to be implemented in the fall of 1973. The thrust of this effort is to educate students to have a beginning professional competence at the bachelor's level, and for assumption of leadership roles in social welfare at the master's level. Part of the data upon which this plan was developed came from the Department of Health, Education and Welfare and its projection of manpower needs. In accord with the priorities established concerning the need for bachelor level personnel shared with us by your staff last February, we took considerable effort to strengthen that aspect of our program. This can easily be seen by our reallocations of stipend money received to provide for additional undergraduate faculty and student support.

In an effort to meet the mission of the University in providing educational leadership to the State, a great deal of consultation has been given by the School of Social Work to a number of State and private

schools in developing their social work programs. A series of negotiations have taken place in an effort to develop a consortium arrangement between the University School of Social Work and other geographically related schools which would capitalize on the strengths of each and conserve resources of all at the same time. Of particular importance has been the work with Lincoln University which has a large group of minority students who currently have no social work program and are highly desirous of entering this career which could be possible through a consortium plan.

If the reduction of resources which you indicated to me take place it will mean: (1) a loss of vitally needed student support and an immediate effect on the manpower supply of both bachelors and masters degree professionally educated social work personnel; (2) a loss of faculty support which will hinder the implementation of a new curriculum geared toward a generalist practitioner skilled in developing local community resources by and for its citizens and helping established institutions become more responsive to changing needs; (3) reduce the capacity of the University to provide educational leadership to a number of educational institutions developing social work programs of their own.

We hope some way can be found to modify the anticipated action to reduce these social work training funds. If you find that more specific data would be of assistance to you in conveying the impact of this plan on our educational program please contact us immediately.

Very truly yours,

MARILYN E. MADDUX,

Project Director.

J. F. X. PAIVA, Ph. D.,

Director, School of Social Work.

FACT SHEET

1. Current and Projected Federal Support—(Funded through H.E.W.)

Student traineeships

1972-73	38
1973-74	18
1974-75	6
1975-76	0

Faculty positions

1972-73	4.7
1973-74	3.0
1974-75	1.0
1975-76	0

Clerical positions

1972-73	2.0
1973-74	2.0
1974-75	0.5
1975-76	0

In the past decade, 80% of graduate students in social work have required some form of financial support for the two years required to complete the course of study. In 1972-73 only 55% were able to obtain assistance and many well qualified and promising candidates were forced to withdraw for lack of funds. If the projected reductions are carried out, the percentage of a normal sized class who can expect assistance next year will drop to 22% and no monies will be available the following school term. Most drastically effected will be minority group applicants and married male students since they are least likely to have private resources to finance their education.

2. Current Allocation of Traineeships

SRS (Rehabilitation, Child Welfare, Aging)	16
NIMH—Aging (Geriatric services, nursing facilities)	4
NIMH—Corrections (Probation/parole, juvenile courts, correctional institutions)	6

NIMH Psy/Medical (Hospital social work community mental health, mental hospitals) 12

Total 38

In Missouri all of the foregoing are priority need areas for professionally trained manpower. The proposed reduction in federal support poses the alternatives of either a curtailment of professional services or a large infusion of scarce state revenues to maintain what is already an austerity program.

DISABLED AMERICAN VETERANS

Mr. HARTKE. Mr. President, in March of 1972 the Disabled American Veterans had the opportunity to appear for the first time before the Senate Veterans' Affairs Committee. To the DAV this was a very significant event because it marked the culmination of a long effort on the part of Disabled American Veterans to have created in the Senate a committee especially for veterans' programs. For a number of years Disabled American Veterans has sponsored legislation calling for a Senate resolution for the purpose of the creation of the committee of which I have the honor to serve as chairman. I think that it might be interesting for us to pause for a moment to review some of the most recent accomplishments of this fine organization of disabled men and women.

Mr. President, I am sure you are aware of the fact that Disabled American Veterans is an organization comprised of nearly 400,000 disabled veterans who suffered disability due to disease or injury incurred during military service. For more than 52 years DAV has been concerned with the welfare of our Nation's disabled men and women who have incurred their disability in the defense of this Nation. In this Chamber there are members of the Disabled American Veterans who by virtue of their military service are eligible for membership in this select group of ex-servicemen and women. Mr. President, I am sure that you are also aware of the fine service program of the DAV. In each regional office of the Veterans' Administration you will find a staff of national service officers fully trained and knowledgeable as to all benefits that are available to all veterans. Let me emphasize that the DAV service program is available to veterans whether or not they are eligible for membership in the DAV. Indeed a great deal of the efforts of national service officers are related to providing a service to veterans who are not eligible for membership in the DAV.

In order to meet the demands of the returning servicemen, both disabled and nondisabled, DAV has recruited young Vietnam veterans to serve the organization in the fulfillment of its mission "to provide a service second to none" and available throughout the Nation in each regional office. Disabled American Veterans has a staff of 221 national service officers of which, Mr. President, 129 are Vietnam veterans. This organization realizes the need and necessity of having service officers who understand the current and the today problems of the disabled veteran. Most of these Vietnam disabled veterans who are beginning their careers as national service officers have gone through the campaigns of Vietnam.

These young ex-servicemen know the Vietnam veteran and understand his problems. This is why DAV has built a staff of national service officers for the future and this is why more than 50 percent of the national service officers of this organization are Vietnam veterans. All 129 of these Vietnam veterans have experienced training under career national service officers that go all the way back to World War II. Each trainee must go through a period of 18 months of study before he can become an accredited representative of this organization.

Before I outline for you the increased responsibilities the Disabled American Veterans has assumed during the past several years, I would just like to point out for you their record for the year ending June 30, 1972. Disabled American Veterans assisted our Nation's disabled veterans in recovering monetary awards amounting to \$297,822,857.17. This is a national figure. DAV national service officers during this same time made 135,688 rating board appearances; 203,463 disabled veterans and their dependents were personally interviewed by this staff. Throughout the Nation these national service officers reviewed a total of 289,216 case files. Mr. Chairman, the effectiveness of a trained attorney-in-fact taking in hand a disabled veteran's case file is in many cases one of the most important events that assists the disabled Vietnam veteran on his return to civilian life. For it is through the efforts of these national service officers that the avenues of rehabilitation are first made available in many instances through the technical abilities of these trained men and women in the DAV.

Now, Mr. President, I would like to review for you very briefly the expansion of programs that Disabled American Veterans has more recently offered in addition to all the services that I have outlined for my colleagues today. Beginning in 1969 Disabled American Veterans made available a scholarship program for the children of service-connected disabled veterans whose parents could not afford them a college education. The beginning of the program was September, 1969 and as of now 80 young men and women throughout this Nation have been awarded a DAV Scholarship. As of September, 1972, 71 are still in the program. Beginning with the fall term of this year a new group of students will enter into the program. I should emphasize, Mr. President, that these service-connected veterans do not have to be members of the DAV in order for their children to participate in this program.

A few years ago, Disabled American Veterans became aware of the tragedy and hardships that were being inflicted upon this membership as a result of natural disasters, such as hurricanes, tornadoes, earthquakes, and the like. As a result of these disasters DAV established a disaster program to determine whether or not such a program could be meaningful and effective in time of natural disasters that might be visited upon its membership. Recently, Disabled American Veterans has come to the conclusion that this disaster program should be made available to all service-connected disabled veterans whether or not they are members of the DAV.

Effective January 1, this year, 1973, Disabled American Veterans has inaugurated a new program which no veteran's organization on a national level has ever attempted. It is a program to help disabled veterans during periods of emergency when they most need some kind of financial assistance to see them through these troubled times. As you know, Mr. President, sometimes the machinery of the Veterans' Administration requires lengthy periods of time in order to keep up with disabled veterans' compensations and in particular to pay the veteran the total rating to which he is entitled by virtue of hospitalization and service-connected disability. In many instances disabilities of disabled veterans increase radically and requires adjustments by the Veterans' Administration rating agencies all of which likewise takes time. Meanwhile, the family has to eat, the rent has to be paid, the utilities have to be paid, and this is where DAV's relief program becomes an important source of emergency financial aid. I might point out, this is another duty that has been added to the responsibilities of DAV's national service officers because they are responsible for administering this fund throughout the Nation.

Several years ago Disabled American Veterans became interested in problems involving children who suffered congenital disabilities or who suffered from disabilities incurred by disease or injury. The leaders of the Disabled American Veterans believed that much of the experience they had acquired by virtue of their service-connected disability might be passed on to these young people to help them adjust. Thus it was that DAV became involved in a partnership with Boy Scouts of America so that these young children could have the opportunity to experience scouting within the limits of their disablement.

As a result of this effort large numbers of handicapped scouting units sponsored by DAV chapters have become available to our Nation's thousands of disabled children who can benefit from the experience of scouting in spite of their handicap.

Mr. President, Disabled American Veterans continues to receive the support of the American public. Through their national solicitation program for funds Disabled American Veterans has been able to carry on all the programs of which I have spoken today, but there is a second source of strength which Disabled American Veterans need in addition, if they are going to continue to be a successful organization for the benefit and welfare of the disabled veteran and that is membership. While it is true that Disabled American Veterans has grown tremendously in the past several years, it is likewise true that this organization can benefit from a greater membership of those who are eligible to belong to this distinguished group.

As I said earlier, the present membership of this organization is nearly 400,000 strong but it should be much greater. Certainly the programs of the DAV deserve the serious consideration of all disabled veterans in this Nation. Certainly the greater membership the Disabled

American Veterans can achieve the more eloquent they can be in sponsoring the cause of the disabled veterans of this country. Most of my colleagues in the Senate Veterans' Affairs Committee are acquainted with the fine efforts of Charles Huber, the organization's national director of legislation. I would suggest, Mr. President, that Chet Huber is one of the outstanding legislative representatives of veterans' organizations that have been working closely with my staff of the Senate Veterans' Affairs Committee, but no matter how capable and no matter how eloquent Chet Huber and his staff can be in furthering the cause of disabled veterans, a healthy membership of the DAV must be behind him if he is going to continue to achieve the kind of success that is so necessary toward the furtherance of the cause of the disabled veteran.

VOTER REGISTRATION ACT

Mr. McGEE. Mr. President, with the Senate's consideration of S. 352 approaching, I want to call the attention of my colleagues to some very pertinent testimony favoring voter registration by mail presented to the Committee on Post Office and Civil Service during hearings March 16. I refer to the statement of Mr. David N. Dinkins, who is president of the Board of Elections of the city of New York.

Interestingly, Mr. Dinkins observed that "mail registration tightens security on registration rather than relaxing it." This, he said, results from the fact that the permanent staff of the Board of Elections in New York City is more competent to check registrations than are volunteers or part-time helpers whose total knowledge of the registering citizen is most often derived from no more than a 2-minute personal exposure.

Even more basic, however, is Mr. Dinkins' statement, in behalf of the board he heads, that—

It is our contention that participation in the electoral process is an absolute right—not a privilege bestowed by government.

Basic to the guarantee of that right is the adoption and implementation of the philosophy that the ability to cast a ballot in an easy and convenient fashion is a public, governmental obligation. The individual citizen should not have that burden—it is a public obligation, not a private obligation.

With that philosophy, which is widely shared in our society and in this Chamber as well, it follows that, as Mr. Dinkins told the committee—

It must be recognized that registration should not be used as a means of restricting the number of persons that vote.

Too often, registration procedures do work to restrict participation in our electoral processes. S. 352 would establish a system whereby registration would be made easier, thus opening access to the polling place for many millions of Americans.

Mr. President, I ask unanimous consent that the statement of Mr. David N. Dinkins to which I have referred in my remarks be printed in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

TESTIMONY OF DAVID N. DINKINS ON VOTER REGISTRATION BILL S. 352

Mr. Chairman, Senators, I deem it a privilege to have the opportunity to testify before this Committee before which have come many with unquestioned expertise in the field of Voter-Registration and the election process generally. May I state at the outset, that I do not profess to be such an expert but that there are some things I believe to be fundamental and about which there can be no compromise.

I, my fellow Commissioners (our Board consists of two Republicans—William F. Larkin and J. J. Duberstein, and two Democrats—Gumersindo Martinez and myself), the administrators and other members of our staff are grateful for this forum. Although there may be limited differences as to specifics there is a consensus among all the Commissioners that a system of mail registration such as is provided in S. 352 is highly desirable, in fact, desperately needed.

It is our contention that participation in the electoral process is an absolute right—not a privilege bestowed by government.

Basic to the guarantee of that right is the adoption and implementation of the philosophy that the ability to cast a ballot in an easy and convenient fashion is a public, governmental obligation. The individual citizen should not have that burden—it is a public obligation, not a private obligation.

Our law requires that in order to vote one must first register to vote. To this end, it must be recognized that registration should not be used as a means of restricting the number of persons that vote. That was once the apparent purpose of registration and although it is no longer so intended, such restriction is often the effect of our system of registration.

In the 1968 Presidential Election, only 59.1% of the New York State voting population actually went to the polls. This number was even less than the national figure of 60.1%. In the 1972 election, with approximately 139 million Americans potentially eligible to vote, less than 76,200,000 actually voted, or 76% of the approximately one hundred million who are registered nationally. Note that this 76% of those who are registered represents only 54.5% of the total potentially eligible voting population. New York's statistics for the 1972 presidential election are as low as the national average.

Non-registration is an acknowledged national scandal in a country possessing a great national heritage as a participatory democracy. As has been noted here before, recent elections in Europe have turned out 72% of the qualified electorate in Britain (considered low there); 75% in Ireland; 76% in Canada; 80% in France; 87% in Sweden and Denmark. We in the United States, and particularly we in the Empire State, suffer greatly by comparison.

The difficulties involved in registering to vote would appear to explain the discrepancies between voter turnout in the United States and Europe.

While many believe that so-called voter apathy is mainly responsible for lack of greater voter participation, I do not agree. I associate myself with the remarks made by Senator McGee as he opened hearings on a series of bills focusing on voter registration in October of 1971 when he said in part:

"It also seems somewhat hypocritical to me for these who hold the privilege of political office or influence to call, on the one hand, for feasible participation by all citizens in the affairs of state while, on the other hand, retaining barriers which restrict and in some cases prevent voting."

"A Gallup poll taken in December, 1969, concluded that it was not a lack of interest but rather the residency and other registration qualifications that proved to be the greatest barrier to wider voter participation in our nation."

In New York City, fire-house and mobile registration efforts, and the use of volunteer inspectors or registrars in the communities of our city, conceived and implemented by the late great Maurice J. O'Rourke, and the volunteer or community registration continued even now by the Board of Elections headed until last July by Commissioner Larkin, and now by me, have produced great increases in the number of registered voters. Last year, we registered 453,000 in this fashion. But this is not a satisfactory system. Our State constitution and State laws require bi-partisan registrars which greatly limits our ability to register people with volunteer registrars because only about one-tenth as many of the members of the Republican Party in the City volunteer as do members of the Democratic Party. Consequently there is great difficulty in providing bi-partisan teams of registrars. We can do much better. It is possible to reach most of the potentially eligible voters by a system of mail registration.

We have proposed to the New York State Legislature a system of mail registration on a very simple card form that would be easily available, at each office of the Board of Elections, at public buildings such as the offices of Social Service Department, and Post Office; at private commercial places such as banks, utilities and telephone company offices. This form could as well be included in public or governmental mailings, and private mailings, including mailings of income tax returns, welfare checks, telephone and utility bills.

It would be mailed to any office of the Board of Elections for processing by teams of employees who meet the bi-partisan requirement of our State Constitution. Enrollment, that is, designation by the registrant of a party, could be handled on the same form.

Such a system would be no more susceptible to fraud than the system we now employ.

I include the full text of a statement concerning mail registration contained in a "Preliminary Report and Recommendations for Legislation for Consideration by the 1973 Legislative Session of the Joint Legislative Committee to Make a Study of the Election Law and Related Statutes" dated December 15, 1972. While I may not agree completely with each element of the premise there stated, I certainly concur generally with the conclusion that mail registration is workable and desirable in the State of New York. The point I wish to make by including this statement is that such a plan is deemed to be feasible for the entire State including rural upstate communities that are largely Republican as well as urban centers that are largely Democrats. The Joint Legislative Committee Chairman, and the both houses of our State Legislature as well as the Governor are members of the Republican Party.

STATE OF NEW YORK—JOINT LEGISLATIVE
COMMITTEE ON ELECTION LAW
PROPOSAL FOR A SYSTEM OF UNIFORM MAIL
REGISTRATION AND ENROLLMENT

The present system of voter registration in the state of New York has proved to be a failure and voters are inconvenienced and frequently denied the right to vote.

The existing system of permanent personal registration requires a citizen to physically appear before a board of election inspectors, either on the days of local registration, or at the offices of the board of elections on approximately 250 other days of the year.

To relieve the inconvenience caused by this system the concept of "mobile" or "sidewalk" registration has been developed in recent years as an expansion of the permanent personal registration system. These registration programs have generally been implemented by utilizing untrained and unqualified personnel. All reports seem to

indicate the programs do not work effectively creating additional confusion and error.

Voter registration has been made a political football. Rather than being a means of bringing the citizen into the electoral process, registration drives are used by insurgent groups and others to create spurious issues based on claims that select categories of citizens are being denied their right to vote. Traditionally, voter registration drives appear to benefit the Democratic party and the insurgent groups within it.

This Committee feels the goal is to remove the registration process from their political arena. Only in this way can our citizens obtain a free access to the electoral process without fear or outside pressure to act.

A statewide system of mail registration to be adopted in place of the existing system. Such a system would accomplish the following:

1. Facilitates the registration of voters in upstate areas, where the poor and elderly have difficulty travelling the long distances required to vote.
2. Eliminates registration as a political issue. Registration would be restored to its proper focus within the content of a citizen's right and duty to participate in the electoral process.
3. Permits additional time to check and verify the validity of registrations filed.
4. Lingual problems are eliminated.
5. Substantial cost savings can be accomplished.

Mail registration provides a simple system within the understanding of all people. A widely distributed application form could be provided. The application would be designed to elicit only information personally known to applicant and needed by the board of elections to verify the qualifying facts such as residence and age.

The identity of applicant and his signature would be verified by responsible individuals in the community who are readily identifiable. This group could include town and city clerks, county committeemen, union representatives, employers, notary publics, bank officers, and such public employees (welfare case workers) as deemed appropriate. The applicant would prove his identity through means such as personal knowledge of the verifying officer, a driver's license and/or information available to the verifying officer such as employer's records and checking account signature cards. The verifying officer would also be requested to confirm such other information contained in the application of which he has knowledge or previously recorded information in his files. Thus, an employer could confirm the individual's address, duration of residency, social security number and physical description.

Applications, when completed, would be mailed to the board of elections by applicant. Upon receipt, applications would be examined and processed by a qualified and trained bipartisan board of central registration in the same manner as presently provided for new and absentee registrations. In those cases deemed appropriate, the board would order voter check procedures as presently required for new and absentee registrations. This includes the verification of an applicant's residence by an appropriate peace officer or board employee.

Registrations under the system would be "permanent" as at present.

Except for changing the actual process of registration, all other aspects of the present registration system would be retained, basically unchanged. Registration and enrollment lists would be maintained and processed in the same manner. The mail check and cancellation for failure to vote for two consecutive elections would still apply.

Lists of new registrants are presently required to be furnished each Republican and Democratic county chairman. This part of the present system would be modified to require the participation of the political par-

ties in the verification process. The political party would be required to challenge or accept the qualifications of any applicants within a fixed period of time of the submission of the name to it. This would also eliminate voter challenges at the polling place, except for circumstances arising after the date of registration. A new role for the party organization and county committeemen is also created.

Under this system of mail registration no local registration days will be needed. Thus the days of local registration can be eliminated or reduced. This alone could result in tax savings in excess of five million dollars annually.

This proposal for uniform system of mail registration can also be modified to apply to all other elections in the state which require registration.

Since 1964 we have used every conceivable method within our law, and many which stretched the law to its limits, to register our citizens. We have used fire-house registration, mobile registration, sidewalk registration, and registration conducted by concerned community and ethnic groups. In this we have utilized both paid and volunteer registrars. The extent of these undertakings have been expanded each year with increasingly encouraging results until last year when we were able to register some 453,000 new voters. However, I must confess that this is probably the maximum we can hope for under the present system in any year without changes in the law. For instance, we were able to conduct our volunteer registration effort on Sundays, we could greatly increase our yield. (There is legislation now pending in our State Legislature that would remove the prohibition in our present law against registration on Sundays. Further, the Board of Elections itself has brought suit in the United States District Court seeking to have the subject statute declared unconstitutional.) But after the voter attrition due to death etc. was deducted from the total registered in 1972 (some 800,000 when the number registered at local registration is included) that number is reduced to about 500,000 come January, 1973. We can therefore anticipate, no matter what methods we use under the present law, that we will have a constant non-registered 35 to 40% of our otherwise qualified population in New York City.

The inadequacy of results of this method is equalled or surpassed by the defects and shortcomings which attend its operation. In order to conduct a registration drive which will reach into every neighborhood and reach every group in a city of over eight million, there must be a work force of tens of thousands over whose actions and conduct the 328 members of the staff of the Board of Elections could not possibly maintain intimate control. The result inevitably is that a number of these temporary part-time and often voluntary registrars do not accurately transcribe the information they receive from the registrant or they do not timely transmit the completed forms to the Board of Elections. These errors are reflected on Election Day in legitimately registered citizens perhaps being deprived of a vote because of the absence of their records of registration at the polling place. The potential for error cannot be overlooked under such a loosely supervised process and it is a constant subject of attention.

Mail registration provides the following elements whose remedial qualities are self-evident.

If the citizen fills out his own registration form and certifies by his signature to the correctness of the information it shows, the danger of error in transcription is eliminated. Since delivery is to the Board of Elections directly by mail from the registrant, the registrant is personally accountable for the accuracy of the form.

The permanent staff of the Board of Elections are much more competent to check the

veracity of the facts and the authenticity of the signature on a mailed registration form from other publicly available governmental and business records than is a volunteer or paid registrar or inspector whose total knowledge of the registering citizen is most often derived from no more than a two-minute personal exposure. Thus, mail registration tightens security on registration rather than relaxing it.

If the registering citizen mails the completed form directly to the Board of Elections, there will be no danger of careless or intentionally misforwarding or non-forwarding to their proper destination. The Board of Elections promptly receiving the registration cards, there is assurance that they will be processed and in the proper polling place as authority for the citizen to cast his vote on Election Day.

The direct mail of registration forms by the registrant means that registration only becomes a fact when the Board of Elections actually receives the completed duly signed form. This permits the very widest dissemination of blank registration forms without any fear of compromise or fraud. Governmental utility and many business mailings can contain forms with invitations to the recipient to receive them. They can be made available at all government, banks and public utility offices. In this way the saturation effect which is the one element missing in present registration systems, can be obtained. Also the privacy afforded by mail registration in filling out the forms obviates the timidity which often prevents the poor and less educated from appearing to publicly relate their personal information to their more advantaged fellow citizens.

There is no danger of inadvertent or fraudulent voting twice by the registrant executing two registration forms under mail registration. As long as the citizen fills both forms out correctly, they will find their way into the same record binder destined for the one polling place, so that the Board of Elections can simply destroy the duplication to prevent multiple voting. As now, if a registrant dishonestly registers under a different name or address, the security checks would disclose that and only then would corrective or penal action be made necessary.

One additional advantage ensues from "mail registration". Under present system the motivation which often impels volunteer registrars to take part in a registration drive is to qualify to vote as many citizens as they can who they know will vote for a certain candidate. This results not in saturation solicitation for registration, which is the goal, but selective canvassing with limited results. With this selective canvassing there is likewise identification of the candidate with the registration effort and sometimes downright canvassing which detracts from the non-partisan spirit which should imbue the effort to enfranchise everyone who is entitled and desires to vote. Mail registration on the broadest possible scale would eliminate the partisanship and selectivity which deprecates the spirit and effectiveness of the existing registration drives for more voters.

One final point to be made is not controlling but is worthy of weighted consideration. That is the question of expense. Last year our Local Registration cost the City of New York approximately \$2,115,000 and realized 251,393 registrations during the four days it was conducted. That means for every such registration it cost the City approximately \$80.00. (And in a non-presidential year when the public interest is far less but our overhead is the same, the cost per registrant is greater.) Fortunately, as I mentioned earlier, in addition some 453,000 were registered by volunteer effort, obviously at a far lesser rate.

Some have estimated that with the use of mail registration the cost per registrant

would be twenty-five to fifty cents, including cost of printing, postage and processing. We are aware, of course, that unless the entire registration system were by mail we would probably be obliged to maintain two record systems and two ballot systems. We could not have elections on our present voter machines without separate machines for federal and state elections or in the alternative, a new type machine designed to accommodate each. Practically however, New York State would in all probability adopt the federal mail registration system and of course S. 352 provides for some subsidization. Accordingly, I am not troubled by this problem. It does not defy resolution.

We find the subject bill, S. 352, to be generally satisfactory but we make these observations:

Section 404 should take into consideration that in some political subdivisions of states, the election officials are an even number with equal representation of the two major parties. A deadlock would provide obvious problems. In such an event, there should be some alternative.

Section 406, while providing in subsection (E) that there is no time limit upon the general availability of registration forms in post offices, etc., directs the mailing at the time of the general election only. Of course, for many of us the primary election is the determining election. Perhaps there should be such a mailing in January, if only one distribution, with forms readily available throughout the year. Better, of course, would be a mail distribution in January and again near the time of the general election. Also, whenever the mailing of forms to postal addresses is to be, there should be some limit or cut-off date for receipt by the Board of Elections of the registration form in order to allow sufficient time for processing.

May I take this opportunity to commend the League of Women Voters of the State of New York for its fine work in all areas of the election process. There should be no need for an organization such as the League, in the sense that there should be no need for the National Association for the Advancement of Colored People (NAACP), Congress of Racial Equality (CORE), or the Anti-Defamation League. There should be within the Board of Elections a well-staffed public information bureau that would continually advise the public in an objective fashion, and encourage voter registration and voter participation.

The National Municipal League observes that "The way information is distributed to voters bears a subtle relationship to the equal opportunity afforded each voter. The experienced well-educated citizen may have many sources of information on candidates and issues involved in an election. The multitude of candidates, the voting mechanism, the form of ballot present little problem to him. He knows of the behavior that is expected of him at the polls as to identification, pulling of the levers, rules against loitering, etc. The presence of party workers or even police may not disturb him. These conditions may bewilder the inexperienced voter sufficiently to confuse him when he goes to the polls, or even deter him from getting there. The kinds of information disseminated to voters and methods of distribution are therefore an important part of efforts to insure uniform voting opportunity." I concur unequivocally and agree that the minimum information made available by the Board of Elections in simple written form should include—

- Who is eligible to vote;
- When voting will take place and where;
- Procedure for casting ballots;
- Understandable explanation of ballot issues;
- Names of candidates up for election and offices they seek;

Services available to voters, including challenging procedures;

Explanation of the function of the poll workers the voter is likely to encounter.

If we are really serious about the election process, and the desire to have maximum participation in it, such information must be made readily available by the Board of Elections.

The passage of S. 352 into law should, in New York City at least, have the very beneficial effect of making available funds for such purposes in addition to its main thrust of greatly increasing the size of the electorate.

THE URBAN PARKLAND HERITAGE ACT

Mr. WILLIAMS. Mr. President, at the beginning of this session I introduced S. 12, the Urban Parkland Heritage Act, which would substantially increase the Federal Government's commitment to funding parks and recreational facilities. I have recently received copies of resolutions passed by the San Diego County Board of Supervisors and the Citizen's Advisory Board of the Pennsylvania Department of Environmental Resources in support of S. 12.

Mr. Roger Honberger, San Diego County's Washington representative, indicated in his letter to me that an exhaustive study of the regional park system of San Diego showed that it will be necessary to acquire 35,000 acres in the county to meet the demands of more than 15 million expected visitors in the year 1980. Under the current law and certainly under the current administration's policies, the rapidly increasing open space needs of our major centers of population are likely to go unmet. S. 12 would provide \$5 billion over the next 5 years for the acquisition, development, and management of open space lands.

I ask unanimous consent that the letters and resolutions from the Citizen's Advisory Council of the Pennsylvania Department of Environmental Protection and from the San Diego County Board of Supervisors be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COUNTY OF SAN DIEGO,
Washington, D.C., March 12, 1973.
Hon. HARRISON A. WILLIAMS, Jr.,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: On February 13, 1973, the San Diego County Board of Supervisors passed a resolution in support of S. 12, the Urban Parkland Heritage Act of 1973, which you introduced on January 4, 1973. A copy of this resolution is enclosed for your reference.

I have also enclosed a copy of the Regional Parks Implementation Study for the County of San Diego which was approved by the Board of Supervisors on April 19, 1972. The Study indicates that over 35,000 acres of land must be acquired in the County of San Diego to meet the demands of more than 15 million expected visitors to San Diego regional parks in the year 1980. The Urban Parkland Heritage Act would encourage general purpose local governments to implement environmentally sound urban development plans through Federally assisted acquisition and maintenance of recreational, conservation, and scenic areas.

As the sponsor of this legislation and a

member of the Committee on Banking, Housing and Urban Affairs, I know you will be urging prompt and favorable consideration of this important legislation. If I can be of any assistance to you or your staff, please let me know.

Sincerely,

ROGER F. HONBERGER,
Deputy Administrative Officer.

RESOLUTION RE ENDORSEMENT OF AN URBAN PARKLAND HERITAGE CORPORATION TO PROVIDE FUNDS FOR THE ACQUISITION, DEVELOPMENT, OPERATION AND MAINTENANCE OF OPEN-SPACE LAND

On motion of Supervisor Craven, seconded by Supervisor Brown, the following resolution is adopted by the Board of Supervisors of the County of San Diego.

Whereas, the Urban Parkland Heritage Act of 1973 has been introduced into the Congress of the United States; and

Whereas, the text of the proposed act embodies San Diego County planning goals and objectives; and

Whereas, enactment of the Act would benefit the present and future citizens of San Diego County by:

- (1) assisting local governments in developing a balanced urban environment,
- (2) preventing the spread of urban blight and deterioration,
- (3) encouraging more economic, environmentally sound urban development,
- (4) assisting in preservation of historically or architecturally significant areas and properties,
- (5) helping provide necessary recreational, conservation and scenic areas.

Now therefore be it resolved that the Board of Supervisors hereby

1. Endorses the Urban Parkland Heritage Act of 1973,
2. Directs its Legislative Representative to transmit certified copies of this resolution to the Honorable Chairman of the United States Senate Committee on Banking, Housing and Urban Affairs, to the Honorable Harrison A. Williams, United States Senator from New Jersey, and to the Honorable Daniel Rostenkowski, United States Representative from Illinois.

Passed and adopted by the Board of Supervisors of the County of San Diego, State of California, this 13th day of February, 1973, by the following vote:

Ayes: Supervisors Walsh, Brown, Conde, Bear and Craven.

Noes: Supervisors None.

Absent: Supervisors None.

DEPARTMENT OF
ENVIRONMENTAL RESOURCES,
Harrisburg, Pa., March 13, 1973.

HON. HARRISON WILLIAMS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: Enclosed is a resolution unanimously passed at the February 20, 1973 meeting of the Citizens' Advisory Council of the Pennsylvania Department of Environmental Resources. The resolution deals with the Urban Parkland Heritage bill you sponsored in the Senate.

The Citizens' Advisory Council is concerned that present funding arrangements will not adequately finance the construction of park facilities in and around major urban areas, and we feel that passage of the Urban Parkland Heritage will go a long way toward eliminating this possibility. We support you in your efforts, and have mailed letters to the Pennsylvania Congressional Delegation encouraging them to vote for the passage of the bill.

Thank you.

Sincerely,

THOMAS G. McCLOSKEY,
Executive Director,
Citizens' Advisory Council.

Whereas, Pennsylvania's growing metropolitan regions need the physical and spiritual breathing space of new parks;

Whereas, competing social needs (housing, police, schools) vie for shrinking tax dollars in Pennsylvania's urban areas, many of which face fiscal deficits;

Whereas, the Commonwealth of Pennsylvania has and is, under Secretary Goddard's direction, attempting to expand park opportunities—particularly abutting urban areas;

Whereas, the "Urban Parkland Heritage Act of 1973" introduced in this session of Congress would provide not only acquisition costs but park maintenance and planning and operating funds (grants and loans) up to \$5 billion over the next five years, with special concern for low income and poverty areas;

Whereas, categorical federal open space acquisition funding has been replaced by revenue sharing;

Now, this 20th day of February, 1973, be it hereby resolved, that the CAC of one DER, Commonwealth of Pennsylvania, supports the passage of this legislation with copies of this resolution to be sent to all members of the Pennsylvania Congressional delegation and to Senator Harrison Williams and Congressman Dan Rostenkowski sponsors of similar bills in the Senate and the House.

NO-FAULT VERSUS NO-FAULT

MR. HART. Mr. President, every once in awhile—as President Harry Truman demonstrated so well—a father can no longer fight the temptation to speak out for a child he thinks is being terribly maligned.

Senator MAGNUSON succumbed recently in answering criticisms of S. 354—the national no-fault auto insurance bill. Today I too have caved in.

The issue upsetting me today centers on figures being used by a combination of nine insurance companies to argue that their bill—tagged the "Camelback bill"—would be a worthy substitute for S. 354.

Let me refresh your memory. Last December, top executives of nine insurance companies—Allstate, Firemen's Fund, Hartford Insurance Company of North America, Kemper, Liberty Mutual, Nationwide, State Farm, and Travelers—met at the Camelback Inn in Phoenix, Ariz.

The details of this meeting were spelled out in a very comprehensive and excellent story by Laurence Stern in the Washington Post of March 18, 1973. I ask unanimous consent that the story and a press release from Senator MAGNUSON rebutting the various attacks on the bill be inserted at the conclusion of my remarks.

THE PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

MR. HART. Mr. President, at the Camelback meeting, the companies agreed to push for a modified no-fault "joint industry" bill in the legislatures of some 20 States.

The Camelback bill would allow accident victims a maximum of \$5,000 in medical, wage loss and other economic benefits from their own company—regardless of fault. Law suits would be permitted when medical bills exceeded \$1,000 or there was permanent impairment, disfigurement, or death.

In hearings before the Commerce Committee last month, the companies justified their plan with statistics from one of the Department of Transportation's auto compensation studies.

These figures are the issue today.

Representatives of Allstate, State Farm, and Kemper told the Commerce Committee the DOT study showed:

The number of injured persons with economic loss in excess of \$5,000 was 1.5 percent of all injured persons. The number of injured persons with economic loss in excess of \$25,000 was one-tenth of 1 percent.

Against those figures, indeed, the industry bill would seem to handle the bulk of the cases with dispatch. But the figures did not ring true. In the past few years, my staff and I have thumbed through the DOT study so much that we have memorized much of it. Yet we could not jibe the industry's testimony with what we knew to be in the report.

Enter the Public Affairs Newsletter—published by Kemper Insurance Co. In the issue of February 20, 1973, the newsletter explained that these figures came from a "study of 23,635 cases in which economic loss was determined with great accuracy."

The study is obviously one done by Kemper—with 15 other companies—for DOT and published in volumes 1 and 2 "Automobile Personal Injury Claims" in 1970.

The newsletter went on to explain:

It is these data which confirm that no-fault plans falling within these parameters are indeed effective no-fault legislation.

It is a pretty thought. But—as I read the study cited—this is not what it shows.

The study shows economic loss until the date of settlement. In other words, that is the loss for victims until 18 to 24 months from the accident.

It omits the most significant loss for those seriously injured: loss of future earnings.

In another volume of the DOT study—"Economic Consequences of Auto Accident Injuries"—we find that for the seriously injured and killed, lost future earnings made up 63 percent of their losses.

In the industry-conducted study, we learn that although only 1.5 percent of those seriously injured or killed in the study had losses over \$5,000 at settlement, this group suffered more than 30 percent of the total loss but got back only 17 percent of the total payment dollars. This inadequate compensation would continue under the Camelback plan.

As for those who had more than \$25,000 of loss at settlement time at the end of the line—under the tort system—they got back only \$1 for each \$6 of their loss.

Under the Camelback plan these people—not their insurance company or even that of the driver who may have caused the accident—would bear the terrible financial burden of their loss.

The Camelback plan would solve this by offering us the chance to buy additional coverage to handle these losses. May I remind the Senate that we started down this long road to auto insurance reform because consumers today cannot afford auto insurance coverage.

If we keep most of the inefficiencies of the present system and merely add another premium on top of what we have, we surely will have worsened—not corrected—the problem we set out to solve.

Which means the choices for the seriously injured will too often remain what they are today: Eat the losses themselves—meaning a lower standard of living—or fall back on welfare or social security to at least ease it, with the taxpayer picking up that tab.

Mr. President, one out of every four cars in this Nation is involved in an accident each year. The accident is the threshold to the chance of being in that 1.5 percent whose losses exceed \$5,000 at settlement time. Several hundred thousand persons each year cross that threshold. Right now they find themselves caught up in a system that is inhumane, inefficient, and unjust.

Much as I would like to think that agreement on what to do about this could be found by rallying around the Camelback plan so we could quit talking and do something, I cannot.

The figures do not support that conclusion.

EXHIBIT 1

GIANTS MEET PRIVATELY IN DECEMBER—
INSURERS PLAN NO-FAULT FIGHT
(By Laurence Stern)

It could have been the setting for a satirical skit on the work ethic in American business—Arizona's Camelback Inn with its ranch-style opulence, its rambling expanse of golf green and thwack of tennis balls in play.

In this leisurely landscape gathered last December the top executives of nine of the nation's leading auto insurance companies, among them such giants as State Farm, Allstate and Nationwide.

The occasion was the private launching of an industrywide campaign to defeat passage of federal no-fault insurance legislation in this session of Congress.

In attendance were board chairmen, presidents and senior vice presidents of the nine companies. Because of its prestigious roster of insurance men the group was described by some industry insiders, "Cloud Nine."

It is the elite of the American auto insurance industry, an inner council that convenes from time to time on issues of transcending importance—matters too sensitive to take up in normal trade association channels.

The concern this time was the imminent revival of the federal no-fault bill sponsored by Senators Warren G. Magnuson (D-Wash.) and Philip A. Hart (D-Mich.) which had been narrowly defeated in the Senate last year. Companion legislation has been introduced in the House by Rep. John E. Moss (D-Calif.).

Public pressure for no-fault has been on the rise because of growing awareness of the costly and capricious nature of the prevailing liability system. Under no-fault there was the promise of quick and automatic settlement with policyholders, irrespective of who caused the accident, and of lower premiums as well as elimination of costly legal fees.

The insurance industry itself was deeply split on the adoption of federal no-fault standards. Nationwide supported Magnuson-Hart last year but switched to the Camelback plan this year. One trade group, the American Insurance Association, has also lined up tentatively behind Camelback.

The "big nine" companies at the Camelback meeting are highly contented with the status quo. Collectively, they take in more than a third of the \$16.5 billion in premiums.

Profits were up substantially in 1972 and loss pay-outs were down.

The Camelback group, unlike many of their competitors, do their underwriting through their own forces of salaried agents. This enables them to pick the cream of the risk market, people with good driving records who would look presentable in court. The companies were piling up large profits from investment of their cash "floats"—the reserves piled up between premium pay-ins and loss pay-outs.

But the companies were apprehensive that federal no-fault standards would open up auto insurance to invasion from other underwriting fields, mainly the big life, health and accident insurers, including Blue Cross, who see new financial allure in auto insurance under no-fault standards.

And so in the eyes of the Camelback conferees there was enough in the Senate bill to threaten a revolution in the auto insurance business.

After two days of top-secret deliberations, the "Cloud Nine" group emerged with what they decided should become the industry's battle plan for scuttling Magnuson-Hart. It was hailed as the "Treaty of Camelback" and communicated to the industry's three major trade associations.

The minutes of the meeting, which have been described with some asperity as the Camelback Papers, found their way into the unfriendly hands of Sen. Magnuson and Rep. Moss, chairmen respectively of the Senate and House Commerce Committees. They were promptly referred to the Justice Department to screen for possible antitrust violation.

The grand strategy adopted at Camelback was to bypass Congress by pushing for a modified no-fault "joint industry" bill that would be lobbied in the legislatures of ten target states, although the list has now been expanded to 20 states.

The difference between the Magnuson-Hart and the industry bills are major. The Camelback measure would allow policyholders a maximum of \$5,000 in medical and economic benefits. Under Magnuson-Hart there would be no limit on "reasonable" medical expenses.

The Senate bill also provides reimbursement for wage loss up to a limit of \$50,000 at a monthly rate of \$1,000.

The industry proposal would permit lawsuits when medical bills exceed \$1,000. The Senate bill eliminates lawsuits altogether, except in cases of catastrophic injury, such as loss of a limb or permanent disfigurement.

The first testing ground for the Camelback compact was the Virginia General Assembly. It turned into a miserable fiasco, embarrassing to all.

The insurance lobby introduced the industry's bill as a substitute for the model no-fault proposal sponsored by Governor Linwood Holton. Then the trial lawyers' lobby dismembered the insurance mens' bill and rewrote it to conform to the interests of the lawyers, who are among the most vehement opponents of no-fault.

"The lawyers gutted the no-fault provisions of our bill and opened it up to the skies on legal liability," acknowledged one insurance official. "They turned our child into something we could no longer love and so we had to turn around and kill it."

The spectacle of insurance reform dying in the hand-to-hand combat between competing lobbies did not offer a reassuring prospect for dealing effectively with the issue at state level.

The \$1,000 no-fault threshold in the Camelback plan would cover 76 per cent of the lawsuits now being filed under the present tort system. But nearly 60 per cent of legal fees growing out of liability practice are generated by cases with medical losses of more than \$1,000, according to the DOT study.

Furthermore, the government study showed that in serious injury cases under the liability system victims recovered a far

lower proportion of their economic losses than in minor cases.

Few issues now before Congress touch the pocketbook interests of so large and diverse a constituency. The prospect of injury or liability in auto accidents afflicts almost every American household.

And few social problems have been so intensively studied by the executive and legislative branches in recent years as the present tort liability system of protecting accident victims.

These studies have come to the common conclusion that the fault system of auto insurance is a massive and costly mess. In the words of former Secretary of Transportation John A. Volpe, it "... ill serves the accident victim, the insuring public and society. It is inefficient, overly costly, incomplete and slow. It allocates benefits poorly, discourages rehabilitation and overburdens the courts and legal system."

Volpe spoke these words nearly two years ago after completion of a \$2 million study of auto insurance performed by the Department of Transportation. The DOT inquiry was further reinforced by another exhaustive investigation conducted by the Senate Antitrust and Monopoly Subcommittee under the chairmanship of Hart.

Hart's inquiry produced 11,000 pages of hearing transcript that became a damning indictment of auto insurance practices. It formed the basis for the Magnuson-Hart bill that is pending again in the Senate.

Last month a coalition of diverse interest groups formed The National Committee for Effective No-Fault and hired a full-time Washington lobbyist to campaign for passage of Magnuson-Hart. The alliance includes national consumer organizations, auto rental fleet companies such as Hertz and Avis, the AFL-CIO, the Teamsters and the truckers.

Proponents of no-fault learned their political lesson in Congress last year when Magnuson-Hart died in a closely divided Senate vote, a casualty in part of the effective lobbying of the American Trial Lawyers Association (ATLA).

ATLA, with a national membership of 27,000 and considerable clout in state legislatures and on Capitol Hill, is back in the fray this year to deploy alongside the insurance lobby against Magnuson-Hart.

The lawyers, too, have engaged a full-time lobbyist, Washington attorney Thomas Bendorf, an amiable-mannered veteran in the art of legislative advocacy who describes himself as an "Aristotelian and Thomist." He speaks reverently of preserving the poor man's right to sue. ATLA reported paying Bendorf \$100,000 last year to finance his lobbying operations against no-fault.

Speaking of the Magnuson-Hart bill, Bendorf asserts: "It is not no-fault. It is no responsibility. That's why the fleet operators and truckers are for it. What started out as insurance reform has become transformed into judicial reform."

It takes no great subtlety to discern the interests of the trial lawyers in preserving the present tort liability system. Auto liability produces about \$1.5 billion in legal fees annually, according to a Senate Antitrust Subcommittee staff study.

Insurance agents and adjusters also have reason to oppose high no-fault standards. Some \$2 billion in commissions are extracted from the premiums of policy holders. A strict no-fault law would cut down substantially on the need for large sales forces of agents and claims processors. It would, obviously, also cut down on administrative overhead.

Despite the fiasco in Virginia, six states have recently enacted modified no-fault systems. Of these, Florida and Massachusetts already have a base of operating experience.

In the case of Massachusetts which had the nation's highest rates, there was a 42 per cent reduction in bodily injury premiums in 1971, first year of operation, and an addi-

tional 27 per cent in 1972. There was an increase in property damage that resulted, too, from the changeover in systems.

Since the Massachusetts compulsory insurance law covered bodily injury only, there was a heavy volume of bodily injury claims. Massachusetts won notoriety in the industry as "The Whiplash State."

The new no-fault system has tended to make claims reporting more honest in Massachusetts. But it is also true that property damage rates have been soaring all over the country.

In the first year of Florida's no-fault program motorists got a 15 per cent reduction in bodily injury and property damage premiums. Another reduction of 11 per cent is expected this year, according to the American Insurance Association. The Florida reduction will come to an aggregate of \$100 million this year.

Puerto Rico, which has a state-operated auto insurance program with high no-fault standards, now returns about 90 cents in benefits out of every premium dollar collected. Under tort liability about 45 cents goes back to policyholders in the form of benefits. The rest is claimed by legal costs, commissions and administrative overhead. Massachusetts and Florida no-fault plans return about 55 cents of each premium dollar in benefits. Magnuson-Hart would return about 65 to 70 cents.

Michigan last year adopted the most stringent of the state no-fault laws but it has not been in operation long enough to measure its benefits to policyholders. Michigan's law follows closely the uniform no-fault act of the Conference of Commissioners on Uniform State Laws, which also was the model for the Magnuson-Hart bill.

Nor are the results in yet on modified no-fault adopted by Connecticut, New Jersey and New York.

The prospects are dim for further state action this year in no-fault legislation. Most of the legislatures have already finished their work. The fate that the Camelback joint industry plan suffered in Virginia and Mississippi could well be a harbinger of things to come.

The effect of all this could well be to increase the pressures for action at federal level on the administration and Congress.

One high-ranking trade association executive in "Washington bitterly blamed dismal record of performance at the state level on the trial lawyers."

"The lawyer lobby has provided the kiss of death to no-fault in the states," he charged. "First they contend that there is no need for federal legislation since the states can do the job. They then turn around and kill everything at the state level. All they're doing is stoking the furnaces for federal legislation."

The trial lawyers' man in Washington, counsellor Bendorf, insists, nonetheless, that his organization will continue to oppose "any program that withdraws the right to go to court." The trial lawyers are supported in their stand by the American Bar Association, an institution of considerable authority with most legislative bodies.

And so the insurance industry and the legal profession are well represented in the corridors of state capitals and Congress. But the insistent question is who speaks for the policyholders, such as the one who addressed a letter to Hart on June 14, 1971.

"We who have to drive," he wrote, "who cannot do without cars, are burdened with outrageous insurance bills, plus capricious cancellations of our insurance for no cause, plus the prospect of having to pay huge lawyer's fees if we are involved in any accident to get them from the others involved."

"This business of suing, of having to prove 'blame', of crowding already overcrowded

court calendars, digging up witnesses, losing time from work, paying out enormous lawyers' fees, has simply reached the point of intolerable burdensomeness."

RELEASE FROM SENATOR WARREN G. MAGNUSON, MARCH 14, 1973

Senator Warren G. Magnuson (D-Wash.), sponsor of the National No-Fault Motor Vehicle Insurance Act, today leveled a blast at insurance companies and others for their "distorted, inaccurate, and misleading representations" concerning the Federal legislation.

Magnuson cited as one example a February 20, 1973 "Public Affairs Newsletter" published by Kemper Insurance Company and widely circulated on Capitol Hill in which the following "major weaknesses" of the Magnuson-Hart No-Fault bill were noted:

"Under the name of 'rehabilitation', S. 354 requires payments for expenses incurred while improving one's appearance. This could include hair styling and cosmetics even in the most questionable of injuries . . .

"Another S. 354 provision requires payments enabling the injured victim to return to full enjoyment of life. If a person sustained a hand injury, guitar lessons could qualify for coverage under the language. Other examples are endless—limited only by the imagination of the injured."

Reacting to these and similar allegations, Senator Magnuson said: "I can no longer remain silent as opponents of S. 354 make such distorted, inaccurate, and misleading representations concerning the Federal no-fault legislation. It seems that the opponents will go to any length to discredit this important bill. We welcome constructive comment from any quarter. But we have received very little of that to date."

Senator Magnuson further explained that "the assertions that S. 354 requires payment for hair styling and cosmetics or guitar lessons are completely unreasonable." He explained that the bill requires payment for "allowable expense" defined to mean "reasonable charges for reasonably needed products, services, and accommodations . . . including those for medical care, emergency medical and transportation services, rehabilitation, rehabilitative occupational training, and other reasonable direct remedial treatment and care. . . ." Magnuson continued: "How do you get hair styling and cosmetics or guitar lessons out of that language?"

"There is a certain irony in the statements of the Kemper Insurance Company," Magnuson explained. "When testifying before the Senate Commerce Committee on February 7, 1973, Mr. Lansman of Kemper submitted amendments to the Uniform Motor Vehicle Repairs Act from which the definition of 'allowable expense' in S. 354 was derived. He stated that his amendments 'change UMVARA in a way which conforms with what we think is in the interest of the consumer'. His version of UMVARA defines 'allowable expense' in the same way as S. 354 (except he doesn't use the word 'direct') but limits the total amount recoverable to \$50,000. If our bill does what he says it does, then so does his bill."

Concluding his remarks, Senator Magnuson expressed the hope that members of the House and Senate will not be misled by the "misinformation" that will be disseminated in the coming weeks and months by those who have few valid arguments to offer against the Federal no-fault proposal but who "out of self-interest, believe that good no-fault reform at the Federal level must be defeated at any cost."

POSTAL RATES FOR SECOND-CLASS PUBLICATIONS

Mr. NELSON. Mr. President, on January 31, 1973, I reintroduced legislation (S. 630), cosponsored by 20 Senators, which would reaffirm the historical principal of congressional support for the wide dissemination of a diversity of thought and opinion through publications circulated throughout the country by mail.

This morning, Chairman GALE MCGEE and the Senate Post Office and Civil Service Committee began hearings on S. 630 and other legislative proposals relating to postal rates for second-class publications. As the opening congressional witness at the hearings, I expressed my particular concern to the committee over scheduled dramatic increases in postal rates which may be such a financial burden upon the smaller, less profitable journals of news and opinion in this country that some of the most independent publication in this Nation may be effectively silenced and the free flow of ideas and information stifled.

Included with my statements before the committee this morning were a number of letters and editorials which articulate with particular eloquence the issues presented to Congress by increased second-class mail rates.

Mr. President, I ask unanimous consent that my statement this morning, April 2, 1973, before the Senate Post Office and Civil Service Committee, and a selection of the letters and editorials on the subject of the impact of second-class rail rates on newspapers and magazines, be included at this point in the RECORD.

There being no objection, the statement and material were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GAYLORD NELSON ON S. 630 AND OTHER LEGISLATIVE PROPOSALS RELATING TO POSTAL RATES FOR SECOND-CLASS PUBLICATIONS, BEFORE THE SENATE POST OFFICE AND CIVIL SERVICE COMMITTEE

Mr. Chairman, I appreciate the opportunity to appear this morning before the Senate Post Office and Civil Service Committee to discuss the various issues and legislative proposals relating to postal rates for second-class publications.

The second step of the permanent postal rate increases for second-class mail announced last year by the Board of Governors of the U.S. Postal Service will become effective on July 6, 1973. This second step will represent another significant increase in postal rates for newspapers, magazines and important journals of information and opinion in this country since the Postal Reorganization Act of 1970.

In February 1971, the newly formed independent U.S. Postal Service requested rate increases for second-class mail that would have averaged 143 percent over a 5-year period. When this proposal was instituted on a temporary basis in May of 1971, I became concerned that this dramatic increase would be such a financial burden that it would effectively silence some of the most independent journals and publications in this nation, and stifle the free flow of ideas and information throughout the country.

For 178 years, Congress provided direct legislative support for the wide dissemination of printed publications through the mail, and

set lower postal rates for this matter. In creating an independent U.S. Postal Service, I do not think that Congress intended to reverse this historic policy, nor put aside its concern for the basic educational and informational services, which this self-governing nation requires, and which the U.S. mail uniquely provides.

On June 28, 1972, I introduced legislation (S. 3758) in the 92nd Congress to reemphasize the 178 years of direct congressional support for the dissemination of news, opinion, scientific, cultural, and educational matter through the mails.

On June 29, 1972, the Board of Governors of the U.S. Postal Service announced that so-called "permanent" postal rates would be placed in effect. Two days after last year's Independence Day celebration, second-class postal rates were "permanently" increased an average of 127 percent over a 5-year period.

With the second step of these "permanent" increases facing second-class publications this summer, we must be particularly concerned about the impact of these increased rates upon the smaller, more specialized and less profitable newspapers and magazines which fuel the national competition of ideas with new thoughts, divergent opinions, and singular points of view. It is these voices—the little press, the controversial, the opinion press—which serve the specialized interests of some Americans and the basic interest of all America. Their voices may not be heard or acknowledged in the corporate boardroom of the U.S. Postal Service, where the singular preoccupation appears to be efficiency and size, but I do hope that the case of the small but vital independent voice of journalism will be heard and appreciated in Congress.

The proposition that a healthy free country depends upon the wide distribution of diverse information and opinions by newspapers and periodicals circulated through the mail is just as valid in 1973 as it was in 1792 when Congress first put this principle into law. Accordingly, I reintroduced legislation on January 31, 1973 which would reaffirm the historical principle of congressional support for the wide dissemination of a diversity of thought and opinion through printed publications circulated by mail. This bill, S. 630, is co-sponsored by twenty-one Senators and is one of the measures before the Committee for hearings today.

First of all, S. 630 would amend the policy section of the Postal Reorganization Act of 1970 to make it expressly clear that the Postal Service has an "obligation" to provide postal services at rates which will encourage and assist the wide publishing and circulation of information and differing points of view on all issues of interest to the country.

Second, this bill would set the second-class postal rates at the level of June 1, 1972 for the first 250,000 issues of newspapers and magazines sent through the mails. These rates include the approximately 33 and 1/2 percent increase in rates that were put into effect on a temporary basis on May 1971. This provision would be of particular support to the smaller, almost non-profit independent journals of opinion that already exist. It would also encourage the entry of new publications of this type, and provide continuing outlets for divergent views and fresh ideas.

Any future increases in second-class rates for issues over the 250,000 ceiling would be phased in during a 10-year period under S. 630. This 10-year period would apply only to increases on editorial content; any increases for advertising material would be implemented during 5 years, as is presently the law for both categories.

Finally, and perhaps most important for many small publications, S. 630 would expressly write into law longstanding congressional policy against per-piece surcharges on individual issues of second-class publications. Under the present rate structure,

these per-piece surcharges are particularly damaging to the smaller journals.

While the impact of charges based strictly on weight may sometimes be offset by publications turning to a reduced format or lighter weight paper, a set charge for each copy wipes out this advantage and discriminates against the smaller publication which has done everything it possibly could to reduce mailing costs. These per-piece surcharges may increase postal costs hundreds of percent for some publications, particularly endangering those newspapers and journals sent in the mail which are virtually non-profit and unable to shift the burden of the increases to either subscribers or non-existent advertisers.

There is no doubt that the interests of the larger profit making publications are seriously affected by increased second-class postal rates and deserve some attention in any legislation which is to be considered by the Congress. It cannot be emphasized too strongly, however, that it is the threat to the very existence of the small independent voices that is posed by the excessive rates which bases the case for any legislative relief, and not the guarantee of profits for larger publications. This is the main premise of S. 630. Any legislative proposals dealing with second-class postal rates must recognize that the public interest in the wide circulation of diverse sources of opinion and information comes before the private interest in the financial success of any one publication.

The case for congressional action to insure that a wide and diverse spectrum of published voices is heard in this nation is imperative; it is also historic and based in the philosophy of democratic self-government.

Vigorous public discussion of politics, business, science, education, literature and other matters of national importance has always been an important indicator of a healthy, pluralistic democratic society. When all viewpoints are heard, when all information is being freely exchanged, and when all ideas are openly examined and challenged—then self-government is at work.

The search for a wide range of information, and unfettered inquiry and discussion, have been the methods of seeking moral and political truth since the time of the Greeks and the Socratic dialogues. As explained by Aristotle:

"The ability to raise searching difficulties on both sides of a subject will make us detect more easily the truth and error about the several points that arise."

In a democratic society such as the United States, the necessity for an active pursuit of information and opinion is perhaps best explained by Walter Lippmann in a passage from "The Indispensable Opposition" published in *The Atlantic Monthly* in 1939:

"The unexamined life, said Socrates, is unfit to be lived by man. This is the virtue of liberty, and the ground on which we may best justify our belief in it, that it tolerates error in order to serve the truth. When men are brought face to face with their opponents, forced to listen and learn and mend their ideas, they cease to be children and savages and begin to live like civilized men. Then only is freedom a reality, when men may voice their opinions because they must examine their opinions."

From the earliest days of this country, our national leaders have recognized that the essential service of keeping the American people informed about a diverse range of ideas and opinions is best performed by the widest possible distribution of newspapers, periodicals, and journals of opinion.

For 178 years, Congress provided very specific and precise encouragement and assistance for the national distribution and wide dissemination of newspapers and magazines. Historically, the Congress of the United

States has provided these publications with the benefits of favorable rates in the use of the U.S. mail. Since 1792, the low postal rates which have been set by Congress for distribution of printed publications through the mails have been recognized as a form of national subsidy justified by the educational function and contribution to the self-governing aspects of citizenship.

The Act of February 20, 1792, 1 Stat. 232, gave newspapers a preferential charge of "one cent, for any distance not more than one hundred miles, and one cent and a half for any greater distance" while single letters were to be charged from six cents to twenty-five cents depending upon the mileage. Two years later, this preferred treatment was extended to magazines and pamphlets in the Act of May 8, 1794, 1 Stat. 354, 362.

Subsequent actions of Congress expanded the preferential postal rates given to newspapers and magazines, and in the Classification Act of 1879, newspapers and magazines were placed in the second-class. In describing the Classification Act of 1879 on the House floor, Congressman—and later Senator—Hernando DeSoto Money of Mississippi explained that the legislation merely carried out the historic policy of Congress:

"We know the reason for which papers are allowed to go to a low rate of postage, amounting almost to the franking privilege, is because they are the most efficient educators of our people. It is because they go into general circulation and are intended for the dissemination of useful knowledge such as will promote the prosperity and the best interest of the people all over the country."

This basis for the reduced rates set by Congress for the mailing of newspapers and periodical magazines was reiterated in Postmaster General Charles E. Smith's annual report for 1901:

"Our free institutions rest on popular intelligence, and it has from the beginning been our fixed and enlightened policy to foster and promote the general diffusion of public information. Congress has wisely framed the postal laws with this just and liberal conception. It has uniformly sought to encourage intercommunication and the exchange of intelligence."

Forty-five years later, Justice Douglas emphasized the basis of a policy of reduced rates in *Hannen v. Esquire, Inc.*, 327 U.S. 146 (1946):

"The policy of Congress has been clear. It has been to encourage the distribution of periodicals which disseminated 'information of a public character' or which were devoted to 'literature, the sciences, arts, or some special industry,' because it was thought that some publications as a class contributed to the public good."

At an early time in our nation's history, the vast changes that would occur in this country, and particularly, the developments in the methods of mass communications which have revolutionized modern society, could surely have not been foreseen. The validity of policies which are concerned with assuring sources of popular and diverse information and opinion in this country, however, are even more compelling at a time when the electronic media can report to a nationwide audience of millions the news of an event which occurred only a fraction of a second previously.

There is no doubt that the electronic media can speed a news message to a vast national audience with an immediacy which cannot be equaled in print. However, by using the public airwaves, the electronic media are dependent upon Government licenses for their very existence. As current controversy pointedly demonstrates, governmental pressures for "balance"—or some such judgment—is a constant overriding threat. And with the need to appeal to great numbers of people to pay for the expensive costs of production, it is no wonder that the electronic

broadcast industry is not well equipped to present a multiplicity of opinions and divergent ideas.

The only place where controversy, dissent, criticism, and minority points of view can be effectively expressed and widely disseminated is in the printed media, particularly in the independent journals of opinion. Here, fresh ideas often see their first public exposure. It is here that traditional thoughts and established norms are challenged with uncommon vigor. In our smaller magazines and newspapers, a broad span of issues may be argued in greater depth and with a partisan passion. Complex matters can be discussed and developed over a greater period of time and transmitted to varied audiences.

While the mass media serve to efficiently communicate the common experience to the majority of the nation, it is the little press that performs the crucial function of providing public access to new and untested ideas, to minority thoughts which might otherwise remain hidden, and to the whole range of human experience and expression, which provides the impetus for the continual search for truth in a free society.

When Congress passed the Postal Reorganization Act of 1970 (P.L. 91-375), it did not turn its back on 178 years of historic policy or put aside its concern for the educational services which the U.S. mail uniquely provides.

In Senate Report No. 91-912, which accompanied the Senate version of the reorganization bill on June 3, 1970, the Senate Post Office and Civil Service Committee reported the bill "with the reminder to present and future postal managers that the system will work only if the public interest is kept as the paramount criterion in every decision made."

Sec. 101(a) of P.L. 91-375 also states that "The Postal Service shall have as its basic function the obligation to bind the Nation together through the personal, educational, literary and business correspondence of the people."

In my opinion, the U.S. Postal Service has misread the intent of Congress in enacting the Postal Reorganization Act of 1970, and has instead substituted a single-minded concern for postal revenue for the larger public interest of providing a basic and fundamental service to the American people. I do not think that the educational value of a wide circulation of diverse printed publications throughout this country can be accurately measured using only a green eyeshade, arm garters, a sharp pencil and an accounting pad.

If present postal rate policy of the United States Postal Service is permitted to continue, the only publications which will be able to survive will be the high price, special audience, special interest magazines and newspapers which communicate a narrow message to the restricted audience that can afford to be subscribers. This action can only stifle the wide circulation of popular information and opinion.

In limiting new entry into the publication field, in limiting the range of coverage of news and events, in limiting the extent of circulation, in pricing the dissemination of information and opinion out of range of many people in this nation, and aiding the creation of an educational and information elite, the U.S. Postal Service does not perform a service to the nation.

If the Postal Service were a private enterprise operation, it would be expected that present pricing policies and the present quality of service would result a stock run on Wall Street, or the appearance of some very vigorous competition. But the Postal Service is a government monopoly controlling the rights of circulation between publications and their individual consumers throughout the country. Thus the checks and balances

of a free market are unavailable to curb abuses in price or erosions in service.

When the Board of Governors made their announcement on "permanent" postal rate increases last June 29, the Chairman of the Board stated that "the Governors recognize that the increased rates will work a temporary hardship on some users. To small second-class publishers, the inability to absorb increased postal rates and service would hardly seem to be a 'temporary hardship.'"

This shortsighted attitude towards the threat to small publications in drastically increased postal rates was repeated in the remarks of the Postmaster General of the United States in a New York Times article on August 2, 1972. Mr. Klassen opened his article by stating:

"(W)e read a great deal today about unnamed magazines and newspapers facing what is asserted to be a catastrophic situation allegedly caused by recently authorized postal rate increases."

Mr. Klassen then went on to focus attention on only one large publisher—Time, Inc.—and assumed in his example that all publications would be increased by a 127-percent average over 5 years, and that each and every publication had the same ability to pass on the postal increases to either advertisers or subscribers.

Several months later, the inability of Time, Inc. to absorb all postal increases was big news in the New York newspapers. National headlines, editorials, and columns last December paid their last respects to Life magazine as this last great mass-circulation publication in the nation folded. Life's officers cited postal rate increases of 170 percent over the next 5 years as one of the terminal conditions which could not be overcome, and sent this important communicator of American life to join the likes of Collier's, the Saturday Evening Post, and Look.

Looking beyond the experience of large mass-circulation magazines with significant advertising support, however, the heaviest burden of second-class postal increases will fall on the small, non-profit publications. But there were no headlines last year when The Providence Sister, official magazine of the Sacred Heart Province of the Sisters of Charity of Providence, Issaquah, Washington, notified the Catholic Press Association that "This is to advise that Providence Sister magazine has been discontinued due to the excessive cost of publishing and mailing."

I doubt that it will attract much attention either, when some rural newspaper or some small magazine of diverse intellectual or artistic expression can publish no longer. It will not only be the individual subscribers, who no longer can receive the benefits of a special point of view, who will be the lesser for the loss; the entire nation is weakened when one voice is silenced and its singular contribution to the lively public discussion of politics, literature, science, education, and other items of national importance is ended.

Mr. Chairman, over the past months, I have received many communications and letters on the subject of increased second-class postal rates. Many of these letters and editorials have been very eloquent in articulating the issues which are involved, and in describing the direct impact which these rate increases have on individual publications and their ability to serve their readership. I would ask the permission of the Committee to include a selection of these editorials and attributed letters into the hearing record at the end of my prepared statement.

As a final comment, Mr. Chairman, I wanted to associate myself with some remarks which you made in the Congressional Record on January 16, 1973 in introducing legislation relating to the Postal Service. In

commenting upon the effect of increased second-class postal rates, you stated:

"I believe that the American public generally has a vested interest in the survival of newspapers and magazines. Regardless of the economical, political, or social policies which they espouse, they contribute to the Nation's thought process. I am personally convinced that the Congress should not permit magazines to go under because the cost of distributing them through the postal system is higher than their readers are willing to pay."

In translating this expression into legislation, I think that the Congress would be reaffirming its intent that the United States Postal Service is to be "a basic and fundamental service provided by the Government of the United States, authorized by the Constitution, created by Act of Congress, and supported by the people."

[From the New York Times, Feb. 9, 1973]

POSTAL OVERCHARGE

Senator Gaylord Nelson of Wisconsin has reintroduced a bill that could save scores of small-circulation periodicals from going the sad way of Look and Life. Those giants were not doomed solely by the staggering rise in second-class mailing rates, but that was a grim and important factor. Even more vulnerable to extinction through higher postal charges are those prestigious but financially precarious journals that feed and reflect the whole gamut of American public opinion.

The Nelson bill would reduce the rate for the first 250,000 copies of each issue of a publication to the level existing on June 1, 1972—the date a new schedule was imposed that would raise second-class postage an average of 127 per cent in the ensuing five years.

The Postal Service's present course is a threat to the freedom of the press by overcharge, a threat as ominous as more overt forms of harassment—and less discriminating. The uncommercial periodicals that would be most gravely affected range from the religious weekly and the journal of opinion—right and left alike—to the scientific monthly, the farm journal and the literary quarterly.

Without this spectrum of the printed word the American people would be handicapped in sustaining a sound democracy. Yet it was precisely to assure a sound democracy that the country's early leaders fostered an informed public, in good part through the wide and inexpensive distribution of journals and periodicals of all kinds. The Postal Service seems to have misread not only the philosophy of the Republic's founders but, as Senator Nelson points out, even the plain objective of the 1970 Postal Reorganization Act, which was an improved mail service, not "a single-minded concern for postal revenue."

[From the Wisconsin State Journal, Feb. 16, 1973]

SMALL PERIODICALS AT STAKE—STOP POSTAL RATE HIKE

SEN. Gaylord Nelson is to be commended for his efforts to stop the increase of second class mailing rates and save scores of small-circulation magazines which would be forced out of business by the added cost.

With higher rates many small publications, covering everything from religion to politics to science, would go the way of such giants as Life and Look.

A bill authored by Nelson would reduce the rate for the first 250,000 copies of each issue of a publication to the level which was in effect June 1, 1972. On that date new rates were imposed which, over the next five years, would increase an average of 127 per cent.

The divergence of opinion put forth in these small specialty magazines plays an important role in sustaining our free society.

The Postal Service, by putting revenue raising ahead of service, is doing a disservice to the entire nation by, in effect, stilling the voices of these small journals.

The founding fathers of this country recognized the need for a well informed public. The First Amendment to the Constitution guarantees press freedom from censorship. The increased postal rates merely impose censorship from another direction.

[From the Stevens Point Daily Journal, Feb. 19, 1973]

SECOND CLASS POSTAL RATES

It was spelled out clearly in the 1970 Postal Reorganization Act that the main objective was an improved mail service and not "a single-minded concern for postal revenue." A fair-minded person would have to admit mail service in 1973 is worse and more expensive than it was in 1970, whatever the reasons.

The U.S. Postal Service last June announced that the rate for second class postage would be increased by 127 per cent over a five year period. This is the class that covers newspapers and magazines. As one direct result of the huge rate increases, two mass circulation magazines—*Look* and *Life*—have folded, and a number of smaller journals face a bleak future.

Postal rates, of course, are not the only source of difficulty for the publications, but they are a heavy contributing cause. And if postal rates are a key factor in the cost of disseminating news matter and opinions and comments on events and conditions of importance to the people, then heavy-handed application of rate increases can be an effective method of silencing those publications. That has the same effect as direct censorship.

Sen. Gaylord Nelson, D-Wisconsin, recognizing this danger, has introduced legislation to save scores of small-circulation magazines that would be forced out of business by the scheduled rate increases. His bill, S-630, is intended "to encourage and support the dissemination of news, opinion, scientific, cultural and educational matter through the mails." Under the measure, the rate for the first 250,000 copies of each issue of a publication would be reduced to the level that was in effect on June 1, 1972, the date the new schedule was effective. Any future increase in second class rates would be phased in over a 10-year period.

The Nelson bill deserves full support, for it is needed insurance that the public can continue to be informed. The concept that all classes of mail should "pay their way"—no matter how high the cost or how serious the consequences—is a relatively new one for the nation's postal system. It is in direct conflict with the purposes which brought about the founding of the Post Office, which were to encourage the exchange of information among the citizens of the republic.

One can only imagine what Thomas Paine, himself a prolific pamphleteer, would have to say about the current state of the public's mail delivery system.

[From ADA World, October 1972]

POSTAGE RATES TO KILL SMALL PAPERS

ADA World readers are urged to protest proposed increases in second-class mail rates threatening to stifle the free flow of ideas and information in the U.S.

The U.S. Postal Service has proposed a 142-percent increase in mail rates for newspapers and magazines over the next five years, and it is widely conceded in the industry that such increases will put many publications out of business.

Protests have come from both commercial and non-commercial publications and from conservative as well as liberal publishers. Many small magazines which routinely carry important "think pieces" would cease publication, and nation-wide organizations—

like ADA—which depend on a second-class permit to reach a far-flung membership would find survival difficult.

There is no hope of congressional action this year to hold second class rates at old levels and end the first-step increase—a 0.2 cents a copy surcharge—applied in July, but it is important to act now to prevent further drastic increases, according to Kenneth Flester, executive director of the International Labor Press Association which is leading labor efforts to resist the increases.

Readers are asked to write their senators and representatives urging them to support a bill introduced by Sen. Gaylord Nelson (D-Wis.) and co-sponsored by Sens. Metcalf, Hughes, Eagleton, Humphrey, Chiles, Mondale, Church, Cranston, Kennedy, Case, McIntyre and Hatfield. A companion measure has been introduced in the House.

The Nelson bill would:

Forbid imposition of a per piece surcharge on second class mail.

Roll back pound rates on the first 250,000 copies of second class publications to the temporary rates in effect last June.

Specifically instruct the Postal Service to set rates to "encourage and support the widest possible dissemination of news, opinion, scientific, cultural and educational matter."

Although Congress cannot be expected to reassert direct control over rates, Flester said the hope is for a ban on the surcharge (a device several times offered by past postmasters general and uniformly rejected by past congresses); a clear legislative admonition to the Postal Service on the primary importance of the public interest; and a ceiling on second class increases.

Flester said:

"We believe second class publications should be willing to have their rates raised roughly in proportion to the increase in unit costs of the Postal Service as a whole. This would do away with the ancient argument that resisting rate increases is an act of war against postal employees.

"There are more troublesome snags. One is the indisputable fact that postal rates within the means of most non-profit second class mailers—and a lot of commercial second class, too—will require government subsidy on a continuing basis, to the end of time . . .

"But this runs into the loudly-trumpeted proposition that the Postal Reorganization Act of 1970 was intended to make the Postal Service "self-supporting" within a measurable time—perhaps a decade. Congressmen who believed this proposition—or, even worse, said so out loud—are now asked to change their minds. This doesn't come easily. . . .

"The toughest obstacle of all, it seems to us, is that most members of Congress were heartily sick of the rate-making and wage-setting decisions forced upon them by the old system. They truly want these decisions to be made by the quasi-independent Postal Service created by the 1970 act. We can get the relief we so desperately need only by convincing a Congressional majority that the new apparatus is violently abusing the public interest . . ."

[From the New World, July 28, 1972]

NEW POSTAL RATES A THREAT

(Catholic weekly newspaper of the Chicago Archdiocese)

For a long time the Catholic press has been protesting the postal rate increase faced by newspapers and magazines under the new U.S. Postal Service. Therefore it is good news to find that some of the metropolitan daily papers have awakened to the problem.

As Tom Wicker of the New York Times points out about the proposed increases, in an article published in *Chicago Today*: "It's impact on the flow of ideas and opinion in America is likely to be catastrophic, for it is

precisely upon smaller, usually less profitable publications that it will impose the heaviest burden."

Mr. Wicker notes that "it has been Congressional policy since 1972 to provide certain preferential postal rates, not to enrich publishers but because, as Justice Douglas once put it, it was considered that "periodicals which disseminated "information of a public character" or which were devoted to "literature, the sciences, arts, or some special industry" . . . contributed to the public good.

"That is not quite the same thing as subsidizing corporate farmers . . . or subsidizing oilmen with the depletion allowance," Mr. Wicker continues: "the Senate Post Office and Civil Service Committee, reporting on the legislation establishing the Postal Service in 1970, made it quite clear that 'the Postal Service is in fact and shall be operated as a service to the American people, and not as a business enterprise.'"

We join Mr. Wicker in urging that the Congress roll back the second-class rate increases. These can cause the death of many smaller, urgently needed publications—particularly among diocesan newspapers.

Sen. Gaylord Nelson (D., Wis.) has introduced a bill to prevent the planned increases in postal rates for magazines and newspapers. It would freeze the rate at the current level for those with circulations of 250,000 or less. Those with larger circulations would have extra charges per copy above 250,000 but the rate increase would be initiated over five to 10 years.

Senator Nelson sharply criticized the Postal Services for seeking an average 127% increase in second-class rates, which he said could drive many small publications out of business.

The threat of the increases already has put some smaller publications out of business; many more will follow if the Postal Service's program is not changed.

[From the Topeka (Kans.) State Journal, July 29, 1972]

FREE FLOW OF OPINION IN JEOPARDY

Postal rate increases which threaten to stifle the free flow of information and opinion, through a ruinous effect on magazines, newspapers and other publications, are the target of a legislative remedy championed by Sen. Gaylord Nelson, D-Wis., and a group of colleagues in the U.S. Senate.

Nelson has introduced a bill to head off a whopping hike of 127 per cent for second-class mail, as proposed by the postal service in its zealotness to find new revenues.

It would, instead, freeze already-increased rates for mailing of such matter—up to 250,000 copies of each—at the level existing on June 1 of this year.

The senator expresses deep worry, not simply for the business perils involved, but that the American public will be the loser in a more restricted exchange of ideas and comment, which has been the bulwark of their freedoms.

Nelson, and others aware of the threat, have drawn attention to the historic precedents going back to the earliest days of the new republic seeking to assure the widest latitude for sharing views in shaping public affairs and exchange of knowledge.

"For 178 years," says Nelson, "Congress endorsed the concept of low postal rates for printed publications circulated through the mail. In passing the Postal Reorganization Act of 1970, I do not think Congress turned its back on this historic policy nor put aside its concern for the basic educational and informational services which this self-governing nation requires and which the U.S. mail uniquely provides.

"The proposition that a healthy democracy depends upon the wide distribution of diverse information by publications sent in the

mail is just as valid in 1972 as it was in 1792 when Congress first put this principle into law."

His bill would call upon Congress to reaffirm this obligation by specific language in the act under which the postal service operates, "to provide postal service at rates which will encourage and support the widest possible dissemination of news, opinion, scientific, cultural and educational matter."

Significantly affected by higher postoffice charges are the myriad periodicals and weekly and small daily newspapers whose circulation depends largely upon mail delivery. They are a highly important segment of the overall media, depended upon by millions of people for enlightenment and discussion of local and national affairs.

All citizens may well share the concern of Sen. Nelson and his colleagues for a situation which could erode the very foundations of an enlightened democracy.

THE REPUBLICAN NEWSPAPER
OF CALIFORNIA,
March 30, 1973.

Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: We were delighted to read in the San Diego Union about your measure to freeze at the present level the postage rates for the first 250,000 issues of newspapers and magazines.

Can you please tell us the status of the measure at this point?

The proposal rate hikes are a matter of great concern to us. We feel, as you do, that they would present a serious threat to the existence of small presses.

If we can be of any service to you in this matter, please be sure to let us know. Sincerely,

JOAN B. GREEN,
Contributing Editor.

POLITICS & SOCIETY,
Los Altos, Calif., March 28, 1973.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Your efforts on behalf of little journals are much appreciated by *Politics and Society*. Increases in postage rates have made it increasingly difficult for us, and other journals like us, to survive. What in your opinion, would be the most appropriate way for us to assist your efforts in getting the Senate to pass S. 630? Should we direct correspondence at the Senate Post Office and Civil Service Committee, or might testimony by journal editors be more useful?

Sincerely,

IRA KATZNELSON.

LA CROSSE TRIBUNE,
La Crosse, Wis., March 29, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: We know there are many newspapers that will supply you with great rhetorical expression about the need to provide wide distribution of diverse information, and other historical background. This is great for our side, but we think it is more impressive to tell you that the rate increase proposed for July will raise our second-class postage bill 33 per cent—from \$45,000 to \$60,000 a year.

Traditionally we have raised our subscription rates by only those amounts to keep pace with the postage increases and of course have met resistance from our rural readers. To offset the loss of several thousand mail subscribers resulting from price increases, we have established a network of motor route delivery operated by independent contractors to give same day-seven day

(including postal holidays) right to the farm homes.

In spite of the emergency measures we have adopted—they can only be called delaying actions—our mail circulation will continue to shrink because we will be forced to again raise our mail subscription rates—a continuation of a vicious circle created by exorbitant postage rates.

Our mail subscribers will not be able to express their opinion on these important matters involving postal rates and the manner in which it affects them. You will be providing a great service to rural America if you can somehow describe their position emphatically and truthfully.

Sincerely yours,

ED KEEFE,
Circulation Manager.

STAUFFER PUBLICATIONS, INC.,
Topeka, Kans., March 29, 1973.

Hon. GAYLORD NELSON,
U.S. Senator, Washington, D.C.

DEAR SENATOR NELSON: What must we do to get across to Congress that the whole tenor of American life is being changed by the high rate of second class postage?

Our company besides publishing small dailies also puts out Capper's Weekly (465,000 copies) each week. These rates threaten to force us to discontinue Capper's Weekly which has been published for more than ninety years, and, until 1954, was owned by Senator Arthur Capper.

This magazine goes to every state and to many foreign countries and is read by rural and small town people.

Our fifteen small daily newspapers that we also publish are likewise fighting for their existence.

I hope Congress will see the light and change the direction in which we are headed hell bent.

Sincerely yours,

OSCAR S. STAUFFER.

TRANSACTION INC.,
New Brunswick, N.J., March 29, 1973.

Hon. GAYLORD NELSON,
U.S. Senator, Washington, D.C.

DEAR SENATOR NELSON: Thank you for your letter of March 21 and the information therein contained on your activities with respect to the permanent postal rate increases; and beyond that, some means for congressional legislative support—either for relief of such mail increases, or beyond that, direct subvention.

My friend and colleague at *The New Republic*, Bob Myers, probably has put the matter right in clearly delineating a difference between those magazines in the area of public service which survive from subscription income, and those magazines dedicated to advertising premises and who primarily serve the commodity and business constituencies.

We very desperately need relief, and failing that, some form of subvention; but above all, there must be a clear and distinct separation between modest and very often profitless operations that have been the beacon light of the American liberal imagination since the founding of the nation and those magazines that have no such larger purposes.

It is important here to note that even "special interest magazines" may be of the former or latter variety. The magazine of *Tennis* or *Yachting* is not necessarily the same as *The Progressive*—or for that matter, *society*. I am not entirely sure this distinction has been driven home sufficiently; and as a result, the very tenor and nature of the discussion has largely been handled by the magazine association on one hand, and the postal authorities on the other, crunching, but hopefully not crushing the public service publications such as our own.

Because of this, I am genuinely appreciative of the support you and your colleagues

have given to the principle of congressional support for the dissemination of the diversity of thought. Our own Committee for the Diversity of the Press had given testimony earlier on this subject; and I am certain that I express our common sentiment when I say that I hope you are successful in this activity.

Yours, very truly,

IRVING LOUIS HOROWITZ,
Editor-in-Chief.

RIPON COLLEGE,
Ripon, Wis., March 27, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Continually rising costs and the tightening of college enrollments across the nation have placed a severe financial strain on private colleges and universities.

Historically we have enjoyed the privilege of mailing student recruiting, alumni and fund-raising literature at economical 2d Class rates. Any significant increase in these rates will deal a severe blow to our efforts to maintain effective communication with prospective students, alumni and donors to this private educational institution.

Sincerely,

KENNETH E. LAY,
Director of Public Relations.

THE AMERICAN LEGION,
Washington, D.C., March 15, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: The new rate increases arbitrarily imposed on non-profit second-class mailers by the Postal Rate Commission are so excessive and unreasonable that many publications will not survive unless relief is granted by the Congress. The American Legion Magazine, the American Legion Auxiliary National News and many of the state publications of both organizations cannot long continue to publish under the existing phased rate schedule.

The American Legion Magazine was established in 1919, at the time the organization was chartered by the Congress. It is mailed to all Legionnaires and to schools, libraries and veterans hospitals throughout the country. The magazine provides information on matters of concern to veterans and their dependents, and contains articles on patriotism, youth programs and the history and culture of our country. The editorial content averages 75% and the advertising content is 25% or less in each issue. The average press run is 2,700,000 issues per month.

Five years ago the cost of mailing the Legion magazine was approximately \$140,000 a year. Last year the cost was \$313,000. Under the present schedule of rate increases, by 1980 the cost of mailing the magazine will skyrocket to nearly \$1,000,000 a year, an increase of 235%.

The principal inequity is the new charge of up to 1.5 cents per piece because this additional cost does not adjust for publications with a low percentage of advertising income. Until the new schedule of rates became effective, a per piece charge had never been imposed upon authorized nonprofit mailers. This charge is in addition to the per pound rate increase schedule now in effect.

For over half a century prior to enactment of Public Law 91-375 (Postal Reorganization Act), the Congress provided preferential mail rates for publications of veterans organizations, churches and other non-profit groups who disseminated information of benefit to their members and to the public. The language of the Postal Reorganization Act clearly indicates that the Congress had no intention of abandoning the traditional treatment accorded these organizations.

The projected schedule of increases of the Postal Rate Commission will practically eliminate the gap between the profit publications and the non-profit mailers. The Commission has callously ignored those provisions of the Postal Reorganization Act and 55 years of Congressional policy concerning the rate treatment of non-profit organizations. The rates discriminate against a class of publications which are least able to absorb the increases and whose history has been one of disseminating news and useful information in the public interest rather than becoming income oriented through the sale of large amounts of advertising. Subscription costs of our magazine and other Legion publications cannot readily be passed on to our members because these costs are part of the dues structures of the organization.

The Congress should reassert its historic policy which recognizes the enormous contribution that second-class non-profit publications make to the culture of our country. A reassertion of this policy must be accompanied by legislation reestablishing fair and equitable postal rates for authorized non-profit mailers.

The American Legion and the American Legion Auxiliary have always published in strict compliance with the law and the intent of the Congress. We should not be forced to discontinue or curtail our efforts to keep our members informed on matters of vital concern to them. Legislation has been introduced in this session to provide some relief. I respectfully urge you to support it and help our publications to survive.

Sincerely yours,

JOE L. MATTHEWS,
National Commander.

THE COOPERATIVE LEAGUE OF THE U.S.A.,
March 1, 1973.

Hon. GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: As the Legislative Director of the Cooperative League of the U.S.A. I have been asked to forward to you the enclosed letter from the officers of the Cooperative Editorial Association expressing support for your bill, S. 630.

They are united in this matter because the proposals of the present Post Office management will put many of them out of business if not changed.

You have their permission to put the letter in the Record or any other way that will be helpful.

Sincerely,

SHELBY E. SOUTHARD,
National Commander.

JOURNAL OF THE EXPERIMENTAL
ANALYSIS OF BEHAVIOR,
Rochester, N.Y., February 22, 1973.

Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: I want to thank you for introducing your bill concerning the exemption of small journals from the proposed postal service rate rise. We have only 4,000 subscribers and are, as are many other scientific journals, a rather marginal operation, with only two full time employees. Last year we were \$7,000 in the red. Since our bill for postage was \$4,200 you can see that any large percent increases in that would be likely to do us in completely.

Again, thank you for your help. I hope you succeed.

Sincerely yours,

VICTOR G. LATIES,
Professor.

AMERICAN BANKER,
New York, N.Y., February 22, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: As you know I have followed with keen interest your aggressive

work on behalf of the publishing industry in the problems it faces with rapidly rising costs and poorer and poorer performance from our postal service.

It is nice to know that there is a distinguished member of the Senate who has an appreciation for the problems we face. Your Bill which would reduce the rate for the first 250,000 copies of each publication to the level of June 1, 1972, would be a great boon to the smaller publishers.

Please keep up the good fight, and if there is any way I can be of service to you, please let me know.

Respectfully yours,

ENVIRONMENTAL ACTION,
Washington, D.C., February 20, 1973.

Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: I wish to state my strong support for your recent bill, S. 630, to reduce postage rates for magazines with limited circulation.

As you are well aware, there are numerous financial pressures on magazines these days. With the proliferation of smaller specialized magazines, there is also pressure to keep prices down, as the market can only bear so much. For non-profit organizations like ours, it is especially difficult to make ends meet. Obviously, ever-spiralling postage expenses severely cut into our program.

What is particularly galling about the postage increase is the unbelievably poor service we receive at the hands of the Postal Service. It is not uncommon—in fact, it is the usual case—for a copy of our magazine to take between one and three weeks to reach many of our subscribers. I know of no reader who gets *Environmental Action* in less than five days after it is mailed.

We support your continued action in this direction. Please let us know if we can be of assistance.

Sincerely,

PETER HARNIK,
Editor.

FLIGHT ENGINEERS' INTERNATIONAL
ASSOCIATION,
Washington, D.C., February 12, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Thank you for the Congressional Record January 31, 1973 and for your continuing fight to allow small publications such as our FEIA NEWS to remain in existence through implementation of reasonable postage rates.

Sincerely,

ERROL L. JOHNSTAD,
President.

COOPERATIVE EDITORIAL ASSOCIATION,
Chicago, Ill., February 20, 1973.

Hon. GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: This is to record the strong support of our Association for S. 630, the bill to encourage dissemination of news and opinions through the mails, through keeping the June 1, 1972, limit on second-class postal rate increases. We appreciate your action and those of other Senators in backing these measures.

Our Association is made up of editorial workers on publications owned by or written for cooperatives of all types. These are membership publications that reach families to-talling more than 20 million members of co-operatives. Needless to say, the application of fair and reasonable second-class postal rates is the lifeblood of these membership organs, which are not operated to make a profit but to provide essential information to owners of these associations. Prohibitive rates as proposed by the U.S. Postal Service

would make publishing these (usually small) publications extremely difficult if not impossible. We would appreciate your continued efforts on behalf of this legislation and will urge our members to follow through, in gaining additional support for it.

Sincerely,

PHILIP J. DODGE,
Executive Secretary.

THE AUTHORS LEAGUE OF AMERICA, INC.,
New York, N.Y., February 9, 1973.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: The Authors League wishes to thank you for introducing your bill to prevent the projected massive increase in second class mailing rates. The Authors League has testified in the House before Mr. Udall's Subcommittee in favor of such legislation. We have asked Senator McGee for an opportunity to testify during the forthcoming hearings on the operations of the Postal Service and we will support your bill.

Sincerely yours,

MILLS TEN EYCK, Jr.,
Executive Secretary.

THE LUTHERAN,
Philadelphia, Pa., January 5, 1973.

Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: The recent demise of LIFE magazine adds urgency to your proposed legislation to freeze second-class mailing rates and to prevent disastrous increases in the per-piece surcharge. As you re-introduce the measure in this session of Congress, I hope prompt action can be taken by the Committee on Post Office and Civil Service to schedule hearings and produce some action.

With thanks for your continued interest in this matter,

Sincerely yours,

ALBERT P. STAUDERMAN,
Editor.

NEWPORT COVENANT CHURCH,
Bellevue, Wash., December 7, 1972.

Senator GAYLORD NELSON,
New Senate Office Building,
Washington, D.C.

DEAR SIR: I write to encourage you in the bill which you have introduced which would freeze all second class rates at the level of June 1, 1972 for the first 250,000 issues of magazines and newspapers sent through the mails, and would drop the 1½ cents per piece surcharge on all second-class publications. Your bill is commendable and highly in order and in keeping with the spirit of our American democracy. Thanks for your proposal. I sincerely hope it passes.

Sincerely yours,

DELMAR L. ANDERSON, Pastor.

THE ADVOCATE,
East Orange, N.J., October 9, 1972.

Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: I am very much interested in your Senate Bill 3758 to prohibit the imposition of a per-piece surcharge which has been proposed by the Postal Service, and wish to add my support to your efforts.

If and when such an increase as now proposed goes into effect, the results would be catastrophic. Such a rate increase would be unsurvivable for many non-profit publications.

One reason Congress instituted second-class rates was to promote the widespread distribution of printed matter, the theory being that an informed citizenry was one of the best possible safeguards of democracy. That holds true today. However second-class mail would be threatened if existing plans of the Postal Rate Commission are implemented. We look to Congress for survival.

Please keep me informed as to the progress of your Bill and I would appreciate a copy of S-3758.

Wishing your Bill quick passage and with warm personal regards, I remain
Cordially,

ALLEN C. BRADLEY,
Circulation Manager.

THE MISSIONARY TIDINGS,
Winona Lake, Ind., October 19, 1972.
Senator GAYLORD NELSON,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR: As a former Wisconsinite—and soon to return there—I am proud of your integrity in political office. And as editor of a small church magazine, I am very concerned that Bill S. 3758, which you sponsored, be passed.

I am enclosing a carbon copy of my letter to Senator Gale W. McGee which explains our position. I sent similar letters to Representatives Thaddeus J. Dulski and Morris Udall and to the senators from Indiana. I hope you and the various state representatives are flooded with mail from the many who see no justification for this drastic increase.

Sincerely,

ALICE FENSOME.

THE HENRY F. HENRICHS
PUBLICATIONS, INC.,
Litchfield, Ill., September 26, 1972.
Senator GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: I have just read with interest the item in the September issue of "The American Legion Magazine" concerning your position on second class postal rates. I appreciate your letter to the Editor of "The American Legion Magazine" with reference to your bill S. 3758, which we hope will gain much support and can be put into law.

As publishers we realize how great the blow has been by the increase in second class rates and how difficult it is to continue to pay higher rates for second class mail service, which has certainly not been improved.

We commend you for your attitude in this matter and your action in preparing legislation that we hope will be successful.

Sincerely,

GARTH HENDRICH.

GOOD NEWS,
Wilmore, Ky., September 12, 1972.
Senator GAYLORD NELSON,
Chairman, House Employment Manpower
and Poverty Committee, New Senate Office
Building, Washington, D.C.

DEAR SENATOR NELSON: I am writing to protest the recent increase in postage rates for religious publications. The radical increase in cost will make it very difficult for non-profit publications such as ours. Since we do not exist to make profit, as do the commercial publications, it seems grossly unfair that we should be forced to pay this unreasonable postage increase.

Those who use the mails for selling merchandise—particularly the direct mail promotion people—are the ones who should pay the postage increase. We certainly do not object to paying a fair share of the cost, but when the postage rates reach a level at which many non-profit publications would be forced to suspend, then the postage rate becomes a punitive measure.

In the interest of fairness, I want to ask you to use your influence to change this discriminatory legislation.

Sincerely,

CHARLES W. KEYSON,
Editor.

GOSPEL PUBLISHING HOUSE,
Springfield, Mo., September 11, 1972.
Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR NELSON: I am writing to express appreciation to you for Nelson Bill (S. 3758). We believe this bill will greatly affect publishers of magazines and newspapers and we trust it will receive favorable consideration by those whose responsibility it is to either accept or reject passage.

Thanks again for your part in proposing this important legislation.

Cordially,

WILLIAM G. EASTLAKE,
National Director, Division of Publication.

WORLD EVANGELISM, INC.,
San Diego, Calif., September 8, 1972.
Senator GAYLORD NELSON,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: As the publisher of Deeper Life magazine I wish to thank you for your bill (S. 3758) which would freeze postage rates at the June 1 level for the first 250,000 sent through the mails.

This would mean so much to so many if this bill is passed.

Yours very truly,

MORRIS CERULLO.

CHILD EVANGELISM,
Grand Rapids, Mich., September 8, 1972.
Hon. GAYLORD NELSON,
Chairman, House Employment Manpower and
Poverty Committee, New Senate Office
Building, Washington, D.C.

MY DEAR SENATOR: As an editor of a non-profit Christian magazine for workers with children, namely, Child Evangelism, I take this opportunity to commend you on your encouraging bill (S. 3758) which would freeze postal rates at the June 1, 1972 level for the first 250,000 copies of magazines and newspapers sent through the mail.

Your bill would also eliminate the cent-and-a-half surcharge that the Postal Rate Commission had recommended.

Your bill will mean the difference between the demise or continuation of magazines which have been wholesome as well as a strength to Judeo Christian culture of USA.

This letter is not only to commend you but to support you in this effort. In addition you will find carbon copies of letters which we are today addressing to Senator Gale W. McGee, Chairman, Senate Post Office and Civil Service Commission, also Representative Thaddeus J. Dulski, Chairman, House Post Office and Civil Service Commission, and Representative Morris Udall, Chairman, House Subcommittee on Postal Service.

In supporting your bill, we think it would correct certain aspects of the postal reorganization Act of 1970 which overlooked the importance of free expression and the widest possible dissemination of wholesome information and ideas, planned and hoped for by our founding fathers and supported by them in the need for low cost postal rates for magazines and newspapers.

Cordially yours,

Rev. P. W. BENNEHOFF,
Managing Editor.

ROCHESTER, MINN., August 28, 1972.
Hon. SENATOR NELSON,
Senate of U.S., Washington, D.C.

DEAR SENATOR: It has come to my attention that the Postal Department is attempting to raise the price of mailing periodicals such as Church affiliated newspapers and that you have sponsored a bill No. 3758 in the Senate to put curbs on this idea.

Thanks to you, and I hope the thinking of others that this attempt will be stopped. . .

I realize there is need for more revenue in the P.O. service but perhaps this step they propose will be hurting the "grass root publications." I feel we have a great need for.

Altho I am from another state I watch with interest legislation by our national leaders and I admire your stand on the issue of which I write.

Sincerely,

WALT BRUZEK.

FAR WEST SKI ASSOCIATION,
San Francisco, Calif., August 25, 1972.
Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: On behalf of the association, we wish to express our support of your S. 3758 which seeks relief for certain second-class postage users.

The association, a division of the United States Ski Association, publishes twenty times yearly its own tabloid newspaper. The rates proposed by the Postal Service would be a severe blow to the financial health of the association, which is a non-profit corporation under the laws of the State of California.

Would you please inform us as to other members of the Senate whom we should contact, and what other actions you recommend?

Sincerely,

JOHN WATSON,
President.

WOMAN'S NATIONAL
AUXILIARY CONVENTION,
Nashville, Tenn., August 24, 1972.
Senator GAYLORD NELSON,
Chairman, House Employment Manpower
and Poverty Committee, New Senate Office
Building, Washington, D.C.

DEAR SIR: As editor of the Co-Laborer magazine I want to thank you for and commend you for the bill S. 3758 that you have recently introduced.

The Co-Laborer is a 2nd class religious non-profit publication with a circulation of 13,000. Our women shall be praying for you as you and your staff work on the passage of this bill.

Sincerely,

CLEO PURSELL,
Executive Secretary-Treasurer.

THE SUNDAY GUARDIAN,
Newark, N.J., August 14, 1972.
Senator GAYLORD NELSON,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: Thank you for introducing bill S. 3758 in the U.S. Senate. As one who has given his life to this publication and has never accepted a paid advertisement we sincerely hope your bill will keep the rates down.

Respectfully yours,

ROBERT S. WOMER.

AUGUST 7, 1972.
Senator GAYLORD NELSON,
Chairman, House Employment, Manpower
and Poverty Committee, New Senate
Office Building, Washington, D.C.

DEAR SENATOR NELSON: The introduction of your bill (S. 3758) is a bright development for all of us in the field of church publications, and I wish to commend you for this fine work.

Let us hope and pray for the passage of your bill which will correct certain aspects of the Postal Reorganization Act of 1970.

Thank you for what you are doing with reference to this important matter.

Sincerely yours,

O. W. POLEN,
Editor in Chief.

OAKLAND, CALIF.,
August 4, 1972.

Senator GAYLORD NELSON,
Washington, D.C.

Respectfully solicit your support of Nelson S. 3758 bill for press freedom of the huge postal increase on second class mail will force many viable publications to cease publication. Our auditor has forecasted an increase from 15,000 per year to more than 45,000 at the end of the 10 year period. We simply cannot stay in business if this increase becomes a reality.

FRANCIS A. MAUROVICH,
Editor.

THE MORNING STAR,
Lafayette, La., August 4, 1972.

Hon. GAYLORD NELSON,
Committee on Labor and Public Welfare,
New Senate Office Building, Washington,
D.C.

My DEAR SENATOR NELSON: As Editor of our Diocesan newspaper, I wish to commend you for the much-needed relief in postal rates provided in the legislation which you are proposing in the Senate today.

We have been fortunate in locating the printing of our paper nearby. For years it had been printed out of state. Our mailing costs, however, even at the present time are a great financial burden. We truly need the succor your bill provides.

Many thanks.

Sincerely yours,
(Rev. Msgr.) RICHARD VON PHUL
MOUTON,

Editor.

LABOR,
Washington, D.C., August 3, 1972.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR GAYLORD: This is a belated note to express our deep appreciation for the bill you have introduced, with 12 co-sponsors, to freeze postal rates for small publications and to provide a rollback.

We carried a story about your bill in the July 15 issue of LABOR, which you may have seen, but in case you haven't I'm enclosing a tearsheet containing the story.

We were particularly pleased that you underscored the disastrous impact of the postal rate surcharge on the "smallest, lightest weight" publications, particularly those in the non-profit category. The latter face 750 per cent in aggregate increases over a 10-year period under the rates established by the Postal Service. Such non-profit publications have already been hit by a 100 per cent raise in postal rates this year as a first installment.

I am enclosing several additional tearsheets from LABOR with marked stories which describe the seriousness of the rate increases for non-profit periodicals. You may want to have this information for future use.

You are a great Senator and I want to salute you.

Sincerely,

RUBEN LEVIN,
Editor and Manager.

NATIONAL CHRISTMAS TREE GROWERS'
ASSOCIATION, INC.,
Milwaukee, Wis., August 3, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: We appreciate and support your leadership in the matter of preserving the concept of low postal rates for printed publications. We will pass the word.

Sincerely,

ALEXANDER T. DAVIDSON,
Secretary.

CAPUCHIN,
August 2, 1972.

DEAR SENATOR NELSON: Enclosed is a copy of a letter that I wrote to Senator Gale McGee regarding your bill S. 3758. Being a Wisconsinite by birth and claim, I have always been a fan of yours and even more so in the bills you have sponsored and supported.

Presently I am a Michigan resident and am also writing to my two Senators here to support you in this bill.

I feel the religious press does valuable work and service for our country—in defusing the emotionalization of the biases that tend to cripple us as a country and in helping us become a more rational people. The loss of our publication would be small, but it would only be a symptom of what is yet to come.

I support you wholeheartedly, and if there is anything I can do to gain support for this bill, don't hesitate to ask.

Sincerely,

FR. ALLEN GRUENKE,
Editor, Sandal Prints.

THE BAPTIST MESSAGE,
Alexandria, La., August 2, 1972.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR NELSON: Let me take this opportunity to thank you for the legislation which you have introduced relative to the postal rate increases for church publications.

The new postal rates will do serious, serious, damage to religious journals if allowed to escalate as scheduled.

Sincerely,

JAMES F. COLE.

THE NEW YORKER,
New York, N.Y., August 2, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: William Shawn has shown me your letter concerning your interest in the proposed 127 per cent increase in the second-class postal rate.

Indeed, an increase of anything like that amount would simply paralyze our business—and as you so clearly discern, our business is the national press of this country.

I would like to thank you for your concern and your interest in writing us.

Yours sincerely,

DAVID D. MICHAELS.

CITIZENS FOR EDUCATIONAL FREEDOM,
Washington, D.C., August 1, 1972.

Senator GAYLORD NELSON,
Committee on Labor and Public Welfare, New
Senate Office Building, Washington, D.C.

DEAR SENATOR NELSON: As vice-president of Citizens for Educational Freedom and as editor of its quarterly publication, a sample of which is attached, may I commend you for your effort to freeze rates on second class publications with circulation of 250,000 or less.

Our organization is one which has been working since 1959 to assure freedom of education in this nation but, as with all citizen groups with more desire than money, we would find it next to impossible to meet higher mail rates to our 50,000 subscribers.

Today I am writing to Senator Gale W. McGee asking that he give favorable consideration to your bill, a necessary piece of legislation if we are to "encourage and support dissemination of news, opinion, cultural and educational matter" through the mails.

Again, may I extend to you my appreciation.

Sincerely yours,

EMILE COMAR,
Vice-President.

MAGNIFICAT,
Buffalo, N.Y., August 1, 1972.

Senator GAYLORD NELSON,
Committee on Labor and Public Welfare, New
Senate Office Building, Washington, D.C.

DEAR SENATOR NELSON: The enclosed copies are for your information.

Your appreciation of the plight of second-class mail users and the relief you are trying to secure for them through legislation by your introduction in the Senate of bill S. 3758 has won the heartfelt thanks of every religious publication.

We believe the letters that we sent to our Senators and key Congressmen will help achieve passage of your bill through the Senate in its present form.

Very truly yours,

JOSEPH F. DI MAIO,
Comptroller.

CHRISTIANITY TODAY,
Washington, D.C., August 1, 1972.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR MR. NELSON: Thank you for your July 8 letter. I approve of the legislation which you have introduced into the Congress concerning the second class postal rates for magazines, etc.

You have my enthusiastic support and endorsement of this move. Thank you for your interest and concern.

With every good wish, I am

Sincerely yours,

HAROLD LINDSELL.

WISCONSIN SOCIETY OF
PROFESSIONAL ENGINEERS,
Madison, Wis., August 1, 1972.

GAYLORD NELSON,
U.S. Senator, U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Thank you for your letter advising us of your feelings relative to the increase in postal rates for publications. We share your concern that this increase will stifle the free flow of ideas and will threaten the continuation of many publications including the Wisconsin Professional Engineer.

I am not opposed to reasonable and equitable second class rate increases but a 127% increase appears totally unjustifiable.

As we seek lasting solutions to the many great problems and needs of our people, any curtailment of science-tech information can only be disastrous.

You are to be commended for your initiative and positive action in introducing S 3758. Thank you.

Sincerely,

GLENN E. BURG,
Editor.

COURIER-JOURNAL,
July 31, 1972.

Senator GAYLORD NELSON,
Committee on Labor and Public Welfare,
New Senate Office Building, Washington,
D.C.

DEAR SENATOR NELSON: Enclosed is a copy of a letter that I am sending today to Senators McGee, Fong, Javits and Buckley. I am also sending similar letters to Congressmen Dulski, Conable, Horton, Derwinski, and Rev. Morris K. Udall.

May I offer our support for the introduction of your bill to the Senate which will allow newspapers like ours to continue publishing.

If I can be of help in anyway, please feel free to call on me at anytime.

Sincerely,

ANTHONY J. COSTELLO,
General Manager.

THE WASHINGTON POST CO.,
Washington, D.C., July 31, 1972.

HON. GAYLORD NELSON,
U.S. Senator, Old Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: Thank you for sending me your statement on postal rates made in the Senate June 28. We are deeply appreciative of your understanding of this issue and of the magazine publishers great concern about it. Oz Elliott has told me of his meeting with you. I am very hopeful that something can be done to alleviate the threat to many publications as well as Newsweek.

Sincerely,

KATHARINE GRAHAM.

CHEYENNE NEWSPAPERS, INC.,
Cheyenne, Wyo., July 31, 1972.

HON. GAYLORD NELSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR: Thank you so much for your letter of July 20 and the enclosed statement made by you to the Senate the last of June. I have read all the information you mailed with more than casual interest.

Needless to say, I am much in agreement with your position. Whether or not the Postal Service Board of Governors intended their actions to become a serious threat to the freedom of the press, there can be no doubt as to the end result as far as many magazines and small newspapers are concerned. We have reprinted the Washington Star editorial on this topic and are preparing an editorial of our own for publication soon.

Your support is deeply appreciated.

Sincerely,

ROBERT S. McCRAKEN.

THE SPARTANBURG HERALD,
THE SPARTANBURG JOURNAL,
July 31, 1972.

HON. GAYLORD NELSON
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: We greatly appreciate your letter of July 18 with enclosure of your statement before the Senate concerning proposed Postal rates.

The proposed increase of 127 percent is outrageous and poses a grave danger to our Country's free press.

I am quite certain that the Board of Governors of the United States Postal Service has lost sight of the original intent of the Congress in setting postal rates to foster the dissemination of news and opinion among the people of a self governing democracy.

This oversight by the Board of Governors must be corrected by the Congress if we are to save the two to three thousand small daily and weekly newspapers which today are still the only local media of millions of Americans.

Sincerely,

FRED D. MOFFITT,
Publisher.

NEW YORK, N.Y.,
July 28, 1972.

HON. GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: I am in your debt for the privilege of reading the text of your June 28 Senate statement on the postal rate increases. It is, to my mind, the most effective and comprehensive analysis I have seen anywhere on the subject. The combination of historical background and detailed knowledge of the way publications operate gives your statement extraordinary value. My compliments and congratulations.

Recently, I testified before the House Committee in a somewhat similar vein. The text of that testimony is enclosed.

With all good wishes,

NORMAN COUSINS.

HARTE-HANKS NEWSPAPERS, INC.,
San Antonio Tex., July 28, 1972.

MR. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: I received your letter of July 20 in which you discussed the 127 percent increase in second-class mail rates. I agree with your position and hope that your colleagues will be persuaded to concur.

Sincerely,

ROBERT G. MARBUT.

THE AMERICAN LEGION,
Milwaukee, Wis., July 28, 1972.

HON. GAYLORD NELSON,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: We have received a copy of your remarks in the Congressional Record and in newspaper articles had noted your position in support of second-class publications.

We do wish to express our thanks and appreciation to you for your efforts, since the monthly Badger Legionnaire, the official publication of the Wisconsin American Legion, is naturally affected by the postal rates.

With kindest regards, I am

Sincerely yours,

ROBERT G. WILKE,
State Adjutant.

COMMENTARY,
New York, N.Y., July 27, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Thank you very much for sending me your statement of June 28 on the issue of second-class postal rates. I agree with your general position and I certainly hope you succeed in your fight against these postal increases.

Sincerely,

NORMAN PODHORETZ.

EDITOR AND PUBLISHER,
New York, N.Y., July 27, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: Many thanks for your letter of July 20 and your enclosure from the Congressional Record explaining your position on the public service aspect of second class mail and your bill S. 3758 which would reiterate Congress's historic position with respect to the widest distribution of information and opinion at the lowest cost through the mails.

As you probably know, it has been our editorial position that Congress should do just that. I have used your letter and material as the basis for a personal column as well as an editorial in our next issue of July 30.

Cordially yours,

ROBERT U. BROWN,
President.

BUILDING OPERATING MANAGEMENT,
Milwaukee, Wisc., July 27, 1972.

HON. GAYLORD NELSON,
U.S. Senator,
Washington, D.C.

DEAR SENATOR NELSON: Thank you very much for your letter of July 20th forwarding to us the copy of the Congressional Record in which you so eloquently discussed the need for a low second-class mail service in the United States. As publishers of two small size trade journals, we are vitally concerned about the U.S. Postal Service.

Not only are we concerned about the high cost of distribution but we are equally con-

cerned with the relatively slow delivery of controlled circulation magazines by the service. We had hoped with the increase in rate that the service would have improved. Perhaps we can expect to see this in the future.

We do appreciate your interest in our problems and hope that you will continue to speak out.

Sincerely yours,

ROBERT H. APPLE,
Publisher.

THE NEW DEMOCRAT,
New York, N.Y., July 26, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Thank you very much for sending me your statement on the issue of second-class postal rates.

I can only hope that you are successful in this vital effort. The future of magazines like the one I edit and publish, The New Democrat, are directly dependent on the ability to circulate its copies at low cost rates. If those rates are raised, the new Democrat (and other similar magazines) will fail.

Furthermore, the new Democrat is not sold (except in a few, confined areas) at the newsstands. Its entire existence is predicated on its ability to continue to mail within the privileged second-class category.

I hope you will keep me in touch on your future efforts in this area. If you would desire any testimony or supporting statements on the problems of small magazines, please notify me. I would be most delighted to help in any way possible.

Thank you so much again.

Editor and Publisher.

KENOSHA NEWS,
Kenosha, Wis., July 26, 1972.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: I have your letter of July 20 concerning the second class postal rates.

Your concern is much appreciated not only by newspapers but by all publications and, in particular, magazines, some of which would find it difficult to survive were certain proposed postal rates to become law.

With every good wish, I remain

Sincerely,

HOWARD J. BROWN,
Publisher.

AMERICA,
New York, N.Y., July 25, 1972.

HON. GAYLORD NELSON,
Washington, D.C.

DEAR SENATOR NELSON: My sincerest thanks for your letter of July 20 outlining your views on the increase of 127 per cent for second-class mail rates recently announced by the Postal Service. It is difficult for me to express how much the enlightened interest of you and your distinguished colleagues in the United States Senate means to all of us who are struggling daily for the survival of the American tradition of a free and independent press.

Your statement of June 28 introducing S. 3758 was a masterly presentation of the case for continuing those public policies that insured the widest possible distribution of different points of view and independent information throughout the country. It is reassuring to have this confirmation of your understanding that Congress did not intend to turn its back on a policy that seems more than ever vital for the welfare and progress of our nation as we have known it since its beginnings.

You can be sure that I will regard it as a privilege to call the attention of our magazine's many friends in and out of Congress to the steps you are taking on behalf of the free flow of information in a free society. Please be sure of my sincerest thanks and best wishes for your efforts on behalf of this cause.

Sincerely yours,
DONALD R. CAMPION, S.J.

HEARST MAGAZINES,
New York, N.Y., July 25, 1972.

HON. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR: You very kindly wrote to Bill Hearst on July 14 about your thoughts on postal charges for newspapers and magazines and recording your convictions in the Congressional Record.

We are grateful to you beyond words for your strong stand. This postal situation is becoming a debacle for many publications. I was at the Bohemian Grove last week and talked with Senator Percy on the same subject and I believe that he feels as you do and wants to get action going before we lose too many newspapers and magazines now only marginally profitable.

Again, many, many thanks.
Cordially,

RICHARD DEEMS.

BAY CITY NEWSPAPERS, INC.,
Bay City, Texas, July 24, 1972.

HON. GAYLORD NELSON,
Senator from Wisconsin,
Senate Office Building,
Washington, D.C.

DEAR SIR: I have been reading about your proposed bill S378 in respect to revising a method of setting second class postal rates.

Your efforts to stabilize what is now an uncertain issue in the interest of those who use second class matter is greatly appreciated. I am sure, by members of the press and I wish to convey my personal appreciation.

Yours truly,

GLENN J. SEDAM,
President and Publisher.

THE ATHENS REVIEW,
Athens, Texas, July 24, 1972.

SEN. GAYLORD NELSON,
Committee on Finance
Washington, D.C.

DEAR SENATOR: Just a note to tell you I appreciate what you are doing to try to keep second class mailing rates from skyrocketing.

Very truly yours,

R. E. DWELLE.

WISCONSIN AGRICULTURIST,
Racine, Wis., July 24, 1972.

HON. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: We want to thank you for your interest in publications like the Wisconsin Agriculturist that rely on the Post Office Department for distribution to subscribers.

The amendment that you have offered to Title 39 United States Code to alleviate the burden of Postal Rate increases on small, Second Class publications, is greatly appreciated.

Your very truly,

VERNON ANDERSON,
President.

CATHOLIC PRESS ASSOCIATION,
New York, N.Y., July 12, 1972.

MR. DAVID OSTERHOUT,
Legislative Assistant, Office of Senator Gaylord Nelson, Washington, D.C.

DEAR MR. OSTERHOUT: On behalf of the Catholic Press Association officials and mem-

bers, I want to thank you very much for sending us a copy of S. 3578 as introduced by Senator Nelson, and his speech introducing it.

We are happy to see that Senator Nelson has taken the lead in this effort to have the special position of small newspapers and magazines recognized and protected by the Congress. There is no doubt that if the heavy increases authorized last week by the Board of Governors of the U.S. Postal Service are permitted to go into effect over the next 10 years, large numbers of small non-profit publications will be destroyed. Clearly this was not the intention of Congress when the Postal Reorganization Act was passed. In the case of religious publishers, typically increases over the next 10 years will be in the range of 400 to 750 percent over pre-May-1971 levels.

As you may know, our Association, with our Protestant brothers, the Associated Church Press and the Evangelical Press Association, have fought the Postal Service increases for over a year. We have not had any great success—but we have hopes now that Senator Nelson's bill may provide some desperately needed relief for our member publications and for other non-profit publications. We congratulate the Senator and your staff on this significant step.

I expect to be in Washington next week (Wednesday, June 19) and would welcome the opportunity to visit with you then, if that is feasible, or whenever it may be convenient. I hope you will let me know (if you get this letter in time) if such a visit would be agreeable.

Cordially,

JAMES A. DOYLE,
Executive Director.

COMMONWEAL,
New York, N.Y., July 6, 1972.

MR. DAVID OSTERHOUT,
Legislative Assistant, Office of Senator Gaylord Nelson, Washington, D.C.

DEAR MR. OSTERHOUT: Many thanks for the welcome news about Senator Nelson's bill and the text in the Congressional Record. Since the Post Office department has just decreed another 25% hike in the second class mail rate it seems more essential than ever for our small magazines to be rescued by Congress.

With all best wishes to the Senator and to you and your colleagues,
Sincerely yours,

Publisher.

DAVIS PUBLICATIONS, INC.,
New York, N.Y., July 12, 1972.

HON. SENATOR GAYLORD A. NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Having just finished reading the June 28th Minutes of the Congressional Record—Senate, I wanted to tell you how pleased I was to have you introduce Legislation referred to as S3758, to provide some relief to the magazine publishing industry in the face of the monopolistic and inflationary practices of the U.S. Postal Service.

Our own company publishes 34 highly specialized consumer magazines, five of which have Second Class mailing permits which represent a \$335,000 increase if the U.S. Congress does not in some way minimize these extraordinary increases which have now become law. Because I have only recently returned from Washington I thought you might be interested in the rather detailed letter I submitted to John Gabusi, the Administrative Assistant to Congressman Udall, who of course is now involved with the hearings in the Sub-Committee for Postal Service matters in the House of Representatives.

It was also interesting to read the comments made by Justice Brennan at Brown University back in 1965, for I am presently a Trustee at Brown and certainly did not feel that I would run across its name in a matter of such vital importance to the entire magazine publishing industry.

Although there are some in the publishing industry who are in the enviable position of falling back on the profits from subsidiaries involved in other forms of communication, our company and many of my co-Directors of the Magazine Publisher Association do not have this opportunity and thus must rise or fall on our own magazine operation.

I sincerely hope that your Bill will receive a receptive chord from your fellow members of the U.S. Senate and that it will eventually become law.

Yours very truly,

JOEL DAVIS,
President and Publisher.

THE AMERICAN LEGION MAGAZINE,
New York, N.Y., July 11, 1972.

HON. GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NELSON: The American Legion Magazine deeply appreciates the copy of your statement made in The United States Senate on June 28th, 1972, and its information relative to the introduction by you of legislation aimed at providing relief to publications adversely affected by the increased postal rates announced by the Postal Rate Commission and approved by the Board of Governors. We applaud your efforts and stand ready to testify in support of same, when and if the opportunity to do so is afforded to us.

I am taking the liberty to include a copy of my statement and testimony to the House Sub-Committee on Post Office and Civil Service. Examination of same will, I believe, reveal reasoning similarities in approaching the problem seeking possible remedies.

Non-profit publications, such as The American Legion Magazine, are particularly hard hit by the second-class postage rate schedule. To be true the phase-out covers a ten year period as contrasted to one of five years for other magazines, but the rate increase will total 235% for those of us in the non-profit classification contrasted to 127% for regular or profit publications.

As you point out, the "killer" to us is the 1.5 cent surcharge that provides no consideration for the differential in editorial and advertising content. The American Legion Magazine averages from 75% to 80% editorial and 20% to 25% advertising. The legislation sponsored by you would remedy this inequity.

More of the non-profit publications, I am sure, would have been included in protesting the abnormal postal rate increases if they could have afforded it. We were forced to present minimal opposition for economic reasons. The suggestion was offered by representatives of the Post Office Department in the hearings that we "pass on" the increased mailing costs to advertisers and subscribers. That is easier said than done. First of all, our subscription revenue is part of the membership dues structure and to increase same requires favorable action by National Convention delegates with actually a two-year freeze at current rates before any increase could become productive, if approved. The advertising potential available to non-profit magazines is restricted now and any jump in rates could have an additional adverse effect.

It seems inconsistent to me that the Post Office Department has been exempted from price controls to which we have been subjected.

Sincerely yours,

JAMES F. O'NEIL,
Publisher.

NATION,
New York, N.Y., July 6, 1972.

DAVID OSTERHOUT,
Legislative Assistant,
SEN. GAYLORD NELSON,
Senate Office Building,
Washington, D.C.

DEAR MR. OSTERHOUT: Thank you very much for sending me Senator Nelson's statement of June 28th, in introducing S. 3758. It is strong, accurate, and well expressed, and merits wholehearted applause from all publishers of smaller American periodicals, regardless of their political views.

Please convey my appreciation to the Senator for his statement.

Sincerely,

JAMES J. STORROW, Jr.,
Publisher.

FUNDING FOR THE NURSE TRAINING ACT

Mr. HARTKE. Mr. President, I am deeply concerned with the funding for the Nurse Training Act of 1971 which is contained in the proposed budget for fiscal 1974. The \$51,348,000 proposed is 16.3 percent of the law's authorization of \$313,500,000. Considering the health maintenance organizations' rapid development, the impact of medicare and medicaid upon services rendered by professional, collegiate-educated nurses, and the possibility of a national health insurance program, it is imperative that Federal funds appropriated in the fiscal year 1974 budget be at, or near, the amounts authorized for nurse training.

Mr. President, supporters of the administration's proposals have suggested that nursing students will be able to seek financial assistance for education from other sources. Allow me to share with my colleagues the following facts which were supplied to me by Ms. Helen J. Berry, head of the department of nursing at Ball State University in Muncie, Ind.:

1. The Department of Nursing, established by Ball State University in 1963, will have graduated 346 professional collegiate-educated nurses by the end of the current fiscal year, May 1973. (This is the sixth year that students have been graduated from this National League for Nursing accredited program.)

2. The current educational facility on campus, \$1,375,000. structure, was made possible by an \$804,671. federal grant under the Health Professions Act of 1963 awarded in 1965. It has been occupied by students since September 1967. Without this facility it is questionable that the current enrollment in the program could be a reality.

3. The enrollment in the programs in nursing has increased considerably in the past three years. The total enrollments by years are enumerated for your perusal.

1970-71	327
1971-72	401
1972-73	566

The 1972-73 figure includes 23 graduate students pursuing master's degree preparation.

In addition to the on-campus students on this undergraduate program on seven since 1970 there have been students enrolled nearby private, institutional campuses. These enrollments are increasing each term. Currently there are 47 students pursuing the freshman and sophomore years in this manner.

4. Of the twenty-five faculty employed as teachers for the nursing courses, twenty (80 percent) received one or more federal nurse traineeships to prepare for their teaching responsibilities. The greater majority (95

percent) of these people have been employed as teachers full-time since earning their teacher preparation. It is questionable that we would have or have had the framework of an adequately prepared faculty to build this program if there had been no federal traineeships available to assist them financially.

5. During March, I have surveyed a portion of graduates and students of our programs relative to financial assistance received, scholarships and/or loans, for their baccalaureate education. Of those replying, the following Table tabulates their responses and identifies the kind of funds and amounts which have assisted or are assisting them with their education. (Two hundred and seventy-two students have received financial assistance since 1965).

The responses of nursing graduates and students at Ball State University regarding financial assistance received during collegiate attendance follows:

Kinds of aids	Number of students replying	Amount	Amount of dollars/students
Scholarships.....	70	\$82,169	\$1,173.84
Loans.....	71	104,955	1,478.23
Student employment..	90	(¹)	(²)

¹ Unknown.

² Unknown, ranged from weekly pocket expenses to full room and board expenses.

It should be noted that only 12 students in the years surveyed, 1968-1975 graduation years, held scholarship funding only; thus the 70 students receiving scholarships may well be duplicated in the loan tabulations also. Many students are unable to attend college without both scholarship and loan financing.

If federal assistance to students is cut drastically, there are many worthy collegiate potential young men and women who will be unable to attend college in pursuit of professional nursing educational goals.

6. Seventy percent of the graduates of this undergraduate program who responded to my inquiry indicated that they had worked while attending Ball State University.

7. Ninety percent of the responding graduates indicated that they were currently full-time employed in a nursing position.

Mr. President, I support the full funding of the capitation grant line item of the Nurse Training Act. With an increase of student enrollment since 1970 of 239 students—327 enrolled in 1970 and 566 in 1972—it is necessary for Ball State and schools in similar situations to hire more qualified teachers for their program. Of these 239 additional students, 142 were permitted to enroll in 1972 because of capitation grant funds available under the Nurse Training Act.

It takes 4 years to educate collegiate professional nurses. Capitation funds are needed for a minimum of the next 3 years to complete the education of these students which was begun under the Nurse Training Act.

Mr. President, this country needs more qualified nurses. We cannot afford to turn back now on a course which Congress charted only recently. The need is still present. I urge my colleagues to support increased funding for the Nurse Training Act of 1971.

THE MYTHS OF THE BUDGET—I

Mr. FULBRIGHT. Mr. President, despite considerable rhetoric to the contrary, the fiscal year 1974 budget, as proposed by the President, is again domi-

nated by military expenditures. Regrettably, the cuts which the President proposes are primarily in programs for human and community development, many of which are of particular importance to Arkansas.

Previous budget presentations have been misleading, but the 1974 proposal is built on a large number of mythical premises and promises.

First is the question of a spending limitation. Nearly everyone agrees that there should be a limitation on spending. However, administration spokesmen imply that somehow it is only the President who wants to limit spending and avoid higher taxes. That simply is not true. It is my view that Congress is equally dedicated to that purpose. This has certainly been the experience of the Joint Committee on Budget Control, on which I serve.

The major difference between Congress and the President is that he insists that he be allowed to determine where cuts will come and opposes a proportional across-the-board cutback, which I and many others have supported. Indeed, through the use of impoundment, the President has moved to make his budget an inviolable document and to impose his policies, disregarding in many cases laws which have been passed by Congress and which he has signed.

Second is the question of a balanced budget. The word "balanced," like many other words in our vocabulary, has come to have a variety of meanings. This administration came into office pledging a balanced budget, but is now proposing its fifth consecutive deficit budget. During the first 4 years of the Nixon administration the national debt has increased by about \$107 billion to almost \$465 billion. The deficits for both 1972 and 1973 are less than originally estimated, although the 1973 figure will not be final until the end of the fiscal year on June 30. The proposed 1974 budget of \$268.7 billion would add almost \$28 billion to the debt.

Under the so-called unified budget, there will be a \$12.7 billion deficit in fiscal year 1974. However, the unified budget counts the surplus from the trust funds—social security, medicare, highways, and so forth—against the deficit. Thus, the Federal funds or "administrative" deficit would be \$27.8 billion. I want to emphasize that it is the administrative or Federal funds figures which are used in calculating the national debt—not the unified budget figure.

As the chairman of the Committee on Appropriations (Mr. McCLELLAN) pointed out during that committee's hearings on the budget last year, the unified budget may serve some useful purposes, but it does not represent the true deficit situation of the Government and—

It does not give the picture that really is helpful in making appropriations, because it gets involved with funds that don't have to be appropriated.

In addition to the unified and administrative budgets, we also have what the economic sages in the executive branch call the "full employment budget", which we are told will be in balance for fiscal year 1974. It is supposed to reflect the amount of Government receipts that

would be generated if the economy were on a full-employment basis. This is a big "if," however, with an unemployment rate of more than 5 percent.

As the Wall Street Journal said of the full-employment budget—

This is a means of figuring how much the Government ought to spend that it doesn't have.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table which shows budget figures and deficits for recent years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Fiscal year	"Unified" budget		Trust funds		Administrative or Federal funds deficit
	Budget total	Deficit	Outlay	Receipts	
1970....	196.6	-2.8	49.0	59.3	-13.1
1971....	211.4	-23.0	59.3	66.2	-29.9
1972....	231.9	-23.2	67.1	73.0	-29.1
1973....	249.8	-24.8	82.6	92.0	-34.2
1974....	268.7	-12.7	90.4	105.5	-27.8

1 Not final figure.

2 Estimate.

Mr. FULBRIGHT. Mr. President, a third myth is the claim that military spending is only 30 percent of the total and that "human resources" account for the largest portion of the budget. The administration states that expenditures for human resources have doubled in 5 years and will be 47 percent of the fiscal 1974 budget. This deceptive claim—which is repeated with drumbeat regularity—is largely based on the inclusion of the social insurance-medicare trust funds under human resources. Yet, the Government simply acts as a trustee for these funds, which can only be used for specified purposes. The administration has no real discretion as to how they are spent.

It is the trust funds which are the most rapidly growing part of the budget. In fiscal 1974, receipts of \$105 billion and expenditures of \$92 billion are expected. The overwhelming portion of these are social insurance and medicare funds, which account for about two-thirds—65 percent—of what the administration calls human resource funds. So there has been an increase in human resource expenditures, but almost totally because of the trust funds, over which the administration has no control.

In fact, primarily because of the trust funds, 86 percent of the budget of the Department of Health, Education, and Welfare is not controllable. As HEW Secretary Caspar Weinberger pointed out in a recent interview in U.S. News & World Report only \$13 billion of the \$100 billion-plus HEW budget is in any sense discretionary under current law.

Social security outlays alone have doubled in 5 years, from \$27 billion to \$54 billion, and are now one-fifth of the budget. Altogether, the retirement-social insurance and medicare trust funds account for nearly one-third of the budget.

The remainder of "human resources" funds as categorized by the administration are for education and manpower, health and public assistance-social services. The proposed budget for education and manpower is actually down from 1973 and would drop to 3.8 percent of

total Federal outlays from 4.2 percent a year ago. Medicare and medicaid account for 84 percent of total Federal outlays for health. Other health expenditures have barely increased. According to a report in the Washington Star-News on March 2, HEW Secretary Weinberger conceded that the increases in health spending planned by the Nixon administration for the coming fiscal year are only a small fraction of what they appear to be.

Human resources other than those from the trust funds are only 12½ percent of the overall budget and 18 percent of the budget excluding the trust funds.

THE GROSS NATIONAL PRODUCT

The President also claims that military spending is a declining portion of the gross national product—GNP. This is a highly dubious standard for measurement. As I have endeavored to point out in the past, far from measuring the true production or welfare or economic health of our society, the GNP is simply a crude total of goods and services produced, ranging from gambling to garbage disposal. I do not intend to elaborate in detail on the inadequacies of the GNP as a yardstick. However, they should be obvious.

After all, budget deficits contribute to the GNP—the greater the deficit, the greater the GNP. Even crime and pollution could be seen as stimulating increases in the GNP, because of the need for expenditures for crime prevention and pollution control.

Instead of glorifying the false god of the GNP, we should be concerned about the inflationary and parasitic effects of military spending. The GNP feeds on inflation and military spending drains away funds vital to the improvement of the quality of life in this country.

MILITARY SPENDING

The request for appropriations for the Department of Defense, according to a statement made by the chairman of the Appropriations Committee (Mr. McCLELLAN) in the Senate on February 6, is \$83.5 billion, which would be the largest military appropriation in history.

Of course, Congress cut some \$5.2 billion from last year's Pentagon budget request plus \$338 million from military construction, and, in effect, \$1.5 billion from foreign assistance. I hope the cuts in military spending will be even greater this year, for the proposed increase in the military budget is more than the entire budget for the Office of Education. This is especially paradoxical at a time when we have supposedly ended our military role in Vietnam and following the ABM treaty and strategic arms limitations agreements with the Soviet Union and improved relations with China.

Appropriations for the Pentagon are only a part of the military-related expenditures of the Government. In a newsletter to my constituents earlier this year, I estimated that military and military-related matters, including the space program, much of which is military oriented, would cost about \$119 billion in fiscal 1974, according to the President's budget.

Recently I asked the Congressional Research Service of the Library of Congress to attempt to develop a more precise in-

dication of the amount we are spending for military and military related matters. One important aspect of this was to determine how much of the outstanding public debt and the interest on that debt is attributable to military expenditures.

According to the report I have received from the CRS, an estimated 78 percent of the public debt is "defense generated." In arriving at this figure, the following process was used:

Defense related outlays have been assumed to include all outlays for the national defense function, all outlays for the veterans benefit and compensation function, and the percentage of interest outlays related to the accumulated defense generated public debt. All outlays have been expressed as a percent of the Federal funds basis of the budget—all trust fund outlays omitted—since the increase or decrease in the public debt is controlled by the deficit or surplus in the Federal funds.

Using this basis of calculation, the portion of the interest on the national debt generated by present and past military and was expenditures will be \$20.4 billion in fiscal 1974, out of a total of \$24.7 billion.

The CRS analysis, based on the President's proposed budget for fiscal year 1974, lists estimated spending for the "national defense function" at \$81.1 billion, and other "outlays—partially or fully generated by or associated with defense activities" at \$33.8 billion. The major components in this category are veterans' programs and interest on the war or defense-generated portion of the debt.

Therefore, the total for military and military-related programs is almost \$115 billion. This total does not include the National Aeronautics and Space Administration—\$3.1 billion—or civil activities of the Department of Defense—\$1.6 billion for the Corps of Engineers, and \$4 million for the Panama Canal. If these figures were included, the total for such programs would be \$119.5 billion.

The Joint Economic Committee, in its 1973 joint economic report, includes a "national security budget" which it describes as an effort to explain to the American taxpayer the full cost of defense-related activities. The committee estimates 1974 outlays for such activities at \$116.1 billion and the requested budget authority for 1974 at \$122.9 billion.

The reports of the Library of Congress and the Joint Economic Committee make clear that we are spending much more for military and military-related matters than is generally acknowledged. The manner in which the budget is presented and all the misleading talk about "human resources" gives a very deceptive picture of how our tax money is actually spent.

Military related spending actually accounts for about 44 percent of the total budget or 65 percent of the budget excluding trust funds.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point tables prepared by the Library of Congress Congressional Research Service and the Joint Economic Committee showing military and military-related expenditures.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

JOINT ECONOMIC COMMITTEE

NATIONAL SECURITY BUDGET¹

[In millions of dollars]

Outlays (fiscal years)

	1965	1968	1969	1970	1971	1972	1973 estimate	1974 estimate	Budget authority 1974 estimate
Defense, military assistance and defense related activities:									
DOD military ²	45,173	77,373	77,877	77,150	74,546	75,151	74,200	78,200	83,481
Military assistance ³	2,469	1,237	1,355	1,186	2,045	1,806	1,648	1,959	3,038

Deductions for offsetting receipts	-124	-115	-133	-118	-89	-108	-751	-382	-382
Subtotal	56,383	85,835	86,065	84,515	82,104	82,766	80,552	85,375	91,677
Payments for past wars and defense program:									
Veterans benefits	6,080	6,882	7,640	8,677	9,776	10,731	11,795	11,732	12,253
Interest ⁴	8,577	10,308	11,834	13,734	14,707	15,437	17,106	18,504	18,504
Subtotal	14,657	17,190	19,483	22,411	24,483	26,168	28,901	30,236	30,757
Programs justified on grounds of national defense:									
Ocean shipping	253	227	236	239	321	317	327	377	408
Impacted area school aid ⁵	263	380	299	492	395	487	351	98	45
Subtotal	516	607	535	731	716	804	678	475	453
Total, national security	71,556	103,632	106,083	107,657	107,303	109,738	110,131	116,086	122,887

¹ This is admittedly an imperfect attempt to explain to the American taxpayer the full costs of national security whether for past or present wars or defense. The committee recognizes that others will question certain items contained in the national security program, that objections will be raised to parts of it, and that suggested changes will be proposed. In the past, the Joint Economic Committee recommended that the full costs of past and current defense-related activities be included in the category of defense programs found in the budget document. No action was taken on this recommendation. We now hope that the national security program breakdown that we have offered will provoke widespread discussion and debate, and that the Office of Management and Budget will be moved to incorporate this concept in next year's budget.

² DOD military excludes DOD civil outlays which totaled \$1,200,000,000 in 1965; \$1,300,000,000 in 1968; \$1,300,000,000 in 1969; \$1,200,000,000 in 1970; \$1,400,000,000 in 1971; \$1,500,000,000 in 1972; \$1,800,000,000 in 1973 (estimated); \$1,500,000,000 in 1974 (estimated); and \$1,600,000,000 in new obligatory authority for 1974.

³ Includes military assistance program (MAP), supporting assistance, credit sales, and part of the food for peace program. Excluded are outlays for military assistance purposes funded through the Department of Defense. Total obligatory authority for this program is shown in the budget as \$2,600,000,000 for 1972; \$2,900,000,000 for 1973 (estimated); and \$2,900,000,000 for 1974 (estimated). The budget authority for credit sales to Israel are under separate legislation. (Military assistance includes military assistance, security supporting assistance, foreign military credit sales, credit sales to Israel, and food for peace (Public Law 480, sec. 104(C)).)

⁴ Includes 75 percent of the program.

⁵ Portions of programs, other than those listed, have been justified in the past as essential to national security, including the National Defense Highway System, the airport program, and others. The committee intends to further analyze this matter.

⁶ Additional authorizing legislation required.

TABLE 3.—FEDERAL BUDGET OUTLAYS FOR SOME PROJECTS THAT MAY BE PARTIALLY DEFENSE RELATED

[In millions of dollars]		
Function code, function and department or other unit	Fiscal year 1973	Fiscal year 1974
250 National Aeronautics and Space Administration ¹	3,061	3,135
DEPARTMENT OF DEFENSE—CIVIL		
401 Corps of Engineers ²	1,698	1,579
910 The Panama Canal ³	13	4

¹ Data represent total outlays for space. NASA unable to segregate defense related from other expenses. Most projects have military impact ranging from substantial (space shuttle) through moderate (tracking net, engine research, launch vehicles) to minimal (planetary exploration).

² Although a part of DOD, most projects (channels and harbors, locks and dams, erosion control, flood control, power) are not substantially defense related.

³ DOD component but most outlays (for operation and maintenance of canal, capital improvements, canal zone government) are only indirectly defense related.

Sources: The Budget of the U.S. Government, fiscal year 1974, National Aeronautics and Space Administration, Department of the Interior.

Mr. FULBRIGHT. Mr. President, I should add that there are many other expenditures which in my view are at least partially military related, but which are not included in the figures I have cited. Among these are such activities as Radio Free Europe and Radio Liberty, for which the President has requested \$45 million in fiscal 1974, as well as some of

the activities of the U.S. Information Agency, which has a \$200 million budget. The figures for the Central Intelligence Agency budget remain secret, of course.

Much is made of the fact that personnel costs are a major part of the military budget and it is true that they amount to a sizable sum, despite the fact that manpower is supposedly at its lowest level in 24 years. Increased salaries for the "volunteer" Army plus the top-heaviness caused by a huge excess of high-ranking officers are significant factors. The budget calls for about \$27 billion for active and retired military personnel for the same amount for procurement of aircraft, missiles, ships and weapons, plus research and development. Almost \$22 billion would be spent for operations and maintenance and \$3 billion for military construction.

We still maintain some 625,000 troops abroad, including more than 300,000 in Europe and 260,000 on the mainland and offshore islands of the Asian continent—40,000 of them in Korea and 45,000 in Thailand.

We have about 2,000 military installations abroad, including 322 major bases. The Navy now homeports ships at nine foreign ports and is planning for more.

The majority leader recently informed us that it costs about \$30 billion annually to maintain our bases, troops, and facilities abroad, and that the overall costs of our participation in NATO is about \$17 billion. One reason for the growth of these figures is the weakened position of the dollar, and, of course, one reason for the dollar's weakened position is our overcommitment abroad.

Using the figures developed by the Library of Congress and the Joint Economic Committee, it can be determined that about 65 percent—almost two-thirds—of the \$183 billion in the budget not coming from Medicare or social insurance trust funds goes for military-related matters. The military-related expenditures account for about 44 percent of the President's proposed overall \$268 billion budget.

These figures reflect the fact that, despite all the claims to the contrary, we have yet to reverse the trend that has seen us spend about \$2 trillion—\$2,000 billion—on war and military-related matters since World War II. We have expended \$1.5 trillion in direct Defense Department outlays during that period.

Perhaps the biggest misstatement in the President's budget message was the claim that "this administration has succeeded in eliminating unnecessary defense spending." Nothing could be further from the truth. This budget is full of unnecessary and extravagant weapons systems which are in no way vital to our national security, and we continue to have mammoth cost overruns. An analysis of data supplied by the General Accounting Office shows that in recent years the costs of 45 selected major weapon systems have risen by \$36.5 billion over the original planning estimates for those weapons. The C-5A is a good example—Lockheed was to build 120 C-5's for \$3.4 billion; the Government is now paying almost \$5 billion for 81 aircraft, which have had numerous tech-

nical difficulties and are highly unsatisfactory. The F-14 seems headed in the same direction. The total program cost for planes that were to be \$11.5 million each is now estimated at a staggering \$25.8 million per plane.

The administration has not been hesitant to bail out the corporations such as Lockheed, Grumman, and Litton, which have committed the overruns. Lockheed, for example, continues to be a major beneficiary of defense contracts. In fiscal 1972 such contracts with Lockheed totaled \$1.7 billion, as did contracts with McDonnell Douglas. This amount is roughly equivalent to the total of all Federal outlays in Arkansas in fiscal 1972, which were \$1.8 billion. The Arkansas figure represents all Federal expenditures in the State, including individual payments for social security and the State's pro rated share of the cost of interest on the national debt.

Mr. President, for the first time in American history, the end of a war has been followed not by a reduction but by a proposed increase in military spending. As I stated earlier, Congress trimmed the President's military budget request by more than \$5 billion last year and I am hopeful that much more can be cut this year.

Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Washington Star-News of March 2 entitled "Health Aid 'Rise' Sinks"; an article by Stephen Nordlinger from the Baltimore Sun, "Pentagon: Damn the Torpedoes' Cost"; by Walter Pincus from the New Republic of March 24, "The Military: What's Up in the Budget?"; and by Herbert Scoville, Jr., from the Christian Science Monitor, "The New Peacetime Defense Budget."

I also ask unanimous consent to have printed in the RECORD the report entitled "Estimated Portion of the Public Debt Allocable to Defense and Non-Defense Activities," supplied to me by the Congressional Research Service of the Library of Congress.

There being no objection, the articles and report were ordered to be printed in the RECORD, as follows:

[From the Washington Star and Daily News, Mar. 2, 1973]

HEALTH AID "RISE" SINKS

(By Judith Randal)

Health, Education and Welfare Secretary Caspar Weinberger has conceded to a House subcommittee that the increases in health spending planned by the Nixon administration for the coming fiscal year are only a small fraction of what they appear to be.

Of the approximately \$1 billion increase in health in President Nixon's budget for the year that begins in July, Weinberger said yesterday in a hearing, \$600 million is merely being shifted from the Office of Economic Opportunity and the rest will be spent over the course of seven years instead of one.

Thus, if Medicare and Medicaid outlays are excluded from consideration, the increase will be a modest one. Various figures were bandied about at the hearing. Weinberger mentioned a true increase of \$49-50 million. Subcommittee Chairman Paul Rogers, D-Fla., said he thought it was only in the \$30 million range but that he would accept Weinberger's estimate.

The funds shifted from the dying Office of Economic Opportunity are primarily for

the provision of family-planning services. The rest of the money in the claimed increase was part of \$700 million to enable the federal government to fulfill its obligations to the nation's 515 community mental-health centers and then phase the program out by 1980.

Weinberger defended the proposed termination of the centers on grounds that the program has shown itself to be a successful demonstration project which should now be taken over by the private sector or state and local governments.

This was hotly contested by Rogers, who said Congress had intended that 2,000 such centers be created so that all Americans would have access to facilities for mental health.

While Congress intended the centers to be demonstration projects that would have federal support for only a limited time, said Rogers, it had not intended that their numbers be so few. Moreover, the program has shown that it is possible to successfully keep many emotionally disturbed people in their communities without confining them to "warehousing" in more expensive mental hospitals, he said.

Yesterday's session, which lasted four and one-half hours in a packed hearing room, was another of the ongoing confrontations between the Nixon administration and Congress over how federal dollars will be spent. Among the issues raised during the hearing by Congressmen of both parties were:

Failure of the administration to fund beyond a token level the Health Manpower Act which President Nixon called the "most important single piece of health legislation" enacted last year.

The ongoing shortage of physicians—now estimated at 50,000. Administration witnesses admitted that while qualified Americans have difficulty gaining admission to the nation's medical schools, about a third of the nation's doctors are graduates of foreign schools. In most states they said, half the physicians being licensed are graduates of such schools and in some states like Connecticut the proportion is 75 percent or more.

The distinct possibility that the administration's announced intention to phase out research training programs will create a shortage of medical school educators and research scientists skilled in probing disease.

The failure of the administration to provide money in the budget for support for schools of nursing will worsen the current estimated shortage of 100,000-150,000 registered nurses.

The termination of a regional medical program as announced by the administration will stymie efforts to apply research findings to the treatment of the nation's sick.

A similar phase-out of the nation's eight Public Health Service hospitals will cost taxpayers more than it saves, since care of the patients now being treated by the hospitals will have to be contracted out to private institutions.

Weinberger promised Rogers that he will examine the health budget anew with the concerns of the subcommittee in mind and would discuss them with the President. Meanwhile, he added, the administration plans to introduce a plan for national health insurance in Congress this year. He did not say when the introduction would take place but told Rogers that it will not be precisely the same bill that the administration introduced somewhat earlier.

PENTAGON: DAMN THE TORPEDOES' COST

(By Stephen E. Nordlinger)

WASHINGTON.—When the jobs were finished and the bills collected, the Navy faced what turned out to be a historic occasion: Its first big cost overrun. By a wide margin, the admirals had underestimated what it

would cost to build the United States, the Constellation and the Constitution, better known as "Old Ironsides."

"The wood of which the frames were to be made was standing in the forests, the iron for the cannon lying in its natural bed and the flax and hemp perhaps in their seed," the war secretary reported to Congress as he defended the markup. When Congress authorized construction of six frigates in 1794, they were to cost \$688,890 and to be delivered the next year. But after financial and production troubles, only three ships were built at \$945,000 and they didn't go to sea until 1798. The costs for each vessel had gone from \$114,815 to \$315,000—an increase of 174 per cent.

And so it went year after year, decade after decade. Delays, changes in design, inflation and canceled orders—all pushed costs higher and higher well beyond military estimates. The public and Congress expressed scant concern. America was well-defended and its citizens were willing to pay the price through the hot wars and the Cold War.

ADMIRALS AND GENERALS

The crunch came toward the end of the Sixties. Disillusioned with the Vietnam War, worried about runaway inflation, disheartened with huge weaponry costs while cities cried for money, the public demanded reform. Cost overruns began making headlines and disturbing even the Pentagon's staunchest allies in Congress.

Countless hearings were held with admirals and generals parading to Capitol Hill to defend their decisions. New approaches were tried. Robert McNamara, the former Defense Secretary, introduced the "total procurement package" but it was jettisoned, with the most notable recent failure being Grumman's overrun on the F-14 Navy fighter plane. The Pentagon is now insisting on holding Grumman to its contract price despite the corporation's claimed loss of \$85 million. Melvin Laird, the Defense Secretary, is trying out the "fly-before-you-buy" approach, with the full results not yet in.

Last week, a congressional Joint Economic Subcommittee, headed by Senator William Proxmire (D., Wis.), wound up three years of hearings on military acquisitions. But as one witness after another spoke about the serious cost overruns at Lockheed and Litton Industries and Grumman, it appeared that the Navy's Eighteenth Century problems were still around and affecting all the services as well. As Senator Proxmire noted, as if drawing a parallel with the frigates' overruns, five amphibious assault ships being built by Litton will cost \$1.2 billion, the same as nine of the craft under the original 1969 contract—an 85 per cent increase. The ships are expected to be 2 to 3 years overdue.

The military apparently has failed to win the battle to control costs. Even those congressional proponents of large military outlays who once gave but cursory examination to Pentagon budgets are fearful that the United States may be pricing itself out of the national security business. An analysis of 45 selected major weapons systems being built shows they will cost \$35 billion more than the original estimates, after adjustment for changes in quantities.

A large part of the problem must be traced to the Pentagon's relationship to the few aerospace giants, the big corporations such as Lockheed, which was working on \$1.7 billion in contracts with the Defense Department in the last fiscal year. Because the Pentagon can turn to only a few contractors to meet its basic needs, competition for major projects has been weakened. The government's dependency on the private aerospace industry has also eroded accountability and efficiency.

When it comes to contract bidding, as an example, things are often the same. One big

corporation will bid to produce a weapon quoting an unrealistically low price to assure winning the contract. The Pentagon accepts the figure and then proceeds to build the weapon, confident it can make up losses through its updated contract changes or by other means. The whole procedure is called the "buy-in." The Proxmire committee was told that Grumman underbid by \$500 million on the F-14 contract just about the amount it says it needs to fulfill the rest of its contract with the Navy.

What remedy is left to the Pentagon to enforce discipline under these circumstances?

If the Defense Department should balk at paying the cost overruns, a serious showdown occurs, as is taking place with Grumman and Litton Industries.

In the Grumman case, the Pentagon said two weeks ago it would hold the corporation to its contract for 48 more F-14 planes and would permit no price increase. But the Pentagon also recognizes that it is dependent on private industry to produce weapons. A settlement may well be made with Grumman, especially if the security chiefs insist Grumman remain viable to produce further weapons.

Litton is two to three years behind its contract schedule for the five amphibious assault ships, technically known as landing helicopter assault, or LHA, ships, but a compromise may also be reached. As Gordon W. Rule, chief of the Navy's procurement control section, told the Proxmire subcommittee, "the Marines want the LHA's," despite any cost overruns. A form of "ballout" for Litton has already been allowed by the Defense Department. Last September it agreed to continue to pay the conglomerate for all its LHA costs through February, even though the contract called for payments based solely on completed work. Without the concession, Litton would have had a serious cash flow problem.

SHOULD PUBLIC PAY?

The lack of accountability and industries' enormous inefficiencies—plus the armed forces' penchant for making expensive weapons changes to cope with the advance of technology—all have contributed, therefore, to cost problems.

The question then becomes: Should the public have to pay for the miscalculations of the Pentagon and the mismanagement of the defense contractors?

Those who oppose ballouts shout no. Let inefficient contractors go under no matter what the impact on the economy or the nation's defenses. This is a capitalist system and why should the public provide welfare payments to big government contractors who enter contracts with their eyes open. The Pentagon, however, says this is not so easy. Financial relief may be needed to keep the aerospace industry producing needed weapons.

Perhaps the answer ultimately lies in nationalizing the major segments of the arms industry, a move proposed by John Kenneth Galbraith. This idea came before the Proxmire subcommittee but it received no takers. But it may be the only answer if the increasingly costly, highly advanced weapons are to be produced in sufficient quantities at reasonable cost to insure national security.

TOP 10 DEFENSE CONTRACTORS FOR FISCAL 1972

(Ended June 30, 1972)

Lockheed Aircraft	\$1,705,434,000
McDonnell Douglas	1,700,217,000
General Dynamics	1,289,167,000
General Electric	1,258,673,000
Boeing	1,170,878,000
AT&T	1,121,512,000
Grumman	1,119,760,000
United Aircraft	995,619,000
N. American Rockwell	702,862,000
Hughes Aircraft	688,132,000

[From the Christian Science Monitor, Feb. 21, 1973]

THE NEW PEACETIME DEFENSE BUDGET (By Herbert Scoville, Jr.)

President Nixon's 1974 Budget: "A responsible government continually adjusts its activities to changing national needs . . . Unless vigorous and determined efforts are made in programs which should be restructured, reduced or terminated, they continue—and even grow."

Does President Nixon's current defense budget reflect such efforts? The budget calls for increased national defense outlays from an estimated \$76.4 billion in 1973 to \$81.1 billion in 1974 and \$85.5 in 1975. It requests the Congress to authorize \$5.7 billion more for defense activities than it did for fiscal year 1973.

How have our national needs changed in the past year to require this increased funding? The war in Southeast Asia is now over. We have signed SALT I agreements with the Soviet Union which put ceilings on the size of the Soviet strategic threat and guarantee our nuclear deterrent. We have professed to subscribe to a Nixon doctrine which limits United States participation in military operations in every corner of the world. Why do we need increased billions for defense when fiscal responsibility calls for an overall U.S. budget ceiling and there are crying needs for resources to deal with our internal social crises? In his message, the President highlights four strategic weapons programs: the Trident ballistic missile submarine; the B-1 bomber; the conversion of our Minuteman and Poseidon missiles to carry multiple warheads which can be aimed at separate targets; and the development of a new submarine strategic cruise missile. None of these are required for our security in the aftermath of SALT I. Instead of being reduced or terminated these programs have been allowed to grow and, in some cases, to begin when they had not been needed before.

The Defense Department budget calls for more than \$1.7 billion for Trident, and the AEC's for more than \$100 million in addition. This is about \$1 billion above last year—and for what purpose? The Polaris submarines are not wearing out; in fact, the conversion program to Poseidon will not yet be finished for two years. The oldest Polaris submarine will have been in service less than 20 years by 1980. There is no foreseeable military threat to the Polaris-Poseidon system. As a result of the ABM treaty, all the present 3,000 submarine missile warheads have a free ride to targets in the Soviet Union. Technology does not exist to even design, much less build, an antisubmarine warfare system which could destroy the Polaris-Poseidon deterrent. Trident may be just as vulnerable to an unknown future threat as Polaris. Even worse, the smaller size of the eventual Trident fleet (It is estimated that when replacement of Polaris by Trident submarines is completed at a cost of more than \$40 billion, we would have only 30 submarines compared to the present 41) could make this system much more vulnerable than the present one. Billions of dollars wasted, and our security decreased.

Similar arguments apply to the B-1 bomber for which the administration proposes to spend nearly one-half billion dollars this year.

The budget calls for more than \$1 billion to place more MIRVs on our strategic missiles, perhaps even to expand the previously authorized Minuteman III conversion program. However, we already have about 5,000 of these warheads, all with explosive yields several times greater than the Hiroshima bomb. The SALT agreements have ensured that the Soviets cannot shoot these down.

Finally, most absurd of all in the aftermath of SALT, is the decision to begin a new

program for a submarine cruise missile (essentially a submarine-launched pilotless aircraft which would traverse the Soviet Union at low altitudes). Having guaranteed through the ABM treaty that ballistic missiles can effectively penetrate the U.S.S.R., the administration now wants to develop a cruise missile which could be vulnerable to Soviet aircraft defenses not restricted by the treaty. How ironical that arms control negotiations are seized upon by the weaponizers to justify expenditures for every conceivable weapon—previously unnecessary—just because it is not specifically banned by treaty.

By far the largest part of the current defense budget goes to maintaining our general purpose forces and military manpower program; the latter comprises 56 percent of our military expenditures. Manpower costs have skyrocketed primarily because of pay raises to support the all volunteer force. However, despite the fact that the Vietnam war is over, that we are withdrawing from Southeast Asia, and that we have promulgated the Nixon doctrine of noninvolvement of U.S. forces in conflict overseas, we have made no significant reductions in the number of military personnel to compensate for the higher pay. There is no evidence in the proposed budget that the defense establishment has been restructured to satisfy our current needs.

In a strange contradiction, the proposed budget calls for a 30 percent reduction in funds for the Arms Control and Disarmament Agency, from an already minuscule \$10 million to less than \$7 million. Yet that agency deserves major credit for having negotiated the ABM treaty, which made a critical contribution to the security of our strategic deterrent and resulted in savings over the years of billions of dollars. To cut or impound funds for disarmament, to say nothing of pollution control, low incomes housing, health, mass transportation, and urban renewal, while allowing rising expenditures for wasteful and unnecessary military programs is hardly evidence of a government responsive to changing national needs.

WHAT IS UP IN THE BUDGET?

(By Walter Pincus)

Remember the stern rules for spending that President Nixon enforced on the domestic side of his budget? There had to be a "leaner federal bureaucracy"; "progress" was to be measured "not by the amount of money we put into programs, but by the accomplishments which result from them"; there should be no "overlapping of responsibilities" which "increased the costs of government" and "generated interagency conflict and rivalry." Congress in its "extravagance" has been overly indulgent with committees "sympathetic to particular and narrow causes," "encouraged by special interest groups and by some executive branch officials who are more concerned with expansion of their own programs than with total federal spending and the taxes required to support that spending."

It's worth recalling the President's verbiage with respect to his budget cuts and his reorganization of domestic spending, for none of it seems to have carried over to defense and foreign military aid. Just the opposite. Here pay rates and prices escalate, with expenditures scheduled to rise some \$5 billion next year and another \$4.5 billion the year after, all with presidential approval.

The biggest defense procurement increase, close to \$1 billion, comes in navy shipbuilding which last year had scandalous cost overruns and faulty planning. The major new investment is a new nuclear-powered aircraft carrier—the navy's third—for which the administration seeks \$657 million, on top of \$299 million received last year. The carrier plays no part in strategic defense. It is a tactical weapon associated with wars such

as Vietnam, or any future "limited" war, and when David Packard was Defense under secretary, construction of this third carrier was delayed because of tight budgetary restrictions. During the past two years, with the Vietnam air war in high gear, the navy made do with 14 carriers. The first nuclear carrier will arrive later this year, and the carrier fleet will then return to its traditional 15 in number, continuing at that level through 1980, when this newest carrier is scheduled for delivery.

A second controversial navy construction project which is getting a healthy boost in the fiscal '74 budget (\$556 million) to a total of \$1.1 billion next year is the Trident, the follow-on ballistic missile submarine designed to replace the Polaris. The navy also wants to push ahead with its less publicized, but cost overrun-plagued program to modernize its guided missile frigates. An additional \$186 million is sought for three such ships. Past testimony before Congress has disclosed that this program is running late, and modernization costs often exceed the original price of the ship.

The navy also wants \$29.3 million for advanced procurement of a new class of ship. Designed as a mini-carrier it will handle 17 aircraft, including helicopters. In the words of Admiral Elmo R. Zumwalt, Jr., chief of naval operations, this sea control ship is "conceived to provide tactical air capability in lower threat areas" than Vietnam. It would be "useful," he told congressmen last year, "in areas where we don't have carriers."

Thus as we enter the "era of negotiations" and embrace the Nixon doctrine, under which we forswear any ambition to police the world, the navy is preparing and the administration funding, an air capability that will permit us not only to support a war like the one in Vietnam, but also fight future engagements of lesser magnitude, the so-called "brush-fire" wars.

Defense research and development is scheduled to rise some \$500 million next year to \$8.8 billion for all services. Some of these anticipated projects deserve close review.

Despite the arms limitation treaty which holds the U.S. and Soviet Union to two anti-ballistic missile sites, the army plans to almost double, from \$100 million to \$170 million, research on a new hard-site ABM system designed to protect our entire Minuteman force. The level of funding, for a system to follow and supplement the now frozen Safeguard system, appears to be running at the same level as before the treaty with the Soviets was signed.

The Congress and Defense Department last year knocked out appropriations for the army's Cheyenne armed battlefield helicopter program, after spending several hundred million dollars. But the army is back again, asking for \$49.3 million in the '74 budget to explore the possibility of constructing a new "advanced attack helicopter" that would provide "fire support at night and in adverse weather." As a piece of transport equipment, the helicopter is to be the recipient also of sharply increased research funds from several services—a situation that was specifically criticized last year by the House Appropriations Committee. The army wants \$108.2 million, up from \$50 million last year, to develop a replacement for the UH1, the "Huey" that provided general tactical support in Vietnam. Called the UTTAS (utility transport aircraft system), it is programmed even at this stage to cost per unit almost four times the Huey.

The army also will double its research (to \$60 million) on designing a new heavy life helicopter. The need, says the Army, is for a helicopter able to lift 22.5 tons—about the weight of the new trouble-prone Sheridan tank. The navy, on the other hand, says it needs a heavy lift helicopter that is seaworthy, but that only lifts up to 16 tons. The administration is prepared to give the navy

\$30 million to develop its version of the heavy lift helicopter—up \$20 million from the current year. In 1972, Congress wanted the two programs merged. They were not.

At least two other research items are worth mention. The navy is budgeted for \$72.8 million, up from \$32 million this year, for a "surface effect ship." This essentially exploratory venture looks toward a propulsion system that would permit high-speed—up to 100 knots—transoceanic vessels which would ride on a cushion of air. It's recognized as a "far out" idea, but if it can be made to work for large vessels, it would radically alter naval warfare requirements. It poses a neat question of priorities. Given the administration's aversion to extravagance, Congress may question the prudence of spending that much money in pursuit of a naval advantage for which no need has been shown, and which may not be accomplished anyway.

The air force will get \$67.2 million to research its advanced short landing and take-off transport, intended to succeed the C130. Though the latter has performed well and is relatively new, the air force is jumping its funding request for a replacement by \$50 million.

In justifying their budget, military men argue that research costs must go up steeply as preliminary work gives way to design. Additional funding, therefore, is only part of a longer term investment and does not reflect year-to-year changes in the political, diplomatic or fiscal position of the country. But that argument loses some of its force if military programs are equal competitors for federal dollars. The SALT agreement—the one signed and a second one that is to be negotiated—should permit less rather than more research on some future ABM system. The elimination of overlapping federal civilian grants, mostly for welfare, would seem to argue at least for consolidation of competing military programs. The scuttling of a weapons system because it had no defined mission should not lead to new investment in new research on the same kind of weapon. After all, the domestic programs that allegedly have failed are not being replaced.

Goldplating, or building an excess of unnecessary equipment into weapons systems, is another part of the '74 budget that deserves scrutiny. For example the marines are scheduled to make their first purchase of a new batch of F4J fighter aircraft. Total cost: \$125.6 million or roughly \$12.6 million apiece. The air force is also planning to purchase F4s, 24 of them, to replace those lost in the closing months of the Vietnam war. Price tag: \$98.6 million, or \$4.5 million per plane. Some in Congress are already looking askance at the almost \$8 million per plane difference in the two purchases. New avionics and ground support equipment for the marines, they say, doesn't come near justifying so striking a discrepancy in price.

The navy is in there with \$455.4 million for 45 more S3A Viking anti-submarine warfare planes, despite a warning last year by the House Appropriations Committee (which cut it back) that this project was nowhere close to being cost effective or justified by mission.

The air force is returning for an additional B747, denied it last year by Congress, which criticized the airborne command post program. Cost for the one plane: \$32.3 million. The air force is also seeking \$180.6 million to buy 36 more C130 cargo planes. Whether these are intended as replacements for Vietnam losses or are to be turned over to General Thieu cannot yet be determined.

No such ambiguity cloaks the army's request for funds for new equipment to replace material turned over to the South Vietnamese where "peace was at hand." For example the army wants \$51.5 million for 24 CH47C Chinook helicopter transports and \$96.7 million for 308 Huey light transport helicopters—all of which are paybacks to the

army for Vietnam transfers. Last year the Congress refused to replace any more than 106 additional Hueys the army gave Saigon. The army wanted to give away more, though the South Vietnamese did not have trained crews to handle them. The army is also asking for \$164.6 million to buy 480 new M60A1 tanks, the primary tank in the armor division. The army has turned over to Thieu older tanks that were in army reserve and guard inventories. It now wants to replace them with the newer, more costly M60.

When the US quickly transferred a large amount of military equipment to Thieu in the closing days of 1972, F5 jet fighters were included, some taken from squadrons "borrowed" from Taiwan and Korea. Both countries in turn demanded and received the presence of American F4 squadrons, so as to fill the gap created in their air defense structures until their F5s could be replaced. The fiscal '74 budget contains \$69.3 million for 116 new F5s, some no doubt to replace those given to the Vietnamese. In addition there is \$112 million in new funds to purchase 71 of an even faster version of the plane, called the F5E. Since the air force won't fly these planes (they're too cheaply made), they all must be for foreign sales or gifts.

The defense budget also reveals a step-up in purchases of ammunition and equipment to replenish stocks around the world that were somewhat depleted during the war. For instance expenditures for the new Mark 48 torpedo, a conventional weapon to be carried by our nuclear subs both old and new, is boosted to \$191.2 million. Funds for the Captor torpedo, a new secret "encapsulated" (whatever that is) weapon, are doubled. A new shoulder-fired flaming rocket launcher is scheduled. Tacfire, a new computerized tractical firing system for field artillery, is being funded at a \$40.6 million level.

Despite considerable publicity about the failures of various air-to-air missile systems during the Vietnam war, the services are increasing their purchases of the Sparrow from \$40 million to \$90 million. The new Phoenix system will get \$100.3 million. The standard Pershing missile long-range nuclear fire support weapon will draw \$57.8 million in army funds, up \$21.5 million from last year. This weapon was not used in Vietnam.

The air force is budgeted for \$107 million worth of Maverick air-to-surface, electro-guided rockets, a weapon that came into use in the latter stages of the Vietnam war. The navy wants to begin buying Harpoon, a new ship-launched anti-ship missile that is still being researched.

Thanks primarily to the all-volunteer force, personnel costs of defense are climbing. Overall, they will be up some \$2.1 billion, though there will be a drop of over 50,000 in the number of servicemen. Not all of that drop, however, is a complete loss to the defense budget. Reserve forces, if Defense has its way with Congress, will go up by 23,000 and 31,000 of the jobs formerly filled by military men will be taken over by civilians. In addition the services are already seeking an extra \$150 million to advertise for volunteers in certain specialties now in short supply. To attract new officers, the college reserve officers training programs have established full scholarship programs at an added cost of almost \$30 million. The army guard program is to go up by \$136 million, the air force by \$76 million.

One program the administration is pushing that will cost over \$400 million is a pay boost for retired officers and enlisted personnel, to reflect the increase in pay to servicemen on active duty. Called recomputation, this proposal faces strong opposition on the Hill. But its inclusion in what the administration classifies as a tight budget indicates that the shortage of federal funds for domestic needs does not even carry over to retired military—a good many of whom are in their 40s.

A "generation of peace" and the improbability of a nuclear exchange notwithstanding, the '74 budget for the civil defense agency will rise almost \$5 million to a total of \$88.5 million. Among the items going up are new warning and communications equipment to signal an attack. The Department of Defense also has earmarked a slight but significant increase of \$150,000 for its lobbying on Capitol Hill—which, if approved, would permit \$1.3 million to be spent for that purpose.

The Defense Department will have \$10 million more to spend on base schools for children of military families where there's no nearby public school. This increase coincides with the administration's decision to cut back federal aid to school districts adjacent to military bases, though these districts will still be expected to educate the military's children.

Higher expenditures for the defense establishment are paralleled in the budget by larger amounts requested for various military assistance items. Direct grants to other countries for military equipment and training will go up by \$135 million, to \$685 million. Next year's program is still classified, but this year (fiscal '73) Cambodia and Korea are scheduled to get almost half of what is allocated. Other major recipients in fiscal '73 are Thailand, Turkey, Jordan, Indonesia and the Philippines, with Ethiopia and Spain also getting a fair slice. The '74 defense budget retains military assistance for South Vietnam and Laos, \$635 million less than in the previous year but still funded at \$2.1 billion, just below what it was two years ago when the war was hot and heavy.

The administration also wants to raise security supporting assistance by \$132 million, to \$732 million. This assistance, most of which is destined for Vietnam, goes for direct budgetary support of a government, or its economic programs. Other countries scheduled to receive this form of aid during the current year are Cambodia (\$75 million), Laos (\$49 million), Israel (\$50 million) and Jordan (\$40 million).

Another military grant program will distribute material declared excess to U.S. needs. Under this category Taiwan this year picked up some \$28.8 million worth of equipment, Turkey some \$52 million and Vietnam \$33.2 million.

While the administration seems to hold the upper hand in its enforcement of domestic cuts and impoundments, it may find that the 93rd Congress will exact its price for this budgetary stringency by taking a whack or two at defense. Last year Congress cut \$5 billion from the President's defense budget, yet legislators found themselves tagged as spenders because of increases approved in the domestic area. Today irritation on Capitol Hill, both toward the White House and the Pentagon, is running high. Whether this will result in even deeper defense budget cuts than last year, depends on the willingness of Congress to take the heat the President and the Joint Chiefs could generate over congressional cuts "endangering of the national security."

The '74 budget abounds in ironies. One may be found in the President's budget message, where he discusses domestic programs. "Delay in congressional consideration of the budget is a major problem," the President said, and he called for "prompt enactment of all necessary appropriation bills before the beginning of the fiscal year (July 1)." In the case of the defense budget, however, Congress this year has been held up by the changeover from Secretary Laird to Secretary Richardson. Indeed Richardson then asked to delay his appearance before the appropriate committees of Congress until after the President had delivered his State of the World address. So the House Appropriations Committee, which undertakes the major defense budget review, will not get started on

the defense budget until April 3, the latest date their hearings have ever begun. It's just another irritant, one of many that may result in the toughest year the military has had on Capitol Hill for a long time.

ESTIMATED PORTION OF THE PUBLIC DEBT ALLOCABLE TO DEFENSE AND NONDEFENSE ACTIVITIES

(By George K. Brite)

How much of the total public debt is national defense generated? This is a constantly recurring question. There is no simple absolute answer. Our public debt has been accumulated over periods of varying levels of defense expenditures. Furthermore, any Federal expenditure, whether for national defense or for other activities or purposes, will serve to increase overall economic activity and increase Federal revenue thus having an effect on the budget deficit. Also there is the additional problem of defining what are national defense costs.

The budget national defense function category includes all activities of the Department of Defense military functions, the expenditures for military assistance, the expenditures for the Atomic Energy Commission, and a subfunction termed defense related activities which includes the Selective Service System and other miscellaneous expenditures associated with the national defense function. In addition to the outlays for the national defense function many persons contend that numerous other Federal outlays are defense related or defense generated. It is generally contended that outlays for veterans benefits and compensation are in the nature of deferred defense costs, inasmuch as these outlays stem from past defense activities. There are some persons who contend that Federal outlays for the space program have been far greater than they would have been if it were not for the military implications. Also there are some persons who contend that a portion of the financial and economic aid granted by the United States in the post World War II period has been, in part, based on military considerations. In addition there are smaller Federal outlay activities such as cemetery expenses, expenses of Soldiers and Airmen's Home, U.S. Coast Guard, American Battle Monuments Commission and others that might be considered defense generated or defense related.

In an effort to apportion or allocate the total public debt to defense and non defense activities the following procedure has been used. At the end of fiscal year 1916 the public debt amounted to \$1.2 billion; most of this debt stemmed from the Civil War. During World War I the total debt increased to \$25.5 billion. With the budget surpluses of the 1920's, the debt was gradually reduced to slightly more than \$16 billion by the end of fiscal year 1930. During the depression years, 1930-1940, the public debt increased by almost \$27 billion to a level of \$43 billion at the end of fiscal year 1940. During the period of World War II, most outlays were in support of the war, the total debt rose to \$270 billion by the end of fiscal year 1946. Arbitrarily the debt accumulated during the depression has been assigned to non defense activities; and the debt remaining from World War I, and the debt increase during period of World War II has been assigned to defense activities. On this basis at the end of fiscal year 1946, the \$270 billion total debt was assigned \$243 billion (90 percent of total) for defense and \$27 billion (10 percent of total) for non defense. From 1946 to 1948 the public debt was reduced by \$19 billion to a level of \$251 billion. It has been assumed that the reduction in the public debt was on a basis of 90 percent for defense and 10 percent for non defense. Therefore, the public debt at the end of fiscal year 1948 was allocated \$226 billion as generated from defense

activities and \$25 billion from non defense activities.

The increase or decrease in the public debt was allocated annually on a defense or non defense basis for fiscal years 1949 through 1974 (estimated) in the following manner. Defense related outlays have been assumed to include all outlays for the national defense function, all outlays for the veterans benefit and compensation function, and the percentage of interest outlays related to the accumulated defense generated public debt. All outlays have been expressed as a percent of the Federal funds basis of the budget (all trust fund outlays omitted) since the increase or decrease in the public debt is controlled by the deficit or surplus in the Federal funds. Total defense related outlays expressed as a percent of total Federal funds outlays have ranged from the low of 56.4 percent estimated for fiscal year 1974 to the high of 83.1 percent for fiscal year 1952—the peak of the Korean war costs—see column 7 of the attached table. The portion of the public debt estimated to be defense generated has declined steadily from the 90 percent high at the end of World War II to the low of 78 percent estimated for fiscal year 1974—see column 10 of the attached table.

It is recognized that the data contained in the attached table are constrained by the assumptions outlined here. Furthermore, it is recognized that by varying the assumptions there could be reasonable arguments that would increase or decrease the portion of the debt allocated to defense activities; however, these changed assumptions would not alter to a major degree the pattern as shown in the attached tabulation.

DEATH OF FORMER SENATOR GILLETTE

Mr. SCOTT of Pennsylvania. Mr. President, former Senator Guy M. Gillette, who passed away on March 3, was a man of great stature and respect in the U.S. Senate when I came to Washington. Senator Gillette, I recall, supported the creation of an independent state of Israel back when the issue was not popular in the United States. Israel's cause became Guy Gillette's cause in 1945 when he assumed the office of presidency of the American League for a Free Palestine. I ask unanimous consent that Guy Gillette's speech at that occasion be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

AMERICAN TRADITION AND HEBREW FREEDOM

(NOTE.—"American Tradition and Hebrew Freedom" is the text of a statement made by The Honorable Guy M. Gillette in Washington, D.C., when he assumed the office of Presidency of the American League for a Free Palestine.)

I am aware that many people will regard it as unusual that I have chosen to decline the gracious offers of a government position by the President and to dedicate myself to the effort of achieving a solution to the Hebrew problem in Europe and Palestine, particularly since it is a non-Hebrew and non-Jew who has undertaken this task. But I believe that this surprise is chiefly due to the general misunderstanding of what we have come to call "the Jewish problem." For it is commonly and universally accepted that the persecution, the homelessness, the enslavement, and the extermination of the Hebrew people is solely a Jewish question and that only Jews need to participate in the various movements that seek to end this tragedy.

I do not share this attitude. I have decided to accept my present task not because I have become a Jew, nor because I intend to settle in Palestine, nor because my love or sympathy for the Jews is in any degree greater than that of the average American. Indeed, I have undertaken this step only as an American who seeks to live up to the traditions and the principles of our nation. For I consider the so-called Jewish problem, not as a Jewish or a Hebrew question, but as an urgent problem of the United Nations and of the decent portion of mankind.

WORLD PEACE AND SECURITY AT STAKE

Because some governments did not share this view of all mankind has paid very dearly in the casualties of our sons and brothers on all the battlefields of the world. I do not consider this problem the most important on the agenda of the United Nations, but I do consider it one of the problems which must be on that agenda. Since America, through the war, through the Atlantic Charter, and through other international relations culminating in the San Francisco agreement has become international in attitude and international in purpose, she cannot and should not fail at this important point either.

I have personally shared the desire for international cooperation, international decency and justice, of the American people. I have given practical expression to that before I became a member of Congress and throughout the twelve years of my service in the House and Senate, and I come to this task with the conviction that unless this particular problem is permanently and effectively solved, it will again be exploited by the forces of reaction to recreate fascism and world war.

Until this war broke out, my interest and my knowledge of this so-called Jewish problem was general and vague. I must confess that even in the first years of war I shared with other Americans the skepticism about the persecution and the extermination suffered by the Hebrew people, the truth of which we have now been forced to believe by incontrovertible evidence. It did not seem possible that in this era of vaunted civilization anyone could be guilty of the savage barbarism and of the bestial crimes that were charged against the leaders of the fascist countries. We have now learned that the facts brought to our attention by the Hebrew Committee on National Liberation and the American groups that supported the Committee in 1943 were under-stated rather than exaggerated.

I am happy and grateful that through the efforts of my present colleagues, I became vitally interested in the plight of the Hebrews in Europe and Palestine and in some degree instrumental in the congressional action that resulted in a few concrete measures, such as the creation of the War Refugee Board, for the alleviation of this tragedy and the rescue of a few thousand individuals from the extermination camps of Central Europe.

What we found in Europe after the end of hostilities there has indeed surpassed our worst fears. The bestiality and ruthlessness of the Germans in the wholesale extermination of the Hebrew people staggers human comprehension. But somehow, miraculously, some two million Hebrews have survived it and the great question is,

WHAT NOW?

Are we simply to forget the five million dead? Are we to ignore the horrible suffering of the survivors and their present plight? Are we to leave them in their present miserable condition, roaming the continent of Europe as "refugees," as "displaced persons," as "stateless Jews," as unwanted, second-rate human beings on God's earth? Or are we, the United Nations, now that the enemy has

been beaten and now that we are in position to act if we really want to do so, to give meaning to our oft-repeated expressions of horror and sympathy? Are we to make a real effort to be of assistance to them, to let them rehabilitate themselves and thus defeat the German scheme to exterminate them? Let us then restore them to life and human dignity by recognizing them as a fellow-member of the United Nations, entitled to equal rights with the other fifty member nations, and by letting their representatives and statesmen sit on the councils of the United Nations and secure an adequate solution to their national problems, just as we are endeavoring similarly to settle numerous other problems within the United Nations.

JEWES AND THE HEBREW NATION

And here let me make it quite clear that when I speak of national recognition for the Hebrews of Europe and Palestine, I mean precisely that and not recognition of the Jews as a nation, for Hebrews and Jews should not be regarded as synonymous terms.

The Hebrew Committee of National Liberation in coming into existence as a temporary Hebrew national authority has taken a step of historical consequence. In drawing the distinction between the Jewish religion, on the one hand, and the Hebrew nation, on the other, they have solved a question which has, consciously or subconsciously, been bothering most of us and which has probably been the greatest single stumbling block toward the solution of the so-called Jewish problem in Europe and the deadlock surrounding the Palestinian problem.

On the basis of this distinction the position of these people can be simply and easily understood. There exists a Hebrew nation whose national territory is Palestine, just as Holland is the national territory of the Dutch. Quite apart from the Hebrew nation, there are people of the Jewish faith practically all over the world. Just as the fact that most Irish are Catholics does not make every Catholic an Irishman, the fact that most Hebrews are Jews does not make every Jew a Hebrew. Here in America, for instance, we have Americans of Hebrew descent and of the Jewish faith, even as there are Americans of French origin and of the Catholic faith, or of English descent and of the Protestant faith. I stress these definitions for I believe them to be of the utmost importance. In the course of centuries of abnormal existence, the Hebrew national problem and the Jewish problem have become much too involved and the solution lies in simplification and normalization.

THE RIGHT TO SELF-DETERMINATION

I have decided to dedicate my efforts to the best of my ability and knowledge to see whether, once and for all, an end can be put to this age-long abnormal and intolerable existence of a great and ancient people who have contributed so much to the progress of the world and who have been so ill-repaid.

I believe it to be the elementary dictate of human decency that we must not prolong for one more day the suffering existence of the surviving Hebrews in Europe today. We believe therefore that the Allied control commissions in Europe ought to recognize the Hebrew national status and permit every so-called "stateless Jew," displaced person, or "Axis-Jew" the elementary right of self-determination in order that they may decide of their own free will whether they are Hebrew nationals or whether they want to remain "stateless," or to become once again German or Rumanian or Hungarian nationals. The present policy which regards and treats the greatest victims and enemies of the Germans as Germans, subject to all the laws and regulations imposed upon the barbaric and defeated foe, is a gross injustice and

must evoke laughter in Hell. To offset this policy, the following steps should be taken:

EMERGENCY PLAN

1. All Hebrews are to be freed from their Axis concentration camps in which hundreds of thousands of them are still detained.

2. A commission composed of those Hebrews should be recognized by the occupying authorities and be charged by them with the handling and representation of all Hebrew affairs.

3. UNRRA should immediately extend its relief operations to the Balkan countries where hundreds of thousands of Hebrews, in Rumania and Hungary particularly, are starving and destitute, and have to date not received one ounce of UNRRA aid.

4. Hebrew representatives should be added to the United Nations War Crimes Commission in order to secure the prosecution and trial of the tens of thousands of known criminals who have participated in and carried out the wholesale slaughter of some five million Hebrews and who are today at large with little prospect of being prosecuted.

5. The Reparations Commission in Moscow should consider the claims and rights of the surviving Hebrews and include in the reparations to be given to United Nations also compensation for the losses suffered by the Hebrew people.

These are emergency measures necessary in view of the destruction and chaos of present-day Europe in which over a million Hebrews find themselves without status, without national or legal protection, without representatives to take action on their behalf.

ESSENTIAL STEP

What is of even greater importance are the following steps which we believe essential for the commencement of a solution of the entire problem:

1. The British Government should proclaim the right of every Hebrew in Europe to apply to the nearest British Consulate and receive his first papers of Palestinian citizenship.

2. An Anglo-American-Russian commission should be set up immediately and given adequate powers to effectuate the repatriation, in the speediest manner, of all such applicants to Palestine.

SIN MUST BE ENDED

Now that a new Government has come to power in Great Britain which is publicly and officially committed to the abrogation of the Chamberlain White Paper under which Palestine is administered, Britain's sin of having kept Palestine closed to the martyred Hebrews of Europe at a time of their greatest ordeal and need should be immediately ended. Similarly, the new Government must annul immediately the discriminatory laws against the Hebrews in Palestine that were the products of the Munich and Nuremberg era.

Many words of grief, many resolutions of sympathy, many speeches of protest have been made in our own and other countries. I do not for a moment doubt the sincerity and the noble emotions which have prompted them, but I say in all earnestness: For God's sake, these people have suffered enough! Their age-old and continuous persecution has ended with a national disaster. It is time for action—action now. I, for one, am going to take all the action within my power and spare no effort. I shall knock on every door and go through every channel to see to it that the action is taken and taken immediately.

I feel confident of the success of our undertaking because I know that the heart and soul of Americans, irrespective of the national origin or religion, is with us. From the length and breadth of this land genuine human sympathy, understanding, and desire to be of help has been repeatedly and

magnificently demonstrated. The will of the American people in this task, adequately expressed, must compel our Government to take appropriate action. For such democratic principles we have fought this war; it is for this that governments are elected and put in power; to express and act on the will of the people.

"DO NOT DESPAIR"

To the surviving Hebrews of Europe (and I hope my word reaches them) I want to say this: Do not despair; do not believe the world is all darkness; humanity is not dead, and the human soul is not all base. The people of this land, engaged as they are in a desperate and bloody struggle against the remaining Axis tyranny, are coming to your aid. Your emissaries and servants of the Hebrew Committee on National Liberation here have not faltered in their task of raising their voice in your behalf. And as for myself, I consider it a great opportunity and honor to lend a helping hand and to serve a cause the solution of which is in the deepest interests of all the United Nations and which has such great appeal to the traditions and the principles that make America.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AMENDMENT OF THE FEDERAL MEAT INSPECTION ACT AND THE POULTRY PRODUCTS INSPECTION ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 90, S. 1021.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

S. 1021 to amend section 301 of the Federal Meat Inspection Act, as amended, and section 5 of the Poultry Products Inspection Act, as amended, so as to increase from 50 to 80 per centum the amount that may be paid as the Federal Government's share of the costs of any cooperative meat or poultry inspection program carried out by any State under such sections, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill.

PRIVILEGE OF THE FLOOR

Mr. CURTIS. Mr. President, I ask unanimous consent that the following staff members of the Committee on Agriculture be allowed privileges of the floor during debate and any votes on S. 1021: Harker Stanton, Forest Reece, Mike McLeod, Bill Taggart, and Jim Giltmier.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield to me briefly?

Mr. CURTIS. I yield.

UNANIMOUS-CONSENT AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—after having cleared the request with the distinguished assistant Republican leader, the distinguished Senator from Nebraska (Mr. CURTIS), who is going to manage

the bill, the distinguished Senator from Georgia (Mr. TALMADGE), who is chairman of the Committee on Agriculture and Forestry, and with other Senators—that debate on S. 1021 be limited to 2 hours, to be equally divided between and controlled by the distinguished Senator from Nebraska (Mr. CURTIS) and the distinguished Senator from Georgia (Mr. TALMADGE) or his designee; that the time on any amendment in the first degree to be limited to 1 hour; that time on any amendment to an amendment, debatable motion, or appeal, be limited to 30 minutes, the time to be equally divided and controlled in the usual form, and with all other matters with respect to the agreement to be in the usual form, with the exception that there be no provision with regard to germaneness.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I thank the Senator.

The PRESIDING OFFICER. The Senator from Nebraska is recognized.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. CURTIS. On my time.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CURTIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, the bill now before the Senate, S. 1021, is virtually identical to S. 1316 which passed this body during the 92d Congress without a single dissenting vote.

S. 1021 authorizes an increase in the Federal contribution to State meat and poultry inspection programs from the current maximum of 50 percent of the costs of such programs to a maximum of 80 percent of such costs.

As my colleagues know, Mr. President, the junior Senator from Nebraska is not one who generally supports increased Federal expenditures. However, I believe this is one program where an increase in the Federal contribution as proposed in the bill now before us will enable many States to continue operating their own meat and poultry inspection programs rather than calling upon the Federal Government to bear the entire cost.

Mr. President, when the Meat Inspection Act of 1967 was passed, it contained a provision that if a State did not want to continue with its meat inspection program, it could turn it over to the Federal Government. It meant that the Federal Government would pay the total cost of all meat inspection throughout the entire country. This has to be very expensive. If a State chose, under existing law, to continue its meat inspection program, the Federal Government would make a contribution of 50 percent of the cost.

Many States are faced with budgetary problems, and there is a temptation for them to just give up the inspection, turn it over to the Federal Government, and

have the Federal Government bear all of the cost.

Inspection by the Federal Government will cost much more than State inspection. In addition to that, the Federal Government will pay 100 percent of it.

Consequently, the Committee on Agriculture and Forestry believes that by raising the contribution of the Federal Government to the State meat inspection programs from 50 to 80 percent will cause a number of States to continue their meat inspection programs and some that have already discontinued them to reinstate them; and that, of course, will save money for the Federal Government.

As pointed out in the Department of Agriculture's legislative report on S. 1316:

Unfortunately, the Wholesome Meat Act provides no incentives for States to continue their meat inspection programs; in fact, it provides a financial disincentive. A State must now bear 50 percent of the cost of carrying out its meat inspection program. But this cost may be totally eliminated simply by turning the program over to us.

The report continued:

We are quite confident that on an 80-20 funding basis most States will continue their programs. We are equally confident that there will be a rapid decline in the number of State inspection programs under the present 50-50 ratio.

I would note that since that report was written on June 28, 1971, my own State of Nebraska, as well as Montana, Minnesota, Missouri, Oregon, Kentucky, Pennsylvania, and Puerto Rico have all turned their meat inspection programs over to the Federal Government as have 13 States in the case of poultry inspection.

As I said a while ago, it is quite likely that some of the States enumerated will reinstate their meat inspection programs if the Federal Government would assist with 80 percent of the cost.

The single difference, Mr. President, between S. 1021 and the bill approved by the Senate previously is a provision in the legislation now pending requiring that the Federal Government contribute no less to any State under cooperative arrangements for meat or poultry inspection under the Talmadge-Aiken Act than the highest percentage contributed to any State under the Federal Meat Inspection Act or the Poultry Products Inspection Act, as the case may be.

By way of clarification, Mr. President, there are presently three separate types of meat and poultry inspection programs.

First, there are the cooperative arrangements under the Talmadge-Aiken Act whereby State employees inspect plants under the overall supervision of a Federal supervisor in the State. The Federal Government presently contributes 50 percent of the cost of this program and the meat or poultry may be shipped in interstate commerce.

Second, there is the cooperative program under the Wholesome Meat Act whereby any state which agrees to adopt standards at least equal to Federal standards may be reimbursed for up to 50 percent of the cost of inspecting plants from which meat and poultry are shipped in intrastate commerce.

Finally, there are plants which are inspected by Federal employees from which products may be shipped either in intrastate or interstate commerce.

Mr. President, the Senate agreed unanimously during the last Congress that this was good legislation. I hope there will be another unanimous vote today.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. GRIFFIN. Mr. President, will the Senator yield me some time?

Mr. CURTIS. Yes. How much time does the Senator desire?

Mr. GRIFFIN. Ten minutes.

Mr. CURTIS. I yield the distinguished Senator 10 minutes.

Mr. GRIFFIN. Mr. President, I want to indicate my support for the legislation reported by the Senate Agriculture and Forestry Committee and to indicate my agreement with the essential reasoning outlined by the distinguished Senator from Nebraska.

Unless legislation like this is passed, it appears that State standards and State meat inspection programs that are now in effect could well become a matter of history. Moreover the cost to the Federal taxpayers would be, not 80 percent, but 100 percent. But because the purpose of this legislation is to preserve a certain degree of State authority and control, which the Senator from Michigan considers to be desirable, it raises a question to which an amendment that I have prepared will be addressed.

The Federal meat inspection statutes at the present time have been construed by one Circuit Court of Appeals—the Sixth Circuit Court of Appeals—as having the effect of preempting State meat inspection laws and standards which may be stricter than the minimum standards set by Federal law.

This has become a very important issue in my State of Michigan, because in our State we have had a meat inspection law for more than 20 years, and a meat standards law which has worked very well. It has protected the consumers of my State, has been acceptable to the meat processors and packers, and now has been declared abrogated by the Federal law which is on the books.

To be more specific, Mr. President, under Michigan State law, hot dogs and sausages can be made only of skeletal meat and does not include the use of such animals byproducts as snouts, lips, spleens, udders, salivary glands, stomachs, and other organs.

The Federal minimum meat standards law which has been in effect would allow such animal byproducts in the manufacture of hotdogs and sausages.

Furthermore, the Michigan meat standards law provides that hotdogs, for example, must include a minimum protein content of at least 12 percent. As I have already indicated, there is no similar Federal requirement.

The point of all this is that it is fine for the Federal Government to come along later, as we have, and set up some standards—in this case, rather minimal standards. Of course, it is better than

having no standards at all. However, in the process, I would hope that we would not, as a matter of intent at least, wipe out stricter standards that States have already provided the consumers in their States. Because of the decision of the sixth circuit court of appeals that is the unfortunate result and the unfortunate effect of the passage by the Federal Government of meat inspection legislation.

There is nothing unusual about the Federal Government setting minimum standards in a field, while recognizing that States may still impose stricter and higher standards than the Federal Government imposes.

I believe it was the intent of Congress that this should have been the case in the meat inspection law. However, if the intent of Congress was not clear, then I think that we should adopt an amendment to the pending bill—which would certainly be a most appropriate vehicle—to make clear that the several States having stricter meat standards would be able to continue to enforce those standards in the interest of their citizens. In addition to Michigan, those States include Massachusetts, Connecticut, Maryland, Nevada, New York, and California.

I would suggest to the distinguished ranking minority member of the committee that my amendment is completely consistent with the philosophy of State's rights which is the main thrust of the bill because the bill itself seeks to preserve the State role in meat inspection and standards. I would find it rather unfortunate if in doing so we should wipe out, at the same time any State regulatory jurisdiction whatsoever.

I would hope very much that it might be possible that an amendment such as the one I have drafted would be accepted by the committee and taken to conference. I do not know whether the Senator from Nebraska might have any comments to make on this matter or not.

Mr. CURTIS. Mr. President, I can understand the urgency of this matter from the standpoint of the distinguished Senator from Michigan. However, the pending bill is a very narrow bill. It deals with just one thing—the financial burden to be borne by the States and the Federal Government. The proposed amendment of the distinguished Senator from Michigan relates to standards of inspection. The present law requires that on the inspection to be carried on by a State, the financial assistance, if there is to be any, must be equal to that provided by the Federal Government.

Now, the question arises, if the amendment of the distinguished Senator from Michigan is offered, as to whether a State can impose requirements over and above the standards of the Federal Government.

I think this is an important question. It merits hearings on the part of Congress. The whole question of State standards should be explored.

I think we should hear from State inspectors and heads of those departments. I think that our people from the Federal inspection program should be heard. I

think that we should also hear from the other interested parties.

It would be my hope that the distinguished Senator from Michigan would not press his amendment at this time. I will certainly join with him in seeking to persuade the chairman of the subcommittee of the Committee on Agriculture and Forestry, the distinguished Senator from Alabama (Mr. ALLEN), to hold hearings on his bill. I think the matter deserves attention, and I think that the subject should be gone into.

Mr. GRIFFIN. Mr. President, it happens that the distinguished Senator from Alabama (Mr. ALLEN), the chairman of the subcommittee, is on the floor. At the very least, it would seem to me that there should be hearings on a bill I have also introduced to carry out the same purpose as a possible amendment to the pending bill.

As I indicated earlier, it is not unusual for a Federal minimum standard to allow for the possibility of a State invoking a higher standard. I refer, for example, to the Federal minimum wage law. There can be no lower minimum wage set within a State, but a State may have a higher minimum wage than is imposed by the Federal Government. The Smith-Hughes Vocational Education Act, I understand, is another example of an area in which the Federal Government sets certain minimum standards, but a State is not precluded from setting higher standards.

I realize that there is a question of the burden or possible interference with interstate commerce in the meat field; but I also am very well aware that in this instance the State of Michigan had a meat law long before the Federal Government thought about it. It would be unfortunate for the Federal Government to deny the people of a State a lawful protection to which they have already become accustomed.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. GRIFFIN. I am glad to yield.

Mr. ALLEN. I shall have something further to say if the amendment is offered. I wish to point out at this time that the U.S. Department of Agriculture published regulations for the use of by-products in such items as hotdogs. I understand they apply also to sausage. They were published originally on December 23, 1972. The Department of Agriculture has received more than 3,000 comments. The proposal was reissued on February 14 and provided for a 30-day comment period, which expired on March 17. So regulations have not been promulgated in final form. It is my understanding that if the proposed regulations become effective, they will then equal the Michigan standards. Therefore, we might be dealing with a moot question in the event the Senator offered his amendment.

Mr. GRIFFIN. I may be wrong, but I believe that the regulations suggested or proposed by the Department of Agriculture do not go to the ingredient standards, but relate to labeling.

Mr. ALLEN. I cannot answer that, because the regulations are not in final form yet. But it has been my understand-

ing that they will. However, I do not know.

Mr. GRIFFIN. Frankly, I think that unless I have some assurance that the subcommittee which has jurisdiction will hold hearings and give the matter consideration, I really have no choice other than to offer my amendment.

Mr. ALLEN. I would be delighted to say to the Senator from Michigan that if the amendment he is discussing—he has not offered it yet—

Mr. GRIFFIN. I have not.

Mr. ALLEN (continuing). Is introduced as a separate bill, and if the bill is referred to the subcommittee of which I am the chairman. I assure the distinguished Senator from Michigan that in the light of the policy we have always maintained, the bill will be set for early hearings. At that time the distinguished Senator from Michigan could come before the subcommittee and explain the bill and offer such other testimony as he might care to adduce. I assure the Senator that there would be no reluctance whatsoever on the part of the Senator from Alabama to hold hearings in his subcommittee. I am sure, though, that the Senator from Michigan is not suggesting that. We have had a number of controversial bills before our subcommittee, and certainly we would not refrain from holding committee hearings on this one.

Mr. GRIFFIN. I thank the distinguished Senator from Alabama for that statement and that commitment. I will say to him that the bill has already been introduced as S. 991.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the Record.

There being no objection, the bill was ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 408 of the Federal Meat Inspection Act (81 Stat. 600; 21 U.S.C. 678) is amended to read as follows:

"Sec. 408. Requirements within the scope of this chapter with respect to premises, facilities, and operations of any establishment at which inspection is provided under subchapter I of this chapter, which are less stringent than those made under this chapter may not be imposed by any State or territory or the District of Columbia. Marking, labeling, packaging, or ingredient requirements less stringent than those made under this chapter may not be imposed by any State or territory or the District of Columbia with respect to articles prepared at any establishment under inspection in accordance with the requirements under subchapter I of this chapter, and any State or territory or the District of Columbia may exercise concurrent jurisdiction with the Secretary over articles required to be inspected under said subchapter I, for the purpose of preventing the distribution for human food purposes of any such articles which are adulterated or misbranded, or, in the case of imported articles, after their entry into the United States.

Mr. GRIFFIN. Mr. President, with that assurance, I am sure that I shall have some witnesses from my State and perhaps from other States who will agree to come before the subcommittee and present the case because it is a case of States rights.

Mr. ALLEN. I understand; and that makes the Senator from Alabama very much interested in the proposed legislation.

Mr. GRIFFIN. With that assurance and that commitment, I shall not offer the amendment to this bill.

Mr. ALLEN. The Senator from Alabama will say to the distinguished Senator from Michigan that he will be glad to discuss the matter with him and arrange a date for the hearings.

Mr. GRIFFIN. I thank the Senator.

Mr. TUNNEY. Mr. President, I am sending an amendment to the desk and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 2, line 19, insert the following:

SEC. 5. Notwithstanding any other provision of law to the contrary, the President shall prohibit the exportation outside the United States or any territory or possession of the United States of any meat or live animal livestock when such exportation shall be at an average monthly rate above that which prevailed in 1972.

SEC. 6. (a) "Meat" as used in Sec. 5 means all beef, veal, pork, sheep and lamb products with Standard Industrialization Classification Codes Number 2011 or Number 2013, before or after they have entered into a processing stage, where they are intended for use as or in a product for human ingestion.

(b) "Live Animal Livestock" means all living animals whose production and sale is undertaken for purposes of producing "Meat" as defined in (a).

SEC. 7. Sec. 5 shall remain in effect until the termination of all restraints, ceilings or other limitations imposed on March 29, 1973 on prices of meat under the authority of the Economic Stabilization Act of 1970, as amended, or any subsequent restraints, ceilings or limitations on these products imposed under this same authority.

Mr. TUNNEY. Mr. President, at the appropriate time, I shall ask for the yeas and nays. There does not seem to be a sufficient number of Senators in the Chamber at this time to ask for the yeas and nays, so I shall call for them later.

I am offering today an amendment to S. 1021 which would protect the American consumer from the likelihood of export-induced shortages of the meat products covered by the President's March 29 establishment of price ceilings.

On March 20, 1973, I introduced legislation which would bar export of meat products whose prices were rising at an annual rate of 3.6 percent or more. I pointed out at that time that such export controls would be imperative if controls were placed upon meat prices. Now that the President has promulgated such controls, we must act swiftly to prevent the development of shortages and black markets that will be inevitable if foreign meat and livestock purchasers are free to outbid American consumers for our limited meat supplies.

My amendment is very simple. It says that, as long as meat price controls remain in effect, the President shall not permit the exportation of price-controlled products or of live animals used to produce these products at a rate greater than that which prevailed in 1972.

We could ban meat and livestock ex-

ports altogether. This would help relieve pressure on prices even more than the measure I propose today. However, I recently discussed this question with a number of leading economists. All favored export controls in the present crisis but some expressed the concern that our long-term ability to sell agricultural commodities abroad and thus improve the balance of payments might be injured by the foreign resentment that an abrupt termination of meat exports might cause. By limiting meat and livestock exports to their relatively low 1972 levels, my amendment strikes a fair balance between maintaining the confidence of foreign consumers and preventing wholesale raids on our scarce supplies.

While it is too early to assess the export effects of meat price ceilings, there are disturbing indications that the ceilings will induce American producers to sell substantially higher amounts of their output abroad. The result would be the creation of meat shortages, possibly accompanied by rationing, or black markets, or both. Let us look at the evidence:

First, the two recent devaluations and the dollar float have substantially reduced the price of American meat to foreign consumers.

Second, billions of dollars, each a potential claim against U.S. meat supplies, are held by citizens of Japan and Western Europe where the demand for meat is rising even faster than in the United States and where consumers are accustomed to paying more for meat than Americans do, even at today's price.

Third, with rising world meat demands and great production difficulties in Australia and Argentina, world meat prices are rising rapidly everywhere but in the United States where, of course, they are now controlled.

Fourth, the President's ceilings do not apply to the price of meat sold for export, therefore American meat producers can legally seek and receive foreign prices above those that are permissible in the domestic market.

Fifth, Japanese pork purchases in February were up seventeen fold over the January level. In March, the Japanese bought almost as much pork in 1 month as they did in all of 1972.

Sixth, before the recent devaluation, the dollar float, and the establishment of meat price ceilings, the U.S. Agriculture Department conservatively estimated that red meat exports in 1973 would be at least twice as great as in 1972. The USDA has as yet to publish revised estimates which take into account the export-promoting developments that have occurred since its original estimate.

Mr. President, I could continue to cite data and reports showing that we are facing a most dangerous situation. For once, let us act before it is too late, before shortages and black markets come to pass.

Article XX of the General Agreement on Tariffs and Trade, the basic law of international trade, recognizes every nation's right to control the export of goods in short supply. The Export Administration Act of 1969 established that it is the policy of the United States to protect American consumers through short-supply export control.

Let us not see another failure of public policy. Let us act now before the problem grows to be out of control.

Mr. President, I should now like to quote from a newspaper article published in the Washington Post dated March 31, 1973, written by James L. Rowe, Jr., which states in part:

According to Agriculture Department figures, U.S. pork exports tripled in the first two months of this year, to 17.8 million pounds of pork products.

In addition, according to one Agriculture Department economist, there is evidence that Japan has purchased nearly as much pork just this month as it purchased from the United States during all of last year.

In addition, according to C. W. McMillan, executive vice-president of the American National Cattlemen's Association, the nation's feed lot owners recently have been shipping thousands of head of cattle to Canada for slaughter because the Canadian market "is higher than ours."

Then it goes on to say:

The ceiling announced Thursday does not apply either to exports or to imported meat sold here. Shultz told reporters before the President's address that the administration would monitor the export situation and said the President has the tools to deal with it should it become a problem.

One official of a large food chain said that he is afraid the export situation will become serious because world prices for meat are rising rapidly.

Mr. President, I ask unanimous consent to have the entire article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEAT EXPORT RISE COULD BUOY PRICES

(By James L. Rowe, Jr.)

A sharp increase in U.S. meat exports could severely limit the price-reducing effect of the President's temporary ceiling on beef, pork and lamb prices.

Treasury Secretary George P. Shultz said Thursday night, however, that the administration does not expect the freeze to draw supplies away from the domestic market.

The nation currently exports only a small proportion of the meat it produces. But, as one food industry official put it, "the wholesale price freeze might push just enough meat products and cattle into the export market to keep meat prices from dropping."

According to Agriculture Department figures, U.S. pork exports tripled in the first two months of this year, to 17.8 million pounds of pork products.

In addition, according to one Agriculture Department economist, there is evidence that Japan has purchased nearly as much pork just this month as it purchased from the United States during all of last year.

In addition, according to C. W. McMillan, executive vice-president of the American National Cattlemen's Association, the nation's feed lot owners recently have been shipping thousands of head of cattle to Canada for slaughter because the Canadian market "is higher than ours."

He said Canada recently removed its import duties on cattle in order to increase the amount of meat available to its consumers.

Japan temporarily removed its import levies on pork imports during March, and, according to one Agriculture Department expert, is expected to do so again in April.

The ceiling announced Thursday does not apply either to exports or to imported meat sold here. Shultz told reporters before the President's address that the administration would monitor the export situation and said the President has the tools to deal with it should it become a problem.

One official of a large food chain said that he is afraid the export situation will become serious because world prices for meat are rising rapidly.

Both imports and exports still account for a minuscule proportion of the nation's total meat production—imports about 1 per cent, exports less than half that.

Last year, for example, the nation exported 220 million pounds of pork (carcass equivalent) out of a total production of 13.7 billion pounds.

Beef exports are even more limited, roughly 110 million pounds of a total production of 22.4 billion pounds last year. Most of that was in variety meats, McMillan said, such as liver and tongue.

A Cost of Living Council official cautioned that apparent sharp increases in pork exports could be misleading. Any time "you start off with a small base, the percentage increase is going to be large," he said.

In a related development, the Cost of Living Council said yesterday that it had added an additional 250 Internal Revenue Service agents to its 2,500-man economic stabilization staff in order to enforce the freeze on red meat prices.

Council director John Dunlop said the IRS would spend next week working with food stores to insure that they have correctly determined their ceiling prices.

Mr. TUNNEY. Mr. President, the second item is an editorial published in the Washington Post dated March 31, 1973, entitled "Beef, Pork and Lamb."

An excerpt from the editorial reads as follows:

After two devaluations and a float, our products are cheaper than ever for foreign buyers and, here and there, they are prepared to pay more than domestic bidders. Japanese importers are currently buying substantial amounts of American pork. If large numbers of foreign meat buyers are willing to go higher than Mr. Nixon's ceilings, American meat exports will increase sharply and further aggravate the domestic shortage. That dilemma still lies in the future but, perhaps, not very far in the future.

Mr. President, I ask unanimous consent to have the entire editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEEF, PORK, AND LAMB

Shortly we shall see who was right in the debate over food price controls—President Nixon before Thursday night, or President Nixon after Thursday night. Until Thursday, the President and his administration had earnestly assured the country that controls could not possibly work effectively for agricultural prices. On that day, of course, he applied controls to beef, pork and lamb, with the ringing declaration that "what we need is action that will stop the rise in meat prices now." The pre-Thursday position was, in fact, a good deal more realistic. It is highly questionable whether the new ceilings will have any great and enduring effect on the price of meat.

But if the ceilings are bad economic policy, they are good politics in the most respectable and legitimate sense of that term. The level of public anxiety and resentment had reached a point at which it was necessary for the national government to do something, and now the government has indeed done something. If it turns out not to be very successful, that will not be apparent for several months.

The coming union negotiations, in a series of large and influential industries, made it essential for Mr. Nixon to act quickly. With retail food prices rising at a rate of 28 per cent a year as they did in January and February, it would be foolish to think that

union contracts could be held down to the 5.5 per cent annual wage increase that is Mr. Nixon's target. Mr. George Meany of the AFL-CIO had already explained to Mr. Nixon, very loudly and publicly, what was going to happen. This schedule of labor negotiations, over the spring and summer, is a very sharp pressure on the administration. Mr. Nixon has not applied the wider controls, or the mandatory price reductions, that Mr. Meany had demanded. But he has made an effort to anchor the price of beefsteak and pork chops. While steak and chops are not the basic staples of most people's diet, they have certainly become the focus of the shopper's outrage.

As for the real effects of the new ceilings, they are not easy to predict. The prices of live animals are still uncontrolled, of course, and if they continue to rise the butchers and processors will be caught in the middle. In that case, some of the less profitable cuts of meat will disappear altogether and others will be sold with doubtless, a slight increase in the amounts of bone and fat. There has been some huffing and puffing from the White House to the effect that the trimming of meat cuts will be very closely policed. But actual enforcement, in all but the grossest cases, will be exceedingly difficult. At the retail level, the difference between profit and loss is measured in fractions of ounces.

The next question is the effect of the ceilings on the expansion of the country's meat supply over the next year. In the case of beef cattle, it takes a matter of many years to expand breeding herds and then to raise the calves to full growth. Despite the enormous increases in prices, the amount of red meat that has come to market this winter has been almost exactly the same as last year. That is the essential reason why prices have risen. Demand is running far ahead of supply. But raising animals for market is a highly speculative business. If the men who run the feed lots conclude that they are going to be caught between the high price of feed grain and the ceilings on meat prices, they may well cut back production. That result would only prolong the shortages that have created the past year's shocking rise in prices.

In its present highly uncomfortable position, the administration has one crucial factor in its favor. The prices of feed grain are beginning to drop. Soybeans, wheat and corn have all fallen a little in recent days. They are responding to the Agriculture Department's belated but, within the past month, exceedingly energetic attempts to induce farmers to expand their plantings this spring. If feed grain prices had continued to rise, the White House could hardly have attempted to control meat regardless of Mr. Meany and the AFL-CIO. But now that feed grain prices are turning downward, controls are at least theoretically possible. The possibility of a truly massive grain harvest next summer and fall is currently Mr. Nixon's best hope for stabilizing the American grocery bill. From now on, the Cost of Living Council can only read the weather reports and hope for the best.

But it is idle and, worse, dangerous to assume that Mr. Nixon or anyone else can now lead us back, by controls or any other device, to the relatively stable low prices that we enjoyed before 1971. The rest of the world is rapidly raising its standards of nutrition and many countries are looking to the United States as a major source of the basic grains and feeds. The administration is depending on expanded agricultural exports to help balance our international payments and pay for among other things, our oil imports. After two devaluations and a float, our products are cheaper than ever for foreign buyers and, here and there, they are prepared to pay more than domestic bidders. Japanese importers are currently buying substantial amounts of American pork. If large numbers of foreign meat buyers are willing to go higher than Mr. Nixon's ceilings, American

meat exports will increase sharply and further aggravate the domestic shortage. That dilemma still lies in the future but, perhaps, not very far in the future.

The evidence thus suggests that food is going to be a good deal more expensive in the future, and no government can do much about it. The proper policy for the administration, over this coming year, is to expand food production as rapidly as it can. It is far better and cheaper, at this point, to risk a surplus rather than shortage. Meanwhile Mr. Nixon will have to do what he can to damp down the panic of inflation while the country slowly gets used to paying more for its groceries. In the ceilings on meat prices, Mr. Nixon is responding to this danger of panic at the cost of jeopardizing, to some unknown degree, farmers' plans for expanding their meat production. He is doubtless hoping, as we all must hope, that after the first wave of farmers' complaints have passed, they will see how high those ceilings have been set. The truth of the matter seems to be that we are now in a worldwide competition for food and, increasingly, it is American food for which the world is competing.

Mr. TUNNEY. Mr. President, it seems to me absolutely ridiculous for the American housewife to subsidize the European or Japanese housewife when meat prices have been escalating so rapidly in this country.

Anyone who has gone down to the local market has seen the price of hamburger almost double in the past 3 months. Other cuts of beef have also gone up dramatically.

I was in California over the weekend and there is one store in the Los Angeles area that sells only horsemeat. They have been forced to close early every day for the past 2 weeks because housewives have been coming down to the store and, instead of buying horsemeat for their dogs, they are buying it for their husbands and children. The horsemeat store has been doing such a land office business, that within just a few hours after they open, the store is sold out. They just cannot get enough horsemeat.

Mr. President, I just happen to feel that this amendment is most important because it will make it very clear that as a congressional policy we are not going to allow the American housewife—the American meat consumer—to be given the short end of the stick by producers who are going—quite naturally and legitimately—to sell their meat products overseas if they can reap far greater prices than are legally available in this country.

There is a clear and present danger that this will happen. The figures speak for themselves. We have had a tremendous increase in exports to Japan. The Department of Agriculture estimates that meat exports are going to at least double this year. This estimate was made before the recent devaluation of the dollar and all the other items I have mentioned.

Mr. TALMADGE. Mr. President, will the Senator from California yield?

Mr. TUNNEY. I yield.

Mr. TALMADGE. Mr. President, looking at the amendment proposed by the distinguished Senator, it seems to me that some points need clarification in order to have a better understanding as to what the amendment really means.

I start with section 5:

Notwithstanding any other provision of law to the contrary, the President shall prohibit the exportation outside the United States or any territory or possession of the United States or any meat or live animal livestock when such exportation shall be at an average monthly rate above that which prevailed in 1972.

My first question is this: I take it, from reading that language, that the Senator does not intend to prohibit the exportation to territories and possessions of the United States beyond the boundaries of this country. Is that correct?

Mr. TUNNEY. That is correct.

Mr. TALMADGE. In other words, meat could continue to be exported to Puerto Rico and to any other possession of the United States?

Mr. TUNNEY. That is correct.

Mr. TALMADGE. My second question is this. Section 5 contains this language: "Shall be at an average monthly rate above that which prevailed in 1972." How does the Senator propose that that be enforced? It is now April. Will the ceiling on April exports be the same as the exports during April of 1972, or would it be the total exports of 1972 divided by 12?

Mr. TUNNEY. I think that it would have to be the latter. That is the meaning.

Mr. TALMADGE. The average of the exports?

Mr. TUNNEY. That is correct.

Mr. TALMADGE. In other words, the monthly average would then be computed on the basis of dividing the total exports by 12 for 1972?

Mr. TUNNEY. The Senator is correct.

Mr. TALMADGE. I read section 6(a) of the Senator's amendment:

"Meat" as used in Sec. 5 means all beef, veal, pork, sheep and lamb products with Standard Industrialization Classification Codes Number 2011 or Number 2013, before or after they have entered into a processing stage, where they are intended for use as or in a product for human ingestion.

What are code numbers 2011 and 2013? Will the Senator clarify that?

Mr. TUNNEY. These are the same as are used in the President's order when he established the ceilings. I took the language of the President's order and applied it to this amendment, because this amendment is effective so long as the President's order is effective.

Mr. TALMADGE. Can the Senator tell me what that covers?

Suppose a citizen of Australia wanted to buy semen from this country to utilize to breed his livestock in Australia. Would the Senator's amendment prohibit the export of that semen?

Mr. TUNNEY. No; certainly not.

Mr. TALMADGE. Would it prevent the export of hides from this country to countries overseas?

Mr. TUNNEY. No.

Mr. TALMADGE. Would it prevent the export of offal products—I do not mean a-w-f-u-l; I mean o-f-f-a-l—for which we have a high demand overseas but no demand here?

Mr. TUNNEY. If it is for human ingestion. If it is not for human ingestion, no.

Mr. TALMADGE. I know there are livestock products for which there is

considerable demand in Europe and other countries, but very limited demand here. I certainly would not want to see any amendment that would prevent the export of a product for which there is a worldwide demand but a limited American demand.

Mr. TUNNEY. The amendment does not intend to do that. The amendment intends to protect American markets for those meat products consumed in this country which have been the subject of the President's order establishing a ceiling. It certainly is not intended to prohibit the export of such things as hides, semen or other items that the Senator from Georgia has mentioned.

Mr. TALMADGE. The committee has not had time, of course, to look carefully into the significance of the Senator's amendment. I do not know how it would affect any number of animal products for which there is a big demand overseas and a limited or no demand here.

I know there is a worldwide demand for breeding stock of some American animals, and there has been a vast increase in the quantities we send overseas.

I have a friend in my State who raises Charolais cattle, and he says there is a tremendous demand in Australia for Charolais cattle for breeding purposes. A great many of them are imported from France, but we have not taken advantage of the export market, and Charolais cattle for breeding purposes bring very high prices.

The Senator states that his amendment would not preclude the exportation of animals for breeding purposes. Is that correct? In reading the language of the amendment, it seems to me that it does, because it is a meat product that could be used for human ingestion.

Mr. TUNNEY. I can only say to the Senator that it was never the intention of the author of this amendment to prevent the export of breeding stock, but it seems to me clear that if there is a massive exportation of breeding stock where there had been little or no exportation before, it could be presumed by the President that perhaps this exportation was not for breeding but was for the purpose of the sale of meat for consumption.

The purpose of this amendment is to limit the export of meat for consumption, and it covers the same ground as the President's order establishing the ceiling.

I say to the distinguished chairman of the committee that it seems to me to be clear that where you have a ceiling based on the price of meat and where you have an expanding market in Europe and Japan, and where you have increased exports to Europe and Japan—I pointed out that U.S. pork exports to Japan tripled in the first 2 months of this year, and it appears that Japan has purchased almost as much pork just this month as was purchased all during last year—we just cannot help but create a pricing situation where some producers will expand their foreign sales. All the boycotts, whether one is for them or against them, are not going to have any impact whatever on the price of meat, because there is always going to be a market overseas.

In only person who will be hurt is the American housewife.

It seems to me that by putting in language that prevents exports in excess of 1972 levels, you are protecting foreign export markets and heading off meat shortages and black markets.

Mr. TALMADGE. Mr. President, will the Senator yield further?

Mr. TUNNEY. I yield.

Mr. TALMADGE. We have covered this in a very limited way. I pointed out to the distinguished Senator that there is a tremendous demand for some animal products overseas and a limited demand here. The Senator would not want to impose a limitation on a market that exists overseas but which is limited in this country, I take it.

Mr. TUNNEY. I would not want to do that. By limiting exports to 1972 levels, I think we have covered that contingency. If there is a market in Europe or in Japan, it would be protected by the language that says exports may continue up to the 1972 level.

Mr. TALMADGE. One further question. Some of these animal byproducts, as the Senator knows, have medicinal value and other value, not for human consumption.

I take it the Senator's amendment would in no way limit exports of those items.

Mr. TUNNEY. The Senator is correct.

Mr. TALMADGE. I do not know what we do with pigs' hair in this country, but I know there is a tremendous market for it worldwide; brains are used for medicinal purposes; and other byproducts are used for various purposes.

The Senator's response is that his amendment would not apply to the export of those items or livestock for breeding purposes, but is limited exclusively where there is an edible product and there is a demand in this country as great as the supply.

Mr. TUNNEY. The Senator is correct.

Mr. TALMADGE. I thank the Senator for yielding.

Mr. CURTIS. Mr. President, I ask unanimous consent that Henry Casso be allowed the privilege of the floor during the debate and vote on S. 1021.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TUNNEY. Mr. President, I have no desire to continue the colloquy on the amendment unless some other Senator wishes to speak to it. I would like the yeas and nays, but I do not know if we have a sufficient number of Senators in the Chamber at the present time to request them.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. TUNNEY. Maybe to be equally divided.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CURTIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, I rise in opposition to the amendment.

The PRESIDING OFFICER. The Senator is recognized.

Mr. CURTIS. Mr. President, the amendment offered by the distinguished Senator from California involves many things. It relates to price control and it relates to ceilings. It very definitely involves our balance of payments; it very definitely involves our entire trade program. I do not believe that any step like this should be taken without hearings. I just do not believe that we will serve the consumers or producers or the general economy at all by the adoption of the amendment. Let us look at the facts.

In 1972 we exported 52 million pounds of beef. Mr. President, do you know how much we produced? We produced 23 billion pounds. While this amendment would raise havoc in administering, it would be a great disappointment to purchasing countries. It involves one-fourth of 1 percent of the production of this country.

This amendment could be agreed to and consumers could not find the slightest trace of it in the market, but at the same time there are a number of countries that are dependent upon meat products. Some of them are specialty products for which there is not a great deal of demand in other countries.

Yes, it is true that Japan is buying food products from the United States, but look at the great amount of purchases we are making from Japan. Our trade balances, our outflow of dollars, all of those problems are going to be greatly accentuated if we cut off the exporting of meat to Japan.

But even disregarding that, our production is so great in this country and our exports are so small that this could not possibly help the consumers.

Mr. President, I think it is time that the Senate commenced to consider the entire inflation problem. It is so easy to talk about food because everyone consumes food and only about 5 percent of the country produces it. How does it happen that there are no amendments here dealing with other things? Food has gone up by 43 percent since 1952. That is based upon a Department of Labor study. A market basket of food for a family in 1952 that cost \$985 is now \$1,409. During that same period the cost of a man's suit has gone up 87 percent, and from 1962 alone a set of tires has gone up 28 percent.

A pair of men's shoes costs 81 percent more than in 1952. Women's shoes have increased 94 percent since 1952. Your stay in a hospital is 371 percent higher than in 1952. It costs 97 percent more for automobile repairs than it did in 1952.

Now, why all of this descending upon a minority of the people whose income is only 80 percent of that of the nonfarm population? A lady's housedress that cost \$5.94 in 1952 now costs \$13.80. A man's suit that cost \$43.60 in 1952 now costs \$79.80. A pair of workshoes that cost \$6.98 in 1952 now costs \$14.30. Your

telephone bill has increased from \$3.06 per month to \$6.26.

Here is something that may be of interest to the ladies and gentlemen of the press. The newspaper subscription has increased from \$8.50 to \$17 per year—this is the average price and it includes all newspapers, weeklies and daily alike, and does not reflect home delivery costs we pay for our metropolitan dailies.

The household hammer that you paid \$2.42 for in 1952 now costs \$5.15. To have your car brakes relined is up from \$17.10 in 1952 to \$39.70.

We could go on and on. Food products, even at the retail level, and that is what we are talking about, have increased less than all these other things. But furthermore, we are not here to debate price controls or ceilings or foreign trade or quotas. There should be a hearing and those people who are responsible for keeping dollars in this country should have a chance to be heard. This is a narrow bill dealing only with the formula for reimbursing the States for meat inspection and it should not be cluttered with amendments.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. CURTIS. I yield to the majority leader.

Mr. MANSFIELD. Mr. President, the distinguished Senator from Nebraska has said that this is no time to discuss price controls. I think it is a perfect time to discuss price controls because what has been done, in effect, is to put price controls on meat. I was interested in the figures the distinguished Senator has called to the attention of the Senate. I think I should emphasize again now what I did earlier today. It is that the first time that the beef industry approached the prices of 1951 was last year. In those intervening decades, the cost to the beef producer increased measurably.

The beef producer—the farmer in general—does not work an 8-hour day. He is a speculator. He is a gambler, because he has to take a chance on prices, take a chance on weather, and take chances on a lot of other circumstances that the ordinary person does not.

So I think we ought to try to keep our perspectives. I think the President made a most serious mistake.

Mr. CURTIS. Mr. President, I might say I agree with the Senator from Montana thoroughly. I think the ceiling placed on meat was an outrage. It will not help the consumer. It will beat down the prices to the farmer, the feeder, and the rancher. It is most unfair for them. We should treat everybody in the country alike. If prices are frozen or curtailed, it should be done across the board, including wages. I am not advocating that that be done, but certainly this was an injustice and it is not going to work. There is not a merchant in the United States who, if he wanted to resort to trickery, who could not violate the ceiling. All he has to do is label it "imported."

Mr. MANSFIELD. The foundation for a black market is being laid.

Mr. CURTIS. A black market is not necessary. How is one going to determine whether hamburger or any other meat

that is all cut up is imported or not? There is no ceiling on imported meat, but there is on meat purchased from our farmers, who pay taxes and who fight in our wars, along with the other citizens.

Mr. MANSFIELD. I want to emphasize again that the farmer does not work an 8-hour day.

Mr. CURTIS. That is correct.

Mr. MANSFIELD. And I want to emphasize that it took 21 years, from 1951 to 1972, for the beef producer to reach the price last year that he had received 21 years ago, but his costs in the meantime had increased. He is a consumer, too. He pays taxes.

I think what we ought to do, if we can work out a system, is to treat the farm economy on the basis of the equality with the labor economy, and in that way the differential which exists today I think could be done away with, and perhaps the farmer would not have such a hard row to hoe.

Mr. CURTIS. I cannot quarrel with the distinguished Senator's position. However, the amendment before us would take away from the farmer, and from our economy generally, all increases in our meat export market. That will have a very injurious effect in the long run.

When we were unable to deliver wheat to various countries because of strikes and other problems, those countries turned elsewhere. We may have lost those markets for a long time because our supplies were not dependable. If we restrict the export of meat, we will be saying to foreign countries, "You cannot depend upon the United States as a consistent supplier."

The essence of this amendment would be to take away a potential market for American agriculture at a time when not only farm prices but food prices are below the price level of nonfood items.

I hope the amendment of the distinguished Senator from California will be defeated. I reserve the remainder of my time.

Mr. TUNNEY. Mr. President—

Mr. MANSFIELD. Mr. President, will the Senator yield, without losing any of his time?

Mr. TUNNEY. I yield.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. TUNNEY. I thank the distinguished leader.

Mr. President, I would like to make just a few additional points to my distinguished colleagues.

I feel very strongly that the Senator perhaps does not understand the thrust of this amendment. It is not disrupting foreign export markets at all. What it simply does is limit exports to 1972 levels and say that there is not going to be a windfall to the producer at the expense of the American housewife.

I have not been an advocate of price controls on raw agricultural commodities. I never have been, and I sincerely doubt that I will be. But the amendment I am offering simply says that the American housewife should not have to underwrite the sale of beef to the European and Japanese housewife.

I just want to refer to what Secretary Butz said just last week. He said that "Anyone who advocates food price controls is a damn fool." A few days later the President advocated a ceiling on meat prices. I wonder what kind of conversation the President and the Secretary of Agriculture had at the time the President announced to the Secretary that he was going to advocate a price control on beef.

The Senator from Nebraska suggested that one-fourth percent of the domestic production is exported. Actually, last year it was 1 percent, and this year it looks as though it will be 3 percent or more.

I would like to quote from the Supermarket Institute "Facts about the High Cost of Beef":

Even a small increase in beef exports . . . obviously would cut into the supply available for domestic consumption. . . .

U.S. exports of beef, although relatively small, could increase due to devaluations of the dollar. The price is right, competitive with other beef-producing nations.

To meet demand and thereby reduce prices to the consumer, a 10% increase in all meat supplies has been cited as necessary . . .

This is important:

Rising standards of living in Western Europe, in Japan and in emerging nations have triggered heavy demands for beef that are outstripping world-wide production. . . . Japan boosted its orders of Australian beef by 50% . . . Due to droughts that will reduce production to the lowest level in a decade, prospects are bleak that Australia will be able to ease the supply situation here.

We have a similar situation in Argentina, which is a major beef producer. So Argentina and Australia will not be able to supply the demands for beef in Western Europe and Japan, and these nations are already moving into our markets.

As I indicated, the Japanese have been buying pork at record levels, and in the first couple of months of this year they bought more than they did the entire last year.

To quote the Washington Post of March 25, 1973:

The Japanese "have quietly placed a whopping order this month for some 20 million pounds of pork." That's nearly 17 times more pork than Japan ordered in January before devaluation.

European food traders, too, are eager for U.S. bargains. The European Common Market is now dangling an offer to purchase 450,000 pounds of processed beef from U.S. meat houses.

Well, it just seems clear to me that there is going to be a substantial increase in the export of meats, and the American housewife is going to pay for it.

Since we have ceilings on domestic prices and no limits on exports, the outlook is clear: We will have a black market or, in the alternative, the ceilings will fall apart because of the fact that there is a shortage. If the ceilings fall apart, meat prices will shoot up and lead to greater inflation, which would have a severely adverse effect upon our balance of payments. We, in the Senate, know clearly that one of the major reasons for the trouble with our balances of trade and payments is the inflation that we have been having since 1965.

The Chair advises the Senator that all time of the Senator from California has expired. The Senator from Nebraska has 17 minutes remaining.

Mr. TALMADGE. Mr. President, if the distinguished Senator from California needs additional time, I will be glad to yield him 2 minutes.

The PRESIDING OFFICER. The Senator from California is recognized for 2 minutes.

Mr. TUNNEY. Mr. President, I think the distinguished chairman of the committee for yielding me the time.

I would like to point out that hearings would delay action because, with the sharp increase in purchases in just the last few days, particularly since devaluation of the dollar, long-term commitments signed for sales abroad will be signed. Couple devaluation of the dollar with the President's ceilings and adding to that the long-term commitments abroad, it seems to me that a 2- or 3-month delay in imposing these export restrictions would render them valueless, or certainly not as valuable and productive as they would be if they were attached to the pending bill.

It seems to me that the time for action is now.

Mr. CURTIS. Mr. President, I yield 5 minutes to the distinguished chairman of the committee, the Senator from Georgia (Mr. TALMADGE).

The PRESIDING OFFICER. The Senator from Georgia is recognized for 5 minutes.

Mr. TALMADGE. Mr. President, the pending amendment was submitted without any advance notice to the Committee on Agriculture and Forestry. We have not as yet been able to ascertain the implications of the amendment. We do know that it affects our international relations and our trade relations. In some instances it may affect trade arrangements we have made with foreign powers. However, we do not know to what extent it affects those things.

It is a dangerous precedent to consider a proposal of such magnitude and importance on the Senate floor without ascertaining what the full effects may be.

The distinguished Senator from Alabama, the chairman of the Subcommittee on Agricultural Research and General Legislation, is on the floor. And he has stated that he is perfectly willing to have hearings on this matter at as early a date as possible so that we might explore the implications of the amendment and determine whether it should be submitted to the Senate for its consideration.

Everyone is concerned over all high prices at the present time, not only the high price of meat, but the high price of everything else. The distinguished Senator from Nebraska pointed out so vividly a few moments ago that the prices of many commodities in the country have accelerated much faster than the prices of meat in recent months. Yet the Senator from California makes no effort to attack that problem.

Let us see where we stand with relation to meat when it comes to trade with foreign countries. Last year we imported into this country 1,355,000,000

pounds of meat which ordinarily would be subject to quotas. During the same period, Mr. President, we exported 458,931,000 pounds of meat. In other words, we are importing about 3 times as much meat into the United States as we export. That was for the year 1972.

Let us see where we are dollarwise. Last year we exported about \$203 million worth of meat to foreign countries. And that, Mr. President, was less than 1 percent of what meat products sold for here in the United States of America.

So, the amendment of the Senator deals with a very trivial, minute part of the meat costs at home. I doubt that it would have much effect on American products.

This year we will import into the United States 1,450,000,000 pounds of meat which would be subject to quotas. And that is against exports last year of about 458 million pounds of meat. So, we will import this year more than three times as many pounds of meat as we exported last year.

Mr. TUNNEY. Mr. President, if the Senator will yield, is the Senator saying he feels that this year we will be importing three times as much as we will export?

Mr. TALMADGE. The Senator is correct. I hold in my hand a release from the U.S. Department of Agriculture under date of March 30. It says:

Secretary Earl L. Butz announced today that in calendar year 1973, the import of meats subject to the meat export law is an estimated 1,450,000,000 pounds.

Mr. TUNNEY. Mr. President what was the estimate of exports that the Department of Agriculture gave?

Mr. TALMADGE. I can give the Senator the exports only for the year 1972. That is all that we have available at this time. It was 458,931,000 pounds.

Mr. TUNNEY. Mr. President, I would remind the distinguished chairman of the Committee on Agriculture and Forestry that the whole point is that exports are going up dramatically this year. Japan has suddenly moved into the marketplace. They cannot get meat from Australia or Argentina.

Mr. TALMADGE. The meat products coming into this country are coming from Australia and New Zealand.

Mr. President, to sum up, this is a matter which should be studied carefully by the Committee on Agriculture and Forestry. If the Senator will submit his amendment to that committee, the Senator from Alabama (Mr. ALLEN) will hold substantial hearings and we will go into the matter of what products are involved and see what is involved in foreign affairs, dollar exchange, and all the manifold problems that remain to be solved, problems which we cannot solve in 1 hour on the Senate floor.

Mr. President, I yield the floor.

Mr. CURTIS. Mr. President, I yield 5 minutes to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 5 minutes.

Mr. BELLMON. Mr. President, I thank the distinguished Senator from Nebraska.

Mr. President, this amendment troubles me more than anything I have seen proposed on the Senate floor for a long time. One of the great problems in American agriculture is that land has been kept out of production because it is not needed for the production of commodities which can be marketed in this country or abroad. This is done at a cost of some \$4.5 billion to the American Treasury. Most of that land could and probably very likely would be utilized in the production of beef and other forms of meat if the demand for those products existed.

The fact is, Mr. President, that at the present time the Japanese are showing a very real interest in the purchase of meat, primarily beef, from this country. Japan is a highly prosperous nation and is a very populous nation. So, potentially Japan alone could be a market for all the meat that could be produced on the many millions of acres of farmland that are presently being kept out of production at a heavy cost to the American Treasury.

For us to take action today that would perhaps interrupt or permanently destroy the potential market for meat in Japan would be extremely short-sighted action that could conceivably cost the American taxpayer and the American consumer huge sums of money for a long time to come.

Mr. CURTIS. Mr. President, will the Senator from Oklahoma yield at that point?

Mr. BELLMON. I yield.

Mr. CURTIS. Is it not true that when we have had transportation difficulties in respect to some agricultural products, and the supply has been interrupted, various countries have not been able to buy all they wanted for the immediate future and have in some instances turned to other countries in an attempt to establish a permanent price arrangement to supply their needs?

Mr. BELLMON. The Senator is absolutely correct. There is a greater problem than I think those of us in this country understand. The Japanese, who live on densely populated islands, have to plan to import food to keep their people alive, and are sometimes more concerned with the reliability of their suppliers than they are with price. Since they are concerned, they have come here and established a market for meat. If they use us as a source for meat, and we take action to terminate their supply at any given time, they will no longer use us as a supplier.

Mr. TUNNEY. Mr. President, will the Senator yield?

Mr. BELLMON. I yield.

Mr. TUNNEY. This amendment does not prevent the exportation of meat. It merely limits the amount we may export.

Mr. BELLMON. There was virtually no meat exported in 1972. Some very small calves were exported from this country to Japan, whose industry is in its infancy. If we take action to destroy it, we are going to destroy that commerce.

Mr. TUNNEY. I misunderstood the Senator. I thought he said we were dis-

rupting established markets. This amendment does not disrupt established markets. It prevents the development of new foreign markets when we have a critical shortage of beef in this country.

Mr. BELLMON. The Senator's amendment would have the effect that if at any time, for political reasons, the Japanese came here and got meat and raised their people's appetites for it, and then we shut off our exports of meat to Japan, they would be in deep trouble. Several years ago the American beef producers tried to establish a commercial beef business in Japan. At that time, the Japanese were totally disinterested. However, the business was carried on in Korea with great success. Since that time, Japan has seen the error of its ways. They have gone to Korea and seen the program, and last year they allowed a certain number of their cattle to be sent there.

The beef cattle produced in this country went up 4 million head at the beginning of 1972, to 118 million, and at the end of the year it was 122 million head. These cattle are going to market, and probably we will have an oversupply of beef, just as we have had in past years, at the end of a price spiral.

Mr. TUNNEY. If the President will take the ceiling off prices, my amendment would terminate, because it is geared into what the President does. I remind the distinguished Senator from Oklahoma that the Export Administration Act of 1969 says very clearly:

To the extent necessary to protect the domestic economy from the excess of drain of scarce materials and to reduce the serious inflationary impact of abnormal foreign demand.

Also, article XX of the General Agreement on Tariffs and Trades, the basic document of international law governing law between nations, provides that a nation may suspend or restrict the export of a commodity when that commodity is in short domestic supply.

It is not going to violate any treaty to do what I propose. We are simply saying that we cannot have increases in exports if they are going to create scarcity in this country.

Mr. BELLMON. The level of exports would not in any way affect the domestic supply of meat. It is such a small part of a trade that is in its infancy that the effect would be infinitesimally small.

Mr. CURTIS. It is small so far as our consumers are concerned, but it is great insofar as its potential in the dollar balance and in the interest of our entire economy, as well as our agriculture, are concerned.

Mr. BELLMON. That is correct. It is tremendously important. We have 60 million acres of land we are trying to keep out of production.

I consider the amendment to be extremely shortsighted. I strongly urge that it be defeated.

Mr. TUNNEY. I should like to know how the Senator feels about the ceiling the President has imposed on meat prices.

Mr. BELLMON. Contrary to some of the statements that have been made by

other Senators, I believe there was some justification for his action. The problem is the result of an almost runaway demand for meat. We are going to have some extremely unreal price relationships in the meat-producing area. I believe the net result of what the President has done will bring some stability to the meat industry which will keep producers from losing their customers and will bring about an ultimate decline in meat prices. I am not one of those who believe that the President was greatly mistaken.

Mr. TUNNEY. My feeling is that the President's ceiling is flexible. In addition, it would create a stabilized price for the consumer.

Mr. BELLMON. The amendment would have virtually no effect on prices in this country, but it would have a potential effect on prices in this country.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CURTIS. I yield the Senator 1 more minute.

Mr. BELLMON. The net result will be that we would say to the Japanese, regardless of their needs, that we are going to cut off their supplies any time it serves our purposes.

Mr. CURTIS. Mr. President, I yield 5 minutes on the bill to the distinguished Senator from Kansas.

Mr. PEARSON. Mr. President, I thank the distinguished Senator from Nebraska for yielding me time.

Let me say to the Senator from California, the sponsor of this amendment, that I think enough time has gone by since Thursday night to make us aware that the President's action is directed very much to the psychology of inflation which exists in the country today.

If he sought to placate those in the labor movement, many of whom are coming into great contracts this year, I do not think he has done so. If he sought to stymie, as some have suggested the housewives' boycott, I think that he will not be successful. If he sought to influence the judgment of Congress in writing in the other body a new extension of the Economic Stabilization Act, I think the rhetoric there, in the House indicates that will not be the final result. I think that by and large what was attempted here was to do something about the public psychology which states buy now, because tomorrow prices are going to be very much higher.

It works both ways. I am not in the livestock business; I am an attorney. When I talk to my constituents, I listen, and for a very good reason. They know so much more about it than I do.

What we have here, Mr. President, is a ceiling, not only on the producer, but on the processor, the wholesaler, and the retailer.

We also have a proposal by the President to give him the authority to eliminate tariff arrangements, so that the quotas are gone. We have imported meat and these are under ceilings as before. We have all of these pressures on the producer now.

Let me say at this point that I under-

stand the Senator's amendment. He is seeking to make export quotas the same as last year but last year, I believe we exported only 1 percent of beef of our total production. And last year, we exported only one-half of 1 percent of our pork.

The Senator is right. The press carried stories that the Japanese have asked for more pork in the last month than they did all last year. The Canadians have knocked down their quotas and tariffs, and I understand that Switzerland, an exporting nation, for the first time is seeking to import.

But once the price comes down in the market, you cannot expect it to keep coming down by placing barrier on barrier on barrier on the producer, even if it were justified, because he feels that he is being singled out today. There are no ceilings on the cost of beef production today. So I suggest to the Senator that he would open up export markets and close them down, and then open them up again and close them down.

While I agree with a great deal of what the Senator from California had to say, I most respectfully suggest to him that his amendment would have a detrimental effect if we are going really to do what the Secretary of Agriculture and the President are apparently attempting to do; that is, to bring supply to the point where we can satisfy the demand in this country.

For all these reasons, I would hope that the amendment will be rejected.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time be equally charged against the time on the bill.

The PRESIDING OFFICER (Mr. McCLELLURE). Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CURTIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time?

Mr. TUNNEY. Mr. President, I am prepared to vote. I do not have any time.

The PRESIDING OFFICER. Does the Senator from Nebraska yield back his time?

Mr. CURTIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. Two minutes.

Mr. CURTIS. I will use it. [Laughter.]

Mr. President, it is understandable that from certain quarters it would be urged we curtail and limit any future export business with reference to meat. It is quite well established that this would not help the consumer alone. In the first place, it is less than 1 percent of our production. Nonfood costs are rising so rapidly, far greater than food costs, so that the consumer will never get any benefit from it.

I might suggest to those who are greatly concerned about the cost of food,

whose prices do they think will be reduced?

Do they think that the rent paid by the supermarket will be reduced? Do they believe that the labor costs paid by the supermarket will be reduced? Do they believe that the insurance and the utilities paid by the supermarket will come down?

Do the people who are so alarmed about food costs believe that the social security tax costs paid by the supermarket would be reduced?

They will be increased.

This is a direct attack on the people who produce food, the only place that can absorb any reduction in cost, and those people only share in income 80 percent of the amount that nonfarm people receive.

As I said a bit ago, if we want to serve the consumer, why not do something about nonfood costs?

Food has gone up 43 percent since 1952.

The PRESIDING OFFICER. All time of the Senator has now expired.

Mr. CURTIS. A suit of clothes for a man has gone up 87 percent—

The PRESIDING OFFICER. All time of the Senator from Nebraska has expired.

Mr. CURTIS. Mr. President, I yield the floor.

The PRESIDING OFFICER. All time on this amendment has now expired.

The question is on agreeing to the amendment of the Senator from California (Mr. TUNNEY).

On this question the yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr. BIDEN), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from Michigan (Mr. HART), the Senator from Maine (Mr. HATHAWAY), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUDLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Hawaii (Mr. INOUE), the Senator from Washington (Mr. JACKSON), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), and the Senator from West Virginia (Mr. RANDOLPH), are necessarily absent.

I further announce that the Senator from Colorado (Mr. HASKELL), and the Senator from Rhode Island (Mr. PELL) are absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that, if present and voting, the Senator from West Virginia (Mr. RANDOLPH), the Senator from Washington (Mr. JACKSON), and the Senator from Minnesota (Mr. HUMPHREY) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BROCK), the Senator from New Mexico (Mr. DOMENICI), the Senators from New York (Mr. JAVITS and Mr. BUCKLEY), the Senator from Maryland (Mr. MATHIAS), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Arizona (Mr. FANNIN) is absent on official committee business.

The Senator from Vermont (Mr. AIKEN), the Senator from Arizona (Mr. GOLDWATER), and the Senator from North Carolina (Mr. HELMS) are detained on official business.

If present and voting, the Senator from South Carolina (Mr. THURMOND) and the Senator from Arizona (Mr. GOLDWATER) would each vote "nay."

The result was announced—yeas 8, nays 61, as follows:

[No. 71 Leg.]

YEAS—8

Johnston	Muskie	Tunney
Kennedy	Pastore	Williams
McIntyre	Ribicoff	

NAYS—61

Abourezk	Dominick	Nelson
Allen	Eagleton	Nunn
Baker	Ervin	Packwood
Bartlett	Fong	Pearson
Beall	Fulbright	Percy

NOT VOTING—31

Aiken	Goldwater	Javits
Bayh	Gravel	Mathias
Biden	Hart	McGovern
Brook	Haskell	Mondale
Brooke	Hathaway	Pell
Buckley	Helms	Randolph
Cannon	Hollings	Stennis
Cranston	Huddleston	Thurmond
Domenici	Humphrey	Tower
Eastland	Inouye	
Fannin	Jackson	

So Mr. TUNNEY's amendment was rejected.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. RIBICOFF. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment, order to be printed in the RECORD, is as follows:

On page 2, strike out lines 17 and 18 and insert in lieu thereof the following:

SEC. 4. The Economic Stabilization Act of 1970 is amended by inserting after section 203 the following new section:

"§ 203A. Rollback of raw agricultural commodity prices

"Immediately following the enactment of this section, the President shall issue an order stabilizing the prices of raw agricultural commodities at levels not greater than the highest levels prevailing for any such commodity on January 2, 1973.

"If no transactions occurred involving the sale of any such commodity the level established under this section shall be the highest applicable level on the nearest previous date in which such transactions did occur. As used in this section, the term 'raw agricultural commodities' means commodities (including livestock to be slaughtered) which are used for human and animal consumption."

SEC. 5. The amendments made by the first three sections of this Act shall become effective beginning with the fiscal year which begins July 1, 1973.

Mr. CURTIS. Mr. President, on this amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the majority leader.

Mr. PASTORE. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I would like to make a unanimous-consent request to the effect that there be a one-half hour limitation on all amendments from now on, with the time to be equally divided between the sponsor of the amendment and the manager of the bill or whomever he may designate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIBICOFF. Mr. President, this amendment freezes the price of all raw agricultural food products including meat, fish, grains, vegetables and fruits prevailing for such commodity on Jan. 2, 1973.

The need for this legislation is obvious. The price of almost all food is skyrocketing and most Americans are finding it increasingly difficult to afford their usual purchases at the grocery store.

Most housewives have known for months that food prices have gotten out of control. Congress, however, refuses to officially recognize the problem and is either relying on consumer pressures or Presidential decrees for a solution.

We are now experiencing the most serious inflation in food prices since the Korean war. In January and February, for example, retail grocery prices jumped at an annual rate averaging over 28 percent. Prices of meat, poultry and fish soared even higher almost reaching an

annual rate of 50 percent. In fact, the increase in those first 2 months of this year almost equaled the entire increase for 1972.

The fundamental reason for these dramatic increases is that the administration's economic stabilization program has never placed controls on the price of raw agricultural food products. Wholesalers and retailers are restricted, but have been forced to pass along increase after increase in the cost of raw products from the farmers to the consumers.

The farming community which used to complain that it received only a small portion of the American food budget now accounts for almost 43 cents of every dollar spent at the market. Statistics reveal that 83 percent of the higher January food costs were attributable to farmers and ranchers.

According to the Agriculture Department, uncontrolled farm product prices, as of January 15, 1973, were 21 percent higher than a year before, even though the prices paid by farmers for commodities, equipment, wages, interest, and taxes had gone up only 9 percent. The 7.6-percent increase in retail food prices during the same period, was only possible because the other links in the food chain—processors, wholesalers, and retailers—absorbed much of the farm-fed inflation.

The evidence is clear that this inflation will not be brought under control until all the prices from farm to market are restricted. During last month's debate on the extension of the Economic Stabilization Act, I offered a similar amendment to the one before us now, but it was defeated.

Unfortunately, for America's consumer Mr. Nixon is unwilling to take the steps necessary to curb further food price rises.

On March 24 he did appear to "throw a bone" to angry shoppers by placing a ceiling on the price of beef, pork, and lamb. It did not take those shoppers long to realize that there was little meat on that bone. As a result, the planned nationwide boycott of meat will take place this week as scheduled.

During his television address the President failed to mention that the ceiling was being imposed at a time where the prices of beef, pork, and lamb were at or near record levels. The day after his speech, the Agriculture Department revealed that prices "on the hoof" climbed by more than 9 percent in the 1 month ending March 15.

Because the President failed to place a ceiling on "on the hoof" prices, there is no guarantee that price will retreat one penny. Instead the farmers and ranchers will continue to charge wholesalers and processors inflated prices.

News reports from the meat industry reveal the belief that unless the prices of live cattle, hogs, and sheep are also brought under control, we can soon expect shortage in popular cuts and slowdowns in packing plant production.

Beef, lamb, and pork are not, however, the only items in the national shopping

basket. The costs of almost every food item from poultry and fish to fruits and vegetables are also rising rapidly. Until these costs are also frozen the consumer will find no lasting relief.

The amendment I offer today would fill the gaps in the administration's program by limiting the price of all agricultural food products to the prices charged on January 2, 1973.

Sooner or later this will have to be done. The longer the Congress and the President hesitate, the more damage will be done to our consumers and the entire economy.

Treasury Secretary Schultz has already admitted that the limited action taken by the President should have been taken 2 months ago before the sharp upturn in prices took place. We can correct that and other mistakes by passing this amendment.

Congress decision on food prices may be the most important in the entire anti-inflationary fight.

The AFL-CIO has already gone on record to say that unless the accelerating inflation is curbed it cannot be expected to adhere to the 5.5 percent wage rise guidelines. The working men and women may be forced by Presidential and congressional inaction to demand significantly larger wage boosts when their contracts come up for renewal this year.

Despite Agriculture Secretary Butz's prediction that the ceiling will be lifted by late summer most observers see no end in sight to the present trend.

It is, therefore, our responsibility to act quickly and affirmatively.

The housewives of this country are letting their voices be heard loud and clear. The question is, Is the Senate of the United States listening to what is happening throughout the country? We have failed to take the lead. Will we also now fail to listen to the overwhelming number of housewives of this country?

Despite the arguments made about the small farmer, the figures are to the contrary. Nineteen percent of the U.S. farmers raise over 75 percent of all our agricultural products, and 7 percent of the Nation's ranchers raise 80 percent of the Nation's beef.

What we have in our country today is large agribusinesses which dominate the industry. These are the people who are benefiting from fantastic profits such as agriculture never has had before, and the rest of our economy is suffering.

Under the circumstances, Mr. President, I would hope that the Senate would consider the housewives of America and recognize the overwhelming revolt that is going on in this country today, and take the leadership in giving relief to those people who have to feed their families but find that their paycheck is insufficient to cover the cost of the market basket.

The PRESIDING OFFICER. Who yields time?

The Senator from Nebraska controls the time in opposition.

Mr. TALMADGE. Mr. President, will the Senator yield me 5 minutes?

Mr. CURTIS. I yield 5 minutes to the distinguished Senator from Georgia.

Mr. TALMADGE. Mr. President, this is the identical issue we dealt with when the Senate had before it the economic stabilization bill, and the Senator's amendment, when he proposed it at that time, received nine votes.

We are all concerned about the prices of commodities, not just food, but everything. Many items have increased in price far greater than food, and the Senator's amendment ignores that fact.

I want to give the Senate some statistics. One of the most overlooked aspects of this situation is that the average American has more disposable income now than at any time in the past. Americans want more and better food. They are spending more for it. They are increasing the demand. So in effect they are themselves spending and demanding the country into rising food prices.

For example, since 1965, when the inflationary spiral began, per capita disposable income has risen 62 percent. Food prices have gone up half as much, only 33 percent. There is more buying power because of increased incomes, and more people in families are holding jobs. The employment of women from 1965 to 1972 went up 24 percent, that of teenagers went up 32 percent.

With rising domestic demand and increased foreign demand—again, because of increased affluence—the wonder of it all is that American agriculture, through ingenuity and ability, has been able to produce enough to come anywhere near meeting the demand of the United States and most of the world, and has thereby been able to keep prices from going up even more.

American food is still the best buy in the world. The U.S. consumer spends only 17.6 percent for food. In Canada it is about 20 percent. In Western Europe it is up to 30 percent. In Eastern Europe it is up to 54 percent. In other nations, it is as high as 60 percent.

If we really want to do something about prices and inflation, everything ought to be included, but what the Senator's amendment does is choose one item that is absolutely incapable of control. For instance, the Senator would set the price of lettuce at whatever it was on January 2, 1973.

Will the Senator tell me what the price of lettuce was on that date?

Mr. RIBICOFF. May I say I do not have that figure at the present time.

Mr. TALMADGE. Is it the Senator's intention to predicate that figure on what the price of lettuce was in California, Oregon, or New York City on that date?

Mr. RIBICOFF. It would be predicated on whatever the January 2, 1973, price of lettuce was at the place where lettuce was sold.

Mr. TALMADGE. The Senator knows that the price of lettuce is dependent on freight rates, shipping rates, as well as other factors. He should know that the price of lettuce varies from day to day and area to area, depending on where the lettuce is transported.

Will the Senator tell me what the price of peaches was on January 2?

Mr. RIBICOFF. Well, I do not know where one would buy peaches on January 2d. If they were not being sold on that day, we would have to go back to the nearest previous day when they were sold.

Mr. TALMADGE. As the Senator knows, fresh domestic peaches are not available on that date. What the Senator's amendment would do would be to freeze the price of peaches as of January 2, 1973, to the price of peaches which may have been imported on that date, and for all I know, they might have cost a dollar if they were imported from some tropical country and were made available in the United States. The Senator's amendment would freeze the price of peaches at whatever level the consumer had to pay for the imported peach as of January 2, 1973.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. TALMADGE. I yield to my distinguished colleague, the ranking minority member of the committee.

Mr. CURTIS. Is it not true that the sale of livestock is priced according to the grade and quality that is established by inspection?

Mr. TALMADGE. The Senator is entirely correct. I want to point out that in my State of Georgia we have 25 or 30 livestock markets, and the price at Moultrie might be much different than at Thomasville. The Senator's amendment would freeze the price at two different points right in the State of Georgia, only 20 miles apart, and no one in the world could tell what was happening there. How could it be enforced without having a separate ceiling for every livestock market? There would have to be a ceiling for every livestock auction market effective January 2, 1973.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. TALMADGE. Will the Senator yield me 2 minutes?

Mr. CURTIS. I yield 3 minutes to the Senator.

Mr. TALMADGE. The Senator knows the price of livestock in various sections of the country will vary. It will vary depending on grade and quality of the livestock, destination, market, and shipping point. Milk varies in price throughout the United States of America. Eggs vary in price throughout the United States of America. Perishable commodities vary tremendously. We might have a commodity that would be at very low cost in Florida, but the same commodity may be very high in New York. That shows how ludicrous it would be to try to freeze the price of something that is completely perishable, located in a particular area, and which price is unable to be frozen.

We had a freeze on agricultural commodity prices in the past. We remember the OPA days. We remember World War II days. We remember the Korean war days. The net effect of that regulation

was to dry up food markets. Commodities were not available, and it made bootleggers out of some of our farmers.

Mr. COOK. Mr. President, will the Senator yield?

Mr. TALMADGE. I yield.

Mr. COOK. Is it not also true that if ceilings are set at different prices in different locations, the farmer will try, to the best of his ability, to ship to the higher priced market, and deprive the lower price market of that respective commodity? In other words, if the price of lettuce is high at one or three or four places, the farmer will try, to the best of his ability, to ship to those markets and deny that commodity to other markets that have a lower price?

Mr. TALMADGE. The Senator is correct. On January 2, 1973, some of the market prices probably were fantastically low. They might have been below the cost of production.

I yield to the distinguished Senator from Connecticut.

Mr. RIBICOFF. Mr. President, the Senator is saying something similar to the statement made by the Secretary of Agriculture a few weeks ago.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. RIBICOFF. That statement was to the effect that anyone who asked for price controls on food was a damn fool.

Mr. TALMADGE. Mr. President, I yielded for a question. If the Senator wants to make a speech, he will have to yield on his own time.

Mr. RIBICOFF. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Connecticut has 8 minutes remaining.

Mr. RIBICOFF. Mr. President, I will speak on my own time.

Secretary of Agriculture Butz made a statement a few weeks ago that anyone who asked for price controls on food was a damn fool. Yet, last week the President—

Mr. TALMADGE. I did not say that.

Mr. RIBICOFF. No. The Secretary of Agriculture said that.

Then, after the President came out with a partial freeze on meat, Secretary Butz hedged on his statement. That, of course, is the type of argument made today without any such language being leveled by my distinguished friend against any other Senators. However, the fact remains that farm products are at record prices with no end in sight.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article and tabulation published in the Wall Street Journal of today.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FARM PRICES CONTINUED TO SURGE DURING MONTH THAT ENDED MARCH 15—SIZABLE JUMP IN LIVESTOCK PRICES HELPED BOOST INDEX TO HIGH OF 405, UP 33 PERCENT FROM YEAR BEFORE

WASHINGTON.—Confirming facts evident for some weeks at the supermarket meat

counter, the Agriculture Department reported that farm prices continued to boom in the month ended March 15.

Propelled by another big advance in livestock prices, the index of all prices received by farmers jumped a record 7% in the latest month, reaching a high of 405, compared with the previous record of 379 in mid-February. The March 15 figure stood 33% above the year-earlier level.

The index of prices received for livestock advanced 9% for the second month in a row, and was 43% above March 1972. Beef cattle set a record at \$43.60 per hundredweight in the latest period, up \$3.10 from the previous record a month earlier. Calves moved to an average \$58.20 per hundredweight, up \$5.70 from the prior February high, and hogs jumped to \$38.30, \$4.10 above the month-earlier record.

Other contributors to the gain in the general farm price index included soybeans, eggs, cotton, broilers, onions and potatoes. Soybeans boomed to \$6.05 per bushel, up 56 cents from the mid-February record, and \$2.85 above the year-earlier figure.

Because of the continuing farm boom, department economists raised their forecast of 1973 net farm income to a record \$21 billion. Previously, they'd been expecting a slight drop from the record 1972 figure of \$19.2 billion.

The department's top economist, Don Paarlberg, said a sampling of farm prices subsequent to the March 15 cut-off for the latest formal report indicates that the overall farm price index slipped about 3.5% in the final two weeks of March. However, Mr. Paarlberg called the present price situation too fluid to predict that the index will remain down for the full month ending April 15.

Inflation pushed farming costs up another 1.5% in the latest month. But the much stronger farm price rise offset this increase, boosting the farm parity ratio to 86, compared with 82 in February and 72 in March 1972. The parity ratio, a closely watched indicator of how well off farmers are in relation to the rest of the economy, is derived from a formula that relates farm prices to farm costs and compares both with a 1910-14 base period.

The adjusted parity ratio, which takes federal subsidy payments into account, advanced to 89 in the latest month from 85 in February. It stood at 77 a year before.

Prices received by farmers for their principal crops compare as follows:

	March 1973	February 1973	March 1972
Wheat, per bushel.....	2.06	1.97	1.34
Rye, per bushel.....	.95	.979	.825
Rice, rough, per hundredweight.....	7.98	7.95	5.60

Source: New York State Department of Agriculture and Markets. Prices are for the New York City area (the 5 boroughs, Long Island, and parts of Westchester and northern New Jersey) and

are those charged by the larger supermarket chains and by a selected sample of independent stores, and verified by State market analysts.

Mr. **RIBICOFF**. Mr. President, the headline of this article in the Wall Street Journal of today is:

Farm prices continued to surge during month that ended March 15. Sizeable jump in livestock prices helped boost index to high of 405, up 33 percent from year before.

The article states in part:

Propelled by another big advance in livestock prices, the index of all prices received by farmers jumped a record 7 percent in the latest month, reaching a high of 405, compared with the previous record of 379 in mid-February. The March 15 figure stood 33 percent above the year-earlier level.

We can use all of the arguments that we have at our command. However, if we can have a freeze on all prices and expect the people to live in accordance with that, we can expect to freeze the prices on agricultural prices as well. We might as well throw the whole Economic Stabilization Act out of the window if we do not freeze the price of food.

The Senator from Georgia makes the statement that what we are trying to do is to put a freeze on food, but not on other commodities.

A few weeks ago Senator from Wisconsin offered an amendment to have a freeze on all items under the Economic Stabilization Act. The Senate voted that amendment down. I would be pleased if the Senators opposing my amendment would support a similar amendment today.

The American housewife can no longer go to the marketplace and feed her family on her husband's pay check. We had better wake up to the emotion sweeping this country. People will not stand idly by while the argument is made that the freeze is being placed on the price of lettuce or peaches when the people know that they cannot afford to buy meat and that pretty soon they will not be able to afford to buy fish or anything else.

We will find that the AFL-CIO will not stand by with a 5.5-percent increase in pay when they know that the people in this country cannot feed their families.

Mr. **CURTIS**. Mr. President, how much time do I have remaining?

The **PRESIDING OFFICER**. The Senator from Nebraska has 7 minutes remaining on the amendment.

Mr. **CURTIS**. Mr. President, I yield myself 10 minutes.

The **PRESIDING OFFICER**. The Sen-

ator from Nebraska is recognized for 10 minutes.

Mr. **CURTIS**. Mr. President, I rise in opposition to this amendment that would place a ceiling on raw agricultural products. I know that the distinguished Senator who offered the amendment means no injustice. However, if this amendment were to become law, it would be most unjust. It would start out with a system of rigid controls against that segment of our population whose income is 80 percent of what the nonfarm people receive. Furthermore, it would be without definitions and without any adjustment geographically. Prices would be frozen as of January 2.

I want to call to the attention of the Senate just what that would mean in the State which I have the honor in part to represent. We have the most serious breakdown in transportation in the history of the United States.

Mr. President, I have recently sent a questionnaire to every grain elevator in the State of Nebraska. Hundreds of replies have come back. The first question on the questionnaire is, "Are you buying grain?"

Close to 40 percent answer "No." Others answer with a qualified yes and say that they buy small amounts if they can ship it out by truck.

If there is no market, the price is zero.

That situation arose last fall. It has reached its peak early in January. As a matter of fact, it was in January when the Committee on Agriculture and Forestry voted to hold hearings on the transportation crisis.

In spite of the sales of wheat to Russia, the transportation crisis is such that the price of wheat is down by 60 cents a bushel.

Mr. President, why should we pick out a group of people just because they constitute a minority? Five percent of the voters of the country are farmers. How come nothing is said about rolling back wages? How come there is such silence in the Chamber about a rollback in the price of other items?

I mentioned awhile ago that the household hammer cost \$2.42 in 1952. It now costs \$5.15.

How come nothing is said about rolling back the cost of a man's suit of clothes, that has gone up 87 percent since 1952, while the price of food has gone up 43 percent?

How come there is such silence in the Chamber about a rollback in the price of women's shoes that has gone up 94 percent since 1952?

Mr. President, we have a totally unworkable proposal to establish prices on all raw agricultural products, including live animals that are sold according to grade and quality.

I hope that the Government in anything it undertakes will always undertake to do justice. The only way in which we can do justice in such a situation would be to grade every animal before it is offered for sale. It is a totally unworkable proposal. It would not result in a reduction of 5 cents in the price of groceries for a year, because we could enact this measure and it would not stop wage increases. It would not stop profits. It would not stop the social security increase for which Congress voted. It would not stop any of these other things that add to the cost of business.

Mr. President, the pending amendment is not only unworkable, but it is also unjust. It would result in no benefit whatever to the consumer.

I said earlier today that a retailer could sell his meat for any price he wanted under the existing order. All he has to do is to label it "imported meat," because the ceiling is placed upon a product if it was produced in this country; but if it is imported, it sells without any ceiling at all.

Again, I question the workability of the amendment. I question the justice involved. If we are concerned about inflation, let us do something about the causes of inflation. I think we are facing a grave national emergency, but I think it started in this Chamber with the abandonment of all restraint on Government spending, with the abandonment of all restraint on deficit spending, with the abandonment of any idea of restraining the expansion of Government.

We have created a situation not only in this country, but all around the world, in which people are commencing to doubt the financial stability of Uncle Sam. They have commenced to doubt the value of his money. Let us not try to fool the people by saying that an unworkable freeze will solve the problem.

The **PRESIDING OFFICER**. The Senator from Connecticut has 4 minutes remaining. Does the Senator desire to use his time?

Mr. **RIBICOFF**. I am pleased to yield back my time.

Mr. GRIFFIN. Mr. President, is an amendment to the amendment in order?

The PRESIDING OFFICER. An amendment to the amendment is in order.

Mr. GRIFFIN. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

Perfecting amendment by Mr. GRIFFIN to the amendment of Mr. RIBICOFF:

In section 203A as proposed, after the words "prices of raw agricultural commodities at levels not greater than the highest levels prevailing for any such commodity on January 2, 1973" add the words: "and stabilizing all wage rates at levels not higher than those prevailing on the same date."

Mr. GRIFFIN. Mr. President, it seems rather obvious that this is a very lopsided affair, as it has been offered. When President Nixon issued his freeze last August, it was not a freeze on prices alone; it was a freeze on prices and wages. I think that it would be rather ridiculous to debate proposed legislation which would actually roll wages back to what they were in January 1973. Yet I think that is what we ought to try to do if we are going to roll prices back across the board. So I think that appealing as is the amendment offered by the Senator from Connecticut, as nice as it sounds in the interests of consumers, it is unrealistic and should not be adopted.

Mr. President, I do not ask for a vote on my amendment. I withdraw it and hope that it will demonstrate the reasons why I shall vote against the Ribicoff amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. JAVITS. Mr. President, this amendment now offered follows a ceiling justly introduced by the President on the prices of meat which have run away, hence the freeze in this amendment would adversely affect pricing of other raw agricultural products which have not run away—or like feed grains which are too high already, as they impact meat, milk and poultry production, would tend to keep them at these high levels. For these reasons, at this time, my vote must be against this amendment.

The question is on agreeing to the amendment offered by the Senator from Connecticut (Mr. RIBICOFF). The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr. BIDEN), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Hawaii (Mr. INOUE), the Senator from Louisiana (Mr. JOHNSTON), the Senator from

South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), the Senator from Maine (Mr. MUSKIE), and the Senator from West Virginia (Mr. RANDOLPH) are necessarily absent.

I further announce that the Senator from Rhode Island (Mr. PELL) and the Senator from Colorado (Mr. HASKELL) are absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL) would vote "yea."

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from South Dakota (Mr. MCGOVERN) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BROCK), the Senator from New Mexico (Mr. DOMENICI), the Senators from New York (Mr. JAVITS and Mr. BUCKLEY), the Senator from Maryland (Mr. MATHIAS), the Senator from South Carolina (Mr. THURMOND) and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Arizona (Mr. FANNIN) is absent on official committee business.

The Senator from Arizona (Mr. GOLDWATER) is detained on official business.

If present and voting, the Senator from South Carolina (Mr. THURMOND) and the Senator from Arizona (Mr. GOLDWATER) would each vote "nay."

The result was announced—yeas 5, nays 67, as follows:

[No. 72 Leg.]

YEAS—5

Case Hart	Pastore Ribicoff	Welcker
NAYS—67		
Abourezk	Ervin	Moss
Aiken	Fong	Nelson
Allen	Fulbright	Nunn
Baker	Griffin	Packwood

Brooke	Hollings	Pell
Buckley	Huddleston	Randolph
Cannon	Humphrey	Stennis
Cranston	Inouye	Thurmond
Domenech	Javits	Tower
Eastland	Johnston	
Fannin	Mathias	

So Mr. RIBICOFF's amendment was rejected.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. TALMADGE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House has disagreed to the amendments of the Senate to the bill (H.R. 1975) to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. POAGE, Mr. STUBBLEFIELD, Mr. ALEXANDER, Mr. BERGLAND, Mr. TEAGUE of California, Mr. WAMPLER, and Mr. GOODLING were appointed managers on the part of the House at the conference.

AMENDMENT OF CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT

Mr. TALMADGE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 1975.

The PRESIDING OFFICER (Mr. McCURE) laid before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to the bill (H.R. 1975) to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. TALMADGE. I move that the Senate insist upon its amendments and agree to the request of the House for a conference on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MCGOVERN, Mr. ALLEN, Mr. HUMPHREY, Mr. DOLE, and Mr. BELLMON conferees on the part of the Senate.

AMENDMENT OF THE FEDERAL MEAT INSPECTION ACT AND THE POULTRY PRODUCTS INSPECTION ACT

The Senate continued with the consideration of the bill (S. 1021) to amend section 301 of the Federal Meat Inspection Act, as amended, and section 5 of the Poultry Products Inspection Act, as amended, so as to increase from 50 to 80 per centum the amount that may be paid as the Federal Government's share of the costs of any cooperative meat or poultry inspection program carried out by any State under such sections, and for other purposes.

Mr. RIBICOFF. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 2, strike out lines 17 and 18 and insert in lieu thereof the following:

Sec. 4. The Economic Stabilization Act of 1970 is amended by inserting after section 203 the following new section:

"§ 203A. Rollback of raw agricultural commodity prices

"Immediately following the enactment of this section, the President shall issue an order stabilizing the prices of raw agricultural commodities at levels not greater than the highest levels prevailing for any such commodity on April 2, 1973.

"If no transactions occurred involving the sale of any such commodity the level established under this section shall be the highest applicable level on the nearest previous date in which such transactions did occur. As used in this section, the term 'raw agricultural commodities' means commodities (including livestock to be slaughtered) which are used for human and animal consumption."

Sec. 5. The amendments made by the first three sections of this Act shall become effective beginning with the fiscal year which begins July 1, 1973.

Mr. RIBICOFF. Mr. President, this is basically the same amendment we just voted on, except that instead of having a rollback to January 2, 1973, it freezes agricultural products as of today, April 2, 1973.

The same arguments that were made on the previous amendment pertain. I see no necessity for spending any more of the Senate's time in arguing further on this amendment.

I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a 10-minute limitation on this amendment, the time to be allocated as heretofore.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, I send to the desk an amendment to the amendment, and I ask for the yeas and nays on the amendment to the amendment.

The PRESIDING OFFICER. An amendment to the amendment is not in order until the time on the amendment has been used or yielded back.

Mr. RIBICOFF. Mr. President, I yield back the remainder of my time, subject to that understanding.

Mr. CURTIS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time on the amendment has been yielded back.

The amendment of the Senator from Washington is in order. The clerk will state the amendment to the amendment.

The assistant legislative clerk proceeded to read the amendment to the amendment.

Mr. JACKSON. Mr. President, I ask unanimous consent that further reading of the amendment to the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment to the amendment will be printed in the RECORD.

The amendment to the amendment is as follows:

In lieu of the language proposed by the Senator from Connecticut (Mr. Ribicoff), insert the following:

The Economic Stabilization Act of 1970 is amended by inserting after section 203 the following new section:

"§ 203A. Six-month freeze

"Immediately upon the enactment of this section, the President shall issue an order stabilizing prices (including prices of raw agricultural products), rents, wages, salaries, interest rates, and dividends for a period of one hundred and eighty days from the date of enactment of this section. * * *

Mr. JACKSON. Mr. President, I can make my statement in a couple of minutes.

This amendment is similar to the one offered by Senator PROXMIRE last week, which I supported and some 37 Senators supported, which would mandate a freeze right across the board, freezing everything—prices, wages, interest, rents—for a period of 6 months.

Mr. President, what we are witnessing now in the administration's effort to deal with the No. 1 issue facing this Nation—inflation—is a piecemeal effort to try to cope with inflation.

Last week, the President announced a freeze on meat prices. This is only the tip of the iceberg as far as inflation is concerned and I suggest that the time has come to have a freeze right across the board, while we ascertain the right course to follow in bringing about some kind of price-wage stabilization in this country.

The fact is that we are now going through a drastic cycle of inflation. Tremendous inflation has occurred in the area of food prices. This will serve as the kind of catalytic agent that will set off another round of inflation—what the economists refer to as cost-push inflation. Cost-push inflation, as opposed to classical inflation, thrives when big labor and big industry can set the price-wage pattern for the country. It is obvious that unless we have some kind of freeze now, in the next go-round between labor and management we are going to witness heavy increase in wages in order to offset the increasingly high cost of living, as evidenced by what has happened in the food sector.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. MAGNUSON. I understand that the amendment of my colleague from Washington includes something that I have always maintained was almost the heart of inflation—interest rates. I understand that this amendment does include interest rates.

Mr. JACKSON. The Senator is correct. May I say on this point, Mr. President—and I am glad that my colleague mentioned this—we are witnessing a re-

run, like an old movie, a late movie on Saturday night on television. The scenario is clear. In 1969 and 1970 we watched the same syndrome—inflation, tight money, high interest rates, unemployment.

The reason why the stock market has been going down is that investors see an administration depending on the classic monetarist approach to inflation, thinking that you can control prices by the control of the money supply, that tight money and high interest rates will bring prices down. What that means is that you can only bring about a solution to the problem by creating a recession. I know nothing about economics and do not claim to; but I have been an observer of this scene for a long time now, and it is obvious that the scenario, the pattern, that is being followed here is one that is going to lead to a recession.

I believe that this amendment is the only sensible approach. As we travel around the country and talk to people, we find that the American people are fed up with the piecemeal approach. I say it is high time that we make this fundamental move.

I am confident that the House of Representatives will adopt such an amendment in connection with the economic stabilization bill that is now pending.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. CHURCH. First, I commend the Senator for coming forward with this amendment. The pattern he refers to is clearly directed toward the classical form of inflation. It is not working, and it is not going to work in this kind of cost-push inflation.

Last week, when the distinguished Senator from Wisconsin offered his 6-month freeze, I voted against it. At the time, I questioned whether a temporary freeze would do more than defer the general increase in prices for a period of time, and then result in accentuating the price rise after the freeze ended. However, since the Senate on Senator Proxmire's amendment, the President has invoked a freeze on meat products.

Mr. JACKSON. Only.

Mr. CHURCH. Only. So it is clear now that the President, will select out certain farm commodities, while blinking at the price rise everywhere else. I can see no justification for freezing meat prices in the name of controlling inflation, while doing nothing about the general increase in prices all across the board. So, in the wake of President Nixon's action, I am going to support the Jackson amendment this time. I think it is called for, in view of the discriminatory action taken by the President last week. I wanted the Senator from Wisconsin to know why I am voting for the amendment now, when I could not vote for it earlier.

I thank the Senator for yielding.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. AIKEN. I wish to ask a question about the amendment. Does it apply to imported food and food intended for export?

Mr. JACKSON. It does not.

Mr. AIKEN. Does the Senator realize that in most European countries meats are retailing for twice as much as they are in the United States, and if the price is frozen here, they can buy every pound we have and double the price over there?

Mr. JACKSON. I do not know how to control imports.

Mr. AIKEN. My question is with reference to exports.

Mr. JACKSON. I do not know how to apply it to exports. That relates to the whole question of strengthening the dollar and trying to provide a means to balance payments and trade.

Mr. PROXMIER. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. PROXMIER. The fact that it does not apply to imports means that we would buy more American products. It is a practical idea. It worked in phase I when there was a freeze.

Mr. AIKEN. If the Senator will read the foreign agricultural report this morning which compares the prices of food, all important foods in foreign countries and the prices here, the Senator will find that in most countries in Europe—Spain, Italy, England, Germany, Luxembourg, Holland, Belgium, and all those other European countries—the price is much higher for retail meats than it is in the United States. In Canada it is almost identical with the price here if one chooses Ottawa and compares it with Washington. Japan is much higher than we are.

If you freeze the price and you cannot ask for more—well, maybe the Senator's amendment does cover lumber, but I do not know what the result would be if we freeze the price of lumber at less than \$300 a thousand here when Japan is willing to pay \$800 a thousand. I do not know if it covers that or not; but if not, we will suffer.

Mr. JACKSON. Mr. President, I have great respect for the Senator from Vermont. Obviously he is referring to a minor part of the problem. The challenge this body must face is whether we are going to take some serious steps in light of the fact that we have had one series of failures after another in the area of economic stabilization. I believe this is a serious step. It is one we have never taken before and it is absolutely necessary in order to protect the integrity of the dollar and in order to prevent an economic recession.

The alternative to this course, Mr. President, would be monetary controls, and monetary controls presuppose that we are going through the wringer and will have a recession to solve the problem of inflation.

Between January 20, 1969, and August 15, 1971—I believe that is the date—the monetary school of economics prevailed.

The President recognized on August 15, 1971 that monetary controls had failed. The monetarist approach did not stop inflation and since then we have had half-hearted efforts in phase I, phase II, and phase III. What triggered the dollar devaluation was phase III, because holders of Eurodollars came to the conclusion that the United States was not going to get tough about inflation. So we

are dealing not only with the integrity of the dollar but also with the situation in which the life savings of millions of Americans are being eroded at a pace unprecedented in American economic history.

Mr. President, if we do not mandate this freeze we are inviting a recession, just as surely as God made little green apples.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. PASTORE. Mr. President, to me this is an issue of guts, guts, guts. The time has come when we should stop blaming one another for the situation; the time has come when we should stop talking about the situation; and I believe the time is here when we should do something about the situation. The only way to bring a halt to the rise in prices is a freeze across the board. That is what this amendment does and I am going to support it.

Mr. RIBICOFF. Mr. President, I accept and support the amendment of the Senator from Washington with enthusiasm. The voices of the housewives of America will not be denied. They seek leadership from the Congress of the United States.

The amendment of the Senator from Washington, of which I am a cosponsor, will finally do the job and provide wage and price controls across the board including raw agricultural products. Then, we can really put a lid on inflation and let the people of this country start living with some chance of economic security.

I hope the Senate will vote for the Jackson amendment. I have offered my two amendments to rollback or freeze food prices in an effort to make the Senate aware of the crisis facing this Nation's families each time they go grocery shopping. Their wages are restricted, interest rates are rising and more than anything else food prices are skyrocketing. The Jackson-Ribicoff-Nelson-Proxmire amendment would be fair to all levels of society. It would mean that no single person, from the farmer to the factory worker would be penalized. It is incumbent on the Senate to act affirmatively now.

Mr. JACKSON. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 1 minute remaining.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. JACKSON. If the Senator from Nebraska will yield to the Senator from Vermont, I will be glad to answer the Senator.

Mr. CURTIS. I yield 2 minutes to the Senator from Vermont.

Mr. AIKEN. The same report from the Foreign Agricultural Committee to which I referred will show clearly that the rate of inflation on food prices in the United States has been far less than in most other so-called vantage countries of the world. It has been less here.

Mr. JACKSON. Obviously, there are inequities that have to be resolved. There should be adjustments. But all I am saying is that we have fooled around here since 1969 and all we have had is more inflation and more recession, a growing level of unemployment, and I submit

very respectfully to this body that unless we take drastic action, action that will somehow shock this economy into stability, we will not get far with our economic problems.

We were assured when phase III started that this would solve the problem. Only a short time after phase III began we had a devaluation of the dollar. Now we have an admission that something should be done about prices when the President froze the price of meat. He has just touched the tip of the iceberg and we have the whole iceberg to deal with. The piecemeal approach will not work.

I submit that now is the time to move decisively in this area of economic stabilization before it is too late to act at all.

Mr. MANSFIELD. Mr. President, would the Senator yield?

Mr. JACKSON. I yield.

Mr. MANSFIELD. I am fully in accord with the amendment of the Senator from Washington. I think it is, as the distinguished Senator from Rhode Island said, and to put it another way, time to fish or cut bait, time to do something or let events take their course, and the sooner we do it, the better off we will be, and certainly the better off the country will be.

Mr. CURTIS. Mr. President, how much time is remaining on the amendment?

The PRESIDING OFFICER. The Senator from Washington has 1 minute remaining and the Senator from Nebraska has 13 minutes remaining.

Mr. CURTIS. Mr. President, it is my understanding that the Senator from Connecticut accepted the amendment as an amendment to his amendment—that the time had expired?

The PRESIDING OFFICER. The yeas and nays were ordered on the Ribicoff amendment and, therefore, it would require unanimous consent to modify the amendment.

Mr. CURTIS. Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Nebraska is recognized.

Mr. CURTIS. Mr. President, this is a simple bill dealing with one subject, the financial arrangement between the Federal Government and the States on meat inspection.

I hope, whatever merits there may be to a freeze across the board, the Senate will vote on it at a time when it is germane, when there have been some hearings on it, when we have had the benefit of the leadership from the committee that would have jurisdiction of such legislation. Mr. President, I think we at least ought to have a printed copy of it.

The economy of the United States is not simple. It is complex. Oratory can sound good, but we can throw a monkey wrench into the machinery.

I say, in the interest of knowing what we are doing, the question of whether or not there ought to be an across-the-board freeze or rollback should be considered by the Senate when a bill comes before this body after hearings have been had and when it is under the sponsorship of the committee having appropriate jurisdiction.

Therefore, I hope, regardless of what the opinion of Senators may be on the

issue, they do not put it on the pending measure.

If my understanding of the debate is correct, the Senate has already voted on this issue as an amendment to the Economic Stabilization Act, and defeated it 52 to 36, or some such number. Why add it here, when the proposal is not even printed and there have been no hearings on it?

Mr. President, I am prepared to yield back the remainder of my time, if the other side is.

The PRESIDING OFFICER. The Senator from Washington has 1 minute remaining.

Mr. JACKSON. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays on the amendment to the amendment were ordered.

Mr. JACKSON. Mr. President, I am prepared to yield back the remainder of my time.

Mr. CURTIS. Mr. President, I yield back my time.

The PRESIDING OFFICER. All time on the amendment to the amendment has been yielded back.

The question occurs on the amendment by the Senator from Washington to the amendment by the Senator from Connecticut. The yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr. BIDEN), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Missouri (Mr. HUDDLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Hawaii (Mr. INOUE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), and the Senator from West Virginia (Mr. RANDOLPH) are necessarily absent.

I further announce that the Senator from Colorado (Mr. HASKELL) and the Senator from Rhode Island (Mr. PELL) are absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL), the Senator from Minnesota (Mr. HUMPHREY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Nevada (Mr. CANNON) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senators from New York (Mr. JAVITS and Mr. BUCKLEY), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Arizona (Mr. FANNIN) is absent on official committee business.

Also, the Senator from Arizona (Mr. GOLDWATER) is necessarily absent. If present and voting, the Senator from Arizona (Mr. GOLDWATER) and the Senator from South Carolina (Mr. THURMOND) would each vote "nay."

The result was announced—yeas 37, nays 39, as follows:

[No. 73 Leg.]

So Mr. JACKSON's amendment to the Ribicoff amendment was rejected.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. GRIFFIN. Mr. President, I move to lay that motion on the table.

Mr. ALLEN. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, what is the question?

The PRESIDING OFFICER. The question is on agreeing to the motion to table the motion to reconsider. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CURTIS. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. GRIFFIN. I move to lay that motion on the table.

Mr. ALLEN. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, what is the question?

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Michigan (Mr. GRIFFIN) to lay on the table the motion to reconsider the vote by which the amendment was rejected. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr.

BIDEN), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Hawaii (Mr. INOUE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), the Senator from Maine (Mr. MUSKIE), and the Senator from West Virginia (Mr. RANDOLPH), are necessarily absent.

I further announce that the Senator from Rhode Island (Mr. PELL), and the Senator from Colorado (Mr. HASKELL) are absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from West Virginia (Mr. RANDOLPH) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from New Mexico (Mr. DOMENICI), the Senator from New York (Mr. BUCKLEY), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Arizona (Mr. FANNIN) is absent on official committee business.

The Senator from Maryland (Mr. BEALL) is detained on official business. If present and voting, the Senator from Arizona (Mr. GOLDWATER) and the Senator from South Carolina (Mr. THURMOND) would each vote "yea."

The result was announced—yeas 39, nays 35, as follows:

[No. 74 Leg.]

So Mr. RIBICOFF's amendment was rejected.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. TALMADGE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. DOLE. Mr. President, I actively supported the Wholesome Meat Act of 1968. It was a good law and still is. I have opposed and will continue to oppose amendments which would weaken it, but as with any program there is always room for improvement. Last year the law was amended to permit the custom slaughter of animals by their owners for their own use. That legislation was made necessary by incorrect assumptions in the regulations issued under the law, for it was never intended that livestock owners be deprived of this privilege.

Now, the Senator from Nebraska (Mr. CURTIS) has introduced S. 1021 which I am proud to cosponsor. It will further refine the Wholesome Meat Act by providing an increase in the Federal assistance for State meat inspection programs which operate under regulations that are certified "equal to" the Federal regulations required by the Wholesome Meat Act. This increased assistance will provide incentives for States to continue their own programs instead of bowing to the provisions of the present law which make it more attractive for them to drop their own systems and let the Federal Government pay 100 percent of the inspection costs.

INCENTIVES TO STATES

The bill would increase the maximum Federal share for the operation of a State meat and poultry inspection program from 50 to 80 percent. It is not my general policy to support such major increases in Federal program costs; however, in this case such a step makes good sense on several counts.

LONG-TERM SAVINGS

First, and most important, it would save the Federal Government the difference between paying up to 80 percent of some State program costs and the 100 percent of the costs that would be incurred if the States simply gave up and

handed the program over to Federal administration.

As Secretary of Agriculture Clifford Hardin stated in a letter to Chairman TALMADGE on a basically identical bill in the 92d Congress:

On the basis of 44 "equal to" states, total state inspection costs during fiscal year 1972 are estimated at \$53.2 million. The Federal share of this, under the 50-50 formula, will be \$26.6 million. Under the proposed 80-20 formula, Federal costs would be \$42.6 million—an increase of \$16.0 million, but considerably less than the cost of 100 percent funding that will be required if States begin to terminate their inspection programs.

REDUCED FEDERAL INVOLVEMENT

Second, I believe it is important for States to continue to be involved in this field. Meat and poultry production is largely under State jurisdiction, and the State personnel have developed a close understanding of the operations within their areas and have established good working relationships with the people involved in them. I also believe it is important to hold down programs which would increase the number of Federal employees. The Federal bureaucracy has a tendency to grow, perpetuate itself, and drift away from the basis purposes of the laws it administers; and, with the increasing emphasis being given to expanding the authority of State and local governments, it seems preferable that any question of program expansion and Federal personnel increases be settled in favor of strengthened authority for the States rather than Washington.

PREVIOUS APPROVAL

I firmly support S. 1021 as in the interests of better government. This proposal passed the Senate with unanimous approval during the 92d Congress, and I urge that it again be approved and sent to the House. Its early enactment into law will be a major help to the meat and poultry inspection systems which protect the American public in 44 States which have programs with standards equal to the Federal program under the Federal Meat Inspection Act of 1968.

The Kansas State Board of Agriculture has passed a resolution which endorses this legislation, and I ask unanimous consent that a copy of that resolution be printed in the RECORD at this point.

There being no objection, the resolution ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas, the meat and poultry inspection program in Kansas and many other states has been certified as "equal to" the federal program; and

Whereas, the livestock and meat industry in Kansas feels very strongly that all state inspected and passed meat and poultry products should not be denied movement in interstate commerce; and

Whereas, state inspected plants are small and widely scattered throughout the state, necessitating considerable travel and expenses in their inspection; and

Whereas, it is more economical for the federal government to have state participation in meat and poultry inspection programs rather than solely a federal inspection program;

Therefore, we the members of the Kansas State Board of Agriculture do hereby request that the members of Congress from the State of Kansas:

1. Support federal legislation which per-

mits the interstate movement of state inspected and passed meat and poultry carcasses, parts thereof, and meat and poultry food products; and

2. Support federal legislation which authorizes the United States Department of Agriculture to provide at least eighty per cent of the financing of state-federal meat and poultry inspection programs.

Mr. CURTIS. Mr. President, I yield back the remainder of my time.

Mr. TALMADGE. I yield back the remainder of my time.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Delaware (Mr. BIDEN), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUMBLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Hawaii (Mr. INOUE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), and the Senator from Maine (Mr. MUSKIE) are necessarily absent.

I further announce that the Senator from Rhode Island (Mr. PELL), and the Senator from Colorado (Mr. HASKELL) are absent on official business.

I also announce that the Senator from Mississippi (Mr. STENNIS) is absent because of illness.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON), the Senator from Alaska (Mr. GRAVEL), and the Senator from Minnesota (Mr. HUMPHREY) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from New Mexico (Mr. DOMENICI), the Senator from New York (Mr. BUCKLEY), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Massachusetts (Mr. BROOKE) is absent by leave of the Senate on official business.

The Senator from Arizona (Mr. FANNIN) is absent on official committee business.

If present and voting, the Senator from Arizona (Mr. GOLDWATER), and the Senator from South Carolina (Mr. THURMOND) would each vote "yea."

The result was announced—yeas 74, nays 3, as follows:

[No. 76 Leg.]

Thurmond
Tower

So the bill (S. 1021) was passed, as follows:

S. 1021

An act to amend section 301 of the Federal Meat Inspection Act, as amended, and section 5 of the Poultry Products Inspection Act, as amended, so as to increase from 50 to 80 per centum the amount that may be paid as the Federal Government's share of the costs of any cooperative meat or poultry inspection program carried out by any State under such sections, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of paragraph (3) of section 301(a) of the Federal Meat Inspection Act, as amended (21 U.S.C. 661(a)(3)), is amended by striking out "50 per centum" and inserting in lieu thereof "80 per centum".

SEC. 2. The second sentence of paragraph (3) of section 5(a) of the Poultry Products Inspection Act, as amended (21 U.S.C. 454(a)(3)), is amended by striking out "50 per centum" and inserting in lieu thereof "80 per centum".

SEC. 3. The Act entitled "An Act to provide further for cooperation with States in administration and enforcement of certain Federal laws" (Public Law 87-718) is amended by adding the following new paragraph at the end thereof:

"The percentage of the total cost of any cooperative arrangement for meat or poultry inspection purposes to be contributed to any State by the Secretary under this Act shall be equal to the highest percentage contributed to any State under section 301(a)(3) of the Federal Meat Inspection Act in the case of a cooperative arrangement for meat inspection or the highest percentage contributed to any State under section 5(a)(3) of the Poultry Products Inspection Act in the case of a cooperative arrangement for poultry inspection."

SEC. 4. The amendments made by this Act shall be effective beginning with the fiscal year which begins July 1, 1973.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. TALMADGE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EXTENSION OF TIME FOR EULOGIES TO FORMER SENATOR GILLETTE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the rec-

ord be kept open for an additional week, until April 9, 1973, for eulogies to former Senator Gillette.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPOINTMENTS TO 1973 SESSION OF THE CONFERENCE ON THE COMMITTEE ON DISARMAMENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, appoints the following Senators to the 1973 session of the Conference of the Committee on Disarmament: the Senator from Rhode Island (Mr. PASTORE), the Senator from Maine (Mr. MUSKIE), the Senator from South Dakota (Mr. ABOUREZK), the Senator from New York (Mr. JAVITS), and the Senator from Colorado (Mr. DOMINICK).

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider various nominations on the calendar.

There being no objection, the Senate proceeded to consider executive business.

The PRESIDING OFFICER. The clerk will state the first nomination.

U.S. AIR FORCE

The legislative clerk proceeded to read sundry nominations in the U.S. Air Force.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered and confirmed en bloc.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

The legislative clerk read the nomination of Charles C. Edwards, of Maryland, to be an Assistant Secretary of Health, Education, and Welfare.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF LABOR

The legislative clerk read the nomination of William H. Kolberg, of Maryland, to be an Assistant Secretary of Labor.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

NOMINATIONS PLACED ON THE SECRETARY'S DESK

The legislative clerk proceeded to read sundry nominations placed on the Secretary's desk in the Air Force and in the Navy.

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered and confirmed en bloc.

Mr. ROBERT C. BYRD, Mr. President, I ask that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, the President will be so notified.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

There being no objection, the Senate resumed the consideration of legislative business.

PROGRAM

Mr. ROBERT C. BYRD, Mr. President, the program for tomorrow is as follows:

The Senate will convene at 10:45 a.m. After the two leaders or their designees have been recognized under the standing order, the following Senators will be recognized, each for not to exceed 15 minutes and in the order stated: Mr. EAGLETON, Mr. RIBICOFF, Mr. DOMENICI, Mr. THURMOND, Mr. ROBERT C. BYRD.

At the hour of 12 o'clock noon the Senate will proceed to the consideration of the Presidential veto message. There will be 2 hours of debate, equally divided, and the vote on overriding the President's veto of the Vocational Rehabilitation Act will occur at 2 o'clock p.m.

Following that, the Senate will resume the consideration of S. 800, the crime bill. The question will be on the amendment of Mr. TALMADGE (No. 73), on which there is a time limitation. There will be a yea and nay vote on that amendment, and there may be other yea and nay votes on other amendments, and on the passage of the bill. So there will be yea and nay votes tomorrow.

ADJOURNMENT UNTIL 10:45 A.M.

Mr. ROBERT C. BYRD, Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10:45 a.m. tomorrow.

The motion was agreed to; and, at 5:34 p.m., the Senate adjourned until tomorrow, April 3, 1973, at 10:45 a.m.

NOMINATIONS

Executive nomination received by the Senate on March 30, 1973, pursuant to the order of March 29, 1973:

DEPARTMENT OF STATE

Graham A. Martin, of North Carolina, a Foreign Service officer of the class of career

minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Vietnam.

Executive nominations received by the Senate April 2, 1973:

IN THE MARINE CORPS

Lt. Gen. Ormond R. Simpson, U.S. Marine Corps, when retired, to be placed on the retired list in the grade of lieutenant general in accordance with the provisions of title 10, United States Code, section 5233.

DISTRICT OF COLUMBIA COMMISSIONER NOMINATION

Nomination received by the Senate April 2, 1973, from the Commissioner of the District of Columbia:

DISTRICT OF COLUMBIA, REDEVELOPMENT LAND AGENCY

Alfred P. Love, for reappointment as a member of the District of Columbia Redevelopment Land Agency for a term of 5 years, effective on and after March 4, 1973, pursuant to the provisions of section 4(a) of Public Law 592, 79th Congress, approved August 2, 1946, as amended.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 2, 1973:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Charles C. Edwards, of Maryland, to be an Assistant Secretary of Health, Education, and Welfare.

DEPARTMENT OF LABOR

William H. Kolberg, of Maryland, to be an Assistant Secretary of Labor.

(The above nominations were approved subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

FR (colonel, Regular Air Force, Medical), U.S. Air Force.

IN THE AIR FORCE

Air Force nominations beginning Thomas G. Abbey, to be first lieutenant and ending

Charles W. Couch, to be major, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on January 16, 1973.

Air Force nominations beginning John C. Aasen, to be colonel, and ending Frank A. Grasso, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on January 29, 1973.

Air Force nominations beginning Thomas J. Abeln, to be colonel and ending William L. Williams, to be colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on February 26, 1973.

Air Force nominations beginning Kenneth J. Bays, to be colonel and ending Bobby M. Via, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 12, 1973.

IN THE NAVY

Navy nominations beginning Benjamin L. Aaron, to be captain, and ending Darold L. Johnson, to be lieutenant (j.g.), which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 12, 1973.

HOUSE OF REPRESENTATIVES—Monday, April 2, 1973

WASHINGTON, D.C.,
March 30, 1973.

The House met at 12 o'clock noon.
The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Enter into His gates with thanksgiving and into His courts with praise; be thankful unto Him and bless His name.—Psalms 100:4.

Eternal God, our Father, whose love is from everlasting to everlasting and whose truth endureth forever, at the beginning of another week we stand still in Thy presence, lifting our spirits unto Thee in prayer; seeking strength and wisdom as we face the duties of this day.

Lay Thy hand in blessing upon the Members of this House of Representatives and all who work for them and with them. Help them to walk in the light, to live with love in their hearts, and to share their strength that they may be made better than they are, stronger than they seem, and wiser than they realize.

We pray that in our Nation and in our world the spirit of good will may increase, the conditions that make for justice may improve, and the fruits of freedom may be enjoyed everywhere; to the glory of Thy holy name and the good of all mankind. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Marks, one of his secretaries, who also informed the

House that on March 30, 1973, the President approved and signed a bill of the House of the following title:

H.R. 4278. An act to amend the National School Lunch Act to assure that Federal financial assistance to the child nutrition programs is maintained at the level budgeted for fiscal year ending June 30, 1973.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3577) entitled "An act to provide an extension of the interest equalization tax, and for other purposes."

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 13. An act to amend title 18 of the United States Code to provide civil remedies to victims of racketeering activity and theft, and for other purposes;

S. 15. An act to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide a Federal death benefit to the surviving dependents of public safety officers;

S. 33. An act to amend the Omnibus Crime Control and Safe Streets Act of 1968 to authorize group life insurance programs for public safety officers and to assist State and local governments to provide such insurance; and

S. 300. An act to provide for the compensation of persons injured by certain criminal acts, to make grants to States for the payment of such compensation, and for other purposes.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

Hon. CARL ALBERT,
The Speaker,
House of Representatives.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 2:35 p.m. on Friday, March 30, 1973, and said to contain a message from the President transmitting the Report of the Secretary of the Interior on administration of the Federal Coal Mine Health and Safety Act in 1971.

With kindest regards, I am

Sincerely,

W. PAT JENNINGS,
Clerk, House of Representatives.
By W. RAYMOND COLLEY.

ANNUAL REPORT ON FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Education and Labor:

To the Congress of the United States:

In accordance with section 511(a) of the Federal Coal Mine Health and Safety Act of 1969, Public Law 91-173, the Secretary of the Interior annually prepares a report to the Congress and to the Office of Science and Technology on progress made in administering the law.

It is my pleasure to transmit to you the report for Calendar Year 1971 and to commend it to the attention of the Congress.

RICHARD NIXON.
THE WHITE HOUSE, March 30, 1973.

**DISTRICT OF COLUMBIA BUDGET,
1974—MESSAGE FROM THE PRES-
IDENT OF THE UNITED STATES
(H. DOC. NO. 93-76)**

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Appropriations and ordered to be printed with illustrations:

To the Congress of the United States:

I am today transmitting for your consideration the budget of the District of Columbia for fiscal year 1974, together with a supplementary budget request covering necessary additional expenses for fiscal year 1973.

These budget proposals reflect views expressed by citizens of the District of Columbia at City Council budget hearings and have been examined by the Mayor and the City Council in accordance with their responsibilities under Reorganization Plan No. 3 of 1967. The Office of Management and Budget has also reviewed these proposals as specified in the District of Columbia Revenue Act of 1970.

As a result of prudent and effective fiscal management on the part of the municipal government, this 1974 budget will provide adequately for District needs during the coming year without requiring either additional Federal funds or increased city revenue. The fiscal year 1974 proposals call for the expenditure of \$841.2 million in operating funds and \$150 million in capital funds.

Timely Congressional action last year on the District's 1973 budget was of great assistance to city officials in planning and executing sound programs to serve the people of Washington. I urge the Congress again to act expeditiously on the District budget for 1974.

RICHARD NIXON.

THE WHITE HOUSE, April 2, 1973.

**THE DECADENT STATE OF PUBLIC
ENTERTAINMENT**

(Mr. SIKES asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SIKES. Mr. Speaker, the depths to which so-called entertainment, particularly motion pictures and to some extent television, in this country has reached is abhorrent to almost everyone.

Recently I scanned newspaper advertisements in a Washington newspaper entertainment page. Of the more than 100 theaters offering motion pictures for public view, only three of the pictures were rated as suitable for general audiences, and two of these were Walt Disney productions. The remainder ranked from those requiring parental guidance to the downright filth of the "X" rated movies.

On television there is a disturbing loosening of moral codes. The recent broadcast of the Academy Awards presentations showed film clips from five motion pictures nominated for awards.

Of the five, only one was available for general audiences, yet tantalizing excerpts from the other four were also pumped into millions of American homes. Swearing is becoming commonplace on television, as are talk and discussion programs advocating drugs, wife-swapping, and prostitution.

Even our colleges and universities are not safe from this kind of smut. There was a recent news account that a sex-ploitation film was mistakenly distributed to a Virginia college instead of the film originally requested. Even when the error was discovered, the film was shown anyway and a professor later was quoted as saying it was "quite a funny goof."

Is it any wonder the morals of young people today are threatened? Where can they go to see decent films? How can we be certain children are not exposed to filthy movies and obscene television?

The courts have not helped. The Supreme Court has thrown out laws passed by Congress against obscenity. Liberal elements of the press have opposed the passage of legislation to curb pornography. Somewhere, somehow the American people must rise up and, in their indignation, make it known to those who distribute this trash that it is not welcome and will not continue to be tolerated or supported.

**PERMISSION FOR COMMITTEE ON
FOREIGN AFFAIRS TO FILE A RE-
PORT ON HOUSE JOINT RESOLU-
TION 205**

Mr. FRASER. Mr. Speaker, I ask unanimous consent that the Committee on Foreign Affairs may have until midnight tonight to file a committee report on House Joint Resolution 205.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

**MAJORITY LEADER THOMAS P.
O'NEILL, JR., CRITICIZES PRESI-
DENT'S TELEVISION APPEAL FOR
SUPPORT OF VOCATIONAL REHA-
BILITATION VETO**

(Mr. O'NEILL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. O'NEILL. Mr. Speaker, the President's nakedly partisan appeal on nationwide television and radio Thursday night was a reprehensible abuse of the prestige and dignity of the high office he holds.

It was a tactic unworthy of a President of the United States.

As President, Mr. Nixon commands virtually unlimited access to the air waves and to the living rooms of millions upon millions of Americans.

Mr. Nixon took advantage of that privilege to make a partisan appeal to the people to support his veto of the Vocational Rehabilitation Act and his projected vetoes of legislation the Congress has not yet even acted upon.

Write your Congressman, he said, and tell him to vote to uphold my vetoes.

That abuse of his access to the Nation's mass communications system is part of a consistent strategy: the President has sought to use the airwaves to push his side of the national policy debate, to intimidate the media, and to drown any voice of responsible dissent from the loyal opposition which controls the Congress.

Yes, Americans, write to your Congressman. Because we are your elected Representatives, and we need your thoughts and feelings to guide our actions. But tell us what you believe—not what Mr. Nixon wants you to tell us.

For too long now, President Nixon has been trying to tell the Congress what kind of laws to pass. We in Congress do not feel that the people elected us to rubberstamp the decisions of one man. It is our responsibility under the Constitution to deliberate national policy, whether it be veterans benefits or defense or international relations, and then—working in concert with the executive—to decide upon courses of action. That is what we are elected to do, and that is what we intend to continue doing.

We do not agree that the President—even with his vast Executive Establishment—is always right.

**FARMER AND RANCHER ARE FOR-
GOTTEN SEGMENT OF ECON-
OMY**

(Mr. MARTIN of Nebraska asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MARTIN of Nebraska. Mr. Speaker, I have little patience with the current meat boycott. This evidently is being promoted by people who have no understanding of agricultural problems. Many farm prices until the last 6 months have been at the same level as in 1940. The farmer and rancher have been the forgotten segment of our economy.

The farmer does not put in an 8-hour day, 5 days a week, but from a 10- to 15-hour day, 7 days a week. The cost of machinery has multiplied several hundred percent, and the cost of fertilizer, diesel fuel, and other items purchased to operate a farm or ranch have increased substantially. Only within the last few months has the rancher and cattle feeder been able to receive a fair price in relationship to the cost of items which he has to purchase.

In 1950 choice steers at Omaha were at \$28.88 per hundredweight. If they had gone up at the same rate as postage stamps, the price would be \$77.02 per hundredweight; as much as total medical care, \$72.34; as much as the rise in wage rates, \$80.69. Compared to the rise in having a baby, choice steers would be bringing \$119.13 per hundredweight. Compared to the rise in the daily cost of hospital service, they would be commanding \$176.69. Choice steers are currently at about \$48 per hundredweight.

The cattleman and feeder are entitled to receive prices commensurate with the rest of the economy. These women should look at the increases in

the prices of automobiles, ladies dresses, shoes, drugs, beer, and cigarettes, and perhaps stage a boycott against some of these items. I have no sympathy for the current meat boycott.

OUR POW'S ARE NOT LIARS

(Mr. WYMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WYMAN. Mr. Speaker, what on earth is the matter with Jane Fonda? It was bad enough for her to go to Hanoi while the war was on and give aid and comfort to the enemy engaged in shooting and capturing Americans even while she spoke.

Now, back home, Miss Fonda claims our prisoner of war accounts of torture while in captivity are false and that our POW's are liars.

Anyone held captive for years in solitary, who had been brutally tied and whipped and beaten, who had his fingernails pulled off, his feet immobilized, his bones broken or his wounds untreated—to be called a liar when he kept his mouth shut until all our prisoners were out and then recounted the dismal truths of enemy brutalities—this will be bitterly resented by men whose indomitable spirit through such agony is best reflected by their virtually unanimous "God Bless America" on arriving back in the United States.

Either Jane Fonda is suffering from some type of mental disorder or she is willfully disloyal to her country. Her continued provocative misstatements suggest that perhaps both she and the United States would be better off if she took up permanent residence in North Vietnam.

SO-CALLED "WATERGATE AFFAIR"

(Mr. WHALEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WHALEN. Mr. Speaker, recently I have received numerous communications regarding the so-called Watergate affair. In view of this mounting constituent concern, it is appropriate that I reiterate and amplify the views I expressed at the time this incident occurred.

I was shocked and dismayed when the Watergate break-in was revealed. This act was repugnant to me. Not only did it represent a transgression of the law, it also violated the traditional American concept of fairplay. Thus, I urged the Justice Department to undertake every effort to apprehend and prosecute those who allegedly instigated and/or perpetrated this act.

Understandably, there existed the possibility of public doubts concerning the willingness of the administration to conduct a detailed scrutiny of those supporting its reelection efforts. I stressed therefore, the need for complete Presidential cooperation with those responsible for handling the Watergate matter.

Regrettably, it now is apparent that this cooperation has not been forth-

coming. There has been an excessive reliance on Executive privilege to shield White House officials from interrogation. Federal Bureau of Investigation personnel have been restricted in the conduct of their inquiry and in the presentation of testimony before public bodies.

These efforts to mask the truth endanger the very foundation of Government. This is of greater magnitude than the crime itself. When the credibility of public officials disappears, pronouncements about law and order, narcotics, and the death penalty have a hollow ring. If Government cannot be believed, whom can our citizens trust?

Thus, I again urge the President to use the power of his office to insure that all facts relating to the Watergate break-in be made available to those charged with its investigation. I recommend further that a two-member investigative panel be created, one member appointed by the President, the other jointly by the Speaker of the House of Representatives and the Senate majority leader. This bipartisan approach would assuage any doubts otherwise held by the American public concerning the validity and thoroughness of the investigators' research and ultimate findings.

PRESIDENT'S REMARKS ON TV LAST THURSDAY

(Mr. DEVINE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DEVINE. Mr. Speaker, our majority leader, the gentleman from Massachusetts (Mr. O'NEILL) has engaged in his daily diatribe against the administration and has said that the President's remarks last Thursday were the most nakedly partisan the gentleman from Massachusetts had ever heard. I have not heard anything more partisan than what the majority leader puts out every day in his 1-minute speeches.

It is nothing new for any President to take the air and appeal to the American people.

It seems to me in addition to telling the American people to write their Congressmen, he also told them to write in to say if they were in favor of the income tax increase that would be necessary if we voted for all these excesses the big spenders always talk about, so let us cover both sides of the coin.

APPOINTMENT OF CONFEREES ON H.R. 1975, AMENDING EMERGENCY LOAN PROGRAM UNDER THE CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT

Mr. POAGE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 1975) to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from

Texas? The Chair hears none, and appoints the following conferees: Messrs. POAGE, STUBBLEFIELD, ALEXANDER, BERGLAND, TEAGUE of California, WAMPLER, and GOODLING.

CONFERENCE REPORT ON H.R. 2107, RURAL ENVIRONMENTAL ASSISTANCE AND WATER BANK PROGRAMS

Mr. POAGE submitted the following conference report and statement on the bill (H.R. 2107) to require the Secretary of Agriculture to carry out a rural environmental assistance program:

CONFERENCE REPORT (H. REPT. NO. 93-101)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2107), to require the Secretary of Agriculture to carry out a rural environmental assistance program, having met, after full and free conference, have been unable to agree.

HERMAN E. TALMADGE,
JAMES B. ALLEN,
WALTER D. HUDDLESTON,
GEORGE D. AIKEN,
MILTON R. YOUNG,

Managers on the Part of the Senate.

W. R. POAGE,
THOMAS S. FOLEY,
B. F. SISK,
ED JONES,

Managers on the Part of the House.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2107), to require the Secretary of Agriculture to carry out a rural environmental assistance program, submit the following joint statement to the House and the Senate in explanation of the accompanying conference report:

The report states that the conferees have been unable to agree. This is a technical disagreement occasioned by the House rules. The Senate amendment made the same provision for continuation of the water bank program that the House bill made for continuation of the rural environmental assistance program (REAP). Under the House rules this amendment appears to be not germane to the House bill. It is the understanding of the conferees that the Chairman of the House conferees at the appropriate time after presentation of the conference report will move that the House recede from its disagreement and concur in the Senate amendment.

Both REAP and the water bank program were attempted to be terminated by the same press release of December 26, 1972. With the Senate amendment both programs would be restored; and the Secretary of Agriculture would be required to—

- (1) make payments under REAP in the full amount appropriated therefor; and
- (2) enter into agreements under the water bank program to the full extent permitted by available appropriations therefor.

A description of the water bank program follows:

ASCS BACKGROUND INFORMATION—BI NO. 15—
NOVEMBER 1972

Agricultural Stabilization and Conservation Service, U.S. Department of Agriculture
The Water Bank Program

Legislative Authority.—The Water Bank Act, Public Law 91-559 (84 Stat. 1468, 16 U.S.C. 1301), approved December 19, 1970.

Under the Water Bank Act, the Secretary

of Agriculture is authorized and directed to formulate and carry out a continuous program in important migratory waterfowl nesting and breeding areas to prevent the serious loss of wetlands, and to preserve, restore and improve inland fresh water and adjacent areas as designated in the Act.

An Advisory Board, appointed by the Secretary, advises and consults on matters relating to his function under the Act.

Purpose.—The Congress found it in the public interest to provide for conserving surface waters, to preserve and improve habitat for migratory waterfowl and other wildlife resources, to reduce runoff, soil and wind erosion and to contribute to water control.

The Water Bank Program, then, is carried out to meet Congressional intent:

To preserve and improve habitat for important migratory waterfowl nesting and breeding areas and other wildlife resources.

To preserve, and improve the wetlands of the Nation, and to conserve surface waters.

To reduce runoff, soil and water erosion, and contribute to flood control.

To contribute to improved water quality and reduce stream sedimentation.

To contribute to improved subsurface moisture.

To reduce acres of new land coming into production and to retire lands now in agricultural production.

To enhance the natural beauty of the landscape.

To promote comprehensive and total water management planning.

Program Provisions.—Under the Water Bank Program eligible persons in selected areas having eligible wetlands in important migratory waterfowl nesting and breeding areas may enter into 10-year agreements, with provision for renewal, and receive annual payments for the conservation of water and to meet other purposes of the Act.

In carrying out the program, the Secretary shall not enter into any agreements with owners or operators that will require Water Bank Program payments in any calendar year in excess of \$10,000,000.

The Water Bank Program on specified farm, ranch or other wetlands applies to wetlands identified in a conservation plan developed in cooperation with the Soil and Water Conservation District in which the lands are located, and under terms and conditions set forth by the Secretary.

Farmer-elected county committees of ASCS administer the Program. Planning and technical services are provided by the Soil Conservation Service.

The term "wetlands" is defined in the Water Bank Act as meaning the inland fresh areas (types 1 through 5) described in Circular 39, Wetlands of the United States, published by the U.S. Department of the Interior. This definition includes artificially developed inland fresh areas which meet the description of inland fresh areas, types 1 through 5, contained in Circular 39.

In brief, these types include (1) seasonally flooded basis or flats; (2) fresh meadows; (3) shallow fresh marshes; (4) deep fresh marshes, and (5) open fresh water.

Land eligible for designation and placement under an agreement is privately owned inland fresh wetland areas of types 3, 4, and 5 that in the absence of participation in the program, a change in use could reasonably be expected which would destroy its wetland character.

Other privately owned land, including types 1 and 2 wetlands, which is adjacent to designated types 3, 4, or 5 wetlands may be designated upon determination by the county committee that this land is essential for the nesting and brooding of migratory waterfowl.

In entering into an agreement, the owner or operator shall agree:

(1) not to drain, burn, fill or otherwise

destroy the wetland character of areas placed under the agreement, nor to use such areas for agricultural purposes, as determined by the Secretary.

(2) to carry out the wetland conservation and development plan for his land in accordance with the terms of the agreement.

(3) not to adopt any practice specified by the Secretary as one that would tend to defeat the purposes of the agreement.

(4) to such additional provisions as the Secretary determines are desirable and includes in the agreement to meet program purposes or to facilitate its administration.

The word "shall" as used in this legislation and similar legislation (H.R. 3298, and S. 394) requires the Executive Branch to use the full amount appropriated by the Congress for the purposes set out in the applicable law.

It does not permit or require any of the funds to be used other than as prescribed by that law. Funds could not be spent for projects that did not qualify and the Executive would be required to use the same degree of administrative care in approving projects that has always been required. No one intends the Executive Branch to approve projects that do not meet the qualifications of the law.

For example, if the Congress should appropriate \$200 million for a particular program, and there are only \$145 million in qualified applications, the Executive Branch could spend only \$145 million, not the full \$200 million appropriated.

In the use of the word "shall", the Congress is not trying to tell the Executive Branch that it no longer has the obligation to determine which projects qualify for funding.

By the use of the word "shall" in legislation to restore programs attempted to be terminated by the Executive Branch, the Congress is stating that it expects programs to be funded in accordance with the law as passed by the Congress and signed by the President.

If changes are to be made in programs, they should be made through normal Congressional procedures, and in the meantime all qualified projects, under the terms of the law should be funded by the Executive Branch within the limits of available appropriations.

The Managers are mindful that the Administration's temporary halt in the acceptance of contracts under the Water Bank Program and the Rural Environmental Assistance Program is a factor in determining whether the entire appropriation of the Congress may now be needed to match said contract requests for the current year. This is an appropriate subject for the consideration of the Congress at a subsequent date to enactment of H.R. 2107.

The Managers wish to re-emphasize that the Administration's discretion under both the Water Bank and the Rural Environmental Assistance Program is not unbridled; while the Secretary possesses the discretion necessary to permit him administrative flexibility in carrying out the two programs, he has not been given the discretion to thwart the will of Congress by terminating them. This is not a power that has been conceded at any point during debate of the bill. Termination is not a power that is possessed by the Administration.

W. R. POAGE,
THOMAS S. FOLEY,
B. F. SISK,
ED JONES,

Managers on the Part of the House.

HERMAN E. TALMADGE,
JAMES B. ALLEN,
WALTER D. HUDDLESTON,
GEORGE D. AIKEN,
MILTON R. YOUNG,

Managers on the Part of the Senate.

TECHNICAL AND CONFORMING CHANGES IN SOCIAL SECURITY ACT

Mr. ULLMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3153) to amend the Social Security Act to make certain technical and conforming changes.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 228(d)(1) of the Social Security Act is amended by inserting "or supplemental security income benefits under title XVI (as in effect after December 31, 1973)," after "IV."

SEC. 2. Title XI of the Social Security Act is amended—

(1) (A) by striking out "I," "X," "XIV," and "XVI," in section 1101(a)(1), and

(B) by adding at the end of section 1101 (a)(1) the following new sentence: "In the case of Puerto Rico, the Virgin Islands, and Guam, titles I, X, and XIV, and title XVI as in effect without regard to the amendment made by section 301 of the Social Security Amendments of 1972, shall continue to apply, and the term 'State' when used in such titles (but not in title XVI as in effect pursuant to such amendment after December 31, 1973) includes Puerto Rico, the Virgin Islands, and Guam."

(2) by striking out "I, X, XIV, XVI," in section 1109 and inserting in lieu thereof "XVI";

(3) by striking out "I, X, XIV, and" in section 1111;

(4) (A) by striking out "I, X, XIV, XVI," in the matter preceding clause (a) in section 1115, and inserting in lieu thereof "VI, XVI,"

(B) by striking out "section 2, 402, 1002, 1402, 1602, or" in clause (a) of such section and inserting in lieu thereof "title VI, part A of title IV, or section", and

(C) by striking out "3, 403, 1003, 1403, 1603," in clause (b) of such section and inserting in lieu thereof "403, 603,";

(5) (A) by striking out "I, X, XIV, XVI," in subsections (a)(1), (b), and (d) of section 1116, and inserting in lieu thereof "VI," and

(B) by striking out "4, 404, 1004, 1404, 1604," in subsection (a)(3) of such section and inserting in lieu thereof "404, 604"; and

(6) (A) by striking out "aid or assistance, other than medical assistance to the aged, under a State plan approved under title I, X, XIV, or XVI, or" in section 1119 and inserting in lieu thereof "aid or assistance under a State plan approved under", and

(B) by striking out "3(a), 403(a), 1003 (a), 1403(a), or 1603(a)" in such section and inserting in lieu thereof "403(a)".

SEC. 3. (a) Section 1843(b)(2) of the Social Security Act is amended by adding at the end thereof the following: "Effective January 1, 1974, and subject to section 1902(e), the Secretary at the request of any State shall, notwithstanding the repeal of titles I, X, and XIV by section 303(a) of the Social Security Amendments of 1972 and the amendments made to title XVI by section 301 of such amendments, continue in effect the agreement entered into under this section with such State insofar as it includes individuals who are eligible to receive benefits under part A of title IV, or supplementary security income benefits under title XVI (as in effect after December 31, 1973), or are otherwise eligible to receive medical assistance under the plan of such State approved under title XIX. The provisions of subsection (h)(2) of this section as in effect before the effective date of the repeals and amendments referred to in the preceding sentence shall continue to apply with respect to individuals included in any such agreement after such date."

(b) Section 1843(c) of such Act is amended by striking out the semicolon and all that follows and inserting in lieu thereof a period.

(c) Section 1843(d)(3) of such Act is amended to read as follows:

"(3) his coverage period attributable to the agreement with the State under this section shall end on the last day of any month in which he is determined by the State agency to have become ineligible for medical assistance."

(d) Section 1843(f) of such Act is amended—

(1) by inserting "or receiving supplemental security income benefits under title XVI (as in effect after December 31, 1973)," after "IV";

(2) by striking out "if the agreement entered into under this section so provides";

(3) by striking out "I, XVI, or"; and

(4) by striking out "individuals receiving money payments under plans of the State approved under titles I, X, XIV, and XVI, and part A of title IV, and";

Sec. 4. (a) Title XIX of the Social Security Act is amended—

(1) by striking out "permanently and totally" in clause (1) of the first sentence of section 1901;

(2) by striking out "except that the determination of eligibility for medical assistance under the plan shall be made by the State or local agency administering the State plan approved under title I or XVI (insofar as it relates to the aged)" in section 1902 (a) (5);

(3) (A) by inserting after "title IV" in section 1902(a) (10) the following: "or who are receiving a supplemental security income payment under title XVI (as in effect after December 31, 1973) and who would, except for such payment, be eligible for such medical assistance under the State plan or who would have been eligible for such medical assistance under the medical assistance standard as in effect on January 1, 1972 (except that in determining income for this purpose, expenses incurred for medical care must be deducted)";

(B) by striking out "not receiving aid or assistance under any such plan" in subparagraph (A) (ii) of such section and inserting in lieu thereof "pursuant to subparagraph (B) (ii)";

(C) by inserting after "Secretary" in subparagraph (B) of such section "or who are individuals receiving supplemental security income benefits under title XVI (as in effect after December 31, 1973) (which for the purposes of this subparagraph shall be considered to be a State plan) but who are not eligible under subparagraph (A)";

(D) by inserting after "State plan" in subparagraph (B) (i) of such section "or who are receiving a supplemental security income payment under title XVI (as in effect after December 31, 1973) and who would, except for such payment, be eligible for medical assistance under the State plan," and

(E) by striking out "not receiving aid or assistance under any such State plan" in subparagraph (B) (ii) of such section and inserting in lieu thereof "under clause (i) of this subparagraph";

(4) by inserting after "IV," in section 1902(a) (13) (B) the following: "who are described in paragraph (10) with respect to whom medical assistance must be made available";

(5) (A) by inserting after "appropriate," in section 1902(a) (14) (A) the following: "or, after December 31, 1973, are required to be covered under section 1902(a) (10) (A) or who meet the income and resources requirement as specified in such section," and

(B) by inserting after "appropriate" in subparagraph (B) of such section the following: "or who, after December 31, 1973, are included under the State plan approved un-

der title XIX pursuant to paragraph (10) (B).";

(6) (A) by striking out "who are not receiving aid or assistance under the State's plan approved under title I, X, XIV, or XVI, or part A of title IV," in the portion of section 1902(a) (17) which precedes clause (A) and inserting in lieu thereof "other than those described in paragraph (10) with respect to whom medical assistance must be made available," and

(B) by striking out "permanently and totally" in clause (D) of such section;

(7) by striking out "permanently and totally" in section 1902(a) (18);

(8) by striking out "referred to in section 3(a) (4) (A) (i) and (ii) or section 1603(a) (4) (A) (i) and (ii)" in section 1902(a) (20) (C) and inserting in lieu thereof "which the State agency administering the plan approved under title XVI determines to make available or, after December 31, 1973, which the agency administering the program of supplemental security income benefits under title XVI (as in effect after December 31, 1973) determines to make available";

(9) by striking out "money payments" in section 1903(a) (1) and inserting in lieu thereof "aid or assistance," and by inserting "or supplemental security income benefits under title XVI of such Act (as in effect after December 31, 1973)," in such section after "title IV";

(10) by striking out section 1903(c);

(11) by inserting after "title IV," in section 1903(f) (4) (A) the following: "or supplemental security income benefits under title XVI of such Act (as in effect after December 31, 1973)."; and

(12) (A) by inserting after "title IV," in the matter preceding clause (i) in section 1905(a) the following: "or supplemental security income benefits under title XVI of such Act (as in effect after December 31, 1973).";

(B) by striking out clauses (iv) and (v) of such section and inserting in lieu thereof the following:

"(iv) blind as defined in section 1614(a) (2);

"(v) 18 years of age or older and disabled as defined in section 1614(a) (3), or";

(C) by inserting after "XVI," in clause (vi) of such section "or supplemental security income benefits under title XVI (as in effect after December 31, 1973)."; and

(D) by striking out "or XVI" in the second sentence of such section and inserting in lieu thereof "or supplemental security income benefits under title XVI (as in effect after December 31, 1973).";

(b) Section 1902(f) of such Act is amended by inserting "supplemental security income payment under title XVI and" after "such individual's."

Sec. 5. The amendments made by this Act shall become effective January 1, 1974; except that such amendments (other than the amendment made by section 2(1) (B)) shall not be applicable in the case of Puerto Rico, Guam, and the Virgin Islands.

THE SPEAKER. Is a second demanded? **Mr. SCHNEEBELI.** Mr. Speaker, I demand a second.

THE SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. ULLMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of this bill is to enact into law certain technical and conforming changes in the Social Security Act which should have been included in the conference report on H.R. 1 in the 92d Congress—the Social Security Amendments of 1972, which became Public Law 92-603. The bill consists entirely of conforming changes that were

omitted from the conference report and in no way changes any decision of the conferees, any information or summary provided when that report was approved, or any cost estimates provided.

Technical and conforming amendments similar to those contained in H.R. 3153 were contained in H.R. 1 of the 92d Congress when the legislation passed the House and the Senate. At the time the conference committee acted on that legislation, there was not sufficient time to modify these technical and conforming changes to reflect the many substantive changes in H.R. 1 which were agreed to by the conference committee. Consequently, when Public Law 92-603 was enacted, it did not contain provisions making these conforming and technical changes. The erroneous cross references and technical inconsistencies in the Social Security Act which resulted from failure to include such provisions in the 1972 amendments would be corrected by the enactment of this bill.

The bill was reported unanimously by the Committee on Ways and Means and would not increase the cost of the programs administered under the Social Security Act.

Mr. Speaker, I urge the House to adopt this bill.

Mr. SCHNEEBELI. Mr. Speaker, I support H.R. 3153, a bill making technical corrections in our social security law.

The purpose of the bill is to correct erroneous cross references and technical inconsistencies in the Social Security Act. Similar technical and conforming amendments were contained in H.R. 1 in the 92d Congress when it was passed by the House and Senate. However, there was not time to modify these amendments in accordance with changes made by the conference committee, so they were not included in the legislation as enacted.

This bill would not make any substantive changes in the social security law but is concerned only with technical corrections. Accordingly, the bill would not result in any additional cost in operating the social security programs.

This legislation is needed in order to make the law technically accurate and more readable. There certainly is no controversy associated with this bill, and I recommend that it be passed by the House.

Mr. ULLMAN. Mr. Speaker, I yield to the gentleman from California (Mr. BURTON).

Mr. BURTON. Mr. Speaker, it is inevitable that in the enacting of legislation as comprehensive as H.R. 1, there be some clarifying follow-on amendments.

However, I would like to note for the RECORD that, although I am certain it was unintended, the effect of one of these amendments is to reduce payments to the "Proutys"—some hundreds of thousands of the elderly who do not receive any other public pension. Apart from that one point, there is a clarifying question which I would like to ask the gentleman from Oregon (Mr. ULLMAN).

The question is this: In section 1905 there are enumerated six classes of per-

sons for whom the States may extend Medicaid provisions. More particularly, in subsection V, section 1905(a), the old language of eligibility in terms of the requirement that one must be 18 years or older in addition to being disabled, has been picked up in this proposal.

My question is this: Am I not correct that the language in section 1905(a) (1) "under the age of 21" clearly countenances on its face that if a person is disabled, as is proposed and defined in section 1614(a) (3), if that disabled person so qualifying and otherwise eligible is under the age of 18, such a person is eligible for Medicaid benefits if the State so determines under clause 1?

Mr. ULLMAN. I would say to the gentleman from California the answer is definitely "yes."

Mr. BURTON. I raise this point only to make it clear to the very few who read the RECORD on these kinds of proposals that there is no intention on our behalf to in any way preclude consideration of those eligible as disabled and under the age of 18 from being eligible for Medicaid in the event the State decides to extend such a program to these persons.

Mr. ULLMAN. The gentleman is correct.

Mr. BURTON. I thank the gentleman.

Mr. ULLMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. ROSTENKOWSKI).

Mr. ROSTENKOWSKI. Mr. Speaker, on February 16, 1973, the Department of Health, Education, and Welfare published in the Federal Register its proposed changes in the regulations for funding and administration of the social services programs under title IVa of the Social Security Act.

These highly restrictive guidelines, if adopted, would establish a new policy which would virtually eliminate these social services and gravely cripple the governmental/private sector partnership in the delivery of such services.

Also, the new restrictive eligibility criteria, which narrowly defines who is a former or potential recipient of services, will exclude nearly all of the working poor from receiving services.

On March 14, 1973, I along with several of my Chicago colleagues, wrote to Secretary Weinberger concerning these new guidelines. In our letter we pointed out that, as written, the title IV guidelines would have the effect of forcing prior welfare recipients back on to the welfare rolls, and would prevent thousands of families from becoming self-supporting.

I am inserting a copy of this letter at this point in the RECORD:

MARCH 14, 1973.

HON. CASPAR W. WEINBERGER,
Secretary, Department of Health, Education,
and Welfare, Washington, D.C.

DEAR MR. SECRETARY: We the undersigned members of the Congressional Delegation from Chicago, respectfully suggest that the proposed 1974 Department of Health, Education, and Welfare guidelines for Title IV of the Social Security Act, as published in the Federal Register, February 16, 1973, would be seriously detrimental to a large portion of the residents of our city.

We are particularly concerned with those sections of the guidelines which prohibit private funds or in-kind contributions from being included in the 25%/75% state-federal match for funding of social service programs. We are also of the opinion that the proposed eligibility standards would prevent more than half of the children now participating in Chicago Day Care programs from qualifying for services. As they are now written, the Title IV guidelines would have the effect of forcing prior welfare recipients back on to the welfare rolls, and would prevent thousands of families from becoming self-supporting.

We believe that it was the intent of the Congress that the \$2.5 billion limitation on Title IV programs imposed by section 1130 of the Social Security Act, be fully expended by allotment to the states. The restrictions placed upon Title IV by the 1974 HEW guidelines would make such expenditure impossible.

We respectfully suggest that new guidelines be drafted to comply with the intent of section 1130, and that specific attention be given to relaxing the eligibility requirements for recipients and to eliminating the 'no private matching' clause.

In closing, Mr. Secretary, we would be most anxious to meet with you, at your convenience, prior to the March 19, 1973 deadline set for finalization of the plan, in order to discuss with you the effects of these new guidelines on our city of Chicago. If this is at all possible, please let us know.

We thank you for your consideration, and with best regards we remain

Sincerely yours,

DAN ROSTENKOWSKI,
JOHN C. KLUCZYNSKI,
RALPH H. METCALFE,
MORGAN F. MURPHY,
SIDNEY R. YATES,

Members of Congress.

These guidelines were to take effect on March 19, 1973. It is my understanding that they are presently being rewritten. We can only hope for the best.

On March 28, 1973, I introduced H.R. 6275, a bill to limit the authority of the Secretary of Health, Education, and Welfare to impose, by regulations, certain additional restrictions upon the availability and use of Federal funds authorized for social services under the public assistance programs established by the Social Security Act. Essentially the bill would restore most of the services to those who received them prior to the introduction of the February 16 HEW title IVa guidelines.

I am inserting a copy of H.R. 6275 at this point in the RECORD.

H.R. 6275

A bill to limit the authority of the Secretary of Health, Education, and Welfare to impose, by regulations, certain additional restrictions upon the availability and use of Federal funds authorized for social services under the public assistance programs established by the Social Security Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That—

SEC. 2. (a) The regulations of the Secretary of Health, Education, and Welfare (relating to the administration of titles I, X, XIV, and XVI, and part A of title IV, of the Social Security Act) as in effect on January 1, 1973, shall remain in full force and effect insofar as such regulations relate to—

(1) the use of privately contributed funds and in-kind contributions as part of State expenditures, in determining (for purposes of any such title or part A) the amount of the

Federal contribution to which any State is entitled on account of expenditures incurred by the State for social services under a State plan approved under any such title or part A: *Provided*, That the Secretary may clarify requirements that such privately contributed funds be expended in accordance with a State plan.

(2) the authority of any State, under any such plan, to define the categories or classes of individuals who are eligible to receive such social services;

(3) the authority of any State, under any such plan, to include, as social services, drug and alcohol treatment programs, education and training services, and comprehensive service programs for children, the elderly, or the disabled (including such programs for mentally retarded children and adults);

(4) reporting requirements of States, under any such plan, with respect to the provision of social services; or

(5) the standards imposed, under any such plan, with respect to the provision, as social services, of day care services.

(b) No regulation, promulgated by the Secretary of Health, Education, and Welfare after January 1, 1973, shall have any force or effect, and any such regulation shall be invalid, if, and insofar as, such regulation is inconsistent with the provisions of subsection (a).

Mr. Speaker, on October 17, 1972, during the consideration of the conference report on H.R. 1, I was careful to point out that it was the intention of the Ways and Means Committee in formulating this legislation that no change be made in the regulations concerning "voluntary funds for social services for matching under title IVa of the Social Security Act."

I see that my good friend and colleague, the Honorable DON FRASER, is present here today. He has been one of the leaders in the House in attempting to change these highly restrictive proposed guidelines. I am sure that he will add to what I have already said.

Mr. ULLMAN. Mr. Speaker, I yield 3 minutes to the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Speaker, today, I support H.R. 3153 which includes technical and conforming changes in the Social Security Act, but I serve notice now that I will never support changes in the Medicare bill to conform to the President's proposal to saddle Medicare beneficiaries with an increased contribution and burden if they require hospitalization and medical help.

Under the present law, a patient pays \$68 and Medicare pays \$32 of a \$100 doctor bill. Under the President's proposal, the patient would pay \$88.75 and Medicare would pay only \$11.25. On a \$200 bill, the patient now pays \$88 and Medicare pays \$112. Under the President's proposal, the patient would pay \$113.73 and Medicare \$86.25.

The situation with respect to hospital bills is much the same. At present, seniors pay, on the average, \$72 toward the first day's cost of hospitalization. Thereafter they pay nothing until after the 61st day of hospitalization. At that point, they pay \$13 a day for the next 30 days and \$26 a day for the next 60.

Under the Nixon proposals, our seniors will pay the full costs for the first day of hospitalization. This will be substantially higher than \$72 paid at present.

In addition, seniors will be required to pay 10 percent of all costs after that.

Following is a specific description of the change by which President Nixon seeks to increase patient payment for medical and hospital service:

Present system for hospital coverage

Days in hospital:	Patient pays
1st day	\$72
2d to 60th day	0
61st to 90th day	18
91st to 150th day	36

NIXON BUDGET PLAN FOR HOSPITAL COVERAGE

First day in hospital, patient pays total cost.

Second to 150th day in hospital, patient pays 10 percent of cost.

PRESENT SYSTEM OF PHYSICIAN COVERAGE

The patient pays the first \$60 and 20 percent of the rest of his doctor bills each year.

NIXON BUDGET PLAN FOR PHYSICIAN COVERAGE

The patient would pay the first \$85 and 25 percent of the rest of his doctor bills each year.

The administration errs in assuming that medicare patients have contributed to the cost of medical service or that medicare patients can reduce their medical or hospital needs by their own choice.

The food and rent inflation of the last 17 months has devastated the budgets of all Americans—particularly the elderly and the poor. It has "whipsawed" millions of American people from self-sufficiency to demeaning dependency.

Last year's social security increase has already been washed out by the intervening inflation in the cost of food, shelter, and clothing. The President's proposed reduction of medicare benefits would provide only short-term financial gains to the administration and long-term losses. It would plunge millions of our elderly into the ranks of the medically indigent and from self-sustaining citizens to citizens substantially dependent on supplemental support from the community or from the family.

Mr. WYLIE. Mr. Speaker, will the gentleman yield for a question?

Mr. VANIK. I am happy to yield to my colleague from Ohio.

Mr. WYLIE. The gentleman from Ohio mentioned the President's program on medicare several times. From whence does this program come? Is there a bill in on it?

Mr. VANIK. His program is clearly set forth in his message to the Congress. I assume that legislation is coming out to support the message he gave us earlier this year.

Mr. WYLIE. I certainly did not draw the conclusions of the gentleman from Ohio on the message to the Congress. The gentleman can draw his own conclusions.

Mr. VANIK. That is in the President's message, and it was very, very well and thoroughly reported. While he has not sent up legislation, I think it is in this way plain.

We have to assume in this House that there will be legislation to support every thing that the President seems for the instant to consider necessary.

Mr. WYLIE. Mr. Speaker, I thank the gentleman.

Mr. FRASER. Mr. Speaker, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Speaker, I would like to take this opportunity to ask about another aspect of the Social Security Act.

Many of us are deeply concerned about the proposed social service regulations issued by the Department of Health, Education, and Welfare on February 15.

We have learned that a wide range of community programs in our districts—from day care for working mothers to homemakers' aid for the elderly—are likely to be terminated if the regulations are implemented.

I would like to ask the gentleman handling the bill if he agrees that the regulations represent an unnecessary restriction on the use of social service funds and move beyond the limitations imposed by Congress last year in the State and Local Fiscal Assistance Act?

Mr. ULLMAN. Mr. Speaker, I agree completely with the gentleman that the proposed regulations issued by the Department of Health, Education, and Welfare move beyond the limitations imposed by Congress last year in the State and Local Fiscal Assistance Act. In that act, we set a dollar limitation on the amount of Federal funds which a State could receive for social services. We also set a limitation with some exceptions on the percentage of funds that could be expended for persons who are not welfare applicants or recipients. As the chairman stated on this floor at the time the conference report on the State and Local Fiscal Assistance Act was being debated, nothing in that act required the issuance of more stringent regulations either as to services which could be provided or persons who could receive such services than were in existence at that time. In my opinion, many of the proposed regulations would have an undesirable effect.

Mr. FRASER. Mr. Speaker, I thank the gentleman very much for his response.

Mr. SCHNEEBELI. Mr. Speaker, I yield 3 minutes to the gentleman from Pennsylvania (Mr. HEINZ).

Mr. HEINZ. Mr. Speaker, I should like to ask the distinguished gentleman from Oregon (Mr. ULLMAN), if he would respond to one or two questions I might ask.

Mr. ULLMAN. I would be very happy to respond.

Mr. HEINZ. Mr. Speaker, I understand that possibly this bill could be the vehicle which would allow the other body to return to us a welfare reform bill. If that were to be the case, and the other body were to return this bill, amended or changed in the other body, to this House, would the gentleman please give use some indication as to how this body might deliberate upon such provisions as welfare reform in the other body which came back to us in the form of a conference report?

Mr. ULLMAN. Mr. Speaker, will the gentleman yield?

Mr. HEINZ. I would be happy to yield to the gentleman.

Mr. ULLMAN. Mr. Speaker, this could be true of any social security measure that this House passed. It is always possible that the other body may add amendments.

Let me say that we have discussed this matter generally among the committee members. The chairman has discussed it with us, and if, in fact, there were a major welfare measure attached to this bill, then the chairman and the committee have agreed that the committee itself would take it under consideration before anything further was done, or before a conference committee decision was made.

Now, of course, we have no indication at this time that this might happen, or to what extent, and we certainly would not make any prior judgment at this time as to what would encompass major social security legislation and what would not. I think, if that happened, it would be rather obvious.

Mr. HEINZ. If the gentleman would respond further? If the bill were to come back and the welfare reform bill was considered by the full Committee on Ways and Means and then came to the floor, would the bill be subject to amendment?

Mr. ULLMAN. Well, obviously we cannot answer that question at this point, because there are different alternatives available under the rules. I am sure no one could answer that question at this point.

Mr. HEINZ. In a general way, would it be possible? What opportunities would a Member of this body have to influence the legislations to offer amendments or propose changes to the bill that may be important to their constituents or to the Nation?

Mr. ULLMAN. I would say we have general parliamentary procedures to cover almost any situation, and I would think that the gentleman and the House would utilize those parliamentary procedures that would be available.

Mr. HEINZ. Well, are they going to be available?

Mr. ULLMAN. I would certainly hope that if we had a major welfare measure attached to this or any other bill, we could devise procedures to bring it to the floor whereby it could be amended.

Mr. HEINZ. Thank you very much.

Mr. VANIK. Will the gentleman yield further?

Mr. HEINZ. I yield to the gentleman.

Mr. VANIK. I think the gentleman from Pennsylvania provided a very useful service to this House in making that inquiry on how the bill might come back.

Will the gentleman from Oregon tell me—and I would like to be assured—if the other body were to make it into a trade bill, would the same principle apply and would we have to refer it to the Committee on Ways and Means for complete and thorough action by that committee before it was reported out of the House?

Mr. ULLMAN. I will say to the gentleman, obviously a trade amendment would not be a germane amendment to a social security bill. We are referring

here to germane amendments and procedures that would follow from them, but certainly not that kind of thing, which would clearly be nongermane. I would hope we would not adopt such a nongermane amendment. As the gentleman knows, the rules of the House are clear as to nongermane amendments.

Mr. VANIK. Will the gentleman assure me such action would not be taken among the conferees?

Mr. ULLMAN. I cannot. As far as I am concerned personally, I can assure you, but I cannot speak for the conferees.

Mr. VANIK. I thank you.

Mr. SCHNEEBELI. I would like to reply, also, to the gentleman from Pennsylvania.

At the time this bill was taken up this question was raised in the committee by Members on both sides of the aisle, Republicans and Democrats. The chairman assured them that we would have a committee meeting on it and also have hearings on the subject if necessary. That was back in January when we took the bill up in the committee.

Furthermore, last week I again asked the chairman if that was his intention, and was assured that it was.

Mr. HEINZ. If the gentleman will yield?

Mr. SCHNEEBELI. I yield to the gentleman.

Mr. HEINZ. I simply would like to thank the gentleman from Pennsylvania for having made this inquiry to make it known that if the House has the opportunity to consider fully any legislation that goes beyond the apparent scope of this measure we will do so.

Mr. SCHNEEBELI. I can assure the gentleman that is true and we will have hearings by the committee if necessary.

Mr. Speaker, I have no further requests for time.

Mr. ULLMAN. Mr. Speaker, I have no further requests for time.

The SPEAKER. The question is on the motion offered by the gentleman from Oregon (Mr. ULLMAN) that the House suspend the rules and pass the bill H.R. 3153.

The question was taken.

Mr. WYLIE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 340, nays 1, not voting 92, as follows:

 Mr. Melcher with Mr. Metcalfe.
 Mr. Milford with Mr. Mitchell of Maryland.
 Mr. Reid with Mr. Mills of Arkansas.
 Mr. Roy with Mr. Riegle.
 Mr. Studds with Mr. Ryan.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

ENDORISING OBJECTIVES FOR A JUST AND EFFECTIVE OCEAN TREATY

Mr. FRASER. Mr. Speaker, I move to suspend the rules and agree to the resolution (H. Res. 330) to endorse objectives for a just and effective ocean treaty.

The Clerk read as follows:

Whereas the oceans cover 70 per centum of the Earth's surface, and their proper use and development are essential to the United States and to the other countries of the world; and

Whereas Presidents Nixon and Johnson have recognized the inadequacy of existing ocean law to prevent conflict, and have urged its modernization to assure orderly and peaceful development for the benefit of all mankind; and

Whereas a Law of the Sea Conference is scheduled to convene in November-December 1973, preceded by two preparatory meetings of the United Nations Committee on the Peaceful Uses of the Seabed and the Ocean Floor Beyond the Limits of National Jurisdiction (hereinafter referred to as the "Seabed Committee"); and

Whereas it is in the national interest of the United States that this Conference should speedily reach agreement on a just and effective ocean treaty: Now, therefore, be it

Resolved, That the House of Representatives endorses the following objectives, envisioned in the President's ocean policy statement of May 23, 1970, and now being pursued by the United States delegation to the Seabed Committee preparing for the Law of the Sea Conference—

(1) protection of (a) freedom of the seas, beyond a twelve-mile territorial sea, for navigation, commerce, transportation, communication, and scientific research, and (b) free transit through and over international straits;

(2) recognition of the following international community interests:

(a) protection from ocean pollution, (b) assurance of the integrity of investments,

(c) substantial sharing of revenues derived from exploitation of the seabed, particularly for economic assistance to developing countries,

(d) compulsory settlement of disputes, and

(e) protection of other reasonable uses of the oceans beyond the territorial sea, including any economic intermediate zone;

(3) an effective International Seabed Authority to regulate orderly and just development of the mineral resources of the deep seabed as the common heritage of mankind, protecting the interests both of developing and of developed countries; and

(4) conservation and protection of living resources, with fisheries regulated for maximum sustainable yield, with coastal state management of coastal species and host state management of anadromous species, and international management of such migratory species as tuna.

SEC. 2 The House of Representatives commends the United States delegation to the Seabed Committee preparing for the Law of

the Sea Conference for its excellent work, and encourages the delegation to continue to work diligently for early agreement on an ocean treaty embodying the goals stated herein.

The SPEAKER. Is a second demanded? Mr. MAILLIARD. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. FRASER. Mr. Speaker, I yield 20 minutes to the gentleman from California (Mr. MAILLIARD), pending which I yield myself such time as I may consume.

Mr. Speaker, Members of the House, the resolution which is presently before the body is simply a House resolution which will require no action by the other body.

What this resolution does is endorse the principles laid down by President Nixon with respect to the Law of the Sea negotiations which will reach their climax in a conference which will open in New York this fall and continue in Santiago, Chile, next year. These negotiations include matters of vital interest to the United States, such as the question of how far our territorial seas shall extend. At the present time, we claim 3 miles, but many nations claim 12 and some up to 200.

There will be determined the question of how much further than the territorial sea the coastal States shall have right to exploit the economic resources of the seabed and the fish stocks in the water column above.

There will also be determined what shall happen to the deep seabed beyond the limits of national jurisdiction, who shall control it, and who shall have the right of exploitation and further, how benefits of that exploitation shall be divided, that is, who shall gain the fruits of the exploitation.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I yield to the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. The gentleman is not saying that by virtue of this resolution there will be a determination of who controls what underlies the waters beyond what now is the 3-mile limit? He is not saying that, is he?

Mr. FRASER. I am glad the gentleman from Iowa raised the question. The answer is complex for it deals with a number of things among which is control of seabeds minerals and oil beyond the 200-meter isobath, that is generally beyond the continental shelf, rather than what is beyond 3 miles. This resolution simply endorses the position of the President which is being pursued by our negotiating team. This resolution has no force of law. It is simply an expression of the House in support of the negotiating position of the U.S. delegation.

Mr. GROSS. So that, if the territorial limits should be, as a result of the work of this committee and in combination with other nations, a 12-mile territorial limit, this would not mean that without further action on the part of the Congress that the coastal States would be entitled to the offshore oil rights within that 12-mile limit? Is that not true?

Mr. FRASER. You are correct. It would not mean that the coastal States would be entitled to the offshore oil rights within the 12-mile limit. You are speaking of the several coastal States of the United States, I presume, rather than the coastal nations of the world which are referred to as states in the international context. Let me take it step by step. Assuming that there is a convention agreed upon in the final meeting in Santiago de Chile next year, that convention would have to be ratified by countries in accordance with their constitutional processes. The United States could elect not to ratify. If the U.S. position is sustained, that is to say, if a 12-mile territorial sea is established, among other things, it is very clear that all of the resources within that 12 miles would belong exclusively to the United States. The 12-mile zone would be the sovereign domain of this country. The United States, in turn, could apportion it among its own States, under either present or new law. It would belong to the people of the United States.

Mr. GROSS. It would belong to the people of the United States, but would Congress have the authority to make a determination as to the ownership of those undersea deposits or resources or whatever they might be?

Mr. FRASER. My understanding is that the status of law today, based on Federal legislation, is that our States have the right to a claim that goes out to 3 miles, with the exception of two States—Texas and Florida, which by reason of a historic claim have a right to go out to 9 miles. Agreement to a 12-mile territorial sea would not entail any automatic change in this situation. Any further yielding of rights to the States would require congressional action.

Mr. GROSS. I thank the gentleman.

Mr. WYMAN. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I am glad to yield to the gentleman from New Hampshire.

Mr. WYMAN. Is it the gentleman's position that the resolution now before us, to which he is addressing his remarks, endorses or takes any position with regard to whether we should have a 3-mile limit, a 12-mile limit, a 200-meter depth limit, or any other limit off our coastal waters?

Mr. FRASER. The resolution supports the U.S. position in the law of the sea forum in several respects. In general, the U.S. negotiating position, I can advise the gentleman, is as follows: We are proposing that there be a 12-mile territorial sea. That would commence just at the water's edge on this chart on the easel to my right. Beyond the 12-mile territorial sea we would in our proposal retain to the coastal nation exclusive ownership and the right to exploit the mineral resources, the sea bed resources, out to the 200-meter isobath or depth line, which is shown on this same chart. That, standing alone, is no change from the 1958 Convention which generally defined the rights of coastal States to exploit out to the 200-meter isobath, but it went further and provided rights to depths beyond to the extent technology

permits exploitation. In any event, we would propose to maintain exclusive control from the 200-meter isobath in toward the shoreline.

Beyond the 200-meter isobath out to the beginning of the deep seabed, which is at the end of the continental rise, we are proposing a mixture of international and coastal State—Nation—rights. The coastal State would be the manager of the resources, but the management of those resources by the coastal State would be subject to five principles, as follows:

First is the protection of investment;
Second is the protection of the marine environment;

Third is revenue sharing;

Fourth is the compulsory settlement of disputes; and

Fifth is the protection for other uses, such as scientific research.

Then, with respect to the deep seabed, which is out beyond the continental rise, there would be an international regime which would have the right to license enterprises who want to go out and exploit the seabed.

Mr. WYMAN. If the gentleman will yield further, we have not, however, asserted, at least this body, our jurisdiction to these coastal waters out to 200 meters in depth.

Mr. FRASER. Under the Truman declaration of 1945 and the 1958 convention, we can exploit resources out to the 200-meter isobath and beyond as technology allows.

Mr. WYMAN. Approximately how far away from the shore, along the eastern coast of the United States, does the 200-meter depth figure extend?

Mr. FRASER. I am glad the gentleman asked that question. This map which I have here shows in yellow the extent of the continental shelf out to the 200-meter isobath. And you can, by closer inspection, get some notion as to how far out the 200-meter isobath is. But in any case it would be some 12 miles or more off New England I believe.

Mr. WYMAN. In any case, it is that far?

Mr. FRASER. The gentleman is correct.

Mr. WYMAN. May I ask the gentleman, has he made any effort to stop the Russian trawlers from fishing within the 200-meter range?

Mr. FRASER. The 200-meter isobath limit does not apply to fishing, but only to exploitation of the seabed. Under present international law, we have a 3-mile territorial sea plus a 9-mile contiguous fishery zone, and for fishing purposes, beyond 12 miles is international waters today.

Mr. WYMAN. I understand. But the gentleman will agree, will he not, that if Congress wanted to, it could unilaterally assert jurisdiction of the United States to exclusively control and use this 200 meters in depth, including the seabed as well as the water?

Mr. FRASER. Well, the United States could unilaterally assert jurisdiction to 200 miles or to a 200-meter depth or to 1,000 or to 10,000 miles, but do we want to? We could make the assertion, but if we did it unilaterally, this would provide

a source of conflict with other nations which would take the position that this is not an accepted international standard. We have criticized other nations for making unilateral claims to vast areas of the international ocean, and we have steadfastly refused to recognize such unilateral claims, believing such matters are properly a subject for international agreement in precisely the kind of forum which we have in the forthcoming Law of the Sea Conference.

Mr. WYMAN. Mr. Speaker, will the gentleman yield further?

Mr. FRASER. I yield further to the gentleman from New Hampshire (Mr. WYMAN).

Mr. WYMAN. I understand that is why we are going to the system on the international conference, because they are going more than 200 miles out; is that not so?

Mr. FRASER. Some States have asserted claims of 200 miles of territorial sea of exclusive sovereign jurisdiction; others have claimed 200 miles for the right of resource exploitation, without claiming control over navigation, a zone they call a patrimonial sea. And there are a variety of other claims that exist today.

Mr. WYMAN. Mr. Speaker, assuming that they authorize or approve the 200-meter depth, we would not have to go very far, would we? Because we would be pretty close to the shoreline in Ecuador at 200 meters in depth.

Mr. FRASER. Ecuador has made a claim of 200 miles, not to a depth of 200 meters. Ecuador is a good example of the problem of the unilateral claim.

Mr. WYMAN. Mr. Speaker, I would like to ask the gentleman further, in the question of the seabed, on the offshore claim as it relates to the energy crisis, does the gentleman have any recommendation, or is there anything in the gentleman's resolution before us today as an implication of a provision by this Congress on what would be done with regard to oil from the continental rise on in? Does that belong to us clearly?

Mr. FRASER. The proposal of the United States is that very generally that the area from shore to the 200-meter isobath or depth would belong exclusively to the coastal nation for mining purposes or for the extraction of oil and gas, but not for fishing however; and from the 200-meter isobath to the edge of the continental margin, where the deep seabed begins, the area would be managed by the coastal nation under international standards, with some revenue sharing; and in the deep seabed, the exploitation would be under international management and control, again with revenue sharing with the developing and the land-locked and shelf-locked nations. So, to answer your question the U.S. position would give the United States exclusive right and control from the 200-meter depth line back into the shore.

Mr. WYMAN. And this resolution then would put this House on record as endorsing that provision today, would it not?

Mr. FRASER. Yes, that is correct. We would be endorsing the President's concept of a national area, mixed inter-

mediate zone, and an entirely international deep seabed area, subject to international standards and mandatory disputes settlement.

Mr. WYMAN. I thank the gentleman.
Mr. MACDONALD. Mr. Speaker, would the gentleman yield?

Mr. FRASER. I yield to the gentleman from Massachusetts (Mr. MACDONALD).

Mr. MACDONALD. Mr. Speaker, to go along a little further, I did not quite understand the exchange between the gentleman from Minnesota (Mr. FRASER) and the gentleman from New Hampshire (Mr. WYMAN) as to what effect this would have on offshore drilling for gas and oil.

Would the gentleman explain that further?

Mr. FRASER. This would have no effect, as drilling takes place today. Of course, we do not know what the outcome of the Conference will be, but our purpose is to support the stated U.S. position. There will be no effect on drilling within the 200-meter isobath, which is where all of our commercial developments have taken place so far.

Mr. MACDONALD. Will the gentleman yield further for just one more observation and question?

Mr. FRASER. Yes, I yield to the gentleman from Massachusetts (Mr. MACDONALD).

Mr. MACDONALD. Mr. Speaker, I was concerned as to what effect it would have on the present rights for offshore drilling. Would it expand the present rights or deteriorate their position, or would it close off any exploration past that 200-meter range?

Mr. FRASER. Under the 1958 convention the right of coastal States to explore or exploit for oil to the 200-meter depth was clear.

In addition, under that convention there was a right to go beyond the 200-meter isobath to the extent that exploitability was possible, a continually changing thing which caused and continues to cause impreciseness and confusion.

Mr. MACDONALD. But that is not clear.

Mr. FRASER. You are right. That is not clear. Under the proposal of the President, beyond the 200-meter isobath out to the end of the continental margin the coastal state or nation manages the exploitation of those resources under a kind of trusteeship and does so subject to certain international standards. The coastal states would have control and management of those resources for the international community, and would likely be entitled to a management fee of one kind or another.

Mr. MACDONALD. I thank you.

Mr. SIKES. Will the gentleman yield?

Mr. FRASER. I yield to the gentleman from Florida.

Mr. SIKES. I think the gentleman's bill is well founded and I intend to support it, but I would like to ask him one or two questions in further clarification.

I would like clarification on the subject of pollution control. Many of us are concerned with pollution control if it is just offshore. Does this bill control Federal and State pollution control efforts?

Mr. FRASER. My understanding is

that within territorial waters and for some yet undefined further area it is the domestic responsibility of the coastal nation. There are pollution standards which are being developed by the International Maritime Consultative Organization on vessel pollution, and this may be broadened. They have a meeting coming up this fall in London.

Mr. SIKES. This bill then would do nothing to discourage this type of effort?

Mr. FRASER. No, not at all. With respect to pollution I think that for international waters there will be some general statements about the problem of pollution, but this will not have any significant impact on territorial waters; and if there is to be a spelling out of pollution standards in the areas further out that remains to be worked out. Incidentally, the United States will make an intervention on pollution this week at the U.N. Seabeds Committee in New York. I will try to provide a copy for the CONGRESSIONAL RECORD.

Mr. SIKES. With regard to the matter of offshore drilling, there has been a controversy for a number of years about who controls the waters to what distance offshore in these jurisdictions. It was resolved between the States and the Federal Government in a generally satisfactory manner. Does this bill change that in any way?

Mr. FRASER. No, sir. The 3-mile rights the States now have and the 9 miles that Texas and Florida have established would not be altered under the U.S. position.

Mr. SIKES. Another item of concern touched on a moment ago is the matter of the claim of some countries to a distance of 200 miles of the waters offshore. We in Florida have had serious problems with some of our neighbors to the south because of their seizure of fishing vessels within the waters that they claim as their own. Does this affect that situation?

Mr. FRASER. We hope it will. We do not recognize the unilateral 200-mile zone of Ecuador and Peru and other nations, and that is where the trouble lies. With respect to fisheries, the U.S. position is that the fish should be managed on a species basis. In general coastal state fishing, that is, for fish found resident in the coastal areas, would be reserved to the coastal states, subject only to the concept that if they do not use all of the resources, then other countries would have a right to come in on a nondiscriminatory basis, so that harvestable stocks would not go unused, or be wasted. But the coastal state would have the first right. For highly migratory species such as tuna we are proposing international management since they spawn in international waters and swim all over the oceans, so that no single state should have a rightful claim over them. For the anadromous species, like salmon, which spawn in inland waters, it is proposed that the host state where the fish spawn should have control over their entire life cycle.

My understanding is that all of the fishery groups in the United States are generally in agreement with the position of our Government on those matters, because it protects all our fisheries. The

problem the fishermen have is with the time it takes to hammer out an international agreement.

Mr. SIKES. One further question.

The SPEAKER. The Chair will advise the gentleman he has consumed 18 minutes. He has 2 more minutes remaining.

Mr. SIKES. One further brief question if the gentleman will yield further.

Mr. FRASER. I yield further.

Mr. SIKES. Has the gentleman's committee given thought to dealing more specifically with separate legislation on the problem of seizures of American fishing vessels in South American waters?

Mr. FRASER. I can only answer the gentleman that our subcommittee has not been given the jurisdiction over that problem. Hopefully, if the Law of the Sea Conference comes to a fruitful conclusion, we will have ended the problem.

Mr. PIKE. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I will be glad to yield to the gentleman from New York.

Mr. PIKE. Mr. Speaker, under the position of the United States the 200-meter mark marks the limit of State's control of the bottom, but not of the water; is that correct?

Mr. FRASER. That is correct.

Mr. PIKE. Does the United States have a position regarding who controls the fishery resources out to the 200-meter depth mark?

Mr. FRASER. No. The position of the United States on fishing has nothing to do with depth. As I have previously stated, our U.S. proposal on fisheries is that they can be dealt with according to their natural habits, not by artificially or politically defining a zone by mileage or by depth.

Mr. PIKE. We are not going to claim any jurisdiction at all, just on our own Continental Shelf?

Mr. FRASER. The shelf really has very little to do with our Continental Shelf. Our position is that the fish found in coastal waters are subject to the control and use of the coastal state, as are anadromous species. The highly migratory oceanic species are subject to international management and allocation.

Mr. PIKE. This has not been true in the past, and it is certainly not true at the present time.

Let me ask the gentleman one other additional question: Is the lobster a seabed resource, or is that a fishery resource?

Mr. FRASER. I am not a fishery expert, but I think it would be a fishery resource, since it is not regarded as a creature attached to the shelf.

Mr. PIKE. So we would not have any control over what happens to the lobsters, unless there is international agreement on it, according to the position of the United States; is that correct?

Mr. FRASER. Well, if there is no international agreement we are left where we are today. If there is an international agreement then presumably—

Mr. PIKE. I am trying to find out what we are pushing for, trying to find out what we are endorsing here.

Mr. FRASER. Under the species approach advocated by the United States, the coastal state would have manage-

ment jurisdiction and a preferential right to that resource.

The SPEAKER. The time of the gentleman from Minnesota has expired.

Mr. MAILLIARD. Mr. Speaker, I yield 5 minutes to the gentleman from Minnesota.

Mr. WYMAN. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I yield to the gentleman from New Hampshire.

Mr. WYMAN. Mr. Speaker, along the lines the gentleman from New York has just developed, and that was the intent of the previous questions I addressed to the gentleman from Minnesota, I was just trying to find out whether by passing the resolution offered by the gentleman from Minnesota we are endorsing the U.S. position that may be taken before the Conference, and generally exactly what that position is. I understand the question asked by the gentleman from New York and the response given by the gentleman from Minnesota, and that is we are going to take a position that we did not assert any control over fisheries out to the 200-meter mark, not the bottom, now, but the fish.

Mr. FRASER. No, that is not right.

Mr. WYMAN. This distresses me.

Mr. FRASER. So far as fisheries are concerned the 200-meter isobath or depth mark makes no difference. The position of the United States is that fish found along the coast, the so-called resident species, are to be controlled, managed, and utilized by the coastal state (nation).

Mr. WYMAN. But we have not asserted that, have we?

Mr. FRASER. Yes, that is our position; that is our negotiating position.

Mr. WYMAN. It may be our negotiating position, but we have not excluded foreign fisheries out to the 200-meter in depth mark, as coastal waters of the United States.

Mr. FRASER. Let me distinguish again. The 200-meter isobath or depth-mark has to do with mining, not with fishes. Foreign fishermen today can legally fish in international waters beyond 12 miles from shore.

Mr. WYMAN. Another thing, section (2)(c) of the resolution offered by the gentleman from Minnesota describes a substantial sharing of revenues derived from exploitation of the seabed.

Is the gentleman proposing that we should share revenues from offshore areas with other nations in the world? And I am talking about offshore of the United States, not down at the bottom of the continental rise.

Mr. FRASER. This proposition is that the rights that we now have would remain, and that is out to the 200-meter isobath, which is where virtually all of the oil drilling is going on so far. But beyond the 200-meter depth out to bottom of the continental margin there would be an intermediate international zone with coastal state management, under certain international standards. It is in that area that it is suggested that any licensing fees or royalties would be shared between the coastal state and the international regime, as well as in the international deep seabed area.

Mr. WYMAN. If we should vote for this resolution today are we voting for that position? Is there an implication that we are voting for that position?

Mr. FRASER. Yes. This is the position announced by the President as one of many aspects of his oceans policy. The answer would be "yes." You are giving general endorsement to that position.

Mr. WYDLER. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I yield to the gentleman from New York.

Mr. WYDLER. Mr. Speaker, if I understand what the gentleman has stated, we are going to take some sort of a position on the States' individual control of offshore waters for the purpose of protecting fishing resources in them, and I am just curious, if that were in fact to become the situation as to what degree we would protect those waters. Would it be the job of each individual State to see that in its own territorial waters the vessels of the Soviet Union did not fish, or from some other foreign country? Who would actually go out and board the vessels or drive them away? How would that be done?

If the gentleman will yield further, it seems to me that we are going to end up with a very peculiar situation where somewhere offshore in the oceans the State of Massachusetts and the State of New York might be fighting about whose rights are being violated, or the State of Rhode Island, and that question could become very confused in the high seas hundreds of miles from land. In addition to that, it might require the State of New York to have some sort of a Navy to enforce these rights and protect its waters, and these ships in turn could get in all types of jurisdictional disputes. I should think, over whose rights are being violated.

Mr. FRASER. As the gentleman knows, there are existing international conventions dealing with certain fishing resources in which there is now even a right of boarding in which we have the right to board Soviet vessels, and vice versa. But, the individual States would not enforce the agreement. The Federal Government would have that responsibility.

What we are dealing with here is the rights of fishing nations, not individual States of the United States. The machinery for enforcement remains to be worked out. I should add that in the fisheries area our position is that there should be quick and effective machinery for settlement of disputes, should they arise.

Mr. MAILLIARD. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I should like to express my support for this resolution. Let me repeat that is all it is—a House resolution. It does not go to the Senate; it does not become law. It is the belief on the part of those of us who sponsored the resolution that what is going on now in this U.N. committee, which is intended to lead on to another major Law of the Sea International Conference, is a matter of very great significance, far more significance perhaps than some of the detailed questions that have been asked today. I

realize there are many, many questions that could be asked, but about as far as we could go in this resolution was the endorsement of certain principles which have been taken as the U.S. position in what is a preparatory meeting—one of several leading up to a major conference next year on the whole question of the law of the sea.

I want to emphasize we are not voting here on the terms of any treaty or agreement. It is an expression of approval by the House for the negotiating position of our U.S. delegation to the United Nations Seabed Committee. That is a little bit of a misnomer because this is really a preparatory conference to set up the terms for the Law of the Sea Conference which is of much wider significance than just the question of the seabeds.

The committee is preparing for this conference, and we hope that out of the conference can come agreement on what the international law of the sea will be. The gentleman from Minnesota and I are designated as congressional advisers to this U.N. committee. I believe that this conference could be the most important of the century.

During our hearings former Secretary of State Dean Rusk told the subcommittee this last week, and I will quote:

Unless the law of the sea is brought up-to-date by general agreement among nations within the next two or three years, we may see a national race for the control of open oceans and seabeds comparable to the race for the control of land areas of the past three centuries . . . it would be sheer insanity for mankind to go down that fork of the road.

President Nixon said in his 1970 ocean policy statement that if the law of the sea "is not modernized multilaterally, unilateral action and international conflict are inevitable."

So the point I am trying to make here is that whether we are successful and can get international agreement on reasonable rules and laws governing the oceans and the resources of the oceans and the resources under the oceans will help to determine the question of war and peace for the next century or several centuries. Conflicts are developing now, as the questions that have been asked today indicate; and without some generally accepted order conflicts are going to become more and more acute as the competition for the resources that are involved becomes more important, and as a matter of fact perhaps resolution is vital with the energy crisis we all know we face.

I think the U.S. position is reasonable and constructive. It is a middle ground between the extremists who have taken hard line positions either for practically the status quo or for territorial seas extending far out into the oceans.

So what we are trying to do is to assure protection of the freedom of the seas beyond what we think will be a 12-mile territorial sea of sovereign jurisdiction. We also want to assure free transit through and over international straits that might otherwise become closed to international traffic by the extension of territorial waters from 3 to 12 miles. It recognizes the mutual interests of na-

tions in protection from ocean pollution, the sharing of some revenues from the exploitation of seabeds, and the prompt compulsory international settlement of disputes that may arise over interpretations of the rules.

Our delegation has also supported an effective international seabed authority to regulate the development of the deep seabed beyond any claim of national control, as well as for the conservation of the fisheries resources.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I am disturbed by a couple of provisions in this resolution. On page 2 it states:

the House of Representatives endorses the following objectives—

And then it enumerates several, and I read one:

assurance of the integrity of investments—

And then again I read:

substantial sharing of revenues derived from exploitation of the seabed, particularly for economic assistance to developing countries—

Now does this mean we would here today be endorsing another foreign handout program, another foreign aid program?

Mr. MAILLIARD. I say to the gentleman, taking the second one first, no, it would not be a question of a foreign aid program. What we are attempting to do is to get something the major nations of the world can agree on. We all know certain nations are asserting jurisdiction way out into the ocean for various purposes. As a matter of fact, I think the record will show we have heretofore asserted that a 3-mile territorial sea is all a country is entitled to under international law; however, in the present law of the sea deliberations we have indicated a willingness to go to 12 miles provided there is a guarantee of free transit through the international straits that become enclosed in territorial waters. Some 29 nations now agree with us on the existing 3-mile territorial sea, but 89 nations have made some other territorial assertions. Thus, it is perfectly clear we cannot get international agreement on a 3-mile territorial sea.

We think it quite likely we can get agreement on a 12-mile territorial sea, although there are those who are claiming as much as 200 miles. So what this is aiming toward is a clear and realistic arrangement among the nations which would receive general acceptance.

Mr. McCLODY. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Illinois.

Mr. McCLODY. Mr. Speaker, I thank the gentleman from California for yielding.

Mr. Speaker, I express my support for the position the gentleman is advancing. It seems to me unilateral actions many other nations have taken are detrimental to our interest, and the very best hope for the U.S. position to be equalized and promoted is through this kind of international agreement.

I think the gentleman answered a further inquiry I had which is with respect to these narrower waters where there is no opportunity for a 9-mile or a 12-mile limit, where the water is narrower than that, or where the seabed is less than 200 meters in depth. Is it our understanding that those waters should be divided equally between the two abutting countries?

Mr. MAILLIARD. The gentleman's question is not entirely clear; however, I will respond to the inquiry by stating that in a situation where a narrow body of water such as a strait separates the national jurisdictions of two nations, I would assume that a median line would divide the waters to prevent overlapping sovereignty. Of course, this is an oversimplified answer. If a 12-mile territorial sea were adopted internationally, then any strait wider than 24 miles would have international waters running through it anyway. On the other hand, if the width of the strait were less than 24 miles, the U.S. position is that there would have to be a right of free transit through, over, or beneath the surface of that strait for vessels or aircraft, whether one or two nations had sovereign jurisdiction over the adjacent shores. One more point—the 200-meter isobath or depth of the water column has nothing to do with the breadth of the territorial sea, or freedom of transit through straits, or with fisheries, or freedom of scientific research, or with pollution. It really only concerns the matter of exploration and exploitation of the remote areas of the continental slope and the seabed; and it constitutes a dividing line between national and international jurisdiction for mining and oil and gas extraction.

A very vital part of our position and one, as far as I am personally concerned that is really virtually nonnegotiable, is the protection of the right to use those international straits which are less than 6 miles under the existing 3-mile territorial sea, we recognize, in which international transportation can pass into the open ocean. When we extend territorial claims to 12 miles, the straits which we now can transit under innocent passage would be closed if we do not maintain the right to free and unhampered transit of those straits.

To me, this is absolutely vital and not a negotiable question. I think that if we do not get that, it will be very dangerous for the United States to sign any convention.

Mr. SAYLOR. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. I think there are several points that are bothering the Members which might be cleared up with regard to our own country so that we can understand this.

The gentleman in the well comes from the State of California. At the present time, California is entitled to the oil offshore for a certain limit. Beyond that, the lands belong to the United States and the United States leases those lands.

Mr. MAILLIARD. Correct.

Mr. SAYLOR. What would be the ef-

fect of the 200-meter isobath that has been referred to? Would California get its rights extended out to that depth, or would those, as between the rights of the State of California and the Federal Government, belong to the Federal Government?

Mr. MAILLIARD. In my opinion, this resolution simply does not address itself to this subject at all. This is a matter between the Federal Government and the States, not between the States and the international community. If the gentleman will recall, this was a very controversial item a few years ago. We had a Supreme Court ruling and eventually passed legislation here, the Submerged Lands Act of 1953. This would not, in my judgment, alter any rights the States now have without further legislation.

Mr. SAYLOR. Approximately 20 years ago the International Court in the Hague ruled that open seas did not extend where there was 12 miles or less from headland to headland. It was territorial water.

Is there anything in this agreement which would affect that court case?

Mr. MAILLIARD. I am not sure your figure of 12 miles is correct, because that would presume on internationally agreed-upon territorial sea of 6 miles. However, the answer to the gentleman's question is that the decision of the Law of the Sea Conference might well affect the ICJ decision and make it most.

Mr. SAYLOR. The third point is 2(b), line 14, which says that we are going to assure the integrity of investments.

Mr. FRASER. What we mean by that is very simple.

The U.S. position is that we want to insure that any investment made by an individual or corporation or joint venture of whatever nature is fully recognized and not subject to expropriation without compensation.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Texas.

Mr. WHITE. Mr. Speaker, I wonder if the gentleman would elaborate on one point on page 2, subparagraph (d), speaking of the objectives of the international agreement and compulsory settlement of disputes.

What does the gentleman envision that would include, and to what extent would this be permitted?

Mr. MAILLIARD. I say to the gentleman from Texas that the U.S. position envisions that there must be an end to international litigation, some way to resolve differences or disputes. We envision a different forum to finally settle disputes where fisheries matters are concerned from that where seabed exploration and exploitation are involved. The former tend to involve local or regional resolution, whereas the seabed matters tend to be more truly international. In any event the machinery for resolving disputes will be created in the Law of the Sea Conference.

We already have an international agreement that the coastal state has complete control out to the 200-meter position as far as the seabed resources are concerned.

Now, between the 200 meters and the end of the continental shelf is one of the things that still has to be settled.

Mr. WHITE. I thank the gentleman. Mr. DOWNING. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Virginia.

Mr. DOWNING. I thank the gentleman.

I am going to vote for this legislation, because I believe a law of the sea is absolutely necessary, and it should be done by the United Nations. However, I am concerned as to the time which is going to be consumed in hopefully reaching this solution.

As the gentleman knows, there is interim legislation which is being considered by various committees of the Congress. I should like to be assured that the passage of this resolution will not preclude any interim legislation the Congress may desire to take up.

Mr. MAILLIARD. I say to the gentleman that obviously it does not preclude it, because until we have a treaty, as to which the United States is a participant, we can assert anything we want to assert unilaterally.

The gentleman knows that I have an interest similar to his. I would hope that we would be able to hold off a little bit, until we see whether this international agreement attempt is going to go on schedule. If it becomes inordinately delayed, I can see that there may be an absolute necessity for some kind of interim legislation. At the moment I would hope we would not have to take that kind of step.

Mr. DOWNING. But this does not preclude it?

Mr. MAILLIARD. It does not preclude it.

Mr. DOWNING. I thank the gentleman.

Mr. FRASER. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Minnesota.

Mr. FRASER. I just want to reemphasize a statement the gentleman made about the importance of the right of free transit through and over the international straits. The Strait of Gibraltar, the Strait of Malacca, the Strait of Dover will all be closed under the 12-mile territorial sea unless there is expressly reserved the right of free transit over international straits.

I join with the gentleman in saying that it really is absolutely necessary for the United States to require in any kind of international agreement that there be freedom of transit for navigation through international straits that become overlapped by territorial seas if we go to 12 miles.

Mr. MAILLIARD. I thank the gentleman. It is of tremendous importance.

Mrs. MINK. Mr. Speaker, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from Hawaii.

Mrs. MINK. I should like to inquire what concern and deliberations of regard were given by the committee with respect to the unique problem which we in Hawaii face because Hawaii is an in-

sular State and is completely surrounded by ocean waters and without the Continental Shelf that has been made reference to this afternoon.

Also there is the additional factor that the waters between the islands are all international waters. It is now a pursuit of our State to try to close off these waters, so as not to have any confrontation with foreign vessels regarding those international waters and having free access to move in between the islands in any way.

Mr. MAILLIARD. As the gentleman from Hawaii is no doubt aware, a number of ocean island nations such as Indonesia, the Philippines, Fiji, and others are insisting on a special treatment of ocean archipelagoes to protect their national territorial integrity by some straight base lines principle to give them control of their "internal" waters without regard to a 12-mile territorial sea between islands. Resolution of that problem should help Hawaii.

Mr. BURKE of Florida. Mr. Speaker, I wish to acknowledge my support of H.R. 330, the Law of the Sea Conference bill, which endorses President Nixon's ocean policy statement of May 23, 1970, and supports the objections now being pursued by the U.S. delegation to the United Nations Conference on the Law of the Sea.

The great wealth of the sea has been overlooked for many centuries by the various nations of the world, because of the past abundance and assessability of land resources. However, with the many dire forecasts of possible serious depletions of many precious minerals and fossil fuels we must now look to the oceans for new supplies. The United States is not alone in this problem. It should be remembered that, until 1945, all countries enjoyed unrestricted freedom of the seas, and most nations observed only a 3-mile territorial waters concept.

The objectives expressed in H.R. 330: to establish a 12-mile territorial sea limit for coastal States with recognition of freedom of the seas for navigation, communication, scientific research, and unimpeded transit through international straits; to recognize the international rights of protection from ocean pollution, protection of investments, protection of access to the oceans beyond the 12-mile limits for reasonable uses, with international sharing of revenues from exploitation of waters beyond the territorial limits; to create an International Seabed Authority to regulate the development of the deep seabed; and to conserve living resources, and recognize coastal State management of coastal and anadromous fish areas, are laudable solutions to an international hodge-podge of laws regulating the sea.

As a representative, I sincerely hope that the passage of this resolution will lead to development and use of the oceans by the nations of the world in an orderly manner and will head-off bitter feelings among friendly neighbors in the years ahead. Hopefully our future needs will be our reward for a ye vote today.

Mr. DON H. CLAUSEN. Mr. Speaker, I am pleased the House has before it today legislation endorsing the work of the

U.S. delegation at the International Law of the Sea Conference.

It is clear to all that growing technology, improved understanding of oceanography, and the threats of man to other forms of animal life have in recent years made existing agreements on the use of the world's oceans and the management of their resources outdated and conflicting.

By approving this measure we are taking a positive and constructive step forward as the international community begins to work together to resolve the serious problems and competing claims of the various coastal nations.

I would like to comment in more detail about one specific aspect of the legislation which is the endorsement of the fisheries conservation and protection portion of the position our negotiators have adopted.

I expect to introduce legislation in the near future to outline more specifically the so-called three species approach to the protection of fishery and marine resources. This concept recognizes the interests of coastal and fishing nations in the preservation of fish and delineates a guardianship philosophy for each kind of species based upon its particular migration habits.

Those fish and/or bottom fish which inhabit the coastal waters of a single coastal state would be under the protection of that nation, and it would be expected to develop a program of protection and conservation of the species to insure the maximum sustainable yield in perpetuity.

Similarly, nations in whose fresh water streams anadromous fish spawn would have control over them irrespective of where their migratory travels take them. This concept recognizes the cost and responsibility of these nations in making certain that fresh waterways are available to the anadromous fish and that spawning grounds are preserved and enhanced.

In addition, this concept would act as an incentive to build and operate anadromous fish hatcheries, fish conservation programs and to undertake flood control and water conservation programs in a way that would enhance anadromous fish populations.

Finally, pelagic fish, such as tuna, whose migratory patterns are unpredictable and wide ranging, would be regulated through separate international agreements designed to prevent these species from being exploited or decimated by any one nation while off that nation's coast.

While these principles appear to be a reasonable step toward a reasonable policy, there is no question that they will be very difficult to obtain. Our negotiators will need our total support and I hope that our approval of the resolution we are now considering followed by others that will follow will demonstrate our commitment to this goal.

Unfortunately, the fishing nations of the world have a variety of fishing policies that have been seriously detrimental to the world's fishery stocks. Some nations are "quick buck artists" whose fishing fleets care not at all whether there

will be future fish for them to obtain. They catch only for today's market and care less about making certain the species they strike can survive their plundering ways.

Other nations have become greedy and inconsiderate. They carefully protect their own stocks by concentrating on sending their fleets to the shores of other nations. This practice could not be condemned if these nations made a practice of using accepted, modern conservation methods but, in fact, they do not.

Devastating inroads into the stocks of some species have focused the attention of the world on these archaic practices and most nations now have more constructive attitudes toward marine conservation.

We must now take advantage of their growing awareness of the long-range impact of their unconcern by advancing a positive program with attainable, effective goals. I believe our position at the International Law of the Sea Conference is just such a program and I personally will be following its progress carefully.

While this legislation is directed toward our objective of establishing protective fishery and marine resource conservation zones contiguous to our coastal States, I want to again remind you that this is, in my view, an improvement over our present situation, the 12-mile limit, but it should be considered as a united step toward what I believe should be our ultimate goal.

Mrs. MINK. Mr. Speaker, House Resolution 330, in the guise of an innocent resolution of House support, would put the stamp of approval on a Presidential policy which I believe is unwise and injurious to the State of Hawaii.

Basically the resolution endorses the position of the Presidential negotiating team with respect to the proposed Law of the Sea Conference. The President's position was spelled out in his ocean policy statement of May 23, 1970, and is now being pursued by the U.S. delegation to the Seabed Committee preparing for the conference.

Unfortunately the President's position ignores the unique geographical status of the State of Hawaii in two major respects.

Free transit through and over international straits is a specific goal set forth in the resolution. While this is commendable as a general policy, no attention is given to the waters between the islands of Hawaii. The distance between our major islands far exceeds the 12 miles specified in the resolution as the "territorial sea" or 24 miles counting the "territorial sea" between two islands. These distances between islands range to 62.9 nautical miles.

The fact that the waters between Hawaii's islands are deemed international, and would continue to be so under the President's policy as endorsed by House Resolution 30, causes problems with respect to communications and security. In no other State is commerce or communication between two areas of the State deemed "international." To illustrate the type of difficulties this raises, currently we are seeking to amend the Federal Highway Act to remove the

restriction on ferry facilities over international waters, as it affects Hawaii.

In addition, by classifying Hawaii's waters as "international" we lose control over our security. Ships of any nation, including warships, can cruise off the coast between islands and there is nothing Hawaii or the United States can do about it legally. In 1967 and 1968, groups of Japanese destroyers conducted training exercises in the Hawaii area. More recently a Russian naval vessel passed around the islands and nothing could be done because of the 3-mile limit.

The United States should insist on a change in the territorial sea to recognize all waters between the islands of Hawaii as within our national jurisdiction. To construe these as international waters entails risks over our ability to protect the islands in any future incident. We have only to recall the attack on Pearl Harbor which precipitated World War II to realize that Hawaii remains an important military position.

When we point out that the United States should recognize Hawaii's status in its policy at these Law of the Sea Conference sessions, the reply is that other nations such as Fiji which are composed of islands will be raising this issue. Why should Hawaii have to look to foreign nations for protection, instead of its own Government? Are we not part of the United States? Certainly, the U.S. Government should afford equal recognition to all of its States, and not tell Hawaii that its interests will be represented by a foreign government. The President should revise his policy in this respect, and Congress should not ratify his policy until he does.

There is another failure of the existing Presidential policy in that it sets an arbitrary standard of a 200-meter "isobath" or depth for determining the extent of a coastal State's exclusive control over the surrounding sea bottom. The undersea area from the shore to the 200-meter depth would belong exclusively to the coastal nation for mining purposes or for the extraction of oil and gas, but not for fishing. From the 200-meter isobath to the edge of the continental margin, where the deep seabed begins, the area would be managed by the coastal nation under international standards, with some revenue sharing; and in the deep seabed, the exploitation would be under international management and control, again with revenue sharing with the developing and the landlocked and shell-locked nations.

This is fine for the continental United States which has a broad Continental Shelf, much of which is less than 200 meters beneath the ocean surface. The shelf and its mineral resources would remain in our Nation's jurisdiction. But Hawaii's islands have no Continental Shelf. They are the tops of underwater mountains which rise steeply from the bottom of the deep sea. Under the President's proposal, we would have very little right to the mineral resources of the ocean around Hawaii since the 200-meter depth is reached very close to shore.

On June 16, 1970, in a letter to the

President concerning his May policy statement, the Honorable John A. Burns, Governor of the State of Hawaii, set forth reasons why the 200-meter standard should be revised to take account of Hawaii's needs. Governor Burns stated:

Hawaii, as you know, is the most international of all the States of the Union, and we fully recognize the vital role that we must play in international efforts to assist developing countries. We congratulate you on your vision and statesmanship in recommending that developing countries be the primary recipients of royalties derived from mineral exploitation of the sea beds.

We in Hawaii, however, have a unique situation in that much of our offshore areas reach a depth of more than 200 meters very close to our coastline. As an Island State, our coast and the potential development of the sea beds surrounding our coast are relatively much more important to us than perhaps any other State in the Union. We have taken significant steps in the exploration and development of the oceans surrounding us, including the detailed study and recent publication of a report titled "Hawaii and the Sea." I believe we are the first State to undertake such a plan of development. In the legislative session just concluded, the Hawaii State Legislature passed an omnibus marine package which includes a series of projects to explore and develop the oceans surrounding Hawaii.

In addition to the State's current and planned efforts, there is considerable defense activity on and below the surface of the oceans surrounding Hawaii. For example, the Navy's listening devices to detect foreign submarines are located in many instances, I am informed, at depths beyond 200 meters but within a 3-mile limit of the coast.

We are aware that the International Convention on the continental shelf defines the continental shelf in terms of exploitation of the sea bed and subsoil to a depth of 200 meters or "beyond that limit to where the depth of the superjacent waters admits of the exploration of the natural resources of the said areas . . ." As you know, this definition has been variously interpreted by a number of legal experts as going beyond the 200 meter depth.

We are also aware that the Commission on Marine Science, Engineering and Resources has recommended that the definition of the continental shelf be fixed "at the 200 meter isobath, or 50 nautical miles from the baseline for measuring the breadth of its territorial sea, whichever alternative gives it (the coastal nation) the greater area . . ."

The definition recommended by the Commission would be much more applicable and acceptable to Hawaii because of its unique position in the ocean and the depths of the ocean close to its shores.

I respectfully urge you to consider these factors with respect to Hawaii's unique coastal environment and our strong interest in oceanic development and exploration, as you further your plans for the implementation of your farsighted proposal.

Instead of endorsing a Presidential standard of a 200-meter isobath, we should press for a standard of 200-meters or 50 nautical miles from the baseline, whichever gives the greater area, as suggested by the Commission on Marine Science, Engineering, and Resources. By adoption of this standard endorsed by Governor Burns, all of the sea within 50 miles of Hawaii would remain in our jurisdiction.

Dr. John P. Craven, marine coordinator for the State of Hawaii, has stated that the United States should consider that the Hawaii Island archipelago is 1,500

miles long, and rich in resources of sea life and minerals. In the last several years there has been increasing attention to the possibilities for "mining" of the sea bottom near Hawaii by gathering mineral deposits lying on the ocean floor. I feel we would be surrendering a valuable and vital national resource if we fixed an arbitrary measure for our sea jurisdiction that did not take account of the waters around Hawaii.

Because of this inattention to the State of Hawaii interests, I oppose the adoption of House Resolution 330.

The SPEAKER. All time has expired.

The question is on the motion offered by the gentleman from Minnesota (Mr. FRASER) that the House suspend the rules and agree to the resolution House Resolution 330.

The question was taken.

Mr. DAVIS of South Carolina. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 303, nays 52, not voting 78, as follows:

So (two-thirds having voted in favor thereof) the rules were suspended and the resolution was agreed to.

The Clerk announced the following pairs:

Mr. Thompson of New Jersey with Mr. Maraziti.

Mr. Rooney of New York with Mr. King.
Mr. Biaggi with Mr. Hastings.
Mr. Matsunaga with Mr. Ashbrook.
Mr. Kluczynski with Mr. Guyer.
Mr. Delaney with Mr. Conte.
Mr. Culver with Mr. McKinney.
Mr. McCormack with Mr. Symington.
Mr. Hanna with Mr. Sandman.
Mr. Charles H. Wilson of California with Mr. Burgener.

Mr. Shipley with Mr. Camp.
Mr. Bowen with Mr. Milford.
Mr. Blatnik with Mr. Baker.
Mr. Brademas with Mr. Huber.
Mr. Koch with Mrs. Burke of California.
Mr. Leggett with Mr. Goldwater.
Mr. Nix with Mr. Steiger of Wisconsin.
Mr. Smith of Iowa with Mr. Brotzman.
Mr. Teague of Texas with Mr. Frey.
Mr. Reid with Mr. Mosher.
Mr. Dingell with Mr. Andrews of North Carolina.

Mr. Badillo with Mr. Harvey.
Mr. Carney of Ohio with Mr. Harsha.
Mrs. Chisholm with Mr. Corman.
Mr. Dellums with Mr. Eckhardt.
Mr. Landrum with Mr. Sebellus.
Mr. Mann with Mr. Edwards of Alabama.
Mr. O'Hara with Mr. Clay.
Mr. James V. Stanton with Mr. Michel.
Mr. Wolff with Mr. Metcalfe.
Mr. Wright with Mr. Price of Texas.
Mr. Dorn with Mr. Hinshaw.
Mr. Melcher with Mr. Riegle.
Mr. Mills of Arkansas with Mr. Cronin.
Mr. Roy with Mr. Talcott.
Mr. Alexander with Mr. Taylor of Missouri.
Mr. Charles Wilson of Texas with Mr. Wiggins.

Mr. Bob Wilson with Mr. Young of South Carolina.

Mr. Bell with Mr. Zion.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FRASER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on House Resolution 330, which was just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

PERSONAL EXPLANATION

Mr. BAKER. Mr. Speaker, I was absent today when the vote was taken on House Resolution 330, endorsing objectives for a just and effective ocean treaty, and on H.R. 3153, technical and conforming changes in the Social Security Act. If I had been present I would have voted "yea" on both.

PERSONAL STATEMENT

Mr. STUDDS. Mr. Speaker, I was delayed coming from my district and missed rollcall No. 63. I should like to have the RECORD reflect that had I been present, I would have voted "yea."

HARRY M. LIVINGSTON

(Mr. DULSKI asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DULSKI. Mr. Speaker, it is my sad duty to inform the House of the passing yesterday of one of our longtime employees in the House of Representatives.

Harry M. Livingston, a finance officer in the House of Representatives for the past 24 years, died Sunday at Georgetown University Hospital following a brief illness.

Most of the Members of the House had come to know Mr. Livingston through his role in the Finance Office beginning in February 1949. He served under three Speakers of the House in addition to yourself. They are former Speakers John McCormack, the late Sam Rayburn, and the late Joseph W. Martin, Jr. For the past 4 years he had served as budget and operations officer in the Office of the Doorkeeper.

Although he had been in Washington for the past quarter of a century, Harry had continued to maintain his voting residence in my district in Buffalo, N.Y. He had long been active in affairs of the Democratic party and for many years was a ward chairman in Buffalo.

Since coming to Capitol Hill, Harry Livingston had made his mark in several areas in addition to the day-in and day-out assistance which he provided to the Members and congressional staffs in connection with their official duties.

In 1961, he was named to the board of directors of the Congressional Employees Federal Credit Union and 2 years later was named its president, an office to which he had just been reelected several weeks ago. During his years at the helm of the Credit Union, its development was significant, because of his dedication and concentrated effort.

Although born in Rochester, N.Y., he spent most of his life in Buffalo until being named to his position in the House of Representatives.

Born April 24, 1909, he was the son of the late Richard E. and Charlotte McLeod Livingston. He was a graduate of Lafayette High School in Buffalo and took up the trade as a carpenter, later being employed by the City Parks Department. He was a member of Carpenters Union Local No. 9, one of the oldest in the country and had retained his membership.

He was a member of the Kenwood Country Club of suburban Bethesda, Md., and recently was elected to the board of governors. He was active in the Kenwood Men's Bowling League and had been chairman of the Arthritis Ball for the last 2 years.

He is survived by his wife, Loretta T., at home, 5401 Christy Drive, Chevy Chase, Md.; two daughters, Mrs. Francis G. "Joyce" Monan, of Alexandria, Va., and Mrs. Theodore "Patti Anne" Morgan, of Wurzburg, Germany; nine grandchildren; and two brothers, Richard E. Livingston, of Bethesda, secretary-treasurer of the United Brotherhood of Carpenters and Joiners of America, and Donald M. Livingston, of North Tonnawanda, N.Y.

Mr. Livingston was active in church affairs and had been an usher at the Little Flower Roman Catholic Church for many years. He was a member of Council 184, Knights of Columbus.

Harry Livingston was a good friend and a fine public servant. His cheerful disposition and friendly nature were well known to all who had the pleasure of working and dealing with him over the years. He will be sorely missed.

CONGRESS SHOULD OVERRIDE THE VOCATIONAL ACT VETO PROMPTLY

(Mr. WON PAT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WON PAT. Mr. Speaker, on behalf of the handicapped people of this great country of ours, and in particular the offshore areas—Guam, American Samoa, and the U.S. Trust Territory—I urge my colleagues in Congress to immediately override the President's veto of the Vocational Rehabilitation Act of 1973, and thus insure that compassion for our fellow man will continue to be one of our fundamental legislative goals.

When the Congress voted unanimously several weeks ago for S. 7, the 1973 Vocational Rehabilitation Act, careful consideration was made by the House and Senate conferees of what impact the spending allocations in the measure would have not only on the Federal budget, but on the existing handicapped aid programs as well.

So great was their just concern for the shape of the Federal budget that \$930 million were slashed from the bill's funding level.

But the 327 Members of the House and 70 Members of the Senate, who voted for the final version, were also concerned that inflation and the growing demands for training for the handicapped would hamper nationwide efforts to assist these people to earn an honorable living.

Despite the best efforts of Congress to safeguard both the economy and the needs of the handicapped, S. 7 was still rejected by the White House as being too overzealous in the spending area.

I cannot believe that the American people want programs which have proven their worth many times over hampered by lack of sufficient funding. After all, the goal of helping the handicapped is not one of a free handout, but instead follows the American tradition of helping our neighbors to help themselves.

Nor can I believe that this administration wants to make the handicapped pay for our budgetary sins.

But unless we act soon to restore the full level of funding called for in S. 7, many projects to aid the handicapped in the territories and those in many urban areas across the United States will undoubtedly be forced to operate at a substantially reduced level.

In the case of Guam, failure to override the veto would be extremely injurious to local efforts to train the handicapped. Were the present funding levels maintained, Guam would be denied the benefit of the significant increases which S. 7 authorizes—almost \$100,000 during fiscal 1975. As our program on Guam is still in the development stages, the proposed funding increases would be doubly helpful at this time.

None of us wishes to see inflation rear its ugly specter once again. Congress must assure us that the spending which we authorize the administration to carry out is within a sensible limitation, a limitation that will keep our economy at a safe level and still provide our people with the services that are desperately needed.

But is there no other place to seek fiscal relief than from the pockets of the handicapped, the school children, or from the veteran who has served his country without question during our most trying periods?

Surely it is the unspoken duty of a legislator to legislate both wisely and compassionately. Without wisdom our efforts would be meaningless, and we would be rendering our countrymen an ignominious disservice. Yet, without the quality of compassion behind our actions, would we not be doing our countrymen an equally great disservice?

The legislation which Congress enacts is more than a mass of dollar signs for the accountants to ponder and from which the taxpayers seek relief. Hopefully, much of this legislation will serve to lift our fellow man out of the problems which circumstances and life have forced on him.

While we learned from our past mistakes in legislating for social relief, let not the noble goals of President Kennedy and President Johnson's Great Society be left withering in our quest for fiscal balance.

PRESCRIBING MORE POISON

(Mr. DENNIS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DENNIS. Mr. Speaker, I insert in the Record a recent editorial from the Wall Street Journal, which I commend to the serious attention of my colleagues who would cure all our economic ills by continuing to bust the budget on the one hand, while imposing all sorts of artificial controls on the other:

PRESCRIBING MORE POISON

Congressional Democrats apparently believe, judging from recent words and actions, that the best remedy for a bad case of poisoning is more of the same poison.

Or more specifically, when economic controls aggravate problems, they would cure them with more controls. Senate Democrats last week pushed through a bill that would slap rent controls on apartments in 60 cities. Other Democrats in Congress are pushing for a 60-day freeze on all prices and interest rates; some even favor, so we gather, trying to control the wind and the rain and other factors that determine raw food prices.

All this will hardly be good news for the nation's independent bakers, who are going out of business in droves because the industry's giants have been forced to keep a lid on prices at a time when flour costs have been rising. And it should be disturbing, but maybe isn't, to the building industry, which has had all sorts of trouble with lumber since Phase 2 set lumber price ceilings at artificially low levels.

When demand shot up, lumber producers naturally concentrated on the most profitable items. Shortages developed in items least profitable. Now, the controllers are trying to restrict log shipments to Japan, which of course works just counter to the efforts of

those other federal officials who are trying to restore trade equilibrium with Japan.

And everyone traveling the streets of New York can see that rent controls are something less than a great idea. The city has block upon block of decrepit housing that could have been maintained and properly valued had not a long period of rent controls distorted the city's real estate values.

As for interest rates, they were held down quite successfully last year by a liberal Federal Reserve monetary policy and the activities of the Committee on Interest and Dividends. This has helped us get a dollar that buys increasingly less in foreign markets and at home, simply because the policy entailed excessive money creation.

And then there are the fuel shortages, past and future, which Congressmen think can be cured with new controls, jawboning and all those other marvelous gimmicks of modern government. As we've noted before here, there's nothing like holding down the price of a commodity artificially when you are trying to entice someone to increase production of that item.

Agriculture Secretary Butz, who isn't always right but is usually forthright, recently described those who want raw food price controls as "damn fools." Department secretaries aren't supposed to say things like that about Congressmen, but sometimes a man can get so exasperated he can't control himself. And when Congressmen have so little understanding of an economic malaise that they persist in policies that can only make it worse, it is easy to become exasperated.

The year 1972, with controls in place, the Fed printing lots of money and Congress merrily overspending the budget by \$11 billion, may have seemed like an economic paradise. But as the events of early 1973 have shown, it was a fool's paradise. If there is any wisdom left in Washington, we won't return to that world of illusion but will instead concentrate on the fundamentals of fiscal and monetary restraint as the only route back to stability.

PRESIDENT THIEU, THE PANHANDLER AND THE PIRATE

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. DRINAN) is recognized for 1 hour.

Mr. DRINAN. Mr. Speaker, today at San Clemente, President Thieu of South Vietnam, opens a 3-day visit in America designed to deceive the people of America and to panhandle from the Congress of the United States.

President Thieu's authoritarian regime has no legitimacy in international law. He is the creation entirely of the U.S. military, the State Department, and the last three or four Presidents of the United States.

In June 1969, I spoke for almost an hour with President Thieu in his heavily fortified imperial palace in Saigon. At that time he was just as cunning and crafty as he will be in the next 3 days during his tour of the United States. It is typical of the Machiavellian tactics of President Nixon and General Thieu that the President of South Vietnam will visit the widow and the grave of President Johnson in Texas. We can similarly wonder about the legitimacy of the motives of President Thieu in visiting the Pope in Rome on his way back to South Vietnam.

Mr. Speaker, during the next 3 days the Nixon administration will do its best

to persuade the American people that the South Vietnamese Government is one worthy of our continuing support. I reject that contention and assert and will continue to assert that the United States had no interest in intervening in the Indochina war years ago and that the only possible policy consistent with law and reason is for the United States to withdraw right now, as Senator MANSFIELD has put it, "lock, stock, and barrel."

There are many reasons, Mr. Speaker, why this government does not deserve the continuing support of the U.S. Government. I will expand on a few of those reasons.

SOUTH VIETNAM IS NOT A DEMOCRACY IN ANY WAY

In June 1969, I spent more than an hour in the jail cell of Mr. Dzu, the runner-up in the election that brought General Thieu to the presidency of South Vietnam. Mr. Dzu ran on a platform that urged a coalition government in South Vietnam as the only possible and fair way to bring about a cessation of hostilities. After a good deal of harassment during the campaign by his opponents, Mr. Dzu was arrested immediately after the election and charged with a violation of the mandate of the Constitution of South Vietnam which, quite literally, forbids anyone stating anything favorable to the Communists.

Two days before President Thieu boarded in Saigon a luxurious jet rented for him by the U.S. Government he freed Mr. Dzu from jail after 5 long years of imprisonment for the "crime" of teaching that the people of North and South Vietnam must reconcile their differences by means short of war.

Since the jailing of Mr. Dzu, President Thieu has also imprisoned up to 200,000 individuals suspected of being in disagreement with General Thieu. I visited in June 1969, with hundreds of these persons. The number of political prisoners in June 1969, came to at least 30,000. That number has now escalated so that virtually any person in South Vietnam who might form a "third force" or some political opposition to President Thieu has been incarcerated.

Several months ago the U.S. Government acquiesced in a pretense of an election in South Vietnam with President Thieu as the only candidate on the ticket. And the U.S. Government similarly acquiesced in the virtual abolition of any meaningful governmental power and all provincial elections at the local level. Once again, just prior to President Thieu's departure for the United States an announcement has been made that some form of local provincial elections will now apparently be permitted in the future.

The suppression of newspapers in South Vietnam has long been a familiar phenomenon in this country. President Thieu in his hour long talk with me more than 3 years ago expressed his disdain for any criticism for his regime when he simply stated that the 40 newspapers then publishing in South Vietnam were too numerous because they simply confused the people.

During the 3 days of the state visit to America by President Thieu the Nixon

administration will seek to create in the minds of the American people the illusion that President Thieu is an ally of the United States in Asia and that this Nation should give considerable aid of all kinds to this dictatorship. Mr. Speaker, I resist every premise and every conclusion in that line of argumentation. The people of South Vietnam do not have the right of self-determination under the regime of President Thieu. He has done everything in his power to prevent any form of real or true democracy in that land. I am certain that he will continue to prevent any emergence or development of any government which does not guarantee his own perpetuation in power.

President Thieu is also apparently seeking a reassurance from the U.S. Government that this Nation will reenter South Vietnam with ground forces if, in the judgment of President Thieu, this becomes necessary.

Some may say that the United States should at this time continue to protect President Thieu because such a course appears to be the most likely way by which we can guarantee economic and political stability in Southeast Asia. Once again, Mr. Speaker, I reject every assumption and every conclusion implicit in the line of reasoning which ends in that judgment. How can we say that President Thieu is the choice of the people of South Vietnam when we have absolutely no evidence to substantiate that conclusion? All of the evidence points rather in the other direction and is indeed overwhelming for the proposition than unless there is some form of coalition government in Saigon within the near future we will have either a much more repressive regime still led by President Thieu or a takeover outside of the political processes by a coalition of dissidents opposed to President Thieu.

We will be told this week that "peace with honor" means the perpetuation of the virtual dictatorship of President Thieu. I reject that thesis. I reiterate that there is nothing in international law, nothing in American tradition and nothing from the mandates of the Congress of the United States that allows, much less requires that the U.S. Government perpetuate in Southeast Asia a regime which in all candor can be called a puppet government of the U.S. military forces in Vietnam.

The terms of the treaty signed by the United States in Paris allow both sides to maintain the level of armaments by giving replacements. Prior to the signing of this treaty the United States poured planes and arms into the South Vietnamese army and air force on an unprecedented scale. In a 1-month period in November and December 1972, the United States sent Saigon over 10,000 tons of military equipment—tanks, personnel carriers, artillery, rifles, ammunition, and bombs. In addition the United States gave Saigon at least 868 aircraft.

This fantastic arsenal is of course buttressed by the presence of at least 45,000 American troops in Thailand to be on hand to support America's apparent continuing air war. Furthermore the administration has revealed no plans to reduce

the size of the 7th Fleet in the waters off Vietnam or the Air Force personnel on Guam who have been engaged in B-52 bombings.

This administration assumes that a Congress that declined to withhold funding from a war which it never declared can be relied upon to continue in another form a war which the administration will make as invisible as possible. The pomp and ceremony to be extended to President Thieu this week will seek once again to legitimate and legalize something which has been illegal and wrong from the very beginning.

This administration will never concede that the entry of the United States into the civil war in Southeast Asia was a mistake. It will, therefore, seek to perpetuate the status quo of political power in the four devastated nations of Indochina. The administration will camouflage military aid in the form of advisers or humanitarian relief. In addition, the Pentagon and the administration will continue to give away vast millions of dollars in equipment or personnel.

What would happen if the United States insisted that any further aid to President Thieu would be conditioned upon that public official making available in his country those basic liberties inherent in a free society? More specifically what would happen if the United States demanded that President Thieu offer a fair and impartial hearing to the 200,000 political prisoners now being detained only because of their political convictions? When I asked these questions of State Department officials in Saigon and in Washington 3½ years ago, they offered the ridiculous reply that the United States would not be justified in so invading the domestic issues involved in the nation of one of its allies. That I suppose is the answer that this administration would give at this time.

If this Congress is to give nonmilitary aid to South Vietnam, I hope that we will insist in the law granting such aid that the assistance will be given only on the condition that no persons are placed in jail or retained in prison simply, because of their political convictions. The Congress of the United States could fashion an amendment to a bill along the lines of the conditions precedent in the Jackson-Vanik amendment designed to withhold the status of a most favored nation from Russia until the U.S.S.R. eliminates the exorbitant fees which it charges for Soviet Jews who desire to emigrate.

The cease-fire agreement signed by the United States gives President Thieu almost a blank check to demand renewed American bombing. Obviously the decision has been made by the Nixon administration to keep U.S. air power in Indochina for at least a few more years. During this period President Thieu can wipe out his domestic opposition while the United States keeps the military balance in his favor. This strategy is designed to accomplish what has been an obvious and consistent American aim since the Geneva Conference of 1954. In other words the Nixon administration is still out to win politically what they failed to win militarily.

The cease-fire, quite literally gives President Thieu more power than the Congress to decide when the United States shall be drawn back into the war again. The power of the Congress would be strengthened in this regard if the Church-Case amendment passed in the Senate and if the bill proposed by our colleague, Congressman JONATHAN BINGHAM, were enacted in the House.

The coming of President Thieu to the United States this week could well be the beginning of another Indochina war. This war will be waged by the Nixon administration to force the other side to accept the Thieu regime. We are back in 1954. There is, however, one difference: The Congress of the United States hopefully is able and willing to assert its power and to state that it will not permit the United States to attempt once again to solve a political problem by military means.

The Congress and the people of America have slept while the U.S. Government has given to President Thieu the fourth or fifth largest air force in the world. President Thieu can carry on the terror bombing which Vietnamese pilots have learned from their American advisers. But President Thieu cannot execute this new savagery if the U.S. Congress states today and every day during the visit to our Nation of this panhandler that we will no longer allow this self-appointed dictator to sabotage the hopes that we have for our people or to deceive this country to believe that the political regime which he has formed is worth a single more dollar of our investment.

Mr. BURTON. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I yield to the gentleman from California.

Mr. BURTON. Mr. Speaker, I would like to commend my distinguished colleague, the gentleman from Massachusetts, and associate myself with his remarks.

Ms. ABZUG. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I yield to the gentleman from New York.

Ms. ABZUG. Mr. Speaker, I want to compliment the Congressman from Massachusetts (Mr. DRINAN) for arranging this special order. I think perhaps that our joy at seeing the return of our prisoners and the beginnings of the end of this war has dulled our senses or our reactions.

Mr. Speaker, the Thieu regime has never been anything but the shadow of U.S. substance in South Vietnam. Now that our troops have been pulled out, what possible justification is there for the United States to continue military support for this regime?

Yet this week, Mr. Nixon is meeting with this dictator who has stripped his people of all civil rights, closed down the newspapers, warned foreign reporters they might be shot for exposés; who uses soldiers, civil servants, and public equipment to promote his own power, reelecting himself with no semblance of democratic process; who has put the army in control of every level of village adminis-

tration; is the man the administration asks us to support.

Recently, Dictator Thieu's shocking treatment of political prisoners has come to light in the report of two young Frenchmen, who themselves were imprisoned in South Vietnam for months. They report from firsthand experience the savage beatings, torture, mutilation, and killing of prisoners. Estimates of their number run from 150,000 to 300,000. They are not enemy soldiers, who are usually killed on capture. They are arrested in dragnet raids, Communist and non-Communist alike, Buddhist and Catholic, men, women, even children.

When the infamous tiger cages at Con Son were exposed by two U.S. Congressmen, we believed that the situation was remedied. On the contrary, the Navy Department recently gave a \$400,000 contract to a U.S. company to build new tiger cages, that former prisoners say are smaller and in every way worse. Human beings are jammed into cramped positions and left untended; if they complain, the guards throw blinding lime on them.

President Thieu has no intention of releasing these prisoners: they now understand his regime and might unite in a third force against him. Many are people whose views would be listened to with great respect. To avoid releasing them, the young Frenchmen say, he is now stepping up the frequency of executions and torture-deaths. He transfers prisoners far from their homes and labels them all as "criminal" rather than "political," to avoid compliance with the protocol on prisoners.

We are as horrified by these revelations as we are by the stories of returning prisoners of war relate. Torture cannot be condoned, wherever it appears. Certainly it cannot be continued with U.S. tax dollars.

Yet Mr. Nixon is proposing to give another \$4 billion in military assistance, direct and indirect, to this regime. Some of the money already spent there is disguised as aid for humanitarian reasons. Last year, my Committee on Government Operations held hearings and reported on U.S. assistance programs in Vietnam. Mr. CONYERS and I stated in our separate views that there was great discrepancy between the stated purpose of the Agency for International Development and the programs it finances in Vietnam. We said that—

A program that ignores and subverts its stated aims deserves no support from the U.S. Congress. Such is the case with the bulk of the USAID programs in South Vietnam. We should eliminate, certainly, all the police, the political, and the paramilitary aid; the economic aid, which is a very small part of what we are sending, should be channeled through international organizations. It requires a major rehauling of the whole AID program. As it is now, the Vietnamese hate us for our aid.

That statement is even more true today, when the hundreds of thousands of political prisoners, their families, and friends, know that the United States paid for the police force that arrested them and the prisons that contain them. They are still barbarously interrogated by in-

dividuals trained and advised by the U.S. Government. Due to public pressure, direct funding for police activity was ended on March 28; but it appears that the usual sleight-of-hand will enable Thieu to use unrestricted funds as he pleases.

Basically we must ask, "What is the purpose of the continuing commitment of this administration to the Thieu regime? Are we still clinging to a base of operations, if the President decides to resume bombing in North and South Vietnam?" He has repeatedly threatened to do so. And the Cambodian bombings continue, again without purpose or justification. Even the President's lawyers cannot come up with a convincing rationale for this continuing military operation, after all of our troops are out and a cease-fire agreement signed.

When the 93d Congress convened, I introduced H.R. 3578, a bill providing for an immediate halt to our bombing in Indochina and a cutoff of all military funds—including funds for Mr. Thieu and for civilians paid by the Department of Defense, or any other military or parliamentary personnel under the control or in the pay of the United States—which would cut off illegal activities of such agencies as the CIA and AID.

This, I believe, is the step we must take if we would respect the wishes of the American people, who want this war really ended. It is the step we must take to comply with article 9 of the peace agreement, which states that—

The South Vietnamese people's right to self determination is sacred, inalienable, and shall be respected by all countries.

Mr. SEIBERLING. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I would be happy to yield to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Speaker, on that score, I would like to add a little bit more to what the gentlewoman from New York said about the two young French schoolteachers who were here 2 weeks ago and who spoke to a group of us about the conditions that they met with in South Vietnam where they were prisoners of the Thieu regime.

Now, what was their offense? They were sent to Indochina, to Vietnam, under the French equivalent of our Peace Corps. They were teachers—one taught French, and the other mathematics—in a school there. They went there in 1968. Their names were Pierre Debris and Andre Menras. They were age 27 and 24, respectively.

Although they had no political preconceptions, after 2 years in Vietnam they were so repelled by the atrocities and the corruption of the Thieu regime that they unwisely, as it turned out, took part in one of the political demonstrations against the regime. They were immediately thrown in jail and subjected to unspeakable conditions, until finally the International Red Cross came in, and there was such a hue and cry raised in France that the regime finally, in December 1972, released them and they were sent back to France.

Now, they spoke of some of the condi-

tions that they witnessed with their own eyes, and I want to dilate on that, if I may, for just a minute.

Mr. Speaker, we have all been outraged, and rightly so, at the stories of the atrocities and the acts of torture that were committed against our POW's by the people who were put in charge of them in North Vietnam. There can be no excuse for that kind of treatment of prisoners of war, or any other prisoners, by any regime that lays any claim to respect on the part of mankind.

Unfortunately, however, our own country's position against such atrocities has been undermined by the aid and support that we are giving to the very same kind of oppression on the part of the Thieu regime.

The two young Frenchmen International were themselves placed in leg irons, beaten so badly they have permanent scars, made to live in unspeakable conditions. But their treatment was mild compared to that imposed on Vietnamese prisoners.

Mr. Speaker, let me just read to you a description that these two young Frenchmen made of the day of the last Tet holiday, when for the day the prison that they were located in were allowed to come out of the cages and down into the yard to celebrate the holiday.

They said:

These were political prisoners who had been brought back from the tiger cages in Poulo Condor.

Normally, they were never allowed to go out into the sunlight; but were kept in solitary confinement, in cells without windows or light. But that day, the first day of Tet, they could come down into the prison yard. So we saw, the whole jail saw, for the first time these hundred prisoners from the tiger cages.

And in what condition! They had to crawl down, because they couldn't walk anymore; their knees had been broken. They dragged themselves along the ground with little wooden benches they had made. In the sun they had to close their eyes completely because they'd been blinded from so many years of darkness. Their faces were haggard and lined, their bodies gaunt and emaciated. They were wearing tattered prison uniforms, the standard black pajamas.

Now, Mr. Speaker, they went on to point out that they had seen these cages and talked to the prisoners that were in them. The cages were too low for the prisoners to stand up. They put 3 to 5 in each one, so there was not enough room for them to sleep. They had to take turns lying down while the others crouched. The cages were completely dark rooms, without ventilation. Most of those who managed to live through the experience were completely blind afterwards.

Now, the significant thing, Mr. Speaker, is that these cages were being built with dollars supplied by the United States of America and, furthermore, more cages, as the gentlewoman from New York has pointed out, are being built with American dollars, \$400,000 worth, by American contractors, according to a report published by the House Committee on Government Operations last October.

Mr. Speaker, these two French gentlemen went on and made a lot of other statements describing the tortures and

the privation and the violation of all sorts of human decency by the regime against prisoners, political and otherwise.

The sad thing is that between 1967 and 1972, according to the U.S. Agency for International Development, the United States has spent \$77,800,000 to support the police and jail systems of the Thieu regime.

That is not counting other forms of economic support and support coming through the defense assistance program.

I am now looking at the AID congressional presentation for the fiscal year 1973. I find there is an additional amount of approximately \$11 million for this fiscal year, 1973, and it is expected that by the time the program is completed, we will have spent in AID funds alone \$103,472,000 to support this type of activity on the part of the Thieu regime.

Mr. Speaker, I would like to mention one other thing. Last fall the House Committee on Government Operations made a study of the U.S. assistance programs in Vietnam. One of the things they brought out was that we were supporting the international police force in Vietnam and the police telecommunications system and "support for Government of Vietnam corrections centers." The AID personnel were interrogated as to the need to expand the capacity for existing prisons in Vietnam and the need for U.S. support.

Mr. Nooter, who was the representative of AID in charge of the programs, said:

It is our objective in the AID program to help the police force and the corrections centers to run both more efficient and more humane operations.

Mr. Speaker, our Government has the power to shut down the Government of South Vietnam tomorrow. With a snap of the fingers, we can demand that the Thieu regime create humane conditions or else they will receive no more U.S. economic support. Yet we have not done so.

I might add that of the total amount of money that has been spent up to now and is projected to be spent for all public assistance, the \$103 million I talked about before, \$1,918,000 is projected to support improvements in the Vietnam prison conditions. All I can say is this is a poor record for us to face the world with, and it is time we did something about it.

Mr. DRINAN. I thank the gentleman from Ohio, and I am now happy to yield to the gentleman from California.

Mr. WALDIE. I thank the gentleman for yielding.

On the very issue that the gentleman from Ohio is relating to, it might be useful if I recount some personal experiences I had when I visited Vietnam in 1971 with Congressman McCloskey.

During that trip I selected as my own area of interest the Phoenix program. When the final history of American involvement in Vietnam is ultimately revealed, our participation in the Phoenix program may end up to be one of the saddest and blackest and most shameful events in which we have participated in that sad and unhappy country.

As a brief measure of the extent of our participation I have in my files a di-

rective from the Military Assistance Command in Vietnam, in Saigon, that was directed to all American military personnel who are engaged in the Phoenix program.

Although I do not have it before me as I speak, the most startling phrase in that directive was to the effect, "You are hereby directed not to engage further in assassinations." An incredible statement contained in the directive from the highest military command in South Vietnam to American military personnel that from that date forward you are not to engage in assassinations in implementing the objective of the Phoenix program. I think that is a fair indication of the nature of the program that we have in fact established to leave for the South Vietnamese as we depart their country. The Phoenix program was designed by American personnel and initially was staffed by American personnel. When I was there in 1971, although it took a while to penetrate the cover, the essential component of the Phoenix program was the interrogation centers located in every Province to which prisoners who were picked up in the nets that were operating for the Phoenix program would be taken for interrogation.

These Province interrogation centers were built by the American Central Intelligence Agency. Even in 1971, the American advisors to the South Vietnamese personnel that were operating the interrogation centers at the Province levels for the Phoenix program were in fact employed by the CIA. And that issue is not in doubt, that issue is clear, and it is correct.

The Phoenix program in the literature that the American personnel developed to leave with the South Vietnamese who were to man the Phoenix program says that its primary objective is to root out the Vietcong infrastructure and its secondary objective is to prepare the country—and this is almost a literal translation of this document—for the political struggle that is impending at the conclusion of military hostilities and, therefore, it was assigned by American authorities in 1971 as the primary pacification program with the highest priority in South Vietnam—to prepare the country for the political struggle that would ensue at the conclusion of military hostilities.

Now, what type of preparation were they seeking to prepare the country for the political struggle? The type of preparation that the Phoenix program embodied was that the South Vietnamese who would be picked up by the South Vietnamese police, whether they be local or national police—although literally there are no local police, it is entirely a national police system—would be categorized in three categories. Category A—and those would be dead, because they would be killed or assassinated. Category B, which were the lower level Vietcong leaders identified as such by people in the community organization and, most troublesome of all, category C. Category C as identified in the manual prepared by American personnel and distributed to South Vietnamese personnel who would be running the Phoenix program, was identified as a person who

would, in order to fit into category C, be a person who was described as one who would stand aside from the rest of the village and engage in conversations with one or two people, someone who by their suspicious demeanor you could tell were disloyal to the government. In short, anyone—and I am paraphrasing now my own words—in short, anyone whom the government felt may be a trouble in the political struggle to come.

What happens to these people once they are identified as category A, B or C? If they are identified as category A they are killed. If they are in the B category, they go to the tiger cages. There are no trials in the Phoenix program. You do not have trials in the Phoenix program. You have no representation, no public confrontation by witnesses or accusers. The accused is not even permitted to come before the people who judge his guilt or innocence—and it is usually guilt. Category C people do not go to the tiger cages, they are not killed, they are put in detention camps, and they are held there for periods up to about 6 months, usually, sometimes up to a year, but generally up to 6 months.

What really happens to a poor soul who is picked up in this dragnet under the Phoenix program and labeled a category C detainee is if he is held for only a few weeks, the message is very clear:

You are now in our dossiers. You have been pointed out as one disloyal to the Government, and if you are to be free from this sort of situation, you had better be supportive of the Government.

Category C has, by far, the largest number of detainees. Category C is the evil of the Phoenix program. It also is the means by which the primary objective of pacification during the 1971-72 years was to be attained, and that primary objective was to prepare the country for the political struggle to ensue at the conclusion of military hostilities. That gives an absolute lie to any possible contention that self-determination of the South Vietnamese people could ever become a reality. When we have set up the program, developed the manuals, and trained the people, to assure that in fact no honest self-determination, no honest political decision can be made at the termination of hostilities, that, if the gentleman will permit me to conclude, is in my view one of the saddest involvements of American knowledge, American power, and American immorality that will result as far as the full history of our involvement in Vietnam is concerned.

For those who believe there will ever be an honest political decision made in South Vietnam. I can only suggest to them they are being greatly misled. It was never our Nation's leader's intention that an honest political decision be made by the South Vietnamese, and it will never be permitted to be made by either our present leaders or our clients who are in power in South Vietnam now.

I thank the gentleman for yielding.

Mr. DRINAN. I thank the gentleman for his remarks.

It is my intention to file as soon as possible a bill which will provide that if this country is going to give nonmilitary

aid to South Vietnam, then we must insist that such assistance will be given only on the condition that no person may be placed in jail or retained in jail or otherwise deprived of any of his rights simply because of his political convictions. The Congress could fashion an amendment to a bill along the lines of the conditions precedent in the Jackson-Vanik amendment. That amendment is designed to withhold the status of the most favored nation from Russia until or unless the U.S.S.R. eliminates the exorbitant fees which it charges for Soviet Jews who desire to emigrate. The least we can do to protect the political prisoners of South Vietnam is to insist upon the incorporation of such a proviso in a bill that would give nonmilitary aid.

The cease-fire agreement signed by the United States gives, I am afraid, to President Thieu almost a blank check to demand renewed American bombing.

Mr. BINGHAM. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I yield to the gentleman from New York.

Mr. BINGHAM. First of all, I thank the gentleman for yielding. I want to compliment him on arranging for this special order.

I think it is appropriate that we here in the Congress protest the reception, the official top-level reception, that is being given today to President Thieu.

As the gentleman has pointed out, he is anything but a leader who should be given the accolade of a leader of the free world. He is a general who has presided over a dictatorship now these many years and who has no intention, as other speakers have pointed out, of allowing true self-determination in South Vietnam.

I should also like to compliment the gentleman from Ohio on his statement about the treatment of the political prisoners in South Vietnam. As he said, one of the aspects of this tragic situation is that it makes it virtually impossible for us as Americans effectively to protest the treatment that was accorded to our prisoners of war in North Vietnam, as recently reported by many of those returnees.

I do have a question that I should like to discuss with the gentleman about the statement that he has just made in that the cease-fire agreement signed by the United States gives President Thieu almost a blank check to demand renewed American bombing.

Frankly I do not read the agreement that way. I think that the agreement to the extent it speaks at all of the enforcement of those provisions seems to call for some kind of vague international sanctions, some sort of international agreement, an international commission, and so on. I do not feel that there is anything in the agreement which would in any way justify the United States renewing hostilities in Indochina.

As the gentleman has kindly remarked, I am the principal sponsor in the House of a bill which would make that impossible without official congressional approval, and recently the gentleman has joined me and others in urging that there be hearings on that legisla-

tion and other legislation in the House Foreign Affairs Committee, but even absent that legislation I see no justification, legal or otherwise, for the President to renew hostilities, and I certainly do not find it in the terms of the agreement.

This agreement has some good terms in it. Among other things it has in it the requirement that the parties in South Vietnam establish democratic freedoms. I think much of what the gentleman has said here today and as has been said by others indicates that aspect of the agreement has been grossly violated already by the Government of South Vietnam, but that is a pretty good provision that is in the agreement. There are other good things in the agreement.

I hope the gentleman would agree with me that there is really nothing legitimately in the text of that agreement that would give Thieu or anyone else the right to call on the United States to come back in regardless of what North Vietnam does.

Mr. DRINAN. I would agree with the gentleman, whose knowledge of that legislation is of course greater than mine. I would say that President Thieu "almost" has a blank check. I hope the gentleman is correct and if the Bingham legislation or something similar passes I hope it would eliminate that as a possibility.

Mr. BINGHAM. If I might, I would say I know for myself and others on the Foreign Affairs Committee, we will be going over with a very careful eye the request the administration may make—they have not submitted their request yet—for the aid program to be carried out in Vietnam, both South and North, if such proposal is made. Certainly I would agree that there should be conditions imposed that the aid not be misused, as it has been in the past, as the gentleman suggests. I think it is imperative we see to it that our aid, if indeed it is to be extended at all, is to be extended for legitimate constructive purposes.

I am disturbed by the fact that the President's budget for 1974 includes an item of \$1.7 billion for military assistance to South Vietnam and this in a time which is supposed to be an era of peace. I, for one, will certainly try to see that aid is eliminated from the authorization bill or any legislation that this Congress will enact. I am sure the gentleman will agree with me on that.

I have further remarks to make, but in the interest of time I will ask unanimous consent to revise and extend my remarks.

We must now recognize, Mr. Speaker, that short of recommitting our ground and air combat forces to Vietnam, we will have quite limited power to enforce the terms of the peace agreement that has enabled us at least to extricate ourselves. That is as it should be. Many of the terms that remain to be implemented have to do with settling the very same disputes between North and South that first got us into Vietnam. It was a mistake for us to have intervened militarily to try to settle those disputes then, and it would be a mistake for us to intervene militarily again now.

Possible future financial assistance to Vietnam, both North and South, raises

the prospect that we may continue to have some influence on the policies particularly of the government in the south, and it is incumbent on the Congress to assure that that influence is employed not to meddle further in the internal political affairs of Vietnam, but rather try to assure within our limited influence adherence to internationally accepted standards of humanitarianism and political freedom.

Reports from South Vietnam on the number of civilian prisoners being held and the treatment being given them by the Saigon government, as well as the reports of our own released prisoners of war, indicate that neither the north nor the south is adhering to such international standards. In the case of the South Vietnamese, at least some of the prisoners being held are innocent children. The conditions of imprisonment in many instances are brutal.

Mr. Speaker, a report of the House Foreign Affairs Committee, of which I am a member, contained detailed descriptions of the treatment accorded political prisoners by the Saigon government. That report, issued in the last Congress, was based on eyewitness accounts of several members of the committee. There is little doubt that such treatment and widespread imprisonment of civilians, is continuing in the south.

The proposals for U.S. assistance to North and South Vietnam will come before the Foreign Affairs Committee as soon as they are submitted by the President. I have no doubt that, under the able leadership of the chairman of our committee, the gentleman from Pennsylvania (Mr. MORGAN), the committee will give long and careful scrutiny to those proposals and that extensive hearings will be held. I certainly intend, Mr. Speaker, in the course of those hearings, to raise many questions and probe deeply into the matter of South Vietnamese activities and policies with regard to political prisoners. My purpose in doing so will be to seek to assure, through an appropriate amendment to the legislation if necessary, that no American funds or other assistance to Vietnam in any way supports or contributes to the continued imprisonment and brutal treatment of Vietnamese civilians whose only crime, if any, has been to express political views that are unpopular with the Thieu regime.

Mr. SEIBERLING. Mr. Speaker, will the gentleman yield if he is interested in an extension of this discussion?

Mr. DRINAN. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Speaker, it would seem to me that the effect of this state visit by President Thieu is that the President of the United States seems to be embracing the Government of South Vietnam and underwriting in effect our continued commitment to that government. This was the same mistake that Lyndon Johnson made when he embraced President Ky and it just got us in deeper.

I thought one of the virtues of the peace agreement was that we now had a graceful way of extricating ourselves from further involvement in the Government of South Vietnam. I would like

to ask the distinguished gentleman if he agrees with that position.

Mr. DRINAN. I agree thoroughly. One of the reasons I called this special order is to discuss what may well be another Black Monday.

Mr. BROWN of California. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I yield to the gentleman from California (Mr. BROWN).

Mr. BROWN of California. Mr. Speaker, many years ago the President of South Vietnam came to America and was hailed as a man history would judge one of the great figures of the 20th century. Unfortunately, history instead considers this man a psychotic, petty tyrant, whose ruinous policies led to the Vietnamese war. This Winston Churchill of Asia was Ngo Dinh Diem.

Today America is welcoming another Vietnamese President, Nguyen Van Thieu. Already Mr. AGNEW has trumpeted him as a distinguished, decent man, a patriot and a scholar. Perhaps history will also erode Mr. AGNEW's fine words.

In President Thieu's kind of democracy, what is good for Mr. Thieu is good for the country. Likewise, what is not good for Mr. Thieu is not good for the country.

A critical press is not good for Mr. Thieu. So this means there is no freedom of the press. Mr. Thieu required newspapers to post an exorbitant bond as security against fines. Since only the wealthy, progovernment papers could afford this bond there is no more opposition press.

Since Mr. Thieu equates his own regime with anticommunism, to make a speech critical of President Thieu is to undermine the resolution of the people's will against communism. The speaker will find himself in jail.

There is no freedom of assembly. An antigovernment demonstration also weakens the people's will, so there are no legal demonstrations.

There is no right to a trial—fair or unfair. Under Thieu law a person considered dangerous can be placed in prison for 2 years without a warrant or a trial. And that sentence is renewable until the man dies.

For the good of Mr. Thieu one must not practice any religion that holds as a commandment "Thou shalt not kill." There is no pacifism in Vietnam. In Government Newspeak, pacifism is neutralism, and neutralism is communism. Mahatma Gandhi, Martin Luther King, and Jesus Christ would all be in prison or dead with bullets in their brains if they were born in Vietnam.

But South Vietnam is a democracy, and it does have elections. However, when Mr. Thieu holds an election, he outlaws or arrests his main opponents. He does try to leave a dummy candidate or two to keep the White House happy, but in 1971 he could not even do that.

He keeps from voting anyone who has expressed sentiments against his government, or anyone who has someone in his family who has done the same. Or anyone who has spoken for peace or neutrality.

And when it comes to election day, it is

one thing to vote in secret, but to have your own men count the votes in secret?

Even at that he only received 34 percent of the vote in 1967. But Thieu knew all along he would only need a plurality to win. After all, he wrote the election law.

Mr. Speaker, I have been flippant with Mr. Thieu, and I believe the whole world would be flippant with this man if it were not for the fact that he has bought himself respect with the blood of more than a quarter million Americans, and a million of his countrymen.

And now that the conflict is slowing down, Mr. Thieu is buying his respect with the bodies of 200,000 men, women, and children he keeps locked away as political prisoners.

Admittedly some of these prisoners can bribe their way to luxury status behind bars. But for most it means torture, beatings and mutilation. It means a state of constant deprivation.

It is just becoming known the torture our own men were put to. But horror and anger at this criminal, and wanton mistreatment, should not be used as an excuse to turn away from what is being done in South Vietnam today.

The horrors of the Con Son tiger cages, where men drank their own urine for liquid, is well known. The methods of torture still in use throughout government prisons should be known as well: Simple beatings, electric shocks applied to the genitals, pins driven into the fingers, liquid mixtures consisting of lime forced down the throat. This is not pleasant, nor is it all. But the most important thing to understand is that President Thieu could stop it tomorrow if he wished.

But he has no desire to do so. Instead he is subverting the peace agreement in order to keep these people in prison. Thousands of prisoners, arrested on charges of a political nature are being reclassified as common criminals. As such they need not be released, now that the war is officially over. President Thieu wants these prisoners safely tucked away in prisons when time for the next election comes around.

But why talk about political prisoners? There are political prisoners across the globe. Is not that, regrettably perhaps, an internal affair that is none of our business? In this case, no. These people are rotting away in prisons built with American dollars by American technicians and with American material. They are staffed by personnel paid for with American tax moneys.

Mr. Thieu has come to America for more money. If we give him this money without a demand that his Stalinist-style politics halt, we will become accessories once again to this man's crimes.

At a time when America is rejoicing over the release of 600 countrymen, it indeed will be a shame to rise up and honor a man responsible for the imprisonment of 200,000 others.

I would like to insert in the RECORD at this point an article entitled "The Treaty and Thieu" from a document by the Indochina Resource Center, Vietnam: What Kind of Peace?

The article follows:

THE TREATY AND THIEU

THIEU BANS PRG POLITICAL ACTIVITY

Even before the treaty was signed, Thieu had issued orders to his army and police forces which in effect forbade any kind of political activity by the PRG. These orders, and many of the laws, edicts and even the constitution of the Saigon government, forbade the very kind of political contest spelled out by the Paris Agreement.

Only days before the public announcement of the cease-fire, Thieu reiterated his longstanding ban on any pro-Communist or neutralist activity. In spite of the fact that the new agreement guarantees freedom of speech, meeting and organization, Thieu's laws forbid such acts as distributing "Communist" leaflets, displaying the PRG flag, or organizing public meetings or demonstrations in favor of any political force other than Thieu. Anyone found organizing villagers to return to their native villages, in short, anyone found informing refugees of their rights under the Paris Agreement to "freedom of movement" or "freedom of residence," will be shot, according to Saigon newspapers quoting official Saigon sources (Wash. Post, Jan. 23, 1973). Refugees who attempt to return to their villages will be arrested. And although the treaty guarantees freedom of the press, strict Saigon government censors will continue to white out areas of newspapers that will be considered "dangerous to the national security."

Editors of newspapers will be confiscated, severely fined or closed down for similar violations of Saigon laws. Writers will be arrested if they write articles or books that are viewed as a challenge to Thieu's manner of governing. As a most recent example, on January 19 four Catholic priests were sentenced in Saigon to five years in prison and were fined VN\$300,000 each for publishing a paper entitled "Justice in the World," which they had presented at a recent Southeast Asian Bishops' Conference.

THIEU'S REPRESSION

During the five and a half years that Thieu has been president of the Saigon government, he and his police forces have relied on widespread and often indiscriminate political arrests to maintain the survival of his regime. Mass arrests followed the Tet Offensive of 1968 and the Cambodian invasion of 1970. Students and others were arrested by the thousands in the weeks that preceded Thieu's one-man election in October, 1971. In the wake of the Spring Offensive of 1972 thousands more were arrested. Under South Vietnamese law, persons can be detained without benefit of trial or lawyer for a period of up to two years, which can be renewed at two year intervals.

As news of the cease-fire approached, in particular in the period after the announcement of the draft agreement in October, the number of arrests increased sharply. Hoang Duc Nha, Thieu's nephew and closest advisor, announced on November 8, 1972 that the Thieu government had arrested or killed 50,000 "Communist civilian and military cadre" since October 31, 1972 (CBS News, November 9, 1972).

THIEU'S POLITICAL PRISONERS

As Hanoi and the PRG pressed for the release of these political prisoners through the months of November and December, they charged that Thieu had a "security plan" to assassinate the political detainees as well as suppress democratic freedoms in case of a signing of a cease-fire agreement.

The charges of Hanoi and the PRG were soon given corroboration by reports that appeared in the Western press. Two Frenchmen who had just been released from Thieu's Chi Hoa prison near Saigon returned to Paris and were quoted by Agence France Presse on January 2, 1973 as saying that "South Vietnamese authorities were reclassifying political prisoners as common prisoners to avoid releasing them when a cease-fire comes into force." Reports smuggled out of Saigon's prisons and published by Dispatch News Service reported that many political prisoners were being shifted to other prisons in an effort to hide them, and that in some cases prison authorities were inciting the common-law prisoners "to provoke, sometimes kill political prisoners." George MacArthur of the Los Angeles Times reported on January 1 that U.S. official sources confirmed to him that "Thieu has ordered the arrest and 'neutralization' of thousands of people in the event that cease-fire negotiations with Hanoi are successful. . . . The term 'neutralization' can mean anything from covert execution to a brief period in detention." And the Washington Post reported on January 18 that "President Thieu has given his province chiefs wide latitude to make political arrests after the coming cease-fire and has also empowered them to 'shoot troublemakers' on the spot." In addition, the Post reported, "Those arrested are to be charged with common crimes instead of political ones," so that the prisoners will not fall into the category of political prisoner, whose release is provided for in the Agreement. To handle the new arrests Thieu has reportedly embarked on a crash program to increase his police force from its present level of 122,000 to 300,000 (Le Monde, Sept. 8, 1972).

The Paris Agreement calls for the release of "Vietnamese civilian personnel captured and detained in South Vietnam" and admonishes Saigon and the PRG merely "to do their utmost to resolve this question within ninety days after the cease-fire comes into effect." This weak wording of the text of the Agreement hardly ensures that the prisoners will be freed in the suggested time framework.

Thieu has made it no secret that he plans to avoid the release of all the political prisoners. To Thieu the prisoners are a political threat which he can best handle by keeping them in jail. Thieu claims to hold only two political prisoners, although the PRG asserts that he holds 300,000 in his jails.

On February 5, the Thieu government reported that it had released 10,000 to 20,000 political prisoners, adding further confusion to the earlier Saigon claim to hold only two. The Saigon report added further that "those freed had been designated 'New Life Cadres,' meaning that while in captivity they renounced the Communist cause and pledged to support the Saigon government." (NY Times, Feb. 6, 1973) Those released, therefore, are considered to represent no threat to Thieu.

The Agreement is explicit in protecting prisoners "against all violence to life and person, in particular against murder in any form, mutilation, torture and cruel treatment, and outrages against personal dignity." But torture has been common in Thieu's prisons and interrogation centers, and has continued in spite of the international furor that arose following revelation of the "tiger cages" in 1970.

In spite of his recalcitrance, Thieu will be faced with pressures to release the political prisoners. The Two-Party Joint Military Commissions provided for in the Agreement are charged with arranging for these prisoners' release. The commissions are to exchange lists of the civilian detainees within fifteen days of the cease-fire and are physically to observe return of the prisoners. Two or more "national Red Cross societies" shall be designated, if Saigon and the PRG can agree, to visit the political prisoners and "contribute to improving the living conditions of the captured and detained." There will be seven teams, or a total of 56 members, of the ICRC who will visit each place of detention and release of the political prisoners, if Saigon and the PRG can agree on arrangements for these visits.

In obtaining the release of the political prisoners, world opinion will play an important role. Already, Amnesty International and other groups have launched campaigns for the prisoners' release. Furthermore, as the cease-fire goes from weeks into months, families with sons, daughters, fathers, nephews and nieces in jail will try again and again to obtain their lease.

In all likelihood, the PRG will appoint to the third component of the National Council neutralists who are now in jail. If Saigon refuses to release these prisoners it will hold up the functioning of the National Council and draw international attention to the whole political prisoner issue. On the other hand, if Thieu complies and releases these jailed neutralists, they will be powerful spokespersons in the highly visible arena of the National Council to press for the release of the other prisoners.

The neutralists, once successfully appointed to the Council, can be an important element in making the Council work. If they organize among themselves, they may be able to act as a buffer and mediator between Saigon and the PRG, and will be a strong force in stimulating the reconciliation and concord that is the very purpose of the National Council.

THIEU'S POLITICAL WEAKNESS

In preparation for the political struggle, Thieu has taken other drastic measures which he hopes will strengthen him in the post cease-fire period. But these measures are only more intense applications of measures that have failed in the past and, more importantly, reveal the nervous desperation of a regime all too conscious of its basic weakness.

Following soon on the decree made last August that abolished all hamlet and village elections, Thieu is now planning to place his own military officers in control of all hamlets and villages (Wash. Post, Nov. 18, 1972). The army would thus be in charge of every level of the Saigon government outside of Saigon itself, where former generals, like Thieu, are in charge. To the Saigon government, the only people they feel they can trust in the face of a challenge from the PRG, are their army officers.

If villagers' support for the Saigon government was weak when they elected their own officials, their support can hardly be expected to be more enthusiastic when they are under the surveillance of a totally unfamiliar army officer. Successive Saigon regimes have always been plagued by the problems that arise when government officers try to win support in an area where they are unfamiliar with the local dialect and customs and are easily branded as outsiders by the local villagers. The elitist and urban ways of the army officers are unlikely to sit well with the villagers, either.

By contrast, the army and political cadre of the PRG are mostly farmers themselves. They usually operate near the region of their origin where they are familiar with the countryside, the local dialect and other local cultural idiosyncracies. In many of the "Saigon-controlled" villages of South Vietnam the farmers and even some of the hamlet chiefs have associations with the PRG. Such a situation is no doubt what prompted Thieu to begin putting his own officers at the head of every hamlet. But these officers are unlikely to reverse this arrangement which has been going on for years. ARVN officers will see their loyalty to the central command above them much more than to the people in the hamlet. Popular alienation against these Saigon-appointed officers will only lead to further village cooperation with the PRG.

ELECTIONS

General elections are provided for in the Agreement. But the offices and bodies for which the voting will take place and the date of the elections are not specified. These

matters and other "procedures and modalities" are the responsibility of the three-part National Council.

Saigon and the PRG are unlikely to agree on these procedures and modalities, and the prospect of elections seems distant indeed. Saigon may offer to hold elections, but only within the framework of the present Saigon constitution under which the National Liberation Front functioning as a political party, and not the PRG functioning as a rival government, could participate in an election for the office of president. The PRG, on the other hand, noting the legendary unfairness of Saigon-organized elections in the past, will likely wish to hold elections for a new constitutional assembly which would write an entirely new constitution.

THIEU'S "DEMOCRATIC" PARTY

The strongest sign that Thieu expects elections to take place is his defensiveness in the face of that possibility. Thieu has formed his own political party, the Democratic Party, which he hopes will out-politic the PRG in any pre-election situation in the months ahead. Almost all army officers and civil servants right down to the hamlet level have been given the choice of joining the party or risking losing their jobs. Some officials report that they were "ordered" to join the party (*NY Times*, Nov. 18, 1972). The party claims nearly 200,000 registered members already (*Wash. Star-News*, Dec. 17, 1972).

To assure that its strength would not be weakened by the existence of other parties—there were twenty-four last year in Saigon—Thieu issued an edict on December 27, that effectively eliminates all political parties but is own. By the new edict any party that wishes to continue to exist must establish branches in every city and in at least a quarter of the villages in half of South Vietnam's 44 provinces. In addition, a party must win 20 percent of the total national vote cast for either house of the legislature and 25 percent of the presidential vote if that party wishes to put forth a presidential candidate. Thieu's new party is nothing more than an extension of his government. Like that government, it is coercive, urban and elitist. Saigon Deputy Tran Van Tuyen, leader of the opposition yet staunchly anti-communist, commented that Thieu's new political moves "will drive the people underground and into the Communist side" (*NY Times*, Dec. 29, 1972). In another interview he commented, "The majority of the people are looking for peace, and Thieu is the main obstacle to peace. Most people are looking for his departure" (*Christian Science Monitor*, Nov. 17, 1972).

To be sure, the PRG is in contact with those who are left out of Thieu's increasingly isolated political apparatus. And it won't be the first time the people joined the PRG because they saw no other acceptable political route.

THIEU'S INFORMATION CONTROL

In the months that follow, press coverage of Vietnam in the United States will decrease. With a smaller and less visible U.S. involvement, newspapers will judge the events in Vietnam to be of less interest to Americans. And the Thieu regime will be likely to refuse entrance visas to foreign correspondents if the turn of events worsens from their point of view, or if they have something to hide from the eyes of the rest of the world. Already, according to *Le Monde* (Nov. 16, 1972), "correspondents can only obtain visas that must be renewed each month (three months for bureau chiefs); some journalists have already been limited to renewing their visas every two weeks or even more often." And on January 29 when the first North Vietnamese and PRG delegations arrived in Saigon to take their places on the Joint Military Commissions, six U.S. reporters were arrested by Saigon police while covering the delegations' arrival. The PRG, on the other hand, will open up its areas and welcome foreign cor-

respondents. They will want to demythologize themselves, to show that they enjoy popular allegiance, control territory, and have a viable government in operation.

Thieu will want to control information disseminated to people in South Vietnam as well. He will suppress any mention of the PRG in order to deny any legitimacy to that government. But the people of South Vietnam will still be able to keep abreast of events by listening to the PRG radio and the Vietnamese-language broadcasts of such foreign stations as the BBC. In an ironic twist, many of the Sony transistor radios provided through previous American commodity import programs will serve to evade restrictions set forth by an American-imposed regime.

Mr. EDWARDS of California. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. I yield to the gentleman from California (Mr. EDWARDS).

Mr. EDWARDS of California. Mr. Speaker, I thank the gentleman for yielding.

I compliment the gentleman from Massachusetts for taking this time today for this very important message to the American people.

I would hope that many people are listening and will pay attention to what is said here today, because, as the gentleman from Massachusetts said earlier in his remarks, President Thieu is here in the United States on a panhandling expedition. He wants, according to the President's budget, \$1.7 billion in military assistance for next year, and in addition, another \$2 billion in economic assistance, which comes to somewhere around \$4 billion. That is money right out of the American taxpayer's pocket, and I think we ought to look at it very, very carefully.

I am not at all sure from my limited experience in being in Vietnam how well the money would be spent if it were authorized and appropriated by the Congress. I was in Vietnam in August 1971, and like the gentleman from California (Mr. WALDIE) wanted to visit some of the Operation Phoenix establishments. After a great deal of difficulty, I was finally permitted to visit one compound on the outskirts of Saigon. This compound consisted of 40 or 50 small cells where the prisoners had to sleep on the deck with a small hole in the center for sanitary facilities.

Each month, the Vietnamese who ran this particular operation were told by the Thieu government to meet a given quota of persons they had captured and who they had either incarcerated or put through a period of rehabilitation to make them better Vietnamese.

I visited an orphanage there, too. It was an orphanage of children with Vietnamese mothers and American GI fathers. It was a lovely place, run by two Australian nurses. However, I was surprised and shocked to find out, in talking with the nurses, that not one cent of American AID money was being spent there. All the money was contributed by the Australian nurses themselves, by local inhabitants, or, in some cases, by American GIs who would come occasionally to visit.

I thought then, as I think now, that if we are going to spend these billions of dollars General Thieu came over to get

on this trip which starts today—this "Black Monday" as described by the gentleman from Massachusetts—it should be spent on something really worthwhile, rather than, as in the past, lining the pockets of high-ranking officials of the Thieu regime. We do not need more U.S. money going into Swiss banks, buying estates on the Riviera for the retirement of South Vietnamese officials. That is historical. That is what has happened to American AID money in the past.

I should like to have someone explain to me, if we are to vote more money for South Vietnam, what safeguards there will be to prevent the continuing misuse of American tax dollars.

I hope the American people will observe and consider what transpires in the next several days. I believe, as a result of this visit, we are going to be asked in this Chamber to vote for a lot of money with no strings on it whatsoever.

I would think we should do what the gentleman from Massachusetts suggests with regard to strings on the money. For example, the International Red Cross should have total access to the 150,000 or 200,000 prisoners who are incarcerated under unspeakable circumstances in Saigon and elsewhere.

I believe we should also require audits and general reports to the American people. I know that I am not going to vote for any of it unless there are provisions for accounting and other safeguards attached to the bill so that I can be proud I voted for it, and not ashamed.

Mr. SEIBERLING. Mr. Speaker, will the gentleman yield?

Mr. DRINAN. Yes; I yield to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Speaker, I think we are all in the debt of the gentleman from Massachusetts (Mr. DRINAN) for taking this occasion to point out the very serious and possibly calamitous effects for our country of the visit, the very ill-advised visit, of General Thieu to the United States, and I wish personally to commend the gentleman for his efforts in this regard and say that I will be glad to support legislation of the type the gentleman has indicated he is going to prepare.

Mrs. SCROEDER. Mr. Speaker, I want to thank my colleague from Massachusetts for making available this opportunity to discuss the implications of our continued aid to the regime of South Vietnamese President Thieu. Gen. Edward G. Lansdale, speaking of an earlier U.S.-supported South Vietnamese Government, said:

I cannot truly sympathize with Americans who help promote a fascist state and then get angry when it doesn't act like a democracy.

The suppression of political liberties by the Thieu regime should make us question the propriety of continuing the massive aid which administrations past and present have deemed necessary to shore up his narrowly based and dictatorial government. This question is of particular concern at a time when the administration, in the name of fiscal responsibility, is imposing drastic cuts on our own domestic social welfare programs.

The occasion of President Thieu's current visit to the United States presents an opportunity for the administration at least to use its influence with Mr. Thieu to press for needed internal reforms in his government. One area which should be of especial concern to us all is the presence in South Vietnamese prisons of approximately 200,000 political prisoners. Most of these people are in prison simply because they dared to be critical of the policies of President Thieu. We should be concerned about their plight because the United States, through the USAID and the Department of Defense, has financed the construction of many of the prisons and continues to pay for their maintenance and to train and advise the police force which runs them.

Since the exposé of the subhuman conditions of the Con Son Island tiger cages in 1970, there have been increasing reports of the starvation, incredible tortures, and summary execution of political prisoners. While we abhor the sometimes brutal treatment of American POW's by the North Vietnamese and the Vietcong, we should in no way countenance or subsidize equally brutal acts by our ally.

We have also heard of the massive arrests, prior to the cease-fire agreement and after, of persons who might be sympathetic to an alternative government. Article 11 of the peace agreement specifically prohibits such acts of reprisal and calls for a guarantee of the democratic freedoms of speech, press, and political activity.

It is unconscionable that the United States can provide the financial support that enables President Thieu to carry out policies in direct contradiction to the principles for which this Nation stands. The cease-fire agreement is tenuous at best. It will certainly fail if the present regime in South Vietnam does not become more responsive to the needs of its people.

Mr. HARRINGTON. Mr. Speaker, it has been more than 2 months since the United States signed an agreement in Paris ending United States intervention in South Vietnam. Just last week, the last planeload of U.S. prisoners of war were released by the North Vietnamese and the PRG—provisional revolutionary government. Still, the involvement of our country is not yet concluded.

The United States is party to several commissions and conferences that seek to make the Paris agreement a reality. In addition, the United States has pledged itself to provide assistance for North and South Vietnam, as well as the other countries of Indochina.

With this dual responsibility, the people of the United States should now concern themselves with the fate of the many civilian prisoners held by the South Vietnamese Government.

The exact number of civilians held in South Vietnamese prisons is a matter of some dispute. The South Vietnamese Government reports that it has jailed 30,000 prisoners, while other estimates run as high as 400,000. Under the emergency powers assumed by President

Thieu on May 9, 1972, several sweeping and ambiguous decrees have been issued. For example:

Those persons considered dangerous to the national defense and public security may be interned in a prison or designated area or banished from designated areas for a maximum of two years which is renewable.

Another provision states that—shall be considered as pro-communist neutralist a person who commits acts of propaganda for incitement of neutralism. These acts are assimilated with the act of jeopardizing public safety.

Many people in this country are concerned about the prison conditions in South Vietnam. The exposure several years ago of the "tiger cages" has created good reason for concern. It is a sign of the severity of the problem that officials of the International Red Cross—the IRC—were told that they might inspect the prisons only in the company of a South Vietnamese Government official. Objecting to such intimidation, the IRC refused.

I received a letter from a constituent a month ago, similar to the many others that I have received, seeking information on the status of eight individuals believed to be held in South Vietnamese prisons. My office contacted the appropriate desk at the Vietnam Working Group at the U.S. Agency for International Development—USAID. My office was told that the request would be processed, and was told, further, that there had been many similar requests. Several weeks later, I received a reply. Mr. Speaker, I insert it in the RECORD:

DEPARTMENT OF STATE,

Washington, D.C., March 5, 1973.

HON. MICHAEL J. HARRINGTON,
House of Representatives,
Washington, D.C.

DEAR MR. HARRINGTON: I have received your letter regarding the concern of one of your constituents about a number of Vietnamese citizens.

The Agreement of January 27 specifically provides that the matter of South Vietnamese civilians detained in South Vietnamese jails should be resolved through negotiations between the South Vietnamese parties to that Agreement. Pending resolution of the problem, the Agreement provides that all those detained "shall be treated humanely at all times and in accordance with international practice." The Agreement further prescribes all forms of torture and cruel treatment and provides that those detained be given "adequate food, clothing, shelter, and the medical attention required for their state of health." The problem involves not only the prisoners held by the Government of the Republic of Viet-Nam but also the thousands of South Vietnamese civilians abducted by the other side during the course of the war. This issue is complicated and not readily susceptible to outside influence or solutions.

With regard to your constituent's inquiry on Vietnamese citizens, we do not feel it appropriate for the US Government to inject itself into matters that under the terms of the January 27 Agreement are now to be settled among the South Vietnamese themselves. Such inquiries should be directed to the Government of the Republic of Viet-Nam. However, recent charges of general repression, torture and mass incarceration of so-called "political prisoners" by Republic of Viet-Nam authorities have, as often in the past, proved grossly exaggerated.

Please continue to call upon me when-

ever you believe that we may be of assistance to you.

Sincerely yours,

MARSHALL WRIGHT,

Acting Assistant Secretary for Congressional Relations.

This response is unacceptable.

Because of U.S. involvement in the Vietnam war, because of U.S. political, military, and diplomatic support of the Thieu government, and because of, at least partial, U.S. funding of the police and prison network of South Vietnam—this problem is not an "internal" matter for the South Vietnamese alone. The various ways this country has supported and continues to support the South Vietnamese prisons and police should be brought to public attention.

First, the Public Safety Division of the USAID has provided funds for a whole range of security programs. Second, part of the foreign assistance authorization for South Vietnam is in the form of support assistance—a special category of aid that allows Government expenditures on items that cannot otherwise be afforded while maintaining the Military Establishment. Third, some members of the South Vietnamese police force are trained at the International Police Academy in Washington. Finally, it should be recognized that any foreign assistance—economic, military, support, even humanitarian—indirectly supports government operations by allowing the South Vietnamese to shift their own resources between whichever projects they consider most useful.

As a signer of the Paris Agreement on Ending the War and Restoring Peace in Vietnam and its attendant protocols, the United States has a responsibility to insure that South Vietnam fully meets the requirements regarding Vietnamese civilian prisoners. Further, it has been suggested that by supporting the imprisonment of these civilians, many of whom might constitute a viable, neutralist force, the United States may be violating the agreement which stipulates that—

Foreign countries shall not impose any political tendency or personality on the South Vietnamese people.

Two important issues are involved in the failure of the U.S. Government to accept and deal with the consequences of its policies and its refusal to provide requested information.

First, the U.S. Congress has the constitutional responsibility for the formulation of public policy and for legislative oversight. The President seeks not only to strip the Congress of its role in the former, but also to deny its role in the latter.

Second, the track record in humanitarian affairs of this country under the present administration has been a sorry one. While the Government has responded quickly and generously, as it should, to natural disasters, such as those in the Philippines and in Nicaragua, it has failed to respond to the political tragedies in Biafra and Bangladesh. The present state of affairs in South Vietnam is all the more intolerable because of the unbreakable link between the United States and South Vietnamese policy.

The administration must not be allowed to shirk its clear responsibility. The administration has the power to help persuade the Government of South Vietnam to release these prisoners or improve the conditions of the prisons. We in the Congress, if we will speak out, can help persuade the administration to exercise its influence in this direction. Therefore, I call upon the President of the United States to use his good offices to urge the Government of South Vietnam to release those political prisoners who are unjustly held and to improve the conditions of the prisons for others. And further, to insure that action is taken, the administration should press the South Vietnamese Government to allow inspection of its prisons by the International Red Cross.

Mr. METCALFE. Mr. Speaker, reports concerning political prisoners from individuals familiar with conditions in South Vietnam are very disquieting.

In 1969 a U.S. study team on religious and political freedom went to South Vietnam. The distinguished gentleman from Massachusetts who has arranged for this special order was a member of that group. The committee which sponsored that group defined the objectives of the group as:

First they will seek to identify the variety of religious forces in South Vietnam and the range of political expression existing there. They will seek to investigate the situation of religious groups and the extent of the imprisonment of leaders of nonaligned groups who represent potentially important political sentiment. . . . Second, the team will seek to investigate the situation of all prisoners in South Vietnam.

The findings of this group in 1969 indicated that many thousands of persons arrested in South Vietnam were denied procedural protection. This study team further stated that repression was pervasive and brutal. The report continues that—

The large majority of those imprisoned in South Vietnam are held because they oppose the government; they are "political prisoners."

Toward the end of the report we note that—

The Study Team has reached the conclusion that the Thieu-Ky Government has, through the extensive and increasing use of the extra-constitutional military Field Courts imprisoned thousands of persons without the most fundamental element of a fair hearing and, in a shocking number of instances, without even apprising the imprisoned persons of the charges against them.

Reports in the New York Times for November 3, 1972, quote Sean McBride, chairman of Amnesty International and former Prime Minister of Ireland, who estimated the number of political prisoners in Indochina at 200,000. Most of these he said were held by the Government of South Vietnam.

The Department of State in July 1971 conceded that the number of persons confined for political reasons is small. The fact is that prisoners are confined for political reasons. I strongly urge the President to discuss this issue with the South Vietnamese President during his visit to this country and to ask the Presi-

dent to guarantee the right of trial and guarantee minimal care to these men.

We have committed men and financial support to this government. To ask the Government of South Vietnam to permit its citizens to exercise rights which the Constitution of South Vietnam provides is not to ask the impossible. It is consistent with the announced purpose of the American Government's involvement. To do less than protest the treatment of these political prisoners is to fail in our own commitment to international standards of law and justice. I strongly condemn the activities of a government which attempts to stifle ideas by force and is unwilling to test its own viability in a free exchange of ideas. I call upon the President of South Vietnam to commit himself to safeguard the rights of the citizens of his country.

Ms. HOLTZMAN. Mr. Speaker, the purpose of the meeting between President Nguyen Thieu of South Vietnam and President Nixon in San Clemente has not been fully explained by either government. Yet, one does not have to be a seer to know that Mr. Thieu is seeking assurances of American military support as well as additional economic assistance for his government.

However, Mr. Thieu should be made aware, and President Nixon should be reminded, that this country's military resources should not be recommitted to prop up the South Vietnam regime and certainly not by Executive fiat. Now that the last prisoner of war has come home and our military troops have been withdrawn, there is not one shred of constitutional authority remaining for the President to reintervene militarily in that country.

Nonetheless, the President seems intent to support Mr. Thieu. The President has conducted extensive daily bombing raids to protect the faltering Lon Nol government in Cambodia. The President also has warned that further violations of the cease-fire agreement will lead to renewed bombing of North Vietnam. Just yesterday Secretary of Defense Richardson suggested that the administration also would not rule out reminding the Haiphong harbor and "other military actions."

It is painful and tragic to remember that the war has cost Americans \$110 billion, the lives of over 45,000 fighting men, as well as the scarring of bodies and minds of many of those who served in Vietnam. We have also paid the price of a riotous inflation here at home.

If we cannot afford meat and we cannot afford full Federal commitments to the elderly, housing, education, and health care, then we cannot afford Mr. Thieu either.

And we should not support him. He came to power in an election that makes a mockery of that word. And he remains in power through the brutal confinement of thousands—perhaps hundreds of thousands—of political prisoners.

The cease-fire accords—under which our prisoners of war were returned—provide for the release of "Vietnamese civilian personnel captured and detained in South Vietnam"—Article 8. Yet, news re-

ports from South Vietnam estimate that up to 300,000 civilians have been imprisoned there for political reasons. They indicate also that the number of political arrests has increased substantially within the past year. There are also reports, from released prisoners, letters smuggled out of jails, and non-Communist politicians opposed to the Thieu regime of the unspeakable tortures these prisoners are suffering.

It is clearly the responsibility of the United States as a signatory of the cease-fire accords to press for the prompt release of political prisoners in South Vietnam. And our failure to seek their release would be a bitter comment on the sacrifices Americans have made to bring about freedom in that country.

GENERAL LEAVE

Mr. DRINAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

STEELE DECRIES JANE FONDA'S ATTACK ON U.S. POW'S

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. STEELE) is recognized for 5 minutes.

Mr. STEELE. Mr. Speaker, I would like to nominate Academy Award-winning actress Jane Fonda for a new award: the rottenest, most miserable performance by any one individual American in the history of our country.

Miss Fonda has said the returning U.S. prisoners of war are "hypocrites and liars."

She has never met the men she has branded, yet in a sweeping statement says they are "hypocrites and liars." Never met them. Never talked to them. Never asked what happened to them. Just branded them, "hypocrites and liars."

Our returned prisoners of war have served our Nation with honor and courage under the most difficult circumstances imaginable, and most Americans have been moved and appalled by their reports of mistreatment and torture.

Can this pampered, privileged young actress who influences so many of our young people be so egotistical and naive as to think that her brief guided tours of North Vietnam qualify her to speak with more authority on how our POW's were treated than the men themselves? Where does she get this colossal gall?

It is one thing to make these charges in a glamorous television studio. I wonder, though, if she would dare to make her charges to the faces of those men who were beaten with rifle butts in the jungle or to the captured airman who was tied down with wire while ants swarmed over his body until he thought he would be eaten alive? Or would she

dare to face the man who had a piece of iron slammed into his teeth so he could not scream while he was being tortured?

I would be more charitable to Miss Fonda then she has been to our returned men. I do not think she is a liar. I think she is a spoiled brat.

Jane Fonda's greatest performance lies ahead. Not in a motion picture where every word is scripted for her. Not in a press conference where her brattiness is gobbled up by the media. But in that confrontation where she says "Liar," and the accused POW tells her the truth.

If a camera could catch the look on her face it would win 10 Academy Awards.

It would also permanently etch on the public mind who is telling the truth.

Jane Fonda, you do not know what you are talking about. Fortunately, most Americans know this.

ONE'S RIGHT NOT TO PARTICIPATE IN ABORTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mrs. HECKLER) is recognized for 5 minutes.

Mrs. HECKLER of Massachusetts. Mr. Speaker, I have today introduced a bill aimed at respecting an individual's or a hospital's right not to participate in abortions, sterilizations, or related procedures if such procedure is contrary to the individual's moral code or the institution's traditional policy.

The bill extends beyond the terms of similar legislation (H.R. 4797) that I introduced earlier in this session. That bill, known as the Right of Conscience in Abortion Procedures Act, make Federal financial assistance to any hospital, clinic, or medical institution contingent upon proof that employees be allowed to decline participation in the procedure of abortion or the disposition of any aborted fetus. The bill was cosponsored by 44 of my colleagues, and has been referred to the Committee on Interstate and Foreign Commerce.

The legislation I propose today would broaden the scope of H.R. 4797; it incorporates features of a bill introduced in the Senate by Senator Church of Idaho, which was passed by that body, 92 to 1, as an amendment to the Public Health Service Act Extension of 1973 (S. 1136).

The expanded bill which I have proposed today retains the protective features of my initial bill. Hospitals or other health-care institutions shall be precluded from discriminating on the employment, promotion, extension of staff or other privileges—or termination of employment of any personnel—on the basis of their personal religious or moral convictions regarding abortions or sterilization or their participation in such procedures.

At the same time, the new legislation offers protection to the institutions themselves. There are many hospitals and similar facilities operated by dedicated devoted groups of individuals to whom the concept of interference with life is totally repugnant. The legislation that

I have introduced today would allow such institutions to post notice of their policy in a public place, and the eligibility of each such institution to apply for Federal financial assistance shall be in no way affected by such a policy.

While it might appear that hospitals are presently free to determine how their facilities are to be used, this is not presently the case. A Federal district court in Montana, in the case of Mike and Gloria Taylor against St. Vincent Hospital, issued a temporary injunction compelling a Catholic hospital, contrary to Catholic beliefs, to allow its facilities to be used for a sterilization operation. The court based its jurisdiction upon the fact that the hospital had received Hill-Burton funds. I might also point out that this decision was in no way related to the Supreme Court's holding in Roe against Wade.

A few points of fact are in order here: 19 percent of the Nation's hospitals are affiliated with one or another church. Of this 19 percent, 29 percent of the church-affiliated hospitals are Protestant, 64 percent are Catholic, 2 percent are Jewish, and 5 percent are of other religious denominations. This legislation, then, addresses itself to a distinct minority of our hospitals. With most of our hospitals not under church ownership, it is obvious that the legislation would in no way affect sterilization or abortions in publicly owned hospitals.

The bill does not establish any requirement on any hospital as to what it may or may not do. Rather, it is directed at what the Federal Government may or may not do.

It is a bill that protects the inalienable rights of conscience of a minority of those involved; and the right of conscience is part of our national tradition.

This is not a matter of concern to any one religious body to the exclusion of all others, or even to men who believe in a God to the exclusion of all others. It has been a traditional concept of our society that the right of conscience—like the right to life from which that conscience is derived—is sacred.

I urge my colleagues to support me on this matter, and welcome any and all who wish to cosponsor this legislation.

TRIBUTE TO EDWARD STEICHEN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. SARASIN) is recognized for 5 minutes.

Mr. SARASIN. Mr. Speaker, recently my district and the world were saddened by the passing of Mr. Edward Steichen of Redding, Conn., the great artist, photographer, and humanitarian.

Due to his distinction in his chosen field and the professional accomplishments known throughout the world, his death was noted and mourned here and abroad. There have been many accounts of his artistic triumphs, particularly his renowned "Family of Man" exhibition.

While these worldwide tributes were appropriate and well deserved, I would like to at this time offer for inclusion in the RECORD a different type of tribute to this exceptional man.

I, therefore, submit this editorial from the Danbury News-Times, a daily newspaper serving the area of my district in which Mr. Steichen long made his home, paying tribute to this outstanding man as a neighbor and friend.

EDWARD STEICHEN OF UMPAWAUG FARM

Edward Steichen, the noted photographer, had made his home in Redding for a little less than half his extraordinarily productive lifetime. Death came to him at his Redding home Sunday, less than 48 hours before he would have reached his 94th birthday.

The world knew him as the man who had made photography an art form, for his portraiture of the great in the arts, in business and in other fields in the early decades of this century, as Captain Steichen, the overall director of combat photography in the Navy during World War II, and as director of photography and mastermind of "The Family of Man" exhibition at the Museum of Modern Art in New York City.

Redding knew him as a good neighbor, interested in education, conservation and other matters bearing on the quality of life in his adopted town.

He established a plant breeding program, with emphasis on delphiniums, at Umpawaug Farm in West Redding back in the 1930s.

It was here also, close to the home he had designed, where he planted a shadblow, whose growth and flowering he captured on film to produce what has been described as a startlingly beautiful chronology of its moods and seasons.

A few years ago, he made 270 acres of his farm available for purchase by the town as open space, with another 140 acres acquired by Redding Open Land, Inc., to be preserved in its natural state.

Mr. Steichen's professional honors were many. So were the tributes from his own government and those of France and his native Luxembourg. But these probably meant less to him than the respect of his fellow townsmen in Redding. They looked upon him simply as a good neighbor and a good man.

THE ROLE OF CONGRESS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. McFALL) is recognized for 5 minutes.

Mr. McFALL. Mr. Speaker, at one of the recent Time, Inc.-sponsored symposia on "the Role of Congress" Dr. Nelson Polsby stated that Congress has the capacity to know whatever it needs to know. Reactions to his opinion that Congress has access to all necessary information on which to base sound legislative decisions made by distinguished Members of Congress Senator ROBERT PACKWOOD of Oregon, and MORRIS UDALL of Arizona and others are inserted below. Louis Banks of Time, Inc., was moderator:

Sen. PACKWOOD. To focus on the House of Representatives, don't forget Henry Clay left the Senate because he thought it was quite a stale and morbid place, ran for the House and on the first day he was elected Speaker of the House.

Mr. BANKS. It would never happen today.

Sen. PACKWOOD. That's correct.

Rep. UDALL. I ran for the Speaker of the House in 1969. I was 47 years old, at an age when many of my contemporaries were grandparents, and said if I would just be patient and sit around 15 or 20 years, I might be ready for leadership in the House. My God, you know this is the only institution

on earth where you can lead the youth rebellion, as I am accused of doing, at age 47.

Mr. BANKS. Let me ask you one, Dr. Polsby. I am surprised that you say that Congress knows enough to do what it's doing and everything is more or less all right. I remember a time in the mid '60s when Congress did not know what the Viet Nam War was costing. It was appropriating blindly, and at the same time was encouraged to enact large social welfare programs at the rate of \$25 billion a year. This is largely responsible for a good many of the problems we have around us now. Can you come up with some reassurance on that?

Dr. POLSBY. I thought what I said was that Congress has the capacity to know whatever it is they want to know. It seems to me I was giving a multi-syllabic version of Senator Packwood's speech, and I tried to give some examples of things they want to know, and therefore, do know.

There are other things obviously they don't want to know, and for good and sufficient reasons, I suppose. It was at those points it seems to me that some of us outside felt like putting a little heat on them. I am more or less in agreement with the premise of your question, but I don't think it contradicts anything I've said.

Mr. BANKS. All right. We'll invite questions from the audience. If you would just rise to the microphone behind you and state your name, sir, we will be off and running.

Mr. SALVATORI. My name is Henry Salvatori. I am very much interested in the discussion of this topic. I am amazed that no one has even mentioned what I consider to be the most important facet of the discussion. That is, whether a Congressman is not very much concerned about the knowledge he has, particularly on what his district is thinking. I can't conceive of a Congressman in a Catholic district, for example, who would vote for abortion, even if he had the facts proving that abortion is the thing to do.

It seems to me this is the crux of the matter. How can Congress rule with 435 people when each man has to be re-elected? Almost immediately after he's elected, election campaigning starts all over again. A Congressman must consider his constituents. He can't vote for something even though he thinks it's a good thing to do if his constituents are opposed to it. I would like to see some discussion of that problem.

Mr. BANKS. We will let Senator Packwood answer that one.

Sen. PACKWOOD. Mr. Salvatori, I didn't have a chance to meet you before and I appreciate the money you sent me in the 1968 campaign.

Rep. UDALL. I don't recall him on my list.

Sen. PACKWOOD. Your point is well taken, because as opposed to almost any European situation, we in Congress are geographically oriented. In England, you are assigned to whatever district the party wants you to run from, and you toe the party line, and to heck with the district.

On the other hand, I go back to Oregon time after time. But the system works because normally the total of our districts are so diverse that on any particular issue—you mentioned abortion—probably is not more than 20 or 25% of the districts where a person would absolutely vote the district regardless of the facts, regardless of conscience. There is still a majority of congressional districts and states where a particular vote is sufficiently unimportant that you can vote the way you think facts lead, rather than the way you think a particular district is oriented. But your point is well taken. All of us are quite oriented towards a geographic district when it is a matter of something that that district feels very strongly about.

Mr. SALVATORI. I would like to suggest that regarding the Tonkin Gulf Resolution, I doubt that any Congressman who had voted against that and then went back to his dis-

trict a year later, would get re-elected. This is the basic problem of Congressmen.

Rep. UDALL. I agree. My thesis earlier was that we would have been a lot better off as a country if we had had a big debate about Viet Nam before we slipped in, when we didn't have all the information we needed about the Gulf of Tonkin. There may be two ways to do it. One way unites the country and the other one doesn't. I think the point Bob Packwood is making is that there aren't 10 issues a year where the ordinary machinist, bricklayer or housewife in my district really is concerned. Abortion is one, and the war another. But these are the highly visible issues. The fact is this government is a huge government, there are little nooks and crannies of public policy that vitally affect people that the ordinary citizen doesn't know or care about. I worked on the Post Office Committee. There is hardly a person in the room that gives a damn about junk mail or slow mail service. I can do almost anything I want to on the realm of postal policy.

Teddy White, in his 1960 book, compare society to a wagon train moving across uncharted country. It struggles out over 100 or 200 miles and its advance stops without seeing the promised land. There are the hangers back, those that don't want to go on, and they stay where they are. Then there is the main body of troops. The job of the leader is to listen to all these, place himself a little forward of the main body where he can assess the advance reports from the scouts and yet not lose contact with what the people are thinking.

Mr. UNRUH. My name is Jess Unruh. I really think what is developing here is a gnatswattling situation. That comes from the saying that sometimes we are guilty of stalking gnats while bears are at large. I think that's where we really are now.

You know, as long as we have the kind of divided authority and fragmented authority that we have, what Mr. Salvatori says here is bound to happen. Each member of the opposition party is responsible not to a party, not to a central authority, not to someone with any kind of ongoing discipline whatsoever, except his district, and I think if you look back historically this is demonstrable. You will find that constantly the press worries about the party out of power. In 1965 the press was terribly worried that the Republican Party was not going to survive after the Johnson landslide. Now we are worried that the Democratic Party may not survive. I really don't think that any kind of doctrine, elimination of the seniority system or the centralization of authority in Congress going back to Joe Cannon or Thomas Brackett Reed or anyone else, is going to materially affect the situation there.

I think there are two things we probably ought to do:

One is, I think, that we should either be prepared to go to some sort of parliamentary system where there is some sort of central ongoing authority for the party out of power, so people have some chance of saying what the non-power party is. I think the U.S. Senate today is a disgrace. What is the Democratic Party? Is it George McGovern or Ed Muskie or Hubert Humphrey or Ted Kennedy or someone else? Really, there is no way of telling. The House is sort of inconsequential mainly because there aren't 435 Congressmen, there are 400 on business and 35 Congressmen, and most of the Congressmen are concerned with their casework to get elected again.

Either you go to a system where the opposition party has a focal point, someone or some group that speaks for the party as a whole, or else you continue to have this situation, and I think that is the choice that we have.

At the local level, I suggest the press is

probably the worst enemy we have in developing some sort of opposition to the party in power because they seem to be terribly afraid of any concentration in power. Anything that develops out of the Legislative Branch that looks like a concentration of power immediately gets press opposition to it. I think at the state level the first and most important thing we could do is to get rid of one house of the legislature. We ought to do that at the congressional level. I suggest that the ingrained traditions of America are too great to do that, but at the state level we can certainly do that. All the rest of it seems to be like swatting flies when we ought to be concerned about the huge mastodons that are pressuring our democratic Congress.

Mr. MACNEIL. You laid down a fascinating thesis; it's not a new one. Woodrow Wilson, as a young historian of federal government, in his book, *Congressional Government* in 1885, laid down much the same idea of establishing the parliamentary system. He had, however, made a slight error on the British Parliament. He had never seen it, he had only read about it. The same thing was true about Congress, he had never seen Congress.

It is a neat and tidy suggestion. But the whole question of who is the Senate—is it Ted Kennedy or Senator Packwood—or who is the Congress is not tidy, it's not that neat and it's not efficient. And it's not supposed to be. I think when we go to efficiency and economy in the Government, we run into areas that are not contemplated in the system. Earlier we were talking about the problem of parochialism in Congress. I don't think the members are as bad at representing the people as you suggest. Congressman Udall suggested very clearly a Congress in which members attend to their home ballistics, answer the mail, bring home a little bacon. His district will leave him alone on most of the questions across the board. The members of the Congress, those who care to be knowledgeable about it and gutsy about it, are free to act on the national interest and not on a parochial basis.

Mr. BANKS. Dr. Polsby, a moment on this.

Dr. POLSBY. I guess I will have to say that I am in favor of chasing real gnats rather than imaginary bears, and I regard the abolition of the U.S. House of Representatives as an imaginary bear. That is to say, I don't think that it is a likely alternative. I do think there's another point that ought to be made. I think we will find that if we asked members of the out party of most of the parliamentary systems of the world, we will discover that they are fairly dissatisfied too. And they just tend to have their scraps at party conferences; I know Democrats don't do that—

Rep. UDALL. Oh, no.

Dr. POLSBY.—except in Washington.

There is one other reason why I would personally like to see the U.S. House of Representatives survive for perhaps another season, and that's this:

Other than the fact that it gives employment to some quite outstanding public servants, the House of Representatives is the seat of more expertise about what is going on in government than any other place in the country outside of the Executive Branch itself. The House has got a powerful, terribly significant role to play in the process of checking and balancing the Executive Branch. The members know more and they do more. They can, of course, know even more and do even more. Nevertheless, certainly the academic community doesn't know more about what is going on in the Government. I don't think the press knows more about what is going on than that group of Congressmen who have made themselves expert about public policy. That, it seems to me, is one very good reason for hanging on

to the House of Representatives just a little longer.

Dr. HORN. Stephen Horn. I would like to ask two questions. I would agree that we are trying to seek responsiveness and responsibility in terms of elected representatives. It seems to me there are several problems. One is that you have oldtimers in Congress that do acquire a monopoly of subject matter and expertise as Dr. Polsby has pointed out. Another is, there is a need to break that expertise, not only for the good of the country to get a change of values from time to time, but for the good of the junior members who need to be strengthened.

I wonder what the members of the panel would think of the following two suggestions to try to earn a little responsibility and responsiveness. That is, instead of worrying so much about internal seniority, that we think more in terms of the total limit of years of service, such as two terms for the U.S. Senator and six terms for the member of the House of Representatives. And beyond that, getting at what is really the basic flaw in the system, that is how we finance people in public office where we ask them how to decide on behalf of a total constituency or a nation. It costs a million dollars to run a contested primary in the State of California. In 1966, a contested race in Michigan for Congress was budgeted for \$180,000. Isn't it time that we face up, not only to a limitation of term, but also face up to the public responsibility for financing both primary and general elections? Let's say to anybody who gets X number of signatures: "Great, you run for office. The public pays your bills up to a certain amount. No other money can get involved."

It seems to me we have to face up to certain basic reforms if we are going to achieve what you gentlemen are talking about, whether we chase gnats or bears.

Sen. PACKWOOD. We haven't scratched the surface of money that is available in small contributions in this country. The Red Cross has done it; the YMCA has done it; the Presbyterian Church has done it. They run basically on small donations from a lot of people and politicians can do the same thing. The money is there. You rap on doors, ask for a dollar or two for your party and you'll get it. But we don't do it. I don't like the idea of public financing of campaigns and I'd do everything I could do to avoid it until you could prove to me there is no other conceivable way to do it.

Rep. UDALL. I totally disagree with Bob about public financing. Teddy Roosevelt advocated it 80 years ago and I advocate it today. I think it's the answer. Although if we are going to have the present system, clearly we ought to have limits. We ought to rely on small contributions, that's the one thing we didn't get in the last bill. The Nixon Administration and the great Democratic Party didn't want a limit. We limited what I spent on my own campaign, \$15,000, but there is no limit on what Henry Salvatori can give me if he wants to.

CHURCH PROJECTS ON U.S. INVESTMENT IN SOUTHERN AFRICA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. Dicks) is recognized for 5 minutes.

Mr. DIGGS. Mr. Speaker, the interest of church groups in the general question of U.S. business involvement in Southern Africa particularly in the employment practices and policies pursued by U.S. businesses in these minority-ruled areas with respect to the African majority continues. Six Protestant groups have now renewed their campaigns for disclosure by certain com-

panies doing business in Southern Africa. I would like to insert in the Record at this point two articles reporting on new developments in this area on actions taken by church institutional investors for the thoughtful attention of my colleagues. I also wish to insert a description of the "Church Project on U.S. Investment in Southern Africa—1973."

The items follow:

CHURCH PROJECTS ON U.S. INVESTMENT IN SOUTHERN AFRICA

NEW YORK, N.Y.—The Episcopal Church has filed a stockholder resolution with International Business Machines Corporation (IBM), asking the company "to provide basic data for thoughtful consideration by shareholders concerning the Corporation's South African investments, activities, and employment practices."

The Episcopal Church, through its Committee on Social Responsibility in Investments, filed a similar resolution for inclusion in IBM's 1972 Proxy Statement, but withdrew it prior to the annual meeting when representatives of IBM and the Church's committee reached an agreement on a draft report.

In a letter to IBM, Mr. Paul M. Neuhauser, chairman of the committee, indicated that the company's answer in 1972 "omitted much of the factual material which IBM had promised to supply." He said that about 80 percent of the material in last year's draft report upon which agreement had been reached was omitted from the printed report of the annual meeting.

Further, he said, "of IBM's agreement to provide nine categories of information in response to the stockholder resolution," only one "was fully complied with and in each of the other eight instances either the promised information was not supplied at all or it was supplied in an inadequate fashion."

The Episcopal Church holds 8,496 shares of IBM stock, worth approximately \$3,275,208.

The Episcopal Church is a member of "The Church Project on U.S. Investments in Southern Africa—1973," a coalition of six religious organizations which has filed resolutions at stockholders' meetings expressing the churches' concern about apartheid in Southern Africa.

STOCKHOLDER RESOLUTION FILED WITH 10 CORPORATIONS

NEW YORK, N.Y.—The largest Protestant church cooperative effort to date to challenge American corporations' investments in Southern Africa was announced here today.

Six Protestant church organizations, one of which is the Episcopal Church, said they have filed stockholder resolutions for placement in annual meeting proxy statements with 12 corporations. The purpose of their action, they said, is to bring to the companies' attention church concern about apartheid in the Republic of South Africa and oppressive conditions for Africans in other Southern African countries.

The resolutions ask the companies to disclose the history of their involvement in South Africa, to provide comparative statistics on numbers of workers, wages paid, trade union contracts with African, Asian, colored and white workers, and to describe compliance with apartheid laws and any efforts by corporations to have the government modify the laws.

Three church leaders announced the joint action for the Church Project on U.S. Investments in Southern Africa—1973, at a press conference at the Church Center for the United Nations. The project is a cooperative venture of boards and agencies of the American Baptist Churches, the National Council of Churches, the Episcopal Church, the

United Methodist Church, the United Presbyterian Church in the U.S.A. and the Unitarian-Universalist Association. All are substantial institutional investors.

Stockholder resolutions asking for facts about their involvement in South Africa have been filed with 10 companies. They are Caterpillar Tractor Co., Chrysler Corp., Eastman Kodak Co., First National City Bank, General Electric Co., International Business Machines Corp., International Telephone & Telegraph Corp., Minnesota Mining and Manufacturing Co., Texaco Inc. and Xerox Corp.

Church groups filing the resolutions, with a combined total of 118,639 shares, are the Domestic and Foreign Missionary Society of the Protestant Episcopal Church in the U.S.A.; American Baptist Home Missions Societies and Board of Education and Publication; National Council of Churches; Board of Christian Education, Commission on Ecumenical Mission and Relations, and Board of National Missions, all of the United Presbyterian Church in the U.S.A., and the Women's and World Divisions of the Board of Global Ministries, United Methodist Church.

A separate resolution has been filed by the Unitarian-Universalist Association with Exxon Corp. asking the company to establish a special committee to investigate implications of a proposed investment in the Portuguese colony of Angola. UUA holds 6,000 shares of Exxon at an approximate value of \$486,000. In addition, a separate resolution has been filed by the Episcopal Church with Phillips Petroleum Co. which asks Phillips not to go into Namibia (South-West Africa). The Episcopal Church holds 15,600 shares of Phillips stock, worth approximately \$685,000.

The Rev. W. Sterling Cary, newly elected president of the National Council of Churches, said that the joint action was being taken because "United States churches have long been concerned about the oppression of millions of black people by a white minority in Southern Africa. We have spoken out against apartheid in South Africa, colonialism in Angola, Mozambique and Guinea-Bissau, the illegal declaration of independence in Rhodesia and the illegal occupation of Namibia by South Africa."

He added, "We believe it is our responsibility as Christians not only to actively fight racism in America but to also battle it in Africa, the continent from which black America has sprung. The fight against racism is not divisible."

"The time is past when U.S. companies can operate without questions being asked about their role and their operations in South Africa. Hard questions are now being pressed from many sectors of the American public," the NCC leader said.

The Rev. Dr. Gene E. Bartlett, president of the American Baptist Churches, speaking in support of the resolutions, said that questions of racism and colonialism in Southern Africa "are our questions—not simply because the Christian gospel demand our concern for the hungry, oppressed and suffering but because world peace rests on the brink there."

Miss Florence Little, treasurer of the Women Division of the United Methodist Church, said today's actions were a way of "translating into action" the churches' expressed opinions regarding colonialism and racism in Southern Africa. The church coalition will solicit supporting proxy votes from universities, foundations, mutual funds, unions, other churches and individual stockholders, she said.

The Church Project on U.S. Investments in Southern Africa was formed in 1971. In 1972 it filed stockholder resolutions requesting full disclosure of the involvement of Mobil, Goodyear, IBM and General Motors in South Africa and Gulf Oil in Angola. Mobil agreed to voluntarily disclose this in-

formation and sent it to all shareholders. IBM made a similar agreement, but in the end disclosed only a portion of the information. Gulf, after a proxy contest, finally disclosed data.

Announced at the press conference was an agreement between the Episcopal Church and GM in which the company agreed to mail to all stockholders a booklet on corporate responsibility, including full disclosure of the company's involvement in South Africa.

The Rev. Stewart MacCell, of the United Presbyterian Church in the U.S.A., announced that the United Presbyterian Church has withdrawn its resolution filed with Burroughs Corp., after that company indicated it planned to publish a report which would outline and explain to shareholders and others their program in areas involving social issues of public concern including South Africa.

Goodyear refused to provide any information and the disclosure resolution was defeated at the company's 1972 stockholders' meeting.

STATEMENTS BY CHURCH LEADERS FOR THE CHURCH PROJECT ON U.S. INVESTMENTS IN SOUTHERN AFRICA—1973

(A cooperative venture of boards and agencies of the American Baptist Churches, the National Council of Churches, the Protestant Episcopal Church, the United Methodist Church, the United Presbyterian Church in the U.S.A., and the Unitarian-Universalist Association.)

STATEMENT OF FLORENCE LITTLE

I am here today as treasurer of the Women's Division of The United Methodist Church. I come to lend support to the Church Project on U.S. Investments in Southern Africa—1973. The Church Project is a cooperative venture of Protestant Church agencies who are deeply concerned about the situation in Southern Africa and the role of U.S. corporations in that area.

The Church Project was formed in 1971 and in 1972 announced its plans to file stockholder resolutions with five corporations investing in Southern Africa. Five Protestant denominations were participants in the Project at that time. Today participation has increased to agencies of six Protestant Church bodies, all of whom are substantial institutional investors. Participants in the Church Project on U.S. Investments in Southern Africa—1973 include agencies of the American Baptist Churches, the National Council of Churches, the United Presbyterian Church, U.S.A., The United Methodist Church, the Protestant Episcopal Church in the U.S.A., the Unitarian-Universalist Association.

Within the denominations specific boards or agencies which are the formal stockholders in these companies have been the filers of the stockholder resolutions we are announcing today.

These actions by the churches in the area of corporate responsibility in Southern Africa represent a major concern of Protestant denominations. In various meetings the churches have made pronouncements expressing their position regarding colonialism and racism in Southern Africa. Today we are translating some of those pronouncements into action.

I might state that the concern of Churches about corporate responsibility encompasses other issues as well as Southern Africa. You might be interested in knowing that through a Church coalition called the Interfaith Committee on Social Responsibility in Investments which I chair, we co-ordinate Church actions on corporate responsibility related to other issues such as ecology, employment practices vis a vis minorities and women, the war in Southeast Asia, and positive social investment options.

The Church Project—1973 will formally seek proxy votes for these stockholders resolutions from stockholders in these companies large and small. We will actively solicit votes from universities, foundations, and mutual funds, Churches and unions, and of course from the concerned individual investors. A proxy statement necessary for formal solicitation will be ready in the near future.

STATEMENT OF THE REV. STERLING CARY

I am here today as President of the National Council of Churches to join in the announcement of an unprecedented action by a broad coalition of Protestant denominations. We are announcing today the filing of 13 stockholders resolutions with U.S. corporations investing in Southern Africa. Never before has such a broad-based coalition of Churches filed so many stockholder resolutions of this kind. We believe this increase in activism mirrors the deepening concern in this nation in the Churches, minority communities, unions, universities, and Congress about U.S. economic involvement in Southern Africa.

U.S. churches have long been concerned about the oppression of millions of black people by a white minority in Southern Africa. We have spoken out against apartheid in South Africa, colonialism in Angola, Mozambique and Guinea-Bissau, the illegal declaration of independence in Rhodesia and the illegal occupation of Namibia by South Africa. We believe it is our responsibility as Christians not only to actively fight racism in America but to also battle it in Africa, the continent from which black America has sprung. The fight against racism is not divisible.

Therefore U.S. Churches have joined in the fight for self-determination, independence and dignity for black people in Southern Africa. Many denominations have contributed funds to the humanitarian work of liberation movements fighting in Southern Africa. We have worked in Washington to change U.S. government policies which support white minority rule in Southern Africa. And today we announce another chapter in our pressure on U.S. corporations investing in Southern Africa.

For decades U.S. companies have invested in South Africa where apartheid is the law of the land. These operations have been virtually unscrutinized. They have made huge profits there while paying their black workers pitifully inadequate wages. They have run their plants like plantations because they felt no one cared. They have provided products for the white government and military, thereby strengthening white control. They have helped create a flourishing economy—for whites.

The time is past when U.S. companies can operate without questions being asked about their role and their operations in South Africa. Hard questions are now being pressed from many sectors of the American public.

Today we are filing a basic resolution asking for a full disclosure of the facts of the involvement of eleven U.S. corporations in the Republic of South Africa. A similar resolution was filed last year with five corporations. Mobil Oil responded voluntarily without a proxy battle and sent such a report to all shareholders. We believe Mobil's response was a responsible one and ask for the same response from these companies. We see this as a legitimate request so that shareholders will have all the facts before them to evaluate the role of their corporation in South Africa. This resolution has been filed with Burroughs Corporation, Caterpillar Tractor Company, Chrysler Corporation, Eastman Kodak Company, First National City Bank, General Electric, International Business Machines, International Telephone and Telegraph, Minnesota Mining and Manufacturing Co., Texaco Inc., Xerox Corporation.

A separate resolution has been filed with

Exxon Corporation urging them to establish a special committee to investigate the implications of a proposed investment in the Portuguese colony of Angola. It seems clear to me that an investment in Angola at this time can only strengthen Portugal which has over 150,000 troops in Africa fighting independence. In fact Portugal has more troops per capita in Africa than the U.S. had in Vietnam at the height of the ground war. This badly strains Portugal's budget and every dollar from an investor helps relieve that strain. Exxon needs to take a long careful look at this proposed investment. This is the purpose of the resolution.

Finally a separate resolution has been filed with Phillips Petroleum Co. which would prevent it from going into Namibia (South West Africa). This territory is illegally occupied by South Africa in defiance of numerous United Nations resolutions. The President of the United States has announced through the former Ambassador to the U.N. that it is official U.S. policy to discourage investment in Namibia. However, Phillips has proceeded to join a consortium which will explore for oil offshore Namibia. It is an investment in direct opposition to the position of the U.N. and the interests of the black people of Namibia.

We believe these resolutions will spark discussion and debate not only in this country but in many areas around the globe. In every case management of these corporations has been contacted and discussions have taken place or will take place between the company and the Churches. It is our expectation that these resolutions will appear on the proxy statements of these corporations which are sent to all shareholders and will be debated in universities, foundations, Churches which hold stock throughout the country. Today marks the beginning of the 1973 debate on U.S. investment in Southern Africa.

(Rev. Cary, an administrator with the United Church of Christ, was elected president of the National Council of Churches at its triennial General Assembly last December in Dallas, Texas. He is the first member of his denomination and the first black to be elected to the presidency of the nation's largest ecumenical body with its 33 Protestant, Orthodox and Anglican communicants.)

STATEMENT OF DR. GENE BARTLETT, PRESIDENT OF THE AMERICAN BAPTIST CHURCHES

I am pleased to be here on the occasion of the announcement of the filing of thirteen stockholder resolutions by participants of the Church Project on U.S. Investments in Southern Africa—1973. As you may be aware there is considerable concern in Christian churches about the whole issue of corporate responsibility. Denominations which are multimillion dollar shareholders in corporate America, are looking beyond dollar returns on investments and are exercising their responsibilities as shareholders to make corporations more responsive to the needs of people.

Churches have a number of concerns: ecology, minority employment, the war, and investment in Southern Africa. Denominations are meeting with management, writing letters of inquiry or support for certain programs, speaking out in public about industrial irresponsibility, attending stockholder meetings, and filing stockholder resolutions to raise issues.

I believe our denomination, the American Baptist Churches, may reflect this growing sentiment in the churches. In November, 1972, our Home Mission Society passed a set of "Guidelines Relating to Social Criteria for Investments." The Guidelines argued that social values and social justice should be given consideration in investing the Society's funds. The Guidelines authorized a series of action responses, including introducing stockholder resolutions, joining in share-

holder litigation and discussions with management. In fact, a special committee was set up in our church to pursue this work.

Guidelines such as these are being passed in numerous church bodies now. More than ever, the church is asking hard questions of government and business as we try to change systems to provide greater justice to our fellow human beings.

Through our appropriate agencies the American Baptists plan to be vigorous members of this coalition, raising questions with these corporations and others about their investments in South and Southern Africa, interpreting these actions to our national constituency and asking for their support, and distributing educational materials so that American Baptists will have a deeper knowledge of colonialism and racism in Southern Africa and U.S. corporate involvement there.

The American Baptist Churches, in their annual meeting on three occasions, have adopted resolutions expressing their deep feeling about racism in Southern Africa. In May 1972 the A.B.C. protested "the willingness of some American corporations and their investors to operate in South Africa in a manner largely uncritical of the apartheid system and in fact profiting from the low wages paid to black workers."

The questions of racism and colonialism in Southern Africa are international questions; they are our questions—not simply because the Christian Gospel demands our concern for the hungry, oppressed, and suffering but because world peace rests on the brink there. Fighting for independence has been going on in the Portuguese colonies for a decade now. It is imperative that we do not support the opponents of independence.

Apartheid in South Africa is our concern. If our corporations make some of the highest profits in the world while doing business there, and we as institutional investors benefit from those profits, we then directly profit from apartheid. Our obligation is also clear. We cannot profit from injustice without challenging injustice. Today is one step in making that challenge a reality.

SOUTH VIETNAMESE POLITICAL PRISONERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. HARRINGTON) is recognized for 5 minutes.

Mr. HARRINGTON. Mr. Speaker, it has been more than 2 months since the United States signed an agreement in Paris ending U.S. intervention in South Vietnam. Just last week, the last plane-load of U.S. prisoners of war were released by the North Vietnamese and the PRG—Provisional Revolutionary Government. Still, the involvement of our country is not yet concluded.

The United States is party to several commissions and conferences that seek to make the Paris agreement a reality. In addition, the United States has pledged itself to providing assistance for North and South Vietnam, as well as the other countries of Indochina.

With this dual responsibility, the people of the United States should now concern themselves with the fate of the many civilian prisoners held by the South Vietnamese Government.

The exact number of civilians held in South Vietnamese prisons is a matter of some dispute. The South Vietnamese

Government reports that it has jailed 30,000 prisoners, while other estimates run as high as 400,000. Under the emergency powers assumed by President Thieu, on May 9, 1972, several sweeping and ambiguous decrees have been issued. For example:

Those persons considered dangerous to the national defense and public security may be interned in a prison or designated area or banished from designated areas for a maximum of two years which is renewable.

Another provision states:

Shall be considered as pro-communist neutralist a person who commits acts of propaganda for incitement of neutralism. These acts are assimilated with the act of jeopardizing public safety.

Many people in this country are concerned about the prison conditions in South Vietnam. The exposure several years ago of the "tiger cages" has created good reason for concern. It is a sign of the severity of the problem that officials of the Internal Red Cross—the IRC—were told that they might inspect the prisons only in the company of a South Vietnamese Government official. Objecting to such intimidation, the IRC refused.

I received a letter from a constituent a month ago, similar to the many others that I have received, seeking information on the status of eight individuals believed to be held in South Vietnamese prisons. My office contacted the appropriate desk at the Vietnam working group at the U.S. Agency for International Development—USAID. My office was told that the request would be processed, and was told, further, that there had been many similar requests. Several weeks later, I received a reply. Mr. Speaker, I shall insert it in the RECORD.

This response is unacceptable.

Because of U.S. involvement in the Vietnam war, because of U.S. political, military, and diplomatic support of the Thieu government, and because of—at least partial—U.S. funding of the police and prison network of South Vietnam—this problem is not an "internal" matter for the South Vietnamese alone. The various ways this country has supported and continues to support the South Vietnamese prisons and police should be brought to public attention.

First, the Public Safety Division of the USAID has provided funds for a whole range of security programs. Second, part of the foreign assistance authorization for South Vietnam is in the form of support assistance—a special category of aid that allows government expenditures on items that cannot otherwise be afforded while maintaining the military establishment. Third, some members of the South Vietnamese police force are trained at the International Police Academy in Washington. Finally, it should be recognized that any foreign assistance—economic, military, support, even humanitarian—indirectly supports government operations by allowing the South Vietnamese to shift their own resources between whichever projects they consider most useful.

As a signer of the Paris agreement on ending the war and restoring peace in Vietnam and its attendant protocols, the United States has a responsibility to insure that South Vietnam fully meets the requirements regarding Vietnamese civilian prisoners. Further, it has been suggested that by supporting the imprisonment of these civilians, many of whom might constitute a viable, neutralist force, the United States may be violating the agreement which stipulates that "foreign countries shall not impose any political tendency or personality on the South Vietnamese people."

Two important issues are involved in the failure of the U.S. Government to accept and deal with the consequences of its policies and its refusal to provide requested information.

First, the U.S. Congress has the constitutional responsibility for the formulation of public policy and for legislative oversight. The President seeks not only to strip the Congress of its role in the former, but also to deny its role in the latter.

Second, the track record in humanitarian affairs of this country under the present administration has been a sorry one. While the Government has responded quickly and generously, as it should, to natural disasters, such as those in the Philippines and in Nicaragua, it has failed to respond to the political tragedies in Biafra and Bangladesh. The present state of affairs in South Vietnam is all the more intolerable, because of the unbreakable link between the United States and South Vietnamese policy.

The administration must not be allowed to shirk its clear responsibility. The administration has the power to help persuade the Government of South Vietnam to release these prisoners or improve the conditions of the prisons. We in the Congress, if we will speak out, can help persuade the administration to exercise its influence in this direction. Therefore, I call upon the President of the United States to use his good offices to urge the Government of South Vietnam to release those political prisoners who are unjustly held and to improve the conditions of the prisons for others. And further, to insure that action is taken, the administration should press the South Vietnamese Government to allow inspection of its prisons by the International Red Cross.

The reply referred to follows:

DEPARTMENT OF STATE,
Washington, D.C., March 5, 1973.

HON. MICHAEL J. HARRINGTON,
House of Representatives,
Washington, D.C.

DEAR MR. HARRINGTON: I have received your letter regarding the concern of one of your constituents about a number of Vietnamese citizens.

The Agreement of January 27 specifically provides that the matter of South Vietnamese civilians detained in South Vietnamese jails should be resolved through negotiations between the South Vietnamese parties to that Agreement. Pending resolution of the problem, the Agreement provides that all those detained "shall be treated humanely at all times and in accordance with interna-

tional practise." The Agreement further prescribes all forms of torture and cruel treatment and provides that those detained be given "adequate food, clothing, shelter, and the medical attention required for their state of health." The problem involves not only the prisoners held by the Government of the Republic of Viet-Nam but also the thousands of South Vietnamese civilians abducted by the other side during the course of the war. This issue is complicated and not readily susceptible to outside influence or solutions.

With regard to your constituent's inquiry on Vietnamese citizens, we do not feel it appropriate for the U.S. Government to inject itself into matters that under the terms of the January 27 Agreement are now to be settled among the South Vietnamese themselves. Such inquiries should be directed to the Government of the Republic of Viet-Nam. However, recent charges of general repression, torture and mass incarceration of so-called "political prisoners" by Republic of Viet-Nam authorities have, as often in the past, proved grossly exaggerated.

Please continue to call upon me whenever you believe that we may be of assistance to you.

Sincerely yours,

MARSHALL WRIGHT,
Acting Assistant Secretary for Congressional Relations.

URBAN MASS TRANSPORTATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. MINISH) is recognized for 5 minutes.

Mr. MINISH. Mr. Speaker, I rise to protest an intrusion on the longstanding legislative jurisdiction of the House Committee on Banking and Currency over urban mass transportation.

Since at least 1960, when a bill authorizing loans for the Nation's mass transit systems was referred to the House Committee on Banking and Currency, the committee has exercised jurisdiction in this area.

The committee is justly proud of its record of support for urban mass transit, including the landmark Urban Mass Transportation Act of 1964 and the 1970 amendments, both of which greatly increased the scope of Federal involvement in the urban mass transit field.

Recognizing that the Nation's mass transit systems are in a crisis situation and that there exists a need for greater balance in overall Federal transportation policy, the Banking and Currency Committee decided last month to establish a new subcommittee to deal with the problems of urban mass transportation. I am proud to have been selected chairman of this newly created subcommittee.

Our subcommittee has already completed hearings and markup on legislation to provide \$800 million in Federal operating assistance grants over the next 2 years to the country's mass transit systems. In addition, the measure would increase capital grant authority of the Urban Mass Transportation Administration by \$3 billion and raise the Federal share for capital grants from a discretionary two-thirds to a mandatory 80 percent.

It is expected that this legislation will come before the full Banking and Currency Committee in short order and be reported for floor action prior to the Easter recess.

Despite the clear jurisdiction of the Banking and Currency Committee over this legislation, it is my understanding that certain members of the House Committee on Public Works have incorporated sections of the same measure into a proposal to be offered as an amendment to the pending highway legislation.

In a desperate attempt to prevent "violation" of the bloated highway trust fund, it apparently has been decided to attempt to ride roughshod over the legislative prerogatives one of the great committees of this Congress.

Mr. Speaker, I intend to fight this unwarranted intrusion into the legislative jurisdiction of my subcommittee and of the entire Committee on Banking and Currency. In the interest of fairness and of the orderly legislative processes of this House, I ask your support and the support of every Member.

At this point, I insert a letter sent by the distinguished chairman of the Committee on Banking and Currency, WRIGHT PATMAN, to the distinguished chairman of the Committee on Public Works, JOHN A. BLATNIK:

HON. JOHN A. BLATNIK,
Chairman, Committee on Public Works, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: It is my understanding that the Committee on Public Works will begin markup on H.R. 6288, the Federal Aid Highway Act of 1973, beginning on Tuesday, April 3. Title III of the bill, H.R. 6288, would amend the Urban Mass Transportation Act of 1964; this act falls within the jurisdiction of the Committee on Banking and Currency. As you may know, the Committee on Banking and Currency has set up a separate subcommittee on Urban Mass Transportation chaired by our distinguished colleague from New Jersey, Joseph Minish. This Subcommittee has already conducted hearings on a number of urban mass transportation proposals and has already concluded its markup session on a 1973 urban mass transportation package, and has already submitted its proposals to the full Committee on Banking and Currency.

The Subcommittee proposals would make substantial changes in the operations of the urban mass transportation program, among which are an increase in the amount of funds authorized for the capital grant program and an increase in the Federal grant ratio to a flat 80 percent Federal grant. Both of these proposals, I note, are contained in Title III of H.R. 6288. I would strongly urge your Committee to forego any legislative action which would amend the Urban Mass Transportation Act.

The Urban Mass Transportation program was initiated by the Committee on Banking and Currency in 1964 and the Committee, as early as 1959, was considering a number of urban mass transportation proposals. We have spent a considerable amount of time on this program and feel that as the authors of our urban mass transportation program that we are the Committee that should make any proposed changes in the Act.

There is a strong feeling in the Committee against any action by your Committee on Public Works which would infringe upon the jurisdiction of the Committee on Banking and Currency. I certainly hope we may be able to work out something beneficial for both the Committees which would provide for greatly needed assistance for our urban mass transportation systems and our Federal aid highway program.

Sincerely,

WRIGHT PATMAN.

BRADEMAS URGES OVERRIDE OF PRESIDENT'S VETO OF THE REHABILITATION ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. BRADEMAS) is recognized for 5 minutes.

Mr. BRADEMAS. Mr. Speaker, on March 27 President Nixon vetoed, yet again, the Rehabilitation Act.

You will recall, Mr. Speaker, that late last October, the President vetoed a similar, but more expensive, bill after Congress had gone home, and we did not, therefore have an opportunity to override.

Tomorrow we will have that opportunity.

And I want, today, to urge my colleagues to seize it with both hands. For the President has attempted in his ill-informed and misguided veto message, and on national television, to paint a picture of an irresponsible Congress further hurting 200 million Americans suffering under phase III and the ravages of inflation.

And that, Mr. Speaker, is not the situation at all.

For the choice we face is not between supporting 20 million handicapped adults, or their fellow citizens.

The cruel choice the President has forced on us is between supporting 20 million handicapped people or accepting his truly astonishing views with respect to this legislation.

And although I applaud the advances made in services to the handicapped in the last 4 years, my vote must be for the handicapped.

I ask my colleagues, therefore, to consider the heartrending human needs to which the legislation addresses itself.

I ask them to remember the careful study given this measure in both the House and the Senate.

I ask them to recall that we have already met the President more than halfway since he vetoed similar legislation last October.

I ask them, finally, to put aside political loyalties and to continue the unprecedented bipartisan support rehabilitation legislation has always enjoyed.

And let me stress, Mr. Speaker, that although my remarks are pointed, they are not those of a partisan.

For as Dr. Edward Newman, former Commissioner of the Rehabilitation Services Administration, told my subcommittee during our extensive hearings on this measure:

Clearly disability is not a partisan issue nor should any response to it be partisan.

And, Mr. Speaker, the overwhelming bipartisan support this legislation enjoyed in both the 92d Congress and, again, in the 93d, indicates that congressional response to the handicapped has never been partisan.

But before I speak of the surprising message that accompanied the President's veto of this landmark legislation, let me say a word to those of my colleagues who may, I am told, be considering supporting an alternative to the Rehabilitation Act.

SUBSTITUTE MEASURE

For I want to warn my friends that such a decision on their part could have a disastrous effect on the 50-year-old vocational rehabilitation effort. And it could, indeed, seriously jeopardize the entire program.

For I would remind them that a new bill must be referred to committee so that we may begin, once again, the hearing process.

And I would remind them, also, that it took Congress 3 full months merely to reduce the authorizations, contained in the measure originally vetoed, to the level at which we find them today.

And finally I should tell my colleagues, Mr. Speaker, that since the authorizing legislation for vocational rehabilitation expired last June 30, there has been some serious legal question as to the propriety of continuing to expend Federal moneys on this program.

So sustaining the President's veto, Mr. Speaker, in the hope of supporting a substitute bill, might, I here repeat, seriously jeopardize the entire enterprise.

ASTONISHING VETO MESSAGE

So let me now, Mr. Speaker, turn to the truly astonishing message that accompanied the President's veto of the Rehabilitation Act.

And let me repeat that I take the President to task with regard to his message not for any partisan purpose, but only in order to set the record straight with respect to this legislation.

For the veto message leads me to wonder if the President's assistants have the time, in the midst of their other activities, to read the legislation we here on Capitol Hill send to the White House.

Indeed, Mr. Speaker, I do not think it too much to say that the President has been ill-served by the adviser who drafted the false and misinformed message that accompanied the veto of the Rehabilitation Act of 1973.

CONGRESSIONAL SPENDING SPREE

I would cite first, in this regard, the President's surprising assertion that this measure is part of—

A Congressional spending spree [that] would be a massive assault upon the pocketbooks of millions of men and women in this country.

Surely, Mr. Speaker, the President does not expect those of us, on both sides of the aisle, who have cut \$20 billion from his budget requests over the last 4 years, to take such an accusation seriously?

And surely, too, since this is an authorizing, and not an appropriating, bill, such a statement can only be characterized as incorrect and deceptive.

The President then goes on the assert, Mr. Speaker, that the Rehabilitation Act would contribute to the "unacceptable choice of either raising taxes substantially—or inviting a hefty boost in consumer prices and interest rates."

The President goes on to say:

The American people have repeatedly shown that they want to hold a firm line on both prices and taxes. I stand solidly with them.

So, too, Mr. Speaker, do I.

That is why the Rehabilitation Act contained a change virtually without

precedent in legislation which has come before this body.

I refer, of course, to the following fact: the authorized spending provided in this measure for fiscal year 1973, \$913 million, is lower than the authorizations for 1971 and 1972 provided in legislation President Nixon, himself, signed into law on December 3, 1970.

Consider that fact: We are suggesting a budget ceiling for 1973 that is fully \$97 million below what the President himself approved for both 1971 and 1972.

Is the President, then, really serious when he upbraids us as—and I quote—"big spenders" engaged in a "congressional spending spree"?

CONGRESSIONAL CRUELTY

But the President's adviser, Mr. Speaker, has not been content with the mischief raised so far. For later in the veto message, the President still again returns to the theme of congressional irresponsibility.

Says President Nixon:

By promising increased Federal spending for this program in such a large amount, S. 7 would cruelly raise the hopes of the handicapped in a way that we could never responsibly hope to fulfill.

I would note first, Mr. Speaker, that this is the first, and in fact, the only reference to handicapped people in the entire veto message.

Indeed, as I read the message for the first time, I had cause to wonder if the President's assistants realized that this bill was, not merely another Federal training program, but a longstanding and successful effort to help the disabled of our land.

But I should just stress again, that this bill promises less money for fiscal year 1973 than was authorized for either 1971 or 1972 in legislation signed by President Nixon, himself, just 2 years ago.

Surely, then, Mr. Speaker, no responsible critic could seriously accuse us of "cruelly raising the hopes of the handicapped"?

I want to assure my colleagues, Mr. Speaker, that none of the disabled people, or the national organizations representing them, writing to me with reference to the veto of this measure, has accused me of "cruelty."

Indeed, judging from their letters, the only cruelty associated with this measure has been the manner in which the White House responded to this measure.

But I should also note, Mr. Speaker, that the Rehabilitation Act provides only \$156 million more for fiscal year 1974 than the legislation we are trying to extend authorized for both 1971 and 1972.

Certainly such a modest increment over 2 years cannot justifiably be termed a "congressional spending spree"?

I wonder, indeed, why the President did not sign this measure, amidst great pomp and circumstance, and claim a victory for his philosophy of self-sufficiency.

And he could, as well, have applauded congressional fiscal responsibility in presenting him with such a modest bill after his veto of similar legislation last October.

DIVERTED PURPOSE

Let me now, Mr. Speaker, turn to what might appear, at first blush, to be sensible objections on the part of the President.

He claims, first, that the Rehabilitation Act would divert the Vocational Rehabilitation program from its original purposes by requiring that it provide new medical services.

The President, Mr. Speaker, is wrong.

For we provide for no services not currently available under vocational rehabilitation.

What we are doing is making more explicit a commitment, in existing law, to persons with severe handicaps.

And my colleagues should know, as well, that the administration itself endorsed that commitment during hearings, and during the House-Senate conference on this measure.

During the conference, for example, the administration's official position was, and I quote from their own memorandum:

Keep the vocational orientation of present law in Title I. However, authorize as in . . . the House bill, a separate program for nonvocational services to the severely disabled.

That is precisely what we have done.

And I am, frankly, perplexed that the same administration today returns to castigate us for agreeing with their advice.

SERIOUS KIDNEY DISEASE

But the President, Mr. Speaker, goes on to compound that error by citing with regard to "new medical services":

A new program for end-stage kidney disease—a worthy concern in itself, but one that can be approached more effectively within the Medicare program, as existing legislation already provides.

The President is again mistaken.

First, this is not a "new program" as he apparently believes.

For 41 state rehabilitation agencies, last year, provided services to handicapped individuals suffering from serious kidney disease.

And, second, the valuable provisions of the Medicare program are complemented, in a most practical manner, by the Rehabilitation Act.

I would cite particularly in this regard the fact that kidney coverage under Medicare does not become available until 3 months after need is established. During that time, the rehabilitation agency can assist the handicapped individual.

And I should also add that many individuals, young and old, are ineligible for Medicare benefits.

Possibly the President's White House staff does not talk with his administrators in the departments, but for whatever reason, the President has been seriously misled with reference to what he calls "new services."

For we have not, as I hope I have demonstrated, provided for new kidney disease services.

What we have done is react to testimony before my own subcommittee to the effect that adequate services for individuals suffering from serious kidney disease would not be possible without special emphasis.

We have, therefore, attempted to provide that emphasis by highlighting congressional concern for the program—which is of enormous value with reference to enabling these individuals to return to work—and providing a modest authorization for it.

So I trust, Mr. Speaker, that my colleagues will begin to understand the bewilderment with which I received the President's veto message. For he clearly was speaking of a bill other than the one passed with such overwhelming bipartisan support in the 92d, and now again, in the 93d Congress.

CATEGORICAL PROGRAMS

Let me now, Mr. Speaker, turn to the third objection expressed in the President's veto message:

S. 7 would create a hodge-podge of seven new categorical grant programs, many of which would overlap and duplicate existing services. Coordination of services would become considerably more difficult and would place the Federal Government back on the path of wasteful, overlapping program disasters.

This statement of opinion, disguised as fact, Mr. Speaker, simply perplexes me. I certainly would not want to make the delivery of rehabilitation services a more difficult task.

Nor, I am sure, do any of the 318 Members of this body who supported this bill on March 8, advocate wasteful overlapping programs.

So let us look at what the bill does rather than what an unknown Presidential adviser says it does.

I assume, first, that the President includes in the list of "seven new categorical grant programs," the title II services for the severely disabled and the program for persons suffering from end-stage kidney disease.

And I believe I have already addressed these issues in adequate detail, indicating, with reference to the former, that we merely agreed with an administration suggestion, and with reference to the latter, that we have done nothing more than underline congressional intent with regard to renal disease services now available through State rehabilitation agencies.

And although the President does not specify which new programs he finds objectionable, I assume he must be referring to the provisions in this legislation relating to the spinal cord injured, mortgage insurance, and interest grants, for rehabilitation facilities, and programs for the deaf and the elderly blind.

So let me say just a word about each of these.

SPINAL CORD INJURED

With regard to the spinal cord injured, Mr. Speaker, again we are speaking not of a new program, but of the strengthening of existing services in this area.

And we are speaking, as well, of a program which had the endorsement of the administration throughout the development of this measure.

With reference to my first point, Mr. Speaker, my colleagues should know that the Rehabilitation Services Administration reports that it is spending over \$3 million to support eight centers for the spinal cord injured.

But, as Mr. E. B. Whitten of the

National Rehabilitation Association, pointed out in a recent memorandum to the President:

The situation in the area of comprehensive rehabilitation services to spinal cord injured individuals is appalling. Although we have a few good programs, enough to serve as demonstrations, less than 20% of the spinal cord injured individuals are receiving the kind of services we know how to provide. A special push is going to be required to make a significant breakthrough.

So we accepted this line of reasoning, Mr. Speaker.

And in doing so, I am pleased to tell my colleagues, we were also following the advice of former Secretary of Health, Education, and Welfare, Elliot Richardson.

Said Secretary Richardson to my subcommittee:

We would certainly support in principle the proposition that there should be greater emphasis in those areas and with respect particularly to the spinal cord injuries. So we would propose in our own bill to give this specific recognition.

And I am pleased to note that the amendment to this legislation, offered on the floor by my good friend from Indiana (Mr. LANDGREBE) specifically endorsed services for spinal cord injured individuals.

So I think I am correct in saying that this is yet a third program objected to by the President that his own administration supported as we developed this bill.

Indeed, Mr. Speaker, we have yet to come across one objection that stands up under examination.

OTHER PROGRAMS

But there are still four other provisions in this—and I quote the President, "hodgepodge of seven new programs" that we have not yet addressed.

And although the President is unable to identify them, I believe we can safely guess that they include the provisions relating to interest grants and mortgage insurance for rehabilitation facilities, as well as two programs to serve the special needs of deaf individuals and the elderly blind.

And I believe, Mr. Speaker, that we can safely ignore the President's objections to interest grants and mortgage insurance for rehabilitation facilities.

For surely, Mr. Speaker, the President must realize that these programs will provide vastly less expensive alternatives for much needed facilities construction, than the outright construction grants available under existing law.

Indeed, Mr. Speaker, I would expect that a President busy, as is President Nixon, advocating greater local, State, and private initiative, would have congratulated us for including such provisions in this legislation.

Obviously, Mr. Speaker, I expected too much.

For his inconsistency with respect to these provisions matches his administration's change of heart with respect to the severely disabled, and those suffering from serious kidney disease and spinal cord injury.

DEAF INDIVIDUALS AND THE ELDERLY BLIND

So we are left now, Mr. Speaker, with but two programs to explain to the President and his staff.

Yet again, you will be surprised to learn, the program to provide services to deaf individuals, who have not reached their maximum vocational potential, is an administration suggestion.

For, I should tell the President, in 1971 his administration came to Congress and requested special grant-making authority for the "low achieving deaf."

And, once again, to my astonishment, the President becomes upset because we have taken him at his word.

But, Mr. Speaker, I must here confess that, search as I can, I find no record of administration support for the provisions in the Rehabilitation Act providing vocational rehabilitation services to older blind individuals.

And, of course, I searched for just such a record of support, for it would have completed the tragic and ironic litany of this administration's inconsistencies with regard to the handicapped.

But surely President Nixon does not expect us to support him in his rejection of this important measure, because of a modest program providing \$50 million over 3 years for blind people over the age of 55?

The expectation that Congress will agree to torpedo this major legislation, over such a minor disagreement, simply flies in the face of commonsense.

And it contradicts, as well, the equal status accorded Congress and the executive branch in the Constitution drafted nearly 200 years ago.

For surely, Mr. Speaker, even a President would accept the congressional prerogative of adding a modest program to help older blind people, even though he, himself, had not requested it.

RIGID STRUCTURES

Mr. Speaker, the President's next, apparently substantive objection is—and I quote:

By rigidly cementing into law the organizational structures of the Rehabilitation Services Administration and by confusing the lines of management responsibility, S. 7 would also prevent the Secretary of Health, Education, and Welfare from carrying forward his efforts to manage vocational rehabilitation services more effectively.

The President and Congress will have, I think, to agree to disagree on the provisions of section 3 of the Rehabilitation Act, which provides for the establishment of the Rehabilitation Services Administration.

But the President is, in my estimation, mistaken in his view of this situation.

For the testimony before both the House and the Senate indicated the need for a statutory base for the Rehabilitation Services Administration if it is to be able to effectively carry out its work for the handicapped.

And the testimony indicated the need for such provisions, too, if Congress is to be able to hold one official directly accountable for the rehabilitation program.

RELATED PROBLEMS

And let me here note, Mr. Speaker, that this problem is not unique within the Department of Health, Education, and Welfare.

For when Congress in 1965 created the Administration on Aging, we made clear our intent that it serve as a focal point

for the 20 million Americans aged 65 and over.

Yet in 1967, when the Social and Rehabilitation Service Agency was created, we found AOA submerged deeper and deeper within the bureaucracy.

And I was equally critical, at that time, of this move—which was, my colleagues will note, under a Democratic administration.

So we are not, with regard to this Presidential objection, encountering any striking new phenomenon.

We are, rather, witnessing once again, the different institutional viewpoints—between the legislative and executive—with respect to organizational priorities.

Mr. Whitten, yet again, succinctly states the arguments in favor of our case. And, I should tell my colleagues, Mr. Whitten is not entirely convinced of the wisdom of our move—so his testimony is, in no way, self-serving.

Said Mr. Whitten:

It is by no means just an effort on the part of Congress to spite the Administration. Under the administration of SRS, responsibility for administration of vocational rehabilitation programs has been divided between SRS and RSA at both national and regional levels. There has never been a clear expression of policy on the point as to whether SRS is to be an agency to coordinate the programs of the various bureaus, or whether it is to be an agency to actually operate these programs. While talk, generally, has indicated that SRS is a coordinator and service agency to the bureaus, actually, personnel has been drained off the bureaus to SRS, and more and more administrative and policy decisions that previously have been made by the bureaus are now made by SRS. This, in itself, would not have been so objectionable, but funds appropriated for research and training under the Vocational Rehabilitation Act have been thrown into an SRS pool and expended, often, on programs having only peripheral, if any, values to the rehabilitation programs. . . . The confusion that has prevailed at both national and regional levels has been detrimental to programs for handicapped individuals.

And I would just finally stress Mr. WHITTEN's argument, Mr. Speaker, with respect to the confusion arising from the current situation at SRS.

For the President is mistaken in charging that we are confusing the lines of authority within the Department of Health, Education, and Welfare. Indeed, by providing a legal basis for the agency charged with administering programs for the rehabilitation of handicapped Americans, we, for the first time, clarify that agency's responsibility.

LANDGREBE AMENDMENT

Let me now conclude my review of this unsupportable veto message by saying just a word about the amendment offered by my good friend from Indiana (Mr. LANDGREBE) which the President commends to us.

For I am sure that the President has not seriously examined the alternative which he praises.

That amendment, Mr. Speaker, if adopted, would mean that 48 of the 54 States and territories would lose funds proposed in the President's own 1974 budget.

Again the President abandons his previous commitments.

Indeed, I should point out that the amendment would cost the President's own home State, California, over \$45,000, while, at the same time, Maine—hardly a major population center, would stand to gain over \$421,000.

Surely the President does not really expect us to take this preposterous proposal seriously?

He is, again, obviously unfamiliar with the legislation about which he speaks, with such great confidence, before the American public.

So let me, then, Mr. Speaker, summarize what I have been trying to say today.

I have told my colleagues that the fiscal and budgetary criticisms of this measure do not stand up under scrutiny.

I have told them of our reasons for seeking to make sure that the Rehabilitation Services Administration has the authority to carry out the responsibilities assigned to it.

And I have told them that the new categorical programs the President opposes are either the creations of his own administration or the strengthening of existing programs.

CONTINUED SUPPORT FOR REHABILITATION

Now let me tell my colleagues, Mr. Speaker, of the overwhelming reasons undergirding our case that the President's veto should be rejected.

Consider that this bill continues one of the most successful Federal-State programs in the history of our great land.

Consider that it makes good on the commitments made in prior legislation to those individuals suffering from the most severe handicaps.

Consider that it authorizes a modest increase in funds, if, in the judgment of Congress through the appropriations process, those funds are available.

Consider that in fiscal year 1972, the earnings of 12,221 rehabilitated individuals climbed to over \$41 million after they received rehabilitation services, compared to the \$3.6 million they earned annually before rehabilitation.

Now, Mr. Speaker, I ask my colleagues to ponder this tragic fact: The number of handicapped people in our land is not, as we would all hope, declining, but it is increasing.

Indeed, current estimates are that between 7 and 10 million people in need of vocational rehabilitation services are not now receiving them, and that over 500,000 will join that number each year.

Yet the President asks us to sustain him in his rejection of the historic legislation, carefully drafted over a 2-year period, that makes a modest attempt to begin to address this situation.

He asks us, indeed, to ignore the yawning gap between our accomplishments and our aspirations with respect to disabled Americans.

And I say this not for any partisan purpose.

For I know the President supported rehabilitation legislation during his tenure in the House and the Senate, and while he served as Vice President.

And he supported it as President, as well, until he was presented with the Rehabilitation Act.

And I applaud the President for that

support, just as I applaud the increase in the numbers of handicapped people served since he took office.

I point out what the President is asking us to do because he has attempted, I here repeat, to paint a picture of an irresponsible Congress damaging 200 million Americans ravaged by inflation.

And the issue, Mr. Speaker, as I noted at the outset of my remarks, is really whether we will today make good on our promises to handicapped Americans, or whether we will support the President in his mistaken views of this bill.

And I hope I have made my own position clear with respect to that choice.

I urge my colleagues to join with me to override the President's veto.

Mr. Speaker, so that my colleagues may understand the dismay with which I viewed the President's veto message, I insert in the RECORD at this point several statements from the administration during the time in which we drafted this measure.

These materials include: Statements by former Secretary Elliot Richardson, and other administration officials, with regard to the Rehabilitation Act; and official administration recommendations with regard to severely disabled during the House-Senate Conference on the Rehabilitation Act, October 1972.

Following those statements, Mr. Speaker, I also insert an analysis and several tables, showing the impact of H.R. 6323, introduced by my good friends from Michigan and Illinois, Mr. ESCH and Mr. ERLKENBORN. That analysis was developed by the National Rehabilitation Association on behalf of the 30 national organizations urging Congress to override the President's veto.

I include, also, Mr. Speaker, the association's analysis of the myths of the President's veto in light of the reality of the measure approved by Congress:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,

Washington, D.C., February 22, 1972.

HON. JOHN BRADEMAs,
House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAs: I want to express my gratitude for the cooperation shown by the Select Subcommittee on Education in working with the Administration on legislation to renew the Vocational Rehabilitation Act. I am pleased to note that some of the Administration's proposals to improve the Act have been incorporated in the Subcommittee bill reported to the full Committee.

There are some provisions in the bill which I feel are unnecessary and some sound Administration initiatives have not been incorporated in the bill. Nevertheless, I want to commend the Subcommittee for its work with us toward our shared objective: improving the capacity of the vocational rehabilitation program to serve the handicapped.

With kind regard,
Sincerely,

ELLIOT L. RICHARDSON,
Secretary.

REHABILITATION SERVICES
ADMINISTRATION,
Washington, D.C., April 11, 1972.

HON. JOHN BRADEMAs,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAs: As we turn toward the Senate considerations of H.R. 8395, the 1972

Amendments to the Rehabilitation Act, I would be remiss if I did not extend my personal thanks for your leadership and deep concern of the nation's capacity to provide rehabilitative services to handicapped people.

Your personal attention has led to an extraordinary bi-partisan effort to make more visible and expand our commitment to helping disabled people achieve independence and self support.

I am particularly appreciative that you made Jack Duncan available to work with us on the Act. His specific knowledge and programmatic insights were extremely impressive to all of us working on the Bill.

Once again, my sincere personal thanks.
Cordially,

EDWARD NEWMAN,
Commissioner.

ADMINISTRATION STATEMENTS ON VOCATIONAL REHABILITATION

Secretary Richardson, March 21, 1972, hearings before the Select Subcommittee on Education on the Older Americans Act

We look forward to working closely with the subcommittee to produce the best possible bill to achieve our shared objective.

Certainly, Mr. Chairman, I would like to join you, noting the very fruitful results of cooperation that you have already mentioned and particularly to congratulate you on the overwhelming support accorded yesterday for the rehabilitation legislation.

OFFICIAL ADMINISTRATION POSITION DURING HOUSE-SENATE CONFERENCE ON THE REHABILITATION ACT, OCTOBER 1972, WITH REFERENCE TO THE SEVERELY HANDICAPPED

We agree that the basic program should be reformed so as to assure that those whose handicaps are most limiting in terms of ability to become gainfully employed should be served by this program before those with lesser handicaps. . . .

Keep the vocational goal orientation of present law in Title I. However, authorize as in Title III of the House bill, a separate program for non-vocational services to the severely disabled. . . . We are talking about something revolutionary in V.R.—dealing with independent living goals. . . .

SOURCE: "Administration Recommendations on Major Conference Issues Regarding Vocational Rehabilitation Bill."

ANALYSIS OF H.R. 6323

The thirty organizations of and for the handicapped who are urging Congress to override the Presidential veto of S 7 have issued the following statement relative to HR 6323, Rehabilitation Act Amendments introduced by Mr. Esch of Michigan and Mr. Erlenborn of Illinois. (See Congressional Record of March 29, H 2181.)

"HR 6323, a new rehabilitation bill, was introduced on March 29 by Mr. Esch of Michigan and Mr. Erlenborn of Illinois. Printed copies of the bill were not available until April 2, approximately 24 hours before the scheduled vote to override the President's veto of S. 7. As a result, we have not been able to make a thorough analysis of this bill. However, we are sure of this.

The introduction of a new bill at this time will contribute to confusing the issue, whatever may be the merits of the bill itself. The vote on Tuesday, April 8, will be to *sustain the veto* or to *override the veto*. No other legislation having to do with rehabilitation will be voted upon on that day. Any new bill must be referred to the appropriate committees, hearings must be conducted, and the bill reported in the regular way. There is no way of knowing whether the committees of Congress or the Administration will approve the new bill. In fact, it contains some of the provisions most objectionable to the Administration. Certainly, the introduction of a

new bill at this late date cannot be used to avoid responsibility for what may happen if the veto is sustained. This seems to be what some members have in mind, since they have been speaking of HR 6323 as a substitute for S 7.

With respect to the bill, itself, much of it is either identical to or very similar to S 7. The appropriation authority is lowered considerably, which is its principal attraction, we suppose. It is significant, however, that the new bill does not contain the new program features of S 7. It does not contain special emphasis on demonstration programs to serve the older blind, the spinal cord injured, the victims of renal disease, and the deaf. It substitutes a 'study' for the provisions for comprehensive services to the severely disabled. It does not contain the vitally important Commission on Housing and Transportation for the Handicapped and other important features. At best, it cannot be interpreted as more than 'stand pat' legislation, while much more needs to be done.

Accordingly, the organizations of and for the handicapped who are urging you to vote to override the President's veto of S 7 are equally emphatic in saying they cannot support HR 6323 in the form in which it was introduced."

VOCATIONAL REHABILITATION ACT AMENDMENTS AND THE PRESIDENT'S VETO ISSUES AND ANSWERS

(Based on White House Releases of March 27, 1973)

ISSUE—FISCAL IRRESPONSIBILITY

In this case, rhetoric is a substitute for substance. The bill *authorizes* expenditures for various programs. It does not *appropriate* any money for anything. The appropriation bill will come later and may or may not recommend the full amounts authorized. The amount of the authorizations is exaggerated. Accepting the President's figures, authority in the bill is \$1.3 billion more than in his substitute bill over a three-year period. Congress will be fiscally responsible. The argument is over *how* the money will be spent, not over *how much*. Rehabilitation is cost effective (15-1 ratio). Let's bury the fiscal irresponsibility issue. Additional funds appropriated under the Social Security Act are earmarked to serve Welfare and Social Security beneficiaries referred to vocational rehabilitation agencies under HR 1.

DISTORTS OBJECTIVES

No rehabilitation measure ever passed by Congress has greater vocational rehabilitation emphasis than S. 7. The emphasis is on the vocational rehabilitation services to the *severely disabled*. The small earmarked authority in Title II, optional with the states, is to encourage them to accept individuals for whom vocational rehabilitation goals may not be feasible, at least in the beginning. The question is how far they can go toward complete rehabilitation. The separate fund assures that this program *will not compete* with vocational rehabilitation funds. This program will help the *most neglected disabled people*.

ISSUE—CATEGORICAL APPROACH

Congress, traditionally, has chosen the categorical approach to initiate and get special emphasis on problems of certain target groups. Why should anyone oppose special efforts to facilitate the rehabilitation of the *older blind, the spinal cord injured, the deaf, and the victims of renal disease*? Anyhow, these are special project programs with very modest authority expiring in three years.

ISSUE—PREVENTS EFFECTIVE MANAGEMENT

What this means is that Congress and the President view effective management differently. The executive never wants any restraints on administration. Fortunately, Congress has insisted on some and the programs

have been *better administered* as a result. S 7 establishes a Rehabilitation Services Administration in HEW under the direction of a Commissioner who will have responsibility for administering appropriate titles of the act. The purpose of this provision is to unify the administration of vocational rehabilitation programs in one administration. Currently, responsibility is divided between various levels in the Department with resulting confusion. Congress has taken similar steps in the fields of education, aging and many others. It is absurd to imply that effective management is impossible under this act.

ISSUE—UNNECESSARY COMMITTEES AND COMMISSIONS

These are unnecessary only if one does not want to do anything to solve the problems to which they are directed. In a TV broadcast (WRC-Mar. 29), Keith Russell, a severely handicapped employee at Walter Reed, emphasized the difficulty, even impossibility, of handicapped people living normal lives because of architectural and transportation barriers. One of the Commissions is directed to the solution of this problem. The President, himself, has appointed many commissions to study and make recommendations. Those in S 7 are appropriate to needs.

WHEAT'S IT ALL ABOUT?

Let's not forget what S 7 really is. Legislation directed toward helping severely disabled youths and adults become employable—the extension of the vocational rehabilitation program, a model of effective state-federal relationships, the most cost effective program in the human service area. 300,000 persons were made employable through this program in 1972. Hundreds of thousands of others are watching with interest and concern as this program for their benefit is being used by the President for a confrontation with Congress over fiscal policy. Let's vote to override the veto with a sizeable margin.

SOME FINANCIAL ASPECTS OF THE HOUSE LANDGREBE (ADMINISTRATION) SUBSTITUTE VERSUS S. 7

THE VOCATIONAL REHABILITATION ACT OF 1972

S. 7 was very carefully drawn to make available funds appropriated by the Congress and signed into law by the President. The Landgrebe substitute does not take into account the technical requirements necessary for release of appropriated funds.

The Landgrebe substitute, if it were to be enacted, would cause all except two low effort States to lose money when the allocation of the Landgrebe substitute is compared with S. 7 allocations within the President's expenditure ceiling. If the Landgrebe substitute were used to allocate moneys already appropriated, in excess of \$23 million would be lost by 25 high effort States. The States and territories that would lose money and their approximate amount of loss expressed in thousands of dollars are listed below.

Loss State or Territory: (in Thousands)	
Alabama	\$1,920
Arkansas	1,158
Delaware	68
District of Columbia	260
Georgia	2,052
Hawaii	447
Idaho	238
Iowa	145
Maryland	197
Minnesota	555
Mississippi	927
New York	1,928
North Carolina	2,487
Oklahoma	772
Oregon	53
Pennsylvania	2,287
South Carolina	1,503
South Dakota	58

State or Territory:	Loss in (Thousands)
Texas	\$3,433
Utah	168
Vermont	66
Virginia	1,743
West Virginia	1,034
Wyoming	21
Guam	34

SOURCE.—Department of Health, Education and Welfare.

The attached was prepared to illustrate State allotments under provisions of the Landgrebe amendments to the VR Act, assuming an appropriation of \$590 million for Section 2, as compared to the allotment of the same amount under the provisions of the present Act.

Column I illustrates the Landgrebe amendment, including:

- 1) Allotment based on amount appropriated;
- 2) Re-allotment of unmatched Federal funds according to State estimates available as of March 30, 1973; and
- 3) However, minimum is shown as \$1 million not $\frac{1}{4}$ of 1 percent (\$1,525,000; the impact is minor)

Column II—The President's budget for 1974, as per the present Act.

Column III—Differences, assuming the State matches what they now estimate will be available.

ESTIMATED FEDERAL GRANT FOR FISCAL YEAR 1973

State	Fiscal year—		Difference
	1973 Landgrebe	1973 budget	
U.S. total	\$589,000,000	\$589,000,000	
Alabama	16,293,402	16,312,594	-\$19,192
Alaska	1,000,000	1,000,000	
Arizona	6,208,101	6,216,415	-\$7,314

¹ Does not include \$1,000,000 minimum for evaluation of the vocational rehabilitation program.

² No allotment base with a minimum allotment of \$1,000,000 or each State.

³ Under \$600,000 authorization figure with \$1,000,000 minimum allotment for each State.

SUMMARY OF PROVISIONS OF CONGRESSIONAL OFFICE OF CONSUMER PROTECTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. THORNTON) is recognized for 5 minutes.

Mr. THORNTON. Mr. Speaker, on Wednesday of last week I introduced H.R. 6280, a bill to establish a Congressional Office of Consumer Protection.

This bill differs from Consumer Protection legislation previously introduced, by establishing the office as an arm of the Congress, exercising legislative oversight, rather than as an independent executive agency under the President. The Consumer Counsel is given broad authority to seek judicial review of executive agency decisions affecting consumers. A Congressional Office of Consumer Protection will assure an appropriate check and balance and an effective method of representing and protecting the public interest.

The office is authorized to develop consumer education and counseling programs, to conduct investigations, to cooperate with private enterprise in promotion and protection of the interests of consumers, and it is directed to keep Congress fully and currently informed of all its activities and to insure that interests of consumers are given consideration by Federal agencies.

The Consumer Counsel is given authority to take part in any proceeding before a Federal court or Federal agency affecting consumers' interests and to appeal agency decisions to the courts. The Consumer Counsel does not have authority to issue subpoenas, but when acting as a part in a proceeding before a Federal agency, may use the agency's subpoena powers.

The bill provides that in the event of a judicial appeal from agency action, the Consumer Counsel or his qualified or designated representative will represent the Office of Consumer Protection, while the Attorney General will represent the agency. The bill contains provisions for resolving complaints, for providing consumer information and services, and testing and research, and for annual reports and recommendations for changes in legislation. A more detailed abstract of the bill follows:

ABSTRACT

A declaration that vigorous representation and protection of the interests of consumers is essential to the fair and efficient functioning of a free market economy is contained in section 2.

Section 3. The Office of Consumer Protection established by this bill shall be independent of the President and of the executive departments and under the control and direction of a Consumer Counsel who shall be appointed for a term of 15 years, ineligible to succeed himself, with salaries and retirement benefits established by this bill, and with a provision that the Consumer Counsel—and the Assistant Consumer Counsel—may not be removed except by Congress, for inefficiency, permanent incapacity, neglect of duty, or other specific causes. No employee of the office—except expert consultants—may accept other employment.

The structure of the office provided in this section is similar to that employed in the establishment of a Comptroller General in the General Accounting Office.

Section 4. The Consumer Counsel is granted general authority to employ, subject to civil service and classification laws, such persons as may be necessary to carry out the provisions of the act, and to establish rules, appoint advisors, enter into contracts, and accept services of others.

Under subsection (c) Federal agencies are directed, upon request by the Consumer Counsel, to cooperate with the Office of Consumer Protection and to furnish information and statistics, and to allow access to agency information.

The Consumer Counsel is required to submit an annual report of acts taken, suggestions for legislation, and evaluation of consumer programs to the Congress and the President in January of each year.

Section 5. The Office of Consumer Protection is charged with the duty of protecting and promoting the interests of the people of the United States as consumers. The office shall specifically assure that consumer interests are considered in the formulation of the policies and operation of programs by appropriate Federal agencies, shall develop education and counseling programs, and conduct investigations concerning consumer problems. The office is directed to cooperate with and assist private enterprise in the promotion and protection of the interest of consumers, and to keep committees of Congress informed of its activities.

Section 6. The Consumer Counsel, upon a finding that a matter affecting the interests of consumers is pending before any Federal court or agency and that the intervention of the Office of Consumer Protection is required to adequately protect consumers' interests, may as a matter of right participate in such proceeding in accordance with such agency's generally applicable rules of practice and may obtain a review of agency action directly in any U.S. court of appeals.

In addition, the Consumer Counsel, upon a determination by the court that an agency action may adversely affect consumers, and that the interests of consumers are not otherwise adequately represented, may seek judicial review of agency action in which the Consumer Counsel did not participate. The Consumer Counsel may in the discretion of the agency or court participate as amicus curiae. The Consumer Counsel is authorized to request Federal agencies to initiate proceedings required in the consumer interest and to obtain judicial review of agency action or inaction.

Subsection (e) provides for use by the Consumer Counsel of agency powers of subpoena and production of evidence.

Subsection (f) makes clear that the Consumer Counsel, or his designated representative shall represent the Office of Consumer Protection in the courts and that the Federal agencies will be represented by the Attorney General of the United States. The Consumer Counsel may designate qualified representatives for such duties.

Subsection (h) makes clear that the

Consumer Counsel is not authorized to intervene in State or local proceedings, but subsection (1) specifically authorizes communication with other offices and agencies, whether Federal, State or local.

Section 7. Before issuing or adopting any rules, regulations, guidelines, orders, standards or formal policy decisions or before taking any other action which may substantially affect the interest of consumers every Federal agency shall notify the Office of Consumer Protection and take such action with due consideration to such interest. In taking any action which may substantially affect the interest of consumers the Federal agency shall indicate in a public announcement the consideration which has been given to such interest upon request of the Office of Consumer Protection—or if it is a case where a public announcement would normally be made.

Section 8. Upon receipt of any complaint or other information affecting the interests of consumers and disclosing a probable violation of a law of the United States, a rule or order of a Federal agency or office, or a judgment, decree, or order of any court of the United States involving a matter of Federal law the Office of Consumer Protection may take any action within its authority which may be desirable or transmit the complaint to the Federal agency charged with the duty of enforcement. This subsection also allows the Office of Consumer Protection to take action based on information which it has developed on its own initiative.

Subsection (c) directs the Office of Consumer Protection to ascertain the nature and extent of action taken with regard to complaints or other information transmitted to Federal agencies. Upon receipt of complaints against business enterprises such business enterprises will be promptly notified by the Office of Consumer Protection of such complaints against them. The public document room containing all signed consumer complaints together with annotations of actions taken by it shall be maintained by the Office for public inspection and copying subject to the following conditions:

First, that the complaining party has not requested confidentiality.

Second, the party complained against has had 60 days to comment on such complaint, such comment to be displayed with the complaint.

Third, upon referral of the complaint to another entity, that such entity has had 60 days in which to notify the Office of Consumer Protection of the action it intends to take with respect to the complaint.

Section 9. This section allows for the dissemination to the public by the Office of Consumer Protection of information, statistics, and other data which may be of interest to consumers. Subsection (b) of this section authorizes and directs Federal agencies to cooperate with the Office of Consumer Protection in making such information available to the public.

Section 10. All Federal agencies which possess testing facilities and staff relating to the performance of consumer protection and services are directed to

perform such tests as the Consumer Counsel within his authority under section 6 of this proposed act may request regarding any matter affecting the interests of consumers. The results of such tests may be used or published only in proceedings in which the Office of Consumer Protection is participating or has intervened pursuant to section 6.

Neither a Federal agency engaged in testing products under this proposed act nor the Office of Consumer Protection shall declare one product to be better or a better buy than any other product. Subsection (d) directs the Office of Consumer Protection to periodically review tested products to assure that information disseminated about them conform to the test results.

Section 11. The section on limitations of disclosures serves to protect first privileged or confidential trade secrets and commercial or financial information, and second, information which comes within the exceptions to the Public Information Act. However, subsection (b) allows such information to be disclosed in an adjudication if the judge or other officer presiding finds that the matter is relevant and that disclosure is necessary. Additional safeguards are provided for release of information in instances which do not involve an administrative proceeding or an adjudication.

Section 12-16. These sections provide for procedural fairness, define terms used in the bill, and contain appropriate savings clauses, conforming amendments and the effective date.

MEAT BOYCOTT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia (Mr. MATHIS) is recognized for 10 minutes.

Mr. MATHIS of Georgia. Mr. Speaker, many misguided and uninformed consumers across the country have embarked on a meat boycott this week, as I am sure every Member of the House is aware. There is no doubt in my mind as to the long-range outcome of this exercise—it will eventually force meat prices higher.

I have just returned from a weekend in my district where I found farmers and livestock producers more inflamed than I have ever known them to be, and with good reason. These producers of our food have been forced for years to eke out a living on low returns from their considerable investment and none are getting fat now off the sale of their livestock for slaughter. These producers are caught in the same squeeze that every other American consumer is caught in—that of inflation and high prices. The cost of their feeds for their livestock has skyrocketed, in some cases, more than doubled, in the past several weeks. The price they receive for their slaughter animals must increase—just to keep pace with their increased costs of production.

Not only do these producers face frustrated, misinformed consumers, they also face an administration that has done nothing to salve their wounds during this period of their own frustration. These farmers are shaking their heads in

disbelief and wringing their hands in agony over the decision to impose ceilings on meat sales at the retail and processor level. This will not, Mr. Speaker, freeze the prices the farmer is receiving for his livestock, but will force them down.

You must understand that the supermarkets' cost of doing business is not frozen, and as labor costs and other operating expenses rise, the supermarkets are not going to take less than the profits they are making at this time on fresh meats; therefore, they will simply pay less to the packers. The packers are caught in the same squeeze, and they will be forced to pay less to the producer. There is no freeze, Mr. Speaker, on the production costs of the producer, so he is the fellow who will finally be punished.

I have numbers of farmers and livestock producers at this time who are ready to throw up their hands and walk off the farm simply because they are sick of being the whipping boy for all of America's economic woes. They are sick of an administration that talks out of both sides of its mouth and then kicks them in the teeth. They are sick of agitators who fail to recognize that food costs in this Nation require a far less percentage to total disposable income than in any other nation in the world. And Mr. Speaker, they are especially sick of uninformed officeholders who continue to demagogue high prices for political purposes.

Instead of leading boycotts—I would suggest to some of my colleagues that they should be leading thanksgivings. They should be saying thank you to these farmers who have fed them, and their constituents, for years without their thanks, without their support, and without their understanding.

Mr. Speaker, I wish to use this opportunity to invite as many urban Members of the House as will accept my invitation to come with me to Georgia and see for themselves the plight of the farmer and livestock producer. I will arrange for you to visit as many farmers and producers as you care to see. I will arrange for you to visit their bankers, implement, and equipment dealers, fertilizer dealers, and others who depend on their efforts for their own livelihood.

I will arrange for you to spend a day, or a week, out there with the farmers, sharing his food and lodging and will offer you the opportunity to work side by side with him—from before dawn until well after dark on most days. And if you are interested after you have had an opportunity to learn more about what it is really like down on the farm—I will arrange for you to talk to some farmers who will be willing to sell you their farms, since you seem to think it is a great way to get rich. Because they are getting ready to get off the land anyway, you might be able to find some bargain basement farm prices.

H.R. 100: PENSION REFORM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRASER) is recognized for 5 minutes.

Mr. FRASER. Mr. Speaker, it is my

privilege to have introduced H.R. 100—Members joined me in cosponsorship—51 Members of the House have introduced similar legislation. This bill amends title 38 to make certain that recipients of veterans' pension and widows' dependency and indemnity compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits.

To receive a pension, a veteran must either have attained the age of 65 or older or be totally and permanently disabled from nonservice-connected causes. Pensions for those veterans with service in World War I or after are subject to income limitations which are in the neighborhood of the poverty level. A single, disabled veteran cannot receive a pension if his income exceeds \$2,600 annually. Further no disabled veteran can receive a pension if his income is in excess of \$3,800, regardless of the number of dependents he may have.

The plight of our pensioned veterans has been significantly intensified by increases in the cost of living which we have suffered over the past few years. Our veterans' benefits have hardly kept pace with this increase. Although, we all felt an economic strain due to inflation, the heaviest toll has been felt by those with a fixed income, such as individuals receiving veterans' pensions.

Congress has recognized the need to offset this spiraling cost of living, as the recent social security increase denotes. However, many veterans will not be able to receive the increase planned by Congress, for they are now in a higher income bracket due to that very social security thus resulting in a decrease in their veterans pensions.

In fact, if we do not amend the present law, over 1.2 million pensioners will have a reduction in their VA pension because of their social security increase. Another 20,000 pensioners will be dropped from the pension rolls entirely, and 15,000 of these veterans will actually suffer a loss in their aggregate income ranging from \$38 to \$168 annually. This means an average loss of approximately \$108 annually to a veteran drawing a pension who is dropped from the rolls.

The reduction in our veterans' pensions is certainly inequitable and creates an undue hardship on a segment of society which certainly can ill-afford it. The increase in social security does not reflect nor result in an increase in purchasing power that exceeds need. In fact, everyone who draws social security and is not poor will receive a substantial increase except the poor veterans receiving pensions. Certainly our veterans and their survivors must have the full measure of the social security increase provided for in Public Law 92-336 without a significant reduction in their pensions.

President Johnson recognized this situation, and tried to provide for it in January of 1967, when he called upon Congress to:

Make certain . . . (social security increases) do not adversely affect the pensions paid to those veterans and dependents who are eligible for both benefits. Accordingly, I propose that the Congress enact the neces-

sary safeguard to assure that no veteran will have his pension reduced as a result of increases in Federal retirement benefits such as social security.

President Johnson's plea was valid in 1967. It is certainly valid in 1973.

A social security increase is, in reality, a myth for those who need both social security and veterans' pension to survive. An increase in social security means a decrease in veterans' pensions for too many.

Something must be done now. Our veterans have already felt the loss of benefits in the February and March pension allotments. This situation must not continue. Only if H.R. 100 is enacted, will this unfair discrimination be avoided.

PRESIDENT'S FAILURE TO EXECUTE THE LAWS OF THE LAND IS HARMING LOCAL COMMUNITIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. DANIELSON) is recognized for 15 minutes.

Mr. DANIELSON. Mr. Speaker, the U.S. Constitution requires that the President shall take care that the laws of our land be faithfully executed. The people in my congressional district have been expressing their concern to me in record numbers over the President's failure to execute some of our laws whose provisions relate to our domestic policies.

These failures to execute our laws have caused much worry among the elderly, the sick, and the poor. People are worried about the President's plans for increases in medical costs under medicare; deep cuts in manpower training programs; his freeze on new low-cost housing starts; proposed regulations which have been promulgated by the Department of Health, Education, and Welfare; the arbitrary phasing out of the Office of Economic Opportunity; and his holding back or impounding of money which has already been appropriated in bills which the Congress has passed and the President has approved and signed into law—in short, his refusal to execute the laws of the land.

These people have a right to be concerned, as I am concerned, and as are so many of our colleagues.

It is my intention to do everything I can to insure that valuable Federal programs which have proven successful will be continued, and to fight at every turn in behalf of those who need the help the most.

Mr. Speaker, the 29th District of California is greatly affected by these unwise failures to execute the laws of our land. I am attaching a list of some of those programs in my district to illustrate the far-reaching effect of the cutbacks and the broad scope of the programs involved:

1973 FUNDING CONGRESSIONAL DISTRICT No. 29
[1973 Budget Federal]

Office of Economic Opportunity:

Oriental Service Center (Council of Oriental Organizations) . . .	\$13,513
Educational Participation in Communities (EPIO) (California State University at Los Angeles Foundation) . . .	13,113

Legal Services Program (Los Angeles Legal Aid Foundation) . . .	168,120
Community Organization through Consumer Action (East Los Angeles Community Service Organization) . . .	11,332
Neighborhood Adult Participation Program (NAPP, Inc.) . . .	104,091
School Community Resources Involvement Project (Los Angeles County Schools) . . .	164,020
San Gabriel Legal Services Program (San Gabriel Valley Neighborhood Legal Services) . . .	75,500
Young Adult Leadership Project (East Los Angeles Community Service Organization) . . .	48,306
Community Return Project (Volunteers of America) . . .	44,444
School Community Action Project (Los Angeles City Schools) . . .	22,364
Narcotics Prevention Project (Narcotics Prevention Assoc.) . . .	39,256

OEO program total . . . \$704,059

NATIONAL INSTITUTE OF MENTAL HEALTH—NATIONAL INSTITUTE OF ALCOHOLISM AND ALCOHOL ABUSE

Alcoholism counseling and rehabilitation project (Los Angeles Community Service Organization) . . .	\$22,565
---	----------

NATIONAL COUNCIL ON THE AGING

Senior community service project . . .	5,118
--	-------

	Number of classes	1973 budget (Federal)
--	-------------------	-----------------------

Department of Health Education, and Welfare and State Department of Education:

Headstart program:

Kedren Community Health Center . . .	3	\$79,721
Child care and development services . . .	3	77,229
Los Angeles County schools . . .	22	572,644
Los Angeles Urban League . . .	1	26,268
Movimiento Educativo de los Ninos de Aztlan . . .	3	80,407
Foundation for Early Childhood Education . . .	2	52,409
Azteca preschool . . .	6	160,432

Total, Headstart . . . 1,049,110

Department of Labor: Neighborhood Youth Corps: 1 Out of school program . . .	138,124
--	---------

District 29, grand total . . . 1,918,976

¹ In school New York City program not listed.

And, Mr. Speaker, I would also like to point out the impact that some of the recommendations made by the President's budget would have on the Los Angeles city schools. This following report, showing the loss of Federal aid to the Los Angeles city schools alone, is most revealing:

LOS ANGELES

CITY BOARD OF EDUCATION,

Los Angeles, Calif., March 9, 1973.

HON. GEORGE E. DANIELSON,
House Post Office,
Washington, D.C.

DEAR GEORGE: I am taking this opportunity to express some of the concerns of the Los Angeles City School District with regard to the proposed revisions in federally funded educational programs. The school district staff and I have reviewed the President's budget recommendations and the accompanying presentations pertaining to educational and community development revenue sharing, and although we can see considerable merit to some of the recommendations, we are seriously concerned should the Congress and the President not act in time to prevent

a break in the continuous funding of our present federally funded programs. Any interruption in continuity in the flow of federal funds could result in the loss of much needed assistance to pupils and community personnel in the many educational programs which have been developed by the Los Angeles Unified School District.

To emphasize some of our concerns, the following summary of major programs, including the positions and the amount of funds, is offered:

Program	Positions subject to termination	Funds subject to termination
ESEA Title I.....	3,274	\$29,171,393
EDSEA Title II.....	9	895,397
NDEA Title III-A.....		367,800
Adult Basic Education (ABE).....	80	849,000
Industry Sponsored Programs (ISP).....	37	267,000
MDTA.....	189	3,000,000
Model Cities.....	418	4,508,123
Vocational Education Act.....	126	2,572,264
Work Incentive (WIN).....	100	1,180,000
Neighborhood Youth Corps (Regular).....	1,315	1,000,000
Neighborhood Youth Corps (Summer).....	5,000	2,140,000
Total.....	10,548	45,950,977

¹ 6,315 NYC Students.

To the above-listed programs could be added a number of programs funded by the Office of Economic Opportunity, New Careers programs, Narcotic prevention programs, etc., whose curtailment or elimination would have serious implications for the Los Angeles community.

The loss or reduction of almost forty-six million dollars of federally funded programs and the resultant employment cutbacks could have serious and far reaching implications for the Los Angeles School District and its future. To fail to call your attention to the gravity of the situation would place me in a situation where I would be remiss in my duty as superintendent.

Sincerely,

WILLIAM J. JOHNSTON,
Superintendent of Schools.

COMMERCIAL BROADCASTING IN THE UNITED STATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Rhode Island (Mr. TIERNAN) is recognized for 5 minutes.

Mr. TIERNAN. Mr. Speaker, the commercial broadcasters of the United States, the licensees of the public airways, are presently involved in an all-out campaign to expand the broadcast license term and to set standards which will make successful challenges all but impossible.

This legislation may effectively end what little public control over broadcast licensees currently exists. Therefore, I commend to the attention of my colleagues the excellent statement made by Joseph A. Beirne, president of the Communications Workers of America, AFL-CIO, before the Subcommittee on Communications and Power of the Committee on Interstate and Foreign Commerce, March 14, 1973.

Included also are the position statements of the Communications Workers of America and the AFL-CIO Executive Council on the recent Whitehead proposal, which Mr. Beirne feels may be inadvertently adopted in changing the license term.

These statements help clarify what is really at stake in the license renewal question.

STATEMENT OF JOSEPH A. BEIRNE

A massive campaign of scare tactics and bogeymen is under way in the Congress, at the instigation of some of the commercial broadcasters.

These broadcasters want to press the Congress into amending Section 307(d) of the Communications Act so as to provide for a 5-year license term and to make challenges to the stewardship of incumbent licensees a practical impossibility.

Currently in circulation is an 8-page paper replete with scare words beginning with the first sentence: "The survival of the free broadcasting system is at stake." This paper, headed "Renewal of Broadcast Licenses—A Background Paper," does not show a source. However, CWA has acquired this paper from the National Association of Broadcasters, which produced it according to reliable information given CWA.

This paper, which cannot be called a fact sheet, makes many sweeping statements "buttressed" by arguments telling, for example, that a certain judge's opinion "implies" that a significant number of licenses should be turned over to newcomers at the end of the three-year license period; or that "a station's ability to function would be destroyed"; or that "the way would be opened for blackmail and extortion."

Broadcasters, this 8-page paper contends, "are not seeking licenses in perpetuity."

Hopefully, no one besides the scribe who wrote that paper believes what is printed therein.

The present law, in Section 307(d), provides for 3-year license terms which are renewable "if the Commission (FCC) finds that public interest, convenience, and necessity would be served thereby." This section incorporates by reference Section 405, dealing with petitions for rehearing.

Under the broadcasters' proposal, Congress would be taking away much of the Commission's enforcement power. The first proviso of their proposal, which has numerous variations and many co-sponsors to date, mandates the Commission to renew a broadcast license if the broadcaster has made an as yet undefined "good faith effort" to serve the community and "has not demonstrated a callous disregard" for law or FCC regulations, another undefined concept.

The second proviso of the broadcasters' proposal is to weigh against a renewal applicant his callous disregard or failure to show good faith efforts, if any.

It is that first proviso which serves to choke off the actual possibility of renewal challenge, the only competition present in this monopoly situation.

The Whitehead proposal, which in the last 3 months has caused a shock wave throughout the broadcasting industry, seems not too different from the broadcasters' own proposal. The Administration's clear purpose, however, was to divide stations from their networks, in order to stifle the kind of national news and public affairs being made available to the citizens living far from the seat of government.

The broadcasters appear not to understand that the present language of Section 307(d) is sufficiently protective of their rights and financial interests.

Under the list of precedents and guidelines developed by the Commission, the community-serving broadcaster has a tremendous advantage over any challenger. The present 307(d) language does not remove a burden of proof from the challenger, no matter what the trade lobbyists and local broadcasters may say to the contrary.

In recent years, only a few broadcast licensees have been revoked—and those for demonstrably poor public service. Notable

examples were the licenses of WHDH, Boston, and WLBT, Jackson, Miss.

The broadcasters seem to have a sizeable error in their reasoning. They seem to be equating the possession of a broadcasting station, in other words, an item of property, with a license to use the airwaves, which are a public resource. I hope the Congress will keep clear the distinction between property and a public resource placed in the hands of a kind of fiduciary. This distinction seems to be getting lost in the efforts to stampede the Congress into action.

Members of Congress have told CWA that they have not had any opposition to the broadcast renewal proposal from their Districts; this is without doubt true. However, limited-group special interest legislation seldom generates any reaction from the home District, a fact we all know.

In their eagerness to shut off challenges, the broadcasters have failed to recognize the massive threats that are rampant in the Nation against the true meaning of the First Amendment to the Constitution. They neglect to note that the present climate, as expressed in the Whitehead speech of December 18, 1972, is one marked by the intention to bring the press under close Federal control. The trade-off to sweeten the change is the 5-year license.

The broadcasters may decide they must accept the Whitehead proposal. However, because of the new interpretation of renewal guidelines that must necessarily follow an amendment to Section 307(d), the broadcasters might end up with the same kind of restrictions Dr. Whitehead had in mind when he discussed the Nixon Administration's license renewal proposal. I do not believe the broadcasters truly want that, even if they get their 5-year license authority.

I am certain the members of this Subcommittee are aware of Dr. Whitehead's appearance February 20 before Senator Pastore's Subcommittee, and his inability to cite specifics on the "elitist gossip" and "intellectual plugola" and other "sins" of which broadcasters are presumably guilty, in his view.

What I am trying to convey to the Subcommittee is that any amendment to the Communications Act should be undertaken after the lobby pressure has subsided. New language may lead to restrictions. If a broadcaster observes the proprieties of the Fairness Doctrine and offers a wide range of program content, he need not worry about his license renewal. Even if he is challenged, he will be contending with a private party. I cannot stress too strongly my fear that a change in the Communications Act, as contemplated in the array of bills before this Subcommittee, may lead to the White House as the antagonist in renewal cases.

And that is where I differ with the broadcasters. Let me offer my sympathetic comments to the broadcasting industry. The owners need to make profits in order to continue operating, in addition to justifying investment. I would normally believe that a broadcasting station not operating at a profit would have to be sold at a capital loss. However, I have learned that this is not an axiom. I would suggest, for example, that someone look into the Commission's license file on Station WGKA, Atlanta, which several years ago was sold at a sizeable profit despite its having been operated for some time at a deficit.

Only last week, another ominous incident occurred within broadcasting. CBS, bowing to pressure from a large number of its affiliates, withdrew the Joseph Papp production of "Sticks and Stones," which has been termed an anti-war drama. Of course the stations have denied that the White House has generated the pressure against showing the program. And if broadcast stations carry TV programs that are not anti-war, such as "The Green Berets," then there seems to be

an obligation to carry the periodic dramatization that is anti-war. And no one, his position on Vietnam or any other war notwithstanding, should stifle the traffic in ideas. I am grieved that CBS decided against carrying the program; the resulting furor over cancellation of the program has now made the program, "Sticks and Stones," into a genuine cause.

Aside from abridging the Commission's authority to set the kind of standards necessary to ensure that the airwaves are not abused by licensees, and there have been cases of abuse, the 5-year license renewal period would cause a practical problem at the Commission. The FCC personnel reviewing an application for renewal would have a 5-year period of records to examine, adding significantly to the workload. In a longer license period, a pattern of low quality performance (i.e., not meeting community needs) would be averaged in to a level difficult or impossible to attack. And a period of bad performance at the beginning of a 5-year period would mean an inordinately long time before the enforcement sanctions could set in.

The longer license period would also require the broadcast licensees to go to added work, furnishing information on a period of stewardship longer than the present.

Finally, there is the question of "due process," a cherished concept in American tradition. The station licensee now has standards which have been developed over the years that the present language of Section 307(d) has been in effect. He does in fact have the full due process of law as his protection under the present law.

The terms of art such as "good faith efforts" and "callous disregard" must be defined, for the Commission's guidance, if the Communications Act is amended. Otherwise, the Congress may be creating a truly chaotic situation for the broadcasters.

For the use of the Subcommittee, I have provided copies of the recent statement of the CWA Executive Board, "Broadcasting or 'Narrowcasting,'" which condemns the Whitehead proposal. We do not see much improvement in the industry proposals, and can envision that the industry could come to regret having pressed for this legislation.

I was among the supporters of the AFL-CIO Executive Council policy statement of February 23, entitled "The Administration's Attack on the Fairness Doctrine." For the Subcommittee's use, I also am providing copies of the AFL-CIO statement. This statement also opposes amending the Act in the fashion requested by the broadcasters.

BROADCASTING—OR "NARROWCASTING"?

The language of George Orwell's "1984" was "Newspeak," by which truth became falsehood and freedom became slavery.

Recent activities of the Executive Office of the President have indicated that the Nixon Administration has made an Orwellian policy decision to continue its attacks on the First Amendment to the Constitution, by attempting to bring the free press under White House control. If the Administration succeeds, it will make broadcasting into "narrowcasting."

The key issue in the "Pentagon Papers" case was that for a 2-week period, the First Amendment was in a state of suspension by a court edict, which was rolled back by a 1-vote margin in the Supreme Court. Regardless of the merits of the Vietnam war, the press should have been free of government interference in the publication of the papers, since genuine national security was not involved.

In November 1969, Vice President Agnew opened the administration attack on the free press, by his criticism of the broadcasting industry. Since that time, he and others speaking for the President have increased

the drum-fire of hostility toward broadcasters and other news media.

Late in 1972, the Administration succeeded in its attempt to subjugate the Corporation for Public Broadcasting, which had been established by the Congress in 1967 as an independent entity. The Administration has all but eliminated effective public affairs programming on the public broadcasting network. Its efforts included the "divide and conquer" strategy, which pits the local public stations against the Corporation on fund allocation, program content and other important matters.

In December 1972, Dr. Clay T. Whitehead, Director of the White House Office of Telecommunications Policy, unveiled the latest assault on the free press. In the guise of helping broadcasters by increasing the license period from 3 to 5 years, the White House is also intending to make broadcasters hesitant to present network news and programming by exercising more "local responsibility."

Dr. Whitehead's December 18 speech is replete with high-sounding phrases about ways in which broadcasters can "offer the rich variety, diversity and creativity of America" on television, and how "the truly professional journalist recognizes his responsibility to the institution of a free press."

In connection with a discussion of the "Fairness Doctrine," Dr. Whitehead stated: "For too long we have been interpreting the First Amendment to fit the 1934 Communications Act," calling that interpretation an "inversion of values."

Dr. Whitehead has proposed that Congress enact his bill, which would have as sweeteners the 5-year license renewal and more stringent requirements for citizen groups to challenge license renewals. The dangerous part of the Whitehead proposal is that government takes unto itself power to determine whether the individual station has been programming to meet vague and undefined government standards. The Communications Act, in its 38 years, never has given government the power to intervene in program content. The Whitehead bill would have that practical effect.

The Executive Board of the Communications Workers of America, recognizing the fragile nature of our First Amendment freedoms, hereby condemns the Whitehead proposal and urges the Congress to take no action thereon.

[Statement by the AFL-CIO Executive Council, Feb. 23, 1973]

THE ADMINISTRATION'S ATTACK ON THE FAIRNESS DOCTRINE

In August 1971, this Council adopted a policy statement which urged the Federal Communications Commission to "broaden and liberalize its fairness and related doctrines" and to "undertake effective enforcement programs to make them a reality." We called attention to and deplored the Commission's long record of lethargic enforcement.

The AFL-CIO shares the concern of the general public that private individuals and groups should have a fair opportunity of access to the airwaves to present their views on public issues, and that these airwaves, which are public property, must not be monopolized by the views of licensees and commercial advertisers. The AFL-CIO has, moreover, a special interest in this subject, in that some licensees are given to disseminating anti-union propaganda generally, while others have sometimes sold time to an employer to state its view during a labor dispute while refusing to sell time to the union.

This Council's August 1971 statement was evoked by the FCC's announcement that it was undertaking a "broad-ranging inquiry into the efficacy of the Fairness Doctrine" and other inter-related rules and principles.

In the year-and-a-half since then, the Commission has indeed inquired, but thus far it has brought forth not even a mouse.

Instead, the Administration has recently proposed that the Commission's efficacy be further enfeebled and attenuated (1) by lengthening the license period from three years to five; (2) by forbidding the Commission from adopting "any predetermined performance criteria . . . respecting the content of broadcast programming"; and (3) by providing that a license can be taken from an incumbent and granted to a competing applicant only through a two-hearing proceeding, in which the licensee is first found to have failed in its minimum obligations, and then loses to a competing applicant in a comparative hearing. This last proposal is similar to ones which the industry has been advocating and public interest groups opposing for several years.

Curiously, these proposals to give the industry virtually complete freedom from government scrutiny have been put forward by the Administration at the same time that Administration spokesmen have launched a barrage of attacks upon the networks for supposed "ideological bias" against the Administration, and as dispensers of "elitist gossip". Obviously, the legislative proposals do not logically follow from the thesis of the speeches. The reverse is true: if networks and their affiliates have been derelict in their responsibilities, the rational cure is more government oversight, not less.

The answer to this apparent paradox is, we fear, the one suggested by Commissioner Nicholas Johnson. The Administration proposes to give licensees freedom from even the feeble authority the Commission now exercises, but only if the industry shapes up and eliminates the "ideological bias" against the Administration imputed by Administration spokesmen to the networks. In other words, the content of network news and comment must be made more acceptable to the Administration.

We oppose in toto the proposed legislation, or any other that would weaken the Commission's administration of the Fairness Doctrine and related doctrines.

We assert:

1. The Commission should show more vigor in enforcement of the Fairness Doctrine, not less.

2. Station licensees have too much security of tenure, not too little. Only one licensee has ever lost its license for violations of the Fairness Doctrine, and then by the mandate of the courts, not by the choice of the Commission.

3. The networks, by and large, show a greater awareness of their obligations under the Fairness Doctrine, the personal attack rule, etc., than do most local stations. We assert this flatly, even though we have had disagreements with the networks on this subject and are far from satisfied with their performance. But in our experience the worst offenders are not the networks but local stations—and, very often, the more local the worse the performance.

4. The attempt of the Administration, whether by carrot or stick, to induce licensees to an ideological slant more to the Administration's liking is a grave threat to First Amendment freedoms. It should be flatly rejected by the industry and, if the industry is too short-sighted to perceive its own long-range interest, by the Congress.

EXECUTIVE PRIVILEGE—FOR THE CHIEF EXECUTIVE ONLY

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, I am today introducing legislation which would

effectively limit the exercise of any so-called executive privilege to the Chief Executive only. The issue of executive privilege has been of great concern to many of us for a long time. We are all aware of the phenomenal growth of executive power at the expense of the legislative branch. We have all been witness, for example, to the use of executive agreements in place of treaties requiring Senate advice and consent. Such growth threatens the fiber of our government conceived as a system of checks and balances.

My statement today discusses two recent instances that the use of executive privilege hindered Congress in acquiring information for carrying out its duties. It lists in tabular form numerous other instances of the use of executive privilege. Second, it discusses the dubious historical foundation for the privilege.

This past January, Secretary of State William P. Rogers invoked executive privilege and refused to testify before the Senate Foreign Relations Committee on Vietnam War Policy. In the same month, prior to assuming their cabinet duties, Elliot L. Richardson and Claude S. Brinegar expressly declined to comment on the war at Senate confirmation hearings—Congressional Quarterly Weekly Reports for January 13, 1973, at pages 53, 60, and January 20, 1973, at page 67.

In April 1972, prior to confirmation of Richard Kleindienst as Attorney General, the Senate sought information of the dealings of the Justice Department with I.T. & T. Executive privilege was invoked to keep Peter Flanigan from testifying. As a confidential adviser to the President, he was allegedly entitled to claim executive privilege. Inconsistently, it was alleged both that Mr. Flanigan dealt solely with Robert McLaren and also that the President had no knowledge of the McLaren-Flanigan discussions. Eventually, a mutual arrangement was agreed upon which limited the questions Members of Congress could ask Mr. Flanigan. Discussed in detail in an article by Arthur Selwyn Miller, "Executive Privilege: Its Dubious Constitutionality," appearing in the daily edition of the CONGRESSIONAL RECORD for October 2, 1972, at page 33066.

Other instances of claims of executive privilege too numerous to discuss are listed below:

CLAIMS OF EXECUTIVE PRIVILEGE

April 27, 1972: Treasury Secretary John Connally refuses to testify before Joint Economic Committee on matter of the Emergency Loan Guarantee Board refusing to supply requested records on the Lockheed loan to the Government Accounting Office. (*Washington Evening Star*, 4/27/72)

March 20, 1972: Frank Shakespeare, Director of the U.S. Information Agency, refuses to supply copies of USIA program planning papers for various countries—invokes executive privilege. (*Washington Evening Star*, 3/21/72)

March 20, 1972: State Department refuses to supply Senate Foreign Relations Committee with a copy of "Negotiations, 1964-1968: The Half-Hearted Search for Peace in Vietnam." (*Washington Post*, 3/20/72)

March 15, 1972: President Nixon invokes executive privilege in the request of the House Foreign Operations and Government Information Subcommittee for country field

submissions for Cambodian foreign assistance for the fiscal years 1972 and 1973. (*New York Times*, 3/17/72; Congressional Record, vol. 118, pt. 7, pp. 8694-8695.)

August 31, 1971: The Department of Defense refuses to supply foreign military assistance plans to the Senate Foreign Relations Committee. (*New York Times*, 9/1/71)

June 9, 1971: The Department of Defense refuses to release computerized surveillance records and refuses to agree to a Senate Constitutional Rights Subcommittee report on such records. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, pp. 398-399)

April 19, 1971: The Department of Defense refuses to allow three designated generals to appear before the Senate Constitutional Rights Subcommittee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, p. 402)

April 10, 1971: The Department of Defense refuses to supply continuous monthly reports on military operations in Southeast Asia to the Senate Foreign Relations Committee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, p. 47)

March 2, 1971: Department of Defense General Counsel J. Fred Buzhardt refuses to release an Army investigation report on the 113th Intelligence Group requested by Senate Constitutional Rights Subcommittee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, pp. 402-405)

March 19, 1970: Secretary of Defense Melvin Laird declines invitation to appear before Senate (Foreign Relations) Disarmament Subcommittee. (*New York Times*, 3/19/70)

December 20, 1969: The Department of Defense refuses to supply the "Pentagon Papers" to the Senate Foreign Relations Committee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, pp. 37-38)

August 9, 1969: The State Department refuses to provide defense agreement between U.S. and Thailand to the Senate Foreign Relations Committee. (*New York Times*, 8/9/69)

June 26, 1969: The Department of Defense refuses to supply the five-year plan for military assistance programs to the Senate Foreign Relations Committee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, p. 40)

April 4, 1968: The Department of Defense refuses to supply a copy of the Command Control Study of the Gulf of Tonkin incident to the Senate Foreign Relations Committee. (Committee on the Judiciary, United States Senate, *Executive Privilege: The Withholding of Information by the Executive*, 92nd Congress, First Session, p. 39)

(Research by Harold C. Relyea, Congressional Research Service, excerpts appeared in daily edition of the *Congressional Record*, 6/20/72 at p. 5820.)

Turning from the frequency of use of executive privilege to its validity as a doctrine, there is serious doubt that historical precedent justifies a claim of executive privilege. Prof. Raoul Berger, senior fellow in legal history at Harvard Law School, a member of the American Law Institute also serving as past chairman of its administrative law section, appeared before the House Subcommittee on Foreign Operations and Government Information and extensively docu-

mented the lack of historical foundation for executive privilege. Advocates of executive privilege claim that it is based on the doctrine of separation of powers. They reason that Congress encroached upon matters entrusted to the executive. Professor Berger discussed precolonial political thought and oft-cited examples of the use of executive privilege in Washington's administration. He concluded that neither supports the claim that the doctrine of executive privilege is founded on the separation of powers. Professor Berger also discussed the few cases which have considered the problem of executive privilege and concluded that none of them limited the power of Congress to inquire into executive conduct. He proposed these solutions:

- (1) a statute authorizing a suit on behalf of Congress against a member of the executive branch.
- (2) a permanent attorney who could screen congressional committee application for potential lawsuits.
- (3) resort to the Congressional contempt power.

Professor Berger concluded:

Until Congress faces up to the fact that the swelling tide of executive privilege claims can be stemmed only by decisive Congressional action, executive claims will continue to clog Congressional performance of vital functions." (CONGRESSIONAL RECORD, vol. 118, pt. 15, p. 19061.)

The recent pronouncement by President Nixon that "executive privilege" extends not only to current members of the White House staff but to former members as well should serve as an even greater impetus to the Congress to clarify and define what this privilege may be.

The "Nixon Doctrine of Executive Privilege" evolved out of the Senate Judiciary Committee's confirmation hearings on the nomination of L. Patrick Gray to be Director of the Federal Bureau of Investigation. Those hearings disclosed that information concerning the FBI's investigation of the Watergate incident was made available to the President's counsel, Mr. John Dean, in the White House. This unusual precedent appears to have put the chief law enforcement agency, the FBI, squarely in the political arena. Evidence further suggests that the FBI had knowledge of White House staff involvement in the Watergate case and turned that information over to Mr. Dean. At the same time, the White House steadfastly denied any involvement.

Now the President, in connection with the Gray hearings, has refused to allow Mr. Dean to appear before the Senate Judiciary Committee, claiming not only executive privilege but also the attorney-client privilege.

At question is the Congress' ability to perform its constitutional duties. In this case, the Senate is charged with the responsibility of confirming Presidential nominations. If the Senate is to carry out that constitutional power and responsibility, clearly it must have the benefit of all available information. If such information includes the testimony of White House officials, then that testimony should be forthcoming.

I strongly support and defend the fundamental constitutional principle of the separation of powers. I question its

application in the issue of executive privilege however, or even the existence of such a thing as executive privilege, except as it applies directly to the President himself.

The Congress should have access to all information on matters which fall within its jurisdiction. The executive branch has argued that complete access would hinder its discharge of its constitutional responsibilities. I find it difficult to follow this line of reasoning, and cannot understand what information would, if furnished to the Congress, hinder the Executive in this manner.

The bill I am introducing today is simple and straightforward. It amends the Freedom of Information Act and requires that administrative agencies and Executive Office staff members either furnish information or appear before congressional committees when requested by Congress on "matters within its [Congress'] jurisdiction."

Tomorrow the Foreign Operations and Government Information Subcommittee of the House Government Operations Committee begins hearings on the subject of so-called executive privilege, under the very able leadership of Congressman BILL MOORHEAD. I commend Chairman MOORHEAD for scheduling those hearings and share his hope that a "rational and intelligent" solution can be found to the problem.

I submit to the House, that if there is to be "executive privilege" let it extend only to the Chief Executive.

Mr. Speaker, the text of my proposal follows:

H.R. 6438

A bill to amend the Freedom of Information Act to require that all information be made available to Congress

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 552 of title 5 of the United States Code (the Freedom of Information Act) is amended by adding at the end thereof the following:

"(d) (1) Whenever either House of Congress, any committee thereof (to the extent of matter within its jurisdiction), or the Comptroller General of the United States, requests an agency to make available information within its possession or under its control, the head of such agency shall make the information available as soon as practicable but not later than thirty days from the date of the request.

"(2) Whenever either House of Congress or any committee thereof (to the extent of matter within its jurisdiction) requests the presence of an officer or employee of an agency for testimony regarding matters within the agency's possession or under its control, the officer or employee shall appear and shall supply all information requested.

"(3) 'agency', as used in this subsection means a department, agency, instrumentality, or other authority of the Government of the United States (other than the Congress or Courts of the United States), including any establishment within the Executive Office of the President."

TOWARD MORE RATIONAL SUPREME COURT DECISIONS

(Mr. SIKES asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, I am intro-

ducing a resolution proposing an amendment to the Constitution which, if ratified by the States, would require the concurrence of a 2-to-1 majority of all Supreme Court Justices present and sitting in order for the Supreme Court to render an opinion or decision in any case.

As you know, current practice by the Supreme Court requires only a simple majority of those present to render a decision. With nine Justices on the Bench, only five are presently necessary for a decision.

History has recorded several 5 to 4 decisions handed down by the Supreme Court which have significantly changed our understanding of the meaning of State laws, Federal laws and the Constitution itself by virtue of the single vote of one Justice. Such a narrow margin should be insufficient to overrule the prior precedent of established law. Five-four decisions cast grave doubts in the mind of the public and the mind of our legal community as to whether or not a specific decision should be adhered to or compiled with until a clearer statement from the Court indicates permanent application of the decision. Instead of resolving disputes, the present scheme encourages future litigation.

Too often the rule of stare decisis has been circumvented by the Court. Stare decisis is that Latin maxim which means "to abide by, or adhere to, decided cases." Even when a large minority of the Court disagrees, stare decisis may be abandoned and precedent may be overruled with little difficulty.

In dealing with constitutional questions, it is most important that the Court primarily exercise its function of applying the law and avoid "judicial legislation." As Mr. Justice Sutherland said in *West Coast Hotel Co. v. Parrish*, 300 U.S. 379, at 404:

The judicial function is that of interpretation; it does not include the power of amendment under the guise of interpretation. To miss the point of difference between the two is to miss all that the phrase "supreme law of the land" stands for and to convert what was intended as inescapable and enduring mandates into mere moral reflections.

Requiring a larger majority of the Court for opinion would greatly enhance the image and the prestige of decisions handed down by the Supreme Court and, thus, the Court itself.

Mr. Speaker, I urge the support of my colleagues on this much needed legislation.

FREEDOM OF CHOICE ON SCHOOLS

(Mr. SIKES asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, I offer a joint resolution proposing an amendment to the Constitution concerning a fundamental principle cherished by all truly free people—freedom of choice and, specifically, the freedom to select the school which one chooses to attend.

The proposed amendment reads:

The right of any citizen to be assigned to the public school of his parent's or guardian's choice if a minor, or to the public

school of his choice if an adult, shall not be denied or abridged by the United States either directly or by means of a condition to the receipt of Federal financial assistance.

The language is simple and the proposition it enunciates would seem to be self-evident and an inherent attribute of life in a country which prides itself on individual freedom and was founded on the principle of the inalienable rights of all citizens to life, liberty, and the pursuit of happiness.

Nevertheless, the increasingly zealous efforts of the Federal courts to impose artificial racial balances on the Nation's school systems by means of massive and disruptive busing orders, wholesale consolidation of school districts, and enforcement orders which may lead to fund cut-offs, have necessitated the proposed amendment to the Constitution to restore fundamental freedoms which are steadily being eroded. Only recently, February 16, 1973, for instance, a Federal district court judge here in the District of Columbia issued a sweeping order to the Department of Health, Education, and Welfare to take certain enforcement actions against schools and school districts, including higher educational institutions, elementary and secondary schools and vocational schools, which were found to be in violation of requirements of title VI of the 1964 Civil Rights Act and court ordered desegregation plans. The enforcement proceedings ordered by the court could result in the withholding of Federal aid to schools and school districts—aid which is essential to the continued vitality of many of the institutions. The constitutional amendment I propose would make such denial or abridgement of educational opportunity by means of the Damoclean sword of Federal fund cut-off illegal and insure that the right of citizens to attend the school of their choice will not be compromised or conditional.

Cries of racism from professional trouble makers may greet the introduction of a constitutional amendment such as this. However, the cause of freedom for all is advanced, not diluted, by this proposal and the underlying principle of the Supreme Court's decision in *Brown* against Board of Education—that students cannot be assigned to schools on the basis of race or color—is fulfilled, not defeated, by this amendment. The rationale of *Brown* has been tortured by the courts which, in their quest for artificial racial balances, have imposed the very racial assignments condemned by the Court nearly 20 years ago. Furthermore, the very underpinnings of the constitutional doctrines which have evolved regarding desegregation—the social science data so eagerly embraced by the Court in *Brown* and its progeny—have recently been seriously, if not fatally, undermined by studies which demonstrate that racial desegregation does not affect the student's eventual educational attainment.

The route of amending the constitution is a serious one but one which I believe is necessary if we are to be liberated from the tyranny perpetrated by judicial fiat in the name of constitu-

tional rights. As stated recently by Senator ERVIN, a foremost expert in constitutional law:

The adoption of a constitutional amendment is now a prerequisite for restoring freedom to America's schoolchildren and for eliminating judicial tyranny with respect to our public schools.

Mr. Speaker, only by the means of amending the fundamental law of the land, the Constitution, will we be able to readjust the balance so badly skewed in recent years. By this amendment we are not changing the Constitution, but reaffirming its fundamental principles of freedom for all citizens of the United States.

SOVIET TRADE: AT WHAT COST?

(Mr. WAGGONER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONER. Mr. Speaker, opponents of granting MFN treatment to the Soviet Union have based their arguments, for the most part, on the question of allowing Soviet Jews to emigrate without having to pay a discriminatory tax to do so. As a cosponsor of the Vanik bill in the House, I feel strongly that this question must be resolved as a precondition to the discussion of this issue by the Congress.

I was interested, however, in an article which appeared in the Exodus, a newspaper of the Union of Councils for Soviet Jews, which appeared in the February 1973 issue, raising the question of whether or not expanded trade with the Soviet Union is in our best interests under any circumstances, considering the monetary and nonmonetary costs involved.

Cited, for example, was James Reston's column which expressed concern that continued and expanded trade with the U.S.S.R. for such things as energy sources controlled by the Soviets would create an unhealthy dependency, which risks the possibility—in the event of a military emergency—that these products could be cut off. According to Reston, trade dependency of this type could present a real security problem for the United States.

Also mentioned, was the definitive study of Soviet trade by Dr. Anthony Sutton, of Stanford University, which has shown that in the past 10 years of trading with the Soviet Union, products made in the United States have turned up in Soviet-made tanks and trucks found in Vietnam and on the Israeli borders. Dr. Sutton's conclusion:

If a decade of such trade (it began in the early 60's) did not produce peace, why multiply the problem.

Historically—when you consider lend-lease—the Soviet Union has proven to be a poor credit risk. To make matters even worse, products that are now being purchased by the U.S.S.R. are being financed by the already overburdened American taxpayer. And what is often overlooked when we talk about our balance-of-payments deficit is that in recent years the largest part of the deficit is not

in the actual trade balance itself, but in foreign capital investment.

Mr. Speaker, as food for thought, I ask that the article mentioned in the Exodus for February 1973 follow my remarks at this point.

SOVIET TRADE: AT WHAT COST?

(By Harold B. Light)

Last month I dealt with the phenomenal support built up in Congress to withhold trade concessions to the Soviet Union, unless the USSR grants free emigration and rescinds the ransom tax to Soviet citizens. At this writing over 170 Congressmen have co-sponsored the Vanik Bill. On the surface it would appear that all this effort results from sympathy for the Soviet Jews, but is this entirely true? With only two Jewish Senators, and a sprinkling of Jewish Congressmen, it is obvious that many legislators are seriously opposed to many phases of the Soviet Trade agreements simply because of the inherent disadvantages to broad American interests.

This might be the right time to bring up the question, "What's so good about trading with the Soviet Union?" James Reston wrote recently in the New York Times describing the hundreds of American businessmen visiting the USSR discussing trade exchanging patents and technological methods. They are contracting to build truck plants and chemical plants. The U.S. Occidental Petroleum Corporation has signed a \$10 billion deal to develop drilling rights for natural gas and oil, and to build a massive pipeline for the Russians which they cannot build themselves. Reston wonders about "the wisdom of depending upon energy sources controlled by the Soviets, risking the possibility that these sources could be cut off in any military emergency." He asks, "Are the short range interests of commercial deals by the USA compatible with the long range interests of security? Now that the election is over, these commercial deals are being made piecemeal, without references to the strategic problems involved."

Dr. Anthony Sutton's 10-year study of Soviet Trade, conducted at Stanford University, names U.S. companies and products presently being used in Soviet military tanks and trucks appearing in Vietnam and on the Israeli borders. He concludes that "If a decade of such trade (it began in the early 60's) did not produce peace, why multiply the problem?"

Bob Considine has termed the Soviet War Debt terms an insult, showing how the original \$11 billion lend lease debt to the U.S. was gradually "negotiated" down to \$722 million by Henry Kissinger and President Nixon after 17 years of no payment, and with 30 more years to pay at an unspecified rate. Inflation alone would wipe out that debt, meaning no more repayment at all.

On July 8, 1972, President Nixon granted the USSR \$500 million credit to buy U.S. wheat. The lurid details of the wheat deal have revealed that the profits of hundreds of millions of dollars to the insiders will be borne by the American public in increased costs and subsidies. So why is trade so good? SALT talks and Nuclear Disarmament? Yes, but why should the U.S. give the Soviet Union all its computer technology, production know-how, data processing equipment (they are at least 8 years behind us in those fields; see New York Times, October 11, 1972), when they have nothing that we want to buy. Certainly, no American manufacturer will build them a factory and no American bank will finance it, without U.S. Government insurance for the debt; that means the American taxpayer could wind up paying the bill. Historically, the Soviets are a poor credit risk.

At this writing, we are beginning to see important articles written to indicate that the American public should not allow a concern

for Soviet Jews to interfere with its "own best interests." Hopefully, the support now built up in the Congress will not run out of momentum by the time Congress gets caught up in its flood of new bills this session. This may very well depend upon a steady stream of letters and telegrams to every Congressman and Senator to support the Vanik Bill (formerly HR 17131) and the Jackson Amendment (S. 2620), on East-West Trade and the Soviet Education Tax.

Perhaps the only positive aspect of the infamous ransom tax is that the Kremlin handed us a valuable weapon to mount an antitrade bill campaign. Otherwise, we could assume that Congress might have already granted these trade concessions. The Vanik and Jackson legislation has given us more time to fight the battle.

If we can delay, or possibly even deny the Soviet Union that which they want most, the Kremlin will know that their treatment of our Jewish brethren has cost them dearly. On many occasions I have told high Soviet officials that eventually they will let our people go. Further, that this will happen when the price is so high that they cannot afford to keep them. It is up to every one of us to keep raising that price. Then, and only then, they will let our people go!

GREAT LAKES FLOODING

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, as a result of a request from our distinguished colleague, Representative CHARLES A. VANIK, the Inter-American Affairs Subcommittee on Friday, March 23, and Monday, March 26, conducted oversight hearings on U.S. participation in the International Joint Commission, United States and Canada—IJC. The issue of primary concern in the hearings was the present and continuing danger of serious flooding along the Great Lakes. The IJC has important responsibilities under the 1909 Boundary Waters Treaty with Canada, which affects lake levels.

In view of information developed at the hearings and the need for urgent action to provide relief, however small, the Subcommittee on Interamerican Affairs sent the following letter to the Secretary of State which I know many of my colleagues will find of interest:

COMMITTEE ON FOREIGN AFFAIRS,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 27, 1973.
Hon. WILLIAM P. ROGERS,
Secretary of State, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: In view of the current danger of flooding in the Great Lakes area, the Inter-American Affairs Subcommittee urgently requests the Department of State to immediately negotiate an agreement with Canada to seek a report from the International Joint Commission, to be completed within five days, on the advisability of temporarily increasing the diversion of waters of Lakes Michigan-Huron through the Chicago diversion canal.

The subcommittee also requests that urgent attention be given to the legal question of whether the IJC, its U.S. section, or any other U.S. federal agency can seek modification of a U.S. Supreme Court decree now restricting diversions through the Chicago canal.

Positive findings as to the advisability of any additional diversion and the legal status of the federal government would indicate a

need for immediate federal legal action to seek modification of the present U.S. Supreme Court decree to allow diversion required to alleviate flooding conditions threatening large areas of the United States.

Sincerely,

PETER H. B. FRELINGHUYSEN,
CHARLES W. WHALEN, Jr.,
MICHAEL HARRINGTON,
ABRAHAM KAZEN, Jr.,
DANTE B. FASCELL,
BENJAMIN S. ROSENTHAL,
H. R. GROSS,
ROY A. TAYLOR,
ROBERT H. STEELE.

JAMES P. GRANT: WHERE NEXT WITH DEVELOPMENT ASSISTANCE?

(Mr. FRASER asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. FRASER. Mr. Speaker, James P. Grant, president of the Overseas Development Council—ODC—notes that the organization he heads "was established in 1969 to increase American understanding of the problems facing the development countries and the importance of these countries to the United States."

The ODC has now published a survey of the major problems facing the United States in its relations with the developing countries. "The United States and on the general theme. There is an over-the Developing World: Agenda for Action" includes a series of useful chapters view essay by Robert E. Hunter who directed the project. I am familiar with and have long admired Bob Hunter's work. Theodore M. Hesburgh, Chairman of the ODC Board wrote the introduction.

I was especially interested in Jim Grant's contribution to the book. He has wrestled with the question, "Where Next With Development Assistance?" The resulting essay is a provocative one, one that I commend to the attention of my colleagues.

In his foreword to the new book, Jim Grant promises similar follow-on publications if "Agenda for Action" proves helpful to Americans. Based upon my reading of this first agenda project, I suspect Grant, Hunter, and the ODC will be busy for the foreseeable future. "Agenda for Action" fills a very real need: Chapter 5 of the book follows:

CHAPTER V: WHERE NEXT WITH DEVELOPMENT ASSISTANCE?

(By James P. Grant)

President Nixon's successful visits to Peking and Moscow last year marked not only the ending of the cold war era but also of the associated era of foreign aid, in which the justification for large-scale economic cooperation with the low-income countries was largely based on the existence of the global confrontation. As discussed in other chapters, however, continued American progress in a growing number of areas is increasingly dependent on the attitudes of, and developments in, the countries of Asia, Africa, and Latin America—at a time when their needs extend far beyond just the continuation of economic growth. There is an opportunity to be found in the coincidence of certain trends: the shift away from the cold war, the improving economic situation in the United

States, and emerging public consciousness of our growing interdependence with other nations—including many in the developing world. This opportunity sets the stage for a major new assessment in 1973 and 1974 of American interest in the low-income countries and the best means of working with them.

As this chapter will argue, however, the United States should take certain actions without waiting for the outcome of this review. First, it should maintain its multilateral and bilateral economic assistance at a level at least sufficient to encourage the still growing development assistance of Western Europe and Japan. Second, the United States should initiate and play a leading part in a multilateral effort for Indochina's economic rehabilitation after the fighting stops. Finally, as a first response to changing needs, it should separate development cooperation from security assistance, while improving substantially the coordination of the many efforts which affect U.S. economic cooperation with the poor countries.

Since President Truman began the Marshall Plan for Europe in 1948 and the Point IV technical assistance program for the developing world in 1949, foreign economic aid has been a principal symbol of U.S. concern for global problems. In recent years, developing countries have achieved unprecedented progress in increasing industrial and agricultural output. And since 1960, there have been massive increases in Western European and Japanese development aid, the combined total of which is now about \$4.5 billion annually. Nevertheless, it is now obvious that U.S. policies must be thought through again. As the American rationale for development cooperation has weakened and become uncertain, U.S. economic assistance of all types has dropped to approximately \$3.5 billion a year, including economic aid to Vietnam and credit sales of agricultural surpluses under the Food for Peace program. The United States has now slipped to twelfth among the sixteen industrialized member nations of the Development Assistance Committee (DAC) of the OECD in terms of the proportion of its gross national product (GNP) devoted to development assistance. And the United States is well on its way toward the distinction of last place.

The importance of official development assistance (ODA) from the DAC countries can be seen from the fact that it now totals approximately \$8 billion of a total resource flow of some \$80 billion annually to developing countries. A slightly larger amount comes from activities such as direct investment, export credits, and private voluntary aid, while nearly 80 per cent of the resource flow is financed by the foreign earnings of poor countries through the sale of goods and services.

In part, the reason for the decline in U.S. official development assistance lies in the increasingly meager support for the program in Congress as the cold war has waned, domestic problems have become more pressing, and the program has been caught in the controversy between Congress and the Executive Branch over Vietnam. Even continuation of the present, already shrunken bilateral program has been in doubt. In recent years, the bilateral aid program has frequently come close to being killed; twice it has been voted down temporarily in the Senate. Currently, foreign aid is in existence only on the basis of a continuing resolution; no appropriation bill has been passed for this fiscal year (FY 1973) for either the bilateral or the multilateral program. Regardless of what happens to appropriations for this fiscal year, new authorizations for FY 1974, beginning July 1, 1973, must be enacted if the bilateral development assistance programs are to be continued. Thus, having rejected the major recommendations of the Peterson Task Force on

foreign assistance,¹ Congress must act one way or the other on development assistance legislation in 1973.

MAJOR ISSUES FOR DECISION

There are several major issues to be faced in any reappraisal of the U.S. role in development assistance for the rest of this decade.

1. *Why bother with development assistance?* Most urgent is the need to establish whether or not large-scale development assistance has a major role in the new era that lies ahead. This requires a three-step analysis to show 1) whether we have a stake in the development of the poor countries and in securing their cooperation on issues of concern to us; 2) if so, whether development assistance will help significantly, by meeting some poor-country developmental needs; and 3) if the first two questions are answered in the affirmative, what kinds of development assistance are important in helping to meet those developing-country needs?

The first of these questions is hardest to answer. Having justified development cooperation largely in cold war and humanitarian terms, most Americans have not thought through—to the same extent as have the Europeans and the Japanese—the other purposes which it might serve. There is now a need to examine ways in which development assistance may be important to the new needs of the United States as it increasingly becomes a "have not" nation in terms of raw materials, and as the continued improvement of its well-being becomes ever more dependent on the cooperation of developing countries in such matters as monetary policy, markets to provide U.S. trade surpluses, environmental protection, narcotics control, and hijacking.² Thus far, moreover, we have paid little attention to such questions as whether our development assistance policies have been instrumental in the increase of U.S. exports to developing countries by some \$5 billion annually over the past ten years, or in the provision of a badly needed \$2 billion U.S. trade surplus in 1971. As a consequence, virtually no consideration has been given to determining whether this surplus, or this growing market for U.S. exports, might disappear if the United States does not reverse its present declining participation in development assistance.

2. *How successful have the poor countries been?* There is also a need to examine the ways in which development assistance can make the greatest contribution to development. Of necessity, doing this will require some assessment of developing country progress.

During the 1960s, the developing countries on average achieved a 5.5 per cent increase in GNP—a rate of growth unequalled by the rich countries at a comparable stage of their development. A number of developing countries have experienced very substantial economic growth, attaining GNP growth rates of 10 per cent or even higher. Some low-income agricultural societies have been transformed into industrializing economies in amazingly short periods, and others may well follow suit. Except for petroleum, the growth of trade in primary products has been far from dramatic, but exports of manufactured goods have shown dynamism; for the developing countries as a whole, they have been increasing rapidly and now account for 23 per cent of total world exports. Yet many developing countries' unemployment levels are still increasing, some even exceeding those of our own Great Depression;³ the income gap between the poorest half of the population and those well-off is actually widening, and urban settlements are mushrooming because of rural migration. In many areas these problems become less

Footnotes at end of article.

manageable every day because population growth continues unrestrained. Finally, if the debt burden that has built up in a number of major developing countries continues to accumulate, it will become insupportable. This situation has led some people to throw up their hands in despair, others to argue that aid is only "making the rich richer," and still others to state that development is aggravating global environmental and population problems.

These are real issues which must be met in seeking to answer the question: "Where next with development assistance?" Fortunately, experience in a number of poor countries during the past ten years offers some encouraging evidence that an effective combination of domestic as well as international policies can create new jobs, increase social services, reduce income disparities, and check population growth.⁴ The possibility is best illustrated in East Asia, by countries with very different political and economic systems: namely, China and North Korea on one side of the ideological barrier, and South Korea, Taiwan, and the city-states of Hong Kong and Singapore on the other. Contrary to a common assumption of the 1960s, the development record of these countries indicates that policies that enhance social equity need not deter overall economic growth—and can even speed it up. Elsewhere, countries as different as Israel, Cuba, Ceylon, and Yugoslavia have dealt effectively with some of the problems discussed here.

It is no accident that most of the non-Socialist development "successes" have taken place in societies with broad access to a combination of trade, investment, and aid. Nor is it an accident that the major innovations introduced through development cooperation have resulted primarily from U.S. assistance programs—private and public—which explicitly concentrated on particular functional areas. These innovations include the "green revolution," the extraordinary spread of public health measures, and the acceptance of the need for large-scale family planning programs and their subsequent introduction. If the rich countries had also met their assistance targets for the 1960s and had opened their markets more to the products of the poor countries, the record of success in the developing countries might have been even better.

3. *Should the goal of development assistance be limited to advancing development?* Many observers argue that development assistance should be regarded as a tool for securing cooperation on issues not directly linked to economic or social development, such as winning important U.N. votes, increasing American exports, advancing U.S. private investment, and compelling political reforms by repressive regimes. Other observers argue, with considerable merit, that the objective of development assistance should be that of development alone—a process which is both vastly complex and of great long-range importance for the orderly evolution of a peaceful and cooperative world. The latter group argues that explicit use of development assistance to achieve non-developmental objectives jeopardizes our important interest in development progress in virtually all countries, and that successful cooperation in development progress improves the climate for attaining these other U.S. objectives. The proponents of this view point out that development aid usually is an ineffective means of direct leverage for securing U.S. political goals.

Some categories of aid should indeed be used in the first instance solely to advance development progress, so as to ensure the most effective approach possible to the difficult problems that need to be overcome. These categories include support for multilateral institutions and provision of bilateral

technical and material assistance specifically for cooperative efforts on such developmental programs as family planning and rural development. However, there are other types of aid which also come within the OECD definition of official development assistance, but which may be used to advance several—sometimes conflicting—objectives, of which development is only one, as in the case of the provision of economic security aid for Vietnam, where the survival of the Saigon Government took precedence over development objectives.

We need to define more clearly for ourselves the rules for each type of assistance, so that attempting to use aid to advance a short-term interest does not frustrate advancement of other more important U.S. policy objectives. Thus, one can reasonably argue that policy differences with India over the Bangladesh war should not have led the U.S. Government to jeopardize its major policy interest in a successful Indian development effort—although this has been the consequence of the continuing suspension of American aid to India even after the war was over. The United States has an important interest in the continued developmental progress of the world's largest and most poverty-stricken democracy. Similarly, our valid interest in increasing American exports should not prevent the use of development assistance funds to purchase farm machinery available from Taiwan or Japan if these are far more appropriate for use on labor-intensive small farms in India.

In addition to the beneficial results of accelerated development, many other benefits can flow from the favorable atmosphere engendered by effective cooperation in development—an atmosphere which cannot be created if explicit conditions are imposed on development aid for other purposes.

4. *What is the primary role of bilateral aid in development cooperation?* Development assistance now needs to be reexamined in terms of two quite different but complementary functions. First is the transfer of financial resources to enable low-income countries to acquire needed equipment, raw materials, and on-the-shelf technology from other countries. United States economic assistance of all types, and particularly bilateral development aid, has become a steadily smaller portion of the transfer of resources between rich and poor countries. This is partly due to the increases in aid from other countries and the decline of U.S. aid, but, as mentioned earlier, it is primarily due to the rapidly increasing earnings of the low-income countries from the sale of their goods and services.

But this resource transfer on highly concessional terms continues to have vital importance for the very low-income countries, such as those of South Asia and sub-Saharan Africa, which comprise nearly a billion people. There is also a second function for which development aid is as important as ever: namely, as a means for countries to work together on difficult problems requiring new approaches and ideas as much as financial resources. Thus there is a need for cooperative effort in thinking through and experimenting with new approaches that will 1) create more productive jobs; 2) provide the poorest people in developing countries with at least minimal levels of health and educational services; and 3) lead to rural development and help slow population growth and migration from the countryside to the cities.

In large part, the low-income countries have mastered the art of increasing economic output but, for a variety of reasons mentioned earlier, the benefits of this growth have generally not reached the bottom half of their people. Bilateral development assistance should be increasingly applied to helping developing countries cope with the now more sharply perceived and worsening structural and poverty problems which pre-

vent the benefits of economic growth from reaching the poor.

5. *How much development assistance should there be?* Pending the outcome of the overall review proposed here, appropriations for development assistance need to remain at least at current levels to avoid placing the global cooperative effort in even greater jeopardy because of a continuing decline in the U.S. effort. Any increase required for Indochina might reasonably come from the sizable savings from reduced security assistance now that the Vietnam War is over. Some overall increase in U.S. development assistance in 1973 and 1974 would have the benefit of encouraging the other developed countries to continue to increase their development assistance allocations, as most have been doing in recent years.

For the longer run, consideration still needs to be given to the U.N. Development Decade target of 1 per cent of GNP for resource transfers through development assistance and private foreign investment—a goal that so far has been largely ignored by the United States, although a number of other developed countries have already attained it, or will do by mid-decade. The target was made more precise by the United Nations in 1971, when the General Assembly specified that a minimum proportion of this 1 per cent of GNP—0.7 per cent—should be in the form of official development assistance (as distinguished from private investment and export credits on hard terms). Even the 0.7 per cent figure is a crude target at best. It can include all sorts of aid on concessional terms that is explicitly authorized for purposes such as disposing of agricultural surpluses and providing economic assistance to embattled regimes.

Proponents of the 0.7 per cent target claim, with some merit, that a multinational effort to aid developing countries requires a common yardstick for measuring that effort. Members of the United Nations have accepted these targets, although some, including the United States, have not committed themselves to its achievement by any specific date; these targets should be retained until there is agreement on a reasonable alternative. It should also be noted that the goal was originally suggested by the United States itself in the early 1960s.

By contrast, critics of the targets question the political feasibility of a goal which even today would require a doubling of U.S. foreign economic assistance. Moreover, other items in the U.S. budget have to meet strict test of need—that is, can the money be put to wise use? The 1 per cent and the 0.7 per cent targets are certainly valid measures of ability to supply aid, but not of ability to use it well. Thus they are often an object of Congressional criticism.

In this debate, however, it is important for us to recall the basic issue of the U.S. stake in working with the poor countries. The 0.7 per cent target has been accepted by the international community, and it has become a touchstone of broader political relations among countries. Furthermore, there is also a major misconception in the United States about foreign assistance. In fact, most such assistance is not "aid" in the form of "grants," but actually comes back to the United States in loan repayments and benefits the United States by increasing demand for U.S. goods.

The latter reverse flow of economic assistance is particularly important. In fact, the United States now has an excellent opportunity to meet two objectives at the same time; to increase its contribution to development, and thus come closer to the 0.7 per cent target; and to increase its exports to developing countries at the same time. Indeed, the Export-Import Bank could—as is already done at present by the Department

Footnotes at end of article.

of Agriculture with regard to the foreign sale of agricultural products—usefully make “soft” loans for the explicit purpose of financing U.S. exports to those countries with very low per capita incomes, for example, under \$150. These poorest developing countries, with a total population of about 1 billion, badly need goods for development. Those which account for the great majority of the one billion do actually have good long-term development prospects, but are not at present able to service a high volume of credit on the Bank’s regular terms. These easier terms would be compatible with the delayed repayment capacity of the less developed countries and could be as soft as, say, 3 per cent, with 30 years for repayment, and 8 years’ grace on interest payments. Since there is idle productive capacity in a number of sectors in the United States and since increased production reduces domestic social costs such as unemployment compensation, the budgetary cost to the United States of such an increased flow of export credits could be very small indeed, and the real economic cost might be nearly zero.

In the final analysis, the question of “How much aid?” is not separable either from the issue of the U.S. stake in cooperating with the developing countries or from other issues affecting resource flows, such as issues of trade and monetary policy. As discussed earlier, these other flows—far more than aid appropriations—determine the volume of resources transferred to the developing countries. Thus if the markets of developed countries were to be opened up, the developing countries could earn billions of dollars more annually in the form of exports by the late 1970s (see Chapter II). However, even if resource transfers were greatly increased under the trade and monetary systems, this would not meet the need of the developing countries for help in such fields as population, health, and education. But if these methods of increasing resource transfers were to become operative, then the requirements for bilateral development assistance programs might be far less than the U.N. target figures.

6. *What is a better way to organize the global community for development cooperation?* This discussion leads to consideration of the need for far more sophisticated ways of assessing the progress of the poor countries, of determining their development wants and needs, and of allocating resource burdens among the rich. Further thought needs to be given to the respective roles of the World Bank and the United Nations bodies, such as the Economic and Social Council and the United Nations Development Programme. At present the Bank has taken over global leadership in the development field—because of the default of other agencies, the size of the Bank’s staff and resources, and the dynamism of its President. But it lacks universality because of the non-representation of most “socialist” countries, and suffers from the under-representation of developing countries as well as some developed countries, notably Japan, in its management. It also suffers from growing uncertainty about the degree of support for a continued rapid expansion of its soft loans.

There is the strong possibility that a continued weakening of U.S. support for both the World Bank and the U.N. development agencies, as well as for bilateral aid to Africa and much of Asia, could lead to the weakening of global machinery and to the enhancement of regional blocs—in which Western Europe would have strong investment, trade, and aid links with Africa, Japan with East Asia, and the United States with Latin America. The resulting economic domination might be disadvantageous not only for world trade, but also for the political relations between the developed and developing countries when the latter see themselves in a dependent relationship with the former.

7. *What balance should there be between multilateral and bilateral assistance?* There is a broad but far from universal consensus in the United States that developed countries should provide more of their development assistance through multilateral banking institutions, such as the World Bank and the Inter-American Development Bank and through international agencies such as the United Nations Development Programme. Currently multilateral channels account for about one fifth of development assistance.

However, there is a real debate about the desirable extent and speed of this shift. For example, the fact that bilateral aid programs serve so many interests of individual developed countries makes it highly unlikely that they will be phased out completely. Thus the European countries and Japan have been reluctant to shift too rapidly from bilateral to multilateral assistance because of the special commercial and foreign policy interests served by their bilateral programs—such as France’s interest in French-speaking Africa. The United States has these special interests, too, exemplified by its agricultural surplus disposal programs and by its development assistance to Turkey, which is tied to helping farmers shift out of poppy cultivation. For these reasons of special interests alone, therefore, bilateral assistance will be continued for many years to come.

Furthermore, in the interest of advancing development progress, it is also important to remember that the U.S. bilateral development assistance program can tap U.S. professional and academic talents better than can the international agencies. For all its many limitations, the American bilateral program has demonstrated greater administrative flexibility and ability to solve major problems than multilateral and international agencies have done so far.

However, because of the real benefits of both a truly cooperative effort and of a lower U.S. profile in the sensitive business of helping a developing country with change and progress, there is much to be said for supporting as rapid a development and expansion of the multilateral institutions as they are able to handle effectively, and without their becoming, in effect, U.S. “fronts” because of a predominance in funding by the United States.

This last point is an important one. After all, shifting U.S. aid to multilateral institutions too rapidly relative to increases in funding by other contributors, would raise the percentage of U.S. funding. Such a change would increase substantially the danger that both the U.S. Administration and Congress would insist that the multilateral institutions adhere to U.S. policy positions and operate in conformity with standards set for U.S. Government departments—both of which demands, if acceded to, could cripple these institutions.

Therefore, the principal limitation on expanding funds for the International Development Association (IDA)—the “soft” loan window of the World Bank—is the willingness of all member governments to increase their funding proportionately. For the next IDA replenishment period, beginning in fiscal year 1975, the United States should be prepared to support another doubling of funds, to an annual level of \$1.6 billion. The U.S. funding share might go down slightly below its traditional 40 per cent to reflect primarily Japan’s greater share of the total output of the Western industrial nations. However, it bears remembering that the United States still produces more than 40 per cent of this total, and U.S. per capita income is still double the average for the other developed countries. There is certainly a need in the developing world for this aid, and its expansion would increase the already high capacity of the World Bank to perform a leadership and administrative role which increases the effi-

ency of the entire development effort. Both the Inter-American Development Bank and the Asian Development Bank—the latter of which has yet to receive its first U.S. soft-loan appropriation of \$100 million to cover a three-year period—should also be candidates for expanded support.

By contrast, most of the U.N. technical assistance programs should have their funding increased at a slower rate for the immediate future. This conclusion follows from the study prepared by Sir Robert Jackson for the United Nations in 1969. His report describes some of the limitations of these programs after their recent rapid expansion, including the slowness with which decisions are made to start projects, and the delays in execution. Many of these problems still remain today.

Yet even if the maximum feasible support is provided to multilateral institutions, by 1975 their needs for U.S. funds will still total less than one third of the American disbursements needed to maintain U.S. aid at its present low state—a mere 0.31 per cent of GNP, slated to drop even lower under funding commitments already made. Thus, if the United States desired to support a major development effort, it would have to channel this effort mainly through bilateral programs for years to come. It is worth taking the time in the next two years, therefore, to devise a U.S. bilateral economic aid program adequate for the major needs of the 1970s.

8. *What is the best way to organize for the reconstruction of Indochina?* The ending of the war in the Indochina countries will bring with it the need for a major reconstruction effort. President Nixon has specifically mentioned a \$7.5 billion reconstruction fund for North Vietnam, South Vietnam, Cambodia, and Laos. Whether this was envisioned as the total for all contributions, or merely the U.S. share of an international effort, the U.S. share clearly will be large. There will be many difficulties. Will there be substantial low-level violence in any of these countries? Will traditionally hostile countries work with one another? Will Japan and other developed countries play a major role in reconstruction?

These questions highlight the problem of finding the best way to work on reconstruction with the countries of Indochina. There are several principal alternatives. One would be to create a special United Nations entity, as was done successfully in 1971 in the case of Bangladesh relief, to administer the assistance program for each of the Indochina countries.

A second approach would be to provide aid through country consortia—a proven and effective technique which has been used in such countries as India, Pakistan, Turkey, and Indonesia. In this arrangement, the World Bank chairs and staffs the India consortium, which on behalf of its members carries out the major dialogue with India on policy issues. The World Bank also provides the mechanism for reaching agreement on the common guidelines under which the individual countries and the World Bank provide their assistance. The OECD performs the same function for the Turkey consortium. In general, the consortium approach combines the benefits of multilateral policy development and negotiation with the implementation benefits of bilateral aid.

A third approach would be to provide assistance under some form of relationship to a United Nations-sponsored regional organization created by the affected countries, such as a new Mekong Commission or a broadened and strengthened Mekong Committee, which would serve a role somewhat analogous to that of the Organization for European Economic Co-operation (OEEC) in Europe for the Marshall Plan. All aid could be provided under its auspices, with bilateral aid from the United States and other countries provided to individual countries through consortia authorized and operating

under guidelines established by the regional structure. There could be different groupings of donors for each country. Thus, the Asian Development Bank might serve in the managerial role for the South Vietnam consortium, the World Bank for the Cambodia consortium, and a single country—such as Russia, China, or Japan—for the North Vietnam consortium. And there might be a sizable special fund for major Mekong River projects benefiting two or more countries directly under the supervision of the regional mechanism, and administered for it by either the World Bank or the Asian Development Bank.

There may now be an opportunity to use the large amount of funds likely to be available not only to reconstruct individual countries, but also to help create and strengthen structures for increasing cooperation by countries of the region, just as the OEEC provided the initial nucleus out of which the Common Market later developed. The regional mechanism might be built around all the countries with a stake in the Mekong River Basin—namely, North and South Vietnam, Laos, Cambodia, and Thailand. While no part of North Vietnam is in the Mekong River Basin, in the past it has been deeply involved economically with the countries of the Basin; North Vietnam could also be a major user of hydroelectric power produced on the Mekong.

The administrative device which is chosen should reflect some estimate of the course of events in Indochina. Thus, if the Indochina settlement is primarily a cease-fire to permit U.S. disengagement, and if the United States wishes to remain as far removed as possible from further involvement in Indochina, U.N. administration of the entire program would offer the major advantage that the United States would not be directly involved. Unfortunately, it is reasonable to expect from past experience that a U.N. agency would be strong in terms of providing relief but relatively weak as a mechanism for long-term reconstruction and development.

Alternatively, if a genuine compromise settlement is reached, and if it is important to implement the reconstruction effort quickly and effectively in order to provide all the parties with a stake in continued peace, then there will be a strong case not only for using the consortium technique, but also for administering the assistance and managerial consortia under the broad umbrella of the U.N.-sponsored, regionally created mechanism described earlier. Reliance solely on the consortium technique could lead to the tragic result of a massive assistance effort, which was successful in individual countries, but which left them at each others' throats, as in the past. If the OEEC type of role is too ambitious for a group of countries which have recently finished warring against each other, an alternative would be an enhanced Mekong Committee, having the major special fund described above and charged, formally or informally, with undertaking an active role in regional planning, exchange of information about country development plans, and the plans and performance of individual country consortia.

Combining the regional and consortium approaches into one of the various forms has the merit of increased self-help through regional cooperation. It would also have the merit of the Mekong label; U.N. sponsorship; burden-sharing with the U.S.S.R. and China (as well as Western Europe and Japan); participation of the World Bank and the Asian Development Bank; and a non-ideological, peaceful forum of cooperation for development which might eventually flower into a permanent regional framework for the five countries of the Mekong Basin area.

But such a mechanism cannot be created instantly, particularly since some time may be required for all local hostilities to end and for passions to subside. To meet immediate

needs during the first year, existing U.S. bilateral programs for Vietnam, Cambodia, and Laos probably will need to be continued and a Bangladesh-type U.N. agency created to meet urgent relief and rehabilitation. However, some form of increased regional cooperation will be needed before the first year is out. It will be required not only for the future harmony and progress of the region, but also for generating and sustaining substantial amounts of assistance from countries which may otherwise be inclined to downgrade Indochina aid all too soon before the needed level of reconstruction and development has been achieved.

9. What short-term and long-term changes are needed in our legislative and managerial structure for development cooperation? The legislative and managerial structure of the U.S. bilateral economic aid program needs to be reviewed to determine whether it is appropriate to the needs of the new era that lies ahead. However, as stated at the outset, certain obvious steps can be taken now without prejudice to the conclusions of any overall review.

First, with the passing of the cold war era, security assistance should be separated from development assistance, both in legislation and in management (see Chapter VI). This separation is needed not only to help regain support for development aid among many people in the church, academic, and youth communities, but also to avoid the public confusion which stems from endless newspaper stories which subsume the two quite distinct forms of assistance under the single term "foreign aid." Corruption and other misuses of aid are for the most part by-products of security aid, but the resulting press stories tar economic development aid as well. Managerially, no part of security assistance should continue to be the primary responsibility of the development agency.

Second, in view of the growing need for an overall development policy, the principal administrator of development assistance (now the Administrator of the U.S. Agency for International Development) should have a major role in formulating all U.S. programs which bear in important ways on development cooperation. There is much to be said for shifting the supervision of U.S. participation in U.N. assistance programs such as UNDP from the Bureau of Internal Organization Affairs in the State Department to AID itself. The AID Administrator should also have a far greater say in U.S. relations with the multilateral development institutions such as the World Bank. Today, relations with these development institutions are virtually a Treasury preserve. The AID Administrator should also sit on the International Economic Policy Council in the White House, which is the coordinating point for all U.S. economic policy affecting developing as well as developed countries. In general, there is a need for a single U.S. spokesman for development, as there was during the Marshall Plan era. This also means that AID itself should pay more attention to major U.S. Government actions, outside AID's current perspective, which affect development. This change will require changes in the composition of its staff.

Third, there should be another two-year authorization for development assistance at a level at least sufficient to encourage the still growing development assistance of Western Europe and Japan. The Congress in 1973 and 1974 should then join with the Executive Branch in studying the future of development assistance. Legislative action could then follow in the relative calm of the new Congress in 1975, with, hopefully, strong leadership from the Executive Branch and particularly from the President. This strong executive leadership is indispensable if Congress is to vote appropriations for development assistance that are both sizable and

unencumbered by special provisions that restrict the quality and value of aid.

A major issue to be resolved by 1974 is the way in which the United States should organize its bilateral development assistance program. Should it follow the prescriptions of the Peterson Report and divide further the administration of the program among several agencies? Or should it, as many observers urge, integrate the several existing parts of the program relating primarily to development cooperation (such as the Overseas Private Investment Corporation, the Peace Corps, the Inter-American Foundation, and AID), while separating itself from primary responsibility for administering security assistance, programs for the disposal of agricultural surpluses, and export credits—which do not have development cooperation as their primary purpose? Such an approach would gather about one third to one half of present U.S. official development assistance funds—or about \$1.5 billion (not including funding for Indochina reconstruction)—into one administrative entity which would be able to focus exclusively on development and related reconstruction and humanitarian assistance. The scale of its funding could be reduced by several hundred million dollars if a separate, major, and "soft" export credit capability were established for the poorest developing countries. If such an integrated agency were created, there would be a series of subordinate questions: What operating methods should the bilateral development assistance program follow? For example, should it have more employees on a contract basis and fewer on a direct-hire basis? Should the program be more aggressive or more deferential to the development policy decisions of recipient countries? Should it concentrate on a few fields of activity, such as rural development, family planning, health, and education—as opposed to a broader approach? Should special arrangements be made to give it maximum efficiency in advancing development goals—such as continuity of funding, untangling of commodity purchases, and flexibility in determining when to use grants instead of loans?

These are all serious and difficult questions. But only by posing them, and finding answers, can the United States expect to shape a bilateral economic aid program that will be adequate for the next few years, that will avoid many of the problems of the past, and that will again make U.S. leadership possible in this area.

CONCLUSIONS

U.S. development aid funds are grudgingly appropriated by the Congress. At best, they comprise but a small fraction of the external resources available to poor countries. Securing them takes a toll on the President's relations with Congress and—in some instances—on U.S. bilateral relations with poor countries. Is it worth a major effort to set U.S. development assistance programs on a sounder footing? Certainly, if they are to be continued, they should be improved, and the alternative—the unilateral killing of U.S. development assistance—is far too unattractive to be a real alternative at all.

In sum, the case for continuing U.S. development aid rests on four simple propositions:

1. The United States should want the poor countries to succeed, for self-interest as well as humanitarian reasons;
2. Development aid, although small, can help poor countries in ways that other resources cannot do as well;
3. Development assistance costs the United States relatively little, whether the cost is measured in terms of the balance of payments, the U.S. budget, or real resource costs;
4. Providing development assistance gains at least two important windfall benefits for the United States: first, development aid

helps make possible the export surplus which the United States enjoys with the poor countries, and which at present we want in order to maintain high employment in our economy; second, it helps promote an acceptable image for the United States in the world. For whatever it is worth—and many Americans believe this is important even apart from any considerations of increasing interdependence—the opinion other people have of the richest nation on earth would plummet if we did not carry our share of the development assistance programs for the developing world.

INTRODUCTION OF LEAD AND ZINC ACT

(Mr. DUNCAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DUNCAN. Mr. Speaker, joined by 16 other Members of the House, I am introducing a bill which would encourage stability in the American lead and zinc industries and which would encourage increased investment in lead and zinc production facilities in this country.

This bill, the Lead and Zinc Act, is almost identical to a bill which was introduced last August by Mr. ASPINALL and a number of cosponsors. Before I explain the main provisions of the bill, I would like to touch briefly on the problems of our lead and zinc industries.

In introducing a bill to suspend for 2 years the duty on zinc contained in ores and concentrates, Representative ULLMAN has noted the difficulties of the American zinc smelting industry. I simply would add that this industry has undergone a 45-percent loss of capacity in several years' time, and that our zinc mining industry, which is losing the processing outlets for its product, produced less ore and concentrates last year than in any year since 1961.

This country has large, good quality lead ore reserves. Domestic lead mine production has increased, but the increase probably would have been greater had investment conditions been better, especially for lead smelting. Healthy mining and healthy smelting industries go hand in hand, and during the last 3 years two out of eight U.S. lead smelters have shut down.

Because of the closure of U.S. lead

smelters, U.S. lead mines, in order to keep going, have exported ores and concentrates. At the same time the United States has been importing higher priced lead metal, about 250,000 tons last year. This, of course, is damaging to our balance of payments.

Lead imports now account for about 25 percent of U.S. consumption. Zinc imports account for about 45 percent of consumption. Last year imports of lead and zinc ores, concentrates and metal added over \$300 million to our balance-of-payments deficit. During the past 15 years the United States has spent almost \$3 billion on such imports, and over the next 15 years an estimated \$7 billion will be spent unless corrective action is taken.

While the United States closes facilities and increases its imports, other countries are expanding production, especially of zinc metal. For example, 15 zinc smelters and refineries are scheduled to be expanded or constructed in Canada, Europe, Japan, and less developed countries. Only one very modest zinc smelter expansion has been announced for the United States.

The smelters which have been closed in the United States were older installations confronting, in many instances, environmental problems, although the closures have been hastened by new construction abroad. Our foreign competitors have also closed older installations, but they have been able to replace their facilities and, in effect, many of ours too.

Mr. Speaker, the American lead and zinc markets are the largest national markets in the world, our reserves are larger than those found in the countries of Western Europe and Japan, and our mines are better located than many foreign mines. Why is it, then, that foreign producers are able to undertake new investments when American producers are unable to do so?

A principal reason is that foreign governments encourage their minerals and metals producers through various forms of assistance, including substantial subsidies, tax holidays, and important contributions to exploration costs.

Most of the lead and zinc smelters and refineries which are being constructed in Western Europe, Japan, and Canada are benefiting from government grants or subsidized loans. In Ireland, where important mine expansions are occurring, the government extends to mine operators a 15-year tax holiday from corporate and income taxes. In the United Kingdom the government has announced a large-scale program to subsidize industry and a \$120-million program to help meet exploration costs. In still other countries States-owned companies produce lead and zinc at low levels of profitability or perhaps at a loss.

Mr. Speaker, the bill which I am introducing today would help to offset the advantages which foreign lead and zinc producers enjoy as the result of the policies of their governments. It would create fairer conditions for trade in these commodities, and it would allow American producers to compete with foreign producers on a more equitable basis.

The Lead and Zinc Act would amend

the tariff schedules of the United States to provide for rates of duty higher than present rates after certain quantitative levels of imports have been reached in a calendar quarter. It would put no absolute limitations on the importation of the lead and zinc materials and articles specified in the act, and it makes no reference to individual exporting countries.

The quantitative levels proposed in this bill are moderate. They bear reasonable relation to current import requirements of metals and of ores needed by our industries to supplement current levels of domestic mine and smelter production.

Consequently, the higher rates of duty would apply only at points where, without their imposition, U.S. production could be displaced by imports in excess of real need. The bill recognizes the unfortunate need for increased imports of zinc metal by raising the quantitative level on zinc metal imports by almost 40 percent over the limitation in the bill introduced last year.

In addition the Lead and Zinc Act would require the quantitative levels on lead and zinc metal imports to be adjusted every 2 years to reflect changes in consumption. Foreign producers, therefore, would share in any increase in consumption in the U.S. market.

The Lead and Zinc Act would not run counter to the zinc ore duty suspension bill introduced by Representative ULLMAN. It would not do so because it provides that imports of zinc contained in ores and concentrates ordinarily shall be entered free of duty up to a quantitative level of 120,000 tons per calendar quarter. Beyond that level the present rate of duty would be reimposed, but I should note that the quantitative level is well above our current import needs for zinc ores and concentrates.

Mr. Speaker, current developments in our lead and zinc industries damage our balance of payments, jeopardizes our national security, and are costing us job opportunities. The bill which I am introducing today would encourage increased investment in American lead and zinc production facilities. It would be, I believe, fully in accord with the Mining and Minerals Policy Act of 1970—Public Law 91-631—which calls for economically sound and stable domestic mining and metals industries and the orderly and economic development of domestic mineral resources.

Mr. Speaker, I hope that many Members of the House will find the bill worthwhile and will give it their support.

HOSPITAL ACCREDITATION PROBLEMS: CONTINUED

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, in the CONGRESSIONAL RECORD of March 7th, I included material in connection with my several bills providing for a reorganization of the hospital accreditation system of this country. I made particular use of some remarks made by Mr. Kenneth Williamson, who is now the Washington consultant for the American Protestant

Hospital Association. Mr. Williamson has furnished me with a statement of concern by that organization relating to the many problems which face all hospitals across the country, and I bring that statement to your attention today. I am sure our colleagues will find the statement of more than casual interest.

The statement follows:

AMERICAN PROTESTANT HOSPITAL ASSOCIATION—STATEMENT OF CONCERN

Conflict of interest is now being associated directly with a hospital's responsibility to the public. The church affiliated hospital is expected to have an absolutely "pure" record on that score and further, the Protestant church hospital is expected by the public to accept this as a Christian ethic by which they will live.

It is now anticipated that the federal government will begin to take a very hard look at present practices within hospitals. It behooves us all to study immediately all relationships existing in our institutions so as to make sure that they do not in fact permit a conflict of interest to exist. Our measure of possible conflict must be how every relationship would appear to the public and not simply that of a legal justification.

There are at least four primary levels of possible conflict to be considered:

The Board of Trustees (Governing Body); the Administration, the Medical Staff, and the Department Heads.

The pattern and tone of all relationships must be established by the Board of Trustees and in all areas of the Board's activity, the broad question is whether the Trustee's position on the Board is used by him so as to result in profit to him or his company through the purchase of any service or product by the hospital.

At the very least, there should be a full record of open bidding, but in certain circumstances, even this may not be sufficient.

The areas in question may include finances and investments, construction, insurance, laundry, housekeeping, supplies, foods, light and heat, et cetera. The Board may have to consider the very difficult question of members of the medical staff practicing in the hospital, serving on the Board and the obvious conflict of interest that can result.

Any practice by the hospital of providing Free or Part Pay hospital care to Board members, Medical Staff members, the Clergy and their families is seen by the public as constituting a conflict of interest and an unfair practice if the cost of such unpaid service is in any way made up by the paying patients.

The role and interest of the Medical Staff needs to be appraised in light of any possible conflict of interest. The growing patterns of physicians being related to the hospital under various contractual arrangements should be looked at very carefully. This will be especially true where it appears that the hospital contracts with individuals so as to result in substantial profits to such persons.

The rules governing the activities of the Administrator (chief executive officer) should be set by the Board and seen in light of the rules the Board sets for itself. If the Board condones conflict of interest in its own practices, it may well find expression in other relationships in the institutions.

Part time service from an administrator who is employed on a full time salaried basis may be an example of a conflict of interest. If the Board sanctions the administrator supplementing his income by working for others during the regular work week, such earnings should be equated to the remuneration paid him by the hospital. It should further be determined whether such outside activities necessitates the hospital employing additional administrative support with a resultant greater cost to patients.

Any practice of the administrator or other employee selling services or products to the hospital or serving on the boards of organizations which do so should be looked at very carefully as a possible conflict of interest.

The administrator is responsible for judging the activities of department heads. Their full time salaried employment and acceptance of part time service for the hospital so as to permit them to do outside work for pay should be looked at in light of a conflict of interest. Serving as private consultants to other institutions in the area of their particular specialty is an example of questionable practice. The rules guiding such matters should be set forth in any employment agreement agreed to at time of employment.

Every Protestant Church related institution is urged to establish a formal means for a thorough appraisal of all their practices so that if any need for change is found, it is undertaken now.

Approved by the Board of Trustees February 4, 1973.

TELEVISION VIOLENCE

(Mr. MURPHY of New York asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MURPHY of New York. Mr. Speaker, for much too long I have shared with other Members of this body and the general public an extreme concern for the amount of violence being thrust upon television viewers. This concern extends to all viewers, but is most acute when thought of in terms of the numbers of children each day who are being exposed to muggings, shoot-outs, and other heinous crimes while innocently sitting in their living rooms. It is estimated that a normal American child is exposed to nearly a million and a quarter of such televised crimes during his childhood and adolescent years. Furthermore, a recent Surgeon General's committee report, released a year ago, has concluded that there exists a "causal link" between violence on television and violence in society.

And yet I am much disturbed to report that in the face of acute concern and mounting scientific verification, there has been no substantial action by the FCC regarding this ongoing problem. I have introduced a joint resolution this session which would direct the FCC to investigate the effects of the display of violence in television programs. There is no doubt that such an investigation would be greatly aided by a universally accepted data base showing the amounts of violence being aired by each individual station across the Nation.

It has come to my attention that there is now pending before the FCC a petition for rulemaking which would require just such a list of violent episodes shown on entertainment programs during a representative week. The list would be incorporated as part of the regular broadcast station requirements for license renewal. Such logs of violent incidents would then be available, not only to the FCC, but also to Members of Congress, social scientists, and any concerned public citizen. The petition was prepared and submitted by a group of George Washington University Law students organized as VIOLENT-viewers intent on listing violent episodes on nationwide television—under the direction of Prof. John Banzhaf III.

The FCC is presently accepting letters of comment regarding the petition, and I would like to include it in the RECORD at this time in order that concerned citizens may read it:

[Before the Federal Communications Commission, Washington, D.C. 20554]

IN THE MATTER OF: REVISION OF FORMS 301 AND 303 OF RENEWAL APPLICATION TO REQUIRE A VIOLENCE LISTING SYSTEM SUBMITTED BY THE LICENSEE

To: The Commission.

PETITION FOR RULEMAKING

Precis

Television, America's most important means of mass communication, must share in the responsibility for the current soaring crime rates. Television has made murder seem like child's play; shoot-outs and slug-fests are presented as everyday occurrences in modern life.

The adverse effect of televised violence was definitively documented last year for the first time by the report of the Surgeon General's Committee on Televised Violence. The report explicitly stated that televised violence can cause mimicking and imitation in real life among viewers, particularly children. Just as children learn the alphabet from *Sesame Street*, they can learn the violent facts of real life from programs like *Mannix* or *Adam-12*.

Now that it is known that there is a causal link between televised violence and violence in society, a system is needed for the public to learn just how much violence is being broadcast by television stations. In this petition, a self-administered violence listing system is presented for the Commission's consideration. Under the system, stations will be required to list the violent episodes broadcast during the Commission's composite week. The findings of the listing system will then be available to the public.

The proposal steers clear of the censorship prohibitions of Section 326 of the Federal Communications Act. All that is asked for is information. Approval of the proposal should not be seen as a step towards banning all violence on television or limiting it. Rather, the proposal should be seen as a way for the public to learn more about what is being broadcast. Hopefully, armed with that knowledge, everyone will be able to do something about the causes of violence in our society.

Introduction

Pursuant to 5 U.S.C. §553, the statutory authority, and 47 C.F.R. section 1, 40 (a) the Commission authority, VIOLENT (Viewers Intent On Listing Violent Episodes on Nationwide Television), a group of students from George Washington Law School, as members of the general public, respectfully request that the Commission expand its requirements regarding application for and renewal of television broadcast licenses to include a listing system of all violent episodes aired by each station in the course of entertainment programming during the composite week. VIOLENT is convinced that such a rule would be well within the Commission's power to act in the public interest under §303 (i), (g), (j) of the Communication Act of 1934 and would not be a violation of Section 326 of the Act.

The problem

There now exists a large, long standing, and growing sector of the public concerned over the effects of television violence on the behavior of viewers. For well over a decade, numerous committees and Congressional inquiries have pointed accusing fingers in the direction of televised violence. As early as 1960 and 1964, Senator Thomas Dodd's (D. Conn.) Senate Subcommittee on Juvenile Delinquency conducted hearings on the relationship of television violence to juvenile delinquency. In 1968, the National Commission on the Causes and Prevention of Violence chaired by Milton Eisenhower, suggested that there is "a strong probability that a high incidence of violence in entertainment programs is contributing to undesirable attitudes and even to violence in society."¹

In 1969, further attention was focused on television in hearings held by Senator John Pastore's Communications Subcommittee. As a result of these hearings, the Surgeon General was instructed to appoint a committee of distinguished men and women from whatever professions and disciplines he deemed appropriate to conduct a study to establish the effects, if any, of televised violence on children.

After nearly three years of study and of continued violence on television, the Surgeon General released his report in January, 1972. The report consisted of five volumes of studies plus one summary volume of conclusions. The Surgeon General's Committee reached two basic but incontrovertible conclusions:

First, violence depicted on television can immediately or shortly thereafter induce mimicking or copying by children. Second, under certain circumstances, television violence can instigate an increase in aggressive acts.²

The work of the Surgeon General's Committee centered on both short-run causation studies of aggression among some children and field studies demonstrating that extensive viewing of violence precedes some long-term manifestation of aggressive behavior. In an overview of most recent research on the relationship between children's viewing and their aggressive behavior, Robert M. Liebert in *Television and Social Learning* (Vol. 2 of the Report) states that the following assumptions can be made from the accumulated data:

1. It has been shown convincingly that

children are exposed to a substantial amount of violent content on television, and that they can remember and learn from such exposure.

2. Correlational studies have discussed a regular association between aggressive television viewing and a variety of measures of aggression employing impressively broad samples in terms of range of economic background and geographic and family characteristics.

3. Experimental studies preponderantly support the hypothesis that there is a directional, causal link between exposure to television violence and an observer's subsequent behavior.³

Additional studies contained in the second volume of the report, *Television and Social Learning*, expand on these conclusions. One study by professors Stein and Friedrich found that the effects of televised violence upon children is subject to certain cultural and sociological factors. Children from lower socio-economic classes with a narrow range of experience respond more to all types of television than do children who have a wider range of experience.⁴

Research done on pre-school children by Harold Stevenson yielded the following results. A child can learn a variety of unique aggressive responses by observing adult aggression. After the initial learning occurs, the degree of response increases with prolonged observation. These effects are not short-term but endure for at least six months past the testing period. Finally, Stevenson concludes that children appear to learn more from observing violence that they are normally willing to display under ordinary circumstances.⁵

Aggression does not appear to be the only response to observation of violent television, although this has been the focus of most testing. An aggressive response is a threat to the individual himself as well as to society. A few studies, however, have explored the adverse effects of televised violence upon children who do not exhibit a highly aggressive response. Scientists have found that televised violence may cause aggression anxiety with a decline in aggressive behavior in some children and adults.⁶

It must be emphasized that most of these studies do not only explore the effects of violence on television. Television has also been studied as an instrument for good. Research shows that children exposed to prosocial programs (i.e. *Misterogers Neighborhood* and *Sesame Street*) showed greater levels of positive behavior than those children exposed to any other type of programming.⁷

The summary volume of the Surgeon General's Committee Report concluded:

Thus, the two sets of findings converse in three respects; a preliminary and tentative indication of causal relation between viewing violence on television and aggressive behavior; an indication that any such causal relation operates only on some children, who are predisposed to be aggressive; and an indication that it operates only in some environmental contexts.⁸

The Report's findings were presented in hearings before Senator Pastore's Subcommittee in March, 1972. During the hearings, the Surgeon General, Dr. Jesse Steinfeld, unequivocally stated regarding the report:

The data on social phenomena such as television and violence and/or aggressive behavior will never be clear enough for all social scientists to agree on the formulation of a succinct statement of causality. But, there comes a time when the data are sufficient to justify action. That time has come.⁹

When asked for specific recommendations as to the course of action to be taken, the Surgeon General suggested the use of a rating system for violence.¹⁰ Senator Pastore endorsed the Surgeon General's proposal and

Footnotes at end of article.

stated, "What has been accomplished will be lost if we do not proceed *expeditiously* and *effectively*." ¹¹ (emphasis added)

At the same Senate Subcommittee Hearings, Congressman John Murphy (D. New York) commented on the validity of the evidence presented in the Surgeon General's study by saying:

Based on my discussions with the experts in this field, I feel that an objective reading of the scientific evidence will force us to the conclusion that T.V. fare as presently constituted is harmful to our children.¹²

As a possible solution to the harm, a member of the Surgeon General's Committee, Dr. Ithiel de Sola Pool of the Massachusetts Institute of Technology, endorsed the idea of some type of on-going auditing of television violence at the hearings. Dr. de Sola Pool stated, "I would like to associate myself with a suggestion . . . for a continuous monitoring of the amount of violence on television."¹³

Among the representatives of the broadcasting industry to testify in the hearing was Mr. Julian Goodman, President of the National Broadcasting Company. In response to questioning from Senator Pastore, Mr. Goodman stated, "Of course, we agree with you that the time for action has come. And, of course, we are willing to co-operate in any way together with the rest of the industry."¹⁴

There are others concerned about the level of television violence. In a joint review of the Surgeon General's report, former White House aide, Douglas Cater, and author, Stephen Strickland, write:

In their (program producers) incessant quest for program material, there is a compulsion to supply enough 'action' to keep the TV sets turned on. Violence, it would seem, serves as a punctuation and way of bridling the pause for commercials.¹⁵

In September of 1972, a presidentially appointed group of advertising executives recommended that advertisers, advertising agencies and broadcasters help reduce violence in programming and advertising. The group, an advertising and promotion subcommittee of the National Business Council for Consumer Affairs, in a report entitled "Violence and the Media," said:

To the extent that depiction of violence in media may contribute to the encouragement of violence, those of us who bear any responsibility for media presentation must be concerned.¹⁶

What do average Americans think about violence on television and in society? Over 23,000 viewers recently responded to a *Parade Magazine* survey on television violence.¹⁷ The overwhelming response to the survey demonstrates public concern over the violent content of present programming. Such concern is justified and understandable. A look at portions of the Washington area television programming schedule will illustrate this point. On weekday mornings and early afternoons, quiz shows and soap operas dominate the air waves, but by 4:00 the viewing audience is considerably younger. Therefore "action" (i.e. violent) programs take over. On WTOP Channel 9 at 4:00 P.M. children are greeted with the cops and robbers classic of *Dragnet*. On the same channel at 4:30 *Wild, Wild West*, a James Bond-type western, is shown. This program is so violent that it induced the Foundation to Improve Television to attempt to persuade the Commission to revoke the station's license for showing it.

In addition to a regular line-up of violent serials, the Washington area child is exposed to movies replete with violence. On January 6, 1973 at 12:00 noon, a time generally conceded to be prime children's time, WDCA Channel 20 presented a movie called "The Giant Leeches." The basic plot of this movie consisted of showing 20 foot long leeches

graphically sucking the blood from a series of human victims.

Are these isolated examples? Unfortunately we have no way of knowing, since there is no nationwide inventory of the amount of violence shown by each individual station.

On the other hand, with regard to violence in real life, figures do exist and these crime figures have been rising steadily in recent years. Such figures stand alongside recent Gallup Poll findings that violence has become a chief concern of the American public.¹⁸ Furthermore, many crimes show a remarkable resemblance to television crimes. On January 4, 1973 this point was driven home to 236 passengers aboard a TWA flight from Madrid to New York. An anonymous caller told airline officials in Madrid that he had placed a pressure bomb on the plane which would detonate on descending to a level of 3,200 ft. Fortunately the plane was directed to high altitude Rapid City, South Dakota where it landed safely. No bomb was found. It was just a sick extortionist's plot. This crime has never been committed as described until the showing of the television program, "The Doomsday Flight" in 1966. The plot of that program, a pressure bomb on a passenger jet, has been copied three times since it was first shown. One of these incidents occurred in Australia, less than a month after the program was first broadcast there. When asked about the most recent attempt at mimicking "The Doomsday Flight," its author, Rod Serling, told reporters, "Yes I wrote the story, but to my undying regret."¹⁹

Once again there are those who will say that these are isolated examples. The simple truth is that we have no idea how much neighborhood crime is caused by local T.V. because we have no idea how much violent programming exists on each station. The public has a right to such necessary information. Additional time should not be wasted in giving it to them.

Senator Howard Cannon (D. Nev.) summed up many citizens' outrage over the continued saturation of television with violence when he said in the Senate Subcommittee hearings:

So we need to do something affirmatively and specifically and do it now. Not wait until three years from now for the completion of another study. I think this subject has been pretty well studied to death.²⁰

The lack of immediate action

Despite the beliefs of the Surgeon General, members of Congress, scientists, and a large sector of the public that the time has come to ascertain the amount of violence on television, no substantial or affirmative action has been taken since the rhetoric of March 1972. Commission Chairman Burch assured Senator Pastore at that time that extensive hearings would be held to inform the Commission on the subject of violence on television.²¹ Hearings were held on children's television in October 1972, but they did not address the violence issue.²²

Therefore, the present situation is that violence on television has long been one of the stated major concerns of the Commission, and yet the Commission remains uninformed as to even the most fundamental data on the quantity of violence shot into living rooms through the tubes of family television sets.

As a belated response to the Pastore hearings in August of 1972, a million dollar study was commissioned by the National Institute of Mental Health to devise a violence indexing system. This report will not be ready until 1976.²³ There is no assurance that the findings of this study will result in any action. Even then, its findings won't be ready for implementation for several more years. The public is being asked again to simply wait. For what and for how long are questions which once again remain unanswered.

Meanwhile the industry's action in this area has been hopelessly inadequate. Although broadcasters appear to have reduced the amount of violence on what is misleadingly labeled "children's television," they have done nothing to curb the general level of violence shown on the air. Children's viewing is not limited to Saturday morning and after school broadcasting. Even pre-school children spend a good deal of time watching programs designed for more mature audiences. Our study has shown that first graders spent 40% of their viewing time watching dramatic programming aired between 4 and 10 P.M.²⁴ Two researchers for the Surgeon General's Report, Lyle and Hoffman, found that at least one third of sixth graders studied were still watching at 10 P.M., and as many as a quarter might still be viewing until 11 P.M.²⁵

Despite the industry's claims that all televised violence has been decreasing, Dr. George Gerbner has recently announced that his measurements show a violence increase in the 1971-1972 television season. This increase reversed the decline in violence levels of previous years.²⁶ Gerbner's statement supports the findings of the Surgeon General's Committee that television violence "peaks" every four years. The Commission had found that the last violence peak was in 1967.²⁷ Therefore, the well-publicized decline of violence levels on television since 1967 can be attributed to a cyclical violence trend rather than to positive media control, as can the subsequent rise now noted.

VIOLENT's seeks to represent that portion of the public who, in the best interests of themselves and their children, cannot wait four more years to find out what they already know. In the words of the Surgeon General's mandate: the time for action is now. The two year old child who watched violence on television in 1960 when Senator Dodd held his first hearing has already reached puberty and will be an adult, voting member of society by the projected release date of the NIMH study. By then, one entire generation will have been exposed to the proven ill effects of violent programming without anyone having the knowledge of which stations, programs or time slots have caused this exposure.

The exact effects of televised violence may remain unknown, but the extent of the exposure cannot be underestimated. The average adult watches television for approximately two hours daily.²⁸ One study by Stein and Friedrich estimates that nursery school children average almost five hours per day viewing time with an increase through elementary school, and then a gradual decrease to the two hour adult level.²⁹

Even assuming a conservative estimate of approximately three hours daily and using George Gerbner's 1967-1969 average of 7.4 violent episodes per hour,³⁰ our two year old child of 1960 will have been exposed to 1,215,450 violent incidents on television by 1975. The cumulative effect of this violence is accentuated by the findings of one researcher that there is a killing every hour on prime time television.³¹

Another social scientist, G. S. Lesser, estimates that by the age of 18 a child born today will have spent more of his life watching television than in any other single activity except sleep.³²

Undeniably, television is one of the most important factors in a child's development. At the same time, it is the most easily changed. It is difficult to influence the effect of parents, peers, schools and religious institutions. But television unlike the others could be changed. More importantly, television can become a teacher of positive values for the young.

It is VIOLENT's concern for this and future generations of growing citizens which leads it to respectfully request that the following rule be adopted by the Commission.

Footnotes at end of article.

TEXT OF PROPOSED RULE

I. The licensee shall audit all entertainment programming broadcast during the composite week for violent episodes. This audit shall include titles, lead-ins, and actual content of such programming. It shall also include previews shown during the composite week of upcoming entertainment programs. The following auditing system shall be used to determine the violence listing.

II. For the purposes of this rule, entertainment programming is defined in 11(b) of Section IV-B, page 11 of the Application for Renewal of Broadcast Station License, FCC Form 303. 11(b) reads as follows: Entertainment programs (E) include all programs intended primarily as entertainment, such as music, drama, variety, comedy, quiz.

III. The basic measurement for violence listing is the violent episode. It is defined as a continuous action, involving the same set of characters (persons or animals), in which any act or acts, whether intentional or accidental, causing physical injury or death to these characters, takes place. A violent episode also takes place when one or more characters compels another set of characters to act because of fear of being hurt or killed.

IV. Each day during the composite week all audited programming shall be listed and categorized as follows: 1) type of episode, 2) duration of episode, 3) type of characters involved in violent episode, 4) name of program, 5) type of entertainment program, and 6) time when program is shown.

V. In the event there is doubt whether or not an episode should be listed, the doubt should be resolved in favor of listing.

VI. The daily violence listing for the composite weeks of the past three years shall be contained in the licensee's renewal application. The licensee should also have this information available to the public in its local place of business during the time in which its application is pending. The licensee shall announce the availability of this information on the air during prime time evening hours on three different dates prior to filing an application for license renewal.

Explanation of the proposed rule

The listing system proposed by VIOLENT does not support or condemn any type of programming. It simply measures the occurrence of basic units of violence and makes them available to interested citizens and the Commission at renewal time. Responsibility for measuring violence is put squarely where it belongs: on the broadcast licensees themselves. The following commentary aids in interpreting the proposed rule.

Part I

A licensed station's self-conducted listing system during the composite week, proposed in Part I, is the most practical means of assisting the amount of violence broadcast. It will be simple to conduct according to the guidelines set out in Parts II-IV. Self-listing answers government and public demands for monitoring, yet avoids the creation of another federal bureaucracy which many broadcasters as well as private citizens fear.²³

The composite week now used by the Commission to gauge types of programming will adequately serve as a fair sample of the amount of violence broadcast. Because the composite week is announced after programs are broadcast, stations would be unable to juggle programming to distort the accuracy of the listing system.

At least 60% of the programming shown by network affiliated stations is provided by the networks. Other syndicates and movie distributors also provide a great deal of programming to individual stations. Both networks and independent distributors, as a service to stations, may wish to audit pro-

grams for violence as called for in this petition. The findings of networks and distributors could then be easily disseminated to individual stations. However, rendering of such service should not in any way lessen the responsibility of the individual stations for the accuracy of its listings.

Part II

Part II employs the definition promulgated by the Commission to define entertainment programming. Entertainment programs are the only type of programs which would be covered by this violence listing. Other program categories include religious, news, public affairs, instructional, sports, educational institutions, political, and editorials. Commercial matter and non-commercial announcements are also exempted. Entertainment programming ranges from cartoons to movies to musical variety shows.

Part III

VIOLENT's proposed definition is based on the definition of violence used by the British Broadcasting Corporation's audience research report, *Violence on Television: Programme Content and Viewer Perception*, the definitive British study of televised violence released in 1971.²⁴ The definition can best be understood by analyzing its five chief clauses and giving appropriate examples of each. The five clauses are: 1) continuous action, 2) involving the same set of characters, 3) intentional and accidental, 4) persons or animals, and 5) compels another to act.

The "continuous action" clause means uninterrupted violence of the same sort. Therefore, a sword fight between the same two characters is one violent episode, even though the principals may strike each other's sword 25 times and the fight lasts five minutes. However, if the two sword fighters stop fighting for several minutes and then continue their fight, two violent episodes should be listed because there has been a break in the continuous action.

The clause "involving the same set of characters" refers to common sources or instigators of violence and common receivers or recipients of violence. This clause is necessary to separate similar violent acts involving different characters. For example, a sheriff may have fist fights with two different outlaws one after the other. The fist fights should be listed as two episodes because of the involvement of two different sets of characters. A different situation is that of one instigator of violence and two receivers. For example, a cartoon super-hero destroys two underwater beasts with one shot of his laser beam pistol. This is listed as only one episode because only one shot was fired between the instigator and the two recipients. Violence between groups is a possible third situation. If there is an air view film of a battle scene without specifying individual combatants, the battle should be recorded as one violent episode.

The clause "intentional or accidental" is included so that all violent incidents depicted on television will be recorded. To the viewer the distinction between intentional and accidental makes little difference. The violence itself makes the impression on him. For example, if a detective accidentally shoots and kills an individual, the man is dead. The detective's intent may be important in a court of law but not to the television viewer.

The clause "persons and animals" has been inserted to insure that all violent episodes with persons or animals are listed. Animals are included because in many television programs they play an important character role, for example, Lassie the dog, Flipper the dolphin, or Ed the talking horse. Harm to these characters can leave as deep an impression on a viewer, especially a child, as harm to a person. Episodes showing animals inflicting violence on persons should be listed. So, for example, if giant leeches at-

tack Everglades explorers the incidents are listed. There are also many cartoon programs with animals depicting human-like roles that should be listed, for instance Huckleberry Hound or the Hair Bear Bunch. However, conventional acts of discipline or play with animals such as picking a dog up by his ears, spurring a horse, or prodding a mule with a stick should not be listed.

The "compelling another to act" clause refers to threats or coercion, either physical or verbal. For example, a robber with a gun is shown ordering a storekeeper to hand over the money in his cash register. Fearing the gun, the storekeeper gives the robber the money. He has been forced to act because of fear of being hurt. There are also expressly physical forms of coercion. For example a detective walking up to a house is shot at. He escapes getting hit by a second shot by getting behind a nearby car. He has been forced to take action because of fear of being hurt or killed.

It should be noted that the definition proposed here requires only the listing of on-screen acts of violence. Implied acts, or off-screen acts should not be listed.

Part IV

Part IV calls for a breakdown of the violent episodes into six elements. Number one, the type of violence, simply means a quick description of the violent episode. Examples are: "a gunfight between a sheriff and outlaw," "bombing of a city" or "strangulation scene." Number two measures the time span of the violent episode. For example, one sword fight may last three minutes while another lasts 15 seconds. They both are categorized as a violent episode, but the differing time span of the two incidents will be of interest to many. Number three calls for the type of characters involved in the violent episode. Descriptive terms which can be used here include major character, minor character, female, male, adolescent, old person. In other words, any short, definitive description may be used to identify the characters involved in the violence. Number four requires the name of the program on which the violent episode occurred. This is included for identification purposes and to determine which programs contain the most violence. It will also serve as an indicator of the level of seriousness or the tone of violence. A slugfest on a show like *Here's Lucy* will be different from one on *Mannix*. Number five asks for the type of program. The Nielson rating system provides a broad category system which may be of some use here to show any generic grouping such as adventure, quiz, detective, or western. Number six asks for the time at which the program was broadcast. The need for this is obvious. If a particularly gory mugging scene is shown on Saturday morning, it is going to affect more children than if it were broadcast after midnight on a weekday.

Part V

The meaning of Part V (which calls for a presumption in favor of listing an episode as violent) is clear on its face. The section is necessary to avoid time consuming, hair splitting arguments.

Part VI

Part VI is the basic public disclosure requirement. Its purpose is to insure that private citizens have the violence listings readily accessible to them. For the convenience of the public the listings should be on hand at the local place of business of the television station. Three on-the-air announcements during evening prime time are needed to insure the widest possible audience awareness of the availability of the listings.

Benefits of the proposal

The auditing system proposed by VIOLENT confers benefits on the public, researchers, the Commission and broadcasters. At the same time, the burden of responsibility for

Footnotes at end of article.

the system has been placed in the hands of those most capable of dealing with it, the individual stations. Such an approach is in line with recent statements of Mr. Clay Whitehead of the Office of Telecommunications Policy. Mr. Whitehead has repeatedly stated that individual broadcasters must assume greater responsibility for their programming.²³

VIOLENT's proposal will benefit the public primarily in that for the first time it will be possible to determine the amount of violent programming for particular time slots and programs in any community. Not everyone has the time, resources or desire to watch lengthy segments of television in an effort to determine the amount of violence present. Yet responsible citizens and parents are concerned about such violent programming and should be allowed access to information about it.

The public will also be benefited in that VIOLENT's inventory system will not result in another huge outlay of taxpayer money. The proposal places any financial burden for the system within the broadcasting market. Unlike the million dollar study presently being conducted by the NIMH or the expensive Surgeon General's Committee Report, costs incurred by VIOLENT's proposal can be equitably apportioned among sponsors and will eventually be reflected in the price of the sponsor's product.

The Commission and Congress will benefit from the VIOLENT proposal in that no longer will they have to go to the expense and trouble of special studies in order to achieve a readable indicator of the volume and distribution of violence on television. For all their fanfare, these various studies have left both Congress and the Commission in the dark as to the amounts of violence present on television. There are those on the Commission and in Congress, who may fear that such an inventory would be but a first step. They argue that by some "domino theory of regulation," once the amount of violence is determined, we are necessarily on the road to total censorship of violence. Such a theory assumes future irresponsibility on the part of the Commission and Congress, both of whom have been expressly entrusted with the protection of constitutional liberties in communications. On the contrary, VIOLENT's proposal seeks to create a better informed, more responsible Commission and Congress who will not be operating from within a statistical vacuum.

Media social scientists will be aided by VIOLENT's proposal in that they will finally have a broad, standardized, inexpensive data base from which to conduct their research. Presently, without a taxpayer's grant or vested involvement with the broadcasting industry, an independent researcher operates at a distinct disadvantage in his investigations into the effects of televised violence. VIOLENT's proposal would open up the field of research to a larger and more diverse range of media specialists.

Furthermore, broadcasting stations, networks and syndicates will be aided by the proposal. Broadcasters have stated repeatedly that they have an honest and abiding concern for violence on television and that they are, by way of various industry codes, making a good faith effort to curb broadcast violence. But obviously their efforts are failing, since Dr. George Gerbner's recently released figures show that violence is again on the rise. The auditing system proposed will allow the licensees, broadcasters and syndicates to reevaluate the weaknesses of past codes, and formulate more effective codes which will successfully deal with the problem. Publishing the data can act to further benefit the licensees in that they will be able to use the information to authori-

tatively fend off irresponsible attacks on their programming.

The Commission's Authority

VIOLENT's proposed rule is clearly within the Commission's established powers as expressed in the Communications Act of 1934. The Act gives the Commission the authority to act affirmatively to promote the safety of life and property through the use of wire and radio communications (47 U.S.C. § 31).

Specifically, Commission members: Have the authority to make general rules and regulations requiring stations to keep such records of programs, transmissions of energy, communication or signal as it may deem desirable. (emphasis added) (47 U.S.C. § 303(j)).

The Commission is empowered through this section to promulgate any rule which it thinks desirable. Nothing more need be proven under this standard to justify Commission action. This is not an enforcement provision, but rather a rule aimed at providing the Commission with information gathering power. As such, the standard of proof required to justify Commission action is the minimal standard of desirability.

In response to this authority, the Commission requests extensive information in its Form 301 and Form 303 which applicants must complete to apply for or renew licenses. In them, the applicant or licensee is requested to give such information as a detailed balance sheet of the applicant for 90 days previous; other businesses in which the applicant or any officer, director or principal stockholder has more than a 25% interest; the make and type of transmitting apparatus; modulation monitors, frequency monitors; and even the date of the last tower repainting.

Also included in Forms 301 and 303 is a requirement for disclosure of program content under Section IV-B "Statement of Television Program Services" which requires the applicant to submit (1) exhibits ascertaining the needs of his particular community; (2) a breakdown of hours, minutes and percent of total air time devoted to News, Public Affairs and other programs, along with a composite log and other requisites with regard to past programming; (3) various estimates as to proposed programming policies; (4) total amount of broadcast time devoted to commercial matter during the composite week; (5) proposed commercial practices; (6) a statement of general station policies and procedures which must include the names of station personnel who make programming determinations, whether or not the station has adopted a code of broadcasting standards and practices, and, if so, a description of such policies.

These requests for desired information, and VIOLENT's proposed rule, are simply requests for disclosure. Therefore, the test to be applied in determining Commission authority is that of desirability.

Further, the Commission is mandated to act "as public convenience, interest or necessity requires" (47 U.S.C. § 303).

In its general grant of authority under Section 303, the Communications Act does not enumerate a specific regulatory scheme to be carried out by the Commission. Rather, it allows the Commission to fulfill its duty by determining how the public interest might best be served. As Justice Frankfurter spoke for the Supreme Court in *NBC v. U.S.*

But the Act does not restrict the Commission merely to supervision of the traffic. It puts upon the Commission the burden of determining the composition of that traffic.²⁴ As an aid to applicants in conforming with the requirements of Section IV-B of Forms 301 and 303, a policy statement was issued in 1960. The Commission said in that statement:

The regulatory responsibility of the Commission in the broadcast field essentially in-

volves the maintenance of a balance between the preservation of a free, competitive broadcast system, on the one hand, and the reasonable restriction of that freedom inherent in the public interest standard provided in the Communications Act on the other.²⁵

The listing system proposed by VIOLENT, like the other requirements of Forms 301 and 303, allows the Commission to obtain factual data to fulfill its public interest mandate without threatening the First Amendment rights of the broadcasters, because there is no system of censorship, judgment or evaluation of data involved in the VIOLENT proposal. The responsibility for measuring program content is left to a free, competitive broadcasting industry.

When the Commission moves into the area of enforcement, § 303 contains two tests, (1) public interest and convenience and (2) necessity, for determining whether the Commission may regulate in a given area in a given manner. Under a public interest test, the standard which the Commission uses is that of whether there is a controversial issue of sufficient public importance involved to justify action.

The Commission explained the industry's responsibility to issues of public concern in a series of notices on drug related musical lyrics in 1971. In these notices the Commission referred to the "epidemic of illegal drug use" to which the licensee could not be indifferent to the potential of his facilities to compound the problem.

The plain fact is that the licensee is not a common carrier—that the Act makes him a public trustee who is called upon to make thousands of programming decisions over his license terms. The thrust of the Notice is simply that this concept of licensee responsibility extends to the question of records which may promote or glorify the use of illegal drugs. A licensee should know whether his facilities are being used to present again and again a record which urges youth to take heroin or cocaine—that it is a joyous experience.²⁶

Certainly the public concern with encouragement of drug use should be no less than the public's concern with the subtle encouragement of violence in this nation. Therefore, even using the higher public interest test, VIOLENT's proposal meets the standard set for Commission action.

The final test devised by § 303 is that of necessity. This standard requires proof of necessity before positive action can be taken by the Commission. Commission action need only be based on a preponderance of the evidence test. With cigarette smoking, *Banzhaf v. F.C.C.*, as with television violence, the danger is "documented by a compelling accumulation of statistical evidence."²⁷ All the proof necessary to support VIOLENT's proposal can be found in the six volumes of the Surgeon General's report. It is neither necessary nor practical to allow the effects of televised violence to go unchecked while more incontrovertible data is sought.

VIOLENT's proposal, therefore, meets each of the 3 tests devised to judge the appropriateness of Commission Action. The listing system, like the other requirements of Forms 301 and 303, allows the Commission to obtain desired factual data through reasonable regulation. The Commission can act to fulfill its public interest mandate without threatening the 1st Amendment rights of the broadcasters, because there is no system of censorship, judgment or evaluation of data involved in the VIOLENT proposal. No specific method of regulation is proposed to come under the challenge of § 326. The responsibility for measuring program content is left to a free, competitive broadcasting industry. *VIOLENT's petition distinguished from other proposals*

VIOLENT's proposal is unlike all previous petitions made to the Commission and the

Footnotes at end of article.

courts concerning televised violence. Foremost among such actions were the 1972 petition of O. R. Grace, Mr. George Corey's petition in the same year, the petition of the Foundation to Improve Television (F.I.T.) in 1970 and a subsequent court suit by three individual members of F.I.T. VIOLENT has steered clear of legal pitfalls in these actions while at the same time attempting to improve the basic theme underlying them.

The O. R. Grace petition charged that much programming is "vulgar and violent."⁴⁰ It urged immediate review of all licensees as well as network practices and policies. This attempted solution does not concern itself on a practical level with the intricate relationship between the Commission and the industry. The Commission has no direct control of network policy and the word "network" appears nowhere in the Communications Act of 1934. Neither does the O. R. Grace proposal work within the well established procedures of review followed by the Commission. In its letter of response to O. R. Grace, the Commission states that the proper time for licensee review is at license renewal, and it is at that time that such matters may rightly be discussed. VIOLENT has followed the Commission's recommendations and has geared any considerations regarding violent content of programming to the license renewal forum.

In the Corey complaint, petitioner requested two actions from the Commission. "First, he sought intervention into license renewal proceedings and the withholding of licenses from three New England stations until either hearings could be held to determine the amount of violence broadcast or until the Commission could establish violence guidelines. Second, he suggested the institution, under the fairness doctrine, of a public service violence warning before the airing of violent programs. Mr. Corey assumes in his petition that stations which broadcast violence are necessarily operating against the public interest. Further, he assumes that the Commission could create a violence standard and then use this standard to justify license revocation and programming control.

VIOLENT's proposal makes no such assumption. It does not create a standard of violence nor is it a rating of violence. It is merely a listing of violent incidents. Clearly such a listing does not of itself create a rating standard by which to justify the revocation of a station's license. Violent has followed the Commission's refusal to deal with the issue in the manner sought in the Corey petition. In addition VIOLENT has followed the Commission's recommendations in its response to Corey that it is more appropriate to consider industry-wide issues through the rule making forum. VIOLENT's petition, therefore, does not seek to search out violent stations in a "witch hunt" approach to the problem, but rather seeks a rule applicable to all stations.

The Foundation to Improve Television (F.I.T.) petition⁴¹ proposed to ban all violence on television during certain evening hours, and to refuse license renewals on the basis of a violence determination. The Commission chose not to deal with the violence question at the time because it was awaiting the results of the Surgeon General's Report before acting on the issue. Although the report has been out for nearly a year, there has been no action on the violence issue.

In a subsequent suit brought by three individual members of F.I.T., *Mary Maguire et. al. v. Post-Newsweek stations, et. al.*,⁴² the complainants sought to restrict the telecast of specific programs which it termed excessively violent. This request was rejected by the Federal District Court for the District of Columbia and on appeal. The rationale for the rejection was that the appropriate forum for such an action is the Commission itself.

VIOLENT suggests none of the above proposals. It does not seek to censor, restrict, or ban questionable entertainment programming. Nor does it desire to deny license renewal on the basis of the amount of violence aired. No value is attached to televised violence, either positive or negative. Nor is the Commission asked to sit in judgement of any or all programming. VIOLENT's proposed rule is restricted to a request for information on programming services from all licensees at the appropriate time of license renewal.

CONCLUSION

VIOLENT's proposal speaks for itself: there is a causal link between televised violence and violence in society. The link has been scientifically proven and attested to by congressional leaders, citizens groups, and members of the broadcasting industry themselves. Despite this overwhelming concern, there has been no real effort made to ascertain the amount of violence broadcast over the nation's air waves.

VIOLENT proposes a system to list violent incidents broadcast during the composite week. Such a listing conforms with and does not significantly differ from other information now requested on the license renewal form. The information so provided will be made accessible to any citizen or group. If approved, the proposal could be put into effect immediately, with a minimum of effort by the Commission.

Such a listing system would benefit the public, Congress, researchers and broadcasters themselves. All will be given a data base from which to discuss and evaluate the detrimental effects of violent programming. No similar data base presently exists. It is inconceivable that a thorough investigation of televised violence can proceed without this data.

VIOLENT's proposal is within the Commission's authority. It does not abridge the statutory guarantees of freedom of expression in section 326 of the Communications Act of 1934. Enactment of the proposal should not be seen as a first step towards censorship, but rather as a means of providing information to stimulate lively public debate.

VIOLENT respectfully requests the Commission to carefully consider its proposal, taking whatever action it deems appropriate.

MIAMI BEACH MUSIC AND ARTS LEAGUE

Mr. PEPPER asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, it is my honor to bring to the attention of my distinguished colleagues an outstanding cultural organization, the Miami Beach Music and Arts League, whose esteemed president for 1972-73 is Mr. Lee Reiser.

The league, founded by the noted music laureate, Ruth C. Brotman, in January 1951, annually presents a series of eight public concerts in the Miami Beach Auditorium, Miami Beach, Fla.

The purpose of this organization is to provide scholarships for young, talented musicians and those in the allied arts in the Greater Miami area, to further encourage such artistic endeavors, and to recognize artistic accomplishments publicly and annually in the Dade County area.

This nonprofit organization provides musical, social, and other programs for its members and guests throughout the year. The league raises funds through concert subscription sales and through concert subscription sales and through the generous contributions of its sponsors and friends.

Amateur, talented young people, regardless of race, creed, or color, are recognized by this fine organization which gives them, when selected, the opportunity to perform in concert before the league and the general public. Those performing in these concerts are presented with scholarships and awards to enable them to further their careers and develop their artistry at institutions of their choice.

Of great nostalgia to the members of the league is the first concert organized by the league in 1951, under President Ruth Brotman, which included such national and international artists as Dr. Bertha Foster, Mme. Mana Zucca, Frances Seibel, Anthony Loeb, Florence Kutzen, Olga Bibor Stern, Anyuta Melikov, Edward Mandel, Sholom Asch, and Harold Shapiro.

The league, now in its 22d year, has a total membership of over 2,100 devoted sponsors, contributors, and subscribers. In 1972 the league was able to distribute over \$4,000 in scholarships and awards to deserving, talented young musicians and artists of Dade County.

The league and all its worthy members are to be commended for the outstanding job they are doing to promote and encourage the cultural enrichment of our area's young people.

A GRACEFUL TRIBUTE TO PUBLIC MEN

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, I was privileged to join my distinguished colleague and dear friend, the Honorable ROBERT

MOLLOHAN, at a dinner in his honor last fall in his district, at Moundville, W. Va. The delightful invocation by Father Robert E. Lee of Our Lady of Snows Church-Mount Olivet, Wheeling, W. Va., has stuck in my mind and I thought I might share it with our colleagues on both sides of the aisle. Father Lee has something to say to each of us, I think, as we carry out our responsibilities as elected representatives of all the people:

INVOCATION BY FATHER ROBERT E. LEE

O God, we believe that you are here present with us this evening as we gather to pay tribute to Congressman Robert Mollohan and such public figures as Congressman Claude Pepper, who represent us in the government of county, state, and country. The recognition is for work well done in sharing time and life for the good of constituents, the people, God's people.

Your son Jesus Christ would know about banquets: he attended them while on earth. He ate with sinners as well as saints and He recognized a person's worth as he read a person's soul.

So, we feel very much a community of people, hopefully, as co-creators of good with the Supreme Creator and we say "Well Done" to people who multiply talents for the good of others. Bless, O Lord our representatives for years well spent in our service and God's. Bless and consecrate the minds, ambitions of all in public life . . . Long after election fever has quieted down, may they work for liberty, justice and peace with lofty ambitions, refined consciences and a sense of the Creator's dignity in all people.

Finally O God; so that all people can work hand in hand for the good, the true and the beautiful, in the interest of equal time, and for the non-alienation of half my parish, bless also the Republicans.

REMOVING THE RANSOM

(Mr. PODELL asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, during the last few days some interesting news has come out of the Soviet Union. It appears that in certain selected cases, the Soviet authorities are waiving their infamous education tax imposed on Jews seeking to emigrate to Israel.

Since we are currently engaged in attempts to pass amendments to the administration's trade bill that would have precisely this effect, I must admit that I am encouraged by the Soviets' actions. American public opinion does indeed have an effect on the Russian Government.

And yet, it is precisely this effect that concerns me as well as pleases me. For it is transparently obvious that the Russians are reacting directly to stimuli from the American Congress. They desperately want their most-favored-nation trading status, so much so that they are willing to make what is for them a major concession on a point of great sensitivity. Were it not for the determination of the Congress in supporting the Freedom of Emigration Act, the 44 Soviet Jews whose ransoms were waived in the past 2 weeks would still be languishing in Russia.

The Soviet Union seems to be giving quite a lot, but is in effect giving very little. The education tax, which officially became Soviet law last December,

is still on the books, and will remain so. The tax is being waived in a very few, selected number of cases. There are still many more people being denied visas than there are cases of visas being granted. The excuses for denials become flimsier and flimsier. For example, the Golygorsky family were denied a family visa on the ground that their older son Vladimir, a 25-year-old violinist served in the army. He did serve for 2 years, but his rank was private and he had no access to secret information. Even with the apparent relaxation of emigration restrictions, no activists and very few scientists are being granted permission to emigrate.

All of this indicates that we should not think that the present relaxation of restrictions means very much in the long run. We should be aware that this is just a ploy by the Soviet Government, to lull the Congress into believing that its objective of easing Russian emigration restrictions has been attained. This objective will not be attained, no matter what reports we may read or hear, until there is no longer any barrier to emigration from the Soviet Union.

We must not think that now we can give up on the Freedom of Emigration Act. This legislation is the only leverage we have on the Russians. The threat of the act's passage was what made them ease off in the first place. If we drop the legislation now, what is to keep the Soviet authorities from reimposing the exit tax, or perhaps imposing even harsher restrictions on the Jews seeking their freedom?

It would be shortsighted folly to give up now, just when we taste the first small fruits of victory. We ought not to back down until we have a complete victory, and the doors to Russia are thrown wide open.

I would like to insert in the Record an article from last Friday's New York Post. It should serve to remind us of what we are fighting for.

The article follows:

[From the New York Post, Mar. 30, 1973]

SOVIET JEWS: NO EXIT FOR MANY

(By Stephens Broening)

Moscow.—For 60 rubles a month, Lev Libov nails soundproof padding on the apartment doors of people sensitive to noise. As a Ph.D. in the chemistry of metallurgy, he is massively overqualified for his work, but it provides a living for his wife Natalya and their 9-year-old son Dan.

He lost the job he was trained for after he applied for permission to leave for Israel nearly two years ago. Since then he's been assigned to a kind of no-exit purgatory created especially for thousands of Soviet Jews the state refuses to yield.

Like many of the well educated Jews who have tried to join the flow of emigrants to Israel—running about 2300 a month this year—Libov has been prevented from working in his specialty and flatly prevented from leaving. For him and others like him the hurdle of the diploma tax seems light years away.

The men who control emigration apparently feel he knows too much, that his departure will subtract from the national sum of knowledge and slow the march toward communism.

In his desperation Libov has turned to a mild sort of activism, the signing of open letters, petitions and the occasional tentative

sit-in at a government office. During the visit of President Nixon last spring, five policemen arrested him at home before dawn and held him in 10 days' preventive detention. Son Dan told his mother: "I said to the kids at school that papa went on a business trip to Leningrad."

Details of Libov's situation emerged from a series of interviews with Moscow Jews who agreed to discuss their difficulties. They claimed there were thousands like them throughout the Soviet Union. Among those interviewed were the families of:

Yuri Kosharovskiy, a physicist who was fired when he applied for the "character references" necessary to support any application for an exit visa. Officials said he could go, but his wife Nora's "special qualifications" as a former mathematician at Moscow State University would keep her here.

An official of the Interior Ministry told her last fall: "If you were a shopgirl you could leave." Kosharovskiy works now as a stevedore.

Barukh Enbinder, a former physicist at the Institute of Physical Chemistry of the Academy of Sciences. He applied for character references on Dec. 26, 1971. Two days later, he was fired. He hasn't worked since and risks arrest for "parasitism." He has a wife, Orlova, and a 7-month-old son.

Vladimir Slepak, a computer specialist with two sons, 21 and 13. Slepak and his elder son Alex have been arrested, notably during the Nixon visit. "Will my husband and son be at home when I return or will they have been arrested?" Slepak's wife Maria asks. The Slepaks have appealed to the Interior Ministry and the KGB secret police for a way out. Last October a KGB officer told them: "If you want to live among Jewish people go to Birobidzhan." That is the so-called Jewish autonomous republic that Stalin created between Manchuria and the Soviet maritime provinces.

Barukh Orlov, a historian, and his wife Maria have both been fired from their jobs. "We have no work and no money," they complained. Their 15-year-old daughter, one of two children, gets anonymous threatening phone calls. Orlov has a bad heart.

Mikhail Babel, an engineer fired from his job last June. He initiated administrative action for reinstatement but lost. He works as a loader in a bakery for 70 rubles a month. The ruble is worth \$1.34 at the official exchange rate. Helen, his wife, says her daughter hears "nothing but bad words about Israel" in her school, "but Israel is her motherland."

THE BEEF ABOUT BEEF

(Mr. PODELL asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, last Thursday night, President Nixon brought us some long-overdue news. He was imposing a price ceiling on meats at their present level.

Unfortunately, this is not good news. For the level at which the price ceiling was imposed was the highest level of meat prices in the history of this Nation. It is the level at which most American consumers could no longer afford to buy meat for their dinner table. It is a level that is prohibitively expensive for all but the wealthy.

The alternatives left open to us are none too good. Fish is nearly as expensive as the cheaper cuts of beef. Eggs are selling for 79 cents a dozen. How many dozens of eggs will it take to feed a family of

four that cannot afford meat? This is no bargain either. And cheese prices are equally high.

We are now into a nationwide meat boycott. The power of the housewife is pitted against the might of the meat producing and packing industry. It seems, that for a short time, at least, the housewife will prevail. We have already seen meat prices come down a bit in the last few days. But this will be a temporary victory.

Beef cattle growers are threatening to withhold their animals from the market, seeking to keep prices at their current levels and drive them even higher if possible. Unless the Federal Government steps in and takes an active hand in the matter, the housewife will ultimately be defeated in her attempt to get the best food for her family at the lowest possible price.

The President's price freeze shows good intentions, but we all know the famous saying about good intentions. We need more. We need a rollback of food prices to their levels of last November. We need a thorough revamping of the farm subsidy program that will give the farmer a fair return on his investment without penalizing the consumer with inflated prices. We need a detailed study of the food production and distribution industry in this country to find out precisely where the consumer's food dollar goes. We need to find out how food distribution can be accomplished more efficiently, and how we can improve productivity on the farm, in the middlemen's factories and packinghouses, and in the groceries.

Housewives cannot fight their battle alone any longer. They need to know that the President and the Federal Government are fighting on their side, and protecting their interests. Let us go from a price freeze to a price rollback as soon as possible, and restore some sanity to the dinner table.

INCLUDING MASS TRANSIT IN NATIONAL TRANSPORTATION TRUST FUND

(Mr. PODELL asked and was given permission to extend the remarks at this point in the Record and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, I am today introducing a bill to establish a National Transportation Trust Fund. Each year the proponents of mass transit in the Congress fight for the crumbs left by the highway lobby. This year's fight is already in progress. The Senate recently authorized the discretionary use of \$850 million of the highway funds for urban areas. If the Members of the House join in this action—and that is doubtful—the first stage of the battle will be won.

The House must go along with this piecemeal approach to funding to salvage a disastrous situation. However, this folly should be ended as quickly as possible. The Congress created the Department of Transportation in recognition of the central role transportation facilities play in national life. Unfortunately the creation of a new Cabinet post did little

to unify all the various aspects of transportation policy in the country. While all come under one purview, highways, railroads, airways, and mass transit all remain in their own separate bailiwicks fighting and struggling with each other for a share of available funds. Mass transit for urban areas has remained the stepchild of the lot.

Why should we wait until the transportation problems of the rest of the country are as severe as those of New York City before we act? One of the daily frustrations of living in New York, or any other major metropolitan area, is the noise, pollution, and congestion caused by automobiles. Finding a parking space is cause for rejoicing, and those who do not fight the traffic suffocate in the subways.

A rational approach to the funding and planning of our transportation needs is for many a question of survival and the numbers increase daily. Under my legislation a National Transportation Trust Fund would absorb the separate trust funds which now exist for highways, airports, airways, and other specific categories. It would require the Secretary of Transportation to formulate within 1 year from the date of enactment a comprehensive plan for the effective implementation of a unified transportation program.

It should be clear that this is not an attack on the automobile or the extension and repair of the highway system where needed. It is a call for policies tailored to different regional needs. The Secretary would be directed to consult with regional, State, and local agencies in an effort to achieve a better balanced, more effective system.

My district feels the question of mass transit most sharply but other benefits would accrue from this legislation. For example, the railroads of the Northeast are on the verge of collapse and this must be dealt with in the context of the entire transportation system. The interrelationship of freight and passenger service, of rails, highways, waterways, and rapid transit must finally be recognized.

PUBLIC SAFETY OFFICERS AND SURVIVORS WOULD BE PROTECTED AGAINST CRIMINAL ACTS

(Mr. McCLORY asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. McCLORY. Mr. Speaker, today Messrs. SMITH, SANDMAN, RAILSBACK, FISH, HOGAN, and MOORHEAD of the Committee on the Judiciary are joining me in introducing a legislative proposal drafted by the Attorney General entitled the "Public Safety Officers' Benefits Act of 1973."

The purpose of the bill is to provide a \$50,000 Federal payment to the survivors of State and local public safety officers, including firemen, who died in the performance of duty as the direct and proximate result of a criminal act.

This legislation is urgently needed because of the growing risk of death that public safety officers face while carry-

ing out their assigned tasks, and because of the existing disparity in survivors benefits from State to State.

Statistics clearly demonstrate the increasing incidence of violent street crime and support official estimates that the rate of violent street crime increased by 156 percent during the decade of the 1960's. In addition, in recent years, more deaths result from the premeditated design of violent dissenters who have chosen public safety officers as a symbolic target for demonstrating dissatisfaction with society.

Notwithstanding the severe occupational hazards which confront policemen, firemen, correctional officers, and other public safety officers, many States have failed to provide sufficient death benefits for the survivors. For example, a study conducted in October 1970 reported that 18 States provided no such financial assistance and even where States have provided death benefits, they are generally inadequate.

For these cogent reasons we believe Federal minimum payment of \$50,000 should be provided to meet the immediate financial needs of survivors of public safety officers who give their lives in the line of duty.

In this bill, "public safety officer" is defined to include persons serving public agencies, with or without compensation, in activities pertaining to law enforcement, corrections, courts with criminal or juvenile delinquent jurisdiction, and firefighting. This gratuity would serve as a Federal floor for survivors benefits and, with certain exceptions, would be in addition to any other benefits due the survivors. Benefits due under this proposal would not be subject to Federal income taxation.

It is estimated that the cost of this legislation would be \$9.4 million annually, based upon recent statistics on assaults against public safety officers. This cost would consist of approximately \$8.3 million in awards and \$1.1 million in administrative expenses.

The text of the bill and a section-by-section analysis follows. I urge speedy action by the House to provide these much needed benefits which will help significantly in combating crime.

The material follows:

H.R. 6449

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Safety Officers' Benefits Act of 1973."

SEC. 2. Title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by adding at the end thereof the following new part:

"PART J—DEATH BENEFITS FOR PUBLIC SAFETY OFFICERS"

"DEFINITIONS"

"SEC. 701. As used in this part—

"(1) 'child' means any natural, illegitimate, adopted, or posthumous child, or stepchild of a deceased public safety officer who is—

"(A) under eighteen years of age; or

"(B) over eighteen years of age and incapable of self-support because of physical or mental disability; or

"(C) over eighteen years of age and a student as defined by section 8101 of title 5, United States Code;

"(2) 'criminal act' means any crime, including an act, omission, or possession under the laws of the United States or a State or unit of general local government which poses a substantial threat of personal injury, notwithstanding that by reason of age, insanity, intoxication or otherwise the person engaging in the act, omission, or possession was legally incapable of committing a crime;

"(3) 'dependent' means wholly or substantially reliant for support upon the income of a deceased public safety officer;

"(4) 'line of duty' means within the scope of employment or service;

"(5) 'public safety officer' means a person serving a public agency, with or without compensation, in any activity pertaining to—

"(A) the enforcement of the criminal laws, or the prevention, control, reduction or investigation of crime; or

"(B) a correctional program, facility or institution where the activity is determined by the Administration to be potentially dangerous because of contact with criminal suspects, defendants, prisoners, probationers or parolees; or

"(C) a court having criminal or juvenile delinquent jurisdiction where the activity is determined by the Administration to be potentially dangerous because of contact with criminal suspects, defendants, prisoners, probationers or parolees; or

"(D) firefighting

"RECIPIENTS"

"SEC. 702. Upon a finding by the Administration that a public safety officer has been killed in the line of duty and the proximate cause of such death was a criminal act or apparent criminal act, the Administration shall pay a gratuity of \$50,000 to the eligible survivor or survivors in the following order of precedence:

"(1) if there is no surviving dependent child of such officer to the surviving dependent spouse of such officer;

"(2) if there is a surviving dependent child or children and a surviving dependent spouse of such officer, one-half to the surviving dependent child or children of such officer in equal shares and one-half to the surviving dependent spouse of such officer;

"(3) if there is no surviving dependent spouse, to the dependent child or children of such officer in equal shares;

"(4) if none of the above, to the dependent parent or parents of such officer in equal shares; or

"(5) if none of the above, to the dependent person or persons in equal shares who are blood relatives of the such officer or who were living in his household.

"INTERIM BENEFITS"

"SEC. 703. (a) Whenever the Administration determines, upon a showing of need and prior to taking final action, that a death of a public safety officer is one with respect to which a benefit will probably be paid, the Administration may make an interim benefit payment not exceeding \$3,000 to the person or persons entitled to receive a benefit under section 702 of this part.

"(b) The amount of any interim benefit paid under subsection (a) of this section shall be deducted from the amount of any final benefit paid to such person or persons.

"(c) Where there is no final benefit paid, the recipient of any interim benefit paid under subsection (a) of this section shall be liable for repayment of such amount. The Administration may waive all or part of such repayment, and shall consider for this purpose the hardship which would result from repayment.

"LIMITATIONS"

"SEC. 704. (a) No benefit shall be paid under this part—

"(1) if the death was caused by the in-

tentional misconduct of the public safety officer or by the officer's intention to bring about his death; or

"(2) if the actions of any person who would otherwise be entitled to a benefit under this part were a substantial contributing factor to the death of the public safety officer.

"(b) The benefit payable under this part shall be in addition to any other benefit that may be due from any other source, but shall be reduced by—

"(1) payments authorized by section 8191 of title 5, United States Code;

"(2) payments authorized by section 12(k) of the Act of September 1, 1916, as amended (D.C. Code, § 4-531(1));

"(3) gratuitous lump-sum death benefits authorized by a State, or unit of general local government without contribution by the public safety officer, but not including insurance or workmen's compensation benefits;

"(4) amounts authorized under any Federal program, or program of a State or unit of general local government receiving Federal assistance under this title which provides for the compensation of victims of crime.

"(c) No benefit paid under this part shall be subject to execution or attachment.

"PROCEDURE"

"SEC. 705. (a) In the event of the death of a public safety officer serving a State or unit of general local government, the notification of such death shall be filed with the Governor or the highest executive officer of the State.

"(b) The Governor or the highest executive officer of a State upon receipt of notification of the death of a public safety officer, shall promptly notify the Administration of the pendency of a certification, and, after due investigation, shall certify to the Administration all facts relevant to the death upon which the benefit may be paid.

"(c) The Administration upon receipt of certification by a Governor or the highest executive officer of a State shall determine if a benefit is due, and, if so, to whom and in what amounts.

"REGULATIONS"

"SEC. 706. The Administration is authorized to establish such rules, regulations and procedures as may be necessary to carry out the purposes of this Act.

"MISCELLANEOUS PROVISIONS"

SEC. 3. Section 520 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, is amended by inserting "(a)" immediately after "520" and by adding at the end thereof the following new subsection:

"(b) There is authorized to be appropriated in each fiscal year such sums as may be necessary to carry out the purposes of Part J."

SEC. 4. Until specific appropriations are made for carrying out the purposes of this Act, any appropriation made to the Department of Justice or the Law Enforcement Assistance Administration for grants, activities or contracts shall, in the discretion of the Attorney General, be available for payments of obligations arising under this Act.

SEC. 5. If the provisions of any part of this Act are found invalid or any amendments made thereby or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

SEC. 6. This Act shall become effective and apply to acts and deaths occurring on or after the date of enactment of this Act.

"SECTION-BY-SECTION ANALYSIS"

The title of the legislation is the "Public Safety Officers' Benefits Act of 1973".

Section 2 amends Title I of the Omnibus Crime Control and Safe Streets Act of 1968,

as amended, by adding at the end thereof a new Part J entitled "Death Benefits for Public Safety Officers". Title I of the Safe Streets Act established, among other things, the Law Enforcement Assistance Administration, and under this proposal LEAA would be given the responsibility of administering the benefits program.

The definitions of terms used in the legislation are set out in section 701 of the new Part J.

The term "child" is defined in subsection (1) to include any natural, illegitimate, adopted, or posthumous child, or stepchild of a deceased public safety officer who is under eighteen years of age, or over eighteen and either incapable of self-support due to mental or physical disability or a student as defined in 5 U.S.C. § 8101. (Section 8101 defines a "student" to be an individual under 23 years of age who has not completed four years of education beyond the high school level and is regularly pursuing a full-time course of study or training at certain types of institutions.) The term "child" is defined broadly (the child may be married, for example) because he must be dependent upon the public safety officer in order to be an eligible survivor. So long as a child is dependent, he would be eligible to recover regardless of certain other conditions such as marital status.

The term "criminal act" is defined in subsection (2) of section 701. The term is relevant because the death of a public safety officer must result proximately from a criminal act or an apparent criminal act before his survivors would be eligible for benefits. "Criminal act" means any crime under the laws of the United States or a state or unit of general local government which poses a substantial threat of personal injury, and includes any act, omission or possession. Even if the individual perpetrating the offense were legally incapable of committing a crime because of age, insanity or intoxication, for example, the officer's survivors would still be eligible for benefits.

The term "dependent" means wholly or substantially reliant for support upon the income of the deceased officer. A survivor must be determined to be financially dependent before he is eligible to recover benefits. The term is intended to be flexible enough to prevent a rigid application of the statute.

"Line of duty" means within the scope of employment or service. An officer must be killed in the line of duty as the proximate result of a criminal act or apparent criminal act before eligibility attaches.

Subsection 5 defines the term "public safety officer". A "public safety officer" is a person serving a public agency, with or without compensation, in any activity pertaining to: (A) the enforcement of the criminal laws, or the prevention, control, reduction or investigation of crime; (B) a correctional program, facility or institution; (C) a court having criminal or juvenile delinquent jurisdiction; or (D) firefighting. With respect to (B) and (C), the activity would have to be determined by the Administration (LEAA) to be potentially dangerous because of contact with criminal suspects, defendants, prisoners, probationers or parolees. The intent of the definition is to include only those public servants who risk death from criminal acts because of the inherent nature of their work. (The term "public agency" as used in this definition is itself defined in section 601(1) of the Safe Streets Act, and means generally any state or unit of local government, or any department or agency of such state or unit. It does not include the federal government or federal agencies.)

Section 702 of the new Part J establishes the criteria for eligibility, and delineates the order of precedence among those who may be recipients of benefits under the Act. The sec-

tion provides that LEAA will pay a gratuity of \$50,000 to eligible survivors upon a finding that a public safety officer has been killed in the line of duty and the proximate cause of death was a criminal act or apparent criminal act. To be eligible, survivors would have to be financially dependent upon the deceased public safety officer. The following dependent individuals would be eligible for benefits: a spouse; or if there is a child or children, the spouse and the child or children; or if there is no surviving spouse or children, the parent or parents; or if none of the above, certain blood relatives or household members.

Section 703 provides for the payment of interim benefits not to exceed \$3,000 to eligible survivors upon a showing of need before final action is taken by the Administration. (\$3,000 would be the maximum amount per case regardless of the number of survivors). Any such interim benefits would be deducted from the amount of the final benefit. Where no final benefit is awarded the recipient of an interim benefit would be liable for repayment. The Administration could waive repayment of any or all of the amount, however. In making this determination, the Administration would be required to consider the hardship which would result from repayment.

Section 704(a) enumerates those situations in which no benefit shall be paid. No benefit shall be paid if death was caused by the officer's intentional misconduct or by his intention to bring about his own death, or if the actions of any person who would otherwise be an eligible survivor were a substantial contributing factor of the death.

Section 704(b) states that the death gratuity shall be in addition to any other benefit that may be forthcoming from any other source. However, the benefit would be reduced by payments authorized under: (1) 5 U.S.C. § 8191 which makes a non-federal officer eligible for benefits under the Federal Employees Compensation Act when the officer is killed or injured while performing a federal or quasi-federal function; (2) section 4-531(1) of the District of Columbia Code, which provides for similar but not identical benefits to those provided herein for deceased D.C. police and firemen; (3) any state or local program providing gratuitous lump-sum death benefits which are not contingent upon contributions by the officer; and (4) any federal or federally assisted program to compensate the victims of crime. These reductions are intended to minimize the inequities that could result from an officer's survivors recovering benefits from more than one program when such programs are designed for essentially the same purpose.

Subsection (c) provides that no benefit paid pursuant to the provisions of the legislation shall be the subject of execution or attachment.

The new section 705 establishes the procedure to be followed with respect to an application for death benefits. Notification of an officer's death must first be filed with the Governor or the highest executive officer of the particular State (subsection (a)). The Governor or executive officer is then required to notify the Administration of the pendency of a certification. After investigation, all relevant facts surrounding the death shall be certified to the Administration. (Subsection (b)). The Administration, upon receipt of certification, then determines if a benefit is due, and if so, to whom and in what amounts. (Subsection (c)).

Section 706 authorizes the Administration to establish such rules, regulations and procedures as may be necessary to carry out the purposes of the Act.

Sections 3, 4, 5 and 6 of the legislation are miscellaneous provisions. Section 3 authorizes such sums as may be necessary to carry out the Act; section 4 provides that any appro-

priation made to the Department of Justice or LEAA may be used to make benefit payments until specific appropriations are made; section 5 makes the provisions of the Act severable; and section 6 provides that the Act shall be effective and apply to acts and deaths occurring on or after the date of enactment.

NIXON'S MEAT PRICE FREEZE IS TOTALLY INADEQUATE

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, the President's imposition of a ceiling on the price of meat last week was a hollow gesture which, in my opinion, is a totally inadequate approach to the present price crisis confronting the American consumer.

This freeze on the price of beef, lamb, and pork alone is insufficient for two basic reasons.

First, the President delayed taking action until meat prices had reached such astronomical levels that consumer boycotts and public outrage had made headlines in every newspaper and magazine. The level at which he froze prices is a level which is far too high for public acceptance.

Second, a freeze on the price of meat alone is an economic absurdity which is doomed to disaster from its inception. What the country needs is an immediate freeze on the price of all goods and services, not just on the price of meat, and a gradual rollback of all consumer prices to lower levels. Any future price increases must be subject to strict guidelines and controls. Price controls on meat alone cannot work, for if the costs of the goods and services which farmers must pay in order to produce meat continue to rise, meat production will become unprofitable for them, they will sharply reduce their output, and rationing and black markets may result.

Last week, prior to the President's announcement of meat price controls, I submitted a statement to the House Banking and Currency Committee during the course of that distinguished committee's hearings on the Economic Stabilization Act and the price spiral which has struck our Nation. I am attaching the statement to my remarks of today.

This statement does not reflect the subsequently imposed meat price controls, but I feel that it represents a fair analysis of the factors underlying the shocking rise in national food prices. I have cosponsored the legislation which the Banking and Currency Committee proposed as a solution to our current price crisis—an immediate freeze on interest rates and on the price of all goods, services, and rents, a rollback of those prices within 60 days, and a strict control of all future proposed price rises. I shall continue to support this proposal as a far more realistic and effective course of action than the apparently futile meat price freeze imposed by the President.

I am also attaching an excellent column by Rowland Evans and Robert Novak which appeared nationwide to-

day, entitled "Meat Price Ceiling: Too Little, Too Late."

The statement and article follow:

STATEMENT OF CONGRESSMAN JONATHAN B. BINGHAM

Mr. Chairman, I thank you for this opportunity to discuss the issue of skyrocketing food prices. I would like to commend you and your Committee for the leadership and initiative which you have shown in conducting hearings on the Economic Stabilization Act and in the formulation of new legislation aimed at controlling the growing increases in the cost of living which are so adversely affecting the American consumer. The deliberations of this Committee can have a tremendous impact on the American standard of living for years to come.

Mr. Chairman, I am deeply troubled by the rise in food prices which has taken place in the U.S. since the summer of last year. These increased consumer costs have struck particularly hard the elderly, persons living on fixed incomes and pensions, the poor, and families with growing children. The trip to the supermarket or the corner grocery store has turned into a nightmare for many Americans. In urban areas, where in normal times food costs are invariably higher than in rural areas, price rises have been devastating.

This Committee will certainly dig deep in its efforts to answer the questions behind the food cost hikes and to find solutions to this complex problem. I wish to emphasize my own opinion that existing agricultural policy, the failure of the President to impose price controls on raw agricultural products, and the increased export of American food products to foreign markets are among the basic factors which underlie these staggering food price increases. A glance at the record reveals the severity of these increases.

Since January of 1972, eggs have gone up 40 per cent in price, onions are up 33 per cent, bacon is up 29 per cent, and potatoes and milk are up 25 per cent. Hamburger has climbed from 71 cents to 78 cents per pound, bologna from \$1.14 to \$1.29 and chuck roast from 79 cents to 86 cents. Nationwide wholesale food prices rose by 5 per cent in December, and almost 3 per cent in January.

According to the U.S. Bureau of Labor Statistics, retail food costs in the New York area rose .3 per cent in December, 1.9 per cent in January, and 2.5 per cent in February. The price of meat, poultry, and fish jumped 4.5 per cent in the New York area last month—if that continued for a year, the annual price increase would be a staggering 54 per cent. All existing price rise records are being broken as prices go right through the ceiling.

This is the problem, and Congress must address itself without delay to the development of solutions.

I suggest that there are three courses of action which we should take at once.

First, Congress should press for price controls on food. In 1970, we gave the President authority to control wages and prices, but he committed a number of grave mistakes in the exercise of those powers. He delayed a year in exercising his authority to impose mandatory controls, and when he finally acted, his controls were unfair and out of balance. For example, controls were never established for the prices of raw food. Then, on January 10th of this year, the President abandoned the compulsory wage-price controls of "Phase II," which were at least partially effective in holding down the cost of living and embarked, instead, upon a voluntary system known as "Phase III," which has been a dismal failure.

The present wage and price control program includes price restraints on food once it enters the processing stage, but those controls have no effect on the basic cost of food. Congress should formally require the President to exercise his power to control basic

food prices. If he is unwilling to take this step, then we as a Congress must legislate a price freeze on food. I am aware that there is conflicting opinion on the effect which a freeze on food prices would have in this country. Some warn that the result would be a farmers' resistance movement, cutbacks in agricultural production, rationing, and black markets. Others contend that business would go on as usual. Congress has alternative actions available which must be explored. A temporary food price freeze could be legislated which might last for a period of several months, a selective freeze on certain products could be enacted, or across the board price controls on all agricultural products could be legislated. What is important is that we take action now which will alleviate the plight of the consumer.

Second, Congress should eliminate subsidy payments to farmers who hold their land out of production. This anachronistic payment system began two generations ago and was initiated to improve an agricultural situation which since has changed drastically. Even with recent reductions in acreage subsidized for non-production, there will still be U.S. Treasury payouts of \$2.5 billion for 20 million unused acres this year. A prime factor in the skyrocketing cost of meat is the rise in feed grain prices. Elimination of non-production subsidies and increased grain production would enable ranchers to purchase grain and fatten livestock at lower prices, a saving which could then be passed on to the consumer. Every available acre in the U.S. should be used to increase food production and decrease food costs. Arguments that supply would far exceed demand and farmers would be bankrupted if non-production subsidies were removed ring hollow when the growth of U.S. exports is considered.

In 1972, the U.S. exported over \$8 billion in agricultural products, and that figure is expected to rise to at least \$10 billion this year. Australia and South Africa have suffered major droughts and will be unable to meet growing demands in Europe and Asia for more food imports. India is in an agricultural crisis and faces a disastrous food shortage. The Soviet Union and China are emerging as potential major importers of U.S. farm products. Both here and abroad the American farmer will surely be able to find adequate markets at a fair price for all the products he can grow on heretofore unutilized land.

The noted economist Charles Schultze has estimated that Federal subsidies to farmers cost the American consumer \$4.5 billion annually in hidden food costs. The consumer suffers at the cash register, because of artificially high prices for basic commodities, and again at the hands of the tax collector, who must levy large amounts to pay out farm subsidies.

I do not advocate cutting out all Federal price supports for agricultural products because the consumer could suffer in the long run from an unregulated agricultural market situation. But I do suggest that Congress give very serious consideration to the elimination of wasteful subsidies paid for nonproduction.

Third, Congress must root out and eliminate those taxes on food which are regressive in nature and particularly burdensome to lower-middle income and low income groups. A salient example of this is the so-called "Bread Tax," a 75 cents per bushel tax on wheat which raises the cost of a pound loaf of bread by 2 cents. This tax, incidentally, is levied only upon wheat used for human consumption. In effect, animals get a better shake from the tax collector on wheat than do the consumers of this country.

Mr. Chairman, unless Congress acts decisively and quickly, a full-scale consumer revolt will result.

Housewife and consumer groups have begun organizing food boycotts (my wife and I are participating in such a boycott this coming week), and restaurants are offering discounts to patrons to avoid ordering beef. A recent series of thefts of supermarket meat in Long Island, New York, has been attributed in part to soaring meat prices.

Congress clearly has its work cut out for it. In the development of solutions to the problem, many competing interests must be balanced. Consumers deserve a break, our international balance of payments must be considered, and the price, cost, and profit structure of the enormous American food processing industry must be analyzed. Also, the American farmer must be treated with dignity and understanding, and not be made the whipping boy for our nation's economic and agricultural woes. As is often pointed out, in the past 20 years the prices which farmers receive for crops have risen by only eleven per cent, while retail food rises have climbed 56 per cent. The taxes imposed on farmers grew by 297 per cent, and farm costs climbed by 109 per cent over that period of time, 60 per cent of today's retail cost of food is attributable to the transport, processing and distribution of food, and salaries in those sectors have increased in order to provide improved standards of living for their employees.

Finding solutions and achieving compromises will not be a simple matter, Mr. Chairman. All Americans must be aware of the enormous complexities which confront this distinguished committee and the other concerned organs of Congress which are grappling with the issue of increasing food prices. But all of us must make every effort to come to the rescue of the American consumer and develop a solution to the food price crisis which confronts our nation.

Mr. Chairman, I believe that the legislation you have introduced with a number of Members of this Committee (H.R. 6168), and which I have also introduced (H.R. 6213), requiring the President to impose an immediate freeze on prices—including food prices—and interest rates is one step we simply must take on behalf of the best interests of the American consumer. I congratulate you and the Members of this Committee for your leadership. I urge this Committee to report this legislation out promptly so that it may be enacted into law at the earliest possible date.

[From the Washington Post, Apr. 2, 1973]

MEAT PRICE CEILING: TOO LITTLE, TOO LATE

(By Rowland Evans and Robert Novak)

Invoking meat controls with such typically Nixonian stealth that some high-ranking White House aides were not consulted in advance, President Nixon now confronts a major new political problem: A runaway Congress ready to enact mandatory wage-and-price controls far tougher than he wants.

In the candid words of one presidential assistant, the new ceilings on beef, lamb and pork may only further dramatize the issue of food inflation, "tossing gasoline" on congressional fires already burning furiously in favor of a stringent new controls law.

Thus, Rep. Wilbur Mills of Arkansas, a formidable critic of the permissive Phase III controls program, is now prepared to use his great influence as chairman of the House Ways and Means Committee to force House passage of an across-the-board wage-and-price freeze similar to the historic freeze of Aug. 15, 1971.

Mills had strongly recommended a total retail food-price freeze to Secretary of the Treasury George Shultz. When Mr. Nixon Thursday night bowed to the angry public clamor against soaring food prices by imposing a ceiling severely limited to meat, Mills was both surprised and displeased. He

had expected a much broader emergency program.

Accordingly, Mills is now prepared to take the floor of the House to fully support all aspects (except an interest rate ceiling) of an across-the-board freeze that Rep. Wright Patman of Texas, chairman of the House Banking Committee, will propose when he brings up the bill extending presidential wage-price controls authority.

Moreover, Mr. Nixon's bold appeal to the voters over the head of Congress to back him in the battle over vetoed spending bills which started last week is also likely to stimulate the same congressional demand, particularly among the Democratic majority, for a far tougher controls law than the White House wants. If such a bill went to the White House and were vetoed, the Democrats could use that veto as protection against voting for higher domestic spending.

Even worse for the President than these unwanted congressional repercussions is the mood widely shared among politicians that Mr. Nixon is just groping with, not coming to grips with, the inflation crisis.

Some leading outside economists, for example, were certain that Mr. Nixon shifted ground and trimmed his emergency controls program at the last minute on Thursday. His economic advice still comes mainly from authors of the disastrous Phase III—led by economics czar Shultz, a doctrinaire free-marketeer who has always opposed controls. The Thursday decision is perceived by the outside economists as a sop to public demand—too little, too late—by an administration that isn't sure what to do.

This mood, moreover, may explain the dramatic contrast between Wall Street's tepid reaction Friday, the day after the meat decision, and the record rise in stock prices on Aug. 16, 1971, the day after Mr. Nixon's across-the-board freeze. The probable interpretation: Wall Street's money men, with vast interests at stake in the anti-inflation battle, were left wholly unconvinced that the President's meat decision will help much.

Likewise, if the President's new ceiling on meat was supposed to appease AFL-CIO President George Meany, as many Democrats believed, it was a failure. Meany's blast at the White House for putting a ceiling on meat at the highest prices in history means one thing: His potent lobby will be turned loose for a total effort to persuade the House to impose stringent price controls.

Nor is there any mathematical formula showing that the new meat controls will actually work. Packinghouse operators now cannot bid for choice cattle at higher prices, which means cattle feeders cannot raise their prices to compensate for rising, still uncontrolled, feed costs. This could actually reduce the supply of beef to the market, while keeping prices at their current peak, and lead to rationing, black markets—or both.

In short, Mr. Nixon has taken a high-risk political gamble with a meat-controls program that did not satisfy Congress, consumers and most economists. If the President has restored credibility in his Phase III anti-inflation program, the evidence still lies somewhere off in the future.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORMAN, for today, on account of official business.

Mr. MATSUNAGA (at the request of Mr. O'NEILL), for today, on account of official business.

Mr. MCCORMACK (at the request of Mr. O'NEILL), for today, on account of death in the family.

Mr. CAMP (at the request of Mr. GERALD

R. FORD), for today, on account of official business.

Mr. CRONIN (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. YOUNG of South Carolina (at the request of Mr. GERALD R. FORD), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. ROBERT W. DANIEL, JR.), to revise and extend their remarks, and to include extraneous matter:)

Mr. STEELE, today, for 5 minutes.

Mr. ROBISON of New York, on April 4, for 30 minutes.

Mrs. HECKLER of Massachusetts, today, for 5 minutes.

Mr. SARASIN, today, for 5 minutes.

(The following Members (at the request of Mr. STUDDS), to revise and extend their remarks, and to include extraneous matter:)

Mr. MCFALL, today, for 5 minutes.

Mr. DIGGS, today, for 5 minutes.

Mr. GONZALEZ, today, for 5 minutes.

Mr. HARRINGTON, today, for 5 minutes.

Mr. MINISH, today, for 5 minutes.

Mr. BRADEMAS, today, for 5 minutes.

Mr. THORNTON, today, for 5 minutes.

Mr. MATHIS of Georgia, today, for 10 minutes.

Mr. FRASER, today, for 5 minutes.

Ms. ABZUG, today, for 10 minutes.

Mr. DANIELSON, today, for 15 minutes.

Mr. TIERNAN, today, for 5 minutes.

Mr. BIAGGI, on April 3, for 15 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. FRASER, in the body of the RECORD, and to include extraneous matter, notwithstanding it exceeds two pages of the RECORD and is estimated by the Public Printer to cost \$680.

Mr. MURPHY of New York and to include extraneous matter not withstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost \$850.

Mr. GRAY in two instances, and to include extraneous material.

(The following Members (at the request of ROBERT W. DANIEL, JR.), and to include extraneous matter:)

Mr. HANRAHAN.

Mr. ZION.

Mr. SNYDER.

Mr. DERWINSKI.

Mr. FISH in two instances.

Mr. QUIE.

Mr. YOUNG of Florida in five instances.

Mr. FROELICH in two instances.

Mr. ZWACH.

Mr. DENNIS.

Mr. KEMP.

Mr. CLEVELAND.

Mr. BOB WILSON.

Mr. BRAY in two instances.

Mr. HAMMERSCHMIDT in two instances.

Mr. CARTER.

Mr. VEYSEY in two instances.

Mr. WYMAN in two instances.

Mr. WHITEHURST.

Mr. THOMSON of Wisconsin.

Mr. HOGAN in three instances.

Mr. FRENZEL.

Mr. COUGHLIN.

Mr. HOSMER in two instances.

Mr. MOORHEAD of California.

Mr. McCLOSKEY.

Mr. PRICE of Texas.

(The following Members (at the request of Mr. STUDDS), and to include extraneous matter:)

Mr. LITTON.

Mr. HARRINGTON.

Mr. DE LUGO.

Mr. HELSTOSKI in 10 instances.

Mr. WILLIAM D. FORD.

Mr. O'HARA.

Mr. KASTENMEIER.

Mr. CARNEY of Ohio in two instances.

Mr. CONYERS in 10 instances.

Mrs. GRASSO in 10 instances.

Mr. BRASCO.

Ms. ABZUG in five instances.

Mr. HANNA in three instances.

Mr. VAN DEERLIN.

Mr. BURKE of Massachusetts.

Mr. EVINS of Tennessee in six instances.

Mr. HUNGATE.

Mr. ANNUNZIO in five instances.

Mr. SATTERFIELD.

Mr. CASEY of Texas.

Mr. ROSTENKOWSKI.

Mr. ZABLOCKI in two instances.

Mr. BENNETT.

(The following Members (at the request of Mr. DRINAN) and to include extraneous matter:)

Mr. BINGHAM in two instances.

Mr. FISHER in six instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 13. An act to amend title 18 of the United States Code to provide civil remedies to victims of racketeering activity and theft, and for other purposes; to the Committee on the Judiciary.

S. 15. An act to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide a Federal death benefit to the surviving dependents of public safety officers; to the Committee on the Judiciary.

S. 33. An act to amend the Omnibus Crime Control and Safe Streets Act of 1968 to authorize group life insurance programs for public safety officers and to assist State and local governments to provide such insurance; to the Committee on the Judiciary.

S. 300. An act to provide for the compensation of persons injured by certain criminal acts, to make grants to States for the payment of such compensation, and for other purposes; to the Committee on the Judiciary.

ADJOURNMENT

Mr. DRINAN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 48 minutes p.m.) the House adjourned until Tuesday, April 3, 1973 at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS,
ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

692. A communication from the President of the United States, transmitting a draft of proposed legislation to authorize reduction or suspension of import barriers to restrain inflation (H. Doc. No. 93-75); to the Committee on Ways and Means and ordered to be printed.

693. A letter from the General Counsel of the Department of Defense, transmitting a draft of proposed legislation to amend titles 10 and 14, United States Code, and certain other laws, to modernize the retirement structure relating to members of the uniformed services; to the Committee on Armed Services.

694. A letter from the Director, Central Intelligence Agency, transmitting a draft of proposed legislation to amend the Central Intelligence Agency Retirement Act of 1964 for certain employees, as amended, and for other purposes; to the Committee on Armed Services.

695. A letter from the Chief of Legislative Affairs, Department of the Navy, transmitting notice of the proposed donation of certain surplus railroad equipment to the Warren County Chapter of the National Railway Historical Society, Warrenton, N.C., pursuant to 10 U.S.C. 7545; to the Committee on Armed Services.

696. A letter from the Chairman, Federal Deposit Insurance Corporation, transmitting an interim report of the operations of the Corporation during 1972; to the Committee on Banking and Currency.

697. A letter from the Acting Assistant Secretary of State for Congressional Relations transmitting a report on deliveries of excess defense articles during the second quarter of fiscal year 1973, by acquisition cost and value at the time of delivery, pursuant to section 8(d) of Public Law 91-672; to the Committee on Foreign Affairs.

698. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend the authorization of appropriations for educational broadcasting facilities grants; to the Committee on Interstate and Foreign Commerce.

699. A letter from the Acting Secretary of Health, Education, and Welfare, transmitting a plan for providing hospital care for merchant seamen and other beneficiaries now served by the Public Health Service Hospitals at Baltimore, Boston, Galveston, New Orleans, San Francisco, and Seattle, pursuant to section 3 of Public Law 92-585; to the Committee on Interstate and Foreign Commerce.

700. A letter from the Secretary of Transportation, transmitting a report on the study of the "barge mixing rule problem," pursuant to Public Law 91-590, excluding the comments and views of the Interstate Commerce Commission and the Secretary of the Army; to the Committee on Interstate and Foreign Commerce.

701. A letter from the Vice President for Public and Government Affairs, National Railroad Passenger Corporation; transmitting the financial report of the Corporation for December, 1972, pursuant to section 308(a) (1) of the Rail Passenger Service Act of 1970, as amended; to the Committee on Interstate and Foreign Commerce.

702. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to section 204 (d) of the Immigration and Nationality Act, as amended [8 U.S.C. 1154(d)]; to the Committee on the Judiciary.

703. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States, pursuant to section 212(a) (28) (I) (ii) of the Immigration and Nationality Act [8 U.S.C. 1182(a) (28) (I) (ii) (b)]; to the Committee on the Judiciary.

704. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice transmitting copies of orders entered in cases in which the authority contained in section 212(d) (3) of the Immigration and Nationality Act was exercised in behalf of certain aliens, together with a list of the persons involved, pursuant to section 212(d) (6) of the Act [8 U.S.C. 1182(d) (6)]; to the Committee on the Judiciary.

705. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders entered in the cases of certain aliens under the authority contained in section 13 (b) of the act of September 11, 1957, pursuant to section 13(c) of the act [8 U.S.C. 1255 (c)]; to the Committee on the Judiciary.

706. A letter from the Governor of the Canal Zone, transmitting a draft of proposed legislation to authorize the President to prescribe regulations relating to the purchase, possession, consumption, use, and transportation of alcoholic beverages in the Canal Zone; to the Committee on Merchant Marine and Fisheries.

707. A letter from the Administrator, National Aeronautics and Space Administration, transmitting a draft of proposed legislation to amend section 203 of the National Aeronautics and Space Act of 1958, and for other purposes; to the Committee on Science and Astronautics.

708. A letter from the Administrator of Veterans Affairs, transmitting a draft of proposed legislation to amend title 38 of the United States Code in order to establish a National Cemetery System within the Veterans' Administration; assist States in the establishment and operation of veterans' cemeteries; to revise eligibility for burial allowance; to eliminate certain duplications in Federal burial benefits; and for other purposes; to the Committee on Veterans' Affairs.

709. A letter from the Acting Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to amend the International Organizations Immunities Act to authorize the President to extend certain privileges and immunities to the Organization of African Unity; to the Committee on Ways and Means.

710. A letter from the Chairman of the Council of Economic Advisers, transmitting a report on the repeal of the excise tax on motor vehicles, pursuant to Public Law 92-178; to the Committee on Ways and Means.

RECEIVED FROM THE COMPTROLLER GENERAL

711. A letter from the Comptroller General of the United States, transmitting a report on protecting the consumer from potentially harmful shellfish (clams, mussels, and oysters); to the Committee on Government Operations.

712. A letter from the Comptroller General of the United States, transmitting a report on problems in obtaining and enforcing compliance with good manufacturing practices for drugs; to the Committee on Government Operations.

713. A letter from the Comptroller General of the United States, transmitting a report on cost growth in weapon systems in the Department of Defense; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk

for printing and reference to the proper calendar, as follows:

Mr. POAGE: Committee on conference, A conference report to accompany H.R. 2107; (Rept. No. 93-101). Ordered to be printed.

Mr. FRASER: Committee on Foreign Affairs. House Joint Resolution 205. Joint resolution to create an Atlantic Union delegation; (Rept. No. 93-102). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ABDNOR:

H.R. 6415. A bill to amend the Federal Trade Commission Act (15 U.S.C. 41) to provide that under certain circumstances exclusive territorial arrangements shall not be deemed unlawful; to the Committee on Interstate and Foreign Commerce.

By Ms. ABZUG:

H.R. 6416. A bill to provide public service employment opportunities for unemployed and underemployed persons, to assist States and local communities in providing needed public services, and for other purposes; to the Committee on Education and Labor.

By Mr. BADILLO:

By Mr. BINGHAM (for himself, Mr. CHARLES H. WILSON of California, and Mr. MAZZOLI):

H.R. 6424. A bill governing the use of the Armed Forces of the United States in the absence of a declaration of war by the Congress; to the Committee on Foreign Affairs.

By Mr. BURKE of Florida (for himself, Mr. ARCHER, Mr. BAFALIS, Mr. BROWN of California, Mrs. CHISHOLM, Mr. CRONIN, Mr. DAVIS of South Carolina, Mr. DERWINSKI, Mr. GREEN of Pennsylvania, Mr. HINSHAW, Mr. HORTON, Mr. JONES of North Carolina, Mr. LEGGETT, Mr. MAYNE, Mr. McCLOSKEY, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MURPHY of Illinois, Mr. PETTIS, Mr. PODELL, Mr. ROE, Mr. ROSENTHAL, Mr. ROUSH, Mr. WAMPLER, and Mr. WHITE):

H.R. 6425. A bill to amend title 10 of the United States Code in order to make certain totally and permanently disabled World War II servicemen and their dependents eligible for CHAMPUS medical benefits; to the Committee on Armed Services.

By Mr. BURKE of Florida (for himself, Mr. WHITEHURST, Mr. YATRON, Mr. YOUNG of Alaska, and Mr. YOUNG of Florida):

H.R. 6426. A bill to amend title 10 of the United States Code in order to make certain totally and permanently disabled World War II servicemen and their dependents eligible for CHAMPUS medical benefits; to the Committee on Armed Services.

By Mr. BURKE of Florida (for himself, Mr. ARCHER, Mr. BAFALIS, Mr. BROWN of California, Mrs. CHISHOLM, Mr. COLLIER, Mr. CRONIN, Mr. DAVIS of South Carolina, Mr. DERWINSKI, Mr. HINSHAW, Mr. JONES of North Carolina, Mr. LEGGETT, Mr. McCLOSKEY, Mr. MOAKLEY, Mr. MURPHY of Illinois, Mr. PODELL, Mr. ROSENTHAL, Mr. ROUSH, Mr. WAMPLER, Mr. WHITEHURST, Mr. YATRON, Mr. YOUNG of Alaska, and Mr. YOUNG of Florida):

H.R. 6427. A bill to amend title 38 of the United States Code in order to provide additional compensation to veterans who are totally disabled as a result of combat injuries; to the Committee on Veterans Affairs.

By Mr. CAREY of New York:

H.R. 6428. A bill to amend the Agricultural Adjustment Act of 1938 to eliminate wheat marketing certificates, and for other purposes; to the Committee on Agriculture.

By Mr. CARTER:

H.R. 6429. A bill to establish Capitol Hill as a historic district; to the Committee on Interior and Insular Affairs.

H.R. 6430. A bill to encourage earlier retirement by permitting Federal employees to purchase into the civil service retirement system benefits unduplicated in any other retirement system based on employment in Federal programs operated by State and local governments under Federal funding supervision; to the Committee on Post Office and Civil Service.

By Mr. CONYERS (for himself, Mr. GONZALEZ, Mr. DRINAN, Mr. MATSUNAGA, and Mr. WOLFF):

H.R. 6431. A bill to amend the Economic Opportunity Act of 1964 to require that any plans to reorganize the Office of Economic Opportunity be transmitted to Congress pursuant to the Executive Reorganization Act, and for other purposes; to the Committee on Education and Labor.

By Mr. CRANE:

H.R. 6432. A bill to amend the Urban Mass Transportation Act of 1964 to provide a sub-

stantial increase (on a revenue-sharing basis) in the total amount authorized for assistance thereunder, to increase the portion of project cost which may be covered by a Federal grant, and for other purposes; to the Committee on Banking and Currency.

By Mr. DONOHUE:

H.R. 6433. A bill to amend the Internal Revenue Code of 1954 to allow a credit against the individual income tax for tuition paid for the elementary or secondary education of dependents; to the Committee on Ways and Means.

By Mr. DRINAN:

H.R. 6434. A bill to amend the National Science Foundation Act of 1950 in order to establish a framework of national science policy and to focus the Nation's scientific talent and resources on its priority problems, and for other purposes; to the Committee on Science and Astronautics.

By Mr. DULSKI:

H.R. 6435. A bill to amend section 225 of the Postal Revenue and Federal Salary Act of 1967; to the Committee on Post Office and Civil Service.

By Mr. DUNCAN:

H.R. 6436. A bill to amend the Internal Revenue Code of 1954 to disallow any deduction for depreciation for a taxable year in which a residential property does not comply with requirements of local laws relating to health and safety, and for other purposes; to the Committee on Ways and Means.

By Mr. DUNCAN (for himself, Mr. CAMP, Mr. CLARK, Mr. FLOOD, Mr. FOLEY, Mr. ICHORD, Mr. JOHNSON of California, Mr. McEWEN, Mr. McSPADEN, Mr. QUILLEN, Mr. ROONEY of Pennsylvania, Mr. RUNNELS, Mr. SAYLOR, Mr. SHOUP, Mr. SKUBITZ, Mr. SYMMS, and Mr. UDALL):

H.R. 6437. A bill to protect the domestic economy to promote the general welfare, and to assist in the National defense by providing for an adequate supply of lead and zinc for consumption in the United States from domestic and foreign sources, and for other purposes; to the Committee on Ways and Means.

By Mr. FASCELL:

H.R. 6438. A bill to amend the Freedom of Information Act to require that all information be made available to Congress; to the Committee on Government Operations.

By Mr. FRASER:

H.R. 6439. A bill to provide local self-government for the people of Washington, D.C.; to the Committee on the District of Columbia.

By Mr. FUQUA:

H.R. 6440. A bill to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus supplies and equipment to State education agencies; to the Committee on Government Operations.

H.R. 6441. A bill to amend the Uniform Time Act of 1966 in order to provide that daylight saving time shall be observed in the United States from the first Sunday following Memorial Day to the first Sunday following Labor Day; to the Committee on Interstate and Foreign Commerce.

By Mr. GUDE (for himself and Mr. BROYHILL of Virginia):

H.R. 6442. A bill to amend title 5 of the United States Code to provide that supergrade employees (and certain other Federal employees) whose pay is subject to a special statutory limitation shall be credited, for civil service retirement purposes, with the full amount of the basic pay they would be entitled to receive in the absence of such limitation; to the Committee on Post Office and Civil Service.

By Mr. HANNA:

H.R. 6443. A bill to assure that Federal housing assistance programs are carried out to the full extent authorized by Congress; to the Committee on Banking and Currency.

By Mr. HASTINGS (for himself, Mr. GAYDOS, Mr. RONCALLO of New York, Mr. BUCHANAN, Mr. ECKHARDT, Mr. DAVIS of Georgia, Mr. KOCH, Mr. CLEVELAND, Mr. HAMILTON, Mrs. CHISHOLM, Mr. HELSTOSKI, Mr. BURTON, Mr. MATSUNAGA, Mr. STEPHENS, Mr. BRADEMANS, Mr. CARNEY of Ohio, Mr. RONCALLO of Wyoming, Mr. RODINO, Mr. MCDADE, Mr. ROSTENKOWSKI, Mr. WALDIE, Mr. MCCORMACK, Mr. FLYNT, Mr. McSPADEN, and Mr. MALLARY):

H.R. 6444. A bill to extend through fiscal year 1974 the expiring appropriations authorizations in the Public Health Service Act, the Community Mental Health Centers Act, and the Development Disabilities Services and Facilities Act, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mrs. HECKLER of Massachusetts:

H.R. 6445. A bill to provide that respect for an individual's right not to participate in abortions contrary to that individual's consciences be a requirement for hospital eligibility for Federal financial assistance and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HELSTOSKI:

H.R. 6446. A bill to authorize financial assistance for opportunities industrialization centers; to the Committee on Education and Labor.

By Ms. HOLTZMAN:

H.R. 6447. A bill to require States to pass along to individuals who are recipients of aid or assistance under the Federal-State public assistance programs or under certain other Federal programs, and who are entitled to social security benefits, to full amount of the 1972 increase in such benefits, either by disregarding it in determining their need for assistance or otherwise; to the Committee on Ways and Means.

By Mr. KEMP:

H.R. 6448. A bill to extend to volunteer fire companies and volunteer ambulance and rescue companies the rates of postage on second-class and third-class bulk mailings applicable to certain nonprofit organizations; to the Committee on Post Office and Civil Service.

By Mr. MCCLORY (for himself, Mr. SMITH of New York, Mr. SANDMAN, Mr. RAILSBACK, Mr. FISH, Mr. HOGAN, and Mr. MOORHEAD of California):

H.R. 6449. A bill; Public Safety Officers' Benefits Act of 1973; to the Committee on the Judiciary.

By Mr. MCFALL (for himself and Mr. NIX):

H.R. 6450. A bill to amend the Economic Stabilization Act of 1970 to establish a temporary Price-Wage Board, to provide temporary guidelines for the creation of price and pay rate stabilization standards, and for other purposes; to the Committee on Banking and Currency.

By Mr. MATHIAS of California (for himself, Mr. MCFALL, Mr. CHARLES H. WILSON of California, Mr. BURGNER, Mr. MOORHEAD of California, Mr. HINSHAW, Mr. STARK, and Ms. BURKE of California):

H.R. 6451. A bill to provide for the establishment of the California Desert National Conservation Area; to the Committee on Interior and Insular Affairs.

By Mr. MINISH (for himself, Mr. GETTYS, Mr. HANLEY, Mr. BRASCO, Mr. KOCH, Mr. COTTER, Mr. YOUNG of Georgia, Mr. MOAKLEY, and Mr. STARK):

H.R. 6452. A bill to amend the Urban Mass Transportation Act of 1964 to provide a substantial increase in the total amount authorized for assistance thereunder, to increase the portion of project cost which may be covered by a Federal grant, to authorize assistance for operating expenses, and for

other purposes; to the Committee on Banking and Currency.

By Mrs. MINK:

H.R. 6453. A bill to amend title 10 of the United States Code to deem service as a member of the Women's Airforce Service Pilots during World War II to be active service for purposes of computing retirement and longevity benefits; to the Committee on Armed Services.

By Mr. O'HARA:

H.R. 6454. A bill to amend title 18 of the United States Code to permit the transportation, mailing, and broadcasting of advertising, information, and materials concerning lotteries authorized by law and conducted by a State, and for other purposes; to the Committee on the Judiciary.

By Mr. POCELL:

H.R. 6455. A bill to establish a Transportation Trust Fund, to encourage urban mass transportation, and for other purposes; to the Committee on Ways and Means.

By Mr. QUILLLEN:

H.R. 6456. A bill to amend title 38, United States Code, to provide for a special addition to the pension of veterans of World War I and to the pension of widows and children of veterans of World War I; to the Committee on Veterans' Affairs.

H.R. 6457. A bill to amend title 38 of the United States Code to liberalize the provisions relating to payment of disability and death pension; to the Committee on Veterans' Affairs.

By Mr. ROGERS (for himself, Mr. KYROS, Mr. PREYER, Mr. SYMINGTON, Mr. ROY, Mr. NELSEN, Mr. CARTER, Mr. HASTINGS, Mr. HEINZ, and Mr. HUBNUT):

H.R. 6458. A bill to amend the Public Health Service act to authorize assistance for planning, development and initial operation, research, and training projects for systems for the effective provision of health care services under emergency conditions; to the Committee on Interstate and Foreign Commerce.

By Mr. SATTERFIELD:

H.R. 6459. A bill to authorize the Secretary of Agriculture to develop and carry out a forestry incentives program to encourage a higher level of forest resource protection, development, and management by small nonindustrial private and non-Federal public forest landowners, and for other purposes; to the Committee on Agriculture.

By Mr. SAYLOR:

H.R. 6460. A bill to establish a national land use policy, to authorize the Secretary of the Interior to make grants to encourage and assist the State to develop and implement State land use programs, to coordinate Federal programs and policies which have a land use impact, to coordinate planning and management of Federal lands and planning and management of nearby non-Federal lands, and for other purposes; to the Committee on Interior and Insular Affairs.

123. Also, petition of the city council, Holland, Mich., relative to revenue sharing; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

THE HANDICAPPED AT WORK: TOMORROW'S CHALLENGE

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, April 2, 1973

Mr. CHURCH. Mr. President, the winning essay in this year's Idaho State "Ability Counts" contest, sponsored by the Governor's Committee on Employment of the Handicapped, is Susanne Jane Mansell of Boise.

I have just had occasion to read her winning essay, entitled "The Handicapped at Work: Tomorrow's Challenge."

Also winning in the Idaho contest is David Sharp, of Idaho Falls, for his poster on Hire the Handicapped. I wish it were possible to reprint this young man's striking poster in the CONGRESSIONAL RECORD. Since we deprive ourselves of graphic representation in the RECORD, however, I can only say that it is a striking piece of work, which I know will be highly effective.

Reading Miss Mansell's essay, it is easy to see why this young woman was selected as a winner in the contest.

Miss Mansell is the daughter of a disabled veteran, and understands the problems of the handicapped from immediate experience.

In her essay, she notes the problems that had to be overcome by the United

States to put a man on the moon, and wonders why—if we can overcome those barriers—we cannot at the same time remove the barriers we put in the way of the handicapped.

It is a very legitimate question. As she states in her essay:

The entire space program illustrates the will of mankind to break down barriers and to strive for the impossible dream. Now we need to prove ourselves in the important area of service to humanity.

Mr. President, I ask unanimous consent that the text of Miss Mansell's essay be printed at this point in the Extensions of Remarks.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE HANDICAPPED AT WORK: TOMORROW'S CHALLENGE

(By Susanne Jane Mansell)

Ten, nine, eight, seven, six, five, four, three, two, one, blast off!

A great roar arose, overpowering all other sounds in the area. The ground shook with the force of the rocket's lifting off the launching pad. It seemed as if the whole earth were being jarred loose from its foundations! The air was electric with excitement. The date was July 20, 1969, and man had undertaken his first excursion to the moon.

Some Americans like Joe Blake, born blind, and Marjorie Adams, confined to a wheelchair by multiple sclerosis, could only listen to radioed reports; yet they too experienced the challenge of man's seeking a goal higher than all others and being willing to pay the price to realize that goal.

Since that dramatic "first," four moon

landings have occurred. What seemed impossible yesterday is now within reach in the space program. For man to land on the moon he had to overcome obstacles, previously unsurmountable. Now, man can travel through space at extraordinary speed and dares hope to go beyond the moon to more distant planets.

This question comes to my mind: if mankind has advanced sufficiently to venture into outer space against tremendous odds, why can he not break down the barriers that haunt the handicapped worker?

Seeking answers, I talked first with my father, a disabled veteran. To my surprise, he knew a great deal about such barriers. Though he believes attitudes have greatly improved over the past half-century, he cited a recent magazine survey which revealed that "out of 16,000 adults and 1,000 school age children, 63 per cent of the people questioned wanted to get the handicapped out of sight." Considering that "one out of every seven persons in the United States is disabled in some way" that like hiding our heads in the sand.

What is being done to change attitudes toward the handicapped and what is their hope for the future? "The most effective example I know of is LIVE, Inc., in Boise. LIVE strives to establish dignity and self-worth in the disabled person. By training and employing the handicapped worker, LIVE gives him an opportunity to be self-supporting." This improves his opinion of himself; and, in turn, raises other people's opinion of him. A person who is usefully and gainfully employed is happier and better-adjusted.

"As for the future, there is reason to hope. I believe in the human race and have confidence that, as we become aware of the

Footnotes at end of article.

problems, we will respond in a positive way."

How do we become aware? One way is through publicity such as that associated with the "Hire the Handicapped" campaign, which makes the community cognizant of the problems that the handicapped encounter. By informing the public, such measures help to unite communities behind a common cause, the improvement of conditions affecting handicapped workers.

What can be done to change attitudes? "The first and most important goal should be to educate the people." Ignorance and fear are the major obstacles to overcome in changing unfavorable attitudes toward the handicapped. Through greater contact with the disabled, the average able-bodied person will gain a better understanding of the problems handicapped persons face.

I also talked with George Betenbenner, a supervisor for Mountain Bell Telephone Company, who employs a handicapped person in his group. "The main objective for us in employing handicapped persons is to find a position in which the person can function well and take pride. In such a position, the employee's feelings of usefulness increase." He has a better self-image as he succeeds in his job; and, when he accepts himself, others accept him the same as they do the physically and mentally fit person.

Given the right environment, the handicapped can succeed. But, along with mechanical assistance such as ramps, elevators, amplifiers for telephone sets, hand-operated vehicles, he needs encouragement and love, the love of someone who cares and who will struggle to help him to feel needed and wanted. No one survives alone.

The amputation of both legs does not keep Chester Smith from his drafting job, nor does a birth defect prevent Phyllis Fisher from teaching drama; a respiratory disease has not deterred Robert Mansell from being a useful, necessary person to his family, church, and community. Despite paralyzed legs, Bill Gratton is an eminently successful radio and television newscaster. Someone who cares—a wife, mother, son, daughter, or friend—has contributed to the success of each. Love can bridge the most difficult of all barriers.

What is the challenge of tomorrow? I believe the acceptance of handicapped persons according to their ability to perform should be the goal. The entire space program illustrates the will of mankind to break down barriers and to strive for the impossible dream. Now we need to prove ourselves in the important area of service to humanity.

I believe that progress is being made toward acceptance of the handicapped. But we have not yet reached a level of full understanding and integration of all persons with physical or mental disabilities to the extent that is necessary for a healthy society. When the United States put John Glenn into space, did we stop? No! A higher goal beckoned and we fought without cessation to attain that goal. The same perseverance and dedication must be applied to the treatment of the handicapped. We cannot stop short of total victory.

Let it be recorded that we have launched another rocket—a rocket aimed at achieving the goal of complete acceptance of the handicapped worker. Now let the countdown begin. Ten, nine, eight, seven, six, five, four, three, two, one, blast off!

NEWS BULLETIN OF THE AMERICAN REVOLUTION BICENTENNIAL COMMISSION

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. WHITEHURST. Mr. Speaker, I am inserting in the RECORD the March 26 edition of the news bulletin of the American Revolution Bicentennial Commission—ARBC. I take this action to help my colleagues be informed of action across the country in preparation for the 200th anniversary of the Nation in 1776. The bulletin is compiled and written by the communications committee staff of the ARBC. The bulletin follows:

AMERICAN REVOLUTION BICENTENNIAL COMMISSION,

Washington, D.C., March 26, 1973.

The Bicentennial Western Regional Workshop was held in San Francisco on March 19-20. After a welcome address by Mr. Richard Pourade of the California ARBC, several discussion groups led by ARBC staff members explained facets of Bicentennial programs and policy, the national picture, Bicentennial Parks, BINET, Federal Grant programs and Communications.

It was announced at the Western Regional Workshop that Kent B. Williams has been named as Regional Director for the California Regional Bicentennial Office in San Francisco to coordinate activities in eight states. Mr. Williams, formerly Chief of Audio/Visuals and a Press Information Officer for the ARBC, stated at the two-day planning workshop, "The 200th anniversary of American independence should be as vital to the family in San Francisco and Honolulu as it is to the family in Lexington and Concord. Our job will be to develop Bicentennial programs in which the people of the Western United States may actively participate in 1975 and 1976."

The New York City Bicentennial Corporation has recently issued Focus '76: An Interim Report to the Directors on the Plans and Activities of the New York City Bicentennial Corporation, July-December, 1972. Inquiries can be directed to the Corporation at 331 Madison Avenue, New York, New York 10017.

Mrs. Charles Dawood, Chairman of the Detroit Mayor's Committee, Keep Detroit Beautiful Teens, writes that the Committee "has been receiving literature and The Bicentennial News and we find it very interesting and informative, so much so, that our Teens would like to take an active part in the Bicentennial Arts Program. Our program is a beautification as well as youth voluntary, and our aims and goals are to beautify our surroundings and to improve the quality of life in our respective communities. We would like you to keep the KDB Teens in mind and please let us know what we can do to contribute to your worth while program."

On February 27, House Concurrent Resolution 15 was passed by the Arkansas Senate. The House of Representatives has previously endorsed this resolution, which provides that the membership of the Arkansas American Revolution Bicentennial Committee be enlarged by two members, the state regent of the Daughters of the American Revolution and the president of the Sons of the American Revolution. Currently, the state D.A.R. regent is Mrs. Silas E. Carroll, Jr. of Benton, and the S.A.R. president is Dr. James Upton of Conway.

The February meeting of the American Revolution Bicentennial Commission of Connecticut adopted a resolution designating an Official Bicentennial Editing Project of the State of Connecticut. The project, in progress since September, 1967, and expected to continue for several years beyond 1976, is the editing of the papers of Jonathan Trumbull, Connecticut's Revolutionary War governor, known affectionately to General Washington as "Brother Jonathan." The Commission's resolution states that Trumbull "has not received the recognition that his contributions to American's independence deserve," a reference to the fact that Trumbull was chiefly responsible for funneling food, clothing and war materiel to the Colonial armies to such an extent that Connecticut became known as "the Provision State." The editing project is in charge of Professor Albert E. Van Dusen of the University of Connecticut. He is also the Connecticut State Historian.

The first Planning Aid Grants have been awarded by the Maine State American Revolution Bicentennial Commission. At a two-day meeting in Waterville, March 8-9, the Commission took final action on all requests for funds received since the program was launched earlier this year. Proposals were put forth by a wide range of non-profit groups, including historical societies, museums, various branches of the University of Maine, the NAACP of Bangor and two local Bicentennial Committees.

Henry Rubin, Director of the Louisiana State Bicentennial Commission, has announced a "Call to Action" for all interested State communities to help plan, encourage, develop and coordinate Louisiana's participation in the 200th Anniversary of the United States of America. Mr. Rubin states "Our concept of a meaningful Bicentennial Celebration is to provide something of lasting value to Louisiana communities and their people. To do this, every city should have a voice. The Louisiana American Revolution Bicentennial Commission has developed procedures to establish a city or parish Bicentennial Commission, the first step toward a successful state celebration." City commissions formed or being formed are: Alexandria, Baton Rouge, Breau Bridge, Crowley, Ferriday, Lake Charles, Lafayette, Monroe, Natchitoches, New Orleans, Shreveport, and Slidell.

As part of its bibliographic program in observance of the American Revolution Bicentennial, the Library of Congress has published *Creating Independence, 1763-1789*, an annotated bibliography of background reading for young people. Compiled by Margaret N. Coughlan, Children's Book Section, Library of Congress, with an introduction by Richard B. Morris, Gouverneur Morris Professor of History, Columbia University, the bibliography serves as a guide to the selection of materials for young people on the American Revolutionary War period. Included under five broad subject headings—"The Times," "The Rise of Discontent," "The Days of Revolution," "A Constitution is Born," and "Heroes, Heroics, and Traditions"—are accurate, well-documented histories, biographies, and a few historical novels and fictionalized biographies.

The original five-member Nevada American Revolution Bicentennial Commission has been enlarged to accommodate new members and is now operating under the chairmanship of Secretary of State, William D. Swackhamer. The Commission recently officially commended North Las Vegas as Nevada's "first bicentennial city" because a fully active and representative committee is now working on several local bicentennial projects. Two state agencies, the Nevada Highway Department and the Department of Education were commended for completion

of a teaching project keyed to the bicentennial era.

The Indiana ARBC reports that several Hoosier communities are planning Bicentennial Celebrations. Bicentennial committees have been or are being formed in Boone, Cass, Daviess, Delaware, Dubois, Knox, Lake, LaPorte and Allen counties, and in the cities of South Bend and Michigan City. News of others will be forthcoming. Fulton County hopes to dedicate an original log barn, furnish it and begin an annual Round Barn Festival. Hamilton County and Noblesville will carry over many of their Sesquicentennial observances. Wabash College, through Ron Peterson, assistant to President Thaddeus Seymour, has a workshop producing Continental Line uniforms, muskets and a variety of early American products.

OEO NOT COMPLETELY SUCCESSFUL

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. LANDGREBE. Mr. Speaker, during the controversy last fall concerning the funding of the Indianapolis Legal Services Organization, an editorial appeared in the Indianapolis News which I would like to share with you.

I feel that this editorial summarizes many of the unfortunate undertakings that many of the OEO funded legal services organizations have approached.

I include this editorial in the RECORD:
Stop LSO

The Indianapolis Legal Services Organization is supposed to provide the indigent with legal representation. Its actual role in the community, however, is somewhat different and explains a lot about why the agency is increasingly the center of controversy.

LSO faces an acid test soon when the City-Council Council decides on its request for \$202,232 in Community Service Program funds, and its prospects for survival are not helped by recent cases in which the agency has revealed its curious character.

In one case, an Indianapolis woman sought assistance in obtaining a divorce. Somehow she ended up in Federal court challenging the Marion County Welfare Department's six-month separation rule for determining ADC eligibility. To LSO's embarrassment, it was revealed that she was mainly concerned with getting a divorce and that she had no intention or knowledge of signing papers to sue on another matter.

There is similarly the case of a reluctant client, an inmate at the Indiana Reformatory at Pendleton, on whose behalf LSO filed a damage suit in connection with the quelling of disturbances at the institution last January. The inmate wrote LSO asking that the suit be dropped, but was then visited by LSO attorney Harold R. Berk and decided to continue with the proceedings. In court the client candidly testified that he had changed his mind several times and was not certain even at that point what he wanted to do.

In another recent case, involving distribution of underground newspapers in the public schools, LSO's cultivated image of championing the poor came unraveled. Investigation revealed that LSO's clients were anything but poverty-stricken. The parents of one of the student publishers had a com-

bined income of close to \$27,000, and others had incomes in excess of \$15,000.

Similarly, LSO recently represented a member of the U.S. Navy in a divorce proceeding. The matter came under fire from Circuit Court Judge John L. Niblack, who asked pointedly: "Is it the contention of LSO . . . that members of the Armed Forces of the United States are paupers?"

Each of these cases reveals a peculiar activism on the part of LSO, supporting the charges of critics that the agency is more interested in representing causes than poor people. We think it is time for the City-Council Council to put a stop to this flagrant misuse of public funds.

CUTTING DEAD WOOD

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. QUIE. Mr. Speaker, on Saturday, March 17, 1973, a column by William S. White appeared on the editorial page of the Washington Post. Part of his discussion concerned the restructuring of OEO.

In light of the current interest of OEO, I ask that the section concerning poverty in Mr. White's article be printed in the RECORD, as follows:

The long effort of the Democrats to discredit the President's budget as excessively harsh toward the poor and too generous toward the Pentagon is losing for several reasons, including the oldest of all possible reasons. It will fail in the end primarily because it is untrue to suggest that Mr. Nixon is "turning the clock back" and gutting social welfare.

Taking the budget in the aggregate he is planning to spend more, rather than less, on welfare. What he is really trying to do is to cut or to cut down only some programs, notably the highly compassionate but also highly ineffectual "war on poverty" that he inherited from the Johnson administration. What are being chopped down, or at, are schemes that either won't work or are intolerably costly for what they accomplish.

Though there are undeniably scattered instances of hardship for some people in this approach, the central reality is that the President is trying both to clear up a horrendous federal welfare mess based on too much belief that Washington knows best and to fight the real enemy of the poor, which is called inflation.

As truth actually does sometimes do, the truth is slowly coming through here. The Democratic attack on the administration is declining in force because of this and because of collateral circumstances.

Perhaps the most important of these collateral circumstances is that various pressure groups marshalled under the general but not always honest heading of civil rights are heralding "a national spring offensive" against the administration in its entirety. There are threats of street violence as undertones.

The political atmosphere has so far changed in the last four years as to make such allies unwelcome even to most of the ultra-liberal Democrats themselves. They don't want this association. And so for the most part they are beginning to back away and to moderate rhetoric that had pictured the President as deliberately hard-hearted toward the unfortunate.

A NEW ETHIC FOR MEDICINE AND SOCIETY

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HOGAN. Mr. Speaker, the question of abortion continues to arouse great debate around the country. I am inserting in the RECORD today an editorial from California Medicine dealing with the ethical question facing the medical profession regarding abortion:

A NEW ETHIC FOR MEDICINE AND SOCIETY

THE TRADITIONAL WESTERN ETHIC has always placed great emphasis on the intrinsic worth and equal value of every human life regardless of its stage or condition. This ethic has had the blessing of the Judeo-Christian heritage and has been the basis for most of our laws and much of our social policy. The reverence for each and every human life has also been a keystone of Western medicine and is the ethic which has caused physicians to try to preserve, protect, repair, prolong and enhance every human life which comes under their surveillance. This traditional ethic is still clearly dominant, but there is much to suggest that it is being eroded at its core and may eventually even be abandoned. This of course will produce profound changes in Western medicine and in Western society.

There are certain new facts and social realities which are becoming recognized, are widely discussed in Western society and seem certain to undermine and transform this traditional ethic. They have come into being and into focus as the social by-products of unprecedented technologic progress and achievement. Of particular importance are, first, the demographic data of human population expansion which tends to proceed uncontrolled and at a geometric rate of progression; second, an ever growing ecological disparity between the numbers of people and the resources available to support these numbers in the manner to which they are or would like to become accustomed; and third, and perhaps most important a quite new social emphasis on something which is beginning to be called the quality of life, a something which becomes possible for the first time in human history because of scientific and technologic development. These are now being seen by a growing segment of the public as realities which are within the power of humans to control and there is quite evidently an increasing determination to do this.

What is not yet so clearly perceived is that in order to bring this about hard choices will have to be made with respect to what is to be preserved and strengthened and what is not, and that this will of necessity violate and ultimately destroy the traditional Western ethic with all that this portends. It will become necessary and acceptable to place relative rather than absolute values on such things as human lives, the use of scarce resources and the various elements which are to make up the quality of life or of living which is to be sought. This is quite distinctly at variance with the Judeo-Christian ethic and carries serious philosophical, social, economic and political implications for Western society and perhaps for world society.

The process of eroding the old ethic and substituting the new has already begun. It may be seen most clearly in changing attitudes toward human abortion. In defiance of the long held Western ethic of intrinsic and equal value for every human life regardless of its stage, condition or status, abortion

is becoming accepted by society as moral, right and even necessary. It is worth noting that this shift in public attitude has affected the churches, the laws and public policy rather than the reverse. Since the old ethic has not yet been fully displaced it has been necessary to separate the idea of abortion from the idea of killing, which continues to be socially abhorrent. The result has been a curious avoidance of the scientific fact, which everyone really knows, that human life begins at conception and is continuous whether intra- or extra-uterine until death. The very considerable semantic gymnastics which are required to rationalize abortion as anything but taking a human life would be ludicrous if they were not often put forth under socially impeccable auspices. It is suggested that this schizophrenic sort of subterfuge is necessary because while a new ethic is being accepted the old one has not yet been rejected.

It seems safe to predict that the new demographic, ecological and social realities and aspirations are so powerful that the new ethic of relative rather than of absolute and equal values will ultimately prevail as man exercises ever more certain and effective control over his numbers, and uses his always comparatively scarce resources to provide the nutrition, housing, economic support, education and health care in such ways as to achieve his desired quality of life and living. The criteria upon which these relative values are to be based will depend considerably upon whatever concept of the quality of life or living is developed. This may be expected to reflect the extent that

quality of life is considered to be a function of personal fulfillment; or individual responsibility for the common welfare, the preservation of the environment, the betterment of the species; and of whether or not, or to what extent, these responsibilities are to be exercised on a compulsory or voluntary basis.

The part which medicine will play as all this develops is not yet entirely clear. That it will be deeply involved is certain. Medicine's role with respect to changing attitudes toward abortion may well be a prototype of what is to occur. Another precedent may be found in the part physicians have played in evaluating who is and who is not to be given costly long-term renal dialysis. Certainly this has required placing relative values on human lives and the impact of the physician to this decision process has been considerable. One may anticipate further development of these roles as the problems of birth control and birth selection are extended inevitably to death selection and death control whether by the individual or by society, and further public and professional determinations of when and when not to use scarce resources.

Since the problems which the new demographic, ecologic and social realities pose are fundamentally biological and ecological in nature and pertain to the survival and well-being of human beings, the participation of physicians and of the medical profession will be essential in planning and decision-making at many levels. No other discipline has the knowledge of human nature, human behavior, health and disease, and of what is involved in physical and mental well-being

which will be needed. It is not too early for our profession to examine this new ethic, recognize it for what it is and will mean for human society, and prepare to apply it in a rational development for the fulfillment and betterment of mankind in what is almost certain to be a biologically oriented world society.

RESULTS OF HON. WILLIAM L. HUNGATE'S LATEST QUESTIONNAIRE

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HUNGATE, Mr. Speaker, I would like to bring to the attention of my colleagues the results of my recent questionnaire to my constituents in the Ninth District of Missouri. This year's poll produced 38,000 replies—more returns than in any previous year. The large response indicates to me an increased concern about some of the controversial national issues yet to be solved. For this reason, I believe the results will be valuable to the Members of the House as we seek answers to the Nation's problems through the legislative process.

The questionnaire follows:

9TH DISTRICT (1973) QUESTIONNAIRE RESULTS

[In percent]

	His	Hers	Total		His	Hers	Total
1. Vietnam. With the prospects of peace in Vietnam following the recent cease-fire agreement, what role do you believe the United States should have in Southeast Asia?				(D) Provide that abortions not be permitted under any circumstances.....	7.9	8.9	8.4
(a) Get out completely from all Southeast Asian nations.....	30.3	32.1	31.2	(E) No opinion.....	2.2	1.2	1.8
(b) Continue to provide military equipment only and technical assistance.....	11.6	10.1	10.9	4. Rural programs. In the President's press conference of Jan. 31, 1973, he stated: "Now 80 percent of this 2 percent [REA] money goes for country clubs and dilettantes, for example, and others who can afford living in the country, I am not for 2-percent money for people who can afford 5 percent or 7." Do you—			
(c) Provide funds for rebuilding war-ravaged South Vietnam only.....	6.9	6.7	6.8	(A) Agree with this assessment of REA program needs.....	28.3	24.8	26.6
(d) Provide funds for rebuilding both North and South Vietnam.....	6.6	4.8	5.7	(B) Disagree with this statement and believe the program should be fully reinstated.....	23.8	23.5	23.7
(e) Let the majority of aid to rebuild Vietnam come from the UN or other international sources.....	43.1	43.5	43.3	(C) Favor some cutback in REA and other rural programs.....	26.2	23.6	25.0
(f) No opinion.....	1.5	2.8	2.1	(D) No opinion.....	21.7	28.1	24.7
2. Amnesty. After our POW's have been returned, should the approximately 70,000 young men who left the United States to avoid the draft be—				5. Minimum wage. As Congress is expected to again consider minimum wage legislation, which do you prefer?			
(a) Allowed to return without any conditions.....	4.9	4.8	4.9	(a) Providing a gradual increase from \$1.60 to \$1.80 then to \$2 per hour.....	42.2	44.3	43.2
(b) Allowed to return on condition they perform some alternate public service for 1 to 2 years.....	23.1	30.8	26.9	(b) Minimum wage be established at more than \$2 per hour.....	27.3	26.4	26.8
(c) Allowed back to stand trial and receive whatever punishment might be imposed.....	70.6	62.8	66.8	(c) Minimum wage be established at less than \$2 per hour.....	5.5	5.6	5.6
(d) No opinion.....	1.4	1.6	1.4	(d) No new minimum wage legislation should be enacted.....	22.1	19.1	20.6
3. Abortion. Should laws governing whether a woman receives an abortion—				(e) No opinion.....	2.9	4.6	3.8
(A) Provide that the decision be left entirely up to the woman and her doctor.....	52.2	51.2	51.7	6. Economy. The President's authority to impose wage and price controls expires on Apr. 30, 1973. Do you believe this authority should be—			
(B) Allow abortions only under special circumstances (such as danger to the mother's life or to victims of rape).....	35.3	37.4	36.3	(a) Continued.....	68.0	65.5	66.8
(C) Be left up to the States to decide.....	2.4	1.3	1.8	(b) Discontinued.....	28.6	28.8	28.7
				(c) No opinion.....	3.4	5.7	4.5

JUSTIN DOUGLAS HALLER

HON. CARLOS J. MOORHEAD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. MOORHEAD of California. Mr. Speaker, it gives me great pleasure to make the following announcement for the RECORD.

Justin Douglas Haller, the first great great grandson of Jefferson Davis, soldier, Member of Congress, and Secretary of War, was born on March 9, 1973, to Mr. and Mrs. Howard Edward Haller of Chevy Chase Estates, Glendale, Calif.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. SCHERLE. Mr. Speaker, for more than 3 years, I have reminded my colleagues daily of the plight of our prisoners of war. Now, for most of us, the war is over. Yet despite the cease-fire agreement's provisions for the release of all prisoners, fewer than 600 of the more than 1,900 men who were lost while on active duty in Southeast Asia have been

identified by the enemy as alive and captive. The remaining 1,220 men are still missing in action.

A child asks: "Where is Daddy?" A mother asks: "How is my son?" A wife wonders: "Is my husband alive or dead?" How long?

Until those men are accounted for, their families will continue to undergo the special suffering reserved for the relatives of those who simply disappear without a trace, the living lost, the dead with graves unmarked. For their families, peace brings no respite from frustration, anxiety, and uncertainty. Some can look forward to a whole lifetime shadowed by grief.

We must make every effort to alleviate their anguish by redoubling our search for the missing servicemen. Of the incalculable debt owed to them and their families, we can at least pay that minimum. Until I am satisfied, therefore, that we are meeting our obligation, I will continue to ask, "How long?"

U.S. "FED-UPNESS" WITH INDIA AND SWEDEN

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. SIKES. Mr. Speaker, Mr. William S. White in a column entitled "U.S. 'Fed-Upness' with India and Sweden" appearing in the Washington Post on February 17, expressed the convictions of a great many Americans. It is thought provoking and highly appropriate. I wish to submit it for reprinting in the RECORD.

U.S. "FED-UPNESS" WITH INDIA AND SWEDEN (By William S. White)

Relations between the United States and the world's two most piously pacifistic nations, India and Sweden, are in deep cold storage and no kind of thaw in sight.

For the first time, Washington is daring to express in public its fed-upness with the moralizing finger-pointers of so called neutralist powers that are in fact habitually "neutral" in favor of any adversary of this country.

The United States now has no Ambassador in Stockholm and no discernible intention to send one any time soon. Daniel Patrick Moynihan has been appointed by the President and confirmed by the Senate to be ambassador to India, but the administration has made it plain that nobody is concerned with any resumption under present circumstances of real diplomatic contact with New Delhi.

All this is novel. For all through the Eisenhower, Kennedy and Johnson administrations, Washington's fixed policy was to exercise a gloomy patience and a very high degree of tolerance when the United States was attacked—as so often it was—by countries which call themselves "nonaligned" but have in fact historically found very little wrong with the Communist side in the cold war.

It was, and particularly to Presidents Kennedy and Johnson, a galling posture, especially having in mind that the "nonaligned world" owes its physical safety to none other than the U.S.

Indeed, President Johnson once wryly observed in private that the one sure way to get extra tenderness and help from the United States government was to kick it as hard as possible and in public.

Nevertheless, a kind of excessive tolerance was maintained through the years in fear that if the United States ever actively resented the abuse routinely directed against it "world opinion" would censure not the abusers but rather the nation being abused.

The Nixon administration has simply decided that turning the other cheek while certainly not dignified is also certainly not effective in any case. Thus it is that while official American displeasure is being directed specifically at Sweden and India, for acts of a grossly hostile nature, the intention is that this displeasure shall be noted elsewhere in the neutralist world as well.

As to Sweden and India, the provocations could scarcely be denied even by those who are convinced that whatever the United

States may do or say abroad it is surely wrong. The Swedish Prime Minister Olof Palme has compared American actions in Vietnam to the race-murders of Adolf Hitler. So bitter an insult is not made easier to take by recollections that the Swedes got fat practicing "neutrality" while selling to the Nazis arms with which to kill and enslave other Scandinavians. American troops for their part did a good deal of dying to liberate Nazi Germany's victims.

As for India, Prime Minister Indira Gandhi, daughter of the sainted Prime Minister Nehru and like him a professional pacifist except when sending her troops against weaker neighbors, has now implied that American bombing in Vietnam was racist. Would this have been "tolerated for long had the people been European?" she asks rhetorically.

She is of course furious because her aggression in Pakistan was not saluted by the United States. Her innuendo that the U.S. was killing North Vietnamese Communists for being Asians ignores that the South Vietnamese being defended by the United States are also Asian.

The comments of Palme and Mrs. Gandhi, however, are interesting primarily because they illustrate so well the utter impossibility of getting along with this kind of truth and logic. It can't be done; and this at long last is the conclusion of President Nixon.

SALT TALKS: AN ADVANTAGE TO THE SOVIETS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. RARICK. Mr. Speaker, the Soviets have reacted to the nuclear advantage given them in the SALT talks just as any reasonable observer would have expected them to.

Our numerical inferiority to the Soviets was supposedly justified, according to our decisionmakers, because our nuclear missiles, although fewer in number, had multiple warheads, called MIRV's. Now that SALT I has numerically guaranteed 5 years of Soviet nuclear superiority, the Soviets are altering their single warhead missiles by changing them to MIRV, or multiple warheads identified as the SS-17.

The Russians now have been given missile superiority by our leaders. Who can be so naive, as to believe that after 5 years of such an advantage the Soviets will ever be interested in parity. After all, they have the decided upper hand.

And as if this is not bad enough, we have now announced a \$202.4 million Export-Import Bank loan to the Soviets, supposedly for American industrial equipment.

I insert related news clippings in the RECORD, as follows:

[From the Baton Rouge (La.) Sunday Advocate, Apr. 1, 1973]

DO THEY REALLY WANT DEFEAT?

(By Joseph Alsop)

WASHINGTON.—Nowadays, in the dark hours before dawn, you sometimes wonder whether a lot of virtuous Americans do not actually want to see their country defeated. Consider, to begin with, the powerful drive now taking shape among the liberal Democrats in Congress to dismantle the national defense.

Then consider a few other things of some significance, like the dreadful surprise that followed hard on the heels of the first round of SALT talks. The surprise took the form of a Soviet test, demurely delayed until the first SALT round was over, of a submarine-launched ballistic missile with a range of about 4,500 miles.

The surprise was dreadful for several reasons. To begin with, the range of this new submarine-launched missile exceeds by around 1,000 miles the maximum that had been considered possible by the American scientific analysts. The first SALT agreement was squarely based on the U.S. analysts' predictions, which have now turned out to be poppycock.

Then, too, the Soviet test provided that in the first round of SALT talks the Soviet negotiators had been grossly misleading, if not directly untruthful.

"PARITY" RECOGNIZED

They had pleaded that their submarine launched ballistic missiles had a much shorter range than the comparable American weapons. They had stressed the complex operational factors that make an increase of range almost exactly equivalent to an increase of number, in the case of strategic missiles launched from submarines.

Hence the Soviets had claimed they had a right to a lot more submarine-launched missiles than the United States. This claim, made in the sacred name of "parity," was, in fact, recognized. Under SALT I, the Soviets are allowed to build up to a total of 950 submarine-launched nuclear missiles, whereas the United States is held to a level of about 600 such missiles.

Now, however, the Soviets have a submarine-launched missile of much longer range than any in the U.S. arsenal, either in existence or in prospect. Its present accuracy has been questioned, but accuracy can always be improved. With missiles of such range, more-over Soviet nuclear submarines can lurk in the Bering Sea or the Sea of Okhotsk, far beyond the reach of U.S. sea surveillance. And thence they can loft their missiles to almost all the most vital American targets!

In sum, this single Soviet missile test betokens a coming change in the strategic balance that ought to give the creeps to any liberal Democrat who gives a pin about his country's future.

Instead, one of the prime aims of the liberal Democratic attack, now being organized in the Senate, is the destruction of the U.S. Trident program. This is the program, of course, intended to give this country greater and less vulnerable seaborne nuclear striking power.

One of the main objections to Trident, naturally, is that the new missiles will be MIRVed—in other words, will have multiple warheads capable of being independently targeted. The doctrine of the virtuous is that if the United States goes on MIRVing its missiles, the Soviets will then be driven to MIRV their missiles. This, once again, is purest goose-talk.

A WRONG TURN

Soviet nuclear missiles are not MIRVed today, simply because Soviet missile development took a wrong turn a good many years ago. To MIRV a missile successfully, you have to put a complex miniaturized computer on board the missile. For detailed guidance, the Soviets instead relied for a long time on computer systems at the launch point rather than using on-board computers.

Throughout much of the first round of SALT talks, however, it was already perfectly clear that the Soviets were working, all out to correct this past error—and thus to MIRV. Another recent Soviet missile test had shown furthermore, that the Soviets have already achieved considerable success in this intensive effort.

The new missile tested is called the SS-17. It has an on-board computer and a range of 6,000 miles. It can even be regarded as a new "counterforce weapon." But the main point is that the new missile is a long step in the direction of much more widespread Soviet MIRVing, which the goose-talkers say we must not "stimulate." In such matters, the Soviets need no stimulation.

The goose-talkers still quack about "parity." In reality, another question already faces us. How will the Soviets behave if and when they are allowed to acquire a heavy predominance of nuclear striking power? Any sensible man ought to be able to figure out the answer to that question. And the question indicates where the Soviets are heading.

[From the Evening Star and Daily News, Mar. 21, 1973]

SOVIET MISSILE ADVANCE COULD EXPOSE U.S. SILOS

(By William Beecher)

Administration military analysts report that the Soviet Union has conducted its first successful test of a computer aboard a new intercontinental ballistic missile.

This development, the analysts said, is considered highly significant in that it should improve the accuracy of the SS11 missile to the point where it could be used to attack American Minuteman missile silos and not only cities and airfields. Such missiles constitute the bulk of the Soviet ICBM force.

The administration analysts said the placement of a computer aboard an intercontinental missile also could markedly advance the time when the Soviet Union might develop accurate Multiple Independently Targetable Warheads (MIRVs) for its intercontinental missiles.

Administration officials said this technological progress could have some impact both on the current negotiations to seek a treaty limiting or reducing the number of offensive nuclear weapons in the United States and the Soviet Union, and on the administration's interest in improving the capability of its own MIRV warheads.

The Russians have reportedly made four tests of the SS17, an improved version of the SS11—the first last September, the most recent earlier this month.

Analysis of telemetry readings convinced the United States that a computer was aboard on each of the four, ordering corrections in the missile's flight because of high winds and other unanticipated factors affecting the missile's trajectory.

Soviet ICBMs now ready for operation employ a ground-based computer that attempts to forecast before launching such variables as shifting wind, engine velocity and engine burnout time.

The analysts say that if the accuracy of the SS17 could, with an on-board computer, be brought to within a quarter of a mile of its target, it could carry a sufficiently large warhead to be effective against steel-and-concrete Minuteman silos.

[From the Washington Post, Mar. 20, 1973]
SOVIETS TO SIGN \$202.4 MILLION U.S. LOAN PACT

The U.S. Export-Import Bank says Soviet officials have agreed to sign a formal pact next week providing for \$202.4 million in U.S. loans to Russia's foreign trade bank for the purchase of American industrial equipment.

Eximbank officials said yesterday there will be two loan signing ceremonies—one on March 21 and another on March 23—at the Eximbank's headquarters here.

The Eximbank had approved \$101.2 million in direct loans and guarantees for another \$101.2 million in matching loans from three U.S. banks. But the formal signing ceremonies were delayed while legal experts for both the lenders and the borrower reviewed the final wording of loan documents.

FIGHTER IN THE CAUSE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. RANGEL. Mr. Speaker, it is indeed fortunate that this country has people like Alma John.

In these times of skyrocketing food prices, widespread consumer fraud, and general insensitivity to the needs of the poor, Alma John is living and working to make her city, New York, just a little more livable for her 8 million neighbors.

It gives me great satisfaction to submit an article from the New York Daily News concerning Alma entitled "Her Gentle Voice Will Be Heard":

HER GENTLE VOICE WILL BE HEARD

(By Joyce White)

"Whenever welfare day arrives, prices go up," said Alma John. In her cozy apartment at W. 137th St. and Madison Ave., she sat discussing what goes on in Harlem.

A gentle, soft-spoken woman, Alma seldom raises her voice, even when talking about the social injustices that exist in her community.

"Living in Harlem, I can easily see the discrepancies in quality of goods and services rendered to this community," she said. "Wilted vegetables and bad meats fill the markets. Merchants in Harlem use all sorts of illegal devices to cheat customers."

However, Alma does more than just talk about the issues. She has been fighting for almost a half century. During the depression, she led a group of Harlem Hospital nurses in a struggle to improve working conditions. Now, she's tackling the merchants.

"I started a program on WWRL radio called 'Shopper's Guide,'" she said. "Several times daily I quote the best buys of the week, give nutrition hints and cooking techniques. And I also warn my listeners to watch out for the piece of metal that merchants often place on the scale, along with the chicken," she said, with twinkling eyes.

In spite of her consumer efforts, whenever Alma is called the black Bess Myerson of Harlem, a slight frown appears on her usually serene face.

"I work at the grassroot level, plus I don't have any mayoralty aspiration," she quickly retorted. "Anyway, our work is completely different. I'm concerned about all aspects of black family life. On my radio program, I advise my listeners on how to eat to live," she added.

Alma's concern doesn't stop with her consumer program. On Saturday morning when most people are sleeping late, she is directing a talent workshop. About 60 persons gather at Sachs Furniture at E. 121st St. and Third Ave. to express their creative talents.

"The people at the workshop relate to each other as a family unit," she said. "Our motto is: Teach what you know; if you don't know, learn."

"At the workshop, you will often see a senior citizen reading a new poem that he has written, or a 5-year-old teaching a new dance step to the entire crowd," she said.

"Several times a year we visit prisons, youth houses, detention centers or so-called 'correctional houses.' We don't go there merely to entertain the inmates, but to let them know we consider them a part of our black family."

"The prison population was 27% black in 1937, today it's 85%," she added softly.

Seemingly, there is no end to Alma's activities. She also produces as well as moderates a TV program called "Black Pride," which appears on WPIX Sunday nights. Mondays, she hosts a talk show on WWRL radio.

She seemed slightly embarrassed when asked to explain how she manages it all. But she said she has her epitaph ready: "She didn't rust out, she just wore out."

ESTABLISH A LOAN PROGRAM FOR VIETNAM VETERANS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BOB WILSON. Mr. Speaker, recently, I met with a group of college veterans representing most of the colleges and universities in my district. They emphasized the difficulties faced by many Vietnam veterans in securing sufficient funds to meet the continuously rising cost of higher education. Congress last year took a major stride forward by substantially increasing the subsistence allowance for Vietnam-era veterans and I was pleased to work for the passage of this legislation.

Nonetheless, with the ever-increasing rise in the cost of living, coupled with skyrocketing costs of education even at State universities, many veterans are unable to take advantage of their education benefits. They simply cannot pay living expenses and tuition costs even though many work at parttime jobs to supplement their incomes. The situation is exacerbated by the slowness in processing their claims, either by the schools themselves or the Veterans' Administration. Eligible veterans may wait several months before getting any money from the VA. In the meantime, they may be forced to drop out of school and go to work fulltime in order to eat.

I am, today, introducing legislation to establish a loan program for Vietnam veterans who have enrolled in a higher education program. With these additional funds, the veteran would be able to assure that he had sufficient income to remain in school. Many veterans are unable to consider attending a private university, because of the higher costs, despite the fact that this particular school might more closely meet their individual educational needs. The loan program I am proposing would thus increase the veteran's educational alternatives by making it possible for him to borrow sufficient money to attend the university of his choice, public or private.

It would also provide VA insured loans to veterans attending institutions of higher education and pursuing degree objectives with interest subsidy provisions similar to the insured loans under the Higher Education Act of 1965, as amended. In addition, the bill provides direct VA loans where insured loans are not available under interest rates prescribed by the Administrator in the veteran's area of residence or not available under the terms and conditions necessary for approval of an insured loan by the Administrator of Veterans' Affairs. Loans up to \$1,500 per year would be available, although the maximum insured loans made to any veteran could not exceed \$6,000.

I feel very strongly that a veterans' educational loan program should receive priority consideration. Although the Congress and the administration have devoted considerable attention to providing additional funds for higher education loan programs, sufficient funds have unfortunately not become available to meet the current demand. While we are endeavoring to expand the funds available in higher education loans to all students, I think that we need to pay particular attention to the needs of the Vietnam veteran. After interrupting their schooling and careers to serve in the Armed Forces, these young men returned home to find that their contemporaries, who were not called, had a considerable headstart in terms of education and job experience. Regardless of their own feelings on the war which they fought, and undoubtedly their views are as diverse as the Nation as a whole, these men gave their time and put their lives on the line because their country asked them to do so.

Returning home from the most unpopular war in our history, they were not greeted with the much-deserved praise and celebration which presently awaits our prisoners of war nor the thanks for a job well-done which returning GI's received in 1945. While we as a Nation try to bind up our wounds, it is paramount that we provide every possible assistance to those who were in the line of fire.

The loan program I am proposing is not a welfare grant, but a loan to assure that these veterans are able to complete their education and become productive citizens. The loans will be repaid, both in terms of the actual cash value of the loan itself and the investment in our Nation's future productivity and growth. In addition, it will provide greater flexibility to veterans in planning their specific educational programs and would relieve some of the student population crush experienced by many public-financed institutions due to the prohibitive rates at private universities. I would like to reiterate my request for prompt congressional consideration of this legislation.

MR. THIEU'S VISIT

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. LEHMAN. Mr. Speaker, with the arrival of President Thieu to meet with President Nixon this week, I hope we will all be on guard so that this visit will not be a springboard for further U.S. involvement in Southeast Asia.

For too many years, the United States has poured too many men and too much of its resources into the maintenance of this despotic regime in South Vietnam. Now that our POW's are home, there is little rationale for the presence of any American military personnel in South Vietnam or elsewhere in Southeast Asia.

I believe that the President recognizes that the American people do not want to

see any reinvolvement in Southeast Asia. We must, however, be cautious lest Mr. Thieu attempt to cajole anything else out of the American people during his visit here.

LITHUANIAN INDEPENDENCE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. EILBERG. Mr. Speaker, during the years between 1795 and 1915, the people of Lithuania were subject to the harsh rule of the Russian empire. During World War I, the Lithuanians fell to German domination. In 1918, however, this proud people declared itself a free and united nation. Tragically, this long awaited freedom was to last for but 20 years.

World War II brought occupation by the Red Russian Army and declaration that Lithuania was a constituent republic of the United Soviet Socialist Republic. Soon afterward Nazi Germany attacked the Soviet Union and once again Lithuania fell to the control of the Germans. It was not until 1944 that the Russians regained Lithuania.

The United States has never recognized the Soviet conquest of Lithuania or that of Estonia and Latvia, the other suppressed Baltic States, but has maintained its steadfast adherence to the legal governments of these nations.

As an independent state, Lithuania gained admission to the League of Nations on September 22, 1921. The first President of the Lithuania Republic, Antanas Smetone, was elected under a provisional constitution. The permanent constitution, adopted on August 1, 1922, established as basic rights the freedom of speech, assembly, religion, and communication.

In 1938, a new constitution was established which provided stronger powers for the President, but in general reaffirmed the major provisions of the original document. During the period of independence, great emphasis was placed on improving agriculture, the country's primary industry. A land reform program was instituted, resulting in Lithuania becoming a nation of small farmers. Additionally, industrialization progressed. While in 1913, Lithuania had only 151 industrial establishments with 6,603 employees, by 1939 the industrial establishment had grown to 16,131 enterprises employing 33,000 workers. Lithuania made similar strides in social legislation. A labor control law, the 8-hour day, and several educational reform measures were adopted before the Second World War.

Lithuania was one of the first countries to experience the aggression of both Hitler and the Soviet Union. With war imminent, Lithuania attempted to maintain a policy of absolute neutrality, but was engulfed nevertheless. The first loss occurred when Klaipeda was yielded to Germany on March 22, 1939. On June 15, 1940, the Soviets reoccupied the country. Soon afterward, in July of 1940, a rigged

election produced a Congress which requested the incorporation of Lithuania into the Soviet Union.

It is estimated that during the first Soviet occupation, the country suffered the loss of about 45,000—many Lithuanians fled, others were arrested or deported. Repeating the history of the First World War, German occupation replaced Soviet. During this time however, the Germans instituted a colonization policy and several thousand German families settled in Lithuania. Almost all Lithuanian Jews were executed by the Nazis. As the war drew to an end, Lithuania returned not to independence, but to Soviet domination.

Under Communist domination, communication between Lithuanians and the free peoples of the world, has been minimal. The country is closed to Western observers. This is regarded as a precautionary measure of the military, due to the fact that the Baltic coast is conveniently located for the establishment of military bases. The Communists appear to have concentrated their efforts on industrialization and on collectivizing agriculture. The few people who have been able to escape since 1945 report a lack of freedom and the imposition of Communist methods on this traditionally freedom loving society.

The United States recognized the independent Lithuanian Government on July 27, 1922, and it continues to maintain diplomatic relations with the representative of the former independent government, which has a legation in Washington.

While joining with our Lithuanian brothers in mourning the loss of their country's too briefly experienced freedom, let us reaffirm our resolution to see that freedom once again established.

MRS. CORINNE C. BOGGS

HON. JOE D. WAGGONER, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. WAGGONER. Mr. Speaker, I would like to take a moment to welcome to the House, the newest Member from the State of Louisiana, the gentlewoman, Mrs. CORINNE C. BOGGS.

You know it was often said down in Louisiana that the second district was in fact represented by two Members of Congress: Hale Boggs and LINDY BOGGS. Although it is sad that we can no longer say that we have two Members of Congress representing the second district, we can be proud to say that we have one exceptionally qualified Congresswoman; a fine lady for whom I personally have the highest respect and admiration. To know her is to love her.

I think that most of the membership of this body who knew Hale also knew how important a role LINDY played in his life and political career. The quality of representation for the second district will not in any way be diminished, I can assure you.

As the first woman elected to the Congress from the State of Louisiana, LINDY, I would like to extend my congratulations and best wishes to you. The second district has maintained its tradition of fine representation.

STOP "PASSING THE BUCK"

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HARRINGTON. Mr. Speaker, in recent months, the American housewife has been cited as the cause and the solution to many problems in our society. Such an accusation is misleading, unjust, and false.

The housewife is not the "most powerful weapon against high prices" as the President said she is on Thursday, March 22, 1973. The President has at his disposal, the most powerful weapons against high prices. Certainly, a consumer does not have the authority to impose a ceiling on meat prices. When the President said, "the buck stops here," he was very accurate. The buck or blame cannot be passed on to the American housewife for the high cost of living.

It is clear that the administration's economic stabilization program has not achieved its major objectives. We need to control all meat prices, not just put a ceiling on some. In addition, we need general price controls such as those under the phase II program. Finally, the President should accept the blame for the economy's failures, and stop passing it onto the American consumer.

An article by Ms. Ellen Goodman, which appeared in the Boston Globe, March 26, 1973, stresses these points in a decisive manner:

MUST MOTHER TAKE THE RAP?

In the beginning it wasn't so bad. The housewives of America were just being blamed for water pollution. Somehow the collective guilt of a nation settled onto the woman with the washing machine and detergent and she was exhorted to change washing agents for the future of generations to come.

It was not, of course, the housewife who'd killed Lake Erie but the finger was pointed at her and she crept off to buy low phosphates, thereby being caught between the ads telling her she must have clean white laundry or be considered a wash-out (you should excuse the expression) and the articles telling her she was responsible for the waters and their inhabitants.

Then the housewife was told that those wonderful electrical appliances pushed down her purse for a decade or more were using up too much electricity. Meanwhile, of course, the lights blazed all night in the Pru but, she was told to cut back, brown-out on electricity or be held responsible for the Energy Crisis.

In the meantime, the electric company was running a special on can-openers and air-conditioners were running 24 hours a day in buildings constructed without windows.

With extreme ease however, the housewife was convinced that she had the Responsibility.

Then the health people got into the act. Women were told in somber tones to read the labels on the fast food packages and

ask themselves the searing question of whether they really wanted to feed their families dehydrogenated whatever. Back to nature, the health folk told her: bake your own bread, can your own beans, and no matter that you have only 35 minutes from the moment you get home to the moment the family sits down for supper. Is your time worth more than your family's health? Guilt wrapped itself around the housewife if she picked up frozen fried chicken.

Did anyone ever tell the prepared food people how to run their business? No, just the consumer.

Then, it was snacks and cereals. The mother was lectured to by doctor, dentist and nutritionist. Cavities, curvature of the spine and possibly scurvy would occur if her children ate Captain Grapeberry Cereal with Marshmallows and Salty Air Chips. Meanwhile the kids were being sold the stuff on television.

The mothers of young children were given the option of hassling with the kids over breakfast or letting their teeth rot. The mothers of older kids who get the Salty Air Chips at the corner store on the way home were given Guilt.

The manufacturer was never ordered to stop making the garbage, the housewife was ordered to stop buying it.

At this point the housewife was responsible for (1) water pollution, (2) the Energy Crisis, and (3) the health of her family.

Enter Richard Nixon.

Last Thursday the President of the United States said: "I would suggest that the greatest and most powerful weapon against high prices in this country is the American housewife."

The President (and that man's the President) suggested that American housewives "beat" high food prices by "buying more carefully".

Lordie, so that's the trick. And all the time we thought it had something to do with farmers and wholesalers and retailers and labor costs and stuff.

But no, now the housewife has to assume the guilt of inflation and take it upon herself to turn the tide by buying more carefully.

I don't know about you, but I don't know any man or woman who shops casually in the supermarket these days, just romping along piling up the Porterhouse.

With cube steak on sale, pray, for \$1.65, anyone with a freezer is living off of the vintage beef. An investment in a meat cellar doesn't seem to absurd.

But to blame the consumer, to blame the victim, is like convicting the driver when the steering wheel of his new car comes off in his hand.

Housewives have become too easy a target, all too ready to pick up the guilt and not organized enough to throw it in the right arena. We have to feed our families something more than "Let's Pretend Loaf" and when the choice is between \$1.69 top round and \$1.65 Swiss steak, the problem of price control belongs somewhere else. Like the White House, for instance.

WELCOME HOME LARRY STARK DAY

HON. ROBERT P. HANRAHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HANRAHAN. Mr. Speaker, March 25, 1973 was declared as "Welcome Home Larry Stark Day" in Mount Greenwood, Ill. The ex-prisoner-of-war returned

home after 5 years in a POW camp in Hanoi.

The following is the telegram which I sent to Mr. Stark:

Mr. LARRY STARK,
C/O Mr. Harry Drake, Superintendent,
Mount Greenwood, Ill.

MARCH 22, 1973.

Dear Mr. Stark: The happiness and excitement you are feeling today is being felt by our entire Nation in what has become one of history's greatest causes for celebration—the return of you and your fellow POW's from Southeast Asia.

My only regret is that I could not be in Illinois to join in honoring you for your great courage and for the sacrifices you have made for your country.

I wish you every possible happiness for the life you have yet to live. Welcome home.

Congressman ROBERT P. HANRAHAN,
Third District, Illinois.

It is indeed a great time for America to be able to witness the return of these fine men who have given so much for their fellow man. Their bravery and endurance are an inspiration to us all. I join with all of America in honoring the returning POW's.

FOOD PRICES

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HAMILTON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my April 2, 1973, Washington Report entitled "Food Prices."

[From Washington Report of Congressman Lee Hamilton, April 2, 1973]

FOOD PRICES

With food prices rising faster than at any time in the past 20 years, President Nixon announced a ceiling on the wholesale and retail price of beef, lamb, and pork "for as long as necessary to do the job." The price of food in the typical market basket jumped 2.5 percent from January to February and the President was forced to accept ceiling prices, which he had previously been rejecting because they would contribute to shortage and be counterproductive.

An important factor in the President's decision was his belief that without a halt to rising food prices there would be an explosion in wage increases in the upcoming labor contract negotiations. Already the prospects are diminishing for achieving his goal of holding inflation to 2.5 percent by the end of the year.

The big question, of course, is whether this and the other steps (cited below) will actually work. The hope is that prices will come down with the combination of a ceiling on meat prices, the housewife's rebellion at food prices, and the farmer's increased production.

The fundamental reason for the rising food prices is tight supply combined with strong demand, with several developments converging to cause the price upsurge:

1. Strong consumer demand for food arose from an increase in spendable income arising from higher wages, larger social security payments, and tax refunds.

2. Exports of agricultural products increased sharply. The huge sale of wheat to the Soviet Union last fall took 25 percent of the crop. Poor weather abroad in several countries caused smaller crops at home and more demand for U.S. food, and increased

demand for livestock products from abroad, and the devaluation of the dollar, which made our food exports cheaper, all contributed to an all time record U.S. exports, up 40 percent from the previous year.

3. Domestic food supplies were reduced. Red meat production fell off a shade, freezes and bad weather at harvest damaged the grain crops, and unseasonable weather and Hurricane Agnes hurt the fruits and vegetables.

The imposition of price ceilings on meat is the latest of several moves by the Administration to moderate food prices. The basic approach has been to increase production of agricultural products so that greater supply will reach the market and bring down prices through the law of supply and demand. Specific steps include:

- sale of government grain stocks;
- discontinuation of direct export subsidies on agricultural products;
- suspension of meat import restrictions;
- expansion of herds by permitting grazing on idle lands;
- efforts to free railroad boxcars for transportation of grain;
- retention of price controls on food processors, wholesalers, and retailers;
- request for authority to suspend tariffs and quotas on import of food; and
- most importantly, adjustment of farm programs to encourage greater production of grains and soybeans.

While I have supported the moves to increase agricultural production, prompt action would have eased the increase on consumer food prices. The major difficulties in the President's proposal are that extended price controls will create shortages and distortions (so, hopefully, the period of imposition will be limited), and the inequities of the imposition of controls on meat products while not imposing controls on other items.

Putting the price of food into broader perspective may not help the family budget, but it does provide a little comfort. Americans enjoy the best food and spend a smaller percentage of their pay checks for it than other people (in 1947, Americans spent 25 percent of their pay check for food; in 1971, only 16.3 percent). While it takes the average American 6 minutes to earn a loaf of bread, it takes a Brazilian 46 minutes and a Soviet citizen 12 minutes. It takes a Japanese worker 10 times as long to earn a pound of sirloin steak as an average American. Moreover, rising food prices are an international problem, with other industrialized countries reporting larger increases than in the U.S.

Elaborate studies have been made to determine who is responsible for the big grocery bills, but the results are inconclusive. They do agree, however, that the American farmer is not responsible because his share of the food dollar dropped to 38 percent in 1971, his costs have risen sharply, and his amazing productivity continues (in 1950, he provided for himself and 15½ others; today, he produces enough for himself and 48 others).

ASSOCIATED PRESS SURVEY SHOWS GUN DEATHS UP 40 PERCENT

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ROSTENKOWSKI. Mr. Speaker, we often hear of the so-called "slaughter on the highways" and the accompanying statistics that show the unusually high traffic death tolls that accompany every long holiday weekend. Unfortunately,

Americans do not pay as much attention to a similar statistic which needs no such "holiday weekends" to reach its incredible heights.

The Associated Press has just released its most recent gun survey which demonstrates that death by the gun has become an even more common occurrence than it was 3 years ago. Then, better than 200 people a week were killed by handguns. In the week of March 4 to 11 of this year, 345 people were killed by the discharge of guns. The fact that this statistic includes accidental as well as intentional firings takes little away from the fact that this is an alarming 40-percent increase over the July 1969 survey.

Since the Associated Press article is only too clear in delivering its gruesome message, I would like to insert it in the RECORD as further proof of the need for this Congress to finally take a clear stand for strict limitations on the use of guns, pistols, and rifles. I would hope that the House Judiciary Committee would seriously consider the various proposals that have been introduced in this session of the Congress, including my bill, H.R. 3167, in order that we might greatly reduce the general accessibility of these weapons and the slaughter on the streets which results from their use:

ABOUT 345 IN UNITED STATES KILLED BY GUNS IN 1 WEEK

In one week this month, 345 men, women and children in the United States were shot to death. Some were the victims of armed robbers, some were policemen killed in the line of duty, some were shot during family quarrels.

Other gun deaths were more bizarre: a bartender machine-gunned as he sat in his car at a Boston intersection, a teen-aged couple executed as they knelt by a sleeping bag in the Arizona desert.

The 345 deaths, counted in an Associated Press survey the week of March 4-11, represented a 40 per cent increase over those counted in the last similar survey four years ago.

In each of three previous AP surveys, gunshot deaths totaled about 200: there were 199 in June 16-23, 1968; 192 in July 7-14, 1968, and 206 in June 15-22, 1969.

The dates for the AP surveys were chosen at random. The first two were taken in the wake of the assassination of Sen. Robert F. Kennedy. The third came a year later after passage of a federal gun control law.

In the latest survey, 236 deaths were classified as homicides, 89 as suicides and 20 as accidents. The total number of gunshot deaths rose 40 per cent since the 1969 survey—homicides climbed 44.5 per cent, suicides 33.7 per cent and accidental deaths 20 per cent.

The weapons included the small, cheap handguns called "Saturday Night Specials" and often used in holdups, a father's revolver in the hands of a curious infant, a shotgun grabbed during a family quarrel.

In most states, there are no attempts to compile comprehensive, statewide records of gun deaths until weeks or months after they occur. And in many cases, the type of weapon is not always listed immediately.

But in the 345 gun deaths counted March 4-11, at least 128—or 37.1 per cent—of the weapons used were pistols. Handguns were responsible for at least 41.4 per cent of the homicides, 25.8 per cent of the suicides, and 20.5 per cent of the accidental deaths.

Ten persons were killed during holdups, and five robbery suspects were killed by police.

The 1968 federal gun control law banned interstate mail order sales of rifles, shotguns and all types of ammunition. It also banned most over-the-counter sales to out-of-state residents.

The 1968 law also banned imports of cheap, small-caliber pistols, but a number of U.S. firms sell "Saturday Night Specials" assembled locally from parts shipped in from overseas.

Attempts to get tighter controls have failed in Congress.

In the latest AP gun death survey, California reported the most deaths—42—during the week. Next came Texas with 33, Michigan 28, New York 25, Illinois 22, Ohio 19, Virginia 17, Louisiana 15, North Carolina 14, Georgia 12, Maryland and the District of Columbia each had 5.

Of California's 42 deaths, 20 were homicides and 22 were suicides. Michigan reported the most homicides—22, followed by New York with 21, California 20, Texas 18, Illinois 16, Ohio, 13, Georgia 13, Virginia 12, Pennsylvania 10, Florida 9, Louisiana 9.

Eight states reported no gun deaths during the period: Colorado, Kentucky, Minnesota, Nevada, New Hampshire, Vermont, Wisconsin and Wyoming.

REPORTS TO CONSTITUENTS

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. PRICE of Texas. Mr. Speaker, as part of my continuing effort to keep my constituents informed of my activities in the Congress, I wish to include in the RECORD at this point the text of my recent weekly Washington Reports:

WASHINGTON REPORT FROM CONGRESSMAN BOB PRICE

MARCH 23, 1973.

This week in a letter to the Chairman of the House Public Works Committee, Congressman Bob Price expressed his support for preserving the Federal Highway Trust fund intact which has provided the chief source of money for the Federal Interstate Highway program since 1956.

Price, who has worked with the Administration in most areas took exception to a recent White House endorsement for diverting some highway trust fund monies for urban transit programs. Labeling a Senate vote this past week to set aside portions of highway trust fund revenues for non-highway use a "mistake," Price told the House Public Works Chairman:

Hon. JOHN A. BLATNIK, Chairman, House Committee on Public Works, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to express my support for legislation to retain the Federal Interstate Highway program as presently constituted. In behalf of my constituents of the Thirteenth Congressional District of Texas who have written to me in great numbers on this matter, I must oppose any attempt to divert highway trust fund monies for use in urban mass transit projects.

At a time when more and more Americans are using the Comprehensive system of super-highways which are the direct result of the far-sighted Highway Trust Fund established in 1956 for both commerce and recreation purposes, we cannot afford to permit a diversion of the fund monies into areas for which they were not intended. There is today a considerable amount of discussion in support of spending highway trust fund monies

for urban non-highway projects, and this is being proposed as a cure for urban congestion and decline. However, in my opinion, quite the opposite is true. The answer lies not in spending additional money to further attract our people to the large cities, but rather to invest in the development of rural America. If people are to return to the farms and small towns, one of the most essential requirements must be the existence of a comprehensive, modern highway system by which goods and persons can be efficiently transported and economic development encouraged and made feasible.

Your consideration of these views as you decide the future direction of the self-sustaining Interstate Highway trust funds will be greatly appreciated.

Sincerely,

BOB PRICE,
Member of Congress.

MARCH 15, 1973.

In a message to the Congress this week, President Nixon announced his intent to submit to the Congress the Criminal Code Reform Act aimed at providing a comprehensive revision of existing Federal Crime laws. This act proposes needed changes and closely reflects the thinking of the citizens of the 13th Congressional District who recognize the need for more effective law enforcement and criminal prosecution.

The need to reinstate the death penalty, the need to halt the frequency of criminal acts and the need to take positive action against drug offenders are three of the most widely voiced views appearing in the letters received by Congressman Price. The President's Criminal Code Reform Act would be a step in the right direction toward restoring respect for the law and bringing an end to the recent era of permissiveness.

The Criminal Code Reform Act acknowledges the death penalty to be a valuable deterrent to crime and would dissuade individuals from taking the lives of others in the course of committing another crime. As proposed, the death penalty would be imposed for war-related treason, sabotage, espionage, and when the death of an innocent person has been caused due to serious offenses such as kidnapping and aircraft piracy.

The act also provides for stricter penalties for narcotic pushers. Under the new act heroin or morphine pushers would receive higher mandatory sentences with second offenders who are convicted of trafficking in more than four ounces of heroin or morphine receiving a mandatory sentence of life imprisonment without parole. Those charged with trafficking in heroin or morphine would also be denied pre-trial release. The President has also urged that marijuana not be legalized.

It is time that the loopholes surrounding criminal acts are plugged—it is time to insure that our laws and system of criminal justice work, not only to insure the rights of the criminally accused, but also the rights of society and the innocent victims of crime.

MARCH 9, 1973.

Congressman Bob Price returned to his room in the general care section of Bethesda Naval Hospital this week. The Congressman, who underwent additional testing and treatment last week in the coronary unit, has recently been showing signs of improvement and is conducting a limited amount of office business.

The Congressman's office has recently been receiving many letters and petitions from citizens Nation-wide voicing their support of his constitutional amendment which would permit voluntary prayer in our Nation's classrooms. This bill has been referred to the House Committee on the Judiciary.

The United States Department of Agriculture announced this week that farm commodity exports will reach an all time high of \$11 billion during Fiscal Year 1973. This figure means a gain of \$5 billion during the last four years. These figures prove that agriculture is demonstrating that it is one of our major growth industries and that it has the strength to produce adequate food for nutritious American diets while shipping to major countries abroad at a record pace.

With the return of our POW's from Vietnam, the controversy surrounding the question of amnesty for draft evaders and deserters has once again come under extensive debate. Despite the ending of American participation in the Vietnam Conflict, Congressman Price has reiterated his belief that the granting of wholesale amnesty would undermine the respect for all law. Historically, amnesty has been granted only under limited circumstances, and public opposition toward granting amnesty to all deserters and draft dodgers is showing signs of being on the increase.

MARCH 1, 1973.

Congressman Price this week announced the details of two appointments which he has received. Through a letter from House Minority Leader Gerald Ford, he was informed of his reappointment to the House Republican Policy Committee where he will serve as one of seven Members-at-Large during the 93rd Congress. As a member of the House Republican Policy Committee, the Texas Congressman will work closely with other members of the House leadership in conjunction with the White House to formulate and expedite the enactment of proposals as part of an overall legislative program. In a separate announcement, Congressman Bob Price was also named to serve as a Member of Subcommittee Number One of the House Armed Services Committee, whose major responsibility is legislation affecting programs of research and development for the Department of Defense.

Congressman Price's office is continuing to respond to correspondence and inquiries arriving in the office daily from the Congressman's constituents. The Congressman, who is presently convalescing at Bethesda Naval Medical Center outside of Washington, is receiving information about the various issues of concern to his constituents.

In recent days, a large volume of correspondence, much without return addresses or names, has been received in Congressman Price's office concerning a proposal by a Veterans Administration official to lower the rating schedule for service-connected disability compensation. An inquiry by the Congressman's office has revealed that President Nixon had no personal knowledge of this proposal, nor had he authorized it to be formally presented to the Congress.

Legislation has been introduced which will, if enacted, limit the authority of the Veterans Administration by freezing the service-connected disability compensation rating schedule as in existence in January, 1973. This legislation will also make any proposed changes subject to the approval of the Congress.

FEBRUARY 23, 1973.

Congressman Bob Price continues to make good progress toward recovery at Bethesda Naval Hospital where he has been a patient for the past two and one half weeks.

Doctors there report that additional comprehensive testing and observation of Congressman Bob Price over the past several days have revealed no evidence of a heart attack or further cardiac damage following an incident of chest pain Monday.

The Congressman, who had been readmitted to the coronary unit for further evaluation,

has since been moved back to his room in the general care ward of the hospital where he continues to rest comfortably.

Late Thursday, February 22, the House passed legislation, similar to that introduced earlier this year by Congressman Price, to amend the Farmers Home Administration Emergency Loan Program by a vote of 269 yeas to 95 nays. The bill as passed by the House was a more expensive version of the Price legislation. If this legislation is enacted, the "grandfather" amendment attached to the bill Thursday will give all farmers and ranchers in Secretarily designated disaster areas an 18 day period in which they may apply for 1% disaster loans under the \$5,000 forgiveness clause. Furthermore, this legislation provides for a 5% interest rate for those loans provided for under the provisions of the Consolidated Farm and Rural Development Act. This legislation is now awaiting further action by the Senate.

FEBRUARY 16, 1973.

During this week while the Congress is in recess in honor of Lincoln's Birthday, Congressman Bob Price continues to make good progress at Bethesda Naval Hospital where he has been undergoing extensive testing and treatment following a mild coronary occlusion last week. Doctors have determined that no complications have been detected and the Congressman is responding well to treatment. Price is expected to remain in the hospital for another two to three weeks before being released.

This week in one of his most strongly worded letters to President Nixon, Congressman Bob Price expressed opposition to any plan or scheme to provide economic assistance to North Vietnam as part of the peace settlement. Price's office has received a tremendous number of letters from concerned constituents who have registered their opposition to any plan for aid to North Vietnam.

The text of Congressman Price's letter to the President is as follows:

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am writing to express my objection in the strongest of terms to any plan which would involve American financial or economic aid to the government of North Vietnam.

Those of us in the Congress who have stood resolutely with you in opposition to the demands among various dissidents in and out of the Congress for peace at any price have done so because of our agreement with your staged premise that Americans who have fought, died, and "paid a price" to resist Communist aggression shall not have done so in vain.

After ten years of cruel war it would be unconscionable to lavish over two billion dollars of assistance upon a government which has been responsible for the deaths of over 50,000 Americans, hundreds of thousands of South Vietnamese, and has practiced the most sadistic and brutal forms of inhumanity and has scoffed at the most elementary rules of civilization and human decency.

It is true that the United States helped rebuild our former enemies of Germany and Japan at the close of World War II, but that was after the militaristic and dictatorial regimes of both nations were deposed. In North Vietnam today the same persons who have attempted to defeat and humiliate the United States are still in control of the government, and any attempt to buy or bribe their friendship or cooperation is as doomed to failure as every other giveaway program this Nation has undertaken in the past.

Mr. President, I supported you in your bid for an honorable conclusion of the Vietnam conflict. Let us not reward those who have

forced upon this Nation our darkest hour since the Civil War. Sir, my conscience will not permit me to do this.

Respectfully,

BOB PRICE,
Member of Congress.

FEBRUARY 8, 1973.

This week Congressman Bob Price was admitted to Bethesda Naval Hospital in Washington for evaluation of an incident of chest pain and discomfort. During the next ten days while the Congress is in recess in honor of Lincoln's Birthday, the Congressman will undergo extensive testing and treatment procedures. As a result of several months of strenuous activity involving an election campaign, the introduction and preparation of several new bills in the 93d Congress, trips to the new 13th Congressional District, and the assumption of responsibilities as one of the few members named to serve on two major Committees in the new Congress, doctors have detected evidence of extensive physical exhaustion requiring an undetermined period of rest and convalescence.

The office of Congressman Price will continue to operate on a full time basis and staff personnel will respond to constituent inquiries and needs until the Congressman returns to the office in the weeks ahead.

On February 7, legislation similar to that introduced by Congressman Price to reinstate the Rural Environmental Assistance Program was approved by a large majority vote in the House of Representatives. Price, as a Member of the House Agriculture Committee, has in recent weeks met several times with Agriculture Secretary Buttz to discuss and express his support for REAP, which has been of great benefit to our Nation's farmers in conserving and protecting our land, air and water resources.

The bill now goes to the Senate for action. Congressman Price has continued to receive encouraging remarks concerning the three bills he has introduced this year which are designed to combat the energy crisis by establishing a Council on Energy Policy and incentives to allow for the continuation of exploration for our oil and gas reserves. Price plans to seek the support of his colleagues in Congress in the months ahead to build up our Nation's energy supply thereby decreasing our dependence on the importation of these vital resources from other countries.

FEBRUARY 2, 1973.

This has been a busy week for the Committee on Agriculture of which I am a Member. On Thursday, the Committee approved legislation to reinstate the Rural Environmental Assistance Program and sent this legislation to the House where it will be voted on within the near future. As a sponsor of a comparable bill to reinstate this valuable Federal cost-sharing conservation program, I could not be more pleased with the outcome of the Committee's decision. I can only hope that the Congress will follow suit by approving this bill as soon as possible.

Monday, February 5, brings another week of meetings for the Committee on Agriculture. During this time hearings will be held on legislation I recently introduced to restore the Farmers Home Administration emergency loan program which has proven to be invaluable to the farmers in our district and the nation who have been hard hit by extremely bad weather conditions during the last several years. It is anticipated that the Agriculture Committee will once again act quickly to approve this legislation and send it to the House Floor for further action.

This has been a week in which Americans have rejoiced over seeing the names of those POW's who will soon be returning to their homes. For the last several years I have been wearing two of the POW bracelets which

contain the names of two men who used to be my flying buddies during the Korean Conflict. Soon I hope to send the bracelets I have been wearing to these men who have constantly been in my thoughts as a small expression of appreciation for their extraordinary service to our Nation. Others who have been wearing these bracelets might wish to do the same.

The cold-blooded and cowardly shooting and wounding of Senator John Stennis this week has touched off a new wave of demands for gun control legislation. It is sad that the Congress has, like an ostrich with its head in the sand, ignored the crime epidemic brought on by a decade of liberal, permissive leadership; but just as sad is the way in which the Congress is reacting to the brutal assault of one of its own Members. Contrary to the plea of liberals whose only solution is the confiscation of guns—"Let's get the guns off the streets" they say—the time has come for a return to strict law enforcement and for the infusion of new backbone in our courts and law enforcement system. Instead of getting the guns off the streets, I believe what we really need is to get the criminals off the streets.

JANUARY 24, 1973.

This has been a truly historical week in American history. Starting with ceremonies last Saturday to mark the reinauguration of President Nixon for a second term, citizens everywhere were later stunned upon learning of the untimely death of former President Lyndon B. Johnson.

As a member of the Texas Congressional Delegation, it was my solemn privilege to join in leading our Nation in ceremonies at the Capitol rotunda to honor Mr. Johnson for his tireless service to the Nation and to our State of Texas.

It is ironic that President Johnson's death should proceed by one day the marking of another historic event and a cause for which he labored so hard, the announcement of a ceasefire in the Vietnam War. Americans everywhere have been greatly relieved to hear this long-sought good news, and we can be thankful to both Presidents Nixon and Johnson that they showed great strength and determination to achieve an honorable peace. Perhaps the best news of all is that the waiting and anxiety of the brave families and friends of our Prisoners of War-Missing in Action will soon be at an end.

The legislative activities of the 93rd Congress continued at a fast pace throughout the week. While agreeing in principle with the President's efforts to hold down Federal spending, after much study and several conferences with the Secretary of Agriculture and other Members of Congress, I introduced a bill to reinstate the Rural Environmental Assistance Program which has proven over the years to be of great benefit not only to agriculture, but also to the Nation in the areas of water and soil conservation.

With the energy situation in our country becoming more critical daily, I further submitted a bill similar to one I introduced last year to establish a Council on Energy Policy. It is my hope that the Congress will act quickly on this legislation in order to establish a means to systematically arrive at solutions to the fuel shortage crisis which has crippled communities across the Nation this winter.

JANUARY 23, 1973.

Today Congressman Bob Price introduced legislation which, if enacted, will require the Secretary of Agriculture to carry out the provisions of the existing law providing for the authorization and funding of the Rural Environmental Assistance Program. "While I agree in principle with and applaud the President's efforts to keep Federal expenditures within reasonable limits," Price stated,

"I feel that the effects brought about through the discontinuance of this important program would be detrimental to the long range preservation of our most vital human resources—namely our soil, water and air."

Noting that the Rural Environmental Assistance Program has worked effectively as a Federal cost sharing program for conservation programs installed by farmers since the 1930's, the Texas Congressman went on to mention some of the accomplishments made possible through this program: "REAP has enabled our farmers to do more to clean up and preserve our environment than any other federally sponsored program. Through this program our farmers have been able to protect our soil through the establishment and improvement of vegetative cover, strip-cropping practices, terracing, the re-seeding of marginal land, and cross fencing for grazing. REAP has also provided for strides to be made in the areas of sediment retention and chemical runoff control, drainage, irrigation and related practices and livestock water utilization and distribution on ranches. Through this program our farmers have also been able to embark upon activities which have slowed the spread of noxious brush and weeds, accounted for a major portion of our reforestation program on private lands, helped aid wildlife conservation and increased the development of recreational areas."

Price went on to state that it would be unfair of us to demand America's farmers to take on the burden of the conservation of our natural resources single-handed when it is evident that REAP has benefited not only rural America, but our Nation as a whole. He added that it is not feasible at his time for farmers to initiate and continue long range programs without the aid of cost sharing initiatives provided by the Federal Government especially if we are to continue to feed the starving millions abroad.

"I am looking forward to the hearings which will soon be held on this matter by the Committee on Agriculture of which I am a member and I am hopeful that the Administration will reconsider its action with regard to this important program," Price concluded.

JANUARY 4, 1973.

Congressman Bob Price announced early today that he has joined with other Representatives in calling for a bipartisan caucus of all interested House Members to meet this afternoon to discuss recent Administration actions leading to the termination of certain programs within the Department of Agriculture. These programs include the 2% REA loan program, the Farmers Home Administration Emergency Loan Program for farmers hit by natural disasters, the Water Bank program, and the Rural Environmental Assistance Program.

"The purpose of this meeting," Price stated, "will be to find out what alternate procedures could be worked out to allow for budget control without destroying those ongoing programs which have proven of great benefit not only to agriculture, but to the Nation as a whole in the areas of water and soil conservation."

Price will also be joining the other Members of the House Agriculture Committee tomorrow in meeting with the Secretary of Agriculture to discuss this matter at further length. "I am hopeful these meetings will lead to a satisfactory solution for all concerned," Price said.

WASHINGTON, D.C.,

JANUARY 3, 1973.

Immediately upon the convening of the new 93rd Congress today, Congressman Bob Price introduced several bills dealing with a variety of important issues for consideration, including:

A Constitutional Amendment to permit voluntary prayer in the Nation's classrooms and other public buildings.

A Constitutional Amendment setting minimum attendance requirements for Members of Congress—failure to be present and voting on at least 70% of recorded yeas and nay votes would result in the dismissal from office of a delinquent Congressman.

A Constitutional Amendment to prohibit deficit spending by the Federal Government except in time of war or national emergency, and to require a retirement of the National Debt over a one hundred year period.

A bill to abolish the limitation on outside income for social security beneficiaries over the age of 65.

A bill to provide tax credits for expenditures made in the exploration and development of new reserves of oil and gas in the United States.

A bill to establish a Council on Energy Policy to advise the Congress and the President in the formation and execution of a national energy policy to meet the future needs of the United States.

A bill to modify the Delaney Amendment to the Federal Food and Drug Act to permit the use of DES in animal feeds when residues from such use may be present in inconsequential and harmless amounts.

A bill to reestablish November 11th for the annual observance of Veterans Day in the United States.

A bill to modify the inheritance tax laws applicable to farmers, ranchers, businessmen and other property owners.

"I believe the 93rd Congress has a great challenge ahead—we have an opportunity to take up the unfinished business of the past and to enact responsible new legislation to meet the pressing needs of the American people. As the Representative of the new 13th Congressional District of Texas, I shall vigorously attempt to promote the views of all of my constituents in the Congress and to seek legislative action in those areas which meet with their needs," Price said.

RESOLUTION NO. 3

HON. GENE SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. SNYDER. Mr. Speaker, on April 4 this year the Organization of American States will begin meeting here in Washington. At that meeting an attempt will probably be made by a handful of Castro sympathizers to have the Castro regime admitted to the OAS.

Mr. Speaker, only a scant four out of all the Latin American countries presently recognize Castro—Mexico, Panama, Chile, and Peru. It would be folly to admit to the OAS a government which has repeatedly demonstrated its unwillingness to engage in peaceful cooperation. As the U.S. Ambassador to the United Nations, John Scali, said at the recent Security Council charade in Panama:

Cuba brought the sanctions on itself by exporting revolution. When it stops that, the sanctions will be lifted.

At that same Security Council session, Panamanian strongman Gen. Omar Torrijos, in a bitterly anti-American tirade, tied the Panama Canal question to the admission of Castro's clique to the OAS. Just as General Torrijos was re-

buffed on his ludicrous demands relating to the canal, I believe that he and his cohorts should be rebuffed on their mad-cap scheme on behalf of Castro.

This agitation by a small number of Marxists and other extremists to admit the revolution-exporting Castro regime to the Organization of American States should be resisted here in the Congress and by our State Department.

I believe that a very sound view of this entire issue was eloquently expressed in a resolution adopted by the American Legion at its 54th annual national convention in Chicago last year.

I include the text of this resolution to be printed in the RECORD at this point:

RESOLUTION NO. 3

Committee: Foreign Relations.

Subject: Cuba.

Whereas, since 1960 each annual national convention of The American Legion has urged the Government of the United States to take whatever action may be necessary to free the Cuban nation from communist domination; and

Whereas, United States public policy as proclaimed in Public Law 87-733, effective October 3, 1962, calls for the prevention of the export of aggression or subversion by Cuba to any part of this hemisphere; the prevention of the creation in Cuba of an externally supported military capability endangering the United States; and cooperation with the Organization of American States and with freedom-loving Cubans to support the aspiration of the Cuban people for self-determination; and

Whereas, efforts to attain these objectives have been weak, indecisive and ineffective; and

Whereas, Castro has been active in organizing Communist operations in Latin American countries; and

Whereas, Castro has been collaborating with the U.S.S.R. in the establishment of Military bases in Cuba; and

Whereas, Castro now indicates a desire to reestablish commercial relations with the U.S.A.; now, therefore, be it

Resolved, by The American Legion in National Convention assembled in Chicago, Illinois, August 22, 23, 24, 1972 that we reaffirm our position and reiterate our call to the Government of the United States to set up an effective political action program, individually or through the Organization of American States, to eliminate the Castro communist regime in Cuba; and be it further

Resolved, that, until this objective is achieved, all United States political and economic relations with Cuba remain suspended, and that economic and military aid to other member nations of the Organization of American States which unilaterally break the existing trade embargo on Cuba be terminated; and be it finally

Resolved, that The American Legion recommends that diplomatic relations not be reestablished until the Cuban Government stops its efforts to establish and perpetuate Communist activities in the Western Hemisphere.

BLADENSBURG HIGH BASKETBALL CHAMPIONS

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HOGAN. Mr. Speaker, Saturday, March 17, 1973, was a proud day for the

Mustangs of Bladensburg High School as they defeated Bethesda-Chevy Chase High School in the Maryland class AA basketball championship. I would like to take this opportunity to commend Coach Roy Henderson and his assistant Ernie Welch for their outstanding coaching ability and their dedication to the game of basketball. I extend my congratulations to all the fine athletes on this team who displayed a great deal of courage while playing under pressure. These players include: Frank Foster, Kurt Schumacher, Waverly Evans, Kelvin Combs, Donald Foster, Toney Pulley, Brian Ball, Steve Ambrose, Tyrone Braxton, Bruce Buckley, Darryll Ritter, Dan Smith, and Charles Hall. And to the team managers, Donald Worley, Roger McDaniels, Randy Colbert, Jay Porter, and Terry Randolph, I wish to commend them in their efforts in helping to bring the Maryland class AA basketball championship to Bladensburg High School.

A HELPING HAND REMEMBERED

HON. L. A. (SKIP) BAFALIS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BAFALIS. Mr. Speaker, the number of U.S. servicemen helped by the American Red Cross over the years must be legion.

Unfortunately, it is a human failing to slowly lose the memory of a helping hand once the need is gone.

Not so with one Vietnam veteran, Peter Bordonali of Fort Pierce, Fla.

He was helped. But he remembers. And now he helps others.

For that reason, I recommend to all the following story published in the March 25, 1973, edition of the Fort Pierce News-Tribune:

FP VIETNAM WAR VET REPAYING RED CROSS
Drafted and only three months into a year-long Vietnam stint in 1969, Fort Pierce's Peter Bordonali, 24, was mowed down by an enemy rocket, suffering a traumatic amputation of the left leg.

Bordonali can recall the incident matter-of-factly today, but what he recalls the most about the incident and subsequent hospitalization, is "the Red Cross did me a great service."

"All the time, the Red Cross was at my bedside making sure I was comfortable, helping to keep me from mental collapse, and bringing me hobbies to work with my hands, keeping my mind occupied."

"The Red Cross brought me other than Army food—ice cream. The Red Cross did and does a tremendous service to all soldiers," Bordonali stated.

It was during the days and weeks of hospitalization that Bordonali observed the faithful Red Cross workers and it was in a hospital bed that he decided he had to repay the Red Cross.

"In the hospital bed the thought occurred to me that I had to find some way to repay the Red Cross. As soon as I was released, I made it my business to contact the Red Cross," he explained.

His first actual contact with Red Cross service came last year with the murderous tornadoes that ripped through Okeechobee, taking the lives of several mobile home

residents whose homes were shredded apart by the twisters' strong winds.

"I went to Okeechobee then because they needed help and I decided it was now or never. I've been working as a volunteer with the Red Cross ever since," Bordonali said.

This month is National Red Cross month. "Be a good neighbor. Help the good neighbor. Give," the organization's slogan begs.

"We want to tell the people we're here to help them. People aren't really aware of what we're doing and since this is National Red Cross month, we want to tell them," Bordonali said.

He is the chairman of the Red Cross disaster preparedness committee, and in that capacity he works at the Red Cross headquarters answering the telephone, doing telephone contacts, and delivering disaster books to various organizations.

He has also seen to it that the Red Cross headquarters on N. Seventh Street has a complete citizens band radio outfit.

Bordonali and 15 CB operators make up the disaster preparedness committee.

"These men are ready, able and equipped to handle any emergency for the Red Cross. We can set up immediate communications between any disaster zone and the American Red Cross," Bordonali explained.

The team, in addition to manning the communication lines, is also responsible for search and rescue, maintaining and supplying emergency shelters, and in overseeing the operations at the shelters.

"The men are here for community service to work with the Red Cross. They have donated time and the CB equipment for the use of the Red Cross," Bordonali said.

Working with Bordonali are Don Brown, Red Cross coordinator; Ronnie Anderson, assistant coordinator; Ronald Morahan, Ed Powell, Earl Stroud, Earl Cordary, Matt Schneider, Ed Hutchison, Ed Dunn, Roy Hall, Doyle McPeak, Jim McDonald, Jerry Dubberly and Victor Bryan.

"I would like for the community to know that these men are interested in donating their time to the Red Cross and we hope that will interest others in Red Cross work. We need volunteers," Bordonali pleaded.

He also noted that without funding from the United Fund and without other donations from the community, "The Red Cross can't operate. I also have to stress we need bodies, too. We can't operate without volunteers and donations."

Bordonali is married and has a four month old son. He and his family live at 3400 Ave. G.

REASONS FOR COSPONSORING THE CRIMINAL CODE REFORM ACT

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. FISH. Mr. Speaker, on March 22, I joined with a number of my very able colleagues on the House Judiciary Committee as a cosponsor of the Criminal Code Reform Act of 1973—H.R. 6046. The need to reform and simplify Federal criminal laws is almost universally conceded by the legal community and is long overdue. There is no question but that a rational, integrated code is needed if we are to properly respond to the challenges of crime in 20th century America.

As my colleagues in the House know, however, this administration-backed bill

also contains a number of controversial and provocative provisions. There are sections dealing with such sensitive matters as: First, the insanity defense; second, the death penalty; third, the disclosure of classified information; and fourth, mandatory minimum sentences for drugpushers. Despite my reservations over the bill's more controversial proposals, I decided to cosponsor this legislation as evidence of my support for general Federal criminal law revision. This is a large and complex document, and one that must be given considerable scrutiny by the judiciary committees and the entire Congress. Hopefully, these deliberations will be underway shortly. They should provide an excellent forum for discussing what a modern, progressive criminal justice system should encompass.

WELFARE SCANDAL—VI

HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. THOMSON of Wisconsin. Mr. Speaker, there has been a lot of talk in the media and among the Members of Congress over the desirability of closing loopholes in our laws which undermine the original purposes of legislation enacted by the Congress. Not only in the tax code, but in our welfare legislation is this a pervasive concern.

Our welfare system is a continuing monument to the Congress' inability to design legislation to handle social problems. The present system has not only perpetuated dependence of the needy on society, but has extended that dependence from generation to generation. Further, it has generated a class of criminals whose existence depends completely on the continuance of our ineffective maze of welfare programs.

The past week or so, I have inserted daily into the Record installments of a series run recently in the Milwaukee Sentinel exposing the fraud, waste, and failure of the Milwaukee County Welfare Department. Estimates of the slippage run as high as 20 cents on the dollar.

Today's installment deals with the widespread illegal bartering in Federal food stamps and other in-kind disbursements made by the welfare department. It is clear that the program is not operating as designed by the Congress. Too often, at least in this example, the food stamps are not used to secure wholesome and nutritious food for needy families, but are sold at a discount for cash or bartered for liquor.

The article follows:

"MAJOR" SELLS FOOD STAMPS

(By Gene Cunningham and Stuart Wilk)

They call him "The King of the Food Stamps." They also call him "The Major." Almost any night he'll amble into a North Side tavern—sollid clothes hanging loosely over a bulky frame—a broad grin on his face and government food stamps in his pockets. He pounds the bar, demands a beer and

cocks back his head announcing that The Major has arrived.

"There's only one Major," he declares. "I'm The Major and there's only one."

The regulars laugh and return to their drinks. Others try to ignore him.

"Any stamps to sell?" the bartender asks.

The Major leans forward and enters into a brief, inaudible huddle with the tavern-keeper.

After a few minutes the two men move to a less populated part of the tavern. They motion two customers to join them.

The customers are reporters for The Milwaukee Sentinel—but The Major doesn't know that.

"You wanna buy some stamps?" asks The Major, grasping the bar to regain his equilibrium.

"Sure," says one of the reporters. "How many have you got?"

"Here's \$10 worth," he says, pulling out a booklet of five \$2 food stamps. "I'll take \$8."

Now the reporters huddle.

"That's too much," a reporter decides.

"Here's \$7—you're still making a profit."

"Don't tell me about profit!" growls the food stamp king.

"\$7.50," the reporter offers.

The Major is tempted but not convinced.

"\$7.50 and a beer," says the reporter.

"That's the top offer."

"Sold!"

The money is exchanged for the food stamps.

The bartender pours the food stamp king a beer and—having made a quick, profitable sale—The Major orders a round of drinks for the house.

A few regulars toast The Major.

Everyone drinks up and The Major waves at the reporters as they leave.

It's easy to buy food stamps in Milwaukee County. Taverns are the most common place to buy them, although, according to some caseworkers, stamps are freely sold by clients on the sidewalks outside the Milwaukee County Welfare Center at N. 12th and W. Villet Sts.

[The food stamp program is a federal program administered through the county welfare department.]

Buying and selling stamps is a federal offense. But that doesn't hamper pros like "The Major" or others like the man who sold the same two reporters a \$5 food stamp in a tavern one night.

"How much you wanna offer?" asked the man.

"Three dollars," answered a reporter.

"Make it \$4," insisted the man.

BID ACCEPTED

"\$3.50," bid the reporter.

"Sold!"

A Milwaukee bartender told reporters that he has some of his customers buy his groceries.

"I haven't gone into a grocery store in years," said the bartender. "My customers trade me food stamps for drinks. Then they go and shop for me."

They'll also trade bus tickets for drinks. The Milwaukee County Welfare Department gives out the tickets to clients. They're valid on all Transport Co. buses.

The department pays full fare—50 cents for adults—for each ticket.

In November and December of 1972, the welfare department was spending from \$1,600 to \$4,700 a week for bus tickets bought from the Transport Co.

And the clients trade them freely for drinks.

One night, as reporters watched, a customer pleaded with a bartender to accept a bus ticket for a 35 cent shot of whisky.

"I'll give you a dime," barked the bartender.

The customer stared blankly. "Ah, get outa here," the bartender shouted. "You're a bum. Get outa here."

The customer put the single bus ticket back in his pocket and shuffled out the door.

BOOMING BUSINESS

"He's a dirty wino," the bartender told a reporter. "What do I need his lousy bus ticket for?"

The bartender does a booming bus ticket business, he explained. He has a cigar box that, on some occasions, is overflowing with tickets stamped "DPW"—Department of Public Welfare. He gets them in exchange for drinks.

One night the bartender told the reporters:

"You want a welfare bus ticket? Have one on me."

He tossed a single bus ticket over the bar. Sometimes he'll hold "Sunday night specials" to clear out his bus ticket inventory at cut rate prices.

Recently the bartender sold a reporter six bus tickets for \$2. They are worth \$3 at face value.

The bartender said to come back "any time." There are always bus tickets—or food stamps—to be had, he said.

Some customers will sell welfare department vouchers if they can find a taker, the bartender said. The voucher is made out to the recipient but some stores don't check identification.

Recently, a bartender said, a \$70 voucher was sold at his tavern for about \$25. There's always a lot of action here," said the bartender.

[The food stamps and bus tickets purchased by reporters were not used. They are being returned to the Milwaukee County Welfare Department. No expenditure of welfare department funds was involved in this project.]

WEST FRONT EXTENSION: LARGE, UGLY, NOT PRODUCTIVE

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. CLEVELAND. Mr. Speaker, it is always a pleasure to receive an expression of informed opinion from one's constituents when taking a position on a matter of some controversy. And as we gear up to repel another architectural assault on the Capitol—extension of the west front—it is particularly reassuring to see that the word is getting around the country.

A great deal has been said and written on the subject. But the following letter from Stephen P. Tracy, an architect in Cornish, N.H., poses the issue with an economy of language and sense of style we would do well to emulate in disposing of the matter:

HON. JAMES C. CLEVELAND,
U.S. House of Representatives,
Washington, D.C.

DEAR JIM: The purpose of this letter is to solicit your continued opposition to a proposed extension of the West Front of the Capitol Building, and to thank you for your vote last year to prohibit construction on this project at least until a feasibility study has been prepared.

It is my understanding that efforts are again being made to secure the approval of

Congress for this extension despite the fact that the report submitted by the engineers who were authorized and instructed to make a feasibility study concluded that the West Front could be and should be restored. It is puzzling to me that the findings of this report should be rejected when, insofar as I know, no one has contended that these findings were not accurate appraisals of the situation.

The following facts represent my understanding of the present situation:

1. The restoration of the West Front is practical from both engineering and economic standpoints.

2. The proposed extension of the West Front will create additional facilities at a cost which cannot be justified inasmuch as equivalent facilities can be provided elsewhere at much lower costs.

3. The preservation of the last remaining facade of the main Capitol Building is important as safeguarding a part of our architectural and historic heritage. How can our heritage be equated with the need for a certain number of square feet of new office space?

Viewing the alternatives from an economic standpoint, I see the following:

1. For less than \$4,000,000, the West Front can be restored.

2. For less than \$25,000,000, new office space can be provided elsewhere.

3. For \$60,000,000, the West Front can be extended to provide the needed additional space.

This Yankee horse trader knows which horse he likes best: the old strong mare who needs a bit of attention from the veterinarian; not the showy and expensive mare who has been sired by a donkey and whose foal may be large, probably ugly, and certainly not productive.

I hope you agree.

Cordially,

STEPHEN P. TRACY.

PRESIDENT'S BUDGET AND THE POOR

HON. HAROLD V. FROEHLICH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. FROEHLICH. Mr. Speaker, many recent reports in the news media have conveyed the impression that the Nixon administration, by dismantling the Office of Economic Opportunity, have forsaken the poor and decided to stop all future funds from going to help the poor.

In actuality, the President's budget in 1974 calls for a greater expenditure for the poor than ever before. I am especially pleased that programs to assist Indians have been increased by some \$9.7 million. Hence, there are clearly two sides to the debate on OEO, and the administration's side deserves wider dissemination.

I ask unanimous consent that the following article by Allan C. Brownfeld from the March 8, 1973, issue of Roll Call be printed in the RECORD. This article provides some good information on what is happening to some of the programs presently funded under OEO, and I think that this information should be disseminated to the public.

IS OEO "REALLY" BEING DISMANTLED?

(By Allan C. Brownfeld)

Washington is embroiled in a passionate controversy over the future of the Office of Economic Opportunity which, rhetoric aside, has generally failed in its appointed task of assisting the poor to make meaningful and productive lives for themselves.

While many in the Congress proclaim the alleged "success" of O.E.O., they seem not to have listened to the counsel of black leaders who, it seems, are more concerned about really solving problems than producing a constituency of voters in return for federal hand-outs which solve no problems at all.

Bayard Rustin, director of the A. Philip Randolph Institute of New York, said that O.E.O. is an "immoral bag of tricks" amounting to a "new form of slavery." He stated that, "The problem for Negroes and Puerto Ricans and poor whites . . . is that America has no commitment to turn muscle power into skills."

Rustin expressed the view that simply giving people a "dole" without asking them to work and helping them to attain skills is no answer to the real problem. The hopelessness and futility remain, what has been called "the psychology of poverty." Unless this psychology is changed, government programs such as those initiated by the Kennedy and Johnson Administrations, and promulgated during the first four years of the Nixon Administration, provide only a tranquilizer and not a cure. In many instances, these programs have made problems worse.

When President Nixon appointed Howard Phillips, a bright and articulate young man, to "dismantle" O.E.O. the political debate began. In his appearance before the House Subcommittee on Equal Opportunities, Phillips was, in effect, threatened by Black Congressman William Clay of Missouri. Clay at one point berated Phillips about a small American flag in the lapel of his suit. "Let me tell you what poor people think of that flag," he said. "They think their part of the flag is the stick upside of their heads."

Clay declared that a confrontation in the streets "surely will come this summer" if the poor are abandoned and he reminded Phillips of the recent New Orleans incident in which a black sniper was finally killed after murdering a number of innocent bystanders. If a lesson was not learned from that episode, Clay said, "Baby, I think this country is lost."

At this point Phillips, maintaining an extraordinary calm in the face of such an attack, declared: "Let me express the most profound kind of concern for the statement you just made." Clay responded that he didn't understand such big words, and Phillips responded that, "I know what you're talking about and I don't care for it."

The level of Congressional debate over matters of national importance seems to have deteriorated to a new low when a member of Congress can hold up a sniper who has murdered innocent people as an example for the nation, and who threatens violence if his own position is not adopted. If the Congress seeks to censure behavior which brings disrepute to the whole democratic process, William Clay should be one of its first candidates for consideration.

Rep. Frank Thompson of New Jersey performed in a manner equally to the discredit of the democratic process. When Phillips testified that O.E.O. employees had been acting illegally by placing themselves in the position of working, in a partisan political manner, for candidates for public office, for registering voters, and for doing other things clearly prohibited by law, Rep. Thompson replied, in effect, that some laws are made to be broken.

What is unfortunate is that men such as

Reps. Clay and Thompson, and the thousands of "poor people" who marched in an effort to intimidate Congress with the threat of violence if they did not have their way, seem not to understand is that O.E.O. is not really being dismantled at all. Conservatives seem not to understand this fact either, for they are hailing current Administration efforts as if a real dismantlement were in process. Even O.E.O. Chief Phillips himself admits that he does not know where current policy is really leading.

Consider a few facts. The war on poverty was never a single, centralized program. It included a number of programs: the Job Corps, Operations Headstart and Follow Through, Vista (Volunteers In Service To America), Community Action Agencies, Legal services for the poor, Neighborhood health centers, and Programs for Indians and for migrant and seasonal farm workers.

In his budget for the 1974 fiscal year, President Nixon cut out the Office of Economic Opportunity. It is this central office which is being "dismantled."

The only O.E.O. program which the Administration is prepared to eliminate is that of Community Action agencies. The fact is, however, that there are now 907 such agencies employing more than 180,000 people and spending about 1.2 billion dollars of federal money a year—a third of which came from O.E.O. communities which want to continue those agencies beyond June 30. These communities will have the opportunity to continue such agencies at their own expense and, testified Phillips, with funds from other federal sources—such as revenue sharing funds.

Legal services for the poor, another program which conservatives have been criticizing for many years because of its deep involvement in politics and in the unethical practice of stirring up litigation, will not be eliminated at all. Instead, the Nixon Administration is planning to propose legislation to set up a new agency to conduct this program.

If conservatives who are pleased and liberals who are aghast are sincere in their feelings, they should understand that the programs previously being conducted by O.E.O. are not being dismantled.

Community Economic Development is to be shifted to the Office of Minority Business Enterprise in the Commerce Department. Its funding will be increased by 2.6 million dollars. Health and nutrition programs, including the neighborhood health centers, will go to H.E.W. Programs for Indians will also be put under HEW, with spending to go up by 9.7 millions. Aid to migrant and seasonal farm workers will be continued by the Labor Department with a requested appropriation of 40 million dollars—up from 36.3 million. The Job Corps, one of O.E.O.'s notable failures, was transferred by the Nixon Administration to the Labor Department in 1969. The Neighborhood Youth Corps also went to the Labor Department while the Headstart program and the Follow Through program were shifted to H.E.W. In 1971, the VISTA program was put—along with the Peace Corps—into a combined group known as ACTION.

If the Nixon Administration really wanted to "dismantle" O.E.O. it might have made some steps in that direction during its first four years. It did not. Now, it seems to be "dismantling" in words, while continuing in deeds. Perhaps it is seeking to keep conservatives happy, just as they are kept happy by telling them we are "strong," despite the SALT agreements which deteriorate our defense, and are "fiscally sound," despite unprecedented deficits. They have bought such bills of goods before, and the O.E.O. "dismantlement," unfortunately, seems to be another.

NOT A DOLLAR MORE

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. GAYDOS. Mr. Speaker, recent reports from Manila are that President Ferdinand E. Marcos has crushed the Maoist insurgency in the southern Philippine province of Mindanao and now is ready to get moving on his promised land reform program—with, of course, Uncle Sam's financial help.

Scripps Howard Writer Alan Horton said in a dispatch the other day that Manila speculation is that the United States will provide from \$200 to \$300 million which President Marcos needs for his program immediately. The whole thing is estimated conservatively to cost \$1 billion. So more from us obviously will be expected later.

But why, when we have poured billions into the Philippines over the last 75 years, must we now be called upon to pay the lion's share of the Marcos' land reform? What of other nations? What about prosperous Japan with its growing stake in the Philippines' market? According to Mr. Horton, Japan has heeded President Marcos' call only to the extent so far of a \$75 million loan.

Surely, our country has enough domestic problems begging for money to occupy it without taking on the funding of a Philippines' land distribution. The Marcos idea is to enable 650,000 rice and corn farmers to buy their own farms and pay for them at liberal terms out of future harvests. Our money is to pay off present land owners. In other words, we are to subsidize the transaction with our \$200 to \$300 million now—and more later.

It seems to me that we have plenty of tenant farmers in our country who like to buy land on terms so generous and at prices so below market that hefty public subsidies would be needed. I am for helping Americans first, if we are to help anyone. The family farm concept needs as much encouragement here as it does in the Philippines.

The point of the Philippines plan to us is this. It shows that not only this far Pacific country, but a great part of the world still seems to be looking to the American taxpayer as the target for any easy touch on any supposedly "reform" scheme that can be concocted. Let a regime get into trouble with its people, or a new one rise to power on a platform of grandiose promises, and the American becomes the money well to be tapped for what is believed needed.

We should have had enough of this by now, with our Federal deficits still menacing and our trade balances persisting against us, and the Philippines case could afford the means of demonstrating this fact. We have given that nation enormous sums and still have it on our foreign aid list this fiscal year to a total of \$160 million, none of which, incidentally, is to go for the Marcos land reform. All is earmarked for other pur-

poses. I am against handing over one dollar more on the sound grounds that we sorely need every one of our dollars here at home.

TRIBUTE TO MRS. MATTIE RAMSEY BROWN

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. CONYERS. Mr. Speaker, it is a privilege for me to take this time to honor a friend and neighbor who has done so much for the children in her community. On March 30, of this year the State of Michigan, and Detroit in particular, will lose an invaluable educator and civic leader when Mrs. Mattie Ramsey Brown steps down as the executive director of Michigan's first cooperative nursery school. Her retirement, as executive director, will be a great loss to those of us who had the pleasure and privilege of knowing her and working with her.

Mrs. Brown is the founder and executive director of the Peter Pan Nursery in Detroit. She was born in Floster, Miss., and graduated from Alcorn College with a bachelor of science degree. She served as head of the home economics department at Mississippi Industrial College, previously having attended Tuskegee Institute in Alabama and Hampton Institute in Virginia. She continued her child development studies at Wayne State University and at the Merrill-Palmer Institute in Detroit. Later she served as a youth supervisor for the National Youth Administration.

During her career, Mrs. Brown has been honored on numerous occasions for her devotion and leadership in education and civic affairs. A few of the organizations which have bestowed honors upon her are, her sorority, Zeta Phi Beta, the Merrill-Palmer Association of Metropolitan Detroit where she is an alumni board member, the Greater Macedonia Baptist Church, and the Michigan Association of Colored Women's Club.

In 1937 with the help of a few dedicated friends, a small amount of capital, determination, and vision Mrs. Brown founded the Peter Pan Nursery. From the beginning she received continuous inspiration and support from her loving husband, Louis Earl Brown, Sr. and her only son Louis, Jr.

The alumni and friends of Detroit's Peter Pan Nursery will gather at the Sheraton-Cadillac Hotel on March 30 for a dinner honoring Mrs. Brown. The event will be a double celebration, observing not only the 36th anniversary but a mortgage burning for the school as well.

Because of her great love for her community and her continuing interest in the development of preschool facilities I am happy that Mrs. Brown will continue as a consultant to the school which grew and succeeded because of a beautiful, determined and wonderful woman.

"THE EDUCATION THAT CAN'T WAIT" WAITS

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1973

Mr. McCLOSKEY. Mr. Speaker, I would like to call to the attention of the House one more example of the President's unilateral termination of a program recently authorized and funded by Congress. This involves the Environmental Education Act enacted into law on October 30, 1970, and for which this year's estimated expenditure was \$3.180 million.

An editorial appearing in the March 17 issue of *Environmental Action* written by Bickley S. Dodge, discusses the recent division of the administration to completely terminate the program:

"THE EDUCATION THAT CAN'T WAIT," WAITS

(By Bickley S. Dodge)

Two years ago, U.S. Education Commissioner Sidney Marland coined a new slogan when he labeled environmental education "the education that cannot wait." His slogan has become only one of many bitter ironies that have plagued the program from the beginning. Today, environmental education is not only still waiting, it appears to be in imminent danger of total extinction as a federal program.

The 1974 federal budget, released in late January, confirmed a distressing rumor. In one sentence it announced the intention of disposing of environmental education: "This program will be terminated in 1974."

Official Administration opposition to the program, centered within the Department of Health, Education and Welfare (HEW) itself, rests mainly in three arguments. First, it is said, we don't need separate legislation to support environmental education—we can do it through already existing programs. Second, environmental education is a narrow categorical program and therefore conflicts with Administration philosophy. And, third, the program has failed anyway. Each of these arguments can be easily refuted.

The environmental education program has always been described within HEW as "core" funding, as a catalyst which would generate lots of additional federal money for environmental education. This strategy has proven more effective in keeping appropriations for the program low than in actually generating new environmental education money. In fiscal 1972 the total federal appropriation for the Office of Environmental Education (OEE) was only \$3.4 million. The Office of Education claimed that in addition it would spend \$11 million on environmental education through other programs. To date it has still not been able to document that claim. A list, purporting to document the \$11 million expenditure, exists, but the validity of many of the projects listed is so questionable that apparently the commissioner is too embarrassed to release it.

Even if other educational programs were doing what they should be, they are limited in their scope and target. Title III of the Elementary and Secondary Education Act, for example, can support environmental education but only through local education agencies. No other program is as flexible as the Environmental Education Act in terms of program content or the range of permitted "target groups." Most importantly for environmental action organizations, no other program has the flexibility of the Environmental Education Act to support non-formal

environmental education projects sponsored by community groups.

The language of the Environmental Education Act is strikingly broad in scope and intent, and administrative pronouncements have re-emphasized that breadth. Yet the executors of the program are now claiming it is too narrow and categorical—and thus inconsistent with the Administration's "New Federalism." In May, 1971 Marland described the program this way:

Environmental education can be the core, the unifying concept around which Office of Education categorical grants can be coalesced into a modern educational response to the environmental/ecological crisis.

Does that sound like a description of a narrow categorical program?

If anything, in fact, some environmentalists have criticized the program for having been too broad in the past, for having stressed the creation of an "environmental ethic" so vague and general as to risk obscuring specific environmental substance and skills. Last year's environmental education grantees, for example, spent 30 percent of their resources on subjects not even covered by the act, and less than 10 percent each on resource depletion, transportation, technology and population, according to a recent survey by Friends of the Earth. There is encouraging evidence of greater substantive focus this year. In any case, the program's focus could tighten up much further before it could accurately be described as a "narrow categorical program."

The official critics' final argument is that the environmental education program has failed anyway, and therefore deserves to die. The program has been subject to internal bureaucratic delays, snafus and harassment at every step of its unhappy existence; there was no director for nine months, no advisory council for a full year, a skeleton staff even now, and of course almost no money. And now those responsible dare to call the program a failure. This is like the boy who kills his mother and father and then pleads to the judge for mercy on the grounds that he is a poor orphan.

Of course, environmentalists have been disappointed in their expectations of what the environmental education program could have been. But the potential still exists. Change, not abolition, seems to be in order. Moving OEE from the Office of Education to a more hospitable home—possibly the Council on Environmental Quality or the Environmental Protection Agency—or elevating it within the HEW bureaucracy might be one improvement.

Since the official arguments against environmental education are all so refutable, what are the real reasons it's slated to die? One possibility that must be strongly considered is that, being small, weak, and relatively unnoticed, it is an easy sacrificial lamb for an Administration that wants to claim it's cutting government costs without really doing so in any effective way.

Ralph Nader was once asked whether he believed in capitalism. He replied, "I don't know: we haven't tried it yet." The federal environmental education program is in somewhat the same category. It's time we tried it. Whether or not it expires first will depend a great deal on the amount of public and congressional concern expressed in the next few months.

FLORIDA'S LOSS IS NATION'S GAIN

HON. L. A. (SKIP) BAFALIS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BAFALIS. Mr. Speaker, for years Florida veterans have been fortunate in

having the services of one of the Nation's best Veterans' Administration regional directors, Odell W. Vaughn.

Now, Vaughn, a disabled combat veteran with 26 years of VA service, is leaving Florida.

But there is no dismay among Florida veterans. Their sense of loss is more than offset by the knowledge that Vaughn is coming to Washington to serve as Chief of the VA Department of Veterans Benefits.

As such, he will administer nearly \$9 billion in programs, ranging from GI bill education and training to GI home loans to pension and insurance. He will head a department with some 17,000 employees and 57 regional offices.

I am certain he will do an excellent job.

A 1972 nominee for the "Handicapped Federal Employee of the Year" award, Vaughn has received the VA's superior performance award six times in his career. He is rated among the best of the VA's regional managers.

A native of Greenville, S.C., Vaughn enlisted in the Army in World War II and took part in three invasions with the 178th Field Artillery Brigade. He lost both legs late in the war while trying to rescue a comrade-in-arms who lay wounded on a minefield. He won the Silver Star for this gallant effort.

The honor bestowed upon Odell W. Vaughn is a high one but I, for one, am certain the choice was a wise one.

MASSACHUSETTS' LEGISLATORS TESTIFY ON THE BURKE-RIBICOFF TAX CREDIT BILL, H.R. 49

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BURKE of Massachusetts. Mr. Speaker, last Friday, March 30, the House Ways and Means Committee on which I serve, received testimony from Representative Paul White, Democratic Legislator from Dorchester, Mass., on H.R. 49, legislation to provide a tax credit for nonpublic school tuitions. Representative White's presentation was a concise and convincing argument for the tax credit concept. It is for this reason that I have requested time to share his statement with you. I am also submitting for the RECORD the remarks of Representative Raymond Flynn, Democrat, of Boston:

STATEMENT OF MASSACHUSETTS STATE REPRESENTATIVE PAUL WHITE

Mr. Chairman and members of the Ways and Means Committee: Thank you for the privilege of appearing before you today.

Many public officials across the United States, sensing public discontent with certain aspects of our Federal tax laws, successfully campaigned this past Fall on platforms of tax reform. Public expectation in this area is justifiably high. An interrelated issue of great public concern is the quality and cost of education in the United States. These two issues, tax reform, and the quality and cost of education, are of paramount impor-

tance to the citizenry of this nation—the Congress must be responsive to these needs.

Your honorable committee has a number of proposals which seek to respond. One such measure, H.R. 49, recognizes the legitimate concerns of trying to make our tax laws more equitable and our educational policies more flexible—and I therefore appear today to support it wholeheartedly.

The importance of H.R. 49, and the reasons for its public import, are not difficult to substantiate. The cost of education overall is rising, nonpublic school attendance is rapidly diminishing and taxpayers, both parents and nonparents alike, are feeling the pinch.

While the closing of isolated non-public schools may not place an undue burden on the public school system, the wholesale closing of nonpublic schools particularly in urban areas—would place an intolerable burden upon the already limited resources of most urban school systems. For example, in Boston, out of a total elementary and secondary student population of 126,841—30,681 students, or approximately 25% attend non-public schools. In Massachusetts 10 largest urban areas out of a total elementary and secondary school population of 218,000 over 50,000 attend non-public schools—again about ¼ of the student population.

This pattern of high concentration of non-public schools in urban areas is not unique to Massachusetts nor New England. 37% of the elementary school pupils in Milwaukee attend non-public schools, 34% in Philadelphia, 33% in Cincinnati, 32% in Chicago, 29% in both St. Louis and Pittsburgh, 28% in New York.

The impact of a rapid decline in non-public school enrollment would clearly be great in cities such as these where a large percent of the school population presently is educated outside of the public school system.

As revealing as these figures are, they represent but the tip of the iceberg—for the true impact of massive non-public school closings can be measured only on the local level—the social, economic and educational disruption that is caused by the closing of a neighborhood school.

A reasonable question is: Will H.R. 49 alleviate a rapid decline in non-public school attendance?

The Special Commission to study Public Financial Aid to Non-Public Primary and Secondary Schools (1971, Mass.) attributed half of the enrollment decline to monetary causes. And it is reasonable to expect that as costs rise, schools which previously had not charged tuition, will do so—furthering the enrollment decline. According to a study by the I.N.A. Corporation (commissioned by Cardinal John Krol of Philadelphia), Parochial school costs are rising three times as fast as revenues—whipped along by declining enrollment. The rising costs/declining enrollment cycle, where each increase in cost leads to a decline in enrollment, and each decline in enrollment leads to an increase in costs, will inevitably lead to the eventual shut-down of the non-public school system. It has been estimated that if the *Catholic schools alone* were to close throughout the country, public school operating budgets would have to be increased by some \$3.2 billion.

In practical terms, H.R. 49 would mean that the typical taxpayer with a dependent attending a non-public school would not have to pay twice for one education. If the student's yearly tuition were \$200, H.R. 49 would allow the parent a tax credit of \$100. This measure of relief might be just the impetus parents would need to keep their child in a non-public school. A \$100 credit is relatively small in comparison to the current national average per pupil cost of \$858 per year in the public schools. A cost, I might

add, that would have to be absorbed by the taxpayers if the present trend continues.

The United States Supreme Court has recently held that local property taxes are a constitutionally valid method for financing public education notwithstanding the fact that property tax bases from one community to the next may be inequitable.

Local property taxes in Massachusetts, as in other states, have been rising steadily, particularly in urban areas where a movement towards the suburbs has weakened the already thin tax base. H.R. 49 would provide relief not only for those taxpayers with children in attendance at non-public schools, but also relief for non-parents and the parents of public school children in areas which could be hardest hit by massive non-public school closings. Whether a non-parent or parent of a public school child pays property taxes, state and local income taxes, sales tax or a combination of all three to support local schools—these taxes will go up if additional students are thrust into the public school system.

The property tax, however, will have the strongest impact. In the Commonwealth of Massachusetts, non-public school enrollment decline between 1965–1971 cost the taxpayers \$66 million (A)—the majority of which was paid out of local property taxes. This additional expense was not, and in the future will not be evenly distributed across the state. (B) Only 33% of the public school districts have Catholic schools in them—and these schools, at least in Massachusetts, make up the majority of non-public schools. Generally, most transferees will start attending public schools in the same district as their former non-public school. Costs, then, will rise in those school districts which receive the transferred pupils, further exasperating the ever-burdened property taxpayers.

In my state, several legislators have recognized the need for relief in Massachusetts and there are currently three bills in committee which would accomplish on the state level, what H.R. 49 proposes on the Federal level.

With regard to the question of constitutionality, a decision by the Federal court in New York which is currently under review by the U.S. Supreme Court is *Committee for Public Education and Religious Liberty v. Boylen et al. v. Brydges* (U.S. District Ct. S. D. N.Y. Oct. 2, 1972). That decision upheld the validity of the N.Y. tax credit provisions for the following reasons:

(1) Not restricted to areas which by concession are known to contain practically only Catholic parochial schools. Rather, it covers attendance at all non-profit private schools.

(2) It does not involve a subsidy or grant of money from the Federal Treasury, *Walz* 397 U.S. at 674, 90 S. Ct. at 1414 (case challenging constitutionality of tax exempt status of church property). Court recognized that "granting tax exemptions to churches necessarily operates to afford an indirect economic benefit." Court also noted in *Walz* that grant of a tax exemption is not sponsorship since the government does not transfer part of its revenue to churches but simply abstains from demanding that the church support the state." In brief, the Court has in these instances accepted the view that exemptions differ from subsidies.

(3) Third, it has a particular *secular intent*—one of equity—to give some recompense by way of tax relief to our citizens who bear their share of the burden of maintaining the public schools and who, because of religious belief or otherwise, send their children to non-public full-term schools as is their constitutional right.

(4) Benefit to the parochial schools, if any, is so remote as not to involve impermissible financial aid to church schools. (The consistent legislative policy ever since the

1917 Revenue Act has been for Congress to permit the deduction of so-called charitable contributions from personal income.)

(5) There is a minimum of administrative entanglement with the non-public schools.

Non-public schools provide elements in education essential to a free society. Children and parents are afforded an alternative educational experience to the public schools through the existence of non-public schools. A heterogeneous school system can contribute more to the educational process than would a uniform system because of the rarity in educational philosophies and approaches to teaching. This diversity has little, or nothing to do with the sectarian basis of many non-public schools.

The philosophies and purposes of the various types of non-public schools are expressive of pluralism in our society, and they also reflect strong moral factors that serve society well. While the public school systems across the U.S. might be capable of absorbing all non-public school students, albeit at a significantly increased cost to taxpayers and disruption of the public schools, many less tangible, but nonetheless important benefits occurring from the private and parochial school systems would be lost to the nation and its citizens.

STATEMENT BY STATE REPRESENTATIVE RAYMOND L. FLYNN

I am here this morning to raise a problem crucial enough to warrant its being raised again and again—until at last our discussion yields a solution, refer to the frustrating question of how we are to effectively save ourselves from the serious cultural loss and enormous financial embarrassment which threatens our large cities in the wake of the probable destruction of the Catholic parochial school system.

I will not be convinced that the constitution of the United States makes this event inevitable. It can only be the case, should we permit this to happen that our wits are dull and our imaginations flacid.

Indeed, the very magnitude of the problem compels a solution. In Boston, the problem approaches sure catastrophe. More than 30,000 of more than 126,000 elementary and secondary school students attend non-public schools—and please remember, for example, that almost 90% of the elementary school students of Massachusetts in non-public schools are in Catholic schools.

Where does anyone think the City of Boston, which has already the highest tax rate in the nation, is going to discover the money or the facilities to absorb 30,000 more students—nothing less than 25% of the cities total elementary and secondary school population. Because we will have to turn again to the already overburdened middle class homeowners and tax payers, we are just going to price ourselves out of business as a viable residential community.

Let me pose to you a startling but very interesting question. Why is it that the same constitution, is used to force us all, at every level of government, to subsidize by tax exemption acres of church property and at the same time prohibits us from subsidizing by a personal tax exemption church facilities the lack of which will cost us a fortune to replace. This is a constitution, by that interpretation, which is picking our pockets—and both at once. (with both hands.)

Nor is this only a matter of money. The cultural loss to the city that will be involved, should the parochial system be destroyed, will be incalculable. More specifically, given the much higher quality of parochial school education, we will also suffer a serious academic loss.

Are we, therefore, compelled to impoverish ourselves not only financially, but also culturally and academically? This is a consti-

tution, or an interpretation of it, that grows more strange and stranger still.

Not only stranger, but less in touch with reality as all our citizens understand it. Just a few weeks ago at a meeting at St. Margarets Church in Dorchester, of which Speaker McCormack is a parishioner, several hundred parents confronted reality—and came close to losing their school. I know only too well that my own parish, the Gate of Heaven in South Boston, has no less urgent problem in the respect. The parish still has a school—but barely, and only because of the dedication and self sacrifice of the good parents of these children.

The inequity of all this is also a matter of real concern; for an important reason that the non public school parent finds it hard to support entirely the non-public school is that he has also to support the public school. That he should do so, in support of what has been called the common good, I do not dispute. But the common good seems lately, in this area, to be rather a secondary consideration in many minds.

The common good that I support is why the government pays farmers not to plant wheat. Then why can we not pay parents to keep their children in parochial schools? I support legislation that would provide income tax exemptions for parents paying tuition for children in non public schools. This involves no direct grant of money from government to the school, remedies the inequities of double taxation on some of our citizens, and most importantly, it will involve no governmental control.

Gentlemen, it is unreasonable for us to stand idle—allowing the demise of quality education in parochial school, while pouring millions into a declining public school system, and gentlemen, don't deceive yourselves, for someday, if not today, the American taxpayer will pay the price.

VA HOSPITALS

HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HAMMERSCHMIDT. Mr. Speaker, the adequacy of patient care in Veterans' Administration Hospitals has been the subject of controversial discussion in past weeks. Stemming from a House Appropriations Committee investigation, newspapers throughout the Nation cited generalized allegations of patient mistreatment and a poor level of medical service.

As a reflection of the other side of the story and an indication that substandard VA Hospital care does not exist throughout the system, I am inserting in the RECORD a recent article in the Fayetteville, Ark. Northwest Arkansas Times. Following this article are two letters to the editor of the Times from Arkansas veterans describing their first-hand experiences with VA medical treatment:

[From the Arkansas Times, March 9, 1973]

"PATTERN OF NEGLECT" DENIED BY LOCAL VA ADMINISTRATOR

There is no "pattern of neglect" in the Fayetteville Veterans Administration Hospital, according to Fred Hendricks, the administrator, who denied allegations made in a confidential Congressional report that the well-being of hundreds of thousands of patients in VA hospitals is endangered.

Congressional investigators for the House Appropriations Committee based their conclusions on interviews with VA officials and examination of VA records. The report said veterans have to wait for admission, suffer from cramped quarters, poor nursing care because of understaffing and "may leave in worse shape than when admitted."

"This simply does not apply to the local hospital," Hendricks said. "We are in a better position in funding for salaries, operating costs and personnel than we have ever been. Our report to the VA Committee stated we had no unfunded needs."

Hendricks said the hospital operates on a \$5.25 million budget compared to \$3.09 five years ago.

"I do not feel we are understaffed. Some 41 new positions were funded at the beginning of the fiscal year. This included five registered nurses, four licensed practical nurses, four nursing assistants, two physicians, a dietitian, social worker and other support personnel," Hendricks said.

NEW SERVICES

Another 32 positions are funded to staff new services which are expected to be in operation within the next few weeks, he said.

These include an intensive care unit, a coronary care section, a respiratory treatment center and a pulmonary function laboratory. Recruitment is under way for these 32 positions which include 12 registered nurses; 12 LPNs; one physician, a pulmonary function laboratory technician and other support personnel.

Hendricks said veterans do not have to wait for admission here. "We have no waiting list and have not had one for two years. All sick veterans, who the admitting doctor feels need hospitalization, are admitted immediately," he said.

"Our space is totally adequate and beds are not overcrowded. We are in compliance with national standards as far as the number of square feet required per bed," Hendricks said.

The report indicated the White House Office of Management and Budget was cutting VA hospitals, may force 29 hospitals to close by 1975 and "may intend to force the VA out of the hospital business entirely."

[From the Arkansas Times, Mar. 14, 1973]

FROM THE PEOPLE—BUM RAP FOR THE VA

To the Editor:

I notice in the papers that the VA Hospitals have been accused of not treating patients properly, etc. I can speak for myself in this matter. When I left the service I was under treatment, and I reported to the VA here in Fayetteville in 1963.

Since that time I have been treated as both an IN patient, and an OUT patient, depending upon my condition. Eventually, as time passes, I have become unable to work. The VA in Fayetteville sent me for examination and testing to the VA in Little Rock, where I received the type of treatment found only in the best hospitals in the nation.

Believe me, I know they can always use help, and more help, but to accuse them (the nurses, doctors, orderlies, etc.) of neglect, on the whole is irresponsible. During my stays as an IN patient in both of these hospitals I received the best care and did not see a single patient neglected.

I did see doctors and nurses work beyond their time to help patients. Now I don't say it can't happen—that's too brash a statement—but surely I can say it does not happen here, or in Little Rock. And certainly not in most cases.

By the way, I volunteer to help when I can in the VA Hospital to give those who cannot do for themselves an extra bit of comfort and aid, and I am sure more volunteers would be appreciated in any VA Hospital.

HENRY C. COOGAN.

[From the Arkansas Times, Mar. 19, 1973]

FROM THE PEOPLE—THE BEST THERE IS

To the Editor:

The other day you carried an article about VA Hospitals. That article was full of false information.

In the first place no veteran that needs medical treatment is ever turned away. In the past two years I have had two major operations. One here at the Fayetteville VA, and the other at the Little Rock VA Hospital.

I could not have received better treatment and care at any hospital in the USA, than I did at these VA Hospitals.

The doctors, nurses and staff of those VA Hospitals are the most wonderful and dedicated people I have ever met.

R. L. HUTCHCRAFT.

MARINE CITY, MICH., YOUNG PEOPLE HELP BUILD "A LITTLE BETTER WORLD"

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. O'HARA. Mr. Speaker, it has been my personal privilege this week to serve as host to an outstanding group of young people from Marine City, Mich.—young people interested in the processes of their government and in the interrelationship between their government and their own community.

Each of us, Mr. Speaker, has numerous opportunities to greet groups of his constituents who journey to their Nation's Capital to learn more about how their Government operates, and I have enjoyed many such occasions in the more than 14 years that it has been my privilege to serve in this body.

What makes this group of young people unique is the nature of the social mission which binds them together. These young people belong to the Marine City chapter of the United Nations Association, and they call themselves, "A Little Better World." The name they have chosen to identify their group springs from the simple philosophy that, "if every one does just a little bit, no one has to do a lot." This is the concept that is worth pondering, because it calls on each member of the group—and, by inference, on each member of society—to do his part toward making their community, their State, their Nation and their world, a little better place in which to live.

It is intriguing, Mr. Speaker, that these young people call on each other to do "just a little bit" and yet, through their group activities, they have done far more than just a little. They have, in fact, done a lot for their community—and, in the process, have done a lot for their own individual and group development.

These young people have, for example, established their own activities center—and have then turned around to the senior citizens of their community and made their headquarters available for older people from 10 a.m. to 3 p.m. each day. This demonstrates a concern for others, particularly the elderly who are so often isolated from the community.

It also demonstrates a sensible utilization of facilities that otherwise would be left to stand idle during the hours when these young people are in their classrooms. It is pleasant to note that the senior citizens have responded enthusiastically to this offer from the young people, and are utilizing the "Little Better World" center on a regular basis.

These young people have identified other needs within their community, and have acted to meet those needs. They made available office space and a telephone in their building, so that a social worker could be assigned to Marine City and provide counseling for families in trouble. In similar fashion, the young people provided space to house a counselor on alcohol and drug abuse. And a "Little Better World" has made its facilities available once each week so that the Air Force can use it for recruiting purposes.

Not all of their work has been as dramatic. They have taken on the more menial tasks of painting and decorating rubbish containers for use in the downtown area of Marine City. They have collected refuse from the shores of the St. Clair River. They have prepared Christmas baskets for needy families in their area. And they have gone door-to-door to collect funds for UNICEF. As I say, Mr. Speaker, this may not be very dramatic—but it is a fine example of young people concerned about the community in which they live, and sufficiently motivated to do something about it.

It was my privilege to have these young people as my guests at breakfast this week. The young people were honored by the presence at that breakfast of the senior Senator from Michigan, the Honorable PHILIP A. HART. Senator HART and I talked with these young people about the origins and development of their government—and we emphasized the same point: That this is a government which was founded by mortal men, and which has been brought forward for nearly two centuries by mortal men. We recognize that governments do err. We know that men do make mistakes. Yet we know that our form of government has endured because men of good will have worked to correct their errors in a free, open and democratic fashion. We explained to these young people that progress is sometimes slow under our system of government. Certainly a monarchy or a totalitarian government might be infinitely more efficient—but, as we told these young people, neither would be as effective as our present system, which calls for the collective judgment of 435 Members of this House and the 100 Members of the other body.

The point, of course, is that the manner in which the Congress of the United States operates—with each Member making his contribution to the deliberations and taking part in the decision-making process—is precisely the same way in which these young people, through their "Little Better World," are approaching the problem-solving efforts of their group.

Mr. Speaker, I was most favorably impressed by these young people, by their interest in the world around them—not only in the world of Marine City but in the world of their nation and the United Nations—and by their keen grasp of the issues. I was also impressed by the quality of the guidance they are receiving from their adult associates—Mrs. Grace Zapel, who helped them found the organization; the Honorable John R. Beauchamp, a member of the City Commission of Marine City; and Mrs. Mary Lou Shackett, who assists Mrs. Zapel in the day-to-day workings of "A Little Better World."

I would like to add a few words in particular tribute to Grace Zapel. A former organizer for the United Auto Workers, a member of a union morale team which visited England to lift the spirits of American servicemen stationed there in the days before the Normandy invasion in World War II, an associate of the late Ambassador John Winant, an ardent supporter of the United Nations, and a school teacher—Grace Zapel is one of life's true humanitarians. These young people are the richer for this opportunity to be associated with Grace Zapel in making this truly, "a little better world."

MEAT BOYCOTT

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ZWACH. Mr. Speaker, the President has declared ceilings on meat prices and consumers are planning a meat boycott, this at a time when the price of meat animals has just reached the point it was 20 years ago.

Since that time, wages have increased 230 percent and hospital costs have more than tripled. Meat prices at the farm went up only 12.6 percent.

Ed Wimmer, president of Forward America, in a letter to the editor of the Cincinnati Enquirer, dealt with the entire question of meat prices in a very enlightening manner.

I would like to insert Mr. Wimmer's letter in the CONGRESSIONAL RECORD and strongly recommend its reading by my colleagues and all of the other readers of the RECORD. The letter follows:

Letters to the Editor,
The Cincinnati Enquirer, Cincinnati, Ohio.

SIR: Consumerism reached its lowest level of intellectual bankruptcy when a loud-mouthed, self-styled male spokesman for the boycott movement against the price of beef was cheered when he said:

"We are going to bring the meat industry to its knees."

The facts are, that the meat industry is one of the biggest in the United States, and American cattle raisers, along with hog producers, feeders, packers and independent retailers, have operated on the lowest over-all profit rates of any industry in the country, and have gone broke by the hundreds of thousands.

What the screaming housewives and some of their political front men have overlooked,

is that Russia bought a billion dollars worth of feed grain in this country, creating a shortage on the domestic market. That Russia paid a ridiculously low price for this grain after \$10 billion in war debts were cancelled; and then Russia took some of its gold and bought up our cheap paper dollars floating around the world, paying us off in our own "trading stamp coin" and they saved a hundred million dollars.

Not a peep from the housewife boycotters or the chains against the deal; not a word of sympathy for those who lost over 500,000 head of cattle that died in the rain soaked mud of Iowa; Kansas, Nebraska, and other states; or a word about the storms that destroyed acres of fruit and vegetables and much of the Southern poultry industry.

Governor Ronald Reagan of California is one of the lone voices urging housewives to end their boycotts, saying that for the first time in several years many of the producers were covering only a small part of their past losses.

Since the 1930's the American housewife has bought bargain priced fruits and vegetables harvested by the lowest paid wage earners in America, with half-starved mothers and children working in the fields like slaves. In this period, 3,000,000 farm families and 100,000 cattle feeders abandoned their farms and feed lots because they couldn't get a fair return on their poultry, pork, beef, and grains.

One of the biggest contributing factors to our federally fed, artificial debt- and deficit-prosperity, has been poor returns to agriculture, and now that the farmer is living off the consumer for a change, all hell is breaking loose.

A question I would like to ask: Who will hire the unemployed workers and pay the taxes lost through the great harm being brought to a great industry—the harm now building up? The answer, of course, is "the boycotting consumer".

Yes, we are living in pretty sad times when one group of people can vindictively threaten to bring an industry "to its knees".

Sincerely,

ED WIMMER,
President, Forward America, Inc.

NATIONAL CONFERENCE ON SOVIET JEWRY WARNS OF CONTINUING POLICE REPRESSION OF SOVIET JEWS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. DRINAN. Mr. Speaker, I include herewith a statement issued by the National Conference on Soviet Jewry denying that there have any dramatic improvements in the situation of Soviet Jews desiring to immigrate from Russia.

The National Conference on Soviet Jewry speaks for nearly 4 million American Jews through the 34 member agencies of the conference and over 220 affiliated local Jewish community councils and federations.

The following statement was made by the conference in response to a statement made by Soviet trade official Vladimir S. Alkhimov in Washington, D.C., in which he asserts that there have been "dramatic changes affecting the emigration of Soviet Jews."

The following information should strengthen the case for the resolution introduced by our colleagues Congressman CHARLES A. VANIK and Congressman WILBUR D. MILLS.

The resolution follows:

The assertions yesterday by Soviet trade official Vladimir S. Alkhimov, in regard to alleged dramatic changes affecting the emigration of Soviet Jews are welcome if, in fact, they reflect new developments. They do not.

In truth, there are over one hundred thousand pending affidavits for Soviet Jews which have not been acted upon by Soviet officials. Despite the welcome increase in emigration in 1972, this only represented one fourth of those Jews known to have such affidavits. Soviet officials are playing a dangerous numbers game when they say that over 95% of all applications last year have been settled. In reality the officials are referring only to those finally permitted to leave after much harassment. In the meantime, thousands of Jewish families have been waiting, in vain, for years. Most of them are under constant surveillance and have been unemployed for months on end.

Mr. Alkhimov distorts the facts when he asserts that "only ten percent (of those who actually emigrated) had to pay something." In reality the imposition of a retroactive ransom tax last August, for those who leave the Soviet Union, has already cut down the number of educated Jews permitted to leave by more than one half—from over 20% in the first part of 1972 to less than 10% in the last six months. Soviet Jews have not been able to pay the \$15,000 or \$20,000 tax necessary to leave, and hundreds, perhaps thousands, have been discouraged from applying.

Such bland comments by Soviet officials overlook the high degree of continuing police repression of Soviet Jews. Illegal searches and seizures by secret police have led to closed trials of Jewish activists. Jews in Moscow, Minsk and Thilisi face additional trials in the next few weeks.

The Soviet official, who along with several colleagues has undertaken to lobby on legislative matters while in Washington, as guests of this country, has repeated assertions made two months ago by the Soviet propaganda outlet—Novosti Press Agency. Alkhimov's comments therefore do not reflect any fundamental change in Soviet policy. He has tried to convey a false impression to American public opinion.

HISTORIAN SCHLESINGER EXPOSES MYTH OF SO-CALLED EXECUTIVE PRIVILEGE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, Arthur Schlesinger, writing in Friday's Wall Street Journal, adds significantly to the current dialog on so-called Executive privilege, that mythical entity which exists as a figment in the minds of some Presidents.

What some call "Executive privilege," I call a simple courtesy which the Congress extends to Presidents allowing them a limited amount of intimate dialog with advisers; dialog which the Congress decides is inviolable from congressional scrutiny.

The stress here is on "limited."

Mr. Schlesinger's comments run parallel with a study prepared for me by the Library of Congress which shows clearly that the current interpretation of so-called Executive privilege by the White House did not begin in the Washington administration, but in 1954 when President Eisenhower refused to allow executive employees to testify before the Congress.

I include Mr. Schlesinger's article in the RECORD at this point:

[From the Wall Street Journal, Mar. 30, 1973]

EXECUTIVE PRIVILEGE: A MURKY HISTORY

(By Arthur Schlesinger Jr.)

"The doctrine of Executive privilege is well established," said President Nixon in his statement of March 12. "It was first invoked by President Washington, and it has been recognized and utilized by our Presidents for almost 200 years since that time." With that historical flourish the President issued still another challenge to the Legislative Branch of government, declaring that not only members but former members of the President's White House staff "shall follow the well-established precedent and decline a request for a formal appearance before a committee of the Congress."

Most commentators, while noting that President Nixon was filing an unprecedentedly large claim for Executive privilege, appear to accept his idea that the doctrine has solid and unassailable historical basis. The impression is abroad that George Washington and all his successors, confronted by unacceptable congressional demands for information, simply cried "Executive privilege," and that settled the matter. Yet, when one looks into the problem, one encounters some curious facts. For example, the very term "Executive privilege" seems itself to be of fairly recent American usage. My research is far from exhaustive, but I cannot find that any President or Attorney General used it before the Eisenhower administration. You will look in vain for it as an entry in such standard reference works as the Smith-Zurher "Dictionary of American Politics," or "The Oxford Companion to American History," or Scribner's "Concise Dictionary of American History." It is not even to be found, I was dismayed to discover, in "The New Language of Politics," compiled by William Safire of Mr. Nixon's very own White House staff.

Of course this may seem a semantic quibble, since the claim of the Executive to deny information to Congress is certainly not novel. Still, if the doctrine of "Executive privilege" were all this well-established and had the sanction, as Mr. Nixon assures us, of almost 200 years of American history, one would expect that the phrase would have been in common usage during the first 180 of these years.

President Nixon's historical recital undoubtedly derives from vagrant memories of Eisenhower days. In May 1954, in the midst of the Army-McCarthy hearings, President Eisenhower instructed employees of the Department of Defense that, if asked by the McCarthy Committee about internal exchanges within the Department, they were "not to testify to any such conversations or communications or to produce any such documents or reproductions." This was an unprecedentedly sweeping denial to Congress. But it had a certain moral justification in the atrocious character of the McCarthy inquisition, and it was given legal color by an accompanying memorandum from Herbert Brownell, the Attorney General, assigning to the President "an uncontrolled discretion to withhold the information and papers in the public interest." Mr. Brownell then set forth a parade of supposed historical precedents,

beginning with Washington. Neither the Eisenhower directive nor the Brownell memorandum, by the way, used the term Executive privilege.

The Brownell memorandum itself had a curious history. The "uncontrolled discretion" phrase—indeed the whole sentence from which it was taken, and a number of other sentences too—were lifted from a series of articles by a Department of Justice attorney named Herman Wolkinson published in the "Federal Bar Journal" in 1949. So too were the historical examples. In recent years the Wolkinson-Brownell version of history, later amplified by Attorney General (now Secretary of State) William P. Rogers in 1958, has received careful examination, most notably at the hands of J. Russell Wiggins, a newspaperman turned historian, and of the legal scholar Raoul Berger. Their research makes it clear that these examples do not prove what President Eisenhower and now President Nixon supposed they prove.

THE WASHINGTON PRECEDENT

Did George Washington, for example, ever invoke Executive privilege? In the first case of supposed presidential denial—a House inquiry into the St. Claire expedition in 1792—Washington actually gave the House all the papers it wanted and sent his Secretaries of War and the Treasury before the investigating committee. In the privacy of the Cabinet, the President and his colleagues agreed that, as Jefferson noted in his diary, "the Executive ought to communicate such papers as the public good would permit, and ought to refuse those, the disclosure of which would injure the public; consequently were to exercise a discretion"; but this notion was not transmitted to the Congress nor announced to the public. The second Washington example is equally irrelevant. When the House asked for papers relating to the Jay Treaty, the President declined to send them on the ground that the House had no constitutional role in the treaty-making process and that anyway the papers had already gone to the Senate. In neither case, in short, did Washington withhold from Congress the information it requested. In neither case did he invoke Executive privilege.

It would have been surprising had he done so. For the prevalent assumption, inherited from British parliamentary experience, was that Congress was among other things a "grand inquest" and thereby had a right to inform itself on public matters. The Constitution itself laid on the President the duty "from time to time [to] give to the Congress Information of the State of the Union," nor was this duty considered to be discharged by the annual presidential message. Though, as Washington's Cabinet thought, there might be occasions when disclosure as a practical matter could be against the public interest, the Executive presumption in the early republic was always that Congress should and would receive the information it sought. There was certainly no idea of an "uncontrolled" presidential discretion.

Our first Presidents were in consequence exceedingly chary about denial. Jefferson once withheld material he had received on the Burr conspiracy. He explained that it contained "a mixture of rumors, conjectures and suspicions," but in any case the congressional request had specifically exempted anything the President "may deem the public welfare to require not to be disclosed." Monroe once withheld on the ground of potential damage to innocent persons; again Congress had asked for information only in "so far as he may deem compatible with the public interest." In both cases Presidents were exercising, not discretion they claimed for themselves, but discretion conferred on them by Congress. The first President to invoke privilege in anything like the contemporary sense was Jackson on two or three occasions;

but his practice did not settle the constitutional issue.

Through most of American history the situation rocked along, with Presidents acceding to most congressional requests but sometimes reserving and very occasionally insisting on their right not to do so, and with Congress in such cases generally acquiescing for practical reasons in presidential denial but never admitting any principle of uncontrolled presidential discretion. Disagreements were always absorbed in the political process, and contention never led to a serious Executive-Legislative showdown.

MR. BROWNELL'S CLAIM

Mr. Brownell did make the curious claim in 1954 that the "courts have uniformly held" that the President had uncontrolled discretion. But the Attorney General did not cite a single case—for the entirely understandable reason that there were no cases to cite. There had never been up to 1954 a judicial decision dealing with the Executive denial of information to Congress. Nor has there been one to this day.

Thus up to twenty years ago, presidential withholding, not yet blessed with the impressive sobriquet of Executive privilege, was a practice to which Presidents very occasionally resorted in cases where they could expect support and understanding in Congress and in public opinion. Our system in its pragmatic beauty had declined to confront the theoretical question whether Congress had an absolute power to demand or the presidency an absolute power to deny. On the whole, Executive privilege was not an urgent issue.

What precipitated the contemporary definition (as well as the designation) of Executive privilege was the system of internal security set up during and after World War II. Some members of Congress, not always the most admirable, liked to get into personal security files, and Presidents were reluctant to indulge them for much the reasons advanced by Jefferson and Monroe—such files were too often a mixture of rumor, conjecture and suspicion calculated to do damage to innocent persons. So in 1941 Robert H. Jackson, then Attorney General, declined to give FBI reports to the House Naval Affairs Committee. His list of historical precedents undoubtedly supplied the basis for the Wolkinson articles.

The Wolkinson inquiry itself was undoubtedly stimulated by the determination of the Truman administration not to give security files to the House Un-American Activities Committee. This determination, by the way, was angrily protested by Congressman Richard M. Nixon of California, who said on April 22, 1948, that the Truman order "cannot stand from a constitutional standpoint." It would mean, young Mr. Nixon continued, "that the President could have arbitrarily issued an Executive order in the Meyers case, the Teapot Dome case, or any other case denying the Congress of the United States information it needed to conduct an investigation of the Executive department and the Congress would have no right to question his decision." Add the Watergate case to Mr. Nixon's list, and it would make a pretty good speech today for Senator Ervin or Congressman Moorhead.

It was similarly Joe McCarthy's inquiry into the loyalty of individuals that provoked the sweeping Eisenhower directive of 1954. But the language of the Eisenhower directive covered matters far beyond the original question of security files and ushered in the greatest orgy of Executive privilege in American history. From June 1955 to June 1960 there were at least 44 instances when officials in the Executive Branch refused information to Congress on the basis of the Eisenhower directive—more cases in these five years than in the first century of American history. Yet even President Eisenhower, not grasping the truth recently revealed to Presi-

dent Nixon about the immunity of White House staff members, permitted Sherman Adams to appear before a congressional committee in 1958.

PRESIDENT KENNEDY'S CONCERN

When President Kennedy came into office, he was considerably disturbed by the growing and manifest abuse of Executive privilege. He had served 14 years in Congress; his Attorney General had been counsel to congressional committees; and they took effective action to bring the matter back into its historical balance. Still, as Congressman Moss presciently said in 1963, "The powerful genie of Executive privilege momentarily is confined but can be uncorked by future Presidents."

President Nixon has uncorked it with a vengeance. The claim that not only present but past members of the White House staff are immune to congressional inquiry is wholly unprecedented. The President, it is true, says "Executive privilege will not be used as a shield to prevent embarrassing information from being made available but will be exercised only in those particular instances in which disclosure would harm the public interest." But it is hard to see how this principle would save John Dean or Dwight Chapin—as Mr. Nixon seems determined to save them—from undergoing congressional interrogation about the Watergate affair. Here, if anywhere, the presidential concern can only be political embarrassment—unless, of course, our President has reached that point of self-delusion where he thinks anything that hurts his administration politically must by definition harm the public interest.

President Nixon, like President Eisenhower before him, makes a great deal of the separation of powers as a ground for Executive privilege. But the Constitution does not establish impassable barriers between the branches of government. Justice Jackson put it memorably: "While the Constitution diffuses power the better to secure liberty, it also contemplates that practice will integrate the dispersed powers into a workable government. It enjoins upon its branches separateness but interdependence, autonomy but reciprocity."

When congressional requests have been too outrageous, public opinion—indeed, responsible congressional opinion—has accepted presidential refusals. But a President has the correlative duty to fill all reasonable congressional requests for information. He has the responsibility to preserve the spirit of comity on which the separation of powers depends. He is not an absolute monarch, nor is his Executive privilege uncontrolled. President Nixon's extravagant claims find no support in historical precedent.

As Madison said in the 49th Federalist, none of the branches of government "can pretend to an exclusive or superior right of settling the boundaries between their respective powers." If President Nixon is determined to outdo all his predecessors and push his extraordinary claims to the point of unresolvable conflict with Congress, then the disagreement between two branches of government might well be passed on to the third. The Supreme Court has never had occasion to consider the issue of Executive privilege. Perhaps this is an idea whose time has come.

CONSUMER PROTECTION—INEVITABLE AND INEXORABLE

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BRASCO. Mr. Speaker, for the past decade, there has been a growing

awareness in the Nation that the average shopper is being victimized in a number of ways by those providing goods and services in the marketplace.

Ralph Nader probably will be noted by historians as the first person who took the concept of "consumerism" and made it meaningful to the mass of Americans, while prodding Congress to take its first halting steps toward reform in this area. We have come a long way since then in terms of awareness and indignation. Unfortunately, in terms of concrete, effectively enforced measures, we are woefully remiss as a society.

We know now much of the food we consume is "doctored" with a variety of additives, many of which are believed by some authorities to be unsafe. We know now that the Food and Drug Administration, on paper a consumer safety organization, is in fact basically a protector of industry, which it is required by law to police on behalf of the consumer.

We know now this agency is sort of an "on-the-job-training" point for food and drug industry executives, who put in stints there between moves to other private organizations.

We know now that government is aware of and winks at a variety of shoddy corporate practices which endanger the public, offer us worthless merchandise and services and take staggering sums in profit from the average consumer.

We know now some such practices are perpetrated by small groups of large companies, acting in collusion with one another.

In the past several years, we have learned about Corvairs, bad tires, cars made to fall apart in low-speed collisions, tainted foods, dirty meat, cancerous poultry, warranties that do not warrant, and guarantees guaranteeing nothing but continued aggravation.

We now know about hot dogs, containing more garbage than real meat and more additives than garbage, as well as 30 percent fat, which we are told is good for us.

We know our foods are not truthfully labeled in terms of real ingredients identifiable to the discerning concerned shopper.

We know they are not identifiable in terms of nutritional content.

We know they are not labeled to inform us when a product should be taken off the shelf.

We know there is no uniform system of retail quality grade designations. There is no requirement for labeling of food, drug, and cosmetic products to contain name and place of the true manufacturer. If these makers are so proud of products they sell, and their cacophonous advertising dins such messages into our ears, then there is no reason why an average shopper cannot be told on the label who makes it and where his plant is located.

We have no unit pricing. Nor do we possess any information on labels of durable consumer products as to performance life of the product.

Nor are we ever informed of the date of manufacture of any product whose design or performance may be changed. Here is perhaps one of the worst scandals

of all. Today industry deliberately seeks to make product life as short as possible and models as short lived as it dares. This in turn gives them an excuse to substitute a new model, declare others obsolete and therefore desirable to replace. Even though the older model may be perfectly adequate, industry feels it must hustle products on and off the consumer stage as fast as possible in order to maximize profit and minimize consumer use of what they peddle.

All this, mind you, to accompaniment of the most outrageous, ridiculous claims by Madison Avenue hucksters who would not know a legitimate product claim if they tripped over it in their board rooms.

Meanwhile, the public is beset on all sides by what can best be termed a "hustle," of the first chop. The great "game" is to enter some contest, promising the consumer something for nothing, usually an exotic trip or some glittering assortment of merchandise. Such promotional games are almost always rigged in some manner. For years a continuing battle has raged in Washington as consumer advocates have sought to get the Federal Trade Commission to use its authority to outlaw these frauds. Alas, the battle too often has gone against the public; special interests have too often prevailed.

What it all boils down to is that the consumer in America today has never had it so unsafe, tainted, flimsy, and false.

Good consumer protection laws sit on the Federal statute books unenforced by civil servants who remain paragons of paper shuffling and masters of bureaucratic obfuscation.

Whatever happened to the Safe Toy Act, several years on the books? Piously we are informed by the FDA that they are working day and night to get unsafe toys off store shelves. The same is true for the Flammable Fabrics Act, designed to save lives of 4,000 and more small children who burn to death because the Federal Government has taken years to make manufacturers flameproof garments and fabrics.

A cumulative education process is required, in tandem with grim determination on the part of many in Congress to keep pressing the consumer protection cause until we have cleansed the marketplace of products, practices, and entities who find it more profitable to peddle junk, tell lies, and deceive the public than to perform with any degree of honesty. Several Members of the House have been fighting this battle for a number of years. One is our distinguished colleague, Mr. ROSENTHAL of New York. He has again this year introduced a package of excellent, constructive consumer protection measures. As I did previously, this time I am joining in sponsorship of these measures; all of them. Each is badly needed. Each will eventually be enacted into law. Each will be battled over in this Congress, and it is my pleasure to join in that struggle.

These are the measures in question:

First. H.R. 1650, Truth in Food Labeling Act—requiring full disclosure of ingredients by percentage according to their common names.

Second. H.R. 1652, Nutritional Labeling

Act—requiring statement of nutritional content of food products.

Third. H.R. 1654, Open Dating Perishable Food Act—requiring labeling of date beyond which products should not be sold.

Fourth. H.R. 1656, Consumer Food Grading Act—requiring a uniform system of retail quality grade designations.

Fifth. H.R. 1658, Honest Label Act—requiring labeling of food, drug, and cosmetic products to contain name and place of business of true manufacturer.

Sixth. H.R. 1660, Unit Pricing Act—requiring disclosure by retailers of the unit price of commodities.

Seventh. H.R. 1662 meat price freeze—stabilizing the retail prices of meat at November 1972 prices.

Eighth. H.R. 1664, meat quota repeal—repealing the Meat Quota Import Act of 1964 to increase the supply of lower cost meats.

Ninth. H.R. 1667, Performance Life Disclosure Act—requiring manufacturers of durable consumer products to disclose on a label the performance life of each product.

Tenth. H.R. 1668, Appliance Dating Act—requiring the date of manufacture of any product whose design or performance capabilities may be changed.

Eleventh. H.R. 1670, Sales Promotion Game Act—prohibiting manufacturers, producers or distributors from requiring or encouraging any retail seller to engage in promotional games.

Twelfth. H.R. 1672, Intergovernmental Consumer Assistance Act—providing Federal grants and technical assistance in the establishment and strengthening of State and local consumer protection offices.

It all boils down to a few very essential principles. Do consumers have a right to know what is in a product, who makes it, when it was made and what its nutritional value is? I say yes.

Do they have a right to be free of advertising gimmicks, phony guarantees and warranties, and similar deceptive practices? I believe they do.

If Upton Sinclair were alive today and could see what has happened to the American marketplace, he could write an updated version of "The Jungle," hitting American in the digestive tract again. Only he could add chapter after chapter dealing with other frauds infesting the marketplace today.

Government is as guilty as private business. It has no will to protect consumers today, just as it has no will to seek enforcement of laws already on our statute books.

Who, then, is the more guilty party? The manufacturer who deliberately puts bad perishables or unsafe, unworkable products on the market? Or is it the government bureaucrat, safe within the civil service system, who by his own inertia prevents enforcement of existing law? Both are equally to blame. Both should be equally exposed and mercilessly dealt with. Each of these proposed measures will eventually become law. Consumer protection is a concept that can best be termed both inevitable and inexorable in its progress toward fruition.

BUREAUCRATIC ARROGANCE IN OEO

HON. ROGER H. ZION

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ZION. Mr. Speaker, a few weeks ago the Indianapolis News printed an article criticizing the OEO employees who brought a class action suit against Acting OEO Director Howard Phillips. Author Lou Hiner points out that employees are far more interested in keeping their own jobs than in providing programs for the poor.

Mr. Hiner's article follows:

[From the Indianapolis News, Mar. 5, 1973]
BUREAUCRATIC ARROGANCE IN OEO

(By Lou Hiner Jr.)

It was the height of bureaucratic arrogance last week when a group of employees of the Office of Economic Opportunity filed a law suit challenging the right of the Nixon administration to curtail or abolish OEO programs.

The class action suit was filed in "behalf of all OEO employees" against Howard Phillips, acting OEO director, but actually it was an indirect challenge to President Nixon which said, in effect:

"Just try to abolish OEO. We'll show you who's running things!"

Phillips has been the target for some time of certain lawyers' groups, community poverty agencies and persons supposedly working for him in OEO.

(The law suit was not exactly 100 per cent in the interest of the nation's poor people. One of the charges was that OEO's 2,100 employees would suffer "irreparable loss or injury due to the loss of their jobs.")

Phillips' critics portray him as a tight-fisted, heartless gauleiter who is racing to dismantle OEO and cause increased suffering among the poor. The Washington Post, which takes a dim view of Phillips and a bright view of OEO, quoted an unidentified source as describing Phillips: "He is not a nut. He is a very conservative guy who thinks this (OEO) is a lot of crap."

The 32-year-old Phillips has said on several occasions that he is carrying out President Nixon's announced program to transfer some of OEO's programs to other agencies which in effect are duplicating those programs. But many of the poverty help programs will be given back to the states and local communities and financed under revenue sharing.

It is Phillips' theory that local people know more about handling problems of their poor than a bunch of bureaucrats in Washington. He also believes the dollar will stretch farther on the local level.

"The nation's poor are entitled to a dollar's worth of results for every dollar spent in their name," Phillips told a reporter, and he emphasized again: "I don't think you'll see any wholesale termination of programs."

Rep William O. Bray, R-Ind., has struck out at some of those who are griping about the OEO phase-out. He aimed his barbs particularly at some local officials who have said such action may lead to civil disturbances.

"What are we to say about this witless chatter? It is just the thing to inflame and outrage various groups and send them once more helling into the streets on a mindless, violent orgy of destruction," Bray said. "Is this intended to frighten the Congress? The administration? Or, the taxpayers?"

Sen. Jesse A. Helms, R-N.C., has said OEO's advocates have generated "a lot of misinformed debate about the value of these programs and their place in the overall structure of national policy."

Helms said that since 1964 more than \$2.8 billion has been poured into OEO programs with few concrete results to show in improving the economic opportunity for the poor. He conceded some of the programs have worked in certain localities and he observed:

"Any community action program that has demonstrated a fine record should be able to convince state, local and private sources to continue funding. . . . If they had tangible results, they should have the know-how and the experience to argue persuasively with local leaders."

The basic concept of the community action programs was to mobilize local resources to help the poor. Helms explained his opinion of what happened:

"The vast majority of these community action projects have been merely a conduit to fund the salaries of the local organizers, creating unseemly divisions among various factions in the poor neighborhoods scrambling for salaries. These projects suffered from lack of accountability, both in financial terms and in accomplishment."

Often 85 per cent of OEO's funds for local projects went for staff salaries and other administrative expenses. People administering those projects seldom scoured the local bushes for money to help pay the costs.

As Helms has said, no one is arguing that the social problems of the country should be ignored. But no one can hold up the nine-year-old OEO as the model for mobilizing community resources.

"It is plain that the federally funded community action agencies have failed to provide the poor with workable examples of true community action. Some people seem to regard the OEO programs as a sop to the poor, a symbol of national interest. Yet, their effect upon the improvement of the lot of the poor has been negligible," Helms told a newsmen.

**JAMES G. HANLON, VICE PRESIDENT
OF WGN CONTINENTAL BROADCASTING CO.**

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ANNUNZIO. Mr. Speaker, on Monday, March 26, Chicago lost one of its most distinguished citizens—Mr. James G. Hanlon, vice president and manager of public relations and advertising for the WGN Continental Broadcasting Co.

He had been associated with WGN for almost 30 years, and during that span of time, he compiled an admirable record of public service in the broadcasting field.

Beginning in 1943 as a writer with the WGN Publicity Department, he moved up quickly to public relations manager in 1948, manager of promotion and research in 1960, and manager of public relations and advertising in 1965.

Jim was one of those indispensable people in whom most everyone placed the highest trust, and because of his basic decency and selflessness, he gained many friends for WGN.

His ability and dedication merited his election as a vice president of WGN Continental Broadcasting Co. in 1968. Additionally, he served as acting chairman of the company's editorial board and as a member of the WGN continental expansion committee in 1970. In these capacities, he made a major contribution to-

ward guiding the growth and development of WGN during its formative years.

Ward Quaal, the outstanding president of WGN Continental Broadcasting Co. said of Jim Hanlon:

We lost a great friend and colleague who was one of the architects of broadcasting and who in the early days of our administration helped mold the new WGN radio and television of today.

Prior to joining WGN, Jim Hanlon was a highly-regarded columnist, feature writer, and editorial production manager of Radio Guide and its successor, Movie Radio Guide.

Mrs. Annunzio joins me in extending our deep sympathy to his wife, four children, and to all of his coworkers at WGN, for Jim Hanlon was a man who was highly respected and he will be sorely missed by those who had the opportunity of knowing him.

ABORTION

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HOGAN. Mr. Speaker, today I would like to insert further excerpts of medical evidence from the Massachusetts criminal abortion trial, *Commonwealth against Brunelle*.

The excerpts follow:

GUEST COMMENT

This opinion discusses most of the relevant legal issues at a time when the defense of abortion statutes was almost solely predicated upon the state's inherent right to protect life. Although still effective, this argument by implication or, as lawyers say, by negative pregnant (e.g. I have not beat my wife today.) inferentially concedes that a state such as New York may determine that it will not protect fetal life. Currently, and because of the New York statute, the argument has shifted focus to the state's duty to protect human life at any stage of its development.

In syllogistic form the current argument is as follows:

1. The United States Constitution protects all individual human life from destruction without due process or without the equal protection of the law.

2. But fetal life is individual human life.

3. Therefore, fetal life cannot be destroyed without having first been given the protection of due process and equal protection under the United States Constitution.

Before either the due process of equal protection clauses are applicable to the abortion situation, the abridgement of those clauses must be found in some form of state action prohibited by the Fourteenth Amendment to the United States Constitution. This state action occurs (as it did in New York) when the state withdraws all penal sanctions which formerly protected uterine life. The withdrawal of protection from this segment of humanity constitutes a deprivation under the Federal Constitution of that portion of humanity's due process and equal protection rights.

For example, if the state were to withdraw its protection from a certain class of individuals as the Nazi State did *vis-a-vis* the Jew in Germany, then under our Constitution any individual in that group would be deprived of due process of law and equal protection of the law. Such an invidious discrimination is prohibited by our laws.

At the time *Commonwealth v. Brunelle* was argued, the defense made to the attack on the abortion statutes was that the state had the power to declare fetal life human life, and, therefore, protect it by statutes which allowed the taking of that fetal life only when necessary to save the life of the mother. The legal theory relied upon for the therapeutic exception was that of self-defense. An individual attacked by another is entitled to protect his life even if it means taking the life of the aggressor. If the abortion were not performed, two lives would be lost: the mother's and the child's. At least under these difficult medical circumstances, the law acts to preserve one life.

The effectiveness of this argument (The state has the power to protect fetal life.) is evident from its victories in the *Brunelle* case under consideration here.

That a state may pass laws to protect the health and welfare of its children even against the "... parents' claimed control of the child or one that religious scruples dictate contrary action..." is no longer open to doubt. *Prince v. Massachusetts*, 321 U.S. 168, 169 (1944). Indeed, the Supreme Court has taught that "the well being of its children is, of course, a subject within the state's constitutional power to regulate." *Ginsberg v. New York*, 390 U.S. 629, 638 (1968).

We take exception to the portion of the *Brunelle* opinion which indicates that possibly the primary purpose of the abortion statute when passed in 1845 in Massachusetts was the protection of the health of the mother. The purpose of this statute was to protect the unborn child as well as the mother. The great medical battle of the 19th century was to persuade legislatures to eliminate the requirements of quickening and to condemn abortion from conception. The annals of the *Journal of the American Medical Association* show conclusively that the association unanimously condemned abortion as the destruction of human life.

Even prior to the development of the science of fetal physiology all doubts were resolved in favor of the unborn child. Commencing in 1803 medical jurisprudential texts urged state legislators to pass statutes protecting the lives of unborn children at all periods of fetal gestation. (See Quimby, Isaac M. Introduction of Medical Juris Prudence. *JAMA*, Vol. 9, p. 164, Aug. 6, 1887 and Markham, H. C. Feticide and its Prevention. *JAMA*, Vol. 11, p. 805, Dec. 8, 1888; American Medical Association. Minutes of the Annual Meeting 1859. *The American Medical Gazette*, Vol. 10, p. 409, 1859; Chauncey D. Leake (Ed.) *Percival's Medical Ethics*. Williams and Wilkins, 1927, pp. 134-135.)

Abortion statutes have always been considered as having been passed to protect the unborn child's right to life. *State v. Howard*, 32 Vt. 380 (1859); *State v. Murphy*, 27 N.J.L. 112, 114 (Sup. Ct. 1858); *Mills v. Commonwealth*, 13 Pa. St. 630; *Anderson v. Commonwealth*, 190 Va. 665 (1950).

Prior to these attacks on abortion statutes, there has never been any doubt as to the constitutionality of this type of legislation. That is, until we reached this era of sexual permissiveness. Statutes prohibiting abortions are as old as written extant law. The Code of Hammurabi written in 1728 B.C. contains strict prohibitions against abortion. It is fairly certain that this code is but a compilation of much older laws.

Individual human life begins at conception. There is no other logical or scientific starting point and, in fact, any other starting point for this consideration would be made on other than scientific grounds (perhaps "philosophical," perhaps "religious," perhaps "convenience"). The United States Constitution protects human life against arbitrary, invidious classifications and discriminations. It protects human beings from destruction at the mere whim or caprice of a woman. It protects human life from destruction without due process and without the

equal protection of the law. It protects fetal life from conception.

The issue we are concerned with is one of civil rights. One segment of humanity cannot, under our form of constitutional republicanism and under our Constitution, determine that another segment of humanity does not have civil rights. The child in the womb has a civil right to life guaranteed it by the United States Constitution. We, as citizens of the United States and as persons living in the United States, are under a duty to protect the lives of all human beings that may be destroyed without conformity to just laws. It is our duty as citizens and persons to protect the lives of the children from wantonly being destroyed, throughout this nation. This is our duty as citizens and persons in this republic and not merely as members of any sectarian religious faith.

DENNIS J. HORAN, Esquire.

CHICAGO, ILL.

CROSS EXAMINATION OF HERBERT RATNER,
M.D., BY MR. OTERI

Q. (by Mr. Oteri) Doctor, do you personally feel that a woman has an obligation to complete a pregnancy, or does she have a right to terminate it at some point?

A. (Dr. Ratner) The thing that complicates the problem from the medical point of view, for the physician, is that once a pregnant woman steps into his office, he, unfortunately for this situation, has an obligation to two patients—the mother and the baby—and any time we take a patient in an obstetrical service, we have an obligation for two patients. That is why you frequently see us knocking ourselves out, doing things which a mother permits, even at risk to the mother, to save the baby. We work in the delivery or operating room, where, 90 percent of the time, we are knocking ourselves out trying to save a baby with forceps, transfusions, and intrauterine transfusions.

We even have a new specialty of pediatrics called fetology. The New York Academy of Medicine's publication *The Sciences* has an entire article indicating the kind of things that relate to saving the baby *in utero*. The article concludes "the fetus may be the littlest patient, but he is by no means the least."

And that's the problem when a pregnant woman walks in; whether we like it or not, we have, automatically, two patients.

Q. The fact of the matter is that when a woman comes into your office, the pregnant woman, and she tells you she wants to terminate a pregnancy, she is a month pregnant...

A. Right.

Q. ... do you feel any obligation to this woman to cooperate with her in terminating this pregnancy?

A. The obligation I feel with this woman is to help her resolve the situation she is in. I am not a technician, doing what she asks me to do; I have to do what both medically and professionally I have an obligation to do, so I can't. It goes against both the Hippocratic Oath and the purposes of the medical art. I cannot do that, because she is asking me to eliminate another human being's life, so my answer to that is no.

Q. Let me ask you a question. Are you familiar with—do we have any medical textbook in obstetrics or gynecology which you are aware of that in any place uses the term "human being" to describe the zygote?

A. I would like to first make it clear that we are not dealing with zygotes, when a woman comes into your office. By the time she knows she is pregnant and wants an abortion, she is now six to eight weeks pregnant, and we are dealing with a recognizable human being.

Q. That is not my question. My question was, are you familiar with any medical textbook in the field of obstetrics and gynecology that refers to the zygote as a human being?

CXIX—671—Part 8

A. When they refer to the zygote, the implication is that it is a human being. When you pick up a book in pediatrics, they do not refer to the child as a human being; they refer to it as a child.

A zygote is an analogous term as fetus, infant, child, adolescent, adult. They are all stages of a human being. It is not customary to go out of the way to specify a stage as a human being, because everybody knows it.

Q. Is a human being, as you know it—and you talked about evolution of the species—is the human being that you and I know different in any characteristics other than size from a one week old zygote? Is there anything I can do that a zygote can't do?

A. Say that again. Other than...

Q. Other than my size, what are the differences between me and a one week old zygote in a womb?

A. There are numerous differences.

Q. I can think, the zygote can't?

A. Yes.

Q. I can talk and the zygote can't?

A. Yes.

Q. I can sustain myself; I don't need a womb to support me in life?

A. No. The zygote sustains its own life in the same sense that the newborn infant or the young infant can sustain its own life.

I don't know what your relation is to your mother. Maybe you're dependent upon your mother, but the infant is dependent on the mother, and the zygote is dependent on the mother.

Q. The infant is dependent on the mother?

A. As well as the zygote.

Q. I am not dependent on the mother?

A. Not at this point.

Q. The infant is dependent on the mother to clean out its urinary tract?

A. Yes.

Q. Feed it?

A. Yes.

Q. Sustain it?

A. Right.

Q. If the infant, is born at one month, will it live?

A. Not at the present stage of technological development, it won't live.

Q. At two months?

A. It won't live.

Q. Five months?

A. It won't live.

Q. In other words, this zygote or embryo or fetus, if it were allowed to develop without any interruption, could possibly become a human being?

A. I don't understand. It is a human being. It is not a matter of becoming a human being. We grant that human beings at different stages of life have different qualities, which doesn't make the zygote or infant any more or less of a human being. It has not the capacity that a mature human being has.

Q. Would you refer me to one textbook on obstetrics and gynecology that refers to the zygote as a human being?

A. Yes...

Q. I am talking about obstetrics and gynecology.

A. Here is a book entitled, *Modern Motherhood*, by Dr. Liley.

Q. Is that a textbook in gynecology?

A. It is a textbook that we have some of our medical students read.

Q. Is it a textbook in gynecology and obstetrics?

Is it a book that you read to learn your medicine from?

A. It is one of the things we read.

Q. Is it a textbook in obstetrics and gynecology?

A. It is a textbook that can be used, because it is dealing with modern motherhood, which the pediatrician...

Q. A pediatrician isn't an obstetrician.

A. The obstetrician doesn't have charge of the baby.

Q. Does the pediatrician...

A. The specialty of fetology is a sub-specialty of pediatrics and not obstetrics. You

are limiting the concept to the erroneous belief that it is only the person who delivers who has any kind of medical obligation to the fetus.

Q. Who does the pregnant woman go to—the pediatrician or obstetrician?

A. The modern development in this area today, in good hospitals, is for the woman to get to both before she delivers.

Q. The lady living in Oak Park, your suburb, and she comes up and misses a period and decides she might be pregnant...

A. She goes to the obstetrician. That is the obstetrical side of it.

Q. Now, Doctor, you...

A. But it is not the pediatric side of it.

Q. I know that.

Q. You refer to the zygote as being in residence in the womb of the mother, is that correct?

A. Yes, for about 20 minutes, because quickly thereafter it is no longer a zygote.

Q. What does it become after 20 minutes?

A. It has a continuous development. For language's sake, we have a rough division so we can refer to them: We talk of the zygote, embryo, fetus, of the infant, the child.

Q. When you talk about residence in the womb of the mother while it proceeds in its own development, you are talking about zygote, embryo, to fetus?

A. The zygote is normally no longer a zygote after six days or a couple of days have passed and it has got into the womb.

Q. It is not 20 minutes?

A. It takes about six days to go down.

Q. Now, Doctor, while this zygote is going for the six days from the womb to implanting in the wall, how is it sustained?

A. It is sustained by its own nutrition, and the heat is supplied by the mother.

Q. After it implants in the wall of the mother, does it receive its nourishment from the mother?

A. It receives its food in the same way that the infant at the breast receives its food from the breast.

Q. The infant at the breast is outside of the mother?

A. I am trying to clarify it receives its nourishment from the mother in the same way.

Q. If there were some interference with the food supply between the mother and the embryo attached to her, the embryo would die?

A. And the same way the infant in the burning house, unattended, would die.

Q. When the embryo—by the way, how many spontaneous abortions are there?

A. A high incidence. About 25 percent.

Q. Is that in the period between fertilization and implantation?

A. No, there is a high incidence there, but it continues through the first three months. One out of seven pregnancies ends in a miscarriage in the United States, this is nature's means of getting rid of human beings who just aren't capable of surviving.

Q. Nature gets rid of human beings?

A. That's right. The way it does in epidemics and other tragedies.

Q. Do you think we should attempt to stop epidemics?

A. We certainly should.

Q. I have no further questions.

THE 152D ANNIVERSARY OF GREEK
INDEPENDENCE DAY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ANDERSON of California. Mr. Speaker, on March 25, 1821, a Greek

patriot, Alexander Ypsilanti, unfurled the flag that sparked the revolt resulting in Greek independence.

March 25, 1973, was the 152d anniversary and celebration of the beginning of modern Greek independence.

Unfortunately, since 1821, the Greek people have not enjoyed a smooth democratic history.

With their declaration of independence, the struggle had just begun. The Greeks still had to defend their freedom from the Turks.

Then from 1837 until the 1843 coup, the Greeks were virtually a Bavarian protectorate.

After the Young Turk revolt of 1909, the Balkan wars of 1912-13, and World War I, the Greeks faced another crisis when Gen. Theodoros Pangalos seized power in 1925 and became a dictator the following January.

An attempted coup and a chaotic political situation characterized the early and mid-thirties until Gen. John Metaxas made himself a dictator with the consent of the king.

In 1940, Greece rejected the Italian Fascist ultimatum for capitulation, but the Germans occupied all of Greece in 1941 with the Greeks resisting with guerrilla warfare.

Soon after the Germans withdrew, civil war broke out in 1945.

When pressure began to mount between Greece and her Communist neighbors, President Harry S. Truman announced that the United States would assist the Greek people as well as the Turks in their fight against communism. Truman's statement came to be known as the Truman Doctrine.

After several years of political disorder, a group of conservative army officers seized control of the Government in 1967 because they believed the leftists were planning to use upcoming elections to stage their own coup.

Since the 1967 junta, the Government has suspended the original Constitution, instituted Marshall law, and imprisoned persons of differing political beliefs.

Recently the junta government has made large economic strides and has begun to reinstitute some civil liberties. However, there are still no parliamentary elections or a timetable for the implementation of elections even though the Government's own Constitution provides for them.

With the ancient Greek heritage as one of the world's first democracies and as a leader of cultural advancements, it is particularly unfortunate that Greeks today are not enjoying full citizens' rights.

But, the spirit of the Greek people is well known because of the Greeks' ability to come through hard times.

As the esteemed modern Greek writer, Nikos Kazantzakis, has written:

Greek soil has been so saturated with blood, sweat, and tears, the Greek mountains have witnessed so much human struggle, that you shudder in contemplating the fact that here on these mountains and shores, the destiny . . . of all mankind, was at stake.

Mr. Speaker, Mr. Kazantzakis has captured the essence of the men and women of Greece. Today, in recognition of the Greek Independence Day, I salute the traditions and history of Greece and its sons and daughters around the world.

NEW YORK TIMES RECOGNIZES CONGRESSMAN EARL LANDGREBE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BRAY. Mr. Speaker, the New York Times of March 31, 1973, devoted part of the front page of the second section to a profile of our colleague from the Indiana Second District, EARL F. LANDGREBE. I am pleased to insert it at this point:

HOUSE Foe OF SPENDING OUT-NIXONS NIXON (By Marjorie Hunter)

WASHINGTON, March 30.—The electronic scoreboards perched along the rims of the House balconies blinked fitfully.

Aye: 284 . . . 302 . . . 382 . . .

Nay: 1 . . .

Time: 2:16 . . . 1:05 . . . 0:13 . . .

Moments later, it was all over. A bill to authorize \$475-million for clean air programs had passed, 387 to 1.

Sitting in isolated splendor midway in the chamber was the man whom colleagues have jokingly dubbed the naysayer from Valparaiso, Earl Frederick Landgrebe, Republican of Indiana, who had cast the sole no vote.

The most consistent champion of the Nixon Administration's efforts to trim the budget, Earl Landgrebe (pronounced LAND-greeb) thinks that even President Nixon, on occasion, is too much of a spendthrift.

"The President has asked us to go with him a mile, and I say that's fine," he said later, moving restlessly around his office. "That's somewhere in the Bible; maybe I don't have it exactly right."

But one time, Mr. Landgrebe said, "is not enough to balance the budget as it should be."

"I say, let's go another mile and cut it some more," he continued.

A SELF-MADE MAN

A devout Lutheran, his pockets often crammed with religious tracts, Mr. Landgrebe speaks with all the zeal of an old-fashioned evangelist.

Two years ago, he left for Moscow on a House Education Committee study with a carton of 75 Bibles and a suitcase containing 30 more Bibles and 250 religious books. These, he distributed, as he said later, "in the dark of the night," until he was picked up for questioning by the Soviet police.

Behind his desk is a row of Bibles. Nearby is a Biblical tract entitled "Good Laugh?" and taped to a tall red lamp on his desk is a cartoon, showing a male stick-figure saying, "Some folks are good for nothing but I'm going to ask for pay . . ."

The cartoon, perhaps more than the Bibles, best explains the philosophy of a man who proudly proclaims that he made it on his own and thinks everyone who is able should also work hard for a living.

His naysaying on a vast array of domestic spending bills this year has astounded even his fellow conservatives in the House.

"A lot of them have been scolding me," he said. "They tell me, 'Listen, Earl, how can you be so blind as to follow Nixon?' Well, I just have to call the shots as I see them. The

rest of them like to claim they're conservative but they don't follow through."

Some of his friends, he said, seem to think he lives in a cave.

"I guess a lot of them expect me to show up on the floor one of these days wearing a bearskin," he said, grinning ruefully. "Well, I don't live in a cave. I like air conditioned homes and good cars just like everybody else, but you have to pay for them."

Mr. Landgrebe thinks that the Congress and the nation "should thank God for a President who has brought tough guys to town to hold down all this spending we've been doing."

His current field idols are Caspar W. Weinberger, the Secretary of Health, Education and Welfare; and Howard Phillips, who has been assigned the job of dismantling the antipoverty agency, the Office of Economic Opportunity.

"It's damn exciting to be here at this moment in history with people like Weinberger and Howard Phillips around," he said.

NEW PRECEDENT

He told of Mr. Phillips coming to his office, a few weeks ago, to ask him to vote against any further funding for the antipoverty agency.

"That's the first time, believe me, that kind of thing ever happened to me; a bureaucrat asking me to vote him out of a job," Mr. Landgrebe said happily.

"Well," he went on, "when I'd recovered from the shock, I looked at the guy and told him, 'You sure don't look like a nut to me, but I'm sure surprised.' Mr. Phillips just smiled and said, 'Oh, that's all right. When I get O.E.O. cleaned up, then I'll go on to another agency.' Now, you've got to admit that's a refreshing situation."

Defending himself against those who say he has moved even to the right of the President, Representative Landgrebe who has been in the House since 1969, insists he is not for cutting everything.

FREE ENTERPRISE LAUDED

"I just think we should screw the faucet down a little and let the free enterprise system take over again," he said.

It was through free enterprise, he reminds visitors, that he made it, working his way through high school with a variety of menial jobs and later starting a truck hauling business with only a little cash.

"I'm a rather wealthy man now, but I worked hard to get it," he said, "and I don't want America to lose everything it's got through irresponsible spending."

Although Mr. Landgrebe has consistently voted to trim domestic spending and twice received awards from businessmen for his efforts—he has been a strong advocate of defense outlays and may support whatever the President requests in aid for North Vietnam.

FINANCING OWN TRIP

"I want to go to Hanoi and see for myself," he remarked. "I've already applied for a visa, and I'll go on my own money."

Representative Landgrebe is aware that many of his constituents oppose rehabilitation aid for North Vietnam but he thinks that "if it takes a few billion dollars to win the peace, then it's worth the price to keep America strong and sweet."

His role as the most persistent of Congressional budget-cutters has not escaped the attention of the White House.

"I was down at the White House few weeks ago and I told the President I was with him all the way in cutting out all this big spending," Mr. Landgrebe said.

"You know, he really seemed to appreciate it," he went on. "The President even followed me a few steps to say thanks."

JULIAN GOODMAN

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. CARTER. Mr. Speaker, it is with great pleasure that I submit the following biography of my friend and fellow Kentuckian, Julian Goodman, president of the National Broadcasting Co. Having received the International Radio and Television Society's highest honor—the 1972 Gold Medal—he has proved himself to be a man of outstanding achievement, strength, and creativity.

His contributions in the field of broadcasting have received widespread acclaim, and I am confident that he will continue to be a leader in his field in the years to come.

His biography follows:

JULIAN GOODMAN

"... a faithful reporter, a daring innovator, a tireless and effective champion of freedom, a forceful and timely spokesman for the broadcasting industry..."

With this citation, the International Radio and Television Society awarded NBC President Julian Goodman its highest honor—the 1972 Gold Medal—for his achievements in and contributions to broadcasting, in which he has worked for more than 25 years.

Since becoming NBC's President in March 1966, Mr. Goodman has established himself as a strong and effective spokesman for broadcasting, and as a creative force within the ranks of television's top management. He has been an industry leader on a variety of issues involving the relationship between Government and broadcasting and the Constitutional right of the American people to a free flow of information.

Mr. Goodman was named NBC's Chief Executive Officer on Jan. 1, 1970, and, two years later, was elected a Director of RCA Corporation. He came to his present position after a 20-year career with NBC News, during which he not only produced a variety of news programs and special coverage projects, but developed many of the production and program techniques that have since become familiar in radio and television.

He pioneered the use of tape for radio broadcast of news events; participated in the development of the "instant news specials" initiated by NBC News; supervised NBC News coverage of many major stories; directed the development, production and broadcast of scores of significant NBC News specials, and managed a full-time worldwide staff which at the time totaled 900 writers, editors, cameramen and technicians.

As broadcasting's only top management executive with a background in program production, he has stimulated a number of program and policy innovations within NBC, ranging from cultural and informational projects and children's programming to industrywide research studies.

Among these projects was the "NBC Experiment in Television" series, which was widely acclaimed for its exploration of new forms and concepts in the medium. Another was the initiation of a worldwide search for talented young filmmakers, resulting in highly praised programs on "the new communicators."

In one of a series of steps to provide more professional concentration on improved children's programming, Mr. Goodman, in January, 1970, established, within the Television Network, a new office of Vice President, Chil-

dren's Programs, headed by a producer of children's programs with a 20-year record of experience. NBC-TV was the first network to make such an appointment.

Mr. Goodman also directed the funding of a long-term NBC Research study, begun in March, 1969, to assess the possible effects of television on the behavior of young people. The study has been commended by a specialist in the field as "an unprecedented, major study... using carefully validated reporting methods."

Mr. Goodman joined NBC as a news writer for WRC, NBC's owned radio station in Washington, D.C., in the summer of 1945. He was appointed Washington editor for "News of the World," an NBC Radio Network broadcast that included news pickups from all major capitals.

Shortly thereafter he became Manager of News and Special Events for the Radio Network, then NBC's principal broadcast operation. As television networking developed, Mr. Goodman was also appointed Manager of News and Special Events for the NBC Television Network in August, 1951. The operations were combined under his charge.

In 1959, when television was growing rapidly and NBC News had become a separate and major division of the company, Mr. Goodman was assigned to NBC News' New York headquarters as Director of News and Public Affairs. He was appointed Vice President, NBC News, in January, 1961, and Executive Vice President on Oct. 4, 1965.

On Dec. 13, 1965, in a realignment of NBC's top corporate management, he became chief administrative officer of the company with the title of Senior Executive Vice President. On Jan. 10, 1966, he was elected to the NBC Board of Directors, and on March 4, 1966, he was elected President of the Company.

In 1952, Mr. Goodman directed NBC News film coverage of the political conventions, which won wide critical acclaim; in 1956, he supervised the operation of NBC's central news desk at the conventions; during the 1960 national election campaign, he produced the October 7 broadcast of "The Great Debates," the second of four historic encounters between Presidential candidates John F. Kennedy and Richard M. Nixon.

While in Washington, Mr. Goodman took a leading part in extending television and radio coverage to important governmental news events. He obtained permission for the first live broadcast of a Congressional committee hearing and he helped open the way for the first filming of a Presidential news conference in 1955.

After his assignment to New York, Mr. Goodman supervised such specials as the "Journey to Understanding" series that covered the travels of President Eisenhower and Soviet Premier Khrushchev; the "JFK" series that reported periodically on the Kennedy Administration; and the "Breakthrough" series of medical programs. He produced "Comment" and "Ask Washington," as well as "Report From Alabama," which won a Robert E. Sherwood Award.

Mr. Goodman was born in Glasgow, Kentucky, May 1, 1922. He attended Western Kentucky University but left before graduation to join the Army in 1943. After leaving the Army he served as office manager for the Combined Production and Resources Board in Washington, D.C., until 1945. He then enrolled in George Washington University, in Washington, and earned his AB degree.

At the University's Winter Convocation in February, 1966, Mr. Goodman was honored with an Alumni Achievement Award by the Board of Trustees.

He was awarded the honorary degree of Doctor of Laws by William Jewell College, Liberty, Missouri, in November, 1967. Also in

November, 1967, Mr. Goodman was honored as a leader in the field of journalism by election as a Fellow of Sigma Delta Chi, national professional journalism fraternity, at its annual convention in Minneapolis, Minnesota.

In 1970, Mr. Goodman was named "Kentuckian of the Year" by "The Kentuckians," becoming only the fifth man in the organization's 67-year history to be so honored.

Mr. Goodman and his wife, the former Betty Davis of Dawson Springs, Kentucky, have four children and live in Larchmont, New York. Mr. Goodman is an ardent sports fan. He golfs, plays tennis, fishes and frequently sails in Long Island Sound near his home.

STARK REALITIES OF THE AFTERMATH**HON. JERRY LITTON**

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. LITTON. Mr. Speaker, today we stand on the threshold of a historic week in our country's history. It is the first week in many years that we have not had prisoners of war in North Vietnam, or combat troops in Southeast Asia.

Along with many thoughtful constituents, other American citizens, and numerous congressional colleagues, I consider the prolog of this past week's events as the first stage of our Nation's resurrection from patriotic disunity—one paralleled only by events leading to the American Revolution almost 200 years ago, and the Civil War of the 1860's.

Today, we face the stark realities of the aftermath. We turn our attention to healing both physical and emotional wounds. We must prepare ourselves to begin the second stage in the quest for peace. We all know true peace, in an ultimate sense, is not yet to be. It will not become a reality until the problems growing out of the long and bloody Southeast Asian struggle are laid to rest.

In the coming months, the eyes of the world will be focused upon the U.S. Congress as the problems embracing Southeast Asia and America are sifted and weighed. To many, the fulfillment of our task seemingly knows no boundaries. First, we must grasp the problem of aid to North Vietnam set forth in our peace agreements under article 21. Secondly, we must resolve the question of amnesty on the home front. Neither problem could be explored in open discussion as long as we had POW's and combat troops in the Southeast Asian war zone.

I believe that under our leadership the cause of unity between the North and South Vietnamese can be greatly advanced, the amnesty question of American boys who refused to answer the call of their country settled, and guidelines for a program of rejuvenation established. If a majority of American citizens, and my colleagues in the Congress, concur with what might, at first, seem a provocative but, in the final analysis, sensible solution, hopefully we can pursue a program that would solve both the problem of aid to North Vietnam and the problem of amnesty.

But first, let us closely examine the problem of amnesty. Almost 50,000 Americans who served in the Southeast Asian conflict lost their lives. Nearly 300,000 more were wounded, some severely. Many who served will spend the rest of their days in hospitals, hopelessly crippled or blinded. The war will never end for those parents, widows, and orphans who suffered anguish through loss of their sons, husbands, and fathers. For this country to provide unconditional amnesty to those who refused to serve, or who subsequently deserted after having been called, would, in effect, be saying that the almost 50,000 who did die, and the nearly 300,000 who were injured, were wrong and those who refused to serve, or deserted, were right.

Further, I believe that exoneration of draft dodgers and deserters would set a precedent which could pose a threat to our national security. If we leave it up to each individual to decide whether or not they will serve their country, or which laws are to be obeyed, or scoffed, we turn our backs on our democratic system and invite chaos. We also ignore the sacrifices made by every veteran who ever served in any prior war in which our Nation has been involved. In my view, anyone who has fought for this country to insure for future generations the precious legacy of life, liberty, and the pursuit of happiness, deserves an endless debt of gratitude. Amnesty would be an offense to their patriotism.

Equally significant is the awesome thought that, should unconditional amnesty be provided for all who refused to serve in Southeast Asia, how would it be possible for us, at any future date, to expect a future generation to answer the call to arms when a prior generation, who refused to serve, was spared punishment? This factor deserves special consideration in view of the fact that we anticipate having an All Volunteer Army with fewer and more specialized members in the service.

Inevitably, there will be individual cases which warrant a comprehensive review. Therefore, I would favor, as did President Truman following World War II, the establishment of an Amnesty Board to consider the petitions of those violators who wish to come out of exile and seek to have their cases reviewed. It is conceivable, through such procedure, that some equitable compromise might emerge to balance amnesty with retribution.

I feel very strongly that the United States should not and cannot continue to be the caretaker of the world. Hopefully, Vietnam has taught us that. However, neither can we isolate and shield ourselves completely from international affairs.

However badly we blundered and stumbled, Vietnam was not a war where we had aims or desires of conquest—we were there solely to aid. Probably no nation of the world would have sacrificed equally with only the intent of helping others defend themselves. It began in the best of our traditions—one befitting a great and generous nation.

The administration insists that aid to North Vietnam is a financial investment

in peace—that with ample money and materials, North Vietnam will turn inward to peace instead of war. I sincerely hope that this would be the case, but I have doubts. Internal warfare was raging for years before we even became involved in Indochina. I fear that the quest for reunification of all of Vietnam under Communist rule is still top priority in the minds of North Vietnamese leaders.

It is bad business to sacrifice nearly 50,000 American lives and \$135 billion in helping South Vietnam stand on its feet—we have built their air force to the fourth largest in the world—and then counter our 10 years of work and sacrifice, including war expenditures totaling one-third of the national debt our country has accumulated in its lifetime, by building up North Vietnam so that it may continue to strengthen its aggression toward the south. I think it is not unreasonable to assume that for every dollar of assistance we give North Vietnam, another dollar will be freed to build up their defense program to advance their cause.

One political analyst for the Washington Star expects Hanoi to receive an estimated \$1.7 billion per year in foreign assistance. This amount is just about the size of its 1970 GNP and much higher than the GNP for 1972. My first thought is how will Hanoi handle this huge sum of money. If leaders use the money to better living conditions and promote peace, then it could be a worthwhile investment. But past experience shows that this is not likely. After the 1954 reconstruction program, only 15 percent of total investment was allocated to restoring the devastated agricultural sector where 91 percent of population lives. According to a U.S. News & World Report issue of February 19, the first priority in Hanoi for use of U.S. reconstruction funds would be the restoration of railroads, highways, communication, and powerplants. Then would come the rebuilding of industrial facilities. Last is aid to the people.

It goes without saying that I would unilaterally oppose any aid which appeared to be reparations or expiation for the sins of imperialistic America, as North Vietnam might make it look. Many officials favor multilateral aid to North Vietnam possibly through the United Nations or the World Bank. But Hanoi stubbornly insists on bilateral aid.

Then there is the argument that points to our reconstruction of Germany and Japan after World War II with the Marshall plan. Many would assume that we should do likewise in North Vietnam. The difference between World War II and the Korean conflict is vast indeed but the most significant is the fact that Germany and Japan promised to set up working democracies with fair and equal representation—and obviously from all indications Hanoi has no intention of doing this.

The difference goes much further than this. After World War II, there was an unconditional surrender by Japan and Germany and a commitment to an end in hostilities. In North Vietnam the situation is not this pleasant. Hanoi has not surrendered; 150,000 of their troops remain in South Vietnam and an end in

hostilities is unlikely. Thus, as long as North Vietnam is continuing major hostilities toward South Vietnam and we continue economic aid to repel these hostilities, it would be absurd to provide North Vietnam with funds.

The American people have been told for the past decade that once the war in Vietnam was ended, money would be made available for domestic programs of construction and assistance. We have been led to believe that such domestic moneys would build rural water and sewer systems, new and better methods of transportation systems, housing units, recreational facilities, flood control impoundments, and power-generating facilities, such as the Pattonsburg Lake Reservoir in Missouri's Sixth District.

Perhaps we can solve both the problem of aid to North Vietnam as we promised in article 21 of the cease-fire agreement and amnesty for those who refused to serve by sending those people who seek amnesty to North Vietnam—instead of money—to help them rebuild their country.

If those in America who evaded military service loved the North Vietnamese too much to fight them, perhaps they still love them enough to help them in their reconstruction program. The sickening stories of torture being related back to the American people by our returning POW's would not indicate that the North Vietnamese have any love for Americans.

I personally do not favor aid to North Vietnam or unconditional amnesty, but if we are to aid North Vietnam and if we are going to permit those who refused to serve when called to work for mankind in return for amnesty, then I see no reason why we cannot accomplish both of these objectives by sending those who seek amnesty to North Vietnam to serve a given number of years in helping rebuild that country in lieu of money which is so badly needed not only for domestic programs here in America, but also to bolster the value of the sagging U.S. dollar.

DISABLED AMERICAN VETERANS SERVICE PROGRAM

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. DORN. Mr. Speaker, I would like to insert into the RECORD an updated review of the activities of the Disabled American Veterans. The Disabled American Veterans is an organization comprised of nearly 400,000 veterans who suffered disabilities due to disease or injury incurred during wartime or warlike military service. Since 1921, a period of 52 years, Disabled American Veterans has been concerned with the welfare of our Nation's disabled men and women who have incurred their disability in the defense of this Nation. Counted among its many members are prominent national figures and government leaders who themselves were injured or disabled in line of duty.

One of the primary functions of the Disabled American Veterans has always been to provide a service through its national service program for the benefit of the disabled veteran and his dependents. In each regional office of the Veterans' Administration you will find a staff of Disabled American Veterans national service officers fully trained to assist veterans in filing for the many benefits which the Congress of the United States has provided for our Nation's defenders. These national service officers are attorneys-in-fact appearing before the Veterans' Administration rating agencies when authorized to do so by the veteran or his dependents. These appearances are made each time the case of the veteran is considered by a Veterans' Administration rating agency. Among the many duties of national service officers is the responsibility for preparing legal briefs to be submitted to the VA Board of Appeals in Washington, D.C. when this becomes necessary.

The Disabled American Veterans was founded in 1921 when its first national convention was held in Detroit, Mich. National headquarters is located in a beautiful plant in Cold Spring, Ky., just across the river from Cincinnati, Ohio. This organization employs an approximate average of 700 persons per year at its national headquarters. DAV also maintains a national service headquarters in Washington, D.C., to administer the service program. DAV depends upon the support of the public to assist in meeting the heavy financial burdens imposed by the service program of the organization which includes the salaries of the national service officers who assist thousands of disabled veterans each year. For instance, Mr. Speaker, at the end of the last fiscal year, Disabled American Veterans assisted our Nation's disabled veterans in recovering awards amounting to \$297,822,857.17 throughout the Nation. These attorneys-in-fact made 135,686 rating board appearances; interviewed 203,463 disabled veterans and their dependents; and reviewed a total of 289,216 VA case files in connection with their duties.

Many of my colleagues will recall that Disabled American Veterans utilized the American University and the facilities of the Veterans' Administration to train national service officers to assist disabled veterans following World War II. I am very pleased and very proud to report to my colleagues that of a total of over 221 national service officers today, 129 of them are Vietnam veterans. Disabled American Veterans realizes the need and necessity of having service officers who understand the current and today problems of the disabled veteran. Trained under an experienced career national service officer of the Disabled American Veterans, each national service officer trainee goes through a period of 18 months of study and application of principles of service work before he can become an accredited representative of the organization fully qualified to assist veterans in all phases and in all matters pertaining to benefits for the disabled veteran and his dependents.

Mr. Speaker, I was very interested in receiving information concerning the expansion of programs that the Disabled American Veterans offers the disabled veteran. These are recent programs and indicates that DAV indeed deserves the support of the American public in carrying out this pledge as provided by its charter and constitution "to provide for the welfare of the disabled veteran and his dependents." Beginning in 1969 the organization offered a scholarship program for the children of service-connected disabled veterans whose parents could not afford them a college education. Eighty young men and women throughout this Nation have been awarded a DAV scholarship. As of September 1972, 71 are still in the program. Beginning with the fall term, September 1973, a new group of students will be entered into this scholarship program. Bear in mind, Mr. Speaker, that these service-connected veterans do not have to be members of the DAV in order for their children to participate in this program.

Several years ago, Disabled American Veterans adopted a disaster fund program to assist its members in the event of a natural disaster. Now, DAV has expanded this program to include all service-connected disabled veterans who suffer losses due to such disasters.

Effective January 1, this year, Mr. Speaker, DAV has inaugurated a new program to provide emergency relief to service-connected disabled veterans. This is another duty that has been added onto the shoulders of the national service officers who administer the funds in each national service office located in VA regional offices throughout the Nation.

A few years ago, DAV became interested in the problems of handicapped children. In order that the organization might provide meaningful assistance to these unfortunate children, many of whom are born with birth defects or who acquire disabilities due to injury or disease, DAV entered into a partnership with Boy Scouts of America for the purpose of establishing handicapped Boy Scout troops throughout the Nation. As a result of this program many DAV chapters throughout the Nation are engaged in helping these young boys learn scouting and learn to do what they can do with their disabilities. DAV has expended almost \$450,000 thus far on its scholarship program, disaster fund, emergency relief, and scouting program. These figures will increase each year.

Disabled American Veterans has been described by some as a single purpose organization, but I believe, Mr. Speaker, that in view of the expansion of their programs it can be said that Disabled American Veterans is continuing its mission to provide a full and complete service to all service-connected disabled veterans of this Nation.

I know that my colleagues will join with me in expressing the appreciation of this august body to this fine organization for the great efforts that they are making in providing for the needs of disabled veterans through its legislative program. Charles L. Huber, the national director of legislation, is in charge of

this vital program and each year he and the national commander of the Disabled American Veterans, presents its legislative program to this committee. The policy statement of the organization provides that the Disabled American Veterans should exert its efforts in behalf of the service-connected disabled veteran and while they do not oppose other programs such as pension benefits, the primary thrust of the DAV is for our Nation's defenders who need help in overcoming the rigors of their disabilities.

I know that the American public will continue to support Disabled American Veterans and that all those eligible for membership in the DAV will continue to support the organization through its membership, because this is the only veterans organization devoted exclusively to the welfare of the disabled veteran.

JAN KRYSKY, ANOTHER VICTIM OF SOVIET TYRANNY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BIAGGI. Mr. Speaker, the plight of the Soviet Jews continues to rank among one of the most serious human problems in the world today. I would like to briefly relate for my colleagues the tragic story of yet another refugee from Soviet oppression, Mr. Julius Krysky, who is in this country now on behalf of his son, Jan.

The senior Krysky was permitted to leave the Soviet Union for Israel in November 1972. In the typical Soviet manner, he and 70 other highly educated Jews were granted permission to leave provided they would get out of the country within 7 days—a move clearly timed to the U.S. Presidential elections.

His son, Jan, however, who is 21, was tossed in a mental institution a year ago on charges of "militant Zionism." In a ward for the criminally insane, Jan has been given injections which leave him delirious and force him to stay in bed for months on end.

He told his mother, who had a rare opportunity to visit him earlier this month, that he does not believe he will be able to last very much longer. His father has come to this country seeking help.

The tale of how Jan ended in the mental institution belongs in a book of fiction, not real life. In October 1971, Jan was escorting a girl home from a concert when a drunk, Bykov, insulted him with the term "Zhid." A fight ensued and Jan was brought to trial. Bykov then submitted a letter to the court in which he admitted guilt for starting the incident and Jan was acquitted.

The case was reopened, however, in January 1972, when the Krysky family applied for permission to emigrate to Israel. Julius Krysky was told that his son would either be given 10 years in a labor camp or he could be institution-

alized as a "schizophrenic" for his Zionist beliefs. The family chose the institution believing that Jan would soon be released.

Julius Krysky has asked me to assist him in pressuring the Soviet Government for his son's release. Therefore, I am sending around a letter to my colleagues today asking them to join me in writing to Premier Alexi Kosygin, asking him to release Jan, and to President Nixon, asking him to assist us in this effort.

Mr. Speaker, I hope all those here who share with me a deep concern for the plight of the Soviet Jews will join with me in this important effort.

UNITED STATES-RED CHINA DIPLOMATIC EXCHANGE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. RARICK. Mr. Speaker, the United States-Red China diplomatic exchange has now been announced.

Here in Washington we get Gen. Huang Chen, one of Mao's most dedicated Communist fanatics.

In turn, we send to Peking Alfred L. Jenkins, David K. E. Bruce, John Holdridge, and Charles W. Freeman.

As the usual dealings with the Reds, they gain by sending us trained agents.

I insert the related news clippings:
[From the Washington Star and Daily News, April 1, 1973]

TEAM OF DIPLOMATS LEAVES FOR PEKING

A five-member State Department advance team left yesterday en route to Peking to establish a "liaison mission" for the first formal U.S. diplomatic dealings with mainland China in more than two decades.

The group, headed by China expert Alfred L. Jenkins, flew commercially by way of Chicago to Hong Kong, where its members will confer with officials of the U.S. Consulate General before entering China April 5.

Jenkins and his aides will make final preparations for the arrival of David K. E. Bruce, one of the nation's most seasoned diplomats whom President Nixon brought out of retirement to head the Peking mission.

The Chinese said their own advance party will arrive in Washington some time in April to prepare for the opening of the mission here. The two liaison offices—embassies in all but name—will open for business simultaneously in early May. Bruce has said he will be in Peking by then.

Peking announced Friday that its chief of mission will be Huang Chen, who has been serving as ambassador to France and is regarded in Washington as the top diplomat of the People's Republic of China. He is the only envoy known to be a member of the Communist Central Committee.

Bruce will be accompanied to Peking by John Holdridge, a member of the President's National Security Council who will share with Jenkins the title of deputy chief of mission. Holdridge is described as a protégé of presidential adviser Henry A. Kissinger, who made the arrangements for Nixon's trip to China last year.

Among those accompanying Jenkins on the advance assignment, and also to remain

on the liaison mission staff, is Charles W. Freeman, a fluent writer and speaker of Mandarin Chinese who has been heading the State Department's China desk.

Marshall Green, assistant secretary of State for East Asia and Pacific affairs, predicted that the United States will quickly become second only to Japan as a top trading partner of the Chinese.

The missions are being called liaison offices rather than embassies in deference to Peking's refusal to have full scale diplomatic relations with any country continuing to recognize the Nationalist Chinese government on Taiwan.

[From the Washington Star and Daily News, Mar. 31, 1973]

CHINA'S U.S. LIAISON IS MAN OF THE ARTS

Huang Chen, one of China's most seasoned diplomats and a figure of marked importance within the country's Communist party, was named yesterday to head China's liaison office in Washington.

In his 64 years Huang has been a soldier, propagandist, playwright and artist. His interest in the arts, fostered in his early years, remains lively today. Central to Huang's life, however, has been an unflagging dedication to China's Communist party, a loyalty that goes back at least 42 years and has rewarded him with membership in the party's central committee.

Huang Chen was born into a peasant family in southwest Anhwei and went to school in Anching, a Yangtze port city 30 miles from his birthplace. He graduated from the fine arts academy in Shanghai and remains one of the few Chinese in high positions to have had training in this field.

At the age of 23 he became a party member and served as a political commissar at the divisional level when the Communist headquarters was in the southwestern part of Kiangsi Province.

He fought with the Red Army of Mao Tse-tung and Chu Teh and at one time commanded a regiment, the 13th, which belonged to the Third Army Corps. Later he served as a propaganda worker, and while on the Long March from Kiangsi to the new base in Yenan, he wrote two plays that were staged just before the Red Army made the difficult crossing of the upper Yangtze in the spring of 1935.

During this period Huang made sketches of the Red Army in the field, some of which were published in book form in 1962 under the title "A Collection of Drawings During the Long March."

Through all of the years that followed Huang combined an active military career with political groundwork for the party when the central government was formed in the fall of 1949, after the Nationalists were driven from the mainland, he was working in the political department of the people's Revolutionary Military council, the highest military organ of the government, with the rank of general.

The following year Huang was assigned to the foreign ministry and was named Peking's first ambassador to Hungary. In 1954 he was reassigned to Indonesia. It was during this period that the Afro-Asian conference was held in Bandung, and Huang, as part of the Chinese delegation headed by Premier Chou En-lai, was successful in establishing China as a friend of the small Asian and African countries.

During his stay in Jakarta relationships were strained over the treatment of the three million Chinese in Indonesia often victims of blatant discrimination and the target of riots. Finally a treaty was signed in 1960, after six years of negotiations.

From 1961 to 1964 Huang served in Peking as deputy minister of foreign affairs, a period during which he tried to consolidate the

start made at Bandung to improve China's relations with the developing countries.

In this capacity he made four trips abroad, including one in which he accompanied Chou on a visit to 10 nations in Africa.

In 1964 Huang became Communist China's ambassador to France.

Relaxed and affable, Ambassador Huang was a familiar figure in diplomatic circles during his eight years in Paris—a big man with a round, heavy face, he was often clad in Gray Mao vests and sported a Mao cap.

In 1964 Huang became Communist China's ambassador to France.

His wife, Chu Lin, was active in making contacts with French groups as well as the overseas Chinese in Paris.

After President Nixon's visit to Peking last year, Huang held frequent meetings with the United States Ambassador to France, Arthur K. Watson, within the framework of the opening stages of the new Chinese-U.S. relationship.

They exchanged gifts, Huang presenting Watson with Mao-Tai, a Chinese brandy, and Watson reciprocating with bourbon.

EXTRA DIVIDENDS ON A SMALL FINANCIAL INVESTMENT IN THE DISTRICT OF COLUMBIA

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ROUSH. Mr. Speaker, committee responsibilities often require Members of Congress to travel great distances to acquire information on matters related to their committee work.

Last Friday I took a short trip—some 5 miles from the Capitol and by car a 7-minute ride—to the Congress Heights section of the District of Columbia. I wanted to learn more about the lives of the people there since I am a new member of the District of Columbia Subcommittee of the House Appropriations Committee.

I went in particular to observe the activities of a community group that has organized itself there as the Mission of Community Concern. It is nonpartisan; nondenominational. I was so impressed by the work of this group—accomplished on a shoestring financially—that I would like to describe to you what I saw and what I learned.

Two members of my staff and I first went to the small office on Martin Luther King Boulevard maintained by Father Shane MacCarthy, a priest from Assumption parish in the neighborhood, who is the organizing genius behind the group, but who would be the first to say that the success of the Mission derives from the work of everybody involved—and I met them all. In that small office, Will Hudgins, the project director, and Valentine Burroughs, the social services director, initiated us to the work that is being done out of an office in Hart Junior High and a youth recreation center.

The Mission of Community Concern functions as an educational-recreational service for the large number of students in that area who are truants and drop-outs from school. Operating on large measures of faith, hope, and charity are

20 full-time personnel, 8 full-time Neighborhood Youth workers, 6 regular volunteers, 3 part-time professional staff people. They manage to provide services for some 1,200 people—direct and indirect—on a grant of \$66,000 from the Department of Health, Education, and Welfare's Youth Development and Delinquency Prevention Administration.

The services performed include the operation of a recreation center headed by a full-time director, Gilbert Hall, where youth come for chaperoned dances, for art lessons conducted in connection with Trinity College's art department, for games, for modern dance lessons, home-making courses, for friendship, even babysitting. Membership is free and cards are distributed—if they are lost a fee is exacted—so the center knows how many youths are involved in their varied activities.

At Hart Junior High School, Val Burroughs runs an office, staffed by VISTA and other volunteers. Here they are accessible to the students all day and from here they seek to bring truants back into the classroom. A special class is conducted by the volunteers in this program to help students who have missed out on classroom work or never reached the academic level their age required. Math, English, history are key subjects handled in this class.

I visited Hart Junior High. I listened while Val and the social services workers described how they tutored the children there, what they did when they visited the children's families and how they showed them ways to be supportive to their children in their schoolwork.

About half a mile away at the Linda Pollin apartments. I visited the youth recreation center. I have a copy of the March calendar of events indicating that four and five events are scheduled daily, starting at 4:30 p.m. These include dances and pingpong tournaments, special classes, and group activities away from the center. There is an elected youth council which meets weekly with Mr. Hall to discuss the schedule.

Other services provided include taking children to the Baltimore Bullets basketball game—free—and once to a special Kennedy Center performance when a charitable contribution made this possible. There are visits to a swimming pool at a local military facility and a special summer camp is planned this year.

One of the most interesting features of all this is the people who do the work. I cannot talk about them all but I would like to point out that among the volunteers who are full time are six men on release—for this work—from Lorton Reformatory. Six days a week they are picked up, brought to Congress Heights and paid the handsome sum of \$5 a day by the Mission—at no cost to the District—for multiple services. One of the Lorton men visits the parents of truant children; another one conducts an amazing class for children who are under-achievers. I visited that classroom and was awed at the quiet and concentration of children interrupted by visitors. These Lorton men also supervise athletic activ-

ities at the center, and the swimming activities away from the center. They make sure kids who come to the dances stay there, when the parents request that they do so.

I can tell you that I was most impressed with these men. I talked with them. I saw the work they were doing. I even asked them if the parents resented their helping the kids because of their background and if the kids looked up to them for the same background. In both cases the answer was "No." The parents, they said, responded to someone caring about their children. For example, at the recreation center, if a child misbehaves he or she is not thrown out, but taken home because they want the parents to know what the child is up to and what is needed to work with that child. As far as admiration for their prison record is concerned, the Lorton men felt that their lives were an example of what not to do, since they had been there and found it not so good. They felt the kids saw that clearly.

Before the day was over I was feasted at a luncheon prepared especially in honor of the occasion by Mrs. Conyers, the mother of one of the Lorton workers. I never tasted such good crab cakes before. There was a delicious salad and macaroni and cheese; fruit punch and chocolate frosted cake. And we all had our picture taken together. I left there feeling that I had made some very good friends, people for whom I have great respect.

As I made this visit I reflected on our present fiscal crisis and the need for cost-effective social programs, those with definable benefits. I remembered being told that 400 youth had crammed into the youth center the night before for a dance. The youth center is obviously doing something right to get that number there. And since this is the only recreation center in the immediate neighborhood, I was struck with the thought that these same kids might well have gotten into a great deal of trouble had this activity not been arranged for them and chaperoned with care.

If there were an award offered for the best of Federal moneys, I am sure that the Mission of Community Concern would take the prize. I told Father MacCarthy that I thought he should be working for the Appropriations Committee of the Congress. Somehow, I think he likes what he is doing better.

There is no question that these dedicated people are enlarging the lives of the children of the Congress Heights area and through them, the parents. Throughout our conversations I was impressed with the way in which the parents were always brought into the picture. This is one of the cardinal principles of their operation.

This Mission of Community Concern is encouraging kids to stay in school, helping them to study, supplying motivation to do so; introducing them to new experiences that are educational and social. In many cases lives and futures are being salvaged. The individuals who are involved in the Mission of Community Concern are doing this community and their Nation a great service. I

was certainly enriched by my experience on last Friday and humbled by the example I was given.

WELCOME FOR THIEU

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BINGHAM. Mr. Speaker, on the matter of South Vietnamese President Thieu's visit and the continuing imprisonment and mistreatment by his government of civilian political prisoners, which is the subject of a special order today by Mr. DRINAN, a most relevant and thought-provoking article appeared in today's New York Times. That article, entitled "Whom We Welcome," by reporter Anthony Lewis, follows:

[From the New York Times, Apr. 2, 1973]

WHOM WE WELCOME

(By Anthony Lewis)

LONDON.—Those with weak stomachs for the unpleasant should stop reading now.

"It is not really proper to call them men any more. 'Shapes' is a better word—grotesque sculptures of scarred flesh and gnarled limbs . . . years of being shackled in the tiger cages have forced them into a permanent pretzel-like crouch. They move like crabs, skittering across the floor on buttocks and palms."

That was a description in Time magazine recently of an exceptional group of beings: former political prisoners in South Vietnam. They are exceptional because they exist. Those who go to South Vietnam's prison island, Con Son, rarely emerge in any living form.

The Time report, filed by David DeVoss, quoted one of the men as saying he had been arrested one day in a park, with his wife and children. "The police attached electrodes to my genitals," he said, "broke my fingers and hung me from the ceiling by my feet. They did these things to my wife, too, and forced my children to watch."

In the tiger-cage cells on Con Son, the report said, "water was limited to three swallows a day, forcing prisoners to drink urine. Those who pleaded for more food were splashed with lye or poked with long bamboo poles."

That picture of what happens to those arrested by the Saigon Government on political suspicion is the same as many other conscientious and unhysterical observers have given. Some of the evidence is so much more horrible that no paper would want to print it; reading it, no one could doubt that a large number of prisoners in South Vietnam suffer systematic torture and starvation.

But why mention it now? Americans are trying to forget Vietnam, and they have never shown much interest in the torments of the political prisoners anyway. Well, the answer is that an occasion makes remembering a duty. That is the forthcoming visit to President Nixon in San Clemente by the South Vietnamese President, Nguyen Van Thieu.

Delicacy of feeling is a luxury that governments seldom feel they can afford in international relations. If we restricted our relations to those regimes whose standards of justice and decency we approve, it might be rather a limited list. Realism requires us to do business with all sorts of governments,

Communist dictatorships and rightist tyrannies among them.

But doing business is quite a different matter from giving a symbolic stamp of approval. There are credible arguments for keeping up links with South Africa and Greece, for example, but it would be another thing to invite Prime Minister Vorster or Premier Papadopoulos to the United States.

In the case of President Thieu, it is easy to understand the reason for his visit. He has proved a much stronger, more durable leader than most of us who have been his critics expected. His determination made it possible for Mr. Nixon to get American forces out of Vietnam as he wanted to, without a final political settlement.

But even within the scope of the Nixon policy, it is questionable wisdom to give Thieu the accolade of an American trip. The interest of the United States now is to encourage an indigenous political process in South Vietnam, a peaceful evolution away from the polarization of the war. Our direct military role is about over, now we want to move toward a period of political benign neglect.

President Thieu is of course a polarizing figure par excellence. Neutrality is a crime in his universe. To show a continued American investment in his pre-eminence must inhibit any process of peaceful change—and, once again, unnecessarily commit American prestige. We link our destiny to his.

That is the commonsense political argument against welcoming Nguyen Van Thieu to the United States. But there is also, inescapably, the argument of feeling. The world is full of cruelties, and we cannot cure them, but it is not necessary to proclaim our insensitivity by such a symbolic act.

Estimates of the number of political prisoners in South Vietnam range up to 300,000. The leading American authority, Dan Luce, puts the figure at 200,000. Half that, 100,000, is the equivalent in population terms of more than 1 million political prisoners in the United States.

A Frenchman who spent more than two years in South Vietnamese prisons, Jean-Pierre Debris, spoke recently of the apparent American indifference to the problem. He said:

"If they could bring one Vietnamese from the tiger cages of Con Son to the United States, and people could just look at him, that would be enough. He would not have to speak English. There would be no need of press conferences, articles, speeches. If the American people could just see that one man, half-blind, unable to walk, tubercular, scarred, it would be enough."

WATERGATE'S STINK WILL LINGER LONG

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. RIEGLE. Mr. Speaker, I would like to bring the following editorial from the Flint Journal of March 25, 1973, to the attention of all those concerned with the impact of the Watergate affair on American politics. The editorial was illustrated by a cartoon which depicts the President delivering the message, "When we fail to make this criminal pay for his crime, we encourage him to think that crime will pay . . ." We see the President sitting at his desk while on either side of his chair, concealed under the

American and the Presidential flags, are two men: "Bugging" and "Espionage."

The editorial follows:

WATERGATE'S STINK WILL LINGER LONG

James J. Kilpatrick is a newspaper columnist who is known not only for his conservative views, but also for his writing style and high regard for choosing the right word.

So, when speaking to a Flint audience, he declared, "The whole Watergate bugging business stinks" he was not falling into the vernacular, but choosing the best words to describe the mess.

Despite an investigation by the Senate Judiciary Committee, it is highly unlikely there will be a definitive answer to how high up in the White House the responsibility for Watergate rests.

Bruce Blossat, Newspaper Enterprise Assn. columnist who appears on these pages, thinks it highly improbable that the President was aware of the spying until it exploded and that it is not likely the few men closest to the President were aware of plans for direct bugging of the Democratic headquarters at Watergate.

His logic is good: The President was conscious of the great advantage he held over the Democrats at the time, he is too smart a politician and lawyer to take such risks for so little gain and he probably would have considered the project counterproductive.

Still it is generally conceded somebody with considerable authority—enough to have control over large sums of campaign funds and a recognized power to set policy—had to be involved. And even if the top level of the Nixon campaign organization or administration was not aware of the plot, the stench clings because Nixon has retreated behind executive privilege, political power and personal loyalties rather than to try to root out the mess.

It is not enough to dismiss the whole business as one of gross stupidity and almost incredible bungling. The damage is not restricted to the Republican party's political standing.

The grievous harm in the Watergate affair and all its ramifications (hidden political funds, FBI files, confessions of criminal activities under the guise of political campaigning and the widening of the split between Congress and the administration) lies in the damage done to our political system.

It feeds and swells the ranks of those who have accepted the theory that "politics is a rotten business" and that conspiracy and deviousness and greed is the name of the game.

It is these people, although they deplore their version of politics, who will buy the "defense" of some apologists for the party that Watergate was just a different way of playing the same old game, that it was a modernization of the rules and not a change. But it is not true. Spying and wiretapping are not variations but a retreat to the days of voting cemetery lots and stealing ballot boxes. They are a new, insidious and degrading ingredient in politics—and those who speak so highly of the "old virtues" of yesterday and who praise personal integrity and self-reliance should realize it.

In discussing Watergate, Blossat writes: "Most of the newsmen who cover politics hard and long don't accept the conspiratorial theory, the idea that all politicians are dishonest, the notion that the reality is always hidden and never easily unearthed. They find hundreds of 'clean' politicians, find them often more hard-working and dedicated than men in almost any other field, find them congenial, balanced people with a constructive, hopeful outlook."

The stench from Watergate provides ammunition for the conspiratorial theorists, it diminishes the defenses of those who agree with the opinion of Blossat (one we share)

that the absurdities of the 1972 campaign must not be allowed to blacken those who work hard and honestly in the vineyards of democratic government.

In the long run, accepting the necessity for an ever-alert skepticism and querulousness on the part of the citizenry and press, democratic government must rest ultimately on the trust of the people in their government, upon their final decision that those they have elected are fundamentally acting in their behalf and, within the limits of human frailty, are worthy of their support.

Watergate and all it represents, does incredible damage to that trust no matter on which side of the political fence one chooses to stand.

That is why the stink of Watergate, goes beyond the immediate vicinity and penetrates far up in the administration. It will linger until the President chooses to let in the air at whatever cost to his aides.

FEDERAL RESERVE BOARD CONTROL OF COMMODITY FUTURES MARKET

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. FRENZEL. Mr. Speaker, the House Banking Committee chairman has announced markup sessions beginning tomorrow on his bill, H.R. 6168. The bill contains a provision mandating Federal Reserve Board Control of Commodity Futures Markets.

No participants in futures markets have been asked to testify before the committee. No other expert witness has mentioned this subject except in response to questions from sponsoring members of the committee.

Members of the Minneapolis Grain Exchange have been concerned that legislation might be enacted without study or debate. They have caused me to be furnished with a copy of a statement by W. F. Brooks of the National Grain Council, which I am informed they have endorsed.

The Brooks statement follows. It is rich in the history of congressional rejections of similar proposals. As in the past, there is no reason to have this provision slipped through the Congress now.

STATEMENT OF THE NATIONAL GRAIN TRADE COUNCIL

My name is William F. Brooks. I am President and General Counsel of the National Grain Trade Council. We appreciate this opportunity of registering our views against the approval, by House Committee on Banking and Currency, Section 206 of H.R. 6168.

The stated purpose of this section is to prevent "excessive speculation in and the excessive use of credit for, the creation, carrying or trading in commodity futures contracts, having the effect of inflating consumer prices and industrial costs". To accomplish this, the Board of Governors of the Federal Reserve would prescribe regulations which apparently would give the Federal Reserve System the same powers to set margin requirements in connection with trading in commodity futures contracts that it now holds in the setting of margins for credit transactions on the stock exchanges.

On a number of occasions Congressional committees have studied proposals which

would grant to government officials authority to set margin requirements on futures transactions in commodities. We have opposed this grant of authority because in our considered judgment, no public official or group of public officials, such as the Board of Governors, are so omniscient as to determine when speculation might become excessive in commodity transactions and to determine when any degree of speculation in commodity futures contracts would have the effect of inflating consumer prices.

We are convinced that speculative transactions have little effect on the price paid by consumers for commodities and that speculation is not a basic factor in determining the general level of prices in the long run. We doubt that it is an appreciable factor even in the short run and we are quite certain that relatively little credit is used in connection with futures trading.

The proposal embodied in Section 206 is based on a misconception of the nature of commodity contracts markets, on the nature of trading in commodity futures contracts, and on the functions of margins in connection with the commodity futures contracts when attempts are made to draw an analogy between them and the down payment required to obtain a title to stock or goods and chattels or real estate.

Organized contract markets are recognized commercial institutions. Most of the commodities for which futures trading is available, are subject to the Commodity Exchange Act. Additional commodities may become subject to this Act.

These recognized commercial institutions make possible an orderly movement of agricultural commodities from production to consumption. Their operations assure a rough equality on the buying and selling sides of the market. The availability of futures contracts makes substantial contributions to the financing of crops as they are planted, harvested, and start thereafter through the marketing channels to ultimate end users. Speculation within the commodity markets makes hedging possible and permits the operation of the Nation's low-cost efficient grain marketing system.

The grain marketing system, because of the availability of futures markets where people trade in futures contracts covering grain, is a highly competitive, low-cost marketing system. The function performed by futures markets is to register the forces of supply and demand by open public trading. In doing this through the medium of futures transactions, producers, processors, exporters, and others are offered an opportunity to obtain price insurance that today they may agree to deliver in the future something they may not now own, or that today they may agree to take delivery in the future of goods they may now anticipate they will need, or that today they may obtain a price certain for commodities they are buying or have bought and intend to carry awaiting sales or use for processing. Through trading on exchanges, a steady flow of commodities moves from production into consumption.

The rules of futures markets require that the users of these markets deposit collateral in the form of margins, to guarantee the performance of their contracts. The minimum margin to be deposited is determined by the governing boards of contracts markets. Futures commission merchants can and often do require deposits in excess of the minimum established by governing boards. The minimums required are subject to constant review. They vary by commodities, by type of trade, and may be different for different delivery months.

Attempts are at times made to draw an analogy between the margin required to enter into a contract for the future sale or purchase of a commodity, and the down pay-

ment required to obtain title to stock, or goods and chattels, or real estate.

There is no analogy between these transactions.

In speculative securities transactions actual title to the number of securities traded passes from the seller to the buyer. The speculator in securities deposits his own money in the amount required by the Federal Reserve Board to obtain title to the securities, and his broker then loans the balance, either from his own funds or from a lending bank to complete payment for the transactions. In speculative securities transactions actual title to securities, evidencing the acquisition or disposal of an equity, passes from a seller to a buyer.

So, too, as to transactions involving goods and chattels or real estate. There, purchasers obtain a title by making a down payment and arrange to pay the balance either with the seller or through a bank on terms satisfactory to the buyer, the seller, and the bank. The buyer receives a title to something tangible—something he can use—something he can deal with—subject, of course, to the rights of the lender—the seller or the bank—as those rights may be defined in a chattel mortgage or mortgage deed.

In transactions covering agreements to sell or buy commodities for future delivery or receipt, no title passes to the buyer and no title passes from the seller. Each party to such a contract entered into on a commodity exchange deposits with his broker an amount of earnest money to assure compliance with the contract when, in the future, it matures, or until an offsetting contract is entered into. Only if the contract is completed by delivery, when it matures, does a title pass. And then, contrary to the practice in transactions involving securities or goods and chattels or real estate, full payment must be made.

Implicit in each futures transaction is an intention on the buyer's part to make delivery, and on the seller's part to take delivery. These obligations often are liquidated by offsetting trades. To the extent that they are not so offset, delivery will be made by the seller and title to the grain covered by the contract will be accepted by the buyer.

The experience of late 1947 as to grain prices, indicates that in commodity markets, where the volume of speculative trading has been limited, prices react in response to supply and demand factors. In October of 1947, as demanded by the President, a 33½ percent margin was set by the exchanges for speculative transactions. At that time May (1948) wheat at Kansas City was selling at \$2.62¼. May wheat continued upward, reaching nearly \$3.00. During this period the markets lost much if not all their liquidity, and such trades as were available to hedgers—processors or exporters, county and terminal handlers—caused rather wide changes in prices.

No compelling public interest existed during World War II to require the Government to attempt to govern the margin requirements necessary to contract, as a speculator, for the purchase or sale of commodities for future delivery. It was not until April 1946 that the OPA attempted to exercise such authority. At that time this agency decreed that margins on new speculative trades in cotton futures should be \$50 a bale on transactions based on a price above 28 cents a pound. If news stories describing the promulgation of this order are accurate, the then Secretary of Agriculture signed the order after he had been "ordered by Economic Stabilizer Bowles to sign it". Mr. Bowles at that time stated as the reason for the order "the prevention of further speculative rises in cotton". Why he then had to order the Secretary of Agriculture to sign is con-

tural. The order to sign may have been required because the then Secretary of Agriculture believed then, as we do now, that it is not necessary but rather harmful and dangerous for the Government, through the exercise of control over margins in speculative contracts for future delivery, to interfere with the mechanism of free, open, competitive markets, and that attempts to control prices through this interference will not work.

It is significant that shortly thereafter, and before the decree became effective, Congress repealed the law under which the decree was issued.

This decision of Congress to remove (from the control sphere of the Government) control over margins was undoubtedly a decision based on full consideration of the merits of the question whether the Government should have authority to set margins on future transactions in commodities. Whatever the Congressional reason then, it is obvious that in view of subsequent legislative events, Congress has been consistently convinced thereafter that there was little or no merit in the request that the Government should have this authority.

In 1947 the Joint Committee on the Economic Report held extensive hearings on prices throughout the country and in Washington. During these hearings people connected with all segments of those industries that make use of futures markets testified on the operation of those markets. They explained the operation of those markets; the function of the speculator; the contribution he makes to a market's liquidity; the use of markets, in view of their liquidity, by producers, handlers, processors, exporters, and others, in buying, storing, processing and exporting to insure inventories; and how, in view of these uses, sellers of the Nation's grains are not left to the mercy of a few or a single buyer; and buyers of the Nation's grains, as it moves from production into consumption, are not left to the mercy of a few or a single seller.

All opposed the suggestion that the Government should be granted the authority to set margins on speculative transactions. At that time, as now, the proponents of the suggestion stated that this authority was needed to prevent excessive speculation. They agreed then, and they agree now that futures markets, including speculation, perform an economic function in moving crops for, by them, hedging is possible. They agreed then and seem to agree now, that speculation is a stabilizing force and that its presence in open regulated market places "focuses all of the forces that affect price in one place where everybody can see it".

Since that date responsible committees of Congress have studied proposals to grant control to the Government to set margin requirements in connection with trading in commodity futures contracts.

In February 1948, the Senate Committee on Agriculture held hearings on a bill which, if enacted, would have granted margin control authority. Hearings on this bill (S. 1881, 80th Congress, 2nd Session) extended over four days with a number of witnesses from the administration, the farm groups and industry interested in futures trading, appearing before the Committee. This Senate Committee after hearings and study of the testimony produced at these hearings, took no action.

In the 81st Congress, companion bills—H.R. 4685 and S. 1751, embodying the same proposal, were referred to appropriate committees.

Neither bill was reported.

A Subcommittee of the House Committee on Agriculture was named to study H.R. 4685, and conducted an investigation into the operation of commodity exchanges.

Thereafter this Subcommittee recommended that no new and additional regulation of commodity exchanges appeared necessary.

In 1950 and 1951, in connection with the Defense Production Act and its extension, the House and Senate Committees on Banking and Currency, considered proposals to grant to the Government authority to set margins in connection with trading in commodity futures contracts. Congress did not approve the grant of this authority.

In 1966, a Subcommittee of the House Committee on Agriculture held hearings on a bill which would have granted a number of authorities to the Secretary of Agriculture, including the authority to set margins on commodity futures contracts. According to the U.P. ticker of April 6, 1966, Congressman Matsunaga, after the hearings had been concluded told newsmen that if this Committee approved any part of the bill it would only be in greatly modified form. The same news item reported that comments by other subcommittee members indicated the margin control section of the bill was not expected to survive.

That Subcommittee did not report a bill. During the 90th Congress, a Subcommittee of the House Committee on Banking and Currency held hearings on H.R. 11601. Section 207 of that bill was nearly identical to the provisions of Section 206 of H.R. 6168 granting, as it does, certain authorities to the Board of Governors of the Federal Reserve.

After hearings directed specifically to Section 207 of H.R. 11601, the Subcommittee in 1967 made no recommendation that that proposal be reported favorably and acted on by Congress.

This Committee is, in effect, therefore considering a proposal which, in substance, has been considered by other committees and subcommittees in prior Congresses and found wanting. We recommend that this Committee make a similar finding.

We oppose this grant of authority because we are convinced that this method of attempting to prevent inflated consumer prices will not work. We oppose this grant of authority because an attempt by the government to exercise control over margins may well cause a breakdown in the entire marketing structure, leaving State trading as the only alternative. Raising margins will not keep prices from going up. It seems to be admitted that commodities that have no futures market are usually more erratic in price than those that have. By raising margins you can reduce and eliminate volume of trading. But you cannot control prices. And, you might wreck the market structure.

IN APPRECIATION OF EARLE B. OTTLEY

HON. RON DE LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. DE LUGO. Mr. Speaker, when the 10th Legislature of the Virgin Islands convened January 8, 1973, it was the first time in 26 years that the legislative branch of the Government of the Virgin Islands could not boast of Earle B. Ottley as one of its members. The legislature, not to mention the people it represents, is certainly much poorer for Senator Ottley's determination to retire.

As the primary driving force of the senate, Earle Ottley was responsible for more social legislation beneficial to the people he represented than perhaps any single individual has been in any comparable circumstances. He accomplished this laudable record by virtue of a superb ability as a legislative tactician and a unique grasp of the governing process. The application of these abilities, in conjunction with an unwavering dedication to and compassion for our people, enabled him to achieve so much for our islands.

It was my privilege to serve with Earle Ottley for approximately 9 years in the Virgin Islands Senate. For 4 of those years he served as president of the senate while I was minority leader. During all of those years, and especially during that time we served as leaders of opposing parties, I never saw need to question his love for our Virgin Islands and his determination to act in their best interest.

Mr. Speaker, the only consolation that we in the Virgin Islands have in the retirement of this great progressive populist leader that it is partial. Earle Ottley is continuing, with his usual breathless energy, his involvement with other responsibilities in the islands. These include, but are not limited to, his chairmanship of the V. I. Commission on Human Resources, the presidency of the V.I. Labor Union, and publishing the *Carib-Post*, a weekly newspaper.

Earle B. Ottley, through public office, labor organizing, journalism, and party leadership has been at the vanguard of the struggle to secure an equitable and prosperous Virgin Islands. His current activity promises continued dividends for our people's rights and welfare. I am now pleased to insert in the CONGRESSIONAL RECORD a resolution passed by Senator Ottley's colleagues in one of the closing sessions of the Ninth Legislature of the Virgin Islands:

RESOLUTION OF THE NINTH LEGISLATURE OF THE VIRGIN ISLANDS OF THE UNITED STATES

Resolution to cite the services of and to express appreciation and extend congratulations to the Honorable Earle B. Ottley on completion of twenty-six years of dedicated service as an elected representative of the people of the Virgin Islands

Whereas Senator Earle B. Ottley, a native of the Virgin Islands, born on the Island of St. Thomas, was first elected to public office in 1946, as a member of the Municipal Coun-

cil of St. Thomas and St. John; was thereafter re-elected to that body continuously through 1954; was elected to the First Legislature of the Virgin Islands in 1954; and has since been re-elected to each succeeding Legislature through the Ninth, now sitting; and

Whereas over the years, Senator Earle B. Ottley has held several legislative offices, including that of President of the Legislature, has served on every important committee of the Legislature and has been chairman of many, including the Committee on Rules and the Committee on Finance, has served on numerous public boards and commissions, and is now Chairman of the Second Constitutional Convention of the Virgin Islands; and

Whereas during his twenty-six years of service, Senator Earle B. Ottley has been a champion of the rights and welfare of the people of the Virgin Islands and has sponsored and pushed to fruition important legislation in many fields of public endeavor, including labor and employment, workmen's compensation, homesteading, housing, health, education, social welfare, etc.; and

Whereas Senator Earle B. Ottley was one of the chief architects of the Election Code of 1963, which code was an outstanding contribution to the political development of the Virgin Islands, due to the fact that it transformed temporary political associations from mere social and restricted membership clubs into legally recognized, controlled and supervised stable political organizations in which voters could enroll freely, and which Election Code contributed substantially to the subsequent enactment of the Elective Governor's Act of 1968 by the Congress of the United States; and

Whereas Senator Earle B. Ottley has been in the forefront of every liberal movement during his years of public service and has worked tirelessly for the right of the people of the Virgin Islands to elect their Governor and for full internal self-government; and

Whereas the public career of Senator Earle B. Ottley has been brilliantly distinguished in its devotion to the interests of the people of the Virgin Islands; and

Whereas Senator Earle B. Ottley has now completed twenty-six consecutive years of service as an elected representative of the people of the Virgin Islands; Now, Therefore, be it

Resolved by the Legislature of the Virgin Islands:

That, through the medium of this Resolution, the officers and members of the Ninth Legislature, on behalf of the people of the Virgin Islands, cite the distinguished and devoted service of, and express appreciation and extend warm congratulations to Senator Earle B. Ottley on his completion of twenty-six consecutive years of public service as an elected representative of the people; and provided further

That a copy of this Resolution be printed, framed and presented to the Honorable Earle B. Ottley at a Testimonial Dinner to be held in his honor by the Ninth Legislature of the Virgin Islands;

Thus passed by the Legislature of the Virgin Islands on December 20, 1972.

PLANNED FISCAL REFORM NEEDED

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. BENNETT. Mr. Speaker, today I was the first Member of Congress to testify before the Senate Subcommittee on

Budgeting, Management and Expenditures of the Committee on Government Operations, currently studying legislation to give Congress stronger controls over the Nation's fiscal policies. And I would like to include hereunder the testimony which I gave:

STATEMENT OF THE HONORABLE CHARLES E. BENNETT

Mr. Chairman, I very much appreciate having this opportunity to be here today to speak in support of my bill H.R. 5388 which I have introduced to improve and implement procedures for fiscal controls in the government. This legislation is identical to S. 40 introduced by Senator Brock.

Congress, as now operating, can be compared to a poorly run corporation. There are 500 men on the Board of Directors, a board that won't pass on the corporation's annual budget. It has no overall mastery of the total budget and no real list of priorities.

Instead, it farms out small parts of the budget to scores of committees and subcommittees, each concerned with an office or two. Then, bit by bit, hearings are held; and 20 finalized mini-budgets pass in a random fashion before the entire board. Only a handful of the members really understand the issues behind the separate budgets; so, trusting their specializing colleagues, they vote in favor of measure after measure largely on the basis of whether the programs appear good rather than on whether they are good and can be afforded. The budget takes shape at a snail's pace, and still, no member of the board can be sure what the final total of expenditures will be.

Nor is any study conducted to see what this year's new program will cost next year; nor is there care enough given as to whether the program will work at all. Billion dollar programs are thrown at the country without any preliminary testing and they grow and grow, year after year, unchecked and untested by the board. That leads to wasteful government spending and costs you and me, the taxpayers, too much money in taxes and inflation.

It seems amazing that the federal government's legislative branch, handling the biggest budget in the world, has so poor a grip on the fiscal process. It is because of this slippery grip that the nation spends and spends until today we are facing a serious fiscal crisis. I and others in Congress have introduced legislation in an effort to correct these procedures.

Government, generally, is growing at an astounding rate in the United States. Governments at all levels will spend \$370 billion this year. The federal government alone will spend \$250 billion of this amount. In the past quarter century, total government expenditures, Federal, State and local have gone from about 18% of the gross national product to cover 33% of the gross national product. In other words, the governmental sector of the American economy is growing more than twice as fast as the private sector.

The greatest increases have been in state and local governments; and in many cases these local increases have been inspired or required by new federal programs requiring local matching funding. The federal government in the meantime is spending much more money than ever before.

In the 54 years since 1920 the federal budget has been in deficit 37 times. In 32 of these years, Presidents submitted budgets to the Congress with deficits. Since 1931, there have been only six surpluses, 1947, 48, 51, 56, 60 and 69.

The largest deficits in the administrative budget have occurred in recent years as follows: 1968—\$28 billion; 1970—\$13 billion; 1971—\$30 billion; 1972—\$29 billion; 1973—\$34 billion (estimate).

In the past decade, the average family's

share of the national budget has risen 82% from \$2022 to a projected level this year of \$3,681. We are still spending billions more each year than we take in. This year, alone, 10% of your family's tax dollars will go down the drain paying the interest on the national debt.

Every day, I receive letters from constituents in Jacksonville which I represent in the Congress asking that I do something to stop uncontrolled spending. But I receive many more letters which ask that spending be increased for various specific programs, which add to greater federal spending than we now have or ever expect to have. Everyone seems to agree that taxes should not go up and in fact federal taxes have gone down dramatically in the last 15 years, necessarily further devaluing the dollar through excessive borrowing in good times.

To meet the problem I have introduced the "Federal Act to Control Expenditures and Upgrade Priorities" (F.A.C.E. U.P.). This "Face-Up" bill is even more comprehensive than the congressional budget bill I introduced a few months earlier. The bill would require Congress to project all major federal expenditures over a five year period. Secondly, it would require that federal programs be re-evaluated every three years. It would require the pilot testing of every proposed major federal program. The "Face-Up" bill would designate a joint Congressional committee to evaluate the federal budget in terms of priorities. Finally, my bill would subject federal programs, financed through trust funds, to the annual appropriation process just as other tax-supported programs. I am now working closely with Congressman Robinson in seeking co-sponsors for this vital legislation.

Because of the ballooning costs of federal programs, in years following their enactment, it is no longer acceptable to evaluate and plan expenditures on a one year basis. Therefore, the five year budget projection for programs will give us full recognition of the long range costs of programs. Congress will be better able to judge the worth of programs in relationship to the cost.

The trend today is to add on to existing programs without terminating those older, expensive programs that may have grown wasteful and unnecessary after a few years. We must force program administrators to justify their existence and the best way to do this is to put a three year limitation on authorization, causing periodic review of all programs.

The "Face-Up" bill calls for a two year pilot testing of major programs to provide a better estimate of costs and also to permit a complete evaluation of a program before national implementation. Pilot testing is to be conducted under conditions similar to those expected if the full program were enacted. The testing would be monitored by the Comptroller of the United States.

The Joint Committee on the Budget would develop a legislative budget to serve as a guideline discouraging uncontrolled federal spending and foster proper implementation of national goals and priorities. The joint committee is to be composed of 18 members and will be adequately staffed and become a permanent part of the budgetary process. The House or Senate would not consider a bill unless a statement from the joint committee is attached.

Title Five of the bill, the final section of the legislation, establishes the requirement of annual appropriations by Congress, including those expenditures made by trust funds. Currently, there are 800 federal trust funds with a permanent budgetary authority. They too should come under a thorough annual appropriations review.

The five points contained in this bill that Senator Brock and I are pushing will bring about the long needed reforms in the cum-

bersome corporation we know as the Congress. Only in this way can Congress regain control of the priorities of government, a power our forefathers thought should be in Congress by legislation rather than in the hands of one man, the President, by personal decree.

Thank you for giving me this opportunity to testify in favor of this legislation and hope the Committee will take prompt action on it.

ANNUAL QUESTIONNAIRE

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. FISH, Mr. Speaker, once again, as I have every year since I entered the Congress, I am sending a congressional questionnaire to my constituents in the 25th Congressional District of New York. Through this form of communication, I am seeking to obtain their views regarding some of the pressing matters which confront us here in the House of Representatives. When the results of this opinion poll are available, I will certainly share them with my colleagues.

The questionnaire reads as follows:

1973 QUESTIONNAIRE

Dear Friend and Neighbor:

As the new session of Congress begins, we have some new problems to face, in addition to those that have followed us from the last session. I hope you will spend a few minutes answering this, my fifth annual Legislative Questionnaire, as your opinion will be most helpful to me in the months ahead.

Although, as your Congressman, I assume the final responsibility for my voting record, your opinions on the important issues facing our country are of great importance to me, and I can assure you that your collective opinion will weigh heavily in my considerations. Of necessity, the questions and answers are sweeping in nature, so if you wish to express more detailed opinions on these or other questions, please write, as I welcome your views.

I consider it a privilege and honor to represent you in Congress, and I look forward to hearing from you.

Sincerely,

HAMILTON FISH, JR.,
Member of Congress.

THERE TO HELP YOU

As I pledged, I now have three full time District Offices in the 25th Congressional District. My Peekskill, Poughkeepsie and Kingston offices are manned by skilled staff members from 9 a.m. to 5 p.m., Monday through Friday. My Carmel office, although on a part time basis, is also there to serve you.

Each of these offices is there to be of help to you. If you have a problem or need information concerning the Federal government, either write or phone my District Office nearest you. We're here to serve you.

Peekskill: 738 South Street, Peekskill, New York 10566, Telephone (914) 739-8282.

Poughkeepsie: 62 Market Street, Poughkeepsie, New York 12601, Telephone (914) 452-4220.

Kingston: 292 Fair Street, Kingston, New York 12401, Telephone (914) 331-4466.

Carmel: Main Street, Carmel, New York 10512.

WHAT DO YOU THINK?

[Provision for "yes", or "no" answers in "his," "hers," and "youth" categories.]

Do you Favor?

1. Legislation to restore the death penalty in certain crimes such as murder, treason, and hijacking.
 2. The Supreme Court decision limiting the power of the states to regulate abortions.
 3. Increased trade with China and the Soviet Union.
 4. Longer sentence including mandatory life for traffickers in heroin.
 5. War Powers legislation requiring Congressional consent to a commitment of U.S. armed forces to hostilities.
 6. Plans to construct nuclear power plants in the Hudson Valley to provide power for the MTA.
 7. Diversion of a part of the Highway Trust Fund (gasoline tax) to provide inter-city and mass transit systems.
 8. Removal of the Social Security earnings limitations.
 9. A lowering of the age, that men and women become eligible for Social Security benefits.
 10. Reconstruction for North Vietnam.
 11. Tax credits for tuition paid for non-public education.
 12. Mandatory price controls on raw agricultural products and meat.
 13. Administration impounding of funds, ending or cutting programs in agriculture, housing, anti-poverty, urban renewal and water pollution.
 14. Tougher environmental standards on industry.
 15. An increase in the Federal minimum wage.
 16. With respect to amnesty for draft evaders, do you favor?
 - (check one)
 - a. no amnesty
 - b. conditional amnesty with alternate service requirements
 - c. total amnesty
 17. If you would like to receive future special reports from me, please complete the following information: Last name; first name; middle initial. Street address. City and State. Zip code.
- To help me analyze the results of this poll, please indicate your age and sex:
 M: 21-30; 31-45; 46-65; over 65.
 F: 21-30; 31-45; 46-65; over 65.
 Y: 16 and under; 17; 18; 19; 20.
 Labor Union: M, F.
 Veteran: M, F.
 Occupation: Answer male, female, or youth.
 Hourly Employee.
 Farmer.
 Retired.
 Salaried Employee.
 Business or Profession.
 Educator.

OEO FUNDS ABUSE

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. KEMP. Mr. Speaker, in order to help all Members be apprised of as much new information as possible, on issues of immediacy and national concern, I recommend for perusal a recent article which addresses the issue of use and abuse of OEO funds. The Detroit News on March 21 printed a story which suggests that OEO funds were used to subsidize demonstrations which occurred in the city of Washington, D.C., on February 20, 1973. The Economic Opportunity Commission of Nassau County—EOCNC—was one of the groups respon-

sible for a great deal of the planning that went into those demonstrations.

I encourage my colleagues to read the article, and include it in the RECORD: USE OF ANTIPOVERTY FUNDS TO STAGE DISTRICT OF COLUMBIA PROTEST RALLIES IS CHARGED

(By Seth Kantor and John E. Peterson)

WASHINGTON.—Federal authorities are investigating the alleged use of Office of Economic Opportunity (OEO) funds to sponsor rallies in Washington, protesting recent federal cutbacks in anti-poverty programs.

The investigation centers around the Economic Opportunity Commission of Nassau County (EOCNC), a Long Island, N.Y., anti-poverty agency that receives \$1.5 million a year in federal grants from the OEO.

OEO investigators said the Long Island agency, which operates 11 anti-poverty centers in densely populated (1.5 million persons) Nassau County, organized the first of several such protest rallies in the nation's capital Feb. 7.

More than 3,000 demonstrators from Nassau and adjoining Suffolk County made the 250-mile trip to Washington and OEO investigators estimate the rally may have cost the taxpayers nearly \$50,000.

OEO investigators also are probing the firing of nine EOCNC employees who refused to participate in the agency's "March on Washington." The nine—all with excellent work records—were fired without benefit of notice, two days after the protest.

The Feb. 7 protest was followed by a series of small protests that culminated with a big rally Feb. 20 that drew some 10,000 social workers and their sympathizers from anti-poverty agencies along the Eastern Seaboard.

Federal officials are afraid the Feb. 20 protest also may have been paid for with federal funds and indicate that as many as half-dozen new investigations may be launched before the end of this month.

"If present indications prove correct," said one high-ranking official, "it's quite possible that middle-level bureaucrats who head these agencies have spent hundreds thousands of dollars earmarked for services for the poor in a gigantic lobbying effort to save their own jobs."

The OEO, now being dismantled by the Nixon administration, is the principal agency conducting various facets of the anti-poverty program. Some of its functions are being transferred to other agencies.

Investigators from the OEO did not begin their probe of the Nassau County agency's Washington rally until March 6, although they made an initial attempt Feb. 28.

But EOCNC's executive director, John Kears, refused to let OEO investigators audit the agency's books at that time on the grounds "that we have to know the specific charges and the complainants."

"It really was an incredible situation," said an OEO investigator.

"OEO was supplying Kears's agency with \$1.5 million a year and he refuses to let us see how he's spending it. They finally let us in a week later after OEO headquarters in Washington sent a telegram threatening to cut off their funds. With that kind of delay, we were lucky to find any books left to audit."

Even though OEO investigators termed EOCNC's accounting controls "practically non-existent," they did manage to uncover a number of facts. Among them:

The Nassau County agency transferred \$50,000 from its operating account into a private "slush fund," a week prior to the Washington protest.

Shortly before the rally, EOCNC tapped the "slush fund" for \$28,000—allegedly to charter 68 buses and pay the living expenses

of 80 of its employees who "volunteered" for the trip, 300 employees of the agency's delegate or subsidiary agencies and the nearly 2,700 other "sympathizers" it recruited from its poverty clientele and, in many cases, "just off the street," OEO investigators said.

All employees of OEO-funded agencies who made the trip (about 380 in all) were given the day (Wednesday, a normal working day) off with full pay. And the agencies were shut down.

The nine employees of EOCNC who refused to make the trip were fired without notice two days later.

It was the firing of the nine employees who declined to go on the trip to Washington that eventually brought the OEO investigators into the picture.

One of the employees fired, a woman supervisor, in charge of training new employees, took her case to James Davis, the president of the Glen Cove chapter of the NAACP.

"It didn't take me long to determine that the nine had all been fired in direct violation of their civil rights," Davis said.

"For one thing, the 1967 amendments to the Economic Opportunity Act clearly forbids OEO employees to be paid for lobbying. And, for another, it's highly unconstitutional to fire someone—particularly from a government job—for refusing to support a certain political persuasion."

Davis quickly sent a letter demanding a full-scale investigation of the matter to Angel Rivera, executive director of OEO's Region 2 in New York City.

When Rivera didn't respond, Davis contacted OEO's headquarters in Washington. The investigators it dispatched searched for three days before they found Davis' initial letter to Rivera—a letter Rivera says he never saw.

"I heard later that Kears had some real close friends in the Region 2 office that headed off trouble for him," Davis said.

"It's a funny thing that my letter finally blew the whistle on the Economic Opportunity Commission because originally we (the NAACP) were all for the lobbying trip to Washington."

"In fact, we and a number of other organizations offered to donate funds to help pay for the trip but Kears turned us down. He said he didn't need any money and that they weren't going to charge anyone that went."

"We did help them recruit demonstrators, though. They hired 68 buses and they wanted to fill them—for a while they were taking kids out of school . . . picking up winos off the street, anyone they could get."

Davis said he would have been more suspicious but Kears told him that EOCNC had received some "large donations from a number of private sources," and that he shouldn't worry.

"I do know that OEO has been investigating them for several weeks now and some real heat is being applied," Davis said. "George Jackson, who was chairman of EOCNC, and Kears's boss, resigned last week."

EOCNC officials, while refusing to talk about the \$50,000 "slush fund," have been quite open in commenting on the reasons for firing the nine and their motives in making the Washington trip.

"All commission staff members who did not attend the rally and didn't have a prior excuse were terminated," said EOCNC's public information director, Nat Trammel, in a statement to the press the day after the firings (Feb. 10).

One of the fired employees, Mrs. Nancy Reimer, of Rockville Centre, N.Y., said she had no warning about her dismissal until she picked up her paycheck on Friday afternoon (Feb. 9).

"Inside my check was a small note that said, 'you are being terminated because you failed to demonstrate concern and agreement with the agency's philosophy.'"

"I was really shocked. I worked for them for six years, never had any criticism about my work and was rarely sick. Then just like that—goodbye."

Three days after Trammel's initial statement, Kearsse called a press conference and denied firing the nine because they had refused to participate in the Washington protest.

"We were belt-tightening and they just weren't productive," he said. "But their failure to attend was one of the factors and may have been the final indicator in our decision."

Last week, however, Kearsse said the firings "are no one's business, but our own."

"That — Nixon is slashing our funds and these people didn't even care enough to go down there on a free trip and demonstrate," he said. "Now they can find out what it's like to be on welfare."

One of the OEO officials brought in to dismantle that agency and transfer its more effective programs to other departments said he runs into similar attitudes quite often.

"We're all for helping the poor," he said, "but, when you ask some of these professional do-gooders to open their books and show you how much of their grants have actually gone to the poor, they get this arrogant attitude and just about tell you to go to hell."

"The situation in Nassau County has prompted us to take a close look at other agencies present at the demonstrations here. Once our investigations are completed, you can be sure we will take appropriate action."

"Appropriate action," he said, could mean cutting off federal funds, giving agencies probation time to shape up or even lead to requests that the Justice Department prosecute individual officials for fraud and other crimes.

"I wouldn't bet on getting many convictions, though," he said, "because the accounting conditions have been so lax at many of these agencies that it's often downright impossible to find out where any of the money went."

A call to the EOCNC yesterday evoked this answer from a switchboard operator:

"No one's here today; you'll have to call back tomorrow."

"Where is everyone?" she was asked. "Oh, they've all gone to Albany to lobby," she replied. "But they'll be back tomorrow. You call back then."

LOG EXPORTS: THE ALASKAN TIMBER INDUSTRY

HON. DON YOUNG

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. YOUNG of Alaska. Mr. Speaker, on March 28, the Alaska Lumber Association and the Alaska Loggers' Association testified before the Subcommittee on International Finance of the Senate Committee on Banking, Housing and Urban Affairs and presented their case with regard to that portion of Senator PACKWOOD's Senate bill 1033 which will limit the foreign export of lumber to 4½ inches in thickness.

Simply, their position is this: If the Alaska timber industry is forced to reduce the maximum thickness of its foreign export lumber to 4½ inches, it will lose the Japanese lumber export market. Ninety-five percent of Alaska's sawmill production is exported to Japan. The economics of export marketing in rela-

tion to the product capable of being produced by Alaska forests are such that shipments of lumber to Japan in thicknesses of up to a nominal 8 inches must be made in volumes large enough to insure that the balance of the production which can meet a 4½-inch limitation can be successfully marketed. If their sawmills lose this market, this loss will in successive turn substantially wipe out the existing sawmill industry, the pulp industry, and the logging industry. Inasmuch as these industries in combination constitute the third largest industry in Alaska, and the largest industry in southeast Alaska, the economic disaster befalling Alaska from this sequence of events is self-evident in any context.

Mr. Speaker, I would like to call to the attention of my colleagues the testimony of the Alaska Lumber Association and the Alaska Loggers' Association and urge that the State of Alaska be exempt from the log export restrictions as set out in the Packwood bill:

THE ALASKA TIMBER INDUSTRY OPERATIONS AT FULL CAPACITY

Today, ninety-five percent of Alaska's sawmills are operating at one hundred percent capacity. All are operating on two shifts per day. Three shift per day operations are not presently possible, due to the time required to perform daily maintenance. The mills operate year around, with shutdowns limited to those caused by breakdown. Two additional mills will be in operation in 1973, and these also will be operating at one hundred percent capacity within the time required to break them in. At present, twelve to fourteen different Japanese trading companies are in vigorous competition for the production of these mills. By way of comparison, in 1967 there was only one such trading company in the Alaska market, none of the mills operated the year around, and none of them were on double shift operations.

EXISTING EXPORT REGULATIONS CRITICAL TO GROWTH

Forest Service regulations controlling the extent of primary manufacture in Alaska necessary before export to Japan would be permitted, have been critically important to the development of Alaska's export market in Japan. Recognizing that Alaska's own domestic demand would not support a viable sawmill industry in Alaska within the regrowth cycle of Alaska's existing forests, and that Alaska sawmills had little chance of ever placing their production into the domestic United States market at a profit, they did, and still do, permit the export from Alaska of lumber up to a nominal eight inches in thickness. This limitation was determined over the years to be the stage of primary manufacture which would give Alaska the optimum benefits of primary manufacture, while at the same time giving them a market for their product.

EFFECT OF JONES ACT

It has often been suggested by those outside of the Alaska timber industry that a repeal of the Jones Act would enable the Alaska lumber to be marketed into the domestic United States at a profit, due to the supposed reduction in shipping rates which would follow if we were permitted to use foreign bottoms to move our product. As we stated at the round log hearings held in January of 1968, this is simply not so for several reasons.

In the first place, Alaska lumber is being lifted by Japanese ships with capacities in excess of eight million board feet. This lumber is loaded at rates in excess of one million board feet per day, the ships are highly

sophisticated, and represent a huge investment made over the past ten years by the Japanese, specifically designed for the Alaska lumber trade. There are no other ships available to Alaska to move Alaska lumber at the volume and the loading rates required. If our export to Japan is cut off, the Japanese obviously will not allow us to use these ships to move our products into the United States domestic market. During the time it would take for other foreign or domestic shipping to develop the necessary shipping capacity for Alaska's use, the Alaska timber industry would have gone out of business.

In the second place, the cost of producing lumber in Alaska is so much higher over the cost of production in the Northwest, that there is simply no way meaningful competition in the United States domestic market for Alaska lumber could be achieved. Labor costs in logging camps and sawmills range twenty-five to thirty-five percent higher in Alaska over Northwest costs. Gross logging costs exceed Northwest costs by 35-40%. Local purchase costs are twenty-five percent higher than the Northwest. When these higher costs are considered with the fact that the Alaska timber produces a much higher percentage of low grade lumber than does the Northwest timber, it becomes obvious that the Alaska product cannot be marketed at a profit in the domestic United States market, regardless of a lowering of shipping rates.

FOUR AND ONE-HALF INCH LIMIT WILL NOT CREATE MORE JOBS

Assuming that the Japanese market would accept Alaska's lumber production in sizes not exceeding four and one-half inches in thickness, no real benefit to the Alaska economy would be achieved. Four and one-half inch lumber can be produced with the same equipment as is presently being utilized for six and eight inch lumber without any significant increase in employment. Production costs, on the other hand, would increase, because the rate of production would necessarily fall in accommodation to sawing the lumber down to the smaller dimension. At the same time, although some of Alaska's lumber does in fact bring a fair return from the Japanese market in four inch thick sizes, most of Alaska's lumber would suffer a reduction in market value if sold in thicknesses below the present six and eight inches being used. Here, again, we come back to the problem of the high percentage of defect in Alaska timber. Reducing the thickness limitations to four and one-half inches would force Alaska mills to cut the defect out and chip the resulting waste. Leaving the defect in, however, permits the Japanese to cut the defect out in a manner which gives them much more than wood chip recovery from the defect at higher values than wood chip recovery. In other words, Alaska sawmills can sell an eight inch thick piece of lumber to the Japanese at a higher price than could be obtained for two four inch pieces. The four inch lumber presently being sold by Alaska industry to Japan is primarily obtained from trees which, due to their small size, cannot produce a merchantable product in excess of four inches in thickness. As the tree size increases, the tree can accommodate the production of six and eight inch thick lumber with a higher return to the Alaska timber industry and Alaska economy than would be recovered if the industry was forced to reduce all of their production to the four and one-half inch limits.

JAPAN WILL LOOK TO OTHER SOURCES

The question may well be asked, and often has been, as to why we cannot force the Japanese market to accept a more finished product from Alaska than is presently exported under existing Forest Service regulations. As earlier mentioned, the Japanese timber industry is one essentially of remanufacture. Over thirty-six thousand sawmills

are involved. If the Japanese market accepted finished lumber, these mills would go out of business.

Before Japan will let that happen, she will exhaust every effort to keep these mills in operation. If Alaska can't supply Japan with a product suitable for remanufacture, Canada will be (and has been) more than willing to do so. Alaska's present export to Japan is in direct competition with Canadian export, and Alaska's penetration into the Japanese market is based principally upon being able to produce lumber up to eight and one-half inches in thickness, rather than upon the inability of Canada to meet the volume demands of the Japanese market. As the pinch on Japan's wood sources increases, the need for Japan to make favorable arrangements with Russia for access to its huge volumes of soft wood timber could well lead to arrangements being worked out between them to resolve Japan's wood shortage. Once either Canada or Russia or both take up the slack caused by Alaska's forced withdrawal from the market, there would be little hope of Alaska ever being able to re-enter the Japanese market on any terms.

THE ALASKA PULP INDUSTRY

Initial large scale utilization of Southeast Alaska timber commenced in the early 1950's with the construction of a dissolving pulp mill at Ketchikan, Alaska, and a dissolving pulp mill at Sitka, Alaska. All of the pulp production of the Sitka mill goes into foreign export (Japan), and eighty percent of the Ketchikan pulp mill's production goes into the domestic United States market, and twenty percent goes into foreign export (Mexico and South America). The Ketchikan pulp mill supplies twenty-five percent of the United States domestic requirement for dissolving pulp.

Original investment costs for these two mills exceeded \$152,000,000.00 dollars. Since the original construction, \$74,000,000.00 dollars have been expended in capital improvements. Within the next 5 years, total expenditures to meet environmental controls will exceed \$40,000,000.00 dollars.

Pulp prices are set on the world market for pulp, irrespective of whether the product is placed into the domestic or world market. Pulp prices historically resist increasing costs of production. In 1954, for example, Ketchikan Pulp Company was selling its production for \$185.00 dollars per ton, and in 1972 it was selling its production for \$203.50 dollars per ton. This represents less than a 10 percent increase in twenty years. During the same period of time, raw log cost to the pulp mills (inclusive of stumpage) increased from \$32.79 dollars per thousand board feet to \$78.54 dollars per thousand board feet, an increase of 140 percent.

Until the development of the Japanese export market for Alaska lumber, the pulp mills were forced to pulp all logs, regardless of quality, with no appreciable return in increased end product value over the end product available from low grade logs. Unless another use for the high grade logs could be found, so that a dollar return commensurate with their basically higher value could be recovered, it became evident that the pulp mills would soon reach the point at which the dollar return from pulp would no longer support the investment, costs of raw material acquisition, and operating and marketing costs. In fact, the very ability of these mills to survive had become questionable.

The development of viable sawmill industry in Southeast Alaska thus became one of absolute necessity if the pulp mills were to survive.

THE LOGGING INDUSTRY IN ALASKA

The Alaska timber industry is dependent upon the logging effort of one thousand five hundred loggers employed in forty-five camps located throughout the Tongass Na-

tional Forest. Employment in these camps ranges from a low of two men for the smaller camps to two hundred men for the largest camps. The larger camps are in fact small communities, including streets, family housing, schools, sanitary facilities, power plants, water systems, airplane and boat loading facilities, machine and repair shops, supply warehouses, bulk fuel supply storages, as well as the customary bunkhouses and mess houses.

The Tongass National Forest consists of twenty-five thousand square miles, 17% of which contains presently merchantable timber stands and extends through the Alexander Archipelago for a distance of four hundred miles along the coast of Southeast Alaska. Within this area are located 18 villages, towns and cities ranging in population from twenty people to eight thousand people. The logging operations and logging camps are remote from these "population centers", and access to these camps is limited to travel by airplane or by boat. All employees, families, supplies, and equipment must be first imported into Alaska, and then transhipped by boat or air to the camps. The logging product itself must be truck hauled from the cutting areas for distances up to forty miles, dumped in the tide water for bundling and rafting, and then towed to the mills and storage areas for distances up to two hundred miles.

All logging in the Tongass National Forest is conducted under multiple use concepts, and consequently the technique of merely "punching in" a logging road to the cutting areas is lost to history. Alaska logging roads are constructed to Forest Service standards, and many are designed to furnish continued access to the forests long after the logger has moved on to another cutting location. Since 1954, over 2,000 miles of such roads have been constructed in the Tongass National Forest by the logger at his own expense. The cost of building these roads in 1954 was \$23,000.00 dollars per mile; in 1972, the cost had risen to \$50,000.00 dollars per mile. In terms of cost per thousand board feet, these roads now cost anywhere from \$6.00 dollars per thousand board feet to \$25,000.00 dollars per thousand board feet, depending upon the terrain, the cutting sequence layout of the sale, and the volume of timber available per acre.

Wages paid the Alaska logger are based upon wage scales twenty-five percent to thirty-five percent higher than those prevailing in the Western states. All supplies, foods, clothing, materials, etc., required by the logger, cost at least twenty-five percent more than do similar purchases made in the Western states.

In recent years, the matter of environmental control has had a serious cost impact upon the Alaska logging industry. Camp site costs have increased one thousand percent since 1967 (before the advent of such controls). Changes in cutting practices to accommodate the scenic value regulations of the Forest Service are causing an yet undefined escalation in logging costs. Delays in scheduling the relocation of camps into new cutting areas, inherent in the environmental impact statement requirements, is contributing to significant additional costs. The requirements relating to the development of dry land storage, as opposed to water storage, is further compounding the problem of logging costs.

The remoteness of the logging areas of itself is significant in determining the cost of logging in Alaska. As a result of the factors above mentioned, the total logging investment in depreciable items (i.e., camps, equipment), and facilities in Southeast Alaska as of 1972, exceeded \$60,000,000.00 dollars. When this is compared with the fact that these camps harvested five hundred forty million board feet of trees in 1972, it

becomes readily apparent that no place else in the United States requires this huge an investment to harvest this fairly insignificant volume of trees (insignificant when compared to the 1972 harvest in Washington, Oregon, and California).

Further contributing to the loggers' cost dilemma has been the fact of the over maturity of the trees in the Tongass National Forest. This over maturity causes a significant volume of what the logger cuts down to be left behind, because he could not be paid for gathering it up and shipping it to the market. The reason he could not get paid for this effort was simply because there was no market price available which would support the cost of getting the product to the market. The loss sustained in removing the defect from the logs shipped to market was carried by the logger himself. As with the pulp mills, the logging industry within the past few years has been faced with little chance of survival unless the end product recovery value could be raised to support the extreme costs of logging. The present ability of the logging industry in Alaska to survive is directly dependent upon the continued growth and development of the Alaska sawmill industry. With the development of the Alaska sawmill industry, as we know it today, and as we expect it to expand, the end value of what the logger produces has increased to the point where logging costs can be covered, and profits anticipated. The ability of the sawmills, through the export of their product to Japan, to develop a highly integrated operation with the pulp mills, has resulted in the recovery of end product values which simply did not exist five years ago. As previously mentioned, for example, in 1972, fifty million board feet of logs were released from pulping (at no reduction in pulp production) for sawmill use at a far greater return than is possible from pulp use. Commencing in 1973, the logger is starting on a program under which he will gather and recover the defective wood formerly passed by, and he will be paid a price for this effort which will make it worthwhile for him to do so.

Under the circumstances above outlined, it must be readily apparent that the Alaska logging industry cannot survive if the Alaska sawmill industry is forced to meet the manufacturing requirements of Senate Bill No. 1033, and lose the benefit of existing export manufacturing requirements under existing law.

THE ARMS TRADE—PART XVII

HON. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. COUGHLIN. Mr. Speaker, from time to time I have inserted in the Record comments and articles on the international trade in armaments which I believe might be of interest to my colleagues. Recently, there have occurred developments which I feel might be of further interest to them.

A few weeks ago our Government announced that it was relaxing its arms embargo against India and Pakistan, imposed after the 1971 war in East Pakistan or Bangladesh. The principal beneficiary of this new policy, it appears, will be Pakistan, since it lost the 1971 war as well as the 1965 Kashmir conflict.

Under the terms of the new policy, Pakistan will be allowed to buy "non-lethal" weapons, including 300 armored

personnel carriers, reconditioned aircraft engines, parachutes, and a wide variety of spare parts. Somewhat surprisingly, the Defense Department appears to consider ammunition, the item which actually kills people, as nonlethal equipment and is prepared to sell it to both India and Pakistan.

Mr. Speaker, I believe that it is time that some questions were raised. Are we creating a situation, for instance, which will encourage the use of arms to settle differences as happened in 1965 and 1971? Is this change in policy designed to curb hostilities in the area, or is it, in fact, meant to ease our balance-of-payments deficit through the maximum sale of U.S. arms abroad? Considering the fact that both India and Pakistan are in the firm grip of advanced poverty and hunger, can we in good conscience force-feed them with arms in return for their meager supply of hard currencies?

Are we falling into the trap of believing that if we do not supply these weapons to Pakistan and India, the two countries will gratefully accept Communist arms and, as a result, immediately slide into the Marxist camp?

How, Mr. Speaker, can ammunition be defined as "nonlethal"? I have written to both the State Department and the Defense Department seeking an answer to this question, and it is with some anticipation that I await their answers.

The basic question which haunts me, Mr. Speaker, and no doubt others who look upon these developments with some skepticism, is: Do we, in fact, know what we are doing here?

The same could be said of our recent agreement with Iran in which we have agreed to sell it \$2 billion worth of our military equipment over the next several years. Now, Mr. Speaker, it does not take an expert in international affairs to realize that such a sale is wildly extravagant, that it will not add to the stability of the Middle East, and that it may well work against the best interests of the United States.

Iran needs \$2 billion worth of arms like it needs more poverty. The American rationale for selling these arms seems to be that Iran has a large income from its budding oil industry; that we have a balance-of-payments problem; that we need Iran as an ally; and, therefore, in return for helping us out financially, Iran remains a friend and has fancy military equipment to defend its oil industry.

Mr. Speaker, I believe it is time that Congress and the American public begin to review our arms aid policy, and begin to ask the questions and require the clear answers which hopefully will bring some sanity to this area of endeavor in our Government.

Below are two newspaper articles which outline the recent developments on which I have commented above:

[From the New York Times, Mar. 15, 1973]

UNITED STATES EASES CURB'S ON PAKISTAN ARMS

(By John W. Finney)

WASHINGTON, March 14.—The United States relaxed its total embargo on arms shipments to India and Pakistan today, thus permitting the Pakistanis to receive some 300 armored

personnel carriers, spare parts for previously supplied arms and some "nonlethal" military equipment.

In announcing the decision, made at the request of the Pakistani Government, the State Department said it would not alter the military balance or stimulate an arms race. Officials explained that India, as a result partly of her military victories over Pakistan in 1965 and 1971 and partly of large-scale Soviet arms aid in recent years, now held an overwhelming military position.

PAKISTAN MAIN BENEFICIARY

The new policy was decided upon at the White House. Under it, the United States will sell "nonlethal" equipment and spare parts to either Pakistan or India, but State Department officials acknowledged that Pakistan would be the principal beneficiary.

The decision was made, officials said, more for political and psychological reasons than for military ones.

They said that Pakistan was in an intricately defensive mood following the destruction of much of her military forces in the war with India in December, 1971, and the loss of her eastern region, which became Bangladesh.

By providing an assurance of renewed American support and limited military aid, the officials said, the Administration hopes Pakistan will become more amenable to a settlement of some of her political problems with India and with Bangladesh.

The United States imposed its total embargo on arms shipments to the Indian subcontinent following the Indian-Pakistani war of 1971. The decision announced today returns United States policy basically to what it was in 1967, when a limited embargo was in force.

Pakistan will now be able to receive some \$1.2-million in spare parts, parachutes and reconditioned aircraft engines that she ordered but whose export was blocked with the embargo.

In addition, Pakistan will be able to buy 300 armored personnel carriers worth \$13-million. Pakistan contracted to buy the vehicles in 1970 and had made a down payment before the imposition of the embargo.

NONLETHAL AMMUNITION

Officials said that the policy decision made it possible to sell ammunition to either India or Pakistan. They explained that ammunition, according to definitions used by the Defense Department, could be regarded as "nonlethal" equipment.

Weapons, however, are not regarded as "nonlethal," and technically the armored personnel carriers ordered by Pakistan should be excluded. But Charles W. Bray 3d, the State Department spokesman, said their shipment would be permitted "in order to wipe the slate clean" of arms commitments entered into before the 1971 embargo but never fulfilled.

Mr. Bray and other officials stressed that "nonlethal" military aid from the United States to Pakistan was not going to upset the present "military ratio" between the Pakistanis and the Indians.

In announcing the relaxation of the embargo, Mr. Bray also emphasized that it continued to be the administration's intention "to avoid involvement in anything which might be considered an arms race in the subcontinent."

In principle, India would be allowed to complete her purchase of some \$91-million in communications equipment for an air defense system that was blocked by the embargo. Whether India, which has now turned to the Soviet Union for arms, intends to purchase the equipment was left unclear by United States officials.

The United States policy on arms sales to the Indian subcontinent has gone through various phases since the shipment of all

military equipment was first embargoed after the Indian-Pakistani war of 1965.

This embargo was modified in 1966 to permit the sale to both countries of "nonlethal end items"—a category that was construed to include ammunition.

In 1967, the policy was further relaxed to permit the sale of spare parts for military equipment already provided the two nations, with a further exception made in 1970 to permit Pakistan to order the armored personnel vehicles.

[From the New York Times, Feb. 22, 1973]
IRAN WILL BUY \$2 BILLION IN U.S. ARMS OVER THE NEXT SEVERAL YEARS

(By John W. Finney)

WASHINGTON, February 21.—Iran has contracted in recent months to buy more than \$2-billion in military equipment from the United States in what Defense Department officials describe as the biggest single arms deal ever arranged by the Pentagon.

Officials said that the purchase would include such equipment as helicopter gunships, F-5E supersonic interceptors, F-4 fighter-bombers and C-130 cargo planes. But the officials were reluctant to talk about the specifics because of the reported sensitivity of the Shah of Iran to publicity about the transaction.

Senate sources who had been briefed on the arms deal said they understood that Iran would also purchase such advanced weapons as laser bombs, the guided bombs used against North Vietnamese targets in the final stages of the Vietnam war.

It was also understood by Senate sources that at the Shah's request the United States would station an unusually large detachment of 300 military personnel in Iran to train Iranians in the use of the new weapons.

SHAH SAID TO DO CHOOSING

The arms to be purchased were said to have been determined largely by the Shah, who over the years has favored the most advanced weapons produced by the United States and who with his oil revenues has the money to buy them.

For example, in addition to the F-4's that he has been purchasing for the last decade, the Shah reportedly expressed an interest in the F-15, a new Air Force interceptor not yet in production.

State and Defense Department officials said that the large-scale transfer of arms, which is to go on over the next several years, would help reinforce what they described as "a point of stability" in the Persian Gulf area.

At the same time, both Defense and State Department officials emphasize that aside from such considerations, the deal was entered into on the ground that it would be highly profitable in helping American arms manufacturers caught in a post-Vietnam slump in orders and in helping to redress this country's deficit in balance of payments.

CASH ON THE BARRELHEAD

The Shah, according to defense industry sources, will pay "cash on the barrelhead" for the weapons.

"It sure is going to help fill in some of the gaps on our production line," said a representative of one aircraft manufacturer that is to get a major part of the order to fill.

As described by State Department officials, the arms purchases are part of a five-year modernization program that the Shah adopted for his armed forces two years ago. The officials said that with the withdrawal of British forces from the Persian Gulf in late 1971, Iran, decided to accelerate and compress the modernization program.

For more than two decades, the United States and Britain have been the traditional

arms suppliers to Iran, with the Shah on occasion threatening to turn to the Soviet Union for arms if he could not obtain them from Western sources.

Beginning in 1950, the United States gave more than \$800-million in military aid to Iran, but in recent years, as Iran grew wealthy from oil, the military assistance shifted from such aid to sales of the arms on basically commercial terms.

As it became apparent that Britain would withdraw from the Persian Gulf, the Shah began stepping up his purchases of arms, turning to the United States primarily for aircraft and to Britain for ships and tanks.

Both State and Defense Department officials acknowledged that the ordered arms were beyond the Shah's needs for maintaining internal security in his country. But, it was said, the Shah's basic concept is that he needs a military force that could discourage any Soviet adventurism in the area and block any move by neighboring Iraq, which has received substantial military equipment from Moscow.

EXACT SIZE OF ORDER SECRET

The exact size of the arms deal is still kept secret. Senate sources said that they understood the total was nearly \$3-billion, but defense officials said it was "closer to \$2-billion."

More than half of the orders are said to be for several hundred helicopters and interceptors.

The Bell Helicopter Company, for example, has received an order for 202 AH-1J helicopters, a gunship used by the United States Marine Corps, and for 234 model 214-A helicopters, a 16-passenger cargo helicopter. The helicopters are to be built at Fort Worth, Tex. The Bell company officials describe the order worth at least \$700-million over the next five years.

In addition Iran has reportedly placed an order with the Northrop Corporation in Hawthorne Calif. for about 140 F-5E's a new interceptor particularly designed for foreign air forces as a defense against the Soviet-built MIG-21. The F-5G, a fighter that is easy to maintain is expected to cost about \$1.5-million a plane.

The Iranian deal reportedly reflects a new emphasis by the Nixon Administration on promoting foreign military sales. In some ways, officials say the Nixon Administration is returning to a policy of a decade ago when the Defense Department pushed foreign military sales so aggressively that Prime Minister Harold Wilson of Britain publicly deplored the "high-pressure salesmanship of the Americans."

The promotion campaign led in the late nineteen-sixties to Congressional restrictions, initiated largely by the Senate Foreign Relations Committee. The Senate committee was concerned that the sales were promoting arms races and imposing undue financial burdens on developing countries.

After a slowdown in arms sales, "the pendulum is beginning to swing the other way," according to one State Department official involved in setting policy on military sales.

This time, however, officials insist that it is the State Department, not the Defense Department, that will have the dominant voice in controlling military sales.

Vice Adm. Raymond E. Peet, the Deputy Assistant Secretary of Defense for Security Assistance, also insists that his military teams have orders not to "promote" arms sales to other countries.

Arms sales, meanwhile, have surged upward from a low of \$925-million in 1970. They reached \$2.1-billion in 1971, \$3.45-billion in 1972 and are expected to total \$3.8-billion in 1973.

WITH FRIENDS LIKE THIS, AMTRAK DOESN'T NEED ANY ENEMIES

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. PICKLE. Mr. Speaker, on the March 11 "60 Minutes" TV show, there was a segment on Amtrak, the National Rail Passenger Corporation. This report, based on interviews conducted by CBS's Mike Wallace, shocked many Americans. In fact, my office received many letters in response to the show.

I was particularly disturbed by the interview with Mr. Lewis Menk, chairman of the board of the Burlington Northern Railroad, and also a board member of the Amtrak Corporation. During the interview, one received the clearest impression that Mr. Menk desires Amtrak, or any intercity rail passenger service, outside the East to go away—to be discontinued.

Mr. Speaker, I think rail passenger service will be a vital, if not essential, mode of moving people in the future. This is why I support strongly efforts to make operational 300 m.p.h. trains in America. This is why I support strongly this Nation's high-speed ground transportation research and development program for such trains.

In the meantime, I will support the continuation of Amtrak, despite what its board members may feel.

I include the dialog between Mr. Wallace of CBS and Mr. Menk of the Amtrak directors in the RECORD at this time:

WALLACE-MENK INTERVIEW ON MARCH 11, CBS 60 MINUTES PROGRAM

WALLACE. Lewis Menk is chairman of one of the railroads that makes its profit out of freight, not passengers—the Burlington Northern. And he sits on Amtrak's Board of Directors. He got there by buying Amtrak stock. Not because he believed in it, but because he could take the purchase price as a business expense—a loss. Aboard one of his company cars, Lew Menk told us how he feels about Amtrak's future.

How much did you pay for your stock in Amtrak?

MENK. Thirty-three million plus.

WALLACE. And you carry it in your—on your books right now at how much?

MENK. One dollar.

WALLACE. Why?

MENK. We wrote it down because we thought that was the value of the stock.

WALLACE. You think that Amtrak's stock is worthless?

MENK. I do. In the context of the present time, it is.

WALLACE. You say, "In the context of the present time." Do you expect it's going to be worthless in the future?

MENK. I don't expect that Amtrak will ever be a profitable corporation; if that's what you're asking, yes, that's my answer.

WALLACE. So you feel that passenger trains by and large—with the exception of in—the highly populated corridors—should be permitted to die an honorable death, right?

MENK. Yes, sir.

WALLACE. And Mr. Quinn of the Milwaukee Road feels the same way, right? He's publicly stated that.

MENK. I assume so. Yes, I think that's so. WALLACE. And Mr. Moore of the Penn Central feels the same way, right?

MENK. I would expect so.

WALLACE. Okay. This trinity—Menk, Quinn and Moore—are on the Board of Directors of Amtrak, and Amtrak is committed to speedy and efficient passenger traffic. You see no conflict of interest there?

MENK. No, do you?

THE WAR STILL CONTINUES IN CAMBODIA

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. KASTENMEIER. Mr. Speaker, although American servicemen have been withdrawn from South Vietnam, our involvement in the Indochina conflict still continues as the President orders war planes to bomb in Cambodia.

Although the original rationale given, back in 1970, for the Cambodian bombing, that of protecting American troops, is no longer valid, Nixon continues to make war.

Like many of us, the Washington Post, in a March 30, 1973 editorial, takes issue with the President's war policy.

THE CAMBODIAN ISSUE: PRESIDENT OR KING?

On June 3, 1970, Mr. Nixon promised he would henceforth bomb in Cambodia only "to protect the lives and security of our forces in South Vietnam." Those forces have now gone home. But the President continues to bomb. The contradiction is acute and it is made the more so for the President by the fact that its implications extend beyond Cambodia. In Paris, Mr. Nixon made Hanoi and the Vietcong a deal hinging in part on his threat—reaffirmed by implication last night—to start bombing them again under certain conditions. Now, by completing troop withdrawals, he has removed his sole previously claimed rationale to bomb *anywhere* in Indochina. He is in the position of a man who threatens to shoot in a jurisdiction where there is no justification, by his own terms, to use firearms.

One begins to understand the administration's frantic and so far futile search for a reason for the Cambodian bombing that will make it look like Mr. Nixon is doing something other than roughly and arbitrarily asserting American—and Executive—power. One official, conceding constitutional justification is a joke, submitted that "the justification is the re-election of President Nixon." By that theory, he could level Boston. Others suggest Mr. Nixon is merely "responding to a request" from the Cambodian government, as though any such request confers its own legitimacy. It is said the United States will stop bombing when the Communists in Cambodia stop shooting. That will happen when they topple the government, perhaps quite soon. What will Mr. Nixon order the B52s to do then?

The plain truth is that Mr. Nixon bombs to save a policy which, in its Cambodian aspect, was bankrupt from the start. The 1970 American intervention into Cambodia—ostensibly conducted to clean out the sanctuaries, buy time for Vietnamization and protect Americans in Vietnam—in fact made little sense if Mr. Nixon were not prepared to continue propping up a pro-American government in Phnom Penh indefinitely. None-

theless, Secretary of State Rogers insisted (May 13, 1970) that the U.S. would not "become militarily involved in support of the Lon Nol government—or any other government" in Phnom Penh. "I'm talking about U.S. troops or air support or something," he underlined. Now Mr. Nixon tramples on his own and Mr. Rogers' pledges not to adopt Lon Nol.

In 1970, Mr. Nixon, describing his Cambodian adventure strictly in terms of its Vietnam impact, hailed it as "a decisive move . . . the most successful operation of this long and difficult war." In fact, in the adventure's Cambodian aspect, he bought into ocean-front property which was already underwater. The Cambodian insurgents, although divided among themselves, are collectively mopping the floor with the Lon Nol troops, whose abundant American supplies and air support are patently inadequate to offset their own poor training, leadership and motivation.

Mr. Nixon should stop bombing Cambodia at once. He may not quail at Senator William Fulbright's threat of public hearings, although we would hope all senators with a concern for constitutional government and the Senate's integrity would demand such hearings. But the President might further consider that he is bombing not only Cambodia but his remaining chances of getting reconstruction aid for Hanoi.

If the bombing is halted, Lon Nol might well decide to head for the Riviera, and the insurgents would probably take over Cambodia. The prospect is not much in doubt; nor is it very fearsome. The United States can expect to do very little to avert it, even by perpetual bombing. The contending Cambodians will need time to sort out their own feuds; they will be chiefly interested in how things go in Cambodia. In the incomplete but prevailing cease-fire situation in Vietnam, it cannot be nearly as important as before whether Hanoi has extra military supply routes and sanctuaries in Cambodia. Hanoi's and the Vietcong's decisions in South Vietnam will depend on many factors, not solely on who runs Phnom Penh.

By bombing, Mr. Nixon tears at the American political fabric and harmfully asserts a strictly American responsibility for what happens in Cambodia. Instead, he should be respecting the law and temper of the United States, and he should be trying by diplomacy to draw outside and local states into an Indochina-wide settlement that will not stand or fall on the unilateral application of American power. Evidently the President has still to learn he is not an absolute monarch in the United States. He has also to learn he is not King of Cambodia—or perhaps some kind of Southeast Asian emperor?

INFLATION MUST BE CURBED

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. CASEY of Texas. Mr. Speaker, inflation is a sore subject with every American, and the person who feels the pinch the hardest is the homemaker. She has to make ends meet in order to insure adequate nutrition for her family at a reasonable cost.

The following letter was sent to me by my constituent, Mrs. Lloyd D. Hoffman of Pasadena, Tex. As a family man I can

well understand Mrs. Hoffman's plight and know of her concern. I am sure my colleagues will agree with me that steps must be taken to curb inflation and keep food a necessity and not a luxury.

I've been a registered voter for ten years now and I've never written any of my political representatives until now because I felt they were doing all in their power to look out for my interests. Oh, I haven't always completely agreed with them; however, I never disagreed drastically enough to voice my discontent. However, I feel I must at this time tell someone about one of my greatest disappointments with my country's government.

I write as a wife, mother, homemaker, and citizen to voice my disappointment in prices. I feel it is sad that a father has to work two jobs to pay all of his family's bills and buy their food. This is our case. Lloyd, my husband, works six days a week, leaving the house at seven in the morning and not returning home until midnight sometimes—Monday thru Friday and 8-5 Saturdays.

We have two sons, ages 3 and 1½ years. We didn't ask much of life for them except the necessities and somewhat a secure future. However, it looks pretty dim for their future, if the cost of living doesn't quit going up. Sincerely, Mr. Casey, I don't want this to be taken as a hate letter because I love my country and love living here. It worries me the way it is headed though.

Our family doesn't try to outspend the neighbors, etc. So we don't spend money foolishly. I budget groceries and do a good job, I feel. However, it really takes some doing to feed my family on an average of \$25-\$30 a week. According to L. Jean Boger, Ph.D. in Nutrition and Physical Fitness, my food budget should be about ¼ of our income because I'd say we're in a moderate income bracket. So I try to use this principle when buying groceries.

By making a lot of baked goods, using meat substitutes, shopping specials, using no convenience foods whatsoever, etc., I do keep it under the ¼ margin—or at least up until now. It does concern me to go to the store where I shop regularly and see the prices go up so quickly.

I'll illustrate this with two items. I shop at a food store located in Pasadena. The first item is a 4-pound box of bacon ends. January 28, 1973, I bought it for \$1.49; February 4, 1973, I paid \$1.59 for it. The first price I ever paid was \$.99 sometime the latter part of 1972. Then it jumped to \$1.39, I think. However, these two dates I gave you I am sure of because I shop every two weeks and these were my last two shopping days and I have the two packages in my refrigerator right now.

Item 2 is a 5-pound sack of flour (brand name Harvest Blossom). January 28, 1973 cost \$.37 and February 4, it jumped to \$.43. I'm aware these are cheaper than most items of this type and that this grocery store has good prices; however, I'm afraid to see what the prices will be next time. If just these two items have jumped this much what has happened to the rest of their items in stock. Milk jumped from their regular \$.99 a gallon to \$1.03 a gallon.

Congressman Casey, I majored in Home Economics and received my B.S. in 1964 from Sam Houston State in Huntsville, and I really don't know just how women that haven't been trained can afford to buy groceries for their families. I buy ground beef because I can stretch it, chicken because it goes so far, etc. So you can see I'm not extravagant with my food dollar.

What I'm trying to say is Help. I need help from my government to be able to meet

everyday needs. After paying a house payment (it went up \$10 as of February 1), utilities and buying food, we don't have anything left to save for the proverbial rainy day.

I am sure my colleagues will agree that making ends meet and dreading every shopping day is not a satisfactory way of life. Inflation must be curbed, and as Members of Congress, we must take the lead to fight this "green" monster.

THE BUDGET PROCESS

HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HAMMERSCHMIDT. Mr. Speaker, the Nation today is faced with a disturbing fiscal situation which has resulted in confrontation of the three branches of our Government over Federal spending. With the release of the 1974 budget, this complex issue has generated keen interest throughout the Nation.

The President is seeking to control the level of Federal outlays, Congress is working through its Joint Study Committee on Budget Control toward a permanent mechanism for fiscal responsibility, and the judiciary is being called upon for interpretive answers to questions on who may constitutionally establish spending priorities.

Because of the historical evolution of fiscal policies and the complexities which come to play in the present-day situation, I have devoted a series of seven newsletters to "The Budget Process." Because this series tries to present a summary of the issue, I am sharing it with my colleagues by publication in the RECORD:

THE BUDGET PROCESS

1. INTRODUCTION

This is Congressman John Paul Hammerschmidt in Washington with Comment from the Capitol.

In describing the relationship between the executive and legislative branches of federal government it is often said—"The President Proposes; Congress Disposes." Such is the budget process.

The President has sent to Congress his budget for Fiscal Year 1974. It calls for the expenditure of \$268,700,000,000 (billion). To pay the bills, there would be estimated tax receipts of \$256,000,000,000 (billion) and a shortage of \$12,700,000,000 (billion). The shortage would be covered by borrowing, or "deficit financing."

The Budget is the President's plan of operation, set down in much detail, in terms of expenditures. It is the basis for all federal operations for one full twelve-month fiscal year period, as the Executive Branch sees national needs.

The Budget sets the direction which the Administration proposes to take. Now Congress, by the process of congressional review, will begin disposing with a wide range of options.

Congress can change programs, eliminate them, enact new ones. Congress can increase or reduce presidential spending recommendations.

When the majority of Congress and the

President are of the same political party, there is generally much less friction than when they are of different political parties.

However it is invariably true that both the Executive Branch and the Congress have high-minded goals. They both want to establish the most important national priorities possible, and use the best means to meet them.

The goals generally shared above all others are high employment, prosperity without inflation and without war. The President in his budget proposed how we can try to achieve these most desirable goals. For the next several months, Congress will be reviewing the budget, and deciding what to accept and what to change.

II. BUDGET STUDY COMMITTEE

More and more there is concern for putting the nation's economy in order.

There are many indications of the need for positive action.

The recent devaluation of the dollar points up the trade aspect of the problem. The President's budget and tight spending ceiling; the Executive Branch impoundment of funds; Congress fighting appropriations, rescission and program cutback; all are indications of serious conditions which must be corrected. The flaws are derived from long periods of economic instability, characterized principally by excessive inflation.

Last year Congress formally acknowledged the problem when it temporarily increased the public debt limit. While refusing to accede to the President's proposal for a rigid spending ceiling, it established the Joint Study Committee on Budget Control.

This group draws bi-partisan membership from fiscal experts of both the House and Senate. Senator John McClellan is a co-vice chairman among the thirty-two members.

The Committee has met this year, charged with exploring ways to tighten congressional control over budgetary outlay and receipt relationships. It is supposed to devise a method which will give a comprehensive overall view of each year's federal spending and revenues, to replace the haphazard agency-by-agency, department-by-department, program-by-program approach of the past which has not provided the desired budget control.

Too often attractive programs have received inordinately large authorizations, and subsequently appropriations.

In my judgment, we must find ways to assure true congressional responsibility in seeking a balance between revenues and spending, in enacting programs and appropriating funds to carry them out.

III. FOUR DECADRE DECADES

The record of deficits since 1931 demonstrates beyond doubt the need for spending-and-taxing coordination in dealing with the budget.

In the last 42 years, there have been only six years of surplus in the administrative budget, the last for 1960 in the amount of \$785,000,000 (million). Since then approximately \$200,000,000,000 (billion) in deficits have been recorded by the federal government spending more than it takes in, year after year, without interruption. The \$200 billion figure includes estimated imbalance for fiscal year 1974.

World War II is often singled out as the time America got the big-spending habit and accepted deficits. In each of the critical years of the war, 1943-44-45, the nation rolled up deficits in excess of \$50,000,000,000 (billion).

Yet that \$150,000,000,000 (billion) total deficit for peak wartime expenditures, in a struggle for our very freedom, was far less than the huge budgetary failures of the past decade. The erosion of the budget process since 1960 is another legacy of the war in Southeast Asia, the cost of which contributed

enormously to sustaining the deficit position.

From any view of the problem, one thing is evident: Some of the blame rests with Congress for the size of deficits, and their constancy, through Congressional failure to arrive at budgetary decisions on an overall basis.

The Joint Congressional Study Committee on Budget Control is examining this very basic problem. It is to determine a procedure for Congress to follow in establishing responsible budget control. In my judgment, nothing is more important to a sound economy, free from excessive inflation.

In a later report I shall look at the history of budget control in Congress, the development of the relationship between spending and taxes, and how the present inadequate system came about.

IV. BUDGET CONTROL HISTORY

This report deals with the evolution of our federal budgetary system.

Historically, Congress has taken varying approaches to balancing income and expenditures. For the first 75 years of the federal government, Congress exercised tight, unified budget control through committees, Committee on Ways and Means in the House, and the Committee on Finance in the Senate. Each committee had jurisdiction over both spending and taxing.

In 1865, as a result of the overwhelmingly heavy burdens imposed on Congressmen in financing the Civil War, the Ways and Means Committee relinquished some of its jurisdiction.

While retaining authority over taxation and the raising of revenue, the committee turned over its spending jurisdiction to the newly created Committee on Appropriations. The Senate took similar action. The first major change—the responsibilities of these two committees, the first major breakdown in overall Congressional budget and also control.

During debate on the changes, some Members prophetically pointed out the dangers of separating the two jurisdictions.

Further dilution of Congressional control occurred as various legislative committees of the House and Senate took over spending jurisdiction from the Appropriations Committees. With the greater fragmentation of control over federal spending, it became increasingly difficult for Congress to obtain comprehensive cost information on programs.

This situation prevailed until Congress passed the Budget and Accounting Act of 1921, which further de-emphasized the Congressional role in budget matters. This Act is a principal source of today's budgetary differences between Congress and the Executive Branch. I shall make it the subject of a later report in the series of Budget Control.

V. EXECUTIVE BUDGET CONTROL

This report continues the series of discussions on budget control. The subject is especially important in time of inflationary pressure.

In 1921, Congress changed directions. Whereas in earlier years, Congress had been the focal point of budgetary control, it passed that responsibility over to the White House by approving the Accounting Act of 1921. That measure, for the first time, made the Executive Branch the focal point of budget control.

To tighten up its own procedures, Congress returned to the Appropriations Committee full authority over spending. This action was intended to re-centralize spending control which, between the Civil War and World War I, had been grabbed by several legislative committees.

Passage of the Budget and Accounting Act, however, gave only temporary relief. Congress began to circumvent the authority of the Appropriations Committee by the device known as "backdoor spending".

These actions, once again, have divided spending control among several committees. "Backdoor spending" in essence creates mandatory spending. So large is its impact that the Appropriations Committees of the House and Senate actually control only about 50 percent of all spending.

Further curtailing the effectiveness of Congress as a budget control institution is the Appropriations Committee practice of considering each appropriations bill as a separate entity . . . not as a party of an overall package.

This is not to say that Congress is not careful and painstaking in dealing with each annual appropriation measure. It is. What is lacking in coordination and constant attention to the big picture with all its fiscal policy and budgetary implications.

Next in this series . . . a closer look at "backdoor spending".

VI. "BACKDOOR SPENDING"

Congress is under constant admonishment to cut out unnecessary federal spending. However, its system of budget control has deteriorated so greatly that it is not always possible to be sure just what is "necessary" or "unnecessary" in terms of the budget and the nation's fiscal policy.

Congressional control over spending rests with the Appropriations Committees of the House and Senate, but time after time Congress bypasses these committees and nullifies their role as control points for spending. This is done by "Backdoor Spending."

Backdoor spending may take the form of "contracting authority". Such authority on low-rent public housing added \$150,000,000 (million) in obligations in Fiscal Year 1973.

Backdoor spending may also rely on unlimited and indefinite "borrowing authority". Student loan guarantees are backed by this kind of borrowing, without appropriations limitation.

"Permanent Appropriations" constitute another type of backdoor authority, with appropriations provided by the legislation itself. For example, the interest on the public debt is indefinite as to time and amount, but is a firm obligation without Appropriations Committee review.

Congressional studies show that over a five-year period, backdoor spending exceeded budget requests by \$30,000,000,000 (billion). By contrast, budget requests considered by the Appropriations Committees were reduced substantially.

In my judgment, any effective budget control reform in Congress must require sharp restrictions on and eventual elimination of backdoor spending.

VII. "THE WORKABLE BUDGET"

Congress needs to determine a way to develop and maintain effective budget control.

In recent reports I have discussed the history of the problem, and factors which hamper overall control of federal income and expenditures.

One difficulty is the sluggishness of the Congressional legislative process. A program must be authorized before the Appropriations Committee may act. Appropriations are often held over into the fiscal year for which they are needed; even into the second Congress of the fiscal year. Such delays increase uncertainty.

Another practice that is costly is the renewal of authorizations each year—rather than for several years. This requires annual appropriations and tends to drive up program spending levels!!

The establishment of ceiling levels is generally agreed to be an essential for budget control. But this is easier said than done.

Members of Congress vary in their views on what ceiling levels are sensible. They disagree on the extent of new budget authority needed, the rate of spending to be continued, even the danger of legislative bills which by-

pass the appropriations process. To gain general agreement on ceiling levels would seem to require extensive inquiry and debate, with the schedule of activities already jam-packed.

These are among the major problems being considered by the Joint Committee on Budget Control. Its findings and recommendations may well determine whether this nation shall follow sound fiscal policies. Its recommendations could help Congress establish a truly effective system of overall budget control, and improve our ability to evaluate budget controversies.

In my judgment, this is essential if Congress is to deal wisely with Executive Branch proposals, if Congress is to tax and spend with discipline and understanding, if Congress as a body is to have sufficient understandings of and respect for the intricacies and importance of sound fiscal and economic policies.

TRIBUTE TO CAPT. JOHN FER

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ANDERSON of California. Mr. Speaker, all of us have been touched by the war in Indochina. All of us have witnessed directly or indirectly the death and destruction—the adversity, the distress, the torment—of the people of this area plagued by years of war.

Many served our country fighting for the principles of freedom, fighting to preserve a small nation, fighting to prevent the rule of force in Southeast Asia.

The fighting has now stopped for U.S. servicemen, but many did not return. Many did return, leaving an arm, a leg, an eye on the battlefield.

We grieve for the families of those who made the supreme sacrifices and we pledge to make every effort to heal the wounds and repay our commitment to those who suffered in service to our country.

And, now, the prisoners of war are coming home to a well-deserved welcome, greeted by a proud country which is in their debt.

Yes, they are heroes, and they deserve our accolades and tributes. But, so do the other soldiers, the sailors, the airmen, and the marines who also served so honorably.

The prisoners of war, Mr. Speaker, symbolize the American spirit and the American servicemen. They are proud, yet humble they are loyal, yet firm they are tired of war, yet patriotic they are candid, yet sincere they are just, yet compassionate.

We in San Pedro are proud to welcome home a man who epitomizes these virtues.

That man is U.S. Air Force Capt. John Fer.

John Fer, U.S. Air Force captain, returned to California this March from 6 years imprisonment after being shot down over North Vietnam on February 4, 1967.

Captain Fer has returned to a community which remembers him well from his growing up years in San Pedro.

A native of San Pedro, John attended Mary Star of the Sea and Leland Avenue Grammar Schools, and Dana Junior High School where he was student body president.

Active in high school student government and athletics, Captain Fer was graduated from San Pedro High School in 1955.

A successful college career followed at the University of Southern California and the U.S. Air Force Academy. While at USC, John ran track and cross country.

Captain Fer's military career began to blossom at the Air Force Academy. At the Academy, John was chairman of Honor Committee, squadron commander, outstanding athlete of the graduating class, school record holder in cross country and in the 2-mile track run, and captain of both the cross-country and track teams.

He was commissioned as a second lieutenant in June 1962, and attended pilot training in Laredo, Tex., in August 1963.

John's first assignment was to Plattsburg Air Force Base as a B-47 copilot beginning in October 1963.

In February 1966, Captain Fer began training at Shaw Air Force Base. That June, John left this country for an assignment to Takhli Air Force Base, Thailand.

Less than 1 year later, on February 4, 1967, Captain Fer was shot down over North Vietnam.

For the next 6 years and 1 month, John was a prisoner of war.

His unwavering loyalty to his Nation during his captivity is an example in patriotism worthy of our emulation.

Captain Fer's dedication to the United States has carried over into his plans for his future.

John plans to make the Air Force a career.

Captain Fer is already scheduled to be promoted within the next few months. I would like to be one of the first to congratulate Captain Fer on becoming Major Fer.

Our Air Force will certainly be better off for the leadership and abilities of Captain—soon to be Major—Fer.

Mr. Speaker, I proudly join with John's parents, Mr. and Mrs. Ernest Fer of Vista, John's brother, Mr. Peter Fer, and the citizens of San Pedro in welcoming Captain Fer home.

The residents of San Pedro will formally welcome Captain Fer home with an open air rally and dinner on Saturday, April 7.

All the service organizations in San Pedro are cooperating to organize the events under the leadership of Richard Bauer, president of the San Pedro Chamber of Commerce.

Chairman for the dinner is Mario Perkov. Others directing the dinner plans are Andy Wall and Jack Pearson.

I am proud that the community of San Pedro is giving Captain Fer such a warm welcome home.

A hero such as Captain John Fer deserves a hero's welcome.

OEO LOSS TO HAVE IMPACT ON BOSTON AREA

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. DRINAN. Mr. Speaker, on March 23, 1973, the Subcommittee on Equal Opportunity of the House of Representatives under the distinguished leadership of our colleague Congressman AUGUSTUS HAWKINS, of California, conducted a hearing on the dismantling of the Office of Economic Opportunity at Faneuil Hall in Boston.

Humberto Cardinal Medeiros, the archbishop of Boston, gave a moving statement to the subcommittee on what the disappearance of the OEO would mean to Greater Boston. Cardinal Medeiros stated that the Community Action programs of the OEO constitute a "healthy, three-way partnership among government, private institutions, and private citizens." The cardinal went on to state that—

I hate to see it end. I pray that it will continue.

The complete statement of Cardinal Medeiros follows:

TESTIMONY OF HUMBERTO CARDINAL MEDEIROS

Congressman Hawkins, Members of the Committee, I wish to join Mayor White and other citizens of Boston and Massachusetts in welcoming you to this historic city that cherishes the traditions of justice and liberty which permeate the history of our country. I want to assure you of my blessings and prayers as you conduct your hearings and deliberations throughout this land.

I am appearing before you today to express my personal concern over the impact that the dismantling of a major portion of the programs sponsored by the Office of Economic Opportunity will have on thousands of low income people in Boston and throughout this Commonwealth.

I do not pretend to be an expert on the technical and statistical details of the OEO programs that are being shut down. Others appearing today will provide that information.

I do not come here today as a Democrat or a Republican or as a critic of action taken or omitted by the Administration or Congress. Like all government agencies, OEO must be accountable to higher governmental authority. It would be foolish to suggest that its programs have been an unqualified success, or should be immune from criticism.

What I want to do today is to speak as a Bishop who has a pastoral responsibility and a deep, personal concern for the poor of all denominations, races, cultures, and backgrounds. I know from personal experience both the difficulties of being poor and the innate desire of every man who is poor to raise himself and his family above that degree of poverty that impedes his development as a citizen and as a human being in this land of opportunity.

Poverty is complex and the steps we must take to eradicate both the cause and the effects of unjust, unwanted, and oppressive poverty would seem to be equally complex. The history of our own country and of modern society gives ample evidence that attempts to deal with the problems of the poor as if there were an inherent connection between poverty and immorality have not only

not produced the desired results but, in most instances, have wrought terrible injustices upon those they were designed to help. I am disturbed, in observing the current scene, to feel an undercurrent of discontent, and even animosity, towards our more deprived brothers and sisters, arising no doubt, at least in part, from the astronomical costs involved in public programs to assist the poor. Although I am painfully aware, from my own experience in attempting to provide fiscal support for the human service programs in the Archdiocese, of the high cost of such efforts, I nevertheless must state emphatically that we cannot allow costs or even the occasional misuse of our public generosity to deter us from fulfilling our moral and civic obligations.

What has impressed me about the OEO programs has been the wide range of services and opportunities available to the participants and, most of all, the principle of involvement of the poor in the solution of their own problems that has characterized the Community Action Programs. It saddens me to learn that so many of these programs are being ended after so many people have invested themselves, their energy, and their hope in the design and operation of the programs.

In Boston alone, for example, some 350 people—most of them low income persons—serve without compensation on the local APAC Boards. Eight of the eleven neighborhood Boards in this city will cease to function within months. Many of the employees of the local programs and of Action for Boston Community Development were once welfare clients. They face the loss of their jobs within six months, and the prospect of a return to welfare subsistence or unemployment compensation. Think of the damage that will do to the human spirit and the morale of these people and their families.

Some 54,000 people who annually are served by OEO programs will be deprived of services. These include elderly people who were being given hot meals, medical care, transportation, companionship, consumer aid and other simple but vital services in East Boston, Charlestown, and other neighborhoods; young people in Jamaica Plain, Brighton, and elsewhere enrolled in drug abuse prevention programs; more than 5,000 youths employed for the summer by the City-wide Neighborhood Youth Corps; and some 20,000 unemployed people being offered counseling, placement, and follow-up services in Neighborhood Employment Centers.

These are just a few of the programs and they reflect only the impact on Boston. Similar programs in other cities throughout the Archdiocese will suffer. To whom will these people turn? Our economy is in poor shape. Unemployment in some low income areas is as high as 28%.

Many will turn to the Churches and social agencies. We try our best through parish St. Vincent de Paul conferences, our schools, Catholic Charities, Family Counseling, our Planning Office for Urban Affairs to be of assistance, but we cannot begin to meet the needs without the co-relative efforts of our Federal government. Many of our priests, sisters, and lay people serve as volunteer members of the local Boards and programs along with the low income representatives. This has been a healthy, three-way partnership among government, private institutions, and private citizens. I hate to see it end. I pray that it will continue.

Members of the Committee, I respectfully urge you to do all in your power to convey to the Congress and to the Administration the importance of continuing programs to provide these services to the poor and to insure their participation in the design and delivery

of such programs. The hour is late, the problems are burdensome, but I am confident that Americans of good will, courage and compassion will not turn their backs on those fellow citizens who so desperately need their understanding and support.

Thank you.

RISE IN FOOD PRICES

HON. HAROLD V. FROELICH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. FROELICH. Mr. Speaker, I am today introducing legislation to instruct the House Banking and Currency Committee to conduct a full and complete investigation and study of all matters affecting, influencing, or relating to the cost and availability of food to the American consumer.

The incredible increases in retail food prices in recent months have caused an uproar in the supermarket checkout line and helpless frustration on the part of many families. Grocery prices went up 2.3 percent in February of this year, on top of the 2.5-percent increase in January, thus resulting in a 4.8-percent increase for the first 2 months of 1973 alone.

This situation is intolerable, and the end is not yet in sight. It is also an extremely complex situation which I do not feel can adequately be resolved by piecemeal action. It cries out for the in-depth consideration and study proposed in my bill.

The President announced last week that he was imposing a ceiling on the price of beef, lamb, and pork, in an attempt to halt rising meat prices. I welcome this move, but it is, at best, a temporary measure, of limited benefit, and it points up the need for comprehensive action which addresses itself to the total problem and seeks long range and far-reaching permanent solutions.

In the mail, I have received from my constituents, as well as in my personal contacts with constituents when I hold office hours in my district, one constant plea predominates: "Do something about food prices." Just what that something is, it is up to the Congress to determine. We will be in a much better position to make this determination, after the Banking and Currency Committee has looked at the total picture, as it relates to domestic production, trade policy, and present Federal, State, and local statutory authority, and has pulled all of the facts together in a clear and comprehensive way.

Hopefully, we can then arrive at a sound and workable solution to this domestic crisis—a solution which will take the myriad aspects and ramifications of the problem into consideration, and a solution which will relieve the American consumer of the mammoth food cost burden he is now being forced to bear.

I might add that my bill is similar in purpose to legislation which has been in-

troduced by a number of Members to create a Select Committee on the Cost and Availability of Food. I commend these Members for their active interest and concern. I do feel, however, that the creation of a new committee would not be the most efficient or effective manner in which to handle this problem. A new committee would require time to get organized; it would require the hiring of a complete staff; it would lack the expertise and familiarity with the legislative process now enjoyed by the Members and employees of a standing committee; and it would require additional funding. My proposal would eliminate these drawbacks and would, instead, rely on the experienced and competent Members and employees of the House Banking and Currency Committee.

In addition, there would be no need to appropriate additional funds for this purpose, a fact I consider of prime importance if we are to make an honest effort to reduce Federal spending and return to this country some semblance of fiscal sanity.

The text of my bill follows:

RESOLUTION TO AUTHORIZE THE COMMITTEE ON BANKING AND CURRENCY TO CONDUCT AN INVESTIGATION AND STUDY OF ALL MATTERS RELATING TO THE COST AND AVAILABILITY OF FOOD TO THE AMERICAN CONSUMER

Whereas, retail food prices have risen 33 percent during the past 8 years and 16 percent during the past four years;

Whereas, farm prices in February 1973 were 22 percent higher than in February 1972;

Whereas, government economists are now predicting an increase in retail food prices for 1973 in excess of 6.5 percent—the largest annual increase in 22 years;

Whereas, Federal regulation and management of the Nation's food marketing system has failed, on a continuing and systematic basis, to provide consumers with food at reasonable prices and farmers with a fair return on invested capital;

Whereas, Government trade policies and purchases of food influence the cost of food to consumers;

Whereas, it is in the long range best interests of both consumers and farmers for there to be an abundant, wholesome and reasonably-priced food supply; and

Whereas, the rate of increase in retail food prices disrupts the fair and efficient functioning of our market system and is unacceptable to and a hardship on the American consumer: Now, therefore, be it

Resolved, That the Committee on Banking and Currency, acting as a whole or by subcommittee, is authorized and directed to conduct a full and complete investigation and study of all matters affecting, influencing, or relating to the cost and availability of food to the American consumer.

Such investigation shall include:

(1) The production, processing, marketing, merchandising, advertising, labeling and retailing of food products for sale to the American consumer;

(2) The profits, price spreads, productivity, market structure and competition in all segments of the food industry;

(3) The trade policies, practices, regulation, services and organization of the Federal Government and, to the extent they affect interstate commerce, the State and local governments affecting, influencing, or in any manner relating to the cost and availability of food to the consumer.

For the purpose of carrying out this resolution the committee or subcommittee is authorized to sit and act during the present Congress at such times and places within the United States, including any Commonwealth or possession thereof, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpoena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary; except that neither the committee nor any subcommittee thereof may sit while the House is meeting unless special leave to sit shall have been obtained from the House. Subpoenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

The committee shall report to the House as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable. Any such report which is made when the House is not in session shall be filed with the Clerk of the House.

GRAND JURY REFORM AND THE FORT WORTH FIVE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. RANGEL. Mr. Speaker, the grand jury system is older than this country, but the recent practices of the Justice Department demonstrate that the grand jury does not always fulfill its original function of protecting the innocent from unwarranted prosecution.

The case of the "Fort Worth Five" is merely one example of how the present grand jury process can be abused. A House Judiciary Subcommittee is presently investigating this matter, but the fact cannot be denied that almost a year ago these five men were dragged from their homes in New York and taken to Fort Worth, Tex., to testify before a grand jury. They have remained interned there ever since. I feel it is quite apparent that the Justice Department is engaged in a deliberate policy of harassment against these men.

I am planning on introducing legislation in the very near future that will not only eliminate some of the real and potential abuses of the grand jury as it presently operates in the Federal criminal justice system, but also, in some ways, actually speed up the grand jury process. It is my feeling that proper legislation can restore to the grand jury its original purpose of protecting the innocent citizen without removing its effectiveness as a tool for investigating and returning indictments.

Unfortunately, that does not solve the immediate problem at hand. The unjustifiable conduct of the Justice Department has spurred many people into action. The Rockland County legislature, in the State of New York, recently passed

a resolution calling for the return of the "Fort Worth Five" member who is a resident of Rockland County, Mathias Reilly.

I would like to insert this resolution into the RECORD for the benefit of my colleagues. It is my hope that the goals of this resolution can soon become a reality for all five men:

RESOLUTION No. 264 OF 1973 MEMORIALIZING THE PRESIDENT AND CONGRESS TO EFFECT THE IMMEDIATE RETURN OF THE "FORT WORTH FIVE" TO THE STATE OF NEW YORK FOR TRIAL

Mr. John Murphy offered the following resolution which was seconded by Mr. Grant and unanimously adopted:

Whereas, it is a cardinal principle of American justice that those accused of a crime be promptly tried by a jury of their peers in the community in which they reside, and

Whereas, it is vital to our system of American justice that our citizens have absolute confidence in its fairness and impartiality, and

Whereas, it is especially critical that the application of American justice be always free from any taint of subservience to the political interests of a foreign power, and

Whereas, one resident of the County of Rockland has been spirited to a Texas jail far from his family, friends, and community and is being held there without having been convicted of any crime against the American people, and

Whereas, there is widespread belief that his prolonged and arbitrary incarceration so far from his home is being continued in direct furtherance of the political aims of a foreign power, and

Whereas, his continued incarceration under the charges in which he is being held without conviction is a violation of the spirit of American justice and is inherently alien to our doctrine of fairness, and

Whereas, his continued incarceration is a violation of his civil rights and is a direct threat to the freedom of action and belief of other Americans who oppose the policies of a foreign power, now therefore be it

Resolved, that the Legislature of the County of Rockland convey, through the President and Congress of the United States, its determination that this man should forthwith be returned to our State and that he be speedily tried on the charges against him in order to restore respect for American justice and confidence in its independence from foreign political dictates, and be it further

Resolved, that copies of this resolution be transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives and to each member of the Congress of the United States from the State of New York.

DOWN SOUTH WITH SENATOR CHILES

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. SIKES. Mr. Speaker, I am impressed, as I think many will be, by an article appearing in the Miami Herald on February 13 about the work and the attitude of Florida's junior Senator, the Honorable LAWTON CHILES. It is entitled "Down South With Senator CHILES." It

makes a lot of sense. I submit it for printing in the RECORD.

IN PERU, BRAZIL, ARGENTINA—DOWN SOUTH WITH SENATOR CHILES

(By Nathan A. Haverstock)

Since coming to the Senate two years ago, Lawton Chiles, Florida's junior senator, has—at his own out-of-pocket expense—made two fact-finding trips south of the border, visiting such key nations as Peru, Brazil, Argentina, and Chile. His conclusions deserve attention, if only because the Congress has so little information about Latin America, and yet is called upon so often to take legislative action affecting that area and U.S. relations with it.

Chiles traveled—as he did on his now celebrated walks across the state of Florida that helped him win election to his office—in search of ordinary citizens, people representing as broad a spectrum of views on their national problems as possible.

In an abnormally relaxed mood, the senator recently expounded his views on Latin America to this reporter, an audience of one. Though it was obviously a busy day for the 42-year-old Floridian—he had to duck out for two votes on the Senate floor—he made clear his feeling that Florida's obvious interest in the area alone justifies the time he is devoting to learning something about our hemisphere neighbors. As far as the rest of the Senate is concerned, it can only benefit from the energy and interest shown by Chiles along with pitifully few others.

"You learn more by listening than you do by talking," Chiles said of his unusual travel style. "I didn't want to go on the official embassy circuit, or as the guest of my government. I wanted to set my own schedule." But he didn't want to cause trouble or embarrassment, so he checked out his plans with the foreign ministries of all countries visited.

"I found that they didn't really have any objection to my talking with anyone I pleased. Once people locally are really convinced that you want to hear from all sides on questions, so as to draw your own conclusions, no one has any objection to your talking to anybody in sight."

Not speaking Spanish as fluently as he hopes to some day, Chiles relied for interpretation on Colin Bradford, a 33-year-old, Yale-trained Ph.D. in history, who will be joining the senator's staff in early March, specifically to help Chiles keep up on Latin America. Contacts Bradford had developed five years ago while spending a year studying economic planning in Chile, under the previous administration of President Eduardo Frei, were of help in planning the Senator's casual encounters with Chileans.

Noting that nationalism is on the rise in Latin America, Chiles said "it is tremendously interesting to see all the different ways in which Latin American societies are reorganizing themselves to promote the welfare of the ordinary man."

The senator said he knocked heads with some of his Chilean hosts on the issue of the expropriation of American-owned business assets. He pointed out to them that they could not expect this country to accept takeovers of U.S. interests lying down. His hosts, in turn, educated him on some political facts of life in today's Chile—namely, that no matter what party might be in power there it would be political suicide to come out against nationalization of key industries.

"We need more consultation with our Latin American neighbors on important changes of policy," Chiles said, "and we need to carry out some of our promises to them." Chiles mentioned as one specific that the United States should grant trade preferences to Latin nations "where it is in our nation-

al interest . . . it should be at least as easy for us to grant them preferences as it has been for us to grant preferences to the Japanese in the past."

American businessmen should get more help from our government, he said. "It is ironical that Japanese and German companies receive much more government support than U.S. companies, and yet we get blamed for government intervention in Latin American affairs." It would be better, he added "if our government were involved at an earlier stage . . . encouraging the kinds of trade and investment that Latin Americans want before a crisis occurs . . . and we should be anticipating problems in such areas as natural resource exploitation . . . and we should be thinking of how we can get business disputes resolved through some form of international settlement."

The views voiced by the Florida senator are scarcely novel ones. Indeed, they are shared by senators on both sides of the aisle. Thus, the Latin American problem remains where it has for years on Capitol Hill, on the willingness of senators other than Chiles to take the time to do something to promote acceptance—in forms of legislative action—of their commonly shared views.

ADMINISTRATION'S HOUSING MORATORIUM

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. HANNA. Mr. Speaker, as many of my colleagues can recall, I have recently addressed this body on the matter of the administration's housing moratorium. Although I was generally aware of the theoretical problems such an action must create, I have since that time been made painfully aware of the immediate and concrete impact of the freeze on a number of very worthwhile projects in my area.

It appalls me that anyone can conceive of a policy which commits people and substantial dollars to a program in good faith and then permits them to be dropped virtually by a hangman's ax as being in any way a "right" or correct national policy. I can understand that some might be frustrated with certain such programs, but I cannot see how we can suspend indefinitely such programs with no available alternatives to maintain this vital capability.

HUD has offered no alleviation of the problems caused those who, in all good faith, merely tried to do what their Government wanted. I am, therefore, today introducing legislation to rescind the present moratorium. This is the least we can do while both we and the administration evaluate our past efforts and prepare for future directions in housing policy. The text of the bill follows:

H.R. 6443

A bill to assure that Federal housing assistance programs are carried out to the full extent authorized by Congress

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That the Secretary of Housing and Urban Development shall immediately cease any suspension of Federal housing assistance programs, or any withholding of funds for such programs, and shall carry out such programs in the current and each succeeding fiscal year to the full extent possible pursuant to the contract authority or other funds appropriated or otherwise authorized or made available by the Congress for such programs in each such fiscal year.

SEC. 2. The Secretary, in carrying out his responsibilities under this Act, shall not withhold or delay the approval of applications for contracts under the Federal housing assistance programs, the entry into contracts under such programs, or the expenditure of funds appropriated for such programs. He further shall take no action which effectively precludes or delays the approval of applications for contracts for such programs, the entry into contracts for such programs, or the expenditure of funds appropriated for such programs.

SEC. 3. "Federal housing assistance programs" means the programs established under section 235 and section 236 of the National Housing Act, section 101 of the Housing and Urban Development Act of 1965, Title IV of the Housing Act of 1950, and the United States Housing Act of 1937.

FOOD FOR THOUGHT

HON. DAVID W. DENNIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. DENNIS. Mr. Speaker, the following is a letter to the editor of my hometown newspaper, the Richmond, Ind., Palladium-Item, which may give my metropolitan and urban colleagues some food for thought:

ANY TAKERS?

Editor, The Palladium-Item:

Mr. and Mrs. City Slicker: Ways to remedy your high food price dilemma.

- (1) Get rid of your garbage disposal.
- (2) Fence in your beautiful lawn.
- (3) Turn your garage into a barn.
- (4) Need \$400 in cash for your investment.

Go to a farm sale, stand in the mud all day to buy a pig, one half dozen hens, one rooster and an old gentle cow.

You have enough ground in the average yard to feed the pig and chickens the necessary roughage.

You will have to buy the following items: a small amount of corn, hay and a few minerals from the elevator.

Now if you are real energetic, you can probably get all the hay that you require by helping some farmer make hay at hay-making time or extra money at the high hourly rate of \$2 per hour.

Also, after corn harvest, many farmers would gladly let you pick up the corn that was missed in the field for your animals.

Now save all your high priced garbage and dishwater to slop the hog. Do you realize that enough garbage goes down the drain to feed that pig?

The end results:

A pig to butcher.

A calf from the cow to butcher.

All the eggs you need plus some poultry to eat.

Contributions to ecology:

Eliminates chemical fertilizer for your yard because you have nature's natural fertilizer, but of course you will have to spread it.

Eliminates spray you buy for your bushes because the chickens take care of the bugs.

When you butcher the hog take the excess lard and make your homemade soap which will eliminate the harsh detergents and gets your clothes much whiter and brighter.

There is one big drawback—the hogs, chickens and the cows must be fed and taken care of twice a day, 365 days out of the year. Even through vacations and weekends but just think of how much money you are saving by staying home on your vacation to take care of your livestock.

FORREST DAVIS.

RURAL ROUTE, LYNN, IND.

POSTAL SERVICE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. STEIGER of Wisconsin. Mr. Speaker, the U.S. Postal Service has been the subject of much controversy. Its work is under scrutiny by Congress, the media, and the millions of Americans who daily use the mails.

There is no question that the Postal Service in recent years has had more than its share of problems and that the caliber of service has been subject to justified criticism. Congress' decision to make the Postal Service a quasi-independent organization was aimed at correcting many of the problems which made the old Department little more than a moribund institution.

Postmaster General Klassen is doing a good job of turning the Postal Service around. While service can still be faulted, I have observed real progress. Considering the massive nature of the system required to provide postal service to more than 200 million Americans, I think we need to recognize not only the Postal Service's problems but its achievements as well.

The following letter to the editor of the Oshkosh Daily Northwestern by the postmaster of the U.S. Post Office in Oshkosh, Wis., is one which I feel deserves attention:

[From the Oshkosh (Wis.) Daily Northwestern, Mar. 10, 1973]

POSTAL SERVICE TRYING TO MODERNIZE

(By C. W. Spalding, Postmaster, U.S. Post Office, Oshkosh, Wis.)

(NOTE.—The U.S. Postal Service has been receiving a great deal of notice lately, notably as the subject of an investigation by a Senate committee. An editorial earlier this week drew the following article in reply from Oshkosh Postmaster C. W. Spalding.)

Reference is made to the editorial entitled, "Some Government Costs Can Be Cut," which

appeared in the Tuesday, March 6, 1973, issue of the Oshkosh Daily Northwestern.

In this statement, you would like the public to believe that the U.S. Postal Service is operating inefficiently, is over priced and forces customers to use their services because of the "monopoly on first class mail."

As for the "woes of the U.S. Postal Service" which you stated were caused by employee benefits, let me state that today the benefits paid to government employees do not far exceed those paid in private industry. We are tied into a very fine retirement plan, but this plan is largely financed by a seven per cent deduction from the base salary of the employee.

Vacations in the private sector are very close to, and in some instances exceed the length of those earned by government employees.

Let us take a look at our competition. United Parcel Service provides a very fine service to its customers. They do not, however, offer their services to each and every person who wants to mail a parcel. It is very probable that if they reach the point whereby they are required to accept any item that any individual wishes to send anywhere, they would then inherit the same problems faced by the postal service.

As long as they can remain selective in regards to their clientele, they should be able to provide their services at the present standard. Who can predict what will happen if the conditions change?

The law does provide the U.S. Postal Service with a monopoly on the delivery of first class mail. This does not and never has prevented any company from handling its own, intra company messages or billing service.

It seems plausible to believe that if private business had found it less expensive and more efficient to provide their own delivery service, it would have done so. The trend up to this point has been in the other direction.

The Independent Postal Service has established "local" branches in several large cities in the country, and has tendered a possibility of delivering local letters for five cents. This is however, a strictly local operation and does not make allowances for the vast transportation network which must be maintained to move the mail across our nation and around the world. Admittedly, for the postal service this is accomplished by contracts with private business enterprises. If IPSSA were to go into nationwide distribution, they too would have to establish a transportation network.

A review of postage rates over the past quarter century shows that postage rates on first class mail increased from two cents an ounce to the present eight cents. In the same period all other living costs have risen by at least the same rate. The cost of the Oshkosh Daily Northwestern during this period has risen from two cents a copy to the present 15 cents a copy—double the rate of increase over the first class postage rate!

The new U.S. Postal Service is in the process of modernizing facilities, equipment and work methods. This however, cannot be accomplished overnight in an operation as widespread and complex as this new corporation.

Over the past years while private industry was changing their operating policies, no money was available to the Post Office Department for improvements in operation. We struggled along using the same methods and techniques established by Ben Franklin.

Today we are in the throes of a change in management policies, and improved techniques to provide for more effective use of our facilities and manpower.

We can only request that our customers consisting of every man, woman and child in

the nation, bear with us during this period of conversion.

WASHINGTON SEMINAR

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. ASPIN. Mr. Speaker, a teacher and constituent of mine, Mr. John W. Eyster, recently came to Washington with seven of his students to take part in a Washington seminar of their own planning.

The project began with the Janesville, Wis. students and their teachers making intense preparations for the visit. Once in Washington, the group experienced numerous facets of Washington life.

They had interviews with members of both the executive and legislative branches. They viewed the operations of the Voice of America and prepared a tape for broadcast. They met with department officials from the Department of Health, Education, and Welfare and other agencies. Prepared with specific topics and areas of interest, the group brought their questions to the top lawmakers and law-enforcement agencies in our country.

I am certain that this direct contact with Government officials has given these students a much keener insight and a much greater understanding of the complexities of Government.

I hope this experience has given them a much greater appreciation for what Government can and is doing for them. I further hope that this trip will have instilled in them the desire to be active and productive citizens within their own communities.

Hopefully, future groups will be able to make this important trip so that more citizens can study first-hand the inner workings of our governmental system.

TRIBUTE TO GEN. LEWIS B. HERSHEY—A GREAT AMERICAN RETIRES FROM PUBLIC SERVICE

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. EVINS of Tennessee. Mr. Speaker, Gen. Lewis B. Hershey, who served our Nation faithfully and ably as Director of the Selective Service System for more than 30 years, is retiring from public service.

General Hershey brought a special competence and compassion to a thankless job—the supervision of the drafting of millions of young Americans in World

War II, the Korean war, and the Vietnam war.

He is dedicated and devoted to the national interest and he accepted criticism philosophically and without rancor—he had a job to do and he did it.

General Hershey appeared regularly before the Subcommittee on Housing, Space, Science, and Veterans Appropriations during the time I was honored to serve as chairman of this subcommittee, and he acquitted himself with distinction and devotion to the public interest. He was unfailingly responsive, courteous, and cooperative in his relationships with our committee.

The Nation owes General Hershey a great debt of gratitude for his outstanding record of public service and I am sure we all wish him the very best of good luck and success as he begins his richly deserved retirement.

HOUSE SELECT COMMITTEE ON CRIME

HON. DAVID E. SATTERFIELD III

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1973

Mr. SATTERFIELD. Mr. Speaker, this Nation is indebted to Chairman CLAUDE PEPPER and to the members and staff of the House Select Committee on Crime, which has done much to dramatize the scope of criminal activity in this country.

An editorial which appeared in the Richmond News-Leader on March 20, contained well-deserved observations about the effect of the work of this committee.

The editorial follows:

DEATH OF A COMMITTEE

On June 30, the House's Select Committee in Crime will go out of business. It isn't that no more crime exists to investigate, but rather that a majority of the House believed that the select committee's functions overlap the territories of other committees.

That's a pity, because the committee has done a good job. It was established four years ago when a consensus in the House agreed that Congressman Emanuel Sells' Committee on the Judiciary was neglecting the problem of crime. Florida's Claude Pepper became chairman; five Democrats and five Republicans completed the committee. As a select committee, the Pepper Committee could investigate crime and issue reports of its findings, but it could not initiate legislation, and its "select" status meant that it was only temporary.

The committee tackled its task with gusto. It scheduled hearings in a number of cities, including Boston, New York, San Francisco, Omaha, and Columbia. Its hearings focused on drug abuse, gambling, and organized crime's links with professional sports. It found that at least one-third of amphetamines manufactured annually were winding up in a lucrative black market. Its reports on juvenile crime offer an authoritative summary of that problem. It examined drug abuse in the schools.

Although the committee produced no leg-

islation directly, it was responsible for indirectly influencing some measures aimed at reducing drug abuse. It found that a profitable market had been established for heroin paraphernalia, leading 34 States to adopt

laws prohibiting the manufacture or sale of this paraphernalia. Above all, the committee's activities dramatized the scope of the crime problem, bringing many aspects of crime into sharper focus. But now it will

disband, leaving the investigation of crime to other House committees. The House would be foolish to accept a lesser performance from these other committees than the Pepper Committee successfully gave.
