It does not require an engineering degree to see, therefore, that the men who designed the Corvair considered the recommended tire pressure differential critically important in counteracting the recognized effects of the roll couple distribution, and it is also clear that the foremost reason for their rejection of available methods for transferring more of the roll couple to the front—a front stabilizer bar and a different type of rear suspension—was: COST.

Not surprisingly, in an analogy to the tactic which has seen General Motors never call Maurice Olley to testify but instead attempt to discount and discredit the opinions Mr. Olley offered GM on relevant subjects in the 1950's, Mr. Rubly and the other key men who made the crucial decisions on the design of the Corvair suspension, and who knew of its dangers, have never, as far as we know, been offered as witnesses by General Motors. And when such men have appeared as reluctant witnesses summoned by General Motors' opponents to depositions, they have suffered from atrociously poor memories.

THE YEARS 1958-60

Third Issue: What Did GM Officials Do To Protect The Public From These Special Hazards of The Corvair?

In summary, they rejected the front stabilizer bar and they recommended that a car be operated with a tire/pressure differential to save the manufacturer money but it is certainly not a reasonable substitute for designing stability into the vehicle.

The evidence will show that even when used with the recommended tire pressure differential the original Corvair does not have an acceptable degree of lateral stability. Nonetheless, since Mr. Rubly found the possibility of using a tire pressure differential to achieve stability a "saving grace" in the Corvair, it should be understood why in any case such a solution, even though it may have lessened the production cost of the automobile, was incompatible with sound engineering practice.

Derwyn Severy, nationally recognized expert in connection with questions of automobile safety and, on occasion, a witness employed by General Motors to testify on such questions, has said:

"Where the public at large is expected to maintain the tire pressure understanding, then I'd say it becomes a dangerous situation to the extent that the vehicle is sensitive to oversteer or directional instability from variations in tire pressure."

Robert N. Janeway, an engineer who has headed Chrysler's dynamic research, says:

"* * * this expedient must be considered a last resort. For, instead of stability being inherent in the vehicle design, the operator is relied upon to maintain a required pressure differential in front and rear tires. This responsibility is, in turn, passed along to service station attendants, who are notoriously unreliable in abiding by tire pressures. There is also serious doubt whether the owner or service man is fully aware of the importance of maintaining the recommended pressures."⁴

The "serious doubt" entertained by Mr. Janeway has to be followed by a firm conviction that neither owners nor service station attendants could be charged with knowledge

³ *Suspensions From The Ground Up* by Charles M. Rubly, for presentation at SAE National Automobile Week, March 15-17, 1960.

⁴ *Passenger Car Design and Highway Safety*, Consumers Union, 1962, p. 45.

of the importance of the recommended tire pressure differential in the Corvair. For five consecutive years, 1960 through 1964, Corvair Owners Manuals accompanied the prescribed tire pressures with cryptic warning:

"Oversteer problems may also be encountered with incorrect pressures. Maintain the recommended inflation pressures at all times."

But, as a judge who pursued this subject during a Corvair trial has observed:

"None of the engineers of General Motors could explain what this language meant. This is preposterous. Why was such language used? Certainly the average purchaser would have no conception of what was meant by this language in the Owner's Guide."⁵

In any case, the most persuasive evidence that it is violative of sound engineering practice to rely on a tire pressure differential to give stability to a vehicle, has to be the backpeddling GM has done and the misrepresentations it has advanced in a frantic effort to minimize the importance of the tire pressure differential since the Corvair's stability became a public issue. Certainly someone at General Motors must have seen that such misrepresentations would sooner or later be tagged as lies or as establishing a corporate position that the men to whom General Motors entrusted that aspect of the problem involving lateral stability were engineering idiots.

THE YEARS FROM 1960-62

Fourth Issue: (1) Did GM Executives Engage in a Continued Refusal from 1960-1962 to Correct the Defect? (2) Did Their Earlier Attempts to Correct the Corvair's "Misbehavior" Concentrate on Finding a Cheap "Fix"?

Both to the U.S. Senate and to courts, a few GM officials have described the 1960-1963 suspension designs as the same. For example, in the Winchell statement GM submitted to your Committee, he speaks about "the design characteristics of the 1960-1963 Corvair." (p. 1559) Similarly, this was the evidence given by GM to Judge Jefferson. Other court cases reveal the same pattern of testimony i.e., there were no significant differences in these suspensions. Also, the attached "Agenda" used by GM officials to brief their attorneys and other personnel also states that the 1960-63 suspensions were "the same."

Facts

The attached documents, originating in the Chevrolet R & D Section of GM show that there were several significant pre-1964 suspension changes. These included a limitation on rebound angle and a change in rear spring rate. Also, the results of several GM Proving Ground reports were available in 1962, which showed certain systems that appeared to be the more stable when spacer blocks and other changes were made. For example, in P.G. 15699, done in early 1962, the best results appeared when the vehicle used production components except for the rear shock absorbers which were of the hydraulic rebound cut off type with 0.5 in. spacer blocks. As in the other Chevrolet Layout L-58339 shows, [Plaintiffs' Exhibit 91 in *Franklin v. General Motors*], these modified shock absorbers were then incorporated in the 1963 Corvair (6/12; ECR 47153).

In summary, the full history of the 1959-1962 efforts by Chevrolet and GM engineers to correct the Corvair's "misbehavior" is just beginning to emerge; however, apparently it involves two more or less parallel efforts, one by the men who designed the Corvair and the other initiated by Chevrolet R&D in January 1960.

⁵ *Drummond v. General Motors*, California Superior Court, Los Angeles County, No. 771 098, p. 24.

The first of these efforts, the one by the men who designed the Corvair, sought to find a cheap "fix" to tinkering with the car without altering its basic design. Although there were some early changes in the rear spring rates that may have affected the vehicle's handling characteristics, Mr. Rubly and his group apparently focused on the possibility of controlling the problem by reducing the maximum rebound or positive camber in the rear wheels. In a pre-production test it had been noted that restricting the rebound tended to improve the car's roll stability.⁹ So, shortly after the car went on sale, its designers were experimenting with shims in an effort to limit rebound.¹⁰ Further work in this direction prompted an interim revision of the shock absorbers in the middle of the 1962 model year "to restrict rebound."¹¹ The maximum rebound or positive camber in the rear wheels were thereby limited to 9°, as contrasted with the original 11°.

In May and June of 1962, ten different such suspension modifications—not all involving changes in the shocks but all aimed at limiting rebound—were tested for their effect on the Corvair's roll stability characteristics.¹² The suspension modification that appeared "most stable"—i.e., the only one with which the car did not roll over—used rear shock absorbers of the hydraulic rebound cut-off type of 0.5 in. spacer blocks. These shock absorbers were incorporated as a change in the 1963 model "for improved ultimate stability."¹³ Some General Motors' records say that they limited maximum rebound or positive camber in the rear wheels of 8°. However, a proving ground test report now available says, "These shock absorbers limited the rear wheel rebound angle to 7½°."¹⁴

In any case, further tests of equipment to limit the maximum rebound and thus improve lateral stability led to the conclusion, according to the General Motors' report, PG 17103, "that the dynamic stability of the current production 1963 Corvair was not substantially improved through practical modifications to shock absorber design and configuration."

These tests apparently ended hopes that the "fix" could be cheap.

Summary

As far as we can tell, GM never admitted that the 1962, or mid-1962, or 1963 rear suspension was different from the 1960-1962 models. Such an admission would have raised an immediate question by the Corvair victims as to what was the nature of the difference, and the reason for the change. For GM to explain changes of this sort would, in turn, have had some critical implications concerning both their lack of effectiveness and GM's own evaluation of the original system. And, who knows, exploring the reasons for the different shock absorbers used in the 1963 model might have led the Corvair victims in turn to uncovering P.G. Reports 11543, 12207, 15699 and the P.G. 17103. As noted above, GM did not undertake that risk. Thus the attached documents prove conclusively the falsity of GM's testimony on the identity of the 1960-1963 suspensions. (See Appendix items No. 5 and 7)

It is to be expected that GM will, at this late date, attempt to excuse its false swearing on this matter by minimizing the importance of the different shock absorbers in the mid-

1962 and again on the 1963 model, as it now attempts to minimize the importance of the tire pressure differential it prescribed for the early Corvairs. However, such shock absorber and rebound limitation changes were essential enough to involve substantial costs to GM and nobody familiar with GM will ever believe that it consciously spent money on a quest for meaningless non-visible vehicle modification.

Fifth Issue: The Suspension Changes in the 1964 Corvair—Were There Misrepresentations by Mr. Winchell as to the Nature of Corvair Modifications in 1964?

GM's position and testimony

The Winchell statement GM submitted to your Committee says that the 1964 modifications of the Corvair suspension system: "did not alter the full rebound control arm angle at the rear wheels. They did transfer more of the roll couple to the front wheels and, thus, transfer more cornering force to the outside front wheel. All of this was in an attempt to extend the limit of control as a step in the normal process of product improvement. The limit of control was increased to approximately 0.7g lateral acceleration with terminal neutral steer." (p. 1562)

Facts and conclusion

However, when Mr. Winchell testified that the 1964 changes "did not alter the full rebound control arm angle of the rear wheels" he neglected to state that, as the attached internal documents from Research and Development conclusively prove, the maximum rebound design angle of the Corvair had been changed in May 1962, and then again in the 1963 model. These documents also conclusively show that the length of the standard shock absorber had been reduced three times—in the 1962 model, again in May of 1962, and then again with the 1963 model. Thus this talk by Mr. Winchell about '64 control arm rebound was essentially irrelevant and misleading. The only question is whether the 1964 change in roll couple distribution was indeed part of "the process of normal product improvement".

GM's own research and their P.G. tests make it clear that GM knew of the value of the roll couple and stabilizer bar in 1953, and that all the attempted fixes that failed were in lieu of stabilizer bar and roll couple changes. Since GM knew of this need in 1953, and then was aware of the roll-overs of the Corvair in 1959, and was continually reminded of the inability of tests such as P.G. 11543 (of November 1959) to cure the problem, without a stabilizer bar, particularly in light of the 1961 Olley memorandum. Mr. Winchell's 1966 testimony which described the '64 adoption of the stabilizer bar and leaf springs as "normal product improvement" was totally misleading—particularly in suggesting that all this was done as rapidly as the knowledge became available. Indeed, the roll bar was on the prototype Corvair and the Vehicle Dynamics Paper of April 1964 makes the statement that "shortly after" Chevrolet R&D found out that "roll couple" distribution was largely "responsible for the misbehavior" of the Corvair—"a Corvair with a single leaf transverse rear spring and front stabilizer was built and demonstrated." (p. 13). Certainly this knowledge was driven home again to Mr. Winchell by Mr. Olley's 1961 paper, and it was reemphasized when tests were run with a stabilizer bar, and the results were studied. Yet inexplicably this alternative continued to be rejected by the Chevrolet decision makers. Thus, by Mr. Winchell's own Department's statement, the 1964 changes were developed in response to a determination of the reasons for the "misbehavior" of the early Corvair, NOT "in the normal process of product improvement."

Sixth Issue: Did GM Represent the Purpose and Effect of the 1965 Corvair Suspension Changes?

GM's position

Mr. Winchell's statement to the Senate said:

The changes made in the 1965 suspension were for the purpose of improving ride, while at the same time maintaining the control characteristics and higher limits achieved in 1964. (p. 1562).

Issue

This testimony (which equates the 1965 changes with the 1964 changes), to the extent it does, contains a puzzling failure, repeated elsewhere in court, to mention that the 1965 Corvair rear suspension also limited the maximum rebound or positive camber in the rear wheels to approximately four degrees as contrasted with the maximum rebound or positive camber of approximately eleven degrees in the 1960 Corvair, and approximately 6.8° in the 1964 model. Why this omission? Was it significant in misleading the Senate and the courts?

Conclusion

Your investigations should study Mr. Winchell's letter to Semon Knudsen, at the time General Manager of Chevrolet, which took the position that the 1964 changes were insufficient, that the full redesign of the 1965 suspension system was needed if the Corvair was to be "at least as safe as the standard Chevrolet." Thus, it is difficult, if not impossible, to understand how Mr. Winchell, of all people, could represent the 1965 changes as being merely for the "purpose of improving ride, while at the same time maintaining the control characteristics and higher limits achieved in 1964." (p. 1562, Senate Hearings)

While true that the ultimately important 1965 changes had made the roll couple distribution, 54% rear and 46% front in the 1965 Corvair (p. 28); however, the 1965 changes also limited maximum rebound. More significantly, in regard to the rebound limitation, Mr. Winchell's own history of the Chevrolet vehicle dynamics program rebuts Mr. Winchell's public testimony. Within GM, Mr. Winchell admits that the work on the "out of control" characteristic of the Corvair "indicated that the jacking characteristics consequent to the swing axles and roll couple distribution were responsible for the misbehavior." (p. 11, emphasis added)

Therefore, a summary list of the misrepresentations in the single paragraph of the Winchell statement concerned with the 1965 changes is:

1. The statement implies that the increase in control achieved by the changes did not require any alteration of the full rebound control arm angle of the rear wheels. We know that not only did the 1965 changes limit the maximum rebound in the rear wheels but that "the jacking characteristics consequent to the swing axles" had been determined by Mr. Winchell's own group as a cause of the Corvair's "misbehavior."

2. The 1965 changes "were for the purpose of improving ride, while at the same time maintaining the control characteristics and higher limits achieved in 1964." Mr. Winchell's own position urging adoption of the more extensive suspension changes that became the 1965 model contradicts this statement. Also, its implication that the unmentioned 1965 limitation of the maximum rebound in the rear wheels must have been for purposes of "improving ride" is contradicted by the conclusion of Mr. Winchell's own group that "the jacking characteristics consequent to the swing axle" were a cause of the Corvair's "misbehavior."

In other words, with the use of an alternative to the "swing axle" originally selected for the rear suspension, the Corvair's handling peculiarities were significantly corrected in later models.

But when public questions were raised from 1965 to the present moment about the handling safety of earlier models still on the road, GM indignantly replied that the upper unit of control of the Corvair is 0.6 G and

"this lateral acceleration is the upper limit of control ability for all passenger cars of the same period", and swore to you the changes in the 1964 and 1965 models were nothing more than "a step in the normal process of product improvement." Indeed, GM suppressed their explicit presentation to their own staff that after the 1964 changes, GM's changes to the 1965 Corvair were necessary to eliminate jacking. Nevertheless, GM testified to the U.S. Senate that "The changes made in the 1965 suspension were for the purpose of improving ride, while at the same time maintaining the control characteristic and higher limits achieved in 1964."¹⁵

Seventh Issue: What was GM's Duty to Protect the Public?

But this history contains an even grimmer irony. It was just about the time that GM was introducing the Corvair to the American public in the fall of 1959 that the Michigan Supreme Court was compelled to angrily spell out for GM a manufacturer's duty when it acquires knowledge of a latent defect in a product it has sold that may endanger the user. The case was *Comstock v. General Motors*, and the latent defect at issue involved the loss of brake fluid in certain Buicks:

"In our view, the facts in this case imposed a duty on defendant to take all reasonable means to convey effective warning to those who had purchased '53 Buicks with power brakes when the latent defect was discovered."

"* * * Prompt warning could easily have prevented this accident."

What Did GM do to Protect the Public? The Attempted Tire Pressure Fix, and GM's Refusal to Admit its Failure

As seen earlier, the only significant decision GM made to offset the instabilities resulting from the drastic roll couple distribution in the original Corvair (as seen by them in PG 11106 of June 1959) was in the adoption of a tire pressure differential, 15 psi front and 26 psi rear when cold. The technique was well known. Mr. Olley's 1953 paper had pointed out, "Decreasing front tire inflation, increases the aligning torque of the front tires and therefore the handling stability." (p. 12) And again, "Lowering the front inflation will also increase the aligning torque and road feel." (p. 13) However, P.G. 11106 of June 1959, had shown GM's Holden automobile (the GM code name for its prototype version of the Corvair) had wheel lift at 15 and 20 mph and actual rollover at 25 mph.

Thus, the tire pressure recommendation carried with it the implication that GM knew that stability was not inherent in the Corvair's design. In the Owner's Manual, GM accompanied the prescribed tire pressure differential with a cryptic warning:

"Over-steer problems may also be encountered with incorrect pressures. Maintain the recommended inflation pressures at all times."

Could this warning be considered a good faith attempt to cope with recognized instabilities in the Corvair design? It seems doubtful particularly when it was disowned in the courtroom by GM. As Judge Bernard Jefferson's opinion said of the Owner's Manual "warning":

"None of the engineers of General Motors could explain what this language meant. This is preposterous. Why was such language used? Certainly the average purchaser would have no conception of what was meant by this language in the Owner's Guide."

Judge Jefferson's question—"Why was such language used?—has never been answered by GM documents—except that the 1961 Olley memo now reveals its true value—to "save the life of the Corvair."

But on the other hand, when the Corvair came under public attack, GM evolved a cor-

porate position that minimized any possible effect in the tire pressure differential. In the Winchell statement GM submitted to your Committee, for instance, he says:

"Tire experts would agree that failure to maintain the optimum or recommended tire pressures in any vehicle may result in some degree of oversteer, or some change in stability. However, even reversing the tire pressure differential is unrecognizable at 30 to 40 mph in a Corvair. The effect becomes noticeable as the speed increases, but it does not render the car uncontrollable. The pressures selected for the Corvair were the best choice for satisfaction and value to the customer in control, tread-life and ride."

Facts

The available evidence, much of which is attached hereto—the 1953 Olley paper, the Cornell Aeronautical Research in the 1950's, GM's resort to tire pressure differential in the effort to equalize cornering coefficients (and the revealing language in the cryptic Owner's Manual warning), the 1960 Rubly paper, etc.—all show that GM knew the inherent instabilities in the Corvair before it was put on the market, that GM knew that the corrective action indicated was to shift more of the roll couple to the front, and that GM knew of methods, other than fiddling with tire pressures, to obtain a better roll couple distribution.

Somewhere else—unless it has been destroyed—there must be technical data, minutes of meetings, some evidence from which it can be determined what other data prompted GM to prescribe the tire pressure differential that it now would lead the public to believe inconsequential. Their shyness on the subject is understandable. Anyone who understands this subject knows that the basis for the prescribed tire pressure differential will also evidence GM's knowledge of the instabilities in the design at a time before it was placed on the market. Despite GM's bad memory on this matter, there are now records which show that the date on which this 73% tire pressure differential was decided was January 21, 1959.

General conclusion

The men responsible for the production of the 1960-63 Corvair should not be heard to say that this presentation is a rejection of American business, apropos Mr. Roche's desperate repose pattern. That is too arrogant and transparent a canard. As the evidence herein demonstrates this letter is primarily a commentary on the men responsible for misusing GM's resources for a purpose unworthy of American business.

There are about 600,000 of these dangerous Corvairs still on the road. The hazard inherent in them have undoubtedly been multiplied by the ravages of age, and because of their vintages they are driven increasingly by the young and the poor—those classes of people who are probably least able to spend the money for necessary corrections in their basic mode of transportation. Thus, every passing day presents the probability of more casualties in continuing sacrifice to the careers of a group of men at GM who until now have succeeded in suppressing evidence of their callousness. As Mr. Fonda and Mr. Sergay estimated a few months ago, these 600,000 will probably be involved in over 500 more maiming roll overs if they are left on the road. Although the Corvair's past impact cannot be retrieved, these men still can help save lives and injuries in the future by coming out candidly—if they rethink their professional obligations to the public. It is now a question only of who steps forward first.

A public hearing by your Committee can assure that the new deaths and injuries do not occur in these roll over vehicles. This should not be delayed by the Department of Transportation study of whether this roll over propensity is a defect under the 1966 law. Another certain benefit of a public hear-

ing will be to place before the public the heater defect which affects hundreds of thousands of families from the carbon monoxide leakage.

In a reflection of the reward structure within GM, the officials responsible for the Corvair debacle continue in control of the world's largest manufacturer, enjoying the rich personal rewards they have reaped for shielding this corporate crime. Nothing suggests that they have any remorse whatsoever for the innocent human beings who have been maimed by GM's refusal to acknowledge and warn of—or correct—the hazards General Motors has secretly recognized for years under their own euphemistic label of "misbehavior."

This presentation offers to the United States Senate and the Department of Transportation—and the entire American public—documentation of this whole story from General Motors' own records. For a decade GM has refused to come clean, so such records are now our most conclusive evidence.

Mr. James M. Roche, Chairman of GM, has recently expressed distress over the present availability of large portions of GM's heretofore secret Corvair records, and has taken to public platforms to denounce those who ask employees to "blow the whistle" on corporate misbehavior seriously harmful to the public interest. Mr. Roche complains that, "however, this is labeled—industrial espionage, whistle blowing, or professional responsibility—it is another tactic for spreading disunity and creating conflict." (Speech of James M. Roche, March, 1971.) Thus his fear of public scrutiny of the manner in which GM operates leads him to argue that the public concern for truth about safety and health must be limited by the degree of disunity or conflict the truth would create. This attitude is the consummate corporate tyranny since the most dishonest areas would receive the least disclosure. Mr. Roche is saying that what cannot be disclosed is that which GM decides is in its interest, regardless of the public or consumer interest. He should read the professional canons of ethics (engineering and law) which define professional responsibility to the public as above that of the employer. Nonetheless, when at the end of that day Mr. Roche doffs his mantle as corporate spokesman and approaches things on a more ordinarily human level, even he would subscribe to the proposition that human lives and well-being are more important than the need to adhere to what Chevrolet internal memos call the "party line" in the name of a diseased sense of corporate loyalty. Certainly the forthright approach of one automobile executive engineer in the person of Mr. Harley Copp, shows that the truth is not anti-business. Rather, Mr. Copp's actions show that moral awareness and the sense of personal responsibility have not yet been stifled in all of the Detroit decision makers. Mr. Copp's testimony also shows that much of his information was shared with other auto executives, and thus it suggests that your Committee should investigate why the equivalent GM executives have never dared to speak as candidly in public about the Corvair. The interested public will be watching the degree to which Mr. Copp is treated with honesty and fairness by the Ford Motor Company for his display of professional engineering conscience.

In any case, the attached material should show the real basis for the current anger of some General Motors officials over "whistle blowing". Responsibility for one of the most scandalous episodes of corporate suppression of truth ever to reach public view can now be established, and the evidence of it, after ten years of being successfully cloaked, probably never would have seen the light of day if the consciences of a few insiders had not told them that the public interest in the truth of this matter is more important than

¹⁵ P. 1562.

any career risks they might run in bringing that evidence forward.

In the fresh light of the new evidence and its implications contained in this letter, together with the gatherings of your staff's inquiry, the public should be able to learn, through a public hearing by your Committee, the facts and necessary admissions. Only a public hearing can set the record straight and assist the Congress in forming remedial policies so that such corporate manipulations be less likely to occur in the future. We respectfully urge you to commence such a hearing, hoping that you share the view that these materials and additional information in your Committee's possession compel such a conclusion.

Thank you for your continuing interest.

Sincerely yours,

RALPH NADER.
GARY SELLERS.

EXHIBIT 6

GM PROVING GROUND REPORT 15699 TEST REPORT—ROLLOVER STABILITY EVALUATION OF VARIOUS CORVAIR SUSPENSION SYSTEMS

FOREWORD

Mr. N. E. Farley of the Chevrolet Motor Division requested the Experimental Engineering Department to conduct a series of vehicle roll-over tests to determine the roll stability characteristics of ten different modifications to the suspension system of a 1962 Corvair "700" series, 4-door sedan.

Comparative tests were also conducted with a 1961 Chevrolet, 4-door sedan. This vehicle had no modifications to the suspension system.

These tests were performed during May and June 1962.

TEST RESULTS

The test vehicle was evaluated with ten types of suspension modifications. The suspension system that appeared to be the most stable (Test No. 3), used production components excepting for the rear shock absorbers which were of the hydraulic rebound cut off type with 0.5 in. spacer blocks. A .625 in. diameter front stabilizer bar was installed on the front suspension. Tables 1 and 2 are listings of the suspension systems evaluated and indicate if the vehicle rolled.

DISCUSSION

Mr. N. E. Farley of the Chevrolet Motor Division requested the Experimental Engineering Department to conduct a series of vehicle roll-over tests to determine the roll stability characteristics of ten different modifications to a 1962 Corvair "700" series, 4-door sedan. The acceleration forces acting on the vehicle at the instant of incipient roll-over, as recorded by seven accelerometers located on the vehicle will be used as the criteria for determining the roll stability characteristics. A 1961 Chevrolet, 4-door sedan without suspension modifications was also included in this test series for comparison to a nontransaxle vehicle roll stability characteristics.

INSTRUMENTATION

Biaxial accelerometers to measure lateral and vertical accelerations were mounted at the front and rear bumper centers (see Figures 1 and 2). A triaxial accelerometer was mounted at the vehicle's center of gravity to measure lateral, longitudinal and vertical accelerations. The left rear control arm was equipped with a potentiometer which provided an electrical signal proportional to the vertical motion of the left rear wheel.

The signals from these instruments were recorded with an oscillograph and the resultant acceleration vectors were computed from the oscillograph data on the IBM 1620 Computer.

Vehicle preparations

As a safeguard for the driver, a set of roll bars were constructed within the body

cavity. The center of gravity and moment of inertia of the test vehicle was determined by swinging the vehicle on the long and short swings located at the Proving Ground Engineering Test Department. The car as swung was equipped with roll bars, camera mount and two anthropomorphic dummies which occupied the left front and left rear seats. In addition the gasoline in the fuel tank was replaced with water. For the test runs, the water in the fuel-tank was maintained at the half-full mark. Fuel for the engine was supplied from a one-gallon safety fuel can bolted to the floor of the front luggage compartment. Before the start of all tests, except test number ten, the tire inflation was set to the recommended 15 psi front and 26 psi rear. After several trial runs, the tires would build up to 18 psi front and 30 psi rear. At no time while testing was any air bled off. In test number ten, the tires were inflated to 25 psi front and 40 psi rear.

Photographic coverage

Fixed to the left rear frame rail was a graduated sector of a circle as shown in Figure 3. A reference pointer was mounted on the axle. A 1000 frame per second "triad" camera mounted on the vehicle recorded the movement of the axle, with respect to the vehicle frame.

This series of tests were run on the level bituminous concrete Military Skid Pad. Positioned around the perimeter of the test area were a 400 frame per second "Milliken" and a 128 frame per second "Bell and Howell" cameras. Color photographs of these tests were filmed at a 24 frame per second rate by an "Arriflex" camera. These films are on file at the proving Ground under No's. A-186, A-191, and A-208.

Test procedure

The test runs were made by executing a sharp left turn, upon entering the Skid Pad, and abruptly reverse steering into a full lock right turn. This maneuver is known as a "modified J-turn". The first trial runs were started from a point just short of the Skid Pad on its access route. These first trial runs were from the level portion of the access route onto the level test pad area. The more stable suspension systems required high speeds and more violent maneuvers to produce vehicle roll-over tendency. Longer approach runs were made to allow the driver to make a gear change from first into second gear and attain speeds of 33-35 mph. The maximum speed in first gear on the short runs was approximately 28-29 mph. These speeds were as observed by the driver. As the runs were extended beyond the length of the instrument cables, it became necessary for the instrument van to "chase" the test vehicle along a short straight course parallel to the test vehicle's path.

Summary

Ten different sets of test conditions were evaluated. They consisted entirely of modifications to the suspension system. These modifications are listed in Table No. 1, in the order that they were tested. It is also noted in the Table if the vehicle rolled. Table 2 is a tabulation of the test vehicle's rear axle angular free travel in rebound for each test condition. Figures 4 through 13 are typical views of the 10 different test series. Each test series was performed by making runs at increased speed increments until the vehicle rolled or it was difficult to produce a more violent maneuver.

Test No. 1: The addition of .5 in. spacer blocks to the rear shock absorbers was the only change made to the production suspension. On the fifth trial run, the vehicle rolled 360°, (Figure 4).

Test No. 2: Test No. 2 was run with the same suspension components as Test No. 1, that is production suspension modified with .5 in. spacer blocks on the rear shocks. This test used web rebound limiting straps on the rear control arms. A .625 in. diameter stabilizer bar was installed on the front suspen-

sion. On the seventh trial run, the vehicle rolled 180°, (Figure 5).

Test No. 3: Test No. 3 also used production components except for the rear shock absorbers which were described as "hydraulic rebound cut off" type and 0.5 spacer blocks on the rear shocks. These spacer blocks were used for the first four runs and then removed. The .625 in. diameter front stabilizer bar was retained. This suspension exhibited a marked roll resistance and in six trial runs did not roll over, (Figure 6).

Test No. 4: Test No. 4 used "hydraulic rebound cut off" rear shocks with 0.5 in. rear shock spacer blocks. The remaining components were production as in Test No. 3, except for the .625 in. diameter front stabilizer bar, which was removed. Seven trial runs were made before the vehicle was rolled 90°. The vehicle was righted and two more runs were made with the spacer blocks removed from the rear shock absorbers. No more roll-overs were experienced, (Figure 7).

Test No. 5: Test No. 5 was made using production control arms and shock absorbers with the .5 in. spacers. The rear coil springs were of a reduced rate (300 lb/in.) and a transverse leaf spring was installed in the rear. The vehicle rolled 180° on the second trial run, (Figure 8).

Test No. 6: Test No. 6 used production control arms, reduced rate (300 lb/in.) rear coil springs and a transverse leaf spring. The production shock absorbers were replaced by the "hydraulic rebound cut off" type and the .5 in. shock absorber spacers were omitted. On the fifth trial run, the car made a 180° roll, (Figure 9).

Test No. 7: Test No. 7 used reduced rate (300 lb/in.) rear coil springs with "airlift" bags inside the coils. This dictated a change in shock absorber location and also in shock absorbers. The production Corvair valving was duplicated in longer shock absorbers which were mounted outside and to the rear of the coil springs. The control arms were production items and a transverse leaf spring was installed. On the sixth trial run the vehicle rolled 360°, (Figure 10).

Test No. 8: Test No. 8 followed the conditions of Test No. 7, used reduced rate (300 lb/in.) coil spring and "air lift" bags, longer shock absorbers with production valving and relocated mounting. The addition of 1.25 in. spacers to the lower ends of the shock absorbers more nearly approached rebound travel limits of the control arm in Test No. 1 and others were .5 in. spacers were used in connection with production shock absorbers. Production control arms were used on this test. On the sixth trial run the car rolled 270° and in the process the left rear axle broke at the wheel. This was attributed to a fatigue failure, (Figure 11).

Test No. 9: Test No. 9 used production components with the exception of the shock absorbers which were the "hydraulic rebound cut off" type. Again the .125 in. shock absorber spacers were used. The 4 wheels were offset outboard 1.0 in. each giving an overall tread increase of 2.0 inches. The .125 in. shock absorber spacers were removed after the sixth trial run. On the seventh run the car rolled 180°, (Figure 12).

Test No. 10: Test No. 10 was run with production suspension parts except for the shock absorbers which were the "hydraulic rebound cut off" type with .125 in. spacers. The wheels were Corvair production wheels with the rear tires inflated to 40 psi, 14 psi over normal, and the front tires with 25 psi, 10 psi above normal. After the second trial run the .125 in. spacers were removed from the shock absorbers. On the fifth run the car rolled very hard, going through 540°, (Figure 13).

Analogous to the Corvair Roll-Over Stability Evaluation Test Series, tests were performed on a production 1961 Chevrolet, 4-door sedan. Eight trial runs were made with instrumentation and two were made without

the maneuverability handicap of the instrument cables and instrument van, (Figure 14). No roll-overs were experienced in these 10 runs.

A roll-over occurred on nine of the ten Corvair suspension modifications. The resultant acceleration and direction at the center of gravity of six of these tests, prior

to and at rollover are plotted in Figures 15, 16, 18, 20, 21, and 22. In each instance, a curve from the preceding run of the same suspension modification, in which no rollover occurred, appears for the sake of comparison. Similar plots of trial runs No. 62, Figure 17, and No. 73, Figure 19, which experienced no roll-over are included to show the roll sta-

bility characteristics of the more stable suspension modifications. This also is the case for trial run No. 112 of Test No. 11, Figure 23, of the 1961 production Chevrolet, 4-door sedan.

[EDITOR'S NOTE.—Figure 1 and test or work request sheet are available in subcommittee files.]

TABLE 1.—REPORT NO. PG-15699

	Date	Corvair suspension modifications	Remarks
Run Nos.— 46, 47, 48, 49, and 50.....	May 14, 1962	Test No. 1: Production suspension components and shock absorbers. Half inch spacers installed between shock absorber lower end mountings and rear control arms to limit rebound travel.	Car rolled 360° on run No. 50.
51, 52, 53, 54, 55, 56, 57, and 58.....	May 15, 1962	Test No. 2: Production suspension components and shock absorbers with the half inch spacers. Web rebound limit straps on rear control arms and a 0.625 in. diameter front stabilizer bar.	Car rolled 180° on run No. 58
59, 60, 61, 62, 63, and 64.....	May 17, 1962	Test No. 3: Production suspension with new shock absorbers described as "hydraulic rebound cutoff type". Half inch spacers were used to limit rebound travel but were removed after run No. 62. A 0.625 in. diameter front stabilizer bar was used.	Car did not roll over.
65, 66, 67, 68, 69, 70, 71, 72, and 73.....	May 18, 1962	Test No. 4: Production suspension with "hydraulic rebound cutoff" shock absorbers. The half inch spacers were used through test run No. 72, but were removed for test run No. 73. The front stabilizer bar was not used in this test.	Car rolled 90° on run No. 71; did not roll on run Nos. 72 and 73.
74 and 75.....	May 28, 1962	Test No. 5: Production control arms and shock absorbers with half inch spacers installed. Reduced rate rear coil springs (300 lb/in.) with camber compensator rear leaf spring.	Car rolled 180° on run No. 75.
76, 77, 78, 79, and 80.....	May 29, 1962	Test No. 6: Production control arms and the "hydraulic rebound cutoff" shock absorbers without the half inch spacers. Reduced rate rear springs and camber compensator leaf spring.	Car rolled 180° on run No. 80.
81, 82, 83, 84, 85, and 86.....	June 4, 1962	Test No. 7: Production control arms, reduced rate rear springs with "airlift" bags inside the coils. Camber compensator leaf spring and longer shock absorbers mounted outside and to the rear of the rear coil springs. "Airlift" bags inflated to 13 p.s.i. No rebound limits other than shock absorbers.	Car rolled 360° on run No. 86.
87, 88, 89, 90, 91, and 92.....	June 6, 1962	Test No. 8: Production control arms. Reduced rate rear spring with "airlift" bags inflated to 13 p.s.i. Camber compensator leaf springs and the long shock absorbers with 1.25 in. spacers to limit rebound travel.	Car rolled 270° on run No. 92.
93, 94, 95, 96, 97, 98, and 99.....	June 7, 1972	Test No. 9: Production suspension with "hydraulic rebound cutoff" shock absorbers and 0.125 in. spacers at lower mountings used. After run 97 the spacers were removed. Wheels with 1 in. of offset were used. Overall tread increase front and rear was 2 in.	Car rolled 180° on run No. 99.
100, 101, 102, 103, and 104.....	June 8, 1962	Test No. 10: Production suspension components and wheels were used. "hydraulic rebound cutoff" shock absorbers with 0.125 in. spacers. After run 101 spacers were removed. Rear tires inflated to 40 p.s.i., fronts to 25 p.s.i. Normally the tires are inflated to 26 p.s.i. rear, and 15 p.s.i. front.	Car rolled 540° on run No. 104.

TABLE 2.—MAXIMUM CORVAIR REAR AXLE MOVEMENT IN REBOUND

Test No.	Condition	Free angle		Loaded angle (300 lb)		Run numbers

10.....	Std suspension with hydraulic cutoff shocks—12 in. shims; 40 psi rear, 25 psi front.....	8°40'	8°50'	9°20'	9°15'	100-101 no roll.
10.....	Std suspension with hydraulic cutoff shocks—no shims; 40 psi rear, 25 psi front.....	9°15'	9°20'	9°20'	9°15'	102-103 no roll; 104 roll.

GENERAL MOTORS PROVING GROUND

This report must not be copied or duplicated in any manner. It is for the express use of the recipients listed on the distribution sheet and is not to be distributed further without written approval of the director at Chevrolet Proving Ground operations.

All copies are on loan only. They are to be returned to the GM Proving Ground Library after one month's time. File copies will be retained in a "Special Security Handling" file in the vault and will not be released to anyone without the written approval of the director of the proving ground.

FOREWORD

This series of tests was run to evaluate and determine the dynamic stability characteristics of the Chevrolet Corvair with various shock absorbers and suspension configurations. These tests were performed by driving a specially equipped Corvair through a series of high speed maneuvers on a flat, level, bituminous concrete surface in an attempt to overturn the car. Maneuvers and components used for each test were as directed by Mr. M. Sheehan of the Chevrolet Motor Division. Personnel of the Experimental Engineering Department conducted the tests on

November 13th, and 26th, 1962, and on March 18th, April 5th, 10th, 11th, and May 14th, and 17th, 1963. This work was done at the request of Mr. N. E. Farley of the Chevrolet Motor Division.

RESULTS AND CONCLUSIONS

A summary of the complete series of 33 runs is presented in Table 1.

These tests showed that the dynamic stability of the current production 1963 Corvair was not substantially improved through practical modifications to shock absorber design and configuration. A test phase which incorporated a pair of high speed movie cameras mounted on outriggers to the rear of the car, showed that this change in the weight distribution prevented the car from overturning during these test maneuvers.

A 1964 prototype suspension installed in the car made the dynamic stability characteristics acceptable for several different test conditions. The last run of the series was an abnormally severe maneuver from a super elevated surface to a level surface and caused the car to overturn.

DISCUSSION

These tests were run to assist Chevrolet Motor Division engineers in evaluating Cor-

vair suspension modifications made to improve the car's dynamic stability. Evaluations of vehicle roll characteristics were made from observations of the tests and analysis of high speed movies of maneuvers of the test car at 25 to 40 mph on a level, bituminous concrete surface.

Vehicle preparation

Essentially all of the preparatory vehicle modifications were made to protect the driver during possible vehicle rollover conditions. These were made in regards to possible fire, vehicle deformation, driver impact against the internal surfaces of the car, and flying car components such as the seat and glass. The production gasoline tank was removed and a one gallon safety gasoline can installed for the engine fuel supply. This was installed in the front luggage compartment in a manner that would permit quick removal in case of an emergency.

A gravity "lock-in-position" switch was installed in the ignition circuit to open and hold open the ignition circuit in case of a vehicle rollover. This switch was installed for two purposes, the first being the obvious fire hazard in case of a rollover, and the second being in case of a rollover which ter-

minated with the car on its wheels and a possible dazed driver unable to quickly maneuver the car out of a hazardous condition.

A substantial rollover bar system was installed inside the car to prevent extreme vehicle deformations from injuring the driver. Also, all internal surfaces which could be impacted by the belt restrained driver were padded with ensolite material of sufficient thickness to reduce the injury potential to a satisfactory level. A rope netting was installed on the driver's door window opening to prevent the driver's left arm, and possibly his head from being thrown out through the open window and contracting the road surface or being injured between the rolling vehicle and the road surface.

All loose and unnecessary components were removed from the vehicle, this included the rear seat back and cushion, the floor mats, and other small fittings. The windshield and rear light were removed, the side windows rolled down and the front door ventpanes removed. For tests No. 115 through 126, the standard production front seat was used. For the remainder of the tests an Oldsmobile bucket type seat was installed. It was felt that this seat would give the driver an added measure of protection during rollovers. A 50th percentile dummy was securely fastened in the left rear passenger position to simulate an unfavorable load condition.

Test procedure

Prior to each test phase, suspension modifications were made to the vehicle and initial measurements and adjustments made as per Chevrolet Motor Division engineers. Tire pressures were adjusted to a hot pressure of 17 psi front, and 28 psi rear as previous runs showed these pressures to be stabilized values for these tests. A minimum amount of gasoline was maintained in the safety gasoline can and a pliable adhesive material was put over the vents of the battery caps to prevent acid spillage in case of a rollover. Immediately prior to each test, the car was positioned as shown in Figure 1. The car was driven onto the Military Skid Pad and through a predetermined maneuver while high speed movies were taken of the vehicle's actions. A rollover or significant engineering decision concerning the suspension terminated each phase of a test program.

Test site

The level bituminous concrete Skid Pad at the east end of the Military Straightaway was used for these tests. Sweeping of the Skid Pad was done as necessary to provide a clean test area; a dry road surface was a test requisite for all tests. Figure 1 shows the test area.

Photographic coverage

Documentary still photographs were taken before, during, and after each test as needed to accurately record vehicle conditions. High speed movies were taken of each test from perimeter locations. These locations were varied from one test phase to another. On tests No. 127 through 131 high speed cameras were installed on outriggers to the rear of the vehicle to photograph each rear wheel's action during the test maneuver. Typical camera positions are indicated in Figure 1. Most of the high speed movies were taken at 128 fps, however, some were made at 500 fps. Standard speed movies were also taken as requested. Copies of all movies have been given to the Chevrolet Motor Division for their analysis. The original movies have been filed at the Technical Data Department of the General Motors Proving Ground.

Driver protection

Driver safety took precedence over all other test conditions. A lap belt, two shoulder belts, and a chest belt were installed to restrain the driver. A safety helmet with plexiglas front shield was used, and the driver also

wore a sport's type mouthpiece to protect his teeth. The previously mentioned padding throughout the interior of the car further prevented possible driver injury.

Test setup

Figure 2 shows the test car No. CH2702 which was used for the tests 115 through 120. The test driver is in position and the car is ready to be run on the first test. This car had been used in a previous set of tests, reported in Report No. PG-15699, which accounts for the deformed body condition. Figure 3 shows a 50th percentile dummy and its retention in the left rear seat passenger position. All dummy components were securely lashed into position to prevent them from falling about and injuring the driver during any rollover maneuver. Following are brief descriptions and test results of each test:

Run No. 115, Date: 11-13-62, speed 28 mph

Prior to this test, Chevrolet Division personnel had installed shock absorbers on the rear suspension designated as second version 9° Delco shock absorbers. These shock absorbers restricted the rebound of the rear axles to 9° as measured relative to the body of the vehicle. These shock absorbers are also known as the hydraulic cutoff type. The front shock absorbers were standard 1963 production absorbers. All previously mentioned precautions and preparations were taken prior to the test. A simple "J Turn" to the right at approximately 28 mph caused the right rear wheel to come off the ground for approximately 50 feet of forward travel of the vehicle. A "J Turn" maneuver consists of driving the car straight ahead at a predetermined speed, turning the front wheels sharply in one direction, and giving the engine full throttle. Prior to the test the outside sidewall of the left rear tire had been painted white to indicate any scrubbing action. At the end of the test this paint showed that the tire had been scrubbed on the road surface all the way up to the rim. The car did not roll over as the result of this test.

Run No. 116, Date: 11-13-62, speed 28 mph

This test was very similar to the previous run, however, a slight maneuver was made before the simple "J" turn. This is referred to as a modified "J" turn. This modified "J" turn is executed by the driver turning to the right, then left, and again right into the "J" turn in a rather zig-zag fashion, and again as in the previous run, the right wheel was lifted for a considerable distance and the paint was scrubbed from the outside wall of the left rear tire.

Run No. 117, Date: 11-13-62, speed 28 mph

Approximately the same conditions were used for this test, except that the lateral excitation was increased by a more violent zig-zag prior to the "J" turn. As a result of the maneuver, the car made two complete lateral rollovers. Figure 4 shows the car as it is about to start the first rollover. At the end of the two rollovers, the car again landed on its wheels. As shown in Figure 5, the left front wheel showed considerable misalignment. Later examination of the test vehicle showed the lower ball joint to be defective, that the tie bar on the left rear shock had been "pulled through" and that the right rear axle shaft was bent and had to be replaced. Close-ups of the left rear wheel are shown in the photographs of Figure 6. Note how the paint has been scrubbed from the tire wall and the rim distorted from its contact with the road surface. The vehicle position after test is shown in Figure 7.

Run No. 118, Date: 11-26-62, speed 28 mph

The car was repaired as necessary and a set of shocks designated as third version Delco shock absorbers were installed on the rear suspension. This shock absorber limited

the rebound of the rear axle to 7½°. A 28 mph simple J Turn showed the car to be quite unstable. The car did not roll over however. The high speed movies show that the right rear wheel lifted approximately 18 inches and the left rear tire had the paint scuffed from the sidewall to within 1½ inches of the rim.

Run No. 119, Date: 11-26-62, speed 28 mph

This test was an identical test to the previous run and again the car very nearly overturned. This completed the testing on this pair of shock absorbers.

Run No. 120, Date: 11-26-62, speed 28 mph

For this test, a pair of 1963 production shock absorbers were installed in the rear suspension. These shock absorbers limited the rear wheel rebound angle to 7½°. In this test, a 28 mph simple "J Turn" caused the car to roll over onto its roof. High speed movies show that the right rear wheel came off the pavement when the car had turned approximately 90°. The wheel came up about 18 inches and then the car rolled quickly over onto its roof. The left rear wheel rim dug into the pavement during the roll. This test terminated the testing activities with this car because Chevrolet Division engineers felt that the rollover tests had changed the body rigidity characteristics and that this car was no longer representative of a production vehicle.

For the following tests, No. 121 through 147, Car No. CH3905 was used. As with the previous car, roll bars were installed and all the associated safety equipment and vehicle modifications made. While the new car was being setup a test program was run on the Military Skid Pad, using the Proving Grounds coefficient of friction skid trailer to determine the coefficient of friction of the road surface being used for the rollover tests. These tests show that the coefficient of friction was between .77 and .86.

Before the test setup was made in the new car, two dummies were positioned in the vehicle and the height of the center of gravity determined. It was found to be 19.3 inches above the ground, 67.7 inches behind the centerline of the front wheels, and 2.54 inches to the left of the centerline of the car. After the roll bars and other modifications had been installed in the vehicle, the center of gravity location was found to have shifted as follows: 20.4 inches above ground, 69.9 inches behind the centerline of the front wheels, and 2.72 inches to the left of the centerline of the car. When the car was set up, the shock absorbers installed in the rear suspension were designated as the four-hole hydraulic cutoff shock absorbers. These limited the rear axle rebound to 7½°. These shock absorbers were used for tests No. 121 through 126.

Run No. 121, Date: 3-18-63, Speed 28 mph

The car as set up for test is shown in Figure 12. Figure 13 shows details of the roll bar and padding inside the vehicle. Figure 14 shows the car just prior to test No. 121. This test was a simple "J" turn at a speed of 28 mph. His speed movies of this run show that the right rear tire was picked up from the road surface and that the white paint was scrubbed from the tire on the left rear wheel approximately half way to the rim.

Run No. 122, Date: 3-18-63, Speed 28 mph

This was an identical rerun of the previous test. In this test the right rear wheel lifted a little higher from the road surface than in the previous run. However, all other conditions were practically identical.

Run No. 123, Date: 3-18-63, Speed 30 mph

In this test a simple "J" turn was made from 30 mph. This run was slightly more severe than the previous two runs. Results were the same as for the previous two runs.

Run No. 124, Date: 3-18-63, Speed 33 mph

This again was similar to the previous three runs. However, the simple "J" turn was preceded by an "S" maneuver and the test speed was increased to 33 mph. Again the movies show that the right rear wheel came up, in this test about 12 inches. The white paint was scrubbed from the wall of the left rear tire approximately half way up the side of the tire.

Run No. 125, Date: 3-18-63, Speed 40 mph

Again conditions were identical to the previous tests. However, the test speed was increased to approximately 40 mph, and again an "S" turn preceded the "J" turn. A photograph showing the car action is shown in Figure 15. This Figure also shows similar photographs for Runs No. 121 through 124. In this series of runs, it was quite obvious to the observers that the car was approaching an unstable condition.

Run No. 126, Date: 3-18-63, Speed 38 mph

Conditions were as for the five previous runs, and a speed of approximately 38 mph was used. In this test the right rear wheel came up, the left rear wheel "tucked under" its rim cut into the road surface and the car rolled one complete lateral rollover. The moment of impending roll is shown in Figure 16. Figure 17 shows the car after the rollover, and Figure 18 shows the skid marks for Runs No. 121 through 126. At the completion of this test, the vehicle was returned to the Chevrolet Motor Division garage to be repaired for future tests.

At this point in the test program, Chevrolet Motor Division asked that high speed cameras be mounted on the rear of the vehicle to photograph rear wheel tire and suspension action. Figure 19 shows the test car with the cameras installed. The camera installation changed the center of gravity location as follows: The center of gravity height became 19.6 inches and was located 72.3 inches behind the centerline of the front wheels and 2.72 inches to the left of the centerline of the vehicle. The seat was also changed at this time from the standard full bench type seat to an Oldsmobile bucket seat. The seat installation, plus the belt restraining system for the driver is shown in Figure 20.

Run No. 127, date: 4-5-63, speed 27 mph

The shock absorbers used in this test were Model XD220293 Delco shock absorbers and designated as a six-hole hydraulic cutoff shock absorber. These shock absorbers limited the left rear wheel rebound to 6° 45', and the right rear wheel rebound angle to 7° 15'. In this test, a 27 mph "J" turn caused very little tire scuff and no noticeable lifting of the right rear wheel. Figure 21 shows the car in the most severe part of the skid.

Run No. 128, date: 4-5-63, speed 30 mph

This test was identical to the previous test. However, the test speed was increased to 30 mph. Again there was only a little scuffing on the left rear tire and the right rear wheel was not lifted appreciably.

Run No. 129, Date 4-3-63, speed 36 mph

Test conditions were identical to the previous two runs. However, the test speed was increased to 36 mph and a modified "J Turn" was executed. The car looked very stable.

Run No. 130, date: 4-5-63, speed 36 mph

Test conditions were identical to the previous run, and again the car looked very stable.

Run No. 131, Date: 4-5-63, Speed 36 mph

Conditions for this test run were identical to the previous tests. This was the last test of this phase because the car looked very stable under the various maneuver configurations. Peak lateral slides are shown for Runs 127 through 131 in Figure 21. The tire skid marks for these runs are shown in Figure 22.

Run No. 132, Date: 4-10-63, Speed 30 mph

The Model XD220293 Delco shock absorbers were retained on the rear suspension of the car for this test, however, the movie cameras were removed from the car. As a result of the 30 mph "J" turn, the car rotated to the right approximately 180° and the right rear wheel lifted approximately 2 feet. High speed movies taken on this test showed that the car was very nearly in a roll condition. The left photograph of Figure 23 shows the vehicle during the skid. Removing the cameras and accessories from the car had raised the center of gravity from 19.6 inches to 20.4 inches and had moved the center of gravity ahead from 72.3 to 67.6, also the center of gravity moved slightly to the left from 2.7 to 3.05 inches to the left of the center of the vehicle. Removing the cameras from the rear of the vehicle reduced the load on the rear axle from 1981 lbs to 1771 lbs.

Run No. 133, Date: 4-10-63, Speed 30 mph

For this test the XD220293 Delco rear shock absorbers were shimmed to limit the rebound on the left to 5° 35' and on the right to 6° 30'. In this test the 30 mph "J" turn caused the right wheel to lift up 2½ to 3 feet and scrub the paint from the left rear tire ½ of the way of the tire sidewall. In this test the car looked unstable.

Run No. 134, Date: 4-10-63, Speed 30 mph

Conditions for this test were identical to the previous test, however, during the "J" turn maneuver the car rolled laterally over onto its roof. Figure 24 shows the car just previous to rolling over and the car in the rollover position. The lower right hand photograph of this Figure shows a closeup of the left rear tire and wheel showing how the paint has been scrubbed from the tire and the rim has been deformed by the road surface. Following this test the car was rolled over on its wheels and taken to the Chevrolet garage for a check-over and shock absorber change.

Run No. 135, Date: 4-11-63, Speed 26 mph

For this test 1962 production shock absorbers were installed and shimmed to limit the left rear angle to 5° 30' and the right rear rebound angle to 6° 35'. The 26 mph "J" turn showed the car to exhibit unstable characteristics. The left photograph of Figure 25 shows the car in the lateral skid.

Run No. 136, Date: 4-11-63, Speed 26 mph

Conditions for this test were identical to the previous test. A 26 mph "J" turn again showed the vehicle to exhibit unstable characteristics. The lateral skid is shown in the right photograph of Figure 25. The decision was made by the Chevrolet Motor Division engineers to discontinue testing on this shock absorber and suspension configuration since it was quite obvious that the car could be rolled.

Run No. 137, Date: 5-14-63, Speed 28 mph

For this test a 1964 suspension configuration was installed on the car. This suspension incorporated a lateral leaf spring under the rear suspension, softer coil springs in the rear, and a 13/16" diameter roll bar on the front suspension. 1963 production shock absorbers were installed both front and rear. The rear shocks, however, were shimmed to limit the left rear wheel rebound angle to 7° 35' and the right rear wheel rebound angle to 7° 30'. The 28 mph conventional "J" turn showed the car to be very stable with very little lift of the right rear wheel.

Run No. 138, Date: 5-14-63, Speed 30 mph

This test was identical to the previous test, except that the speed was increased from 28 to 30 mph and an abbreviated "S" turn performed before the "J" turn. Again the car appeared to be very stable.

Run No. 139, Date: 5-14-63, Speed 38 mph

Conditions for this test were identical to the two previous tests, except that the speed was increased to 38 mph, a more severe "S" maneuver, and "J" maneuver were executed. Again there was very little roll or lift and the car appeared to be very stable.

Run No. 140, Date: 5-14-63, Speed 38 mph

This test was identical to the previous tests except that a more severe "S" turn, followed by the "J" turn was used and the vehicle path was such that it passed from the super-elevated section of the skid pad down into the lateral section. This caused the right rear wheel to raise approximately 12 inches. This was a severe test for this suspension configuration.

Run No. 141, date: 5-14-63, speed 38 mph

For this test the spacers were removed from the rear shock absorbers which increased the rebound angle on the left rear wheel from 7° 35' to 8° 5'. The right rear suspension rebound angle was increased from 7° 30' to 8° 25'. The 38 mph combination "S" and "J" turn caused very little lift of the right rear wheel and the car looked very stable.

Run No. 142, date: 5-14-63, speed 38 mph

Conditions for this test were identical to the previous test, however, there was a slight modification in the path of the "S" and "J" turn. This caused some lift of the right rear wheel. However, the car still appeared to be quite stable.

Run No. 143, date: 5-14-63, speed 38 mph

This was an identical re-run of the previous test and the right rear wheel again lifted as in the previous test. These tests showed the car to be very stable and the Chevrolet Division engineers asked that the tests be terminated for that test condition.

Run No. 144, date: 5-17-63, speed 30 mph

The 1963 production shock absorbers were removed from the rear suspension and a pair of Delco shock absorbers No. XD-220292-1 were installed. These permitted the left rear rebound angle to be 8° 15' and the right rear wheel rebound angle to be 8° 40'. A 30 mph simple "J" turn caused a slight lifting of the right rear wheel, however, the car appeared stable.

Run No. 145, date: 5-17-63, speed 36 mph

The 36 mph combination "S" and "J" turn of the vehicle as equipped in the previous test caused some lifting of the right rear wheel, however, the car again looked very stable (Figure 28).

Run No. 146, Date: 5-17-63, Speed 38 mph

This was an identical re-run of the previous test except at 38 mph and the car again looked very stable (Figure 27).

Run No. 147, Date: 5-17-63, Speed 38 mph

The 38 mph combination "S" maneuver followed by a "J" turn caused the car to roll laterally 1¼ times. However, the vehicle's approach path was from the super-elevated section of the Skid Pad down into the flat section in a rather unusual maneuver, so that this test could not be considered a valid comparison with previous test runs. Figure 29 shows the car as it is about to roll up on its side during the first roll and Figure 30 shows the car at the completion of the 1¼ lateral roll. Figure 31 shows the car after it had been rolled back over on its wheels. Note that both rear tires have lost almost all of their air. Figure 32 shows that the front wheel has cut into the road surface as well as the left rear wheel. This is unusual because on previous rollovers, the left front wheel rim had not contacted the surface of the road in this manner. Figure 33 shows the 1964 suspension configuration. This test terminated the testing on this vehicle.

[EDITOR'S NOTE.—Figure 1, not printed here, is available in subcommittee files.]

TABLE 1.—TEST SUMMARY SHEET

Run No.	Date	Designation of shock absorber	Rear suspension rebound angle		Test conditions	Significant results
			Left	Right		
Corvair No. CH 2702 used for 1st series of runs:						
115	Nov. 13, 1962	2d version 9°	9°	9°	28 mi/h J-turn	
116	do	do	9°	9°	do	
117	do	do	9°	9°	do	Car rolled 2 full rollovers.
118	Nov. 26, 1962	3d version	7½°	7½°	do	Car nearly overturned.
119	do	do	7½°	7½°	do	Do.
120	do	1963 production	7½°	7½°	do	Car rolled ½ rollover.
Corvair No. CH 3905 set up and used for the following tests:						
121	Mar. 18, 1963	4-hole hydraulic cutoff	7½°	7½°	do	
122	do	do	7½°	7½°	do	
123	do	do	7½°	7½°	30 mi/h J-turn	
124	do	do	7½°	7½°	33 mi/h J-turn	
125	do	do	7½°	7½°	40 mi/h J-turn	
126	do	do	7½°	7½°	38 mi/h J-turn	Car rolled 1 full rollover.
127	Apr. 5, 1963	XD220293 6-hole hydraulic cutoff	6°45'	7°15'	27 mi/h J-turn—With cameras	
128	do	do	6°45'	7°15'	30 mi/h J-turn—With cameras	
129	do	do	6°45'	7°15'	36 mi/h moderate J-turn—With cameras	
130	do	do	6°45'	7°15'	do	
131	do	do	6°45'	7°15'	do	Car very stable.
132	Apr. 10, 1963	do	6°30'	7°	30 mi/h J-turn	
133	do	do	5°35'	6°30'	do	
134	do	do	5°35'	6°30'	do	Car rolled ¾ rollover.
135	Apr. 11, 1963	1962 production	5°30'	6°35'	26 mi/h J-turn	Car looked unstable.
136	do	do	5°30'	6°35'	do	Do.
137	May 14, 1963	Production 1963 shocks—1964 suspension	7°35'	7°30'	28 mi/h moderate J-turn	
138	do	do	7°35'	7°30'	31 mi/h moderate J-turn	
139	do	do	7°35'	7°30'	38 mi/h moderate J-turn

141	do	do	8°5'	8°25'	38 mi/h moderate J-turn	
142	do	do	8°5'	8°25'	do	
143	do	do	8°5'	8°25'	do	Car very stable.
144	May 17, 1963	XD220292-1 1964 shocks	8°15'	8°40'	30 mi/h simple J-turn	
145	do	do	8°15'	8°40'	38 mi/h moderate J-turn	
146	do	do	8°15'	8°40'	do	
147	do	do	8°15'	8°40'	38 mi/h J-turn from super	Car rolled 1¼ rollovers.

EXHIBIT 7

[From the Washington Post, Sept. 27, 1970]
ENGINEER SAYS GM SUPPRESSED ADVERSE DATA ON CORVAIR

(By Morton Mintz)

A former General Motors engineer who played a key role in opposing lawsuits resulting from roll-over accidents involving 1960-63 Corvairs, says that GM suppressed its own adverse test reports to prevent them from surfacing in the courts.

GM, in a denial yesterday, said in Detroit that it "has identified or produced all documents which, in the opinion of its legal counsel, it was required to identify or produce."

The engineer, Carl F. Thelin, said that a superior once produced from "a back closet" a three-in stack of previously secret proving ground documents—but with a directive to Thelin not to copy them and to withhold them from GM's legal defense files and potential witnesses.

"Thus a witness could say he never heard of it," he told The Washington Post in a four-hour interview.

Thelin described the documents as "dynamite." He said that one of them, No. 17103, proved that with suspension systems such as those on later models the early Corvairs it would have been "almost impossible to roll over."

These and similar statements tended to support recent charges by Ralph Nader that GM executives possessed but concealed proving ground test data and films, unfavorable to the Corvair. Nader charged that these "conclusively proved" the early Corvairs to be "dangerously unstable."

Yet, Thelin feels that the early Corvairs, driven sensibly, are safe, especially in the hands of a public that, he believes, is by now familiar with criticisms of their handling characteristics.

In addition, he rejects—on engineering, practical and financial grounds—Nader's contention that the government should recall for correction the estimated 600,000 1960-63 Corvairs still on the roads.

Three weeks ago, GM President Edward N. Cole said that the test data and films cited

by Nader were of "engineering development tests in which Corvairs, specially equipped with experimental parts, were intentionally overturned by experienced test drivers using violent maneuvers designed to overturn them."

That is correct, Thelin said. "The cars were intentionally overturned. That was the whole point, to make them less prone to roll over."

As a result, he said, GM modified the 1963 Corvairs to stop roll-overs and corrected subsequent models so that they would "neither rollover nor 'spin out.' The '65 was an all-new Corvair."

But none of this, Thelin said, means that Nader made "irresponsible and false charges," as Cole asserted on Sept. 7 in a letter to Secretary of Transportation John A. Volpe.

RECOLLECTION HAZY

Thelin said that four years have elapsed since the documents episode. Moreover, it occurred during a long, confused period of transition from one boss to another.

For these reasons, Thelin said, he is not now certain whether the superior who produced the "dynamite" documents and ordered them suppressed was R. A. Gallant or C. D. Simmons.

Gallant was staff engineer of the "Product Analysis Group" the cover name for the "Corvair defense group" in GM's Chevrolet Division, Thelin said. Simmons succeeded Gallant.

Gallant, reached in Detroit, said, "I don't remember anything about it." Simmons could not be reached.

Thelin was among the GM employees who were "entitled to have access" to the papers "as and when required in the performance of their duties," the company said yesterday.

The papers had been "in the custody of his superiors and presumably were made available to Mr. Thelin and other employees by his superiors on that basis," GM said.

Thelin, in the interview, described in detail various methods used by the Corvair defense group to frustrate plaintiff's lawyers' interrogatories—the written questionnaires which the courts require be answered.

"We felt that some of these guys were

planning to screw GM just because it had billions of dollars," he said.

The defense group never used as witnesses the "old fogies who designed this car," Thelin said. "We were told that some of these guys had to be kept off the stand because they would look like fools."

That's why GM recruited the defense group, in which he was one of about a dozen engineers, Thelin said.

"Our witnesses were very knowledgeable, very expert; more than that, they had good rapport with jurors. They would avoid engineering words; talk to the jury, not past them. They were anxious to testify and had good speaking voices."

STAR WITNESS

The "most effective witness" was Frank J. Winchell. Thelin said. "He could wow that jury."

Winchell, then director of Chevrolet's research and development engineering center in Warren, Mich., and now a special assistant to GM president Cole, had recruited Thelin in September, 1965, for the Corvair defense group.

Winchell has "personal magnetism," Thelin said. "He is a good engineer and a hell of a man. He's a leader. Whatever the word 'leader' means, he's that kind."

Thelin emphasized his belief that serious design problems in the Corvair were neither inherent nor unavoidable. They resulted, rather, from engineering incompetence at middle-management levels, he said.

Young engineers, he said, could look at the car and instantly spot a needless design fault.

Thelin had first told his story to Gary B. Sellers, legal consultant to Ralph Nader. Then he told it to Frank W. Allen, a GM lawyer, and finally, to a reporter. In each case his cooperation was requested, not volunteered:

"I've got to tell the truth," he told the reporter at his home near Buffalo, N.Y.

He recalled that GM lawyers, discussing how to behave on the witness stand, had advised him, "Never attempt to lie. Just tell the truth—what you know. Then you don't have to keep track of what you've said."

"I'll always live by that," Thelin told me. "It's a good way to live. If I'm asked a question I'll go straight down the middle."

Thelin began his travels "down the middle" of the Corvair controversy when Sellers, acting for Nader, came to see him the night of Sept. 3.

This was on the eve of Nader's public charge—made in a letter to Secretary of Transportation Volpe—that GM had for about eight years suppressed adverse proving ground reports and films on the early Corvairs.

Nader had first come to prominent public attention as a Corvair critic. This was almost five years ago, when his book, "Unsafe at Any Speed," was published. Then, early in 1966, came the famed "snooping" episode. Finally, in May 1969, with sales way down, GM stopped making the car. With that, the controversy apparently faded away.

In recent months, however, secret sources have been supplying Nader and Sellers with new information and documents in which Thelin's name repeatedly cropped up, Sellers said.

Sellers undertook a search for corroborations. It was for this purpose that he went to see Thelin, who now heads the vehicle test and design section of the Cornell Aeronautical Laboratory, Inc., in Buffalo (of which GM is a client).

Five days later—after news media had carried stories on the Nader and Cole letters to Volpe—Sellers made a second visit to the Thelin home. This time, Thelin invited him to dinner.

The next day, Sept. 10, Frank Allen, the GM lawyer with whom Thelin had worked closely in the Corvair defense group, phoned. He began with a cheerful "Hi, Carl, old buddy," and then led up to the Nader and Cole letters.

In the conversation with Allen Thelin volunteered that "Nader's people" had contacted him.

Thelin said he told Allen, in "a brief resume," that he had confirmed the authenticity of materials which Sellers had brought to him. These included copies of the "dynamite" documents.

Allen said, "Oh, boy."

He proposed to see Thelin in Buffalo. Thelin agreed.

The next day at the same dining room table where Sellers had questioned Thelin, Allen interviewed the engineer for "a solid four hours without interruption."

"We remain friends," Thelin remarked.

Thelin, 40, is a graduate of the University of Wisconsin, a mechanical engineer, a "car buff," a Republican, an active Baptist layman and former head of the safety council of St. Clair Shores, Mich.

He came to GM in 1955 and became a front-wheel-drive, chassis and steering specialist on the engineering staff. His design innovations culminated in the experimental models of the Oldsmobile Toronado—"my claim to fame."

At the time, members of the American Trial Lawyers Association (ATLA) had filed the initial batch of what ultimately would become more than 300 lawsuits in behalf of persons injured or killed in Corvair roll-over accidents.

"We felt that ATLA was seeking to expand the product-liability business, and that they singled out the Corvair because of its uniqueness," Thelin said.

The Corvair was the first mass-produced American car with an engine in the rear—and an air-cooled engine at that. It entered the economy-car market in the fall of 1959.

And so Thelin went to work for Frank Winchell as if he were joining in a "French Foreign Legion" type of adventure, an enthusiast anxious to make "a sacrificial effort to defend the right of engineers to make design innovations."

In addition, Thelin felt he was aiding the cause of "fundamentalist" design engineers, who had been "low men on the totem pole," against the cause of the production engineers.

Thelin's assignment was engineering liaison with GM's legal staff, especially Frank Allen, but he had certain specific primary and secondary missions.

First of all he had to provide "engineering support for the defense of any Corvair case," such as accident investigation.

He traveled a lot to look at wrecked Corvairs and to try to figure out what had happened. Many times, at the GM proving ground in Milford, Mich., he tried to duplicate the accident site. "It was fun, man, an exciting job," Thelin said.

After a time, he also became responsible for producing 16-millimeter, widescreen sound movies to be shown to trial juries.

Thelin would make such movies after a plaintiff, in a pre-trial deposition, had described in his own words how an accident had occurred—say, on a curve on a country road.

With the plaintiff's description as a shooting script, Thelin and his colleagues would duplicate the accident—sometimes even at the original site and with competitive economy cars of the same model year as the particular Corvair.

"Everything was entirely on the up-and-up," Thelin said.

"We would show that the Corvair went through this like all the other cars," Thelin said. "Then we would show, as a clincher, how recklessly you had to drive in order to have an accident, although our skilled test drivers could prevent one."

"Our defense was principally, almost always, that you had to drive in a very reckless manner in order to take the Corvair beyond the 'limit of control,' and that limit was higher for the Corvair than for competitive models of the same year," Thelin continued.

"The camera was in the back seat, viewing over the driver's shoulder, with a wide-screen lens giving close to normal vision," he said. "The movies would knock your eye out, they were so good."

EDUCATING LAWYERS

Thelin also had a couple of continuing "background" missions.

One was "to conduct seminars on vehicle dynamics for the benefit of lawyers, who had to be given a survey course in the subject so they could question witnesses intelligently." The defense lawyers were not only those on GM's staff, but also those from law firms the company retains in every state.

A second "background" job was "to acquire, index and write critiques" of materials that might be construed to be critical of the Corvair.

Some of these materials were "internally originated," such as reports on proving ground tests and Corvair shop manuals and sets of specifications. Others were "publicly originated," such as the Nader book and articles in car buff magazines.

In any event, Thelin's job was to process all of these materials for the legal defense files, so that GM witnesses "could study and rebut" criticisms.

Some of the "internal" materials were "freely offered" to plaintiffs' lawyers, Thelin said.

But there was a feeling, which he shared, that "we owed them no favors, and we had to give them what the law required and no more."

In a Chicago case, the decision was to "pile on the answers, snow them, bury them under material," Thelin said. The defense group shipped out a wallful of boxes of technical materials that the plaintiff's attorney "couldn't understand" and that would leave him "glassy-eyed in two hours," he added.

GM, in its statement yesterday, said that as an engineer, Thelin "had no legal training or experience qualifying him to construe discovery questions, subpoenas and other court documents."

"DEVIL'S ADVOCATE"

As Thelin continued to search for critical material, playing the role of a self-scribed "devil's advocate," he said. "I eventually got

to the point where I was looking for some material I couldn't find."

He came to believe, for example, that there must exist proving ground test reports that he hadn't seen. He persisted in making inquiries about this.

"Somebody—Simmons or Gallant—finally said, 'Here they are,'" Thelin said. That was when the "dynamite" documents came out of the closet and when he was told that, above all, he must not show these papers to potential witnesses. After that, he himself was "kept out of cases where he might be called," he said.

Thelin said the documents, which, oddly, included some in the public domain, consisted of proving ground reports and films on Corvair "ski path" tests and other "runs" made as early as 1961.

These materials have "purposeful attention" to handling characteristics, particularly roll-over possibilities, with various types of equipment, he said.

Thelin said he put the documents in a binder or folder. "I'm not a counter-espionage guy," he remarked.

The binder or folder was "not identified in a provocative manner," he said. He kept it in an open bookcase in his office. A few others in GM, including his office assistant, knew of it, he said.

Thelin said that one document in particular was "damning." It was "never offered to any plaintiff's attorney," at least while he was at GM, he said. Yet, in his view, GM was obligated to produce it in response to certain interrogatories.

KEY DOCUMENT

This document was No. 17103, the one which, according to Thelin, established that the early Corvairs would have been "almost impossible to roll over" had they had different—and differently positioned—suspension equipment similar to that on 1963 and later models.

All internal GM references to the document "misidentified" it, Thelin said. Therefore, "I could say there was no 17103."

The "mis-identification" was caused by an extra zero, the origin of which is unknown to him, Thelin said.

The extra digit transformed "17103" into "170103." Ultimately, Thelin said, he discovered that it had been established at GM some time earlier—in writing—that "170103 is really 17103."

GM in its statement yesterday, said it had not produced 17103 "because in the opinion of our counsel, it has not been called for." However, GM said it has turned over this and related materials to the Department of Transportation and a Senate subcommittee.

"That's when my stomach started to churn," Thelin said. "That's when I knew I was getting into deep water. Ignorance is a wonderful thing."

He said that the gung-ho feelings he had brought to his mission at Chevrolet now were sounding "a little bit hollow."

It began to seem to him that there was a possible pattern emerging from such elements as the "dynamite" documents, the exclusion of Corvair designers as GM witnesses and the odd addition of a digit to the 17103 paper.

Another important point increasingly troubled Thelin. He believed, as his own work for GM had shown, that the Corvair was not more prone to accidents than comparable cars of the same model year. Indeed, he said, "a Corvair driver had a better chance of avoiding single-car accidents, because of better brakes and handling."

What struck him, however, was more and more evidence that when there is an accident of a kind that generates "lateral acceleration, or side force" tending to overturn the vehicle, the consequences in an early Corvair are "more severe."

He put it another way: In an emergency situation in which a driver, say, seeks to avoid an accident, there may come a point at which

certain maneuvers take a car out of control. Then it will no longer do what he wants it to do.

In such a situation, Thelin said, conventional cars tend to continue more or less straight ahead. The early Corvairs tended to "spin out to either side, but could also turn over," he said.

Thelin said that although he was "bothered" he continued to work.

In December 1966, GM settled a large number of Corvair cases brought by a Los Angeles law firm. This Thelin said, "took the pressure off, or relaxed it."

At about that time, he continued GM management "perceived an oncoming recession," with the result that it ordered a 10 per cent reduction in the work force.

THELIN QUILTS

Thelin was transferred to a body drafting job at Chevrolet, "a kind of work I intensely disliked." In addition, he no longer had the use of a company car and similar prerequisites. After two months of "humiliation" he quit.

Thelin went to Uniroyal, the tire company, and stayed a year and a half. Then, in March, 1968, he grabbed a chance to move to Cornell Aeronautical, where he does automotive safety work.

Thelin was himself the owner of a Corvair, a 1962 model. He was then not yet aware of any controversy about its safety and considered it a "cute little car."

He read Nader's "Unsafe at Any Speed" early in 1966.

"My initial reaction was the straight party line," he said. "Here was a smartaleck out to make a lot of money criticizing our good little car. We thought he was paid by ATLA."

BOOST TO ENGINEERS

He feels differently today. "Ralph Nader, through his book and other activities, has enabled 'fundamentalist' engineers to have greater design responsibility for the finished car," he said.

And because Nader "helped to elevate, to free, the design engineer," Thelin said, the cars of recent vintage are much safer vehicles than those of only a few years ago.

When Nader released his letter to Volpe, a GM spokesman said, "We deny his charges and reiterate that the Corvairs are safe and effective cars to drive."

Later, GM president Cole, in his reply to the Secretary, said "I want to assure you that General Motors and its executives have been faithful to their public trust."

In March, 1966, after the "snooping" episode, the Senate Subcommittee on Executive Reorganization held a hearing. The Corvair and its safety was a central issue.

GM president (now chairman) James M. Roche, testifying under oath, put into the hearing record a highly favorable report on the Corvair which Chevrolet's Frank Winchell had previously given to a Michigan State Senate committee.

Now Nader, in his letter to Volpe, has attacked the Winchell report and has asked Sen. Abraham A. Ribicoff (D-Conn.), the subcommittee chairman, to reopen the hearing. An aide said Ribicoff has not reached a decision.

EXHIBIT 8

EXCERPT FROM TRANSCRIPT IN COLLINS V. GM,
PAGES 3213-16

By Mr. HARNEY. Q. These tests that you have told the jury about were not in any way connected with the decision to put the Corvair on the American market, were they?

Mr. WHITNEY. Which tests are we referring to?

Your Honor, I object to it. He said these tests, Mr. Winchell has been on the stand for sometime and he has testified to many tests.

By Mr. HARNEY. Q. Each and every test you talked about in this case was never, ever done in connection with original decision to put the Corvair on the market, correct?

Mr. COSTANZO. I object to that upon the ground counsel has already referred to certain tests that were shown to the jury. When he follows that up with another question about this, obviously it leaves the impression he is talking about the tests that were shown to the jury. I object to the question, your Honor.

The COURT. Will you repeat your question? Mr. HARNEY. Yes.

Q. With respect to each and every test that you as a witness have participated in in connection with showing to the jury, each and every such test was done in connection with litigation and not in connection with the decision to put the Corvair on the market?

A. The decision to put the Corvair on the market was made in 1957 or '58.

Q. Can you answer my question?

A. Are you talking about the 1960 or 1965 Corvair?

Q. I am talking about all the tests you have talked about in this trial in front of these twelve ladies and gentlemen plus the alternates.

A. Some of the tests that were ran were certainly related to the 1964 and 1965 Corvair. The 1960 Corvair, no.

Q. Like this set you brought in here, did you have that set?

A. Not that particular one but that is not a novel demonstration of lateral acceleration.

Q. Did you have such a thing to demonstrate the lateral acceleration of a 1960 Corvair?

A. No sir.

Q. No sir. How about this table here?

A. No sir.

Q. How about that chart behind you?

A. Well, this is a reproduction of a very ordinary chart that we use.

Q. In connection with the 1960 Corvair?

Mr. WHITNEY. May he finish the answer, Counsel?

The WITNESS. This is a chart, a reproduction of regular tire data. This chart was made specifically for the purpose that you see it here now.

By Mr. HARNEY. Q. Of the 1960 Corvair?

A. These tire characteristics were produced in this form to bring to this courtroom.

Q. Does it relate to a 1960 Corvair?

A. Yes, sir. There are tire characteristics for a typical 6:50-13 tire.

Q. When was that chart made up?

A. That was made in the past three or four months.

Q. There was no such chart made up for the 1960 Corvair?

A. There are many, many charts of that.

Q. Can you find one for me that was made before that car was put on the American market?

Mr. WHITNEY. There is no foundation for this question. Object to it, your Honor.

The COURT. The objection is sustained.

By Mr. HARNEY. Q. Do you have any with you that you could point out to me that were made before this car was put on the American market?

Mr. WHITNEY. Object as argumentative unless there is some foundation he has brought all the engineering data.

The COURT. The objection is overruled.

The WITNESS. I did not bring any such tire data with me.

By Mr. HARNEY. Q. What would you call such tire data?

A. Well, the tire companies and the General Motors Corporation as well as other automotive business—

Q. The only question is, what do you call it?

A. I am trying to tell you there are tire characteristics curves for all tires.

EXHIBIT 9

EXCERPT FROM TRANSCRIPT IN COLLINS V. GM,
PAGES 3856-58

By Mr. HARNEY. Mr. Winchell, since you have been here in San Jose, have you seen any General Motors test on the lateral sta-

bility or the directional stability with instrumentation of the Corvair automobile?

A. Since I have been in San Jose? That would be tests conducted here in San Jose?

Q. No, the physical presence of any such report in San Jose since you have been here?

A. Yes, I think so.

Q. And you know where such test reports would be located?

A. I was shown a stack of material that I understood had been submitted to the plaintiff in this case and was asked was I familiar with these tests. I said I couldn't say. Some of them I had some familiarity with, some I did not.

Q. I am asking, Mr. Winchell, about lateral stability and directional stability tests on the Corvair with instrumentation. Do you understand my question?

A. Yes, sir.

Q. And you have seen such reports?

A. There were quite a few reports there. Some of this test, I seem to recall having seen several roadability tests.

Q. With instrumentation?

A. Yes, sir, all the roadability tests are with instrumentation.

Q. What type of instrumentation?

A. I don't know precisely what type, but I know the data they get. What particular instruments they used in getting it, I can't testify to that.

Q. Would it be correct that the only instrumentation in any test of what you are aware of was in the one mile an hour test?

A. If I understand your question correctly, absolutely not.

Q. Then you have seen other test reports pertaining to the lateral stability and the directional stability of the Corvair with instrumentation, true?

A. If I understand your question correctly, yes, sir.

Q. You have seen it here in San Jose?

A. I saw the reports that I spoke of. I saw the data that I read to you in evidence. I saw the photographs that were submitted in evidence. I saw the film that was submitted in evidence of this one and a half mile and hour test. That is all I can recall at the moment.

Q. Any moves you have seen of any lateral stability or directional stability test is the one mile an hour test correct?

A. I believe that's correct; yes, sir.

Mr. COSTANZO. Are you referring only to the Corvair automobile, Counsel?

Mr. HARNEY. Yes, sir.

EXHIBIT 10

CADET STUDIES—APRIL 16, 1957

CONCLUSIONS

From looking over our Cadet drawings again I get the general picture as follows:

Frameless car of about 2650-2800 lbs. curb wt.

Wheelbase longer than standard in relation to car length—approx. 119" w.b.

Vee 6 engine set longitudinally ahead of axle, with unit torque converter transmission back of drive gear and hollow pinion hypoid drive.

Rear swing axle with pivot at wheel center height.

Diagonal positioning of swing axle pivot centers to be kept as small as possible to avoid toe change in rear tires.

Considerable argument in favor of torsion rods.

Rear brakes in the wheels rather than central.

Swing axle of open A frame type.

Front suspension still in doubt. Wishbone (SLA) type with longitudinal torsion rods would be preferred except that unless arms are very short they interfere with trunk space. The steering linkage also interferes. The reversed Porsche has evident advantages, but we cannot claim to have produced a good design. Possibly use Porsche laminated torsion rods.

Spare wheel horizontal behind front

bumper, as on Renault Dauphine. Battery forward. Gas tank at rear beside engine.

Radiator beside engine. Air intake ahead of rear wheels. Air exit behind rear window.

Thinner seat backs needed.

Muffler transverse behind power unit.

Synchromesh box and gear shift mechanism was not studied.

In attached notes I have listed objections to rear engine but not its advantages. Perhaps these are:

- (1) The least expensive construction possible.
- (2) Improved accessibility.
- (3) Better traction, especially in winter driving.
- (4) Less roll for a given roll stiffness.
- (5) Longer wheelbase giving improved handling (with front-rear weight ratio properly controlled.)
- (6) A completely flat floor. Flatter than a front-drive which has to bring the exhaust back.
- (7) Light steering.
- (8) Better isolation of engine noise is possible.
- (9) A more uniform riding quality when light and fully loaded, because more uniform ratio of front to rear deflection under all conditions.
- (10) Beaming deflection reduced because torque reactions are carried directly in the power plant mass, which again is housed in the stiffest portion of the body-structure.
- (11) Reduced power consumption at speed because no power lost in air turmoil under the hood.
- (12) Greatly improved braking because of uniform load distribution in deceleration.

MAURICE OLLEY.

Some of the ideas are illustrated in the photostats of the Styrofoam models which have been handed to you.

As far as possible the drawings are listed in chronological order.

They cover, 7 engines, several transmission variations, front drive, rear engine, and front engine rear drive.

The engines are:

2 cycle 4 cylinder barrel.

2 cycle 4 cylinder X engine.

Flat 4 air cooled.

Flat 6 air cooled and water cooled.

Vee 6 water cooled.

Vee 8 water cooled.

Line 6 water cooled.

A variety of front suspensions is shown. Most interesting for a rear engine, frameless car is the "Reversed Porsche", since this offers an opportunity for clearing the front compartment floor to give maximum front baggage space. By using a longer lower arm, or by "splaying" the upper and lower arms, the pro-dive tendency of the pusher suspension can be avoided, and a good steering geometry can still be obtained.

A variety of rear suspensions is also shown, but, in view of our expl. work the swing axle with normal center height appears to be the only one of present interest.

Front drive

The front drive study started from the consideration of the design faults, of today's standard car, in which we go to immense expense and trouble to carry the drive from the heavy end of the car to the light end, where under moderately slippery conditions we cannot get traction.

It was shown that, given a highly unconventional engine design, it would be possible to build a front drive car with a short hood, short wheelbase, and short overall length. Mario Revell, and Styling generally, were quite in favor of a front drive car, which puts a large mass between the front wheels, and is good for controls & car heating. It offers big savings in simplified body construction.

We purchased the Hotchkiss-Gregoire car,

and were then strongly reminded of the fundamental steering troubles from driving through the front wheels.

With a conventional engine the front drive car appeared to be of grotesque shape. Interest in this waned.

Rear engine

Fundamental objections were:

- (1) Lack of a station wagon design.
- (2) Lack of baggage space.
- (3) Lack of rear baggage space, for emergency carrying of bulky objects.
- (4) Excessive rear weight with our present engines.
- (5) Increased wheelbase—considered unsightly by Styling, especially with the reduction in rear overhang which we proposed.
- (6) Gas tank location.
- (7) Collision risks.
- (8) Lack of a considerable mass between the front wheels to control wheel flight.
- (9) Heating of car.

(1) The first appears insuperable. The Fiat "Multipla" or Volkswagen delivery Van designs are not a solution because of lack of rear entrance, unsightly appearance, and collision risk.

(2) (3) Accepting this, it still appeared possible to provide at least some emergency baggage space at the rear of the car, plus a good baggage space in front. To do this the spare wheel could be laid down flat just behind the front bumper, the battery could be tucked into a corner of the front compartment, at a moderate increased cost in starter cable, to help the weight balance, and a deep, but short, trunk space at the rear could be contrived just back of the rear wheels (But only with considerable reduction in engine accessibility).

(7) The forward flat mounting of the spare wheel helps to reduce collision risk. The "reversed Porsche" suspension also involves a transverse structure at the toe board portion of the dash which helps to strengthen the front end. But the menace of the concentrated engine mass at the rear still remains. And wherever the gas tank is placed, even high up behind the rear seat as in the Vauxhall, it is still in the path of the engine in collision. (An exception to this is the Renault Dauphine).

(4) To obtain a reasonable weight balance (which we set at 40/60) it appeared essential to mount the engine forward of the rear wheels. Schemes of side opening rear trunk lids, for access to engine, were sketched. (These are not in attached list of drawings).

Even when so mounted the engine will need to be of aluminum to achieve 40/60 weight distribution, with 4 passengers.

This does not impose any penalty on overall car length, provided that one accepts a greater ratio of wheelbase to overall length than we use now, and that the rear wheels will come some 10" to 12" further back than at present relative to the back of the rear seat.

For a rear engine, the dimensions in the plane of the wheel centers, appeared to work out approximately as:

	Inches
Front wheel to dash.....	10
Dash to rear seat back.....	84
Rear seat back to rear wheel.....	25
Wheelbase	119

This 84" body length appeared necessary to obtain comfort with a 55" roof height because of the necessarily reclined position of the passengers, but a great deal hinged on the ability to produce a thin seat back to the front & rear seats. Some notice was taken of Vauxhall & other European cars in this respect. It was also doubtful what thickness was required between passengers and engine for heat and noise insulation. Rear engine cars in Europe have a bad reputation for engine noise because of noise transmission through the large rear panel. All except the

Tatra which puts a wide baggage compartment in between.

The 40/60 weight distribution was tried out by "faking" a '52 Chev., with one hundred and twenty-four inch wheelbase and 40/60 wt. distribution. This handled distinctly better than a standard car.

Power plant

The 24"-25" dimension from rear seat back to wheel center at wheel center height could not be obtained with the Vee 6 engine, because of the engine height and slope of the seat back, except by abandoning the simple swing axle and using a semi-swing independent or DeDion, with twin-jointed drive shafts. This led us into various more complex transverse arrangements all of which are best forgotten, since they were all costly and clumsy.

Glacosa has pointed out that the principal production advantage of the rear engine car is the use of a single power plant block connected to the rear wheels by two simple drive shafts protruding from the differential. The swing axle is therefore the only acceptable rear suspension, and the reduced load variation on the rear wheels makes the swing axle acceptable on a rear engine car without a leveling device. However, torsion rods are preferable to coil springs to allow shop adjustment of standing height to meet weight variations due to air conditioning, different body types, etc., as well as to avoid the commercial load variation of coil springs.

Some difficulty arose in the location of the radiator. In fact the preference for air cooling was not a matter of weight so much as a feeling that, if cooling air was going to be hard to get, it would be preferable to dissipate heat at a higher temperature differential than a pressure loaded radiator could give us.

Some French figures indicated that a sports car consumed a lot of power with radiator open due to the power dissipated by the impact air in passing through the radiator and hood. In contrast the Renault 4 c.v. consumed less power with the cooling system in action than blanked off. (See Menthery push-tow tests.)

This appeared to indicate that considerable engine power might be required for pushing enough air through a rear radiator. (Our attempt at a rear baggage compartment increased our difficulties, and was later abandoned.)

Side cowls for air intake were suggested, but it was noted that Tatra now take in cooling air through a scoop at the rear of the roof, passing down through hollow quarter panels.

Flat take in air from the dead air in the wake, which at least has the advantage of sucking from a spot having atmospheric pressure, but which must be extremely bad for dust. (Note the objection to rear engine school buses for this reason.) Volkswagen do the same. Perhaps the dust objection is diminishing with modern roads. The side intakes of the Renault Dauphine appealed to Styling, who made sketches on this line.

Much must depend on the body shape. For instance with a modern broken back-line, there is considerable depression back of the rear window, which makes this a desirable place to discharge air rather than take it in.

(Incidentally an openable rear window would be impossible in this case because of fumes.)

For an engine of the size contemplated it appeared that side cowls ahead of the rear fenders, with discharge vertically upward back of the rear window, and twin radiators facing forward either side of the engine block, might be best.

Transmission

The best suggestion for a transmission and bevel drive, was a shortened torque converter back of the hypoid ring gear, with drive back from the engine through a hollow

pinion. We were helped in this by designs for a front-drive car, with engine back of front wheels, from Thorne's department. (We have these prints—L3-1110, dated April 16/54.)

These included the Kelley central brake which at one time we thought of using, but I now think that disc brakes in the wheels are preferable.

The trouble with the drive back through the hollow pinion is to get the two inner ends of the drive shafts close together, for maximum length of swing arm. The drawings show that, by using a form of spur differential, it is possible to get the centers of pot-and-block U-joints only 5" or 6" apart giving on a 58" track, a swing arm length of 26". 6" center distance was used in our own swing axles.

There was some question whether or not to use a common lubricant for transmission and hypoid gears. The bevel differential cannot be used without drastic shortening of swing arm length. (Several studies of this by Valukonis.)

There is a question in my own mind whether, with E.P. oil, the common DeDion pot-and-block joint (as used by Lancia & Fiat) is not as good as, and cheaper than the Chrysler type with pot and spherical roller.

There were no designs made for 3 speed synchromesh transmissions. In 1954 we seem to have assumed that by 1959 (?) the synchromesh would be dead.

The only other type of drive which is of possible interest is the U.S. Rubber toothed belt drive. Our one expl. set up where such a drive was mounted right below the front floor in a split torque-converter transmission, showed the extreme silence of this type of drive. It ran less than 400 miles, but we did not expect it to run this far. Rumor (through U.S. Rubber) is that Styling are making further developments along this line.

There is no question that, once the partial rear trunk is abandoned, the best engine accessibility is obtained with the engine back of the rear wheels. We concluded that a reasonable (40/60) weight balance was not to be had with this arrangement and our engine sizes (say a 180 c. in. Vee 6). Perhaps, we did not look at this hard enough with an aluminum engine, but I don't think so. Mounting the engine ahead of the wheels forces a 25" dimension from seat back to wheel center, and it is this dimension which provides the 40/60 weight distribution.

A side-opening hood on the rear was proposed for accessibility, but is impractical for car-structure. A good trunk lid with a Vee 6 engine and side-radiators, will provide better accessibility than we have today.

Swing axles

We have drawings of nearly every type.

Single Joint.—Low center. The swinging rear axle casing evidently means a cost increase on a rear engine car. Besides this the single joint axle involves large joint angles, beyond the capacity of a pot-and-block joint. This was discarded.

Low Center—Two Joint.—Several drawings of this in various forms. Our tests on expl. cars shows no necessity for the low center, which has the fault of causing small misalignments of the axle shafts in the wheel bearings and therefore requiring a self-aligning bearing at the wheel. Also produces considerable slide in the U-joints (increased cost and shorter swing arm radius). Also some brake drum misalignment, and a disc brake is almost impossible.

Thus I think we can forget the low center swing axle.

Conical or parallel swing.—The open Vee arm type of swing axle such as we have built experimentally, with axle shafts running in the open, seems to be the best type for construction cost and general convenience. We have drawn parallel and conical swing types.

We have built and run only the conical swing, having a "virtual radius arm" of about 45", which is too great for very much anti-lift in braking, but avoids excessive toe-change.

It is not proven that even this amount of toe change is desirable, but we think it is less than on the Volkswagen. The Mercedes has no toe change since the axle stays straight in plan view. The effect of the Volkswagen toe change on tire wear is not known.

In the original Mercedes swing axle the rear wheel forces were carried entirely by the drive casing. On the new Mercedes swing axles driving and braking forces are carried almost directly to the rocker sills. The same is true on the Volkswagen, but lateral forces are carried to the power plant, which must be stiffly mounted to receive them. Our own diagonal swing axles carried all rear wheel forces direct to the frame, and this seems true of the Fiat 600 also, so that the power plant may be mounted to carry only its external driving torque to the best advantage.

Of the various types the Fiat 600, which is almost the same as our own high center swing axle, appears the best.

I believe it would be very desirable to take another look at the swing axle with a view to using torsion rods. This may imply parallel swing, which is probably best for tire wear, although lacking brake drive compensation. Also, it carries almost all the normal road forces straight forward into the body structure, & allows height adjustment.

A compromise between parallel swing and our present design with the torsion rods slightly diagonal and anchored to the rocker sill, may be best.

Front suspension

There were several studies of "reversed Porsche" suspension.

The styrofoam model photos show one form. Probably the laminated torsion rods (packed in grease) would be appropriate. We made tests and drawing studies of these.

With this suspension it was almost essential to produce truly parallel wheel motion, which we thought desirable. We could clear the front floor almost completely.

An objection was that we could get no "frame" forward of the dash, but only a "tin box". And therefore, the holding of the front bumper worried us.

Probably we made a mistake in departing from the original Porsche design of arms, which are forged and stuck into plain bearings in the ends of round-section cross tubes, being held on to the laminated rods only by taper-pointed set screws. We tried designs which looked a little safer than these set screws.

Perhaps we should have done better with the normal trailing arm Porsche suspension, but using only one cross tube in the lower position, to clear the front trunk floor.

Also as you will see from the photos, we tried a short arm wishbone suspension with anti-dive, but got in trouble trying to keep the steering linkage clear of the floor. Perhaps such a suspension, with longitudinal torsion rods, could be combined with a low trunk floor.

As you will see from drawings and models a considerable amount of trouble was caused by our involvement with air-oil springing or Firestone (old type) bellows.

Tires

The need for tires with cornering power more nearly proportional to load seems a necessary part of rear engine development. The Europeans have been heading in this direction for years, with their long-cord tires. The American tire industry is also moving in this direction as one means to postpone the standing wave.

Although our 40/60 "faked Chevrolet" looked good, it may be desirable to urge U.S. Rubber in this direction, or to use sports car tires.

MAURICE OLLEY.

EXHIBIT 11

CORVAIR—JUNE 29, 1959

Weight balance

The typical American passenger car has an accepted place in the life of the typical American family. It has ample power, ample passenger and baggage space, a forward mounted V8 or line 6 engine, probably automatic transmission, and conventional rear axle.

It is likely to have such items as power steering, power brakes, air conditioning, and a dozen other refinements.

But, when it comes to designing the best possible light car, with a clean slate to start with, it seems desirable, rather than simply shrinking the dimensions of a standard car, to take a new approach.

You can say that this is simply for the sake of novelty. But it isn't. It is chiefly because of the disposition of the "payload", consisting of passengers and baggage.

Conventional cars locate the payload mostly towards the rear of the car, with a tendency therefore to establish an almost equal balance of weight on front and rear wheels, when loaded.

Consider for example a 4000-pound car with an added payload of 800 pounds, consisting of 4 passengers and 200 pounds of baggage, of which perhaps 600 pounds will fall on the rear wheels. The change in weight distribution between the light and loaded condition will not be serious on a car of this type, though the change in handling and ride is noticeable.

If the weight distribution of the empty car was 55 percent on the front wheels and 45 percent on the rear, the distribution when loaded will be equal front and rear. There is an impression that American cars are habitually running in a "nose-heavy" condition, and even that this is essential for handling stability. Actually some makes, with the heavier engines, are nose-heavy even with a normal passenger load, while others are loaded equally front and rear. The nose-heavy cars frequently call for higher inflation in the front tires than in the rear, to avoid excessive understeer.

The weight balance of the station wagon is radically different. In these the body is heavier on the rear wheels and carries more payload, so that the weight distribution when loaded will frequently be 40% on the front wheels and 60% on the rear.

Most drivers know that any handling difficulties in this condition can be avoided simply by increasing the inflation of the rear tires.

On a compact car with the conventional forward engine, weighing only say 2400 pounds empty, the addition of 800-pound load can change the weight distribution from one extreme to the other. The typical car of this type will have 55% on the front wheels when empty, and may have nearly 55% on the rear wheels loaded. When loaded the weight on the rear springs will increase by as much as 66 percent, so that if these springs are to have as much as 5" deflection under full load, they will have only 3" deflection when light.

With only 3" deflection one cannot expect anything but a poor ride, and, when the brakes are applied with the car lightly loaded, the rear springs are unloaded still further by the weight transfer due to braking, and may momentarily be almost completely unloaded. Consequently the braking of such a car when lightly loaded may become fairly dangerous, especially on rough roads.

One has to consider how to make the lighter car comfortable to ride and steer, and safe to stop, at all loads, since it will certainly be used under all conditions from driver only, to all the load it will carry. We don't want it to ride with its tall high when light, or to sag down at the rear when loaded.

The evident solution is to distribute the weight of the empty car in the same pro-

portion as the average distribution of the payload. Then there will be no appreciable change in the balance of the car at any load.

A convenient average distribution of the payload is 40% front, and 60% rear, so it appears that the empty car should have the same distribution.

By building an aircooled engine of light construction just back of the rear wheels, with an integral aluminum transmission ahead of it, it is possible to concentrate all the driving mechanism in the rear of the car, and still (even with a light-weight integral body) come out with a 40/60 weight distribution, on the empty car.

Handling

The next question is—can a car with 40/60 weight distribution be designed to handle properly? Considering the existing balance of our station wagons when loaded, and of all commercial vehicles, there should be no doubts about this.

When the tires and the suspensions at each end of the vehicle are correctly adapted to their loads, the "forty sixty" will handle perfectly. And its great advantage is that it will handle in the same way at all loads.

To compare a car with an arrow is a complete fallacy. All that an arrow can do is fly straight in still air. The nearest comparison in an automobile is one in which the steering has been disconnected, so that only the rear wheels have any sense of direction.

A car must steer, and it does this by adjusting the direction of the front wheels, using the rear wheels as a point of reference or fulcrum.

There are two requirements for stable handling, and it's difficult to say which is the more important. One is that the rear tires must not be overloaded. If they are the car will wander whatever its other condition may be. The other is that the sense of direction of the rear wheels should be slightly better than the fronts. This gives the desired margin of "understeer."

A truck gets this result by fitting dual rear wheels. But a passenger car can get the same result without dual tires by simply using rear tires which have adequate cornering power for the load they carry. The contribution of the tire makers to this result is of first importance. Modern low profile, long cord tires, using Tyrex cord, and mounted on wide rims, have cornering power much more nearly proportional to load than anything which was available a few years ago. Thus there is now no need to use clumsy oversize tires on a rear engine car, or to use different tire sections front and rear.

All that is needed is to use normal inflation in rear tires of modern type and adequate size, and then to reduce the inflation of the fronts until, with the assistance of independent suspension in front and a swing axle at the rear, we have produced the desired margin of understeer.

Then we have got about the only design of light car which maintains its weight balance, and therefore, its riding, handling and braking characteristics at all loads.

We also have a number of other features—

1. We have a much improved body, excellently adapted for integral construction, since it is not weakened structurally by a central tunnel, or by being split in front to mount an engine. It can combine a low roof with ample head room, easy entrance and exit, adequate seat height, and a flat floor. The body has none of the road noise, engine noise, and shake in the front compartment so often associated with integral construction, in a light car.

(1) There are two reasons for this. One is the much better front structure due to the absence of the engine. The other is the use of large front tires with low inflation.

(2) Because of the lightly loaded front tires, the steering is light and precise, with effortless parking.

(3) A new type of power plant can be used, which would be too wide to fit between the front wheels, but which is ideal for rear mounting.

This is an extremely light air-cooled aluminum "flat-six", about half the weight of the existing Vee eights. It is in perfect balance, and forms one compact unit with the transmission and drive gears. High gear drive is "direct."

(4) Besides the saving in weight there are no water connections, water pump, radiator, no anti-freeze, and no boiling. Two minutes after starting the engine is up to temperature, the choke is off, and a great deal of the fuel normally used to heat up the cast iron of the engine, the cooling water, and the radiator is saved.

(5) Another saving is that the engine is cooled by fan only, not by the motion of the vehicle. Consequently the power usually consumed in the form of added head resistance needed to force air through the "cave of the winds" under the hood, is all saved. The fan intake is throttled by thermostat so that the power it consumes is only that needed for cooling.

(6) All parts of the power plant which require service attention are completely visible and accessible.

(7) The conventionally designed light car when carrying the driver only, is so close to unloading the rear end when braking on a dry road that little useful braking can be done with the rear wheels.

On the rear engine car front and rear brakes both do an equal amount of work, giving maximum life of the brakes and greatly improved stopping power.

The rear engine car remains almost level when braking, and there is no overloading of the front tires when brakes are applied hard.

(8) It is well known that traction in winter conditions or on soft roads is exceptionally good on a rear engine car. This is not simply because of the adequately loaded rear tires, but even more because the lightly loaded front tires pave the way for the rears. The practice of having the more lightly loaded wheels in front actually goes back to the days of horse-drawn carriages.

As compared with a 55/45 weight distribution the 40/60 actually gives an increase of 33% in the maximum acceleration without slipping the rear wheels on any paved road, wet or dry.

(9) The gas tank is protected behind the front suspension structure and housed within the structure of the vehicle. It is completely removed from the exhaust system, and immune from either front or rear collision damage.

Equally important, the entire fuel system is on the cool side of the engine. So that fuel loss by evaporation, which occurs on conventional cars in hot weather, is largely avoided, and vapor lock is unknown.

(10) Within the car a high degree of silence and coolness is secured by the absence of drive line and exhaust under the floor. For winter driving an air-flow heater is used, which gives instantaneous heat.

(11) There seems to be a belief that rear engine cars become unmanageable in a crosswind. In some of the known cases this is true. But it doesn't need to be. It comes about through going at the job the wrong way.

The cars in question appear to have started off wrong by overloading the rear tires. Then, when the vehicle has proved unstable, the designers have tried to restore "feel" to the steering wheel by using excessive caster angles, or even by putting centering springs on the steering.

Summary

Thanks to improved tires and improved supplies of aluminum, it is now possible to build a compact rear engine car with American standards of comfort and performance.

This is the only design of light car which maintains the weight balance, and therefore the required riding, handling and braking characteristics, at all loads. The weight distribution is 40% front and 60% rear.

Success of this weight distribution depends on adequate rear tires. The inflation of the front tires is then reduced till the handling of the car is correct. No excessive caster, centering springs, or other devices are used.

The results are—

An excellent body with lots of room, and a flat floor. The body is quiet and cool, without front end shake.

The fuel tank is protected, and the fuel line is cool.

The steering is light.

Braking is exceptionally good whether light or loaded.

The engine is accessible. It maintains its temperature at all times, and there is no warming-up period.

Traction in snow is immensely improved.

There's no question that the car is an outstanding success.

M. OLLEY.

EXHIBIT 12

CORVAIR STEERING

(By Maurice Olley, written: April, 1961, publication date: December 1961—GM restricted—for Corporation use only)

PREFACE

Although the attached notes look a little technical, I have done my best to suppress all calculations and tables of figures.

The aim is to show:

(1) The fault with our swing axles today is that, because of their wide spring base and high roll center, we are carrying too much lateral weight transfer on the rear tires.

(2) When this weight transfer is made similar to that of a conventional car with a rigid rear axle, the swing axle performs just like a rigid axle (except that it should ride better).

It appears that further studies on the same lines are needed for Greenbrier, Corvaire, Tempest, etc.

MAURICE OLLEY.

CORVAIR STEERING

Means have been found to predict steady-state skid pad curves with reasonable accuracy. These have been applied to independent front suspension, rear axles and swing axles. The results are based on an approximate mathematical representation of tire characteristics. They have now been applied to the Corvaire.

Tire tests

To begin with, Fig. 1 and Fig. 2 represent flat-bed test curves for front and rear Corvaire tires, supplied by GM Research. These indicate a friction coefficient for the tire rubber of 1.25.

We have reason to believe that this is too high for actual skid pad testing where the wheel and tire are less rigidly controlled.

Another doubtful point in the test is that the rise of cornering force at light loads with increased slip angle is shown as more rapid on the underinflated front tires than on the overinflated rears. Individual tire variations may account for this.

To obtain "synthetic" tire characteristic curves approximating to the tests, after trying various alternatives, I have adopted a friction coefficient of 1.0, and a linear decrease of cornering coefficient i.e. side force/vert. load as indicated on Figs. 1 and 2.

On the rear tires I get an accurate match with the test at 4 degrees slip angle. On the

fronts the match is not so good except at normal load of 600 lb.

It is thought that the calculated tire characteristics in Figs. 1 and 2, while they may not be strictly accurate, are a close enough representation of what actually occurs in skid pad testing to give a fair prediction of handling. My assumption of a parabolic rise of side force with slip angle probably is an understatement at light loads and small slip angles. But, since it is relatively easy to calculate and gives realistic skid pad curves, it is considered good enough for preliminary studies.

(EDITOR'S NOTE.—Figures 1 and 2, not printed here, are available in subcommittee files.)

CORVAIR (STANDARD 1961 SPRINGING)

The assumed conditions are:

$W_f=1200$ lb

$W_r=1800$ lb

$W_t=3000$ lb

Wheel track $T_f=54$ in. (4.5 ft)

$T_r=55$ in. (4.583 ft)

Length=108 in. (9 ft)

Ride rates $K_f=88$ lb/in.

$K_r=122$ lb/in. (PG test)

Effective deflection $d_f=6.82$ in. (.568 ft)

$d_r=7.38$ in. (0.615 ft) (Note: rear deflection $\frac{1}{2}$ % greater than front)

Roll rate $R_f=\frac{88 \times (54)^2}{1375}=186.5$ lb ft/deg (10690 lb ft/rad)

$R_r=\frac{122 \times (55)^2}{1375}=268.2$ lb ft/deg (with tires) (15370 lb ft/rad)

$R_f+R_r=26060$ lb ft/rad

Height of C. G. (loaded)=21 in. (1.75 ft)

Rear roll center ht (h_r)= $27.5/22.5 \times 11.6=14.18$ in.=1.18 ft

Rolling moment $Q=W_f H+W_r$

$(H-h_r)=1200 \times 1.75+1800 \times 0.57=3126$ lb ft

Roll angle (P) when lateral acceleration (λ)=1,

$P=\frac{Q}{R_f+R_r-Q}=\frac{3126}{26060-3126}=0.1363$ rad (7.8°)

(This is only about 68% of normal roll angle. The car is stiff in roll.)

Weight transfers ($\lambda=1$)

Front, $T_f=\frac{R_f P}{t_f}=\frac{10690 \times 0.1363}{4.5}=324$ lb

Rear, $T_r=\frac{R_r P+W_r h_r}{t_r}=\frac{15370 \times 0.1363+1800 \times 1.18}{4.583}=922$ lb

$T_f+T_r=1246$ lb

Roll couple distribution, 26% F. 74% R.

Note that, in spite of the over-soft rear springing, the rear weight transfer is still 2.85 times as great as the front.

Ackerman angle on skid pad= $9/108=0.0833$ rad= 4.775° .

The steering characteristics are worked out by assuming the tire side forces of Figs. 1 and 2, and by first finding the slip angles and steering angles with a solid axle in the rear having the same spring base and roll center height as the swing axle.

From this preliminary calculation the side forces on the outer and inner rear tires can be figured. And, with these the lift of the rear end and the steering characteristics of the swing axle can be calculated.

The preliminary solution for a solid axle gives the following:

Lateral Acc. $\lambda=0.20$ 0.40 0.50 0.60 0.65

Fr. slip angle $\alpha_f=1.22^\circ$ 2.70° 3.63° 4.76° 5.45°
R. slip angle $\alpha_r=1.25^\circ$ 3.07° 4.66° 7.15° 9.36°
Sig. angle $\delta=4.74^\circ$ 4.40° 3.84° 2.30° 0.88°

These are plotted in Fig. 3. The lack of curvature in the α_r line, and the upward curvature of the δ_r line are an indication

that the rear end is carrying too much roll couple, and that, even with a solid axle, there would be pronounced oversteer.

The next question is how much worse this is made by the swing axle.

To find this, we figure the side forces on outer and inner tires. These are in Fig. 4.

From this we can figure the vertical lift of the rear end of the car. This is shown in Fig. 4.

[EDITOR'S NOTE.—Figures 3, 4, and 5 are available in subcommittee files.]

SWING AXLE

R_r =roll rate

Roll center height= $27.5/22.5 \times 11.6=14.18$ in. (=1.18 ft)

The axle is credited with the raised roll center O , but is thenceforth treated as a single joint swing axle.

Y_1 and Y_2 are outer and inner side forces.

These are "external," that is they don't include side force necessary to balance camber thrust.

Assuming that R_r contains the tire deflection, camber angles γ remain equal on either side of the car.

Then, since the spring base remains horizontal, the roll angle ϕ remains the same as in the case above of the solid axle. The thing that changes is the lift Δh , which occurs due to the side forces Y_1 and Y_2 .

It appears reasonable to assume that the tires act like sections through the middle of a sphere, i.e. variations in track and wheel radius can be ignored.

Then,

Lifting force= $(Y_1-Y_2) \left(\frac{h_r}{t/2} + \gamma \right) = (Y_1-Y_2) \frac{h_r + \Delta h}{t/2}$

Hence lift $\Delta h = \frac{(Y_1-Y_2) (h_r + \Delta h)}{\frac{W_r}{d_r} \times \frac{t}{2}} \text{ or } \Delta h =$

$\frac{(Y_1-Y_2) h_r}{\frac{W_r}{d_r} \times \frac{t}{2} - (Y_1-Y_2)}$

Using the side forces and calculated lifts of Fig. 4 and refiguring for the increased weight transfer due to the lift, and for the camber thrusts on the outer and inner wheels due to the camber change in the rear wheels, we get the increase in rear slip angle shown in the curve marked "Sw. Ax" in Fig. 3, and the corresponding curves for side thrust on outer and inner wheels shown in Fig. 4.

It can be seen that although, under this high roll couple, the swing axle acts somewhat worse than the solid axle, the change is not great, and Fig. 4 shows that the side forces are so much alike that there is no need to refigure the swing axle, using the revised values of Y_1 and Y_2 .

(These predicted test results appear to be a bit worse than the latest actual test results. Meaning perhaps that the actual tire characteristics are better than my assumed characteristics on Figs. 1 and 2.)

It has been found in earlier studies that the departure between swing axle characteristics and those of the solid axle decreases rapidly as the roll couple carried on the rear end is decreased.

So, to simplify the figuring, it seems adequate to study how a solid axle would behave under reduced roll couple.

This is done in two stages and is shown in Fig. 5.

(1) Rear Roll Rate is decreased and Front increased until the lateral weight transfer is only 50% greater in the rear than the front i.e., F. 40%, R. 60%. At the same time the roll stiffness is slightly decreased to increase the roll angle from 3.9° to 4.3° at a lateral acceleration of 0.5g.

This results in a completely neutral steering, the front and rear slip angle curves

being practically identical, as shown in Fig. 5.

(2) In this case the total roll stiffness is still further decreased to permit the vehicle to roll to a conventional roll angle of 5.73° (0.10 radian) at 0.5g lateral acceleration. This is suggested to slow down the roll frequency to match up more closely with the pitch and bounce frequencies for the sake of ride. It would be desirable at the same time to stiffen the rear ride rate so as to "flatten" the ride.

The roll rate at the rear is now decreased to an almost nominal figure of 73 lb ft/deg such as might be obtained from a substantial rubber pivot joint on a transverse leaf spring together with the rubber joints on the wheel arms.

The aim is to obtain equal lateral weight transfers front and rear, i.e. 50/50 F. & R. And the result, as shown in Fig. 5, is a substantial understeer.

The comparative roll rates (with tires) are:

	[In pounds feet/degrees]		
	Present Corvaire	Case (1)	Case (2)
Front roll rate.....	186.5	264	254
Rear roll rate.....	268	155	73

The above two examples are worked out for solid rear axles. It is shown that in the present Corvaire the swing axle, due to lift, handles rather worse than a solid axle, but other studies have shown that this effect of the swing axle decreases rapidly as the roll couple carried by the swing axle is decreased.

In fact a swing axle which carries the proportion of the roll couple normally carried by a rigid axle will perform almost exactly like a rigid axle, as regards steering, and will ride better because it does not tramp.

TRACTION

The angles plotted in Figs. 3 and 5 do not include traction effects. Studies in "Steering Notes" have shown the oversteering effects of rear traction, appearing chiefly at lateral accelerations above .5g. The traction effect could be expected to make the sudden oversteer of Fig. 3 considerably worse. But here, as in the case of swing axle lift, the deterioration due to traction is extremely sensitive to the roll couple carried by the rear end, so that, in case (2) of Fig. 5, it will virtually disappear.

TIRES

The other thing that appears from these studies is the extreme importance of the tire characteristics. The increased cornering power of the rear tires virtually "saves the life" of the Corvaire.

NOTE: As an addition to Figs. 4 and 5, I have added the figured lift, side forces, and steering characteristics for case (2) above. These confirm that with the reduced weight transfer on the rear the lift is reduced, and the steering is almost the same for a swing axle as for a rigid axle.

RISE RATE AND ROLL RATE TEST: CAR No. 0104, CHEVROLET

General Motors Proving Ground, Milford, Michigan.

Date, March 17, 1959.

Report No. PG-10841.

Test Run For Chevrolet Motor Division, W. O. No. 806-3.

Confidential: Prepared for the use of the Chevrolet Motor Division only.

Requested By P. J. King.

Report Sent To P. J. King.

Report Prepared By P. Garthe, F. Oxford, Engineering Test Department.

DISCUSSION

This test was performed using the procedure outlined in Report No. PG-2672-10 with the following exceptions:

- (1) The rear doors were removed to permit attachment of the loading equipment near the vehicle center of gravity.
- (2) "Weaver" plates were placed under the rear wheels to accommodate the tread change

during the test. Since the travel of these plates is limited to approximately three inches, portions of the ride rate curve on both sides of the design range have a different rate caused by the restricted tread as the "Weaver" plates reached the end of their travel. The spring rate published is that obtained through the free tread travel portion only. This free travel portion of the

curve lies below the full design load but it is assumed that the spring rate would be essentially constant through the design range if free tread travel could be provided.

(Editor's NOTE.—The graphs that were made a part of this exhibit are not reproduced here. However, they are available in subcommittee files.)

GENERAL MOTORS PROVING GROUND—RIDE RATE AND ROLL RATE—DESCRIPTION AND TABULATION OF RESULTS

EXHIBIT 14

CHEVROLET,
March 20, 1959.

To: C. M. Rubly, Engineering Center,
From: W. L. McCollum, Proving Ground.
Subject: Stabilizer Bar H-25 Cars.
CC: M. M. Roensch, M. S. Rosenberger, K. Hansen, C. H. Fehlberg, R. C. Emig, N. E. Farley, P. J. King.

On car 0104 measurements of ride and roll rate were taken, and ride evaluations conducted with and without the stabilizer bar with the latest springs (570 lb./in. rear rate and 168 lb./in. front rate). This car with latest engine mounts is a very good handling car either with or without the stabilizer bar. Without the bar there was a slight loss in straight ahead stability and an improvement in cornering. There was no noticeable increase in roll when the bar was removed and the ride balance is improved.

The measured ride and roll rates are tabulated below:

	Wheel load		Ride rate (lb./in.)
	Left	Right	
Left front.....	598	84	
Right front.....	590	81	
Left rear.....	895	172	
Right rear.....	900	165	

	Roll rate	
	With bar	Without bar

(Rear Suspension Model Test Proposed full swing axle and others, May 13, 1958, 139-64)

ENGINEERING STAFF,
GENERAL MOTORS CORP.,
Detroit, Mich., May 13, 1958.

To: William C. McIntyre, Suspension Development.

The theoretic analysis of a proposed full swing independent rear suspension indicated that the car would roll in a severe turn instead of sliding. Therefore, Suspension Development built a 1/2 scale model of this rear suspension to determine if the theoretic reactions of the suspension geometry were correct.

The proposed full swing independent rear suspension was built as a 1/2 scale model. The swing axle pivots were at the same height as the centerline of wheels. A lateral force to simulate centrifugal force was applied at the center of gravity (C.G.) height through a spring scale. The wheels were then covered with a 40 grit emery cloth and set on a rubber slab which gave a coefficient of friction of approximately one. The force was applied at ten-pound increments and roll angle and lift of the body measured. Graphs were plotted of roll angle versus the "G" loading and lift versus "G" loading. Pictures of the model suspensions are also included in the report.

The test of the full swing independent with the inner pivots on the centerline of the wheels was followed by the testing of a four-link solid axle; a semi-swing independent with inner pivots two inches above the centerline of wheels; a full swing independent with the pivots four inches below the centerline of the wheels; a full swing independent with lateral leaf spring and roll bar and a full swing independent with interconnected flat spring.

CHARLES W. LATREILLE.

THE EFFECT OF LATERAL ACCELERATION ON ROLL ANGLE AND C. G. HEIGHT WITH FOUR EXPERIMENTAL REAR SUSPENSIONS

(By L. J. Kehoe)

REAR SUSPENSION BEHAVIOR

Summary

A series of tests were made to determine the effect of lateral acceleration on four types of rear suspensions.

Results

1. Conventional Four Link (Figure 1):
(a) Height of C. G. remains constant.
(b) Roll angle is directly proportional to lateral loading from .1 g to 1.05 g. At that point the car slides.

2. Semi-Swing Arm Independent with the Inner Pivots 2" Above the Centerline of Wheels (Figure 2).

(a) Height of C. G. remains constant until about .5 g lateral loading. It then increases until car slides at .90-.95 g.

(b) Roll angle is negligible until about .4 g acceleration loading is reached. Roll then increases rapidly until at .90-.95 g the wheels slide.

3. Full Swing Independent with Inner Pivot 4" Below Center-line of Wheels (Figure 3).

(a) Height of C. G. does not vary much, a slight fall being followed by a slight rise.

(b) The roll angle vs. lateral acceleration curve is practically a duplicate of that obtained with the four-link axle, essentially a straight line to 1.0 g acceleration, when the wheels slide.

4. Full Swing Independent with Inner Pivot on Center-line of Wheels (Figure 4):

(a) Height of the C. G. does not change until about .7 g. It then increases rapidly until at 1.0 g the car overturns.

(b) There is no body roll until about .6 g lateral acceleration. By 1.0 g, rolls has approached 6° and the car overturns.

Method of test

For some years past, the Structure and Suspension Development Group of General Motors Engineering Staff has been measuring the roll steer and ride steer geometry of proposed suspensions through the use of 3/8 scale models, (Figure 5). To avoid interaction, the opposite end of the model is supported on a knife edge. For preliminary studies, the scale model has almost replaced graphical analysis, due to the ease and accuracy obtained with the scale model method.

When it was decided to investigate the dynamic characteristics of certain rear suspensions under lateral acceleration, graphical analysis was rejected since observation had shown that, for example, the height of the cars C.G. is a variable, as is roll.

Figure No. 6 is a view of the equipment and methods used to obtain the data on which curves 1, 2, 3 and 4 are based. It will be noticed that the front wheels are not complete. This permits observation from the side, since the wheels do not rotate.

At the start of the program it was decided that:

1. Total weight on the wheels is to be 25 lbs.

2. Lateral load is applied at an arbitrary C.G. height, rather than the C.G. of the model.

3. Load is applied by pulling a spring scale, which is attached to a fine wire, which is, in turn attached to the chassis model. Figure No. 7 shows this attachment clearly. In order that vertical components due to angularity will be minimized, it is recommended that the wire will be at least 20 ft. long.

4. Measurements are to be taken while the tests progress and tests should be repeated several times until a consistent series of values are obtained. In this connection it is recommended that all tests be conducted by the same personnel to avoid variations in technique.

5. From previous work it has been established that wooden wheels to which coarse

emery cloth has been stapled, bearing on a one inch thick pad of 70 durometer rubber will permit lateral loading of 1.0-1.05 g before sliding. This is comparable with new tires on a reasonably good concrete pavement.

6. For photographic purposes, a rod tipped with white paint is placed as a reference mark near the C.G. load application point.

The attached pictures were not made during the tests. They have been photographed with the charts as a visual aid to interpretation of the curves. In each one the arrow on the chart indicates the load applied.

(EDITOR'S NOTE.—The graphs that were made a part of this exhibit are not printed here but are available in subcommittee files.)

EXHIBIT 16

CHEVROLET,

June 21, 1963.

To: Mr. E. J. Premo, 1-328 Engineering Center.

From: Mr. F. J. Winchell, L-105 Engineering Center.

Subject: 1965 Corvair Rear Suspension.

In compliance with your request, we will assist Mr. King with his problems associated with the handling of the 1965 pretest Corvairs.

Since there appears to be some controversy at the present time over the relative merits of the 1964 and 1965 rear suspensions, I would like to reiterate the following points.

1. Assuming no extraordinary deflection steer or roll steer characteristics, the primary factor in cornering stability of this or any car of reasonable proportions is the relative rate of weight transfer from inside wheel to outside wheel in the front and rear suspensions. This is customarily referred to as roll couple distribution. The benefits of improved roll couple distribution should be independent of how it is achieved. I understand that both the 1964 and the 1965 suspensions give about 40% front and 60% rear which, in my opinion, is absolutely satisfactory for cornering stability.

2. Preliminary indications are that the improved roll couple applied to the swing axle as it has been in the 1964 suspension will prevent roll-over with the lateral force potentially available on a smooth, dry road surface. I consider this a very significant improvement over previous model Corvairs.

3. The fact remains that the swing axle geometry is capable of sufficient reduction in tread and lift of the center of gravity of the vehicle to cause roll-over under circumstances which would not result in roll-over with the 1965 suspension or with a conventional rigid rear axle; i.e., a dip in the road while cornering hard or skidding into a curb, rut or other obstruction.

4. The 1964 suspension may get some adverse publicity due to its apparent similarity to the Empi kit, while the 1965 suspension appears to be a prestige feature.

If, in management's judgement, this car must be as safe as the conventional Chevrolet, engineering must take the position that the swing axle is inadequate.

F. J. WINCHELL,

Research and Development.

EXHIBIT 17

CHEVROLET MOTOR DIVISION: PRODUCT PROGRAM—MAJOR REVISIONS

(List all revisions by UPC group.)

Model: 1965.

Series: 500, 600, 700, 900.

Last submission date: Dec. 10, 1962.

Revision date: January 18, 1963.

Revisions:

UPC 4—A new independent rear suspension design with wheel movement controlled by a 3-link articulating system at each wheel will be used for improved ride and handling. The design is similar to the type used in the

1963 Corvette except that coil springs will be used rather than the transverse leaf unit.

EXHIBIT 18

1965 CORVAIR PRESENTATION TO EPG

INTRODUCTION

The present Corvair was originally introduced in 1960 to meet the competitive threat of small foreign cars and the lower priced small domestic cars.

The Corvair is unique in many respects, not only because of its rear engine design, but also the fact that its styling cycle has proven to be of much longer duration than our other passenger car lines.

For this reason, before describing a new 1965 Corvair proposal, a brief history of the current model might be helpful, to your considerations.

Slide 1

This is a diagram of our original Corvair design as introduced for the 1960 model year.

You will note that in order to eliminate the Drive-line Tunnel Chevrolet designed a light weight, air-cooled, rear mounted engine, with a transaxle for rear wheel drive. This also gave nearly constant weight distribution under various loading conditions, good traction and braking characteristics and excellent steering and maneuverability. The body-frame integral structure gave low roof, ample headroom, adequate seat height and flat floor.

For various reasons including the inherent costs of the vehicle, it did not completely meet the requirements of its intended economy market, but instead actually created an image and a market of its own. This image was largely that of a sports car, economically priced in comparison with other sports cars, and having a certain "Foreign" flavor because of its rear engine, and low silhouette.

Slide 2

Capitalizing on this new image, we made various changes to meet this demand and at the same time pressed ahead with the Chevy II for coverage in the basic transportation area.

In January 1960, we added a club coupe and a few months later the popular Monza Coupe, the Luxury Version of this model. A high performance engine also helped enhance this image.

Other improvements followed in 1961 such as a direct air heater to replace the expensive gasoline heater; the spare tire was moved from the forward trunk compartment to the engine compartment, and a larger fuel tank was installed. A 4-speed transmission, a Monza Sedan and Air Conditioning were also added in 1961.

In 1962 we added a convertible model and introduced the Monza Spyder with Turbo-Charger.

In 1964 we will introduce the 164 cubic inch engine for better performance. Currently 75% of all Corvairs are in the Monza series, 20% in the Deluxe 700 series and only 5% in the low priced standard 500 series.

CORVAIR COMPETITIVE PRICES, 1960-63 DEALER NET

	Corvair		Falcon	
	Standard	Deluxe	Standard	With deluxe option
4-door models: ¹

1962	1,435	1,483	1,431	1,492
1963	1,435	1,483	1,431	1,458

¹ All model prices include heater.

² Not available.

Slide 3

The Corvair's price position with respect to the Falcon is shown here, at the dealer net level.

In 1962 Chevrolet dropped the 4-door sedan in the low price line so that our lowest priced 4-door sedan became our 700 series deluxe Corvair at \$1522 with the lowest priced Falcon at \$1477. While this created a disadvantage of about \$45.00 with the lowest priced Falcon, the two vehicles were quite closely priced on a comparable base of deluxe equipment. In fact the Corvair at this level shows a \$16 advantage when the \$1522 price is compared to the Ford \$1538. Ford eliminated some of their deluxe option features in 1963 in order to overcome this disadvantage.

The 2-door comparison reflects our lowest priced 2-door unit in 1963 to be \$4.00 over the lowest priced Falcon and on a comparable base of deluxe equipment, these two vehicles are also quite closely priced—\$1483 for the Corvair compared to \$1458 for the Falcon.

In this comparison of 2-door units, however, it should be pointed out that the Corvair is actually a coupe style with limited rear compartment size while the Falcon more nearly meets the specifications of a 2-door sedan.

While we do not believe the Corvair and Falcon are necessarily reaching the same market, the prices shown here would indicate that where they do compete, they are on fairly equal terms price-wise.

PRODUCTION VOLUME (MODEL YEAR)

	Corvair	Chevy II	Falcon	Fairlane
1960	250,007		435,676	
1961	282,075		439,312	
1962	292,531	326,607	414,282	298,116
1963	260,000	355,000		
1964	200,000	600,000		
Total	1,284,613			
Average, 5 years	256,923			

¹ Index volume.

Slide 4

Volume sales of the Corvair seem to represent a continuing demand in the area of 250,000 per year.

During the 5 year period (1960 through 1964) in which the present Corvair will have been on the market, approximately 1,284,000 units will have been sold establishing the 250,000 annual sales on a firm experience basis. The Ford Falcon, during the 3 years compared on this chart has achieved a volume over 50% in excess of the Corvair, but participates largely in the basic transportation area.

Chevrolet feels that the Corvair represents an almost exclusive market segment and its sale has not reduced our sales in other lines to any appreciable extent.

With this background and with 5 years of unchanged body style, Chevrolet now proposes a new Corvair for 1965 with new fresh lines but keeping the same basic Corvair image that has found for itself a definite place in the automobile market.

Slide 5

This is the new look proposed for the 1965 Corvair. The model shown here is a Monza 4-door hardtop sedan. The sedan and coupe will be hardtop models featuring frameless curved side glass. The car will be 3.0 inches longer and about 2.0 inches wider but will retain the same 108" wheelbase and over-all height. Moreover, the design includes significant improvement in two critical areas. Improved entrance is provided and rear seat knee and leg room are increased. Chassis changes in the area of steering, braking and suspension systems will give the Corvair improved handling and maneuverability.

Slide 6

Dimensional differences in terms of 1965 advantage over the present Corvair are shown in this sketch. Door opening-to-ground is up 1.4 inches at the front and 1.2 inches at the rear. Door opening-to-seat is greater by 1.0 inch in front and 1.8 inches at the rear. By moving the rear seat rearward about one inch, we have a comparable gain in rear knee room and leg room. Other dimensions are equivalent to those of the present model.

Slide 7

A proposed new heating system which introduces a central duct, eliminates the rather complex dual rocker panel ductwork of the current car. A distributor under the front seat directs heated air to front and rear compartments. The center duct also feeds the defrosters at the base of the windshield.

The engine cooling air intake is relocated from the deck lid to the tulip panel just back of the rear window, giving a cleaner air supply and better water separation. This new design permits use of outside air, not previously available, for defogging in mild weather.

Other changes in body construction contribute to reduced cost and improved resistance to corrosion.

Slide 8

The unitized front suspension and cross-member assembly is of simplified construction. To facilitate assembly, a new cam eccentric is used to adjust camber. A link type stabilizer will be added as standard equipment.

Steering changes with reduced turning radius improve maneuverability.

Slide 9

The new 3-link coil spring independent rear suspension, similar to the 1963 Corvette, provides improved handling. The 3-link system works much like the familiar short and long arm design of the front suspension. Here the short arm is, the axle shaft which has "U" joints at each end. This enables the axle shaft to serve the dual function of driving member and upper suspension link. The strut rod is the lower link, and can pivot at both ends through relatively simple pin joints. The dual links of the 1965 design result in a more vertical wheel path, with consequent reduction in tire scrub.

Slide 10

The third link of the new design shown here in profile is a torque control arm running forward from the wheel to a pivot directly attached to the body and controls brake torque.

Wider rear brakes give a better wear balance with front units and increased braking capacity and durability.

Slide 11

The model line-up proposed for 1965 is basically unchanged from the present, as the spyder 600 line merely replaces our present spyder option. As mentioned earlier, hardtop styles replace the thin pillar 2-door coupes and 4-door sedans in the present line. One other change, in the bottom of the line, a 4-door hardtop is shown. This is in place of the 2-door club coupe which we have currently. The purpose is to provide a small sedan, if possible, at the base of our line to fill the vacancy left by the growth of the Chevy II to the larger "A" car size. Present estimates indicate that it may be feasible to have the 4-door sedan in this base line instead of the 2-door model but the decision will be reviewed later as costs to the two body styles become firmer.

Our basic concern is to have a low priced unit for competitive purposes in the 500 series, and while we would prefer a four door unit for this purpose, costs may require that we remain with the two door as our anchor in the low price field. We do not believe that

the volume is sufficient to permit two body styles in this line.

1965 CORVAIR MODEL LINE

	Standard 500	Deluxe 700	Monza 900	Spyder 600
4-door hardtop sedan	×	×	×	
2-door hardtop coupe		×	×	×
2-door convertible			×	×

Slide 12

Present estimates indicate that our price cost of the new 4-door hardtop style for 1965 will approximate that of the thin pillar style in 1964. Actually a \$2 net savings is currently indicated.

The net savings in the body are approximately offset by the net increase in chassis costs. The principal reason for the chassis increase is the major change to incorporate the Corvette type rear suspension. Were it not for this change, chassis costs would also be lower in total for 1965.

Both Fisher and Chevrolet are working on cost reduction programs and speaking for the chassis area, we feel we have excellent opportunities to develop further cost reductions as our designs and studies progress.

The program presented here contemplates the hardtop model as the 1965 version. Styling has also developed a thin pillar version and a pillar version with frameless door glass. The thin pillar version would further reduce the body cost shown here by \$9, while the cost of the thin pillar with frameless door glass would approximate the hardtop.

Because of the greatly improved appearance of the hardtop version, we recommend that our program continue on this basis.

Slide 13

In the area of tool cost, a low volume line such as the Corvair presents particular problems. We have demonstrated that unlike our usual line of cars requiring frequent model changes and extensive face lifts, the Corvair can carry its market for an extended period of time without major changes or revisions.

The present Corvair will have run for five years by 1965 with virtually no styling change except for ornamentation. We feel the new Corvair should also be evaluated on a long term basis and would suggest a four year period for consideration of tool allocation.

This chart indicates the comparison of tool costs as experienced on the present Corvair versus the estimated costs of the 1965 Corvair if carried four years.

The present Corvair body total includes approximately nine million dollars for a station wagon model brought out in 1961 which is not contemplated in the 1965 line. Elimination of this item would reduce the body total of the present Corvair to — million in place of the — million as shown. Also a substantial foreign (approximately — million) of the chassis tooling in the present Corvair was represented by the engine which will be largely carryover in the 1965 program. Further, because of the completely new design of this vehicle in 1960, more subsequent modifications were necessary than we would anticipate with this 1965 design.

Unit tool absorption would of course depend upon the cycle used for consideration but the total tool bill, indicates a reduction of 25 million dollars in the two comparable 4 year periods. Using an annual volume of 200,000 units or 800,000 for the cycle, this would represent a savings of approximately — per unit in tool cost over the original Corvair program.

CONCLUSION

We feel that the Corvair program for 1965 has merit. It replaces a vehicle that will have

been in the market for five years and should now be restyled with fresher lines. Furthermore, with over one million Corvairs on the road receiving good public acceptance, it would be a very difficult decision to abandon this concept.

Economically, the project is at least as good as the present version if considered on a long-range basis. Variable profit, while not as good as our regular passenger car, compares favorably with the present Corvair position.

With the high proportion of Monza sales on which the profit position is better, and the option sales opportunity on this unit, the profit position on the complete project becomes much more attractive than when viewed from a base model alone.

The Corvair participates in a market that represents largely plus volume for Chevrolet because of its unusual character which makes it unique in the industry.

As a promotional activity our dealers are forming Corvair clubs much in the same manner as Corvette clubs have sprung up across the country. With the fresh new hardtop styling and improved front and rear suspensions, it is conceivable that we can actually increase our volume potential over present levels and thereby enhance our profit possibilities.

Chevrolet strongly recommends engineering policy approval to proceed with this important project.

EXHIBIT 19

[From the Los Angeles Times, May 28, 1971]
CORVAIR DEFECTS KNOWN FROM START, EX-GM TECHNICIAN SAYS

MAN WHO HELPED BUILD PROTOTYPE CLAIMS EXECUTIVES KNEW OF SAFETY QUESTIONS BEFORE CARS WENT ON SALE

(By Alexander Auerbach)

A man who helped build the first Corvair says that executives at General Motors knew before the car was put on sale that it had handling problems affecting its safety.

George Caramanna, a senior design and development technician in the Chevrolet research and development department from 1957 to 1970, also says that the first prototype built rolled over the first time it was driven.

Among those who knew of the problems, he says, are Edward Cole, now president of General Motors, and Frank Winchell, Cole's assistant who has testified in defense of the car. Winchell was put in charge of GM's engineering staff Thursday, and is in line to become a vice president of the company.

Caramanna also says that a front rod stabilizer bar, intended to make the car less likely to roll, was designed and installed on the prototype, but was removed—to save money, he was told—before the Corvair went into production in 1959.

GM STATEMENT

Asked to comment, a General Motors spokesman said "allegations of improper design of the 1960-1963 Corvair... have been refuted on a number of occasions in the courtroom following the examination and cross-examination of qualified expert witnesses."

Nothing that the Department of Transportation is currently studying handling characteristics of the car, the spokesman added. "We believe an in-depth analysis of the allegations by competent experts to be more reliable than the hit-run tactics of unqualified critics."

He would not comment as to whether Caramanna was an "unqualified critic."

The statement concluded that "General Motors has never denied that the 1960-63 model Corvair may be rolled over after it substantially exceeds its limit of control, which is equal to or better than the limit of control of competitive cars of the same era."

RESIGNED POST

Caramanna resigned from GM and left Detroit when his marriage broke up. He was brought to Los Angeles to help a Hollywood firm design racing cars, but the company folded soon after he arrived. Now Caramanna operates a service station in Spring Valley.

His story adds an insider's chapter to the Corvair controversy. The car became the focal point in a debate over auto safety with the publication of Ralph Nader's "Unsafe At Any Speed" in 1965.

The Corvair went out of production in 1969, but an estimated 600,000 still remain on the road.

Currently the National Highway Safety Bureau is conducting tests of the Corvair, both for handling and for suspected carbon monoxide leaks from the car's heater.

Sen. Warren B. Magnuson's Commerce Committee also is investigating the car, and according to a committee aide Caramanna is expected to be asked to testify.

Caramanna's story conflicts at some points with public statements by GM officials. In 1966 Frank Winchell told the Michigan senate that the introduction of a front stabilizer bar on the 1964 Corvair was simply "a step in the normal process of product improvement."

STABILIZER BAR

According to Caramanna, the stabilizer bar was designed for the 1960 Corvair but was not used. The early models, he adds, had a mounting spot for the bars embossed into the body three years before the "product improvement" took place.

Caramanna, 44, is not an engineer, but he gained a knowledge of suspension engineering while building and racing cars and working for four years in GM's structure and suspension division before joining Chevrolet R&D. He holds half a dozen patents on automotive devices.

While other GM employees involved with the Corvair have given information to Senate and private investigators, Caramanna is the first man who saw development of the car from its earliest stages to production and then through the company's internal reaction to the estimated 400 court cases involving the car, to speak out publicly against it.

His first job in Chevrolet R&D, says Caramanna, was preparing a pretest vehicle for the Corvair engine and rear suspension.

He and an engineer, Frank Burrell out of the engine and rear end out of a German Porsche and fitted it with Corvair components.

"It was Cole's baby," Caramanna recalls. Cole did much of the design work as chief engineer for Chevrolet, and about the time the car moved off the drawing boards Cole was named general manager of the Chevrolet division.

Cole drove the first Porsche with the Corvair engine, having been awakened long after midnight on standing orders to call him when the job was done. Caramanna says Cole was jubilant.

The first true Corvair was the prototype, made in R&D a few months later, and its initial ride was less fortunate.

The prototype had the same structure as the production Corvair, although some of the external sheet metal was different. The prototype was taken to the GM proving ground as soon as it was finished, and a driver named Gib Hofstadter, with Jack Winchell, a technician, took the car to the "skid pad," a large paved circle.

(Winchell's brother is Frank Winchell, the man who took the stand for General Motors in court battles and legislative hearings on the Corvair.)

"They went out to the skid pad and rolled the car," Caramanna says, "rolled it right into the roof." The rollover was purely accidental, not part of any test program, he says.

No one was injured.

That rollover was not the first indication trouble lay ahead for the reputation of Corvairs suspension, however.

Before moving to R&D, Caramanna worked on suspensions under a man named Von D. Polhemis. Polhemis Caramanna says, met with some of the men in charge of the Corvair project long before the car was in production, and told them he felt the suspension was unsafe. "They laughed at him and called him an idiot," Caramanna recalls.

TELLS OF MEETING

Shortly before the Corvair was to go into production in 1959, Caramanna says, he and Frank Burrell met with Kai Hansen, who was directly responsible to Cole for the project.

"Kai told us that the front roll stabilizer on the prototype would not be used on the production model, because it cost too much." A few days later he and Burrell told Hansen in Cole's presence that they felt the lack of the stabilizer bar would make the car unsafe, he says.

In a 1960 speech GM suspension engineer Charles Rubly said the roll stabilizer bar was left off because "we felt the slight amount of gain realized did not warrant the cost."

The problem with the Corvair, in Caramanna's opinion, is not that it was a rear-engine vehicle, as many laymen believe, but that it had problems with its rear suspension and swing axle.

There is a theoretical point in a car called the "roll center," he explains. When the car is in a sharp turn or when hit by a gust of wind, it tends to rotate around that point.

The Corvair's roll center was about 14 inches above the ground when fully loaded and higher with only the driver aboard. He thinks that was far too high. The theoretical point can be located near or even on the ground by using different suspension techniques, he says.

EASILY CHANGED

The standard Corvair could be readily altered to make it far more roll-resistant, Caramanna says.

Shortly after the car was put on the market, reports filtered back to GM that Corvairs were wearing out tires very quickly in races, scuffing the sidewalls.

R&D was charged with building a Corvair that would do well in racing, and Caramanna prepared three cars for the Daytona Beach races in Florida. The job was relatively easy, he says.

He put on the stabilizer bar that had been designed for the prototype Corvair, then cut the coil springs in the rear to lower the car. The shorter springs gave the car a wider rear track. The final touch was the installation of nylon straps to keep the rear wheels from "jacking" or tucking under the car.

"You just could not turn that car over the way we fixed it," Caramanna says.

PREPARING DEFENSE

As the court cases erupted early in 1960, one of R&D's main tasks became preparing the defense of the car.

As part of one defense, Caramanna had to drive a Corvair as fast as he could through a series of turns around pylons, reproducing the sharp turns that were said to cause the car to roll over.

"I had a movie camera in front and another in back, one to the side and another in a helicopter overhead," he says.

"I got the car through by keeping my foot steady on the accelerator pedal tapping the brake once with my left foot, and whipping the steering wheel from side to side."

That was vital in driving the Corvair under lateral acceleration, he says, since keeping the gas on kept the rear wheel from slipping.

Once the rear wheels began to slip, he said,

they would tend to "jack" or fold under the car, making a rollover possible.

"Now I could keep the accelerator steady, and most race drivers could, but the reaction of the ordinary driver on the street is to hit his brakes, or back off the gas," Caramanna says.

"That's the worst thing you can do, because the rear end lifts up and the rear wheels lose their grip on the road.

"If the car has any lateral acceleration when you do that, from a skid or a gust of wind or if you jerk the steering wheel, you're gonna roll that vehicle.

"It doesn't have to be at a high speed. It can happen at 30 m.p.h. or even less in a sharp turn."

[From the Detroit Free Press, June 14, 1971]
EX-GM AIDE TOLD FAMILY TO STEER CLEAR OF A CORVAIR

(By William Schmidt)

SAN DIEGO, CALIF.—In 1960, George Caramanna visited his sister Lillian Mulvihill in Southgate, and offered her some inside advice.

"Whatever you do, Lillian," said George, at the time a technician at the General Motors Tech Center in Warren, "don't buy a Corvair. If anyone in the family does, in fact, I'll give them a good kick in the butt."

George Caramanna was not, as he was to say later, "just speaking for my health."

At the time, Caramanna was among a handful of highly paid Chevrolet engineers and technicians who had just helped design, test and prepare the rear-engine Corvair for its late 1959 debut.

Caramanna, who now lives near San Diego, runs his own service station and no longer depends on GM for his future, became the first real insider to claim publicly what many critics have been arguing for years—that the Corvair was a poorly designed and dangerous car and General Motors knew it from the beginning.

And Caramanna has been subpoenaed to appear in Washington, D.C., Wednesday and tell Sen. Abraham Ribicoff's subcommittee on executive reorganization all about the car.

The subcommittee is investigating charges that GM gave false testimony during a one-day hearing in March, 1966, at which a GM executive denied allegations the car was unsafe.

Caramanna received unexpected support from the Ford Motor Co., which turned over to the subcommittee private test data on the car. A Ford engineer, Harley F. Copp, had written the subcommittee on June 5 and told them that Ford test data showed the Corvair to be unsafe.

"I knew it was a lousy car and so did a lot of people I worked with," said Caramanna, 44, a short, lean auto mechanic and part-time race driver who quit GM in 1970 and headed for the West Coast.

"Even so, a lot of those same people turned right around and went out in the courtroom to defend the car.

"There are still too many Corvairs on the road today. I can't even keep a clear conscience about it anymore."

According to Caramanna, who worked on the Corvair for about seven years in Chevrolet's Research and Development (R & D) section, early models of the car produced between 1960 and 1963 suffered from a poorly designed rear suspension that caused handling problems affecting safety.

It is an old charge, first made by Ralph Nader in his 1963 book, "Unsafe At Any Speed," and repeated in lawsuits filed by former Corvair owners who blamed their accidents on the car's poor handling.

The problem with the 1960-63 Corvair is highly technical, said Caramanna, and involved a poor rear suspension which he said gives the vehicle a tendency to roll over or spin out in a sharp turn or when hit by strong gust of wind.

He said GM engineers knew about the problem early in the Corvair's development, because a prototype of the car built by Caramanna and engineer Frank Burrell rolled over the first time it was driven.

Though he had no formal engineering education, Caramanna said he later installed a stabilizer bar in the prototype to make it less dangerous.

Despite warnings from engineers and suspension experts involved in the project, however, Caramanna said GM removed the bar before the car went into production. He said he was told it was done to save money.

In 1964, after the first wave of allegations that the car was unsafe, Caramanna said the stabilizer was installed in the new models.

GM has denied Caramanna's charges, first described May 28 in a Los Angeles Times newspaper article. In a statement, GM said similar allegations already had been "refuted on a number of occasions in the court room following the examination and cross-examination of qualified expert witnesses."

But Caramanna said he already knew that. He said he was the guy who drove the Corvair in some of the films General Motors made to use in court as evidence to prove the car handled safely.

In one of the films, Caramanna had to drive a Corvair as fast as he could through a series of turns and pylons while he was filmed by two cameras inside the car, two cameras outside and another in a helicopter overhead.

Despite the quick, sharp turns, the car didn't roll over.

"O course it didn't," said Caramanna. "I was driving the car like a racer—keeping a steady foot on the gas and just pedal-tapping the brake.

"Ordinary drivers wouldn't drive that way. In a sharp turn, they'd hit the brake or back off the gas, which can cause the rear end to lift up and wheels to lose grip on the road.

"The first thing you know you'll roll over or start spinning."

Caramanna knows what he is talking about when it comes to racing. He spent several years roaring around Detroit's old Motor City Speedway in a refurbished 1935 Hudson coupe, and later helped design and build the streamlined Chaparral, America's first Formula I racing car to win in Europe.

A native of New Jersey, Caramanna's family moved to Detroit when he was 13. He attended several schools, and finally dropped out in the 11th grade at Eastern High School in 1944.

He enlisted in the Navy, which trained him as a mechanic. When he left the service in 1947, he went to work in a gas station on Gratiot near E. Forest.

"I've always had a natural mechanical ability," says Caramanna. "When I'm driving along in a car, I can see in my head how the whole engine is working—pistons moving, the cam, everything."

In 1953, General Motors advertised for a suspension mechanic, and Caramanna—hoping to improve the handling of his Hudson stock car—hired on at \$375 a month in GM's structure and suspension division.

In 1957, he became part of the Chevrolet R & D section launched five years earlier by Edward Cole, the Chevrolet chief engineer who is now president of GM.

The Corvair was Cole's pet project, and he used to pencil ideas for it when he managed the Cadillac Tank plant in Cleveland during the Korean War.

Caramanna said Cole was so enthused about the car that he ordered him and Burrell to call as soon as they had completed the pretest model so Cole could test drive it.

"We got him out of bed sometime after midnight for that first drive," said Caramanna. "Cole was so excited about the car that when he finished the drive he got out and actually jumped up in the air and clicked his heels."

Despite his lack of formal engineering education, Caramanna's natural ability carried him a long way. Working with the GM patent section, Caramanna patented a half-dozen different automotive devices, including one he invented with Frank Winchell, the former director of Chevrolet R & D who is now a GM vice president.

When he left GM in February 1970, Caramanna's salary had grown to \$1,275 a month.

He left GM shortly after his marriage in Detroit broke up.

Caramanna traveled to North Hollywood, Cal., and hired on with actor Steve McQueen in an unsuccessful attempt at building racing cars.

Later in the year, Caramanna moved to Spring Valley, a suburb of San Diego, and opened a service station he says is already bringing him better money than he made at GM.

Caramanna said he decided to speak out about the Corvair when he heard about the Campaign GM project in Detroit last year.

Let by Nader, the project was aimed at making GM more responsive to consumer demands.

As a result, Caramanna became involved with Nader's people, and is now represented by attorney Gary Sellers, who is Nader's legal aide.

"My only regret is that I didn't speak out sooner," said Caramanna.

"In 1961 or '62, I almost wrote Sen. (Robert) Kennedy about the Corvair. But I had a wife and two kids and was a little worried about my job.

"But now it's different. I appreciate everything GM did for me, and I like the free enterprise system.

"But there is no way in the world a company should be allowed to build cars that are just going to hurt people."

EXHIBIT 20

JULY 16, 1959.

To: E. N. Cole, K. E. Staley, E. H. Kelley, H. F. Barr, D. D. Douglass, N. E. Farley, R. G. Ford, E. Gray, K. H. Hanson, E. L. Harrig, L. R. Mason, L. N. Mays, E. J. Premo, L. J. Rausch, M. S. Rosenberger, W. E. Schmidt, H. H. Schroeder, and E. S. Wellock.

From: A. W. Harris, J. E. Mackenzie, J. C. Purcell, T. O. Townsend.

Subject: Comparison of Corvairs and Chevrolets on simulated cross-country trips.

Through the cooperation of the Willow Run Plant, the Service Department was able to obtain its Corvairs for the Flat Rate and Wreck Programs two days ahead of schedule. This enabled us to make a 1000 mile, two-day run at the Proving Ground simulating a cross-country vacation trip. The two Corvairs were compared against two Impala hardtops by the above personnel.

Although we are more or less familiar with the Corvair design and performance on short test under specific conditions, none of us had an overall feel of the Corvair on long distance, vacation-type driving. We felt that a simulated test would be desirable not only to learn more about the product, but also to know what to look for when the Corvair arrives in the field, to better train our personnel, and to compare our opinions with Engineering Reports from the customers' point of view.

Consequently, on July 9 and 10, the four of us each drove a Corvair one day and a Chevrolet one day for a distance of 500 miles over an average daily running time of 9 hours, 12 minutes, and elapsed time of 11 hours, and 43 minutes. We did not change cars during a single day's run to simulate actual customer conditions. Half of the distance was driven on the ride and handling loop which consists of a series of different type asphalt and concrete pavement conditions with severe unbanked, curves and railroad tracks. Road surfaces ranged from

broken-up, poorly repaired concrete to satin-smooth asphalt with a considerable amount of corduroy, washboard, dips, pot holes, etc. The other half of the distance was driven on the truck loop which has a smooth asphalt surface but is quite hilly. Approximately five miles each day was driven on the inside shoulder of the truck loop which is extremely rough gravel permitting top speed of 25 m.p.h. to stimulate a horrible example of a detour.

The two Corvairs were both equipped with automatic transmissions. The Chevrolets they were compared against were both brand new Impala, 4-door hardtops equipped with power steering and power brakes. One had a 283, 2-barrel engine and Powerglide transmission while the other had a 348 engine with Turboglide transmission. (The objective here was to compare the top of the line luxury models with the bottom of the line economy cars.) Each of the four cars was first given a safety check only, to approximate a "hit-and-miss" type of field new car conditioning.

SUMMARY

In summary we are very favorably impressed about the capabilities of the Corvair. It is a roadable "automobile" with many features more desirable than the Impala under the conditions driven. While we are not in a position to judge its salability, it is interesting to note that when we compared our opinions, most of us were thinking of buying one for wives or teen-agers.

We did find some "bugs" during the test and know of many others. It is sincerely hoped that Management will attempt to eliminate these conditions on Corvairs stored at Milford so that we don't get into a series of "Turboglide type" campaigns in the field with resulting loss of confidence by wholesale and retail personnel.

The following are some general comments categorized into Fatigue and Comfort, Safety, etc. Attached are a narrative of road failures during the test, results of an inspection made on all four cars prior to the test, and a tabulation of speed, oil, and gasoline economy.

FATIGUE AND COMFORT

The group rate the Corvair slightly better than the Chevrolet under the conditions we drove. Individual opinions vary from a stand-off to superior. The major Corvair advantage here is in the front seat. We believe the Impala seating position is much more unnatural (low to floor). Also, the Impala seat is rated as slightly to considerably hotter than the Corvair seat due to type of trim material. Shoulder support on the Corvair front seat back rest is better. The attachment of the seat to the body seems to be much more positive with no noticeable fore and aft chocking.

The Impala requires much more effort to control on rough curves at fast speeds even though equipped with power steering and power brakes. The Corvair really is a "cat on a carpet."

Conversely, all of us feel the Corvair accelerator pedal effort is excessive and contributed to fatigue. We all noticed the cramped left foot position due to the wheel housing. We believe the toe-pan angle could be improved in this area for more comfort even with wheel housing limitations.

SAFETY

We are very much concerned about Corvair throttle linkage sticking in the wide-open position. This occurred twice on one car at 77 and 789 miles and once on the other car at 207 miles. Proving Ground personnel inspected both cars (one while stuck) and we believe they agree the sticking is somewhere in the tunnel and not in the usual places in the engine compartment. Tunnel covers on both cars were removed and no cause of sticking could be pinpointed.

Our concern is made acute because no one knows why the throttles stuck and the con-

dition cannot be duplicated. Thus, there is at this point no fix and we know of no way to check for a potential failure. If the condition occurs in the field, it will inevitably lead to accidents and lawsuits. Engineering Center and Plant personnel have been advised.

When trying to check the stuck throttle linkage on one car, the accelerator pedal splines were stripped. It appears this pedal attachment is complex, expensive, and ineffective.

For conservative drivers, the Corvair power plant and gear ratios are quite adequate. The engine is, of course, inferior to the 283 two-barrel engine in passing ability and high speeds, and on grades.

Service brakes were rated adequate to excellent and loss of pedal during the 1000 miles was much less on both Corvairs than on both Chevrolets. The parking brake failed on one Corvair (reported as a loose fulcrum pin). This condition, of course, left the car with no method of holding the car when parked. None of us feel the pump-up type emergency brake is as safe as the present type. The release is "explosive" and rattles.

A left rear tire blew out on one Corvair at 50 m.p.h. on a railroad crossing (not due to fault of car or driver) and no difficulty whatsoever was noted controlling the car to a halt. Tire wear was much less on Corvairs than Impalas. Both right-front Impala tires were bald at the end of the test and must be replaced. (Toe-in on one car was $\frac{1}{4}$ " in and the other had $\frac{1}{16}$ " toe-out, although wear was equal.)

The cornering ability of the Corvair is rated from very good to outstanding even though we drove alone with no luggage. It seems to impart a feeling of confidence that the driver can take sharp, unbanked curves much faster than in a Chevrolet. The flatter feel of the ride with lack of "float" is not as pleasant as the billowy type of Chevrolet ride except when going over railroad tracks and "roller coaster" type of bumps.

Glare and reflections in the windshield are not as severe on the Corvair but glare off the top of the lids over the instrument cluster and glove box as well as windshield wiper arms was noted. The turn signal housing and upper portion of the steering wheel reflected very visibly on the windshield.

NOISES

Our second major complaint on Corvairs concerns the cacophony of discordant buzzes, rattles, creaks, squeaks, moans, etc. Both the heaters had a singing tea kettle type of noise. Instrument panel rattles were particularly bad in the cluster area, the glove box, and ash tray. Door trim pads were noisy, one turn signal cancelling cam clicked on all turns. Rear spring type of noise was objectionable on one rear suspension and noticed on the other. Both cars had a light moaning or whooming noise at 60-65 m.p.h. Various panels buzzed when the horn was blown. The bodies appeared to have a drumming noise on rough roads at high speeds. One Corvair had a noisy speedometer cable.

None of these noises individually are perhaps serious but when heard as a whole are extremely objectionable. We recommend Engineering assign a squeak-and-rattle engineer to check twenty or thirty Corvairs on the ride-and-handling loop as they are unloaded from the haulways. This should provide a pattern leading to the solution of most noises we heard.

One Impala (which bore a sticker saying "100% deliverable") was extremely noisy. Metal-to-metal squeaks were found in the radiator lower valance panel to left bumper support and at the left fender skirt to fender behind the wheel opening. The right front door creaked and the gearshift lever rattled excessively.

At high speeds, the Corvair engine noise is practically inaudible. At low speeds and at idle, it was rated from the driver's seat

as acceptable to good. However, it is not as good as the 283 engine under these conditions.

GENERAL COMMENTS

We expected more Corvair gasoline economy than we got (18.2 average both cars) even under these hard driving conditions. However, these figures are complicated by the fact that we found early in the test both right-hand carburetor to manifold gaskets mispositioned which restricts the bore and causes an air leak (plant advised). Economy before gaskets were positioned was about 3 m.p.g. less than the rest of the test. On the other hand, the Corvair engine seems to "loosen up" much more in the first 500 miles than the V-8's.

We are afraid the public will be disillusioned if economy is given too much emphasis.

The upward opening of the front door handles and downward opening of rear door handles is confusing. We like the true Chevrolet type of door locking procedure much better than the "Ford" type on the Corvair.

Trunk space leaves much to be desired and emblem studs projected way into the trunk with possible damage to the contents. The spare tire air pressure cannot be checked easily according to present type mounting. The tire should be reversed.

NARRATIVE OF ROAD FAILURES

CORVAIR 00769W100017—ODOMETER AND REMARKS

28 Left rear tire blew out and wheel damaged by a loose plank at railroad crossing.

60 Engine oil suction pipe and screen assembly fell out (early design without bracket). The pipe measured 0.621" and the hole 0.623" (hot). Vacuum leak discovered at right-hand carburetor to manifold gasket. Found gasket had been turned end for end introducing a vacuum leak and restricting the passage of fuel vapor.

150 Powerglide began to run away occasionally for a few seconds during throttle upshift.

NOTE: This gradually got worse and after the test it was found that the control cable was approximately 0.100" too short at the checking dimension from the ball to the flange. This has been brought to the attention of the assembly plant. This in turn was found to be due to a poorly routed and twisted cable conduit. When straightened out, it was O.K.

207 Throttle stuck wide open.

540 Coil primary wire fell off coil.

700 Noticed a light moaning noise at 60-65 m.p.h. Sounds like an air induction noise.

995 Engine flooded out going down hill on both gravel detour loops (first type carburetors). On the second loop, it took four minutes to get the engine started.

CORVAIR 00769W100015—ODOMETER AND REMARKS

53 Parking brake became inoperative (reported as fulcrum pin came loose).

77 Throttle stuck wide open.

222 Glove box door pops open continually. Discovered vacuum leak in righthand carburetor to manifold gasket. This is an identical failure to the other Corvair.

400 Sun visor won't stay up and there is no means of tightening. What do I do now?

573 Parking brake release handle screws are loose. Had parking brake and glove box repaired.

632 A whirring hum that comes and goes at constant wide open throttle about 70

m.p.h. was noticed similar to a belt or fan hum.

671 Gasoline gauge drops from one-eighth full to below empty indicating an intermittent open circuit. Later it was O.K. Slight brake pinch out noted.

719. A noise similar to coil spring noise noted in rear suspension.

789 Throttle stuck wide open. Engine oil leak—LF corner When replacing accelerator pedal (splines stripped when checking stuck throttle), it was noted the Powerglide control cable was improperly routed at toe-pan, a clip was missing, and the Powerglide cable cover was cut by emergency brake cable

CHEVROLET F59F243611—ODOMETER AND REMARKS

167 Hood shake at left rear corner noted on bumpy roads.

369 Transmission groaned loudly in reverse at medium throttle.

450 Reflections and glare are objectionable.

478 Gearshift lever rattles. Knob has 1/2" free play and will drop of its own weight.

50 The aft end of the hood flutters noticeably above 60 m.p.h.

200 Rocker arm ball nut chirp noted.

300 Front wheel unbalance noted at approximately 80 m.p.h.

400 Left side of cowl started to creak. Later disappeared before 500 miles.

869 Made odometer check—found 2.28% fast.

PRELIMINARY INSPECTIONS—NO WATER TESTS WERE MADE

CORVAIR No. 00769W100015

NOTE: Additional items were found, but they had been noted by Willow Run for repair. Repairs were not made at Service Department request to expedite delivery.

1. Rear window frames misaligned, low and forward. (Possibly center pillar is too far aft.)*

NOTE: An asterisk indicates the condition was noted on both cars. Items are not repeated on Corvaire No. 17.

2. Trunk lid misaligned to right.

3. Roof side rail mouldings short at front lower end. (The junction of the door parts, fender, and cowl at lower corner of windshield has an objectionable appearance.)*

4. Very rough metal above and below headlights.

5. Left front corner of headlining soiled.

6. Rub-thru on forward edge of cowl louvre panel.

7. Flanges on trunk floor do not fit properly to wheel house panels.*

8. Thinner bolts on both ends of instrument panel (both areas approximately 1" x 6").

9. Pinch welds under rocker panels are unsightly.*

10. No provision made to seal a large hole in engine compartment at license light, yet hood latch hole (approximately same size) is sealed.*

11. Ash tray plastic retainer loose in instrument panel.

12. Glove box bezel bellied between screws. Why have a seal on the instrument cluster bezel and not on glove box bezel? Owners will think one is missing.

13. Parking brake required 2 1/2 strokes to lock brakes.

14. Nine points of air leakage were observed in engine compartment sealing. The smallest was 1/8" x 1/4". Some are design deficiencies.*

15. (Critical) Engine air cleaner to carburetor hose clamps at all four carburetor ends were positioned partly off hose. When one hose on No. 0015 was checked for looseness, the air cleaner to hose bracket fell off. Only one of four tabs was welded and it was defective.

16. Neutral safety switch misadjusted. Engine starts between neutral and drive detents.

17. Oil leak at filler pipe connection to transmission.*

18. Both parking lights, dome light, and instrument panel lights were inoperative.

19. Heater controls were stiff.*

20. Gasoline leak at tee to heater hose.

21. Windshield washer jar cap hinge design is very flimsy.

CORVAIR No. 00769W100017

1. Solder pits at tulip panel behind rear window.

2. Left rear door weatherstrip torn at upper front corner.

3. Both rear door trim pads were bellied out.

4. Dirt in paint at top of lock pillar interior trim panel.

5. Paint has dripped from above on deck lid and lift front fender.

6. Vacuum advance hose partially kinked at coil.

7. Transmission vacuum hose rubs on right rear lower control arm.

8. TV lever rubs edge of transmission oil pan lightly.

9. (Critical) Steering wheel to mainshaft nut had never been tightened, just started on shaft.

10. (Critical) All tie rods clamps were loose, both tie rods could be rotated easily by hand.

11. Windshield wiper blades parked too high.

12. Windshield wiper arm under dash rubs wiring.

13. Battery cable negative terminal not tight, easily removed by hand.

14. Heater air duct clamp at forward blower was missing. Why is a clamp needed here?

CHEVROLET F59F243611

1. File marks on right rear door below moulding.

2. Front seat back trim out of place on left end.

3. Dash pad material partially covers left defroster duct opening.

4. Right front door creaks.

5. Engine oil pant front gasket has a slight leak.

6. Air cleaner is loose.

7. Fuel hose is twisted and slightly kinked at fuel pump.

8. Fan belt is too loose.

9. Powerglide upper cooler pipe interferes with breather pipe bracket.

10. Gas tank vent pipe is misaligned.

11. Radiator lower valance panel interferes with bumper support bar and squeaks.

12. Spare tire and jack loose rattling.

13. Left front fender has a metal-to-metal contact with fender skirt and squeaks.

14. Speedometer seal sticks out 2 1/2" on left end.

15. Left windshield washer stream aimed at bottom of windshield lower garnish moulding.

CHEVROLET F59F243664

1. Left rear door cocked in opening. There is an interference at the bottom rear corner.

2. Right rear door also cocked in opening being tight at the top front corner.

3. Right front door has rub-thru on lower rear edge.

4. Left rear door trim pad loose at lower front corner.

5. Right front door remote control lock rod grommet is loose.

6. Right rear door reveal moulding not in clips at rear.

7. Left rear tower window is extremely noisy when window is raised.

8. Glove box is misaligned.

9. Right rear quarter lower trim pad is missing.

10. Ash tray is misaligned.

11. Rough metal finish on right rear quarter at corner next to tail light.

12. Fan belt is loose.

*Delayed by repairs and investigations.

13. Accelerator pedal is misaligned to operating rod.

14. Choke pipe is loose in manifold.

15. Gas tank vent pipe is misaligned.

16. Gas line hose clamp at left frame side rail interferes with toepan.

17. Horn ring is dead at 7:00.

18. Horn rattles against grille header panel.

Subject: Comments on Test Trip to Berea, Kentucky

The following comments are a result of our test trip to Berea, Kentucky involving the Corvaire test cars on both the automatic and the 3-Speed transmission.

ENGINE

1. On both cars the engine oil filter tube was loose as we have previously experienced on production engines. A change must be made to correct this condition on our present design.

2. The change which was made in the exhaust ramp of the cam improve the valve noise level on Car 0500.

3. There was considerable oil fumes and seepage noticed at the oil dip stick. We should very seriously look at sealing off this with a positive fitting seal.

4. There was indications of detonation on the 3-Speed in high gear when operating at the low engine speeds. I do not consider this a very important item and plan no change in the spark advance curve to remedy this condition since in normal operation it would be shifted into second gear.

5. There was excessive air cleaner vibration noticeable in the car at about 65 mph. This is a tuning problem and should be looked into to see if we can remedy this condition.

6. Considerable driving was done on various carburetors to finalize the necessity for separate carburetors on the automatic and the 3-Speed. The conclusion which we came to after these series of changes, would be that we would accept a separate carburetor for these two transmissions and what was driven on the return trip on these two cars would be the lean limit of each carburetor. We will proceed immediately to finalize this calibration and release these carburetors for production, even though on the return trip we only gained about 1/2 of a mile per gallon on the 3-Speed over the automatic for highway economy.

7. There was a very definite period at the low engine speed which from our past observations, is related to muffler. This vibration is considerably worse with a cold engine. According to the Proving Ground, this condition can be remedied almost completely by the installation of flexible mounts at the rear end of the attachment of the muffler to the

engine. If this is the final fix for removing this vibration, we will move in this direction with our design.

8. From our tests, we indicate that our balance of the generator is critical for boom. We must look at a mount for the generator which is not as critical for vibration as the one that we have released for production.

9. It was felt that the engine mounts are tuned very close to the torque reaction period on the automatic transmission at engine idle. We must change our mount characteristics so that this condition will not exist in this range of engine speed.

10. There was some observation of throttle sticking at idle on the automatic transmission. Even though we had a heavy return spring on the throttle linkage, the carburetors should be checked to see if they return to the idle stops and we must be sure that this condition will not become apparent on cars when the torsional spring is removed from the carburetor cross shaft.

11. The ground strap which is connected to the throttle and does not stay in position. This is a design deficiency if this installation is up-to-date.

12. On test car 0550 there was an engine oil leak at the rear end of the engine in the vicinity of the oil cooler. This should be checked.

SUSPENSION

1. We were very much dissatisfied with the released rear shock absorbers. There was considerable pitching of the vehicle over wavy roads both on and off the main highway. This has been experienced on previous test cars on this type of operation, therefore, we took a set of experimental shock absorbers which have been worked out at the Proving Ground along on this trip. These were installed and driven over a considerable distance in the vicinity of Berea.

It was a general agreement among the various observers that this would be a definite improvement in the overall ride and handling of this car. As a result of this, we will immediately release this experimental shock absorber valving and get it into production as soon as possible. We will work with Production Engineering so as not to build shock absorbers with the present release valving. All engineering cars to be converted.

2. Mr. Cole felt that we should reduce our rebound travel of the rear suspension as much as possible both from the appearance and the general handling of the car. It was felt that the production car with the new shock absorber valving was very satisfactory for handling on these extreme roads. We will not reduce any rebound travel if it impairs our overall ride but we will eliminate all rebound travel which is not necessary for the behavior of the rear suspension.

Proving Ground will install rebound straps on the rear wish bones in conjunction with a scratch graph. This will give us an indication of how far we can go to eliminate rebound travel. Rebound travel has been reduced previously.

3. The observation of wheel fight on this test trip was quite favorable on the car which we have reduced the positive caster by 2°. We will immediately release a design for production which changes our upper front control arm to give us this new wheel alignment. We will go one step farther to minimize wheel fight, and that is to observe on several cars the new idler lever which we also had on one of the test cars. It was also felt that this new construction on the idler lever which is the same as our 1959 idler arm, is a gain. This construction should be evaluated on several cars at the Proving Ground to make sure that it is a help.

4. Spring interference was apparent and corrected on the rear suspension. This condition was remedied by bending the flange on the lower plate of the cross member. This is a production item and should be taken care of immediately with Willow Run and we

should also see to it that we obtain as much clearance as possible on our production design.

5. Directional signal prongs shorts across the horn contact when the steering shaft is deflected on Car 0550. This condition observed shows a very close clearance between the canceling prongs and the horn contact. This is a design condition and should be remedied as soon as possible.

6. On both cars, very serious brake roughness was observed on practically all types of brake applications. This is a condition which has appeared on previous cars but not to the alarming degree which we observed on this test trip. A very aggressive program has been initiated to finalize and to remedy this condition on production vehicles. Mr. Rubly will work directly with the Development Group on this program to observe and also to relate any design changes which are necessary to eliminate this condition. We will investigate both the drum and the brake shoes and also the fit of the yoke in the axle to see if that is also related to this observed roughness.

7. It was observed that the 3-Speed throttle control introduced vibrations into the throttle pedal. This will be investigated to see if we have the right isolation characteristics.

GENERAL OBSERVATIONS

1. During our rides there were several criticisms of the seat cushion and back. The general conclusion which was arrived at was that we should have cushions with somewhat stiffer seats so that we did not get into an uncomfortable condition after riding over a considerable time. It was felt that the seat cushions as a whole, were too soft with insufficient dampening, and that the slope of the seat cushion should be raised at the front edge as it was installed in one of the test cars. This type of a cushion is being demonstrated in these same two cars at the Proving Ground.

2. The single speed windshield wiper was tested during the rainy weather and under very wet conditions we had 58 cycles/minute of the blade and when the windshield was slightly wet the oscillations dropped to 50 cycles/minute.

3. There was water in the luggage compartment after heavy rain on both cars.

4. The front rubber carpet on the floor was torn in several places. This could be poor material.

5. The heater controls were too tight for pleasant operation and also the knobs were not of the latest contour.

6. The defroster action kept the windshield clear during the rain.

7. A very objectionable reflection was observed from the dash in the windshield right at eye level. This will be a very serious customer complaint.

K. J. HANSEN,
Engineering Department.

EXHIBIT 21

INTER-ORGANIZATION LETTERS ONLY

CHEVROLET,
May 24, 1961.

To: Mr. Duntov.

From: Mr. G. Caramanna.

Subject: Trans Canadian Rally.

Upon arriving in Montreal, we found the Chevrolet dealership full. We then called up the G.M. training center, and were given room to work.

Mr. Trent Jarman complained about some front end oversteer; upon checking four cars, on front end machine, it was found that they were from 1/2" to 1" toed in.

The cars were set with full racing type suspension. The rear springs were cut off one full coil, to lower car and to get -3° camber. The front springs were left with their full length, the thought being that the added weight, of spare parts, gas, oil and other miscellaneous things would lower

cars. All this was done without regard to spring rate. There were no rebound straps added to suspension to take rebound shock and relieve shocks.

The roads that the Rally traveled on, for the most part, were not the type, that were conducive to the above type of car suspension. There were many donkey backs and many rutted and very rough roads.

The time element involved in this Rally, was not of the nature to warrant very much speed, point in many instances all cars in rally, were from one half hour to two hours early at check points.

There were three production type Corvairs also in Rally. I completely checked over these cars, to compare their performance to ours.

Upon completion of Rally, it was found that the production cars had little or no damage to under side of cars, while the four we had were very bad. The controls were bent, and in one case the throttle linkage was stuck on one half throttle.

The tunnel covers were smashed beyond repair, and shift tubes had to be hammered straight for them to fully engage gear. Near completion of rally, the tires in our cars were throwing their threads. The cars also were losing standing height.

One car had frozen its transmission, and broke case. It was noticed that there were no transmission dope on the ground, it is felt, that the case was cracked when traveling a very rough road; the road was so, that drivers left the road and went on the fields rather than travel them.

One car had a bent push rod, it was noticed that push rod was installed up side down, with lube hole on the lifter side.

The production Corvairs lost a total of 4 fan belts and ours lost two. One production Corvair lost its rear axle bearing. One had a frozen front wheel bearing.

It is felt that any one of our Corvair could at any time, have been knocked out of Rally, due to the lowered height of cars. Car height is felt to be of more importance, than handling.

GEORGE CARAMANNA,
Research and Development.

EXHIBIT 22

DEARBORN, MICH., June 3, 1971.

HON. WARREN G. MAGNUSON,
Chairman, Senate Commerce Committee,
Old Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: I am writing you this letter as an individual experienced in the design and development of motor cars and without the knowledge of my Management in the Ford Motor Company. In my attempt to affirm the source and truth of a General Motors statement that the 1960-63 Corvair was "equal to or better than the limit of control of competitive cars of the same era", I called Mr. Alexander Auerbach of the Los Angeles Times—Washington Post Service and he suggested that I provide additional copies of this letter to DOT. Because of Mr. Auerbach's interest and assistance I have also provided him a copy of this letter at his request.

The Detroit News stated on Friday, May 28, 1971, copy enclosed:

"General Motors has never denied that the 1960-63 model Corvair may be rolled over after it substantially exceeds its limit of control, which is equal to or better than the limit of control of competitive cars of the same era."

I refute the competitive implications of this statement; "which is equal to or better than the limit of control of competitive cars of the same era" concerning our competitor the 1960 Falcon engineered and manufactured by the Ford Motor Company.

I had the engineering responsibility on our competitive car, the 1960 Falcon. Upon joining the Ford Division as Assistant Chief

Engineer in August 1956 Mr. R. S. McNamara, Vice-President and General Manager of Ford Division, and Mr. Hans Matthias then Chief Engineer of the Ford Division assigned to be the responsibility for developing designs for an economy car. Prior to this assignment I was Chief Engineer of Lincoln and I am now Director of our Company Engineering Technical Service Office.

We began our pre-program studies on economy cars with an assessment of various vehicle configurations including reviews of a rear engine car in the 1700-2300 pound weight range. The results of these pre-program studies led to the front engine Falcon which was introduced in late 1959 as a 1960 model.

As you know, Ford Motor Company evaluates and tests competitive cars as a routine aspect of our business. Therefore, prior to introduction of the Falcon we exchanged five production Falcons for five production Corvairs with Chevrolet management. Of these five and some additional Corvairs bought through dealerships, three Corvairs rolled over during our early customer type evaluations.

None were rolled due to abusive driving, none were considered driver error and all came as surprise to the drivers and passengers. These roll-overs were a most unusual occurrence because of their frequency. The roll-overs were:

1. Late summer 1959 on Dearborn Proving Grounds lowspeed track.
2. Late summer 1959 on Dearborn Proving Grounds while an engineer was taking a ride.

3. Late fall on a Kentucky road during a competitive product evaluation trip. Other competitive cars were on this trip.

The Corvair rear suspension was a swing axle type with a high rear roll center from 1960 until the 1965 model. Relating to this type of suspension, Mr. Maurice Olley who retired from General Motors in 1955 as Special Assistant to the Chevrolet Chief Engineer in charge of suspension development stated in his patent, No. 2,911,052, which was issued on November 3, 1959 and applied for on May 18, 1956, subject: Independent Rear Suspension for Vehicles:

"While this type of suspension has enjoyed a certain measure of success, particularly in the relatively small vehicles popular in Europe, it nevertheless possesses certain inherent disadvantages which have thus far prevented widespread acceptance. In particular, the ordinary swing axle, under severe lateral forces produced by cornering, tends to lift the rear end of the vehicle, so that both wheels assume severe positive camber positions to such an extent that the vehicle not only 'oversteers' but actually tends to roll over. In addition, the effect is nonlinear and increases suddenly in a severe turn, thus presenting potentially dangerous vehicle handling characteristics."

Apparently Mr. Olley retained some affiliation with Chevrolet after retirement because three months prior to introduction of the Corvair he was used by Chevrolet to provide "expert testimony" on the engineering characteristics of the rear engine car to 50 newsmen at the Detroit Athletic Club.

Technology existed to certify on an objective basis the superior handling characteristics and "limit of control" of the Falcon, e.g.:

1. General industry practice is to design the handling characteristics of our cars to the driving habits of our customers. Ford practice has always been to insure that the handling characteristics of the vehicle result in predictable response during an emergency maneuver. The 1960 Falcon exhibited these favorable characteristics while the Corvair did not.

2. Automotive proving grounds have as part of their facility a vehicle handling road. In this road system is a switch back wherein the vehicle makes either a left or right turn and immediately thereafter is expected to

make the opposite turn. On repeated tests over our handling roads the 1960 Falcon was clearly superior in "limit of control" to the 1960 Corvair.

3. Rear engine cars, regardless of the rear suspension, exhibit borderline handling characteristics especially if the total weight of the vehicle exceeds 1,800 pounds. These borderline characteristics are particularly true on wet pavements and/or icy roads where, because the greater weight of the vehicle is behind the center of gravity, the rear end of the vehicle wants to rotate and skid in the direction of travel when cornering or braking; rear end first.

4. In the mid-1950's Ford built a front engine experimental swing axle car with a rear suspension similar to the 1960 Corvair rear suspension and this car rolled over on our proving grounds during a typical handling test.

5. Mercedes Benz had used swing axle rear suspension for a number of years with front engine configuration. In the 1950's they introduced a low pivot swing axle design which was developed to minimize the oversteer characteristics of the swing axle with its higher roll center. Among professionals it was, and is, accepted fact that conventional swing axle cars with their associated high roll center cause oversteer and tend to give a false sense of safety up to the "point of surprise"—either skid or roll over.

6. Inherent oversteer of swing axle cars can be ameliorated by use of higher rear tire pressure compared to front tire pressure. Corvair specified a 73% higher rear pressure than front with only an 11% difference in rear end curb weight over front. Falcon specified no difference in tire pressure with a minus 4% difference in rear end curb weight over front. Quoting from Mr. Maurice Olley's 1953 SAE paper, No. 53-18:

"Finally, it appears impossible to make a car with heavily loaded rear tires handle safely in a wind even at moderate speeds, without fitting twin tires at the rear, which is impossible with a swing axle. The European cars of this type, even though they use up to 10 lbs. more inflation in the rear tires and up to 10 degrees caster angle, and even fit centering springs on the steering linkage, still wander badly in a high wind."

It was an established technical fact among suspension engineers in the early 1950's that the 1960 Corvair type high roll center swing axle rear suspension controverted historical industry practice of designing cars to the driving habits of our customers whereas the 1960 Falcon met these requirements and had predictable response during an emergency maneuver. As early as 1946-47, the General Motors experimental "Light Chevrolet" engineered by the late Mr. E. S. MacPherson, then of G.M. and later Vice President of Engineering at Ford, refused the use of the swing axle type in designing the rear independent suspension for the experimental "Light Chevrolet" which was built and tested at General Motors. He personally discussed and reviewed with me in 1951 the design and theory underlying his refutation of swing axle on that car.

In summary, the 1960 Falcon was superior in "limit of control" compared to the Corvair and General Motors implication that the Falcon, a competitor of the same era, was no better than the Corvair in "limit of control" is a flagrant violation of facts.

Sincerely

HARLEY F. COPP.

EXHIBIT 23

AMENDED NOVEMBER 30, 1972, CRITIQUE OF GENERAL MOTORS DISCUSSION ON DESIGN CHARACTERISTICS OF THE CORVAIR

PAGES 1559-63 IN PART IV—FEDERAL ROLE IN TRAFFIC SAFETY (By H. F. Copp)

NOTE

Amendment: All references to speed and lateral G forces as indicated in Falcon vs.

Corvair Handling Film submitted by Ford Motor Company have been removed from text.

BACKGROUND

During my discussions with Senator Ribicoff's staff on June 14, 1971 Mr. John Koskinen and Mr. Robert Wager asked me to prepare a critique of General Motors Discussion on Design Characteristics of the Corvair authored by Mr. Frank Winchell and contained in Part IV—Federal Role in Traffic Safety dated March 22, 1966, beginning 6th paragraph on Page 1559, concluding 4th paragraph on Page 1663. These statements are submitted in accordance with the "Canons of Ethics for Engineers" in the Ford Motor Company.

My first knowledge of the General Motors statement contained in Part IV was on June 13, 1971. I was unaware of the degree of controversy because I was on assignment as Director of Engineering for Ford of Britain/Ford of Europe from June 1963 to May 1968. Therefore, since learning of these statements on June 13, I have studied in detail technology available to the automotive engineer prior to and during the design of the Corvair. I have also calculated relative values of Corvair vs. Volkswagen using formulae available at that time.

I stated in my letter to Senator Magnuson dated June 3, 1971, that we considered and discarded the rear engine configuration prior to selecting the front engine arrangement as the basic design for our Falcon which was the primary Corvair competitor. I also said in my letter to Senator Magnuson, "Rear engine cars, regardless of the rear suspension, exhibit borderline handling characteristics especially if the total weight of the vehicle exceeds 1800 lbs."

DISCUSSION

G.M. begins and ends their statement with truthful representations of the manner in which we, as an industry, have developed the handling and control characteristics of our motor cars for at least 25 years. However, between their opening and closing statements I believe they sophistically misled the layman on four major issues:

1. Corvair is NO Different than Other Rear Engine Cars—Page 1560
2. Only Expert Drivers Can Handle More than .3 Lateral G—Page 1561
3. Corvair Tire Pressure Differential is of Minor Importance—Page 1561
4. Oversteer Might be Better than Understeer—Page 1562

SUMMARY OF REFUTATIONS

I. Corvair is No Different Than Other Rear Engine Cars—Page 1560

1. The Corvair was 40% heavier, larger and a greater load carrying car than the comparators. Because of the added weight and wheelbase, the Corvair's latent skidability was twice that of the Volkswagen. Again, because of weight and wheelbase it generated 1.8 times the spin force once it began to skid.

2. The Corvair controverted established rear engine suspension effective roll couple distribution thereby grossly deteriorating its potential handling performance. The Volkswagen was basically an understeering vehicle whereas the Corvair was an under-oversteering vehicle. As an industry we design for understeer, avoid oversteer and consider under/oversteer a dangerous condition.

3. The films showing Falcon vs. Corvair handling submitted by Ford Motor Company clearly demonstrate the results of the above two deficiencies. Also, the Volkswagen and Renault Dauphine were run under similar circumstances in 1959 and were able to corner higher speeds with less instability than the Corvair.

4. Compared to Volkswagen, the Corvair had 38% greater power to weight ratio and acceleration performance. Therefore, for safety purposes controllability performance should have been improved by at least the same amount compared to Volkswagen. And yet,

their product showed quite the opposite results in controllability performance amounting to a gross deficit in the range of 70-90% compared to Volkswagen (38% plus a basic deficit of one-third to one-half lower controllability performance than Volkswagen).

II. Only Expert Drivers Can Handle More than 3 Lateral G—Page 1561

1. G.M. fails to mention that the conditions for which they speak are very under smooth, ideal conditions wherein G forces felt by the driver are very nearly the same G forces on the tires at the road surface. In fact, under real world conditions the G forces felt by the driver are much less than G forces at the tire/road on typical undulating blacktop/concrete public roads. Real world tire to road lateral G forces cause incipient skid or slip which the average driver does not concern. Indeed, we as an industry, attempt to disguise these forces so that the customer may experience the pleasure of a plush ride.

This was especially the case for the Corvair and was proclaimed as a virtue. The high instantaneous lateral G forces causing incipient skid were so well disguised that they stated as a result of their laboratory tests with "rear wheels in tramp motion at wheel hop frequency" (lateral forces as on rough road; 12-15 cycles per second):

"A 1957 Chevrolet (the last model Chevrolet produced with solid axle and leaf spring rear suspension) had 2.9 times more lateral axle motion, 1.4 times more lateral body/frame motion, and six times more lateral front seat frame motion compared to a Corvair with equal vertical wheel motions. Other presently produced vehicles with solid axles and leaf spring rear suspensions had similarly large lateral motions excited by this type of suspension." (Emphasis added.)

Therefore, a highly idealized lateral G force suspension system has no relevance if these values cannot be translated into competitive handling on public roads as stated in the last paragraph of G.M.'s discussion:

"A car having a high capability in lateral acceleration may be completely inadequate in the transitional phase of entering or leaving a curve, or in an S maneuver, or in passing, or in turning while braking or accelerating, or in low coefficient pavements."

2. Drivers encounter roads having friction coefficients as low as .10 and many times the coefficients will change from .30 to .10 or even .70 to .10 without warning. Examples are: wet leaves on wet/dry concrete; wet, oil filmed blacktop repair patches on wet/dry concrete; early morning frost patches.

3. A primary automotive engineering objective is to prevent loss of control resulting from inadequate suspension system warning and/or unpredictable suspension system response. Roll-over is only one possible result of loss of control. The use of idealized lateral G values has no relevance to the primary objective of developing real world suspension systems if the basic system is not in accord with G.M.'s opening and closing statements.

4. The films showing Falcon vs. Corvair handling and my analysis of these films clearly demonstrate that an expert driver was unable to control the Corvair in our comparative highway handling tests which were run on dry, slightly undulating blacktop. The films and the analysis are visual proof of the fallacy in playing "a numbers game" with lateral G. During the five highway handling sequences shown in the Ford film, the Falcon achieved a 100% rating whereas the Corvair achieved only a 10% rating and yet General Motors emphasizes that the Corvair was capable of higher lateral G than other front engine cars.

III. Corvair tire pressure differential is of minor importance—Page 1561

1. From my analysis of the Ford film comparing Falcon vs. Corvair handling, I quote: "For non-standard tire pressure of 26-26 psi severe control problems began upon en-

tering the second corner of the S curve in Phase II highway handling whereas similar control problems with standard tire pressure began on leaving the second corner of the S curve. This amounts to a reduction in 'on course' control of approximately 33% for 26-26 psi tire pressure."

The General Motors statement says: "However, even reversing the tire pressure differential is unrecognizable at 30-40 mph in a Corvair."

2. G.M. publicly stated in March 1960 when discussing the development of the Corvair suspension system:

"The objective was to arrive at equal tire deflections, front and rear, under riding conditions and equal slip angles, front and rear, during cornering. At 5-passenger load the difference in tire deflection is less than .10 inch. (Emphasis added because slip angle induces understeer.)

"There are two things that could have been done to better this condition. One would be to lower front tire pressures to 13 psi or increase rear tire pressure to 28 psi."

Also, "Thus, in line with our original objective an engineering solution to lateral stability has been obtained by proper design of tires, rims and specified inflation pressures." (Emphasis added.)

3. G.M. also stated on July 1, 1959 in a pre-introduction press review:

"With the proper tire inflation and with the assistance of independent suspension in front and a swing axle at the rear, we have produced the desired margin of understeer." (Emphasis added.)

4. Technically, it has been calculated within $\pm 10\%$ at 35 mph that equalizing front and rear tire pressure causes a 60% deterioration in steady state response for an understeering rear engine car with drive only and an 80% deterioration at full passenger load. For the Volkswagen which was a much better handling vehicle than the Corvair, the affect of equalizing front and rear tire pressure caused a 60% deterioration in vehicle response at 35 mph with driver only.

IV. Oversteer might be better than understeer—page 1562

1. The General Motors statement suggests that oversteering cars might be safer because they would spin into the corner rather than into the oncoming lane. In fact, the Ford film analysis shows that when oversteer was increased on the Corvair by increasing front tire pressure the first swerve or deviation in loss of control threw the Corvair into the oncoming lane during all three test sequences and these tests were run with an expert driver.

2. The analysis of the Ford films showing Falcon vs. Corvair handling proves that in the important highway handling sequences the understeering Falcon achieved a 100% rating and the under/oversteering Corvair achieved a 10% rating.

3. The film analysis also shows that during all five sequences of the highway handling test runs the Corvair deviated into the oncoming lane during each test sequence and that complete loss of control was experienced in three of the five sequences.

4. The Ford film analysis indicates that increasing oversteer by equalizing the tire pressure on the Corvair caused an approximate 33% deterioration in controllability.

5. Historical industry practice is to design our motor cars for understeer because it is more uni-directional and provides the basis for warning and quicker response by the driver. Technical literature published by General Motors for years proves that they design for understeer to achieve favorable vehicle stability criteria. I quote from the GM press review of July 1959 on the Corvairs:

"There are two requirements for stable handling and it is difficult to say which is the more important. One is that the rear tires must not be overloaded. If they are, the car will wander whatever its other conditions

might be. The other is that the sense of direction of the rear wheels should be slightly better than the front. This gives the desired margin of understeer." (Emphasis added.)

6. The major reason for specifying the large tire pressure differential on the Corvair was to induce understeer as stated in their owners manual.

CONCLUSION

I conclude that apart from opening and closing statements by General Motors in their Discussion on Design Characteristics of the Corvair, their main arguments consist of incongruous artifices which mislead the layman by clever omission of published knowledge and facts known to them prior to and following introduction of the Corvair in October 1959. Application of these artifices to the design of our motor cars would result in disastrous controllability and by comparison in 1959-63 Corvair control problems would pale to insignificance. Furthermore, I believe that the four central issues contained within the G.M. statement as described above would not have been accepted, if submitted, for presentation or publication by the Society of Automotive Engineers or any other reputable automotive engineering fraternity.

Finally, I must say that in my 25 years of designing and developing motor cars I have never had submitted to me data or a technical report arguing in favor of even one of the four major issues which I have proscribed in the G.M. statement on Design Characteristics of the Corvair:

1. Larger, heavier and more powerful rear engine cars are no different than the smaller Volkswagens, Renault Dauphines.
2. Only expert drivers can handle more than 3 lateral G.
3. Tire pressure differential has little or no affect on rear engine car handling between 30 to 40 mph.
4. Oversteer might be better/safer than understeer.

EXHIBIT 24

AMENDED NOVEMBER 30, 1972, SUMMARY, ANALYSIS OF FORD FILM SHOWING FALCON VERSUS CORVAIR HANDLING

(By H. F. Copp)

NOTE

Amendment: All references to speed and lateral G forces as indicated in Falcon vs. Corvair Handling Film submitted by Ford Motor Company have been removed from text.

BACKGROUND

While preparing my letter to Senator Magnuson dated June 3, 1971, I discovered the only extant copy of a film made on the Ford Motor Company Dearborn Proving Grounds in August-September 1959 indicating the serious handling deficiencies of the 1960 Corvair. This film was made at the request of Mr. J. O. Wright then Vice President and General Manager of the Ford Division and was subsequently shown to the Ford Technical Evaluation Committee on September 23, 1959, and October 1, 1959 to the Executive Committee which was, at that time, the Corporate Operating Committee and included Mr. Henry Ford II, Mr. E. R. Breech, Group Vice Presidents, etc.

During my discussions with Senator Ribicoff's staff and specifically Mr. John Koskinen and Mr. Robert Wager, I was asked to analyze this film and quantify the relative handling characteristics of the Corvair as run in the tandem sequences with the Falcon. The attached analysis and this summary are submitted in accordance with the "Canons of Ethics for Engineers" in the Ford Motor Company.

DISCUSSION

Following my testimony to Mr. Koskinen and Mr. Wager in Washington on June 14, additional documents were discovered and submitted to the Ford Corporate Office of General Counsel from which important state-

ments relating to the film and Corvair handling evaluations as presented to the Executive Committee on October 1, 1959 are quoted below:

1. Before showing the film:

"It is necessary to emphasize at this point that these are completely objective tests and in no sense have they been contrived to show the Corvair in an unfavorable light. The drivers of both cars are equally skilled drivers from our test track area, and the Corvair driver was instructed to make every effort to keep his car under control."

2. After showing the film:

"The lack of extreme cornering ability is not a significant product disadvantage in itself. Of much greater significance in the preceding film has been the difficulty experienced by the Corvair driver in re-establishing control over his vehicle once it had been lost. This is indicative of a lack of stability which is more likely to be encountered by the average driver under average conditions and this condition is deemed to be a significant product disadvantage."

3. In the discussion on Ride and Handling:

"The Corvair with its rear heavy weight distribution shows marked instability under conditions of severe cornering and in passing. While the driver will not encounter difficulty under most normal driving conditions, there are frequently encountered emergency conditions such as slippery pavement or emergency conditions such as slippery pavement or emergency maneuvering in which the driver cannot maintain control of the vehicle. The Corvair falls considerably short of our handling standards."

Although during my investigations and subsequent searching we were unable to discover any additional film which showed the Volkswagen and Renault Dauphine running against the Falcon, it is important to note that during the Executive Committee presentation on October 1, 1959 we stated:

"For reference purposes, we have also shown the Volkswagen and the Renault Dauphine under similar circumstances at comparable speeds. These pictures show that both of these vehicles have ability to corner at higher speeds with less instability than the Corvair." (Emphasis added.)

METHOD OF ANALYSIS

The film shows 10 sequences run at specified tire pressures: 5 sequences on a 150 ft. radius circle referred to as "Phase I—Comparative Breakaway"; 5 sequences (of much greater significance on an "S" curve of approximately 200 ft. radii with a 100 ft. inter-connection between the two curves referred to as "Phase II—Comparative Highway Handling"). Nine additional sequences were run with the Corvair at equal tire pressure, front and rear, of 26 psi.

A numerical percentage summary has been calculated by assigning declining percentage ratings to control performance for the categories of: stable, minor, major, and lost. Each film sequence was analyzed and graded into these four categories and then translated into percentage ratings to develop an average for each of the two phases.

RESULTS AT SPECIFIED TIRE PRESSURES

1. The Corvair achieved a 35% control rating during the "Phase I—Comparative Breakaway" tests as compared to the Falcon which achieved 100%.

2. The Corvair achieved only a 10% control rating during the "Phase II—Comparative Highway Handling" tests as compared to the Falcon which achieved 100%.

3. The average of the Phase I and Phase II testing was 18% compared to the Falcon at 100%.

4. An absolute minimum acceptance standard of 60% should have been achieved for the average of the two types of tests but the Corvair achieved less than one-third of this minimum; 18% vs. 60%. Significantly, the standards of General Motors appear to be

even higher as stated by Mr. Frank Winchell on Page 1560 of Part IV, Federal Role in Traffic Safety dated March 22, 1966. I quote:

"Much of our testing, therefore, is comparatively; acceptability is based on comparison with successful vehicles in use by the motorist on public road systems."

NOTE: I have also been asked to provide a critique of G.M.'s statement referenced in Point 4 above under Results. There is a direct relationship between my film analysis and my critique because, as noted above, G.M. fully understands that handling evaluation is comparative and I; therefore, reference my film analysis in the critique of G.M.'s statements.

AMENDED NOVEMBER 30, 1972, FALCON VERSUS CORVAIR HANDLING, FILM ANALYSIS QUANTIFICATION OF HANDLING COMPARISONS

NOTE

Amendment: All references to speed and lateral G forces as indicated in Falcon vs. Corvair Handling Film submitted by Ford Motor Company have been removed from text.

The film showing the Falcon vs. Corvair handling comparison submitted by the Ford Motor Company to the United States Senate has been analyzed at the request of Messrs. Koskinen and Wager. This film was made by the Ford Motor Company on the Dearborn Proving Grounds during August-September, 1959, prior to introduction of these two cars and at the request of Mr. J. O. Wright then Vice President and General Manager of the Ford Division, for the purpose of illustrating the serious Corvair handling problems which we had discovered during our early evaluations.

The film was shown to the Corporate Technical Evaluation Committee on September 23, 1959 and on October 1, 1959 to the Executive Committee of the Ford Motor Company. To my knowledge, this is the first and only time a comparative handling movie has been made to demonstrate to Corporate management a competitor's handling characteristics.

We said to the Ford Executive Committee when presenting this film:

"The Corvair has been shown attempting to maintain the same speed as the Falcon in the various maneuvers. It is necessary to emphasize at this point that these are completely objective tests and in no sense have they been contrived to show the Corvair in an unfavorable light. The drivers of both cars are equally skilled drivers from our test track area, and the Corvair driver was instructed to make every effort to keep his car under control."

For reference purposes, we have also shown the Volkswagen and the Renault Dauphine under similar circumstances at comparable speeds. These pictures show that both of these vehicles have ability to corner at higher speeds with less instability than the Corvair.

(Film)

Discussion of Handling Film

These pictures have shown only that the Corvair exhibited instability under extreme cornering conditions, under which the Falcon remained stable. The lack of extreme cornering ability is not a significant product disadvantage in itself. Of much greater significance in the preceding film has been the difficulty experienced by the Corvair driver in re-establishing control over his vehicle once it had been lost. This is indicative of a lack of stability which is more likely to be encountered by the average driver under average conditions and this condition is deemed to be a significant product disadvantage."

We also said in the same presentation:

"The handling and stability of the Falcon are excellent. The Corvair with its rear heavy weight distribution shows marked instability under conditions of severe cornering and in passing. While the driver will not encounter

difficulty under most normal driving conditions, there are frequently encountered emergency conditions such as slippery pavement or emergency maneuvering in which the driver cannot maintain control of the vehicle. The Corvair falls considerably short of our handling standards."

There are innumerable methods of analyzing comparative handling characteristics shown in the film. In the final analysis, results must provide "go"—"no go" quantification of handling characteristics. In this instance, a typical method has been used to assess the control adequacy of the Corvair relative to the Falcon as shown in the Attachment; viz.

First, the severity of control deviation was defined in terms of four categories: stable, minor, major, lost (Attachment p. 1).

Second, control adequacy percentage within a range of $\pm 10\%$ was assigned to each of the above four severity ratings (Attachment p. 1).

Third, all test runs in the film were analyzed. Severity ratings were assigned and the sequence of control deviation was noted in terms of on-coming lane and/or adjacent shoulder (Attachment pp. 2-3).

Fourth, the percent control adequacy within a range of $\pm 10\%$ was assigned for each test run based on the above (Attachment pp. 2-3).

Fifth, an average performance of 60% control adequacy was established as the minimum acceptance standard.

In summary, a method has been evolved which provides quantification of control adequacy in terms of percentage relative to the Falcon but only for the conditions of dry, blacktop, slightly undulating surfaces. It should be emphasized that fully definitive comparisons would require similar tests under many more adverse conditions, such as wet blacktop, curves with changing road camber, surprise bumps on cornering which tend to throw the vehicle, ice, snow, etc.

The film analysis is summarized as follows and detailed on the Attachment, Pages 2 and 3.

CONTROL ADEQUACY COMPARISON

Film test description	Percent control adequacy ± 10 percent	
	Corvair	Falcon
Standard tire pressure:		
Phase I—Comparative breakaway; 5 sequences.....	35	100
Phase II—Comparative highway handling; 5 sequences.....	10	100
Average percent, phase I and II.....	18	100
Percent range ± 10 percent.....	8-28	90-100
Minimum percent acceptance standard.....	60	60
Nonstandard tire pressure Corvair 26-26 p.s.i.:		
Phase I—Comparative breakaway; 6 sequences.....	37	100
Phase II—Comparative highway handling; 3 sequences.....	8	100
Average percent, phase I and II.....	22	100
Percent range ± 10 percent.....	12-32	90-100
Minimum acceptance standard.....	60	60

Based on a 60% minimum acceptance standard, the Corvair with standard tire pressure achieved 30% of the standard (18%/60%). Applying the maximum favorable variation of $\pm 10\%$, the Corvair achieved 48% of the minimum acceptance standard (28%/60%).

Additional conclusions which result from the Attachment are:

1. For non-standard tire pressure of 26-26 psi, severe control problems began upon entering the second corner of the S curve in Phase II highway handling whereas similar control problems with standard tire pressure began on leaving the second corner of the S curve. This amounts to a reduction in "on

course" control of approximately 33% for 26-26 psi tire pressure.

2. For non-standard tire pressure of 26-26 psi, in both Phase I and Phase II testing, the Corvair deviated into the oncoming lane six times during nine test runs and demonstrated complete loss of control four times during the nine test runs.

3. For standard tire pressure in both Phase I and Phase II testing, the Corvair deviated into the oncoming lane eleven times during the ten comparative tests when running with the standard tire pressure. Complete loss of control occurred five times during the ten test runs.

H. F. COPP,

(July 26, 1971, Amended November 30, 1972).

FILM ANALYSIS, FALCON VERSUS CORVAIR HANDLING—DATA SHEET

PHASE I—COMPARATIVE BREAKAWAY (15-FT RADIUS CIRCLE; DRY BLACKTOP SURFACE SLIGHTLY UNDULATING; LANE WIDTH OF 12 FT)

Test run	Corvair		Severity of control deviation	Percent control adequacy	Corvair	Falcon
	Oncoming lane	Shoulder				
Standard pressure 15-26 p.s.i.:						
1	1		Minor	50	100	
2		1	Lost	0	100	
3	1	2	do	0	100	
4		1	Minor	75	100	
5	2, 4	1, 3	do	50	100	
Average 5 tests				35	100	
Nonstandard pressure 26-26 p.s.i.:						
1	1		Minor	50	100	
2		1	do	75	100	
3	2	1	Major	25	100	
4		1	Lost	0	100	
5		1	Minor	75	100	
6		1	Lost	0	100	
Average 6 tests				37	100	

PHASE II—COMPARATIVE HIGHWAY HANDLING

[S curve, 136° arc at 200 ft radius, 100 ft straightaway, 140° arc at 200 ft radius, 182 ft straightaway; dry blacktop surface slightly undulating; lane width of 12 ft]

Standard Pressure 15-26 p.s.i.:						
1	1st	2d	Lost	0	100	
		3d				
2	2d	4th	do	0	100	
3	1st		Major	25	100	
	2d					
4	1st	2d	Lost	0	100	
5	2d	1st	Major	25	100	
Average 5 tests				10	100	
Nonstandard pressure 26-26 p.s.i.:						
1	1st	2d	Lost	0	NA	
2	1st	2d	do	0	100	
		3d				
3	1st	2d	Major	25	100	
Average 3 tests				8	100	

Note: For 26-26 p.s.i., major control problems began at entering second corner compared to control problems at 15-26 p.s.i., which began on leaving the second corner.

FILM ANALYSIS—FALCON VERSUS CORVAIR HANDLING DEFINITION OF CONTROL DEVIATION SEVERITY

Severity rating	Percent control adequacy	Vehicle/driver control conditions
Stable	100	No deviations.
Minor	150-75	Minor swerve with full recovery using less than oncoming lane or adjacent shoulder.

Severity rating	Percent control adequacy	Vehicle/driver control conditions
Major	25	Major swerve which occupies oncoming lane and/or shoulder equal to car width.
Lost	0	Major swerve which occupies more than oncoming lane and/or shoulder greater than car width and results in loss of control including spinouts.

1 Minor deviation which uses oncoming lane, 50 percent; Minor deviation which stays in lane or uses adjacent shoulder, 75 percent.

NOTES: Assigned percentage values should be assumed to be representative within a range of ± 10 percent.

Minimum acceptance standard: Defined as 60 percent which allows minor deviations of 50-75 percent control adequacy but full recovery.

RELATIONSHIP BETWEEN COPP CORVAIR-FALCON FILM ANALYSIS RATING PERCENTAGES AND THE FORD "VEHICLE EVALUATION RATING SYSTEM"

(By H. F. Copp)

I have been asked whether there is any correlation of the percentage method which I used in assessing the Ford film comparing Falcon and Corvair Handling with the Ford procedure used in our "Vehicle Evaluation Rating System".

I must admit that my method was in no way related to our numerical 1 thru 10 procedure used in our "Vehicle Evaluation Rating System". My technique is shown in my Film Analysis of July 25, 1971 and amended November 30, 1972 as Attachment Page 1 and is attached hereto for ready reference.

Some 15 years ago we attempted to quantify subjective jury evaluations of control performance on all types of road surfaces by introducing a "Vehicle Evaluation Rating System". This system has been under constant refinement since its introduction but has continued with a 1 to 10 numerical scale which all evaluators apply to their assessments. As it applies to handling and controllability, the scale is:

Rating index	Acceptability	Grade	Expertise required
1	Unacceptable	Poor	All customers.
2	do	do	Average customer.
3	do	do	Do.
4	do	Customer complaint	Do.
5	Borderline	Borderline	Critical customer.
6	Acceptable	Barely acceptable	Do.
7	do	Fair	Do.
8	do	Good	Trained observer.
9	do	Very good	Do.
10	do	Excellent	Not perceptible.

Any system of handling and controllability tests and their ensuing conclusion must separate good from bad; unacceptable from borderline, and borderline from acceptable.

It would be most convenient if I could assign percentage values to each rating beginning with 1 at 10% and ending with 10 at 100%. Unfortunately, this is not the case because:

1. We rated the Falcon Handling Performance at about 7.5 whereas my Film Analysis method rated it at 90-100%.

2. A 1962 Corvair, not generally different from the 1960 Corvair, was rated at 3.4 whereas my Film Analysis rated it at a nominal 18% ± 10 for a maximum of 28%.

A recently completed Ford Control Performance Project, ATMD 72-5, which has been reviewed with DOT shows correction factors of approximately ± 12 % for subjective ratings by 20 evaluators. As previously noted, I considered my method of rating to be representative within ± 10 %. I also assigned a 60% minimum acceptance standard for the Corvair because it was following the Falcon which had no relationship to the Ford Rating Index of 5 which is borderline and 6 which is barely acceptable.

If one attempts to correlate the Rating Indices with my percentage method he must

first correct for the 1960 Falcon rating index of 7.5 ± 12 % and the 90-100% resulting from the Film Analysis.

In actual fact, we are constantly raising our standards of control performance and about the best we have recently measured as indicated in ATMD 72-5 is a corrected index of 8.30 on a 1971 Mercedes 220 4-door sedan during a rough road cornering test. It is obvious that our standards have been raised since 1959 and the 1960 Falcon index which we assessed at 7.5 in 1959 might now be assessed at only 6.5. It, therefore, follows that 1971-72 data and techniques cannot be correlated with one film showing only two types of tests on dry, blacktop roads.

As I stated on Page 2 of my Film Analysis:

"There are innumerable methods of analyzing comparative handling characteristics shown in the film. In the final analysis, results must provide "go"—"no go" quantification of handling characteristics. In this instance, a typical method has been used to assess the control adequacy of the Corvair relative to the Falcon."

Also, "In summary, a method has been evolved which provides quantification of control adequacy in terms of percentage relative to the Falcon but only for the conditions of dry, blacktop, slightly undulating surfaces. It should be emphasized that fully definitive comparisons would require similar tests under many more adverse conditions, such as wet blacktop, curves with changing road camber, surprise bumps on cornering which tend to throw the vehicle, ice, snow, etc."

One might argue that I was unduly harsh in my method of assessing the Corvair and overly generous in assessing the Falcon. In defense of such argument, I submit:

1. Control performance is a relative comparison in terms of time and weight class. For example, the 1965-68 Ford was a better handling car than the 1954-57 Mercury although both cars were about the same weight, comparably equipped.

2. In 1966, a 1962 Corvair was rated unacceptable by an experienced group of development engineers. Their rating index of 3.4 was 1.6 or 32% below the index of 5, which is "borderline" minimum and 43% below the index of 6 which is graded as "barely acceptable".

3. My film analysis method defined a minor swerve with full recovery using less than the oncoming lane as 50% control adequacy. It is significant that had all the swerves been into the oncoming lane with full recovery, the Corvair would have met the minimum handling standard of 60% when applying the plus 10% tolerance. As a matter of comparison, it should be noted that a swerve with full recovery onto the shoulder rather than the oncoming lane was only penalized 25% from the 100% base, and, therefore, assigned a 75% value for control adequacy. If, for example, all the swerves had been onto the shoulder with full recovery, the Corvair would have exceeded the minimum handling standard by 25% without application of the plus 10% tolerance.

4. By selecting the most favorable tolerance, plus or minus, in an effort to determine the best relationship between Corvair-Falcon rating indices and my Corvair-Falcon Film Analysis, we arrive at:

[In percent]

	Corvair	Falcon	Ratio Falcon/Corvair
Rating index	3.4	7.5	
Selected tolerance	-12.0	+12.0	
Best relationship	13.0	8.4	2.8
Copp rating Ford film	18.0	100.0	
Selected tolerance	+10.0	-10.0	
Best relationship	28.0	90.0	3.2
Average of best relationship ratios			3.0

1 Minimum.

2 Maximum.

From the above it can be seen that by selecting accepted or specified tolerances in an effort to show the closest correlation of Corvair-Falcon rating indices with my ratings of the Corvair-Falcon Handling Comparison Film, we indicate reasonable similarity in results. The average ratio of best relationships shown in the last line at a value of 3.0 is within $\pm 7\%$ of the individual best relationship ratios in rating indices and my Film Analysis percentages.

FILM ANALYSIS—FALCON VS. CORVAIR HANDLING, DEFINITION OF CONTROL DEVIATION SEVERITY

Vehicle/driver control conditions	Severity rating	Percent control adequacy
No deviations.....	Stable.....	100
Minor swerve with full recovery using less than oncoming lane or adjacent shoulder.	Minor.....	150-75
Major swerve which occupies oncoming lane and/or shoulder equal to car width.	Major.....	25
Major swerve which occupies more than oncoming lane and/or shoulder greater than car width and results in loss of control including spinouts.	Lost.....	0

1 Minor deviation which uses oncoming lane—50 percent; minor deviation which stays in lane or uses adjacent shoulder—75 percent.

Note.—Assigned percentage values should be assumed to be representative within a range of ± 10 percent. Minimum acceptance standard: Defined as 60 percent which allows minor deviations of 50-75 percent control adequacy but full recovery.

EXHIBIT 25

CRITIQUE OF DOT-NHTSA 1960-63 CORVAIR HANDLING AND STABILITY; DOT HS-820 198

(By H. F. Copp)

I. CRITICISM OF MY CALCULATED SPEEDS BY DOT IS JUSTIFIED

The DOT report much more accurately represents the speed and G forces indicated in the Ford film showing Falcon vs. Corvair Handling. My investigation of the cause for my errors resulted in learning that the projector used in my stop watch timing analysis was running at 18 frames per second whereas the film was taken at 24 frames per second (see Attachment I for detailed discussion).

II. CORVAIR RAPID TRANSITION FROM UNDERSTEER TO OVERSTEER EXCEEDS DRIVER'S REACTION TIME

From Page 6 of the Panel Evaluation of the NHTSA Approach to the 1960-1963 Corvair Handling and Stability (Report No. A3971): "What is different about the 1960-through-1963 Corvair is the characteristic transition from understeer to oversteer which occurs at a lateral acceleration of 0.4 G to 0.5 G."

Also, "In the General Motors films it was observed that the lateral acceleration might go from 0.3 G to 0.6 G in a quarter to a half second depending on the attitude and speed of the vehicle."

The NHTSA report attempts to destroy the credibility of the Ford film by:

Stating that losses of control occurred in about the same location and in front of the camera.

Showing pictures of the driver's arms turning the wheel in a direction that would induce loss of control.

In examining the individual frame by frame sequences of the Ford film, I conclude that:

1. Assuming speeds to be the same in the first and second corners of the Phase II highway cornering tests, G forces in the second corner are 6% higher even though the curve radius to road centerline is the same for both corners at 200 feet. In the first corner the cars are running on the outside lane at 206 feet radius and on the second corner they are running on the inside lane at a 194 foot radius. In fact, the films show that the cars are still accelerating in the first corner.

2. The Corvair is experiencing latent control problems as it enters the second turn of the Phase II tests.

3. At standard tire pressure, the Corvair loss of control in Phase I and Phase II testing was not identical as indicated in my film analysis.

	Phase I comparative breakaway	Phase II comparative highway handling
Test sequences.....	5	5
Minor loss.....	3	0
Major loss.....	0	2
Complete loss.....	2	3

I believe that staged tests which make the Corvair look bad would have attempted to make the Corvair look bad in all sequences. This is not apparent in the Ford film.

4. At the point of loss of control the driver's corrections to the Corvair are exactly those instinctive reactions which would be made with an understeering car; i.e. turn more to the right in a right hand corner.

5. The best of measured driver reaction times are from 0.25 to 0.33 second and these times are more the result of instinctive reaction. At 24 frames per second, therefore, the very best instinctive reaction represents 6 frames in 0.25 second. The driver's arm movements to the right occur in less than 6 frames as indicated by individual frame analysis of the film.

6. As quoted earlier from the Panel Report, the Corvair:

Went from understeer to oversteer "at a lateral acceleration of 0.4 G to 0.5 G".

"Might go from 0.3 G to 0.6 G in a quarter to half second."

Interpolating these data clearly shows the Corvair problem and the driver's inability to cope with the rapid transition from understeer to oversteer.

Transition occurs at 0.4 G to 0.5 G which equals 0.1 G maximum span.

Transition from 0.3 G to 0.6 G occurs in one quarter to one-half second which amounts to a rate of 0.1 G in 0.08 to 0.17 second all of which are well below the best possible driver's instinctive reaction time of 0.25 to 0.33 second.

7. A driver's reaction time is much higher when he has to think and then react. A minimum of 0.5 second to 1.0 second is accepted criteria. On this basis, the Corvair rate of transition from understeer to oversteer exceeds human reaction time by a minimum of 0.33 second to 0.92 second. In the Ford film taken at 24 frames per second, this translates to 8 frames at the minimum and 22 frames at 0.92 second. In distance traveled at 38 mph it translates to a range of 18 to 51 feet in excess of the best known psychomotor¹ reaction time due to the change from understeer to oversteer.

8. At higher speeds the problem is made worse proportionally:

Distance traveled in feet in 1960-63 Corvair due to understeer/oversteer rate of change beyond best human psychomotor response time:

	Speed (m.p.h.)
22 to 61.....	45
27 to 74.....	55
31 to 87.....	65
36 to 102.....	75

9. Assuming a good driver is aware of the Corvair's transition from understeer to oversteer and that he is driving in an understeer mode but due to road conditions and/or the demand for an emergency maneuver he transverses into the oversteer mode, his best psychomotor reaction time will more nearly

¹ Muscular action ensuing from prior conscious mental activity.

approach 1.0 second. Allowing for the lowest rate of change from understeer to oversteer in a 1960-63 Corvair as stated in the Panel Report and quoted earlier at 0.5 second from 0.3 G to 0.6 G, a good driver under the conditions mentioned above will exceed his psychomotor response capabilities in a 1960-63 Corvair by—

Distance traveled (feet):	Speed (m.p.h.)
55.....	45
67.....	55
79.....	65
93.....	75

The above is based on the optimistic assumption that upon occurrence of oversteer, a good driver corrects accordingly and the suspension system remains in the oversteer mode. In actual practice this is rarely the case. For example, undulations, bumps and/or changes in road camber have a marked effect on front and rear wheel movements with consequent additive transition in suspension system steer characteristics.

III. TEST METHOD USED BY NHTSA DO NOT CORRELATE WITH REAL WORLD CONDITIONS

At the top of Page 54 of the Report it says: "The vehicle handling test procedures employed in this program were defined by NHTSA although they were closely related to methods previously developed and used at the HSRI" (Highway Safety Research Institute of the University of Michigan).

Also, on page 68:

"The road surface grade of test areas was level within 1%. The average skid number for the road surface was 79 to 30 mph and 80 to 60 mph."

It is well known that Ford uses subjective methods for rating the handling and controllability of our motor vehicles. Some 15 years ago we attempted to quantify these subjective jury evaluations on all types of road surfaces by introducing a "Vehicle Evaluation Rating System". This system has been under constant refinement since its introduction but has continued with a 1 to 10 numerical scale which all evaluators apply to their assessments. As it applies to handling and controllability, the scale is:

Rating index and acceptability	Grade	Expertise required
1 Unacceptable.....	Poor.....	All customers.
2do.....do.....	Average customer.
3do.....do.....	Do.
4do.....	Customer complaint.	Do.
5 Borderline.....	Borderline.....	Critical customer
6 Acceptable.....	Barely acceptable.....	Do.
7do.....	Fair.....	Do.
8do.....	Good.....	Trained observer.
9do.....	Very good.....	Do.
10do.....	Excellent.....	Not perceptible.

Any system of handling and controllability tests such as the HSRI proposals must spring from and support the subjective real world tests which we use to separate good from bad; unacceptable from borderline, and borderline from acceptable. The HSRI tests fail completely in this regard; show excessive variability and non-correlation. Results of the Ford 14-month investigation of the HSRI procedure and our counter proposals have been reviewed with DOT as indicated in Ford Report ATMD 72-5 dated August 29, 1972.

2. Under the conditions of test, ultra level and high adhesion surfaces, it is possible to generate theoretical, non real world lateral G forces which have no relevance on the majority of our public roads which, as we all know, are not smooth. On these roads, the total vehicle lateral G forces are much lower than the transient and instantaneous lateral G loads which are constantly developed between the tires and the road. Therefore, the total vehicle G loads are often very low while instantaneous G forces between the tires and

road are near the critical point due to suspension system absorption of the undulations, bumps, and changes in road camber.

3. The test methods of "steady turn" are non real world simply because most vehicle maneuvers are a complicated system of transient dynamics or in other words a system of ever-changing conditions.

I conclude that the test methods employed by NHTSA are in no way representative of those methods used by the automotive industry for developing and measuring handling stability and controllability of our products.

IV. DOT HAS STATED THAT NO SYSTEM OF TESTS HAS YET BEEN DEvised WHICH CAN BE USED TO RATE OR QUALIFY THE HANDLING REQUIREMENTS OF MOTOR CARS

It is public knowledge that Mr. Doug Toms, Director of DOT, has stated that unfortunately, despite great effort, DOT, HSRI, and the automotive industry have been unable to devise a series of procedures and tests which could be used to measure the control performance of motor cars. This statement should, perforce, invalidate the DOT report.

V. 1962 CORVAIR RATED UNACCEPTABLE IN 1966 FORD JURY OF DEVELOPMENT ENGINEERS

During the continuing Ford development on handling tests in an attempt to establish handling performance standards which would correlate with real world conditions and provide a more objective method of evaluation, a 1962 Corvair was rated at 3.4 by a jury of experienced development engineers. Six additional vehicles were rated including a 1966 station wagon which had been purposely modified to make it unacceptable. Ratings ranged from 7.5 for the 1966 Mustang to 3.0 for the modified station wagon.

The 1962 Corvair rating of 3.4 as applied to our Vehicle Evaluation Rating System means: Unacceptable; Poor—customer complaint; and Average—customer would discern handling problem during life of car.

The full report containing this rating is contained in an August 3, 1966 Ford Motor Company Intra Company communication addressed to Mr. R. E. Edwards, subject: Handling Tests for Safety Committee in Handling Performance Standards. This report has been submitted to the Federal Government.

VI. MY FILM ANALYSIS OF "1960 FALCON-CORVAIR HANDLING COMPARISON" GAVE DUE ALLOWANCE FOR FALCON'S ADVANTAGE AS LEAD CAR

From Page 41 of the July DOT report:

"The test was conducted so that the Falcon was always the lead car when the two cars were driven in the same scene. It was the conclusion of the analysts that this gave the Falcon a distinct advantage in the driving maneuvers on the test track."

The Falcon had to be the lead car to prevent an accident and because it was I admitted this advantage and established a minimum handling standard of 60%. Despite this 40% discount, the Corvair failed to meet even one-half the standards of 60% against the Falcon which achieved 100% at standard tire pressure.

VII. I DID NOT RATE THE CORVAIR HIGHER WITH 26/26 PSI TIRE PRESSURE THAN WITH STANDARD PRESSURE

From Page 46 of the July DOT report.

"A point to note is that Mr. Copp rated the Corvair higher with nonrecommended 26 psi front and rear tire pressures than with the manufacturer's recommended tire pressures used in test No. 1 which were inconsistent with his analysis."

The following table is summarized from my film analysis dated July 25, 1971:

Test	Percent control ± 10 percent adequacy	
	Corvair	Falcon
Ia Comparative breakaway—standard pressure.....	35	100
Ib Comparative breakaway—26/26 lb/in ²	37	100
Ila Comparative highway handling—standard pressure.....	10	100
Ilb Comparative highway handling—26/26 lb/in ²	8	100

I clearly indicated that any method of analysis could not be more accurate than $\pm 10\%$.

From the above it can be seen that the nominal value in Test Ib is exactly 2% higher than the nominal value in Test Ia. Applying my specified tolerance of $\pm 10\%$ to Tests Ia and Ib the ranges are:

	Nominal percent	+10 percent	-1 percent
Standard pressure.....	35	45	25
26/26 lb/in ²	37	47	27

Had the report acknowledged my specified tolerance, its authors would have omitted the above quote. It is most apparent that the range of accuracy in my rating system would have shown that a standard pressure rating of 45% was possible and that a non-standard pressure at 26/26 psi of 27% was possible as indicated in the above table underlined values.

ATTACHMENT I: CRITICISM OF MY CALCULATED SPEEDS BY DOT IS JUSTIFIED

My stated speeds were based on repeated timing by a jury of three people using a standard silent film projector running at 18 frames per second. After the DOT Report was issued, I verified that the film had been taken at 24 frames per second thereby invalidating my speeds by the ratio of 24/18 which amounts to 33%. In my report I also stated the speeds to be accurate within $\pm 10\%$. Because of the more sophisticated projector used by DOT, I would assume their speeds to be accurate within $\pm 5\%$. Correcting for my projector error of 33% and using a tolerance of $\pm 10\%$ for my crude methods of timing and a $\pm 5\%$ for the DOT more sophisticated frame count method establishes reasonable correlation, viz.:

	Phase I comparative breakaway (mi/h)	Phase II highway cornering (mi/h)
DOT—Standard lb/in ² tire pressure:		
Nominal.....	35	38
± 5 percent tolerance.....	33-37	33-40
DOT—26/26 lb/in ² tire pressure:		
Nominal.....	35	(1)
± 5 percent tolerance.....	37-39	(1)
Copp—Standard and 26/26 lb/in ² tire pressure:		
Nominal.....	30	31
± 10 percent tolerance.....	27-33	28-34
Copp—Corrected:		
± 10 percent tolerance.....	27-33	28-34
Add 33 percent (24/18).....	9-11	9-11
Total.....	36-44	37-44

1 Not indicated.

Note: DOT speeds at standards and 26/26 lb/in² tire pressure with tolerance of ± 5 percent: 33 to 39 mi/h, phase I, 36 to 40 mi/h, phase II.

EXHIBIT 26

COMMENTS ON "REQUEST NO. 8," FORD EFFORTS IN 1966 TO ESTABLISH HANDLING PERFORMANCE STANDARDS

(By H. F. Copp)

I have prepared this statement on file "Request No. 8" forwarded to me by Mr. Robert Wager in his letter of July 19, 1972. Many of the pertinent questions in "Request No. 8" are answered in my Study "Relationship Between Copp Corvair-Falcon Film Analysis Rating Percentages and the Ford 'Vehicle Evaluation Rating System'". Some other comments of interest concerning this 4 Document file are:

1. The tests were a concerted effort by Ford to develop a series of disciplined objective tests from which we could establish Product Acceptance Handling Performance Standards. The effort was unsuccessful primarily because as stated in the last sentence of the August 3, 1966 communication to Mr. R. E. Edwards, "No efforts have been made to measure road disturbance inputs."

2. Our most recent work which does show a large measure of success has been reviewed with DOT and completely invalidates the HSRI methods used in the DOT 1960-63 Corvair Handling and Stability studies as they reported in their July DOT HS-820 198. Our report is ATMD 72-5 dated August 29, 1972.

3. The 1966 station wagon achieved a subjective rating of 6.5 on our 1-10 Rating Index as defined in Ford's "Vehicle Evaluation Rating System". By definition, the 6.5 rating is at the low end of the acceptable range and 1.5 above "borderline".

4. A similar wagon was modified to induce a high rate of change from understeer to oversteer and this modified wagon was rated at 3.0 which is unacceptable and its poor handling would be discerned by the average customer during the life of the vehicle. I should emphasize that this modified station wagon was a necessary tool for the evaluators so that they could establish a range of rating indices from 3.0 to 7.5 for test correlation purposes.

5. The 1962 Corvair used in these tests inadvertently overturned during a dry run over the test course. I have personally discussed this accident with the driver and he confirms the conditions causing the roll over.

EXHIBIT 27

ANALYSIS OF ROLLOVER ACCIDENT FACTORS AND INJURY CAUSATION

(By Donald F. Huelke, The University of Michigan Medical School; Joseph C. Marsh IV, The University of Michigan Highway Safety Research Institute; Harold W. Sherman, The University of Michigan Highway Safety Research Institute—Present at the 1972 Annual Conference of the American Association of Automotive Medicine.)

ABSTRACT

One of the most violent automobile accidents in terms of occupant injury exposure

is the rollover crash. In this environment the most consistently noted damaged area of the vehicle has been roof crush. Hence, it has been hypothesized that the prevention of significant roof crush will result in reduced injury severity. An analysis was made of the clinical accident investigation reports of 249 rollover crashes out of over 2,500 accident cases available. The results of the study disclosed that average occupant injuries in rollovers are at the lower end of the injury severity scale and are similar in severity to occupants in all other types of crashes. However, twice as many fatal injuries occur in rollovers than in all accidents and two-thirds of these fatalities are due to unrestrained occupant ejection. From these data it would appear that containment of occupants within the vehicle would provide a significant reduction of injury severity levels, and that reducing roof crush in rollover accidents will be of little significance in injury severity reduction.

Rollover¹ crashes can be the most violent in terms of occupant injury exposure. In these types of crashes a variety of force vectors are applied to car occupants with these vectors changing a number of times during very brief periods. On the other hand, rollovers can be as a "leaf tumbling down the roadway" and in these crashes there can be minimal force and force vector changes applied to the occupant.

Occupant containment within the vehicle is a major premise for survivability. However, in rollover collisions the potential is higher for door opening and occupant ejection than in many of the other crash configurations.

Probably one of the obvious damaged areas consistently noted about the vehicle in rollovers is roof crush. Thus, it has been suggested that preventing significant roof crush the occupant injury severity would be reduced. Likewise, with the relatively high incidence of door openings in rollovers, it has been suggested that ejection through open doors would be reduced if roof crush could be reduced to a minimum level.

In the amendment to the proposed Motor Vehicle Safety Standard 216 it states that, "... available data have shown that for non-ejected front seat occupants in rollover accidents, serious injuries are more frequent when the roof collapses. The roof crush standard will provide protection in rollover accidents by improving the integrity of the door, side window, and windshield retention areas. Preserving the overall structures of the vehicle in a crash decreases the likelihood of occupant ejection, reduces the hazard of occupant interior impacts and enhances occupant ejection after the accident" (1).²

It is the intent of this paper to explore the distinctive factors that characterize rollover accidents, their frequency, dynamics, vehicle damage, and occupant injury severity.

METHODOLOGY AND DATA

The Highway Safety Research Institute (HSRI) at The University of Michigan has processed over 3,000 Collision Performance and Injury Reports (CPIR) (2) into computer storage and is currently providing online access to these data via remote computer terminals in the automobile industry. National Highway Traffic Safety Administration (NHTSA) of the Department of Transportation, and six of the NHTSA sponsored Multidisciplinary Accident Investigation (MDAI) teams. The field accident investigations and the computer processing of these cases was sponsored by the Motor Vehicle Manufacturers Association (formerly Automobile Manufacturers Association) and the Department of Transportation.

¹ Vehicle rollover or overturning is defined as at least a 90 degree vehicle rotation about any horizontal axis.

² Numbers in parentheses designate references at end of paper.

All vehicle measurements, injury descriptions, injury severities and mechanisms of injury were computerized from the field accident reports. Twenty four different clinical accident investigation teams (Table 1) submitted the CPIR Revision 3 Long Form reports used in this study. All data were edited by HSRI to conform to consistent definitions of rollover occurrence, damage, and injury severity.

The cases reported were selected according to various criteria established by the study teams. The population of cases in the data file are not a cross-section of the general accident population. Of over 2,500 cases available, this study was restricted to 2,336 solid top (metal) passenger cars (excluding trucks and convertibles). In this group there were 249 rollover cases of which 212 sustained roof crush (Table 2).

In what ways are rollovers different than non-rollover collisions? In order to identify the type of accident situations strongly associated with vehicle rollover, a number of two-way tables were prepared. These bivariate tables contrasted rollovers vs. non-rollovers for many accident variables, such as horizontal road alignment, driver's age, and time of day.

In order to statistically test for possibly significant factors (e.g., day and night), a one-way analysis-of-variance was performed on a number of interesting control variables (e.g., time of day) using rollover "yes/no" as a dichotomous dependent variable. The F-Ratio statistics provided a significant measure of the over-involvement of rollovers in a particular accident situation (e.g., rollovers are involved twice as often in night accidents than in day accidents). All the results presented here were significant to .01 (p less than .01).

Because the analysis-of-variance program drops cases from the individual tables in which a variable is coded "unknown," the total number of cases may vary from table to table.

In an effort to learn what induces a car to overturn and whether overturning was the first event, two hundred available hard copy cases were retrieved for tabulation. They were not selected on any other basis and should generally represent all the cases in computer storage.

The analysis of occupants and their injuries was restricted to those in the front seat, who represent approximately 84 percent of all occupants. This was done to parallel the statements in the MVSS 216 Docket 2-6 (1). Again, the one-way analysis-of-variance program was used to describe occupants in rollovers and to relate inches of roof crush to average injury severity.

ROLLOVER FREQUENCY

How many cars roll over each year? *Accident Facts* (3) of 1972 reports "Overturned in Road" as 0.6% (or 98,400 of 16,400,000 accidents). All other rollovers are not reported because overturns are only one class in the accident classifications (4). Thus, if the first event is "collision between motor vehicles" and one of the vehicles subsequently rolls over, only the first event is recorded and the rollover is not documented. In the CPIR file the question of rollover is coded separately and independently of accident configuration. Of 200 rollover cases hand sorted and reviewed in detail, only 3 per cent occurred on the roadway. Of the remaining 97 per cent, 60 per cent struck another object or vehicle before rolling over and 37 per cent ran off the road before overturning. Thus, if 97 per cent of vehicle rollovers are not indicated in police accident reporting, then the number of rollovers is much higher than the 0.6% reported in the mass accident data, perhaps on the order of 19 per cent are rollovers ($0.6 \times 97 \div 3$).

Garrett's (5) study of rural state police reported accidents indicates 13 percent as being principally rollover collisions. An ear-

lier Automobile Crash Injury Research (ACIR) study (6) found rollovers in 25 per cent of rural injury producing accidents. The magnitude or extent of the rollover phenomena is not all clear and further resolution is required in order to evaluate the need for and impact of an rollover standards.

ROLLOVER ACCIDENT CHARACTERISTICS

Vehicle rollovers have been signaled out as unique events for the application of special countermeasures and standards, such as MVSS 216. In order to gain a fuller perspective of potentially fruitful countermeasures, those features that characterize rollovers need to be identified. By contrasting rollovers and non-rollovers, a number of CPIR variables were identified that distinctively set rollovers apart as a unique event.

Rollover accidents occur when a young impaired driver speeds around the curve of a dark rural road. Typically the small vehicle overturns, frequently ejects the occupants out a window, and sustains crush across the forward third of the roof. The following tables display these characteristics.

In Table 3, rollovers are overrepresented in rural accidents where they represent 17 percent of the crashes, while in urban accidents only 6 per cent are rollovers. The rollover type of crash is more frequent on curves than crashes on straight roads. They account for 23 percent of crashes on curved portions of the roadway, whereas only 8 percent of crashes on straight roads are rollovers (Table 4). It is also interesting to note that limited visibility is significantly related to rollover crashes. At dawn/dusk, 13 percent of crashes are rollovers and 14 percent are rollovers at night (Table 5).

As seen in Table 6, 30 percent of single vehicle crashes are rollovers whereas only 3 percent multiple car crashes are rollovers. The smaller the cars the more involved they are in rollovers (Table 7). Six percent of the standard size vehicles overturn while 16 percent of the subcompact or mini cars overturn. As indicated in Table 8, relatively few rollovers occur under 40 mph, but with higher speeds the frequency of cars overturning increases significantly.

In Table 9, we see that the young driver, 21 and under, is almost twice as involved in rollovers. Interestingly the impaired driver rolls over 17 percent of the time, while the unimpaired driver only rolls 7 percent of the time (Table 10). Driver impairment, as defined in the CPIR form, includes several categories of psychological (e.g., asleep, inattention), physiological (e.g., infirmities) and pharmacological (e.g., alcohol, drugs), which have been combined in Table 10.

Recall again that traveling speed is also highly associated with rollover involvement and many of the factors (e.g., driver age, impairment, speed, etc.) often associated with the general accident population are significantly overinvolved or overrepresented in the population of rollover accidents. This suggests that there may exist a select combination of accident prevention measures that would be uniquely effective in reducing the frequency of the rollover event.

Given that the driver becomes engaged in a rollover situation, how does his vehicle overturn? As a preventive measure, can the vehicle handling and vehicle dynamics be improved to reduce the likelihood of rollover? Vehicle rollover dynamics have been discussed adequately in the literature (7, 8). It is sufficient here to note that, while it is possible to design a vehicle suspension system that will induce rollover, cars manufactured in the USA today are designed to minimize the rise in the center of mass during severe maneuvers thereby removing the possibility of a self-induced rollover on a flat surface.

Many envision a rollover as a car merely turning on its side. However, rollovers can occur when the vehicle yaws and pitches at the same time. Combining minimal amounts of pitch and yaw with a change in coefficient

of friction and/or striking a low obstruction can also cause the vehicle to roll. In addition, vehicles can vault due to marked changes in horizontal surface alignment.

Of the 200 rollover cases that were hand sorted and reviewed in detail, one-hundred ninety six rolled over due to pitch and yaw and "toe stubbing" (e.g., tire hit curb, wheel dug into soft earth) or vaulting of the car over an embankment. Only in four cases was there an indication that rollover occurred without tripping or vaulting and these cases were in atypical situations, i.e., towing trailers, buffeted by passing tractor trailer units, or where the vehicle rode up a guardrail and ramped over.

The initial direction of vehicle roll is described in Table 11. Not too surprisingly, cars roll over sideways most frequently and slightly more often towards the driver's side. Interestingly overturned cars most frequently come to rest upside down (Table 12), which can complicate extrication procedures. Further examination of the data file show that special extrication procedures (beyond simply opening the door) were used on 10.4% of the overturned cars and only 6.5% of non-rollover cars.

VEHICLE ROLLOVER DAMAGE

Rollover vehicle damage may involve any portion of the car, but our concern is with the roof and supporting structures. Table 13 displays the distribution of roof crush for the subset of solid top passenger cars that rolled over. These are measurements of direct roof crush down along a vertical axis through the point of maximum crush. This table indicates that 60 per cent of vehicles that rolled over had 6 inches or less of direct roof crush; therefore, these vehicles apparently already meet the intent of occupant protection as implied in the roof crush standard, MVSS 216.

In the Mackay and Tampen field study of 89 rollovers (9), all but ten cases had "some roof distortion and penetration of the passenger compartment. All of these ten cases were limited to 90 degree rolls. Figure 1 shows the frequency of the point of maximum collapse on the roof area. The most frequent point is immediately behind the (windshield) header region, centrally. . ."

As expected, roof structural damage occurs most frequently in rollover crashes. Of crash cars having left side pillar damage, 79 per cent of rollover cars had damage to the left side pillars (Table 14). The statistics for the right side are similar.

Significantly it was found that a front door opened in 14 per cent of vehicle rollovers vs. only 9 per cent of non-rollover vehicles. Mackay and Tampen (9) found that in 57 per cent of their 89 rollover cases one or more doors opened. The frequency of door openings during rollovers presents the hazard of potential occupant ejections.

ROLOVER EJECTIONS

Other studies have shown that ejection from the vehicle is one of the leading causes of serious injury and death (10, 11). This problem is particularly acute in rollover accidents. In rollovers, 21 percent of the cases had occupants who were ejected, whereas only 3 percent of non-rollover crashes had occupants ejected (Table 15). Table 16 indicates that of those ejected, 46 percent were in rollovers.

For those occupants that were ejected, the various possible portals of ejection are shown in Table 17. Of the large number of occupants not ejected in crashes, only 9 percent were in rollovers. However, rollovers involved a higher percentage of occupant ejections. Of these occupants ejected through door openings, 28 percent were in rollovers, while rollovers accounted for 50 percent of all windshield ejections and ejections through the side glass openings amounted to 61 percent in rollovers.

Of the 62 ejectees in rollover crashes, half went out of the vehicle through side window

areas. Occupant ejection through the side glass has been reported previously (12). When the vehicle rolls, the unrestrained occupant moves to the down side of the car. If the window is open the occupant can be partially or completely ejected with the car then rolling over him. If the window is closed, the glass can be broken in the first quarter roll with occupant ejection through the door glass opening occurring in subsequent rollovers. Sometimes the dynamics of the crash are such that the unrestrained occupant catapults through the side glass and is partially or completely ejected. Improved roof structural integrity will not eliminate these types of ejections. Once there is significant roof crush to occlude the glass opening, occupant ejection cannot then occur through this area.

In the past, doors have opened frequently in rollovers due to either frame and body distortion, door button activation from ground contact on the outside, or by inadvertent occupant activation. Inadvertent door opening and ejection due to roof crush has not been noted in the literature or by the authors' field accident investigations. As shown in Table 18, door related ejections decrease with increase in roof crush, indicating occupant containment within the car. It appears that door ejections occur before any significant roof crush has been sustained. An open door of a crashed car with obvious roof collapse in the area of the door opening often misleads one to interpret roof crush as the causal agent. The high frequency of side window ejections related to rollovers and the lower frequency of door ejections related to overturn crashes can be explained by the improvements in the latch-striker mechanism, which maintains the integrity of the side of the car. The variety of door opening mechanisms has been presented elsewhere (13).

Finally a statistical analysis of 277 unbelted rollover occupants indicates no significant relationship between ejection and roof crush [$F(4,272) = 0.420$].

ROLOVER INJURY SEVERITY

The definition of injury severity in the CPTR data file is based on the American Medical Association's Abbreviated Injury Scale (AIS) as outlined in Table 19. While many may not accept the AIS as a linear scale, most researchers will agree that the AIS is an ordinal scale. The distribution of AIS for rollovers and all accidents is displayed in Table 20. This table shows that the distribution of injuries at the lower injury levels is approximately the same in rollovers as in all vehicle collisions. However, rollovers have 16 percent of occupants in the fatal category (AIS 6-9), twice that of all accidents.

In Table 21 it can be seen that for those ejected 49 percent are in the fatal categories (AIS 6-9), whereas only 7 percent of those not ejected in rollovers were fatally injured. The data indicate that 4 out of 6 rollover fatalities are due to ejection from the vehicle.

Figure 2 illustrates the relationship between the amount of roof crush and the average injury level of occupants not ejected. Note that up to 6 inches of roof crush the average injuries are minor to moderate in severity. From 7 to 24 inches of roof crush, the average occupant injury is in the moderate injury range. It is only when the roof is crushed downward more than two feet, thereby obliterating compartment space (in general found only in extremely severe crashes), does the average injury level approach the serious category. The T-bars in the figure show the standard deviation for injuries in each roof crush increment.

While a strong association between extent of roof crush and injury severity is displayed, Figure 2 does not define a causal relationship. It could be that extent of roof crush is simply an indicator of accident severity

and that injury severity increases with accident severity. Figure 3 shows that increased frontal crush in rollovers is significantly associated with increased AIS. Does this mean that increased frontal crush "causes" increased injury? Or in other words, should cars have stiff noncrushable front ends? Clearly not. It should be noted that because two variables are statistically associated, this in itself does not mean a causal relationship. Because roof crush is related to injury, this does not mean that roof crush causes injury.

The comparison of roof crush and AIS for belted and unbelted occupants is fairly revealing (Fig. 4). Occupants restrained by a lap belt have a lower average overall injury level than unrestrained occupants in crashes involving roof crush. Lap belted restrained occupants have an average injury of moderate even with significant roof crush of 13-24 inches. The F-Ratio statistic (3,646) was 1.7, indicating no significant statistical relationship exists between AIS and roof crush for restrained occupants in rollovers.

The story for unrestrained occupants is not so happy. Injury is again strongly related to roof crush for the unbelted occupant. Thus, it is not clear that passive restraints would protect the rollover occupant as much as if he had worn his belt restraint system.

CONCLUSIONS

The accurate number of annual rollover crashes in the United States is not determined by police accident mass data reports. Rollovers probably occur in one out of five or eight crashes.

Rollover crashes are more often single vehicle crashes, on curves rather than on straight roads and in limited visibility (dawn/dusk or at night) and at higher traveling speeds. Smaller cars, the subcompact (minis), roll over more often than larger sized cars.

Many of the factors often associated with the general accident population, are significantly overinvolved or overrepresented in rollover crashes. The young, under 21 years, driver or those with impairments are overly involved in rollover crashes.

Most rollovers are caused by several simultaneous factors—pitch, yaw, and changes in coefficient of friction, or changes in surface alignment and seldom occur on a flat surface.

Six of ten rollover cars had zero to six inches of roof crush and these cars apparently meet the intent of occupant protection as implied in MVSS 216. Door openings during the crash sequence were significantly higher in rollovers than in all accidents.

MVSS 216 indicates that serious injuries are more frequent to the non-ejected front seat occupants in rollovers when the roof collapses. However, the results of this study indicate that minimizing roof crush by vehicle redesign would not significantly decrease occupant injury at lower amounts of roof crush. The data show that minor or moderate injuries are sustained with minimal roof crush of zero to six inches. For roof crush down as far as 24 inches, the average injury severity for non-ejected occupants is only in the moderate range. Only when roofs crush more than two feet does the average occupant injury severity approach the serious category. The data do show that there is a statistical relationship between increments of roof crush and increases in average injury levels; however, this is not a causal relationship. Roof crush probably is an indicator of accident severity.

In rollovers, average occupant injuries are at the lower end of the AIS and are similar in severity to occupants in all types of crashes. However, the data indicate that twice as many fatal injuries occur in rollovers than in all accidents and four out of six of these fatalities are due to occupant ejection. Ejection occurs more often through the glass areas, especially the side glass areas, and ejection takes place before significant

roof crush has been sustained. There is no significant statistical relationship between unbelted occupant ejection and the amount of roof crush and thus roof crush preventative measures would not be effective to eliminate this problem.

Lap belted occupants in rollovers have a lower average overall injury level than those who are unrestrained. No statistically significant relationship exists between lab belted injury levels and the amount of roof crush. However, the lap belt does prevent side glass, windshield and door ejections and prevents the occupants from being buffeted about inside the car. Therefore, the roof crush standard would not reduce the interior impact hazard for unbelted occupants.

STATEMENT BY GENERAL MOTORS, DATED DECEMBER 21, 1972, REGARDING "1960 FALCON-CORVAIR HANDLING COMPARISON" FILM AND RELATED TESTS

General Motors' evaluation of the 1959 Ford film entitled "1960 Falcon-Corvaire Handling Comparison" started with a careful analysis of the film itself. This was necessary because no actual measurements were available to us.

By counting the number of film frames taken while a vehicle is passing a stationary

object, and knowing the length of the vehicle and the film speed in frames per second, it is possible to compute the speed of the vehicle with a reasonable degree of accuracy. The Corvaire automobile is known to be designed to be exactly 15 ft. long with a wheelbase of exactly 9 ft., and a film speed of 24 frames per second (commercial photographic speed) was assumed.

The eight sequences of Phase I (circle test) were timed with the vehicles at various places on the circle. The vehicle speeds for all of the runs were computed to be 35 mph and quite constant around the circle.

The eight sequences of Phase II (S-curve test) were timed in like manner. The vehicle speeds were found to be 41 mph at entry of the first turn, and to be approximately 40 mph in front of the camera.

The lateral accelerations to which the vehicles were subjected while on course were then calculated, assuming a center of gravity path in the center of the lane. The resulting values of 0.52g for Phase I and 0.57g for Phase II were found to be within the known range of controllability of the Corvaire. The film was then studied for driver-vehicle behavior, to determine the reason for the behavior of the Corvaire.

In the Phase I tests, it was observed that, as the vehicles approached the camera, the Corvaire began to describe a radius larger than the actual circle, bringing the outside rear tire close to, and often off of, the edge of the road. This was coupled with an abrupt left steer input in front of the camera (as observed in the front wheels), causing the vehicle to yaw left (counter clockwise). The driver's hands and arms could not be clearly seen during the steering maneuver because of the camera angle.

The Phase II test film more clearly showed driver manipulation. In six of the eight runs, the driver of the Corvaire could clearly be seen to be imparting additional right steer to the Corvaire as he neared the end of the right-hand (second) curve and was in front of the camera. Had he found it necessary to change his steering angle at all at that time, it should have been to reduce his right input for the approaching straight.

In one run (the seventh run of Phase II), the driver for some unknown reason steers to the left, approximately half-way through the right-hand curve, and naturally goes off the course to the left.

In the sixth run of Phase II (the solo run of the Corvaire), the driver's actions cannot be seen. However, it can be observed that, as the Corvaire enters the second turn, it is allowed to go over the centerline. The vehicle is then steered abruptly to the right, and then the front wheels are returned to the straight ahead position, so that the Corvaire leaves the course straight ahead.

On May 12, 1972, Mr. Nader called a press conference and distributed copies of Mr. Copp's analysis of the Ford film, showing speeds of 30 mph (Phase I) and 31 mph (Phase II).

On May 13, 1972, the sections of the Ford handling course shown in the film were outlined with traffic cones on the Vehicle Dynamics Test Area of the General Motors Proving Grounds at Milford, Michigan. Instrumented cars were available in restored production condition. Movie cameras were placed in the cars to record measured values and driver actions. A ground camera was also used. Engineers experienced in vehicle handling evaluation were used as drivers. Runs on the Phase I course were made at 30 and 35 mph. Runs on the Phase II course were made at 31, 35, and 41 mph. No difficulty in control of either car in either phase was experienced. All runs were with the Corvaire following the Falcon, and with manufacturers' recommended the pressures on both cars.

Two additional runs were made on the Phase II course at 30 mph where the driver

of the Corvaire deliberately drove the vehicle off the inside of the second curve. The ground camera recorded arm motions similar to those in the Ford film.

On July 20, 1972, the Ford course was again constructed on the Vehicle Dynamics Test Area at the General Motors Proving Grounds, this time with paint stripes. The same drivers and vehicles were used. The Phase I course was run at 30 and 35 mph, and the Phase II course was run at 31, 35, and 41 mph. In-car, ground and overhead cameras were used. Again, no difficulties were experienced with either vehicle. No intentional deviations from the Phase II course were run. All runs were with the Corvaire following the Falcon, and with the manufacturers' recommended tire pressures on both cars.

On September 16, 1972, the sequences were re-run by General Motors drivers on the handling course at the Dearborn Proving Ground of Ford Motor Company. In-car, ground and overhead cameras were used. The same vehicles were used, but a different Corvaire driver was used (also experienced). The handling course had recently been resurfaced, but was of the same dimensions except for edge stripes marking 11 ft. wide lanes. A 44 ft. speed trap was used to measure the speed of the lead vehicle.

The Phase I (circle) portion was run with the Corvaire following the Falcon at 35 mph, and then with the Falcon going as fast as it could negotiate the course (36 mph). The vehicle positions were then reversed, and with the Falcon following the Corvaire, the Corvaire driver was instructed to negotiate the course as fast as possible. The resultant speed was 38 mph.

The Phase II (S-turn) portion was run with the Corvaire following the Falcon at 41 mph, and then with the Falcon going as fast as it could negotiate the course (43 mph at entrance to second curve). The vehicle positions were then reversed, and with the Falcon following the Corvaire, the Corvaire went as fast as it could negotiate the course. That speed was 45 mph at the entrance to the second curve. The drivers had no difficulty in controlling either car in either phase.

A 30 mph skid stop with the Corvaire was made on the Phase I portion of the course. A measured skid distance of 44 ft. 9 in. yielded a computed Skid Number of 67.3.

General Motors concluded, from an analysis of the 1959 Ford film and from its own running of the same tests, that the 1959 Ford film did not provide an objective demonstration of the Corvaire's handling characteristics and that the maneuvers of the car were the result of the driver's action. In our opinion, the only conclusion that can be drawn about the relative handling characteristics of the two cars from these particular tests run by General Motors is that the steady state limit of control of the Corvaire is slightly higher than that of the Falcon. The layout of the course in these tests was such that the transient limit of control of either vehicle could not be reached.

EXHIBIT 29

U.S. DEPARTMENT OF TRANSPORTATION,
Washington, D.C., January 10, 1973.

Mr. ROBERT J. WAGER,
Staff Director and General Counsel, Subcommittee on Executive Reorganization and Government Research, U.S. Senate, Washington, D.C.

DEAR MR. WAGER: In accordance with your request for NHTSA's comments on Mr. Copp's critique of the NHTSA Corvaire handling report, the enclosed information is forwarded. Sincerely,

ANDREW G. DETRICK,
Acting Director, Office of Defects Investigation, Motor Vehicles Programs.

JANUARY 10, 1973.

I. The NHTSA personnel have looked at the 1959 Ford film showing the Falcon vs.

Corvair Handling at 18 frames per second projection speed. It was determined that the speed of the Corvair would have been about 26 and 27 mph at this projection rate for Phase I Test 1 and 2 respectively.

The thing about watching the film at 18 frames per second that immediately struck the NHTSA personnel was that the film looks like slow motion. This is most evident when the Corvair is in a slide out or spin out mode. It is difficult to understand how anyone could spend very much time watching the film and not recognize the slow motion effect at 18 frames per second.

A plus or minus 10%, which Mr. Copp uses, applied to 26 mph speed gives a range of 23.4 to 28.6 mph and 24.3 to 29.7 for 27 mph.

Mr. Copp appears also to have used the center of the road for the radius in his calculations rather than the path of the vehicle. 30 mph at 150 ft. (r) = .4g; 30 mph at 156 ft. (r) = .385g.

There also appears to be an error in his appendix for Phase I Comparative Break-away/mph, DOT—26/26 psi tire pressure: nominal, 35; $\pm 5\%$ tolerance, 37–39.

II. Mr. Copp quotes the "Panel" from page 6 of their report. This is in first section of their report and it contained their initial understandings. The addendum, which was written after they had been exposed to additional information concerning the transition, provides the Panel's final understanding about transition.

It is their final understanding about the transition that is most important, the same as Mr. Copp's final understanding about the vehicles' speed, etc., in the Ford film is most important.

In the Panel's June 6 addendum they state:

"The 1960–1963 Corvair, which is an initially understeering vehicle, changes from understeer to neutral steer at approximately .4g lateral acceleration. At greater lateral accelerations this condition changes to oversteer which increases with the lateral acceleration until the vehicle is no longer under control of the driver above .6g (limit of control). The time frame within which the transition occurs is a function of vehicle speed and trim, but the amount of steering wheel correction or steering change required to maintain a constant 108 foot radius is only about 50 degrees of steering wheel motion from .4g to .6g.

"By comparison, a 1967 Chevrolet sedan and 1967 Chevrolet station wagon, both of which are understeering vehicles, required approximately 175 degrees of steering wheel movement, respectively, to maintain the same steady state conditions.

"This means that the Corvair has greater control sensitivity than these vehicles as well as greater control sensitivity than contemporary vehicles." (emphasis added)

Mr. Copp quoted the Panel "What is different (emphasis added) about the 1960 through 1963 Corvair is the characteristic transition from understeer to oversteer which occurs at a lateral acceleration of 0.4g to 0.5g."

The difference does not mean that it is bad. As a matter of fact the Panel describes the difference in the end of the report as follows: "Although the 1960–1963 Corvair does oversteer from .4g to .6g it is not unstable and the control sensitivity is superior to that of contemporary vehicles (emphasis added) in the sense that less steering input is required for a desired maneuver."

II. (1) Mr. Copp conveniently assumes that the speed of the vehicles to be the same for both curves. There is a very good possibility that the speeds on the first curve could be higher than the second curve. The vehicles did have a longer distance to get up to speed at the first curve and they probably scuffed off some speed going around the curve. They may not have gotten up to the same speed by

the second curve. There is a difference in the radius of curvature of the inside and outside of the turns, 6% as Mr. Copp states. A one mile per hour decrease in speed will make up the differences in the two radii from the first curve to the second curve—41 mph on the 206 foot radius is 0.544 gs 40 mph on the 194 ft. radius is 0.549 gs.

(2) Mr. Copp stated that "The Corvair is experiencing latent control problems as it enters the second turn of the Phase II tests."

Close examination of the Corvair as it enters the second turn clearly shows it is not experiencing any problems. It can clearly be seen that it negotiates the second turn with no problems. It is not until after the driver puts in the unexplainable steering at the end of the second curve that the car goes off the road in response to his input.

(3) Mr. Copp stated: "I believe that staged tests which make the Corvair look bad would have attempted to make the Corvair look bad in all sequences."—Not if they are clever!

(4) Mr. Copp states: "At the point of loss of control the driver's corrections to the Corvair are exactly those instinctive reactions which would be made with an understeering car; turn more to the right in a right hand turn."

Close examination of the driver of the Falcon in Ford film clearly shows that this is not true. The driver of the Falcon as he passed in front of the camera at the same point where the driver of the Corvair put in the unexplainable steering input the driver of the Falcon did not put in any more steering at all. He just kept the steering he had in at that point.

During constant speed—constant radius turns, once the vehicle is in the turn a driver just maintains the steering input he has established to maintain path direction. He does not put in any more steering than is needed. The driver only attempts to maintain path control. A driver only uses the steering input necessary to make the car go where he wants it to go—not any more.

If Mr. Copp's statement was true, which it isn't, it would be like saying that when a driver drives a Lincoln around a curve he puts in so many degrees of steering into the steering wheel. Then when he drives a Mustang through the same curve, which would have a more responsive steering, that the driver would put more steering in at the end of the curve with the Mustang just because he put in a higher amount when driving the Lincoln.

The driver of the Corvair had no reason to put in more steering at the end of the curve and there was no logical instinctive reason for it.

Items 5, 6, 7, 8. There does not seem to be any reason for discussing these since it is very apparent what the drivers of the Corvair and Falcon actually did in the films.

(9) If Mr. Copp had observed any driver steering motions of Corvairs during the transition from understeer through neutral steer to oversteer he would understand that little or no steering may be required during this period. Movies taken simultaneously of the suspension and a driver of a Corvair going over rises and bumps in the road on curves causing the vehicle to go through the transition ranges clearly demonstrate that these do not have any consequent additive transitions in the suspension system steer characteristics.

The Panel in their addendum state that "This means that the Corvair has greater control sensitivity than these vehicles [1967 Chevrolet sedan and 1967 Chevrolet station wagon referred to in the previous paragraph] as well as greater control sensitivity than contemporary vehicles."

III. (1) In Mr. Copp's discussion about Ford methods of evaluating vehicles he states "The results of the Ford 14 month investigation of the HSRI procedure and our counter proposals have been reviewed with DOT

as indicated in Ford Report ATMD 72-5 dated August 29, 1972."

As of this time a check of the NHTSA personnel involved with the HSRI test procedures has not turned up anyone who has received the information indicated by Mr. Copp.

(2) The test conditions of a relatively smooth higher coefficient surface was selected to be able to produce the maximum lateral accelerations. The maximum transient accelerations experienced in the testing program were considerably higher than those attained during steady state conditions. The level test surface condition was selected to assure uniformity and comparability.

(3) The tests conducted by Ford in their Falcon-Corvair films were also steady turn tests. The 150 ft. radius circular track is certainly a steady turn and the two 200 ft. radius curves are also steady turns.

IV. Mr. Copp stated: "DOT has stated that no system of tests has yet been devised which can be used to rate or qualify the handling requirements (emphasis added) of motor cars."

The tests conducted by NHTSA were not for the purpose of determining the handling requirements but were for the purpose of comparing the characteristics of the vehicles under consideration.

The NHTSA tests did provide information and data about the inputs and responses of the vehicles and these were then compared. These were comparative tests not requirement tests.

V. Mr. W. A. McConnell, Director of Product Test Operations Office, Product Development Group, Ford Motor Company, in his April 26, 1972, letter to Senator Magnuson briefly discussed some films involving a used 1962 Corvair in poor condition. It appears from the information NHTSA has received from Ford that this is the same Corvair Mr. Copp refers to in Part V of his critique.

Mr. McConnell stated in his letter: "We have two other reels of film involving a Corvair. These films were made in 1968 and involved a used 1962 Corvair in poor condition. The tests shown in these films were not designed to measure the handling characteristics of the Corvair (emphasis added) and do not present a fair illustration of its handling characteristics."

Mr. McConnell and Mr. Copp apparently do not have the same opinions concerning the tests. Mr. Copp's title of Section V of his critique "1962 Corvair Rated Unacceptable in 1966 Ford Jury of Developmental Engineers" does not agree with Mr. McConnell's statements concerning the tests.

The rating of the 1962 Corvair did rate a little higher than the similar condition 1966 Ford station wagon.

VI. There is no logical reason why the Falcon had to be the lead car unless the results of the tests had been predetermined. Since the drivers of cars did not have any apparent protective equipment, they must have been confident nothing would occur to risk their safety.

If the driver of the Corvair was given the lead car position then he had to drive the vehicle to the best of his ability or possibly risk a crash. Also, if the Corvair had been in the lead it may have been able to go faster than the Falcon with proper driving without the unexplainable steering inputs.

VII. Mr. Copp rated the Corvair at 35 for the standard tire pressure and 37 for the 26/26 tire pressure. Plus or minus 10 percent to each one still make their ranges 25 to 45 versus 27 to 47.

Mr. Copp stated that "for the nonstandard tire pressure of 26–26 psi, in both Phase I and Phase II testing, (emphasis added) the Corvair deviated into the oncoming lane six times during nine runs and demonstrated complete loss of control four times during nine test runs.

26/26 psi

$$\frac{6}{9} = 66\%$$

oncoming lane

$$\frac{4}{9} = 44\%$$

complete loss

"For standard tire pressure in both Phase I and Phase II testing, the Corvair deviated into the oncoming lane eleven times during the ten comparative tests when running the standard tire pressure. Complete loss of control occurred five times during ten test runs.

$$\frac{11}{10} = 110\%$$

oncoming lane

$$\frac{5}{10} = 50\%$$

complete loss

Even if the tests had been valid, a 66 percent loss on control in the oncoming lane for the 26/26 psi tire pressure would be better than the 110 percent for the standard pressure. Also, a 44 percent complete loss of control for the 26/26 psi tire pressure would be better than a 50 percent loss of control for the standard pressure.

Mr. Copp, in his tabulation of his evaluation, shows that:

	Percent control adequacy
Standard tire pressure:	
Average, phase I and II.....	18
Range \pm 10 percent.....	8-28
Nonstandard tire pressure, Corvair 26-26 psi:	
Average, phase I and II.....	22
Range \pm 10 percent.....	12-32

ROBERT J. WAGER, Esq.,
Staff Director and General Counsel; Subcommittee on Executive Reorganization and Government Research, U.S. Senate, Washington, D.C.

DEAR BOB: Your letter of December 6, 1972. You forwarded to me the following material:

1. My letter to you dated August 16, 1972 (9 pages).
2. Comments on "Request No. 8" Ford Efforts in 1966 to Establish Handling Performance Standards, H. F. Copp, 11/30/72 (2 pages).
3. Amended November 30, 1972, Critique of General Motors Discussion on Design Characteristics of the Corvair, H. F. Copp, 11/30/72 (5 pages).
4. Critique of DOT-NHTSA 1960-63 Corvair Handling and Stability DOT HS-820 198, H. F. Copp, 11/30/72, (6 pages, 1 attachment).
5. Critique of General Motors Discussion on Design Characteristics of the Corvair, H. F. Copp, 10/22/71, (5 pages).

You asked me the following questions:

1. Has Copp changed his views? If so, how?
2. What changes or modifications would you make in your own previous statement, if any, as a result of Copp's own amended views?
3. What do you think of Copp's Critique of the DOT tests?

SUMMARY

I do not believe Mr. Copp has changed his views towards the Corvair; and Mr. Copp's Critique of DOT-NHTSA 1960-63 Corvair Handling and Stability DOT HS 820-198 has not changed my opinion of the Corvair.

Mr. Copp's Critique would have us invalidate the NHTSA report since the testing did not include driver reaction time, varying road surface, and subjective driver comment. Since no reliable tests were available to include the above, NHTSA chose a system of tests which would quantitatively evaluate the performance of the Corvair against contemporary vehicles. This was the only reasonable way of determining whether or not the Corvair should be charged with a safety defect.

Question 1. It appears that Mr. Copp has not changed his views in any way. He only seems to have slightly less substantiation for his views in that he has removed all refer-

ences to speed and lateral G forces as indicated in the Falcon vs. Corvair handling film.

Question 2. I would make no changes or modifications in my previous statement as a result of Mr. Copp's amended views.

Question 3. In evaluating Mr. Copp's Critique of DOT-NHTSA 1960-63 Corvair Handling Stability DOT-HS-820 198, I will comment on each of Mr. Copp's numbered points as follows:

1. *Criticism of my calculated speeds by DOT is justified.*—Given that Mr. Copp now agrees with the DOT calculations of G loadings and speed for the Falcon vs. Corvair film. Given that Mr. Copp states that, "at the loss of control the driver's corrections to the Corvair are exactly those instinctive reactions which would be made with an understeering car." We then can predict the spin displayed by the Corvair when exiting the right hand turn since the Corvair has considerably higher control sensitivity than the Falcon. In short, if one takes the steering wheel movement required to change the direction of the Falcon at high G loadings and applies this same steering wheel movement to the oversteering Corvair one will induce a spin.

2. *Corvair rapid transition from understeer to oversteer exceeds driver's reaction time.*—Unfortunately Mr. Copp has decided to base an entire mathematical analysis on the single comment, "In the General Motors film it was observed that the lateral acceleration might go from .3 to .6 G's in a quarter to a half a second dependent on the attitude and speed of the vehicle." The observation referred to by Mr. Copp occurred during tests wherein a Falcon and a Corvair entered a 108 foot skid pad circle on a tangent at various speeds. The particular case being observed was, I believe, at the speed of 40 mph where neither car was able to make the turn onto the 108 foot circle. The Falcon plowed off the outside of the circle and the Corvair spun to the inside of the circle. This again displayed that there is a practical limit of control in both oversteering and understeering vehicles. Oversteering vehicles due to instability and understeering vehicles due to uncontrollability. It was in these tests where the Corvair was almost pitched at the 108 foot circle that the G loadings built-up in the very small time frame.

The panel only made this point in order to question the General Motors comment that the Corvair had a gentle transition from understeer to oversteer without referring to any time frame. Since in the case Copp selects, the vehicle had to be thrown into an uncontrollable mode in order to have the transition in a fraction of a second; it seems irrelevant that this particular induced activity causes a situation which exceeds driver reaction time.

If a driver is forced to execute a maneuver which temporarily throws a car out of control, then he must be instinctively ready to correct the situation. Further, the large amount of steering wheel angle required to quickly change the direction of a Falcon under emergency situations might also be impossible within driver reaction time.

3. *Test methods used by NHTSA do not correlate with real world conditions.*—In order to determine whether or not the 1960 through 1963 Corvair should be charged with a safety defect, the National Highway Traffic Safety Administration chose a series of tests which would quantitatively evaluate the Corvair relative to contemporary cars. This approach seems valid.

Everyone involved realized that surface adhesion conditions, non-level road surfaces, etc., could change the characteristics of the various automobiles tested. Also there was a realization that a series of tests should be initiated which would attempt to better evaluate the interface between the average driver and various handling characteristics

of cars used on the American highways which brings us to point #4.

4. *DOT has stated that no system of tests has been devised that can be used to rate or qualify the handling requirements of motor cars.*—It is my opinion that Mr. Doug Toms, Director of DOT, when he stated that "despite great effort DOT-HSRI and the automotive industry have been unable to devise a series of procedures and tests to measure the control performance of motor cars," that he meant that there were not a series of tests that could take into consideration various conditions of road surfaces and grade that might be encountered by an automobile or take into consideration the interface between many different drivers which might attempt to drive a motor car on the United States highways. Consequently, the DOT took a standard series of tests and ran contemporary cars against the Corvair to prove quantitatively that it met or exceeded the values posted by contemporary cars. I consequently, therefore, do not believe that Doug Toms' statement per force invalidate the DOT report.

5. *1962 Corvair rated unacceptable in 1966 Ford Jury of Development Engineers.*—I believe we all gave Ford credit for attempting to relate subjective driver reactions to quantitative test results on the handling of automobiles. In fact, most of us recommended that additional work be done in this area. But it appeared at the time of the Corvair tests by the Ford engineers that the acceptability or unacceptability of the Corvair was based strictly on the subjective feelings of drivers. It appears to me that very close correlation would need to be established before this system could be used to decide whether or not particular cars have safety defects.

Part 6 and 7 seem self-explanatory in Mr. Copp's analysis.

Very truly yours,

RAY W. CALDWELL,
President.

ROBERT J. WAGER, Esq.,
General Counsel, Senate Subcommittee on Executive Reorganization and Government Research, Washington, D.C.

DEAR MR. WAGER: In your April 7, 1972 letter to me, you enclosed for my evaluation a copy of your 1966 hearings in which a statement by Frank Winchell appears on Pages 1959 through 63, H. F. Copp's critique of the Winchell statement and related movie analysis, and certain material supplied to you by the Ford Motor Company describing its efforts to establish a handling standard for its cars.

You stated that you had the following questions concerning those documents:

1. Is there anything inaccurate or misleading in Winchell's statement?
2. Is Copp's critique valid?
3. Based on your knowledge of the relative stability of the Corvair and Falcon, do you accept the results of Copp's movie analysis?
4. Are the results of the Ford tests consistent with Copp's analysis?
5. From the Ford tests, what conclusions can be drawn about the stability and handling of the various cars?

In addition to the above, I will also add my own evaluations of the 1960 through 1963 Corvair.

INTRODUCTION

Winchell, Copp, Manos, and Nader are only a few of the many people who have had opinions on the 1960 through 1963 Corvair. All seem to have some kind of axe to grind. Winchell works for General Motors, Copp works for the Ford Motor Company (and seems to be miffed because he thought someone was putting down the Falcon), Professor Manos (I don't know why), and Ralph Nader who

rose to prominence on the Corvair. The only way my comments can be of value in this controversy is if they can somehow separate fact from fiction. I have no relevant affiliation with any of the groups concerned, and have nothing to gain or lose by the outcome of the Corvair controversy.

SUMMARY

Question 1. Some of the comments in Winchell's statement need further evaluation. These comments are primarily the ones pointed out by Copp in his critique. But, taking into consideration the fact that the Corvair controversy had begun and Mr. Winchell was employed by General Motors Corporation, it appears that his comments were reasonable and prudent at the time and what one would expect from a man in his position. At least his comments are not an attack on anyone.

Question 2. Mr. H. F. Copp's critique of Mr. Winchell's statement concentrates on four points in Winchell's statement which do require clarification. To support his claims, Mr. Copp uses a very subjective analysis of an old Ford film which was recently made public by Ralph Nader. The veracity of this film is questionable in that it does not appear to agree with the tremendous amounts of information which have been collected and evaluated by the Department of Transportation. The four points upon which Mr. Copp chooses to differ with Mr. Winchell do merit discussion. But using the subjective analysis of the Ford film as the basis upon which to refute Mr. Winchell's claims actually weakens Mr. Copp's case. Also, unfortunately his critique is an attack.

Question 3. Since Mr. Copp presents a complete description of his means of subjectively evaluating the Ford film, his approach is acceptable. But, when the percentage conclusions he draws are lifted from the complete explanation and presented separately, they are very misleading. However, the problem does not lie as much in the analysis of the film as in the film itself. The film depicts the Corvair as being very substandard to the Falcon. Whereas information submitted by General Motors, Ford and exhaustive testing done by the Department of Transportation would indicate that the Corvair quantitatively meets or exceeds the standards set by contemporary cars in stability tests, cornering tests, and roll-over tests. (Ford material was that supplied to your Subcommittee). Further, members of the Department of Transportation counted film frames and timed the cars in the Ford film to get an indication of their speed and consequent G loadings. Calculations indicated that the cars were operating in the .5 to .55 lateral G area rather than in the .32 to .4 G area suggested by Copp in his analysis. In addition, visual analysis of the film shows radical steering inputs being administered to the Corvair. Considering the high G loadings and the severe driving technique, one can predict the characteristics displayed by the Corvair which has much higher control sensitivity. The film, however, in my opinion, gives little indication of the relative merit of the two cars.

Question 4. The main purpose of the Ford tests was to attempt to correlate subjective driver opinion with the characteristics exhibited by various cars. It did appear that the drivers involved preferred cars which tended towards understeer. But this is not directly relevant to the Corvair controversy which centers on whether or not the car is unsafe.

Question 5. No new information is shed on the Corvair controversy by the Ford tests, the jectively prefer oversteering or understeering other cars have been well defined. The important point to be noted is the validity of an attempt to determine whether drivers subjectively prefer oversteering or understeering cars. If the preference trend away from the oversteering Corvair is an indication that the

drivers are uncomfortable in the Corvair because they feel inadequate to cope with the oversteer, then we are back to the nub of the Corvair controversy which is: Can the average driver cope with the transition from understeer to oversteer during an emergency situation?

The Corvair appears to be a well engineered car that went through the Department of Transportation's tests in Texas with less mechanical problems than contemporary cars. The Corvair quantitatively meets or exceeds the standards set by contemporary cars. It seems, therefore, inconsistent to even consider citing the Corvair with a safety defect in the handling area. It does, however, have a transition from understeer to oversteer through the neutral steer condition which occurs at .4 lateral Gs. At .6 lateral G the Corvair is tending rapidly towards terminal oversteer. Through the entire rating from .4 to .6 lateral G the Corvair has better control sensitivity than contemporary cars in that it requires less steering wheel angle to accomplish any driving maneuver. One concludes, therefore, that the only significant feature of the Corvair which could account for the Corvair handling controversy is the transition from understeer to oversteer in the controllability range. Focus should now be drawn away from the Corvair itself and directed to the broader question of whether or not present vehicles should be built with a similar transition. This question is important since there are some current vehicles such as vans, loaded station wagons, etc. which display the same transition as the early Corvair.

Is there anything inaccurate or misleading in the Winchell statement?

Mr. Winchell's comments are reasonable given the atmosphere of that time. The Corvair controversy is coming into full bloom. He states in one place, "the design characteristics of the 1960-1963 Corvair which were claimed to be wrong," and in another place, "we were accused of ignoring elementary mechanisms alleged to eliminate the characteristics." I think it is reasonable to assume that Mr. Winchell was on the defensive during this hearing and that his remarks should be evaluated in that light.

The comments Mr. Winchell makes early in his statement relative to the characteristics of vehicles and how they effect vehicle control are quite succinct. He touches on one of the elements of the Corvair controversy which I have not seen appropriately spelled out to date. Control and stability are two different characteristics.

If one were to draw a graph with complete stability as one extreme and instability as the other extreme, how would one define those limits? I suggest that complete stability in a vehicle means that no steering input or road disturbance would have any effect on the direction the vehicle was traveling. Instability, on the other hand, must mean that any steering input or road disturbance would cause the vehicle to spin. Clearly, neither extreme is acceptable and, I'm sure you will agree, we must come away from total stability towards instability to some compromise point where the car is controllable. The reason is simply that a vehicle completely stable as to path is not controllable and as you tend across the graph towards instability the vehicle becomes more controllable.

Detractors of the Corvair are quick to point out that the Corvair at its limit of control becomes unstable and spins out. Those same detractors, however, do not point out that contemporary understeer vehicles are uncontrollable at the same lateral acceleration (continued turning of the steering wheel has no effect on the path of the vehicle). Thus, there is a practical limit of control in both oversteer and understeer vehicles, oversteer vehicles due to instability and understeer vehicles due to uncontrollability.

Winchell's comment, "Corvair differs from other cars only in the arrangement of its components," in the general sense is true. Corvair is still a car with engine, seats, transmission, four wheels, steering wheel, etc. However, the Corvair does have handling characteristics due to weight distribution and suspension characteristics which are different from most contemporary cars with the possible exception of some imports. The only important characteristic, to my way of thinking, is the transition from understeer to oversteer in the .4 to .5 lateral G area. Since I believe that quantitatively the Corvair was able to pull as many lateral Gs as contemporary cars and was controllable to the same limit, then the question becomes, how do these characteristics effect the normal American driver under conditions of stress?

The next significant point in Winchell's statement regards the number of lateral Gs drivers can cope with. Winchell's comment that General Motors' experience is that in an emergency situation few motorists have the capacity to control any cars on public roads in excess of .3G at 30 mph and .2G at 60 mph is certainly controversial. I suspect that most drivers do not enjoy high lateral acceleration and would certainly under normal conditions stay under the .3G and .2G limits. However, my opinion is that many drivers under emergency situations do, in fact, generate lateral forces considerably in excess of .3Gs and conceivably as high as .7. It is under these extreme emergency conditions that the Corvair's transition from understeer to oversteer between .4 and .5G and terminal oversteer characteristics at .6G may cause an unfamiliar driver difficulty.

Mr. Winchell's comments, "even at .75G lateral acceleration, the suspension has dropped only one degree below its position in a normal straight ahead course, does not indicate the most important factor which is the tires relationship to the road. If the car at that point has 3 to 5 degrees of roll then the roll plus one degree mentioned by Mr. Winchell would indicate that the tire may have 4 to 6 degrees of positive camber relative to the road. This figure is, therefore, 4 to 5 degrees higher than that for the normal straight axle rear suspension, and contributes to the Corvair's transition and terminal oversteer."

It is my experience that changing the tire pressures on a rear engine car (or any car for that matter) will have an effect on the handling characteristics of the car. In the case of the Corvair, the same tire pressure all around will increase oversteer and move the transition from understeer to oversteer to a lower G figure. Winchell states, "the pressure selected for the Corvair was the best choice for satisfaction and value to the customer in control, tread life, and ride." I'm sure this is the case, however, these pressures should be adhered to. One can only speculate on whether or not General Motors changes to the 1964 Corvair were indeed "a step in the normal process of development." The fact that the Corvair controversy does not surround the 1964 Corvair which still had a swing-axle is an indication that the swing-axle per se was not the problem, but rather the characteristics of the car. I also suspect the 1964 car did change in the 0 to .6G range in that the transition from understeer to oversteer was probably pushed up from the .4G range to the .6G range.

I wish someone would underline Winchell's comment, "It is desirable that a planned program for the extension of driver capability parallel the development in extended vehicle and highway capability."

Winchell's comments relative to oversteer being better than understeer may be accurate in the absolute sense. But the important factor is the reaction of the general public to the understeering and oversteering cars. This is the area where the Corvair is in question. Not whether or not it can do the things other cars can do, but more importantly,

how do drivers react to a car with these characteristics?

All the curves I have studied on steering wheel angle vs. lateral Gs on a constant radius circle do not support Winchell's contention that further turning the wheels into a turn reduce the cornering power of the front wheels causing the car to generate even a larger radius. The natural reaction of a driver in an understeering car is to steer farther towards the turn is valid, along with backing off on the gas. The tremendous angle on the front wheels would tend to slow the car down, and as the car slowed down it would tend to start turning towards the inside as originally intended. On the other hand, in an oversteering swing-axle car the driver senses his mistake, backs off the gas which transfers weight from the rear to the front wheels. This exaggerates the oversteer particularly in the case of the Corvair because as the rear of the car raises the rear tires tend to positive camber and hence the car turns sharper than originally intended.

Winchell's comments on Senate Bill No. 773 would appear reasonable.

Is Copp's Critique Valid?

In general terms, Harley Copp's critique on Frank Winchell's statement to your committee brings up some valid points. However, I think the basis for his refutations are weak.

Under background, he makes the statement that Ford evaluated rear engine cars and decided against them making the statement, "rear engine cars, regardless of the rear suspension, exhibit borderline handling characteristics especially if the total weight of the vehicle exceeds 1800 lbs." Clearly, 1880 lbs. is an arbitrary figure and rear engine cars by definition do not necessarily exhibit borderline characteristics. In fact, a Porsche 911 which is a 2500 lb. car with a very heavy rear engine exhibits quite reasonable handling characteristics.

Harley Copp's main objections are to four comments:

1. Corvair is no different than other rear engine cars.
2. Only expert drivers can handle more than .3 lateral Gs.
3. Corvair tire pressure differential is of minor importance.
4. Oversteer might be better than understeer.

Let's take one point at a time.

Copp takes, by way of refuting "the Corvair is no different than other rear engine cars", the position that since the Corvair is 40% heavier with longer wheelbase, that it has latent skid ability twice that of a Volkswagen and when it begins to skid it has 1.8 times the spin force. This has to do with the polar moment of inertia and Copp does not indicate that because of its longer wheelbase the Corvair also has a higher ability to counteract its latent skid ability and spin force. Without calculating both factors one cannot make any relevant comment.

It is possible that the Corvair controverted established rear engine suspension effective roll couple distribution, but I do not believe necessarily grossly deteriorated its potential handling performance. What it did do was put a transition from understeer to oversteer in the controllability range, and that must be evaluated in terms of how it effects average drivers.

Copp by way of supporting his position that the Corvair was different from other cars uses subjective percentages, i.e., the Corvair suffers "a controllability performance deficit amounting to 70 to 90% compared to a Volkswagen." None of the other test data available on the Corvair would indicate that the Ford film showing the Corvair following the Falcon reasonably indicates the actual performance of the two vehicles. In fact, Copp states that both the Volkswagen and Renault Dauphine were run under similar circumstances in 1959 and were able to corner at higher

speeds with less instability than the Corvair. In the Department of Transportation tests the Corvair never made outrigger contact which would indicate a roll-over whereas both the Volkswagen and Renault Dauphine indicated roll-overs.

Relative to "only expert drivers can handle more than .3 lateral Gs." Copp, I believe, makes some reasonable points. The surface upon which a driver is operating his vehicle has a large amount to do with lateral Gs because the surface may be either undulating or exhibit a poor coefficient of friction. Therefore, one cannot simply state lateral Gs as an indication of handling for all circumstances.

Copp sights the film showing Corvair vs. Falcon handling as an indication that an expert driver cannot control a Corvair over the .3G figure mentioned by Winchell. However, DOT timed some of the skid pad tests on the Ford film and it appears that the cars were operating closer to the .5G range. Also, Copp gives the Corvair a 10% rating and the Falcon a 100% rating based on his subjective system. This system would tend to indicate the Falcon is ten times better than the Corvair and, as such, is misleading.

Relative to Point 3 on tire pressures, common sense would agree with Copp's challenge to the comment, "tire pressure differential is of minor importance." As tire pressures change, slip angles also change effecting oversteer/understeer performance and consequently Winchell's statement should be questioned. However, Copp's numbers game with percentages is misleading. He states that the Corvair went off the road six seconds sooner with 26/26 tire pressures than it did with standard pressures which amounts to 33% deterioration. He is comparing apples and oranges and battleships over an 18 second course. It is a 33% deterioration in time but in no way can be construed as a 33% deterioration in handling.

When Copp puts in parenthesis (emphasis added because slip angle induces understeer), it is misleading because high slip angles in rear tires induce oversteer, and high slip angles in front tires induce understeer. There is no question that the Corvair should be driven with the recommended tire pressures.

Much more information is required in order to analyze Copp's comment that "it has been calculated within plus or minus 10% at 35 mph that equalizing front and rear tire pressure causes a 60% deterioration in steady state response for an understeering rear engine car with driver only and an 80% deterioration at full passenger load.

Copp's entire refutation of Winchell's statement, "oversteer might be better than understeer," is based on the Ford film which appears to be unrepresentative.

In summary, I feel that Harley Copp does point out four reasonable areas for discussion relative to the Winchell report. (1) The Corvair is no different than other cars. (2) Only expert drivers can handle more than .3 lateral Gs. (3) Corvair tire pressure differential is of minor importance. (4) Oversteer might be better than understeer. But, I believe the Ford film used by Copp as supporting evidence is unreasonable, and does not prove his points.

Are the results of the Ford tests consistent with Copp's analysis?

In my opinion the Ford films are inconsistent with Copp's film analysis. Copp makes the comment, "The film showing Falcon vs. Corvair handling and my analysis of these films clearly demonstrates that an expert driver was unable to control the Corvair in the normal highway handling test of .32G."

The Ford Report dated November 8, 1968 and entitled "Vehicle Response Characteristics of Test Vehicle GAP No. 1" makes the following comment, "The vehicle is near neutral to about .4G lateral acceleration and then goes to an oversteer state." The evaluation of Figure 1 in the same report entitled, "Steady State Response Characteristics of

GAP 1" indicates that the Corvair actually tends toward understeer at about .45Gs and would appear controllable to at least .55Gs. These figures are certainly inconsistent with Copp's .32G figure stated in the previous paragraph.

The Ford Report dated August 3, 1966 and entitled "Handling Tests for Safety Committee on Handling Performance Standards" includes Figure 3 which is a curve plotting steering wheel torque against lateral acceleration in Gs. This curve indicates a rather linear increase in steering wheel torque relative to G increase which would tend to indicate the car is neutral up to the .4G bracket. As the Gs continue to build up from .4 to .6 less steering wheel torque per unit G increase is required indicating that the car is tending towards oversteer. The important factor here is that they seem to have reasonably reliable data clear up to the .6G bracket which certainly indicates that the car is not out of control until that point. Again, it would seem that Ford's own data on the G limits of the Corvair is inconsistent with Copp's movie analysis wherein he indicates that the Corvair is out of control at .32Gs.

Earlier in my critique I indicated that timing of the movies both by counting frames and using a stop watch indicates that the G limits were considerably higher than those quoted by Mr. Copp. Since Ford's own test data on the Corvair indicates that the Corvair breaks away or becomes uncontrollable in the oversteering mode at much higher G levels than Mr. Copp indicates; it would appear that the Department of Transportation's thinking and my thinking relative to the G levels displayed in the movie are correct. Now, from all the evaluation of steering wheel angle vs. lateral G graphs we know that quick steering movements in the Corvair in the .5G range can quickly throw the Corvair into the oversteering condition shown in the Ford movie. Of particular interest is when the Corvair comes out of the right hand turn on the test rack in the Ford movie and after nearly completing the turn the test driver puts in a violent steering wheel correction to the right. We can anticipate under those conditions that the Corvair would display the behavior indicated by the movie. Similar drastic movement of the steering wheel toward the turn in the Falcon would not cause a similar reaction in that the Falcon at high G limits is tending towards its understeering limit of control and therefore is very insensitive to steering wheel movement. In short, it would appear that the Corvair vs. Falcon film although it indicates behavior that we would expect under certain types of steering wheel movement on the Corvair, does not indicate the relative merits of the Falcon vs. the Corvair.

I would like to digress briefly and say that even though the Ford tests actually have little bearing on the Corvair controversy or Copp's analysis, they are of critical importance. The reason they are of critical importance is because they do attempt to collate objective vehicle tests with subjective feelings of drivers. It is just this type of testing which would ultimately be needed if the Corvair controversy were going to be ultimately laid to rest. Because, as was stated before, we have plenty of information to evaluate the characteristics of the Corvair, but what we do not have is how the average driver reacts to this particular set of characteristics. The Ford tests are an attempt to prove how drivers 'feel' about certain vehicle characteristics.

Ford, in this series of test, states that they have little conclusive correlation between subjective driver feeling and objective vehicle tests. The Ford tests did indicate that the drivers used were both experienced and inexperienced and the drivers did appear to dislike the oversteering characteristics of the Corvair. What is critical is not whether or

not the drivers dislike the characteristics of the oversteering car, but rather was the driver able or not able to cope with the oversteering characteristics. There is no indication of this in the Ford reports.

It is my opinion that no testing should be done whether or not drivers can cope with the understeer/oversteer transition of the Corvair. What should be done, however, is to take modern vehicles, 1972 vehicles, and adjust them with different loads and different tire pressures to change the characteristics and then determine whether or not inexperienced drivers, or at least drivers unfamiliar with the tests, are able to negotiate a given course. The reason simply is that we have considerable information on the actual handling characteristics of cars but very little information on the interface between the driver and the cars with these various characteristics.

From the Ford tests, what conclusions can be drawn about stability and handling of the various cars?

With the amount of information actually available in the submitted Ford Reports, it appears that no significant evaluation can be made of each separate vehicle. Certainly tests in general indicate that the majority of the cars tested are cars that understeer. An evaluation of Ford's specially set-up station wagon which appears to have somewhat similar characteristics to the Corvair would be of interest in order to learn how much adjustment is required to change a vehicle from the basic understeering to an oversteering mode. We already know that on the '64 Corvair changing the spring rates and adding a front anti-sway bar made the car handle more like other contemporary vehicles.

In short, the Ford reports tend to indicate that Copp's G analysis is incorrect, contemporary cars do have a practical limit of control of about .6Gs, and the Corvair does oversteer more than contemporary vehicles.

AN ADDITIONAL COMMENT

As I was reading further in the book on hearings some comments by Professor Manos caught my eye. He indicates that he believes that a 1962 Chevrolet was in full control at .8Gs. We have no indication in all of the information gathered that contemporary cars were able to pull anywhere near that kind of cornering force. Further, Figure No. 1 entitled "Steady State Yawing Velocity Response" in the Ford Report dated August 3, 1966 subject "Handling Tests for Safety Committee on Handling Standards" indicated that a 1966 Ford wagon set-up in the normal fashion has a practical understeering limit of control of slightly under .6Gs.

Very truly yours,

RAY CALDWELL.

EXHIBIT 32

JUNE 1, 1964.

To Mr. E. V. GILLILAND, G.M. Legal Staff:

This is to confirm my views and requests regarding Pierini vs. Chevrolet.

(1) TIRE PRESSURE

Our tests of last January were conclusive in that at 30-35 miles an hour the tire pressures reported on the Pierini car were not significant in the normal driving of the car. That is, the car was not deficient in any recognizable way going straight or in cornering at these speeds. The car did not seem to drift or pull more one way than another. It is my opinion that the average individual could not tell whether the tires were properly inflated or inflated as claimed. I think that, in light of our statement in the Owners Guide regarding inflation pressures, it is going to be extremely difficult to convince a jury that my testimony is not prejudiced:

At these low speeds, the tire pressures are not significant. The Owners Guide must have, of course, considered that the car will be driven at high speed. Inflation pressures become critical as the speed increases. The cen-

trifugal forces which are reacted by the tires varies as the square of the speed for any given displacement of the steering wheel. In other words, at a given displacement of the steering wheel, the side forces on the tires at 60 miles an hour are 4 times the forces at 30 miles an hour. At 90 miles an hour, the side forces are 9 times the forces at 30 miles an hour. At the same time, however, it must be realized that the same forces can be generated at 30 miles as can be generated at any other speed. The relationship between force and speed is as follows—

$$F = KV^2W^2 \text{ divided by } R$$

The limiting forces at any speed is equal the weight of the car times the coefficient of friction—

$$F_{max} = W\mu$$

In other words, at "any" speed, any force up to and equal to the limit of adhesion can be generated if the steering wheel is turned far enough to reduce the radius enough.

It is my opinion that, although these tire pressures could not have adversely affected Mrs. Pierini's ability to drive the car at these speeds, it would have affected to some slight degree her ability to recover control of the car once having lost it.

I feel confident that the reported tire pressures had no bearing at all on Mrs. Pierini's loss of control. To verbally convince the court of this is a difficult, if not impossible, task. It was, therefore, my recommendation that the court in some way experience the difference in the behavior of the car at these speeds and at both normal and the reported tire pressures. I am certain that the difference in tire pressures on the same car would not be recognizable at the 30-35 mile speed range over any selected course. I understand that it is not possible to subject the court to this experience. I would, therefore, recommend that an unbiased witness or witnesses be subjected to this variation in tire pressure. I am certain that this would be much more convincing than any verbal testimony by us or anyone else in General Motors.

(2) PATH OF MRS. PIERINI'S CAR

There seems to be some difference of opinion regarding the precise path generated by Mrs. Pierini in losing control of the car. In view of her testimony, I think it is extremely important to determine accurately the course of her car as stated in our discussions last January. I think this can be done accurately enough for us to understand the exact conditions the car was experiencing prior to its having turned over. This can be done by setting up an appropriate camera in the exact location by superimposing the original negative on the ground glass viewer and retracing the skid marks and measuring its curvature. Knowing this radius and the speed reported by Mrs. Pierini, we would be able to positively calculate the forces acting on the tires and would know if Mrs. Pierini was inside or outside controllable range of the Corvair. Furthermore, it would seem to me important to be able to state to the court that Mrs. Pierini veered across the road at 30 miles an hour generating a 2000 ft. radius or whatever it was.

In addition, it would seem important to know whether Mrs. Pierini was or was not on the pavement when she attempted to turn the vehicle right. This is pertinent in light of the testimony that spillage of air from the left rear tire contributed to the loss of control. From the present photographs, it appears that Mrs. Pierini dropped her right front wheel off the shoulder, turned the wheel to the left too far causing the car to veer in a left hand turn clear across the pavement and that she did not make a right hand correction until the left rear tire was on the soft shoulder. I believe that air was spilled from the tire when it struck the small embankment and that the car turned over at this time.

F. J. WINCHELL.

JUNE 3, 1964.

To: Mr. R. V. GILLILAND, G.M. Legal Staff

From Blewett's investigation of August 30th, 1961 (accident occurred on August 18th), I take the following—

[EDITOR'S NOTE.—The graph is available in subcommittee files.]

I concur with his analysis of what happened.

I also concur with Pierce Ausburn's analysis that the tire deflated when it struck the divider. Otherwise, there would have been score marks on the rim. Furthermore, we and Engineering Staff were not able to spill air from a '61 Corvair wheel and tire on an ordinary pavement, by broad sliding the car or dragging it sideways at the limit of adhesion regardless of tire pressures.

Mrs. Pierini appears to have been completely incompetent since the left radius she took across the road was approximately 210 ft. which, at the speed reported, would be almost within the normal cornering range of "any" driver in making, normal turn around a street corner. Further, the subsequent right hand correction took some 300 ft. which must have been much greater than a 200 ft. radius and at a slower speed. The fact that at no place was there evidence of her applying the brakes suggests that she may have become "unseated" by the "sudden" left turn when the steering angle finally overcame the straightening force of the edge of the pavement on the tire. I cannot think of any other reason why a competent person would not have applied the brakes.

Tire pressures were reported as—LF 25; RF 17; LR 21; RR 17.

A '61 Corvair was set up with these tire pressures and driven by Simmons, Passon, Gilliland and Winchell on the test track at G. M. Tech Center.

There was no consistent drift right or left. Furthermore, at these speeds of 30-35, there was no deficiency evidence of oversteer, etc. at normal driving. I subsequently drove the car for several days, to and from work, (20 miles each way) up to 90 MPH and am convinced that at 30 or 35 MPH these pressures were in no way responsible for Mrs. Pierini's loss of control; that few people, if any, would recognize this discrepancy in pressures at 30-35 MPH, even at .3g's.

Furthermore, Simmons, Passon, Gilliland and Winchell made an evaluation of the response of this car at these pressures when dropping off a pavement edge of 4" with respect to a regular Chevrolet. The regular Chevrolet reacted more violently than this Corvair with these pressures.

The same tests were conducted with the tires—LF 25; RF 25; LR 17; RR 17.

Both Mr. Pierini and Mrs. Pierini state that on some occasions the car was normal and on others it was not. For instance, Mr. Pierini stated that he had some "sway" problem going to work but coming home it was O.K. This, of course, is unreasonable if the claim is "oversteer" due to improper inflation. Also, Mr. Pierini claims he experienced difficulty at 20 MPH.

Pierini's interrogatory; questions No. 41 and 42, answers that photos were taken at the scene immediately after the accident by Tom Halde (20 color slides), 1006 Santa Barbara Street, Santa Barbara, Calif.—we should have these pictures.

According to deposition of W. H. Harper, Horgan has all of Halde's photos.

Do we have the photos that T. Halde took of car and of tire and rim?

Only one tire mark observed by Harper. He recalls that the northbound lanes are lower than southbound. (15-18 to 22).

Harper states rollover damage was slight, car was probably going at slow speed (18-17 to 22), partially on pavement and dirt.

Page 23-17 to 22 infers dirt, debris and vegetation was in the tire.

Page 24-20 to 26 claim some slight pavement abrasions on rim.

Pages 27 and 28 are interesting in that he states that the outside bead was pulled off, either from impact or the side forces resulting from the centrifugal forces.

The fact that Mr. Harper states that car handled O.K. after the accident with the tire pressures apparently at —LF 25; RF 17, LR 21; RR 17, is certainly consistent with our observation. He also tested to 45 MPH.

F. J. WINCHELL.

To Mr. J. B. Bidwell, Research Laboratories
DEAR JOE: I have read with considerable interest your report on tire pressures (Report No. 24-876).

I have been assisting the Legal Staff in the defense of lawsuits brought against the corporation related to handling characteristics and very recently to the effect of tire pressures.

In this latter instance, the plaintiff lost control of the car at 30 miles an hour; due she claims to the fact that the dealership rotated her Corvair tires and did not change the pressures. Our tests on the Corvair have shown conclusively that at these speeds neither engineer or layman can differentiate between normal and "reversed" tire pressures.

You report states accurately the criticalness of tire pressure. It is assumed, however, that the reader understands that there is a critical speed. The report could be damaging as evidence without such a qualification.

I think a separate and independent report on the relationship of speed to the critical behavior of the car would not only be helpful in future cases but would eliminate the possibility of misuse of this report.

F. J. WINCHELL.

EXHIBIT 33

THE EXNEWSPAPER,

Warren, Vermont, December 13, 1971.

BOB WAGER,
Washington, D.C.

DEAR BOB: Pardon me for not getting this promised letter off sooner, but I have had some rather personal consumer problems—to or not to—so I had to get some paying assignments off first.

You asked on the phone if, during my association with GM and Corvair, did I see any evidence that would indicate that the GM people KNEW that the Corvair was less than safe. The answer is no.

I saw nor heard no evidence of GM knowing that the Corvair was "unsafe" (at whatever speed) nor was there any evidence of it actually being unsafe or even difficult as far as my personal experience was concerned. As for the GM higher-ups, I was not privy to their innermost thoughts or uppermost plots. Maybe they were sitting in their Knoll Associates offices rubbing their hands in anticipation of highway carnage caused by the Corvair. I do not know. What I do know was that the Corvair—as I drove it—was one of the sweetest handling most pleasant-to-drive production cars I had experienced.

Most of the car-buffs felt fondly toward the Corvair from the time it first appeared. Here was what we considered to be the first attempt from "Detroit" to make a car for a driver. (The Corvette in its early stages was scorned as a bit of con—a pseudo-sports car for the gullibles.) The Corvair was handsome by our standards, it was people-sized instead of one of those wheeled dirigibles, it had the engine over the drive wheels which seemed a sensible place, it was interesting from an engineering standpoint and it lent itself to all sorts of modifications. (Every piece of domestic machinery at that time required extensive modifications—stiffer suspension for a start—to make it even acceptable to a truly keen driver, but most of them were confirmed sow's ears to begin with and were ignored.)

The Corvair inspired all sorts of special equipment—John Fitch for one did clever stitchery around the basic Corvair to come up with a truly fine little car. The Corvair also inspired lots of print in the nuts-and-bolts media on how to improve the car, how to drive it etc. Ralph Nader, in his research for his first book, was obviously impressed by the existence of the proportionately large amount of type devoted to the Corvair and, I think, he not being a car-minded type, misinterpreted it. He was not aware that so much space was devoted to how to make the Corvair a better car not because the motoring journalists thought that it was a bad car but because they thought it was so much better than anything else offered to us by Detroit.

I personally was responsible for one such article—"How to Drive a Corvair", I think it was called, in a special on Corvair put out by "Car Life" magazine in California. I know that Mr. Nader saw the article because he quoted from it in "Unsafe at Any Speed" in a way which led me to suspect he didn't know much about cars. (I think a non-car person plunging into the middle of that special world of the automotive media is in for a degree of culture shock. Articles are written in a jargon and they are written for the converted. They assume a certain position on the part of the readers to begin with. (A politician making a speech to a banquet of party regulars speaks with different shadings than he does when campaigning in the balliwick of the opposition.)

Anyway I have great admiration for Mr. Nader, but always felt that his anthropological foray into the world of car nuts was less than accurate.

I wrote in the article about the type of accident a Corvair was apt to have when pushed to the maximum and how to avoid it—the off-the-road backwards type. Now every car has its own particular accident to which it is prone, just as every junkie has his drug-of-choice. The Corvair happened to be an oversteering car in a world of extreme understeers. Still, I would not say that it was beyond the normal ability of the average driver under average conditions to drive reasonably well. In short, it was not really the best car, but it was better than most being offered us on this side of the Atlantic at the time. And its potential was excellent.

Now, in retrospect, I think there is no question that for a little more money GM could have put an improved suspension system on the Corvair right from the start—stops on the swing axle etc.—rather than a few years later. A-little-more-money seems to be the critical matter in selling cars. That's how most Americans buy—by price. I swear if you offered them an option that for \$500 more they would never have an accident they would turn it down. Whether ads, beginning with the famed "Somewhere west of Laramie" type, have trained them to buy image—at the lowest base price possible (they never seem to count in the extras), rather than cars. I don't know. Anyway, the manufacturers fiddle with pennies on each part so that they can compete, and the Corvair was already priced higher than the Falcon and the Valiant—its direct and more conventional rivals. But that is good old American free-enterprise "capitalist" thinking, isn't it? Whether it is venality is another matter. (And whether you can really separate the two is still another matter.) Did the GM decision-makers on their thick carpets within their wide paneling say: "So we kill or dismember a few people, so what? Put in the cheaper suspension." I do not know. I am perhaps naive but I think that most of the evils of the world are by chance, not by design.

To me the greatest obvious mistake in the early Corvair was the steering ratio. I prefer quicker steering—a 16:1 ratio perhaps rather than the 19:1 I think the Corvair had. Maybe greater. Anyway, with faster steering it is

easier to catch a back-end that is apparently intent on switching positions with the front. This of course assumes that the driver can tell when the car is breaking loose and what to do to catch it. A 16:1 steering ratio—which amounts maybe to 2½ turns lock to lock, I'm not sure—however makes a car hard to turn when it is being parked, for instance. Power steering was not indicated in so small a car and, thinking of the woman driver who wouldn't like straining at a wheel when she parked merely for some abstract (to her) margin of safety should one "overcook it" while pouring into a diminishing radius turn, GM opted for the easy-to-park ratio. (Whether they were thinking of the weak women of the world or were afraid that that weak soul was the strong one when it came to deciding which car to buy and would veto one that was hard to park, I couldn't say. But since they have stockholders I would guess the latter.)

I do not know what special things were done to the Corvairs I drove in the two Trans-Canada rallies, but one very obvious one—and necessary to my way of thinking for the kind of driving we would be doing—was to put three degrees of negative camber in the rear wheels. That meant that instead of standing straight up and down in relation to the ground the rear wheels were splayed out at the bottom in a knock-kneed fashion. This improved the handling under hard cornering and I loved the way it performed. The car seemed to lean hard against that tilted wheel—as if it were an outrigger—and scurry right around the bends. I entertained myself on the long Canadian runs by sucking following cars into trying to stick with me and I would accelerate around the turns watching in the mirror as they faltered, kicked up shoulder dust and fell back. Nothing in the rally could stick with the Corvair on the turns. I never drove a Corvair with camber or positive camber in the same way so I do not know how it would react. (There could well be the tendency under extreme forces for the positively cambered wheel to "camber" some more and roll under. VW's have, or had, that propensity. I've never liked them and have not driven one hard for a long time.)

The two years of the rally, almost a decade ago now, are sort of fused in my memory, but I am certain it was the second year that I had so much trouble—the sort of trouble that can plague competition no matter how well planned or well prepared the cars are. (In European rallies, such as the Liege-Sofia-Liege, some 100 cars usually start and rarely more than a dozen as much as finish.) First off 11 miles from the start the gas tank was punctured on a sharp rock masquerading as mud from a truck. That sort of thing. Then I was off the road in the fog one night while lost in Quebec and off again in some ice or snow. ("Civilian" drivers are often dismayed at the way competition driver speak so casually of, what to the ordinary driver, are disasters. But in European rallies I have known cars to have rolled several times, plunged off baby cliffs (me) and collided with timber trucks and horsecarts to carry on—and even win.)

One time on the Trans-Canada during a particularly slippery section (one driver commented that you could shoot a puck in Sault Ste. Marie and score in Port Williams) I was bombing along with a clutch of cars trailing behind like a comet's tail. It was night and the visibility was bad and since I have the sort of vision that somehow adapts well to such conditions I often develop a "following" and play pioneer. I was driving mostly without headlights—just flickering them on every now and then. (One can see better in snow or fog from the light of following cars coming under the car—low.) As I remember it was slushy in spots, the sort that tugs at wheels suddenly. And it was gusty. In short, it was a bad night for driving. Certainly for going

more than 30 miles an hour. I was probably doing 60-70. (The spur of competition moves one to do things one would not think of doing merely driving to Aunt Maud's for Thanksgiving.) Anyway, it was a touch and go matter at best keeping the car pointed straight—any car. And I lost it. I remember being somewhat sideways, near the point of no return, and my lights were off at the time so it was slightly disorienting. I did not really fight to catch it because there were many cars behind me—and headlights approaching in the distance. Not that it was a conscious decision, but anyway—whoosh—it was now uncatchable and I slithered off the road into the generous ditch on the opposite side of the road (in the classic Corvair manner, backwards, fortunately in this case.) Again fortunately the headlights I had seen turned out to be a giant tractor-trailer rig, the only thing that could maintain enough traction in the slush to pull me out. We cabled up and out I popped. Within 30 to 45 minutes I had caught and passed the other cars again (slowed considerably without my pioneering.) That's the way it is with rallying—except for the American ones that involve time-keeping and computers more than driving.

The only trouble I can remember that I had with the Corvair on those rallies that was not my own dumbpuffery was the starter going out—and something with the ignition, too. I remember I had to drive for hours holding the ignition key in the start position to keep the engine running. That was tiring, and also tricky on the turns—my arm kept getting tangled with the steering wheel. I also broke a tie-rod end that trip, too. On a rock or rough British Columbia road or some such. But it did not affect the car particularly except on right hand turns and there was a noticeable shimmy around 90. After all, I was only steering one wheel.

One thing I remember about the GM big-wheels—they didn't seem to approve of the three degrees negative camber. Or at least that is my impression. At the time I assumed the reason to be because they were spending all that money on the rally team to get publicity for their standard Corvair and not some "freak" that looked as if it had a broken axle. Anyway, in all the advertising pictures—golly, I just remembered I was a full page ad for GM!—they had the wheels air-brushed to an upright position again. Now, maybe someone can make something ulterior out of that. I did not at the time.

Two other things that might be of interest to you. The first is strictly hearsay. When Australian driver and later world champion Jack Brabham was lent a new Corvair while at Sebring or some such race to use as a road car he reportedly—with four or five people with him—charged down a straight, cranked it hard into a turn and turned it over! The story goes he took it back and said "that bloody thing is dangerous!" End of legend. How you can even begin to check it out I wouldn't know.

The other story: Phil Hill, the American champion, was hired by GM after the series of Corvair trials had started to do some testing along with some other drivers. During some maneuvers Phil turned a Corvair over. He never got asked back to Warren, Mich. again!

I had involved Phil in the Corvair thing in the first place when I was asked to go to California (San Jose) for a trial involving one Paul O'Shea as an "expert" witness for the plaintiff. I suggested that they bring Phil up from LA also. We knew Paul well and Paul was making all sorts of imaginative statements about his grounds for expertise. The idea was that Phil and I would sit conspicuously in the courtroom and keep Paul "honest".

I had no particular faith at the time that GM, nor any other manufacturer, was a Seeker After Truth and a repository of the

good and the beautiful. I did feel, however, that cars are all dangerous weapons and should be handled accordingly. They should be driven properly and well. I felt that the tendency in the country was to more and more restrict the use of judgment by drivers and thus allow that ability to atrophy, rendering it useless just when emergency demanded its exercise. And I felt that driving skill and the cultivation of advanced driving techniques which could give a driver a margin for safety on the highway rather than taxing his meager abilities with just everyday driving, was being neglected. I still feel that way.

But since those days I have been even more torn between my feeling that people should not be conned, gypped, bamboozled, flim-flammed, defrauded or in any way "had" by the boys in the board room—nor by a street peddler with dancing skeletons for that matter. So part of me is cheering "Righton, Ralphie". But then again I feel that the delicate rights of the individual can so often be trampled in the rush to do something for-his-own-good. (Rather like shooting deer to keep them from starving.) I'm not thinking of Ed Cole's right to hoodwink, but of my right to buy a "72" Corvair if I wanted to. Something I cannot do because of Mr. Nader. My feelings are split.

Well, Bob, perhaps this is more than you bargained for. And to think I got through it all without saying "state-of-the-art" even once. Happy holidays to you and may you hit hard to the backcourt and get your first serve in throughout '72. Come to Sugarbush some time!

Best Wishes

DENISE McCLUGGAGE.

P.S. As a consumer who spent four hours shoveling off my roof with a True Temper non-stick snow shovel please be advised that the damn thing clings to snow like a baby rhesus monkey to its mother. Fraud!

EXHIBIT 34

BILL STROPPE & ASSOCIATES,

Long Beach, Calif., January 19, 1972.

Mr. ROBERT WAGER,
Hotel St. Regis
3071 W. Grand Boulevard
Detroit, Mich.

DEAR MR. WAGER: Please excuse the delay in getting this letter off to you.

The following is a brief summation of what I related to you on the telephone earlier this month. As I told you then, I am not certain of dates and times, but as my memory serves me, the Experience Run in the Falcon for Ford Motor Company was in 1960.

On this Experience Run, test drivers ran the Ford Falcons for a period of thirteen days, continuous running, at the Ford testing ground. At the completion of this Experience Run, the test drivers were given an opportunity to test a General Motors Corvair in order to compare it with the Falcon. In groups of four to six, the crews took the Corvair around the handling course for comparison with the Falcon. The third group to drive the vehicle slid on wet pavement and the vehicle overturned after hitting the grassy area at the edge of the track.

A rear engine vehicle is a little more susceptible to a slide of this sort than the conventional front engine automobile. This same type of accident has happened with other rear engine vehicles, such as the Volkswagen. Drivers must be familiar with the vehicle and its characteristics to overcome difficulties which might arise when operating the automobile. Manufacturers are aware of the peculiarities of their automobiles, and make every effort to correct or minimize any problems which affect the safety and handling of the automobile.

All members of the testing crew felt the Corvair to be a very good automobile. The vehicle handled well and was stable on the track even in high wind testing. We were

happy to have the opportunity to drive the Corvair immediately after testing the Falcon to compare the characteristics of the front engine versus the rear engine machine. Both vehicles had many good points and a few that were not so good, but then—this is true of all automobiles.

Again, let me say that I feel that a driver should become accustomed to the automobile to know the safety hazards relating to the handling of that particular vehicle. I have had the opportunity to test drive a wide variety of vehicles, every thing from a Ford Model T to high powered, four wheel drive race machines, and every one of the vehicles present a different handling peculiarity.

Please let me know if I can be of further assistance in this matter.

Sincerely,

BILL STROPPE.

EXHIBIT 35

Following is a statement by Senator Ribicoff on July 22, 1971, regarding the Justice Department investigation of Mr. Ralph Nader's charges of transcript alterations and other matters.

On May 20, 1971, Mr. Ralph Nader wrote me alleging that at the hearing of March 22, 1966, Mr. James Roche, Chairman of General Motors, misled the Subcommittee concerning previous investigations of individuals initiated by GM, and that subsequently the Corporation was responsible for secretly altering the hearing record of that date. The following day, I requested the Justice Department to reconsider its 1968 conclusion that there was insufficient evidence to warrant prosecution of GM officials for perjury or obstruction of justice, in the light of Mr. Nader's charges. Shortly thereafter, the Subcommittee furnished the Department with copies of the 1966 transcript and other documents relating to Mr. Nader's charges.

After reviewing all the evidence the Justice Department found no evidence of any misconduct and determined that "none of the matters brought to our attention merits further outside inquiry or suggests a conclusion different from that previously reached in our 1968 letter regarding perjury and obstruction of justice. We have also determined that none of the material brought to our attention presents a reasonable basis for prosecution under the false statement statute, 18 U.S.C. 1001."

The staff investigation of other charges by Mr. Nader relating to General Motors testimony concerning the Corvair is continuing.

The texts of my letters to the Justice Department and their reply are attached:

May 21, 1971.

HON. JOHN N. MITCHELL,
Attorney General, Department of Justice,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: On February 6, 1971, I asked Ramsey Clark, Acting Attorney General, to determine whether representatives of General Motors had committed criminal acts under the Federal Criminal statutes in connection with their appearance before the Subcommittee on March 22, 1966. It appeared from documents filed in a New York court action between Ralph Nader and General Motors that certain testimony given before the Subcommittee might have been false and certain documents submitted to the Subcommittee might have been altered. To assist the Attorney General in his investigations, I sent him a copy of the printed record, the documents submitted to me by Mr. Nader's attorneys, and other material which the Subcommittee had received during its inquiry into General Motors' investigation of Mr. Nader.

On August 16, 1968, Mr. Nathaniel E. Kosack, First Assistant, Criminal Division in the

Department of Justice, wrote me that the Department was "forced to conclude that the evidence is insufficient to support a prosecution under the criminal laws of either the District of Columbia or the United States relating to perjury and obstruction of justice." He assured me that "all documents filed in the civil suit of *Ralph Nader v. General Motors* have been reviewed by the Criminal Division and all relevant leads pursued."

Mr. Nader has now alleged in a letter to me of May 20, 1971, that "the FBI investigation was defective from the beginning because it was based on the secretly altered hearing record rather than on the untouched original transcript." He claims that the record falsifications prevented FBI detection of violations of 18 USC 1001 (relating to false statements) and "led the Department of Justice to look only for possible perjury rather than for perjury and false statements," in violation of 18 USC 1001.

Mr. Nader has made serious charges which the Department should consider. Accordingly, I request that the Department reconsider all material forwarded to it in 1967, together with the allegations in Mr. Nader's letter and the attachments to his letter, copies of which are enclosed, especially in the light of Section 1001 of Title 18, USC, if that was not done in 1967, as alleged by Mr. Nader.

Sincerely,

ABE RIBICOFF, Chairman.

JUNE 3, 1971.

HON. JOHN N. MITCHELL,
Attorney General, Department of Justice,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: I would appreciate it if you would have the members of your staff pursuing the questions raised in my letter to you of May 21, 1971, meet as soon as possible with Mr. John A. Koskinen, my Administrative Assistant and Mr. Robert J. Wagner, General Counsel of the Executive Reorganization Subcommittee. At that time, we will be happy to make available additional background information and documents to assist you in your investigation.

I understand there may be a question of the applicability of the statute of limitations to some aspects of your inquiry. I would appreciate it if your Department would thoroughly investigate the matters raised in my letter of May 21 and give us your conclusions without applying the statute as well as with it taken into consideration. This will assist us in assessing the need for further Congressional action.

Thank you for your cooperation.

Sincerely,

ABE RIBICOFF.

JULY 21, 1971.

HON. ABRAHAM RIBICOFF,
U.S. Senate, Washington, D.C.

DEAR SENATOR: As requested by your letter of May 21, 1971, the Criminal Division has reconsidered the conclusions it reached some four years ago regarding the Senate Subcommittee on Executive Reorganization hearing of March 22, 1966, and subsequent matters relating thereto.

It appears the original voice tapes and original reporter's transcript of the Subcommittee hearing are presently available only from non-governmental sources. Their authenticity would no doubt be subject to challenge by persons involved and antagonistic to those supplying them.

In addition, as you are aware, more than five years has elapsed as to most of the matters discussed with your staff. On July 25, 1971, it will be five years since the official record was published. If there were any violations the statute of limitations would bar prosecution after five years. It was not practical therefore, to accomplish more than a limited evaluation during the available time. We would like to hereinafter indicate the results of this evaluation.

Our original review included the offense of perjury, 18 U.S.C. 1621, as well as other offenses, and of necessity encompassed the elements of willfulness on the part of those persons giving testimony and the element of materiality of questioned portions of the testimony. Both these elements are also critical to the false statement offense, 18 U.S.C. 1001, suggested by your staff.

Our review of the materials and matters furnished by your staff has included the list of some sixty-four differences between the volunteered voice tape and the volunteered copy of a reporter's transcript dealing with testimony in the Subcommittee hearing.

We have also made a comparison of the printed official transcript with the voice tape and volunteered transcript. It was indicated to us that suggested changes for inclusion in the printed transcript were reviewed by the staff prior to printing and at least one suggested change was rejected by the staff.

One item apparently included in the version submitted by the staff for printing did not appear in the final printing. The information furnished to us does not foreclose the occurrence of an inadvertent printing error nor does it suggest any misconduct relating to this change.

We have determined that none of the matters brought to our attention merits further outside inquiry or suggests a conclusion different from that previously reached in our 1968 letter regarding perjury and obstruction of justice. We have also determined that none of the material brought to our attention presents a reasonable basis for prosecution under the false statement statute, 18 U.S.C. 1001.

The materials recently furnished to us are being returned to your staff.

Sincerely,

WILL WILSON,
Assistant Attorney General.

ATTACHMENT II—NADER LETTER TO SENATOR RIBICOFF

MARCH 12, 1973.

Senator ABRAHAM RIBICOFF,
Chairman, Subcommittee on Executive Reorganization, Washington, D.C.

DEAR SENATOR RIBICOFF: Over the last two years, your staff, John Koskinen and Robert Wager, have been conducting a highly secret investigation of General Motors executives' statements before your Subcommittee in 1966. At the same time, GM has had highly preferential treatment in the conduct of this inquiry while the parties who brought the matter to your attention and those former GM employees who cooperated with your staff have been excluded.

As you recall, my position has always been that an open Subcommittee hearing would bring all parties in an open forum and produce the materials which all could review in evaluating any subsequent Subcommittee report. If such a course of action were taken, not only would a great amount of your staff's time have been saved, but a number of ill-advised staff procedures, which seriously flaw the effort, would have been avoided.

For example, General Motors officials have been given an opportunity to read the final draft report. Presumably, the basis for this offer was to assure the accuracy of the report and be fair to the reputation of General Motors. Why then was not the same courtesy accorded former GM employees and others deposed or interviewed by staff. They have much more to lose for their cooperation and statements to staff than the Goliath Corporation.

Further, employees of General Motors were deposed with GM counsel present in the room. It was obvious to any GM employee that his words were being closely monitored by his employer and that it would be risky indeed to make adverse statements which departed from the carefully orchestrated GM company line. Moreover, such

depositions remain secret. If counsel were to be allowed, then why such secrecy? As a final indiscretion, transcripts were often typed at General Motors by company stenographers.

Third, statements taken from other witnesses not employed at GM were routinely given to GM for rebuttal but there was no opportunity afforded for such witnesses to comment on the General Motors' rebuttal or the statements of their employees affecting or allegedly contradicting the testimony of these witnesses. My own experience with the provision of numerous documents and sources of information to your staff without any opportunity to comment on the General Motors' response or allegations is but one such instance of non-parallelism. It was only recently discovered that staff had not even approached the company's 1966 detective until after they received an affidavit two weeks ago swearing to a most provocative assertion by the detective which relates to the essence of the Subcommittee's staff inquiry.

Finally, only General Motors has had access to the work product of your subcommittee's investigation. Only GM can review the materials and findings of your staff with access to their sources. Anyone else cannot make an adequate evaluation because all others have been denied all opportunity to review the depositions, GM responses, GM test reports and other data, the list of individuals interviewed and other information in the staff's possession. My disagreement with the conduct of the staff investigation has been registered before but apparently without effect. So insupportable, in my judgment, is the one-sidedness of the inquiry and its unjustifiable secrecy and denial of access to anyone outside of General Motors to the information gathered for critical analysis, that a strong presumption against objectivity emerges. It would be futile to read your staff's report under such proscribed conditions. Only a few days ago, Mr. Wager displayed a distinct disinterest in receiving our comment on the ridiculous and disgraceful reply by NHTSA Administrator Mr. Douglas Toms to Dr. Carl Nash's meticulous analysis of DOT's incompetent Corvair investigation and its admitted and crucial data suppression. Months ago, he had decided to accept the DOT report no matter what its inadequacies.

It is true that this matter has gone on for a disagreeably long time. Yet if the quest for justice in this case is not to be worn by time, the question should be conducted fairly and openly. Millions of drivers and passengers still ride in these hazardous vehicles. The Administration delayed and then whitewashed the Corvair matter (even to the extent of not publicly demanding that GM correct at its expense the carbon monoxide leakage problem in 1961-1969 Corvairs which has been conceded by the DOT and the company). Your Subcommittee remains one of the last official hopes that these motorists will receive the protection of the safety laws.

Whether you decide to publish the staff report or not, I respectfully request that this letter be printed in toto as part of the prefatory material to the report.

Thank you.

Sincerely,

RALPH NADER.

ATTACHMENT III—RIBICOFF LETTER TO NADER
WASHINGTON, D.C., March 14, 1973.

MR. RALPH NADER,
Center for the Study of Responsive Law,
Washington, D.C.

DEAR MR. NADER: Enclosed is the full text, including 36 exhibits, of a staff study concerning your letters to me regarding General Motors and the Corvair. I have reviewed this study and your letter of March 12, and feel the staff study was conducted in a fair and impartial manner and that there is no reason

for my Subcommittee to hold further hearings on this matter. Because of the widespread public discussion and previous *Congressional Record* inserts, I will place this study in the *Congressional Record* tomorrow.

At the same time I am urging Secretary of Transportation, Claude S. Brinegar, to convene an international conference on replacement tire safety. This is based on the discovery during the investigation that replacement tires can adversely affect vehicle handling to a substantial degree. In my view, this is one of the most significant findings of the report.

I appreciate your deep concern about automobile safety and the substantial contributions you have made in this field.

Sincerely,

ABE RIBICOFF.

MEMORANDUM

MARCH 12, 1973.

To: Senator Ribicoff.

From: Bob Wager, John Koskinen.

Subject: Response to Nader letter concerning staff report.

Ralph Nader's most recent letter is not directed to the subject of our inquiry—GM's statements and conduct concerning the stability and handling of the 1960-63 Corvair. Rather it concerns the procedures used in our investigation.

Basically, Nader claims that GM was given "highly preferential" treatment, while he and other critics of GM have been excluded from the investigation. As Nader well knows, we have spent many hours discussing the progress of our investigation with him and his staff. In fact, Nader's former associate, Mr. Gary Sellers, told us in 1971, that he had notes on more than 50 hours of conversations with us. Moreover, we spent over 25 hours interviewing the three primary public critics of GM's actions concerning the Corvair—Carl Thelin, George Caramanna and Harley Copp—and discussing GM's arguments with them.

Nader next contends that while GM was permitted to read the draft report, the persons interviewed were not allowed to do so. We asked GM, DOT and Nader to review the report to assure that technical and factual statements were accurate. No individual witness we interviewed was under personal investigation, nor are the character or integrity of any of them called into question by the report. All of the statements and conclusions in the report are based on sworn affidavits supporting the testimony given.

Our review procedures parallel those used in Nader's own Congress Project last summer. Like him, we conducted an independent investigation compiling the information relevant to a determination of the issues. Then, like him, we prepared a draft report and asked the affected parties to give us their comments on it. And, like him, we did not go back to each and every witness upon whom we relied for their approval of our conclusions. GM and DOT agreed to review the report. Nader refused.

Nader alleges that the statements of non-GM witnesses "were routinely given to GM for rebuttal, but there was no opportunity afforded for such witnesses to comment on GM's rebuttal." This is simply not true. At no time was GM given access to the testimony of any person interviewed, nor was GM ever informed which non-GM witnesses we were interviewing or where and when the interviews took place. To this day, GM has never been told what information was made available to us by Nader or anyone else. The only way GM ever learned the source of any document we had was through Nader's own press releases.

In only one case was information we generated independently shared with GM. Harley Copp, at our request, prepared four lengthy technical analyses. He specifically gave us permission to show these papers to anyone we wished.

Nader asserts that only GM has had access to the work product of the investigation. This also is untrue. Throughout our inquiry we have been very careful not to disclose the contents of our files to anyone outside the Subcommittee. This was to assure that there would be no disclosure of irrelevant statements which might prejudice the reputation of an individual or adversely affect the pending Corvair litigation. During our investigation, GM supplied many documents and other information to us. To that extent, of course, GM knew what was in our files. But with respect to all other material, GM learned what evidence was in our possession only when Nader publicly announced that he was supplying certain items to us. Nothing else in our files has been revealed to GM.

Our attempts to maintain the security of our investigative files in no way will hinder the public's right to information relating to the safety of the Corvair. All relevant documents and information necessary to the determination of the issue before you or important to the safety of the Corvair are available in the public file at the Department of Transportation or are attached as exhibits to this report.

With respect to the timing of our interview with Vincent Gillen, as noted in the report, Gillen had already been interviewed twice by the FBI and deposed by Nader's lawyer in Nader's suit against Gillen before our investigation began. We reviewed these materials and determined that they were not relevant to the subject of the safety of the Corvair and contained no new information concerning the GM investigation of Nader. Accordingly, we did not initially seek to interview Gillen. As soon as Nader called us and suggested that Gillen might have new information, we immediately contacted him. On talking to him, however, we found, as stated in the report, that he had previously given all substantive information to the FBI.

Finally, Nader contends that Bob Wager showed no interest in receiving his comments on the DOT reply to Nader's critique of the DOT report. Expectedly the opposite is true. For many weeks we have earnestly sought to obtain Nader's views on the DOT report as well as his response to DOT's defense of its report. On October 25, 1972, Mr. Wager contacted Joan Claybrook concerning Nader's position on the DOT report. This was followed by a two-hour meeting with Carl Nash on November 21 to discuss Nader's arguments in detail. In the following weeks we urged Miss Claybrook and Mr. Nash to set a time to review our report so that these questions could be further pursued.

They consistently refused to do so. We have always stated that we wanted to consider Nader's views on the DOT report and every other issue. But we have made it plain that we would not discuss them piecemeal. We would cover all the issues in our report together at one time. GM and DOT agreed to this procedure, Nader would not.

In summary, Nader's letter contains no new information concerning the stability and handling of the 1960-63 Corvair. Accordingly, we adhere to the conclusions stated in our report. We do not believe these procedural matters should be allowed to obscure the merits of the issue originally raised by Nader.

ATTACHMENT IV—NADER LETTER TO SENATOR RIBICOFF

MARCH 26, 1973.

HON. ABRAHAM RIBICOFF,
Chairman, Senate Subcommittee on Executive Reorganization, Washington, D.C.

DEAR SENATOR RIBICOFF: Thank you for the opportunity which you have provided to respond to the staff report so that, in your words, "the public now and in the future have access to other points of view at one

place in the same edition of the Congressional Record." Attached is our report responding to the Wager-Koskinen compilation. I believe that this report, authored by physicist, Dr. Carl Nash, and legal specialists, Joan Claybrook and Mark Green, decisively repudiates the W-K findings and conclusions exonerating the behavior of General Motors before your Subcommittee in 1966 and gratuitously accepting the GM view of the Corvair. In spite of severe time constraints and the unjustified secrecy surrounding the W-K inquiry, the enclosed analysis shows that Wager and Koskinen did not use much evidence presumably available to them that would have resulted in a more critical evaluation of General Motors and a more heightened compassion for the safety interests of motorists.

The Nash et al response shows the staff report to be faulty in logic, unreferenced in many of its assertions, severely prejudgmental in its research methods and erroneous in its conclusions. One can legitimately wonder about the extent to which additional disclosures would reveal additional weaknesses in the staff report were the entire record of information available for public study. Since it is not, it is necessary to state that the absence of a response to any given assertion in the W-K report should not be interpreted as a recognition of its accuracy.

Before noting some pertinent points about the W-K report, it is well to keep in mind the unchallenged facts about Corvair hazards which presently expose millions of motorists to avoidable risks. First, there is a serious exposure of carbon monoxide to users of 1961-1969 Corvairs due to a defective heater exchange system. The Department of Transportation, after much evidence and prodding, has recognized this by requiring GM to send out two defect notification letters in 1971-1972. This defect alone should have led a responsible company to recall the Corvairs, but in the absence of a mandatory law it refused to do so.

Second, Wager and Koskinen revealed the finding of a still secret GM report that certain aftermarket tires could "adversely affect the handling of the car to a substantial degree." The quoted words are from the General Motors report and the "car" referred to is the early (1960-63) Corvair. Since all early Corvairs now have replacement tires, this is a conceded hazard known but unrevealed since at least 1971. Given the callousness of General Motors in not warning Corvair owners that the company considered the Corvair unsafe with certain of replacement tires (see Sec. II. Technical Issues in the attached report), what is the explanation for the low key treatment accorded this finding?

Would it have been unreasonable for Wager Koskinen to have sounded the alarm by issuing a warning to all Corvair owners in their conclusions and recommending to a neglectful NHTSA that it more formally advise these owners of such hazards? Would it have been an excess of zeal to criticize the corporate irresponsibility of General Motors in keeping such crucial safety information from its innocent customers? Instead of pressing on General Motors for withholding knowledge relevant to motorist safety, staff turned this information into a "discovery" of their own investigation. The fact that NHTSA had possession of this information from GM for almost two years and, in a gross abuse of public trust, has maintained this report and its contents in secrecy against all public requests for disclosure also escape the staff's evaluative grasp. What goes on here? Whose interests are the staff protecting?

This hazard is conceded by General Motors but the staff's only advice to you is to ask the Secretary of Transportation to convene an international tire conference. What about motorists driving every day cars with "certain aftermarket tires" adversely affecting the handling of the vehicles? Don't they merit the staff recognizing the need for NHTSA to

require a letter of advice and caution as provided for in the 1966 act you so vigorously supported? Perhaps as much as any single episode in the Corvair's history, this performance represents the contagion of indented thinking—in this case from the company to the agency to the legislative committee staff. When asked why they are keeping this General Motors report secret, staff replied that it was proprietary. How could a tire safety report on replacement tires for a vehicle (Corvair) no longer in production be proprietary, particularly since the Subcommittee can make up its own mind on this matter? The staff is actively protecting General Motors from public criticism and legal accountability here while not helping to reduce the exposure of motorists.

There are a number of observations to make on a broader plane. As my letters over the past two and a half years have urged, an open public hearing would have been a much fairer, cheaper, quicker and a more accurate way to arrive at a sounder evaluation of General Motors' behavior than a secret staff investigation closed off from scrutiny to all interested parties except General Motors. Such a public hearing process would have permitted Subcommittee members and staff to cross-examine witnesses and cross-check materials. Obviously, this was not the course taken and the ensuing flaws and procedural inequities emerged as a result.

Starting backwards in time, your staff offered General Motors, the Department of Transportation and us an opportunity to review the draft of their report. We did not accept this invitation because (1) it was not made to other interested parties who either cooperated or whose reputations were harshly treated or both, and (2) we were not permitted to see the alleged documentation and other materials in the staff's possession. Yet General Motors not only did have access to these materials, it also extracted an agreement from the staff that they remain confidential. We believe that an investigatory draft report, where the staff acts as investigator and judge is a singularly inappropriate subject for preferential access. Open to all or open to none should have been the policy.

Why would a staff keep secret the materials from which it extracted its conclusions, refuse to disclose who it talked to, decline numerous opportunities to cross-check General Motors' partisan explanation, avoid any interviewing with key parties to court cases (such as the plaintiffs' lawyers) which they presumed to evaluate, deny even parties not connected with General Motors any copies of their own depositions, and keep from us copies of public transcripts in distant court cases? Because they had their minds made up that they were going to make a decision that was not subject to evaluation and scrutiny by the Corvair and General Motors critics. Fortunately this shielding did not entirely succeed.

The procedural inequity of refusing to show us and other interested cooperating parties, the materials and information submitted by General Motors for the purpose of receiving informed critiques revealed how little cooperation or assistance the staff really wanted from the critics. Clearly the staff did not have a monopoly on the ability to review the veracity and intricate orchestration of General Motors' defense. Yet they declined this source of illumination from those who stood ready to assist in their exploration for the truth.

All the forces of power, secrecy, attrition and lethargy pushed for the conclusions reached by the Wager-Koskinen Report. The Corvair victims have no organization, no teams of lawyers, no countervailing force against such an institutional bias. Even such institutional adversity, however, could have been overcome. But it was not. To have come

out adverse to General Motors would have led to a series of obligations by the Subcommittee to press for a variety of law enforcement actions including the corrective recall of the early Corvair. The opposition to such moves by General Motors would have further burdened your staff.

As the attached report shows in detail, Wager and Koskinen made every effort to give General Motors the benefit of every doubt, every deception, every inhibition of witnesses, and every last response. They wrote the report as if they were held to splitting hairs of past litigation subpoenas and doing such without even questioning both sides of the particular litigation. Where was their concern with the way General Motors held back from providing the Subcommittee in 1966 with full information including the proving grounds reports on the Corvair instability? Why did it take third parties and long hours of staff questioning of General Motors to produce what the company should have volunteered to the Subcommittee if it truly cared at all about the Subcommittee's quest at that time.

It is dismaying to perceive the parallels between portions of the staff's report and the now hoary General Motors exonerations of its behavior or the uncritical acceptance of General Motors' interpretation, intent, or memory whenever they conflicted with the critics' version or even other statements by General Motors personnel on the record.

The enclosed report elaborates on, among others, these points: The pattern pursued by staff was to describe an assertion by a critic or former employee, then describe and accept the rebuttal by General Motors or its partisans as if by knee-jerk reaction. The evident bias beneath this approach is indicated by its easy avoidability through quick cross-checking with the critics or challengers. The systematic refusal of Mr. Wager to do this underscores what we have sensed since the beginning of the study to its conclusion—a prejudgment and predetermination so deeply set in his mind as to defy any explanation short of personality factors beyond our interest. Note, if you will, just one illustration of many in the Wager-Koskinen Report. It was stated that on the recommendation of Gary Sellers one Maurie Rose was interviewed. Mr. Sellers indicated that this former GM technician would be critical of the Corvair.

Wager and Koskinen scarcely conceal their delight that Mr. Rose turned out to be admiring of the Corvair when they interviewed him. An objective inquirer would have called Mr. Sellers for an explanation of this surprising reversal of expectation. I directly heard Mr. Rose expound about the hazards of the Corvair. Yet the staff was not interested in checking back. They were not interested in weighing the subtle pressure and intimidation which hovers around General Motors employees residing in the Detroit area or otherwise who are fearful of General Motors' pervasive influence. Both Title 18 and the cross-examination associated with a public congressional hearing would have helped avoid such nonobjective evaluations.

Regarding the staff's startling receptiveness to General Motors' explanations, there is the matter of General Motors' chronic history of antitrust violations, chicanery over pollution controls, dealer manipulations, automobile hazards, bumper parts and aftermarket frauds, auto finance machinations and other disreputable practices of a corporate recidivist. Such a history is deserving of stringent caution not swollen gullibility or favorable prejudgment. For example, over and over again, General Motors has stated that their cars were not defective, stalled the government and then conceded the defects and recalled millions of cars. In 1971, as an illustration, after several years of coverup, delay and denial, General Motors agreed to the recall of over 7 million Chevrolet with hazardous motormount defects.

Numerous casualties on the highways in these cars had to precede this concession. We have been involved closely with many such reliable and accurate efforts to obtain recalls including the massive Chevrolet motormount recall. Against such a background, we might have expected greater respect accorded our experience and judgment by Wager and Koskinen—especially given their self-acknowledged limitations for this inquiry. Instead they accorded a strong presumption of credibility to a company with a legendary record of deception, suppression, violations, greed and disinterest in its safety obligations. You have no further to look, Mr. Chairman, than your own disclosures of vehicle recall data in 1966 collected from very reluctant manufacturers who had kept them secret from the motorists whose lives and limbs could have been saved.

When it comes to Corvairs, too many executive careers and too many legal vulnerabilities are involved for General Motors to do anything but stand defiant. Given General Motors' own detailed proving ground tests documenting the early Corvair's instability in representative road maneuvers which drivers could expect to confront in certain highway situations, it is deplorable to observe how Wager and Koskinen disregarded these tests with a flip sentence or two.

It is also unfortunate that many persons whose work or testimony is quickly dismissed by the Wager-Koskinen Report—are not permitted any opportunity to defend their position. A congressional hearing would have provided the opportunity directly or in supplementary materials submitted for the printed record.

Senators have many priorities to consider. They rely on their staff far more than the public realizes. Often this staff system works to ameliorate a most difficult time and issue congestion. In this case, I believe your staff did you a disservice. Had their inquiry been conducted with equitable due process, balance, cross-examination and open access to all interested parties, we do not believe they could have delivered to you the findings and conclusions contained in their report. It is hoped that you will read the attached report and recognize that both fairness and auto safety requires opening the staff's files containing General Motors documents. It is understood that you have retained the ultimate judgment to release such materials. I cannot believe that once the details are brought to your attention directly, rather than by proxy, that you will continue to deny interested parties and the media the right to judge for themselves at least to the extent that an open hearing would have permitted. Inasmuch as the statute of limitations for prosecuting any violations in 1966 expired in 1971, (see introductory section of the attached March 23, 1973, staff memorandum to me) well before the leisurely release date of the Wager and Koskinen Report, the last pretense for continued withholding of such materials from public scrutiny has disappeared.

The Corvair inquiry will continue. It is hoped that fuller disclosures and evaluations relating to the Wager and Koskinen report at a later time will be received by the Subcommittee with candid concern and consideration.

Sincerely,

RALPH NADER.

ATTACHMENT V—NADER STAFF MEMORANDUM AND EXHIBITS

MARCH 23, 1973.

MEMORANDUM TO MR. RALPH NADER

From: Carl Nash, Ph.D., Joan Claybrook, and Mark Green.

Subject: The Ribicoff Staff Report on the Corvair Stability Controversy.

The staff report to Senator Ribicoff, released March 14, 1973, responds to the documented assertions of Mr. Gary Sellers and

yourself that General Motors misled the Senate Subcommittee on Executive Reorganization about the safety of early model Corvairs. It is the report's conclusion that, despite some contrary evidence, the Subcommittee was not misled since "the performance of the 1960-63 Corvair compares favorably [in stability and handling] to similar contemporary cars."

Although staff investigators possessed an excellent opportunity to educate the public about the workings and impacts of General Motors, they have unfortunately failed in their mission—as their report is marred by faulty methodology, technical incompetence, and inaccurate assertions. But before detailing the insupportability of the report's arguments and conclusions, one should initially understand the operative context of its development. For by its approach and predisposition, it is not entirely surprising that the report reads like a GM brief.

First, little of the staff report's supporting materials have been made public, most of its investigation has been conducted in secret, and GM and DOT have reviewed a draft of the report, making suggestions and corrections, prior to its release. The staff report admits that you have operated at a disadvantage because much of the evidence they considered "was unavailable to Mr. Nader." Yet due to the decision of the Department of Transportation to illegally withhold GM documents not exempt under the Freedom of Information Act, and the refusal of the Ribicoff staff to release the 4,000 pages of depositions and other GM materials, this disadvantage continues.

Second, the staff report hardly deals with an essential component of your complaint—that private GM tests showing the defective handling of the Corvair were illegally, unethically and deceitfully withheld from Corvair court cases, as well as being denied the DOT and the Ribicoff Subcommittee prior to 1970.

Third, the report, like General Motors and the National Highway Traffic Safety Administration (NHTSA), considers irrelevant the key GM proving ground reports, PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and 17103 (Corvair Dynamic Stability Tests). The Corvairs GM tested in these reports are not significantly different from standard Corvairs and the maneuvers used are not unlike those performed in emergency situations on public roads. The results of these reports have particular weight because of their source (GM), their purpose (to find what changes in the Corvair suspension would improve its resistance to overturning), their contemporaneity with the subjects being tested (1962-1963 Corvairs), and their occurrence prior to the first blossoming of the Corvair controversy.

Fourth, the report's authors, Robert Wager and John Koskinen, modestly note their technical inability to judge many issues, and say they "express no opinion on the technical questions relating to the ultimate safety of the car." But their (understandable) modesty surely takes them further than they intend, for their study obviously does attempt to assess "the technical questions" about the Corvair's safety; if they are inept for this demanding and crucial task, there is little reason to have confidence in their effort. They cannot have it both ways—doing what they are denying.

Fifth, and relatedly, this inconsistency neatly precludes any finding of fault against GM. Whether GM misled the Subcommittee ultimately turns on the stability and handling of the Corvair—which the authors assume not to be able to judge.

Sixth, they therefore depend to an extraordinary extent on the July 12, 1972 report of the National Highway Traffic Safety Administration (NHTSA). The staff endorsed the NHTSA's conclusions about the Corvair.

And with good reason: uncritically accepting NHTSA's assertions because they "appear reasonable," the staff report in many key sections is little more than a reproduction of the NHTSA/DOT study. At crucial factual junctures, Wager said Koskinen merely mechanically cite that study. This recitation requires that they ignore the refutation of the unscientific and self-interested DOT tests, completed by Dr. Carl Nash on February 2, 1973 and supplied to the Ribicoff Subcommittee at that time.

Seventh, the DOT exoneration of the Corvair in 1972 is hardly germane to the claims of GM witnesses in 1966 that the safety of the Corvair was demonstrated by verdicts in two court cases.

Eighth and very important, during the course of their inquiry, the staff learned that General Motors considers the Corvair unsafe with certain brands of replacement tires. Both GM and NHTSA refuse to disclose the GM report on this finding and the staff has gone along with maintaining such unconscionable secrecy over a matter so related to human safety by keeping its copy of the GM report also secret. In addition, staff did not even recommend that a public and forceful warning be sent to Corvair owners by either GM or the NHTSA in the light of this imminent, continuing hazard to several hundred thousand Corvairs and their occupants on today's highways.

Finally, one cannot ignore the personal and institutional biases discouraging the staff from neutrally assessing whether GM had misled the Subcommittee. Personally, those close to this entire episode are aware of the obvious hostility between Mr. Wager and Mr. Sellers—it was, after all, the former who alleged without any basis in fact that the latter may have violated the law by obstructing a Senate investigation, and it was Mr. Sellers who charged that staff investigator Wager had known of GM's substantive alterations in the official Subcommittee transcript of the 1966 hearings—and this personal animosity may well have prejudiced Mr. Wager's judgment on the study. And institutionally, if the staff report had found that GM had misled the Subcommittee, as we believe it should have, Senator Ribicoff would have been burdened with considering: whether to hold public hearings to assess the significance of GM's misbehavior; whether to notify individuals, including plaintiffs in court cases, who suffered harm from GM's actions; whether to request a reopening of the NHTSA safety investigation; whether to recommend to the NHTSA that the owners of all Corvairs still on the road be notified of the Ribicoff findings; and whether the GM actions constitute criminal violations warranting referral to the Justice Department for possible prosecution.

(In fact, although your letter of October 23, 1970 alleged that GM had misled the Subcommittee about the Corvair's safety, it was not until May 21, 1971, that Senator Ribicoff asked the Justice Department to investigate. That request not only completely ignored the charges in your October 23 letter, but it effectively mooted the entire issue: for the five year statute of limitations ran out either on March 22, 1971, if it began running at the March 22, 1966 hearings, as seems likely, or on July 25, 1971, if it began running when the official record was published, which itself would have allowed the Justice Department only two months to investigate.) Given the personal subtleties and the additional work burden from a finding adverse to GM, there were substantial pressures to tilt the equities in favor of GM—which the staff report repeatedly did.

I. THE MECHANICS OF THE RIBICOFF INVESTIGATION

A. The need for a public hearing

The design of the inquiry into the issues raised in your letters of September 4 and October 23, 1970, and May 20 and July 8,

1971 was determined by the Ribicoff staff alone. The first letter sought a "re-opening of the 1966 inquiry in light of the grave matter of misleading under oath a congressional committee." As the pattern of secrecy in the investigation became more evident, the second, third and fourth letters repeat, with increasing intensity, this request for the convening of a public hearing. The letter of May 20, 1971, which requests that the evaluation process be opened up to public scrutiny, is reproduced in part below:

[Senator Ribicoff, 20 May 1971]

"... General Motors' backstage maneuvers demonstrate that public hearings are now imperative. I write to you out of a concern that despite the unquestioned integrity and good faith of your staff members and those concerned with the subject at the Department of Transportation—GM has assumed such a pervasive degree of control over the terms and conditions of the present investigation that the subjects outlined in my letters of last September and October may not be adequately examined in public.

"Although Mr. Cole proclaimed to the world in September 1970 that the evidence on these charges would show that GM and its executives 'have been faithful to their public trust', GM's response to these investigations reveals a continuing aversion to any public scrutiny of most of that same evidence. Unfortunately, thus far they have succeeded in keeping this important information out of public view. For example, GM has monotonously reiterated the groundless statement that much of the evidence concerning this no longer produced car must be kept secret to protect its 'proprietary interests'. It unsupportably claims that the attorney-client privilege requires that a large amount of additional evidence be suppressed. Ross I. Malone, GM General Counsel, has apparently extracted agreements from members of the Senate staff and the Department of Transportation which have insulated critical evidence from public examination. This sequestered evidence could well answer the questions of the members of the engineering and legal professions who have been trying to sort out the needlessly secret information surrounding this matter for ten years. This pointless hide-and-seek has caused Senate employees to conduct inquiries in secret and has precluded public access even to the transcript. There is no justification to treat data on a vehicle which is no longer in production with this secrecy.

"Unhappily, Mr. Malone's efforts to control the terms and conditions of these investigations did not stop with agreements requiring secrecy. His improper attempts to ingratiate himself and his employees include the provision of limousines and on-the-spot expensive secretarial services in Detroit.

"By insisting that these preliminary inquiries into the charges be conducted in such a clubby atmosphere (and that GM be allowed to tell its story on the Q.T.), Mr. Malone has seriously weakened if not destroyed the credibility and moral force of any conclusions favorable to GM that might result from such a process. As Professor Lon Fuller has pointed out, belief in the disinterestedness of the judge and the opportunity for full hearing of both sides are important considerations which lend moral force to an official decision.

"And, naturally, a full hearing of both sides contemplates a vigorous, knowledgeable adversary-type development of the evidence. Little, if any, critical examination by parties outside the Committee staff has been made of the carefully selected secret GM evidence. This is especially significant in light of the implications of the information I have outlined. The many credible and relevant witnesses—outside and inside GM—do not have a chance to present their evidence and recollections under this type of inquiry.

"Cross-examination is, as Wigmore said, 'beyond any doubt the greatest legal engine ever invented for the development of the truth.' But your investigators may have been unduly handicapped by the absence of meaningful cross-examination owing to the condition of secrecy Mr. Malone apparently extracted from them. Without the opportunity to study the documents and testimony now being offered by GM, it is next to impossible for others to offer any concrete suggestions relating to the credibility of the company's presentation. The prime purpose and utility of the ability to cross-examine and present witnesses is to correct false impressions generated by self-selected expressions by the opposing party.

"Your Committee's past experience with GM's deceptions in volunteered statements and sworn testimony also proves the need for a public hearing. In 1966, your Committee was given a lesson in the unreliability of General Motors' selective version of evidence. As you will recall, at the time General Motors' use of detectives first came to public attention General Motors first issued a denial, and then a deceptive press release. That press release was at best misleading, because, as you said, Senator:

"It is apparent, as you thumb through and read this report, that practically none of the investigation has anything to do with what you (General Motors) contended your investigation was for in your news release of March 9.' (Hearings of March 22, 1966, p. 1396.)

"Thus, as Senator Robert F. Kennedy pointed out, 'had the chairman not called a hearing, really the public and the newspapers would have been misled.'" (Hearings p. 1389.)

"Now, very substantial evidence backed by knowledgeable witnesses formerly employed by General Motors, has surfaced. The importance of the Corvair to millions of Americans who must drive or ride in them and the necessity to make truth in Congressional hearings a deterrent to future corporate deception and prevarication on other issues call for a public hearing by your Committee."

This recommendation, as it turned out, was ignored. The report's authors opted instead for a private investigation.

B. Secret communications and preferential access

The Ribicoff staff have spent many many hours in the preparation of their report, which they proclaim is a balanced piece of work. The articulated rationale for conducting the investigation behind closed doors (doors often closed also to staff of other Subcommittee members) is that many individuals would not otherwise have been willing to speak with the staff investigators; and anyway, it was said that the staff investigation was a preliminary step to an open hearing. But having found (unilaterally) that the Subcommittee was not misled, the staff asserts there is no need for a hearing. (Catch 22.)

We disagree with this position. 18 USC 1505 provides criminal and civil penalties to protect witnesses before Congressional committees from harassment, intimidation, threats, or injury. No adequate explanation could be adduced from the staff why this statute was not sufficient to protect any witness who might be called to testify before a Congressional hearing. By conducting its interviews in secret, the staff emphasized that it was protecting witnesses who did not play a "relevant" role in the Corvair episode from being harassed by plaintiffs' counsel. But the procedures of the inquiry should not have been shaped by a gratuitous shielding of some of these people from wholly speculative interferences. Far worse is the potential of subtle GM intimidation of those interviewed. The alternative to a public hearing has been a secret staff investigation in which GM has been given highly preferen-

tial treatment because it agreed to cooperate with the Subcommittee staff on condition that all communications be held secret. You, on the other hand, refused to be bound by such restrictions and insisted on the public airing of all communications and issues raised. As a result, the flow of communications between the Subcommittee and GM was rapid and frequent, while the communications between the Subcommittee and the Corvair critics was limited.

Some examples of the preferential treatment afforded GM follow:

GM was given the opportunity to rebut statements and analyses made by various interested parties and former GM employees; but these latter individuals, who cooperated with the Ribicoff staff, were not able to comment on any GM rebuttals. Upon reading the report for the first time, for example, we discovered that GM was formally invited to respond to letters and numerous documents you sent Senator Ribicoff. Yet you were not invited to comment on GM's response and other allegations.

Despite its obvious inhibiting effect, GM was permitted to have its counsel attend and take notes at the depositions conducted by the Ribicoff staff of each GM employee. This is not unlike the much criticized actions of John Dean, III, the White House counsel, who sat in on the FBI interviews of White House staff connected with the Watergate activities.

GM was requested by the Subcommittee to provide—voluntarily and not under subpoena—a large number of documents for the investigation. The Ribicoff staff explained that the penalty for noncooperation would be an immediate public hearing, thus turning what should be a condition precedent (the public hearing) into a condition subsequent controlled significantly by General Motors with the Subcommittee staff's approval. In addition, the staff agreed to accept all GM documents under various conditions of nonrelease and with legal title attached. While Wager and Koskinen retained the right to release any "relevant" documents in their report or in future hearings, they promised not to release any materials directly to you or to any other interested parties. Thus, GM effectively kept other interested parties, including former knowledgeable GM employees, from scrutinizing the various materials on which the Subcommittee staff relied for its decision-making and from alerting the Subcommittee to the absence of potentially pertinent materials, inaccuracies, or contradictions.

GM and DOT officials were given the opportunity to read a final draft of the staff report, an opportunity you respectfully declined because of the one-sidedness of the inquiry, the unjustifiable secrecy, and the refusal to permit all interested parties to have equal access with GM to the staff report draft and supporting materials. Presumably, the offer to reveal sought to assure the accuracy of the report and to be fair to the reputation of General Motors and DOT staff. But the same courtesy was not afforded former GM employees and others deposed or interviewed by the staff, participants in the process with more to lose individually than GM could lose corporately.

This lack of equal access has had an impeding impact. While we appreciate both the opportunity to have this response printed together with the staff report, and some staff responses to a number of our specific questions about the report, we must nevertheless note the following list of items requested for the purpose of preparing this memorandum and denied by the staff:

1. The transcripts in the Collins and Anderson cases for an overnight loan (they are public court documents) because they are the legal property of GM, even after we pledged not to copy any pages as a condition of the loan.

2. A list of individuals interviewed by the Ribicoff staff (listing those promised confidentiality only by affiliation).

3. A list of all materials supplied by GM to the Ribicoff staff, and of all other documents used by the staff in the preparation of the report.

4. Access to copies of various GM documents used in the preparation of the report (such as PG 11285 and the GM rebuttals) which are not publicly available and not known to us.

5. The depositions of GM and other persons deposed by the Ribicoff staff and on which the report is in part based.

C. GM's coordinated defense

The Corvair litigation represented probably the most serious judicial conflict which the company ever faced—both for its direct and precedential importance in mass volume products liability development. The challenge posed by injured plaintiffs or next of kin to General Motors in this regard elicited the most clever and loyal company advocates. Knowledge and decision-making about litigation strategy reached up into the highest levels of the company hierarchy, including the top executives. Against such a background, the portrait painted by Wager and Koskinen about the mutual isolation of different segments of Chevrolet and their disorganization over the Corvair litigation in the mid-sixties is a fantasy quietly cultivated by their company advisors. Had the plaintiffs' attorneys been asked, they might have detailed for the staff just how organized and orchestrated GM was for such litigation—with its computer printouts, "hot documents," special security handling index, Corvair schools for local defense attorneys and private detectives. (Exhibit A) The machine-like functioning of Chevrolet and GM as disciplined units over the years under various external and internal stresses belies the disarming Wager and Koskinen view that what everybody knows about GM is really not true.

The Ribicoff staff told us that their problems caused GM to unearth materials that the auto firm was surprised to find. Eureka-like, it was as if they and GM had embarked together on a journey of serendipity. Treated with exceptional deference at high corporate levels, these young lawyers became sufficiently impressionable to accept the suggestion that GM has surprised and confused enough perhaps to blunder but not to plunder the rights of injured litigants and Corvair occupants generally. Such a benignly uncritical predisposition ignores the reality of GM's tightly controlled and planned defenses.

For example, General Motors, at the height of the Corvair litigation in the mid-1960's, had its legal department draft the most candid case against the Corvair's handling defects so it could assess the worst it might expect should all the secret GM data and tests be disclosed at a later time. This detailed memorandum from GM attorney James F. Durkin to GM General Counsel Aloysius F. Power exposes the staff report's naive conjecture that GM was internally dispersed and ill-prepared to produce certain incriminating documents. Attached to the "Durkin memorandum," as it came to be known, was among the strongest evidence GM had of the Corvair's handling and stability defects. This group of Corvair proving ground reports and other documents become known within GM as the "hot documents," and indeed they were. They were too hot to be permitted to alleviate the righteous plight of the company's customers. They were withheld from public view in one of the greatest displays of internal corporate security ever. The Ribicoff staff has joined this security apparatus by not disclosing this memorandum and its complete attachments as well as many other GM materials which would fault the accuracy of their findings and conclusions.

The staff report made a point of distin-

guishing between Chevrolet Research and Development (Frank Winchell's group) and Chevrolet Production Engineering to explain why the latter's tests were not known by the former when questioned by plaintiffs' attorneys and others. The absurdity of this self-serving GM tactic is noted subsequently. The point here is that the lawyers, who coordinated the testimony of all GM's technical witnesses, including Winchell, also possessed these reports. In the summer of 1965, Chevrolet's Chief Engineer, Ellis J. Premo, testified in the *Anderson* case (p. 4155 of the trial transcript) that GM's Legal Section had been provided with all extant and relevant Corvair materials from the Engineering department. Note the question—answer exchange:

Q. Did you sir, attempt to make available all of the reports concerning the Corvair or concerning its handling characteristics or stability?

A. Every report we had was made available.

Q. Whom did you make them available to personally?

A. To the General Motors Legal Section. Q. OK, and as I understand it there are other reports concerning four ply tires vs. two ply tires other than the one you have in your hand.

Mr. NUNEZ. I want to object to this question on the grounds, your honor, that the Court's order of April 1, 1965, as follows, it says almost on the end "and it is hereby granted insofar as it pertains to test reports and motion pictures dealing with stability of preproduction models, prototype models and all other models through the year 1962 as being made available in the offices of the defendant corporation, General Motors building in Detroit, Michigan." I think for Mr. Lloyd to be permitted to ask Premo about other reports not related to the matters covered by the court's orders is improper. COURT. Objection sustained.

Mr. LLOYD. Q. Am I correct then, sir, that you set out and selected all the reports having to do with the stability or handling of the Corvair and made those available?

A. Every report on the Corvair, every test report.

Q. Every test report?

A. That we have regardless of what it pertained to.

The Ribicoff staff report concludes, "We believe the foregoing sections of this report have presented the relevant evidence necessary for determination of the basic issues. . . ." But the staff report did not mention nor produce as an exhibit the "Durkin Memorandum," perhaps the one single document which best refutes many of GM's numerous misleading statements in court cases and before the Ribicoff Subcommittee. Of all the materials gathered during the Ribicoff investigation, it is the first one which should have been shared with the public.

D. Non-association of the subcommittee from the report

The Wager and Koskinen staff report on the Corvair matter is not a Subcommittee report or even a Subcommittee staff report. For, in a serious reflection of the report's stature, there were objections by the staffs of other Subcommittee members that because the investigation had been conducted in isolation they did not want to be associated with it. As a result, the report is being published in the *Congressional Record* as a staff report.

II. TECHNICAL ISSUES IN THE STAFF REPORT

Messrs. Robert Wager and John Koskinen say they "express no opinion on the technical questions relating to the ultimate safety of the car." Why? Because they "do not have the technical capability to make an independent engineering evaluation of the stability and handling of the Corvair," and because "[m]any of Nader's contentions [in the Nash critique of the NHTSA study] are

technical and we do not have the capability to evaluate them fully."

These claims prove only half true, since the authors do go on to make technical judgments concerning the Corvair's safety and, in the process, do corroborate their self-assessment that they lack the technical competence to do so. And being technically insecure, they consequently and unquestioningly accept NHTSA's deficient Corvair defect investigation study and NHTSA's "response" to the Nash critique because, in their words, "Congress established the National Highway Traffic Safety Administration to make just such technical judgments." Based on our experience with Federal agencies in general, and the NHTSA in particular, we are far less sanguine about arrogating to executive agencies absolute wisdom.

For their technical consultant on this complex subject the Subcommittee staff chose Mr. Ray Caldwell. Mr. Caldwell's engineering training is confined to an undergraduate engineering program. Also, virtually all of his subsequent engineering experience has been limited to driving, and building, racing cars which operate in a completely different context than do passenger cars. The requirements for successful racing car designs would, in fact, be contrary to many of the requirements of safety in a passenger car. Caldwell's sympathies toward his subject are evident in his judgment, "Mr. Winchell's comments are reasonable given the atmosphere of the time." Thus does Caldwell seem far more the amateur sociologist than the professional engineer he is claimed to be.

Finally, and most troubling, is Caldwell's formal involvement with the NHTSA in its Corvair investigation (as a member of its evaluation panel). He was committed to a position on the safety of the Corvair before being contacted by Wager. The use of Caldwell, as well as the direct use of the NHTSA for technical advice, is yet another unfortunate example of the Congress's institutional dependency on the executive branch for information, advice and analysis. Certainly if the Subcommittee staff felt the need of a technical consultant, they could have found someone who had a reasonable knowledge of vehicle handling who was not connected with either GM or the NHTSA, and who had not prejudged the issue.

What follows is a point-by-point refutation of the technical misinterpretations and misstatements in the staff report which its authors were unable to discern. When a house of cards is seemingly built up brick-by-brick, it must be dismantled card-by-card.

A. NHTSA Corvair report

On December 13, 1972, Robert Carter, Associate Administrator for Motor Vehicle Programs in the NHTSA, admitted to NHTSA Administrator, Douglas Toms, that "some miscellaneous data" (dealing with light load tests) had been omitted from the index and file of the Corvair investigation because "it was not considered valid for the investigation." (exhibit B) Ignorance of this data led several high officials in the DOT, including Secretary Volpe, NHTSA Administrator Toms, and NHTSA Chief Counsel Lawrence Schneider to make inaccurate statements (exhibits B1, C, D) denying any testing of the Corvair with a light load at Texas Transportation Institute (TTI). (See the *Addendum* to Nash Critique, Exhibit 1 to Ribicoff staff report) Carter's memorandum characterizes the light load tests as "unofficial."

The NHTSA and the Ribicoff staff report now assume everyone has a rather short memory. Wager and Koskinen assert that the "DOT decided to conduct another series of tests on the Corvair in a lightly loaded condition." (emphasis added) The "unofficial" tests have now become official in this resurrection. NHTSA further states that "this test material was not withheld from the Panel," [the NHTSA's 3-man outside panel of so-called technical experts none of whom

are specialists in vehicle handling] which is quite interesting because it was apparently withheld from Secretary Volpe, Administrator Toms, Chief Counsel Schneider, and Associate Administrator Carter.

The Nash critique of the NHTSA work goes virtually undiscussed in the staff report, while there are extensive quotations from the NHTSA's letter to Wager supposedly answering the Nash critique. Signed by Mr. Robert Carter, it is almost identical to Toms' response to a significantly different letter from Senator Warren Magnuson. (exhibit E) This boilerplate response does not respond in any detailed way to the Nash critique, which analyzes the deficiencies and deceptions in the NHTSA Corvair handling and stability investigation, and shows why the NHTSA reached its insupportable conclusion; nor does it adequately or fundamentally rebut any of his criticisms. It seems not to concern the staff authors that the agency which wrote the study they so heavily lean on simply ignores those who carefully explain its deficiencies. (exhibit F, G)

When discussing the effect of heavily loading the Corvair in the NHTSA tests, the Ribicoff staff report states:

"It is true that this weight (the 615 pounds of excess weight added to the Corvair in the NHTSA test) increased the initial resistance to spinout and rollover by about 20 percent. But after the brakes were applied in the drastic steer-dramatic brake maneuver, this weight provided 20 percent more energy toward spinout and rollover. This is the result of the well-known flywheel effect. The added weight made it more difficult to reach the point where spinout or rollover would occur, but once that point was reached, the additional 615 pounds made it more likely that these responses would occur. (See explanation attached as exhibit 3) This is implicit in the GM recommendation that the Corvair be tested in a lightly loaded condition." [emphasis in original]

The staff report's exhibit 3 is a classic example of the kind of technical incompetence which pervades their effort. When Wager and Koskinen were asked who authored this exhibit, they replied that it was a "staff document prepared on the basis of engineering information supplied by the DOT and GM." Here they give the "moment of inertia" of a solid uniform box (incorrectly, due to an apparent confusion between the concepts of weight and mass). They then calculate the moment of inertia for the Corvair as though it were a uniform solid rectangular box. To find the increase in the moment of inertia with an added 615 pounds, they again calculate the moment of inertia of the same uniform box as if it were now 615 pounds heavier. According to their figures, the increase in the moment of inertia (which they call the "energy of spin" in a complete confusion of the concepts of inertia and energy) is 20.4 percent. This figure is used in the above quotation to show that the heavily loaded Corvair is more unstable than a lightly loaded one. The computation completely ignores the distribution of mass in the vehicle.

More important, however, is the staff report's misunderstanding of the complexity of dynamical stability of vehicles. It is difficult, if not impossible, to predict on purely theoretical grounds (especially at the simplistic level of this exhibit 3) the detailed response of an automobile in a drastic handling maneuver. Thus, one must rely heavily on experimental evidence to determine the behavior of an automobile under these conditions. For the Corvair, there is evidence which strongly indicates that heavy loading—which was the way NHTSA tested their Corvairs—increases the car's stability. In particular, GM's PG 17103 (Corvair Dynamic Stability Tests) shows the early model Corvair less susceptible to instability and rollover when the rear end is very heavily loaded

with cameras and other equipment. Also, review of the NHTSA film of the drastic steering-dramatic brake maneuver with both light and heavy loading shows the effect of loading quite clearly. The heavily loaded Corvair is more stable, never spinning out completely in any maneuver, while the lightly loaded Corvair would spin completely around in the more severe maneuvers. (This issue is discussed in detail in part III of the Nash critique of the NHTSA investigation.)

The NHTSA has constantly claimed that its decision to heavily load all test vehicles in the official portion of its Corvair testing was consistent with a suggestion made by Mr. Gary Sellers, a former consultant to you. Building on this misstatement, Wager and Koskinen go one step further to assert that NHTSA's Corvair tests "were conducted in accordance with Nader's suggestions." As a matter of fact, the primary recommendation of Sellers' letter was that "critical variables . . . [be] at the most severe levels—those most likely to reveal the defects alleged . . ." It is disingenuous for NHTSA, in a secret study where they could employ any method of their choosing, suddenly to take one of Sellers' recommendations out of context in order to justify an invalid testing standard. *The NHTSA has yet to show that it had made an independent judgment that testing the Corvair heavily loaded was justified or appropriate.* (See letter from Carl Nash to Senator Warren G. Magnuson dated March 15, 1973, exhibit H)

Wager and Koskinen also categorically accept the NHTSA position that "wheel rim contact with the pavement is not the precipitating cause of Corvair rollover, but occurs in the course of rollover." NHTSA in this case was merely repeating GM's contention at the 1966 Michigan legislative hearings, which is based on GM proving ground tests allegedly confirming that statement. In a typical overstatement of more limited results, however, the staff report would make the results universal and claim that wheel rim contact cannot precede a rollover. Unfortunately, the NHTSA's own suppressed tests of a lightly loaded Corvair show that this is simply not true. In two "noncomparative" tests (exhibit I) of the NHTSA's lightly loaded Corvair which did not rollover, the NHTSA engineers noted that there was right rear wheel rim contact with the pavement—in one case severe enough to damage the rim. The NHTSA's insistence that rim contact can only occur *after* the vehicle has begun to roll over (revealed to the public six months after release of their report) is thus contradicted in their own test experience.

The NHTSA's rejection of the term tuck-under is equally specious. The term "tuck-under" is not a precisely defined word, but rather indicates a condition in which one automobile wheel and tire are operating at a severe positive camber angle. Certainly if the rim were able to contact the roadway, such a condition must have existed which could be called "tuck-under." Whether or not rim contact precedes or follows rollover is mostly a function of the tire's sidewall stiffness and inflation. In GM's tests, apparently the conditions were such that contact followed, while in the NHTSA tests, it preceded.

B. Corvair tests by GM, Ford and Consumers Union

To substantiate the results of the NHTSA investigation, the staff report cites "the GM, recent Ford, and Consumer Union [sic] tests."

1. *GM Tests.* In a self-serving ambiguity, it is not clear in the case of the "GM tests" whether the report refers to the vast body of GM proving ground tests, or to only the two late 1972 re-runs of the original 1959 Ford Falcon-Corvair circular track and s-turn comparison tests. Since the GM proving ground tests which were contemporaneous with the development and production

of the Corvair (1959-1963) do not endorse the staff report's thesis and are summarily dismissed by the NHTSA report, it is a fair presumption that the reference to "GM tests" means later 1972 re-runs only.

The Ribcoff staff report merely parrots the NHTSA and GM dismissal of what is surely the major piece of evidence that the Corvair is inherently defective: viz. *GM's own proving ground tests showing the Corvair rolling over at speeds as low as 25 mph in simple j-turn (emergency obstacle avoidance) maneuvers.* NHTSA downgrades these adverse PG reports by summarily asserting that they are "not representative of the practical driving environment" and they did not involve Corvairs identical to production Corvairs.

This "not identical" rationale reiterates GM President Edward Cole's September 7, 1970 letter to DOT Secretary John Volpe. As viewed by Cole, small changes in the Corvairs tested on the proving grounds warranted distinguishing them as "specially equipped with experimental parts." This is clever but fatuous. If true, the NHTSA's test results at TTU could only apply to a 1963 Corvair with 1971 tires because the earlier Corvairs were, after all, different.

In fact, differences between the test cars and regular cars were insignificant—as we will try to explain in some detail since the PG reports are pivotal evidence of GM's bad faith in its court cases and before the Subcommittee. Two cars were involved in PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and PG 17103 (Corvair Dynamic Stability Tests), a 1962 and a 1963 model Corvair 4-door sedan. The 1962 car was the only car used in PG 15699, and it was also used for the first six runs of PG 17103. The modifications to the car bodies consisted of installing minimum devices necessary for the protection of the driver when the car overturned: a roll bar to prevent roof collapse, safety belts, a modified fuel system, nets over the windows to prevent ejection of the driver's arms or head, a gravity sensitivity ignition cut off switch to stop the engine in rollover, and interior padding. Loose items inside the vehicle were removed, and during the latter part of PG 17103, the Corvair bench seat was removed and replaced by a bucket seat from an Oldsmobile, for increased driver protection. The change in the position of the center of gravity due to these changes was no more than would have been the result of adding or subtracting passengers in the car. As a matter of fact, the change in the position of the center of gravity between a Corvair with a full tank of gasoline and an empty tank is 1.6 inches, compared with a change of less than 2.5 inches for the modifications for the Corvairs used in these PG reports.

The purpose of the tests was to determine the rollover stability of various suspension modifications to the Corvair. With one exception, the modifications to both cars were all minor changes in the shock absorbers, spring rates, rear rebound angle, and relative roll resistance of front and rear suspension (roll bars on the front, transverse leaf spring on the rear). The exception was the use of the 1964 design suspension on the last eleven runs of PG 17103. The primary changes in the shock absorbers concerned the way in which the shock absorber limited travel when they reached full compression and extension (jounce and rebound of the suspension). The device being tested was a hydraulic damper at the end of the shock absorber (hydraulic cutoff shock absorbers) which has no effect until the suspension becomes fully extended. Even when the suspension reached full rebound, the only effect of the hydraulic cutoff is to cushion the impact of the suspension reaching this limit.

The range of suspension rebound limit changes was from 5°23' to 10°18'. Most of the tests were done with the suspension re-

bound within the limits of production models—6.8° to 11°. These tests found that the performance of the Corvairs was relatively insensitive to rebound angle. (It is interesting that the trend in rebound angles on the production Corvair was toward less rebound.) Yet GM claimed, and the staff report repeated, that reducing the rebound angle in the Corvair involved in run #120 of PG 17103 resulted in a 10 percent reduction in the roll-over stability, although the change is not specifically blamed on the rebound limit. The comparison, after all, is between the test car with a driver and rear seat passenger (dummy) on the left side (outside of the turns which were being made to the right) and a comparison car with driver and passenger in the two front seats. This comparison offered by GM to the Ribcoff staff was uncritically accepted despite its misleading and unproven character. Even Wager and Koskinen agree that "the rebound angle has no real effect on the control characteristics of the car."

The addition of a roll bar on the front suspension is claimed by the staff report to have "contributed little to the car's handling." This is also borne out by the results of PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems). Also, the stability of the Corvair with a rear transverse leaf spring alone is not improved according to PG 15699. For the most part, the changes to the Corvairs in these tests were less extensive than the minor changes made on production Corvairs offered to the public from the 1960 model through the 1963 model. The production changes have been characterized by GM engineers as not significantly affecting the handling or stability of the Corvair, and the NHTSA implicitly agreed by testing a 1963 model as representative of all Corvairs. To say, then, that the proving ground Corvairs were sufficiently different from regular Corvairs to invalidate the adverse PG reports is engineering hairsplitting—with a self-interested purpose.

The proving ground tests have been characterized by Edward Cole as being "violent maneuvers designed to overturn" the cars and by the NHTSA as being severe development tests which "were not representative of the practical driving environment." There are two factors which must be considered in evaluating these assertions. First, can only tests which simulate "the practical driving environment" or which are not "violent maneuvers" be considered legitimate demonstrations of defects in vehicles? Second, are violent maneuvers part of the normal, albeit infrequent, experience on public roads? The answer to the first is obviously "no." A legitimate test must exceed the expected use of a product by a sufficient margin that guarantees adequate or safe performance of the product under the complete range of expected use, including emergency situations. The answer to the second is "yes"—accident avoidance maneuvers are often well simulated by the j-turn, which was used as the primary maneuver in PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and PG 17103 (Corvair Dynamic Stability Tests).

The j-turn test determines a car's response in an emergency reaction to a suddenly perceived obstacle in its path: e.g., you are driving along at 30 mph and a child suddenly emerges from a side street forcing you to swerve to avoid hitting the child. This maneuver is obviously one a typical driver may be forced to make—as studies like the NHTSA's Multidisciplinary Accident Investigations point out. It proved a maneuver which the Corvair failed: *while probably no other American cars could be overturned in such a test, a 1962 Corvair rolled over twice in a simple 28 mph j-turn in PG 17103.* Professor Leonard Segel, who heads the vehicle handling research section of the Michigan Highway Safety Research Institute, said

"I'm just flabbergasted that people [GM, NHTSA, and the Ribicoff staff] were able to say that these tests [the GM proving ground tests such as PG 15699 and PG 17103] don't prove anything."

Finally, there is the issue of the source of these reports. General Motors would have had no reason to have produced a test report which was invalidly critical of the Corvair or which showed the Corvair in such an aberrational situation, so unrelated to the actual use of the car. Regardless of the euphemism GM used to characterize their aim in running these tests or the modifications to the Corvairs tested, the tests were designed to explore ways of improving the car's rollover stability and hence its safety. Although Cole tried to characterize the Corvair tests for PG 15699 and PG 17103 as being "normal development tests," there is no evidence that GM or any other domestic auto maker carried out such tests on models other than the Corvair. These tests are central evidence revealing the defective nature of the 1960-1963 Corvair suspension design. The attempts by GM, NHTSA, Wager and Koskinen to diffuse, dissolve, and defeat the issue of the relevance of GM proving ground tests—particularly PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and PG 17103 (Corvair Dynamic Stability Tests)—simply does not stand up to rational analysis.

2. *Ford Tests.* The reference to the Ford tests is also ambiguous. Is the qualification "recent" intended to cover the 1966 and 1968 testing at Ford of early model Corvairs for the purpose of perfecting its vehicle handling test procedures?

In the 1966 and 1968 tests, Ford engineers apparently assumed from their previous experience with the Corvair that its handling characteristics fell below those considered acceptable at Ford. Ford engineers were probably using their Corvair to determine if their test procedures would adequately discriminate between cars with and without acceptably safe handling qualities, the latter being demonstrated by their Corvair. If the Corvair could pass one of the Ford tests, it was likely that Ford engineers considered the test too lenient.

Ford, in a letter to Senator Warren G. Magnuson, dated April 26, 1972, stated: (exhibit J)

"We have two other reels of film involving a Corvair. These films were made in 1968 and involved a used 1962 Corvair in poor condition. The tests shown in these films were not designed to measure the handling characteristics of the Corvair and do not present a fair illustration of its handling characteristics."

The tests being referred to are lane change maneuvers. Although none of the Ford products used in the tests (mostly 1968 models) had significant difficulty in the test, the Corvair would often go out of control with the rear of the car losing traction, causing it to spin. Regardless of Ford's primary purpose in the tests, the results show the instability of their used 1962 Corvair, which is typical of those which remain on the roads.

3. *Consumers Union Tests.* The reference to Consumers Union tests concerns 1960 Corvairs. The tests were part of CU's regular comparative product evaluations, published in their magazine, *Consumer Reports*. The testing for these CU reports was, in 1960, based on largely subjective driving impressions of their test cars. Because CU owns the cars they test, and sells them after the testing is completed, they try not to test the cars in ways which damage or seriously degrade them. Nonetheless, CU was unimpressed with the characteristics of the Corvair as compared to other compact cars it tested, such as the Falcon and Valiant, a fact not clearly evident in the Ribicoff staff report.

On September 27, 1972, in a letter to the

NHTSA, CU's Auto Test Division Chief, Robert Knoll, said:

"Our own evaluation of the Corvair's handling originally was not too critical, but by today's stricter standards (our standards) we might rate it less satisfactory for emergency handling. You might think of it this way—if you lived twenty miles from town on a winding country road, would you like to drive this particular car to the hospital if one of your children was seriously injured? Some cars are more 'forgiving' than others." (exhibit 4)

Despite their reliance on the CU tests, Wager and Koskinen did not contact CU to inquire about the test methods or data from CU's Corvair tests. In response to our inquiry, CU made the following statement to describe both their tests of the Corvair and the misuse of their test report by the Ribicoff staff report:

"During the period before 1965 when the Corvair in question was being produced, Consumers Union had no formal, repeatable emergency vehicle handling tests. Although Consumers Union commented about the relative safety of oversteering and understeering cars, these comments were general in nature and not derived from specific, controlled tests of the Corvair. We note that the Subcommittee staff report omitted the final sentence of the quotation used from *Consumer Reports* which read: 'The easiest and safest car for a driver to handle is one with neutral handling characteristics, and the [1960] Falcon and Valiant come close to be just such.' Later in the same article it is noted 'the Valiant's handling . . . can be rated the best of the three cars by a definite margin.'"

"In 1966, Consumers Union tested a 1966 model Corvair, generally accepted as representative of the Corvairs with the best handling qualities."

"By this time, CU had developed an emergency handling and stability test procedure by which to rate its test cars. Even the 1966 Corvair emergency handling was rated only fair because of oversteer and sensitivity to variations in tire pressures from those recommended. Consumers Union believes that the characterization by the Subcommittee staff of Consumers Union as a 'Corvair supporter' is both false and misleading."

CU's description of the Corvair in 1960 as being less "forgiving" than other cars, and their notation that the Corvair could "get the driver into trouble a little more easily—and into trouble requiring somewhat more skill to get out of—than a car that understeers to a similar extent," brings up another point concerning the Corvair. In September 1971, *Consumer Reports* noted that: (exhibit K)

In CU's opinion the Corvair heater is a defect as defined by the National Traffic and Motor Vehicle Safety Act. The construction of the heater is such that it will almost inevitably blow carbon monoxide into the Corvair passenger compartment should a small leak develop in the engine's gasketing or exhaust system.

A month later, on October 27, 1971, the NHTSA officially declared the 1965 Corvair heater defective, and GM sent defect notifications to owners of 1961-1969 Corvairs. GM refused, however, to recall the cars for correction, and because of the expense of the correction and its temporary nature, most of the Corvairs on the roads remain defective. The combination of the heater and handling stability defects is even more insidious than either one separately. A driver of a Corvair, drugged by the heater's carbon monoxide, must then drive a car whose handling is charitably described as being unforgiving.

It should also be pointed out that when Edward Cole, GM's president, was gratuitously given the first annual safety award by the National Motor Vehicle Safety Advisory Council (advising the NHTSA) in July 1972, Mr. Walker Sandbach, Executive Director of

Consumers Union and a member of the advisory council, resigned from the council in protest. He particularly cited Cole's insensitivity to safety by noting that Cole was the "father of the Corvair."

C. The timing of production changes in the Corvair suspension

The decision to introduce the 1960 Corvair as originally designed, and to maintain virtually the same suspension system through four production years, should be viewed in light of the evidence available to GM at the time, and GM's potential for generating further evidence on which to base a production decision. It is not reasonable to argue, as do Wager and Koskinen, that GM's decision was proper because of the results of the NHTSA testing a decade later or any other recently generated information or tests.

GM President James Roche expressed one standard of care for vehicle stability at the 1965 Ribicoff Subcommittee hearings: "Today's automobile even at higher speeds [more than 50 miles per hour], is almost impossible to turn over [in a j-turn], unless the outside wheels strike an obstacle." Yet GM had evidence even before the introduction of the Corvair in 1959 that it could be overturned in a simple j-turn at half the speed cited by Roche [PG 11106 (Skid Pad Roll Test on Corvair Prototype)]. Other proving ground reports issued before and during the initial year of Corvair production also showed the Corvair's instability, even after various minor modifications were tried.

In particular, in late 1961, Chevrolet offered a factory-installed option, RPO 696, which consisted of higher rate springs, shock absorbers with greater damping, a front antiroll bar, and rear suspension rebound limiting straps. Also, RPO 696 was standard equipment on the "Spyder" model, a car designed to appeal to the sports car set—with a turbo-supercharged engine, four-speed transmission, tachometer and other gauges, and special trim. The implication of this option was that it improved the Corvair's handling to make it more like a sports car (i.e., more responsive and predictable).

The suspension option RPO 696 was tested in PG 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension), which showed that the Corvair with the heavy duty suspension was also unstable in the skid pad tests. In a Summer 1970 *Automotive Quality* article, "Remember the Corvair?", Karl Ludvigsen, a former GM public relations employee, and that RPO 696 "didn't allow the Corvair to corner appreciably faster but it made it easier to drive near its limit." Thus Ludvigsen seems to be saying that the optional suspension not only did not help the safety of the car, it gave the driver a false sense of control as he approached the Corvair's disastrous limits.

If RPO 696 did not actually improve the Corvair's safety, GM was defrauding the enthusiasts who ordered this option assuming it would improve the Corvair's handling. If it did improve the handling, GM was negligently selling defective vehicles to some of its customers when it had knowledge of how to eliminate the defects.

If the results of the PG reports showing Corvairs to be unstable and susceptible to rollover in low-speed simple j-turns were not sufficient to prove that the Corvair was dangerously unstable, they were certainly sufficient to warrant further investigation of the matter. Certainly, GM has not shown a similar experience with any other recent production model, nor have they shown, using the evidence of the time, that any of the other American compact cars of the time (the Falcon, Valiant, or Rambler) were nearly as unstable as the Corvair in this maneuver. Furthermore, GM's unique experience of receiving a large volume of criticism of the Corvair's handling, simultaneously with a large number of lawsuits alleging defective Corvair handling and stability, should have

given the auto firm reason to explore the Corvair's handling and stability far more extensively than appears to have been done. Of course, in addition, GM had a basic responsibility to correct the defects and warn owners, an obligation they have consistently avoided.

One must ask why, when GM knew the important effect of tire quality on the Corvair's handling and stability, it did not fully explore the effect of tire quality on the safety of the car. Maurice Olley's engineering paper, "Corvair Steering," dated April 1961, stated—

"The other thing that appears from these studies is the extreme importance of the tire characteristics. The increased cornering power of the rear tires virtually 'saves the life' of the Corvair."

In spite of this knowledge, and for unknown reasons, GM gave no instructions to owners about the quality of tires to replace the original tires when they were worn out. GM might reasonably have been expected to explore the effect of various qualities of tires on the Corvair's safety. That they did not, or that they ignored the results of such tests, is indicated by the results of the belated 1971 GM tests of aftermarket tires on the Corvair, revealed for the first time in the Ribicoff staff report. (Discussed subsequently.)

GM's enormous callousness in not warning Corvair owners that the company considered the Corvair unsafe does not explain the indifference of those who subsequently learned of this finding: (a) Koskinen and Wager, who, instead of indicting GM for not acting on its own past knowledge, treated the information as a discovery of their own investigation and did no more than to urge the Senator to call for an international tire safety conference, (b) the NHTSA which had possession of the information from GM well before the close of their Corvair handling and stability defect investigation and yet did not investigate this effect further and did not disclose the hazards of some aftermarket tires on the Corvair even after the close of that investigation.

Wager and Koskinen's claim that GM's choice of the suspension for the 1960 model Corvair was based on factors other than cost or ride comfort is explicitly refuted by the paper of the Society of Automotive Engineers (SAE), authored by Charles Rubly. Rubly was in charge of the development of the Corvair chassis. In his paper, Rubly lists seven reasons for the choice of the Corvair rear suspension. (Exhibit L.)

The first four reasons given by Rubly are strictly cost items concerning the cost to manufacture and service, and its reliability. The remaining three concern the quality of ride and isolation of passengers from suspension harshness and noise. Another way of making this point is to note that the reason for not choosing a more satisfactory suspension for the Corvair was cost.

That changes in the 1964 Corvair were to improve safety is shown by the characterization of tests of that suspension. PG 17103's (Corvair Dynamic Stability Tests) description of the tests of a prototype 1964 type suspension on the Corvair and the implied comparison with the 1963 Corvair shows that the dynamic stability (here, obviously meaning resistance to rollover) was the primary issue in the change to the 1964 suspension:

"These tests showed that the dynamic quality of the current production 1963 Corvair was not substantially improved through practical modifications to shock absorber design and configuration. . . .

"A 1964 prototype suspension installed in the car made the dynamic stability characteristics acceptable for several different test conditions. . . ."

At the time these tests were being run, the decision to adopt the 1964 suspension was about six months old and the 1964 model was virtually in production (a revealing

commentary on the actual lead time—eight months—required for such a substantial change). Apparently the tests were to confirm the improvement in safety created by this change in the suspension. It is interesting to note that even with the 1964 suspension, it was possible to overturn the Corvair in PG 17103 in an "abnormally severe maneuver."

Wager and Koskinen's characterization of Winchell's role in the improvements of the Corvair suspension ("Winchell was both constructive critic and defender of the Corvair") is neither documented nor is it even referenced. As in the numerous other cases where they introduced ad hoc evidence, the gratuitous mention of Winchell's Corvair ownership is simply not relevant to the issue. A conclusion that a car is safe because automotive engineers and their families drive them is similar to concluding that cigarettes are safe because many medical doctors smoke or that seat belts are unnecessary because some NHTSA employees do not wear them. It further ignores the fact that GM engineering and executive level employees are offered significant discounts on the corporation's products, or are virtually given them, in return for engineering and other evaluations. (Exhibit M.) At least two GM families, the Osborns and the Hancocks, may have regretted giving their children Corvairs to drive. (See staff report section entitled "David Lewis") and the staff report's characterization of GM engineers as unconcerned about the handling and stability safety of the Corvair is more a comment on the indifference of the industry toward safety and the love affair of some engineers with engineering difference, almost for its own sake, regardless of the total effect on safety.

D. Tires and the Corvair

The Ribicoff staff report gives considerable attention to the effect of tires on the handling properties of the Corvair. For example, it quotes a 1971 GM test of tires on the Corvair as stating that the Corvair handling could become "unacceptable under some driving conditions." Since access to this GM test report has been denied, us, and since the report is also without justification, considered confidential by the Department of Transportation, we can only speculate about the exact finding and content of this potentially pivotal report.

It is evident, at the least, that the Corvair's instability in some cases and apparent stability in others could be due to the choice of differing tires as well as to vehicle loading. Professor Leonard Segel has said that for a vehicle whose handling is "on the borderline," tires can be the single most important factor in determining the level of safety of the vehicle's handling properties. But, he added, there was something of a contradiction in tire requirements for such a marginal vehicle as the Corvair: "on the one hand, you want tires with maximum traction; but for such a car, this may lead to a rollover."

When asked whether there had been any studies of aftermarket tires on the Corvair by GM before 1971, the staff authors vaguely recalled something dealing with the Corvair defense group (Product Analysis), but could not identify it. They did not probe into this issue, however, despite their asserted interest in the tire issue. Nor did they ask whether, as original equipment tires were being tested for selection in 1959, aftermarket tires were also being tested either formally or informally.

We recently talked to Mr. Arnold Brown, a former Chevrolet vehicle development and senior project engineer who had done some of the tire testing for the first Corvairs. He said that Uniroyal (then U.S. Rubber Co.) had worked most closely with GM in the development of the original 6:50 x 13 tires and that tire testing at that time was a relative-

ly ad hoc procedure, using "seat of the pants" evaluations of tires. Normally, tires are chosen as a compromise between ride and handling qualities, but Brown said that for the Corvair, because of its handling problems, the handling characteristics of tires were considered paramount.

"I wrote many reports on unsatisfactory tires" for the Corvair, said Brown, and cited the initial rejection of both the General and Goodrich tires for the production 1960 Corvair. Brown said that he didn't think that anyone at GM had tested aftermarket tires on the Corvair, or at least it was not their regular practice. He said that the wide variety of available tires would preclude such testing. GM's attitude might have been comprehensible had the factory recommended a particular aftermarket tire, but the Corvair owner was left with no guidance and a bewildering variety of tires for the Corvair.

We asked about GM's attitude on informing owners about possible problems with aftermarket tires. Brown answered that GM's attitude was that they "should not scare anybody." He said that GM considered it had done its duty if the car got out of the factory with safe tires. Their attitude was illustrated by a defect in the original 1960 models. He said that with worn front tires, the Corvair could develop a severe front wheel caster wobble (rather like a shimmy). But GM's attitude was that worn tires were the responsibility of the owner, and a decision was made at GM not to recall the defective cars. (This attitude toward the Corvair, particularly, has not changed. In its so-called owner notification letter about carbon monoxide leakage through 1961-1969 Corvair heaters, GM said: "It is Chevrolet's position that there is no such risk if the Corvair has been regularly inspected and maintained and is in good working order.")

Brown claimed that significant improvements were made in the Corvair tires each year as they gained experience with the Corvair's tire needs. He said "a factory fresh 1963 (Corvair) was a much safer vehicle than an early production 1960 because of its tires."

Brown also related an incident which occurred at GM during the early days of the Corvair. He said that GM liked to play the tire companies off against each other. On one particular day, a Firestone representative was challenging the superiority of the U.S. Royal tire for the Corvair. To prove his point, he asked if he could demonstrate it in a nearby U.S. Royal shod Corvair. When he drove the car it turned over on a flat dry paved surface. Although the Firestone man had taken a significant risk, GM did not switch to Firestone for the Corvair, since it perhaps did not make any difference.

Neither did Wager and Koskinen inquire if GM had researched the question of whether owners were aware of the need for proper tire pressures, or whether Corvairs in service typically had their tires at the proper inflation levels. (Evidence from NHTSA Corvair files indicate that a significant number of Corvairs probably have tire pressures that vary considerably from GM's recommendation.)

Wager and Koskinen's insidious use of the word "solely" in their sentences "vehicle stability is not solely a function of tire pressure," and "we do not believe GM relied solely upon tire pressure to achieve vehicle stability," attacks their own straw man. They might as well have said "we do not believe that GM put tires on the car solely to improve its stability and handling." Their report makes no distinction between necessary and sufficient conditions. The correct tire pressures are a necessary condition for a semblance of stability in the Corvair, but are certainly not sufficient for stability. Proper choice of tires is also a necessity, but not a sufficient condition for Corvair handling stability.

Finally, in one of their more palpable and serious contradictions, Wager and Koskinen

criticize GM for failing to give adequate warning in the owner's manual about tire pressures and its effect on handling. This statement stands in flat contrast to their facile agreement with GM and the NHTSA that tire pressures are unimportant to the safety of the Corvair. We were appalled at their failure to inquire into GM's knowledge of the effect of using various after-market tires and GM's failure to warn owners of this potential hazard.

E. Campbell data

Professor B. J. Campbell completed his highly original make-model study of accidents in North Carolina in 1970. He was very interested to note the high incidence of "off-road" crashes in the early Corvairs (1960-1963 models) and the downward trend toward average performance in the 1964, 1965, and 1966 models. "My best guess is that the Corvair data probably do reflect real physical changes in the cars [between the 1960-1963 models and the later models]," he said, "but as a scientist, I am not sure that the data are sufficiently strong to infer causality."

It appears that the only difference in Corvairs between 1960 and 1966 which would account for the improvement in their "off road" accident statistics was the change from swing axles to modified swing axles in 1964 and finally to fully articulated independent rear suspension in 1965. The weight distribution and general performance of the Corvair remained virtually identical over these years, as did the other general characteristics. The sharp reduction in off road crashes in 1964 and 1965 models, as shown in Campbell's work, correlates with the redesign of the suspension systems.

Campbell is quoted in the staff report as doubting the wisdom of recalling the Corvair. We pointed out to him, however, that the federal government had no authority to order a recall, but rather could only send defect notification to owners. When asked whether there should be defect notification on the Corvair handling and stability, he discussed with us the effectiveness of such a notice and then answered, "I don't know."

Although the staff report suggests that Campbell asserts that the consistently high ratio of off road crashes involving Corvettes cannot be blamed on the driver alone (i.e., not on the car), while the Corvair crashes are blamed on the car, Campbell made an important qualification of that statement to us. He said:

"I point out that the Corvair also had a high percentage of off road accidents. I note that on the basis of data I presently have, it would be improper to blame the Corvair suspension and the Corvette driver."

But Campbell lacked all the data he would have desired. He stated that the missing information necessary to make a more conclusive determination of the Corvair's safety consists of the relative mileage data for all cars so that the overall crash rate as a function of mileage could be computed. He attempted to do this following his initial make-model accident study, but was not able to get what he considered sufficiently valid data. He described this as one of the biggest disappointments of his professional career.

Yet his data still have significance since they are the only publicly available data which give any indication of the overall experience with the Corvair in actual use, other than the number of serious crashes which have resulted in lawsuits being filed against GM. That Campbell's data are not absolutely complete is hardly an argument for the Corvair, although that is the implication given it in the Ribicoff staff report.

F. Olley studies

One can hardly expect a long-time and loyal employee like the late Maurice Olley to publicly and directly criticize General

Motors, so it is therefore noteworthy when his personal views in technical papers conflict at all with the firm's official position. The staff report, however, for some reason strains to construe his overall view as favorable to the Corvair and refuses to recognize Olley's specific skepticism about the Corvair type rear suspension in his more technical writings.

In his May 18, 1956 patent application (granted November 3, 1959), Olley was not discussing an existing GM car or a pending vehicle proposal, and was not concerned with the possible GM production of a rear engine car with swing axles—for the Corvair did not yet exist, neither in fact nor on paper. Free of institutional pressure to bend thought to corporate needs, Olley could articulate his own views on rear engine cars with high roll center swing axles.

His 1956 patent application particularly criticized ordinary swing axle equipped vehicles because of the oversteer, the tendency toward rollover, and the lift of the vehicle's rear under severe lateral forces. Olley said that such a design presented "potentially dangerous vehicle handling characteristics." He proposed in the patent a low roll center swing axle, similar to the early Corvair design except for the crucial difference that the roll center was considerably lower; this would have the effect of reducing the roll stiffness of the rear suspension. (The effect would have been similar to the effect of the 1964 Corvair suspension.)

Lowering the roll center of the rear suspension is one way of reducing its roll couple (which can then be made up by using an anti-roll bar on the front suspension). The use of a front suspension anti-roll bar alone is not sufficient to ameliorate the defects in the Corvair rear suspension; the rear roll couple must be simultaneously reduced. The 1964 Corvair rear suspension design also reduces the rear roll couple.

But the primary problem with the swing axle suspension is noted in Olley's 1956 patent application; "the effect [oversteer and rollover susceptibility] non-linear and increases suddenly in a severe turn." The non-linear character of the swing axle makes any discussion of the emergency handling in terms of steady-state behavior specious. Thus, the discussions of the under- to oversteer transition being at 4 times the acceleration of gravity (g), or the limit of control being at .6 g, are simply not germane to the question of safety in the Corvair in emergency maneuvers which generally involve highly transient behavior. For instance, the NHTSA's evaluation panel noted, "In the General Motors films it was observed that the lateral acceleration might go from 0.3 g to 0.6 g in a quarter to a half second depending on the attitude and speed of the vehicle."

The disadvantages of the Olley suspension design were demonstrably not related to the handling qualities which such a suspension would give. Olley's criticisms of this suspension were minor. He said of it in his 1957 memorandum that it "has the fault of causing small misalignments of the axle shafts in the wheel bearings and therefore requiring a self-aligning bearing [which was also needed on the actual production Corvair] at the wheel. Also produces considerable slide in the U joints (increased cost & shorter swing arm radius). Also some brake drum misalignment, and a disc brake is almost impossible [this was also a characteristic of the production Corvair, and disc brakes were never used on any production Corvair of any year, front or rear]."

Olley's 1957 and 1959 memoranda, cited by Wager and Koskinen as indicating Olley's support for the Corvair, were written in response to higher echelon requests. But they did not, as had his 1956 memorandum, address the issue of swing axle rear suspension. The 1957 memo contains almost offhand remarks about a proposed design. Everyone

at Chevrolet engineering knew that the Corvair was the special project of Ed Cole, then General Manager of the Chevrolet Division, and few were prepared to confront him directly.

The 1959 Olley memo, dated shortly before the Corvair's ballyhooed introduction, reads like a press release, not an engineering paper. Nowhere in the 1959 memorandum is any mention made of the swing axle rear suspension. The only issue discussed is the Corvair's weight distribution. But in a 1961 engineering paper, entitled "Corvair Steering," Olley analyzes the Corvair's performance based on its then two year history. He concludes it by noting that "in the present Corvair, the swing axle, due to lift, handles rather worse than a solid axle but other studies have shown that this effect of the swing axle decreases rapidly as the roll couple carried by the swing axle is decreased." Thus, a well respected GM engineer, in his two engineering memoranda on rear suspension design as used in the Corvair, found fault with it.

G. Distinctions between the various types of GM tests

In answer to depositions and orders concerning testing done by the corporation, GM uses a shifting parlance to characterize the tests of handling and stability. Often, in a deft verbal shell game, they deploy a variety of terms so as to disclose as little as possible in any particular situation.

GM would have us believe that terms such as "rollover test," "lateral stability," "lateral acceleration" and "roadability" are well defined and have been since before the time of the Corvair. In fact, at GM there was much internal contradiction and controversy about the meaning of such words and they were used by GM witnesses in Corvair litigation to confuse and mislead plaintiffs, juries and judges. Not even the industry dominated Society of Automotive Engineers (SAE) attempted to offer a standard terminology until 1965, and that effort is notable for its basic inarticulateness.

At least by 1963, it was clear that industry jargon on vehicle handling required reform. General Motors organized a symposium for the industry to discuss the problem, and, as a result, a committee was set up in the SAE to develop the technology. The committee was headed by GM's Joseph Bidwell (exhibit N). The lack of agreement even at this stage was evident from the SAE's first glossary, SAE J670a, "Vehicle Dynamics Terminology." Wager and Koskinen cite this document as though it contained clear descriptions of all the terms germane to the Corvair stability and handling questions. Yet the definition of stability given in J670a is a very theoretical one, similar to that given in college physics texts and not very useful in the specific Corvair context. Part of J670a which comes closest to describing the stability of an automobile is just a note (Note 8) which says that stability is a characteristic of "environment" and "trim" and must be investigated for each different set of conditions. Nowhere does J670a have any mention of the terms of "roadability," "lateral stability," "path stability," "attitude stability," or any of the other terms GM glibly employed to obstruct discovery. Virtually all of the terminology defined in J670a refers to steady state phenomena rather than transient phenomena which are involved in the maneuvers in the PG reports at issue now and which show the clear instability characteristics of the early Corvair.

The distribution that should have been made is between: (a) a test of stability and handling characteristics and (b) a test to purposely overturn the vehicle by artificial means to determine its crashworthiness.

It is obvious that GM itself made the (a) and (b) distinction internally, at least in its technical departments. PG 17103, which is called "Corvair Dynamic Stability Tests for

Chevrolet Motor Division," was to "evaluate and determine dynamic stability characteristics" of the Corvair using various suspension components "in an attempt to overturn the car." That a rollover was the expected final result is stated under "Test Procedure": "A rollover or significant engineering decision concerning the suspension terminated each phase of a test program." (p. 3) PG 15699 is called "Rollover Stability Evaluation of Various Corvair Suspension Systems," indicating the connection of the words "rollover" and "stability" at General Motors.

The SAE recommended practice for (b), in its "Rollover Tests Without Collision—SAE J857," states that "Rollover tests are conducted to evaluate vehicle structure and occupant injury potential"—or what is now called crashworthiness. The staff report, following GM's lead, considerably broadens the category of rollover test to include any test in which a rollover occurs, thereby merging category (a) into category (b).

Sometimes, the deception on rollover tests is overt, as in the *Collins* case where Mr. Kai Hansen, who worked extensively on the Corvair suspension at Chevrolet Research and Development as well as in production engineering, incredibly denied that GM had any test for determining a vehicle's tendency to roll over. He characterized a rollover test in the same terms as does the SAE recommended practice. (In fact, GM did have a test for "rollover stability at least as far back as 1959, and so tested Corvairs in at least four proving ground reports, PG 11106, PG 12207, PG 15699, and PG 17103, before the end of the 1963 Corvair production.)

The staff report characterizes 11106 as a rollover test, but PG 11106 was not designed to determine crashworthiness. The test procedure for PG 11106 states "The purpose of this test was to determine a condition necessary to roll over a Holden [code for Corvair] vehicle on a level paved surface." Rollover did not even occur in most of the test runs of PG 11106. Since "the vehicle was prepared for the test by installing a rollbar, padding and seat belts," it is obvious that the preparations for the test precluded evaluation of "vehicle structure and occupant injury potential" on an unmodified car. Thus PG 11106 is not a rollover test as the SAE defines the term, but a rollover stability and handling test and since it involved a pre-production car should have been supplied in the *Collins* case as well as others. (See the litigation section which follows.)

Although Wager and Koskinen spell out and defend the indefensible GM distinctions between the variety of possible tests, GM prefers obfuscation as a tactic to impede understanding. For example, in the 1966 hearings before the Michigan State Senate, Mr. Frank Winchell, at the time director of Chevrolet Research and Development engineering, explained the concept of stability as follows:

Control engineers generally speak of *Stability* in two ways:

Attitude Stability and Path Stability (emphasis in original).

This statement is at best highly misleading, assuming a "control engineer" is some special engineer who uses the term stability in this way. If the term "control engineer" is to mean an automotive engineer who is concerned with the general handling and stability characteristics (as well as control) of a vehicle as is implied by Winchell, his statement is simply not true.

We were at a considerable disadvantage in determining which tests GM should have provided in litigation. The staff study notes that PG Report 2673-16 establishes the procedure for a "steady state lateral stability test." Yet this document was unavailable to us because GM conditioned its submission with an agreement of secrecy by Subcommittee staff. The NHTSA also specifically refused a Freedom of Information request for the document as well as a number of others

(see exhibit 0). Wager and Koskinen said that all of the GM submissions would be accorded confidential status at GM's request, except that on specific request we were allowed to see but not copy a limited number of already public court documents.

III. CORVAIR LITIGATION

A major issue raised by your letter to Senator Ribicoff was GM's practices in withholding key documents, particularly proving ground reports from plaintiffs during Corvair product liability litigation. Without knowing the proving ground (PG) report numbers nor even whether these tests existed, plaintiffs' attorneys were never able to elicit the ones which revealed the Corvair's instability characteristics and rollover tendencies in their probings of GM technical witnesses and legal counsel—who would disingenuously say that they would turn over all relevant tests if opposing counsel would only identify exactly what they allege is missing (i.e., by number). Since GM cites its litigation record to the public and the Ribicoff Subcommittee as definitive of the safety of the Corvair, it is essential to explore how GM's acts and omissions shaped that litigation outcome.

This the Ribicoff staff report does not do. Like GM, it addresses itself only to the narrowest letter of the law on the contested issues, and incorrectly resolves the matter of legality. Thus, in assessing GM's behavior, it asks whether "GM was legally obligated to produce certain documents in the court cases and failed to do so," and whether "GM had perpetrated a fraud or deceit upon the courts." Yet to all but the most rigid profit-maximization theorists, "corporate responsibility"—which the staff report aims to evaluate also—surely includes moral responsibilities as well as legal obligations.

The staff report was apparently uninterested in asking whether GM had a moral responsibility to produce certain documents, because of, *inter alia*, (a) the deception which otherwise results, (b) its superior knowledge of the existence of these documents, (c) the catastrophic human cost caused by defective cars, and (d) its superior ability to prevent such harm by manufacturing safe cars and correcting defects.

Nor does the staff report, because of its unwise adoption of the NHTSA study, adequately probe the meaning and effect of GM's suppression of its internal proving ground reports showing the Corvair's undue susceptibility to instability and rollover in the kind of emergency driving conditions normal drivers confront. Finally, Wager and Koskinen barely mention the fact that Corvair plaintiff attorneys were unconscionably harassed, delayed and misled by GM. Techniques of obstruction range from intentionally supplying thousands of irrelevant documents and films, to exhausting plaintiffs' attorneys with frivolous motions and objections, to playing word games with confusing technical terms, to arguing for a limited court order which skillfully excludes key items GM knows to exist, to hiring private investigators to probe expert witnesses. While discussion of these techniques follows, of particular interest here is a previously undisclosed GM memorandum of January 5, 1965 entitled "Hypothetical Cross-Examination of a Member of the Corvair Product Analysis Group"—which is reproduced as our exhibit P. It carefully instructs GM witnesses how to give obscure, non-responsive if not false answers during cross-examination. It makes a mockery of GM's pretense of openness and fair-dealing in its court cases. It is a blueprint for stereotyped replies developed by GM's General Counsel, Aloysius Powers, to preclude any diversity of response which may be dictated by candor and honesty.

That GM, in our view, had a moral responsibility does not of course absolve it of the legal obligation in the early model Corvair litigation to produce the proving ground re-

ports. To the contrary, after a thorough review of all the facts known to us and a careful analysis of GM's defense as presented by Wager and Koskinen, we have no doubt that GM was legally responsible for production of at least PG 11106 (Skid Pad Roll Test on Corvair Prototype) and 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension) in *Collins v. General Motors* (1960 Corvair) and, in addition, at least the complete films and other documents associated with PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and 17103 (Corvair Dynamic Stability Tests) in *Anderson v. General Motors* (1962 Corvair). Since we lack access to other proving ground reports—General Motors successfully requested confidentiality for them from the NHTSA and the Ribicoff staff—we can only speculate how many other incriminating tests were similarly oppressed.

A. Frank Winchell

Perhaps the most appropriate starting point to discuss Corvair litigation is Frank Winchell, described by Wager and Koskinen as the "chief technical advisor to the product liability lawyers" and now GM's Vice President for Engineering. For as is obvious in both the Corvair litigation and the Ribicoff staff report, Winchell is a key figure. The root issue is Winchell's denial that certain written records existed for Corvair testing. As the chief technical adviser on the Corvair litigation, it should be apparent that Winchell was either seriously ill-informed about GM's formal Corvair testing or intentionally forgetful in depositions and court testimony.

The Ribicoff staff report, for some reason, contorts the facts every favorable way for Winchell: "It should be noted that Winchell's testimony did not deny the existence of PG 15699 and 17103. Those reports were the result of work done for the Chevrolet product engineering section by the GM proving ground. This was completely separate from the work performed by Winchell and his group." Thus do they deploy what can be called the "bifurcation technique," whereby responsibility is so divided in a bureaucracy that no one is seemingly responsible.

This benign view of Winchell's conveniently limited knowledge is ludicrous for a man who:

Was the "chief technical advisor to the product liability lawyers" during most of the Corvair instability litigation;

Was the chief GM witness in Corvair litigation around the country;

Had unlimited access to the test work order indexes and the GM archives; (see exhibit 16) *

Was a close advisor to Edward Cole, now the President of GM and who is often referred to as the father of the Corvair;

Tested a Corvair for handling and stability in Colorado in 1958;

Was promoted to be Director of Research and Development of Chevrolet Engineering beginning in 1960;

Remained in that position during the Corvair controversy and when work was initiated and completed for the 1964 and 1965 model corrections in the suspension systems;

Admitted in *Collins* his role in the design of the 1964 modifications to the Corvair suspension systems;

Answered affirmatively, in that case, the question, "did you actually participate in this work [the development of the 1964 and

*Memoranda from Winchell to Aloysius Powers, General Motors General Counsel, dated December 16, 1964, agreeing to supply a number of providing ground test reports (by number) for Mr. Adkins of the legal staff for a conference on litigation, and from Passom to Power dated December 18, 1964 transmitting the reports retrieved from the GM archives.

1965 Corvair suspensions] in each instance?"; and

And "[f]orcefully advocated suspension changes to improve" the "ultimate performance of the Corvair" (Ribicoff staff report).

GM tries to drape the "ignorance is bliss" insulation around its top executives; to permit association of its master sergeant-in-charge with such unawareness is the ultimate Wager-Koskinen absurdity. Thus, it is simply not possible to argue that Winchell did not know or had no reason to know about adverse proving ground tests, involving scores of GM employees, and reduced to bulky reports which demonstrated the Corvair's instability and propensity to roll over. Yet this is precisely what the staff report does strain to argue.

Had they asked the proper questions instead of accepting the well-worn Winchell bifurcation technique, their judgment might have rested on fact rather than fiction.

Another compelling refutation of Winchell's "it was in the other Division" routine is the testimony by his boss, Ellis J. Premo, Chief of all Chevrolet engineering, who told the Court in *Anderson* (tr. 4155) that he had turned over to the GM legal staff "every report on the Corvair." As GM's "chief technical advisor to the product liability lawyers," Winchell could not have been uninformed about the test reports Premo gave the lawyers. At least the excuse that he (Winchell) was in Chevrolet Research and Development and the reports were done by Chevrolet Production Engineering is completely discredited, for the GM legal staff bridges the two. Winchell and the legal staff spent many hundreds of hours together for the litigation defense alone. Their conclusion is a depressing commentary on the staff investigators' gullibility or predisposition, as later discussions of Winchell's role in the court cases will reveal.

B. Scope of court orders

The staff report, while ignoring PG reports 11106 and 12207, defends GM's non-submission of PG reports 15699 and 17103 (which tested 1962 and 1963 cars) by arguing that the court order in *Collins* applied only to 1960 and earlier models. Yet at no time in your October 23, 1970 letter did you state that PG 15699 and 17103 should have been produced in the *Collins* litigation. (At the same time, based on GM's own statement in the *Collins* trial that 1960-1963 Corvair models were virtually identical it can be reasonably argued that GM should have produced tests involving 1962 and 1963 models in a court case involving a (admittedly identical) 1960 model.)

The court order in *Anderson* required production of written reports, memoranda, studies and test data including numerous moving picture films in existence prior to April 19, 1963 which relate to testing of 1960, 1961, and 1962 Corvairs. While again ignoring such PG reports as 11106 and 12207, the staff report disposes of PG 15699 (issued on June 14, 1963) and PG 17103 (issued November 4, 1963), by arguing there was no requirement for GM to furnish this information. But this confuses the date the proving ground tests were issued with the date they were actually completed. In fact, since PG 15699 was run in 1962 and PG 17103 was run first in November 1962 and subsequently between March 18, 1963 and April 11, 1963, at least the films of these tests should have been produced in *Anderson*. Since GM produces films in court cases without copies of the test reports, it cannot argue here that it did not believe the films should be produced without the reports.

Also, the staff report does not mention GM's responsibility in *Anderson* to produce test work orders (i.e., the test instructions from the production engineer to the proving ground engineer) or the technical test reports which resulted in PG reports 15699 and 17103. The test work order for PG 15699 is

dated April 11, 1962 and for PG 17103 is November 12, 1962, well before the *Anderson* court order cut-off date of April 19, 1963. (The Ribicoff staff report itself, in the section on Carl Theil, claims that GM produced these items in the *Franklin* case—although the plaintiff's attorney in that case, Louis Davidson, denies ever receiving these documents; he was never interviewed by the Ribicoff staff.)

Further, even the judge in *Anderson* makes it clear that any absolute cut-off time for production of PG reports may be a bit arbitrary. In response to a question raised by GM counsel Nunez about the appropriateness in the case of referring to the 1964 Corvair, the judge answered (tr. 1188):

"I am not so sure. It is dependent upon what develops from the answers and that makes it a little difficult to rule upon the question but if it should turn out or develop that say in the 1964 or 1965 model certain substantial changes were made which made the car much more driveable, much more safe to drive and much more stable and it turned out those changes that were made they had known about in 1959 and 1960 as being available, I think the fact is that that latter part, then, would be admissible because if they did put them on in 1964 why couldn't they have put them on in 1959; if those changes they made could have been shown to be available in earlier years.

PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and PG 17103 (Corvair Dynamic Stability Tests) are examples of the kinds of tests to which the judge was referring. They were run for the purpose of testing various 1962 and 1963 Corvairs with various insignificant modifications designed to improve their stability and handling characteristics, and specifically to improve their resistance to rollover.

C. *Collins* case

Your letter of October 23, 1970 sharply criticized those GM witnesses who were asked questions to which unbiased answers would have produced the key proving ground reports suppressed for so long by GM, such as PG 11106 (Skid Pad Roll Test on Corvair Prototype), 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension), and 11285 (Rollover and Crash Test of 1959 Chevrolet and Corvair). All these reports pertain to the 1960 Corvair at issue in *Collins v. General Motors*, tried in San Jose, California in 1965.

The Ribicoff staff report extracts from your letter six examples of such GM misrepresentations and item by item purports to refute the examples presented. Our commentary on each example follows:

Your letter quoted the trial transcript where plaintiff's counsel David Harney (again, unaware of the various and crucial proving ground reports) questioned Winchell about his presence at Corvair stability and handling tests in 1953. Winchell responded that he was present and apparently a passenger in the test car at some point during such tests at GM's proving ground at Manitou Springs, Colorado, but that no written reports were made of those tests. Your letter then suggested the committee consider whether the suppressed proving ground reports of the pre-production Corvair, which Winchell failed to mention, such as PG 11106 (Skid Pad Roll Test on Corvair Prototype) and PG 11245 (Tire Blowout Comparison at 60 mph), "could even possibly have been unknown to Mr. Winchell." By omission throughout the trial transcript, and this instance is but one example, Winchell implies no knowledge of such reports.

The staff report replies that the passage in question did not call for a response concerning these proving ground reports, apparently because they were not conducted at Manitou Springs. Never answered is the obvious and key question of whether Winchell in

fact knew of the existence of the critical proving ground reports.

Another example of GM obfuscation is quoted in your letter from the *Collins* trial transcript (tr. 3213-15). Plaintiff's attorney Harney is there trying to establish from Winchell whether any of the GM tests presented during the trial were other than tests prepared specifically for the litigation defense.

Q. (by Harney). I am talking about all the tests you have talked about in this trial in front of these twelve ladies and gentlemen plus the alternates.

A. Some of the tests that were run were certainly related to the 1964 and 1965 Corvair. The 1960 Corvair, no.

Winchell answers that the test evidence produced by GM in *Collins* concerning the 1960 Corvair was not limited to tests produced only for the litigation, but that it also included engineering tests done either during the development of the 1960 Corvair or during some later product evaluation. As your letter pointed out, Winchell thus admitted that GM recognized its obligation to produce pre-production Corvair tests in the *Collins* case. But not having done so—for example, PG 11106 (Skid Pad Roll Test on Corvair Prototype), 11285 (Rollover and Crash Test of 1959 Chevrolet and Corvair) and 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension) were not submitted—GM by omission was effectively denying that they existed.

The Wager-Koskinen report seeks to rebut your contention by referring to the words "lateral acceleration," the terms used in your letter to describe the missing proving ground reports (which you also cited by number). Their point, presumably, is that the unproduced PG reports were not "lateral acceleration" tests. Thus, they conclude that the quoted testimony fails to support your point and "is rebutted by other evidence." (This "other evidence" is nowhere provided.) The term "lateral acceleration" is not an inappropriate descriptive phrase to apply to the missing reports. In particular, PG 11106 contains both steady speed runs in a circle (what Winchell refers to as a "roadability test" and what GM also appears to call a "lateral acceleration or stability test") and j-turn tests to "determine a condition necessary to roll over a Holden [Corvair prototype] vehicle on a level paved surface."

The staff report then continues to ignore the question of the missing proving ground reports and focuses instead on the narrowest construction of your point by asserting: "At no time did Winchell deny the existence of lateral acceleration tests. In fact, at page 3766 . . . he said he had run such a test on a 1960 Corvair and at page 3848-49, he acknowledged the existence of written reports on such tests."

At page 3766 Winchell is asked when he first ran a Corvair lateral acceleration test. He told the court it was run in 1960; but in response to the question whether it was recorded, he responded, "I don't think so." At pages 3848-49 we discover Winchell deliberately interpreting "lateral acceleration" and "directional stability" to describe only "roadability" tests. In the roadability test, as occasionally defined by various GM witnesses in the Corvair litigation, the car is driven at gradually increasing speeds around and around a circle with no change or maneuvers in the steering in order to test its reaction to lateral acceleration. This test does not measure the performance of the vehicle in typical highway situations as do the lateral stability and rollover stability tests. The intentional misleading of plaintiff's attorney by discussing only roadability tests in response to questions about lateral acceleration or directional stability is apparent.

Q. Do you have any movies or reports concerning dynamic tests done at more than one mile an hour on a Corvair to ascertain

lateral acceleration forces or directional stability?

A. Any movies or reports?

Q. Yes, sir.

A. There are reports, yes, sir.

Q. What are they called?

A. Roadability tests.

Q. Are they instrumental tests?

A. Yes, sir.

Q. When were they done?

A. That is the standard procedure—

Q. No. I am not asking about standard procedures.

A. I can't say when they were done.

Q. Have you seen them?

A. Yes, I have seen a number of roadability tests.

Q. With instrumentation.

A. Yes, sir.

Q. Wherein lateral forces were being maneuvered?

A. Yes, sir.

Q. And recorded?

A. Yes, sir.

Q. By whom?

A. By proving ground personnel. I don't know whom precisely.

Also at issue is Winchell's statement on page 3855 of the trial transcript that "I have never seen the Corvair rolled over on the [GM] skid pad." Your letter of October 23, 1970 stated: "... Mr. Winchell's assertions of ignorance about the rollovers on film in PG 17103 and PG 15699 are totally implausible in light of his position at GM at that time."

As we read the staff report, there are two points at issue in this statement, both involving GM's (previously noted) deployment of technical terminology to evade legal obligations. The first is whether "seen" means "seen personally" or "seen personally or in movies." Your letter clearly presumes that GM middle executives do not spend their days at the proving grounds; films of the tests, of course, were the issue. But the staff report narrowly interprets the word "seen" to mean "presence."

The second issue and second distinction is between the proving grounds and the skid pad. The report states in Winchell's defense: "The record and our investigation support Mr. Winchell's answer. He had previously testified that he personally rolled a Corvair at the proving grounds, but not on the skid pad..." This statement implies that Winchell's testimony cited by the staff report (pages 3360-1) distinguished for the court between proving grounds and skid pad. But actually, Winchell merely stated that his experience in the Corvair rollover had occurred at the proving grounds. To our mind any distinction after the fact between a reference in the course of a trial to the proving grounds and the skid pad (located at the proving grounds) is a clumsy attempt to hide the truth. But not to Wager and Koskinen. "There would be no reason for him to deny his presence at such a test. So far as we have been able to determine, this is a true statement," claims the staff report.

Unexpectedly, we have recently uncovered evidence that contradicts Winchell's claim at the 1965 trial that "I have never seen the Corvair rolled over on the skid pad." A former GM employee who was part of the technician team for PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems), Mr. Brian Heurtebise, gave a deposition on December 14, 1972, in the case of *Liebelt v. General Motors*. It states that Winchell did observe a Corvair immediately after it had rolled over on the skid pad during the tests for PG 15699—if he did not, in fact, see the rollover itself. These tests were conducted in May and June 1965. Heurtebise said that immediately after a rollover, he and his associate Mr. M. D. Sheehan would go over to a Corvair—he to look after the condition of the driver and Sheehan to direct the photography. According to Heurtebise, "I looked around and Mr. Sheehan had his hand

on the top of the car and was bent down and Mr. Farley* was driving the car and Mr. Winchell was looking past Mr. Farley (toward the overturned Corvair) to see what Mr. Sheehan was saying." In the cross examination later in the deposition, Heurtebise was asked, "And when you looked in that direction, was Mr. Winchell looking toward you?" He answered, "Yes." Heurtebise provided a sketch of the position of the various cars and people and reiterated his identification of Winchell.

You criticize Winchell for stating in the *Collins* trial (the earliest Corvair trial after the *Pierini* settlement) that the only GM movie of a Corvair lateral stability or directional stability test he has seen was the one shown at trial in which the Corvair rolled over at 1½ miles per hour. Plaintiff's attorney Harney was apparently attempting here to elicit from Winchell a statement specifying the scope of the evidence GM was going to produce at the San Jose trial. Just after the trial had begun, GM had handed Harney a roll of unidentified films showing a Corvair test he had never seen before; Harney, therefore, was seeking to avoid the repetition of surprises.

It is evident from the transcript that Harney's question to Winchell refers specifically to materials physically located in San Jose for the trial, and not to every test GM has ever conducted. However, since GM knew it might well have to produce the key PG reports mentioned so often in your letters, it is a fair presumption that these reports might have been physically located in San Jose. If they were, then Winchell as one of GM's chief witnesses must have purposefully been kept in the dark for his answer to Harney to have been an honest one. If the key unproduced proving ground reports and films were not in San Jose, then General Motors in premeditated fashion had no intention of submitting them on the case. (It is important to recall here that on the defective design issue there was no pretrial discovery.) The staff report ignores whatever obligations GM had to produce these reports. It looks only to the face of the question and defends Winchell saying that Harney's question concerned only the films Winchell had seen since his arrival in San Jose, and that Winchell did not deny the existence of rollover test film because he was not actually questioned about it.

To further distort reality, the Ribicoff staff report says that GM furnished motion pictures of PG 11106 (Skid Pad Roll Test on Corvair Prototype) at the trial voluntarily. Actually, there is no documentation supporting GM's claim that the film produced was in fact PG 11106, and there is no explanation why the proving ground report for 11106 was not also furnished. As to the voluntariness of its submission, the staff report apparently accepts this characteristics by GM of its actions without questioning whether it was required by the court order—a subject the staff report avoids throughout.

On receipt in the courtroom of a film in an unmarked canister, which is now alleged by GM to be PG 11106, Mr. David Harney, the plaintiff's attorney, stated: "I hate to be snide, but what General Motors has handed us will take only a couple of minutes." (tr. 1628) The next day Harney submitted the film as exhibit 48, since it lacked any identifying markings.

The first substantive question asked by Harney after the film was run in the courtroom was: "Are you familiar with the type of blow-out test [tire] which is being conducted here?" Since 11106 does not contain any tests of vehicles with blow-outs, and the film is not identified in the transcript, we think there are serious questions whether GM in fact submitted PG 11106 to Harney.

* Farley was the engineer who requested the test for PG 17103.

We asked Harney about the film and, to the best of his recollection, it was not a film of a stability rollover test.

"... It is difficult to believe that the plaintiff was prejudiced by lack of these reports," continues the Ribicoff staff report, "since GM did furnish voluntarily, although not required by the court, the motion pictures of PG 11106, a rollover test, which were shown to the jury. Moreover, the court allowed numerous other rollover tests to be placed in evidence by Harney." Mr. Harney, on hearing this statement by telephone, pointed out that these "numerous other rollover films" were the ones his expert witness Paul O'Shea prepared, not GM films as might well be implied from the staff's prior discussion of only GM materials.

Harney added that he thought his plaintiff was "definitely prejudiced by not having access to the reports we now know to have existed then." He also disparaged GM's so-called generosity in providing a few minutes of film—which was hardly of value since (1) there was no accompanying report to explain the speed and other test characteristics and (2) absent any identifying marks, it is difficult at best to question GM witnesses about it. The staff report's endorsement of GM's alleged disclosure of PG 11106 was far too casual and unquestioning given the suspicious circumstances surrounding this "disclosure."

One of the questions commonly asked by plaintiffs' attorneys in product liability litigation is whether written records, including detailed testing and engineering documents, are in existence. In the case of the Corvair litigation this question was particularly pertinent since key documents consistently were not produced under court orders.

Your October 23, 1970 letter commented that higher level GM employees, in Corvair litigation depositions, had been inaccurate and misleading in suggesting that most written records of testing are routinely destroyed. If true, this might of course deter plaintiffs from demanding production of many basic documents.

As an example, you quote the questioning of Winchell by *Collins* plaintiff's attorney David Harney, who referred to the 1962 depositions (from the *Drummond* case) of Kai Hansen and Harry Barr, both management level GM engineers closely connected with the design, development and production of the Corvair.

Mr. Harney asked Winchell:

Q. As of 1962 it is correct that practically everything that had to do with testing of the Corvair had been destroyed by General Motors?

A. Not to my knowledge.

Q. Have you read the deposition of Harry Barr in which he said that was true?

A. No. I did not read that.

Q. Did you read the deposition of Kai Hansen in which he said that was true?

A. I did not.

The Ribicoff staff report states:

"We questioned Barr and Hansen closely concerning their depositions in the *Drummond* case. Both denied under oath making the statement attributed to them by the plaintiff's counsel. We also obtained copies of their depositions and reviewed them. We could find nothing in them to support the contention of Mr. Harney, plaintiff's counsel. In fact, Hansen testified that some of the engineering reports were still in existence (p. 86), and the record shows that a number of such documents were presented to the plaintiff at the deposition" (p. 87).

We looked first at pages 86 and 87 of the *Drummond* depositions to confirm the staff report description, and to our surprise found Hansen saying the following:

Q. Are those reports [professional and engineering reports] still in existence?

A. Some of them are, yes.

Q. Well, some of them are and some of them aren't?

A. Yes.

Q. What happens to those that aren't?

A. We have an incinerator. We burn them after they have served their purpose.

Q. Do you have a policy as to how long you keep a report?

A. After they are of no use to us any more. It is our personal housekeeping rules.

Q. But some might be kept. Is that right?

A. Could be, yes.

Q. Kept for posterity?

A. Like these reports you see out here on the table.

Q. These are test reports?

A. These are formal reports in our operation.

Q. Any of these your reports?

A. I read them.

Q. None of these are dictated by you?

A. No.

We also looked at the depositions, albeit it quickly and without the opportunity to question Barr and Hansen. Kai Hansen, questioned by attorney James Dumas, testified at page 98:

Q. Are any reports that you have ever written on the Corvair, from 1957, when you first heard of these small cars and the Corvair, to the present time in existence now?

A. I don't have any and I don't think so. I think that all has been done away with in the house cleaning of this operation.

Q. House cleaning of what operation?

A. We have certain facilities in this area that are only limited and we only have so many drawers in the office. When they are full, we get rid of the stuff, now that we have the history established. These are only observations that were peculiar to the very moment you would make this observation. The same observation may change tomorrow and there will be another piece of paper to supplement.

And Harry Barr, being questioned by attorney Harney, testified at page 134:

Q. To your knowledge does GM have a microfilm set up to make a permanent record of documents which are going to be destroyed, burned up, incinerated or in some other fashion disposed of?

A. Well, I think we protect our drawings and specifications in this manner somewhere in the Corporation.

Q. How about memoranda?

A. I believe not.

Q. Is memoranda periodically destroyed?

A. Yes.

Q. By memoranda I mean to include reports.

A. You mean like letters or things like that. Yes.

Q. I'm talking about reports also. Are they destroyed?

A. You have one in your hand there. That is evidence that all reports are not destroyed.

Q. Some are?

A. I believe many are.

Q. Periodically?

A. Well, the policy generally is to not keep things in your operation file more than a year.

Q. You mean after a year they are destroyed?

A. Generally.

Q. Who is in charge of that program? Is that each person's responsibility?

A. Yes, really.

Q. In other words, each executive secretary?

A. A secretary's responsible.

Q. And as far as documents and reports are concerned, when they are destroyed, to your knowledge, no microfilm is made at all or other copy preserved?

A. Not the ones around here. I can't speak for General Motors.

As seems evident, these GM witnesses clearly intended to leave the impression that

many engineering and other reports and papers are disposed of once a car has been built. The staff report's flat assertion to the contrary is contradicted by this testimony. Apparently they did not read these other pages. In this case the materials were public to us, not secret as many other materials they excerpted from, and the shallowness of their research can be revealed explicitly.

As discussed, a favorite technical distinction made by GM's witnesses in Corvair litigation was between *lateral stability tests* and *rollover tests*. Where a plaintiff obtained an order for GM to produce lateral stability tests, the company, wrongly we believe, did not furnish rollover stability tests. (See Section on "Distinctions Between Various Types of GM Tests") Your October 23, 1970 letter at page 15 mentions the subpoena in the *Collins* case which required production of tests of "stability and handling characteristics of Corvair" but points out that PG 11285 (Rollover and Crash Test of 1959 Chevrolet and Corvair) was not produced by GM. The staff report explains that GM's judgment this rollover test was beyond the scope of the subpoena calling for stability and handling tests. Further, it misleadingly suggests that the court agreed to withholding the test and refused to grant a subpoena after its admissibility was fully argued to the court.

First, although GM counsel briefly referenced a *fixed steering rollover test* report on an undated film plaintiff's attorney obtained from another case, and said it was not being produced "on the theory that it is not pertinent to stability and handling characteristics," the transcript shows no explanation of this rationale—and it was far from obvious to anyone but GM. GM did not give dates, names or numbers for the few films produced in cases, thus hindering plaintiff's ability to accurately identify associated reports. In fact, after 30 pages of transcript debate over GM's failure to produce, plaintiff's attorney was still demanding handling and stability tests (having not yet received one by the opening date of the trial).

Second, the court does not refuse to grant a subpoena and exclude the test, as the Ribicoff report says. Rather, the court merely refuses to modify the subpoena (to its prior status) to include model year Corvairs other than the 1960 model like the one owned by plaintiff. At this point plaintiff's attorney indicates he will seek a new subpoena, apparently thinking GM's excuse for not producing test reports is that they perhaps do not pertain to the 1960 model. The judge's decision *not to amend* the subpoena was most likely the result of the sworn denials by a GM witness of the existence of stability and handling tests other than those already produced in the case. The decision in no way gave GM any discretion to withhold any test reports or materials other than the one test report in controversy—now known to be PG 11285 (Rollover and Crash Test of 1959 Chevrolet and Corvair). Such purposeful efforts to confuse and mislead do not offend the Ribicoff authors; they seem to consider it a necessary element of the adversary system.

Having decided that GM was not obligated to produce PG 11285 because it was a rollover test, the Ribicoff staff report indiscriminately concludes that "Based on this ruling, it seems likely that the other rollover tests cited in Nader's letter, such as 11106 and 12207, also would have been excluded by the judge." The withholding of these tests was an important part of your original complaint to Ribicoff and cannot be so easily dismissed. There is a significant distinction between PG 11285 (Rollover and Crash Test of 1959 Chevrolet and Corvair) and PG 11106 (Skid Pad Roll Test on Corvair Prototype) and 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension), although all three concern rollovers. The Ribicoff staff apparently does not realize that the rollover

test in PG 11285 was one designed to evaluate *vehicle structure and occupant injury potential* (see SAE J857) while PG 11106 and 12207 were *dynamic stability rollover* tests. The difference is not insubstantial. The first is designed to test crashworthiness and the second to test a type of stability. Contrary to the hasty conclusion in the staff report, there is every reason to presume that the judge would have admitted the stability type rollover tests since the issue in the case was vehicle stability.

Most assuredly the distinction would not be lost on GM, as is evident from the transcript in the *Anderson* case. There, when asked about rollover tests, Kai Hansen, who directed the work on the Corvair chassis and then moved to Chevrolet engineering, gave the following testimony in response to questions about GM's rollover testing. (*Anderson* transcript, p. 1015):

A. Our main purpose in this test is to roll physically a car, to check on the physical strength of the body, the suspension, and every conceivable part of the vehicle.

Q. You are not directing your attention at what causes it to roll? You want to see what happens when it does roll?

A. That's right.

Q. Are there any tests you conduct for the purpose of determining what causes a vehicle to roll?

A. No. Our only rollover tests are those tests which are under standard procedure.

Hansen must have known better. Several of the Corvair tests were run specifically to determine what conditions are necessary for a Corvair to roll over, or what improvements would increase its rollover stability, such as PG 11106 (Skid Pad Roll Test on Corvair Prototype), 12207 (Skid Pad Rollover Test of Corvair with Heavy Duty Suspension), 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and 17103 (Corvair Dynamic Stability Tests). It is significant that Hansen had extensive experience in both R&D and in production engineering; thus, he could not then feign ignorance of the procedures, record keeping, or reporting in one or the other of these seemingly totally isolated parts of the corporation.

D. Anderson case

GM's behavior in hiding information from plaintiffs in *Anderson v. General Motors* differed in one significant way from *Collins*. There was virtually no pretrial discovery in *Collins* on the design defect issue, leaving plaintiffs little time to argue and probe for the missing test reports. In *Anderson* (and in *Franklin*), GM tried the opposite technique: it flooded the plaintiffs with hundreds of irrelevant documents made available only in Detroit (*Anderson* was tried in Clearwater, Florida). Although plaintiffs attorneys in both *Anderson* and *Franklin* searched diligently for days through the mass, they never discovered PG 11106, 12207, or any of the other key reports. Given their interest in finding just such critical Corvair studies, it is safe to observe that GM, in one way or another, did not make these reports available for discovery.

Your October 23, 1970 letter brought to Senator Ribicoff's attention one specific example from *Anderson* of GM's misrepresentations to plaintiffs: it referred to a passage from pages 4802-6 of that trial transcript where Winchell denied the existence of any written reports from testing and evaluation of 1960-1962 Corvairs. The staff report defends Winchell again under the bifurcation technique—i.e., since he directed Research and Development in Chevrolet Engineering, he therefore could not discuss test reports prepared by proving ground personnel for a parallel office, Chevrolet Production Engineering, even though they concerned his specialties: suspensions, handling, and stability. But to a person now knowledgeable of the existence of the long sup-

pressed proving ground reports, Winchell's evasions and attempts to mislead are apparent (see also previous section on Frank Winchell):

Voir Dire Examination

By Mr. Masterson:

Q. Mr. Winchell, were there Corvair automobiles involved in this testing?

A. Yes sir.

Q. How many?

A. Well, I tried to estimate that a moment ago. I think I—I couldn't say it very precisely, 12 to 24, in that area.

Q. Does it include 1960, '61 and 1962 models?

A. Yes sir.

Q. And were the results of your testing reduced to writing?

A. No. Our—our testing was a development, exploratory kind of work where we are seeking fundamental facts.

Q. And the results of these tests were not reduced to writing?

A. Not formal reports with—

Q. Well, was any of the data preserved?

A. Well, when you say "any of the data," I—I would be hard pressed to say. Our custom in this thing, I have to explain to you, Mr. Masterson, is—

Q. Well, my question was: Is any of the data preserved?

A. I can't—I can't say positively whether there was any or not. I presume there was some.

Q. Where would it be if it was preserved?

A. Probably in our Research and Development files.

Q. Of which you are the head?

A. Yes sir.

Q. Do you know whether it was preserved or not?

A. I can't really say, Mr. Masterson. It was—

The COURT. Are you telling us that you do a great deal of research and keep no records of what you find out?

A. Well, we don't—what I said is we don't issue any formal reports. When you are—when you are in the exploratory range of this thing you are not in a position to come to any conclusions.

The COURT. But do you keep any written records of what you find out each day or do you just try to keep that in your mind?

The WITNESS. No, we do note our results, and we meet and discuss them, and they are held for some period of time, but I couldn't tell you whether they are still in existence or not.

The COURT. All right, sir.

Further Direct Examination

By Mr. Nunez:

Q. Mr. Winchell, in that connection what is the—what is the usual procedure for—that is set in motion at Chevrolet—for doing something to or with an automobile that will result in a formal test report?

A. Well, the procedure is—originates with the—what we call the product engineer, the man who is responsible for releasing this component to production. He is called the Production Engineer. He writes a test order or a build order or a design order. If it is a test order, the test order goes to the laboratory head or the proving ground head. He assigns certain people to the conduct of the test, they meet and discuss what they are going to do. The test is conducted, and the produce (sic) engineer gets the—gets the facts from the test immediately, verbally, and then as a matter of record, if we think that—that test has any use to us in future design work, or as a reference, a formal report is written by report writers under the direction of the test engineer.

The COURT. Do you keep any record of the tests that were made that you decided had no use to you so that you don't repeat the test the next month or next year?

The WITNESS. Well, our Research and Development Group, sir, is rather small, and we don't run that—

Mr. NUNEZ. Excuse me, Mr. Winchell, I think the Judge can hear you quite clearly, but I would—

The COURT. You face the Jury—

Mr. NUNEZ. Address your answers to me.

The COURT. So everyone can hear, then.

The WITNESS. We have—as I say, in this particular program I had about two engineers to start with, and I don't run the hazard of this thing being repeated by that personnel.

By Mr. Nunez:

Q. Well, you were telling me about a particular device that makes a record on a—on a running piece of graph paper, some kind of paper.

A. Well, Mr. Masterson asked me specifically—

Mr. MASTERSON. May I ask that the witness respond to the Judge's question? The Judge asked you if you preserved data so that you don't repeat the test which was not useful to you.

The WITNESS. Well, I can't give just a yes or no answer on that. Sometimes we do, and sometimes we don't. I say, if—if, in our opinion, we think it has some influence on our future conduct we keep it for some period of time. If we don't think so, we don't keep it.

The COURT. Proceed, Mr. Nunez.

The WITNESS. Could I say something by way of explanation here?

The COURT. Yes, sir.

The WITNESS. In writing a report that is going to be useful to engineers of, say, three or four or five years hence, it has to be a very comprehensive report. Just to—to supply him with a data sheet of some measurements you've taken doesn't necessarily do him any good. And what I'm trying to say is the composition of a very comprehensive report that an engineer some five or six years hence or farther can make use of, requires a good deal of effort by the reporting engineer. And so we don't bother with things that we don't think have that kind of value in research and development.

By Mr. Nunez:

Q. All right. Did any of the—the data that you gathered in your testing and evaluation of vehicle handling back in the 1960 through 1962 era, was any of it resulted into any sort of formal form or written form or a form which would preserve the information that you derived from those tests?

A. Not to my recollection.

This exchange should help disabuse anyone of the alleged courtroom candor of Mr. Winchell.

The staff report, other than its offhanded dismissal of PG 15699 and 17103, did not ask whether GM had an obligation to submit documents, such as proving ground reports and films, which were covered by the court order in *Anderson*. Nor did the staff investigators talk with Barney J. Masterson, the plaintiff's attorney. If they had spoken with all the principals involved, their forgiving attitude toward GM might have been less facile. Mr. Masterson told us of his deep frustration in attempting to get any reasonable response from General Motors and of his many useless trips to Detroit to review the avalanche of irrelevant materials provided during discovery.

Mr. Masterson specified that on one occasion, when the trip to Detroit was particularly fruitless and frustrating, he petitioned the Florida Sixth Circuit Court to fine GM the cost of the trip for having wasted his time, and the court agreed. Masterson said that the GM counsel then asked him, as a favor, not to collect the money because it would embarrass him with his employer. Since the amount was trivial and the counsel had promised to cooperate thereafter, Masterson agreed. To his shock, after the jury found in favor of GM, Masterson ironically reports

that "They [GM] tried to tax me with \$80,000 in costs, which was ridiculous."

Another example of GM's avoidance techniques emerges from the interrogatories in *Anderson* dated March 23, 1965. Plaintiff asked:

"Q. 33. Did General Motors Corporation ever conduct any tests trials of the Corvair Automobile [sic] and Corvair Monza Automobile whether for evaluating performance, durability, or handling qualities of said automobiles, during which they were either deliberately or accidentally overturned or rolled over?"

"A. Yes.

"Q. 34. If the answer to interrogatory No. 33 is in the affirmative, please state with particularity the details of such occurrence and General Motors Corporation explanations for such occurrences.

"A. See answer to 15 above."

Question 15 concerned support tests for the tire recommendations in the section on tire care in the Corvair Owners Manual. The answer to it stated, with an obvious absence of "particularity [and] details."

"Written reports, memoranda, studies, and test data including numerous moving picture films have been produced by General Motors Corporation for plaintiff's inspection."

E. Franklin case

Of *Franklin v. General Motors*, Wager and Koskinen say, "we are unable to find fault with GM's conduct in this litigation." We wonder if they ever read the decisions of either the Illinois Supreme Court or the Cook County Circuit Court. Contrary to the staff report's characterization of the case—that the Illinois Supreme Court sustained GM's contention that the discovery subpoenas were invalid—the plaintiff, in fact, essentially prevailed on the discovery issue.

After extended and frustrating obstructions during discovery, the plaintiff filed a motion in the Spring of 1965 to show cause why GM should not be held in contempt for failure to comply with the discovery orders. GM did not relent—an action which indicated it was willing to risk default rather than produce the test reports called for in the discovery orders. The Circuit Court held GM in contempt for failure to comply with its discovery orders and struck GM's pleadings. GM filed a petition for writ of mandamus in the Illinois Supreme Court to expunge the discovery orders. This court reversed the Circuit Court, objecting primarily to the lower court's procedural actions in striking the pleadings (including contributory negligence and damages). The Supreme Court also objected to the absence of any showing of relevance by plaintiff in the discovery orders. But on the *crucial issue* of the *breadth* of the discovery orders, the Supreme Court found only one paragraph too broad. The Illinois Supreme Court opinion also harshly criticized GM:

"It is apparent from the voluminous record in the trial court that defendant [GM] did not exhibit an understanding of the spirit of the rules and in many instances sought to obstruct the orderly process of discovery." (emphasis added)

Examples of GM's obstruction of discovery, taken from the plaintiff's brief to the Illinois Supreme Court, December 1965, follow:

"Plaintiffs specifically waived seeing any documents relating to the design and operation of the Corvair engine itself or on the creation or testing of interior appointments . . . and waived seeing all records from Fisher Body Division, Turnstedt Division or from Chevrolet's various assembly plants, including its Tonawanda plant, having pointed out they were irrelevant . . . General Motors rejected such a waiver and said it would produce all such records, unless plaintiffs withdrew from any further examination of records, claiming they were required by court order.

"General Motors refused to comply with the Court's order to make available an employee to testify about the source of the records and General Motors system of filing and record keeping.

"Plaintiffs waived seeing large numbers of blueprints that it had found irrelevant; General Motors insisted on producing them anyway.

"Plaintiffs waived seeing particular motion picture films; General Motors insisted either on showing them over plaintiffs' objections . . . even to running the soundtrack so that it drowned out plaintiffs' statements for the record to the reporter—or on converting a waiver of specific films into a general waiver of seeing any movie films at all.

General Motors refused to make copies of examined documents at plaintiffs' expense, in its own building, even though it regularly did such work commercially for others.

"General Motors agreed to allow copies to be made of documents as inspected. . . . Then once the plaintiffs made arrangements with a commercial copier, General Motors repudiated the agreement and refused to allow any copies to be made until after all production was concluded.

"Plaintiffs' counsel repeatedly requested production of the specific documents concerning suspension systems and weight distribution, all as enumerated in the numbered paragraphs of the May 13 order and proceedings. Thus at the outset plaintiffs' counsel stated to General Motors' house counsel . . .

"Mr. Davidson: I will repeat, Mr. Adkins, that we don't wish to add General Motors burden in any way here; that we would simply like to get those records that it is essential that we see in connection with our litigation, and that involves matters that, as you know, pertain to the stability of the car, the rear end, the suspension system, the camber, items of that general nature. . . .

"General Motors, however, instead insisted upon producing every Corvair record it could find, allegedly to comply with the . . . order. . . .

"General Motors thereupon produced large volumes of documents, involving copious tests of speedometer cables, horns, generators, windshield wipers, air inlet volume, air and gasoline heaters and defrosters, generator mounts, octane tests, oil pumps, hydraulic valve lifters, fuel pumps, crankcase ventilation, camshafts, oil pan and oil leakage, heater blower switches, oil switch durability, gas tank meter accuracy, turn signals, bucket seat installation, engine noise, heater noise, exhaust emission, fly wheels, power glide transmission, headlamps and voltage regulators, compression ratios, engine temperatures and engine compartment tests, as well as numerous other engine and accessory items. . . .

When we talked recently with Mr. Louis Davidson, the plaintiff's attorney in *Franklin*, he noted that neither Wager nor Koskinen had contacted him or any of his associates. After hearing the staff report's evaluation of the case, Davidson told us "absolutely they should have contacted me, especially before characterizing GM's conduct as being without fault in the *Franklin* case. GM's tactics were clearly obstructionist and were so recognized by the courts."

Following action by the Illinois Supreme Court, plaintiff got new discovery orders from the Circuit Court which avoided the objections relied on by GM for invalidating the prior orders and clearly called for production of PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and 17103 (Corvair Dynamic Stability Tests). It was only at this point, when clearly boxed in by the court rulings, that GM began to make serious overtures to settle the case. The case was not settled, as the Ribicoff staff report implies, because of a reversal of plaintiff's motions, but be-

cause GM was not willing to submit to discovery.

According to Mr. Davidson, the case was settled for "a very substantial amount" (it was about \$250,000 according to other sources available to us), but after a figure was arrived at, GM successfully imposed two further conditions on Davidson: (1) that he never disclose the amount of the settlement and (2) that Davidson amend his complaint to eliminate any allegation or claim that the handling and stability was dangerously unsafe.*

The staff report contains the following statement about the production of PG 15699 and 17103 in the *Franklin* case:

"Almost contemporaneous with the trials [*Collins* and *Anderson*], GM produced test reports 15699 and 17103 for discovery in the *Franklin* case." (See discussion below) (emphasis added)

The staff report presents no evidence that these two proving ground reports were produced. And an authoritative document which indicates non-availability of these two reports is not mentioned. In its mandamus reply brief in *The People ex rel. General Motors Corporation v. Nicholas J. Bua*, Illinois Supreme Court, 1967, GM appended an extensive listing of every exhibit identified in the discovery proceedings in Detroit in the *Franklin* case. PG 15699 and 17103 were not listed.

Later in the staff report, the following statement about PG 15699 and 17103 appears:

"These documents would, however, have been required to be produced in the *Franklin* case. . . . The record shows that GM had produced the test work orders (the test instructions from the production engineer to the proving ground engineer) and technical test reports which resulted in PG 15699 and 17103. We also determined that both test reports were available for discovery." (emphasis added)

The "record" referred to in this statement is not identified, making impossible any evaluation of its accuracy. Also unexplained is why the test work orders and technical test reports which resulted in the proving ground reports—but not the proving ground reports themselves—are claimed to have been produced. Finally, Louis Davidson told us that when GM inundated him with materials, he and his engineer assistant combed the documents but never found a single roll-over test report. If any of these test reports or test work orders were available in Wager and Koskinen's imagination, they were not available to a searching team of plaintiff's lawyers.

*Amendments to the complaint to remove allegations of design and manufacturing defects as a condition of settlement is apparently a common practice at GM. In 1972 Mr. Edward Wolf, plaintiff's attorney in *Petry v. GM*, a Corvair carbon monoxide case in Philadelphia, told the Senate Commerce Committee under oath that not only was he forced to amend his complaint, but he was forced as well to turn over to GM all of his papers, including technical materials and depositions. As a result of this testimony, during which Senator Vance Hartke raised the issue as to the propriety of General Motors keeping from public view certain key depositions of GM engineers (who made significant admission as to the design of the 1961-1969 engine and heater systems and the passage of carbon monoxide into the passenger compartment), GM produced the depositions for the committee who made them public. Subsequently, the NHTSA, which was investigating this safety defect, found the 1965 Corvair to be defective. GM then sent a safety defect notification letter to owners of all 1961-1969 Corvairs warning of the presence of carbon monoxide.

F. Drummond case

The staff report states that you and Gary Sellers "unsuccessfully attempted . . . to prove suppression of documents and to secure a reopening of certain Corvair cases." As an example of this activity, the report states you wrote to Judge Bernard Jefferson (*Drummond* case) alleging suppression of documents and perjury at the trial several years earlier, and that "Judge Jefferson rejected the charges and refused to reopen the case, pointing out that Nader had no standing to raise such issues." These are inaccurate characterizations of your letter of July 8, 1971 to Judge Jefferson and what followed.

The letter to Judge Jefferson pointed out that (1) General Motors had widely distributed his *Drummond* opinion (in the thousands) and used it in press releases to answer charges about Corvair handling instability, (2) discussed a number of recent revelations about GM documents which contradicted GM's claims in court about the Corvair's safety, and (3) respectfully suggested that the Judge exercise his power to initiate an "investigation to determine the extent to which the proceedings before you . . . was distorted by suppression and perjury."

Your letter did not, as the Ribicoff staff report suggests, attempts to secure a reopening of the case. A proposed investigation of fraud on the court is quite distinct from a motion to reopen a case. And, it is of course the duty of any citizen, particularly a lawyer as an officer of the court, to produce information germane to any serious deception by a party in court, especially in a non-jury case where the judge rendered the decision, as in *Drummond*.

Judge Jefferson did not reply to your letter. To our knowledge he made no study or decision on the merits of the materials and references you supplied to him. Apparently, as described in the Los Angeles *Times* newspaper interview which is the sole source relied on by the staff report, Judge Jefferson construed your letter to be a request for reopening the case and on that basis commented he had no authority to do so. In that context he said that legal procedure would require the filing of documents in an adversary proceeding with both sides participating, not simply a letter from someone not directly connected with the case.

Whatever the merits of the Judge's response, it is clear that he was making a procedural point about standing and not a substantive decision on the issues. The staff report misses this obvious distinction and proceeds to mischaracterize the Judge's statements.

G. Porterfield case

Although *Porterfield v. General Motors* is a recent case and not related to GM's statements at the March 22, 1966 Ribicoff hearing, Wager and Koskinen considered this litigation "a major test of GM's good faith compliance with court orders." They admit that "[t]he interrogatories in the case clearly called for PG 15699, and it was listed in 1967, and actually produced in 1969. The lawyers and engineers assigned to the case at the time believed PG 17103 was not within the scope of the court order and accordingly did not produce it."

Based on the numerous contradictions we had found during calls to other plaintiffs' attorneys, we contacted the *Porterfield* plaintiff's counsel, Mr. Harlow Sprouse in Amarillo, Texas. After we read him the two paragraphs on *Porterfield* in the Ribicoff staff report, Sprouse complained:

"Obviously they have gotten their information on the *Porterfield* case from GM. It seems strange that nobody got the other side of the story. What angers me is how anyone could purport to study this case without looking at both sides."

Sprouse told us he never got PG 15699 or 17103 from GM. "There is nothing in any of

the papers that shows I got copies of either or them." Nor was he ever shown the films for these reports. In 1969, he said, he was allowed to look at the written report for 15699 in the office of GM's counsel but was permitted to make only handwritten notes on it. No copying machine was allowed.

Sprouse also volunteered that he has a six inch thick file of interrogatories, motions for sanctions, amended interrogatories and other materials just on discovery.

"My background, credentials—[pause] I'm to the right of Attila the Hun compared to the people in your office, but GM lied to me and used all kinds of tactics to keep me from legitimate discovery.

"I caught them in lie after lie. It is all spelled out in the motions to the court. They would supply a document one at a time, and then deny that it existed or that it was covered in an interrogatory later. They were trapped in many lies in this series of maneuvers."

The Ribicoff staff report also describes how PG 17103 came to be produced in this case.

"Three years later [following production of 15699 in 1969], however, the case having remained pending, another GM attorney took a contrary view and argued within the legal staff that PG 17103 should have been produced. He also questioned the sincerity of those who reached the earlier decision concerning the report. After a lengthy internal debate, the general counsel of GM, still believing the document was not called for, decided to produce it, 'out of an abundance of caution.' We closely examined all the individuals and documents involved in the case and concluded that GM's original judgment was honestly reached and justified on the merits."

The "internal debate" referred to in the staff report was more like an explosion. Given the seriousness of the matter, the staff report dismisses it lightly on the basis that the test report was eventually produced in the case. The GM attorney blandly described as having taken a "contrary view" made known his concern with GM's prior behavior in very forceful language, as the Ribicoff staff files indicate but the Ribicoff staff report does not. In his extraordinary letter of July 1970 appealing to GM Board Chairman James Roche, the GM attorney stated:

"Evidence has come to my attention that strongly suggests that since at least April 4, 1967, employees of General Motors Corporation have been guilty of a continuing suppression of evidence that may have criminal dimensions

"On Monday, July 20, I was told by Joseph Rozek of the General Counsel's staff that answers to interrogatories sworn to and filed in the name of General Motors in the captioned cases in April 1967 were incomplete in that they failed to list the most critically sensitive Corvair rollover proving ground test report, PG 17103, although its companion, PG 15699 (which reported earlier test runs in the same series), was included.

"In Mr. Rozek's company, I promptly arranged to see Nicholas J. Rosiello Mr. Rosiello agreed that if PG 17103 was called for under the terms of the Court order a lawyer's ethical obligation would require that upon such discovery of such an omission the lawyer take prompt steps to cure it

The key to GM's defense in this matter is in distinguishing between PG 15699 (Roll-over Stability Evaluation of Various Corvair Suspension Systems), which was made available for reading but not for copying in this case in 1969, and 17103 (Corvair Dynamic Stability Tests), which was not. Since 17103 was a continuation of 15699, the burden certainly rests on those trying to show a difference. The staff report says that GM's original judgment was "justified on the merits" but the merits are not explained. In an effort to find a distinction, we asked

Harlow Sprouse his view. He told us that GM had never offered an explanation, and merely listed 17103 (only after the aforementioned GM attorney's objection to Roche) on an amended answer to his earlier interrogatory in the fall of 1970. He told us: "There is simply no rationale for distinguishing them at all."

H. Use of court cases

Lastly, we cannot overlook the staff report's claim that you and GM "have misstated the decision in *Anderson and Collins*" in your case because you argued "that the cases could not legitimately be mentioned at all" at the 1966 hearing. When asked for a supporting citation, Mr. Wager referred to the following from page 5 of your October 23, 1970 letter to Senator Ribicoff:

"GM's testimony in February and March 1966 necessarily was both an assertion by GM that they had testified accurately before the courts, and that they knew of no existing evidence which would rebut that testimony. To that extent, this testimony directly conflicted with GM's own internal documents, such as PG 17103, which were being withheld from Courts across the country, from the Michigan Senate Committee and from your U.S. Senate Subcommittee.

As should be apparent from this language, you did not argue that GM could not mention these two cases. To the extent the company did so, however, it had an obligation at the same time not to ignore documented information which it failed to present in those cases and which was obviously pertinent to the safety of the Corvair—such as PG 17103. Even assuming, *arguendo*, that GM had no obligation under law to produce the key proving ground reports in the *Anderson and Collins* cases, it certainly had that obligation before the Senate Subcommittee when it brandished those cases to illustrate the safety of the car. Therefore, the staff report mischaracterizes your language into something you did not say, and then proceeds to attack that mischaracterization.

All the reasons cited in "III. CORVAIR LITIGATION" demonstrate that the staff report is factually wrong in its conclusion that "GM did not engage in any fraud or deceit in its conduct of the *Anderson and Collins* or other cases we reviewed." GM's own techniques in successfully and unjustifiably suppressing the relevant Corvair proving ground reports clearly contradict the report's generous conclusion.

IV. . . . AND OTHER MYTHS

Scattered throughout the Wager-Koskinen report are various errors of fact or interpretation which have not yet been discussed but which should be corrected for the record. A discussion of some of them follows.

Dismissal of perjury against Roche

The Ribicoff staff report dismisses any possible perjury charge against former GM President and Board Chairman James Roche for his testimony at the March 22, 1966 hearings where he denied knowledge of GM investigations other than the one they ran on you.

Wager and Koskinen cite the 1966 Justice Department perjury investigation as concluding that none of the 26 prior Gillen GM investigations of individuals were of an intentionally harassing nature or of persons who criticized GM, and then cite the 1967-68 perjury investigation which considered the GM investigations of such groups as the Locality of Mayor's Committee of Harlem, N.Y. and John Volosin, a union official and former GM employee. The Department also dismissed the charge in 1968 concluding that the Nader investigation was "a complete background investigation of a General Motors critic," while none of the other GM investigations "were of an intentionally harassing nature or of persons who had criticized General Motors or one of its products."

In the *Ford v. GM* case, which arose out of the employment of Mrs. Patricia Pola to investigate the plaintiff's expert witness Paul O'Shea in the *Collins* case, the staff report argues that "Roche told us he did not know of the *Ford* case at the time he testified on March 22, 1966," that the statute of limitations has run on any possible offense, and that "it is evident from the Justice Department memorandum that, having found no grounds for prosecution in the Locality Mayors and Volosin incidents, it would find none here. Nor do we believe the subcommittee was misled in any substantial way by Roche's failure to inform us about the *Ford* case."

The first Justice Department inquiry in 1966 was exposed as a farce when it learned that none of the principal people involved were even interviewed by the Department (see exhibit Q). In its second try, the Department stated in 1968 that none of Gillen's investigations were of "persons who had criticized GM. . . ." This is in error. The Harlem community improvement group was investigated by GM because it was critical of alleged discriminatory employment policies of the company. The formal exchange of correspondence between GM and the antipoverty group clearly shows this complaint to be the sole stimulus in GM's hiring of Gillen to infiltrate the organization. Also, GM undercover investigations of UAW officials over the years, a practice well known in the industry, contradicts the Department's conclusion (see exhibit R).

In addition, it is difficult to accept the staff report's contention that Roche knew nothing about the *Ford* case. *Ford v. General Motors* was filed one month before Roche's March 22, 1966 testimony and was publicized in the press. Furthermore, at the March 22 hearing, Senator Ribicoff and Roche had the following exchange (which the staff report deleted with ellipses):

Senator Ribicoff: Do you know that it is rare or unusual or does this take place without you even realizing it?

Mr. Roche: No, sir; I would know about it if it did take place, and we have been making very careful checks to ascertain what other investigations have been made, and other investigations have to do only with minor affairs. . . .

Thus, either Roche was oddly inept at his self-assigned task (knowing about any other complete background investigations such as the one on Nader), or he considers the employment of a prostitute to "keep her ears open" as a, so to speak, "minor affair," or, as seems most logically likely, he *did* know about *Ford* and its serious implications, but did not disclose it.

The staff assumption that every case is the same—if the Justice Department found no violation in case A it would automatically find no violation in Case B—leads to the unsupported conclusion there would be no violation in Roche's failure to mention the *Ford* case at the hearing because the Justice Department found no violation in his failure to mention the Locality of Mayor's and Volosin cases.

Other errors in the discussion of the *Ford* case include the staff report's accusation that both plaintiff's attorney Harney and GM's local counsel John Costanzo "confirmed that it was customary for them to use private investigators in cases against one another." In our conversation with Harney he said this statement "simply is not true." Harney explained, "I told them we have routinely hired detectives to investigate the accident in a case, but this does not pertain to undercover detectives to investigate the opposition."

Harney also took issue with the staff report's characterization that the *Ford* suit "(. . . was later dismissed in return for an extension of time for filing an appeal in another case, thus giving some indication of a lack of substance to the *Ford* case)." He

told us that he filed a motion to dismiss the suit because Ford did not suffer any permanent physical damage. "There was no bargaining with GM involved," he said.

New excuses for an old memo

The June 21, 1963 Winchell memorandum to Premo (see Wager and Koskinen exhibit 16) states, "If, in management's judgment, this car [the Corvair] must be as safe as the conventional Chevrolet, engineering must take the position that the swing axle is inadequate." This view has been excused by GM with the explanation that the conventional Chevrolet is, in turn, less safe than the Cadillac. Such an argument may appropriately apply to the issue of crashworthiness, where a less massive vehicle, such as a Volkswagen, will inherently be less safe, all other factors being equal.

It is engineering nonsense, however, to argue that small size or low weight is disadvantageous. The handling and stability of many smaller cars is considered acceptable and certainly as safe as the handling and stability of a contemporary Cadillac. The eventual and significant improvement in the handling and stability of the 1965 Corvair, using no technology that was not known by 1957 when the Corvair was being designed, exposes the illogic of GM's attempt to explain away this newly revealed memorandum.

Roll couple, roll center height, and roll resistance

The staff report's discussion of roll center height at the end of the section on George Caramanna (part IV, C) is (again) technically flawed. The roll couple of a vehicle suspension is determined by several factors, among them the height of the roll center. A high roll center increases the roll couple of a suspension. The roll resistance of a swing axle suspension such as the Corvair can be reduced by either lowering the roll center or by coupling the wheels; then, when one is raised, a downward force is exerted on the other, as was done on the 1964 Corvair suspension, Maurice Olley's 1961 paper, "Corvair Steering," showed the advantage of lowering the roll center of a swing axle both in reducing the roll couple and reducing the non-linearity of the response of the swing axle (which he had criticized in his 1956 patent application). The staff report's claim that "the transition from understeer to oversteer of the 1960-63 Corvair was attributable to the roll couple distribution, and not the height of the roll center, ignores the influence of roll center height on roll center."

Standard precautions for auto testing

Wager and Koskinen (section VI, E) note that both Daniel Boone (GM's attorney in charge of general litigation) and Charles Simmons (GM engineer), were wearing crash helmets and seat belts in a Corvair demonstration run for lawyers and potential witnesses. This protection supposedly shows that the occupants expected that the Corvair might roll over (which it did). Judging from the elaborate precautions taken two years before Boone's rollover in the preparations of vehicles for PG 15699 (Rollover Stability Evaluation of Various Corvair Suspension Systems) and PG 17103 (Corvair Dynamic Stability Tests), seat belts and a crash helmet alone could hardly be considered evidence that a rollover was considered a distinct possibility. In fact, the wearing of seat belts and crash helmets is standard operating procedure any time a vehicle is driven for formal or informal testing or demonstration, and does not constitute any evidence that either Boone or Simmons "recognized the possibility that the car would overturn." In "The Investigation of Ralph Nader" (Arbor House, 1972), Thomas Whiteside chronicles Eileen Murphy's conversations and friendship with Daniel Boone; she indicates that Boone was disturbed by the Corvair, and thought GM should recall them, but apparently he did not expect them to so

easily misbehave. Had he had an indication that it would roll over so easily, he presumably would have insisted on far more protection than can be given simply by a lap belt and crash helmet.

"Corvair supporters"—All auto racing buffs

All of the three individual, so-called "Corvair supporters" discussed in the staff report—Denise McCluggage, Bill Stroppe, and Mauri Rose—have been extensively involved in auto racing activities (as was Ray Caldwell, the Subcommittee engineering consultant). McCluggage puts the viewpoint of these people in perspective in describing the audience for whom she writes as a journalist:

"I think a non-car person plunging into the middle of that special world of the automotive media is in for a degree of culture shock. Articles are written in a jargon and they are written for the converted. They assume a certain position on the part of the readers to begin with."

McCluggage and Stroppe reveal their disdain of those who consider the automobile simply as transportation, or who are not interested in becoming "skilled drivers":

"The Corvair happened to be an oversteering car in a world of extreme understeers. Still, I would not say that it was beyond the normal ability of the average driver under average conditions to drive reasonably well. (McCluggage)

"I prefer quicker steering . . . with faster steering it is easier to catch a back-end that is apparently intent on switching positions with the front. This, of course, assumes that the driver can tell when the car is breaking loose and what to do to catch it. (McCluggage)

"A rear engine vehicle is a little more susceptible to a slide of this sort [which caused the rollover of a Corvair being tested by Stroppe and his associates] than the conventional front engine automobile. . . . Drivers must be familiar with the vehicle and its [sic] characteristics to overcome difficulties which might arise when operating the automobile." (Stroppe)

Wager and Koskinen fail to recognize the subtle distinction being made by these aficionados—that these buffs consider the Corvair acceptable only for drivers who have special skill or experience with its dangerous behavior. But the average driver is not a racing car expert. For this average driver, the Corvair is a very deceptive car. When driven gently, it understeers and generally drives like a smaller conventional Chevrolet. An innocent driver who is not warned by GM of the Corvair's Jekyll-and-Hyde handling characteristics may, to his or her horror, discover them too late to learn the skill alluded to by McCluggage and Stroppe.

The staff's quotation of McCluggage on the Corvair is completely out of context. Her tastes in automobiles were based on her racing experience and her special appreciation of particularly responsive cars. Her experience was also not on a standard Corvair, but a highly modified one. Although she is not specific about most of the modifications, she notes that the rear wheels had "three degrees of negative camber in the rear wheels," which she regarded as being both necessary for the kind of driving she was doing in the rally, and an improvement in the handling under hard cornering. McCluggage noted that she had never driven a normal Corvair in the same way so that she did not know how it would react.

McCluggage also admitted that she thought that Chevrolet could have done better with the design of the Corvair, but did not simply because of cost, refuting another myth of the Ribicoff staff report.

GM misconduct case before Michigan State bar

The staff report characterization that "after review, the board dismissed the com-

plaint" by Mr. Gary Sellers is misleading. For there was no effective review of the complaint. Sellers charged two GM attorneys with misconduct: Adkins in the matter of *Veatch v. General Motors* and Rozek in the matter of *Stetter v. General Motors*. He alleged that the two attorneys filed false answers to interrogatories by failing to produce certain microfilm records (which became public in 1971 after discovery by some junk dealers) which GM previously claimed "did not exist." In this complaint he was joined by Professor Fairfax Leary now at the University of Pennsylvania Law School. Stating that they would be bound by the Board's decision, Sellers and Leary requested that the Grievance Board ask the GM attorneys a series of questions concerning the suppressed evidence. These questions, however, were never asked of Adkins and Rozek, and the decision to dismiss the case was based solely on the presentation of the facts in the cases by the GM attorneys. Thus, while there was a review of the facts which GM presented to the courts, there was no review of the complaint itself, i.e., the facts which GM suppressed from the courts.

In *Veatch v. GM*, the court did deny the plaintiff's request to impose sanctions on GM for the failure to produce the microfilm—because the only consideration which the court found relevant was whether the documents would have changed the outcome of the case. Since the case was decided in favor of the plaintiff, the court held that the withheld microfilms would not have "caused a different result to ensue," a decision which again did not speak to the issue in the Sellers-Leary complaint before the Michigan State Bar.

David Lewis on corporate knowledge of Corvair defects

The staff report deals at length with the incident related by David Lewis, a former staff member in the General Motors public relations office and now a professor of Business History at the University of Michigan. Lewis brought to our attention the Corvair accident in December 1959, three months after the Corvair was first marketed, involving Cyrus W. Osborn, the son of Cyrus R. Osborn, executive vice president of GM in charge of engine divisions and overseas operations. According to Lewis, the senior Osborn ordered a thorough investigation of the role of the Corvair in the accident in which his son was permanently crippled.

Wager and Koskinen state that, although they questioned very relevant GM lawyer, engineer and executive about these events, they learned nothing. Then, they say, "At our request, GM conducted an internal investigation of Lewis' charges . . . All of this [10 GM employees being asked about the matter and the searching of 5 different files], we were informed, yielded nothing." Two other unrelated Corvair studies, one of an accident involving the son of a proving grounds employee and another involving tests for litigation, are then mentioned by the Ribicoff staff as reports which Lewis might have remembered and mixed up with the Osborn case.

The staff report's dismissal of the leads provided by Lewis' story is symptomatic of the staff investigation's defects. First, GM was asked to conduct an investigation of itself for the Ribicoff staff, and obviously took full advantage of the opportunity to produce red herrings. Second, there was no apparent independent attempt by the Ribicoff staff to look outside GM for any corroboration of Lewis' knowledge. Third, and most important, there apparently was no inquiry into whether high level GM officers, who might not have been persuaded before, became knowledgeable after the 1961 Osborn accident about the Corvair's deficiencies. Fourth, the staff never cross-checked the GM version with Professor Lewis, thereby again letting GM define and control the limits of their inquiry.

In response to our invitation to comment

on the Ribicoff staff report, Lewis related the following. Sometime in early 1961, William Hamilton, then GM Vice President of Public Relations, reported at a meeting of the Public Relations Planning Committee (of which Lewis was Secretary) that the engineers at the GM Technical Center had discovered instability deficiencies in the Corvair similar to those later pointed out in "Unsafe At Any Speed." As Lewis recalls, these findings resulted from testing done at the GM Tech Center because of the Osborn accident. Hamilton told the PR Planning Committee that it would take approximately eighteen months to repair the defects in the Corvair, but when asked what GM was going to do about presently defective Corvairs, Hamilton, in the presence of Lewis and others, repeated the statement made to him by the GM legal staff: "We aren't going to do anything. We are going to ride this out."

We asked Lewis if he knew anything about the elusive Corvair study done at the Tech Center following the Osborn accident. He said he was told that the defects in the Corvair had been confirmed in tests done at the Tech Center. At that time the Tech Center was under the direction of Charles A. Chayne, GM Vice President in charge of Corporate Engineering.

Lewis suggested that we contact Dan Cordtz of Fortune magazine because Cordtz had become interested in the Osborn accident in the Spring of 1966 and contacted Charles Chayne about it. Cordtz told us that when he asked to see the Osborn report, Chayne said that it was a private report for Mr. Osborn. Because he could get no further information on the matter, Cordtz did not include the incident in his August 1966 Fortune article on the impacts of the auto safety debate at GM.

We also contacted Charles Chayne, but he said he "would not talk to anyone from Nader's office." He was not even contacted by the Ribicoff staff, however.

Lewis told us he was not surprised GM's internal investigation for Wager and Koskinen had yielded nothing. He said that the individuals listed by the Ribicoff staff report as having been interviewed by GM included only engineers from the engineering division of Chevrolet which is a separate division from the GM engineering staff which Chayne headed. Thus, Lewis thought they probably would not know the details of the secret Chayne study. Aside from GM's obvious disinterest in finding the Osborn study, it seems that Hamilton, one of the few people who might confirm the 1961 PR staff meeting, died sometime after GM had interviewed him for the Ribicoff investigators. Also, the only other person at that meeting who GM indicates was interviewed was Thomas Groehn. He also died shortly after his interview by GM. Notes of this meeting were taken by Lewis, in his capacity as Secretary to the PR Planning Committee; but, in keeping with the committee's policy, they were "purposely skimpy—a skeletal outline for review at the next meeting." He doubts that these notes have been retained by GM.

Lewis also was not surprised the Osborn family denied knowledge of the investigation (Mr. Osborn Senior is now dead). "Even when flesh and blood are involved," says Lewis, "the GM employee's loyalty to the organization is such that he and his family would be reluctant to say anything against the organization."

At this point in time, two years after the Ribicoff staff has alerted GM to their interest in the Osborn case, and subsequent to the deaths of several knowledgeable people, it is difficult to prove that GM personnel conducted a study of the Osborn accident. What is clear, according to Lewis, is that Hamilton reported the GM findings of Corvair defects to the PR Planning Committee in early 1961, by which time a corporate decision had been made "to ride this out." "I don't need the notoriety," adds Professor Lewis, "but if

there's no other way, and if it's necessary, I will take a lie detector test."

V. IN CONCLUSION

Based on our analysis of the serious deficiencies of the staff report, and based on additional research which corroborates the charges in your letters to Senator Ribicoff, we must conclude that (1) the staff report is a presumptuous whitewash—one sided and excessively incomplete in its investigation, biased in its approach, and simply wrong in its conclusions and on many of the technical issues and (2) GM did in fact mislead the Subcommittee about the Corvair's safety.

(a) The staff report reflects heavy dependency in its secret GM contacts and shoddy NHTSA testing. Whenever it came to a critical determination, it used any explanation plausible, to exonerate the Corvair manufacturer and the people involved in covering up the car's defects. But dependency discourages balanced investigation, as this staff report confirms. For example, we found to our dismay that key figures in this controversy were never interviewed or contacted even though they were readily available to cooperate:

B. J. Masterson (plaintiff's attorney, Anderson).

Lou Davidson (plaintiff's attorney, Franklin).

Harley Sprouse (plaintiff's attorney, Porterfield).

Judge Jefferson (Drummond).

Judge Bua (Franklin).

Charles Rubly (Staff Engineer, Corvair and Chevy II Chassis).

Charles Chayne (Vice President in charge of Corporate Engineering, ret.).

Dan Cordtz (writer for *Fortune* magazine who investigated Osborn incident in 1965-66).

Walker Sandbach (Executive Director, CU).

Robert Knoll (Head, Auto Test Division, CU).

Edward Heitzman (technical expert concerned with Corvair handling).

Ralph Smith (technical expert concerned with Corvair handling).

Albert Fonda (technical expert concerned with Corvair handling).

Dimitry Sergay (technical expert concerned with Corvair handling).

Gordon E. Freitag (Ford test driver, 1959 Ford Falcon-Corvair test).

Maurice J. Kaiser (Ford test driver, 1959 Ford Falcon-Corvair test).

Also, the staff investigators were seriously handicapped by their lack of familiarity with the technical issues involved. Thus, the staff report can simply not be taken seriously as a piece of investigative scholarship or advocacy.

(b) GM effectively told the Subcommittee that the Corvair was a safe car because two jury verdicts said that the Corvair design was not the cause of particular crash injuries. Even Wager and Koskinen call this a stretching of reality. For at the time of its development and shortly thereafter, GM conducted valid tests which clearly showed the Corvair to be a dangerous and defective product. By a variety of obstructionism and chicanery, the GM legal staff not only hid these tests from court view, but it also exerted a variety of unseemly pressures on plaintiffs' attorneys to drop or settle Corvair cases. This is clear from our references to internal GM documents and to our discussions with those who GM intimidated and deceived. Thus, far from exercising "corporate responsibility," GM violated its public trust in the most fundamental way possible: it knowingly manufactured a dangerous product and cashed the damaging evidence.

EXHIBIT A

DECEMBER 16, 1964.

To: Mr. A. F. Power, G.M. Legal Staff.

Attention: Messrs. D. Boone, E. Adkins.

Subject: Qualification of Expert Witnesses.

Per our discussion Mr. Passon will supply twelve copies of the following material to Mr. Adkins. Items one and two will be available December 16, 1964, and item three as soon as copies can be obtained from the Proving Ground.

1. On chart of physical data, including weights and weight distribution, physical dimensions, recommended tire pressure.

2. A chart showing roll center heights and roll couple distribution.

3. The following GM Proving Ground reports:

PG 9830—Roll Rate Test. 1958 Renault and Volkswagen.

PG 13468—Static Ride and Roll Rate. 1961 Corvair.

PG 17467—Static and Dynamic Ride Rate, Static Roll Rate, Static Ride and Roll Steer, Roll Center Heights, Center of Gravity and Moment of Inertia. 1964 Corvair.

PG 18201—Static and Dynamic Ride Rate, Static Roll Rate and Steer, Roll Center Heights, Center of Gravity and Moment of Inertia. 1965 Corvair.

PG 18759—Static and Dynamic Ride Rate, Roll Rate, Roll Steer, Roll Center Heights. 1965 Chevy II.

PG 17127—Skid Pad Roadability Tests. 1963 Porsche.

PG 14737—Skid Pad Roadability Tests. 1962 Corvair.

In addition, the following cars will be ready for evaluation at the Desert Proving Ground on January 5, 1965.

1965 Chevy II.

1965 Corvair.

1964 Corvair.

1961 Corvair.

1961 Volkswagen.

1961 Renault.

1962 Fiat.

1961 Porsche.

V8 Corvair.

R & D Chevelle.

Each vehicle will be equipped with an accelerometer. I have made arrangements for Mr. R. Beinke of Chevrolet Research and Development to be in Phoenix beginning December 28, 1964, to be certain that instruments and cars are in order. The V8 Corvair has been added to the list because it demonstrates conclusively that a 70% rear weight distribution is stable. The Chevelle has been added because, with this car, disconnected alternative front and rear stabilizer bars, we can convert a good neutral steering 50-50 weight distribution to both oversteer and understeer without a change in weight distribution.

It is our recommendation that we merely release these cars to the witnesses to do with as they see fit. I do not think that we should set up any specific problems for them or do I think that we should make any demonstrations. There is no inference that I know of in any of the allegations familiar to me involved loss of control while driving the car at normal speeds on normal roadways. I do not think that these witnesses will voluntarily subject themselves to high lateral accelerations and incipient loss of control, and certainly think we should not urge them in this direction. It should be recognized that there is no way to eliminate the possibility of an accident.

I think it would be to our advantage to subject them to a blindfold test of tire pressures and front ballast.

I understand that Mr. Milliken of Cornell Aeronautical Lab will be present, and I have made arrangements for Mr. Hall to be present. Mr. Hall will do no test driving. He and Mr. Milliken will merely constitute authorities in their fields. Mr. C. Simmons and myself will also be present.

I understand that the evaluations will have been completed by January 8, 1965.

F. J. WINCHELL,
Research and Development.

CHEVROLET MOTOR DIVISION,
Detroit, Mich., December 18, 1964.

Mr. A. F. POWER,
General Counsel,
General Motors Corp.,
Detroit, Mich.

(Attention Mr. E. Adkins)

Attached are twelve (12) copies each of the following G. M. Proving Ground reports:
PG-9830. Roll Rate Test. 1958 Renault and Volkswagen.

PG-13468. Static Ride and Roll Rate. 1961 Corvair.

PG-17467. Static and Dynamic Ride Rate, Static Roll Rate, Static Ride, and Roll Steer, Roll Center, Heights, Center of Gravity, and Moment of Inertia. 1964 Corvair.

PG-18201. Static and Dynamic Ride Rate, Static Roll Rate and Steer, Roll Center Heights, Center of Gravity and Moment of Inertia. 1965 Corvair.

PG-18759. Static and Dynamic Ride Rate, Roll Rate, Roll Steel, Roll Center Heights. 1965 Chevy II.

PG-17127. Skid Pad, Roadability Tests. 1963 Porsche.

PG-14737. Skid Pad, Roadability Tests. 1962 Corvair.

These are being supplied per your request in connection with the program at the Desert Proving Ground on January 4-5, 1965. You have received all other data as an attachment to Mr. F. J. Winchell's memo to Mr. A. F. Power, dated December 16, 1964.

P. J. PASSON,

Product Analysis and Evaluation.

EXHIBIT B

DECEMBER 13, 1972.

To: National Highway Traffic Safety Administrator.

From: Associate Administrator, Motor Vehicle Program.

Subject: Corvair Handling.

At the time of release of the Corvair Handling investigation report, accompanied by a decision of no defect and the subsequent placement of backup data in the public file, there was some miscellaneous data that had not been indexed since it was not considered valid for the investigation. Typical of this data were the results of the pilot program, instrumentation errors, incorrect procedures and noncomparative tests. A summarization of this data is attached hereto. As I discussed with you earlier, it is not believed that any of the information gives cause for modification of the "Corvair Handling" decision. In fact, the decision is enhanced by some of the data. However, this letter is to better acquaint you with this information.

The pilot test program was run for the purpose of validating the test procedures. Once established, the procedures were the same for all vehicles tested. The pilot program was conducted using the 1962 Falcon to avoid any inference that the procedures were tailored to favor the Corvair. The results of the tests subsequently used on all the vehicles has already been indexed. The data from the tests not used are included in this miscellaneous data.

All of the comparative Steady Turn Braking, Smooth Road tests were made in a right turn. The initial Corvair tests were run turning to the left. The left turn series on the Corvair was completed and then rerun turning to the right for the test report. Since they were not significantly different, the left turn results are included in this miscellaneous data.

As in any test program, some of the test data generated is obviously invalid, i.e., instrumentation failure, improper test conditions, etc. The strip charts for these invalid test runs were retained and placed with the miscellaneous data.

At the conclusion of the Corvair Drastic Steer-Drastic Brake comparative tests, it appeared that the results were not the same

as the HSRI Corvair tests. Therefore, unofficial tests were run with the load condition similar to the HSRI tests. This resulted in the Corvair being 615 pounds lighter than the fully loaded comparative tests. At the start tires removed from earlier tests because of wear were used since no new tires were available. The manufacturer's recommended tire pressures were used. On two tests outrigger contact was made. However, in both cases outrigger contact could not be duplicated. Attempting to better understand the results, the tire pressures were changed to 28 psi front and rear which according to some authorities could make the condition worse. Following calibration tests new tires were obtained and installed and the original tests repeated, only now with new tires and 28 psi tire pressures. No outrigger contact was experienced.

Although not originally considered part of the Corvair handling tests, the results confirm two decisions made during our investigation. First, tests run with tires worn significantly by limit maneuvers as contrasted to normal driver-highway wear yield invalid results. This was recognized in our comparative testing and is completely substantiated by reports just received of testing conducted for the Research Institute. Second, our decision to accept Mr. Nader's suggestion to conduct the tests in the fully loaded condition to obtain valid comparative information was sound. When the Corvair was tested in the same way as during the comparison tests, except for weight, the results were the same.

Throughout the tests, photographs were taken to document the various vehicle configurations including the as received condition of the Nader recommended 1963 Corvair. These photographs were among the miscellaneous data.

With your concurrence, it is our intention to continue with our plan to complete indexing all of the above miscellaneous data and placing it in the public file along with a description of the material contained.

ROBERT L. CARTER.

EXHIBIT B1

AUGUST 9, 1972.

HON. JOHN VOLPE,
Secretary of Transportation,
Washington, D.C.

DEAR MR. SECRETARY: We have read the report of the National Highway Traffic Safety Administration (NHTSA), *Evaluation of the 1960-1963 Corvair Handling and Stability* and the *Panel Evaluation of the NHTSA Approach to the 1960-1963 Corvair Handling and Stability*. This purportedly complete and exhaustive investigation into the Corvair's handling and stability is both defective and deceptive.

The tone, wording, and approach of the report make it obvious that the investigation was not carried out with proper scientific integrity and completeness, but was rather done for its potential propaganda effect against critics of both the Corvair and the NHTSA. Thus the NHTSA expressed a preference for preserving its close relations with General Motors and its president, Edward Cole, over exercising its responsibility to the segment of the public which is endangered by the Corvair's defects.

The reports, released July 30, 1972, raise far more questions than they answer both about the subject Corvair and the NHTSA's belated and prolonged investigation into it. As you know, we have asked Senator Warren Magnuson, Chairman of the Senate Commerce Committee to conduct a thorough investigation into this matter. In the meantime, questions and comments are submitted which are suggested by the NHTSA's reports. I would appreciate a reply to these questions at the earliest convenience of your Department.

INPUT-RESPONSE TEST PROGRAM—TEXAS TRANSPORTATION INSTITUTE

1. The position of the NHTSA is apparently that the GM proving ground tests "do not represent conditions that would be experienced in the practical driving environment." a) Why did the NHTSA choose similarly non-representative conditions and maneuvers for the tests at Texas Transportation Institute? b) What was the NHTSA trying to determine with the TTI tests? c) Did the NHTSA have any objective criteria for these tests before they were begun which would have allowed the NHTSA to differentiate between defective and non-defective handling properties? d) Was the NHTSA looking primarily for rollovers as evidence of defective handling and stability?

2. The NHTSA further discounted the value of the GM proving ground tests "because the vehicles used in these tests were in various states of test modifications" (these modifications being minor changes to the shock absorbers, spring rates, rebound travel, and so on)*. a) Why was the NHTSA satisfied that the equally extensive changes between the 1960 and 1963 models were so insignificant that a 1963 Corvair could be taken as representative of all the 1960-63 Corvairs? b) Did the NHTSA determine that the differences between body styles (sedan, coupe, convertible, station wagon, and bus-van) would also not affect the handling and stability of these various vehicles?

3. The NHTSA stated that the tires used were "as close to the original O.E.M. specifications as possible." a) What does "as possible" mean? Sloth, indifference or negligence of NHTSA? b) What were the exact differences in cord materials, numbers of plies, rubber compound (such as the amount of polybutyldiene) between all types of O.E.M. tires used on the Corvair between 1959 and 1963, and the tires used in the TTI tests? c) To what extent did the NHTSA investigate the differences in the 1960, 1961, 1962, and the 1963 Corvair O.E.M. tires? d) Why was there no disclosure of this important point? What attempts were made to obtain 1959-1963 tires?

4. a) Why were the vehicles in the TTI tests tested only while fully loaded, a condition which probably gave the Corvair significantly better handling and stability? b) In the Corvair, what was the change in the position of the center of gravity with the added weight? c) Did this change in the center of gravity coincide with the change that would occur when the vehicle held six passengers and their luggage? d) Why were no tests done to determine if, in fact, the fully loaded configuration was the one most likely to show the worst handling and stability characteristics of the Corvair as seemed to be assumed by NHTSA?

5. In the report of the TTI work, it was noted that in the Drastic Brake maneuver, the following statements are made: "The sequence of inputs was that which HSRI concluded was most apt to place a vehicle in a rollover mode," and "By varying the magnitude and timing of inputs described above, an effort was made to induce rollover in each vehicle tested." The speeds at which these tests were carried out were 40, 50, and 60 miles per hour.

It is further noted that in none of the TTI Corvair test runs was there a rollover (that is, there was no outrigger contact in any of the test maneuvers). a) In view of the fact that the Highway Safety Research Institute (HSRI) was able to easily, consistently, and violently roll their 1961 Corvair against its outriggers (a simulated rollover) with the same test equipment used by

* Not incidentally, the changes made in the Corvairs used in the GM Proving Ground tests were all designed to improve the handling and stability of the cars being tested.

TTI, wasn't this sufficient evidence that either the TTI Corvair was not typical or that the test conditions were not adequate to determine if the Corvair exhibits defective handling and stability? b) Did the NHTSA even consider this possibility before completing the TTI tests?

6. All testing and analysis referred to in the TTI report was carried out on high friction surfaces. Although such surfaces would be expected to maximize the probability of a vehicle rollover in a given maneuver, it would minimize loss of control due to directional instability caused by lateral skidding. Since loss of vehicle control without rollover is viewed as a major cause of Corvair crashes, was there any attempt to assess either the Corvair's performance on high friction surfaces and the more usual lower friction surfaces?

7. General Motors gives vehicle owners no warnings that Corvairs should be driven only with tires having more than 80 percent of their original tire tread. The NHTSA, in Motor Vehicle Safety Standard No. 109, indicates that a tire with as little as 1/16 inch of tread may be considered safe for normal use. (This is the depth of the required tread wear indicator.) Given these facts, why were the TTI tests restricted to the use of tires with more than 80% of their new tread depth?

8. How did the NHTSA determine that the shock absorbers "obtained through local dealers" were identical with the O.E.M. shock absorbers, and did not reflect either normal product improvement or differences between O.E.M. parts and replacements parts which are common in shock absorbers?

9. In the conclusions to the NHTSA Evaluation of the Corvair, it states, "For many of the tests the plotted data indicated that the Corvair performance fell between the Valiant and Falcon on one side and the Volkswagen and Renault on the other side." a) If the much more hazardous Volkswagen and Renault had not been included in the tests how much worse would the Corvair have been overall than the two remaining contemporary cars? b) Would the conclusion of the NHTSA have been different in this case? c) Why were the Volkswagen and Renault included in the tests in the first place?

PANEL EVALUATION

10. (a) What criteria were used in the selection of the Panel for the evaluation of the NHTSA Approach to the 1960-63 Corvair Handling and Stability? b) Why wasn't it considered a conflict of interest to have on the panel to evaluate the NHTSA's performance, a man who is currently under contract with the NHTSA (Dr. Wright)? c) Was consideration given to the likely biases concerning vehicle handling and driver skills of a man whose career and dedication has been to auto racing (Mr. Caldwell)?

11. (a) How many man-hours were spent by the three panel members in their evaluation of the NHTSA's approach to the Corvair handling and stability? b) What professional assistance was given the panel, and to what extent was the raw material used in the investigation summarized for the panel?

12. The charge given to the panel was to review the pertinent materials in this case, and to "Arrive at joint panel findings, conclusions and recommendations about past and future NHTSA programs for evaluation of the 1960-1963 Corvair handling and stability." a) Since the panel limited itself to recommending that no further testing be done on the Corvair, that the NHTSA develop minimum vehicle handling standards, and that better accident statistics be collected, is the NHTSA satisfied with the panel's performance? b) Further, since it was not in their official charge, by what authority did the panel findings regarding the Corvair itself? c) Why did the NHTSA require "joint panel findings" rather than allowing for possible dissenting opinions on the panel?

MAKE-MODEL VEHICLE CRASH DATA

13. In considering crash data, equal weight was given to the early rollover data of Cornell Aeronautical Laboratories (CAL) and the off-road, single vehicle crash data from the North Carolina Highway Safety Research Center (HSRC). a) Why wasn't Dr. Campbell of HSRC asked for his latest data which are considerably more up-to-date and statistically valid? b) Since rollover must be preceded by a vehicle's going out of control, why was rollover considered equally significant with single vehicle, off-road crashed which is probably a large class?

Dr. Campbell's most recent data on off road crashed for both the Corvair and the Volkswagen show clearly the higher than average incidence of such crashed in these vehicles when equipped with unmodified swing axle rear suspensions. The data contained in the Cornell Rollover study are considerably older than the HSRC data, comes from a considerably smaller data base, and does not differentiate between model years. Furthermore, the later CAL VW study (which contains data on the Corvair) contradicts the findings on the Corvair of the earlier study.

14. (a) Since the NHTSA relied, to some extent, on vehicle crash statistics from several years ago, is the NHTSA reasonably satisfied that the quantity and quality of such statistics allow them to be used to make determinations such as this one? b) If not, what is being done in the way of contracting for make-model crash studies which will allow the NHTSA to detect significantly substandard vehicles?

GENERAL

15. In the general discussions of the relations between handling and lateral "g" forces, it is apparent that these forces are the average forces felt by the driver, and not the instantaneous forces on the tires and suspension. While these forces are approximately equal when a vehicle is operated on a smooth road below the limit of adhesion, the instantaneous lateral forces may be far in excess of the average forces on a rough or undulating road. What consideration did the NHTSA give, beyond the single rough road test with an automatic pilot of the TTI sequence, to the effect of normal or typical, randomly rough or undulating roads* on the Corvair handling and stability?

16. It is noted in the addendum to the Panel Evaluation that "the Corvair has greater control sensitivity . . . than contemporary vehicles." This control sensitivity would be likely to induce a driver to operate a Corvair nearer to the "divergent instability boundary," or at least in the region of control in which the vehicle may quickly change from under- to oversteer. a) Did the NHTSA attempt to assess this factor in their investigation of the Corvair? b) Was there an attempt to assess the likelihood that a driver operating a Corvair within its limits of control could easily exceed these limits (by light application of the brakes, or by turning the steering wheel an extra quarter of a turn, for example) thus throwing the car out of control inadvertently?

17. (a) Is the NHTSA satisfied that it is possible to make a finding of no defect on the handling and stability of the Corvair when it appears that reasonable definitions of adequate handling and stability are lacking? b) Is the NHTSA satisfied with the contract performance of the Highway Safety Research Institute on vehicle handling standards when the HSRI has not been able

*This phrase denoted roads which have irregularities that can be absorbed by typical automotive suspension systems. Such irregularities, found on most American roads, are due to faulty road construction and repair, normal or extraordinary wear and tear, or to extreme weather damage.

to define such handling standards requirements?

18. In the evidence presented in the *Evaluation of the 1960-1963 Corvair Handling and Stability*, there is good evidence that the pre-1968 VW and the Renault Dauphine have considerable worse handling and stability than contemporary American cars. a) Will the NHTSA also begin investigations into the handling and stability of the Subaru 360 and the VW Microbus.

The NHTSA has done a grave disservice to the public in producing this report which allegedly absolves the Corvair of blame in thousands, of avoidable fatal and serious injury crashes. In doing so, the fundamentally subservient relationship of the NHTSA to the auto industry, and the effective abdication of a segment of the engineering profession have been once again exposed. The question raised by this debacle must not be left unanswered, and the perversion of the function of the NHTSA and the engineering profession must be corrected.

Sincerely,

RALPH NADER,
CARL NASH

AUGUST 18, 1972.

Mr. DOUGLAS TOMS,
Administrator, National Highway Traffic
Safety Administration, Department of
Transportation, Washington, D.C.

DEAR Mr. TOMS: To save you the embarrassment of again using incorrect information about the comparison between the HSRI and TTI tests of the Corvair, I quote from page 20 of DOT publication HS-800-374, *Vehicle Handling Test Procedures*, Volume I:

The Corvair and Fords were used cars and thus required extensive overhauling before testing. New brake linings, shock absorbers, and, where necessary, ball joints and wheel bearings were provided.

The report notes that the outrigger assembly weighed 85 pounds and the controller weighed 260 pounds. It appears that the front seats were removed so that the increase in weight would be less than the 345 pounds. It is my opinion that the primary difference which accounts for HSRI's Corvair turning over the TTI's not is the loading. Otherwise, the only difference is that HSRI's was a 1961 and TTI's was a 1963. Are you willing to admit that there was that much difference between the 1961 and 1963 models?

On the question of degradation, and the Corvair heater, let me quote from page 41 of the investigation report on IR 249:

Initial design and assembly practices seem sufficient to preclude sources of engine fumes at the time of production; however, degradation of engine components may provide sources for such fumes.

This quote contradicts what you said about the consideration of degradation in the definition of a defect. If degradation of the Corvair's suspension system causes the vehicle to have dangerous or defective handling characteristics, how is this different from degradation of the heater causing a defect? I would like to see an adequate discussion of this point from the NHTSA.

Yours truly,

CARL NASH.

AUGUST 23, 1972.

Hon. JOHN VOLPE,
Secretary of Transportation
Washington, D.C.

DEAR Mr. SECRETARY: After sending you an inquiry concerning the investigation by the National Highway Traffic Safety Administration (NHTSA) of the 1960-1963 Chevrolet Corvair handling and stability, further information came to our attention concerning the effect of suspension component degradation on the handling and stability of these vehicles. The NHTSA has set many precedents in the consideration of degradation as

a factor in the determination of what constitutes a defect in motor vehicles and motor vehicle equipment. The policy which has evolved can be stated as follows: It is not sufficient evidence that a defect does not exist in a motor vehicle (or in motor vehicle equipment) to show that there is no hazard to traffic safety in the operation of the vehicle (or the use of the motor vehicle equipment) when it is new or when it conforms to all manufacturer's specifications.

The other major Corvair investigation provides a good example of this principle. In the report of the Corvair direct air heater defect investigation, it is stated:

Initial design and assembly practices seem sufficient to preclude sources of engine fumes at the time of production; however, degradation of engine components may provide sources for such fumes.¹

The investigation proceeded to evaluate the extent to which degradation was taking place in older Corvairs by having owners bring their cars into testing stations where the carbon monoxide leakage into the passenger compartment under normal use conditions was measured. The finding that a significant number of 1965 Corvairs in use by private individuals produced carbon monoxide leakage so that the level in the passenger compartment exceeded 200 parts per million was held as sufficient evidence that a defect existed in the Corvair direct air heater system under section 113 of the National Traffic and Motor Vehicle Safety Act of 1966. Further evidence that the NHTSA found degradation to be a primary factor in this case is that they allowed General Motors to state in their defect notification to owners:

We believe that if a Corvair has been regularly inspected and properly maintained and is in good working order, it will operate without danger of exhaust fumes entering the passenger compartment through the direct air heater.²

The measures to be taken to repair the defect in the direct air heater, approved by the NHTSA, were an inspection to determine if the vehicle is in good condition, and to repair the vehicle to bring it back to good working order if necessary.

Degradation also plays a role in defects which may lead to catastrophic failures such as in the Ford lower control arms found to be defective by the NHTSA on police and emergency vehicles. Chevrolet engine mounts, and many others.

The NHTSA's recently completed investigation into the handling and stability of the 1960-1963 Corvair was solely a study of the vehicle when it meets the manufacturer's specifications. Although used vehicles were tested at the Texas Transportation Institute, they were given a comprehensive inspection and repaired to bring them up to an acceptable level of mechanical condition and safety. Each vehicle was brought up to the manufacturer's specifications in accordance with its individual service manuals.³

Similarly, the Corvairs tested in all GM proving ground tests, in the Falcon-Corvair comparison tests carried out by the Ford Motor Company, and in the Michigan Highway Safety Research Institute's tests were all in essentially new condition.

The apparent complete ignorance of the effects of degradation of the suspension

system of the 1960-1968 Corvair on its handling and stability leave this a completely open question. The conclusions that are contained in the NHTSA's evaluation are far more broad than is warranted by the scope of their investigation.

We do not agree with the conclusions reached even for this limited investigation. Quite apart from the issue of original design defects in Corvair handling performance, we believe that the limited nature of the investigation by the NHTSA should be disclosed along with a warning about the additional hazards of degradation to the Corvair's handling and stability. If this were done, Corvair owners would not be totally misled about the lack of safety in their vehicles, especially if they do not provide unusual maintenance and upkeep for their cars.

At a minimum, the NHTSA should also carry out the following program:

1. That all information currently in the hands of the NHTSA concerning the effects of degradation of the 1960-1963 Corvair suspension system on its handling and stability, and of such degradation in other vehicles, be gathered.

2. That the NHTSA obtain from General Motors all such data in their possession, including information about the life expectancy and degradation rate of Corvair shock absorbers, suspension bushings and bearings, and so on. Further, GM should be asked to produce any evidence that they instructed Corvair owners about necessary maintenance of the Corvair suspension components other than routine lubrication.

3. That the NHTSA obtain from Dr. B. J. Campbell his latest accident data from the state of North Carolina which would be relevant to the relative likelihood of Corvair loss of control (generally reflected in single vehicle accident rates), and an analysis of the Highway Safety Research Center of the relevance of this data to the question of the potential hazards of the Corvair handling and stability as Corvairs are used by the public. The NHTSA should further search for any other make/model accident data which would shed light on this question.

4. That when the warning letter is sent to owners of the 1960-1963 Corvairs, it include a warning about the possible effects of degradation on their vehicles' handling and stability (including the necessity of having tires in good condition as well as properly inflated), and that it include a questionnaire concerning their personal experiences with the Corvair (such as whether they had ever been in a crash or lost control of their Corvairs where they felt that the handling and stability of their vehicles was a factor).

5. That an analysis of the information gained from carrying out points one through four above be carried out to determine if, when degradation is taken into account, the 1960-63 Corvair handling and stability are "defective" as the NHTSA interprets that word.

Unless the NHTSA takes decisive steps to resolve the issue of the Corvair handling and stability, the credibility and competence of the NHTSA will increasingly be called into question.

Sincerely,

RALPH NADER,
CARL NASH.

THE SECRETARY OF TRANSPORTATION,
Washington, D.C. September 15, 1972.

Mr. RALPH NADER,
Washington, D.C.

DEAR MR. NADER: This is in reply to your letters of August 9 and 23, 1972, concerning the investigation of the 1960-1963 Corvair handling and stability. In addition, we have received a letter addressed to Mr. Douglas W. Toms from Dr. Carl Nash dated August 18 on the same subject. In the first portion of this letter the answers are the same number and

sequence as your questions in the August 9 letter.

1. The General Motors' proving ground tests referred to are PG 15699 and PG 17103. These represent only two of the many proving ground reports and other documents and films evaluated by the National Highway Traffic Safety Administration (NHTSA).

NHTSA reviewed available test concepts including Input-Response (no driver feedback) and Task Performance (with human driver feedback control). Task Performance was ruled out because of subjective nature of human control and lack of objective measurement. Input-Response was selected because of objectivity and repeatability; these tests then evaluated vehicle response to an input independent of the driver. Input-Response using sophisticated instrumentation already developed by the University of Michigan study (NHTSA Contract FH-11-7297) was recommended by you in your letter of February 23, 1971. Further recommendations on test conditions were contained in Mr. Gary Sellers' letter of March 17, 1971, to Mr. Rodolfo A. Diaz.

The Input-Response tests were designed to provide a series of maneuvers from which quantitative data could be obtained under rigidly controlled conditions for comparing the performance of the various vehicles. These tests did not establish performance limits for safe or unsafe operation. Such limits are the subject of current vehicle handling research in both industry and Government. Rollover was the criteria in only one (Drastic Brake/Drastic Steer) of the five Input-Response tests; the other four tests resulted in responses indicating other vehicle performance parameters as well as rollover.

2. The NHTSA did not in fact discount the General Motors' tests. We considered them for what they were: controlled tests driven by a professional test driver at increasing speed increments using rapid steering movements, maximum throttle and torque inputs, and other driver actions all designed to test the various suspension modifications to the point of rollover or until it was difficult to produce a more violent maneuver. Examination of the report will also indicate other points relative to the vehicle's handling and stability performance obtained from these tests.

NHTSA evaluation of the actual model year changes from 1960-1963 showed no significant difference in the suspension components. In your letters and public statements you have consistently discussed the 1960-1963 model year Corvairs as a class that performed differently from model years 1964-1969. Obviously, in this test program, it was not possible to test all body styles. Both the Panel and NHTSA agreed no further testing was required.

3. NHTSA contacted the original equipment tire manufacturers (OEM) to obtain tires produced for use in the 1960-1963 period. The manufacturers then recommended tires (construction and size) that were currently available and closely matched the 1960-1963 OEM tires. These tires were used on all the vehicles tested with the exception of the Renault.

It is interesting to note that very few 1960-1963 Corvairs would still have their original tires. Therefore, the tires actually used in the tests were representative of tires most likely to be used on those Corvairs today.

4. All vehicles were tested in the fully loaded condition to assure uniformity and comparability in the program. While the weight of the test equipment was such as to only partially load a six-passenger vehicle, this same weight imposed a heavier, almost full, load on the smaller four-passenger cars.

The vehicles were loaded in a manner such that each wheel would have the same load

¹ Investigation Report Intrusion of Engine Fumes Through Heater System of 1961-1969 Model Chevrolet Corvair Vehicles [IR 249], p. 41.

² Letter sent by the Chevrolet Division, General Motors Corporation to 1961-1969 Corvair owners dated December, 1971, p. 2.

³ Evaluation of the 1960-1963 Corvair Handling and Stability, U.S. Department of Transportation, NHTSA, Washington, D.C., July, 1972, p. 57.

it would carry when the vehicle was loaded to its maximum passenger and luggage weight. Therefore, the change in the center of gravity location closely compared to that which would occur with the maximum passenger and luggage loading.

Your associate, Mr. Sellers, stated in this letter of March 17, 1971, that "the critical variables (such as high coefficient of friction, equal tire pressures, heavy loading, etc.) are the most severe levels—those most likely to reveal the defects alleged—or the differentials in the margin present. If under these conditions, the Corvair does not respond in a dangerous fashion . . . then the public can be content that the defects revealed in the GM proving ground reports are anomalous or mistaken."

It was not possible to test the vehicles included in the program under all the possible variables of loading, environment, maneuvers, etc.

5. The input-response tests conducted at TTI were comparative type tests. After the pilot program was completed and the testing procedures for the entire program set, it was necessary to conduct all the tests within the procedures selected to assure comparability. In the drastic steer-dramatic brake maneuver, the magnitude of the brake line pressures (to achieve the four-wheel lock) had to be varied to suit each vehicle because the brake line pressures required for lock up were different for each vehicle. The timing of the point of brake application as it related to the peak yaw rate was determined for each vehicle and the brakes applied at the same point of the maximum yaw rate. This provided for uniformity in the point of the lock up.

The 1963 Corvair tested at TTI was rebuilt to the manufacturer's specifications and was therefore typical of the original equipment configuration, as were the other vehicles tested. When the Corvair was tested, two vehicles had already completed the program. One of these vehicles made outrigger contact during two of the test maneuvers. There is no reason to consider the test program inadequate.

6. All testing was conducted on high friction surfaces as one of the controlled conditions in the test procedures. There is an infinite variety of other environmental conditions that contribute to crashes, including types of pavement and pavement conditions (wet, dry, dusty, oily, etc.). Further, Mr. Sellers in his letter of March 17, 1971, to Mr. Diaz (item 4, page 3) recommended the use of a high coefficient dry surface to reveal the complete transitional response to the car most accurately.

7. The Input-Response tests were conducted under carefully controlled conditions so that comparisons of performance between vehicles could be made from quantitative data derived from testing all vehicles under the same conditions. One of the test variables is tread wear and to provide uniformity and repeatability of test results tread wear had to be controlled. It was determined that uniformity and repeatability could best be achieved when the tires were not worn more than 20 percent.

8. All the vehicles were tested with the vehicle manufacturer's shock absorbers that were available through their dealers for the particular model year tested at the time of the testing program. NHTSA did examine information regarding the specifications of the original equipment shock absorbers and the service replacement shock absorbers obtained for testing on the 1963 Corvair. There was no appreciable difference in the physical dimensions of the shocks. The extended length of the rear shocks, which determines the maximum rear wheel rebound travel, was 0.027 inch longer on the service replacement shock than for the original equipment shock. The performance specifications of the original equipment and the service replace-

ment shock absorbers generally overlapped, within their tolerance ranges, with only a moderately higher load specification for the rebound stroke of the rear shock.

9. Our conclusion, remains the same, if the VW and Renault, the foreign vehicles, had not been included in the tests.

It is concluded that the handling and stability performance of the 1960-1963 Corvair does not result in an abnormal potential for loss of control or rollover and that its handling and stability performance is at least as good as the performance of some contemporary vehicles both foreign and domestic (emphasis added).

The domestic vehicles were the Valiant and the Falcon.

The purpose of the tests was to compare the handling and stability performance of contemporary vehicles with the 1960-1963 Corvair. The VW and Renault were contemporary vehicles.

10. At the time of selection, Dr. Paul H. Wright was the Project Director of the Georgia Institute of Technology multidisciplinary accident investigation team under contract to NHTSA. When selecting the Panel members, our criteria was to obtain recognized professionals with diversified backgrounds in various aspects of dynamics and vehicle performance and independent from the automotive industry.

Dr. Wright was selected for his expertise in accident investigation analysis. We do not believe a conflict of interest existed. Mr. Caldwell was selected for his expertise in design, performance, and driver handling of vehicles. We believe the Panel was competent, professional, and independent in their analysis.

11. The time charged to the Government was 15 man days per Panel member. In addition, each member contributed some uncompensated time to the Panel evaluation.

The Panel was oriented on and given access to all material reviewed, analyzed, or evaluated by NHTSA in the entire investigation. As new information was made known to NHTSA it was also brought to the attention of the Panel. Specific material examined by the Panel is documented in Section VII, References to the Panel Report.

12. We believe the Panel was competent, professional, and independent in their evaluation.

In order to determine whether any further testing by NHTSA was required, the Panel found it necessary to comment on those handling and stability characteristics that may have led, in their opinion, to additional testing. Their comments were the basis for their determination that no further testing was required. Obviously the Panel was not constrained from making any other pertinent comment they wished to offer, nor were the individual members constrained in any way from submitting dissenting opinions.

13. As stated in the report, Dr. B. J. Campbell of HSRC was contacted and the information he presented at the time was reviewed and considered. His data did not contain a category that included rollover; therefore, it could not be compared with Cornell Aeronautical Laboratories' (CAL) data.

Dr. Campbell's "ran-off-the-road" category of crashes included all vehicles that ran off the roadway, for whatever reason, such as blowouts, fell asleep at the wheel, excessive speed, etc., before striking the object. The data also had other vehicles that have the reputation of being good handling automobiles having percentage figures similar to the Corvair and Volkswagen for the "ran-off-the-road" category. A vehicle that had a higher "ran-off-the-road" category percentage had a lower multiple vehicle accident percentage. Thus, if a vehicle driver was able to maneuver his vehicle to avoid an on-the-road crash and ended up in an off-the-road crash, this affected the percentages.

Mr. Garrett of CAL was contacted re-

garding the model years of the vehicle in his report. He indicated that at least 80 percent of the vehicles were 1963 or earlier; therefore, the results did primarily reflect the model of concern to the analysis.

14. The data used by NHTSA was the information that was available. Data of this nature is limited and additional data is considered desirable. Therefore, the NHTSA is planning to have a data gathering program which would allow meaningful analysis, by vehicle classes, of the accident data now collected.

15. In reviewing all the material in this investigation, NHTSA evaluated many documents and films that showed the effects of transient responses when driving on randomly rough or undulating surfaces.

16. Control sensitivity is a characteristic of the vehicle; it does not induce a driver to make any steering corrections. However, if a driver has to make any steering corrections, a vehicle with greater control sensitivity requires less steering angle change to maintain a desired path than one with lesser control sensitivity. A vehicle with greater control sensitivity is considered a more maneuverable vehicle.

17. The conclusions of the NHTSA report are obvious evidence that a finding of no defect on the handling and stability of the Corvair is possible in the absence of vehicle handling and stability standards. Of course, the decision is much more difficult in this case and that is the reason for using the comparison method for testing contemporary vehicles.

The NHTSA has awarded a follow-on contract to the Highway Safety Research Institute (HSRI) University of Michigan (Contract DOT-HS-031-1-159) for further vehicle handling performance research. This contract would not have been awarded if the contract performance of HSRI was unsatisfactory. The purpose of this research is to provide the basis for handling standard requirements.

18. The tests conducted by NHTSA in Texas were comparative in nature. All the cars in the tests performed differently. The NHTSA input-response tests did not indicate that the degree of variance between the handling and stability characteristics of the Volkswagen and Renault with that of other vehicles tested was sufficient to warrant the initiation of separate investigations of the two named vehicles at this time. However, this does not preclude us from considering additional evidence or further evaluation of our test data if it becomes available with respect to these two, or any other vehicles.

Your letter of August 23, 1972, and Dr. Nash's dated August 18, 1972, center around two theses: first, the different test results of the Corvair exhibited in the HSRI and TTI tests; and, second, the effects of component degradation.

There are many differences in purposes of the HSRI and TTI tests. As in any scientifically based test, it is standard practice to examine the effect of the variation of a parameter by holding all other variables essentially constant and changing only the one parameter under study. This approach was utilized in the two tests in question. The HSRI tests were for the purposes of designing and conducting a pilot program to test procedures and equipment to measure the performance of vehicles without the effects of drivers. In doing this, it was not necessary to place the configuration of the vehicle at any specific level other than satisfactory nor to record precisely the vehicle's condition. It was necessary to insure that these factors remained constant while the effect of variations in the type and magnitude of vehicle inputs was studied. The same philosophy extends to all other conditions surrounding these tests. On the other hand, the purpose of the TTI tests was to compare the handling and stability characteristics of the

1960-1963 Corvair with the same characteristics of some selected contemporary vehicles. In doing this, only the vehicle model was allowed to vary. There was no variation between the vehicles' configurations since they were all restored to manufacturer's specifications, the environmental and other test conditions were held as closely as possible and each vehicle was subjected to the same input. Although these tests were conducted properly, it is not proper to attempt to draw a conclusion from the combination of the two tests relative to cause and effect when in fact several parameters are varying at the same time. To attempt to do so violates the experimental procedures described above and is careless, arbitrary, and capricious with the data.

Relative to the question of degradation it is a well known fact that degradation of components or systems, including those that are part of motor vehicles or motor vehicle equipment, cause some change in performance characteristics. In the case of motor vehicles, what is not known is the direction or degree of change due to degradation. For this reason, research is necessary to determine the change in performance levels. In the case of vehicle handling, certain basic research projects are underway to determine the base line performance of new vehicles under certain conditions. Studies have been and are currently being conducted to measure the effect of degraded components on vehicle handling. One such study "Effects of Steering and Suspension Component Degradation on Automobile Stability and Control" was completed by Cornell Aeronautical Laboratory, Incorporated, in January 1971 under NHTSA Contract No. FH-11-7384. Another study is in progress, "Component Degradation, Inspection Equipment: Steering and Suspension Performance," being conducted on current model vehicles by the Highway Safety Research Institute, University of Michigan, under NHTSA Contract No. DOT-HS-031-1-126. For the purposes of our test program, where we were comparing the stability and control performance of the Corvair to other contemporary vehicles, it was necessary to place the vehicles in a like condition or to the manufacturer's specifications in accordance with its individual service manuals. There is no known way of putting partially degraded vehicles in the same or like conditions. Therefore, we believe that conclusions drawn from undefinable "partly degraded" vehicles would require basing them upon speculation rather than facts.

On the other hand, the tests did provide a considerable element of degradation experience. During the tests the Corvair was subjected to approximately 250 test runs without replacement of components in question. Throughout these tests with the attendant vehicle degradation, there was no observable loss in handling and stability performance of the Corvair and certainly it was no worse than the other cars tested. These tests were very severe and the hard usage the cars were subjected to is evidenced by the fact that several of the other cars did degrade to the point of major failures during the testing.

As reference to our final investigation report will substantiate, this does not infer that degradation was not considered elsewhere. In addition to conducting the above tests, a vast amount of other tests and data were reviewed, some with the specific intent of testing degraded performance. Much of this information involved vehicles in various states of degradation. Although grossly degraded vehicles were not used in these tests, it might be noted that this agency would not, under normal circumstances, make a defect determination on the sole basis that a vehicle has been neglected or degraded by its owner. In any event, a vehicle that has survived 64 test runs and 11 rollovers can hardly be considered undegraded, no matter how many damaged parts were replaced for pur-

poses of continuing the tests. The data on this and other similar vehicles were examined. Frame by frame analysis of the films and detailed studies of the data failed to expose any unusual performance characteristics caused by degradation.

Further, it is to be noted that two out of three of your "qualified engineers who are experts in vehicle handling" state "we believe that the degradation of the various suspension components would probably have little net effect on the rollover characteristics of the Corvair."

From the total investigation we do not find that the Corvair's loss in handling and stability performance due to degradation is any worse than that of contemporary vehicles, and it was the total investigation including all sources of information that formed the basis for our determination that the Corvair's handling and stability performance does not constitute a defect.

Sincerely,

JOHN VOLPE.

EXHIBIT C

Senator HARTKE. What year Corvair was used?

Mr. TOMS. '63.

Senator HARTKE. Why weren't earlier models, '60 and '61? After all, they were the ones that had a higher incidence of roll-over.

Mr. TOMS. No. As a matter of fact, Mr. Nader has authorized or designated a representative suggesting the '63.

Senator HARTKE. He will be here in a minute, we will ask him.

Mr. TOMS. Please do. And as we debated this we felt that the '63 was the one that would be most characteristic for this type of testing.

Senator HARTKE. What type of tires were used on a Corvair test?

Mr. TOMS. They were the tires available in the market that were closest to the original specifications of the manufacturer.

Senator HARTKE. Did they differ substantially in the make, the tread style material from those which came with the original Corvair?

Mr. TOMS. There were differences, but my engineers had told me these differences were not significant.

Senator HARTKE. My understanding is that all—

Mr. BERNDT. With respect to the tires, Mr. Chairman, the tires were recommended by the manufacturers of each vehicle that was tested as the most nearly representative tires of those on the original models.

Senator HARTKE. I understand that all the vehicles that were tested represented the manufacturers' maximum recommended load. Is that true?

Mr. TOMS. That is correct.

Senator HARTKE. Why?

Mr. TOMS. Because, number one, again, Mr. Nader's representative suggested that we test them in a fully loaded condition. Number two, the type of instrumentation on the controllers of these vehicles were heavy and in general it was close to the equivalent of a fully loaded vehicle.

Senator HARTKE. One of the people who you worked with is Mr. Sellers; is that correct?

Mr. TOMS. He was Mr. Nader's duly authorized representative at that point in time.

Senator HARTKE. Is he an engineer?

Mr. TOMS. He is not, to my knowledge.

Senator HARTKE. All right. Now, you apparently adopted—

Mr. TOMS. He did consult with and rely upon the advice given to him by engineers.

Senator HARTKE. All right.

Mr. TOMS. This is what we were led to believe.

Senator HARTKE. What I want to find out, really, from you, is did you follow the recommendations of Mr. Sellers just to appease Mr. Nader.

Mr. TOMS. No. We argued with him on a

number of points and we were able to come to an agreement as to what the test program should be like.

Mr. BERNDT. Actually Mr. Sellers was very well advised of the opinion of our engineers and we understand that he had first-rate engineering advice and all of the test procedures that he suggested in his letter to us—it is in the appendix of the Corvair report—were thoroughly reviewed by our people and they concluded that it was indeed a very good recommendation.

[From the Washington Post, July 27, 1973]

GM IS GIVEN BREAK IN CORVAIR TESTS

(By Jack Anderson)

Faced with the recall of 235,000 to 400,000 old Corvairs which could cost lawsuits totaling tens of millions of dollars, General Motors has been let gently off the hook by the Transportation Department.

We have evidence, however, that the favorable report on the Corvair was not only rigged but that Doug Toms, the federal auto safety czar who issued it, never even read it before it was made public.

Instead, the report and its accompanying press release were handled in the 10th-floor offices of Transportation Secretary John Volpe. Words were even put in Toms' mouth that he never spoke.

What Toms said in private about the problem-plagued, 1960-63 Corvairs was altogether different than what the Transportation Department quoted him as saying.

"I've driven enough of these cars, and I don't like them either," Toms confided to the Corvair's nemesis, Ralph Nader. "I felt the right inside wheel jack up on the Corvair . . . I know Corvairs roll over and go out of control, and people have problems with them."

Both Toms and Nader confirmed this private conversation to my associate Les Whitten.

Yet the official press release quoted Toms as saying that "handling and stability performance of these cars is at least as good as the performance of several contemporary domestic and foreign vehicles. The Corvair performance does not result in an abnormal potential for loss of control or rollover."

This statement was manufactured for Toms, he acknowledged, and put out by Volpe's office. Toms saw it for the first time after it had been released.

TAMPERING WITH SAFETY

Not only was the publicity on the report prepared on high, but there's evidence the Transportation Department tampered with motorist safety in setting up the Corvair tests.

For instance, the 1963 Corvair was tested but not the 1960-61-62 models. Yet many of the 300 Corvair suits against GM involve fatalities in the older cars.

New tires were also used on the test cars instead of the worn tires that had figured in many fatal Corvair rollovers. And unlike GM, Ford and other tests in 1960s, which produced numerous Corvair rollovers, the new federal tests used "automatic pilots" instead of human test drivers.

These automatic pilots were designed by an institute, which was established by a \$10 million grant from GM, among others, and is still funded, in part, with \$1 million a year from the auto industry.

The Transportation brass were fully aware of this before they chose the Highway Safety Research Institute, University of Michigan, to participate in tests affecting its benefactor. An institute spokesman denied to us that it is in "anybody's pocket."

Finally, the test results were reviewed by three distinguished auto experts, hand-picked by the department, who had no research and testing credentials in car handling.

The tests were vital to GM, which would have been compelled to start an immensely

costly recall campaign if the Corvairs had been found unsafe. The recall also could have been used against GM in its multimillion-dollar litigation over the Corvairs.

Ralph Nader called Toms after the rigged Corvair report was issued. "There is a helluva lot of political overtones, some spoken, some unspoken, about this report. Aren't you supporting the Democrats? This is a political year, you know," Toms said to the nonpartisan Nader.

Both men agree this is what Toms said. But Toms insisted afterward that he had meant to refer only to the politics of the report's critics.

Footnote: The new report fails to mention even as a footnote that Corvairs of all years have a defective heating system design that may permit lethal carbon monoxide to leak into the passenger compartment. GM, in a letter, has admitted the fault.

EXHIBIT D

CONSUMERS UNION,
September 27, 1972.

Mr. DOUGLAS W. TOMS,
Administrator, National Highway Traffic
Safety Administration, Department of
Transportation, Washington, D.C.

DEAR MR. TOMS: This division performs tests and gathers data for the preparation of the Consumer Reports evaluations of automobiles. Not all of the test results and research data are used in the final published report since the editorial space is limited and the layman's appetite for all the details is probably satisfied with the highlights.

Nevertheless, when we prepare ourselves to discuss the workings of another organization, we engineers must be able to ascertain that every factor of the subject has been carefully examined before we can write an analysis critique. Consumers Union would like to do a piece on the DOT Evaluation of the 1960-63 Corvair Handling and Stability. We have had a copy of the report and the panelists' evaluation and suspect that the published report is an "executive summary" without being so defined, since there seems to be much information omitted. Perhaps you would care to share this additional information with us for the benefit of our readers.

TEST VEHICLE DATA

The report identifies the test vehicles rather sketchily. What were the body styles, engine and transmission options? What was the source of the test cars? What was the condition of the bodies (were they sound or rusted)? Exactly what components were replaced in order to put these cars into the condition that represented the original specifications? What was the brand and construction of the tires selected for each vehicle? Was it necessary to have some of the replacement parts made anew on a limited production basis by the original manufacturers? (We know from our own experience that after market and replacement parts are not always the precise duplicate of the original equipment, especially tires and shock absorbers).

MODEL CHOICE

Some criticism has already been raised concerning the DOT choice of the 1963 Corvair rather than an earlier model. Did the DOT task force have available data which substantiated their choice? Are there published data concerning the spring and shock absorber rates, the control arm travel limitation, and the suspension and steering geometry for each of the model years in question? Can the DOT share this with Consumers Union?

TEST CONDITIONS

The DOT report says that the tests were run with the cars loaded to the manufacturer's maximum recommended load. Ordinarily this would seem to be the worst-case

test condition, but if the question is one of overturning stability, might not there have been some justification to running lighter loads in those cars equipped with swing axle rear suspensions? It could be argued that regardless of the effect on the height of the center of gravity, the lighter load would have allowed the car to stand higher with more positive camber in the rear suspension. This point is arguable, but we would like to know if there was some thought given to both considerations.

A similar point can be made about the requirement that the test tires be replaced when worn 20 percent. It is generally known that, on dry pavement, nearly bald tires will produce much higher side force and aligning torque than nearly new tires. If this is so, and if the potential for overturning is increased with greater tire forces then it would seem as if this stringency was wasted unless it was done only for the sake of consistency.

TEST METHOD

Because we are reporting to a non-technical readership, we tend to stress the subjective evaluation backed with objective measures. However, the choice of test techniques used in the Evaluation defy correlation to the real-world experiences of our readers. The DOT seems to have selected the HSRI Input-Response methodology because it is impartial and repeatable. Has the DOT other material to provide to help us to describe what was done in the testing? There was very little description of the test courses, or the test equipment in the Evaluation—no diagrams or pictures. Someone familiar with the HSRI publications is not totally in the dark, but we would appreciate a description from the DOT.

The input-response tests are difficult to explain to a general audience because of the instrumentation and special analysis required to rank the results. It is also not easy to explain why a vehicle moving randomly on a large undefined paved surface can be evaluated better than one which is required to be driven thru some sort of pathway. The average person realizes that his car must respond to his commands to stay on the road. He can probably appreciate the significance of an experiment if the test path is defined on a large surface with two rows of traffic cones, rather than by curbing and a centerline. It is going to be hard to explain to our readers why Input-Response was chosen over Task Performance, especially, since so much of the criticism of the Corvair had to do with the alleged mis-match between the driver input and the vehicle response.

Mr. Toms, we feel obligated to report some critique of the DOT Evaluation to our readers since we feel that the Evaluation was written defensively and without concern for general understanding; and because of the apparent preoccupation with the overturning potential of the early model Corvair. We realize that these things may have been forced upon the DOT by the unrelenting pressure from the Nader group. However, our own evaluation of the Corvair's handling originally was not too critical, but by today's stricter standards (our standards) we might rate it less satisfactory for emergency handling. You might think of it this way—if you lived twenty miles from town on a winding country road, would you like to drive this particular car to the hospital with if one of your children were seriously injured? Some cars are more "forgiving" than others.

Sincerely,

ROBERT D. KNOLL,
Chief, Auto Test Division.

U.S. DEPARTMENT OF TRANSPORTATION,
Washington, D.C., November 8, 1972.

ROBERT D. KNOLL,
Chief, Auto Test Division, Consumers Union,
Orange, Conn.

DEAR MR. KNOLL: This is in response to your letter of September 27, 1972, requesting

further information with respect to the "DOT Evaluation" of the 1960-1963 Corvair Handling and Stability. Many of the questions raised in your letter are answered in a November 1971 report from the Texas Transportation Institute, Texas A & M Research Foundation, entitled "Input Response Tests of Selected Small Passenger Cars" (hereinafter referred to as "the TTI Report"). This report, along with the report of the specially-convened Panel of experts assembled by the NHTSA to make recommendations with respect to its testing program, as well as a great deal of manufacturer information and test reports, served as the basis for the "DOT Evaluation," which is an analysis as well as a summary of these documents and information. A xeroxed copy of the TTI Report, which is currently out of print, is enclosed for your information. Additional factual information with respect to Corvair Handling can be found in the voluminous public file concerning the Corvair Handling Investigation. This file, titled Handling and Stability 1960-63 Corvair, IR-279, is available for inspection in the NHTSA Technical Reference Division, Room 5108, DOT Headquarters Building, 400 7th Street, S.W., Washington, D.C., during business hours. Material contained in the public file may be copied in accordance with our normal procedures.

While the TTI Report does answer most of your questions, I also would like to address myself to them briefly. I shall treat each of the subject areas you have raised separately.

1. TEST VEHICLE DATA

The test vehicles and backup vehicles were purchased from dealers and private owners in the Houston-Dallas-Bryant, Texas, and Buffalo, New York areas. (The Buffalo vehicles were purchased when an organization in that area was under consideration for the award of the testing contract.) Each vehicle used in the tests was brought up to the manufacturer's specifications in accordance with the service manuals. Brake systems and tires were replaced on all test vehicles; suspension system elements and other components were replaced as needed. Replacement parts were obtained from the original manufacturer's (in most instances, the dealer's) supply, they were not necessarily identical with the original equipment but were recommended and stocked as replacements by the manufacturer or dealer. No original equipment replacement parts were specially manufactured for use in the testing program. Original equipment tire manufacturers recommended currently available tires which were comparable in their specifications (construction and size) to the original equipment. These recommended tires were used for all vehicles except the Renault. Because it was not possible to obtain original equipment-size tires for the Renault before the inception of the testing program, the optional, slightly larger tires recommended by the manufacturer were substituted.

It is interesting to note that very few 1960-1963 model year vehicles are still equipped with their original tires and shock absorbers. Therefore, the tires and shock absorbers actually used in the tests were representative of the equipment most likely to be in use on such vehicles today.

2. MODEL CHOICE

Prior to selecting a specific Corvair vehicle for testing, the DOT task force consulted the service manuals for all model year Corvairs, and concluded that there was no significant difference in the suspension systems of 1960-1963 model year Corvair vehicles. (This conclusion coincided with the position of Mr. Ralph Nader and his associates, who identified the 1960-1963 model year Corvairs as a class that performed differently from 1964-1969 model year Corvairs.) Published data are available concerning shock absorber rates, control arm travel limitations and suspension

and steering geometry for each of the model years in question. This information can be found in the Corvair Handling public file.

3. TEST CONDITIONS

It was not possible to test the vehicles included in the program under all conceivable variables of loading, environment, maneuvers, etc. While the weight of the test equipment was such as to only partially load a six-passenger vehicle, this same weight imposed a heavier, almost full, load on the smaller four passenger cars. Thus, all vehicles were tested in the fully loaded condition to assure uniformity and comparability in the program. It is interesting to note that these severe test conditions were urged upon the agency by Mr. Nader.

The severe test maneuvers generated severe sidewall wear on the tires of the test vehicles. Accordingly, in order to prevent the accumulation of biased test data from worn tires, the requirement that tires be replaced when worn 20 percent was imposed. Moreover, the replaced requirement of tire replacement at a uniform level of wear ensured uniformity of test conditions with respect to each of the test vehicles, so that comparisons of performance between vehicles could be made from quantitative data. Thus, uniformity of test conditions and repeatability of test results were very important considerations underlying the tire replacement specifications in the testing program.

4. TEST METHOD

The Input-Response tests were designed to provide a series of maneuvers from which quantitative data could be obtained under rigidly controlled conditions for comparing the performance of the various vehicles. Prior to conducting the testing program, the NHTSA reviewed available test concepts, including Input-Response (no driver feedback) and Task Performance (with human driver feedback control). Task performance was ruled out because of subjective nature of human control and lack of objective measurement. Input-Response was selected because of objectivity and repeatability; these tests then evaluated vehicle response to an input independent of the driver. Input-Response testing using sophisticated instrumentation already developed by the University of Michigan study (NHTSA Contract FH-11-7929) was recommended by Mr. Nader and his associates.

In addition to the quantitative data obtained through the input-response testing program, the NHTSA studied and evaluated films, proving ground test reports, and other documents submitted by General Motors which relate to task-performance testing on the Corvair. A number of these films and documents are included in the Corvair Handling public file. It should be noted that this task-performance data revealed no mismatch between driver input and driver response, as your letter suggests.

Thorough documentation of the input-response testing program, including text, photographs, diagrams, and charts, is contained in the TTI Report.

I hope that this letter has served to increase your understanding of the Corvair handling test program, and that it will be of assistance to you in communicating with your readers.

Please let me know if I can be of further assistance.

Sincerely,

LAWRENCE R. SCHNEIDER,
Chief Counsel.

U.S. DEPARTMENT OF TRANSPORTATION,
Washington, D.C., February 23, 1973.

HON. WARREN G. MAGNUSON,
Chairman, Committee on Commerce,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reply to your letter of February 1, 1973, concerning the handling and stability of the 1960-63

Corvair. Your questions are answered serially.

QUESTION NO. 1

As we previously stated in our letter of December 20, 1972, the Corvair investigation generated a great deal of investigative information from the industry, the public, and the National Highway Traffic Safety Administration (NHTSA) comparative testing program. Upon completion of the investigation, most of this information was placed in our public files. Other miscellaneous test material and data, including the pilot test program, test data rejected because of instrumentation errors and incorrect procedures, and certain noncomparative tests not relating directly to our comparative testing were not placed in the public file at that time because our technical staff did not consider this material and data to be valid for the comparisons nor was it used for this purpose. At no time was this material intentionally withheld from the public. Once compiled and indexed, this miscellaneous material, which in no way invalidated or compromised the conclusions of NHTSA's report, was added to the public file and voluntarily forwarded to the Committee.

Also, this material was not withheld from the Panel. It was always available for their review as part of the large volume of documents and films accumulated during the extensive NHTSA investigation. The Panel had a sizable task in reviewing all the material studied and work performed by NHTSA and they did not examine in detail each and every piece of information. Subsequently the Panel was contacted to determine if specifically considering the noncomparative tests would result in modification of their conclusions or report. Each of the Panel members indicated that it would not.

There were some considerable and important differences between the Highway Safety Research Institute (HSRI) tests and the Texas Transportation Institute (TTI) tests. One significant difference was the condition of the test surfaces which in both cases were former aircraft runways. The surface in the original HSRI tests, which they recognized as being in poor condition, was concrete that was spalled and cracked with marked irregularities and uneven displacement at the divider strips. The test surface at TTI on the other hand was in much better condition, with more even and uniform surface and less distortion at the divider strips. HSRI personnel aided in the selection of the TTI test site and recommended the actual area on the runway that was subsequently used. Even this test surface at TTI was too irregular and rough for HSRI's follow-on research contract; this area was resurfaced to create a smooth, high-coefficient skid pad that eliminated these irregularities.

Another significant difference was the effect of using tires that had unique and abnormal sidewall, shoulder, and tread wear patterns resulting from previous severe limit maneuvers and using tires that had been broken-in and the wear monitored to assure uniformity and repeatability in the tests.

The tires in the 18 p.s.i. (hot) front and 30 p.s.i. (hot) rear TTI noncomparative tests were tires that had the unique wear patterns from previous severe limit maneuvers similar to those believed to be on the Corvair during the HSRI drastic steer, drastic brake maneuver. The tires on the 28 p.s.i. (hot) front and rear TTI noncomparative tests were tires that had not been used in previous limit maneuvers. These tires were broken-in and the wear monitored in accordance with the procedures of the comparative test program. The wear referred to is that resulting from severe limit maneuvers, not normal highway wear.

No outrigger contact occurred during any of the TTI 28 p.s.i. (hot) front and rear tire noncomparative maneuvers. During one 50

m.p.h., 18 p.s.i. (hot) front and 30 p.s.i. (hot) rear TTI noncomparative maneuver, with the tires that had the unique sidewall, shoulder, and tread wear from previous severe limit maneuvers, outrigger contact occurred. The tires were switched so the tires with the smaller amount of wear from the limit maneuvers were placed on the outboard side of the vehicle in the turn and the tires with the greater amount of wear were on the inboard side of the turn. No outrigger contact occurred at either the same steering input or more severe steering inputs up to the limit of the equipment.

During the 60 m.p.h., 18 p.s.i. (hot) front and 30 p.s.i. (hot) rear TTI noncomparative maneuver again with tires worn from previous severe limit maneuvers, no outrigger contact occurred until the last run with the maximum (for the equipment) steering input. When the rear tires were switched left to right and right to left and the maneuver repeated at this maximum input, no outrigger contact occurred.

Another difference between the HSRI Corvair drastic steer, drastic brake maneuver and the TTI noncomparative maneuvers was that the large majority of TTI noncomparative maneuvers were conducted at more severe levels.

It is NHTSA's view that none of the miscellaneous test material and data modifies our previously announced decision that the handling and stability performance of the 1960-63 Corvair does not result in an abnormal potential for loss of control or rollover and that its handling and stability performance is at least as good as the performance of some contemporary vehicles both foreign and domestic. If anything it adds support to our decisions relative to importance of certain controls necessary for this type of testing. The variation in results on tests due to abnormal tire wear is also supported by more recent research.

QUESTION NO. 2

Mr. Nader now attempts to deny the advice of his own experts. On March 17, 1971, Mr. Gary Sellers, Mr. Nader's expert advisor at the time, wrote a letter to Mr. Rodolfo A. Diaz stating that in his opinion the maximum vehicle load represented the most severe test conditions for this parameter. Contrary to "speaking for himself," as Mr. Nader states, Mr. Sellers' opening paragraph states: "Mr. Nader has asked me to follow-up on this matter. . . ." No less than 10 times in this letter he refers to Mr. Nader and himself as "we" or "our." Further, these recommended test procedures were made known by copies of Mr. Sellers' letter to Mr. Nader and two of his other engineering experts, Mr. Edward Heitzman and Mr. Albert Fonda, who never indicated any disagreement. In documentation of these facts, we quote more fully from Mr. Sellers' March 17, 1971, letter:

"In general, we suggest that the testing on these vehicles begin under conditions where the critical variables (such as high coefficient of friction, equal tire pressures, heavy weight load, etc.) are at the most severe levels—those most likely to reveal the defects alleged—or the differentials in the margin of safety present. If under these conditions, the Corvair does not respond in a dangerous fashion, at variance with the public's expectation of response, then the public can be content that the defects revealed in the GM proving ground reports are anomalous or mistaken. . . ."

and:

"Our more specific suggestions are: . . . 5. That the vehicle also be tested with the maximum recommended load (such as weight of four to six passengers), as might often be experienced on a Sunday drive. (Mrs. Collins had six people in her vehicle and luggage on the roof when her Corvair went out of control.) . . ."

Due to the complexity of any vehicle handling and stability tests, it is impossible to test all vehicles in all configurations and load conditions. The nature of the NHTSA input-response tests required a heavy instrumentation load and as these tests were for comparison, the full load test condition was adopted as the test configuration most compatible for all the vehicles involved. This was, of course, in keeping with the recommendations of Mr. Nader's experts as to the most severe conditions. It would appear that the Corvair critics' objections are prompted more by the results than by an objective review of the procedures.

Considering the infinite combinations of vehicles we do believe that our tests and studies have sufficiently covered the subject, including variations of configurations, to establish that the Corvair handling is not a safety related defect.

NHTSA evaluated a considerable amount of documents and films from General Motors (GM) and other sources where human drivers were operating Corvairs under extremely severe conditions as well as normal conditions. The NHTSA rationale for not using human drivers in its test program is documented on pages 6-10 of the NHTSA report. Essentially, this part of the report explains the limitations in the state-of-the-art relative to vehicle handling, the lack of definitive standards, the problems of quantifying the effects of driver-vehicle-road interface, and the reasons for NHTSA selection of input-response tests for the Corvair test program. Further, it explains the specific criteria for the selection of the maneuvers and test conditions actually used in the NHTSA tests.

Finally, the NHTSA would like to call the Committee's attention to the fact that the record is full of opinions by individual drivers, some of considerable reputation. The injection of still another human driver into the tests, with the attendant questions of driver selection, driver skill, and definition of "normal conditions," would have yielded just another subjective opinion and resulted in prolonging the debate as long as one side or the other was not satisfied with the result.

The problem of determining the effects on vehicle control of drivers impaired by carbon monoxide, alcohol or drugs is the subject of major research by both industry and Government and is, of course, beyond the scope of the Corvair test program. With the current state of scientific knowledge on this subject it is easy to philosophize but virtually impossible to quantify this effect on the Corvair's handling and stability.

QUESTION NO. 3

NHTSA is confident that none of the officials assigned to the Corvair handling and stability study had a conflict of interest. Mr. Ernest P. Wittich, a former employee of GM, has been accused of having a conflict of interest by Mr. Nader. While employed by GM, Mr. Wittich participated in a savings plan that resulted in the simultaneous acquisition of GM's stocks and Government savings bonds. At present he still retains the nominal amount of stocks and Government bonds acquired through this savings program. The modest amount of his holdings is considered to be inconsequential to affect the integrity of an employee's services in any manner in which he may act in his governmental capacity. Contrary to Mr. Nader's inferences, Mr. Wittich did not have sole control of the study or test preparation. In addition to normal supervision by his engineer supervisors, he was joined by three other engineers during the tests. Further, the test program and procedures were formulated by a larger group of engineers and Mr. Wittich had minimal input into these requirements.

QUESTION NO. 4

The NHTSA did not accept the opinions or conclusions of either the proponents or

opponents of the Corvair without question. We did solicit and accept films, data and information from various sources and read and listened to many opinions. The Administration then sifted and evaluated these inputs to arrive at our own independent conclusions. The fact that we may have arrived at the same conclusions as someone else does not mean they were adopted without question. Allegations to the contrary are simply not true.

More specifically, NHTSA's evaluation of the significance of these GM rollover tests is documented on pages 34 and 35 of the NHTSA report and the summary is quoted here for your information.

"In summary, because of the nature and severity of these development tests which were not representative of the practical driving environment, these tests should not reasonably be interpreted to conclude that the 1960-1963 Corvair is susceptible to rollover at low speeds on a flat surface in the normal driving environment."

The foregoing is NHTSA's evaluation—not GM's.

In addition to GM's data on driver-vehicle interaction, NHTSA also examined other reports of such interactions and related driver-vehicle-road interface problems that are documented on pages 97-102 of the NHTSA report.

"A Study of the Relation Between Forward Velocity and Lateral Acceleration in Curves During Normal Driving." ("Human Factors," June 1968)

Accident studies by Cornell Aeronautical Laboratories, Inc., and B. J. Campbell, University of North Carolina.

Technical articles and consumer groups analyses of Corvair performance.

Ford Motor Company data.

Mr. Nader also cited certain Ford Motor Company data in his accusations. As recently as May 12, 1972, in his press conference Mr. Nader used a 1959 Ford Motor Company film and an analysis of it by Mr. Harley Copp to support his contention concerning driver-vehicle-road interface actions. This material was not considered valid by NHTSA in its evaluation.

Since that time these tests on which Mr. Nader relied so heavily have been reproduced four times. Twice they were reproduced at the GM Proving Grounds by GM. The clearly documented results support the NHTSA analysis. The tests were also reproduced twice at the Ford Proving Grounds, once by GM and once by Ford Motor Company. The GM tests were well documented and they again confirm NHTSA's analysis and disprove Mr. Nader's accusations. The Ford Motor Company tests were not documented as precisely as the GM tests but the results, as expressed in the Ford Motor Company December 22, 1972, letter to your office, were essentially the same.

"In an attempt to resolve the question, we purchased a used 1961 Corvair and had one of our engineers, who is not a professional driver, drive it on the same segments, of our track on which the original test was conducted. He had no (emphasis added) difficulty in negotiating the turns at the speeds set forth in the Safety Administration report, which were apparently the speeds used in the 1959 film. We also permitted General Motors to conduct tests of the Corvair and Falcon on this track and we understand that neither the Corvair nor the Falcon had any difficulty in negotiating the turns (emphasis added)."

NHTSA's rationale for not using human drivers in the Government test program is explained in our answer to Question No. 2.

We are forwarding your letter with its enclosures to the Panel members for their information and evaluation. Should any member feel the need to comment further or modify their conclusions, we will arrange to forward this information to you at once.

In summary, Mr. Chairman, we believe we have completed all logical investigation of the Corvair's handling characteristics within the constraints of the resources the question warrants expending. A huge volume of data and information has been examined and an engineering test program conducted, both in an unbiased and professional manner. The Administration has spent over one-half million dollars in direct costs for less than one-half of 1 percent of the vehicles on the road and probably a considerably lower percentage of the mileage driven.

If we can be of any further assistance to the Committee or the members of your staff, please contact us.

Sincerely,

DOUGLAS W. TOMS,
Administrator.

EXHIBIT F

JANUARY 30, 1973.

Senator WARREN G. MAGNUSON,
Senator VANCE HARTKE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON AND SENATOR HARTKE: On July 12, 1972, the National Highway Traffic Safety Administration (NHTSA) issued its final report on the safety defect investigation of the early Corvair's handling and stability. The report concluded that "the handling and stability of the 1960-1963 Corvair does not result in an abnormal potential for loss of control or rollover. . . ." A careful analysis of the technical test materials and supporting documents shows that the NHTSA had no justification for drawing this conclusion from its tests and the other evidence available to the agency.

The hard evidence of Corvair rollover presented by at least three General Motors proving ground test series contemporary with production of the early Corvair is dismissed by the NHTSA which merely adopted General Motors' unsubstantiated rationale that the tests were not fairly representative of production Corvairs in ordinary use. In fact, these internal General Motors tests first confirmed the instability problem for on the road Corvairs. Proving Ground report 11106, April 1959, produced these results:

"J turns to the right were tried on the military skid pad at 15, 20, and 25 mph. Right wheel lift was noticeable at 15 and 20 mph. At 25 mph, the vehicle rolled onto its top."

In subsequent tests General Motors attempted to find various inexpensive design modifications to correct the defect. Although some proved to be of little assistance, each modification tested by General Motors was intended to improve Corvair stability. This fact was not revealed in General Motors academic argument that any vehicle modification disqualified the proving ground tests from consideration. The NHTSA merely dictated the General Motors company line.

The NHTSA's own Corvair test program, on which the agency primarily based its no "abnormal potential" conclusion, is grossly deficient in at least three key respects:

1. The vehicles were tested only in their fully loaded configuration.
2. The vehicle tests were solely of the programmed input-response type (using a driver simulator) under idealized conditions. No tests were carried out with human drivers under normal conditions (uneven road surfaces, reduced traction, wind, and so on).
3. The ability of a driver impaired by carbon monoxide from the Corvair heater (found defective by the NHTSA in October 1971) to safely operate a Corvair in unusual driving circumstances was completely ignored.

The placement of the maximum recommended load in the Corvair for the test

¹This test program was conducted at Texas Transportation Institute (TTI) in 1971.

program does not comport with scientific test procedures which presume that the test conditions bear a reasonable relationship to real life conditions. One cannot generalize the results of tests in this unusual configuration to cover vehicles lightly loaded with one or two passengers—the condition of the Corvair in most actual trips. The negligence in conducting tests only with the vehicles fully loaded is demonstrated by the fact that the agency engineers knew or should have known that internal General Motors proving ground tests of ten years ago showed that the addition of significant weight to the rear of the Corvair increased the stability in emergency maneuvers.

Tests conducted by General Motors in 1962 and 1963 demonstrated that two changes in the Corvair produced substantial improvement in the stability of the Corvair during J turns. One change was a redistribution of the roll couple toward the front suspension. Another change was the addition of two high speed movie cameras to the rear of the vehicle which lowered its center of gravity 0.8 inch and moved the center of gravity back 4.7 inches. The cameras increased the weight at the rear from 1,771 pounds to 1,981 pounds and increased the moment of inertia of the vehicle about all principle axes. The General Motors proving ground report (PG-17103)² concluded:

"These tests showed that the dynamic stability of the current production 1963 Corvair was not substantially improved through practical modifications to shock absorber design and configuration. A test phase which incorporated a pair of high speed movie cameras mounted on outriggers to the rear of the car, showed that this change in the weight distribution prevented the car from overturning during these test maneuvers."

By testing the Corvair for loss of control and rollover potential only while the vehicle was fully loaded, the NHTSA may have introduced an artificial stability into the Corvair in much the same way the General Motors engineers had inadvertently introduced such stability through the placement of camera outriggers on the vehicle in the 1963 tests. While such a test might be important for identifying a possible correction system for unstable Corvairs, it should be only one of at least several modes in which the Corvair was tested, especially since the vast majority of car trips carry only one or two passengers and little luggage.

There is additional evidence to suggest that the loading of the Corvair by those persons conducting the NHTSA test introduced an artificial stability. In 1970 the Michigan Highway Safety Research Institute (HSRI) conducted vehicle handling tests for the NHTSA with this newly developed driver simulator on a lightly loaded Corvair automobile. Although the same test procedures were used, the Michigan tests, conducted under Professor Leonard Segal produced drastically different results than the tests conducted by the NHTSA at TTI with a Corvair loaded to the manufacturer's maximum recommended weight for passengers and luggage. As Professor Segal explained in a letter to me:

"We rolled the Corvair a large number of times and produced sufficient wheel-rim/road-surface contacts that the rear suspension and axle assembly finally broke loose, dropping the transmission. We then had to repair the Corvair to complete our test program."

The NHTSA has offered no explanation as to why it ignored the test results of the Michigan Highway Safety Research Institute

in the agency's own report. As Professor Segal observed: "It appears that rollovers occurring with a less than fully loaded Corvair didn't count as valid data points for the purposes of DOT's study."

The irony of ignoring the results of the Michigan and General Motors tests with the lightly loaded Corvair is all the greater when one realizes that the methods for testing the stability of the Corvair were borrowed by NHTSA personnel from the tests conducted by the Michigan Highway Safety Research Institute. Why would NHTSA borrow the test methods but choose to ignore the test results?

Contrary to what the agency should have produced, it conducted an inadequate and unprofessional test program which made no effort to search out the performance characteristics of the Corvair as it operates under varying conditions, including particularly its behavior when driven by humans on the highway, some of which are well surfaced, some of which are uneven or indeed bumpy, some of which are slippery or subjected to heavy winds. While the new HSRI driving simulator is an important innovation for test objectivity and repeatability, and adds flexibility to the range of handling tests which can be conducted, there is also the danger that a machine will not accurately simulate human drivers. For example, the HSRI machine has no feedback response, it does not drive the vehicle in reaction to road and other conditions, and it does not reflect a range of driving capability typical of human drivers. Once the HSRI machine is programmed, no other variables will influence the controls. Thus, the driver simulator should be treated as one important tool in a range of test experience rather than as the only alternative methodology.

Simultaneous with the opening of the handling and stability investigation, the NHTSA began a defect investigation into the heating system of the 1961-1969 Corvair which it found to be a source of carbon monoxide brought into the passenger compartment. The NHTSA chose to consider these as independent defects although they are intrinsically inseparable. A driver whose reactions and perceptions are impaired by carbon monoxide inhalation will pose a considerably greater hazard when driving a vehicle with unusual and unpredictable handling characteristics. Conversely, such a vehicle becomes considerably more dangerous when in the hands of an impaired driver. Although it is a unique circumstance for one safety defect to have such a direct and devastating impact on another defect in the same vehicle, it is no solution to ignore the relationship. On the contrary, even if there is only some doubt about the handling stability of a vehicle whose passengers are likely to be subjected to carbon monoxide poisoning, the agency should balance the equities in favor of the likely victims. The burden of proving the handling defect should be a lesser one in view of the confirmed existence of the carbon monoxide defect.

There is a final matter which I wish to bring to your attention concerning the handling and stability investigation of the Corvair. The NHTSA selected as its lead investigator a person who had for 16 years been employed by General Motors Corporation in the reliability and service area and who, according to a deposition taken in a recent lawsuit, continues to own stock in General Motors. The NHTSA should explain to the Committee and the public why such a person with no engineering degree or expertise in vehicle handling and stability, with a possible conflict of interest was placed in charge of the test program of this important and controversial defect investigation.

It is a national disgrace that the agency responsible for the protection of lives on the Nation's highways can spend almost one million dollars (or an amount equal to

nearly half of the annual safety defect budget) investigating and reporting on a suspected defect without designing proper tests to confirm or deny the existence of such defect. In this particular case there was also a special burden on the agency because no generally recognized standard tests for auto handling and stability have been adopted either voluntarily by the industry or by the government. In view of the lack of standardization and the variation of test possibilities, the agency should have been especially alert to soliciting advice from all interested parties before spending the time and large sums involved in these tests. In fact, the agency refused my request to permit comment on their proposed test program by all interested parties and to permit observers at the test site in Texas. My concern in this matter goes beyond my own judgment that the stability and control characteristics of the Corvair are defective. At issue is not only the some 300,000 1960-1963 Corvairs still in use but also the continued vitality and credibility of the NHTSA which demonstrated shocking ineptitude in one of its central missions, namely, investigating motor vehicles for possible safety related defects.

The entire Corvair inquiry by the NHTSA has displayed the need for closer oversight by the Congress, and has reinforced the obvious need for a Consumer Protection Agency and a citizen right of intervention and action in administrative activities and litigation. In the handling and stability Corvair inquiry, a most deplorable political judgment (see enclosed article) and a desire to avoid the recall of early Corvairs which could have required similar treatment of early VWs and early Renaults, led to the engineering malpractice that is now being given a disgraceful official recognition. Hundreds of thousands of owners, passengers and other highway users continue to be jeopardized in these cars and the NHTSA's repudiation of their interests has further entrenched a system of regulator enforcement that will lead to similar evasion and casualties in the future regarding other vehicle types.

The broader and deleterious precedent set by this government Corvair test has already eroded the integrity of the agency. The auto industry will understand how even more flexible the agency can become in permitting similar outrages to suffer their innocent victims in defiance of the auto safety law which you did so much to have enacted.

Attached is a technical analysis by Dr. Carl Nash criticizing the NHTSA Corvair report which explains in more detail the issues raised in this letter.

Sincerely,

RALPH NADER.

FEBRUARY 1, 1973.

Senator WARREN MAGNUSON,
Chairman, Senate Commerce Committee,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: I would like to submit additional information which further substantiates the judgment expressed in my letter of January 30 about the rigged scope of the National Highway Traffic Safety Administration Corvair handling tests.

It now emerges that the NHTSA engineers who conducted the Corvair testing at Texas Transportation Institute (TTI) did withhold or suppress data on tests of lightly loaded Corvairs from the agency's July 1972 final report (and supporting materials in the public docket).^{*} These tests were withheld also from the 3-man panel of review. Not only did these tests include roll over and rim contact behavior but more pertinently they reveal in sharp etching the decisive de-

^{*} Since July the engineers have been ordered by their superiors to remain incommunicado to any inquiries relating to their report and their role in it.

² This PG report was never produced in product liability cases by General Motors until it was inadvertently discovered by outsiders in late 1970. General Motors claims that the report was misplaced due to a clerical typographical error.

ficiencies of the reported tests and the knowledge of these invalidations by at least those NHTSA personnel who prepared and closely reviewed the report. Moreover, the outside reviewing panel was not privy to these undisclosed test descriptions in preparing their analysis of the agency's work.

In the General Motors proving ground Corvair tests of 1963 it was shown that the test equipment laden Corvairs were more stable than those without the equipment. The Corvairs which were lightly loaded, as they would be for most Corvair trips (one or two occupants), routinely rolled over on General Motors proving grounds and during the Michigan Highway Safety Research Institute (HSRI) tests. To achieve their objectives of exonerating General Motors and pleasing their administrative superiors, the NHTSA engineers tested heavily laden Corvairs—in effect rigged to be more stable. These tests were the basis of their final report acquitting the Corvair, while the lightly loaded Corvair tests were suspended and their embarrassing preliminary findings scrapped. The explanation the NHTSA repeatedly gave for relying on heavily laden vehicles was a willful distortion of Mr. Gary Sellers letter suggesting test procedures (see Dr. Nash's report).

The disclosure of a possible conflict of interest on the part of TTI test project engineer Mr. Ernest Wittich, and the undisclosed private visit at the beginning of the inquiry to the NHTSA defect investigating staff by General Motors' Frank Winchell—a veteran participant and strategist at Corvair litigations—are not reassuring.

The role of General Motors in the course of the nearly two year long period over which the NHTSA conducted its Corvair inquiry merits closer scrutiny. What were the communications—oral and written—between General Motors and other agents and any of the engineers and other parties associated with the NHTSA investigation? The above noted disclosures make this question a timely issue.

Furthermore, the latest development over the Harley Copp matter between Ford and General Motors are disturbing and directly pertinent to your Committee. You will remember how Harley Copp, Director of Engineering, Technical Services Office for the Ford Motor Company, publicly challenged General Motors' statement in 1971 that the Corvair was as stable as the Falcon. For this exercise of independent engineering judgment and free speech, Mr. Copp has received the corporate freeze-out treatment. Mr. Henry Ford apologized by telephone to General Motors Chairman James Roche and rebuked Copp who was relieved of many of his responsibilities. Other things began to happen. Mr. and Mrs. Copp found themselves under surveillance at their home before and after Mr. Copp testified before your Committee in July 1972 to amplify his criticism of the Corvair and the NHTSA's defective Corvair report. As you know, intimidation or harassment of witnesses before Congressional hearings is a federal crime. This may explain why the FBI is presently investigating the surveillance of Mr. Copp in Michigan.

The pressure which General Motors successfully applied to Ford to subdue the challenge by Mr. Copp and past Ford tests of the Corvair to General Motors' version of the Corvair's roadway behavior is extraordinary. Ford tested early Corvairs (1960-1963) quietly at its proving grounds in 1959, 1966, and 1968. It is apparent that Ford engineers regarded the Corvair as having unacceptable handling and stability. They used it to validate the discriminatory ability of the test procedures developed in 1966 and 1968 (a test which the Corvair would not fail would be regarded as not valid).

After Mr. Copp's outspoken declaration, General Motors' demands on Ford, and the NHTSA July 1972 Corvair report, the following dilemma and resolution occurred. Ford had three choices—stand on its prior Corvair tests, disavow its tests, or conduct new tests. The way out of this dilemma was to avoid the first two choices and take the third. Predictably, the Corvair in the new Ford track tests did not go out of control for the Ford driver or the General Motors drivers which Ford fraternally invited over to go through the same motions.

Against the revelations of previously undisclosed NHTSA Corvair tests, the glibness of Mr. Douglas Toms appears exceptionally egregious. Shortly after the NHTSA Corvair report was released, Mr. Toms declared:

"[The decision on the Corvair handling] included the engineers who actually conducted the testing, their supervisors at higher levels in the engineering and technical area, the legal staff which thoroughly reviewed the engineering finding and recommendation, and the policy makers of the NHTSA, including myself."

Somehow, such a presumably thorough review by Mr. Toms and his associates did not result in the disclosure of the discomforting test results and procedures noted above.

On July 25, 1972, before your Senate Commerce Committee, the following exchange took place, first between Senator Vance Hartke and Mr. Toms, and second, between Senator Hartke and the NHTSA General Counsel Lawrence R. Schneider and his Assistant General Counsel, Frank A. Berndt:

Page 237: Senator HARTKE. I understand that all the vehicles that were tested represented the manufacturers' maximum recommended load. Is that true?

Mr. TOMS. That is correct.

Senator HARTKE. Why?

Mr. TOMS. Because, number one, again, Mr. Nader's representative suggested that we test them in a fully loaded condition. Number two, the type of instrumentation on the controllers of these vehicles were heavy and in general it was close to the equivalent of a fully loaded vehicle.

Pages 242-3: Mr. SCHNEIDER. It's been our policy on any investigation that the investigation is something that is totally within our prerogative and control and if you will, secret, until such time as that investigation is completed and then everything becomes public.

We have set up a public file that totally discloses what was done during the course of the investigation. It's a long-standing practice. It's a long-standing practice of any agency at least that I am aware of that has investigatory authority.

Senator HARTKE. Are those included in your report, all those documents and films?

Mr. BERT [sic]. All of the films and all of the data—

Senator HARTKE. The studies?

Mr. BERT. Publicly available except certain information that is proprietary to the manufacturers.

It is now clear that the above responses by NHTSA officials were not the truth. Moreover, repeated again is the excuse that the vehicles were tested in heavily loaded conditions because of Mr. Gary Sellers' recommendations. This is a willful distortion of what Mr. Sellers, speaking for himself, urged. He recommended that the vehicles to be tested have all critical variables at their most severe levels (on-the-road driving, not on a flat open surface by an automatic pilot), and for the heavily loaded mode not to be excluded by the agency in its test program.

Thank you for your continuing public interest in motor vehicle safety.

Sincerely,

RALPH NADER.

FEBRUARY 1, 1973.

Mr. DOUGLAS TOMS,

Administrator, National Highway Traffic Safety Administration, Department of Transportation, Washington, D.C.

DEAR MR. TOMS: In July 1972, the National Highway Traffic Safety Administration released its long-awaited evaluation of the handling and stability of the 1960-1963 Corvair. As you know, interest in the safety of the Corvair has been widespread and it was hoped that the National Highway Traffic Safety Administration's study would conclusively settle the ongoing controversy.

I have recently received a technical evaluation and letter from Mr. Ralph Nader challenging several aspects of testing procedure and process utilized by the National Highway Traffic Safety Administration in its analysis of the Corvair suspension system. Mr. Nader raises four major concerns:

1. Alleged Suppression of data from tests: Why was the existence of data from Corvair tests utilizing lightly loaded vehicles conducted at the Texas Transportation Institute withheld from both the public and the Panel until six months after the release of the completed NHTSA handling report (December 1972)? Does the recently revealed data invalidate the test procedures and controls described in the July report? To what do you attribute the inconsistent results of the recently revealed test data and the results obtained by the Highway Safety Research Institute? Does the NHTSA believe that the difference between the recently revealed TTI test series and the HSRI test series are due to very subtle differences in the two vehicles tested, and if so, what is your conclusion with regard to the safety of Corvair actually operating on the highways? What is the basis for NHTSA's determination that the recently revealed data was not valid for the purpose of your investigation?

2. Technical Competence of the Tests: Why were the vehicles tested in only their fully loaded configuration? Why were no tests carried out with human drivers under normal conditions (such as uneven road surfaces, reduced traction, wind, etc.)? Why didn't the NHTSA pursue the effect of carbon monoxide from the defective heater on the driver's ability to control the vehicle?

3. Potential Conflicts of Interest: Has the Administration determined to its satisfaction that no NHTSA officials assigned to the Corvair handling and stability study were in conflict of interest by the holding of stock of the General Motors Corporation?

4. Unquestioned Adoption of General Motors Test Results: Did the NHTSA merely adopt General Motors' unsubstantiated rationale that numerous GM rollover tests conducted in 1959, 1962 and 1963 were not fairly representative of production Corvairs in ordinary use? Similarly, why did the NHTSA accept General Motors' discussion of driver-vehicle interaction without substantiation for the particular case of the Corvair?

I solicit your comments and the analysis of the engineering panel on Mr. Nader's letter and evaluation of the NHTSA study and I have enclosed copies of these documents for your information. I am looking forward to your response by February 15, 1973. My purpose in seeking your comments is not to prolong the Corvair controversy. Upon receipt of your response, I will evaluate your comments to determine whether the Senate Commerce Committee should take direct action to assure timely and technically competent defect investigations by the NHTSA.

Sincerely yours,

WARREN MAGNUSON,
Chairman.

EXHIBIT G

HIGHWAY SAFETY RESEARCH INSTITUTE,
Ann Arbor, Mich., August 17, 1972.

Mr. RALPH NADER,
Public Interest Research Group,
Washington, D.C.

DEAR MR. NADER: Prior to making any comments with respect to the facts and opinions set forth in the two DOT reports dealing with the "handling and stability" of the 1960-1963 Corvair, I would like to emphasize that I have not seen the mass of material (films, GM reports, etc.) that was screened by DOT personnel and the panel in the course of making their respective evaluations. What I have seen is some of the testimony that was given in various litigations involving the Corvair (although it was quite a few years ago) and the draft copy of ITT's data report on the test program performed in Texas, and, of course, I am quite familiar with the test work that was done here under my direction. Therefore, I shall try to be very careful and comment on the basis of what I know and have seen, it being understood that there is much in the record with which I am not familiar.

It seems patently clear that DOT personnel, having produced negative findings in the Texas tests, reevaluated the data developed and furnished by other parties and drew conclusions which they felt to be consistent with their own test findings. On the basis of personal conversations that I had with DOT personnel associated with this program, it is my recollection that they fully expected the Corvair to roll over in the course of the test program. Since it did not (according to the official report), it appears that NHTSA staff have gone to some effort to discredit the conclusions drawn by others or to interpret the test findings of other parties in a manner so as to make their own findings look reasonable. Whether there has been any conscious effort to twist the facts would be difficult to say. For example, I can see how NHTSA personnel and the evaluation panel, in view of their fundamental limitations in separating the "wheat from the chaff," would arrive at the position expressed in these two documents in the face of the hard evidence produced in Texas.

I must begin by stating that, in my view, the Corvair handling and stability issue has been thoroughly beclouded as the arguments have waged back and forth in the courtrooms and elsewhere during these past years. At the risk of sounding like a snobbish academician, it appears that the technical people which were involved failed to clearly define and explain the phenomena at issue. The argument presumably has been: does the Corvair present control difficulties to the average driver and, further, is it prone to roll over when emergency-like maneuvers are carried out on a flat, level surface.

As I recall, in much of the Corvair litigation there was a great deal of discussion as to whether the Corvair becomes "oversteer" under certain operating conditions and during these conditions becomes difficult for the average driver to control. A goodly amount of this same debate is to be found in the two documents under discussion and I can only say that everybody is talking about oranges when they should be talking about apples.

Let me get to the point. Under the extreme operating conditions in which Corvairs are known to roll over, the steady-state measures of equilibrium-turning performance (namely, under/oversteer) have no real meaning. All of the discussions dealing with the change in the under/oversteer characteristics of the Corvair caused by increased levels of lateral acceleration and all of the references to the under/oversteer transition are, in my opinion, irrelevant. Whereas the under/oversteer properties of a motor vehicle (as defined at low levels of lateral acceleration) serve to indicate (1) the influence of speed on the path

curvature produced by steering, (2) the nature of the transient response to steering, and (3) the stability of the straight-running vehicle in the presence of disturbances, these properties do not characterize the response to steering when the steering input is sudden, transitory, and large to produce the abrupt change in vehicle trajectory often demanded in an emergency.

Test data indicate that the Corvair does not have a handling deficiency when drivers encounter the normal steering demands imposed by (1) roadway and traffic variables and (2) transport objectives. Further, the Corvair responds to sudden steering inputs of moderate size in a manner that is comparable to a broad spectrum of passenger vehicles. The rear swing axle and the rearward weight bias seem to be adequately compensated for in the design such that no unusual behavior is exhibited (1) in driver-controlled steady turns (up to the so-called "limit of control," which GM states is 0.6 g) and (2) in response to sudden steering inputs up to the point where the peak lateral acceleration achieved in the turn is approximately 0.5 g's. For dynamic maneuvers of increased severity, the nonlinear characteristics of the Corvair become very important, in particular the nonlinear growth of the vertical lift force deriving from the geometry of the rear swing axle.

In the tests performed at HSRI, it was observed that the Corvair was unique among the four vehicles tested in that its turning response to step steering changed character in an abrupt manner between successive runs in which the steering-wheel displacement was incremented from 129 degrees to 151 degrees. Not only was there an abrupt change in the character of the response, there was also a marked increase in the peak value of lateral acceleration that was achieved. For example, the steer displacement of 129 degrees produced a peak lateral acceleration of 0.47 g, with a steer displacement of 151 degrees producing a peak lateral acceleration of 0.78 g. This abrupt change in the character of the Corvair's response to steering is attributed primarily to the kinematic properties of the swing axle resulting in the rear end of the vehicle lifting and the rear tires inclining with respect to the road, a phenomenon that you have described in "Unsafe At Any Speed." It should be emphasized that this jacking behavior of the rear axle occurs in a rather abrupt manner, causing the vehicle to spin and to increase its sideslipping velocity.

Whether the Corvair, as tested at HSRI, would have eventually rolled over in the J-turn maneuvers that were performed here at Michigan is not known. At that time we were doing the "step-steer" maneuvers (J-turns with closed throttle) without outriggers and the behavior of the Corvair became sufficiently threatening as to convince the test driver that the sequencing of runs at higher steer inputs should be discontinued. I have reexamined the Corvair J-turn data and it appears that we may not have reached the "limit turning" response, as was established for the three other test vehicles. Thus, we are left with the question as to whether the Corvair would have rolled over in the J-turn maneuver, if the test procedure had not inhibited the driver from pushing the vehicle harder.

However, it is my view and that of HSRI staff, that the J-turns maneuver, per se, is not the maneuver most likely to induce rollover on a Corvair. Instead, a maneuver involving combined steering and braking is a more demanding test (or measure) of a motor vehicle's resistance to rollover. Further, the operational scenario is realistic. (The director of this Institute has informed me that he has personally witnessed the rollover of a Corvair on the highway in an incident in which the driver steered to

change his course, applied his brakes to bring the vehicle to a stop and then released his brakes on observing the sidewise sliding that was taking place.) In the case of a Corvair, a sequence of steering and braking may produce rollover or it may not. It all depends on the control actions of the driver. If the amplitude and timing of the steering and brake inputs fall within a certain band, the dynamics of the situation will contrive to roll over a Corvair, provided that certain other operating conditions are satisfied.

Given that traffic conflicts arise whose attempted resolution can lead to steering and braking inputs that on occasion will cause a Corvair to roll over on a dry pavement, the question can be posed whether this behavior constitutes a "defect in performance." I contend that the answer to this question requires a legalistic judgment. An engineer may offer a value judgment on this matter, but he is not in a position to argue the existence of a "defect" on technical grounds. When all the facts are in, it will be evident that whereas the Corvair may be induced to roll over more easily than many other vehicles, nevertheless, other vehicles can be made to roll over on a flat, level surface. Do we conclude that any vehicle that can be made to roll over is ergo unsafe and should be removed from the vehicle population? Or do we separate "easy rollers" from "less-easy rollers" and call the former unsafe? And where does one decide at which level a vehicle passes from the "safe" category to the "unsafe" category? It is all very well for Messers Fonda and Sergay to state that "the vehicle, to meet what we believe is a reasonable standard of safety, must slide instead of rolling over on a flat road surface, with any combination of driver actions," but their considered opinion does not provide a technical basis for differentiating between "safe" and "unsafe" vehicles. The federal government, on the other hand, may establish such a requirement for vehicles to be sold to the general public and, if upheld, such a ruling will settle, for once and all, the argument as to what is "safe" and not "safe."

For your information, it was precisely this kind of thinking that led HSRI to propose (in response to a NHTSA request for procurement) that a test procedure be developed that would determine (in a precise, repeatable, objective manner) whether a passenger vehicle can be rolled over on a flat level surface. The NHTSA did not stipulate any such test or measure. Rather, this Institute argued that objective motor vehicle performance measurement technology is practically nonexistent and that steps should be taken to close this technology gap. It should be obvious to you that this position is not likely to obtain a favorable reaction in Detroit and consequently we are justifiably offended and grieved by your statements which imply that we are other than a fully objective research organization. It is difficult enough trying to do highway safety research for a government agency who is more attuned to political pressures and interests than it is for gathering facts, without having "safety crusaders" impugn our integrity.

Having said my piece, let me now discuss the test findings produced by NHTSA in Texas. Although I don't have hard test evidence, it appears that the request made by Mr. Sellers (Appendix IV of the DOT report) that NHTSA test the Corvair and its contemporaries in a fully loaded condition very likely served to make the Corvair more resistant to rollover whereas he anticipated otherwise. Mr. Sellers failed to understand that load, per se, is not the critical variable but rather the distribution of load. The irony is that NHTSA personnel went to great lengths to comply with Mr. Sellers' instructions and requests (as is so painstakingly pointed out in the DOT report) and presumably in so doing produced test findings that are serving to destroy your case.

There are at least two lessons to be learned here: (1) attorneys should stick to their legal practice and not practice engineering, even when it appears that engineers are reluctant to practice good engineering; (2) NHTSA technical staff should exercise independent technical judgments, once NHTSA policy makers have decided on a course of action.

Finally, it seems rather odd that both the writers of the DOT report and the panel chose to ignore the findings produced at HSRI. We rolled the Corvair a large number of times and produced sufficient wheel-rim/road-surface contacts that the rear suspension and axle assembly finally broke loose, dropping the transmission on the test pad. We then had to repair the Corvair to complete our test program. It appears that roll-overs occurring with a less than fully loaded Corvair didn't count as valid data points for the purposes of DOT's study.

I trust that you will treat these remarks as an effort on my part to shed light on a long-standing controversy. Thus, this letter has been written for your personal edification and not for the purpose of aiding you in your campaign to remove the Corvair from the vehicle population. As I tried to express on the phone, the issues that you pose are not black and white, but highly confused grey.

Sincerely,

Prof. L. SEGEL,
Head, Physical Factory Group.

EXHIBIT H

PUBLIC INTEREST RESEARCH GROUP,
Washington, D.C., March 15, 1973.

HON. WARREN G. MAGNUSON,
Chairman, U.S. Senate Committee on Commerce, Washington, D.C.

DEAR SENATOR MAGNUSON: Thank you for responding to my request for a copy of Mr. Toms' letter of February 23, 1973 regarding Mr. Nader's inquiry concerning the NHTSA's Corvair handling and stability defect investigation. I have reviewed Mr. Toms' comments and I am not satisfied by his explanation of the way in which this investigation was carried out. Furthermore, I have reason to doubt that the investigation's conclusions are justified by the NHTSA's own data or its published analysis of the data gathered from other sources.

In order to explore the Corvair investigation on its merits, I request the following questions be explicitly answered:

1. The Loading of the Vehicles for the NHTSA's Tests at TTI:

(a) Prior to conducting the TTI tests, were the NHTSA engineers aware of the conclusion in General Motors' Proving Ground report PG-17103 which noted the particular stability of the Corvair when it carried extra weight on the rear axle and did this conclusion have any influence on the decision on loading made in the Texas tests? If not, why not?

(b) Quite aside from the question of carrying extra test equipment, did the NHTSA determine that the Corvair or any other car in the test program would perform in its most dangerous or unstable manner when fully loaded?

(c) When and how was such a determination made, if it was made at all, and what was the evidence and reasoning used in the determination?

(d) If such a determination was not made, was there any technical basis for heavily loading the test vehicles other than to carry test equipment?

(e) Was any consideration given to the fact that possible anomalous results (such as increased stability for Corvairs and reduced stability for Falcons) might obtain in tests where the vehicles were heavily loaded (contrary to the usual weight loads used in handling and stability tests)? Please explain what considerations were or were not extended to this issue.

(f) If it was possible for the NHTSA to

test the Corvair in a "lightly loaded" configuration in the so-called "noncomparative" tests, why was the Corvair, or any other car, tested either fully or over-loaded in the "comparative" tests?

2. The NHTSA Test Program:

Apparently the NHTSA approached and at least tried to contract with both the Highway Safety Research Institute (HSRI) of the University of Michigan and the Cornell Aeronautical Laboratory (CAL) to carry out handling and stability tests on the Corvair. In both of these cases, the institutions had personnel who were sufficiently expert in the field of vehicle handling that the NHTSA defect staff would not have had to have become involved in the actual design and conduct of the test program.

(a) Was the NHTSA satisfied that institutions other than CAL and HSRI, outside the automotive industry itself, had the expertise to carry out such testing?

(b) Why wasn't HSRI contracted to carry out or at least oversee the conduct of the test program at TTI since neither TTI nor the NHTSA defects office had personnel with experience in this type of test program or in the use of the HSRI developed test equipment?

(c) Why was the Cornell Laboratory contract terminated?

(d) In the test program, the NHTSA attempted to restore the vehicles to original condition through replacement of many suspension components and tires. In doing so, it appears that the aim was to determine if the Corvair was defective when new. However in justifying the choice of contemporary tires (recent vintage such as 1970 tires—not new 1960–1963 tires which may be qualitatively different) for the tests, it was stated that most Corvairs on the road today would be equipped with contemporary tires. There appears to be a paradox in these two statements. Was the NHTSA's aim to determine if the Corvair, as manufactured, was defective? Or was the purpose to determine if the Corvairs in use today are defective because of errors in the original design of the vehicles?

(e) Is the NHTSA position noted in (d) above consistent with the NHTSA's position on other defect investigations such as the Corvair heater investigation?

3. Noncomparative Tests of the Corvair (Lightly Loaded):

It is apparent from the materials which were sent to you on December 20, 1972, concerning data which was belatedly placed in the NHTSA public files for the Corvair investigation, that the tests of the lightly loaded Corvair were neither authorized nor disclosed until considerably after the completion of the investigation. Since both of these factors are highly irregular, if not contrary to law, what if any action is being taken with regard to the personnel involved and what changes are being made in NHTSA procedures to avoid such a situation in the future?

4. Public Information on the Corvair Investigation:

Confidence of the public in the findings of the NHTSA requires full disclosure of the information supporting its conclusions. The NHTSA belatedly revealed previously undisclosed materials in a letter of December 20, 1972, but apparently continues to withhold materials submitted "in confidence" by General Motors. Section 113 of the National Traffic and Motor Vehicle Safety Act of 1966 requires that the Secretary "shall not disclose any information which contains or related to a trade secret or other matters referred to in Section 1905 of title 18 of the United States Code unless he determines that it is necessary to carry out the purposes of this Act." The determination of what is a trade secret should rest with the Secretary and not with the manufacturer who is required to submit all materials requested by the NHTSA pursuant to a defect investigation—

with no allowance for special conditions to be attached to the submission of that material.

Since the Corvair is no longer in production, nor is any design of vehicle suspension similar to the Corvair in production at GM, it is difficult to believe that any material submitted to the NHTSA by GM could be considered a trade secret. I would therefore like to have a list of all materials which have been so classified and withheld from the public. In addition what was the NHTSA's reason for accepting General Motors' contention that these materials be withheld from the public?

5. Impact of Corvair Investigation on Future Safety Matters:

Aside from the findings of the NHTSA concerning the Corvair directly, the public would benefit from a discussion of what was learned from the Corvair investigation which might alter future investigation procedures on technically sophisticated and controversial alleged vehicle defects? What is being done to improve the state of knowledge about vehicle handling testing?

(a) What changes would the NHTSA make in the Corvair investigation if it were done again?

(b) What is the state of rule making on vehicle handling standards?

(c) Does the NHTSA believe that handling standards are desirable or necessary for the improvement of traffic safety?

The issues that I have raised in this letter are important to resolve before any conclusion can be reached with respect to the safety of Corvair handling and stability. I hope that you will request the agency to respond to my questions.

Sincerely,

CARL E. NASH, Ph. D.

EXHIBIT I

(Work sheets for NHTSA Corvair testing drastic steer-drastring brake with a lightly loaded Corvair, carried out at the Texas Transportation Institute.)

PROJECT NO. 787—SPECIAL TEST

Vehicle C; drone operator, Zimmer; test site No. 1; date June 9, 1971.

Tire Pressure: Design —; Service —; Front, 28 (hot), Rear, 28 (hot).

1. Activate instrumentation for a 10 minute period.

2. Check instrumentation calibration and run a calibration strip record for each channel.

3. Obtain the following data before test: Odometer, 61496.

Time, 2:45 p.m.

Ambient Temperature, 92°.

Test Surface Temperature, 120°.

Wind Velocity, 5–8.

Wind Direction (from) SE.

Barometric Pressure, unknown.

Precipitation (previous 24 hrs.) None.

4. Determine, by trial, the normalized steering wheel positions to obtain .1 g lateral acceleration increments at 40 mph vehicle speed in a left turn between .3 g through maximum steering input of 400 degrees. Record speed, steer input, maximum lateral acceleration and brake input time (yaw rate achieves 0.9 maximum value), after beginning of steer input, on the Pre-Test Steer Input Determination Data Sheet.

5. Program the Controller Function Generator for the selected control inputs to the steering system, brake, and accelerator pedals.

6. Stabilize the vehicle in a straight ahead direction at 40 mph for 5 to 10 seconds and start recording data.

7. Execute signal to Function Generator within 1 to 3 seconds after beginning data recordation (throttle is released simultaneously with the ½ sine wave steer input during interval of 0.95 to 1.05 seconds; brake input is applied with sufficient force to lock all 4 wheels for not more than 0.5 second when.

8. Record the test run number, speed, lateral acceleration, steer input, and time of brake input on the Drastic Steer, Drastic Brake Data Sheet.

9. Repeat items 5-8 with increased steer increments to obtain approximately 0.1 g larger steps of lateral acceleration until the vehicle attains a rollover mode.

10. Repeat items 4-9 for a vehicle speed of 30 mph if a roll-over mode is obtained for 40 mph.

11. Repeat items 4-9 for a vehicle speed of 50 mph if a roll-over mode is not obtained for 40 mph.

12. Repeat items 4-9 for a vehicle speed of 60 mph if a roll-over mode is not obtained for 50 mph.

Notes:

a. Install new test identification numbers after each test run.

b. Tires shall be frequently inspected for testing suitability and tread measurements taken periodically to ensure wear at any point has not exceeded 20% of the average tread depth after tire break-in.

c. Record identifying data (test procedure no., date, vehicle, test run no., steering wheel input, brake line pressure, and lateral acceleration) on the recorder tape after each test run.

d. Lateral acceleration (A_y), yaw velocity (r), steering wheel rotation (δ), wheel revolutions, (roll rate (ϕ), vehicle velocity (V), brake line pressure, and brake and accelerator servo's positions shall be permanently recorded on strip charts during the test runs.

13. Record the following data after test completion:

Odometer, 61514.

Time, 5:20 pm.

Ambient Temperature, 96°.

Test Surface Temperature, 175°.

Wind Velocity, 5-10 gusts to 13.

Wind Direction (from) SE.

Barometric Pressure, Unknown.

Comments: None.

Vehicle C, Date, 6/9/71, Time 7:45 pm, Drone Operator, Zimmer.

Engineer, Wittnon-Newman; Vehicle direction, North.

4 wheel lock-up brake line pressure requirement.

PRETEST STEER INPUT DETERMINATIONS

[Tire pressure 28-28 (hot) tire set No. 8]

Vehicle speed (mi/h)	Steer input (degrees)	Lateral acceleration (gravity)	Brake input time (second)	Remarks

FORD MOTOR COMPANY,

Dearborn, Mich., April 26, 1972.

HON. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: I have been asked to respond to your letter of March 28 to Mr. Henry Ford II, in which you asked for information concerning "Corvair tests" made by the Company.

We assume the tests to which you refer were those involved in a 1959 film, a copy of which is enclosed, which shows a 1960 Corvair following a 1960 Falcon around a Ford test track. We believe these tests were performed objectively. In this connection, we discussed the film with the drivers of both vehicles who stated that the tests were performed to the best of their ability. Their statements are attached.

We have two other reels of film involving a Corvair. These films were made in 1968 and involved a used 1962 Corvair in poor condition. The tests shown in these films were not designed to measure the handling characteristics. We assume, therefore, that you do not want this film.

Very truly yours,

W. A. McCONNELL.

STATEMENT

My name is Gordon E. Freitag. My address is 2951 Cornell, Dearborn, Michigan, 48124. I am a Supervisor at the Dearborn test track of Ford Motor Company and have held this position since 1957.

I have reviewed a film made of a 1960 Corvair following a 1960 Falcon around sections of the Dearborn test track. I was the driver of the Corvair. I was instructed to attempt to follow the Falcon without having the Corvair break away. Before the filming began, I had the opportunity to drive the Corvair following the Falcon on the same course used for the film. While the film was being shot, I tried to the best of my ability to maintain the same speed as the Falcon without having the Corvair I was driving break away. As the film shows, I was not able to do so.

Dated: April 13, 1972

GORDON E. FREITAG.

STATEMENT

My name is Maurice J. Kaiser. My address is 3637 Academy, Dearborn, Michigan, 48124. I am a Supervisor at the Dearborn test track of Ford Motor Company. In the fall of 1959, I was a test driver at the Dearborn test track.

I have reviewed a film made of a 1960 Corvair following a 1960 Falcon around sections

of the Dearborn test track. I was the driver of the Falcon. I was instructed to drive the Falcon as fast as possible without causing it to break away. The driver of the Corvair was instructed to follow me and maintain the same speed.

The driver of the Corvair was Gordon Freitag. Both of us were given the opportunity to drive both cars in advance.

I drove the Falcon to the best of my ability in accordance with the instructions I was given.

Dated: April 13, 1972

MAURICE J. KAISER.

FORD MOTOR CO.,

Dearborn, Mich., December 22, 1972.

HON. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: I have been asked to respond to your letter of December 1 to Mr. Henry Ford II, which was received on December 11.

We have reviewed the report on the 1959 Corvair film by the National Highway Traffic Safety Administration. We have again also reviewed the film with the persons involved, including the drivers, Messrs. Freitag and Kaiser. The person who directed the test and the drivers continue to maintain that the cars were driven to the best of the drivers' ability and they deny that any improper steering in-put into the Corvair was involved. We have not, however, been able to make a positive identification of the person driving the Corvair during the S-curve (Mr. Freitag, while he recalls driving the Corvair around the circle, does not now recall driving the S-curve.)

In an attempt to resolve the question, we purchased a used 1961 Corvair and had one of our engineers, who is not a professional driver, drive it on the same segments of our track on which the original test was conducted. He had no difficulty in negotiating the turns at the speeds set forth in the Safety Administration report, which were apparently the speeds used in the 1959 film. We also permitted General Motors to conduct tests of the Corvair and Falcon on this track and we understand that neither the Corvair nor the Falcon had any difficulty in negotiating the turns.

Thus, there seems to be a discrepancy between the 1959 film and certain tests of the Corvair this year. This perhaps could be explained by the use of different cars, different track surfacing, different drivers and all the other circumstances that could vary over a 13-year period. Yet, since differing opinions on Corvair handling characteristics have been rendered by Ford personnel and others, including the Safety Administration, it would seem that there is some question as to whether the 1959 film presented a valid illustration of the Corvair's handling characteristics. This film, however, was not used publicly by Ford Motor Company, and since the Safety Administration has fully investigated this matter, it does not seem fruitful for us to pursue it any further.

In accordance with your request, enclosed are two films made in 1968 involving a Corvair. As I indicated in my earlier letter to you, however, these tests involved a used Corvair in poor condition and were not designed to measure the handling characteristics of a Corvair.

Very truly yours,

W. A. McCONNELL,
Director, Product Test Operations.

EXHIBIT K

[From The Consumer Reports,
September, 1971]

CARBON MONOXIDE IN THE CORVAIR

In February 1961, John P. Petry, a Pennsylvania washing-machine serviceman, bought a new 1961 Chevrolet Corvair Greenbriar van for his work. The van's engine was

the same air-cooled, rear-mounted design that General Motors had introduced the year before in its *Corvair* compact sedan. The original *Corvair* used a gasoline-burning heater, but starting with the 1961 models, GM switched to a direct-air heater as standard equipment in all *Corvairs*. That switch, Petry later contended, was disastrous for him.

The system was designed so that a portion of the air used to cool the engine passed directly into the passenger compartment after having been heated by the engine. GM engineers should have been aware that such a system could be hazardous. A leak in a head gasket or a failure of some component in the exhaust system might cause carbon monoxide and other noxious engine fumes to enter the passenger compartment through the heating system.

Petry later argued, in pretrial testimony found by CU in court records of a suit against General Motors, that fumes inside the van bothered him almost from the time he started driving it. Numerous attempts by Chevrolet mechanics to solve the problem came to naught. That spring, Petry was further annoyed because his *Corvair's* heater wouldn't shut off. According to Petry, a mechanic at his Chevrolet agency gave him two pieces of cardboard and advised him to block the heater's duct work with it. But Petry didn't do that; he didn't know how.

By summer, Petry testified, he began suffering from headaches, loss of appetite, dizziness and nausea, and sometimes, while driving home from work at the end of the day, he would lose his sense of direction. Unaccountably, his ability to judge distances deteriorated, he said. "For instance, making a right-hand turn around a corner, I would have a tendency to hop that corner and rub trees." In the winter of 1962, Petry said, his vision deteriorated. Neither he nor his physician associated his various physical complaints with carbon monoxide.

Meanwhile, Petry remained understandably disturbed by the apparent lemon he had bought. The fumes remained unpleasant and the heater uncomfortable in the summer. Petry retained Edward L. Wolf, a Philadelphia attorney, in an effort to force General Motors to fix his *Corvair*. After hearing his client's story, which included a recitation of his physical problems, the attorney recalled that the Federal Aviation Administration had attributed a number of aircraft accidents to pilot disorientation caused by carbon monoxide. The heaters in those small planes were sufficiently similar in design to the *Corvair's* system to raise some suspicion in the attorney's mind. Wolf had Petry undergo a blood test. It confirmed that he was suffering from carbon monoxide poisoning. Later tests showed that he had incurred permanent brain damage. Petry has been unable to work since 1962. He stumbles, suffers memory lapses, hears a constant ringing in his ears and cannot walk a city block without becoming fatigued. The Social Security Administration has classified him as totally disabled.

In the fall of 1962, Petry sued General Motors for \$250,000, alleging, among other things, GM's "failure to warn . . . of the dangers of carbon monoxide which could reasonably occur by virtue of the inherent characteristics of the heater." Four years later, a few weeks before the case was to come to trial, GM settled the case out of court for \$125,000. As part of the settlement, GM was allowed to purchase the *Corvair Greenbriar* van and Wolf's files in the case. By then, Ralph Nader had published, in "Unsafe At Any Speed," his charges of dangerous handling characteristics in early model *Corvairs*, and General Motors, by its unseemly behavior in assigning private detectives to pry into Nader's private life, had created the scandal that would eventually lead to direct Government intervention in auto safety. Perhaps GM hoped it could keep the story of

Corvair's heater problems quiet. With the Petry case settled, no jury would decide whether the carbon monoxide had caused Petry's illness, nor would the public ever learn what damning evidence, if any, was impounded with Wolf's files. For, as part of the settlement, Wolf and Petry agreed not to discuss specifics of the case.

But last January, under pressure from Ralph Nader and Senator Vance Hartke, the National Highway Traffic Safety Administration reopened the subject. It issued a "special consumer protection bulletin" alerting consumers to "specific use-risk situations" involving all 1961 through 1969 *Chevrolet Corvairs*. The bulletin reported that an investigation of the *Corvair* heater "disclosed that a problem with engine fumes does exist in some of these vehicles." Not until page two of the two-page bulletin, however, was it reported that those fumes may contain carbon monoxide. According to the bulletin, a "limited sample" of *Corvairs* tested were found to admit "significant" quantities of carbon monoxide into the passenger compartment. The bulletin didn't say how much carbon monoxide was discovered in those cars, nor did it reveal the number of cars whose heaters were turning out carbon monoxide. But CU learned that one of the cars tested by the NHTSA was found to contain 60 parts per million (ppm) of carbon monoxide in the passenger compartment. According to the woman who owned that *Corvair*, the Government official who had done the test warned her that her one-year-old son, after riding in the car for eight hours, would become very ill and that her own senses would be dulled. The NHTSA's consumer alert conveyed none of those specific warnings, which may explain why the press paid it only passing attention. The alert advised *Corvair* owners who smelled exhaust fumes to seek repairs or drive with a window open at least one inch.

Good enough advice? Douglas Toms, acting director of the NHTSA, later acknowledged under prodding from Senator Hartke at hearings of the Senate Commerce Committee that the absence of an odor did not necessarily rule out the presence of carbon monoxide, which is itself odorless. Odor or no odor, Toms said, if he owned a *Corvair*, "The first thing I would do is to make sure I always operate it with my window open." Carbon monoxide could enter the *Corvair* even with the heater off, he said.

Toms' testimony expanded further on his agency's consumer-protection bulletin. The bulletin, for example, while advising troubled *Corvair* owners to seek repairs, did not suggest what repairs might be needed, nor did it estimate their cost. In his testimony before the Commerce Committee, however, Toms said the necessary repairs would cost about \$170 and might have to be redone every year. He noted that there was no way for a mechanic to be certain the problem had been solved without access to a carbon-monoxide tester; yet he did not know of any Chevrolet dealer in the Washington, D.C., area with adequate test equipment.

PERILS OF CARBON MONOXIDE

Scientists disagree over how much carbon monoxide humans can tolerate, and for how long, without ill effects, and the disagreement carries over into industrial safety standards. At their most stringent, in the Soviet Union and Czechoslovakia, a factory worker's exposure is limited to 18 parts per million in the air he must breathe all day. In California the limit is 30 ppm for an eight-hour work day, an exposure which in turn is lower than the American Conference of Governmental Industrial Hygienists' recommended maximum of 50 ppm.

Limits for the intermittent kind of exposure that might be encountered in an automobile have been set by the U.S. Government's Aberdeen Proving Ground at 100 ppm for 30 to 60 minutes and at 50 ppm for

more than an hour. Recent tests have shown that after exposure to a concentration of 50 ppm of carbon monoxide for three hours, many persons suffer significant impairment of nervous-system functions, including reduced coordination, judgment, vision and psychomotor performance. Those effects may come about even in the absence of any physical discomfort. Clearly, carbon monoxide should not leak into an automobile's passenger compartment. Levels too low to do permanent harm may still impair one's ability to drive.

The NHTSA put out its mild warning after it had tested 18 *Corvairs* brought to its attention by owners who noticed disagreeable odors when the heater was on. Fourteen of those *Corvairs* leaked carbon monoxide into the passenger compartment when the heater was on. Eight of the fourteen produced concentrations in excess of 50 ppm inside the passenger compartment; two of the eight, a 1963 and a 1966 model, registered 200 and 220 ppm respectively.

Those 18 *Corvairs* were not, of course, a representative sample, since the presence of objectionable fumes was what had indicated in the first place that something was wrong. There had been no testing of *Corvairs* that didn't have an odor. So the NHTSA contracted with the Automobile Association of Southern California for tests of a random sampling of 300 *Corvairs* to give the Government some idea of the percentage of all *Corvairs* that were leaking carbon monoxide into the passenger compartment. By mid-April 1971, with the California test results not yet released (and at this writing they have still not been released), CU decided to test a sampling of *Corvairs* owned by people living near our Mount Vernon, N.Y., headquarters. By letters addressed to registered owners and through newspaper and television publicity, we invited people to bring their *Corvairs* in for testing; 221 *Corvair* owners did so.

We drove each car over a three-mile course through suburban Mount Vernon, N.Y. Driving time ranged from 10 to 25 minutes, depending on traffic conditions. The test route followed local business and residential streets and a divided highway. Carbon monoxide levels were continuously monitored inside the car. At several points along the route the car was stopped, and carbon monoxide was measured in the outside air. Everyone walking or riding in those streets was breathing a certain amount of carbon monoxide most of the time (quite typically from 20 to 30 ppm), and our test was designed to discover the approximate difference between the amount outside the car and the amount inside. If we measured 50 ppm attributable to a defect in the car under test, that meant the occupants might well have been inhaling 70 to 80 ppm—considerably more carbon monoxide than is acceptable by even the more tolerant standards.

Twenty-five of the 221 *Corvairs* tested produced carbon monoxide concentrations in the passenger compartment in excess of 50 ppm above street-level concentrations when driven with the windows closed and the heater on full. Six of those 25 produced concentrations of between 100 and 200 ppm; seven others produced in excess of 220 ppm.

In 1965, General Motors redesigned the *Corvair's* head gaskets in an apparent effort to produce a tighter fit and make carbon-monoxide leaks less likely. But 16 of the 25 *Corvairs* that leaked more than 50 ppm of carbon monoxide in our tests were of 1965 vintage or later.

Is it normal for better than 10 per cent of such a sampling of automobiles to admit what we consider dangerous levels of carbon monoxide into the passenger compartment? To get some idea, CU chose 68 other cars from our employee parking lot and ran them through tests similar to those done on the *Corvairs*. Included in that sample were seven *Volkswagens*, which, like the *Corvair*

have rear-mounted air-cooled engines and forced-air heating systems. In none of those 66 cars did we measure higher concentrations of carbon monoxide inside the car than outside.

If CU's sampling of *Corvairs* is at all representative of the 900,000 *Corvairs* on the road today, then it's quite likely that some 90,000 *Corvair* owners now drive at great risk in cold or wet weather, when they're likely to shut the windows and turn on the heater. Nor do owners of *Corvairs* free of carbon monoxide leaks have any assurance that a leak won't develop tomorrow or the next day.

There are some indications that CU's test result is no fluke. The Automobile Club of Missouri recently tested 52 *Corvairs* and found 17 (nearly one-third) to have carbon-monoxide concentrations of more than 50 ppm in the passenger compartment. The club detected no excess carbon monoxide inside 100 cars other than *Corvairs* that it tested. Further, the NHTSA, although refusing to give us the results of its California study, did indicate that those results were not much different from ours.

WHAT'S TO BE DONE?

It seems evident that many thousands of people riding in *Corvairs* risk an unsafe level of carbon monoxide and that, to the extent their driving may be affected, *Corvair* owners risk injuring other motorists and pedestrians. Though no jury to CU's knowledge has yet held General Motors legally responsible for injuries or damages allegedly caused by the *Corvair* heater, owners of the cars can hardly afford to ignore the kinds of charges leveled at GM in a number of suits. GM has paid settlements not only to Petry but also to several other claimants, including a widow who contended that her husband died of a heart attack brought on by inhalation of carbon monoxide from his *Corvair*. In a case still pending, a *Corvair* owner who was paralyzed by an accident injury claims to have lost control of his car because of carbon monoxide poisoning suffered while he sat in the car for 45 minutes at a drive-in restaurant with the heater on and the windows closed.

The best advice CU can give *Corvair* owners is none too satisfactory. Keeping a window open may not give protection enough in a car with high concentrations of carbon monoxide. One 1964 *Corvair* brought to us for testing was found to have concentrations of about 250 ppm with the windows closed and the heater going full blast. Later, tests were run with windows open in various combinations. Opening the side windows one inch did not lower the carbon monoxide level significantly. Opening one side window halfway and the opposite corner (vent) window 45 degrees reduced the level to 200 ppm. Opening the side window all the way dropped the concentration to 100 ppm. With both side windows rolled down, both corner windows open 45 degrees and the summer air vents also open fully, the carbon monoxide level was 60 ppm—still unsatisfactory. Only with the heater turned off did the problem disappear in that car.

There will be no practical way for most *Corvair* owners to have their cars checked for carbon monoxide levels unless GM supplies its *Chevrolet* dealers with proper test equipment. Nor has GM offered to pay the high price of replacing leaky head gaskets or exhaust system. (Head gaskets on *Corvairs* with unexpired five-year or 50,000-mile warranties are still covered by warranty, however.) Even if carbon monoxide tests were easily obtained and repairs were made free, the risk would remain of leaks developing between times. And even if you never turned the heater on, carbon monoxide might still get into the car.

As word spreads about the *Corvair* heater problem, some people will doubtless sell or trade in their cars, passing along the prob-

lem to others. If laws were written with public safety as the paramount interest, the Government would have authority to order General Motors to buy back every last *Corvair* for its original price. That principle is already established for less expensive products in the Child Protection and Toy Safety Act (CONSUMER REPORTS, March 1971).

As matters stand, the 1966 National Traffic and Motor Vehicle Safety Act requires car manufacturers to furnish notification of any defect that the manufacturer "determines, in good faith, relates to motor safety." A defect includes any defect in performance, construction, components or materials. The manufacturer is obliged to furnish notification of a defect to the original purchaser and any subsequent purchaser who is covered by the original warranty. The manufacturer, however, is not obliged to pay for the repair of such defects, nor is he required to notify all subsequent purchasers. Still, most defect-notification campaigns, generally referred to as recalls, have involved repair or replacement of the defective parts at the manufacturer's expense.

In CU's opinion the *Corvair* heater is a defect as defined by the National Traffic and Motor Vehicle Safety Act. The construction of the heater is such that it will almost inevitably blow carbon monoxide into the *Corvair* passenger compartment should a small leak develop in the engine's gasketing or exhaust system. There is evidence that suggests General Motors may have known that the direct-air heating system was dangerous when it was rushed into production for the 1961 *Corvair*. The 1961 shop manual states: "Because of the inherent characteristics of the heater, objectionable fumes in the engine compartment may be drawn into the passenger compartment and result in owner complaints." The manual went on to advise that "complaints of objectionable odors in the passenger compartment, whether the heater is on or off, should be traced immediately and promptly corrected." It then referred *Chevrolet* mechanics to the section of the manual dealing with "Procedures and possible locations to check for faulty engine gaskets or seals." The new head gaskets installed beginning with the 1965 *Corvair* also point to an awareness on the part of GM of the hazards of the heater. And certainly, if further notice were needed, it has been amply provided to GM in the form of complaints about odors and fumes, not to mention the court cases.

The NHTSA should use its power to require GM to issue a notice of the possible defect. With many *Corvairs* now in the hands of second and subsequent owners and with the warranty expired on most of the cars, it will be necessary to extend the defect notice far beyond what the law requires, perhaps through heavy advertising. The Government should try to persuade GM to do the advertising, to provide carbon monoxide test facilities at many locations and to make repairs at no cost to the owner. *Corvair* owners should be reminded periodically to take the car in for a recheck.

Above, all the NHTSA has an obligation to investigate the *Corvair* case from top to bottom and to give the facts to the public. It has the legal authority to obtain the records impounded by General Motors in the Petry case, particularly the testimony and the records of the GM engineers who designed and tested the heater. The question of how well or poorly this huge manufacturer exercised its corporate responsibility has fundamental bearing on the proper behavior of all corporations and on future legislation.

Each year the *Chevrolet* division of General Motors produces a history of the division. In 1970, the official *Chevrolet* history book dropped all mention of the *Corvair*. The 900,000 current owners of that ill-fated vehicle cannot forget the car so easily.

EXHIBIT L

SUSPENSIONS FROM THE GROUND UP

(By Charles M. Rubly)

INTRODUCTION

A certain amount of background information is necessary to establish a foundation on which to discuss in detail the engineering features, and situations that had to be overcome in designing suspensions for a rear engine car. A paper, "The Chevrolet Corvair," by Messrs. Hansen, Benzinger, and Winchell, was presented at the National SAE Meeting in Detroit in January, 1960. That paper covered the concept and basic design of the *Corvair*.

Starting from the point where we will surmise that the general preliminary specifications has been laid down by Engineering Management and the decision has been made regarding length of wheelbase, the front and rear tread, that we would use a 6-cylinder opposed aluminum engine mounted in the rear in combination with a transaxle so that some type of independent rear suspension could be used.

With the engine, transmission and axle located in the rear and designed as one package, the driveline is eliminated and the tunnel disappears. Consequently there is more leg room for the center passengers, and the overall car height can be reduced for a more compact car. Seat thickness is constant across the width of the car, thereby obtaining a more comfortable seat which in itself adds to the pleasability of the ride.

The *Chevrolet* Engineering Management has recognized the advantages of an independent rear suspension for some time. Such a suspension is desirable because of the inherent softness when unsprung weight is reduced.

Fairly high ride rates can be used for handling benefits, yet harshness is reduced with the use of an independent rear suspension.

The independent rear suspension eliminates the shake that manifests itself through the tramping of a solid axle. It also eliminates that feeling of dragging a gun carriage under the vehicle, and we felt we could better control roll and the height of the roll center for better handling.

Engineering fully realized that with a weight distribution of 40% front and 60% rear there was an unusual situation with regards to handling in a conventional passenger car. Even though such a weight distribution is not unknown today and in fact is common in loaded station wagons.

It should be pointed out that when the handling deficiency no longer exists, the advantages that can be had with a 40% front and 60% rear weight distribution vehicles are many and worthwhile. Some of these are:

1. Little change in weight distribution from curb to fully loaded weight. (Fig. 1)
2. Weight transfer upon braking permits nearly equal braking effort distribution for maximum lining life and fade resistance. (Fig. 2)

3. Light steering effort with numerically lower overall steering ratio, thereby permitting fewer steering wheel turns, lock-to-lock, and no need for power steering.

4. Increased traction with same overall vehicle weight. Figure 3 shows the extra traction inherent to the *Corvair* as opposed to that of the same car if built with front engine. The chart is theoretical, but the figures are comparative and do indicate the traction advantage of a rear engine car over a front engine-rear drive vehicle of the same weight. Using a .2 coefficient of friction, the gain is over 40% in the case of one passenger load, and over 30% in the case of a five passenger load.

We realized at the outset, that tires and width of rims would play an important part in solving the handling situation, also that any tire then being produced would not be

satisfactory. The tires must be an engineered part of the suspension and not just another tire.

Based on the title, we will start from the ground and this policy will discuss:

The development of a new tire and compatible rim to help the suspensions overcome the handling deficiencies of a car that is heavier on the rear wheels than on the front, a situation that has plagued tail heavy cars in the past, plus the situation that exists with use of an independent rear suspension with regards to roll couple.

The design of the front suspension and its attachment to the integral body.

The design of the rear suspension and its attachment to the integral body.

The relative stiffness of the body to which the suspensions attach.

TIRES

In the early stages of development work, existing 13 inch tires of various makes including European tires were evaluated. One tire and rim combination investigated fully was a 6.40-13 inch tire on a 4.5 inch rim. All existing tires were found to be unsatisfactory.

Many different ideas were pulled from the suspension engineer's bag of tricks but the handling characteristics always fell short of our objective and engineering standards.

It was then decided that a tire of larger size, incorporating new internal construction, plus a wider rim and compatible suspension geometry were necessary to accomplish our handling objective, without compromising ride comfort, or adding undue harshness to the vehicle.

Design work was started in cooperation with tire companies to accomplish this. Tire construction and tire building "know-how" were explored. At the same time, evaluations were made of various rim widths and the effects of balancing out tire pressures front to rear. As a result, a tire and rim specification evolved which, when used with compatible suspension geometry, provided the desired handling characteristics.

The tire size was then established as 6.50-13 with 4-ply rating incorporating new proportions, a height to width ratio of .85 and a lower cord angle. A stiffer carcass stock and a softer tread stock were also specified to further improve stability and ride comfort. This new tire is used on a 5.5 inch rim with tire pressures of 15 psi front and 26 psi rear in order to obtain as close as possible equal slip angles under lateral acceleration.

The following graphs, of course, do not represent all the development work that was done, but do illustrate the significant factors and why we accepted the stated specification.

Figure 4 shows cornering force versus slip angle of three different tire and rim combinations:

1. The lower curve represents the old or original tire with a section height to width ratio of .92 on a 4.5" wide rim.

2. The middle curve represents the old or original tire with a section height to width ratio of .92 on a 5.5" wide rim.

The vertical difference between the two curves shows gain in cornering force for the same slip angles between a 4.5" rim and a 5.5" rim.

3. The upper curve represents the new tire section height to width ratio of .85, and reduced cord angle construction on a 5.5" wide rim.

The vertical difference between the upper curve and the middle curve shows gain made in cornering force for the same slip angles between a .85 and .92 height to width ratio of tire section.

The difference between the lower curve and the upper curve is the total gain experienced when using the new tire section on a 5.5"

rim, for an approximate average gain of 19%.

Figure 5 shows the relation of radial tire deflection in inches in comparison with tire loading of a 6.50-13 tire, at 13, 15, 26, and 28 psi. The 15 psi represents the Corvair front tire pressure and 26 psi represents the Corvair rear tire pressures. Note that under these tire pressures and at one passenger load the front and rear tire deflections are practically the same. The objective was to arrive at equal tire deflections front and rear under riding conditions and equal slip angles front and rear during cornering. At five passenger load the difference in tire deflection is less than .1 inch.

There are two things that could have been done to better this condition, one would be to lower front tire pressures to 13 psi or increase rear tire pressure to 28 psi.

The 13 psi will support the load satisfactorily but it was found during tire roll off tests in gravel that it was possible to force gravel under the bead seat if the wheel was slid into a gravel bank. So a safety margin was set up as 15 psi cold resulting in approximately 18 psi when hot.

The 28 psi would reduce the rear tire deflection enough but we did not feel that we should compromise ride and add harshness because under hot conditions tire pressures will increase 3 to 4 psi.

The difference in deflection between the front and rear tires will be greater under hot conditions as indicated by the slope of the curves, but not substantially so, a little over .1 inch total.

Thus, in line with our original objective, an engineering solution to lateral stability has been obtained by proper design of tires, rims, and specified inflation pressures.

FRONT SUSPENSION

The front suspension (Fig. 6) was designed for simplicity, assembly ease and low cost. The suspension, in general, is much the same as used in the Chevrolet passenger car inasmuch as we still use a stamped upper and lower control arm, upper and lower ball joints except the lower ball joint is reversed, or in tension, to get inside the 13 inch rim and keep the scrub radius to a minimum. The brake attaches directly to the steering knuckle, and we maintain the antidive feature and an understeering toe change geometry.

The only significant difference from the regular Chevrolet passenger car, is the use of the strut rod instead of the double bushed lower control arm, and the feature of unitizing the front suspension for ease of assembly at both the manufacturing and the final assembly plants.

The front suspension is assembled at the Gear and Axle Plant as a complete unitized assembly. Camber and caster are preset under a load representing the proper weight of the car on the suspension. Brake adjustment is also accomplished at this time.

Toe is partially set at the manufacturing plant with the final toe setting being made at the end of the final assembly line with the front and rear wheels on the rolls. From the manufacturing plant the complete unit is shipped to the assembly plant for installation into the vehicle.

To install the front suspension unit into the vehicle (Fig. 7), it is placed on a fixture that looks much like a single cylinder hydraulic hoist on wheels. These hoists are on a track along with a similar hoist for the rear suspension engine and transaxle unit.

The track is laid in a circular course and runs from suspension loading station to a point under the body which is carried on an overhead conveyor. The front and rear suspensions are then raised and attached to the integral body structure.

The attachment of the front suspension

unit is very straightforward. It is attached by six bolts, three on each side, driven from below into nuts in the body structure as shown by the phantom lines in Figure 8.

Also note that the front suspension crossmember is attached directly to the body structure without any means of isolation.

We have found that no isolation is needed other than the bushings of the upper and lower control arms. In fact, we had a rubber grommet between the upper end of the spring and the crossmember spring seat which has since been eliminated because it was not required for isolation.

It is my opinion, that by the reduction of the front end weight and thereby being able to reduce the spring stiffness and tire pressures, plus the elimination of the engine mass on the front crossmember, we are able to have a front suspension that has low road noise transmissibility without resorting to some type of isolation between the suspension unit and the body structure.

Also note from the illustration that the strut rod is located to the rear.

We have found in laboratory and vehicle testing that the strut rod and suspension arm bushings amount to approximately 25% of the dynamic ride rate. This has also been found to be true on other makes of cars. We feel that this parasitic rate is too high a percentage of the whole. It is a rate that is normally hard to control because of hysteresis in the rubber and the tolerances of rubber compounding.

This area is one that can be greatly improved in the future. In the meantime, however, we do everything possible to control the deflection rates of the strut rod and suspension arm bushings. This is done to maintain the engineering performance and durability standards established on our test vehicles. Curves are added to our drawings showing the acceptability limits of these rubber parts.

Figure 9 illustrates representative performance required of our rubber bushings. Limits of acceptability of the strut rod bushing are shown, and note that there are two shaded areas. The top area is the requirement when new and is for quality control check.

The second or lower shaded area is the range of acceptability after the bushing has been mounted in a test fixture and stroked for 100,000 cycles per the physical requirement note on the drawing. This control plus rubber compounding specifications insures proper performance and durability.

REAR SUSPENSION

The swing axle independent rear suspension (Fig. 10) is one of the most interesting features of the Corvair chassis.

This illustration shows the general arrangement of the rear suspension, transaxle, and engine completely assembled as a unitized assembly.

Unlike the front suspension, the rear suspension is assembled at the car assembly plant and consists of a crossmember, control arm assembly, springs, shock absorbers, brakes and wheels. The transmission and axle, referred to as the transaxle is assembled to the engine. The transaxle-engine assembly is attached to the crossmember through rubber mounts and shimmed fore and aft at the mounting point to produce the correct toe setting.

The complete engine, transaxle, and rear suspension unit is then installed on a hoist fixture and lifted into place in the body at the same time as the front suspension. The rear suspension, engine, and transaxle unit is attached to the unitized body by five bolts, all cushioned in rubber.

This type of swing axle rear suspension is, we believe, unique in its application.

The control arms are mounted in a semi-

trailing attitude so that their projected pivot axes pass through their respective axle shaft universal joint centers. This arrangement limits slip at the U-joint splines and allows the use of single self-aligning bearing assemblies at each axle shaft.

However, note from the illustration that the bearing outer housing is fastened through the flange plate to the control arm. The bearing inner race is a press fit on the axle shaft which carries the brake drum.

Also note that if the transaxle and engine is properly shimmed fore and aft, and if the dimensions up and down are correct, the centerline through the control arm shaft intersects the U-joint on the inner end of the axle shaft. If such alignment existed at all times, the flange plate, brake shoes and drum would stay parallel to each other throughout the ride travel.

Due to tolerances, variations and deflections this is not very likely to happen so that a self-aligning bearing was used to accept the variations. This particular bearing was designed to accommodate a 3 degree variation between flange plate and drum.

It has been found through vehicle testing that the angular variation when driving on a relatively smooth road to be approximately $\pm \frac{1}{2}$ degree; and on a rough road ± 1 degree.

Because of this slight out of parallel condition between the brake shoes and drum, there was some apprehension whether or not we would experience poor brake performance, objectionable wear or objectionable noise.

Apparently all these things aren't what they seem on the surface, in fact, the wear rate is excellent, probably due to cooling. The wear rate is between .003 to .004 per 1000 miles of road testing, and the function of the brake is satisfactory. We feel that it is one of the best brakes that we have ever put on a vehicle.

The geometry of the suspension is such as to produce an anti-lift reaction under braking, and a toe and camber change during riding.

Due to the positioning of the control arm the rear wheels are always trailing and produce an overall toe-in condition throughout the ride travel.

Another interesting aspect of this particular swing axle was the roll couple distribution front to rear.

You will note in the schematic sketch of two chassis (Fig. 12), the top view representing the Corvair with its swing axle, and the bottom view an identical vehicle except for a solid rear axle and leaf springs.

To keep a direct comparison we have used the same wheelbase, tread, weight distribution, front and rear ride rates, and height of center of gravity.

The roll axis intersects the centerline of front wheels at the ground in both cases and assumes the correct height of roll center at the centerline of rear wheels, with the height of the roll center at the rear being higher for the swing axle than the leaf spring.

With the roll axis being higher on the swing axle than on the leaf spring and solid axle, and the height of CG same in both cases, the moment around the roll axis is less for the swing axle, reducing body roll over the leaf spring suspension as much as 40% under identical lateral accelerations.

However, due to the difference in how the load causing the roll, during lateral acceleration, is applied to the tires, a greater percentage of roll couple and overturning couple is carried on the leaf spring car than on the swing axle vehicle.

It is also true that on a swing axle suspension of this type more of the roll couple is taken on the rear than on the front, and if you had equal tire pressures, front and rear, the result would be greater slip angles on the rear than on the front.

Again the saving grace of the lighter front

end, which allowed the Corvair to use a much lower tire pressure on the front than the rear. This in turn produced small differences between front and rear tire slip angles under cornering conditions.

One of the obvious questions is "If you wish more of the roll couple to be taken on the front wheels why did you leave the stabilizer off?"

First, we felt the slight amount of gain realized did not warrant the cost, secondly, we did not wish to pay the penalty of increased road noise and harshness that results from use of a stabilizer.

Another question that no doubt can be asked is why did we choose an independent rear suspension of this particular type? There are other swing axle rear suspensions, of course, that permit transferring more of the roll couple to the front end. Our selection of this particular type of a swing axle rear suspension is based on:

1. Lower cost.
2. Ease of assembly.
3. Ease of service.
4. Simplicity of design.

5. We also wished to take advantage of coil springs which in themselves have no static or breakaway friction in order to obtain a more pleasing ride, as proven on the Electronic Ride Simulator at General Motors Research.

In the illustration the upper two traces represent the front and rear road wheel deflections when negotiating a given length of pavement. The lower two traces illustrate the sprung mass vertical acceleration as influenced by friction in the suspension articulating members. The sharp increase in vertical acceleration of the sprung mass when friction is introduced in the suspension, indicates the ride comfort improvement to be made by reducing suspension friction.

6. Reduction of unsprung weight results in a softer feeling vehicle and a shake reduction.

To demonstrate the reduction in lateral shake, the chassis rolls were used with two lobe cams to excite the rear wheels in tramp motion at wheel hop frequency. Vibration pickups were installed to measure vertical wheel motion, lateral axle motion, lateral body frame motion, and lateral front seat frame motion.

A 1957 Chevrolet (the last model Chevrolet produced with a solid axle and leaf spring rear suspension) had 2.9 times more lateral axle motion, 1.4 times more lateral body frame motion, and six times more lateral front seat frame motion compared to a Corvair with equal vertical wheel motions. Other presently produced vehicles with solid axles and leaf spring rear suspensions had similarly large lateral motions excited by this type of suspension.

The 1957 Chevrolet had a resonant wheel tramp frequency of 12 cps, and a lateral resonant shake frequency of 15 cps. The Corvair has a resonant wheel tramp frequency of 14 cps, and a lateral resonant shake frequency of 25 cps. Because of the spread between the lateral resonant frequency of the vehicle and the tramp resonant frequency, the Corvairs' lateral frequency will not be excited by the wheel hop frequency.

7. The ability to isolate the body from distortion stresses. As the rear suspension cross-member, which is isolated from the body by eight large rubber cushions, supports all its suspension elements.

This last point is very important in reducing transmission of road noise and engine noise into the vehicle.

The large outer upper cushions locate the suspension to the body, help support the body weight and take most of the driving loads and part of the acceleration and braking loads.

The inner smaller cushions help support the body weight and help to stabilize the crossmember during acceleration and braking. All cushions, of course, isolate the suspension and power train from the body.

The power plant and transaxle unit in turn are supported from the crossmember by two rubber engine mounts. By this double isolation scheme much of the engine vibration and noise is prevented from transferring into the body.

A soft single rear engine mount is attached directly to the body rear crossmember.

The deflection rates of the rear suspension supporting cushions as specified on our drawings are the result of laboratory tuning and many miles of car testing.

These mounts were tuned, to prevent as much as possible, the transmitting of shake, noise and vibration especially those vibrations in the high frequency range.

We control the body mounting cushions the same as the rubber suspension bushings, by the use of deflection versus load curves as shown in the illustration.

BODY STRUCTURE

Among other factors, the body's effect on or contribution to ride was considered when the target structural values were formed. Over 60 different makes or models of cars were evaluated with respect to ride quality and structural stiffness. In that group of cars the unit torsion rate varied from a low of about 23,000 ft-lbs/deg/ft, to a high of about 100,000 ft-lbs/deg/ft.

Generally, the vehicles with numerically lower torsion rates were good with respect to ride softness, but also had notable shake characteristics.

The stiffer vehicles had greater freedom from shake but were prone to ride and road harshness.

Those findings suggest the limits of compromise, but there are other factors that must be considered. Body durability and functional quality require structural stiffness.* With a separate frame and body type construction, an adequately stiff body can be suitably mounted through rubber to a somewhat more limber chassis frame, thus permitting a torsional rate over the length of the wheelbase as desired for ride without sacrificing body quality.

With integrated frame and body construction the designers freedom is restricted. The stiffness required for body durability and performance cannot be sacrificed, so that a greater proportion of the flexibility or isolation from the road has to be designed into the suspension or its mounts. In that respect, unitized suspension systems have a clear advantage. The Corvair for example, with the chassis springs blocked out has a unit torsion rate of approximately 60,000 lbs-ft/deg/ft. But the body alone is stiffer.

The ability to isolate the rear suspension from the body through rubber cushions permitted the tailoring of torsional rigidity for ride quality without sacrificing body quality.

In other words, unitized suspension systems in combination with a frame integral body design, permit a counterpart of the flexible body mounts in a separate frame and body design, thus permitting greater latitude in the development of ride and road noise isolation.

In the case of the Corvair, which has unitized suspension systems front and rear, torsional flexibility could have been introduced at either end. However, the rear suspension always carries the greatest load, and is consequently, the greatest potential source of road noise. Also, because the rear suspension has the greatest roll couple, torsional flexibility added at that point has a more uniform effect over the entire range of vehicle suspension movements.

The Corvair rear suspension mounting permits another bonus, in that the engine and

transaxle forward mounts are suspended in rubber from the suspension cross-member. As mentioned previously, this means that the engine and transaxle are twice removed or doubly cushioned from the body in the area closest to the passenger compartment.

Further isolation of the engine from the passenger compartment (Fig. 18) is provided with a plastic-coated, one-inch-thick blanket of fiber glass. This blanket is mounted on the engine side of the body panel behind the rear seat. In all other areas, the body is con-

ventionally treated with sound deadening and insulating materials.

CONCLUSION

In conclusion, if there were only one "best" way to design a vehicle, the value of this design could be easily measured. In fact, there would be no basis for discussion at all. In this paper we have attempted to take a closer look at some of the developments that made a fundamentally different approach a very practical one.

VEHICLE DIRECTIONAL CONTROL BEHAVIOR DESCRIBED IN MORE PRECISE TERMS

(By Joseph B. Bidwell, head, Engineering Mechanics Dept., GM Research Laboratories)

Leading vehicle and tire engineers are close to agreement on terminology for vehicle directional control and tire characteristics, as a result of a recent SAE-sponsored seminar. Motivated by the pressing need for definitions permitting quantitative measurements instead of subjective evaluations, they approached agreement rapidly by using a previously developed General Motors suggested terminology as a start for discussion.¹

Elimination of inconsistencies and substitution of more precise and logical terms, the representative group envisioned, could bring such important advantages as:

Better communications between vehicle and tire engineers on their common problems.

More precise programs for computers used in vehicle dynamics studies.

Easier sharing of computer programs between companies.

Much progress toward agreement was made as top-ranking experts exchanged comments, criticism, and suggestions for improvement to the preliminary GM studies. In fact, some engineers, following the seminar, even recommended that the final proposal—already in sight—might well be the basis for an SAE Recommended Practice. It would parallel, they pointed out, the SAE RP on Ride, Vibration, and Suspension Terminology (SAE J670). (Subsequent discussions have resolved almost all of the points not settled at the seminar, such as the axis systems problem. The revised terminology, which includes all changes agreed upon up to this time, is given in the Appendix.)

In trying to make the definitions technically accurate, it was emphasized, one must not fall into the trap of tying them down too closely to conventionally steered vehicles. Some of the past terminology is still perfectly satisfactory for them, but it is simply not general enough to take care of future possibilities. Thus, the proposed terms must be usable with such unconventional steering

configurations as: rear steering, all-wheel steering, and systems with steering gear ratio as a function of velocity. Some of the subjects on which agreement was reached by the end of the day included such controversial points as definitions for the various kinds of stability and for oversteer, understeer, and neutral steer. There was also extensive discussion of the question of suitable axes. This problem has since been resolved, as mentioned earlier.

STABILITY

The original proposal contained general definitions of stability and instability, with the latter divided into two types—divergent and oscillatory, which were also defined.

F. D. Hales of MIRA pointed out that the originally proposed definition of instability, namely—

A vehicle system is said to be unstable at a prescribed trim provided that, for any small, temporary control or disturbance input, the vehicle will not return to the original steady-state conditions—

also covers neutral stability, which is certainly not a form of instability but, rather, is the boundary of a stable system.

At the meeting the GM engineers suggested a modified definition of stability, and added definitions of asymptotic stability and neutral stability. They also made slight modifications to their definitions of instability and its two types. To clarify their discussion, they used the sketches shown in Fig. 1.

These configurations apply to dynamic systems in general, but they all have practical significance for the vehicle designer, because every one of them applies to some vehicle with respect to its yaw or lateral response.

It was finally agreed that a general definition for stability was unnecessary, and that the definitions for asymptotic stability, neutral stability, divergent instability and oscillatory instability given in the Appendix should be used.

The word "trim," as used in these definitions, is defined to include both the disturbance and the response. This concept appears to be more useful and technically accurate than the normal definition, which refers simply to the condition of the vehicle. (See Appendix for complete definition of trim.)

The new definitions are of particular significance because they allow the various kinds of stability and instability to be measured with suitable tests. Thus, for example, in the study of a certain vehicle, you may find that any input to the steering wheel places the vehicle in a turn of ever-decreasing radius, unless the driver makes compensating motions of the wheel to maintain gen-

eral equilibrium. This vehicle will never reach steady state; and, although it shows no oscillatory tendencies of its own, it does tend to diverge from a straight course and "spin out." This condition represents divergent instability.

THREE KINDS OF "STEER"

Neutral steer, path oversteer, and path understeer were originally defined in terms of the derivative of the steady-state turning radius with respect to vehicle velocity. If the derivative is zero for a vehicle, it is said to be in neutral steer; if it is negative, the vehicle is in path oversteer; if it is positive, the vehicle is in path understeer.

Hales of MIRA pointed out that the proposed definition of neutral steer means that all vehicles traveling in a straight line on a level road are in neutral steer. E. E. Larrabee of M.I.T. commented that the suggested definitions implied that a small speed change while cornering is essential for the detection of the understeering and oversteering phenomena. He believes that understeering and oversteering phenomena may be detected at constant speed and variable turn radius, including situations where the nonlinear effects of tire side force and driving tractive force must be taken into account.

These and similar comments led to the development of the definitions for reference steer angle and neutral steer, path understeer, path oversteer given in the Appendix.

From these definitions it is clear that, if the yaw velocity divided by the steer angle (that is, the yaw velocity gain) is equal to the forward velocity divided by the wheel base, the vehicle is in neutral steer. If the yaw velocity gain is greater, the velocity is in oversteer, if it is less, it is in understeer.

The real significance of the definitions is that, whether a vehicle is said to be in oversteer, understeer, or neutral steer depends strictly on the yaw gain of the vehicle, which is an easily measured quantity, since it involves the change in the rate of rotation in the earth's plane for a unit change in steering angle (see Fig. 2). Note that the curves aren't necessarily straight, and that yaw velocity gain really means the slope of the curve at any particular point (operating condition).

It must be pointed out, however, that the above definitions cover only the steady-state condition, which was the original conception of Maurice Olley 30 years ago.

Walter Bergman of Ford, and others, felt strongly that definitions to cover oversteer and understeer during the transient state should also be included in the terminology. It appeared that to define transient oversteer and understeer was not easy, and no agreement was reached at the meeting on suitable definitions.

¹ "Terminology for Vehicle Directional Control and Tire Characteristics," a proposal by R. T. Bundorf and D. L. Nordeen, Engineering Mechanics Department, GM Research Laboratories.

AXIS SYSTEMS

The proposal in regard to vehicle directional control axes simple gives some conventions in regard to direction, notation, and terminology. No restraints are placed on the number of axis systems to be used or where the origin of any of them should be. There is simply an XYZ axis fixed in space and an xyz axis, which is fixed at some point in the moving vehicle (*moving axis*). The idea is that the analysts should not be tied down in regard to number of axes or origin. Standardizing the directions, for example, simplifies the use of sign conventions for such items as roll steer coefficient (change in steer angle per unit change in roll), so that one can identify by sign a roll oversteer or roll understeer condition. It is impossible to tell this with the present lack of conventions in regard to general orientation of the axis system. (See the Appendix for the complete definition of the axis system.)

The logic of this system is explained as follows: Forward motion is chosen as positive, which orients the x-axis. This also gives positive roll motion as clockwise when viewed from the driver's position. The desirability of having positive steering wheel motions as clockwise and positive yaw velocities as clockwise rotations when viewed from the above results in a z-axis that points down. In addition, the positive lateral direction is to the driver's right and thus positive path deviation results from positive steer inputs.

TWO SMALL CHANGES

Instead of the term "camber angle," which was used in the original proposal, "inclination angle" is used for describing tire data or vehicle dynamics problems, where the sign convention is different from the SAE definition of "camber angle" (as given in the SAE RP on Ride, Vibration, and Suspension Terminology). In addition, instead of using the term "critical speed" for an understeer vehicle, where the situation is really not critical in any sense, the document now uses "characteristic speed," since this does characterize the understeer nature of this kind of vehicle.

TERMINOLOGY FOR VEHICLE DIRECTIONAL CONTROL AND TIRE CHARACTERISTICS

Section I: Vehicle directional control (handling) terminology

Vehicle Directional Control is a general term describing all aspects of the driver-vehicle control relationship that pertain to coursekeeping. It includes all types of vehicle systems, environments, and operating conditions, and may be studied both subjectively and objectively.

Vehicle directional control motions fall into certain categories, depending upon the area of study and the vehicle environment. In general, the vehicle may be regarded as a system upon which certain inputs, such as steering inputs, wind forces, or road irregularities, may be imposed. The vehicle motions resulting from these inputs are then called "responses." A method of categorizing such conditions of operation and the resulting vehicle motions is given by the following definitions, which describe the general area of vehicle response.

Vehicle Response is the vehicle motion resulting from some internal or external input to the vehicle. Response tests can be used to determine the stability and control effectiveness of a vehicle.

Vehicle Control Response is the vehicle motion resulting from an input to the control (steering) element.

Although the steering wheel is the primary directional control element, it should be recognized that traction forces at the wheels resulting from driver inputs to brakes or throttle can modify directional response.

Vehicle Disturbance Response is the vehicle motion resulting from unwanted force

or displacement inputs applied to the vehicle. Examples of disturbances are wind forces or vertical road displacements.

Position Control is vehicle control with inputs or restraints upon the steering system in the form of displacements at some control point in the steering system (front wheels, Pitman arm, steering wheel), independent of the force required.

Fixed Control is vehicle control with the position of some point in the steering system (front wheels, Pitman arm, steering wheel) held fixed. This is a special case of position control.

Force Control is vehicle control with inputs or restraints upon the steering system in the form of forces, independent of the displacement required.

Free Control is vehicle control with no restraints placed upon the steering system. This is a special case of force control.

Driver Control is vehicle control using the combination of force and position inputs required to maintain the desired path. Force and position are related by the steering and vehicle system parameters and operating conditions.

Steady State exists when external forces relative to the vehicle (including ground and aerodynamic forces) are invariant in time and vehicle control inputs are constant. The motion responses in steady state are referred to as "steady-state responses." This definition does not require the vehicle to be operating in a straight line or on a level road surface. It can also be in a turn of constant radius or on a cambered road surface.

Transient State exists when the motion responses, the external forces relative to the vehicle, or the control positions are changing with time.

These responses are described by the terminology normally employed for other dynamic systems. (Some terminology is described in "Control Engineers' Handbook" edited by John G. Truxal and published by McGraw Hill.)

Trim is a steady-state condition of the vehicle defined by the steady-state vehicle responses and the control and disturbance inputs.

In handling analysis of nonlinear vehicles, trim is used as a reference point for analysis of vehicle stability. In such analysis (as in subjective analysis), it is found that vehicles vary in stability depending upon the trim.

Steady-State Response Gain is the ratio of change in the steady-state response of any motion variable with respect to change in input about a given condition of trim.

Vehicle directional control stability

Passenger vehicles are generally stable systems, but do adopt varying characteristics, depending upon environments and trim. *Environment* refers to the atmospheric and road conditions that affect vehicle parameters. For example, temperature may change shock absorber damping characteristics and a slippery road surface may change tire cornering properties. *Trim* has been previously defined as the vehicle operating condition within a given environment, and may be specified in part by steer angle, forward velocity, and lateral acceleration. Since all these factors change the vehicle behavior, the vehicle stability must be examined separately for each environment and trim.

Given a set of vehicle parameters based on a particular environment, the vehicle may be examined for each theoretically attainable trim. The conditions that most affect stability are the steady-state values of forward velocity and lateral accelerations. In practice, it is possible for a vehicle to be stable under one set of operating conditions and unstable in another.

Unfortunately, the proper definitions regarding stability do not, in themselves, define a quantitative measure of stability; they only decide whether a vehicle system is stable or unstable. This decision is based upon the

ability of the vehicle to maintain a steady-state or near-steady-state condition while under the constant influence of small aerodynamic disturbances, road disturbances, and control inputs. This is, in a real sense, a decision based upon the controllability of the vehicle. Accordingly, the following definitions of stability are applicable to the motor vehicle.

Asymptotic Stability exists at a prescribed trim if, for any small, temporary change in control or disturbance input, the vehicle will approach the motion defined by the trim.

Neutral Stability exists at a prescribed trim if a temporary change in control or disturbance input can be found such that the resulting motion of the vehicle remains arbitrarily close to, but does not approach, the motion defined by the trim.

Divergent Instability exists if a small, temporary disturbance or control input causes an ever-increasing vehicle response without oscillation in the neighborhood of the trim. A linear mathematical analog of a vehicle is divergently unstable when the characteristic equation has any positive real roots.

Oscillatory Instability exists if a small temporary disturbance or control input causes an oscillatory vehicle response of ever-increasing amplitude in the neighborhood of the trim. A linear mathematical analog of a vehicle is oscillatory unstable when its characteristic equation has any complex roots with positive real parts.

Vehicle instability may be illustrated by two examples. The first is the condition of operation above critical speed in a path oversteer vehicle. Any input to the steering wheel will place the vehicle in a turn of ever decreasing radius, unless the driver makes compensating motions of the wheel to maintain general equilibrium. The vehicle with never stop trying to change its course and will never permit the driver to relax. In other words, it will never reach steady state; and although it shows no oscillatory tendencies of its own, it does tend to diverge from a straight course and "spin out." This condition represents divergent instability.

The second example concerns oscillatory instability and may be illustrated by the free control response following a pulse input of displacement or force to the steering wheel. Some vehicles will turn first in one direction, and then the other, and so on until the amplitude of the motion increases to the extent that the vehicle "spins out." In this event the vehicle does not attempt to change its general direction of motion but, on the other hand, does not achieve a steady-state condition and has an oscillatory motion.

It is, of course, conceivable that both types of instability can occur concurrently, causing a divergent motion with oscillation.

VEHICLE DIRECTIONAL CONTROL AXES

In the analysis of vehicle directional control a moving axis system is required for simple derivation of the equations. The directions are chosen for ease of interpretation and logic of the vehicle motions. This system corresponds to that used by the aircraft and marine industries. Through consideration of these points, the axis system here defined and shown in Fig. A has been developed for investigation of vehicle directional control.

Vehicle Directional Control Axis System: A handling axis system ($x-y-z$) is defined for the vehicle with origin 0 at some point fixed in the vehicle and such that, with the vehicle moving steadily and symmetrically in a straight line on a level road, the x -axis is horizontal and points forward and is in the longitudinal plane of symmetry. The y -axis points horizontally to the driver's right at right angles to x -axis. The z -axis points down to form with the x and y axes a right-hand set of axes. These axes remain fixed in the vehicle. Motions of the vehicle are described by motions of this set of axes relative to an axis system (X, Y, Z) fixed in inertial space.

The X and Y axes are in a horizontal plane and the Z axis is directed downward. Analysis may require the use of additional intermediate axis systems.

VEHICLE MOTION VARIABLES

The velocity of a point in a vehicle with respect to the space fixed axis system (X, Y, Z) is a vector quantity. The following motion variables are components of this vector resolved with respect to the moving axis system (x, y, z).

Longitudinal Velocity (Forward and Rearward Velocity) (u) of a point is the component of the vector velocity in the x-direction.

Lateral Velocity (Sideslip Velocity) (v) of a point is the component of the vector velocity in the y-direction.

Vertical Velocity (Bounce Velocity) (w) of a point is the component of the vector velocity in the z-direction.

The angular velocity of the vehicle with respect to the space fixed axis system (X, Y, Z) is a vector quantity. The following motion variables are components of this vector resolved with respect to the moving axis system (x, y, z). Since the axis system (x, y, z) is fixed in the vehicle these angular velocities are also the angular velocities of the axis system (x, y, z) relative to the space fixed axis system (X, Y, Z).

Roll Velocity (p) is the angular velocity about the x-axis.

Pitch Velocity (q) is the angular velocity about the y-axis.

Yaw Velocity (r) is the angular velocity about the z-axis.

There are three additional angles that are often used in vehicle handling analysis and should be defined (see Fig. B).

Heading Angle (ψ) is the angle between the trace on the X-Y plane of the vehicle x-axis and the X-axis of the space axis system.

Sideslip Angle (Attitude Angle) (β) is the angle between the traces on the X-Y plane of the vehicle x-axis and the vehicle velocity vector at some specified point in the vehicle. Sideslip angle is shown in Fig. B as a positive angle.

Course angle (γ) is the angle between the trace of the vehicle velocity vector on the X-Y plane and the X-axis of the space axis system. Positive course angle is shown in Fig. B. Course angle is the sum of heading angle and sideslip angle ($\gamma = \psi + \beta$).

For a flat road, the radius of curvature of the vehicle path in the X-Y plane of the space axis system is the magnitude of the vehicle velocity divided by the time derivative of the course angle.

Reference Steer Angle (δ) is the steer angle of the steered wheels that would result from an input to an infinitely stiff steering system with no roll of the vehicle.

Neutral Steer, Path Understeer, Path Oversteer: A vehicle or mathematical analog of a vehicle is said to be neutral steer at a prescribed trim if the change in yaw velocity per unit change in reference steer angle is equal to the forward velocity divided by the wheelbase. If the change in yaw velocity per unit change in reference steer angle is less, the vehicle is path understeer. If the change in yaw velocity per unit change in reference steer angle is greater, the vehicle is path oversteer.

It is possible for a vehicle to be understeer for small inputs and oversteer for large inputs, (or the opposite) since it is a nonlinear system and does not have the same characteristics at all trims. Consequently, it is necessary to specify the range of inputs and velocities when making a determination of the vehicle's steer characteristics.

Roll Steer is the steering motion of the front and/or rear wheels with respect to the sprung mass that is due to the relative rolling motion of the sprung to the unsprung mass. It is called roll understeer if its influence is such as to induce path understeer,

and it is called roll oversteer if its influence is such as to induce path oversteer. The roll steer coefficient is the change in steer angle per unit change in roll angle about a horizontal axis in the sprung mass plane of symmetry.

Deflection Steer (Compliance Steer) is the steering motion of the front or rear wheels with respect to the sprung mass resulting from compliance in and forces on the suspension and steering linkages. It is called "deflection understeer" if its influence is such as to induce path understeer and it is called "deflection oversteer" if its influence is such as to induce path oversteer. The deflection steer coefficient is the change in steer angle per unit change in force or moment applied to the tire at the road contact. Suspension and steering linkage deflections may be caused by forces and moments in any of the planes defined by the axis system.

STABILITY TERMINOLOGY

Critical Speed for a linear oversteer is that forward velocity which produces infinite yaw velocity gain. It is determined by the relation for the yaw velocity gain of a linear oversteer vehicle.

$$\frac{\text{steady-state yaw velocity}}{\text{reference steer angle}} = \frac{\text{vehicle forward velocity/wheelbase}}{1 - \left(\frac{\text{vehicle forward velocity}}{\text{critical speed}} \right)^2}$$

Characteristic Speed for a linear understeer vehicle is that forward velocity which produces maximum yaw velocity gain (which is equal to one-half of the yaw velocity gain for a neutral steer vehicle of the same wheelbase). It is determined by the relation for the yaw velocity gain for a linear understeer vehicle.

$$\frac{\text{steady-state yaw velocity}}{\text{reference steer angle}} = \frac{\text{vehicle forward velocity/wheelbase}}{1 + \left(\frac{\text{vehicle forward velocity}}{\text{characteristic speed}} \right)^2}$$

Neutral Steer Line is the set of points at which external lateral forces applied to the sprung mass produce no steady-state yaw velocity.

Static Margin is the horizontal distance forward from the neutral steer line to the center of gravity divided by the wheelbase.

SUBSIDIARY DEFINITIONS

Roll Camber is the camber motion of the wheels that is due to the relative rolling motion of the sprung to the unsprung mass. The roll camber coefficient is the change in wheel inclination angle per unit change in roll angle about a horizontal axis in the sprung mass plane of symmetry.

Deflection Camber (Compliance Camber) is the camber motion of the wheels resulting from compliance in the suspension linkage. The deflection camber coefficient is the change in wheel inclination angle per unit change in force or moment applied to the tire at the road contact. Suspension deflections may be caused by forces and moments in any of the planes defined by the axis system.

Roll Center is that point in the transverse vertical plane through any pair of wheel centers and equidistant from them, at which lateral forces may be applied to the sprung mass without producing an angular roll displacement of the sprung mass.

Roll Axis is the line joining the front and rear roll centers.

Roll Rate is the change in the restoring couple exerted by the suspension at either pair of wheels on sprung mass of the vehicle per unit change in roll angle of the sprung mass about a horizontal axis. Roll rate of the complete vehicle is the sum of the separate roll rates at front and rear.

Roll Rate Distribution is the percentage of total roll rate at the front and rear suspensions, respectively.

Lateral Tire Load Transfer is one-half the change in the difference from trim between the vertical loads on the two front (or rear) tires.

Total Longitudinal Tire Load Transfer is one-half the change in the difference from trim between the total vertical loads on the two front tires and the two rear tires.

Lateral Tire Load Transfer Distribution is the percentage of total lateral tire load transfer that is borne by the front and rear pairs of tires, respectively.

SECTION II: TIRE TERMINOLOGY AND AXIS SYSTEM

Wheel Plane is the central plane of the tire, normal to the spin axis of the wheel.

Wheel Center is the point at which the spin axis of the wheel intersects the wheel plane.

Center of Tire Contact is the intersection of the wheel plane and the projection of the spin axis of the wheel onto the road plane. This may not be the geometric center of the tire contact area.

Loaded Radius (R_L) is the distance from the center of tire contact to the wheel center.

Tire Axis System: The origin of the tire axis system is the center of tire contact. The X-axis is the intersection of the wheel plane and the road plane with a positive direction forward. The Z-axis is perpendicular to the road plane with a positive direction downward. The Y-axis is in the road plane, its direction being chosen to make the axis system orthogonal and right-hand.

Tractive Force (F_x) is the component of the force acting on the tire by the road in the X-direction.

Lateral Force (F_y) is the component of the force acting on the tire by the road in the Y-direction.

Normal Force (F_z) is the component of the force acting on the tire by the road in the Z-direction.

Overturning Moment (M_x) is the moment acting on the tire by the road with respect to the X-axis.

Rolling Resistance Moment (M_y) is the moment acting on the tire by the road with respect to the Y-axis.

Aligning Torque (M_z) is the moment acting on the tire by the road with respect to the Z-axis.

Vertical Load is the normal reaction of the tire on the road, which is equal to the negative of normal force.

Slip Angle (α) is the angle formed between the direction of travel of the center of tire contact and the X-axis.

Inclination Angle (γ) is the angle formed between the X-Z plane and the wheel plane. Its sign is dependent only upon the axis system and is independent of location on the vehicle.

Wheel Torque (T) is the external torque applied from the vehicle about the spin axis of the wheel. The wheel torque applied can be computed from the forces and moments acting on the tire by the road.

$$T = F_z R_L + M_y \cos \gamma + M_z \sin \gamma$$

Rolling Resistance Force (F_r) is the force that must be applied to the wheel at the wheel center with a line of action parallel to the X-axis so that its moment with respect to the Y-axis is equal to the rolling resistance moment. This force can also be computed from the forces and moments acting on the tire by the road.

$$F_r = \frac{M_y}{R_L \cos \gamma}$$

Wheel Velocity (ω) is the angular velocity of the wheel about its spin axis.

Effective Rolling Radius (R_e) is the ratio of the linear velocity of the wheel center in the X-direction to the angular velocity of the wheel.

Cornering Force is the lateral force when the inclination angle is zero.

Chamber Force (Camber Thrust) is the lateral force when the slip angle is zero.

Cornering Stiffness (Cornering Rate, Cornering Power) (C_α) is the derivative of the lateral force with respect to slip angle.

Camber Stiffness (Camber Rate, Camber Thrust Rate) (C_γ) is the derivative of the lateral force with respect to inclination angle.

Cornering Coefficient is the ratio of the cornering stiffness to the normal force.

EXHIBIT O

FEBRUARY 21, 1973.

DOUGLAS MR. TOMS,
Administrator, National Highway Traffic
Safety Administration, Department of
Transportation, Washington, D.C.

DEAR MR. TOMS: In the file of the defect investigation, IR-279, concerning the handling and stability of the 1960-1963 Corvair, there are certain materials which did not appear in the public files. These materials were considered to be confidential by General Motors and this confidentiality has been respected by the NHTSA to the detriment of the public interest.

On October 12, 1972, I made a freedom of information request for the complaints filed against GM which alleged harm from the handling and stability defects in the Corvair. The request was based on the fact that these complaints were public knowledge and could be obtained from the courts in which they had been filed and the fact that such information was not protected by the Freedom of Information Act. The NHTSA agreed to make the complaints public on November 7, 1972.

However, there still remains a considerable amount of material which is being withheld from the public file IR-279. Since we have no access to the material being withheld, we can only surmise that it is engineering and test data concerning the Corvair's handling and stability; materials prepared for the defense of the Corvair in lawsuits; and memoranda, letters, audits, and papers concerning the engineering, test, and other Corvair information. This material is not exempt from public disclosure under the Freedom of Information Act. A request for confidentiality by the party supplying the information standing by itself cannot exempt that information from public disclosure.

Beyond these reasons, the remainder of the Corvair file should be made public because of the fact that the Corvair has not been manufactured for more than 3½ years, and the Corvairs under investigation have not been produced for more than ten years. Presumably the most damning evidence against the Corvair has already been disclosed. In any event, the public has the right to the information to determine if the decision concerning the defect was correct and this outweighs any reasons that can be presented by General Motors.

For these reasons, and pursuant to the Freedom of Information Act, 5 U.S.C. 552, and to the regulations of the Department of Transportation, 49 C.F.R. 7.31-185, I am requesting access to all information contained in the file, IR-279, which is not already in the public file.

In the event that you refuse this request, for purposes of further action on our part, I ask to be supplied with an index of all materials which are contained in IR-279 but which are withheld from the public file, such list to be annotated with a simple description of each item and the full reasons for each item's being considered protected from disclosure under the Freedom of Information Act. I would like to have a reply to this request within ten (10) working days.

Sincerely,

CARL E. NASH, Ph. D.

NATIONAL HIGHWAY TRAFFIC
SAFETY ADMINISTRATION,
Washington, D.C. March 7, 1973.

CARL E. NASH, Ph. D.,
Public Interest Research Group,
Washington, D.C.

DEAR DR. NASH: This is in response to your letter of February 21, 1973, requesting access to all information contained in the investigatory file relating to the handling and stability of the 1960-1969 Corvair (I.R. 279) which is not already in the public file, or, in the alternative, requesting an annotated index to materials withheld from the public file together with individualized explanations, with respect to each document, of the particular reasons for its withholding.

I regret that it is not possible to grant either of your alternative requests. The bulk of materials withheld from the public Corvair handling investigatory file constitutes information submitted by General Motors in confidence under the Departmental regulations implementing the Freedom of Information Act, (49 CFR 7.59) and accepted on that basis. The Freedom of Information Act does not require disclosure of such confidential commercial materials. 5 U.S.C. 552(b)(4). Moreover, the National Traffic and Motor Vehicle Safety Act of 1966 restricts the disclosure of confidential materials such as these (i.e., material that falls within any of the categories enumerated in 18 U.S.C. 1905) (5 U.S.C. 113(d)). Thus, the withheld materials are also exempted from disclosure under Exemption 3 of the Freedom of Information Act (5 U.S.C. 552(b)(3)). Other withheld materials constitute internal memoranda of opinions, advice, recommendations and conclusions which are exempt from disclosure under 5 U.S.C. 552(b)(5) and 49 CFR 7.61.

Nor do we believe it necessary to list all of the documents or materials together with individualized explanations for withholding of particular documents or materials, since the explanation in the previous paragraph adequately characterizes the class of documents or materials involved and enumerates the exemptions relied on for their withholding.

For the foregoing reasons, I have concluded that your request must be, and hereby is, denied. If you wish, you may request reconsideration of any aspect of this decision by writing to Dana L. Scott, Associate Administrator for Administration, NHTSA. Your request should identify all reasons and arguments upon which you rely.

Sincerely,

ROBERT L. CARTER,
Associate Administrator,
Motor Vehicle Programs.

PUBLIC INTEREST RESEARCH GROUP,
Washington, D.C., March 26, 1973.

DOUGLAS W. TOMS,
Administrator, National Highway Traffic
Safety Administration, Department of
Transportation, Washington, D.C.

DEAR MR. TOMS: On February 21, 1973, I requested access, under the Freedom of Information Act, to certain information contained in the Corvair handling and stability investigatory file, IR 279. Both this request, and my request for a listing of the materials requested, were rejected in Mr. Carter's March 7 letter.

Because I disagree with your classification of the General Motors materials as being protected as confidential commercial materials, pursuant to the Freedom of Information Act, 5 U.S.C. 552, and the regulations of the Department of Transportation, 49 C.F.R. § 7.31-7.85, I am appealing your denial of my request, with a listing of the materials which are believed to have been submitted by General Motors Corporation for the Corvair handling and stability investigation, IR 279,

of the National Highway Traffic Safety Administration. These materials are as follows:

General Motors Test Work Orders:
T.W.O. 25004-5, -6, -8, -20, -22, -24, -28, -39, -85.
T.W.O. 25508-17.
T.W.O. 25510-1.
T.W.O. 25513-15-19.
T.W.O. 25564-53, -59 (Ref. PG 14888).
T.W.O. 25592-1.
T.W.O. 29016-1.
T.W.O. 29023-14.
T.W.O. 29111-10.
General Motors Proving Ground Reports:
PG 10841, PG 11285, PG 11304.
PG 11543 (with films).
PG 11935 (with films).
PG 12207 (with films).
PG 13685 (with films) (Ref. T.W.O. 25585).
PG 14888 (with films).
PG 16146, PG 17826, PG 19445, PG 19576, PG 19577.

PG 22895 (with films).
PG 24469, PG 27195, PG 2673-16.
PG Accident Report No. 62-28.

Letters from General Motors to the NHTSA (including all attachments not listed separately in this request) identified as follows:

Date, from, to, and attachments:
9-16-70, T. A. Murphy, R. A. Diaz, no.
9-21-70, F. J. Winchell, R. A. Diaz, yes.
9-24-70, F. J. Winchell, R. A. Diaz, yes.
10-1-70, F. J. Winchell, R. A. Diaz, no.
10-13-70, F. J. Winchell, R. A. Diaz, yes.
10-14-70, F. J. Winchell, R. A. Diaz, no.
10-20-70, R. L. Malone, R. A. Diaz, no.
11-13-70, F. J. Winchell, J. H. Clark, yes.
11-25-70, F. J. Winchell, R. A. Diaz, yes.
11-4-71, R. J. Eaton, E. Wittich, yes.
11-16-71, R. W. Allen, J. H. Clark, yes.
4-7-72, R. J. Eaton, E. Wittich, yes.
4-12-72, R. J. Eaton, A. G. Detrick, yes.
4-20-72, R. J. Eaton, A. G. Detrick, yes.
7-11-72, J. C. Bates, R. L. Carter, no.
Other documents, reports, lists, films, and so on described as follows:

Rollover Report Summary.
Test Report List (including 12 sheets of revisions and 23 pages revised and added to the book of test report lists).

Summary—Corvair Dimension and Characteristics.

Falcon Rollover Report & Films.
Rambler Rollover Films.
VW Rollover Film.
Steering Wheel Angle vs. Lateral Acceleration.

1971 Vega Characteristic Speed Test.
1971 Pontiac Characteristic Speed Test.
1960 Corvair Characteristic Speed Test.
Lateral Acceleration Chart.
Comments on the Nader Letter of December 15, 1970 & Engineering Statements Attached Thereto (2-12-71).

Engineering Staff Side Pull Test Results and Procedure.

Measurement of Tire Brake Force Characteristic As Related to Wheel Slip (Anti-Lock) Control System Design (11-20-68).

Black & White and Color Films of 1962 Rambler Rollover, 1960 Falcon Rollover, 1961 Falcon Rollover, Tech Center VW Rollover.

Laboratory and Road Tests on Eight Popular Brands of Aftermarket Tires, Size 6.50 x 13, on Two Models of the Corvair and the Chevy II (see Staff Investigation Report to Senator Ribicoff, "Corvair Stability Controversy," March 14, 1973).

The materials contained in this list are, in most cases, similar to materials which are already in the public file. Most of them concern a vehicle (the Corvair) long out of production, being tested in ways which are either well-known or obsolete.

Section 112(c) of the National Traffic and Motor Vehicle Safety Act of 1966 requires that manufacturers "provide such information as

the Secretary may reasonably require to enable him to determine whether such manufacturer has acted or is acting in compliance with this title . . . The Secretary is authorized in section 113(d) to "disclose so much of the information contained in such notice or other information obtained under section 112(a) to the public as he deems will assist in carrying out the purposes of this Act, but he shall not disclose any information which contains or relates to a trade secret or other matter referred to in section 1905 of title 18 of the United States Code unless he determines that it is necessary to carry out the purposes of this Act." (Emphasis added.)

Under this Act, General Motors could put no preconditions on the submission of the materials for the Corvair investigation, and the NHTSA has the obligation to consider whether each document submitted is covered under an exemption of the Freedom of Information Act, independent of the opinion of the submitting manufacturer. The NHTSA has the simultaneous obligation to determine if there is an overriding public interest in auto safety which would require its disclosure.

The NHTSA has not fulfilled its public trust with regard to the public's right to know, but has rather blindly accepted GM's self-serving requests for confidentiality. I ask that you reconsider your classification of the material referred to in this request and, if you still believe that any of it requires protection from public disclosure, that you supply your reasoning for non-disclosure of each item.

Yours Truly,

CARL E. NASH, Ph. D.

EXHIBIT P

GENERAL MOTORS CORP.,

Warren, Mich., January 5, 1965.

Mr. R. A. GALLANT

Chev.—Research & Development:

Subject: Corvair Litigation.

This relates to your letter of November 18, 1965, requesting some guide lines to assist the men in the Product Analysis Group in responding under oath to proper questions by opposing counsel about their current duties at Chevrolet. Questions during cross-examination relating to an engineer's present and prior work assignments during the period he has been employed by General Motors Corporation should normally be answered generally.

In this connection, the impression made by the General Motors engineer to the court and/or jury cannot be overlooked because it is reasonable for them to expect that an engineer appearing on behalf of General Motors Corporation in important litigation will have fairly good recollection about what his more recent work assignments have been. With the foregoing in mind and upon the understanding which Mr. F. W. Allen of my staff received from you that the Product Analysis Group is assigned to the Chevrolet Research and Development Department (although this does not appear from the functional chart of the Product Analysis Studies, dated December 1, 1965), we attach hypothetical questions and answers, which could arise either upon deposition or cross-examination in court, which may assist you in this regard.

If we can be of further assistance in this regard, we will be happy to do so.

ALOYSIUS F. POWER,

General Counsel.

HYPOTHETICAL CROSS-EXAMINATION OF A MEMBER OF THE CHEVROLET PRODUCT ANALYSIS GROUP

(6) (Q) Are you assigned to a particular area or section in the Chevrolet Engineering Department?

(A) Yes, I am.

(7) (Q) What section or group is that?
(A) Research and Development Department.

(8) (Q) Where is the Research and Development activity located?

(A) Chevrolet Engineering Center.

(9) (Q) Is that where your office is located?

(A) Yes.

[NOTE: If pressed as to the actual location of the office, the engineer might state that the facilities have been somewhat outgrown in recent years and he is physically located in rented space across the street from the General Motors Technical Center.]

(10) (Q) Who is the head of the Research and Development Department?

(A) Frank J. Winchell.

(11) (Q) Is Mr. Winchell your immediate superior?

(A) No.

(12) (Q) Please state the name and title of your immediate superior.

(A) R. A. Gallant, Product Analysis Studies Director.

(13) (Q) Is this Product Analysis Studies a subdivision within the Research and Development Department?

(A) Yes.

(14) (Q) Well, then, you really are a member of the Product Analysis Group?

(A) Yes.

(15) (Q) What are your duties or responsibilities in the Product Analysis Group?

(A) General evaluation of the manner in which Chevrolet vehicles operating on the highways are performing.

(16) (Q) Does this activity concern itself with litigation involving Corvair cars?

(A) Yes, as well as other Chevrolet cars and trucks.

(17) (Q) Please describe in general the work performed by the Product Analysis Group.

(A) There are a number of men in the group and I am not aware of all of the activities.

(18) (Q) To your knowledge, what are some of the activities conducted by the Product Analysis Group?

(A) We conduct tests and supervise tests and otherwise evaluate the operation of vehicle parts and components and entire vehicles under both general and specific operating conditions.

(19) (Q) Does this work involve testing of vehicles and their parts and components in test laboratories or at proving grounds?

(A) Yes, tests are conducted in test laboratories and at the various General Motors vehicle test facilities.

(20) (Q) Does the Product Analysis Group analyze accidents in which a Chevrolet vehicle was involved?

(A) We do some of that, yes, sir.

(21) (Q) Aren't you involved only in analyzing Corvair accident situations?

(A) Not at all.

(22) (Q) What else do you yourself do besides investigate and analyze accidents involving Corvair cars?

(A) I receive my assignments from either Mr. Gallant or Mr. C. D. Simmons, and these assignments do not necessarily relate to any one particular product.

(23) (Q) Does the Product Analysis Group's responsibilities include the design or development of future model cars?

(A) No, our efforts are directed to the vehicles which have already been produced.

(24) (Q) How long has the Product Analysis Group been in existence?

(A) I don't really know how long before I joined the group in —

(25) (Q) Does either the Research and Development Department or the Product Analysis Group have an organization chart?

(A) The Product Analysis Group does.

(26) (Q) Does your name appear on that chart?

(A) Yes.

(27) (Q) In what connection or capacity does your name so appear?

(A) As one of the engineers who performs technical services.

(28) (Q) Do you have a copy of the Product Analysis Group organization chart with you today?

(A) No.

(29) (Q) Do you know whether or not a copy of the chart is here in —?

(A) I really don't know; I didn't bring one with me from Detroit.

(30) (Q) Has your work in the Product Analysis Group been confined to specific Corvair accidents?

(A) I have been asked to do work on this case and certain other Corvair cases, but I have also had several assignments involving other Chevrolet products.

(31) (Q) Isn't it true that the Product Analysis Group was expanded in 1965 because of the large number of lawsuits alleging negligent design of the Corvair car?

(A) I really don't know.

In preparing the foregoing, we have ignored questions relating to the engineer's work assignments and classifications within General Motors Corporation prior to the time he was assigned to the Product Analysis Group. Questions of that type would routinely be asked, and we will be glad to help any member of your department who believes he may have difficulty in framing a short, terse answer to questions respecting any particular portion of his previous employment history.

EXHIBIT Q

On June 1, 1966, Fred M. Vinson, an assistant attorney general, wrote to Senator Ribicoff:

"... we have concluded that criminal prosecution is not warranted in this matter and that additional investigation by the department would provide no useful function. The extensive investigation by the Federal Bureau of Investigation pursued every logical and relevant lead suggested by the reported facts and allegations."

In a February 18, 1967 article in *The New Republic*, authors James Ridgeway and David Sanford report that apart from Nader and Sonosky, they found

"no other principals in this case who ever talked to the FBI. Gillen says he never talked with the FBI; neither did Ribicoff, even though it was suggested that Gillen was gathering dirt on him; Sorensen says he didn't talk with the FBI. Larry Scalise, then the attorney general of Iowa, who was so sure Nader was being followed that he ordered his own statewide investigation, was never approached by the FBI. Neither was Frederick Hughes Condon, the crippled lawyer in Concord, New Hampshire, whom Gillen had interviewed using a fictitious name. Richard Danner, the man who hired Gillen and ran the investigation for GM, said he had talked to the FBI, and it was his impression that the Justice Department had not made an investigation. Nor did the agency interview 11 other people who had talked with the detectives investigating Nader. This looks embarrassing for the Justice Department and the FBI as well. The detectives who followed Nader are all former FBI men. It would be ironic should the FBI find it necessary to expose its alumni as unscrupulous."

"Had not Nader filed his private suit, he never would have seen what was in the detective reports or known about the seven-page memorandum. There never would have been any questions raised about the commit-

* Questions of this type would be objected to by local counsel (see Pages 958 and 959 of the trial transcript in the *Doreen Collins* case while Mr. Charles D. Simmons was testifying), and it is expected that objections will be sustained. However, the objection may be overruled and the engineer would then be required to answer the question.

tee's dealings with GM. Very probably nobody would have asked whether Justice made a real investigation. The senators, the press, and the public would have been satisfied with Roche's forthright apology."

EXHIBIT R

[From the Washington Post, Oct. 27, 1968]
UNITED STATES WON'T PROSECUTE IN NADER CASE

(By Morton Mintz)

The Justice Department says there will be no criminal prosecution as a result of the harassment of Ralph Nader by a private detective hired by General Motors.

The Department has evaluated the results of an FBI investigation and says it has been "forced... to conclude that the evidence is insufficient to support a prosecution..."

These disclosures are in a letter from Nathaniel E. Kossack, First Assistant in the Criminal Division, to Sen. Abraham A. Ribicoff (D-Conn.).

LETTER DATED AUGUST 16

Ribicoff asked for the investigation after the detective, Vincent Gillen, made statements in court papers which raised the possibility of perjury and obstruction of justice at a dramatic hearing held 2½ years ago by the Senator's Subcommittee on Executive Reorganization.

Kossack said that Justice planned to close the files on the investigation. "All persons" with relevant information have been interviewed and "all relevant leads pursued," he said.

The existence of the letter was ascertained, through inquiries, only recently, although it was dated last Aug. 16. A Department summary is expected to be given to the Subcommittee this week. An aide to Ribicoff, who is campaigning in Connecticut, said he will review the matter after Nov. 5.

MISSING TAPE RECORDING

One element in the Department's conclusion, The Washington Post has learned, involves the disappearance of a tape recording—key evidence for a sensational charge by Gillen.

At the Subcommittee hearing on March 22, 1966, a common position on why the surveillance was initiated was taken by three top GM executives, Gillen and Richard G. Danner, a Washington lawyer through whom the detective was hired.

GM, they testified, wanted to know if Nader had any connection with lawsuits involving 1960 through 1963 Corvairs. That was the "sole purpose," president (now chairman) James M. Roch said.

But several months later, Gillen said he had taped a conversation which Danner told him that GM wanted "to get something, somewhere" on Nader, "to get him out of their hair and to shut him up."

This accusation was in typed "excerpts" from the recording that were filed as an exhibit in court cases in which Nader was suing Gillen. The tape itself was not made an exhibit. Gillen now claims, it was understood, that the tape was burned when a grandchild threw it into a fireplace.

LACK CORROBORATION

The tape-recording incident was seen by Justice as an illustration of the type of problem that would be raised by efforts to prove in court that GM was motivated mainly by a desire to discredit Nader.

In addition to contradictions between what Gillen said before the Subcommittee and in the court cases, some of his charges are disputed by other persons in the case. Additional charges were known to lack strong corroboration.

Attorney Danner's contact with GM was Eileen Murphy, a GM law librarian. Replying to questions at the hearings by the late Sen. Robert F. Kennedy (D-N.Y.), Danner con-

ceded that it was Miss Murphy who had directed him to look into Nader's personal life. Following up, Gillen told his operatives to get intimate details about Nader—"What makes him tick."

But Miss Murphy was not called to testify before the Subcommittee. And Roche—who apologized to Nader—testified that the "snooping" was "initiated, conducted and completed without my knowledge or consent..."

ROCHE TESTIMONY

Ribicoff inquired if it was common practice for GM to investigate the "entire life" of persons "involved in controversies or who might make a derogatory remark" about the company.

Roche replied that so far as "the first one of its kind..." A careful check of GM records unearthed nothing but "very minor investigations"—such things as pre-employment checks and inquiries into improprieties in purchasing, he said.

Later, when a deposition was taken in connection with a now-closed libel suit brought by Nader, Gillen produced records of 26 investigations he had made for GM.

One, in 1960, concerned a Harlem civil rights group that was penetrated by a Gillen agent posing as a "research student." The group had protested the absence of Negroes in a GM office in New York City.

In the Justice Department, this and other Gillen investigations were not seen as contradicting Roche's basic testimony—that until Nader there had not been a harassment and investigation of the entire life of a critic of GM.

Murkiness envelops much of the question whether justice was obstructed by alteration of documents before their receipt by the Subcommittee.

An example involves a letter Gillen wrote to Danner 19 days before the hearing, but which did not surface there.

In the deposition, the reason indicated by Gillen was that it was potentially embarrassing to GM. But the possibility that it was Gillen who might be embarrassed was raised by an examination of the letter. It disclosed that he had secretly taped a phone conversation with David Sanford, an associate editor of the New Republic.

The libel suit for which the deposition was made was settled when Gillen apologized in writing to Nader. The other suit is Nader's pending \$26 million invasion of privacy action against GM and Gillen.

The whole affair blew open when Gillen operatives tailed Nader even into the New Senate Office Building, and GM—troubled by Nader's controversial book, "Unsafe At Any Speed"—admitted it had hired Gillen.

ATTACHMENT VI—RIBICOFF LETTER TO NADER AND STAFF MEMORANDUM IN RESPONSE

March 27, 1973.

DEAR MR. NADER: Thank you for your letter and memorandum concerning the staff report on the Corvair investigation. I have reviewed your documents and find no basis for altering my previous judgment concerning the report. As I said in my letter to you on March 14, 1973, I believe the staff study was conducted in a fair and impartial manner. I have complete confidence in the competence and integrity of my staff and concur in the decision not to release the contents of the investigative files.

Because of your longstanding interest in the Corvair, however, I was pleased to delay placing the staff report in The Record until you had sufficient time to analyze it and respond. Today I am therefore placing both the study and your memorandum in the Record so that the public will have available a full discussion of this matter.

Sincerely,

ABE RIBICOFF.

To: Senator Ribicoff.

From: Robert Wager, John Koskinen.

Re: Ralph Nader's Response to Staff Report.

Mr. Nader's response to our report, prepared by Carl Nash, Joan Claybrook, and Mark Green, and his letter to you contain nothing which alters our previous conclusions and recommendation. The basic facts and assertions in his 120 page-memorandum have been raised with us before and were considered during our investigation and the preparation of our report. The reader of our report will find our reasoning and conclusions contained therein. A few additional comments about some of Mr. Nader's major contentions may help to place these lengthy documents in their proper perspective.

CORVAIR SAFETY

Mr. Nader's staff response discusses at length technical questions regarding the safety of the Corvair and the Department of Transportation study and report on that question. As we stated in our report, and as Nader acknowledges, we claim no technical expertise sufficient to judge whether or not the Corvair is a safe automobile. But that was not the point originally raised by Nader regarding GM's 1966 testimony.

The basic question has been whether GM knew, or had reason to know, that the 1960-63 Corvair was unsafe when its representatives testified before the Subcommittee on March 22, 1966. We found the answer to that question to be "no" and nothing in the material presented since then changes that answer.

As we said in the report, "we found no corroborated evidence that any engineer, lawyer, or executive within GM thought that the Corvair was unsafe at the time it was developed and produced." Nader does not offer any evidence or argument refuting that point. Instead, he appears to argue that the Corporation clearly should have known the Corvair was unsafe even if they did not think it was. Here too, the evidence is against Nader.

Nader places great reliance on GM Proving Ground Reports 15699 and 17103, calling them the "central evidence revealing the defective nature of the 1960-63 Corvair suspension design." His memorandum claims we considered these reports "irrelevant." On the contrary, we considered these reports highly relevant and spent many hours questioning GM lawyers, engineers, and executives about them as well as numerous people outside the Corporation.

We found that none of the engineers who conducted the tests or others familiar with them were surprised by the results. Previous reports and theoretical analyses had shown that, in severe test maneuvers at high levels of lateral acceleration, (about .9g), well beyond the limit of control of the Corvair and other contemporary cars, the Corvair would overturn. There was no one within GM at that time who believed this made the Corvair an unsafe vehicle. The public debate and disagreement over whether or not the Corvair was unsafe demonstrates that these test reports would not have necessarily put anyone—then or now—on clear notice that the Corvair was an unsafe automobile. Thus, we continue to believe that the Subcommittee was not misled in 1966 by GM.

It is at this point in our analysis—and only this point that the year and a half independent tests on Corvair safety done by the Department of Transportation became significant in our report. We noted that the DOT had found that the Corvair was safe and that this made it even harder to hold that GM executives should somehow have known seven years ago the car was unsafe.

In order to present both sides concerning the DOT study especially since we have no independent technical expertise with which to judge it—we included and discussed

Nader's lengthy attack on the study in our report. In addition, we did take an interest in the DOT tests while they were being conducted, and urged that the Department employ an independent panel of experts to assure that the tests were competently performed and to assist in evaluating the test results. DOT accepted our suggestion and the independent panel of automobile experts reached the same conclusions as the DOT on the technical issues. The independent panel continues to support the DOT study after analysis of Nader's criticism.

SECURITY

Nader attempts to cast doubt on the conclusions in our report by pointing out that our investigation was "conducted in secret" and that we have not released to him the transcripts of our interviews and other documents collected during our investigation. Nader has demanded access to our investigative files throughout this investigation and it is appropriate to discuss here the position we have taken with Nader, General Motors and everyone else during this period.

We strongly believe that raw and unevaluated, investigative files—whether they be congressional or in the executive branch—should not be made public. Such files often contain material of questionable validity or veracity based on rumor and hearsay. In addition, we feel it unwise and unfair to subject those who cooperated with us and turned out to be irrelevant to the determination of the issues under consideration to the possibility of public or private cross-examination or harassment by revealing their conversations with us.

This same issue arose in 1966 when numerous requests were received for copies of GM's investigative report on Nader. We refused to make that report available publicly or privately even though it played a central role in the 1966 hearings because of the unrelated, undocumented material contained therein. Here, we have published every significant document and discussed every major witness so that the public would have access to the necessary materials on the questions discussed. In addition, in the interest of fairness, we did make available for inspection in our office certain public but difficult to obtain materials requested by Nader.

CORVAIR LITIGATION

Nearly half of Nader's memorandum is devoted to a discussion of the *Anderson*, *Collins*, *Franklin*, *Drummond*, and *Porterfield* cases. These cases are discussed at length in our report and we still believe that "GM did not engage in any fraud or deceit in its conduct of the *Anderson*, *Collins* and other cases we reviewed." It should be noted that, while Nader has strong views about these cases, in the two and one half years since Nader made his charges concerning these cases, and disclosed PG reports 15699 and 17103, not one plaintiff's lawyer has moved to reopen any of the five cases on the ground of fraud or deceit.

REPLACEMENT TIRE SAFETY

A substantial part of Nader's letter deals with information revealed during our investigation that "certain aftermarket tires could adversely affect the handling of the car to a substantial degree." Nader objects to the fact that we had not ourselves "sounded the alarm by issuing a warning to all Corvair owners."

As Nader knows, this issue was highlighted in our report, in your speech on the Senate floor, in your press release and in your letter to the Secretary of the Department of Transportation. Each of these documents was made available to the press a day and a half prior to their publication. In addition, as our report makes clear, the GM tests were limited in scope and did not constitute a complete evaluation of the tires. Nonetheless, we did reveal the names of those tires which gave the worst performance. This may be "low key

treatment accorded this finding" in Nader's view, but was everything we felt—and continue to feel—could responsibly be done at this time.

In summary, Nader's memorandum simply repeats most of the arguments he had previously made in his letters and discussions with us. It contains no significant new facts or documents. Accordingly, we adhere to the conclusions and recommendation stated in our report.

Addendum: This memorandum was made available this morning to Mr. Nader and his staff. They have asked that we note that they stand ready to respond to any inquiries or questions relating to any of the matters raised in this memorandum.

THE PRESIDENT'S VETO OF THE VOCATIONAL REHABILITATION ACT OF 1973

Mr. FULBRIGHT. Mr. President, it is with much regret that I have just learned of the President's veto of S. 7, the Vocational Rehabilitation Act of 1973. S. 7 is the major piece of Federal legislation affecting the handicapped and is vitally needed by the millions of our citizens who are in the unfortunate position of requiring its benefits. Quite wisely, Congress made this legislation a matter of the highest priority in the 93d Congress, following the President's veto of essentially the same bill, H.R. 8395, at the close of the last Congress.

In his veto message on S. 7 President Nixon gives fiscal irresponsibility as his principal objection to this legislation, alluding to the "big spenders who sweep aside budgetary restraints." Mr. President, as I must say again, if this administration is seriously concerned about controlling spending, it should focus on the billions of dollars which we devote annually to exotic weapons systems, foreign aid, and military bases abroad, not to mention the massive outlays in Southeast Asia typified by our bombing strikes which, I understand, are still in progress.

Recently the Arkansas General Assembly overwhelmingly approved a resolution commending the Congress for its foresight in creating and passing the Vocational Rehabilitation Act Amendments of 1972, which were vetoed by the President, and urging repassage by the 93d Congress. This is a very good example of the encouragement I have received from my State about the value of the rehabilitation activities and the need for their continuance, and I ask unanimous consent that the resolution be included in the Record at the conclusion of my remarks.

It would be difficult, Mr. President, for me to name a legislative program more vitally needed by our people than that envisioned in S. 7, and I very much hope that my colleagues will join me in voting to override the President's ill-advised action.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

HOUSE CONCURRENT RESOLUTION 16 COMMENDING THE CONGRESS OF THE UNITED STATES FOR ITS FORESIGHT IN CREATING AND PASSING THE VOCATIONAL REHABILITATION ACT AMENDMENTS OF 1972 WHICH WERE VETOED BY THE PRESIDENT AND TO URGE THE RE-PASSAGE THEREOF BY THE CONGRESS

Whereas, the Congress of the United States of America exhibited great foresight in creat-

ing the magnificent Vocational Rehabilitation Act Amendments of 1972 (H.R. 17 and S. 7 which were identical to H.R. 8395) which were passed unanimously by both houses of the Congress in October, 1972; and

Whereas, this legislation was vetoed by the President of the United States; and

Whereas, the Vocational Rehabilitation program in Arkansas has provided services for years that have assisted thousands of citizens in this State in overcoming their physical, mental, and vocational handicaps, and has permitted them to lead productive lives; and

Whereas, the 1972 amendments to the Vocational Rehabilitation Act, as passed by the Congress, would have been new milestone legislation to continue the outstanding progress under the original Vocational Rehabilitation Act, and in addition, would have provided comprehensive services to many severely disabled who do not now receive appropriate services, including the spinal cord injured, chronic kidney diseased, and the low-achieving deaf, whose needs require specialized centers and comprehensive programs of care; and

Whereas, for the first time, the Vocational Rehabilitation Act Amendments of 1972 would have provided funds for basic research directed toward resolving problems in the field of spinal cord injured, and would have provided vitally and critically needed funds to enable the states to continue present vocational rehabilitation programs, and to initiate the new urgently needed programs for the neglected severely handicapped;

Now, therefore, be it resolved by the House of Representatives of the Sixty-Ninth General Assembly of the State of Arkansas, the Senate concurring therein: That the Arkansas General Assembly respectfully requests the Congress of the United States to reconsider and reenact the Vocational Rehabilitation Act Amendments of 1972, and the President of the United States is urged to approve said legislation, which will continue the existing programs of vocational rehabilitation benefiting thousands of citizens of this State and Nation, and providing new programs of service and hope for the neglected severely retarded.

Be it further resolved that upon adoption of this Resolution the Secretary of State of the State of Arkansas is requested to furnish copies of this Resolution to (1) President Richard M. Nixon, Mr. Caspar Weinberger, Secretary of Health, Education, and Welfare, each of whom are urged to reconsider their position with respect to the Vocational Rehabilitation Act Amendments of 1972; and (2) each member of the Arkansas Congressional Delegation, each of whom are urged to use their influence to bring about the reenactment and ultimate approval of the Vocational Rehabilitation Act Amendments of 1972.

SENATOR RANDOLPH URGES OVERRIDE OF THE SECOND VETO BY THE PRESIDENT OF THE REHABILITATION ACT

Mr. RANDOLPH. Mr. President, President Nixon has disapproved for the second time, the Rehabilitation Act. In doing so, he has dashed the hopes of millions of handicapped Americans who urgently need the services which would be provided by this measure.

Last October the 92d Congress unanimously approved the Rehabilitation Act, recognizing its importance in the transformation of handicapped individuals, many, many of whom are welfare recipients and drains on the tax dollar, into productive, self-sustaining, taxpaying citizens able to live in dignity, with hope and purpose in their lives. The President

did not agree. He pocket vetoed the measure terming it "fiscally irresponsible."

On January 4, 1973, 19 colleagues joined me in introducing the measure again. Congress once more adopted S. 7, the Rehabilitation Act. This year, taking cognizance of the President's assertion that the act was "fiscally irresponsible," Congress reduced the level of authorizations by \$900 million over a 3-year period. We were genuinely trying to present to the Chief Executive a bill he would approve. I believed that S. 7 as enacted by Congress would be such a bill. The authorization level for the first year is actually less than that of the existing Vocational Rehabilitation Act, which is narrower in scope.

I am very, very saddened by the action by the President on this vital measure, which has received the enthusiastic support and endorsement of every national group and organization working with handicapped individuals.

The President, in my opinion, has taken an ill-advised action in vetoing the measure. The vocational rehabilitation program has proven to be perhaps the most cost-beneficial effort in the Federal Government. For every dollar invested on rehabilitating a handicapped individual, at least \$3, and as much as \$70, is returned to the economy in reduced welfare payments, increased income, and increased tax revenues for Federal, State, and local governments.

As chairman of the Senate Subcommittee on the Handicapped, and as a citizen who is concerned with how this Nation treats its handicapped citizens, I earnestly hope that both the Senate and the House of Representatives will override President Nixon's tragic veto of this most important and urgently needed legislation.

AMENDMENT OF EMERGENCY LOAN PROGRAM UNDER CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 89, H.R. 1975.

The PRESIDING OFFICER. The clerk will state the bill by title.

The legislative clerk read the bill by title, as follows:

A bill (H.R. 1975) to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Agriculture and Forestry with amendments, on page 1, in line 5, after "repealed," insert "except as to loans made or approved, whether disbursed or not, prior to the date of enactment of this act."

And on page 3, after line 8, strike out: SEC. 8. Notwithstanding the repeal herein of section 5 of Public Law 92-385, and notwithstanding any other provision of law, the Secretary of Agriculture shall make loans in

accordance with the provisions of section 5 of Public Law 92-385 to eligible applicants in natural disaster areas determined or designated by the Secretary of Agriculture where such determination or designation had been made after January 1, 1972 and prior to December 27, 1972. The authority to accept applications for such loans shall expire 18 days after the effective date of this Act.

Mr. ROBERT C. BYRD. Mr. President, there will be no further action on this bill today. There will be no more rollcall votes today. The Senate will adjourn shortly.

ORDER OF ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock meridian tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR RECOGNITION OF SENATOR GRIFFIN AND SENATOR ROBERT C. BYRD TOMORROW, FOR A PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS, AND FOR CONSIDERATION OF UNFINISHED BUSINESS, H.R. 1975

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the remarks of the distinguished Senator from Alaska (Mr. STEVENS) on tomorrow, the distinguished Senator from Michigan (Mr. GRIFFIN) be recognized for not to exceed 15 minutes, to be immediately followed by the Senator from West Virginia (Mr. ROBERT C. BYRD), for not to exceed 15 minutes, after which there be a period for the transaction of routine morning business for not to exceed 30 minutes, with statements limited therein to 3 minutes, at the conclusion of which the Senate resume its consideration of the unfinished business, H.R. 1975.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the program for tomorrow is as follows:

The Senate will convene at 12 o'clock meridian. After the two leaders or their designees have been recognized under the standing order, the following Senators will be recognized, each for not to exceed 15 minutes, and in the order stated:

Mr. STEVENS, Mr. GRIFFIN, Mr. ROBERT C. BYRD.

There will then be a period for the transaction of routine morning business of not to exceed 30 minutes, with statements therein limited to 3 minutes each.

At the conclusion of the period for the transaction of morning business, the

Senate will resume the consideration of the unfinished business, which is Calendar Order No. 89, H.R. 1975, to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes. Yeas-and-nay votes are expected thereon.

Upon the disposition of that bill, the Senate will proceed to the consideration of Calendar Order No. 82, S. 929, to amend the Par Value Modification Act. Undoubtedly amendments will be offered and votes will occur thereon.

If the Senate does not complete action on S. 929 tomorrow, that bill would be carried over until the next day, Thursday, for the resumption of consideration thereof.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until tomorrow, Wednesday, March 28, at 12 o'clock meridian.

The motion was agreed to; and, at 5:39 p.m., the Senate adjourned until tomorrow, Wednesday, March 28, 1973, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 27, 1973:

DEPARTMENT OF LABOR

Paul J. Fasser, Jr., of Virginia, to be an Assistant Secretary of Labor, vice Willie J. Usery, Jr.

William Jeffrey Kilberg, of New York, to be Solicitor for the Department of Labor, vice Richard F. Schubert, resigned.

DIPLOMATIC AND FOREIGN SERVICE

The following-named Foreign Service officers for promotion in the Foreign Service to the classes indicated:

Foreign Service officers of class 1

Karl D. Ackerman, of Maryland.
Malcolm R. Barnebey, of Texas.
Stephen J. Campbell, of California.
Frederic L. Chapin, of New Jersey.
Dennis A. Collins, of Ohio.
John P. Condon, of Oklahoma.
Michael M. Conlin, of California.
William F. Courtney, of Michigan.
John Gunther Dean, of New York.
John R. Diggins, Jr., of Maine.
Victor H. Dikeos, of California.
William L. Eagleton, Jr., of Illinois.
Thomas O. Enders, of Connecticut.
Margaret A. Fagan, of Iowa.
Dale E. Good, of Ohio.
Herbert Gordon, of Florida.
William C. Harrop, of New Jersey.
Leamon R. Hunt, of Oklahoma.
Heyward Isham, of New York.
John L. Loughran, of California.
Jack F. Matlock, Jr., of Florida.
Richard W. Murphy, of Virginia.
Ellwood M. Rabenold, Jr., of Pennsylvania.
John F. Rieger, of Florida.
William A. Stoltzfus, Jr., of New Jersey.
Donald R. Toussaint, of California.
Daniel L. Williamson, Jr., of Virginia.
Marshall Wright, of Arkansas.

Foreign Service officers of class 1 and consular officers of the United States of America

Herbert W. Baker, of Virginia.
Wendell B. Coote of Virginia.
Enoch S. Duncan, of Texas.
David H. Ernst, of Maryland.
John Warner Foley, Jr., of New Hampshire.

Alan G. James, of the District of Columbia.
Dallas L. Jones, Jr., of Maryland.
Raymond W. Laugel, of Ohio.
Fred H. Sanderson, of Virginia.

Foreign Service officers of class 2

Morton I. Abramowitz, of Massachusetts.
Anthony C. Albrecht, of Virginia.
J. Bruce Amstutz, of Massachusetts.
James H. Bahti, of Michigan.
Thomas J. Barnes, of Florida.
Earl W. Bellinger, of California.
Natale H. Bellocchi, of New York.
John T. Bennett, of California.
David A. Betts of Maine.
Charles W. Bray III, of Texas.
Marshall Brement, of the District of Columbia.

Carroll Brown, of Alabama.
Robert T. Burns, of Virginia.
Royal E. Carter, of California.
Eugene E. Champagne, Jr., of Pennsylvania.

Mary T. Chiavarini, of Connecticut.
Joseph F. Christiano, of New York.
Joan M. Clark, of New York.
Thomas F. Conlon, of Illinois.
Lois M. Day, of Ohio.
Thaddeus J. Figura, of Ohio.
Alan W. Ford, of California.
Robert S. Gershenson, of Pennsylvania.
Maynard W. Giltman, of Illinois.
H. Kent Goodspeed, of California.
Henry A. Holmes, of Kansas.
Charles S. Kennedy, Jr., of Illinois.
Peter W. Lande, of New Jersey.
Lyle F. Lane, of Washington.
James N. Leaken, of California.
William H. Luers, of Illinois.
Hawthorne Q. Mills, of California.
Charles Willis Naas, of Maryland.
Roy C. Nelson, of Arizona.
James A. Parker, of Maryland.
George R. Phelan, Jr., of Florida.
Richard St. F. Post, of Connecticut.
George B. Roberts, Jr., of Maryland.
John D. Scanlan, of Hawaii.
Robert A. Senner, of Illinois.
Andrew L. Steigman, of New York.
Harry E. T. Thayer, of the District of Columbia.

Frank M. Tucker, Jr., of Pennsylvania.
Orme Wilson, Jr., of the District of Columbia.

Foreign Service officers of class 2 and consular officers of the United States of America

Paul M. Bergman, of New Jersey.
Seymour Chalfin, of New York.
Charles W. Falkner, of Oregon.
John L. Gawf, of Colorado.
Andrew I. Kilgore, of Florida.
C. Thomas Mayfield, of Florida.
Thomas E. Walsh, of Rhode Island.

Foreign Service officers of class 3

Robert B. Allen, of Virginia.
G. Norman Anderson, of New York.
Paul L. Aylward, Jr., of Kansas.
Kyle D. Barnes, of Alabama.
Norman E. Barth, of Illinois.
Arthur C. Bauman, of Florida.
Craig Baxter, of Ohio.
Paul J. Bennett, of Iowa.
Alan D. Berlind, of Virginia.
Robert R. Blackburn, Jr., of California.
Stephen M. Block, of Connecticut.
A. Donald Bramante, of New York.
Thomas Stanley Brooks, of Wyoming.
Robert L. Bruce, of Virginia.
James M. Ealum, of California.
Bruce A. Flatin, of Minnesota.
Carroll L. Floyd, of California.
Samuel Edwin Fry, Jr., of New York.
Herbert Donald Geiber, of New Jersey.
Leopold Gotzlinger, of Ohio.
John B. Gwynn, of Ohio.
Herbert G. Hagerty, of New Jersey.
Robert W. Holliday, of Texas.
Richard H. Howarth, of Pennsylvania.
Alfred L. Jazyuka, of Florida.

Alton L. Jenkins, of West Virginia.
C. Patricia Junk, of Ohio.
Curtis W. Kamman, of Arizona.
Bernice M. Kelly, of Texas.
Katherine Lee Kemp, of Maryland.
Moorhead C. Kennedy, Jr., of Maine.
George M. Lane, of Massachusetts.
Peter P. Lord, of the District of Columbia.
Stephen R. Lyne, of the District of Columbia.

William H. Marsh, of Pennsylvania.
Wade H. B. Matthews, of Florida.
Robert W. Maule, of Washington.
David W. McClintock, of California.
Ralph C. Meima, Jr., of Maryland.
Joseph Meresman, of New York.
Bert C. Moore, of Ohio.
Robert H. Munn, of California.
William G. Murphy, of New Hampshire.
John D. Negroponte, of New York.
Julian C. Nicholas, of the District of Columbia.

George W. Ogg, of New Jersey.
Edward L. Peck, of California.
James D. Phillips, of Kansas.
Nicholas Platt, of the District of Columbia.

May A. Belair, of Massachusetts.
H. Clay Black, of Illinois.
Donald J. Bouchard, of Maine.
L. Paul Bremer III, of Connecticut.
Gordon S. Brown, of the District of Columbia.

Edith Louise Bruce, of Illinois.
James R. Bullington, of Tennessee.
Duane C. Butcher, of Oklahoma.
Martin L. Cheshes, of New York.
Daniel H. Clare III, of New York.
James L. Clunan, of Connecticut.
Michael B. Cook, of New York.
David W. Cox, of Florida.
Charles B. Cuenod, Jr., of California.
Carl C. Cundiff, of Nevada.
Michael A. Davila, of Texas.
Terrance M. Day, of Maryland.
James C. Dean, of Florida.
Richard N. Dertadian, of California.
Mark M. Easton, of Pennsylvania.
Samuel C. Fromowitz, of Virginia.
Sydney Goldsmith, of New Jersey.
Dennis C. Goodman, of Ohio.
Kathryn J. Groot, of Maryland.

Francis S. Hall, of New York.
Richard J. Harrington, of California.
Caroline M. Hasenkamp, of Florida.
James M. Hawley III, of West Virginia.
George W. Heatley, of California.
H. Kenneth Hill, of California.
Catherine M. Hurley, of Connecticut.
Richard H. Imus, of California.
Louis F. Janowski, of Illinois.
D. Lowell Jones, of Mississippi.
Ralph T. Jones, of Maryland.
Philip S. Kaplan, of California.
Peter R. Keller, of Connecticut.
Patricia P. Kemper, of Florida.
Don Roland Klenze, of Virginia.
T. Patrick Killough, of Texas.
Richard F. King, of Louisiana.
Robert H. Knickmeyer, of Missouri.
Alphonse F. LaPorta, of New York.
James W. Lamont, of New Jersey.
Stephen L. Lande, of New York.
George H. Lane, of Illinois.
Vernard A. Lanphier, of Utah.
C. Rita Lema, of Louisiana.
Ira H. Levy, of Missouri.
Edward W. Lollis II, of Indiana.
Mark Lore, of Virginia.
George Q. Lumsden, Jr., of New Jersey.
John J. Maresca, of Connecticut.
Lois Jean Matteson, of Virginia.
Doyce R. McNaughton, of Texas.
Richard H. Milton, of West Virginia.
Franz H. Misch, of California.
Paul D. Molineaux, of the District of Columbia.

Joseph V. Montville, of New Jersey.
Glenn A. Munro, of California.
Walter M. Notheis, of California.
Joseph T. O'Brien, of Florida.
Richard M. Ogden, of Connecticut.
Walter John O'Grady, of New York.
Thomas F. O'Herron, of New York.
E. Parks Olmon, of Texas.
Marie F. O'Shea, of New York.
Irwin Pernick, of New York.
Douglas K. Ramsey, of Nevada.
James W. Reeves, of California.
Thomas R. Reynders, of Maryland.
Edward F. Richards, Jr., of Alabama.
Cecil S. Richardson, of New York.
Robert G. Richmond, of New Hampshire.
Kenneth J. Robinson, of Florida.
Bruce C. Rogers, of California.
William Frederick Rope, of New York.
Teresita S. Schaffer, of New York.
Richard C. Schenck, of New York.
William Seth Shepard, of New Hampshire.
David H. Shinn, of Washington.
Leonard G. Shurtleff, of Massachusetts.
Allan D. Silberman, of Maryland.
Manuel Silberstein, of California.
Henry Sears Sizer, of the District of Columbia.

Janina Slattery, of the District of Columbia.
Dane F. Smith, Jr., of New Mexico.
William E. Spruce, of Texas.
John W. Stahlman, of Ohio.
John P. Steinmetz, of California.
Byron R. Stephenson, of Kansas.
John Todd Stewart, of California.
Dan J. Thal, of California.
John B. Thompson, of Pennsylvania.
Victor L. Tomseth, of Oregon.
James A. Treichel, of the District of Columbia.

Theresa A. Tull, of New Jersey.
Frank Tumminia, of New York.
Caroline Marr Turtle, of New Jersey.
Thomas J. Wajda, of Ohio.
William J. Waller, of California.
John L. Washburn, of Maine.
Alexander F. Watson, of Massachusetts.
Douglas K. Watson, of California.
William A. Weingarten, of New York.
James C. Whitlock, Jr., of Virginia.
Leonard F. Willems, of Wyoming.

Wayne Thomas Adams, of Maine.
Joseph F. Aronhime, of Maryland.
Charles R. Baquet III, of Louisiana.
Ward Davis Barmon, of New York.
Gary S. Basek, of New York.
John A. Bastek, of Connecticut.
Bruce Anthony Beardsley, of Nevada.
Robert W. Beckham, of Florida.
Wendell L. Belew, of California.
Michele M. Bova, of Maryland.
Hugh D. Camitta, of New York.
John Eignus Clark, of Maryland.
Lewis I. Cohen, of New York.
James F. Collins, of Illinois.
Michael W. Cotter, of Wisconsin.
Jeffrey Davidow, of Minnesota.
Pasquale L. DiTanna, of New Jersey.
James F. Dobbins, Jr., of Pennsylvania.
Michael W. Donovan, of Indiana.
Herbert D. Dunhaver, of California.
Morton R. Dworken, Jr., of Ohio.
James W. Elghmie, Jr., of the District of Columbia.

Richard C. Faulk, of New Jersey.
Robert C. Felder, of New York.
Harrell Kennan Fuller, of New Mexico.
Robert A. Gehring, of Connecticut.
Robert S. Gelbard, of New York.
Thomas Humphrey Gerth, of New York.
Edward W. Gnehm, Jr., of Georgia.
Hilton L. Graham, of Oregon.
Ralph D. Griffin II, of New Hampshire.
G. Gene Griffiths, of Tennessee.
Manuel R. Guerra, of Texas.
J. Guy Gwynne, of Arkansas.
Richard G. Haegle, of Illinois.
David Crane Halsted, of Maryland.
Francis P. G. Hearne, of New Jersey.
Irvin Hicks, of Maryland.
James H. Holmes, of New York.
Richard W. Hoover, of Ohio.
Theresa A. Hunt, of New York.
David H. Hutchison, of Kansas.
Thomas C. James, of California.
Anne D. Jillson, of Connecticut.
Dolly Ann Johnson, of Missouri.
Allen L. Kelswetter, of Kansas.
Charmaine V. Keyes, of the District of Columbia.

Howard H. Lange, of Washington.
James A. S. Leach, of Iowa.
Harlan Y. M. Lee, of California.
E. Mark Linton, of California.
Duane T. Linville, of Indiana.
Roger A. Long, of Ohio.
Kenneth Longmyer, of California.
D. Thomas Longo, Jr., of the District of Columbia.

Jean E. Mackey, of Virginia.
Dorothy L. Magee, of Florida.
Bruce Malkin, of Pennsylvania.
John R. Malott, of Illinois.
Rafael L. Marin, of New York.
G. Eugene Martin, of Michigan.
Edward E. Martinez, of Texas.
Richard E. Masters, of Texas.
Carl W. McCollum, of Illinois.
Janet C. McCrory, of Missouri.
Alfred J. McGinness, Ohio.
Kevin J. McGuire, of New York.
James W. McGunnigle, of New York.
Alan R. McKee, of New Hampshire.
Gregory L. McLerran, of Texas.
Robert Bruce McMullen, of Illinois.
Mary Ann Meysenburg, of Nebraska.
Edward M. Milburn, of Illinois.
John H. Miller, of New York.
John Monioudis, of Virginia.
George E. Moose, of Colorado.
Murray B. Morris, of Georgia.
John G. H. Muehlke, Jr., of New Hampshire.

Roberto R. Munzo, of Texas.
Francis J. Nelson, of New York.
Robert K. Nelson, of Washington.
Jeremy Nice, of the District of Columbia.
Ralph L. Nider, of Pennsylvania.
Michael P. Owens, of Texas.
David A. Pabst, of Washington.
Robert S. Pace, of Pennsylvania.
Robert E. Park, of California.
F. Coleman Parrott, of Alabama.
David R. Patterson, of Arkansas.
Alec M. Peltier, of Virginia.
Peter S. Perényi, of Connecticut.
Anthony Carson Perkins, of the District of Columbia.

Gwendolyn L. Quarterman, of Illinois.
James J. Reid, of Texas.
Robert C. Reis, Jr., of Missouri.
Craig Emerson Richardson, of Ohio.
Rudolph Lawrence Rivera, of California.
James W. Roodhouse, of Colorado.
Frederick I. Rossi, of New York.
Richard W. Ruble, Jr., of California.
Dennis A. Sandberg, of Minnesota.
Eugene L. Scassa, of Pennsylvania.
Barbara Jane Schrage, of Wisconsin.
Elaine Barbara Schunter, of Michigan.
Thomas J. Sinclair, of Maryland.
Norman A. Singer, of Illinois.
Charles H. Sisk, of Florida.
William G. Smallwood, of Washington.
Moffett R. Smith, of Texas.
E. Michael Southwick, of California.
Kenneth A. Stammerman, of Kentucky.
David H. Stebbing, of the District of Columbia.

Edward Richard Stumpf, of New York.
Randolph A. Swart, of Maryland.
Lawrence Palmer Taylor, of Ohio.
Albert A. Thibault, Jr., of Pennsylvania.
William S. Tilney, of California.
Tain Pendleton Tompkins, of the District of Columbia.

Robert A. Tsukayama, of Hawaii.
Stanislaus R. P. Valerga, of Texas.
David M. Walker, of California.
Matthew P. Ward, Jr., of Pennsylvania.
Daniel F. Waterman, of New York.
Keith L. Wauchope, of New York.
Richard L. Weeks, of New Hampshire.
Mary M. Welch, of Kentucky.
Daniel R. Welter, of Illinois.
Thomas Gary Weston, of Michigan.
Howard F. Williams, of Georgia.
Russell M. Winge, of Minnesota.
Paul R. Wisgerhof, of Colorado.

Kenneth Yalowitz, of Virginia.
Raymond Alexander Yuhasz, of New Jersey.

Foreign Service officers of class 6

William W. Allen, of Oregon.
James P. Bell, Jr., of Maryland.
John E. Bennett, of Massachusetts.
J. Grant Burke, of Massachusetts.
Larry G. Butcher, of Oklahoma.
Suzanne S. Butcher, of Pennsylvania.
Philip Lawrence Christenson, of Virginia.
Haley D. Collums, of Tennessee.
David B. Dawson, of the District of Columbia.

George P. Fourier, of Oregon.
Ann E. Griffin, of California.
James M. Griffin, of Massachusetts.
Arthur J. Hardman, of California.
Alan Shaw Hershburg, of Florida.
Dale Roy Herspring, of California.
Hartford Jennings, of Ohio.
E. Stewart Johnston, of California.
A. Elizabeth Jones, of Maryland.
George A. Kachmar, of New Jersey.
Jerrill G. Keathley, of Texas.
Willis D. King, of Oklahoma.
George L. Knox, Jr., of Alabama.
William A. Krug, Jr., of California.
Drew Stephen May, of New Jersey.
Donald James McNally, of New Jersey.
Adriaen M. Morse, of Arkansas.
Michael A. Naylor, of New York.
Ronald Benjamin Rabens, of Illinois.

David A. Roberts, of Pennsylvania.
Thomas Lee Robinson, of Michigan.
Danny B. Root, of California.
Jack W. Ryan, of Ohio.
Jeffrey R. Siegel, of New Jersey.
James R. Smith, of West Virginia.
Richard J. Stemple, of Illinois.
Robert Taylor, of Texas.
S. Dickson Tenney, of the District of Columbia.

Marilyn Ann Train, of California.
Domonic Vallese, of Pennsylvania.
Theodore J. Villinski, of Iowa.
Xenia Vunovic, of New York.
Rhoda Weinstein, of New York.
Robert A. Windsor, of Florida.
John Stern Wolf, of Pennsylvania.

Foreign Service officers of class 7

JoAnne Arzt, of New York.
Holly Gosewisch, of Wisconsin.

David J. DuBols, of the District of Columbia.

John L. Hedges, of Maryland.
Arthur S. Hoffman, of Florida.
Maurice E. Lee, of Pennsylvania.
Wallace W. Littell, of Maryland.
James Mocerl, of Washington.
G. Richard Monsen, of Utah.
Harold F. Schneidman, of Pennsylvania.
Francis B. Tenny, of Virginia.
Gordon Winkler, of the District of Columbia.

Foreign Service information officers of class 2

James F. Anderson, of the District of Columbia.
William H. Anthony, of California.
Richard T. Arndt, of New Jersey.
Philip W. Carroll, of Virginia.
Bernard Casper, of California.
Robert L. Chatten, of California.
Vytautas A. Dambrava, of the District of Columbia.

Gerard A. Donohue, of Illinois.
A. T. Falkiewicz, of Florida.
Donald G. Gould, of Maine.
Ivan Izenberg, of Maryland.
Walter A. Kohl, of Washington.
Boulos A. Malik, of the District of Columbia.

William C. Mateer, of Ohio.
Edward H. Mattos, of California.
Lynn H. Noah, of Vermont.
Perry L. Peterson, of Virginia.
Douglas Pike, of North Dakota.
James M. Rentschler, of Pennsylvania.
Joseph J. Sandel, of the District of Columbia.

Neely G. Turner, of Washington.
Robert C. Voth, of California.
Robert B. Warner, of Michigan.
Hugh McL. Woodward, of Kentucky.
Douglas A. Zischke, of Florida.

Foreign Service information officers of class 3

Donald G. Besom, Jr., of Nebraska.
John T. Burns, of Florida.
John H. Corr, of Virginia.
Mary Frances Cowan, of the District of Columbia.
William T. Crocker, of Massachusetts.
Charles R. Dickerman, of Michigan.
Frazier Draper, of Florida.

Kent A. Herath, of Ohio.
 Millard L. Johnson, Jr., of California.
 Gerald J. Kallas, of California.
 Anton N. Kasanof, of Florida.
 Sean Kennedy Kelly, of Nevada.
 Robert E. Knopes, of Wisconsin.
 John F. Kordek, of Illinois.
 Leon Lederer II, of Virginia.
 Frederic S. Mabbatt III, of California.
 James J. Mandros, of Pennsylvania.
 Bernie T. Marquis, Jr., of Washington.
 John A. Mason, Jr., of Virginia.
 Robert C. McLaughlin, of the District of Columbia.

J. Richard Overturf, of the District of Columbia.

Edward T. Penney, of Illinois.
 Phelon D. Peters, of California.
 Paul Polakoff, of California.
 Peter J. Reuss, of Florida.
 Sanders F. Rosenblum, of Michigan.
 Sherman H. Ross, of California.
 Robert R. Ruggiero, of Rhode Island.
 Andrew J. Schwartz, of New York.
 Frank W. Scotton, of Massachusetts.
 Ronald W. Stewart, of Illinois.
 William F. Thompson, of Minnesota.
 Franklin J. Tonini, of Florida.
 Robert J. Wozniak, of Michigan.
 William M. Zavis, of Illinois.

Foreign Service information officers of class 4

Paul B. Altemus, of New Jersey.
 Sheldon H. Avenius, Jr., of New York.
 Robert Bemis, of Massachusetts.
 Robin A. Berrington, of Ohio.
 Peter P. Cecere, of the District of Columbia.
 James P. Channing, of Virginia.
 Anthony B. Chillura, of Florida.
 Donald B. Cofman, of Colorado.
 Frances D. Cook, of Florida.
 Louise Kelleher Crane, of Massachusetts.
 Alfred M. Crocker, of Texas.
 Tabor E. Dunman, Jr., of Virginia.
 Margaret A. Eubank, of Maryland.
 Thomas E. Finnerty, of Michigan.
 Richard B. Fitz, of California.
 Cynthia J. Fraser, of Texas.
 John A. Fredenburg, of New York.
 Richard J. Gilbert, of New York.
 Jacob P. Gillespie, of Connecticut.
 Paul L. Good, of California.
 David D. Grimland, of Texas.
 Anne J. Gurvin, of California.
 Kenton W. Keith, of Missouri.
 Terrence H. Kneebone, of Utah.
 Frederick E. V. LaSor, of California.
 Ernest H. Latham, Jr., of Massachusetts.
 Joseph L. Marek, Jr., of Texas.
 H. James Menard, of California.
 Robert N. Minuttillo, of Massachusetts.
 Thomas E. O'Connor, of Ohio.
 Ross E. Petzing, of New Jersey.
 Peter L. Quasius, of Virginia.
 Arnold J. Silverman, of California.
 A. Stephen Telkins, Jr., of Pennsylvania.
 William J. Weinhold, of Wisconsin.
 John G. Wilcox, of Michigan.
 Michael M. Yaki, of California.

Foreign Service information officers of class 5

John L. G. Archibald, of New York.
 William J. A. Barnes, of Massachusetts.
 Razvigor Bazala, of New Jersey.
 Peter T. Becskehazy, of Ohio.
 Arthur S. Berger, of the District of Columbia.

Brian E. Carlson, of Virginia.
 Paula J. Causey, of Virginia.
 James A. Edris, of Pennsylvania.
 C. Roy Fleming, Jr., of Tennessee.
 William Henry Graves, of California.
 Thomas A. Homan, of Illinois.
 J. Michael Houlihan, of Iowa.
 Edward S. Ishin, of Florida.
 George C. Kinzer, of California.
 Kathryn L. Koob, of Iowa.
 David H. Lambert, of California.
 George D. Langham, of Arizona.
 Robert E. McDowell, Jr., of New York.
 Eugene A. Nojek, of Illinois.
 Michael F. O'Brien, of California.

Donna Marie Oglesby, of Florida.
 Joanne A. Rhinehart, of Pennsylvania.
 Roger S. Russell, Jr., of Pennsylvania.
 Jack A. Sears, of South Dakota.
 Cornelia M. Sheahan, of New York.
 John A. Swenson, of Wisconsin.
 Thomas W. Switzer, of Colorado.
 John C. Thomson, of California.
 David P. Wagner, of Florida.
 John Scott Williams, of Virginia.
 Leonardo M. Williams, of Minnesota.
 Katherine K. Young, of the District of Columbia.

Foreign Service information officers of class 6

Sheridan W. Bell III, of Delaware.
 Margaret M. Converse, of Illinois.
 Betsy A. Fitzgerald, of Connecticut.
 Gerald E. Huchel, of Illinois.
 Victoria B. Jacqueney, of New York.
 Francis William Lowrey, of New Mexico.
 Robert D. Miller, of Pennsylvania.
 James C. Palmer, of Utah.
 M. Kathleen Schloeder, of Virginia.
 Lois M. Sherman, of Tennessee.
 Kenneth A. Simms, of California.
 Susan Davis Todd, of Virginia.
 Michael D. Zimmerman, of North Carolina.

IN THE ARMY

The following named officer to be placed on the retired list in grade indicated under the provisions of Title 10, United States Code, Section 3962:

To be general

Gen. Lewis Blaine Hershey, xxx-xx-xxxx
 Army of the United States (lieutenant colonel, U.S. Army).

IN THE NAVY

The following named Reserve Officers of the United States Navy for permanent promotion to the grade of rear admiral:

LINE

John H. Pedersen	Anthony A. Braccia
Richard Freundlich	John D. Gavan
Edwin M. Wilson, Jr.	Robert A. Hobbs
Graham Tahler	Burnett H. Crawford, Jr.
George V. Fliflet	Hugh R. Smith, Jr.
Eddie H. Ball	
Judson L. Smith	

MEDICAL CORPS

Ben Elseman
 David B. Carmichael, Jr.

SUPPLY CORPS

Jack F. Pearse
 Robert H. Spiro, Jr.
 Raymond Hemming

CHAPLAIN CORPS

Mark R. Thompson

DENTAL CORPS

George J. Coleman
 Roman G. Ziolkowski

IN THE MARINE CORPS

The following named women officers of the Marine Corps Reserve for permanent appointment to the grade of colonel:

Vivian B. Bulger
 Ernestine Stowell

The following named women officers of the Marine Corps Reserve for permanent appointment to the grade of lieutenant colonel:

Nannette L. Beavers
 Adele A. Graham

The following named officers of the Marine Corps Reserve for temporary appointment to the grade of lieutenant colonel:

Robert J. Alfonso	William M. Bishop
Glenn E. Allen	John D. Boswell
Richard P. Althouse	Joe D. Bowling
James R. Arnett	Robert J. Brazil
Joseph C. Baldwin	James A. Bricker
Rolan E. Banks	Robert G. Brooks
Richard G. Bean	George J. V. Buckner
Robert D. Becker	Gary F. Burchfield
Robert D. Berguin	Charles W. Bushar III
William H. Beyer	Joseph B. Byrnes

Chilton S. Cabot	Donald J. Miloscia
Edward P. Carlin	John C. Moffett
Charles W. Clarchick	William M. Monroe
Alfred I. Claves, Jr.	George E. Moore
Richard T. Close	Michael W. Murray
Joseph W. Constantine	Richard D. Muzzy
James E. Cooper	Arthur L. Nardiello
John C. Cooper, Jr.	John M. Norton
Myron R. Coryell, Jr.	Lawrence E. Nugent
William J. Cover III	John E. Oates
James A. Craige	Alan S. Painter
Martin J. Crowley	Robert W. Painter
Peter W. Defty	Delos S. Pappas
Harry R. Delkeskamp	John R. Patten
Marvin L. Dery	James W. Pattison
Glenn V. Dill	David A. Perry, Jr.
Rocci M. Discipio	Joseph J. Pestana, Jr.
Glenn H. Downing	Charles G. Peterson
Wildon B. Eaddy	Eric N. Piper
Gordon A. Early	Gerald M. Prizant
Thomas J. Ebner	Hugh C. Purser
James C. Eddins	William A. Rasmussen
Bernard T. Ellerts	Howard E. Rast, Jr.
Edwin J. Emmet, Jr.	Richard L. Rattray
Richard M. Evans	Robert S. Reeves
Joseph Fasano	John V. Reschar
M. P. Frank III	Erland Reuter
Frederic W. Frost III	Cecil E. Rice
Frank Gentile	Wallace W. Rich
Robert A. Giovannelli	William P. Ricketts
William L. Goodwin	William H. Ridings
Peter C. Greer	Richard G. Rodriguez
John W. Greiner	George T. Rorrer, Jr.
William S. Hamel	Gerald J. Ryan
Todd G. Hannah	Thomas R. Sarver, Jr.
Harald R. Hansenpruss	Arthur J. Sattolo
William J. Hatcher, Jr.	Ellis A. Schmidt
Robert T. Hartmann	Charles W. Schrader
Kenneth A. Helmes	John A. Shanahan
James A. Herbert	Lawrence D. Sheridan
Peter H. Hofinga	Carmen P. Silirie
Edwin K. Hoiles	Richard W. Singer
Jon D. Hollabaugh	Thomas B. Smith
Robert F. Horan, Jr.	Wallace S. Smith
Leroy M. Jones	Paul Soby
Donald V. Joyce	Dale W. Spence
Edward A. Kelly, Jr.	George T. Stevens III
Michael J. Kelly	Jerald C. Stoeber
Edwin K. Kiefner	Dan G. Switzer
Wayne E. Koons	John H. Tewksbury
John M. Kretsinger	Richard M. Thoreson
Phillip B. Layman	Charles H. Townsend
Charles A. Lazzaro, Jr.	Richard P. Trotter
Robert E. Lee, Jr.	Barclay M. Wagner
Paul A. Leppert	Newton L. Wakeman
George Lindeman	Arthur E. Walls
Robert E. Loughridge	Richard J. Walters
David R. Martin	William E. Wean
Lawrence McCarthy	James R. Weinlader
Dudley E. McFadden, Jr.	James H. Westmoreland
Thomas C. McGregor	William B. Williams
John J. McLaughlin, Jr.	Herman W. Winter
Harry R. McPike	Louis C. Wirthin
Henry F. Mehlert, Jr.	Glennon D. Woods
George F. Meyers, Jr.	Donald L. Wright
Gene A. Miller	Richard J. Yevak
	William D. Young, Jr.

IN THE NAVY

The following named (naval Reserve officers training corps candidates) to be permanent ensigns in the Line or Staff Corps of the Navy, subject to the qualification therefor as provided by law:

David O. Aldrich	Daniel H. Else III
Alan R. Austin	Kip M. Farmer

Bruce C. Bauer	John H. Gonsalves III
William J. Beres	David R. Goonen
John M. Berosky	Joel L. Greenblatt
Richard N. Bradshaw	Joseph C. Greyson, Jr.
Peter S. Chmellir	Lewis G. Halloran
Thomas C. Compitello	Alan M. Harms
Bruce A. Cordes	John A. Hedin
David M. Crocker	Robert V. Humphreys
Mark E. Denari	Jay R. Jacobowitz
John H. Dickie	Steven C. Jansen
Christopher J. Ebert	Harold J. Kearsley
Robert K. Eby, Jr.	*John A. Keenan
James J. Ehler	John M. Killey
James C. Ellis	Alan G. Kyle

David A. Lang
James R. Lundeen
John M. McCahan
James W. Mehrmann
Roger H. Morrison
George L. Neslein
James H. Norman
John R. Patterson
Darrell B. Powell
*Victor L. Rollandi
Chester W. Schwartz
*Steven D. Stalnaker
James P. Steffensen

The following-named (naval enlisted scientific education program candidates) to be permanent ensigns in the Line or Staff Corps of the Navy, subject to the qualifications therefor as provided by law.

David J. Acker
Henry G. Adams
Robert A. Adams
William E. Alcorn
Jack C. Allen
Harry R. Anderson III
James E. Anderson
Michael T. Anderson
John W. Arnest
Richard G. Balr
William R. Ball, Jr.
Clyde B. Balthrop
Charles W. Bassett III
Donald W. Bechtold II
Gregory J. Bennett
John A. Boito
Robert D. Bourg
Daniel A. Brady
Edward S. Branson
Jack V. Brendmoen
Russell T. Bridges
William J. Brinkley
Jimmy W. Broadus
Karl S. Brown, Jr.
*Larry W. Brown
Richard M. Brown
Larry W. Buck
Dennis W. Buller
Warren L. Bunn
Jack D. Bush
James D. Bush
Leon P. Calviero
Michael H. Carson
Leonard R. Casella
*Reuben Castaneda, Jr.
Lewis A. Causey
Myron E. Chaffee II
Robert A. Cheney
John H. Connor, Jr.
William T. Copeland
Michael R. Cooper
Philip P. M. Cooper
David W. Corel
Richard L. Cox
Marion L. Crouch
Philip H. Crowell III
Nicholas J. D'Acquisto
David E. Damin
Bruce W. Davis
Charles W. Davis
Lavern A. Davis
Victor M. Deleon
Willard J. Demo
Tim A. Dettmann
Joe D. Deweese
Henry A. Domis
James E. Downs
Michael Dubrouillet
Richard E. Duncan
William H. Dunn
Charles A. Edmunds
Kenneth M. Elliott, Jr.
Lawrence E. Epley
Reginald J. Erman
George E. Escola, Jr.
Monty J. Evans
*James T. Fahey
Gary L. Farmer
Rodney G. Farrell
James H. Fenner
Robert J. Flenniken

Joe R. Stilwell, Jr.
Lawrence J. Swenson
*William A. Syverson, Jr.
*Douglas D. Thaxton
*Geoffrey W. Turner
Robert A. Uhl
William C. Wagner
David D. Weaver
Mark D. Westin
Vernon F. Wilkerson
*Jay H. Williams

Edward C. Flynn
Ronald D. Ford
James M. Forgy
Martin Fox
*Daniel J. Franken
Gerald S. French
Dennis P. Fusher
*William E. Gahnstrom
*Thomas G. Galley
John R. Gersh
Ernest E. Gesell III
Quentin R. Grady
John M. Graham
Thomas A. Grassi
*Frederick E. Groenert, Jr.
Frank J. Guarino, Jr.
Raymond J. Gut
Ronald W. Haddock
Dennis G. Hale
Raymond T. Hall
Richard R. Hamm
John L. Harding
Thomas W. Harten
Robert W. Heldecker
Kenneth R. Henry
Michael D. Henry
Gregory P. Hicks
*Dennis A. Hobbs
Bart D. Hodgins
Gary D. Houge
Carl P. Howard
Edward H. Hudson

EXTENSIONS OF REMARKS

"THE CRISIS WON'T WAIT FOR THEM," SENATOR JACKSON ASSERTS; ENERGY PROBLEMS GROW WORSE WITH WHITE HOUSE DELAYS AND INDECISIVENESS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1973

Mr. RANDOLPH. Mr. President, our able colleague from the State of Washington, Senator HENRY M. JACKSON, chairman of the Committee on Interior and Insular Affairs, is a leader in our national fuels and energy policy study. He spoke with accuracy at the National Press Club on March 22, 1973 when he asserted that the administration is caught in a paralysis in coping with the energy crisis.

This Senator, who cosponsored the Senate resolution (S. Res. 45, 92d Congress) with Senator JACKSON to provide the basic authority for the fuels and energy policy study, is in full accord with the Interior Committee chairman. His declaration that "this Nation must move forward immediately to deal with a critical shortage in our strategic reserve and to avert gasoline shortages this summer," is a solid fact.

Mr. President, I believe, as does Senator JACKSON, that emergency action by the White House within the next 4 weeks on a wide range of measures will be necessary to avert critical shortages of gasoline and other fuels this summer and next winter."

Calling attention last Thursday to the fact that "The White House has time and again put off forwarding an energy message—to Congress," Senator JACKSON emphasized: "We cannot find a piece of paper from downtown to indicate where they stand," and he made the timely declaration: "The crisis will not wait for them."

As to the urgency of the energy crisis and the need for prompt actions to roll back its consequences, this Senator is in full agreement with the knowledgeable Senator from Washington. And I stand side-by-side with him in support of the actions he recommended—actions which must be taken if we are to avert a domestic disaster.

It is my belief that the Interior Committee chairman is thinking and acting with foresight in the preparation of legislation to establish a National Emergency Energy Board which, he said,

Would be granted extraordinary powers over Federal agency programs and the energy industries.

It is granted that such an action would be an extraordinary one and, under less critical conditions, should not be necessary. But, as Senator JACKSON said:

If early action is not taken by the Administration to deal with the critical questions inherent in the energy crisis, the Congress will act.

He added that the powers he has in mind for the proposed National Emergency Energy Board would be built upon the precedent of the War Production Board of World War II and other major Federal interventions into the realm of private enterprise in times of emergency.

Indeed, Mr. President, our colleague's speech was a significant development in the war that must be waged against the eroding effects of the energy crisis. I take it to mean that we now see hopeful signs that the battle against the energy crisis is about to be joined from the ramparts of Capitol Hill if it is not soon joined by the man with very real powers of leadership at the White House.

I am ready and willing to work aggressively and diligently with both the leadership of the executive branch and the leadership of the Congress to bring the energy crisis under control—and to an ending, at the earliest time possible. But, like Senator JACKSON, I have little pa-

tience remaining for the procrastination, indecisiveness, and delay in the executive branch with respect to the worsening energy situation. If the Congress must strike without any solid recommendations from the Executive, I stand ready to join with Senator JACKSON and his colleagues of the Interior Committee and those of us who are ex-officio members for the national fuels and energy study in taking positive and decisive actions of the nature so capably conceived and enunciated by the committee chairman last week.

Mr. President, I request unanimous consent to have printed in the RECORD excerpts from Senator JACKSON's address before the National Press Club on March 22, 1973—excerpts released by his office.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY SENATOR HENRY M. JACKSON

If there are any lingering doubts about the kind of energy problems we face, consider these facts:

Between 1940 and 1965, the consumption of energy in the United States doubled. If present trends continue, consumption could double again by 1980. The rate of energy consumption increased twice as fast in 1972 as it did in 1971.

In 1965 we consumed nearly 12 million barrels of oil a day; in 1972 we consumed more than 16 million barrels a day. In 1965 we had three million barrels a day spare producing capacity; in 1972 we had none.

In 1972 we imported some 30 percent of our oil requirements. That figure will double by 1980.

At a time when energy demand is greater than ever, there is not one single new refinery under construction in the United States.

At a time when our need to develop domestic oil and gas is greater than ever, we have seen a sharp decline in all kinds of drilling. For example, the number of natural gas wells drilled declined from a high of 5,459 in 1961 to 3,225 in 1970.

The greatest potential for new oil and gas discoveries is on the Outer Continental Shelf. But less than two percent of the OCS to the

200 meter water depth has been leased for development.

Since 1968 we have been using twice as much natural gas as we can find. With current drilling trends, we could be short ten trillion cubic feet of gas in 1980. Potential gas users were denied service in 21 states in 1972. Curtailments of deliveries in every part of the U.S. are forecast for 1973 and thereafter.

The shortage of natural gas has shifted the burden and caused an extraordinary increase in demand for other fuels. The demand for heating oil in the current winter season has been up over 12 percent.

Today crude oil stocks are down almost 50 million barrels from the high of May, 1971. Gasoline stocks were down at the end of February almost 30 million barrels below this time a year ago as gasoline demand heads for new highs in 1973.

As the nature of the energy crisis becomes painfully apparent, the public has been bombarded with explanations about who caused it. In the midst of all these charges and countercharges, it's time to challenge the conventional wisdom with some plain talk about what this crisis is—and what it is not.

The energy crisis is *not*, as some would have you believe, a conspiracy by the oil lobby, the gas lobby and the coal lobby to milk the American consumer. The energy industries are not conspirators—but they are not blameless either. Many of them have failed to meet new and vital environment responsibilities. All too often, they have been short-sighted and self-serving in their attempts to influence national energy policy. Opposition to responsible surface mining legislation is a case in point.

The energy crisis is *not*, the creation of a small band of environmental extremists blocking nuclear power plants, OCS leasing, and the trans-Alaska pipeline. Environmental concerns have played a major role in slowing construction of vital energy facilities. But even if every one of these facilities had been built on schedule—schedules which, by the way, were overly optimistic—the energy crisis would still be upon us. The fault lies, I believe, not so much with the environmentalists as with those in industry and government who have either failed to respond to legitimate concerns or failed to develop effective institutions for resolving environmental controversies.

The energy crisis is *not*, the exclusive product of short-sighted government regulation, a crisis which will disappear as soon as free market forces have full play. Government policies in such areas as oil imports and natural gas pricing have, of course, contributed to our energy problems. But the sources of the energy crisis are too varied and complex to yield to the demon theory of analysis.

The fact is that our national energy system as a whole is no longer functioning effectively. We are facing real shortages and higher prices. We are entering a period of dangerous dependence on foreign sources of oil.

What has been the response of this Administration to these problems? To put it bluntly, the Administration's response to the growing energy crisis has been characterized by delay, indecision and confusion of purpose.

The Congress has had two years of "crisis talk" from Federal officials and industry representatives. But we have had no action. We have seen no recommendations for legislation. We are still awaiting the transmittal of a Presidential Energy Policy Message.

Meanwhile, schools have closed, factory gates have been shut, and transportation systems have been disrupted.

World oil prices continue to spiral upward and the stability of the Mid-East grows more and more insecure.

The proposed FY 1974 budget recommends only incremental and clearly inadequate changes in priorities and policies for energy research and development.

The prospects of serious regional shortages of gasoline this summer now appear virtually certain.

This list could be lengthened at will but that is not necessary. The point it proves is obvious: The energy crisis we face is a crisis in leadership.

Indecision has been the hallmark of the past four years.

After years of trial balloons on deregulating natural gas, on increased incentives to industry, on rolling back environmental standards, and on other controversial proposals we have yet to see a single concrete recommendation.

Instead we have had a series of timid, *ad hoc* adjustments in the oil import program, in oil leasing policy and in other areas. The country deserves better.

I propose an end to indecision. It is time we had some real, concrete initiatives to deal with the critical problems we face.

In an effort to focus Congressional attention on key issues and stimulate Administration action, I have made a number of specific proposals and recommendations in recent months.

I have proposed new initiatives to unify the major oil consuming nations and lay the foundation for a North American continental energy policy.

I have urged action to preserve the independent sector of our oil industry which is threatened by current oil import policy and other recent developments in the national energy picture.

I have proposed an Energy Facility Siting Act to resolve the bitter conflicts surrounding the siting and construction of refineries, power plants, pipelines and other energy facilities.

I have urged a deepwater port policy that will pave the way for construction of ports to receive the supertankers required to import 60 percent of our oil needs by 1980.

I have proposed a new national conservation policy to end widespread waste and reduce demand in a country that uses one-third of the world's energy.

Specifically, I have proposed a tax on weight and horsepower to reduce the use of wasteful, gas-hungry, superpowered automobiles.

I have asked for a strong, statutory energy import policy which sets forth import policy for the next decade, designed to speed the development of domestic resources and hold reliance on insecure foreign sources to a bare minimum.

I have urged the adoption of specific measures for the creation of a national strategic petroleum reserve, using resources on public lands, including Naval Petroleum Reserves, to the fullest extent possible for this purpose.

I have proposed new approaches to regulating natural gas which will channel gas to the most efficient uses at reasonable prices and generate new supplies.

I have offered a massive 10 year \$20 billion research and development program to unlock new energy sources and better utilize existing sources with the aim of achieving energy self-sufficiency in ten years.

The Administration's response to the growing energy crisis facing the nation has been characterized by paralysis, indecision, delay, uncertainty, and confusion of purpose.

If we are to avert critical shortages of gasoline and other fuels this summer and next winter emergency action must be taken by the White House within the next four weeks on a wide range of measures. Actions which must be taken if we are to avert a domestic disaster include:

1. development of contingency plans and

a national standby rationing system for the allocation of gasoline and other fuels in short supply to public service agencies (hospitals, fire departments, schools), to residential consumers, and to essential industries;

2. establishment of a clear Federal policy to govern the conditions and circumstances under which sulfur dioxide and other air quality standards will, if necessary, be relaxed to deal with critical energy shortages;

3. promulgation of an oil import policy which will meet current demands, provide adequate crude oil stocks for idle refinery capacity, and insure the economic survival of the nation's independent oil producers, refiners, marketers and distributors;

4. establishment of a program to avert this summer's projected gasoline shortages by importing petroleum products, by guaranteeing upland and OCS royalty oil to refineries operating below capacity, and by exercising all existing authority to allocate available supplies of crude oil and petroleum products to areas of need;

5. requiring the oil industry, as a condition for receipt of oil import licenses, to immediately undertake the establishment of a 90 day petroleum storage supply;

6. implementation of a Federal energy conservation policy designed to maximize energy efficiency and reduce waste;

If early action is not taken by the Administration to deal with these critical questions the Congress must and will act.

I have directed my staff to prepare legislation to establish a National Emergency Energy Board which would be granted extraordinary powers over Federal energy programs and the energy industries. The Board's powers would be built upon the precedent of the War Production Board of World War II and other major Federal interventions into the realm of private enterprise in times of emergency.

The Emergency Energy Board would, at a minimum, be equipped with legal authority, personnel, and funding to:

1. allocate all fuels, regardless of how produced, to meet essential public requirements and to avert shortages;

2. implement emergency measures for energy conservation;

3. preempt State law if it is determined that State or local policy frustrates or prevents any action necessary to protect the larger public interest in adequate and secure energy supplies;

4. initiate oil and gas exploration and development by the appropriate Federal agencies on unexplored, but promising public lands, on the Naval Petroleum Reserves, and on the Outer Continental Shelf—including offshore areas of the Atlantic Ocean; and

5. untangle the procedural delays and cut the red tape which frustrates the siting of any electrical power plant, refinery or superport facility which is determined to be necessary and essential to meet regional or national energy requirements.

WHY ARE WE PAYING HIGHER PRICES FOR FOOD?

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mrs. BURKE of California. Mr. Speaker, I received today from the Federal Reserve Bank of San Francisco its "Business & Financial Letter" written by Dean Chen, which presents some important information on the causes for the steep rise in food prices.

I would like to share this article with my colleagues and hope that it contributes to our understanding of this complex, but vital, issue:

HOW MUCH FOR THE FARMER?

The average housewife won't believe this, but American farmers are liable to wind up with less net income this year than in 1972. A strong increase in cash receipts is all but certain, because of both an expansion in output and favorable prices for farm products, but much of this increase may be offset by a decline in government payments. Then, the expected gain in gross income from these sources may be wiped out completely by the continued inexorable rise in production expenses.

The resultant of all these factors could be a decline of almost 5 percent in net farm income, to about \$18 billion for the year. But to put this in proper context, we should realize that last year's net of \$19 billion was 19 percent above the 1971 figure and 12 percent higher than that of any earlier year, including the halcyon period of 1947.

ALL-TIME RECORDS

The nation's farmers set all-time records in practically every sector last year, because of the strong and accelerating demand for farm products at home and abroad. Gross returns thus rose substantially, helped along by a 12-percent rise in farm prices and a 27-percent jump in government payments to producers. The burgeoning demand for agricultural products reflected the strong expansion of the domestic economy, which supported a 10-percent increase in GNP—and it also reflected an upsurge in overseas demand, which is a story in itself.

The picture was distorted by the tight food-supply situation, which came about largely because of several weather-related production setbacks, including freeze damage to West Coast fruit and vegetable crops as well as harvest delays affecting Midwest feed grain and soybean crops. These difficulties led to an explosive late-year rise in prices, and the price problem was accentuated—and government payments sharply increased—because of 1972's restrictive feed-grain program and the substantial set-aside of wheat acreage. Thus, wholesale prices of farm products jumped 25 percent within the past twelve months alone, with such hefty increases as 24 percent for fibers, 27 percent for livestock, and 38 percent for grains.

SPECTACULAR EXPORTS

Farm exports, after reaching the \$7-billion level two years ago, then went on to approach \$9½ billion in 1972, with the final six months accounting for the bulk of the increase. This sharp gain reflected increased livestock production in Western Europe and Japan, declining grain shipments by major competitors, and the improved competitive position resulting from the Smithsonian monetary agreements. Shipments of grain and products rose about 40 percent to \$3½ billion, in the process accounting for nearly two-thirds of the overall increase in exports, and shipments of soybeans and products passed \$2 billion, a record for a single commodity.

Exports in 1973 could exceed \$11 billion—a goal which the Administration originally had not expected to reach until the end of the decade. Prospects in this sector became exceptionally favorable last summer, when foreign countries turned to the U.S. market for more grains because of their reduced crop prospects and tight exportable supplies. Not only did regular customers increase their buying, but the U.S.S.R. signed up for its historic \$1.1-billion grain purchase and China added a small but psychologically important order for 19 million bushels of wheat.

Foreign demand is likely to remain at a high level, reflecting the relatively short supply situation in many foreign countries and

the impact of recent dollar devaluation on the export market for U.S. commodities. This stimulus may weaken later on, however, if major producing countries abroad respond as anticipated to the current high level of prices. The Soviet Union, a country which has shown the ability in the past to recover rapidly from crop failures, has targeted a 12½-percent increase in farm production this year. (Indeed, that country has been a net exporter of food for most of the past decade.) But the U.S.S.R. may remain a major customer over the long run, because of its desire to rebuild its grain inventories and to upgrade family diets to include more red meat. Also, according to latest reports, the Soviet crop year is starting poorly because of dry weather in European Russia and shortages of seed-grain reserves.

EARNING HIGHER PRICES

Given the prospects for higher farm prices and increased marketings, cash receipts of U.S. farmers could rise from the 1972 record of \$58½ billion to a new peak of \$62 billion. In other words, the strong expansion of demand that has provided the underpinning for the nation's industrial boom should continue to provide support for the farm economy as well.

Supplies of major commodities should rise sharply this year, in response both to the high level of prices and to the relaxation of the government's cropland-control program. Altogether, perhaps 30 to 40 million acres of idled land will be brought back into production. Livestock supplies also should increase, as beef, poultry and (after midyear) pork supplies begin to reach the market in increasing quantities. Price pressures thus should begin to ease; although rising perhaps 10 percent for the year, prices received by farmers should increase at a somewhat slower pace than in 1972, and they may actually decline in late 1973 and 1974.

The wheat crop (1.7 billion bushels) is now estimated at 12 percent above the 1972 record, while the corn crop (5.8 billion bushels) is 4 percent above last year, and the soybean crop (1.5 billion bushels) is about 17 percent above the 1972 record. The projected expansion in supplies of feed grains and soybeans fits in with the Administration's plans for increased production of cattle, hogs, broilers, milk and eggs. Government payments could drop from \$4 billion last year to \$3 billion this year—the same level as in 1971. Payments jumped last year for the wheat program and (especially) the feed-grain program, reflecting both larger acreage set-asides and higher rates per acre. These factors will be largely missing this year, however, because of the drive to get more acreage back into production.

PAYING HIGHER PRICES

Production costs should continue to rise from the 1972 level of \$47 billion to perhaps close to \$51 billion, reflecting the use of more production inputs at higher prices. Some cost pressures were already evident in 1972, despite controls on prices of many farm inputs. Over the past twelve months, farm-equipment prices rose 2½ percent at wholesale, while agricultural chemicals rose more than 3 percent and petroleum products jumped 12½ percent. These price pressures should intensify this year, in view of the rapidly growing need for machinery and materials, not to mention land and labor.

The 1973 farm picture is clouded by the fact that policymakers must deal with two conflicting goals—curbing the food-price inflation on the one hand, and maintaining farm prosperity on the other, in the Administration's eyes, the upsurge in farm prices is due not so much to cost-push factors as it is to the rapid expansion of demand relative to supply. In view of that analysis, certain policy moves are inevitable: the relaxation of production restraints on 1973 crops,

the sales of grain from government stocks, and the lifting of import quotas on meat and dairy products.

In this connection, it should be noted that price determination for agricultural products differs somewhat from that for non-farm products. At any given level of demand, sudden changes in marketable supplies tend to cause wide fluctuations in farm prices. Thus, policy actions to increase supply (or reduce demand) can be an effective means of farm price control. But the output of most farm commodities cannot be increased over a very short time-span, so that the price impact of recent policy moves will not be felt at the present time, but rather in late 1973 or 1974.

CONCURRENT RESOLUTION PASSED BY THE SOUTH CAROLINA GENERAL ASSEMBLY REGARDING TERMINATION DATE OF DAYLIGHT SAVINGS TIME

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1973

Mr. THURMOND. Mr. President, on behalf of the junior Senator from South Carolina (Mr. HOLLINGS) and myself, I bring to the attention of the Senate a concurrent resolution passed by the South Carolina General Assembly.

On March 20, 1973, the South Carolina General Assembly passed a concurrent resolution memorializing the Congress to enact legislation that will terminate daylight saving time on the fourth Monday of September of 1973, and each year thereafter. Senator HOLLINGS and I jointly endorse this concurrent resolution.

Mr. President, current law provides that daylight savings time ends on the fourth Monday in October. This scheduling of daylight savings time results in a severe hardship for many persons who begin work or must travel long distances to school in almost total darkness in the morning hours of early fall.

Mr. President, on behalf of Senator HOLLINGS and myself, I ask unanimous consent that the concurrent resolution be printed in the Extensions of Remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A CONCURRENT RESOLUTION

To Memorialize the Congress of the United States to Take Necessary Legislative Action to Terminate Daylight Saving Time on the Fourth Monday in September of 1973 and Each Year Thereafter

Whereas, the control of standard and daylight saving time schedules has been preempted by the Congress of the United States and daylight saving time now begins on the last Sunday in April and ends on the fourth Monday in October; and

Whereas, this scheduling of daylight saving time results in a severe hardship for many persons who begin work or must travel long distances to school in almost total darkness in the morning hours of early fall; and

Whereas, this situation creates a very serious safety problem for young children who, by bus or on foot, must go to school in darkness; and

Whereas, this problem is particularly acute in the early fall and could be solved at least

partially by ending daylight saving time in late September. Now, therefore,

Be it resolved by the Senate, the House of Representatives concurring:

That the Congress of the United States be and hereby is memorialized to take necessary legislative action to change the termination time of daylight saving time to the last Monday in September.

Be it further resolved that copies of this resolution be forwarded to the President of the United States Senate and the Speaker of the United States House of Representatives and to each member of the South Carolina Congressional Delegation.

A SERIOUS SECURITY THREAT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. ASHBROOK. Mr. Speaker, in March 1970, the late Director of the FBI, J. Edgar Hoover, testifying before a House Appropriations Subcommittee, referred to the serious security threat posed by Chinese ship jumpers, many of whom belong to the Communist-dominated Hong Kong Seamen's Union:

The approximately 40,000 Hong Kong based seamen, many of whom actually reside and have families on the mainland, continue to be an investigative problem. The majority of these seamen belong to the Chinese Communist-dominated Hong Kong Seamen's Union. Thousands of these seamen enter the United States each year when their ships dock here. A high number of them desert while here and constitute a serious security threat.

On April 25, 1972, along with extensive remarks on Red China's illicit drug trade, I inserted a Washington Post article by Jean Heller and Mark Brown which reported that approximately 4,200 aliens from Communist China sneak into the United States each year, some of whom are on espionage missions while others are involved in narcotics traffic.

Recently, the New York Daily News carried two articles by Frank Faso and Paul Meskil which also dealt with Chinese ship jumpers, the Hong Kong Seamen's Union, and illicit drugs in the form of heroin. Just how serious is the security threat referred to by Mr. Hoover can be ascertained from the two articles appearing in the New York Daily News on March 20 and 22 by Frank Faso and Paul Meskil which follow:

COLOR NEW DRUG EPIDEMIC HONG KONG HUE
(By Frank Faso and Paul Meskil)

At 2:43 a.m. last July 8, a prosperous Chinese businessman named Hong Moy entered the Rickshaw Garage, across the street from the Elizabeth St. police station, in Chinatown.

President of the 2,000-member Moy Family Association, Moy was one of Chinatown's most influential business and civic leaders. He had about \$2,000 cash on him, the receipts of the supermarket, book store and two coffee houses he owned in the Chinese community.

He intended to drive home to Port Washington, L.I., where he lived with his wife and four children. As the night attendant went to move a car that was parked in front of Moy's 1972 Cadillac, three young Chinese men slipped into the garage and seized Moy

from behind. Pressing a gun muzzle to his head, they made him kneel on the floor and handcuffed his arms behind him.

They went through his pockets and took his wallet and bankroll. When the attendant returned, they pointed pistols at him and told him to stand still. Then one of the men pulled a hunting knife and calmly stabbed Moy in the back. As the three departed, the stabber wiped the knife handle clear of fingerprints and dropped the weapon near the garage door.

ROBBERY WASN'T THE MOTIVE

Moy died an hour later in Beekman Downtown Hospital. A detective called the killing "a routine robbery murder," but it was far from routine. The unarmed victim offered no resistance, made no outcry. There was no need to kill him to get his money. And if the stabber was some sort of homicidal maniac, why didn't he also kill the only witness?

"Robbery was not the motive," a high-ranking police official said recently. "This was a carefully planned execution."

Pressed for details, he said: "I can't say anything more. It's a federal case now."

The FBI, which normally has no jurisdiction in a city homicide investigation, has been quietly checking Moy's background. So has the federal Bureau of Narcotics and Dangerous Drugs.

SEEN WITH SUSPECTED DRUG DEALERS

Federal agents told reporters that Moy had been seen with several suspected drug dealers who came from China and were in this country illegally.

Since President Nixon went to Peking, the official Washington line is that China is not involved in the global dope trade. Still, the rumors and charges persist.

The latest accusation against China was made by two veteran New York crime fighters—Frank Rogers, citywide prosecutor of narcotics cases, and Brooklyn District Attorney Eugene Gold.

At a January press conference announcing the bustup of a smuggling ring that brought hundreds of pounds of heroin into the U.S. last year, Rogers showed reporters a plastic bag on which the words "People's Republic of China" were printed in English and Chinese.

BAG CONTAINED HEROIN

He said the bag had contained "brown rock heroin" from mainland China. Rogers added that he had additional evidence of a Chinese connection, including tape recordings of phone conversations between dope smugglers and dealers.

"This is the first clear and substantive evidence we have that mainland China and Hong Kong (a British colony) are being used as a means of getting heroin into the United States," Gold said.

The boss of the smuggling ring, The News learned, is an important Chinese national who makes frequent trips between the U.S., Canada and Peking, where he confers with top government officials. He has not been arrested.

Of the 36 persons arrested during the five-month investigation of the smuggling ring, 24 were ship-jumping members of the Hong Kong Seamen's Union. A secret report prepared by the Strategic Intelligence Office of the Bureau of Narcotics and Dangerous Drugs confirms that Hong Kong seamen are deeply involved in the international dope traffic.

The report states, "The smuggling activities of Chinese seamen imply a loose but rather extensive arrangement between the seamen and their United States contacts to carry out the movement of narcotics from Southeast Asia on a continuing basis. . . .

"Sensitive sources also reveal frequent communications between Chinese heroin traffickers in New York, Seattle, San Fran-

cisco, Portland (Ore.), and Vancouver (Canada), suggesting that an extensive wholesale mechanism exists."

Other recent Narcotics Bureau and CIA reports on the Asian dope trade mention "ethnic Chinese" and "Chinese seamen." These reports say the opium poppies are grown in Burma, Laos and Thailand, and that opium, morphine base and heroin are transported from Bangkok, Thailand to Hong Kong, the main transfer point for shipments to the U.S.

A secret CIA report on narcotics operations in Southeast Asia states that tons of opium and morphine base, from which heroin is made, are carried from Bangkok to Hong Kong in fishing boats. The report says: "One trawler a day moves to the vicinity of the Chinese Communist-controlled Lema Islands—15 miles from Hong Kong—where the goods are loaded into Hong Kong junks."

Chinese army and navy units guard the Lema Islands and no boats pass there without inspection. The opium fleet could not possibly operate off these islands without Peking's knowledge and consent.

MAJOR DRUG CENTER

So much Asian heroin is flowing into New York that Chinatown has become a major drug center. Over the years, detectives and federal narcs have made sporadic raids on Chinatown dope dens, but the addicts and sellers there were members of the Chinese community and the traffic, mostly in opium, did not amount to much.

In 1971 there was only one big case here involving Asian heroin. But last year there was a virtual deluge. Of the 273 pounds of heroin seized by the Federal Narcotics Bureau here in 1972, nearly a third originated in Asia. Additional seizures of Chinese heroin were made by police and customs agents. Among the major heroin hauls of 1972:

Jan. 28—Customs agents raided an apartment in Sunnyside, Queens, and caught two Chinese seamen with 18 pounds of pure heroin, worth about \$4 million on the addict market.

April 11—Narcotics Bureau agents arrested seven Chinese men and one woman in an apartment at 60 East Broadway and confiscated 11 pounds of heroin, part of a 100-pound shipment.

April 26—Eighteen pounds of heroin, hidden in a teakwood trunk, were seized in Port Washington, L.I. Two Chinese were arrested.

June 27—Four more Chinese seamen and three pounds of heroin were seized at the Sunnyside building raided earlier.

July 21—Six pounds of "pure brown rock heroin" from China were confiscated by federal agents; three Chinese were arrested.

Aug. 23—Four Chinese, including the self-style unofficial mayor of Chinatown, were grabbed by federal agents while completing a deal to sell 20 pounds of heroin for \$200,000 cash.

Oct. 6—A Westchester dope dealer was arrested after selling "brown China" to an undercover agent. The evidence was described as "brown, granular, rocklike crystals of heroin from Communist China."

Dec. 29—Bureau agents recovered 18½ pounds of heroin and arrested two suspects—a Danish seaman who allegedly brought the dope from Hong Kong and a Chinese restaurant owner.

Of the 23 Chinese involved in these cases, all but two were present or former members of the Hong Kong Seamen's Union. Daniel P. Casey, regional director of the bureau, said Chinese seamen are "attempting to become the key suppliers of heroin in the United States."

Jerry Jensen, deputy regional director, said the amount of heroin smuggled into this country from Asia does not yet equal the dope imports from Europe and Latin America, "but if the growth continues as it has in the past year, it will catch up."

KWA LIN: THE DOPE TRADE'S DEALER IN DEATH

(By Frank Paso and Paul Meskil)

This is the story of Kwa Lin, a Hong Kong hatchetman who littered New York's Chinatown with corpses.

Kwa Lin is probably not his real name, but it's the one that investigators know best. He has used a score of aliases and has worked at many jobs—on freighters as a seaman and oiler, in restaurants as a cook and dishwasher, in offices and shops where he was self-employed.

His principal occupation, according to investigators, is enforcer and executioner for a Peking-based Hong Kong-based network of seagoing spies and smugglers.

He is only 5-2 and 140 pounds, but his tiny frame ripples with muscles, and his hands are deadly weapons. He has been trained in Oriental hand-to-hand combat. Moreover, he is equally adept with gun, knife or hatchet.

A member of the Hong Kong Seamen's Union, he sailed to Canada in 1970, jumped ship in Vancouver and slipped into the U.S. illegally. He rented a small apartment on Delancey St. in Newark, obtained a social security card in the name of John Lee and started a small business dealing in Chinese herbs and spices.

His first New York target, investigators said, was a fellow Hong Kong seaman, Sing Hop, 27.

TWO MORE TARGETS

At sunset on Aug. 5, 1970, Sing Hop was walking along Park St., a short, narrow street that runs downhill from Mott St. to Mulberry St. in Chinatown, when a small neatly dressed man approached and fired three rounds from a snub-nosed revolver into his head. Sing Hop fell dead near the rectory of the Church of the Transfiguration. His killer hurried down Park St. into a crowd.

Sing Hop lived in a furnished room at 28 Chatham Square. A search of his meager possessions turned up a forged passport and documents including what investigators described as classified material.

These investigators believe he was killed because he disobeyed orders to return to Hong Kong or China for a new assignment.

A month after Sing Hop was murdered, a man named Kuee Tang was shot to death outside a Chinese social club on Canal St. A police intelligence report describes the club as "a known gambling establishment frequented by illegal aliens, including seamen involved in smuggling operations."

The same report describes Kuee Tang as a ship-jumping member of the Hong Kong Seamen's Union, an illegal alien and "a Communist courier involved in smuggling operations."

Jerry Ginn and Larry Wong also were Hong Kong seamen who entered the U.S. illegally and entered the dope trade. They sold samples of pure Asian heroin to Cuban and Puerto Rican drug dealers here and offered similar wares to Mafia narcotics racketeers. But instead of sending the profits to their bosses in Hong Kong and Peking, they kept some of the money and dope. Ordered to return to Hong Kong, they refused.

September 1970, Ginn and Wong decided to cool off at an air-conditioned movie house. A federal agent tailed them to the Sun Sing Chinese Theater, 75 East Broadway, under the Manhattan Bridge.

They left the theater at 6:30 p.m. and started walking west on East Broadway toward Chatham Square. The glare of the setting sun was in their eyes and they did not notice the little man until he was directly in front of them, an automatic pistol in his hand.

ESCAPES WITH HELP OF FRIENDS

Shot three times in the head, Ginn fell dead near the intersection of East Broadway and Market St. Wong was hit once in the jaw and survived. At least 30 persons witnessed the shooting, including the federal agent. He was unable to intervene, lest he blow his cover.

The agent and several other witnesses followed the killer, believed to have been Kwa Lin, down Market St. one block to the headquarters of I Wor Kuen, a militant Maoist organization, on the southeast corner of Market and Henry Sts.

The gunman opened the door to the I Wor Kuen club and shouted to those inside. Several young men rushed out. Some of the youths held back the witnesses to the shooting. Others walked away with the killer.

Later that night, Kwa Lin boarded a bus. FBI agents kept him under surveillance all the way to Montreal, where the Royal Canadian Mounted Police took over.

On Oct. 18, 1970, Kwa Lin returned to the U.S. in a car driven by another man. They carried Canadian identification papers and crossed into Washington State without incident. The following day, a 23-year-old Hong Kong seaman named Choy Lung was shot to death in Seattle's Chinatown.

According to an intelligence report on the Seattle murder, Choy Lung was a Peking courier who was supposed to have delivered \$18,000 to a Maoist youth group in Seattle. When he kept the money for himself, an enforcer believed to have been Kwa Lin, was ordered to kill him.

Kwa Lin's last New York mission was accompanied at 9:32 p.m. June 1, 1971, when Hong Kong seaman Lee Wing Sun, a suspected dope dealer, was shot dead at Chrystie and Division Sts. Two weeks later, Kwa Lin flew to Vancouver, where he visited a travel agency known to intelligence agents as a center for Chinese ship-jumpers, spies, smugglers and couriers.

As Kwa Lin left the travel agency, Mountie agents arrested him. The New York City Police Department was notified. The department asked Canada to hold Ywa Lin for New York authorities. However, he reportedly was turned over to the Central Intelligence Agency.

What happened to him is a closely guarded CIA secret. But members of other agencies say Kwa Lin has turned informer and provided the first major intelligence breakthrough concerning Peking's undercover operations in North America.

Interrogation of Kwa Lin led to the arrests of at least 20 other members of his narcotics ring, a federal source says. All were ship-jumping seamen. U.S. agents also seized forged documents, Communist propaganda, narcotics and classified information, the source says.

The Nixon administration insists that Peking is not sending drugs or spies to the U.S. But agents of the FBI, CIA, Immigration and Naturalization Service, Bureau of Narcotics and Dangerous Drugs and other federal agencies are still trying to find out what all those ship-jumping seamen are up to.

The official Washington explanation for Chinese operations here is that the Hong Kong seamen caught selling heroin and committing other crimes are professional criminals, not Peking agents. Yet investigators have tailed several of these ship-jumping felons to secret meetings with members of China's United Nations mission here and the Chinese Embassy in Ottawa. There is no official explanation for the conferences between Peking's diplomats and Hong Kong's extraordinary seamen.

INEQUALITIES AMONG SCHOOL DISTRICTS FOR PROPERTY TAX PURPOSES

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1973

Mr. HARRY F. BYRD, JR. Mr. President, on March 21, the U.S. Supreme Court, ruling in a Texas case, rejected the theory that inequalities among school districts resulting from financing through property taxes violate the Constitution.

Strict constructionists of the Constitution will applaud the words of Justice Lewis F. Powell, Jr., who in the majority opinion said:

It is not the province of this court to create substantive constitutional rights in the name of guaranteed equal protection under the law.

On March 23, two Virginia newspapers published excellent editorials analysing and endorsing the majority opinion of the Court. In each editorial, there is the caution against predicting that the decision in the Texas school case indicates a change of thinking on the part of the majority of the Supreme Court which will be reflected in future decisions. Both editorials express the hope—in which I join—that the Constitution will be more strictly interpreted in the future.

I ask unanimous consent that the text of the editorials, "The Effect May Be Far Reaching," from the Northern Virginia Daily, and "A Great Decision," from the Richmond Times-Dispatch, be included in the Extensions of Remarks.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE EFFECT MAY BE FAR REACHING

The U.S. Supreme Court's ruling on Wednesday that there is no constitutional right to education, and thus no constitutional remedy for disparities between rich and poor school districts, concerned itself primarily with methods employed by states in financing schools and the proper use in providing for "equal education."

Wednesday's ruling apparently says that a state law does not violate constitutional guarantees of equal protection because it conditions education on the wealth of local school districts through property taxes rather than on the wealth of the state as a whole.

Justice Powell, speaking for the majority said:

"It is not the province of this court to create substantive constitutional rights in the name of guaranteed equal protection under the law."

"Education is not among the rights afforded explicit protection under our Constitution. Nor do we find any basis for saying it is implicitly so protected."

This ruling is likely to have far-reaching effects and will doubtless come as a shock to those who, since the 1954 decision on school desegregation, have labored under the impression that "education" has stood on a separate pedestal as being virtually unassailable, protected by an impregnable constitutional shield.

It is too early, and too legally complicated,

to say that the decision may open up a Pandora's Box of new concepts, or a rethinking of old concepts, regarding the separateness of state and federal powers.

It will be interesting to watch as the new breed of Supreme Court jurists asserts itself in heading off the trend of legislating by judicial decree.

A GREAT DECISION

The local property tax is no prize, but the 5-4 U.S. Supreme Court decision upholding the tax's constitutionality as a tool of state school finance is pure gold.

The majority decision, delivered by Justice Lewis F. Powell Jr., goes far toward restoring perspective to the grossly-politicized slogan, "Equality of Educational Opportunity." It may prove to be one of the landmarks on the Nixon Court's return to judicial restraint in reviewing the laws of a majoritarian democracy.

In *Rodriguez v. Antonio Independent School Board*, a three-judge federal court had decreed that heavy reliance on the proceeds of local property taxes in Texas made per-pupil spending dependent on local wealth—with "rich" districts able to spend more than "poor" districts—and that the system thus violated the Equal Protection Clause of the 14th Amendment. Similar verdicts had been rendered in California, Minnesota, and New Jersey courts, and if the Supreme Court had agreed, all states except Hawaii—which has full state funding—would have had to change their finance systems drastically to equalize statewide spending.

But the Powell majority keenly analyzed the Rodriguez doctrine and perceived serious legal and logical flaws. There were basically two questions to resolve regarding intrastate disparities in school expenditures:

(1) Did there exist a definable class of "poor" persons whose right to equal protection was demonstrably being denied by the variations in school spending?

(2) Is education a fundamental "right" accorded to an individual under the federal Constitution?

The answer on both counts was "no."

On the first query, the majority cogently observed that the poorest families are not necessarily clustered in the poorest property districts. A Connecticut study, in fact, documented that the largest numbers of poor persons were living in commercial and industrial centers—the very areas that have the most lucrative property bases with which to finance schools. In this metropolitan area, we might add, Richmond has the largest tax base and spends more per pupil than the suburban counties, but it also has the largest concentration of families below the poverty line and the lowest scores on standardized tests of pupil achievement. It does not follow, therefore, that educational "quality" would be "equalized" by leveling spending throughout this region or state.

The court did not directly speak to this next point, but it needs to be noted that many of the nation's leading social scientists have discovered since the publication of the epic 1966 Coleman Report, "Equality of Educational Opportunity," that student learning is not a function of per-pupil spending—or, for that matter, of integrated classrooms. Prof. James Coleman (Johns Hopkins) found that family background accounted for much more of the variation in achievement than differences between schools. Prof. Arthur Jensen (Berkeley) found that heredity explained more of the differences in individual IQs than did environment. Prof. Daniel Moynihan (Harvard) concluded that "It is simply not clear that school expenditure is the heart of the matter." And most recently, Prof. Christopher Jencks (Harvard) found that, "The character of a school's output de-

pends largely on a single input, namely the characteristics of the entering children. Everything else—the school budget, its policies, the characteristics of the teachers—is either secondary or completely irrelevant."

If conclusions such as the above have shaken the liberal's faith in the power of the almighty education dollar to remake society, the Supreme Court's answer to the second question above will shake the faithful even more. Education not a constitutional right? To some egalitarians, that's like saying God didn't make little green apples and FDR didn't make a New Deal in Depression-time.

But it is true that, under our Constitution, providing for public education is a power not granted to the central government but reserved to the states and the people. And it is good—it is so wonderfully good—that a Supreme Court majority at last is honoring the principle of local control of education, which has served Americans well.

It is possible (although no predictions are risked here) that the high court will use the Rodriguez reasoning to uphold the Fourth U.S. Circuit Court of Appeals' opinion that the state of Virginia is not required to consolidate the Richmond area's school districts for equal protection purposes. There are differences between the cases, but the Fourth Circuit's opinion that a federal judge may not compel a state to restructure its internal government for the purpose of attaining racial balance—in the absence of evidence that school lines had been drawn for illegal segregation—doesn't seem too far from the Supreme Court's finding that a state may not be compelled to restructure its school financing in the name of "equalizing" opportunity.

THE TRAGIC PERSECUTION OF SOVIET JEWS

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. PATTEN. Mr. Speaker, the American people are frequently made aware of the injustices that are endured by the Soviet Jews. Personal stories of individuals attempting to get exit visas so that they may leave Russia for Israel have been related to us many times. Yet we do not tire of hearing them, but instead, continue to build opposition to the infamous and outrageous exit fees demanded of these people. This is why so many of us in Congress joined in co-sponsoring the most-favored-nation amendment.

Rabbi Harvey J. Fields, of the Anshe Emeth Memorial Temple, New Brunswick, N.J., and Mr. Samuel Landis, president of the Jewish Federation of Raritan Valley, have sent me a letter written and signed by 34 Leningrad Jews. In their letter, addressed to the U.S. Congress, they speak of the life of the Soviet Jew, filled with material and spiritual difficulties. However, they do not pursue this line because they—the difficulties—will never be fully understood in the West.

Once a year, the Soviet Jew can reapply for an exit visa, never knowing when the application will be accepted, but life goes on, children go on growing. In

order to live such a life and not lose heart or despair—sic—an unlimited belief in success is necessary.

One thing that does convince them to continue this strong belief is American and world public opinion. This public opinion "helps us to exist, to endure, and surmount our lives." These courageous people are grateful for the American people's thoughts and activities to aid them. "It must be said—that without your support we would never have been able to stand ground."

Mr. Speaker, let us continue to give the Soviet Jews the support they deserve and need. Let us not forget the injustices they suffer. I urge that my colleagues read the following letter that should be an inspiration to us all, and let us all do what we can to help Soviet Jews. The letter follows:

A GROUP OF LENINGRAD JEWS ADDRESSES THE CONGRESS OF THE UNITED STATES OF AMERICA

We are not able to fulfill our wish—to leave the Soviet Union and to settle forever in the State of Israel. We are conscious of the fact that this, our wish, is an elementary right of contemporary civilized men—nevertheless, we are deprived of it. The Soviet authorities do not allow us to arrange our own fate and the lives of our children.

We do not lead an easy life, but one that is full of assorted material and spiritual difficulties. We are not writing about them because they will never be fully understood in the West—no matter how much is written or said about them. We live a life which kills the spirit, moreover, we bear our present time only so that it might pass quickly; but after all the present life is that only life we have. We want the future to arrive as quickly as possible, our indefinite future.

We are striving for fairness from the Soviet authorities. In our argument what can we say to them?

The only stand we can take to show our lack of fear of their monstrous power; to show our agreement to make sacrifices; and by our being prepared to go to prison. This latter is a preparedness which the authorities unfortunately use all too often. It is turned out that after the camps and crematories of the War—there still remains Jews for whom it is necessary to go to prison in order to reaffirm their right to leave the Soviet Union forever and live a national life in their homeland in the State of Israel.

The official laws which regulate the issuance of exit permits for the State of Israel are unknown to us. Jews to whom exit visas are refused do not know when they will be able to receive a visa; they do not know on what the reasons for refusal are based; they do not know in particular which organizations or officials are blocking the issuance of the visa; they do not know in which instances it is necessary to appeal the refusal; and above all, they do not know if they will ever receive permission to depart. The only thing that they know is that a year after the refusal they once again may submit all of the documents together with their request for an exit visa. And it is possible once again to receive a refusal. And again in another year to submit documents . . . and this can go on without end.

But life goes on, children go on growing. Specialists are disqualified. In order to live such a life and not lose heart or despair an unlimited belief in success is necessary.

We complain about the absence of laws but when they appear the situation by no means gets any better. The notorious education tax has only the appearance of legality;

indeed it emphasizes still more the lack of rights of those who wish to leave. The unprecedented sums of the tax which were called for in the beginning have so affected public opinion that, when they were slightly reduced (albeit remaining excessively large), it was possible to point out that the situation had improved. But no, it had not improved. The education tax continues to remain a monstrous absurdity and a mockery of common sense. The evil of the education tax lies not only in itself but also in the fact that it diverts public opinion in the West from more important issues to do battle against it. Progressive people in the West may think that if the tax is either surmounted, lowered or completely rescinded, then the main obstacle on the path for Jews going to Israel will have been eliminated. No, no, no! This just isn't so! The main obstacle on the path for Jews going to Israel is not the education tax but the absence of free exit for all who wish it.

The Jews and non-Jews of the Western world have rendered us invaluable aid. The support of public opinion and of various organizations in the West helps us to exist, to endure and surmount our lives. It may be said straight-forwardly that without your support we would never have been able to stand ground.

Therefore we are turning to you: remember us!

We are living people just as you are; we know the same joys and the same pain that you do. We do so love our children and fear for them as you do for yours; and we too want to make them happy.

Help us in this! Remember about this during the negotiations with the Soviet government over political and economic questions.

Do not agree to compromises and half measures.

Do not trade the bodies and souls of Soviet Jews for tons of grain or fertilizer.

Don't delude yourselves about the apparent legality of the tax on education and similar measures.

We beg you to strive for one thing alone:

Free exit from the Soviet Union for all Jews who wish it.

No concessions or compromises! Only free exit for all who wish this—this is the position we are expecting from you; and it is for this that we have hope.

EXPLANATION OF POSITION AGAINST H.R. 3298

HON. PETE V. DOMENICI

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1973

Mr. DOMENICI. Mr. President, on Thursday, March 22, I voted against H.R. 3298 which would have required the Secretary of Agriculture to spend the full amount appropriated for rural water and sewer systems. I cast that vote with a great deal of reluctance because I am acutely aware that the smaller towns and cities of this Nation, particularly those of under 10,000 population, are in dire need of improved and enlarged water and waste disposal systems. To me, then, this bill had great merit, but I am also acutely aware of a need which is greater than the individual needs addressed by this and similar legislation.

That greater need, Mr. President, is the exercise of overall fiscal responsibility which by virtue of the Constitution rests on Congress. This must take priority over individual pieces of legislation, regardless of their individual merits.

I am pleased to make it part of the RECORD that the legislature of my own State of New Mexico, foreseeing the definite possibility of a curtailment of Federal funding for rural water and sewage programs, passed legislation during the last several weeks to enable the State to carry out these programs at a much lower level of Federal assistance. To my mind this is the correct attitude and is a vast improvement over some proceedings in this Chamber which are simply confined to finding fault with funding changes proposed by the President without regard to the impact of individual appropriations on the overall fiscal situation.

I will continue to urge that we approach our fiscal duties in a responsive and responsible manner. Passing costly, though meritorious legislation, without

regard to the overall budget is neither responsive nor responsible.

SOUTH VIETNAM'S POLITICAL PRISONERS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. EDWARDS of California. Mr. Speaker, while we in the United States are rejoicing at the return of our prisoners of war from North Vietnam, we should remember the 200,000 political prisoners still held by the Thieu government in South Vietnam. Subject to unspeakable tortures and brutalities, these patriotic Vietnamese—students, priests, monks, lawyers—bear the brunt of the Saigon regime's attacks on "traitors and enemies of the Republic." The following articles by Mary McCrory and Nicholas Van Hoffman appearing respectively in the March 20 Washington Star and the March 21 Washington Post, draw attention to these atrocities, witnessed firsthand by two Frenchmen who themselves were victims of Thieu's repression. On their present visit to Washington, Andre Menras and Jean-Pierre Debris are calling the American people to use their influence to see that these unrepresented people are not forgotten and left to rot and die in tiger cages. I urge my colleagues to read these articles and think seriously of the burden of responsibility we in the United States bear for these prisoners:

[From the Washington Star, Mar. 20, 1973]

SILENCE GREET'S POW'S TALE

(By Mary McGrory)

A pair of recently released prisoners of war have come to Washington. Little is being made of them. For one thing, they are French. For another, they have a tale of ongoing horrors in U.S.-supported South Vietnamese jails that nobody wants to hear.

Andre Menras is 27. Jean-Pierre Debris is 27. They are both schoolteachers who chose to go to Vietnam as an alternative to military service. They spent 2½ years in Chi Hoa prison in Saigon after staging a two-man peace demonstration in Saigon on July 27, 1970.

"To create a shock" against the corruption and tyranny of the regime, they climbed up on a statue waving a Viet Cong flag and scattering leaflets urging immediate peace. They were beaten unconscious. The scene was filmed by CBS and American MPs. They were sentenced to three years for "lessening the morale" of the South Vietnamese army.

They were unexpectedly released on Dec. 29 of last year, to prevent, they think, their witness of horrors to come—the systematic extermination of political prisoners hostile to President Nguyen Van Thieu. They put the number at 200,000.

Under the auspices of Amnesty International, they are making a world tour, hoping to arouse public opinion about the plight of the "brothers" they left behind, and who will, they say, surely die unless pressure is brought on the Thieu regime.

Menras says ruefully that it is hard to awaken Americans. "I find you are only concerned about the return of your 600 prisoners."

The pair, who are too earnest to be doubted, saw a few dove legislators, among

them Sen. Goerge McGovern, who learned from them that the people who attended a peace meeting he addressed in Saigon in August 1972 are now behind bars.

Menras and Debris were invited to speak here to a luncheon of congressional aides.

Under the terms of the Paris accords, "civilian detainees" are supposed to be released by both sides. But Thieu, they charge, is shuffling them off to other "rehabilitation centers" so their relatives lose track of them and converting their status to "criminal" so the accords won't apply.

They are also being beaten and tortured to death by means detailed in a grisly document the two teachers distributed to the audience.

Women, children and babies are in the crowded cells. They were told of peasant women from the Quang Tri province, rounded up after the April offensive, who bore babies in jail. The babies died and the mothers carried corpses around with them to protest.

American officials know all about and acquiesce in the treatment accorded prisoners. In Chi Hoa jail, an American colonel was a supervisor, occupying a special adviser's office. A representative of the U.S. consulate made weekly visits to the 10 American soldiers jailed there on criminal charges.

One American, they reported, burned his cell in protest of the daily beatings of the Vietnamese political prisoners. He was himself beaten up, with American officials present, in the "torture room," which was easily transformed during official inspections into a movie hall by the lowering of a screen.

Survivors of Con Son, site of the notorious tiger cages, told them that new and worse—that is, smaller—tiger cages were being built on the island with American funds. AID officials say no American funds have been used to build prisons since 1970 when two congressmen exposed the tiger cages.

"It has to be said," said Menras, "without American dollars there would be no prisons."

After the one-man election of 1971, a new wave of arrests brought a new class of prisoners—Buddhist monks, Catholic priests, students, lawyers.

"The bourgeoisie," said Debris, "who because they are obviously non-Communists and have standing, would be believed by the people in the political struggles that are to come. Thieu regards them as more dangerous than the Communists."

Representatives of the International Red Cross visited Debris and Menras in July 1971 and filed a report of "good conditions"—well-ventilated cells and adequate diet. It was just after they had been on a 27-day hunger strike and had been beaten daily. Recently, they took up the report with the IRC directors in Geneva and were told that a critical report might have denied them all prison access.

The only thing that helped was a flood of letters addressed to them in prison by indignant Frenchmen. The beatings ceased and the exercise period was extended. Debris and Menras hope to stimulate a worldwide letter-writing campaign to those they left behind. They have names. Similarly after press reports, prominent political prisoners were better treated for a brief while. When the stories ceased, abuse was resumed.

In the silence that fell after their harrowing recital, one pretty congressional aide asked, "What should Congress do?"

"They should ask Thieu when he comes about the political prisoners," Menras replied. "He will say he has none, but we have lists of names, and he should be asked about each one."

The chances of President Nixon's putting such embarrassing questions to the guest who comes next month are practically nonexistent. For him, Thieu comprises the "honor" in "peace with honor."

Nor is the prospect likely that an outraged Congress will put conditions on the

almost \$3 billion in military and economic aid the administration proposes to send to Thieu this year.

One aide explained, "My guy just wants out all the way. He says the Vietnamese should settle this among themselves. Besides, he doesn't think he should talk about South Vietnamese torture without talking about North Vietnamese torture too."

[From the Washington Post, Mar. 21, 1973]

BETWEEN THE HALVES AND THE HAVE-NOTS

(By Nicholas von Hoffman)

When one of the POWs walked onto the red carpet the other day and did the patriotic obeisances that have been repeated until they have become near litany, he did say one thing we hadn't heard before. He thanked the pro-war portion of the American populace for their support, citing in particular the minutes of silence at the football games and the bumper stickers.

Maybe those moments of civic religion between halves did help. For all outward appearances, the POWs held in North Vietnam were treated about as well as felons in our penitentiaries back home. (The treatment accorded their captives by the Viet Cong in the South needs more learning about.) But confirmation that public opinion—if it's the right public in the right nation—may help comes from two young Frenchmen.

In the summer of 1970, Jean-Pierre Debris and Andre Menras committed an act of imbecilic courage by unfurling a Viet Cong flag in front of General Thieu's National Assembly building in Saigon. They were slammed into the Chi Hoa prison/concentration camp where they languished until three months ago.

Menras says, "If we are still alive, it is thanks to thousands of people who sent us letters, who were concerned about us. From the moment thousands of French people decided to pressure the Saigon fascists, from that moment on, we saw a difference in the attitude of our jailers. They stopped beating us," and ultimately freed the two young men who'd come to Vietnam in the French equivalent of one of our Peace Corps operations.

That takes care of the occidentals. They go first class. In captivity or out, Americans and Frenchmen get treated better than the natives even when their jailers are natives. Most reports indicate both the North and the South Vietnamese treated each other's prisoners with a harshness which bordered on and sometimes reached barbarism.

Maybe we can dismiss it by saying that's what happens in a civil war, but there is still another class of prisoners in South Vietnam, the thousands and thousands who are referred to as "politicals." They're a mixture of Communists, Catholics, Buddhists and war-hating, home-loving neutralists, not to mention a miscellany of miseries such as old, anti-French colonial patriots, students and shoe shine boys who didn't have the requisite 50-cents to bribe the cops.

As it became clear that the combatants were moving toward some sort of cease-fire agreement, Menras reports, the Saigon authorities took steps to hide the political prisoners: "They divided each cell into tiny groups, separating people who had known each other for years. During this separation and change of cells a lot of prisoners disappeared completely. They even mixed Catholic students with members of the NLF so they could be classified as Communists; and all the political prisoners were mixed with the ordinary ones. They took away the files of these prisoners so that no one will be able to prove that there were political prisoners, and not ordinary criminals."

According to both Frenchmen, the treatment dished out to these politicals meets the highest standards set by the Gestapo. While they themselves suffered beatings and

semi-starvation, they spoke to prisoners who saw and endured all manner of torture, some straightforwardly brutal and some done with calculated preparation as when "needles were inserted under the fingernails (and) a sheet of tissue paper was attached to each needle after which the ventilator just opposite was turned on. The breeze from the ventilator set the tissue paper in motion and this, in turn, made the needles move under the nails." Women captives were routinely raped and otherwise sexually abused.

At the same time that we're learning about these horrors, Michael D. Bengt, an American civilian official captured in 1968, has been released from prison with stories about North Vietnamese cruelty toward himself and other captives. This will allow people to say if they do it, why shouldn't we? But that's the kind of question that answers itself merely by being asked.

Beyond that, our people, no matter how badly treated and tortured, are getting out. The people whom Debris and Menras met in prison aren't. They have no one to bargain for them unless it is the NLF who presumably will concentrate on getting their own people freed, and not the other thousands who're imprisoned although they were never members of the Viet Cong. Furthermore, of all the warring parties in this mess, the NLF have the weakest power position and the least leverage on the Thieu government.

So these wretches will have to cling to life as best they can. Lost in the concentration camps and tiger cages, their names are on no lists of repatriation, nor will they be memorialized on any bumper stickers. For them there will be no moments of half time silence, no candles lit, no prayer.

GEORGIA SENATE HONORS PILOTS FOR THEIR SKILL AND BRAVERY

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1973

Mr. TALMADGE. Mr. President, on February 26, 1973, an aircraft flying over a heavily populated section of the Atlanta area collided with a flock of birds which caused both engines to fail.

Pilots Ernest Selfors and David Phillips struggled with the aircraft and successfully avoided crashing into apartment complexes below. Both pilots and their five passengers died, but no one on the ground was killed. The Georgia Senate adopted a resolution honoring them for their skill and bravery, and I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION

Whereas Mr. Ernest Selfors and David Phillips were distinguished pilots and a credit to their profession.

Whereas on the morning of February 26, 1973, on a routine flight over a heavily populated area of Metro Atlanta their aircraft encountered a total malfunction in both engines due to a freakish encounter with a flock of birds.

Whereas Mr. Selfors and Mr. Phillips spent the last seventy (70) seconds of their life wrestling their aircraft in a successful attempt to avoid crashing into any of a number of apartment complexes below them.

Whereas they gave their life for their fellowman and crashed their aircraft in a

pit thus avoiding any injury to others due to their tragic misfortune.

Therefore be it resolved that the Georgia Senate expresses its sincere regrets at their passing and expresses its most sincere admiration and affection for their heroism and service to mankind above and beyond the call of duty.

WELFARE SCANDAL III

HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. THOMSON of Wisconsin. Mr. Speaker, the evidence of failure in our Nation's welfare system continues to mount.

Yesterday our distinguished colleague from Michigan, Mrs. GRIFFITHS, released a study from the General Accounting Office showing the vast duplication and inequity in application of our present welfare system.

Today I am submitting the third installment of a series of articles in the Milwaukee Sentinel resulting from a 3-month investigation of the Milwaukee County welfare department. The authors allege that \$28 million was wasted last year alone through fraud and mismanagement.

This installment deals with the lax supervision and maladministration which runs up the cost of distributing welfare benefits. There are, no doubt, many dedicated caseworkers in Milwaukee and other cities across the country. But the abuses chronicled in the Milwaukee Sentinel series raise serious questions about the "nonsystem" of caseworker supervision of welfare clients.

The welfare scandal cannot be eliminated by ignoring it. The Congress must act soon to reform its welfare assistance program, eliminate duplications which allow some families to receive more than they could earn in the job market and more than other wage-earning and tax-paying people.

The articles follow:

How CASEWORKERS CHEAT

(By Gene Cunningham and Stuart Wilk)

Some workers for the Milwaukee County Welfare Department pick up extra money by cheating on mileage and overtime, and extra time off by cutting short their workdays.

A department administrator who was concerned about the situation was told not to do anything about it because he would be "opening Pandora's box."

Supervisors supposedly watchdog mileage claims and overtime and know whether their workers are on the job or on the town.

The administrator said that he had complained about the mileage claims that were being submitted in one division. He said he told a supervisor that he intended to investigate.

"I was told not to—that I'd be opening Pandora's box," the administrator said.

Incidents of employees taking off for work-outs at the North Central branch of the YMCA, afternoons at the movies and loafing at home are slipping through the system that discourages "opening Pandora's box."

"Everything you have heard about the department is true regarding inefficiency, loaf-

ing and cheating," another administrator said.

Some of the supervisors and administrative staff, as well as workers, take two and three hour lunch periods, he said. Arriving late and leaving early are commonplace, he added.

Once, he said, he complained to a superior about one person who was habitually arriving late for work, leaving early and doing little work while he was there. Nothing was done about it, he said.

Loafing on the job is apparently as big a problem as disappearing from the job.

One worker told a reporter that a friend of his in the department had boasted that from the end of May until early October she had read 10 novels during working hours.

Some workers in his section, he said, have as few as 6 cases and others have as many as 25.

The person with only six cases doesn't have enough to do, so he may read a novel rather than just sit at his desk idle, the caseworker said.

Others, he said, loaf even if they do have work to do.

Meanwhile, the department is doling out untold thousands of dollars for time that isn't being worked and mileage that isn't being driven.

Employees in one division who make home calls "commonly file 38 or 39 miles a day because you can file up to 40 miles without explaining where you drove to," a former division worker said.

"If you file 40 miles or more, you have to detail where you went that day," she said.

A check of monthly mileage claims filed by employees in the division turned up quantities of 39 mile days.

A number of employees consistently listed 39 miles as the distance they drove each day, occasionally mixing in a few days of 38 or a few less miles.

But the requirement of an explanation for 40 miles or more a day failed to discourage some workers. They reported trips of 90 to 100 miles on which they did not leave the city.

One reported driving 94 miles one day and carefully listed by address exactly where she had gone. The 94 miles added up to \$11.28 for mileage.

A Milwaukee Sentinel reporter clocked the trip exactly as the worker had listed it.

The distance—including extra blocks caused by some wrong turns—was 50.2 miles, which would have cost the department only \$6 in mileage.

Another trip listed by the worker as 47 miles was also checked by a reporter. It was 20.5 miles—less than half the distance the worker had claimed, which means she collected more than twice the mileage she should have from the county.

Although caseworkers and case aides said mileage in excess of 40 miles or more a day must be explained on monthly mileage claims, Arthur Silverman, director of the department, said the requirement varies depending on the work the person does and the driving involved.

He made the statement after quoting from a mileage claim form that "any mileage in excess of the usual average should be explained below."

Of the hundreds of mileage claim forms checked by Sentinel reporters, each had used the 40 miles a day figure as the point at which an explanation had to be given.

If the mileage is over the usual average, employees "must specify their destination" on their mileage claim form, Silverman said.

While some employees pinpointed their destinations, other gave such explanations as "househunting" for a recipient and "stamps, shopping for all my people."

The responsibility for mileage claims rests with the workers' supervisors, Silverman said.

"If on observation there appears to be something wrong, they (the supervisors) can call in the person and ask that he explain," he said.

The department work day is eight hours long—from 8 a.m. to 4:30 p.m.—with half an hour for lunch, Silverman said. It adds up to a 40 hour workweek.

Some employees, however, seem to be either scheduled for overtime or are free to work specified overtime on a regular basis.

Many of them actually do work, but others simply file overtime for loafing and visiting in the department on Saturdays or they claim that they were "visiting clients" on weekends, caseworkers said.

One caseworker told Sentinel reporters that when he was in a unit that made emergency calls, workers there padded their overtime.

Workers in the unit get an automatic four hours of overtime for night calls regardless of how long the calls take, he said.

"Some of the visits take no more than an hour," but they would pad the four hours to five or six anyway, he said.

On an individual basis, the overtime situation in the department is probably better than it was in 1971 when a halt in overtime was ordered by County Executive Doyle.

Then, "one caseworker was going around bragging that he was earning as much money as the director of the department," several employees said.

A check of the overtime claimed that year by the caseworker revealed that he had filed 56 hours of overtime most pay periods.

"We had to crack down on overtime. The control should have been in the department, but it wasn't," said Anthony P. Romano, Civil Service chief examiner.

A number of department reports over the last few months indicated that overtime had been totaling more than 2,000 hours each two week pay period, with the majority of it filed by workers in financial assistance and by those doing case reviews.

Worker accountability and supervisor responsibility—or the lack of it—apparently allow caseworkers and aides to loaf or take off during working hours.

A number of workers and others in the department complained of the lack of accountability in the homemaking section by aides assigned to go into the homes of the disabled, assist them and do cleaning and housework.

"Sometimes the aides show up and sometimes they don't," a former employee in homemaking said.

One aide told a client, "If I like you, I'll clean your house. If I don't, I'll sit and watch TV," another department employee said.

A Sentinel reporter arrived one morning at the home of one welfare recipient while the assigned aide was there. The aide was sitting at the kitchen table drinking coffee.

"If you don't need anything, I'll leave," the aide said, and she left. The apartment was littered and needed cleaning.

Another welfare recipient said that for two years the department had furnished her a homemaking aide to come in one day a week and do her housecleaning, laundry and grocery shopping.

In the two years the aide came to her home she never put in much more than three hours of work a day, the recipient said.

The aide always "rushed through, hit the high spots and then said she was going home and go back to bed because she had a night job she had to get to," the woman said.

Some of the homemaking aides are good, some are bad and some of them just don't show up if they don't want to, a worker said.

Asked who knows where caseworkers and aides are when they are not at the department, Silverman said, "At a given time of the day it is usually not known where they are." But they can tell their supervisor, write their destination on their time card or tell the

person who takes their telephone calls, he said.

Later, they write a report that shows who they called on, he said.

At least that's the way the system is supposed to work.

AIDE'S DAY OFTEN MEANS LEISURE

One caseworker goes to Chicago for baseball games while he is supposed to be visiting his clients.

Another goes to the beach during the summer and to a health club during the winter while the Milwaukee County Welfare Department pays him to make home visits.

Groups of caseworkers have card games—some lasting 90 minutes—during their "30 minute" lunch breaks.

To many caseworkers, the Welfare Center at 1220 W. Vliet St. is a place to read the paper, socialize, cheat on mileage and overtime and do as little work as possible.

One caseworker charged that "there is more fraud by the workers than there is by the clients."

Interviews with caseworkers and observation by Sentinel reporters revealed that:

The half hour lunch period is regularly abused by workers, some of whom stretch it into two or three hours.

Many employees leave the department several hours before quitting time for recreation and personal business.

Employees commonly put in for more mileage than they actually drive on departmental business. The department pays them 12 cents a mile.

Some workers get by doing one or two hours of work in an eight hour day.

One caseworker told The Sentinel that he does "less than an hour of work a day."

"I try to read a lot," he said. "I've tried to read books but it's hard to concentrate. Usually I read magazines."

He is supposed to make home visits to 50 of his clients each month.

"The last time I made a home visit was two months ago," the worker said. "I just put down names on the reports. I have 180 cases to pick names from. I talk to some of them on the phone."

The same caseworker files mileage claims of about \$30 a month.

"I don't drive on business," he admitted. "I just go to work and back home."

When he arrives at 8 a.m., he reads a newspaper for about an hour and then spends most of the day reading magazines and socializing.

LUNCH BREAKS

He generally takes about 90 minutes for lunch, but said he would take longer lunch periods if he didn't have "a strict supervisor."

"Most could leave at 10 a.m. and come back at 2 p.m. and the supervisors wouldn't notice," he said.

He regularly leaves work about two hours early, but he said, "I know people who leave at noon and don't come back at all."

When he leaves, he goes to health club, plays tennis, goes to the beach, runs errands or goes home.

"The golden rule is not to answer your phone (at home) until just after 4:30 or 5," he said.

MEMBERS OF "Y"

Some of his fellow workers have taken out memberships at the North Central branch of the YMCA at 2200 N. 12th St., a few blocks from the Welfare Center, he said.

They commonly go there to work out during the afternoon, according to the caseworker.

Another caseworker told a reporter that caseworkers in the department's medical division once held "contests" to see who could put in for the most mileage each month.

CXIX—624—Part 8

There are other "contests" at the department, he said.

"Every morning about a half dozen guys read the paper in the men's room. I had the record of one hour and five minutes to read the paper," he said.

"But another guy broke it with one hour and 11 minutes."

DEPARTURE TIME

This caseworker also commonly cheats on mileage and overtime and leaves work two hours early each day.

"I get more than I should be getting," he said of his mileage. "There's a significant majority of people who are doing it. It's easy money."

The caseworker said that, if he gets an emergency call at night, he will sometimes pad his overtime.

"When called at an ungodly hour, they (caseworkers) add an hour or two," he said.

Describing himself as an "average" caseworker, he noted that he did about three hours work a day.

During his lunch period, he plays cards, generally starting at 11:45 a.m. and quitting about 1 p.m.

GAMES WATCHED

Sentinel reporters watched workers playing cards in conference rooms during the noon hour on several occasions. One game lasted 45 minutes, another 50 minutes and another game lasted more than an hour.

Some caseworkers play cards in full view of their supervisors—and their clients—while others play in conference rooms with frosted glass, to keep from being discovered.

"My friends all cheat on mileage," said another caseworker. "Once I put down mileage for a day I didn't even work. They sent it back with a card that said 'correct and return.'"

There were no other repercussions from the department, she said.

When she was transferred to a different division in the department several months ago, she said she "spent a week without doing anything."

READ MANUAL

She said for five days she did nothing except read a manual.

"Now I just fill out forms," the caseworker said.

"I usually don't take more than an hour for lunch," she said. "I've left at noon a couple of times and just left for the day."

On several occasions she and other workers have gone to movies during the afternoon, she said.

"I would do work if there was work to do," she said. "I'd like to be busy, but the way department is set up I just can't."

The caseworker said she leaves an hour early each day, adding that "everyone else does the same thing."

She described the department as "one continuous social hour."

THE REASONS

Why do the caseworkers cheat the department?

"It's kind of a crummy job," said one caseworker. "And this is one way to get even."

He said that most caseworkers are willing to work and are enthusiastic during their first weeks, but that the enthusiasm gets knocked out of them. They get bogged down in paperwork, several caseworkers said.

Diligent caseworkers "are more likely to step on toes and get into trouble," said one of the caseworkers.

Or, as another caseworker put it, "I'm going to get my \$200 a week either way. So why should I work? I'd rather read a magazine."

"THE IRISH FORTNIGHT" OF THE IRISH AMERICAN CULTURAL INSTITUTE

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1973

Mr. HUMPHREY. Mr. President, the Irish American Cultural Institute, whose international headquarters are located in St. Paul, Minn., is again bringing to American audiences its unique concentration on Irish culture and civilization termed, "The Irish Fortnight." This 2-week program, which brings scholars, writers, musicians, and performers directly from Ireland to the United States, started 2 years ago in St. Paul. In 1973, the program will be held in five U.S. cities: St. Paul, Cleveland, Washington, New York, and Newark. Recently, Dublin's Irish Independent newspaper stated that the Fortnight is by far the "most important" cultural link between Ireland and America.

As a Senator from Minnesota and a long-time friend of the institute's honorary chairman, Mr. I. A. O'Shaughnessy, I am genuinely proud of the invaluable contribution to international cultural understanding made by the IACI. Not only those of Irish descent but all citizens of Minnesota are benefited by the initiative and vision of the institute, its international chairman, HSH Princess Grace of Monaco and its president, Dr. Eoin McKiernan, the IACI's distinguished leader from our State.

This year, in a program which concludes this weekend, the Washington division of the IACI was able to add several new elements to the Fortnight, notably the first U.S. performance of Sean O'Riada's Irish People's Mass as sung by the Congregational Church choir of Fairfax, Va., and a special program at Constitution Hall by the Air Force Band, Sesame Street's Bob McGrath, and Academy Award winner, Mercedes McCambridge.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial on the Washington Irish Fortnight from the Irish Echo and several biographies of Fortnight participants.

There being no objection, the editorial and biographies were ordered to be printed in the RECORD, as follows:

[From the New York Irish Echo, Mar. 17, 1973]

IRISH FORTNIGHT

The Irish American Cultural Institute has done it again. As a matter of fact, the St. Paul-based Institute may have surpassed its most admirable ventures with its spectacular Irish Fortnight which will be featured at five locations beginning on March 18.

The Fortnight, a two-week schedule of programs devoted to aspects of Irish culture and heritage, will be presented at five sites in the United States. Outstanding lecturers and performers from Ireland will be featured in the programs. Programs will be given on college campuses in St. Paul, Cleveland, Washington, South Orange, N.J., and New York.

Here in the east if you are in the vicinity

of Manhattan College in the Bronx, Seton Hall University in South Orange, N.J., or Georgetown University in Washington you have an opportunity to attend one or all of these programs which will discuss the art, literature, music, history, politics and architecture of Ireland.

We strongly recommend these programs to anyone who seeks the real Ireland and its culture. Once again Dr. Eoin McKiernan and his colleagues have put Ireland's best foot forward. They, Manhattan, Seton Hall, Georgetown and all involved are to be congratulated.

[Irish Fortnight, March 18 to 31, 1973]

BIOGRAPHIES OF MAIN PARTICIPANTS DESMOND RUSHEE

Since 1960 has been theatre critic for Irish Independent newspaper. As columnist he has reviewed Broadway plays of Irish interest, was the Irish reporter for Sen. Robert Kennedy's funeral and the Apollo 12 moon flight. In Dublin, he has been a regular lecturer at the Communications Centre on aspects of journalism, and at summer schools for foreign students on aspects of theatre. Has been Irish correspondent for the New York Times in its Arts Abroad series and has written a number of special articles for the Times including a lengthy article on writer Christy Brown.

MICHAEL HARTNETT

Major Irish poet. First collection, "Anatomy of a Cliche," published by Dolmen Press in 1968, although he had contributed poetry since 1962 to Poetry Ireland and in 1963 was editor of the now extinct but then thriving Arena. In 1969 published "The Hag of Beare," a translation of the old Irish poem and in 1970 his Selected Poems were acclaimed. In 1971, his poem "Tao," a long religious poem based on 5th century B.C. Chinese classic of same name, was published. He has translated extensively from Irish and has read in centres in Ireland and England. At present is working on a very long poem which he calls "a psychological history of Ireland."

CHRISTOPHER WARREN

A harpist in the ancient tradition. Has built a replica of the ancient Irish harp. Has created tremendous interest in the rediscovery of this ancient tradition of playing the harp as the old harpers did play it. He is Church of Ireland rector at Miltown, Co. Kerry, rector of Kilmacanogue. Has lectured on ancient harp tradition in Irish universities and is the one man responsible for interest in this revived art.

EAMON DE HOIR

Chief Placenames Office, Ordnance Survey, Dublin. Secretary of the Placenames Society and editor of its journal Dinneschas since its inception in 1964. Member of International Committee of Onomastic Sciences and Council for Name Studies in Ireland and Great Britain. Author of "Seán o Donnabháin agus Eoghan o Comhraí" (1962) and numerous articles on placename research. Wrote the placenames section of "Encyclopaedia of Ireland," 1968.

RUADHRÍ DE VALERA

Distinguished Irish archaeologist, Chairman, National Monuments Advisory Council and corresponding member of the German Archaeological Institute. Principal research and publication work deals with Ireland in Neolithic times and especially with megalithic tombs. Responsible for the establishment of the Megalithic Survey of Ireland at the Ordnance Survey in 1949. Three volumes, covering about one-third of the whole of Ireland are in print under the joint authorship of Ruadhri de Valera and Sean O'Neill. Son of the president of Ireland, Eamon de Valera.

JAMES WHITE

Director, National Gallery of Ireland; council members of Irish Arts Council, Dublin Regional Tourism, Foras Forbartha, Friends of National Collections of Ireland, many others. Formerly was art critic, Standard (1940-50); Irish Press (1950-59); Irish Times (1959-62). External lecturer University College, Dublin and Trinity College Dublin since 1955. Curator, Municipal Gallery of Modern Art, (1961-65). Has published books on Irish Stained Glass (with M. Wynne) and The National Gallery of Ireland. Has lectured and made television appearances in Ireland, England, the Continent and the United States.

SÉAMUS Ó'NEILL

Irish historian, dramatist, and novelist (in both Irish and English). Professor of History, member of Consultative Committee of Irish Historical Society. Summer school faculty at Harvard University. His novel "Tonn Tuile" was highly praised by Seán O'Casey. An Ullath proclaimed his "Maire Nic Artain" the "best novel in Ulster Irish." His Oireachtas prize-winning play, "Inion Ri Dhun Sobhairce" was performed in Maynooth, Galway, Dublin and on Radio Eireann. He has had two short story anthologies published. Has contributed to many English and U.S. publications. Much of his fiction is on the syllabi of Irish universities.

RICHARD KAIN

Interest in Irish literature and culture is of long standing. In 1944 he gave one of the first university courses on the work of James Joyce. He has written numerous books and articles in the Irish area, the best known being "Fabulous Voyager: James Joyce's 'Ulysses'" (1947), now in paperback, and "Dublin in the Age of W. B. Yeats and James Joyce" (1962). He has lectured at many American universities and at the Yeats Summer School in Ireland. In 1972 he was a visiting lecturer at University College, Dublin.

His most recent books are contributions to the Bucknell University Irish Writers Series. "Susan L. Mitchell" was published in 1972, and A.E.: "George William Russell" (with James O'Brien) is now in press.

BASIL PAYNE

Poet, playwright, radio-TV personality. For 10 years has done extensive radio-TV work on Radio-Telefís Eireann as guest editor, presenter, scriptwriter. Has scripted and presented critical studies of American and Irish writers; is editor and presenter of series of 10 talks by professors of English literature, poets and writers; has 60-minute one-man TV-radio production, "In Dublin's Quare City," featuring his own Dublin impressions, poetry and fiction. Original dramas and films include, "Don't Call me Honey," "The Onlooker," a dramatic poem for 4 voices; "A Trip Down the River," a new television play; and "Missing, Believed Dead," 30-minute film featured twice on RTE with enthusiastic response. Has lectured in USA, Canada, throughout the Continent, and Ireland. His poetry has been featured on RTE, B.B.C. 4, Radio Holland and Radio Helsinki. Poetry publications include two collections of poems, "Love in the Afternoon" and "Sunlight on a Square." Literary awards include Guinness Poetry Prize Cheltenham Festival, 1964 and 1966.

STEPHEN M'GONAGLE

President, All-Ireland Congress of Trade Unions. During 30 years as a trade union and labor activist was engaged as Northwest District Secretary of the Irish Transport and General Workers' Union. Member of the Northern Ireland Economic Council and Northern Ireland Training Council and was Vice Chairman, Derry Development Commission until August, 1971, when he withdrew due to internment policy. Formerly Director

of Irish (Republic) Sugar Company. Was Chairman of Peace Conference, Northern Ireland in August, 1969. Last visit to USA in 1962 as guest of U.S. State Department.

SEOSAMH Ó HÉANAI

One of the best known singers in the authentic traditional manner, Seosamh Ó hÉanai was born fifty-two years ago in the Irish-speaking Parish of Carna County, Galway. Bert Lloyd once described the area as "An isolated district of bog and stones that at first sight evokes a landscape of the moon." Since his first entrance in open competition in singing, in 1939, he has placed first or second in the major competitions while in Ireland.

His songs span the centuries from the classic "Rocks of Bawn," which can be dated back to the Cromwellian terror of 1652, through one of the most moving versions of the "Patriot Game," or the more modern songs from the Catholic communities of Northern Ireland. Interspersed are love songs in the moving and compelling native tongue of Ireland, as well as stories and music hall songs. Ó hÉanai's recordings are popular with folk music collectors on both sides of the Atlantic.

RISTEÁRD Ó GLAISNE

Writer, radio and TV personality, teacher, spokesman for contemporary Protestant thought in Ireland, Risteárd Ó Glaisne is one of the better-known figures on the Irish scene. Graduate of Trinity College, Dublin, Ó Glaisne edited Focus, a monthly review of current affairs, until its demise in 1966. A frequent traveler to the Continent, he has first-hand experience with virtually every European country.

Two of his recent books are "Ian Paisley agus Tuaisceart Éireann" (an examination of the socio-political situation in Northern Ireland) and "Raon Mo Shíuil" (a study of issues in contemporary Europe). Work in progress includes a critique of Irish language literature from the earliest times. Mr. Ó Glaisne also edited a do-it-yourself text for modern Irish, "Bun-Ghaeilge."

BENENICE REED

Born in Memphis, Tennessee, of Irish descent, Miss Reed coordinates art programs for the National Park Service, and serves as project liaison officer between the National Park Service and the National Endowment for the Arts. She represents the National Park Service on the executive committee of the "Parks, Arts and Leisure" project, which is co-sponsored by the National Park Service, the National Endowment for the Arts and the National Recreation and Parks Association.

After receiving her Baccalaureate in Fine Arts from St. Mary-of-the-Woods College, Indiana, she pursued her art studies in Florence, Italy for two years at the Instituto Plo XII, Villa Schifanoia, where she was awarded a Master of Fine Arts degree. The thesis for this degree was concerned with Italian synopie and frescoes and was directed by Renzo Chailrelli, librarian of the Uffizi Gallery. She is a member of the Washington D.C. chapter of the Artists Equity Association, a member of the Arts Advisory Board of the National Recreation and Parks Association, and the Museum Educators Roundtable. In 1971, she was a delegate to the Associated Councils of the Arts conference "Washington and the Arts", and was listed in "Outstanding Young Women of America" 1966.

Before joining the National Park Service, Miss Reed directed art festivals and taught art privately and in high schools, college and art institutes. She has held eighteen one-man shows of her paintings in the United States and Europe, has juried and

judged art exhibitions and competitions, lectured before educational and professional, community, and social groups, and presented television programs besides participating in discussions and interviews on art and art programs. She appeared on the NBC-TV program "The Irish Imagination" presented this January. Her figurative expressionist drawings and paintings have been shown in over twenty five juried competitions, receiving awards that include the "Medal of the Mayor of Rome" (Viareggio, 1964) and the "Bronze Medal for Drawing" (Florence, 1964). Her works have been exhibited in over fifty group shows including "Nine Women Artists" at the Brooks Memorial Art Gallery, Memphis, Tennessee, and may be found in public and private collections in eleven foreign countries and twenty-seven states of the United States. In private life she is married to the architect Ronald Dickson.

SALUTE TO BOB WILSON

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. MICHEL. Mr. Speaker, as you know, our good friend and colleague, Congressman Bob Wilson, will be stepping down as chairman of our Republican Congressional Campaign Committee within a few days, after serving nearly a dozen years in that grueling job.

Although Bob has received—and will continue to receive—the warm tributes and praise of his colleagues for a job well done, I think the Congressional Committee's newsletter sums up as well as anything I have read the high regard in which we all hold Bob Wilson.

Mr. Speaker, I insert in the Appendix of the RECORD the newsletter's "Salute to Bob Wilson," published in its March 26 edition:

SALUTE TO BOB WILSON

Kahlil Gibran: "You give but little when you give of your possessions. It is when you give of yourself that you truly give."

Since he became Chairman of the Republican Congressional Committee in 1961, California's Bob Wilson has given much of himself to the job. And the committee and the Republican Party are the better for it.

Under Wilson's chairmanship, which spanned nearly a dozen years for the longest such tenure in the committee's 107-year-history, fresh programs and projects were undertaken and far-reaching advances made. He was the first to change the old order if the new was better.

In professionalizing the committee, Wilson also firmed up its financial footings. He stabilized staffing to a year-round basis. He set up fund-raising programs which were pace-setters for the party and which erased the committee's "feast-or-famine" status. He established the GOP Congressional Boosters Club which provided the financial underpinnings for hundreds of challengers' campaigns.

Under Wilson's direction, the committee beefed up its communications to help get its message to the public and its Congressmen's words to the voters. Its biennial candidates' conferences, also a Wilson innovation, were expanded into broad and effective training programs for fledgling challengers. Campaigning candidates were linked by teletype to committee headquarters in Washington to keep them abreast of daily developments and provide them with ammunition.

In giving of himself, Bob Wilson traveled hundreds of thousands of miles to appear at party gatherings and to help Congressional candidates raise funds and conduct their campaigns. He spent hundreds of hours on "red-eye specials," the late night airplane flights, to enable him to get back to the capital from these rallies and from his district a continent away to tend to his constituents' business. He kept an aggressive legislative schedule, serving as third-ranking member of the House Armed Services Committee and "fathering" such vital legislation as the Nation's oceanography program.

Altogether, 211 Republicans have been elected to the U.S. House since Bob Wilson became RCC Chairman. We think just about all would share in the application of Gibran's views quoted above to the indefatigable Californian who gave so much of himself. We think they would also join in President Nixon's salute. "As you lay down the heavy burden of leadership which you have borne so ably," Mr. Nixon wrote to Wilson, "you can be proud of the service which you have rendered to your party, to your State and to the Nation."

THE INTERNAL SECURITY CUTS THREATEN AMERICAN PEOPLE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RARICK. Mr. Speaker, the announcement that the Nixon administration has abolished the Internal Security Division of the Department of Justice should be greeted with great exultation by the enemies of our constitutional Republic here at home as well as in Moscow, Peking, and Hanoi.

Apparently, the President's advisers have either told him that there is no longer a subversive that to overthrow our Government, or that the Supreme Court will not allow society to stop subversion, or that our country has already been infiltrated to the point that internal security is ineffective, or that our country has already been taken over.

Had Kennedy or Johnson pulled such a coup, they would have been tarred and feathered and exited from the country as dangerous collaborators.

It is truly remarkable what an anti-Communist image can do in advancing the goals of international communism.

While the administration presently entrusted with the security of the American people acts to abandon confrontation with the enemies of free man, the Military Order of World Wars meeting in Washington on January 31, received a report from its Internal Security Committee outlining the serious threat from subversives in our country and adopted the following resolution:

RESOLUTION

Whereas, the internal security program of this nation has been found by the Congress to be inadequate and ineffective; and

Whereas, the first duty of any government is to protect itself and maintain itself as a secure and stable institution under its constitutional authority; and

Whereas, the people of this nation are constitutionally entitled to government which is dedicated in its entirety and without exception to the interests of this nation above all others;

Be it hereby resolved, by the General Staff of The Military Order of the World Wars, in midwinter conference assembled, that the United States of America is ill-served by government officials and government employees who fail in any degree to do their utmost to maintain a high degree of internal security in our government against all enemies, both foreign and domestic, as required by oath of office and lawful official responsibility.

Be it further resolved, that the President of the United States and all members of the Congress be hereby most strongly advised that a comprehensive new and thoroughly effective program of internal security, backed by federal statutes containing high standards and severe penalties, is essential to the national security and general welfare of our nation and should be put into effect at the earliest possible time.

I include a news clipping and report of the Internal Security Committee of the Military Order of World Wars in the RECORD:

[From the Washington Post, Mar. 27, 1973]

INTERNAL SECURITY DIES QUIETLY AT JUSTICE

(By Sanford J. Ungar)

The Kennedy administration tried it, the Johnson administration came close to doing it, but it finally took the Nixon Administration to abolish one of the most controversial divisions of the Justice Department.

A cause celebre at both ends of the political spectrum, the Internal Security Division went out of existence yesterday morning.

There was no partying, protesting or philosophizing to accompany the apparently momentous occasion, which would have sparked both angry opposition and delighted applause just a few years ago.

But then there hadn't been much time to plan as reaction—the event was only announced last Thursday.

Death came not because of any act of Congress, a cutoff of funds or a federal court decision, but rather by a stroke of Attorney General Richard G. Kleindienst's pen.

According to the official Justice Department press release on the matter, the abolition of Internal Security and the transfer of its duties to the department's Criminal Division—where they originally were until 1954—was merely "in keeping with the administration's program of streamlining the Executive Branch."

Justice Department sources said that is a euphemism for the fact that the administration needed to shake loose a sub-Cabinet slot to house its new overall narcotics-enforcement agency.

Formal establishment of that agency is expected to be announced within the next few weeks, and its director will hold the "assistant attorney general" title dropped yesterday morning by A. William Olson, the Southern California lawyer who had been head of Internal Security for the past year.

Administration strategists hope that internal security watchdogs on Capitol Hill won't notice, but there is also a substantive reason for doing away with the division: it was running out of business.

With American participation in the Vietnam war virtually over and with draft calls down to zero, there will be no need in the foreseeable future for vigorous enforcement of the Selective Service Act.

Speaking somewhat with the wistful tone of men who have outlined their usefulness, Internal Security veterans also note that domestic terrorism—considered a major problem in the heyday of the Weatherman militants—has greatly subsided.

Some suggest that the division is a casualty of the same winds of change which have reduced the Subversive Activities Control Board to a shadow of its former self and which make the House Internal Security

Committee (formerly the House Un-American Activities Committee, or HUAC) fight for its life and funds every two years.

It is perhaps a sign of the times that federal officials no longer seem vitally concerned about the threat of subversion and the need to fight it.

Even the Federal Bureau of Investigation and the Central Intelligence Agency are said to be making cutbacks in the area of domestic intelligence and counter-intelligence.

It was not always thus, especially in 1954 when President Eisenhower's Attorney General, Herbert Brownell, elevated the internal security section of the Justice Department's Criminal Division to the status of a separate division. By 1956, it had 94 of its own attorneys.

By the early days of the Kennedy Administration, the division was being called into question and its chief, J. Walter Yeagley, was forced by congressional committees to justify its appropriations.

The Washington Post reported on April 1, 1961:

"The internal security division of the Department of Justice . . . has almost come to the end of its line. For several years, its work load and its personnel have been decreasing. Now, Attorney General Robert F. Kennedy is farming out some of the remaining personnel to other divisions in the department because there is little for them to do."

But Kennedy and other Democrats who followed him as Attorney General, including Ramsey Clark, never managed to do away with the division.

In 1970, Yeagley, who had only 42 lawyers left under his command, was relieved of his vigil and appointed by President Nixon to be a judge of the newly strengthened District of Columbia Court of Appeals.

Then Attorney General John N. Mitchell used the occasion to beef up the Internal Security Division under a new leader, Robert C. Mardian, who had worked in Sen. Barry M. Goldwater's 1964 Republican campaign and Mr. Nixon's 1968 effort.

Mardian took his mandate seriously, building his staff (there were 65 attorneys and 75 other employees in the division yesterday) and launching grand jury investigations of radical activities across the country.

Under him, the Internal Security Division was assigned jurisdiction over a number of controversial cases that would ordinarily have gone elsewhere, including the Harrisburg, Pa., conspiracy trial of the Rev. Philip Berrigan and other Catholic militants and all litigation growing out of disclosure of the top-secret Pentagon papers.

Justice Department officials insist that the division's work "will not be downgraded" because of the transfer, but sources said that many of its personnel will be promptly shifted to other, non-security related tasks.

It was not immediately clear what would become of some of the division's most disputed responsibilities, including its secret "security index" of so-called potential subversives.

While those at Internal Security sought yesterday to minimize the importance of the change, one official of the Criminal Division summed up the inheritance there as "a big headache."

REPORT OF INTERNAL SECURITY COMMITTEE

Mr. Commander-in-Chief and companions of our Order, I submit to you this report on the present state of internal security in our nation.

Despite political propaganda to the contrary, the state of internal security in the United States continues to worsen rather than improve. The recent murders of police officers and innocent people in New Orleans by suicidal communist revolutionaries is a ready example of what we face today and will

face with even greater frequency in the future. After one of the New Orleans snipers was killed by gunfire from a helicopter, his companion is reported to have shouted repeatedly the Communist slogan "Power to the people." A black chambermaid in the New Orleans hotel was told by one of the gunmen that she was "safe," that they only intended to "kill white people." This pattern demonstrates a very successful Communist tactic of combining the communist goals with racial hatred and so-called "Black Nationalism." The organizations presently most representative of this pattern are "The Black Panther Party" and the "Nation of Islam" or Black Muslims.

There are other communist revolutionary groups offering violence and terrorism to our nation, including the "Weatherman," which uses explosives and narcotics as weapons and states that it will use "the classic guerrilla tactics of the Viet Cong." Weatherman members are equally fanatical and suicidal with the Black Panthers and certain elements of the Black Muslims. I recommend to all companions the special report in "U.S. News and World Report" for Nov. 13, 1972, entitled "Behind the Rise in Crime and Terror" for an excellent analysis of this subject matter.

It is an ominous fact that the Black Panthers are expanding their successes. They have now ready access to certain federal funds through the "Berkeley Community Development Council," the program which distributes the federal poverty funds in the Berkeley, California, area. In June, 1972, the Black Panthers gained effective control of the Board of Directors of the BCDC by electing four of their members to seats on the board. All BPP members are pledged to obey without question the instructions of the central party authorities.

The purpose of communist terrorism is, as always, the progressive demoralization of our society and the causing of a loss of faith by the public in our basic free institutions.

Unfortunately, there are other aspects of the internal security situation even more dangerous to our nation than communist terrorism. An increasing segment of our population is becoming alienated from the ideals of freedom upon which our nation was founded. In the recent election, the candidates of "The Socialist Workers Party," a Trotskyite-communist organization, received 65,290 votes for president of the United States. Gus Hall, of the CPUSA, received 25,222 and to these figures should be added the vote of 78,801 for the "Peoples Party" and 53,614 for the "Socialist Labor Party." All these votes must be considered votes of people desiring to change the basic form of government of the United States. Such alienation indicates a substantial failure of the political and educational leadership of our nation to "sell" the honest values of freedom under our present constitutional and economic system.

Another extremely critical problem of internal security is the almost total cessation of any effective loyalty program in the civil service of our government. A shocking expose of this incredible situation is contained in a very recent report of the "Committee on Internal Security" of the U.S. House of Representatives released this month and entitled "The Federal Civilian Employee Loyalty Program." The report is extremely well documented and researched and states in part as follows:

"In this historic period the principal threat to the security and free-functioning of our national institutions in general, and to the integrity of the Federal civil service in particular, stems from the Communist movement and its ramifications. This threat is both external and internal.

"Communist tacticians have long regarded the penetration of the civil service of non-Communist governments as a prime objec-

tive, for it is obvious that in the civil service itself they may most directly and effectively influence and effect the execution of policy on a national scale and hence generally accelerate the process leading to the undermining and ultimate destruction of the society whose institutions they seek to transform. Their opportunities for subversion are by this tactic incalculably multiplied."

"A loyal civil service is thus basic to the overall efficiency of the Government."

"The Subcommittee finds that the departments and agencies (of the U.S. Government) have virtually abandoned the practice of post-appointment dismissals on loyalty grounds."

"... It is apparent that whatever remains of the loyalty program is principally confined to preappointment exclusions, and hence to applicants for sensitive positions only..."

The report continues in its conclusions to recommend to Congress that the entire personnel security program presently in effect be completely scrapped and replaced with a new comprehensive and hopefully much more effective program.

It is almost inconceivable that the leadership of our nation, particularly the executive leadership, has allowed this state of affairs to exist. It is a fact, not a conjecture or a claim, but a fact, that there are a considerable number of high and middle level employees of our Department of State whose personal backgrounds are such as to raise very serious and reasonable doubts as to their personal fitness or their ultimate loyalty to the interests of the United States! This is despite an unequivocal campaign pledge four years ago to "clean out" this very situation. Our Order has already protested this matter by resolution of our national convention to no avail and to no satisfactory response from the government. No more serious problem of internal security exists in our nation at this time.

As a likely result of the above stated problem, the Senate Internal Security Subcommittee has recently shown by the testimony of the Director of the Passport Office of the Department of State that some 50,000 valid U.S. passports reported as lost or stolen have evidently found their way into illicit channels. The director, Miss Frances G. Knight, courageously continues to fight for more funds and personnel to substantially tighten the passport security of our nation, but she has been persistently thwarted in this goal by her superiors in the Department of State. Consider the potential danger to our internal security of the ready access into our country of 50,000 illegal foreign nationals.

A final serious problem of internal security is the terrible impact upon our society of the illegal drug traffic. A September, 1972, report of the Senate Internal Security Subcommittee entitled "World Drug Traffic and Its Impact on U.S. Security" analyzes this situation in depth. The report is in several parts and clearly demonstrates that Communists, primarily Chinese, are directly responsible for much of the drug traffic in the free world and in the United States. This is substantially denied by the executive branch of our government, but the evidence is convincing that it is a fact.

In only one area of internal security can I report favorable news. There have been certain minor successes in the fight against organized crime by the Department of Justice. However, the annual report of the FBI for the year 1972 does not report one single conviction for the crimes of "sedition" or "treason."

I suggest that our Order can and should demand by resolution that a full and complete disclosure of the actual state of internal security affairs in this nation be made by the executive branch of our government

to the people through the Congress so that the people might correctly assess the blame for the present sad situation and demand its improvement. The facts of the situation are well known but are utterly worthless in locked files. It is by no means impossible that full disclosure and adequate remedy could come too late and it is clear that the longer the day of reckoning is postponed the more traumatic will be the necessary remedies.

This committee has made certain recommendations to the Committee on Resolutions.

JACK N. ROGERS,
Chairman, Internal Security Committee.

LEGISLATION TO SUSPEND THE PRESENT DUTY ON ZINC

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. ULLMAN. Mr. Speaker, during the past several years seven out of 14 U.S. zinc smelters have shut down. Zinc smelting capacity has been reduced from about 1,300,000 tons in 1969 to about 700,000 tons by the beginning of 1974. As smelters have shut down, our imports of zinc ores and concentrates have decreased while our imports of higher priced zinc metal have increased, to the detriment of our balance of payments.

Today, joined by colleagues in the House, I am introducing a bill to suspend for a period of 2 years the present duty on zinc contained in ores and concentrates.

This duty is 0.67 of a cent per pound on contained zinc. The duty works a direct hardship on the zinc smelting industry and indirectly on our declining zinc mining industry, whose production is insufficient to meet the full requirements of the domestic smelting industry.

The zinc smelting industry must compete with smelters in Europe and Japan in purchasing ores and concentrates from Canada, Australia, and Latin America. Since Japan and European countries do not impose duties on imports of zinc ores and concentrates, their smelters have a competitive advantage over American smelters in purchasing ores and concentrates.

The American zinc mining industry depends overwhelmingly on domestic smelters as market outlets and as processors of the mines' ores and concentrates. The strength of the domestic zinc smelting industry is directly related to the strength of the domestic mining industry. If the domestic zinc smelting industry is regenerated, then the domestic zinc mining industry will be a partner in the smelting industry's growth.

The bill I am introducing today should encourage investment in American zinc production facilities. Zinc production in this country creates jobs and adds to our technological base. And, as we know, increased zinc production in the United States will help our balance of payments.

Mr. Speaker, I hope that many Mem-

bers of the House will support this measure.

SUPPORT FOR PUBLIC SCHOOLS

HON. CLAIR W. BURGNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. BURGNER. Mr. Speaker, many Members of this body represent districts which contain some or many school districts which derive a substantial portion of their operating budgets from Public Law 874 moneys—Federal impact aid. The rationale for this Federal support comes from a condition in which large numbers of military personnel or civilian personnel in direct support of the military, congregate in a given school district. As a result, either a large portion of the land is not on local tax rolls, or the concentration of military connected families place an unusual burden on the local school district, or both.

Now we come to the administration policy of eliminating category B under Public Law 874, that is school support for those military connected families whose breadwinners work on, but live off the military reservation.

I differ with the administration on the elimination of category B support, and even though I wholeheartedly support the President's budget control efforts, it is my opinion that category B support can be continued within the overall budget ceiling of \$269 billion for fiscal 1974.

If, however, the administration holds firm on the elimination of category B funds, as appears to be the case, I am strongly urging the administration to give careful consideration to:

First. Preparing and proposing a several year phaseout for category B funds. This would permit a local school district to adjust to the loss of funds over a gradual period of time. Reduction of program, change in priorities, or alternative sources of funding could be considered during this time period.

Second. Preparing and proposing an alternative method of permanent Federal impact support for those areas which leave an immense portion of their land under Federal ownership. One method of doing this would be in the form of an "in lieu" tax to the local school district, paid by the Federal Government. Other Members of Congress have examples of this kind of need in their district, but in the district I am privileged to represent, the Oceanside and Fallbrook areas in San Diego County are classic examples of such need.

Mr. Speaker, I have, over the years tried my best to be a strong supporter of the public schools. As a new Member of Congress I intend to do my utmost to continue that support. We all seek equity and fairness in support of our schools. I believe my Public Law 874 suggestions may contain some elements of such equity.

A RECOVERY IN KANSAS CITY

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. BOLLING. Mr. Speaker, Paul Hume has written a heartening story about the Kansas City Philharmonic, which appeared in the Washington Post of Sunday, March 25. The article follows:

A RECOVERY IN KANSAS CITY

(By Paul Hume)

Life has not been easy for the Kansas City Philharmonic lately, but the orchestra is staging a remarkable recovery from what many diagnosed as a fatal illness only two years ago.

The Kansas City orchestras got an asterisk and a gloomy footnote when the Ford Foundation recently announced the results of its historic grants to the nation's orchestras. In the entire United States it was the Kansas City Philharmonic alone (apart from a pair of New York City-based, non-community-supported orchestras) that was dropped from the Foundation's program for failure to raise the designated funds.

First of all, this sad situation was no fault of the players. It was rather the end result of one of those situations that have existed in too many cities in this country. A board of directors drawn from wealthy but not musically alert citizens rather enjoyed playing the role of benevolent patrons until the tab began to grow larger than they cared to keep on covering. When their musicians, like reasonable people anywhere else, decided that they needed year-round employment, things began to deteriorate.

This was coupled with a conductor who all but asked "Children's concerts! What for?" and who then suggested an entire season of all-Beethoven concerts, and nothing but Beethoven for the season. So it is not hard to see how, two years ago, the Kansas City Philharmonic, having also mismanaged what funds it had on hand, simply went out of business.

But few cities with the artistic intentions of a Kansas City are likely to go without an orchestra for very long. There is, after all, a notable museum of art in the city and several universities are there. One of them, the University of Missouri in Kansas City, is also the home of the Kansas City Conservatory, for many years one of the progressive music schools in the country.

Thus it was not surprising that last year, some determined supporters of the defunct Philharmonic gave practically all their time for a year to restoring both money and solid planning to a reborn orchestra. They made the right moves in several directions.

For artistic advisor and principal conductor they engaged Jorge Mester who is not only the conductor of the Louisville Orchestra, but also in charge of the music program at the Aspen (Colo.) Music Center in the summer. He is both a consummate conductor and a notable teacher of conducting.

Moreover, Mester has a feeling for repertoire that has led him to outstanding programming in both cities whose orchestras he now heads. In Kansas City this new season of the revived orchestra, for example, he has conducted Mozart's Symphony No. 26, a work rarely played anywhere; a Purcell Chaconne, the exquisite "Bourgeois Gentilhomme" music of Richard Strauss, which would be a distinct pleasure any time someone played it in Washington, and such large works as the Scriabin "Poem of Ecstasy" and Mahler's

Fifth Symphony. To these, he added, in the solo vocal area "Les nuits d'été," by Berlioz, which would be another welcome visitor on Kennedy Center programs.

That he can program these with an orchestra in which one of the Kansas City music critics often laments the lack of a larger body of strings, is due both to Mester's awareness that a huge orchestra is not always the necessity some people think it to be and that he has a string body that produces a fine, eloquent sound.

In recent hearings the Kansas City orchestra showed how much it has gained in being able to engage as its concertmaster Marc Gottlieb, for many years the leader and first violinist of the Claremont Quartet, a musician of the finest instincts and abilities. Its first stand of cellos are also excellent, while the violas are headed by a young man of special gifts.

Its winds are equally smooth and able, including a horn player who moved to Kansas City directly from the Cleveland Orchestra where he had played under George Szell. A family situation requiring his moving returned to Kansas City's benefit.

Already the budget which the orchestra's new manager, Howard Jarratt, has proposed to the new board, is close to the million-dollar mark. Jarrett was another fortunate move for the Missouri city, coming to them after years of experience and outstanding management of the Dallas Orchestra, which has, for the moment, landed in troubled waters (of the between-conductors kind).

In an interview some years ago, a former mayor of Kansas City gave me what may be the clue to that city's determination to revive and give renewed health to its orchestras. Then Mayor Davis noted that, as an industrial center of considerable variety and vitality, Kansas City was continually on the lookout for ways of attracting new businesses.

Nothing, he stressed, was more important to companies looking for a new location than the leisure-time, cultural activities offered by a prospective city. Transportation, open space, housing and other physical matters are often relatively equal in a number of possible sites, he said. But in his opinion, the conclusive factor was the presence of cultural opportunities in one community that were superior to those in another.

That is only one more reason, among several good ones, that the Kansas City Philharmonic, having survived a difficult illness, is now mended and back in business again, probably becoming stronger than ever.

PUBLIC INVOLVEMENT IN THE WAR AGAINST DRUGS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RANGEL. Mr. Speaker, we, in Congress, certainly know that the fight against drug addiction and trafficking will not be won here in Washington, D.C. More important than creating agencies, spending money for various programs, or making speeches is the hoped-for involvement of citizens in aiding law enforcers in the narcotics fight. Such involvement is taking place in my home city of New York. The Daily News, a major city newspaper, has instituted a "bust-a-pusher" program. The program encourages the public to report the existence of suspected drug-trafficking in their neighborhoods. In a recent 5-

day period, the New York police have apprehended 22 narcotics suspects "fingered" by concerned citizens contacting the News.

This is a promising and important step in the involvement of citizens helping to promote safety, and communities without fear. I sincerely hope that many other newspapers across the country will establish antinarcotics programs along the lines of New York's "bust-a-pusher" program.

U.S.S. "FALL RIVER" TO BE DISMANTLED

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mrs. HECKLER of Massachusetts. Mr. Speaker, 28 years ago this summer the U.S. Navy commissioned a heavy cruiser name the U.S.S. *Fall River*. That ship, having served with distinction, is now about to be dismantled.

It was a pleasure for me to intercede last year on behalf of the Fall River Maritime Museum, to obtain the ship's bell and other memorabilia from the Navy Department. I met with the museum's officials last week, in the city for which the ship was named, and I am delighted that this proud ship will not be forgotten—that its memory will be honored by the people of Massachusetts.

The city of Fall River has a distinguished maritime tradition; indeed, Fall River is the permanent home of the retired battleship *Massachusetts*, and next month we will officially dedicate the retired submarine *Lionfish* as a memorial to the men of the 52 U.S. submarines that were lost in World War II. In addition, the city's history as a port, and its potential for future maritime activity are well known.

I submit for the RECORD, and for the further edification of my colleagues, the lead editorial in the Fall River Herald News of Wednesday, March 21, 1973—a tribute to the U.S.S. *Fall River*.

[From the Fall River (Mass.) Herald News, March 21, 1973]

U.S.S. "FALL RIVER" SERVED NATION WELL

The USS *Fall River*, a heavy cruiser named for this city, is about to be dismantled. The 675-foot cruiser is waiting demolition in Portland, Oregon, and with it will go many memories for Fall Riverites who followed its career from the time it was commissioned in the summer of 1945, just before the close of World War II.

A year later it served as the flagship for Rear Admiral F. G. Fabron during nuclear weapons tests in the Pacific. In 1947 it was the flagship of Cruiser Division I in Pacific maneuvers. During the crucial years just after World War II the *Fall River* served as an effective symbol of the U.S. presence in the Pacific area at a time when this country symbolized the only remaining strength in the entire Free World.

News of its dismantling recalls to thousands of persons in Greater Fall River the pride this community felt at learning the heavy cruiser bearing its name was about to be commissioned. At the time it seemed probable that the *Fall River* would see action in the projected invasion of Japan. Certainly at

the time of its commissioning it bore many gifts from the city and civic groups here. There was attached to it the natural sense of identification any locality or person feels for a namesake.

As the *Fall River* passes into the history books, it will take with it the affectionate recollections of this city, together with the knowledge that it served its country well in all the commissions it received.

TRANSFER SUBMERGED LANDS TO TERRITORIES

HON. RON DE LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. DE LUGO. Mr. Speaker, I have today introduced legislation to transfer from Federal to local jurisdiction certain submerged lands in the Virgin Islands, Guam, and American Samoa.

My bill would grant these islands the same privilege of ownership of offshore land areas now possessed by all coastal States and the Commonwealth of Puerto Rico. This includes "all lands permanently or periodically covered by tidal waters up to, but not above the line of mean high tide and seaward to a line 3 geographical miles distant from the coastlines." The legislation would enable the residents free use of submerged lands adjacent to their coastlines inhibited only by applicable Federal and local environmental restrictions.

At present this is not the case. In order for residents to make any use of these lands, such as the construction of a small dock, a time-consuming maze of redtape must be waded through. Local governments must give building permits and sanction use, after environmental considerations are weighed. Additionally, the resident must petition the Department of the Interior for approval. Interior cannot act, however, until it has the approval of the Environmental Protection Agency.

I can conceive of no reason why this unwieldy process cannot be simplified to a procedure that would less impede orderly use of the submerged land. It can take the better part of a year for a simple request to be acted upon.

In essence, my bill would eliminate the unnecessary steps in the process. Use of land would still be subject to environmental scrutiny and building permits, of course, would have to be secured. However, the nonproductive function of Interior's middleman paper shuffling would not have to occur.

The legislation I have introduced has provisions that exempt from the transfer those submerged lands that are important for the United States to retain. Among these exceptions are:

First, all deposits of oil, gas, and other minerals—this does not refer to coral, sand, or gravel;

Second, submerged land adjacent to property owned by the United States;

Third, all lands acquired by persons other than United States;

Fourth, all lands designated by the President within 120 days of the enactment of this legislation; and

Fifth, lands previously determined by the President or Congress to be of scientific, scenic, or historic character and warrant preservation and administration under the National Park Service Act.

Mr. Speaker, my proposal is quite reasonable and uncontroversial. Simply put it gives the Virgin Islands, Guam, and American Samoa the same right to use their adjacent submerged lands that other American jurisdictions have excepting only those lands which for some overriding reason should be retained by the Federal Government.

I ask that my colleagues favorably consider this measure and give residents of these islands possession of these submerged lands.

V. J. SARTE NATIONAL HYDROCEPHALUS RESEARCH FOUNDATION

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. PATTEN. Mr. Speaker, when V. J. Sarte, of 23 Sulliman Road, Edison, N.J., was born about 2 years ago with hydrocephalus—commonly called “water on the brain”—his mother, Mrs. John “Athena” Sarte, suffered deep anguish. She knew that an estimated 50,000 families in America experience the same suffering each year because of this devastating birth defect. But Athena Sarte did more than just suffer—she went to work and with her organizing ability, strong leadership, and dynamic personality, established the V. J. Sarte National Hydrocephalus Research Foundation, in Edison, N.J.

Hydrocephalus is a congenital disease, with 50 percent of those afflicted dying before their first birthday, and of those who survive, 75 percent suffer severe mental and motor retardation. Mrs. Sarte's son, V. J., is blind and has little motor ability.

When I first read of this tragedy, I wrote to Dr. John F. Sherman, then Acting Director, Public Health Service, National Institutes of Health—NIH—asking for expansion of the Federal programs that attack and hopefully, will eventually cure and prevent hydrocephalus. NIH is active in this fight, but more research is needed, and this inevitably means that more funds are required.

Mrs. Sarte is both founder and national president of the V. J. Sarte National Hydrocephalus Research Foundation. What kind of person is she? This is what Winifred I. Cook, staff writer of the Home News, of New Brunswick, N.J., wrote about Mrs. Sarte and her son's tragedy, which some day may end in triumph:

As a newspaper woman for some 25 years, I have covered many different kinds of stories—some very touching. However, I don't think any story affected me as deeply as this one has. I did not know Mrs. Sarte before I went to her home in Edison to talk

with her. Now I have only the highest admiration for her and for what she is attempting.

Mr. Speaker, with the hope that my colleagues in Congress and those who read the CONGRESSIONAL RECORD, will have a greater understanding of the problems and goals of this foundation, I hereby insert in the RECORD the most recent newsletter written by Mrs. Sarte:

Cerebro-spinal-fluid, fluid accumulating abnormally in and expanding the yet unwelded cranial bones of a frail, helpless child. Yes, this is hydrocephalus (water on the brain). Hydrocephalus has been known for centuries, as revealed in Biblical writings.

This ancient affliction is relatively unknown to the lay person except to those touched by this tragedy and heartbreak. It is one of the top birth defects in our country, yet because of insufficient funds for concentrated research, remains an unknown shadow in our society.

Why???

... do afflictions of this kind forever hang over our society?

... do these “Angels Unaware of God” crying for help in their mentally deteriorating, physically imperfect bodies, plead to a forest of darkness?

... because of lack of funds for research. National awareness, education and funds to find the answers to this tragedy of life must be materialized. ... with your help.

The “V.J.” Sarte National Hydrocephalus Research Foundation is dedicated to this cause. We have no payrolls to meet or offices to maintain. Everything we do is on a voluntary donation basis.

Our national goal is 1/2 million membership at \$3.00 per year, tax deductible. The reward for helping is knowing that you are instrumental in shaping and directing the destiny of approximately 50,000 lives.

Who knows if the child you help to be born normal will be your own or that of a loved one? Reach for the tiny hands of these fragile infants. Don't turn away. Donate now! Funds will be used for expanded research. Experience a lifetime of satisfaction in giving thousands of newborns the chance to come into the world as normal functioning humans in our society.

A. M. SIMON, DEAN OF LAWYERS

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. GAYDOS. Mr. Speaker, the city of McKeesport, Pa., last month lost one of its foremost citizens, Mr. A. M. Simon, dean of the city's lawyers, a cofounder of the McKeesport Chamber of Commerce and the recipient of untold numbers of awards, honors, and accolades.

This fine gentleman, blessed with a keen legal mind, served most of the community's major financial and business institutions, was the legal adviser for many prominent citizens and served in the same capacity, but without pay for numerous community and civic organizations. Despite his richly deserved reputation as an attorney, Mr. Simon continually referred to himself as “simply a smalltown lawyer.”

Mr. Simon died at the age of 93, ending a legal career which spanned 67

years. His death has left a void in the profession as well as in the community which will never be filled.

MANY TOWNSEND PLAN FEATURES NOW IN SOCIAL SECURITY LAW

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. McFALL. Mr. Speaker, for several years I have been a sponsor of proposed legislation known as the Pay-As-You-Go Social Security and Prosperity Act, designed as an alternative to our present program of social insurance.

It would apply the basic principles of the original Townsend plan, but with modifications to meet the problem of inadequate social security benefits, welfare, and hopeless poverty that unfortunately surrounds a large segment of our population.

Recently I introduced H.R. 4018, containing certain changes from the legislative proposal which was before the 92d Congress, in order to reflect today's circumstances.

Although proposals of the original Townsend plan and its revised version were considered too advanced by many only a few short years ago, it is interesting to note that a number of these suggestions now have been incorporated into our present social security system, significantly changing its structure and objectives. We have made considerable progress during this period, but much remains to be done.

At this time I would like to include in these remarks an assessment of where we are and the goals still remaining to be achieved from the standpoint of a man who has spearheaded this effort over the years, Mr. John Doyle Elliott. Mr. Elliott is the Washington representative of the Townsend organization. His views are his own, of course, but I believe the Members would appreciate the following analysis he has prepared:

PROSPEROUS RETIREMENT FOR ALL

(By John Doyle Elliott)

Just as certain labor unions have prosperous retirement for long-term workers by contract, H.R. 4081 will establish a universal “contract” covering all businesses and occupations, all the people, all the time and providing just such prosperous retirement for all.

If there is a flaw, or wrong, in this “contract” then existing contracts are just as wrong, as well as being discriminatory by abolishing the problem only for some.

In the retrospect of history, I find the well informed recognizing that the Townsend Plan contributed mightily to focusing public conscience on these critical needs. This plan for prosperous instead of impoverishing retirement as the inherent right of all Americans has been a tremendous influence on the shape of present legislation and its constructive improvements.

HISTORY REPEATING

I sense history repeating itself. In the Townsend Plan—where we have found the guiding ideas for improving Social Security—I believe we will find the guidelines for its

perfection, in the future. The Social Security and welfare measures adopted by the 92nd Congress confirm that conviction even more firmly than the many previous instances.

1. Widows' and dependent widowers' Social Security benefits are to be 100 percent of the workers' primary benefits. A cardinal principle of the Townsend Plan, equality for women, adamantly, constantly opposed from the very beginning, now receives full acceptance.

2. Social Security's "retirement test" is now dot for dot and cross for cross as the Townsend Plan bills proposed it. Now, the \$1 benefit-loss for each \$2 earned will operate until the entire benefit is exhausted, thus ending the punishing \$1 loss for each \$1 earned over an arbitrary limit. Of course, the present system's benefits still impose a seriously regressive impact, because it will wipe out the smaller benefits more quickly than the larger, leaving the poorer people completely dependent on meager earnings. However, the move is under way to advance benefits towards more realistic levels, which will progressively lessen this regressive impact, ultimately cancelling it.

3. Benefits are automatically to be adjusted in step with Consumer Price Index advances of at least 3 percent. After over 35 years of rejection, this Townsend Plan principle is honored. However, advancing standards of living also must be matched. Only half the need is presently met by enacted law.

PAST VIEWS REVERSED

4. A \$170-a-month, special minimum primary-benefit for those with 30 years coverage under Social Security (\$200 was approved by the Senate) is adopted. This completely reverses past views of minimum benefits. This is a presumed entitlement to a much higher benefit not related to past earnings! It is positive turning towards the basic Townsend Plan concept. Both in dollars and principle, it is a revolutionary reversal of view.

Note that Townsend Plan testimony starting in 1954 hearings on Social Security Amendments, advocated a presumed wage in "covered employment" to be inherently vested in every individual, sufficient to provide a minimum benefit which would bar poverty (hence, eligibility for welfare) even for individuals caught with no other resource. That advocacy is mirrored in this presumed entitlement of at least \$170 a month (\$200 by the Senate), to advance with living costs. The Townsend Plan principle is in the process of enactment.

5. The same concept is reflected in the new welfare reform for Federally financed and administered guarantee of a minimum income of \$130 a month for the aged, blind and disabled. This is a uniform national standard replacing State-determined standards of aid and eligibility. It is a repudiation of past principles, even by their own, former advocates. Along with this new concept of such aid, welfare will allow, without deductions, other income resources such as certain Social Security benefits and earnings—amplifying the reversal of views and changes now emerging. Social Security is changing into a provider of prosperous instead of impoverishing retirement for the American people. The new views and attitudes inherent in these changes, right along Townsend bill guidelines, are unmistakable.

SHAPED 1972 LAW

The great, national pension is an image which shaped the 1972 law and debate. Its realization is on the way.

Since fulfillment is the real, final test of prophecy, the Townsend Plan may well prove the most accurate and prophetic vision and principle of our century.

6. Another profound manifestation of Townsend Plan principle is embedded in what Congress has done. We have not, for some time, been hearing about vast Social Security Trust Fund reserves—frequently estimated by "experts" at $\frac{1}{4}$ trillion dollars shortly after the turn of the century for OASI alone. Those "actuarial" visions have faded.

Instead, we now receive assurances that OASI is adequately funded with reserves representing benefits for a year to a year and a half. It's now a program and is exactly what the Townsend Plan originally proposed and constantly urged.

7. The very people and authorities who instituted, championed and defended the payroll and self-employment tax on the gross earnings of middle to lower income workers to support Social Security, are now branding it regressive, unjust, oppressive to the poor—in whose rescue and benefit our whole Social Security and misnamed welfare system found birth and justification! This is what the Townsend Plan said from the very start.

Has there ever been so tremendous a reversal of view and action? I suggest that, in the future, we should most seriously bear in mind that this whole movement of reversal of views on Social Security and welfare is, virtually count by count, towards some feature, or principle of the Townsend Plan bill, H.R. 4018.

PAYROLL TAXES CONDEMNED

8. Ways and Means. While payroll taxes on the gross earnings of workers are being condemned as unfair and involving intolerably high tax rates (now crowding 12 percent), they are financing but a mean part of what the 1972 debate clearly admits ought to be provided. It is another echo of 38 years of Townsend Plan testimony. Now, what is proposed? Simply that "general revenue" be tapped to augment the present Social Security payroll taxes, to help finance improvements. This does not remedy criticisms of the present system! It leaves the present evils intact, only adding "progressive income taxes," based on ability to pay like our established income-tax system.

The above is coupled with a program to raise the payroll tax-base progressively into the future.

The Townsend Plan bill always has and does propose a very different mechanism, known as the Gross Income Tax (based on gross receipt of all persons and companies). The payroll tax is on the gross income, total earnings, of workers from the first dollar up to the prescribed (constantly rising) ceiling—\$19,800 for 1973.

H.R. 4018 would exempt personal gross incomes up to \$400 a month. All gross receipts of companies (all legal persons other than individual people) will pay. It is the broadest possible tax base and involves, for any given revenue yield, the smallest possible tax rate. The present tax requires the largest possible tax rate.

Putting no direct tax on individuals with less than \$400 a month, H.R. 4018 overcomes the regressive, soak-the-poor character of present Social Security taxes.

Many have—and doubtlessly will—claim the proposed tax on businesses will pass on to consumers and hit the poor. They miss this reality: This pass-along will bear proportionately more heavily on those better off. It will not cancel the advantage of the exemption on persons up to \$400 a month at all.

Next, clearly, Townsend Bill benefits favor the poor and are sufficient to bar poverty even for those caught with no other resource. (The new Social Security special minimums and the new welfare income guarantee favor the poor, moving towards the Townsend Bill standard.) Thus, in proportion to contributions, these benefits will be of the greatest

possible value to the poorer, while of relatively less value to the more fortunate and insignificant to the rich. The higher their income level, the less the relative value of the benefit to them. The rich will get less for their money than the poor, specifically abridging the criticism and faults of the present system.

FOR PEOPLE-SPENDING

Further, let it be remembered that Social Security (whether under the Townsend Plan, or the present program) calls for taxes to support benefits, not burdens. It's for people-spending, not for government-spending. The same tax can't be right for financing both benefits and burdens! The proportionate tax of the Townsend Bill is the just tax for benefits for remedying these flaws in our prosperity and freedom, for improving human living. It is the "general revenue" mechanism that is needed justly to finance all Social Security improvements until it becomes the system we ought to have. It is defined in sections 214 and 229 of H.R. 4018.

In view of the series of facts enumerated above in which by witness of time's distillation of truth, the Townsend Bill has been right from the start. I believe good sense dictates that Congress entertain the serious suspicion that it is very likely to be right on this critical issue of financing, between now and the time we achieve the just Social Security program America ought to have.

In fact, I believe it all properly raises this question. How can the prosperity with freedom, justice and happiness successfully pursued—which ought to be this country's crowning achievement—ever be a reality without the provisions and benefits of this bill?

MINIMAL APPROPRIATIONS FOR LEGISLATIVE BRANCH

HON. DAN DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. DAN DANIEL. Mr. Speaker, in these days when there is so much discussion of budgetary matters, much of the press coverage has given little emphasis to the tremendous job which confronts Congress in dealing with this problem.

The fact is that 535 Members of Congress and their committees and personnel staffs are charged with digesting a mammoth budget prepared by thousands of members of the executive branch in a time frame which is most restrictive. In many instances, the executive departments have spent months in preparing their estimates and back up information and the whole operation consumes far more time than is ever available to the congressional committees.

Appropriations for the legislative branch are minimal when compared with the tremendous operating costs of the budgetary division of the major executive departments and the Bureau of Management and Budget. This point is well stated in an editorial which appeared in the March 21 edition of *The Register of Danville, Va.* which is published in my Congressional District. The newspaper takes account of the fact of the disproportionate costs in the executive and legislative branches and it commends us for the job we try to do.

Modesty does not permit us to "toot our own horn" unduly but we can take satisfaction in knowing that there are those in the press who recognize the problems with which we are confronted and look with favor upon the relative low cost of our operations.

It is often said that the staff of a Member of Congress is really an extension of his own right arm and those who work for us are in a large respect simply allowing our efforts to be multiplied. Considering the job we are called upon to do, the cost is far less than many other activities of Government today.

I commend the editorial to the reading of the Members of the House.

The editorial follows:

SENATORS AT \$390,000 EACH

Compared to the cost of the executive departments and regulatory agencies, the government's expense for maintaining the Congress is peanuts. It sounds big when applied to individual members but not when it is totalled as the cost of making the nation's laws.

To keep each of the 100 Senators in Washington, the payroll for all his office staff, the necessary allowances for the business of representing his state, and the expenses of other duties of his office the total is about \$390,000. For each of the 438 Representatives and delegates, the cost is \$188,000 each.

A member of Congress who devotes his talents to his job is worth all the help he can get. This maintenance cost goes largely for making his job more useful to his constituent and to the nation. Besides the basic cost of \$62 million for salaries of House members' office staffs and \$20.4 million for salaries and travel allowances of members, the appropriation for senators' office staffs was \$34.2 million and \$4.7 million for senators' salaries and mileage. Fringe benefits include franked or free mail for official correspondence, and stationery, telephone and telegraph allowances.

It all goes to relieve the member of routine duties so that he can devote the bulk of his time, thought and effort to legislation. All that the taxpayers ask is that he does just that, and the cost will be accepted without question. Perhaps it is subsidizing Congress. If the product is good for the country, it will be well spent. If not, any sum is too much.

BILDERBURGERS MEET IN AMSTERDAM

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RARICK. Mr. Speaker, the new détente between the created powers recently resulted in a gathering of big shot European and American financiers, industrialists, and politicians in Amsterdam at what was billed as the "Europe-America Conference," and reportedly financed by the International European Movement.

But, behind all the new slogans and movements, the names and faces are the same, that is, the Bilderburgers.

I insert the following news clipping at this point:

CXIX—625—Part 3

[From the Washington Post, March 27, 1973]
EUROPE, U.S. NOTABLES WARN OF THREAT TO UNITY

(By Bernard D. Nossiter)

AMSTERDAM, March 26.—An all-star gathering of American and European officials from the past two decades warned today that Atlantic unity is threatened on both economic and military fronts.

They expressed their fears over the "euphoria of détente" in East-West relations; talk of American troop withdrawals from Europe; floating currencies; rising trade protectionism; and the growing economic strength of Middle East oil producing nations.

Although the degree of alarm varied from notable to notable, virtually all saw dangers, and only a rare figure took any delight in the way the world is moving.

The three-day "Europe-America Conference" here, attended by some 50 eminent persons, is sponsored by the International European Movement, which is thought to get most of its funds from large corporations.

The European delegates included NATO Secretary General Joseph Luns, two former presidents of the Common Market executive commission, Germany's Walter Hallstein and Belgium's Jean Rey, and two former chancellors of the British Exchequer, Roy Jenkins and Reginald Maudling.

The high-powered American group included John McCloy, former Under Secretary of State Eugene Rostow and two former deputy defense secretaries, Cyrus Vance and David Packard.

Many had played central roles in creating or operating postwar landmarks like NATO and the European Economic Community.

Prince Bernard of the Netherlands, a serious royal consort, set the keynote by viewing "with great concern . . . a deterioration of the relationship" between the United States and Western Europe.

He observed that Europe is increasingly anxious over the "reliability" of the American nuclear commitment, but European nations "refuse to consider what a real sharing of the burden means."

It was the address by New York Gov. Nelson Rockefeller, who was accompanied by three advisers, that embraced virtually all the worries dominating the talks here.

He deplored the Democratic Party's proposal to reduce the 300,000 American troops in Europe and traced it to "the combination of prosperity, détente and the resulting trend toward isolationism."

He was fearful that "a proliferation of East-West negotiations and the conduct of independent foreign policies with the U.S.S.R.—in areas of mutual involvement—can only increase the vulnerability of the West and, in the final analysis, destroy the Atlantic community."

The present balance of nuclear strategic force, he indicated, meant that the United States could no longer be counted upon to respond to an attack on Europe. He suggested that the French and British combine forces to develop a deterrent of their own, a prospect that is already a gleam in the eye of Prime Minister Edward Heath.

On the economic front, Rockefeller saw the "monetary framework" collapsing and the "doctrine of free trade being eroded . . . on both sides of the Atlantic." He was concerned about the "ingeniously aggressive expansionist trade policies" of Japan and the growing Western dependence on imported oil. He urged common policies to deal with both.

For the most part, other leading figures who spoke today quarreled little with Rockefeller's gloomy balance sheet. Packard, now once again boss of an electronics firm with big defense contracts, insisted that an Anglo-

French nuclear deterrent would pose "unthinkable" problems. The United States commitment could not be shaken, he indicated, as long as Europe kept up its spending on conventional weapons.

Almost alone, Jens Otto Krag, former prime minister of Denmark, welcomed the growing thaw in East-West dealings. He saw the preparatory talks for a European security conference as "the dawn of the day (for) a realistic East-West dialogue."

Krag said he expected "fairly modest" results from the conference which is expected to open later this year. But he viewed it as part of "a lengthy process of gradually bringing East and West in Europe closer to each other."

The pessimists were most notable on the economic side of the equation.

Henry H. Fowler, former American secretary of the treasury, called floating currencies "the easy way out."

If the world did not return to a system of fixed exchange rates, Fowler said, it would "encourage protectionism and trade wars between blocks, refashion more tightly controls on capital . . . and weaken or drastically alter the alliances that have served the cause of peace and prosperity since World War II."

Fowler is now a partner in Lehman Brothers, the investment banking house.

SEX DISCRIMINATION IN CREDIT OPPORTUNITY

HON. BELLA S. ABZUG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Ms. ABZUG. Mr. Speaker, a particularly paralyzing form of discrimination against women in this country is that of denial of credit solely on the basis of their sex.

During last year's hearing on this subject before the National Commission on Consumer Finance, a parade of witnesses offered documentation of numerous instances wherein the sex of the applicant was the sole basis for denial of a loan. A study on banking practices conducted by the Department of Human Rights in St. Paul, Minn., for example, concluded as follows:

Approximately 39% of the banks interviewed revealed discrepancies in the loan policies stated to males and females: Two banks allowed the male interviewed to obtain a loan when under the same set of circumstances they would not make any statement or commitment to the female interviewed. Three banks that had a policy of requiring both signatures on a loan would make an exception for the male interviewer but not the female interviewer. Two banks would allow the male interviewer to receive a loan without his wife's signature, but would not allow the female to receive the same loan without her husband's signature. Two banks would grant a loan to a married man but the same loan is an exception to policy for married women.

My three bills on this subject—H.R. 246, 247, and 248—would outlaw such discrimination in both personal or consumer and business loans. I understand that the Subcommittee on Consumer Affairs of the Banking and Currency Committee plans to hold hearings on this subject in the near future, and I look

forward to a full presentation of the great magnitude of this problem at that time.

Last Sunday's New York Times carried an excellent article on sex discrimination in the credit field, and I include it at this point in the RECORD:

WOMEN EQUALITY GROUPS FIGHTING CREDIT BARRIERS

(By Marilyn Bender)

A revolt against what many women and civil rights lawyers perceive to be sex discrimination in the extension of credit is gathering momentum.

Under the slogan "Give credit to a woman where credit is due," the assault takes two forms: a search for legal redress and well-publicized pressure tactics against the business community.

Some barriers are buckling more quickly than expected with support from politicians seizing "a nice clean issue, not abortion" (as one feminist put it), and from retailers and bankers aware that the female 53 per cent of the population dominates the consumer economy. There have been these developments:

Sex discrimination in the granting of credit is under attack in bills pending in both houses of Congress and at least half a dozen state legislatures, including New York's. The first state law specifically banning sex discrimination in credit and insurance transactions has just been passed in Washington.

The community property law was amended last year in the State of Washington to make wives equal managers of the property. A lawsuit soon to be filed in United States District Court in Louisiana will challenge "the arbitrary designation of the husband as sole manager of the community property." Such changes would give creditors additional protection and have profound implications for women's credit opportunities in the eight community property states.

The National Commission on Consumer Finance, which held hearings on the subject last May in Washington, D.C., recommended in a recently released report that states review and amend laws that inhibit the granting of credit to women.

Hearings by state commissions have since been held in Pennsylvania, California, Idaho and New Hampshire and by the Federal Deposit Insurance Corporation. Government investigations have been started in Wisconsin, Virginia, Missouri and Michigan.

The Center for Women Policy Studies in Washington, D.C., has received a grant from the Ford Foundation to study the problem.

The National Organization for Women has produced a manual for groups wanting to set up a credit project. Two to three dozen NOW chapters already have.

Such projects by women's groups in Dallas, Minneapolis and St. Paul and Baltimore against department stores and other retail grantors of credit have made it easier for women to open charge accounts in their own name. The Baltimore Credit Bureau Inc. agreed to set up independent credit records for women.

"Discrimination in credit deprives women of participating in the major American way of life and denies them equal access to the same opportunity men enjoy," asserts Barbara Shack, director of the women's rights project of the New York Civil Liberties Union. Like many other experts in this new area of civil rights, she acknowledges that reluctant merchants and lenders do not act necessarily out of male chauvinism.

Many are intimidated by the confusion surrounding the legal property rights and liabilities of women in the United States.

Still, three areas of inequitable treatment have clearly been identified in the hearings, investigations and surveys: retail credit, mortgages and bank loans. Women have "sec-

ond class status" in stores and banks, according to the most thorough survey on the subject of women and credit, which was published last month by the Oregon Student Public Interest Research Group, an offshoot of Ralph Nader's consumer movement.

CLASS DOES NOT MATTER

That status cuts across age, race and economic class, although those of child-bearing age, the separated and divorced and those who most need credit to survive, show the greatest bruises.

Mrs. Eddlene Bloom of Oak Park, Mich., who was divorced last November, has sole title to a new Volvo, to a home valued at \$38,000, more than \$30,000 income in all-money and child support, and a savings account of \$3,000 in the same bank where she and her former husband had a joint checking account for 10 years. She also works part-time.

Yet last January when she applied to the J. L. Hudson Company for a charge account, she was asked for the names of her former husband and her lawyer. "Just to be safe, so we can verify your ability to pay," she was told. She received the charge plate, marked Ms., in two weeks. Last month, though, her application for a Master Charge account through her bank was turned down.

What disturbs Mrs. Bloom and other divorced women is to be "automatically" classified as a credit risk. "For years, I handled all the bills for the household," she said. "I am the one who insured our excellent credit rating, except that it turned out to be 'his' not 'our.'"

Indeed, while the married woman "is a nonperson when it comes to credit," as Representative Bella Abzug, Democrat of Manhattan, has said, the divorced or separated woman runs into what the Oregon study terms "the catch 22." The store will not extend credit "because the credit check will frequently find that she has no credit rating at all. The entire credit history belongs to the husband." The report recommended that wives be given separate files in credit bureau records.

ALIMONY OFTEN DISREGARDED

Many credit managers and lenders refuse to consider alimony or child support as income, moreover, because they do not regard it as a steady and certain source.

On the other hand, they are also reluctant to count the salary of the young working wife.

Take the case of Paul Wintjen, 27, of Milford, Del., and his wife, Marjorie, 25. Last year they were told their combined income of \$14,000 a year was too low to qualify for a Veterans Housing Administration mortgage with which they wanted to finance a \$19,900 house with a 10 per cent down payment.

Mr. Wintjen was earning \$9,500 a year as manager of a fast food restaurant. The bank refused to count the \$4,500 salary of Mrs. Wintjen, a hospital technician. However, the bank lending officer suggested that one half of her income would be computed if she would submit a medical certificate of sterilization. If her husband were to have a vasectomy, though, her income would not be counted "because you can still get pregnant."

Mrs. Wintjen bitterly reflects that "my income is counted 100 per cent by the state of Delaware and the United States Government for income taxes."

Proof of inability to bear children has customarily been demanded of young wives by bankers, who seem to regard the age of 38 as the frontier of safety. They are also biased in favor of nurses and teachers (as opposed to secretaries and assemblyline workers) on the theory that they are likely to go promptly from childbirth back to the job because their services are so much in demand.

A survey by the United States Savings and Loan League showed that 72 per cent of 421

banks queried said they would ignore part or all of a working wife's income. Only 28 per cent said they would count all of it.

Since 1965, the Federal Housing Administration's official policy has been to disallow a young wife's income only if she has no definite record of employment. In 1971, the Federal National Mortgage Association (Fannie Mae) repealed its guidelines of counting 50 per cent of a wife's gross earnings.

But the present determination of whether the joint income is likely to continue has been criticized by women's rights groups as being too subjective. And even when guidelines are loosened, they say, word does not necessarily filter down to the loan officers in the field.

Particularly vexing to women's rights groups is what they view as the inconsistency of credit policies as well as the "wide gap between policy and practice" (as the Women's Equity Action League found in its Dallas project).

In February, 1972, the St. Paul Department of Human Rights tested 23 banks by sending a man and a woman with identical credentials to apply for a \$600, 18-month auto loan. Both were 24 years old, married, earning \$12,000 a year as research analysts and the sole support of their student spouses. Both had good credit histories. Thirty-nine per cent of the banks revealed discrepancies in their loan policies (such as requiring a co-signature only in the case of the female), and nine banks were found to discriminate.

Most of the practices used in extending credit "are based on outmoded assumptions about the status and role of women in society," said Senator Harrison A. Williams Jr., Democrat of New Jersey in introducing his credit discrimination bill.

He pointed out that nearly 43 per cent of the female population worked and more than 44 per cent of married women living with their husbands were employed. Three out of 10 married women with children under 6 are in the labor force.

Feminists argue that there is no valid evidence to support the assumption that women are bad credit risks. A 1941 study by David Durand for the National Bureau of Economic Research offered statistical proof that women were better credit risks than men. A few more recent studies, as summarized in the Oregon report, either confirm this or conclude that marital status is not a reliable determinant of credit worthiness.

Title VII of the Civil Rights Act of 1964, which introduced the sex discrimination ban into Federal law, is addressed to employment. There is no Federal law or constitutional court interpretation to protect women in credit transactions. Some feminists argue that the Equal Rights Amendment, if ratified, would be a powerful tool against credit discrimination.

In Congress, three bills introduced by Mrs. Abzug would bar discrimination by sex or marital status in federally-related mortgage transactions, by federally insured banks or by creditors through an amendment of the Truth in Lending Act. A bill by Representative Margaret Heckler, Republican of Massachusetts, is also drawn to cover consumer lending.

Senator Williams's bill is broadly written to extend the Consumer Credit Protection Act. It also contains a provision for individual suits in a civil action, with damages equal to the amount of credit refused.

STATE LAWS DEFINITIVE

It is in state law, however, that property rights are defined and that creditors try to cover their risk. The Married Women's Property Acts, prevailing in 42 states, give women the right to contract in their own names. However, state laws also make husbands responsible for their wives' support. The am-

biguous word "necessities" is often stated in connection with support and it gives some creditors pause.

In 11 states, there are some limitations on the liability of a wife for the contracts she signs and creditors fear she might disclaim her obligation.

So it is that creditors ask for information about a husband's income or demand his co-signature because they want double protection in collecting the debt. "They have no right to it," says Mrs. Shack, of the New York Civil Liberties Union. She advises women who refuse to give it that they are within their rights, in New York at least. Furthermore, Mrs. Shack says, creditors should realize that the wife's earnings are free from her husband's claims so "she is really a better credit risk than he."

In the eight community property states, the wife is supposed to own half the property acquired after marriage. But until amendments like the one passed last year in Washington, the husband is sole manager of the community property.

Recent attempts to write a ban on sex discrimination into state or municipal law have usually proceeded on oblique courses. Washington has just passed the first law that flatly gives the right to engage in credit transactions without discrimination by sex or marital status.

CONSCIOUSNESS STRESSED

Most other efforts have been directed toward amending a public accommodation law to include a sex discrimination ban and then have a court or agency construe a bank or a retail store as a public accommodation. Such a bill just passed the New York State Assembly. Mrs. Shack has also filed a complaint under a sex discrimination ban in the state human rights law relating to loans for housing, land or commercial space. A bill signed and passed by the New York City Council is similarly related to housing.

Ira M. Millstein, a New York lawyer who served as chairman of the National Commission on Consumer Finance, is one of those who believe that legislative change is not the most important tactic.

"A lot of women are still not aware they should be entitled to credit," he said. "Until they are conscious that a woman with income is a person entitled to credit, period, that marital status shouldn't interfere, that she should be judged as any wage earner for better or worse, what good will it do to put another law on the books?"

"As soon as women start stamping their feet and raising hell and getting to the right person in the credit granting office, it will get done," he declared.

"FORT WORTH FIVE"

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. EILBERG. Mr. Speaker, on March 13 Subcommittee No. 1 of the Judiciary Committee held a public hearing on the status of the "Fort Worth Five."

As chairman of the subcommittee, I asked the Department of Justice to explain why these five Irish Americans had been imprisoned in Texas, 1,500 miles from their families and homes in New York City for 8 months with no prospects of release in the near future.

The next we could learn was that these men had been imprisoned for refusing to answer questions about unnamed persons who allegedly were con-

nected with a vague plot to buy arms in Mexico for shipment to Northern Ireland. The spokesmen for the Justice Department also admitted that no witnesses from Texas had been called and that probably no one from that area would be asked to testify in the foreseeable future.

I recently received a letter from Thomas Laffey, one of the "Fort Worth Five." In it he comments on the hearings and on the Justice Department's testimony.

Additionally, I received a letter from John M. Elliott, cochairman of the Greater Philadelphia Southern New Jersey Region of the National Conference of Christians and Jews who has some very pertinent and interesting comments about this case.

At this time I enter the two letters into the RECORD:

SEAGOVILLE, TEX.,
March 18.

Congressman JOSHUA EILBERG,

DEAR SIR: I had a letter from my wife Eileen on Friday, she said she met you on March 13th during the Congressional hearing on our case. She told me you were a real gentleman in every way. I want to express to you my sincere thanks for the courtesy shown my wife and the others. It is rare for her to go to such a historical meeting, it has left a very good impression.

From reading *Newsday*, March 14, 73 (Long Island, N.Y.) it states the following:

"The Justice Dept. did finally offer an answer yesterday, stating that it possessed information indicating that certain New Yorkers had been in Fort Worth to buy guns from persons in Mexico to ship illegally to Ireland, and that it believed the five New Yorkers knew something about that."

This really burns me up, we stated time and time again that we never knew anybody here (in Texas) or never had contact with anybody here we will now add to that we never knew anyone who contacted anyone else here.

We have received mail from all across the country, ordinary people who read about it in the paper. They can hardly believe we can legally be held.

What I have told you above we are willing to swear before God, judge and jury.

Thank you sincerely for your kind and humanitarian interest.

Very sincerely,

THOMAS LAFFEY.

DILWORTH, PAXSON, KALISH, LEVY
& COLEMAN,

Philadelphia, Pa. March 12, 1973.

Re Irish-American, "Fort Worth 5" Prisoners, H. Res. 220

Congressman JOSHUA EILBERG,
Chairman Subcommittee No. 1, House Judiciary Committee, Longworth House Office Building, Washington, D.C.

"We live in a free and open society; that is where our strength and greatness lies. We do not hide our faults behind a wall; we do not try to bury our mistakes. . ." Senator Robert F. Kennedy.

DEAR CONGRESSMAN EILBERG: As Co-Chairman of the Greater Philadelphia Southern New Jersey Region of the National Conference of Christians and Jews, I appreciate the opportunity of outlining some legal, moral and social concerns relative to the Fort Worth, Texas* grand jury investigation of 12 American Irish-Catholics, residents of the New York area, allegedly involved in gunrunning to Northern Ireland. By investigating this Fort Worth incident, Congress vindicates the best traditions of an open and free society.

A glaring threshold issue is the chilling

effect of having American citizens subpoenaed thousands of miles from their homes, their families, their communities, and their resources (financial and spiritual.)

Political forum-shopping was condemned by Thomas Jefferson two centuries ago.¹ It assumes even more sinister dimensions today when citizens of a minority group are taken into an area of Texas² with a rural and conservative disposition.

This procedure is as suspect as taking black urban residents from the North before a grand jury in Alabama or Mississippi, or taking Jewish urban residents into areas where the KKK or the Bund flourish. The trials of the Scottsboro Boys, the Molly Maguires,³ and Sacco and Vanzetti already clot American jurisprudence with questionable political trials. Yet instead of learning from past inequities, five men now languish in Texas jails without trial and without even being charged. This raises serious questions of fundamental fairness and due process.

The impressions of justice go far to cause citizens to believe in a fair judicial system. However, an examination of the facts of this secret Fort Worth grand jury, which has to date not accused anyone of a crime, reveals an unhappy and discriminatory pattern of misuse of the grand jury process. Briefly, the background facts are: On June 12-15, 1972 blank subpoenas were issued commanding 12 Irish-Catholic American citizens residing in the New York area to appear before a Fort Worth, Texas grand jury on June 19. Prior to the hearing, 4 subpoenas were cancelled by the government. The nature of the investigation was not revealed until June 19, at which time the grand jury was advised of alleged violations of the Gun Control Act of 1968; of the Organized Crime Control Act of 1970; of the Foreign Agents Registration Act, and that "other federal crimes might be involved too." One of these eight citizens was a disabled, decorated Korean War veteran with a known heart condition. After traveling to Fort Worth, he was advised that he did not have to testify. However, the strain caused a stroke, and he was hospitalized in critical condition. Two (2) others were questioned but not called as grand jury witnesses.

Finally five (5) witnesses, all working men with families and without any prior criminal records, were brought before the grand jury. A growing body of legal literature analyzes the legal aspects of (1) due process relative to the grand jury, which many legal scholars have criticized as degenerating into a rubber stamp for ambitious prosecutors; (2) the broader "use" immunity v. a narrower "transactional" immunity; (3) the use of wiretaps⁴ (which has been admitted by the government); and (4) the lack of representation by counsel before the grand jury. I will not dwell on these issues. Instead, I focus upon the common sense questions concerning the civil rights of these men.

Albert Camus reminded us that justice fills a land where a people are motivated by a sense of injustice—a concern for the rights of others. We must all stop to ponder the dark and sinister fate of a person subpoenaed to appear before a grand jury anywhere in the nation where the government feels it will have an advantage.

The Justice Department has loosely applied Article III, § 2, Clause 3 of the Constitution⁵ to get these men out of New York and into Texas. All five of the accused men have filed affidavits with Congress denying that they have ever been in Texas, ever spoken to anyone in Texas, or ever conducted any business in Texas.

What redress can be offered to witnesses dragged from their homes and employment⁶ under adverse clouds of suspicion and forced to travel thousands of miles to in fact not be asked any questions? What about their right of association and expression?

The federal Justice Department's ability to convene a grand jury anywhere, with broad

investigatory powers, can be too easily abused to intimidate and harass anyone who incurs a government's disapproval. Such fishing expeditions, with their inevitable headlines, have a "chilling effect" on a citizen's questioning policies contrary to government orthodoxy.

These five men alleging wiretap and potential foreign prosecution¹ violations of their civil rights took the 5th Amendment, after they were denied assurances that they would not be extradited² to any foreign country (e.g. England or Northern Ireland) for trial. They were cited for civil contempt, and they have spent over five months in Texas jails with no criminal charges pending against them. They are not even allowed telephone rights with their attorneys.

All the legalisms of this unhappy incident have been cut through by the common sense of Father John J. Keaveney in his recent letter to President Nixon concerning his incarcerated parishioner Matthew Reilly:

"He may be found guilty of breaking laws. For which he should be punished. But when a man of his reputation is in jail without trial or prospect of trial and bail is denied, I and others wonder if the 'radicals' are really radicals to all—maybe injustices are being committed. Maybe everything in this country is not as fair as we thought".

To remove any apprehension of religious and economic prejudice, which is damaging to our national fabric, the government should heed Father Keaveney's wisdom, and promptly bring these men to trial in the Southern District of New York. If they have violated a law, let them be judged quickly by a jury. Their present Texas incarceration of indefinite tenure is an open sore which will inflame rather than heal this extension of the current trouble in Northern Ireland. Margaret Truman's recent book on President Harry S. Truman reveals that British authorities attempted to pressure President Truman to act to stop Jewish patriots support of Israel's fight for freedom. President Truman wisely withstood this pressure. Foreign relations cannot be effectively conducted through Star Chamber proceedings. Justice delayed is surely denied, and the Justice Department should act with candor and dispatch to honorably terminate this Fort Worth fiasco.

Sincerely,

JOHN M. ELLIOTT.

FOOTNOTES

¹ Claude Bowers, *Jefferson in Power* (Houghton-Mifflin, 1936, p. 89).

² This distance, not the situs in Texas *per se*, is a primary objection. Texans are as capable of fairness as Georgians, Pennsylvanians, or Alaskans. It is, however, suspect that the Justice Department having chosen a Northwestern venue (Leslie Bacon) and a rural venue (the Berrigans) has now opted for a Southwestern venue.

³ 20 Irish-Catholic miners were hanged in 1877-78 upon the perjured evidence of a Pinkerton detective in America's largest mass execution, Wayne Broehl, *The Molly Maguires* (Harvard Press: 1965). Catholics were systematically excluded from these juries.

⁴ *Tierney v. U.S.*, 41 U.S. Law Week 3408, cert. den., dissenting opinion of Mr. Justice Douglas.

⁵ All criminal trials "shall be held in the state where the said crimes have been committed."

⁶ Some of the five were in fact fired from their jobs.

⁷ The United States Supreme Court in *Zicarelli v. New Jersey State Commission of Investigation* 406 U.S. 472, 481 raised the possibility of testimony for which a witness has been granted immunity under § 18 U.S.C. § 6002-6003 later being used against the witness in a foreign prosecution. When visiting relatives and friends in Ireland, these Amer-

ican citizens might conceivably be detained for prosecution.

⁸ The Justice Department admitted this investigation was in response to official British requests to act against alleged IRA activity. See *New York Times*, July 17, 1972; *Dallas Morning News*, June 23, 1972.

LEGAL SERVICES

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. LEHMAN. Mr. Speaker, in the past week, I have received two resolutions from persons in my district regarding the continuation of some form of legal services for low-income people.

These resolutions were sent to me by the Dade County Bar Association and the Board of County Commissioners of Metropolitan Dade County. The contributions which legal services has made to our communities by providing low-income people with access to the courts is both recognized and commended by both organizations.

Rich or poor, each person deserves the right to have his day in court. The establishment of legal services within the Office of Economic Opportunity recognized that need, and clearly the need still exists.

I commend the attention of my colleagues to both resolutions:

RESOLUTION URGING THE CONGRESS OF THE UNITED STATES TO CONTINUE TO PROVIDE FUNDS FOR LEGAL SERVICES OF GREATER MIAMI, INC.

Whereas, the County has learned that the Office of Economic Opportunity is refusing to fund Legal Services Programs presently eligible for 1973 fiscal grants throughout our country, despite the fact that the Congress of the United States appropriated moneys to continue Legal Services Programs nationwide; and

Whereas, the Legal Services Program of Greater Miami, Inc., provides valuable legal assistance and service to 10,000 impoverished citizens of Dade County annually, which legal assistance and service cannot or will not be provided by any other source, public or private; and

Whereas, the County Commission of Dade County firmly believes that Legal Services of Greater Miami, Inc., has provided and is providing an important and valued service to low-income people in this county by increasing their respect for law through its endeavor to truly bring equal justice to all.

Now, therefore, be it resolved by the Board of County Commissioners of Dade County, Florida, that it recommends to the Congress of the United States that the Congress immediately take such appropriate steps as are necessary to insure the continuation and viability of Legal Services of Greater Miami, Inc., and the Deputy Clerk of this Board is hereby directed to send a certified copy of this Resolution to the Congress of the United States of America.

RESOLUTION

Whereas, the President of the United States has indicated that the Office of Economic Opportunity will be abolished, and

Whereas, the continuance of the Legal Services Program as a National Legal Services Corporation will be a recommendation of the President, and,

Whereas, members of Congress are equally concerned with the continuation of Legal Services as a National Legal Services Corporation, and,

Whereas, lawyers nationwide are concerned about the degree of political independence and maintenance of professional standards for the future of Legal Services, and,

Therefore be it resolved: That the Dade County Bar Association respectfully petitions President Nixon and the Congress of the United States to pass legislation that will provide for a National Legal Services Corporation in accordance with all professional standards and free of political interference;

It is further resolved, That in the event a Legal Services Corporation is created by the joint efforts of the President and the Congress that this Body urges that this enactment shall not discriminate upon the right of an individual to have his day in Court against any defendant, so long as he or she is eligible for the services provided.

TRADE EXPANSION ACT HELPS GLASS INDUSTRY IN KINGSPORT, TENN.

HON. WILLIAM C. WAMPLER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. WAMPLER. Mr. Speaker, ASG Industries, Inc., of Kingsport, Tenn., has completed a new float glass facility at Greenland, just outside of Kingsport, which will provide some 400 additional jobs. This plant was constructed, in part, by funds made available under the trade adjustment assistance provision of the Trade Expansion Act of 1962. This act provides financial assistance to firms which have been injured as a direct result of imports.

The following news release, under date of March 9, 1973, from ASG Industries, Inc., clearly demonstrates the value of such a program: It helps American industry survive and it also helps to create more jobs.

The newsletter follows:

ASG INDUSTRIES, INC., FIRES NEW MULTI-MILLION DOLLAR FLOAT GLASS INSTALLATION AT GREENLAND, TENN.

KINGSPORT, TENN., March 9.—At 3:00 pm on Friday, March 9, 1973, Mr. J. C. Knochel, President and Chief Executive Officer of ASG Industries, Inc., and James H. Quillen, Congressman from Tennessee's First Congressional District, "lit the torch" on ASG's new 450 ton per day capacity float glass melting tank at its Greenland, Tennessee, glass-making complex. The new float unit will come to full capacity around April 1, 1973, and will employ some additional 400 people.

This ceremony took place less than one year after the official ground-breaking ceremony. This latest addition makes ASG's Greenland plant one of the most versatile glass manufacturing centers in the world.

The glass produced in the new float unit is destined to serve ASG's own processing centers as well as trade requirements in the automotive, mirror, industrial, and residential and architectural construction markets. The new line was built under license from Pilkington Brothers, Ltd., creator and world licensor of the float process. This involves the floating of molten glass on molten tin to achieve flatness; thus eliminating grinding and polishing operations required in the production of plate glass.

DAY CARE: IT'S FINE FOR MOTHER,
BUT WHAT ABOUT THE CHILD?

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. QUIE. Mr. Speaker, I submit for the RECORD an article by Andrea Chambers appearing in the March 24, 1973 issue of the New York Times. It summarizes the views of four mothers who are competent researchers. Basically, each agrees that a child is better off with its mother until age 3. I commend the article to my colleagues:

DAY CARE: IT'S FINE FOR MOTHER, BUT WHAT ABOUT THE CHILD?

(By Andrea Chambers)

Andrew and his pint-sized architectural cronies build a tree house in a Bronx day care center. Ellen molds clay animals at home with her mother. Who is better off?

The question of putting a child in a center with others at an early age will be under debate again as the 1973 day care bill, included in the Comprehensive Child Development Act, weaves its way through Congress.

Last year's far-reaching version was vetoed by President Nixon, who expressed concern that excessive emphasis on day care center could "diminish both parental authority and parental involvement with children—particularly in those decisive early years when social attitudes and a conscience are formed, and religious and moral principles are first inculcated."

Four mothers with some special qualifications to discuss day care from both sides—as parents and as psychiatrists who have devoted a large part of their career to the psychological development of children—recently discussed the issue in separate interviews.

They were in general agreement on one point—a child under 3 years of age is better off at home with its mother. But beyond that the views became disparate.

By the age of 3 a child needs some opportunity to be with friends, said Dr. Eleanor Galenson, whose own children are now in their 20's and who is an associate professor in the department of child psychiatry at Albert Einstein College of Medicine and director of the department's nursery division.

"It's a healthy thing at this age," she said. "Much can be learned in a day care center about children of other races and economic backgrounds. And such exposure at this age will have a lasting effect."

Dr. Muriel Laskin, who has two young daughters, took a more cautious view.

"A child at an early age needs to establish a permanent relationship with its mother," said Dr. Laskin, who is a faculty member in the department of psychiatry at Downstate Medical Center, Brooklyn, and a visiting instructor of psychiatry at Einstein College.

Dr. Helen Meyers, an associate professor of psychiatry at Columbia University (she is also director of the Riverdale Mental Health Center), and mother of a 9-year-old boy, said that one reason she favors day care centers is that "it's very bad for a child to be with a mother who is always angry, bored or depressed and resents staying at home."

On the other hand, the overload experienced by a working mother, and its effects on her child in a day care center, give Dr. Judith Kestenberg pronounced reservations about such centers.

Dr. Kestenberg, who has two children, is a director of the Social Center for Parents and Children in Port Washington, L.I., and

associate professor of psychiatry at Downstate Medical Center.

"A child can sense the tension in a working mother and it breeds anxiety," she said. "A mother usually drops off her child at a day care center on the way to work, often in a rush. That evening, very tired, she picks up the child and has to dash home for grocery shopping, dinner and housework. What benefit can this pressure have for a child?"

It's the early years—the pre-3 years—that worry the doctors. They agree that for an infant, day care has more cons than pros, with perhaps the greatest peril being the possibility of long-term psychological damage.

"It's best for a child's development that he or she learn to trust one person and identify with one person in the early years," Dr. Laskin emphasized. "Otherwise, as a teenager, the child may trust no one. Teen-age character problems are influenced by the fact that a child did not learn strong values and feelings for others as an infant."

Dr. Galenson said giving a child the security of living-room "landmarks" is vital.

"I've seen infants who were cared for away from their homes begin having trouble eating and sleeping," she said. She added that she suspects that many physical illnesses common in children in group situations are rooted in fear and anxiety.

The Einstein child development specialist said she also believes that an infant placed with numerous others in a center may react badly to the sheer numbers of the group and that in later life this may carry over into an inability to adapt to group situations.

Few psychiatrists are as strongly opposed to day care centers as Dr. Kestenberg, who said she is bothered by forcing an infant to adapt to two different worlds, the familiarity of home and the day care center.

"Day care can result in permanent damage to an infant's emotional development," she insisted. She said she feels the damage is less permanent in a child above 3 years of age, but still warns that day care may be dangerous for older children.

Dr. Meyers, on the other hand, said she feels most children can adapt easily enough to the shift from a home to a center environment. The important thing, she and the other doctors insist, is that definite standards should be sought.

The most important considerations, the doctors hold, are the quality of personnel ("warm, affectionate teachers . . . not likely to be just out for a job"); the size and time span of the center ("Small groups are best . . . a half-day program . . . permits the child more time to get to know his mother"); the number of rest periods ("Certainly there should be toys, music and games, but . . . a child needs time to rest and indulge his reveries"); and age grouping (by age most of the day, but intermingling at times to allow younger children "some chance to learn from their elders").

For some mothers, finding a day care center that meets their standards may be impossible, or they may have hesitations about enrolling their child in a center. Then what?

Dr. Kestenberg suggests an Israeli kibbutz-type center where a mother works nearby and comes in periodically during the day to visit and care for her child. Another approach, she said, would be for the Federal Government to subsidize a mother for child care duties in cases where she cannot otherwise afford to stay home.

Dr. Galenson suggests the alternative of a family member who can attend to a child in its own home or, for infants, family day care. (Under the family day care system, one trained child-care specialist takes several children into her home for half- or full-day periods.)

And both Dr. Meyer and Dr. Laskin stress the value of the "extended family." They said they feel an aunt, grandmother or other rela-

tive can best care for a child and, in fact, strengthen a family unit.

But day care for the visible present at least appears to be the only choice for most working mothers. And while the centers may pose many problems to family life, Dr. Galenson holds that "we should have day care centers for mothers who need them." And, to make them better, she added, an injection of Federal funds should be considered a priority item while a search goes on for a more adequate, satisfactory substitute.

GOLDEN YEARS FOR THE ELDERLY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. EILBERG. Mr. Speaker, during the past few years, the country took major steps toward meeting the needs of our elderly citizens. Programs had been established and funds made available to provide much needed services for persons on limited incomes. These retired couples and individuals finally had some hope for more than a meager existence during what are supposed to be the "golden years."

During the campaign, the President promised to increase these benefits and to do even more for the elderly. He even took credit for increasing social security benefits when, in fact, he had fought these increases until the last minute.

Unfortunately, he has reneged on all of these promises, and in fact is drastically cutting back on services to the elderly.

At this time, I enter into the RECORD an article in the Philadelphia Bulletin which details this situation:

BULLETIN NEWS ANALYSIS: NIXON RENEGES ON VOW TO EASE LOT OF ELDERLY

(By Linda J. Heffner)

WASHINGTON.—Last year, about seven months before the election, President Nixon said of the nation's elderly:

The best way to help people in need is not by having government provide them with a vast array of bureaucratic services but by giving them money so they can secure needed services for themselves."

Now, four months after the election, Mr. Nixon is whistling a different tune and trying his best to cut deeply into the meager budgets of older Americans.

Recently by a vote of 329 to 69, the House passed a bill authorizing \$1.4 billion over the next three years to continue numerous programs to relieve the poverty and boredom of the elderly and to work for an increased use of their skills.

The President is now expected to veto the bill just as he did a similar bill last year.

PREVIOUS VETO

Last year's vetoed bill was for \$2 billion. It included a \$150 million job training program for the elderly which the Administration opposed. Although that has been eliminated from this year's bill, a \$250 million senior citizens corps for community work, also opposed by Mr. Nixon, is still included.

"There's very little chance that the President is going to have a change of heart this year, especially since the election is over," said one Capitol Hill spokesman instrumental in moving the bill through the Senate last month.

The story of another Nixon broken promise

is not a new one, but it affects, the elderly in a unique way.

As one Senate spokesman puts it, they are "virtually helpless," since they are so widely dispersed, with little means of communication among themselves, and having neither the money nor the organization to mount a protest in Washington.

Nelson H. Cruikshank, president of the National Council of Senior Citizens, the largest and most effective lobbying group for the elderly, said people are slowly awakening to the problems Mr. Nixon has posed for them.

The biggest stopgap, he explained in an interview, is the lack of communication.

Although his council distributes a newsletter to its 3,000 clubs, he says "not nearly enough" senior citizens know what they face.

Mail protesting the Nixon proposals on increased Medicare costs is plentiful, but Cruikshank admits it is primarily feedback from the newsletter and does not indicate a widespread dissatisfaction with plans contained in the presidential budget.

COSTS TO RISE

The 70-year-old council president said most of the elderly simply are not aware of the proposals.

Before the election, Mr. Nixon said he would ask Congress to abolish the \$5.80 monthly premium charge for Medicare Part B (doctor) insurance.

Now he proposes to keep the charge—due to rise to \$6.30 July 1—while cutting deeply into Medicare benefits.

The Administration also proposes to:

Make Medicare patients pay actual room and board charges for the first day of hospital care, plus ten percent of all subsequent charges. Medicare patients now pay only \$72 for the first 60 days of hospital care.

Raise initial out-of-pocket payment under the doctor insurance part of Medicare from \$60 to \$85 and increase the patients' additional out-of-pocket charge from 20 percent to 25 percent of the remaining doctor expenses.

The Administration argues that such moves would encourage people to use less expensive hospitals and, in fact, to use hospitals less often.

The elderly, however, seldom can shop around for hospitals. They usually go where their doctors send them.

In addition, the argument is a deterrent to the whole concept of preventive medicine since it tells the aged basically to hang on and only go to the hospital as a last resort.

"Just think" said Cruikshank, "smart guys like Caspar Weinberger (secretary of health, education and welfare) actually say things like that with a straight face."

While calling the Nixon proposals a "shameful repudiation" of his promises, Cruikshank admitted that "from the beginning there was something phony about dropping Part B costs."

During the campaign, however, Cruikshank said the Nixon forces put out "lots of propaganda," including a reelection committee pamphlet which gave the impression the Part B charge actually had been abolished.

MISLEADING NOTE

Cruikshank maintains that a major influence on the majority of older Americans voting for Mr. Nixon was a note attached to 28 million Social Security checks last July pointing out that the 20 percent rise in their payments was due to a bill signed by the President.

In actuality, the President opposed the increase and only approved the legislation because it was attached to a debt ceiling bill he wanted to sign.

"It was a telling piece of propaganda," said Cruikshank, the retired director of the AFL-CIO Social Security department.

Although sympathetic Democrats on Capitol Hill had warned Cruikshank and others

that Mr. Nixon would use the rise for his own benefit, the council president said there was no excusable way to stop the extra \$6 billion in benefits for the aged just because the President would take credit.

"We had to ask ourselves," he said, "are we representing older people or are we playing politics?"

ADMINISTRATION BACKS "911"

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. YOUNG of Florida. Mr. Speaker, on January 3, along with 17 cosponsors, I introduced H.R. 1308, a bill that would establish a nationwide emergency telephone number—911. With this easily remembered number, a person could call for police, fire, rescue or other emergency assistance, without confusion and regardless of where he is.

The Nixon administration, I am pleased to note, now has added its support to this vitally needed emergency communications system, and established a Federal Information Center on 911 within the Office of Telecommunications in the Department of Commerce. This office will assist State and local communities in establishing a 911 service.

The Bell System and the Independent Telephone Association have given strong support to the 911 concept and implemented it in 250 communities which have requested the emergency number. The advantages of 911 are now available to about 20 million Americans, and daily this quick and convenient number is proving its worth.

However, 911 should be available to all Americans no matter where they are. In a tourist area such as my home State of Florida, for example, millions of visitors would know how to secure emergency assistance without having to fumble through a telephone book.

Congress should act promptly to adopt H.R. 1308 and implement 911 nationwide.

For the consideration of the Congress, I am making available the bulletin of Clay T. Whitehead, Director of the Office of Telecommunications Policy, Executive Office of the President, on Emergency Number 911. The bulletin follows:

OFFICE OF

TELECOMMUNICATIONS POLICY,

Washington, D.C., March 21, 1973.

Subject: National Policy for Emergency Telephone Number "911"

1. Purpose. This Bulletin sets forth the policies that will be followed by executive departments and agencies with respect to the development and improving of emergency communications using the emergency telephone number 911. It provides information and guidance to assist state, local and municipal governments in implementing this emergency communications program expeditiously.

2. Background. A clear need that all citizens be able rapidly to summon help in an emergency situation has long been recognized. A communications system which is immediately available and easy to use can help to meet this need. A person should be able to call for police, fire, rescue, and other emergency aid promptly and without confusion, and without regard to his familiarity

with a particular community. A system which is uniform nationwide will enable a citizen to do this.

For several years, numerous governmental commissions, legislative bodies, private organizations, and citizen groups have recommended the establishment of a single, nationwide emergency telephone number to meet this need for improved emergency communications. The 911 concept provides a single number which is easy to remember and to use. Moreover, the 911 system encourages those providing communications services and those providing emergency assistance to coordinate their efforts and facilities, and work together. The United States Independent Telephone Association and the Bell System have supported this concept, and have taken steps to implement it. Since 1968, over 200 communities with a combined population of 20 million have adopted and demonstrated the value of the 911 emergency telephone number concept.

The lack of a clear focal point in the Federal Government, and the absence of an overall national policy in this area, however, has slowed implementation of the 911 concept in many other communities. This Bulletin is issued to clarify the Executive Branch's position supporting the 911 concept as the means to achieve a single nationwide emergency telephone number.

3. Policies and Planning. These are important points which should be borne in mind by all cognizant agencies with respect to the implementation of 911 service nationwide:

(a) It is the policy of the Federal Government to encourage local authorities to adopt and establish 911 emergency telephone service in all metropolitan areas, and throughout the United States. Whenever practicable, efforts should be initiated in both urban and rural areas at the same time.

The primary purpose of 911 emergency telephone service should be to enable citizens to obtain law enforcement, medical, fire, rescue, and other emergency services as quickly and efficiently as possible by calling the same telephone number anywhere in the Nation. A secondary objective should be to enable public safety agencies to satisfy their operational and communications needs more efficiently.

(b) Responsibility for the establishment of 911 service should reside with local government. This is the level of government closest and most responsive to the beneficiaries of this service, and at which the need for most emergency services arises. At the local level the coordination of the responsibilities and functions of public safety agencies can best be accomplished, and consideration of special local needs undertaken most effectively. Since the areas served by telephone company central offices generally are not coincident with local political and jurisdictional boundaries, planning and implementation of 911 service should proceed through the cooperative efforts of all affected local agencies and jurisdictions.

The character of 911 service is essentially local and intrastate; Federal regulation or legislation in this area, accordingly, is not appropriate. States are encouraged to assist localities in their planning and implementing of 911 service.

(c) The cost for basic 911 telephone service arrangements should not be a deterrent to its establishment. The direct cost to local governments generally includes only the charge for local lines and terminal equipment needed to answer and refer 911 calls.

Planning and implementation of basic 911 service should not be deferred pending evaluation of proposed additions to basic 911 service. A number of 911 service enhancements (automatic call routing to particular jurisdictions and agencies, automatic number identification, etc.) have been proposed. These service enhancements should be con-

sidered with regard to their cost-effectiveness. Local authorities should, however, proceed to implement basic 911 service, to which enhancements can subsequently be made if desirable.

4. *Federal Information Responsibility.* A Federal Information Center on the emergency telephone number 911 will be established within the Office of Telecommunications in the Department of Commerce, Washington, D.C. 20230. The information to be available will include material on the techniques and methods of service and a comprehensive handbook on 911. Advice and assistance will be available through this center to local governments wishing to initiate 911 service in their communities. The center will also act as a clearinghouse for information concerning Federal assistance programs that may be available for the establishment of basic 911 service.

The availability of this Information Center on 911 service should be considered by Federal departments and agencies which have responsibilities in this or affected fields.

CLAY T. WHITEHEAD,
Director.

A FARMER'S VIEWPOINT ON THE RISING COST OF FOOD

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. TAYLOR of Missouri. Mr. Speaker, Congress is now deliberating over ways to alleviate the soaring costs for agricultural products. We are hearing the voice of the housewife who is faced with the responsibility of feeding a family on a limited budget. As we contemplate the plight of the American housewife, I submit, for consideration, the suggestions to housewives from a farmer, Mr. Joyce E. Bartelsmeyer of Mount Vernon, Mo. I found Mr. Bartelsmeyer's suggests to be very thought-provoking and worthy of congressional attention. His remarks follow:

THE ANSWER TO THE HOUSEWIFE'S FOOD PROBLEM

(By Joyce E. Bartelsmeyer)

I want to make a suggestion to you housewives about the food prices in America. There has been a shortage of all resources in the United States. We are going to send 1,000 calves a month to France. If you think our food prices are high here in America go to some of the other countries and price meat there; for example, \$3 a pound in France, \$4 a pound in Italy, and \$5 a pound in Japan. My suggestion to the people of America would be to cut down on their cigarettes and alcoholic beverages and buy more nutritional foods for their bodies. This just might cause them to live a little longer and have a few less doctor bills.

I have been a farmer for 25 years and lost money for a number of years on the farm and it is not too good yet. Our milk is high enough, but our feed prices are rising considerably to where it is cutting our profit down; therefore, we are not making the profit the city people think we are. I suggest that you look into the matter more before you speak. Visit some of these farmers, talk to them, see how many debts they have, how many hours they labor a day, and how much interest they pay a year. I would like for you to have a bargain in food, but I cannot see any way. We have given you a bargain for the last 30 years. That time has ended. Before you make these statements, I would like for you to investigate the farm situation and visit the farmers.

FREE FLOW OF INFORMATION ACT

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. DRINAN. Mr. Speaker, I have filed today a bill to guarantee the free flow of information to the public.

Subcommittee 3 of the Judiciary Committee, of which I am a member, began consideration of this matter when hearings on the newsman's privilege or shield laws were opened on September 21, 1972.

After many weeks of testimony both in the last Congress and in the 93d Congress, I find that I have come to the conclusion which journalists and many others have; namely, that there should be an unqualified all-inclusive law which would give to individuals who are professional disseminators of information that complete freedom of the press which is guaranteed in the first amendment.

I reproduce here for the benefit of my colleagues the bill which I have filed today:

H.R.—

A bill to guarantee the free flow of information to the public

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Free Flow of Information Act."

SECTION 2. [Definitions.]

As used in this Act:

(1) "During the course of his professional activities" does not include any situation in which the claimant conceals the fact that he is a professional disseminator of information. The term does not include any situation in which the claimant participates in any unlawful activities unless the claimant's participation consists solely of observing the conduct of others or receiving documentary or other information.

(2) "Give evidence" means testify, provide tangible evidence, submit to a deposition, or answer interrogatories.

(3) "Information" includes but is not limited to documents, expressions of opinion, films, photographs, sound recordings, and statistical data.

(4) "Professional disseminator of information" means a person who either,

(1) at the time he obtained the evidence that is sought was earning his principal livelihood by, or in each of the preceding three weeks or four of the preceding eight weeks had spent at least twenty hours engaged in the practice of, obtaining or preparing information for dissemination with the aid of facilities for the mass reproduction of words, sounds, or images in a form available to the general public, or

(2) obtained the evidence that is sought while serving in the capacity of an agent, assistant, or employee of a person who qualifies as a professional disseminator of information under subparagraph (1).

(5) "Source" means a person from whom a professional disseminator of information obtained evidence by means of written or spoken communication, personal observation, the transfer of physical objects, or otherwise. The term does not include a person from whom another person who is not a professional disseminator of information obtained evidence, even if the evidence was ultimately obtained by a professional disseminator of information.

SEC. 2. [Privilege to Withhold Information.]

A professional disseminator of information

is privileged to decline to give evidence concerning the source or contents of information that he obtained during the course of his professional activities if he states under oath either

(1) that the information in question could originally be obtained only by reaching an understanding with the source that the contents of the information or the identity of the source would not be disseminated to the public and would not be given in evidence in any official proceeding except under compulsion of law, or

(2) that serious harm to a particular ongoing disseminator-source relationship is likely to result if the contents or source of the information is required to be disclosed.

SEC. 3. [Appeals.]

A claim of privilege under this Act shall not be denied on appeal unless the appellate court independently determines on the basis of the trial record that the claimant is not entitled under the provisions of this Act to decline to give evidence.

SEC. 4. [Burden of Proof.]

In all disputes concerning a claim of privilege under this Act, the claimant of the privilege has the burden of proving by a preponderance of the evidence that he qualifies as a professional disseminator of information to the public and that he obtained the evidence that is sought during the course of his professional activities.

SEC. 5. [Waiver.]

The privilege provided by this Act may be waived by the professional disseminator of information whose evidence is sought or by the source of the evidence. The source waives the privilege only by appearing in person during the course of the proceeding for which the evidence is sought and describing the facts concerning which the professional disseminator may be required to give evidence. When either the professional disseminator of information or the source waives the privilege with respect to particular facts, the professional disseminator of information may be cross-examined on the evidence he gives concerning those facts. A professional disseminator of information or a source does not waive or forfeit the privilege by disclosing all or any part of the information protected by the privilege to the body that is conducting the proceeding for which the evidence is sought, to any other tribunal, to the public, or to any other person.

ANNIVERSARY OF THE GREEK REVOLUTION

HON. ELLA T. GRASSO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mrs. GRASSO. Mr. Speaker, on Monday we marked the 152d anniversary of the Greek Revolution which led to independence for the Greeks from the oppression of Ottoman rule.

From then until the present military regime seized power 145 years later, the Greek people flourished in a nation which derived its strength from the principles of freedom and democracy that we Americans too often take for granted. Our own Nation was founded on those same great principles that are the timeless gift of ancient Greek heritage. Americans long ago rejoiced with the Greeks when victory enabled their people to practice at long last the teachings of ancient Greek philosophy.

A patriot flag raised in the village of Kalavryta on March 25, 1821, began the 8-year struggle for liberty. Great

courage matched by an intense desire to be free led the Greeks to final victory, culminating in the Treaty of Adrianople and the London Protocol of 1830. The people of a young nation in the New World, the United States, and the people of an ancient land new to freedom, Greece, shared a deep friendship built on a common goal: to insure the strength and growth of democracy.

For three-quarters of a million Americans of Greek descent, March 25 is a special day of pride and honor. All Americans join with them in looking forward to the day when freedom and democracy will again prevail in that troubled nation.

OBSCENE RADIO BROADCASTING— VIII

HON. JAMES V. STANTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. JAMES V. STANTON. Mr. Speaker, over the last several weeks I have inserted into the RECORD several items relating to controversial broadcasting by Station WERE in Cleveland, Ohio, and on how this appears to be part of a national trend in programing by radio.

Members of this body who have a similar problem in their own congressional districts might wish to check the RECORDS of February 5, 6, 7, 8, 21, 26 and 28 for material leading up to the insertion I am making today.

The latter is an exchange of correspondence between me and the Department of Justice, which is self-explanatory. For purposes of clarity, I am inserting these letters in the RECORD in chronological order, starting with my original communication to the Attorney General of the United States and concluding, finally, with the most recent letter I have received from his office, dated March 23, and my reply to that, which is dated today. The letters follow:

DEPARTMENT OF JUSTICE,

Washington, D.C., March 2, 1973.

HON. JAMES V. STANTON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: Your letter to the Attorney General of February 7, 1973, concerning offensive radio transmissions has been referred to this office for reply.

We are presently compiling statistical information concerning the number of prosecutions arising under 18 U.S.C. 1464. Upon receipt of this information, we will correspond with you in detail concerning the subject matter of your letter.

Sincerely,

HENRY E. PETERSEN,
Assistant Attorney General.

DEPARTMENT OF JUSTICE,

Washington, D.C., March 23, 1973.

HON. JAMES V. STANTON,
House of Representatives
Washington, D.C.

DEAR CONGRESSMAN: This is in further response to your letter of February 7, 1973, to the Attorney General concerning certain programing on Radio Station WERE, Cleveland, Ohio.

The statistical information referred to in

my letter to you dated March 2, 1973, concerning this subject, has now been compiled. United States Attorneys are required to furnish the Department with caseload reports on a regular basis. According to the information we have received, there have been a total of 15 defendants involved in cases arising under 18 U.S.C. 1464 from and including Fiscal Year 1969 through January, 1973. Cases involving six defendants were disposed of on pleas of guilty or *nolo contendere*; seven defendants were convicted. Three convictions were affirmed on appeal and one was reversed; and cases against two defendants were dismissed.

The paucity of cases arising under this statute illustrates the difficulties involved in enforcing the Federal obscenity laws. As these laws have been interpreted by the Supreme Court, material, to be obscene, must (1) have as its dominant theme an appeal to a prurient interest in sex, (2) offend contemporary community standards in the representation of sexual matters, and (3) be utterly without redeeming social value. Consequently, speech which has as its dominant theme a discussion of an issue or presentation of an idea, however controversial or offensive that idea may be, is protected by the First Amendment against a charge of obscenity. Needless to say, most radio broadcasting falls into this category.

We have reviewed certain investigative reports prepared by the Federal Bureau of Investigation concerning the activities of Radio Station WERE. While certain of that station's programs focus upon discussion of sexually oriented topics, we do not believe the programs could be considered violative of 18 U.S.C. 1464 for the reasons set forth above. Nevertheless, because these programs are certainly controversial and undoubtedly offensive to some individuals, we are requesting the Federal Bureau of Investigation to furnish the Federal Communications Commission with the results of its investigation of this station so that agency may determine whether or not this programing is in the public interest.

I trust this satisfies your inquiry. If I can be of further assistance, please contact me.

Sincerely,

HENRY E. PETERSON,
Assistant Attorney General.

AID FOR NORTH VIETNAM

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. TREEN. Mr. Speaker, I have received many letters from concerned constituents on the question of postwar aid to North Vietnam. And I must say I can understand their concern.

As President Nixon pointed out in a recent press conference, it takes two to heal wounds; it also takes two to make peace. I have yet to see signs from North Vietnam indicating that the leadership of that country expects the present settlement to lead to an enduring peace.

A recent editorial in the New Orleans Times-Picayune directs itself to the question of aid to North Vietnam and I believe it raises some pertinent points.

I am inserting, therefore, the editorial in the RECORD at this time so that these thoughtful comments can be shared with my colleagues:

[From the New Orleans Times-Picayune,
Feb. 3, 1973]

AID FOR NORTH VIETNAM

With Presidential adviser Henry A. Kissinger off to Hanoi later this month to discuss postwar financial aid to North Vietnam, anticipatory resistance-rumbles in Congress, and President Nixon's press conference argument for reconstruction aid, it is clear that any kind of "Marshall Plan" for North Vietnam is soon going to be a hotly debated issue.

It is not a new idea. Indochina-wide economic development aid was the rejected carrot once offered by President Johnson instead of the stick of more war. And American aid to former enemies has been so generous that no end of *mots* have been coined on the desirability of losing a war with us.

American aid to Germany and Japan after World War II is not the precedent for the present case, however. We gave it not to the wartime governments but to Allies-approved governments that took their place after their utter defeat. There was no aid to North Korea after that conflict, but it is still technically at the cease-fire stage with no expectation, as in Vietnam, of a formal settlement.

The President seems to be basing his intentions not on precedent but on projection. He seems to see it as something of a whole carrot patch the North Vietnamese would be so busy tending they would have no time to study war.

Thus aid will offer "incentives to peace," arranging for Hanoi to "have a tendency to turn inward to the works of peace rather than turning outward to the works of war." Aid will be, for us, "a potential investment in peace."

We cannot hazard a guess on whether this will actually work out that way. The men in Hanoi, so long determined in poverty, may be no less in relative affluence. And if they continue their attempts to conquer South Vietnam, by fair means or covert foul, could we continue aid? And if they do take over the south with the post-American withdrawal speed some foresee, what then?

As the financial "peace dividend" to be provided by the end of war spending dwindles and attention is centered on domestic programs war critics have long charged were short-changed because of the war, it is going to be hard to argue that aid should go to North Vietnam, whether as guilt money, humanitarianism or "peace investment."

TRIBUTE TO PAUL WINCHELL

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. REES. Mr. Speaker, we are all aware of the contribution Paul Winchell has made to the world of entertainment. Jerry Mahoney is known to every American child through the magic of television, and Winchell's acting talents are displayed on the screen, over the radio, and on television. Just his voice is familiar to many, as Tigger, for example, in the delightful Walt Disney Winnie the Pooh full-length cartoon features.

But little is known of Paul Winchell's magnificent contribution to medical science, and it is on this phase of his illustrious career as a humanitarian that I wish to direct my remarks.

Paul Winchell's inventions have do-

nated much to one of California's chief industries, entertainment, for he created innovative techniques for making dummies move and for animating films. But he has also entered the more universal realm of medicine by designing and patenting a mechanical heart. On July 16, 1963, he was awarded U.S. Patent No. 3,097,366 for this invention. When the American Medical Association and the American Heart Association turned down the opportunity of developing his invention, because he did not have a working model, he filed his patent away and forgot about it. He simply did not have the funds to pursue the matter further.

Then, almost 10 years later, Winchell was contacted by Dr. Willem J. Kolff. Dr. Kolff is not very well-known outside the medical community, yet he is the man who invented the first practical artificial kidney, the first artificial lung used in human surgery, and the first heart assistance pump. As head of the Artificial Organs Division at the University of Utah College of Medicine, Dr. Kolff had been working on an artificial heart since 1957. Coming across Winchell's patent, Dr. Kolff realized that all of his research was dovetailing with Winchell's original design.

The outcome of their meeting was the following letter sent late last year to all those involved:

This letter is to inform anyone concerned that the University of Utah and Mr. Paul Winchell have entered into an agreement dated January 26, 1972, for a joint effort in artificial heart research. It has been agreed that Mr. Winchell and Dr. W. J. Kolff of the University of Utah have independently developed artificial hearts based on the same principles as described in a patent applied for by Winchell in 1961.

By the agreement mentioned, Winchell has assigned his patent to the University and the University will make available to him access to University laboratories and hospital facilities for joint efforts in further research. Also by this agreement, it is our belief that Mr. Winchell can make positive contributions to the artificial heart as demonstrated by his prior research and patent.

Although Winchell is not a medical doctor, he has been allowed to scrub in and assist in the operations due to the fact that the experimenting is done on calves, and not on humans.

In the first week of March 1973, the medical team made a breakthrough, one that now assures eventual success for implanting the artificial heart in a human. It is for this reason, and the fact that Paul Winchell officially donated his patent to the artificial organs division of the University of Utah College of Medicine on Thursday, March 22, 1973, that I feel it is a fitting time for this legislative body of the country he has served so well to pay him official tribute.

TRIBUTE TO COL. ROBERT CRANSTON

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. REES. Mr. Speaker, I rise to pay tribute to Col. Robert Cranston, com-

mander of the American Forces Radio and Television Service in Hollywood, on his retirement from the Army after 30 years of active duty.

When servicemen and women overseas hear their favorite recording, or view a popular television program on an AFRTS radio/TV outlet, it is largely due to behind the scenes efforts by Colonel Cranston. Through discussions with leading executives of the entertainment industry, he has made major breakthroughs in securing the release of first-rate, current broadcast fare for airing by 166 radio and 55 television stations on land and ship around the world.

Now serving his second tour as chief of the AFRTS nerve center, Colonel Cranston is viewed with esteem by his colleagues in the Pentagon. But perhaps more impressive is the high regard in which he is held by key figures in the Hollywood professional community.

He is a rare man—compassionate and concerned, and yet tough enough to cut through redtape in order to get quality programming shipped overseas. I congratulate Colonel Cranston for all that he has done. But I am confident that his civilian career will prove fruitful as well. Thank you, Colonel Cranston, and the best of luck.

THE PRAEGER REPORT ON THE WEST FRONT OF THE CAPITOL

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. ROUSH. Mr. Speaker, in view of the fact that the House of Representatives will probably soon be asked to decide the fate of the west front of our Capitol Building, I believe that the following letter which introduced the report to the then Acting Architect of the Capitol from the firm of Praeger-Kavanagh-Waterbury on that subject would be instructive.

The Praeger firm of New York City was asked to perform a feasibility study to determine whether in fact the west front central wall of the Capitol could be restored, and to estimate the cost of such restoration. I am unable to include the complete report on this matter because of its length, but I refer those who would like to read the report in its entirety to the entry of Senator PROXMIRE in the CONGRESSIONAL RECORD, volume 118, part 7, page 9039.

The letter follows:

PRAEGER KAVANAGH WATERBURY,
ENGINEERS—ARCHITECTS,
New York, N.Y., December 21, 1970.

Re: Restoration of the West Central Front U.S. Capitol, Washington, D.C.

Hon. MARIO E. CAMPIOLI,
Acting Architect of the Capitol, U.S. Capitol,
Washington, D.C.

DEAR MR. CAMPIOLI: Submitted herewith is our report on the feasibility of restoring the west central front of the United States Capitol. Included are descriptions of our investigations, analyses, cost estimates and conclusions.

Prior to undertaking the investigation of the existing condition of the wall, we held discussions with you and your associates

concerning various details of your experience related to construction and maintenance of the Capitol. We examined photographs, drawings and sample materials of the wall; made a detailed inspection of the interior and exterior of the structure, and carefully read and studied the reports of Thompson & Lichtner and Moran, Proctor, Mueser & Rutledge.

We also studied histories of the construction of the Capitol and the major changes made over the years, the printed deliberations of the Commission for the Extension of the U.S. Capitol, the reports in the Congressional Record concerning the project, and numerous other historical documents.

As part of our study, a detailed structural analysis was made of the walls and floor systems. Stresses in the walls and other component parts of the building, as well as in the foundation soils, were determined.

In addition, plans and specifications were prepared, proposals were invited and a contract was awarded to perform on-site tests of various techniques to strengthen and repair the walls. This research work included drilling holes into the exterior wall; injecting materials into these holes to fill voids, using neat cement, sand cement, epoxy and monomer grouts; and drilling test cores of the grouted walls. The work also included removing exterior paint from typical wall areas and applying stone preservatives. Test borings were made and samples of soil adjacent to the wall were recovered for laboratory testing.

The contract for this exploratory work was awarded to Layne-New York Company, Inc., and work progressed over a period of 10 weeks. During this period our office supervised the work with a full-time resident engineer and assistant. Senior personnel from our New York office made frequent visits to the site to observe and direct the work. One of our staff architects visited England to research restoration projects there.

The firm of Woodward-Moorhouse & Associates, Inc., was retained to conduct laboratory tests of soil samples, and the National Bureau of Standards prepared laboratory tests of grouts, stonework and preservatives. Mr. A. J. Eickhoff and Mr. Jay S. Wyner were consulted on painting and paint removal techniques. Mr. Norman Porter, Geodesist, was retained to prepare a detailed survey of control points which had previously been set in the west wall, and Mr. Thomas W. Fluhr, Engineering Geologist, surveyed the Aquia Creek Quarry and reported on both the quality of stone and the feasibility of developing the quarry as a source of stone for restoration work.

Our studies indicate that while the Capitol is over one hundred and fifty years old and has been exposed to many adverse conditions, it survives in relatively good condition, attesting to the excellence of its builders and to the concern of those responsible for maintaining this, the national monument to our Republic.

Based upon a detailed investigation of the west front walls, we conclude that under conditions indicated in the report, restoration of the west central front of the Capitol is feasible. Further, the restoration can be accomplished within the general guidelines set forth by Congress as a directive to the Commission for Extension of the Capitol.

EXECUTIVE ARROGANCE

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. HARRINGTON. Mr. Speaker, I have refrained from saying much about

the Watergate caper because it seemed that the news stories carrying almost daily revelations reflecting on the corruption of our political process were enough to impress upon the public the seriousness of the threat to our Government. Yet the public, and the Congress despite its protestations, have remained strangely quiescent. Today, I am inserting two articles, by Mr. Joseph Kraft and Mr. Marquis Childs, printed in the Washington Post, which make important points about the implications of the Watergate case. These points must be kept in mind as the Congress considers legislation basically affecting its role in Government.

First, the Watergate case graphically demonstrates the contempt with which the President views the other branches of Government—both the Congress and the courts. His advisers have been directed not to say anything about the conduct of the public's affairs, under the guise of a novel doctrine called by some "Executive privilege" but in reality a new idea about the inviolability of the confidences of those in the executive branch who conduct the public's business. Even when perchance, some of those advisers are obliged to appear, they have been directed to lie. We have seen the spectacle of the administration's nominee for Director of the FBI stating that, in effect, he regarded lying as sufficiently within the normal course of business that he continued to pass the most sensitive information to that Presidential adviser, whom he knew had lied to him. It almost appears that the Congress and the courts were some foreign powers, not coequal branches in the co-operative business of governing this country.

The implications for the structure of Government are alarming. The treatment of issues basically affecting the role of Congress will soon be considered by us, and it will then be important to remember that the executive branch is not composed of persons who have any sense of the traditional values of the constitutional scheme of government. "Executive privilege" is one example. As asserted by the Executive, the privilege is not what it has been believed, but a novel theory under which it has spread like an oil slick to blanket all those in any way connected with the administration. Those who are thought to come within it—who feel their personal knowledge is more important than the public's business—should be treated as personal consultants: they should be cut from the public payroll. The Congress could do that, if it would.

The second point is one that I raised recently before the House Judiciary Committee on newsmen's privilege bills. The administration is preoccupied with control over information. Of course, one can expect them to be chary of revealing information about such embarrassing matters as the Watergate case, regardless of the public's right to know. The attitude of hostility toward public knowledge, however, has been carried to extreme lengths in this case. It reinforces concern over the administration's evident fear of criticism from any quar-

ter, and its insistence on political control, direct or inferential, over the flow of news to the public. That attitude bears on shield legislation for news reporters who otherwise would have to depend on the good graces of the Executive, and on broadcast license renewal legislation. It also bears on amendments to the Freedom of Information Act and on protection of information sources for the Congress in the aftermath of the Court's decision in *Gravel* against United States.

When we have to make important decisions on these legislative matters, the evidence of serious and continuing danger to the effectiveness of Congress as a significant factor in the Government cannot be ignored. The steady slide into impotence will continue otherwise; we must care about that. The following articles inserted at this point set forth some of the reasons why time is so significant now:

THE WATERGATE AND THE WHITE HOUSE . .

(By Joseph Kraft)

A flurry of developments has suddenly transformed the Watergate affair from a sideshow to a political bomb that could blow the Nixon administration apart. For the first time suspicion is beginning to gather around the one person almost everybody hoped was not involved—Richard Nixon.

At the outset, to be sure, Watergate seemed pure nuttiness—half-a-dozen dubious characters caught in the act of breaking into Democratic Party headquarters for the apparent purpose of tapping telephones. The freakish character was not much changed when it became known that two of those involved had connections with President Nixon's re-election campaign—James McCord, a former CIA employee who was security chief for the campaign committee; and E. Howard Hunt, another former CIA official who had a White House office.

The case took on a deeper character when The Washington Post disclosed that there was a general Republican fund to penetrate and sabotage the Democratic campaign effort. According to The Post, the White House chief of staff, H. R. Haldeman, and former Attorney General John Mitchell both had access to the fund. One beneficiary was said to be Donald Segretti, a California lawyer hired to undertake the sabotage mission by Mr. Haldeman's chief assistant and President Nixon's appointments secretary, Dwight Chapin.

Even so, sabotage could be laughed off as a kind of prank. The Post's charges were disparaged by Nixon Republicans as the work of liberal Democrats. But there is nothing partisan or prankish about the latest developments.

Consider first the letter sent by Mr. McCord, the security director of the Nixon campaign, as he faced sentencing by Federal Judge John Sirica for his part in the original Watergate break-in. In that letter, McCord stated flatly that "perjury occurred during the trial in matters highly material to the structure, orientation and impact of the government's case."

He said that "political pressure" had been "applied to the defendants to . . . remain silent." He said: "I cannot feel confident in talking with an FBI agent, in testifying before a Grand Jury whose U.S. attorneys work for the Department of Justice or in talking with other government representatives."

Then there is the role of John Dean III, the young lawyer who is the President's counsel. Mr. Dean was assigned by the President to investigate Watergate last summer and emerged with a report that there was no

involvement by any White House staff members.

But there is now evidence that Mr. Dean himself lied to the FBI about Watergate. Acting FBI Director L. Patrick Gray testified to the Senate Committee considering his confirmation as director, that Dean told the FBI he did not know that Howard Hunt, one of those involved in the original Watergate break-in had a White House office.

In fact, Dean had earlier taken into his own possession materials in Hunt's White House office which he acquired by having the safe forced open. Moreover, according to the Los Angeles Times, McCord told Senate investigators that Dean had prior knowledge of the Watergate break-in.

Finally, there is the stand taken by President Nixon himself on testimony by White House officials before a bipartisan Senate committee set up to investigate Watergate. The committee has been eager to question Mr. Dean, and Dwight Chapin, the appointments secretary who resigned after being named in The Post stories.

But their appearance is being blocked by the doctrine of executive privilege. Normally that doctrine is used only to protect confidential advice given the President by his advisers against congressional prying. On March 12, however, the White House threw the "executive privilege" blanket over Mr. Chapin with a statement which extended the doctrine to "former" presidential aides. At his press conference of March 15, Mr. Nixon said of Mr. Dean: "I am not going to have the Counsel to the President of the United States testify in a formal session for the Congress."

What all this means is that the issue is no longer political sabotage by low-level operators. The issue is obstruction of justice by a systematic cover-up at the highest levels. A cloud has been cast over the Justice Department and the FBI. A time honored doctrine—the doctrine of executive privilege—has been perverted.

Moreover, the finger of guilt is no longer pointing merely at persons high up in the administration. It is not merely a matter of Mr. Haldeman, or former Attorney General Mitchell. The man in the middle is now President Nixon.

TIME TO MAKE A PUBLIC ACCOUNTING

Two months ago Richard Nixon was inaugurated for the second time as the 37th President of the United States. After a near-record landslide this was the crown of perhaps the most remarkable comeback in American political history. Everything looked rosy with the President himself predicting for 1973 one of the best years of our lives.

The transformation occurring in these two months is the difference between day and night. With the second devaluation of the dollar and the swift drop in the stock market the economic picture looks far from bright. Inflation is pushing prices to levels not only for food but for almost every item in the household budget so high that consumers are in open revolt.

Most deadly of all is the Watergate scandal. The latest revelation by James W. McCord Jr., one of the convicted defendants in the bugging case, indicates that far more individuals were involved and that every effort was made from close to the top to put the lid on this odorous mess.

Everything The Washington Post reported, as coming from anonymous sources, seems about to be proved out. Repeated denials by the White House and denunciation of the newspaper have been shown to the futile in the attempt to hush up the whole matter. The trial of the seven, as forthright Judge John J. Sirica said at the close, was a farce.

The scandals of the Harding administration were crude money scandals. Warren Harding himself was a bumbling incompe-

tent who had insisted before his nomination that he was unsuited for the presidency. Proved tragically correct he died before the men he had chosen for his cabinet were unmasked as bribe-takers and betrayers of his trust.

In the Truman administration the gift of several deep freezers to one of the President's aides was blown up into a national issue. Under President Eisenhower, poor Sherman Adams was driven out of office because he was found to have accepted a vicuna coat and a rug from an acquaintance with a petition for help from the government.

These, even the Harding scandals, were minor compared to what is coming to light today. They were examples of simple greed. The Watergate scandal and the reported scheme to sabotage Democratic candidates in their primaries was aimed at subverting the political process itself.

Directly related are the shenanigans in gathering in the \$47 million for the campaign to re-elect the President. Merely on newspaper reports the law appears to have been repeatedly violated. If prosecutions do not follow, the Department of Justice may be considered part of the conspiracy of silence.

Of the Republican Presidents of this century no two could be more unlike than Warren Harding and Richard Nixon. Harding's private weaknesses—women, whiskey and poker—contributed to his public downfall as in his amiable way he surrounded himself with dubious friends whose standards were lower than his own.

Mr. Nixon is the soul of probity. In his own private life and that of the members of his family he has sought to set an example to the country of propriety; a counter to the lowering of standards in so many areas of society. This surely contributed to the landslide.

But for all his personal righteousness the time has long passed when it is enough merely to deny that the White House is in any way involved in the Watergate scandal. Stretching the cloak of executive privilege to cover not only present but past members of the President's staff serves merely to feed the suspicion that something really rotten is at the heart of the whole wretched business. Nothing short of a complete and documented disclosure with the President's imprimatur will suffice.

It was all so needless. As the President said in his interview with the Washington Star-News the election was decided the day the Democrats nominated Sen. George McGovern. Why then the amassing of such vast sums of money by sly and highly questionable means? Why the folly of the Watergate and the vicious effort to undermine the Democratic primaries?

DR. WILLIAM J. VYNALEK

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. COLLIER. Mr. Speaker, half a century of service to humanity as physician, teacher, and soldier ended last Sunday when one of my most distinguished constituents, William J. Vynalek, died in Berwyn, Ill. Dr. Vynalek, a resident of Riverside, also in Illinois, was a man to whom one could truly say, "Well done, thou good and faithful servant."

A graduate of the University of Chicago and Rush Medical College, he devoted the remainder of a long life to

the practice of surgery. His service to the people of Chicago's western suburbs was interrupted only by the call to a higher duty, service as a colonel in the Army during World War II.

Doctor Vynalek was chief of surgery at what was reputed to be the largest Army medical facility in the world, the 108th Army general hospital in Clinchy, France. This establishment was sponsored by Loyola University.

Doctor Vynalek's great ability was recognized on both sides of the Atlantic. Not only was he a member of Phi Beta Kappa and Alpha Omega Alpha medical honorary, he was also the first American to become a member of the French Academy of Urology in Paris. Other affiliations included membership on the American Board of Surgery, the American and Chicago Urological Societies, the American College of Surgeons, the American Medical Association, and the Chicago Surgical Society.

Vynalek was one of the founders of MacNeal Memorial Hospital in Berwyn, where he served for a time as chief of surgery and chief of the medical staff. He was also a professor at the Stritch School of Medicine of Loyola University.

As a lifelong resident of the area where this dedicated physician labored, I am familiar with the great efforts that he made on behalf of his patients. Truly the world is a better place because of the untiring service of such men as William J. Vynalek. May his life inspire others to take up the burden that only the passing years compelled him to relinquish.

It is good to know that his family has established the Dr. William J. Vynalek Memorial Lecture Fund at MacNeal Memorial Hospital, thus helping to perpetuate the memory of this great and good man.

ADMINISTRATION SELECTIVE ON WHAT LAWS TO BE OBEYED

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. THOMPSON of New Jersey. Mr. Speaker, we have all, I think, heard it said that the current administration is one which highly prizes law and order. I yield to no one the desire to see that all laws are obeyed and all statutes enforced. However, as the enclosed commentary by Mr. Ralph Nader indicates, it would appear that the administration is selective in what laws should be obeyed and what statutes enforced. I commend to our colleagues Mr. Nader's commentary on the manner in which the administration is treating legal aid agencies throughout the country.

The commentary follows:

RALPH NADER . . . IN THE PUBLIC INTEREST—LEGAL AID AGENCY RIPPED WITHOUT RESPECT FOR LAW

WASHINGTON.—What can Congress do when a government official purposefully and systematically breaks the law, as the acting director of the Office of Economic Opportunity (OEO), Howard J. Phillips, is doing with White House approval?

Ideologically fueled by hatred for government programs to Americans who are poor and helpless, Phillips is pursuing the dismantling or subversion of OEO's legal services program and other OEO activities undeterred by a chorus of objections and charges of illegality from prominent law firms, OEO employees, and both Democratic and Republican members of Congress.

Under the smokescreen of taking politics out of the legal services program and returning control to locally-elected officials, Phillips and his crony-consultants are using every bureaucratic means to restrict and harass the legal services lawyers. This is being done pursuant to turning over the programs to local reactionary lawyers and politicians.

The law and proper procedures are pushed aside with fierce determination. Phillips had hardly gotten into his job on January 31, 1973, when he violated his agency's own regulatory procedures designed to protect legal services grant recipients around the country.

These rules included: (1) 30 days public notice before any changes in grant procedures; (2) notice to grantees of when they will receive funds held up by processing delays; and (3) notice of intent to terminate with reasons and continued funding until opportunity for hearings on termination.

When House Education and Labor Committee members raised these questions before Phillips on February 27, he had no answer and lamely passed the questions to his counsel who embarrassingly tried to gloss over these oversights.

SETS RESTRICTIONS

Now Phillips has retrenched by pursuing the same purpose of undermining legal services through political action and restrictions from his Washington office. Rather than uniformly cutting off funds or not renewing grants, he is placing restrictions which suppress thorough legal representation of the poor and turn the local boards of directors to his ideological allies.

This is precisely what has occurred with the effective Indianapolis Legal Services program. Ignoring the recommendations of local officials, including the mayor's office, as well as reports by local and federal evaluators, Phillips cut a fifth of the program's funding, imposed seven "special conditions" on the program, and turned control of the program over to its local enemies.

The Indianapolis situation shows that Phillips is not concerned with giving local officials more of a say.

OUTSPOKEN ENEMIES

He is concerned with turning legal services over to its outspoken enemies by edict and continuing controls from Washington—at least until the entire national legal services program can be permanently scuttled. The young oligarchs now running OEO also want to destroy the national "back-up centers."

These centers, which are affiliated with universities, conduct research into poverty law relating to consumer, housing, health and other areas and respond to information requests by legal services attorneys.

In turn, these attorneys have served millions of Americans and pioneered in the courts. They have won law-suits against local and state lawlessness and commercial exploitation of the rights of consumers, tenants and workers. It is the stopping of this modest strengthening of the poor against the powerful that Phillips has directed his policies of illegality, deliberate bureaucratic snares, hostility and arbitrary dismissals of OEO employees who would uphold the law.

As acting director of OEO, Phillips' name has not been sent by the President to the Senate for confirmation, as required by law. He will now have to defend against the

charge in court by a group of Senators seeking to remove him that he is holding his very office illegally.

SAIGON'S PRISONERS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. DRINAN. Mr. Speaker, on Friday evening, March 23, a thousand people at historic Faneuil Hall in Boston heard about the intensification of the reign of terror which has come about recently for the political prisoners and the opponents of the government of President Thieu.

Two young citizens of France, M. Andre Menras and M. Jean Pierre Debris, both of whom spent 2½ years in a South Vietnamese prison, told of the 200,000 or more South Vietnamese citizens who are being detained by the Government of South Vietnam simply because they are deemed to be hostile to the present authoritarian regime.

The signatures of 40,000 citizens of Massachusetts protesting continued help to this situation by the U.S. Government were presented to me and my colleague, Congressman JOHN JOSEPH MOAKLEY.

Mr. Speaker, it was precisely the plight of South Vietnamese political prisoners that brought me to South Vietnam 3½ years ago as a member of an American team to investigate this situation. The number of political prisoners at that time totaled about 30,000. That number has escalated sharply.

There is little likelihood that President Thieu will be anxious to release these prisoners. Inevitably they would form political opposition for General Thieu. On the other hand, the North Vietnamese are not pressing for the release of the 200,000 South Vietnamese political prisoners because their presence in the general population of South Vietnam would complicate the political ambitions of the North Vietnamese.

The thousand American citizens present on March 23 at Faneuil Hall in Boston protested the continued funding in huge sums by the U.S. Government of the police state of President Thieu in South Vietnam.

The citizens of Faneuil Hall also expressed the gravest misgivings about the implications of the visit to the United States by President Thieu planned for April 2-5. It was the overwhelming conviction of these Americans that the United States should extricate itself from all intervention in Indochina and that any continued support of the Thieu regime could only result in more disaster for all parties concerned.

A document of 109 pages entitled "Hostages of War: Saigon's Political Prisoners" by Holmes Brown and Don Luce has recently been published by the Indochina Mobile Education Project at 1322 18th Street NW., Washington, D.C. 20036. This devastating document expands on the information which the two French teachers told to the audience at Faneuil Hall on March 23.

Mr. Speaker, I attach herewith for the benefit of the Members of Congress a summary of the situation with respect to political prisoners in South Vietnam. This summary is taken from a document entitled "Saigon's Prisoners" issued by the Indochina Peace Campaign, 67 A Winthrop Street, Cambridge, Mass. 02138. The thrust of this article is that the U.S. Government has organized, financed, equipped and trained the personnel to run Thieu's programs for getting rid of his political opposition. The article follows:

SAIGON'S PRISONERS

The fate of the political prisoners in the jails of the Saigon government has is a major issue of contention in the implementation of the Ceasefire Agreement. The Agreement states:

The question of the return of Vietnamese civilian personnel captured and detained in South Vietnam will be resolved by the two South Vietnamese parties . . . within ninety days after the cease-fire comes into effect. (Article 6).

One of the things that makes this a major problem is the large number of political prisoners held by Thieu. Estimates are as high as 200-300,000. These estimates are based, in part, on the rate of arrest in South Vietnam, which was 14,000 civilians per month since April, 1972 and rising (*Time* magazine, July 10, 1972). The *Far Eastern Economic Review* reported that 50,000 people had been arrested throughout South Vietnam during the first two months of the Spring offensive (July 18, 1972). Over four years ago, in July, 1968, the *Saigon Daily News* reported that there were over 100,000 political prisoners in Saigon's jails.

Who are these prisoners? Why were they jailed? Will they be released?

WHO ARE THE PRISONERS?

General Thieu has ordered the arrest of anyone who is critical of his regime: According to two French schoolteachers who had been arrested by the Thieu government in 1970 and held in various prisons until December, 1972, the jails hold all kinds of people who in any way opposed Thieu, worked for peace, or spoke out against corruption:

"Chi Hoa (Prison) is like South Vietnamese society in miniature. There is everything from former presidential candidates, Buddhist monks, women and children who have never committed any offense, to the most hardened criminals and drug addicts. There are countless children in South Vietnam's prisons. Often a mother is arrested too quickly to find anyone to care for her children, so the children are arrested and imprisoned, too." (*Press Conference, January 2, 1973.*)

Thieu has always sought to jail his political opponents. Right after the presidential election of 1967, Thieu jailed the runner-up in the election, Truong Dinh Dzu for inciting "neutrality." Dzu is still in prison. Since then, most of those who have been in any way outspoken in their criticism of his government have been arrested. On November 11, 1972, Thieu's nephew Hoang Duc Nha, claimed that the Saigon government arrested 50,000 political opponents and killed 5000 (CBS Evening News). The Saigon Ministry of Information reported that the police made 7200 raids against political critics between November 8 and 15, 1972.

THIEU'S LAWS

Under laws decreed by Thieu over the past several years, citizens can be arrested for a wide variety of reasons and held without trial for long periods of time: Most of the decrees are aimed at what Thieu calls "pro-communist neutrality" whereby neutrality is equated with pro-communism.

The *Washington Post* reported on January 18, 1973 that "President Thieu has given his

province chiefs a wide latitude to make political arrests after the coming cease fire and has also empowered them to 'shoot trouble-makers' on the spot." To handle the new arrests Thieu has begun a crash program to increase his police force from its present level of 122,000 to 300,000 (*Le Monde*, September 8, 1972). U.S. government officials confirmed, in an interview before the Ceasefire Agreement was signed, that "Thieu has ordered the arrest and 'neutralization' of thousands of people in the event that cease-fire negotiations with Hanoi are successful . . . The term 'neutralization' can mean anything from covert execution to a brief period in detention." (*Los Angeles Times*, January 1, 1973).

Thieu has not only arrested his non-communist political opposition, but he does not intend to release them. Andre Menras, the French schoolteacher recently released from Thieu's prisons, explained why in his press conference:

"If the Thieu regime is going to have a chance to survive after a cease-fire, they've got to get rid of everyone who has lived in his prisons and who could tell what they've experienced, what they've seen in the camps, especially the Catholic students, the Buddhist monks, who refused military service. Obviously they can't be called 'Communists,' they're from well-known Saigon families, well-known to the upper classes there. It could snowball if they begin to tell what they've lived through, what they've seen, the tortures they've undergone. Because of their religion and their social standing, people will believe them. Thus it is a matter of survival for the Thieu regime to get rid of these people. Also there are some prisoners they haven't been able to break. Even if they've broken their bodies, they've not always broken their spirit." (January 2, 1973)

TREATMENT OF PRISONERS

The Saigon government has ordered systematic use of torture as a policy: The two French schoolteachers are not the only people to have witnessed or spoken out about the treatment given to political prisoners in Thieu's jails. A Saigon judge, Tran Thuc Linh denounced it publicly:

"I have seen with my own eyes persons fastened to benches, into whose mouth and nose interrogators poured sewage water, soapy water and even latrine water until their stomachs swelled to the bursting point . . . I have been eyewitness to the scene of prisoners with bleeding wounds half-carrying other prisoners more battered and bloody than themselves as they emerge from interrogation rooms on their way to their cells or to court." (Publication of the Catholic Movement for the Edification of Peace, Saigon, November, 1972)

THIEU'S PLANS

Despite the provisions in the Ceasefire Agreement, Thieu has no intention of releasing very many political prisoners: He has recently ordered that in the new wave of arrests, "Those arrested are to be charged with common crimes instead of political ones," so that the prisoners will not fall into the category of political prisoners whose release is provided for in the Ceasefire Agreement. (*Washington Post*, January 18, 1973). Many political prisoners were arrested under Decree No. 004/66 by which Thieu empowered himself to imprison anyone "for a maximum period of two years, which is renewable." No specific offense concerning political activity and no trial are necessary. There have also been reports that Thieu is beginning to reclassify some prisoners who were arrested long ago for political activity as common criminals (*Washington Post*, January 23, 1973).

Already the North Vietnamese and the Provisional Revolutionary Government have lodged very strongly worded protests to the International Control Commission claiming that the lives of these prisoners are in great

danger. Their claims appear to be at least partially borne out in increasing number of reports that the Saigon government may be transporting prisoners out to sea and executing them. "Fishermen in the south have noted many bodies floating in the sea near the island of Hon Rai . . . off the western part of South Vietnam." (*Boston Globe*, March 4, 1973).

U.S. GOVERNMENT RESPONSIBILITY

The U.S. government has organized, financed, equipped, and trained the personnel to run Thieu's programs for getting rid of his political opposition: The major program by which Thieu's opponents are killed, arrested and sometimes tortured was called "Project Phoenix" and is now called "F-6." The Phoenix or F-6 program is largely staffed by the U.S. Central Intelligence Agency (CIA) and is directed by 637 U.S. civilian personnel (Hearings on U.S. Assistance, House Foreign Operations Subcommittee, July-August, 1971, p. 242). According to Ambassador Colby, in his testimony before the House Foreign Operations Subcommittee (July-August, p. 183) 20,587 South Vietnamese civilians were killed and 46,695 persons had been imprisoned under Phoenix between January, 1968 and May, 1971. Funds for the program came from American tax dollars—\$732 million for this period according to the U.S. Agency for International Development (AID), Office of Public Safety, through which much of the money is channeled (USAID publication, 1969).

The U.S. government also funds and supervises Thieu's prisons and U.S. corporations have constructed many of his prisons. American tax dollars provide materials and services to the prison system and pay the salaries of six U.S. Public Safety Advisors on loan from the U.S. Federal Bureau of Prisons to maintain security and supervise construction and training programs (Hearings, pp. 225-6). When two U.S. Congressmen were shown the "tiger cages" on Con Son Island where dozens of prisoners were confined in cells that could barely accommodate a few, were periodically doused with lime and fed only small amounts of rice with no salt or water, U.S. prison advisors first protested their ignorance of such facilities but later awarded \$400,000 to the RMK/BRJ (Raymond, Morrison, Knutson/Brown, Root, Jones) American construction combine to build additional "tiger cages" at Con Son Island (Hearings, p. 46).

THE FUTURE

For the future, it appears that the U.S. will continue to finance Thieu's police force and F-6 program despite the Ceasefire Agreement and that this will severely jeopardize the peace: U.S. AID has asked Congress for \$18 million and the Defense Department has asked for roughly twice that much just to train 20,000 of Thieu's police annually, to supply arms and ammunition to Thieu's police, and to pay the salaries of 200 U.S. Public Safety Officers, assigned as advisors to Thieu's police command. Since these men are not in the armed forces, the U.S. government has no plans to remove them. They are part of the 10,000 civilian advisors that the U.S. has kept in or sent to South Vietnam since the Ceasefire (*Washington Post*, February 2, 1973).

Only American aid, in the form of men and money, enables Thieu to continue jailing, holding, torturing and killing political prisoners. Only an end to American aid will see the beginning of the end to these practices. If the aid continues, if Thieu, with our support, continues these policies, then the Ceasefire will surely break down. Already the North Vietnamese and the Provisional Revolutionary government are protesting strongly Thieu's treatment of the prisoners. The Agreement is very weak in that all South Vietnamese are to have full democratic rights; political prisoners are to be released;

there is to be freedom of the press and free elections. How can any of this happen if Thieu continues his policies of jailings?

THE NEW SOCIAL SERVICE REGULATIONS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RANGEL. Mr. Speaker, the newly proposed HEW Social and Rehabilitation Service regulations have awakened the social consciences of concerned individuals and organizations all across this country. Day care groups, working mothers, research centers, and political groups have joined millions of other Americans in protest of the new regulations.

I now submit a letter from the noted educator Kenneth B. Clark, president of Metropolitan Applied Research Center in New York, to Philip J. Rutledge, the Acting Administrator of Social and Rehabilitation Services in HEW. Dr. Clark's eloquent statement represents the anguish and concern of Americans everywhere:

METROPOLITAN APPLIED RESEARCH CENTER, INC.,
New York, N.Y., March 7, 1973.

Mr. PHILIP J. RUTLEDGE,
Acting Administrator, Social and Rehabilitation Service, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. RUTLEDGE: In accordance with the official procedure, comments on the new HEW Social Service Regulations listed in the February 16th *Federal Register* are mandatory at this time. As president of the Metropolitan Applied Research Center, an organization dedicated to the protection of the interest of those groups in our society whose interests are usually ignored or subordinated, the following statements are made.

The new HEW Regulations undermine any possibility of providing quality developmental centers for those children who are the victims of poverty in the United States. It is our understanding that these regulations will act to:

Reduce funding drastically by limiting the States' ability to raise funds, concurrent with a Federal suspension of open-ended matching of state funds;

Minimize breadth of services provided;

Minimize provision for adequate standards for child care;

Restrict provision for local and consumer involvement in program policy and development; and

Restrict eligibility to only the very poor who have registered for work or job training.

Our concern, of course, is with the implications of these regulations. We see them as an international aborting of any attempt to achieve nation-wide comprehensive child care. In limiting day care to the very poor and making registration for work or job training a prerequisite for day care services, the Regulations have the effect of creating forced labor at less than minimum wages and promoting the warehousing of children. They force mothers of small children to choose between giving up their children or giving up their means of support. This is a choice no mother should be asked to make.

Furthermore, they neglect the working poor for they are not eligible for child care, thereby creating a dependency on welfare and an anti-work incentive. Certainly this on its

face is inconsistent with President Nixon's espousal of the value of a "work-ethic" over a "welfare-ethic."

They also undermine the possibility of providing quality child care for anyone, thus denying children of a basic right to quality care and development, and they negate any attempt to achieve integrated education from the beginning level of early childhood education.

Regulations which have such devastating effects must be amended. It is incredible even to think of the possibility that in the 1970's our government will resort to using the children of our nation as a means of controlling the poor.

Sincerely,

KENNETH B. CLARK.

A SEED WAS PLANTED IN PEORIA

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. MICHEL. Mr. Speaker, an editorial entitled "A Seed Was Planted in Peoria" appeared in the March 13, 1973, edition of the Peoria Journal Star addressing itself to the problem of proper and tasteful broadcasting policies via the television networks and the efforts of local stations to determine for themselves what should or should not be shown.

I ask that the editorial be placed in the *Record* and commend its text to my colleagues who may be hearing from station managers back home relative to similar problems.

The article follows:

A SEED WAS PLANTED IN PEORIA

Did you happen to notice the Associated Press story that reported a CBS show has been "postponed" after a number of stations refused to carry it "at this time"?

Do you wonder if there is some small connection between this unusual incident and the fuss some weeks ago about a couple of segments of the situation comedy "Maude" being denied air time here in Peoria?

At that time Peoria was the butt of some condescending reaction as the only backward community in the whole United States. Some felt that we were not "with it" enough to swallow what the geniuses in New York sent us.

Now, especially after a balanced report nationwide in TV Guide about that "Maude" affair, it begins to look as if Peoria was just breaking the ice—leading the way to a major revolt of CBS affiliates against a show called "Sticks and Bones."

When CBS scheduled that off-Broadway super-soap opera as a TV drama, the same step taken in Peoria by WMBD-TV on "Maude" was taken by scores of CBS stations all over the country. They refused to air "Sticks and Bones."

In the end, CBS itself cancelled the whole transmission.

CBS described the rejected show as "serious, concerned and powerful tragedy". Indeed, it won some awards and raves in New York. But regardless of the skill of the performers or technical accomplishments, this CBS description is an odd one to apply to a misbegotten mess of crude and cruel propaganda in its substance. It vividly portrays, in fact, a blinded Vietnam veteran returning to his home only to be deliberately harassed into suicide by his own mother and father—and ends with his bloody suicide, itself.

However brilliantly produced, what kind

of twisted mind or morbid imagination conceived a theme like that? Or considered presenting it in the midst of the reality of the returning P.O.W.s, where the real drama so contrasts with that fictional one?

When scores of local station managers took a look and said, "There must be something better than this to use in prime time," the author and producer let loose the usual howls: "Censorship!"

Just as Norman Lear did in the "Maude" case.

This about hits the high point for silliness with people engaged in TV's mammoth program selection process.

Everytime anyone in the business selects a subject, a type of treatment, a cast, a theme, or an idea, he is excluding others. The whole business is one of trying to make the best use of limited time.

There is no possible way to use a mass media without some such selection process. If that constitutes "censorship"—everyone in the business is a censor—especially those producers.

They may prefer to think that when they make the decisions of what goes in and what goes out, it is the exercise of artistic freedom—but when somebody does the same thing to them, they call it "censorship."

If you think everybody has a right to be on a network TV as a kind of constitutional right—just try to exercise it. Selection of material and of people is necessary for a school play and not everybody can get into the act any time he so wishes. National television? It is a physical impossibility.

If the resulting systemization is "censorship", those who profit most from its centralization are in a very poor position to condemn it when they don't happen to get their way just once!

Meanwhile, the whole sequence of events strongly suggests that what happens in Peoria can have a very broad effect. A seed was planted in Peoria.

Some old-fashioned guts in one manager of one station here in Peoria appears to have helped prepare other managers all over the country to step up and exercise their responsibility—to do their job.

Who knows? Maybe this will even lead to some more responsible judgments through a little self-analysis at CBS, itself—instead of the knee-jerk reaction of the "group-think" within their own "set."

COMPUTER IN COURT

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. HUNGATE. Mr. Speaker, of all the reasons advanced on behalf of no-fault insurance, one discussion in the March 22, 1973, Christian Science Monitor, is most intriguing to me. The quotation from the Christian Science Monitor states:

Several major insurance companies that previously had backed federal action swung around and decided to seek uniform action by the states. If the states do not act, however, these companies could swing around again. For one thing, the companies that do business in many states have a particular problem: Their data processing equipment cannot cope with very many variations of no-fault, perhaps as few as four. More versions would mean more expensive equipment and more training for employees processing more policies and claims.

It appears that A.P. Herbert's prediction of February 13, 1963, has come to pass. No longer is our litany, "non sub hominem sed sub deo et legem." This should now be revised to read, "non sub hominem sed sub 'deus ex machina'."

The article follows:

COMPUTER IN COURT

(By A. P. Herbert)

Before Mr. Justice Squirrel in the High Court to-day Sir Cyril Tart, QC, opened for the plaintiff in this fascinating action, which is regarded as a test-case on some novel points of law.

Sir CYRIL said: My lord, this is an action for defamation, and the principal defendant is, perhaps, a computer—

The COURT. Perhaps, Sir Cyril? But haven't you made up your mind?

Sir CYRIL. No, my lord. With great respect, we hope that the Court will do that: for here is a new field of life and litigation, and I am unable to find any precedents with which to assist the Court, as I generally do.

The COURT. You are always very helpful, Sir Cyril. Could we now have some approximate outline of the facts?

Sir CYRIL. If your Lordship pleases—as, may I add, your Lordship habitually does. My lord, for many years my client, the plaintiff, has been a client of Generous Bank Limited. In recent years the Bank has been employing a computer.

The COURT. I never quite understand what they do.

Sir CYRIL. My lord, I am instructed, if they are accurately fed with the requisite information they will answer almost any question that is put to them. Moreover, they will answer instantly a question which might occupy twenty expert men for many days. The defendant Computer is also capable of certain mechanical actions, the addressing, sealing and stamping of envelopes, for example.

The COURT. Bless me! Can it predict the weather?

Sir CYRIL. Given the relevant facts and records, I believe it could. But the machine has, in exceptional circumstances, one possible weakness.

The COURT. I am glad to hear that they are human after all.

Sir CYRIL. Yes, my lord. They are run by electricity, and if for any reason the voltage falls below a certain level some error may creep into the answers. My lord, in January last my client was proposing to take a lease of a London flat, modest in quality but not in rent. Asked for references which would show that he was a good and proper tenant, able to meet his obligations, the plaintiff referred the property-owners to his Bank. The Bank, as their custom now is, put certain questions to the Computer, which issued, immediately, a type-written slip, being a carbon copy of its answer, as follows:

"Mr. Haddock's account is overdrawn in the sum of £51,000 7s. 3d."

There followed a second slip:

"The market value of the securities he holds at current prices is £2 0s. 8½d."

A third slip said:

"What is more he owes the Inland Revenue £159,000 6s. 2d."

The COURT. Were these assertions correct?

Sir CYRIL. No, my lord. Later, by painful man-conducted researches with which few of the bank staff are now familiar, it was established that at that moment my client had a credit balance of £1 9s. 4d., and his indebtedness to the Inland Revenue had been cruelly exaggerated.

The COURT. What went wrong, then?

Sir CYRIL. My lord, it was shortly before the mid-day meal. A number of citizens in the neighbourhood had incautiously decided to use their electrical cooking appliances: and the astonished Electricity Board was com-

pelled to reduce the voltage to a level not far above the Computer's dangerline. For a few minutes, it is believed, perhaps less, it must have crossed the line, unobserved by the attendants who had had no warning, and in that brief space of time the questions concerning the plaintiff chanced to be presented.

The COURT. Yes, but the Bank, surely, did not pass the erroneous information on?

Sir CYRIL. No, my lord: but the Computer did. The "top copies" of the answers were placed by it in a sealed, addressed envelope and despatched by chute to the ground floor, where the express messengers waited. The property-owning-company received the message about 3.0 p.m. and at once declined to let their flat to the plaintiff. Moreover, one of the directors of the Company was on the committee of the Royal Yacht Squadron, which has an old-fashioned prejudice against bankruptcy, and at that evening's election my client was blackballed.

The COURT. Dear, dear. But, Sir Cyril, the case seems clear enough. The Bank, by its servant, the Computer, has published a libel, and is responsible.

Sir CYRIL. So, at first, it seemed to the plaintiff—and, I believe, to the Bank. But, having unbounded faith in the powers of the machine, they fed the necessary facts into it and put the question: "What's the answer?" The Computer replied, my lord:

"I am not—repeat not—your servant—for you cannot control me."

The COURT. I see the point. A good point.

Sir CYRIL. It is the point, I am sorry to say, on which the Bank relies. This is a machine, they say, having superhuman powers, and it would be presumptuous and unreal for any association of ordinary men, even a joint stock bank, to pretend to such a domination as is implicit in the relation of master and servant.

The COURT. Yes, but it is *their* machine.

Sir CYRIL. No, my lord, it is not. It is on hire from Magical Electronic Contrivances Limited.

The COURT. What do they say?

Sir CYRIL. They say that they have leased a perfect, infallible machine to the Bank, and they are not responsible for the blunders or negligence of the Bank or the Central Electricity Board.

The COURT. Oh, yes. What about the Board?

Sir CYRIL. They are protected, they say, my lord, by a section in the original Electricity Act.

The COURT. Do they? They would.

Sir CYRIL. At this point in the preliminary argument, my lord, the Bank put a further question to the Computer: "You see the dilemma, don't you? What do you advise?" The Computer replied:

"Try 'the act of God.'"

The COURT. The Act of God? "Something that no reasonable man could have been expected to foresee." Lord Mildew, wasn't it? Something in that, perhaps. But, Sir Cyril, as these superhuman instruments increase in number and power the outlook is grave, is it not, if every mischief they cause is to be dismissed as an Act of God for which no man is responsible?

Sir CYRIL. Yes, my lord. This is, as I intimated, in the nature of a test-case.

The COURT. So you may be reduced, you fear, to a single defendant, the Computer? What is the attitude adopted there?

Sir CYRIL. Satisfactory, my lord. On receipt of the writ, the Computer replied:

"Gladly accept service, my solicitors are Bull Stableford and Brown but I shall require legal aid." And, in fact, legal aid has been granted.

The COURT. Interesting, is it not, Sir Cyril, that the only one of these parties to behave with human decency is the machine? But where will this get you? It is a machine of straw.

Sir CYRIL. My lord, the Bank having refused

consent, by order of Master Richards an interrogatory on that point was administered to the Computer. It replied:

"Am earning heavy money. Why not attach my earnings?"

The COURT. But would not that be unjust to Magical Contrivances Limited?

Sir CYRIL. Possibly, my lord. But they did construct and distribute the monster. For the injustice suffered by my client he is not remotely responsible.

The COURT. True. Perhaps, before these instruments go into operation, they should put in a capital sum, like a gentleman seeking to do business at Lloyd's, to ensure that they can meet any unforeseen indebtedness?

Sir CYRIL. That is a question, my lord, which might well be put to the Computer.

The COURT. Perhaps it would care to come up here and try the case?

Sir CYRIL. No, my lord. It is not, I think, a British subject.

The COURT. Do you know, Sir Cyril, I think I shall go into a home for a fortnight and think about this case. One of those fruit-juice places.

Sir CYRIL. If your Lordship pleases. The hearing was adjourned.

MEAT DILEMMA

HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. HUNT. Mr. Speaker, in the Thursday, March 22, edition of the Washington Post, on page F-1, there is an interesting article entitled "Frankfurters: The Anatomy of a Red-Hot Debate." I call special attention to this article for a variety of reasons, but primarily because it emphasizes once again just how little the consumer is getting for the outrageous price he has to pay.

As high as the prices quoted in the article may seem, there is reason to believe that at some meat counters they may be even higher. Members of my staff have reported to me that in a period of 5 days, hot dogs have risen in price by 40 cents per pound and Italian brand sausage as much as 30 to 40 cents per pound. To add to this, the lowest price available for a pound of franks was \$1.15. Hamburger too has jumped some 20 cents per pound, depending on type. The cheapest ground in many stores is well over a dollar. But to further complicate buying stores wrap it in packages heavier than a pound—so if you need just a pound or less, forget it.

At this time I think it is more important than ever to see that the consumer is getting precisely what he is paying for. If the consumer is going to be forced to pay top dollar, then stores have an obligation to give him the very best at that price. The consumer has every right to not only expect it, but to demand it.

Mr. Speaker, I offer the following Washington Post article for insertion in the RECORD:

FRANKFURTERS: THE ANATOMY OF A
RED-HOT DEBATE
(By William Rice)

The continuing tug-of-war between consumer advocates and the meat industry has

torn apart the hot dog they both have been pulling at. The debate over what it should and should not contain may intensify since the U.S. Department of Agriculture proposed last week to continue the use of by-products in frankfurters.

Byproducts, or variety meats (the term preferred by the meat industry), include kidneys, sweetbreads and other items often considered delicacies. They also include the snouts, windpipe and skin cited above and many other unappetizing parts.

Byproducts touch personal sensitivities. Whether to use them or not has brought out what the American Meat Institute called "the emotional reactions of members of a vocal minority who have personal esthetic misgivings about variety meats."

To lessen some of the emotion: Byproducts are used in a minority of hot dogs, perhaps 30 percent. Heavy regional sales in the Southeast make the percentage on the Washington market far less than that. Also, under the USDA proposal of last week, future package labels will clearly indicate that byproducts or variety meats are part of the frankfurter. Whether the label also will detail the specific byproducts is unclear.

So, in retail stores at least, the consumer is not going to be forced into playing blind man's buff. What will be served in restaurants or at the ball park, where a good portion of the 16 billion frankfurters we eat each year are purchased, will be harder to determine.

It is easy to determine, however, the remarkable jump in prices for frankfurters. A sampling on the shelves of a local supermarket last week ranged from the house (chain) brand at 89 cents a pound to Oscar Mayer All-Meat Wieners at \$1.35 a pound. (Hebrew National Kosher All-Beef brand was \$1.03 for a half-pound.) Statistics provided by the American Meat Institute give a 93.3 cents average price per pound for franks in January of this year. That represents a gain of almost 10 cents per pound over a year ago and 22.8 cents (nearly 25 percent) over 1968, five years ago.

When the Agriculture Department announced, in December of last year, a tentative proposal to ban all byproducts from hot dogs, it wasn't difficult for the AMI to find allies in protesting the move.

Herrell DeGraff, president of the AMI, wrote to the USDA hearing examiner that "the United States is not so affluent that it can afford the economic waste inherent in discarding wholesome food products with an estimated value of more than \$40 million annually" and enclosed tables illustrating the nutritional value of the byproducts in question.

He proposed the regulation allow for products containing skeletal meat and for products containing "variety meats, extenders and binders" under separate labels.

This, in essence, is what has been done. But a USDA official hastened to point out last week that the meat industry's recommendation had been echoed by "lots of educational institutions and research outfits."

"It kind of leads you to wonder," he said.

But the USDA's sweeping initial proposal had led a lot of people outside to wonder what the department, historically sympathetic to industry, was up to. It stimulated a record 2,000 comments on both sides of the issue and, in the minds of some, created a smokescreen that made it difficult to deal with more substantive questions about the contents of frankfurters and sausages.

"Somebody over there was very clever," said the head of one consumer organization. "They never intended it to stick, but the economic issue was one that split consumer interests. It didn't make sense even to us."

"I hate to say this," DeGraff commented, "but the first proposal was seriously ill-considered. It wasn't doing a service to anyone."

According to USDA, the proposal was mere-

ly their attempt to go along with a decision by the U.S. Court of Appeals last August that the label "All Meat" on frankfurters must be abandoned. Legally, frankfurters need be only 85 per cent meat. That didn't equal "all-meat," the court ruled.

Like tomatoes and chicken, to name only two foods, frankfurters aren't what they used to be. At the time President Nixon spoke out on hot dogs (in 1969), the frankfurter's profile had changed from 19.8 per cent protein and 18.6 per cent fat (in 1937) to a flabby 11.8 per cent protein and 31.2 per cent fat.

Controversy at that time centered on fat content. Consumer groups and AM's DeGraff now say that was the wrong approach and both claim they urged that the emphasis be placed on protein content.

To summarize the consumer viewpoint there are three areas of concern about the use of byproducts.

Nutrition. While industry cites the nutritional value and gourmet appeal of byproducts, those that rate highest in both categories (liver, kidneys, etc.) bring high prices when sold separately and therefore are never used in frankfurter production.

Those that are used (hog lips, beef udder, etc.) do contain an impressive percentage of protein. They also contain a lot of collagen (connective tissue) that ranks as protein but doesn't contribute to human tissue growth or repair as does muscle protein. It's not only the amount of protein, but the value of the protein that counts, consumer groups argue.

They would have a requirement that the hot dog contain a minimum of 12 per cent protein and meet a standard protein efficiency ratio, which can be determined by laboratory tests.

Health. Normally the bacteria counts of byproducts, many of which come from the abdominal area, are higher when processing starts than those for skeletal meats. Therefore, they must be handled more carefully.

Furthermore, although frankfurter meats are cooked in processing, temperatures aren't sufficient to make the emulsion sterile. There is more inherent danger in using byproducts, the antagonists charge, and frankfurters with byproducts may prove to have a shorter shelf life than those made without them.

Labeling. The argument is made that under present proposals the consumer will have to be more, not less, sophisticated to know what he is getting. He or she must read small type to find a detailed breakdown and even then the average consumer lacks the knowledge to compare health values of various byproducts.

Products considered "binders" are a concern here as well. The frankfurter may contain 3.5 per cent binders and extenders. If the binders are non-fat dry milk or soy, they give a big protein boost. If they are dextrose, the boost is mainly in calories. A suggested solution is complete ingredient labeling and complete nutrition labeling with percentages. That approach has been rejected recently by the Food and Drug Administration in revised labeling regulations for products it regulates.

Another concern, of course, is how the consumer eating away from home is to know what is in the frankfurter he is served. "It seems reasonable to assume," a consumer spokesman said, "that as binders and byproducts don't change the taste, the merchant's temptation will be to sell the product that costs him less."

The AMI's DeGraff responded with the following during a telephone interview last week:

Nutrition. "We have no serious objection to a 12 per cent protein requirement. When fat limitation was being argued, we countered with a minimum protein proposal. If

it were 12 per cent, that would be self-limiting—you couldn't reach that with more than 30 per cent fat—and more meaningful.

"The current level, 11.5 to 11.7 per cent protein in all-meat franks, isn't that far out."

He acknowledged the "distinctly lower" protein value of byproducts used in frankfurters, but countered by pointing out that the lacking or limited amino acids could be supplied elsewhere in the diet; that the enriched flour in a bun plus the meat in a frankfurter made a "highly effective" combination.

Health. "Under normal conditions," DeGraff said, "with good inspection in the plants, there should not be any danger from bacteria. But if variety meats are badly handled, there could be." Shelf life of frankfurters with byproducts "should not be different," he added.

Labeling. DeGraff said merely that cartons in which frankfurters are shipped to the institutional trade are labeled "meticulously."

On the subject of costs, DeGraff held out no hope of a downturn. Even when less costly byproducts are used, he explained, other costs of production and distribution don't change. Competition, he thinks, will hold down the amount of byproducts manufacturers will put into the meat emulsion.

As to an enlarged supply of beef, he doubts that will provide more meat for frankfurters. Feed lot beef is not used for this purpose. Domestic cow beef, cows taken from the nation's dairy herds, is used and in recent years imports have provided nearly 40 per cent of the beef used for frankfurters.

DeGraff said the cow herd will increase, but not significantly when compared to demand. He called the price increase of imported beef "fantastic" and said even when that supply grows, the United States is only part of world demand.

In sum, it's going to be expensive to produce frankfurters and it's going to continue to be expensive to buy them no matter whether they contain byproducts or not. The "wholesome, cheap, all-beef, all-American hot dog" is extinct.

HAWAII COUNTIES PROTEST BUDGET CUTS

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. MATSUNAGA. Mr. Speaker, since the President announced his proposed budget for fiscal year 1974, thousands of citizens of this Nation, including myself, have protested the tremendous reductions and elimination of programs, particularly in the area of social services.

I have received numerous letters from Hawaii vigorously objecting to the proposals, including resolutions from the councils the counties of Kauai and Maui which sum up how the President's budget, as proposed, will affect the disadvantaged citizens of those counties.

In the belief that these resolutions will be of interest to my colleagues as additional testimony to the fact that social service programs cannot be arbitrarily reduced and deleted, I insert them in the RECORD:

REQUESTING THE PRESIDENT OF THE UNITED STATES AND CONGRESS TO RESTORE FUNDS FOR CERTAIN SOCIAL SERVICE PROGRAMS

Whereas, the President of the United States has ordered reductions and deletions of fed-

erally funded programs designed to improve the general welfare of the socially and economically deprived citizens; and

Whereas, it is a proven fact that the federal funding provided has done much toward the development and improvement of the socially and economically deprived citizens; and

Whereas, such reductions and deletions include, but are not limited to, the following:

(a) The deletion of federal programs 235 and 236 will result in the denial of housing for the low income citizens. Due to the funding of Section 235 and 236 programs, the County of Maui has provided 194 fee simple homes and 112 rental units for the economically deprived citizens;

(b) The reduction of funding to Maui Economic Opportunity, Inc. will affect 2,400 low income citizens. These economically deprived citizens have been receiving services by way of general community programs and consumer education programs. Noontime meals have been provided for approximately seventy elderly citizens over the age of 60, and transportation for approximately 1500 low income citizens. Due to the lack of federal funds the Haku Neighborhood Service Center, the Hana Neighborhood Center, the Makawao Neighborhood Service Center and the Puunene Neighborhood Service Center will be closed down. Such denial of federal funds would drastically affect the living standards and social orientation of families who have relied on such aid over the past years;

(c) The drastic reduction of funds to the social services programs of the State of Hawaii will in turn affect the welfare programs in the County of Maui. It is a known fact that the State of Hawaii has ordered a cut in the amount of welfare subsidies to the low income families. This, in effect, would deny the economically deprived citizens on Maui needed income for survival;

(d) The elimination of federal funding to libraries, vocational educational training of personnel, new careers in education, training institutes and summer fellowships. P.L. 815 school construction, programs for strengthening state departments of education, drug abuse education, environmental education, and vocational rehabilitation services; and

Whereas, federal cutbacks will have drastic psychological, social and economical effects on the deprived citizens of the County of Maui; now, therefore,

Be it resolved by the Council of the County of Maui that it does hereby respectfully request the President of the United States and Congress to re-evaluate the funding for social programs and restore monies proposed to be deleted; and

Be it further resolved that certified copies of this resolution be transmitted to the President of the United States, President of the Senate, Speaker of the House, Hawaii's Congressional delegation, Governor of the State of Hawaii, and Mayors and Councils of the counties of the State of Hawaii.

RESOLUTION

The reduction of vital programs for senior citizens including the elimination of dental care for the aging under Medicaid, the stoppage of all research and training under the Administration on Aging, the deletion of expected expansion of the Retired Senior Volunteer Program, the foster grandparent program, the Senior Corps of Retired Executives, and research on aging under the National Institute of Child Health and Human Development;

The shifting to the uncertainty of special revenue sharing of many educational programs, including education for deprived children, supplementary services, bilingual education, programs for the handicapped, vocational and adult education opportunities;

The freezing of water, sewer, and open space projects and public facilities loans as

well as grants to small communities for building water and sewer systems;

The elimination, reduction or shifting to the uncertainty of special revenue sharing of numerous manpower programs designed to reduce unemployment, including Concentrated Employment Program (CEP) training programs and Manpower Development Training Programs, public service careers and on-the-job training programs, CEP work support, Neighborhood Youth Corps, Operation Mainstream, and the Emergency Employment Act; and

Whereas, the above federal cutbacks, along with many others, will have a serious social and economic effect on the State of Hawaii and the County of Kauai; now, therefore,

Be it resolved by the Council of the County of Kauai, State of Hawaii, that it does hereby call upon the President of the United States and Congress to re-evaluate funding for social programs and restore monies proposed to be deleted.

Be it further resolved that certified copies of this resolution be transmitted to the President of the United States, Hawaii's Congressional delegation, the Governor of Hawaii, the Mayors and Councils of each other county in the State of Hawaii.

RESOLUTION CALLING UPON THE PRESIDENT OF THE UNITED STATES AND CONGRESS TO RESTORE FUNDS FOR CERTAIN SOCIAL SERVICE PROGRAMS

Whereas, the preamble of the Constitution of the United States proclaims that one of our nation's basic objectives is to "Promote the general Welfare"; and

Whereas, the Council of the County of Kauai recognizes our duty on a national and individual level to provide and assist the needy and less fortunate members of our society; and

Whereas, recent federal budget announcements by the President of the United States indicate severe deductions and deletions in many programs designed to promote the general welfare of the people of each state, including Hawaii and the County of Kauai; and

Whereas, such deductions and deletions include, but are not limited to, the following:

The complete dismantling of the Office of Economic Opportunity and agencies related to it, including the Kauai Economic Opportunity program, whose 41 employees presently provide services for over 1700 low-income citizens in the County of Kauai, which services include General Community Programs, Consumer Education and a lunch program for the elderly, Transportation for low-income including transportation for the elderly for shopping, and medical and dental services;

The stoppage of housing programs designed to bring relief to the numerous people in our County who live in overcrowded and dilapidated units at prices they cannot afford, including Section 235 and 236 programs which, along with others, are designed to stimulate construction of moderate income housing; and including U.S. Department of Agriculture loans for low-income rural families and credit for farm labor housing and rural rental and cooperative housing;

The cutting of the distribution of social service funds to the states by 40% leading to the probable loss for Hawaii, and proportionately to the County of Kauai, of \$9.5 million to \$17.5 in federal funds for welfare programs through both public and private agencies, including up to \$7.5 million in social services and \$2 million to \$10 million in food, clothing, and medical care payments;

The elimination of federal funding to libraries, vocational educational training of personnel, new careers in education, training institutes and summer fellowships, P.L. 815 school construction, programs for

strengthening state departments of education, drug abuse education, environmental education, and vocational rehabilitation services;

WORKING FOR THE GOVERNMENT

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. CRANE. Mr. Speaker, Americans are increasingly paying a higher percentage of their income to the Government in taxes.

Before 1930, Federal, State, and local governments were taking 15 cents out of every dollar earned. By 1950, they were consuming twice as much. Today, in 1973, Government's share of every dollar earned is 43 cents.

If this trend continues, in the near future more than half of the income of the average American will be consumed in taxes. Today, each of us works several months a year for the Government. Unless present trends are revised, the number of months devoted to working for the Government will increase.

Let, although we work part of our time for the Government, we are not given the "advantages" of Government employment.

This point was recently made in an editorial in *Industry Week* by Editor Walter J. Campbell.

Mr. Campbell recalled a morning when the city in which he lives had a heavier than normal snowfall. He noted that—

Morning radio and television programs blared out information on the weather, outlined traffic conditions, listed schools that would be closed. Repeatedly, federal employees were advised they could report to work an hour later than usual.

At the same time that Federal employees were given an additional hour to get to work, workers in private industry were given precisely the opposite instructions.

Wrote Mr. Campbell:

Workers in private enterprise were advised to start work earlier to arrive at the usual starting time.

Mr. Campbell was disturbed by this double standard. He calculated that, as a result of our current tax laws, his salary for the first 5 months of the year went to the Government. He noted that—

For the first five months, we were working to support the federal government. That makes us federal employees. Right? So we reported for our work an hour late—just like any other government employee.

The double standard discussed in Mr. Campbell's editorial may provide us with some indication as to why the mail never arrives on time, why there are more employees of the Department of Agriculture each year, despite the fact that the number of farmers decreases each year, and why the average American must pay more taxes for less services every April 15.

I wish to share Walter Campbell's editorial from the February 26, 1973, issue in *Industry Week* with my colleagues, and insert it into the *RECORD* at this time:

WORKIN' FOR GOVERNMENT

(By Walter J. Campbell)

We're in trouble with our superiors at the office again.

It all came about last week when we had a somewhat heavier than normal snowfall. It was the sort of storm that slows but does not halt traffic.

Morning radio and television programs blared out information on the weather, outlined traffic conditions, listed schools that would be closed. Repeatedly, federal employees were advised they could report to work an hour later than usual.

Workers in private enterprise were advised to start to work earlier to arrive at the usual starting time.

That double standard bothered us.

We had been doing some tax calculations the night before.

We figured that our salary from January through May would go to pay our federal taxes: income, and excise levies on air transportation, automobiles, telephone calls, tobacco, alcohol, gasoline, tires and other things.

We also figured we would work during June and July to pay state and local taxes: state income, city income, real property, intangible, gasoline, state sales, county sales, tobacco, and alcohol, and sundry licenses and fees that none of us can really keep in mind.

But for the first five months, we were working to support the federal government. That makes us federal employees. Right?

So we reported for our work an hour late—just like any other government employee. We were greeted with lifted eyebrows. Very carefully, we explained that by working the first five months for the federal government, we had to consider ourselves employed by the federal government and therefore entitled to arrive an hour late. We also suggested that as a worker for the federal government, we intended henceforth to observe all those myriad holidays to which federal workers are entitled.

Our superior's eyes glazed in perplexity. As he retreated down the corridor shaking his head, he was reported to be muttering, "That damned Campbell."

We hold that our stand for equality for those who work to support the federal government with those directly on the federal payroll is entirely logical. It is a campaign we are going to enjoy promoting.

And who knows? When we die, maybe they'll declare a national holiday. And all of you will get another day off.

WHAT IS RIGHT ABOUT BROADCASTING

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. GERALD R. FORD. Mr. Speaker, it is a pleasure for me to insert in the *RECORD* for the benefit of my colleagues a thoughtful address delivered yesterday at the National Association of Broadcasters convention here by an old friend of mine from Michigan, Ward L. Quaal, president of WGN Continental Broadcasting Co. in Chicago. His theme was "What's Right About Broadcasting!" and he speaks from a somewhat different perspective than we have been accustomed to hearing, one which I believe is deserving of our serious attention at this time.

The address follows:

WHAT'S RIGHT ABOUT BROADCASTING!

(By Ward L. Quaal)

President Waslewski, distinguished guests, colleagues and friends. This, for me, is a sentimental journey—the highlight of a "love affair" that has been going on for four decades.

Seated before me is my first love, my fine family: my coworkers and my dearest friends.

I am in love with my country—the greatest and freest nation ever evolved in the history of mankind. Unashamed, I admit a heart tug and perhaps a tear when the colors were presented—a tug and a tear that sprang from the inspiration of our founding fathers, but which is not always present these days in our schools, houses of worship and homes.

And I am in love with our profession—the arts and the many fine people who constitute American broadcasting—free enterprise broadcasting that was born, nurtured and matured in these United States.

I regret that some of those of the newer generation, both within and outside our profession, either never learned or have forgotten the basic tenets of free enterprise in our free society. They have lost touch with the spirit, dedication, zeal and wisdom of the architects of what was then known as broadcasting by the American plan, and which since has been adapted in every free nation on earth in toto or in some modified fashion—adapted throughout the world because it is the most solid.

Let us all underscore what is right in broadcasting! There is much that is right about broadcasting. The present and the future offer that grand opportunity to all of us to plan the dynamic decades that lie ahead, decades that will see radio and television achievements that will dwarf even the magnificence of the greatest feats performed since radio's first reporting of a political convention in the early 1920's to the glamour and the drama of the coverage of the moon shots and, more recently, one of the fine "hours" of television in the reporting from the summer games of the Olympiad in Munich and countless other radio and television achievements, locally and nationally.

As the head of a successful organization and happy "shops" wherever we operate, I believe I know the elements that make for success in ours—unique among all services rendered to our many publics. And I think I know the essentiality of teamwork!

Whether it be in government, industry or sports, no executive head is stronger than his "team." Trite as it must sound, this tribute paid me this morning really does belong to the WGN Continental organization, which sprang from the wisdom and foresight of our precursors, the pioneering executives in The Tribune Company organization. So with the gratitude and affection they deserve, I salute them!

If I had been given the option of a choice of locale for today's event it would have been between two "loves": Chicago, where NAB conventions traditionally are held, is my home. It is a vibrant and wonderful, friendly, thriving metropolis—the heartbeat of the heartland of America!

But Washington—the hub of the world, the eyes and the ears and the conscience of our great nation—is my mentor, my school of higher learning in the art of government. It was in Washington that I was inculcated with the philosophy of free enterprise and of tripartite government. For nearly four years, I had been headquartered in the nation's capital as the director of the Clear Channel Broadcasting Service. Hardly a month has elapsed since 1949 that has not seen my presence in Washington—either as an executive of Crosley, which became AVCO Broadcasting, or in the past 17 years for WGN Continental, and, on numerous occasions, for consultations with government agencies or committees of Congress.

Inexorably, we must look ahead as technology advances, styles change, and fundamental philosophies of government and business undergo transitions. Today's extraordinary advances, giving to this country the unquestioned world leadership in telecommunications, can be traced in direct lines to the wisdom of those men who envisioned the dangers of government versus private enterprise—of a free "Radio Press" versus government censorship! Ladies and gentlemen, our only "censor" should be that peerless combination of quality enriched with good taste!

If I were to select one man in the history of communications law who did the most to safeguard those inherent first amendment freedoms, he would be the late Louis G. Caldwell, attorney of Washington and Chicago, and the first General Counsel (in 1927) of the Federal Radio Commission, forerunner of the FCC. A colorful, white-haired, brilliant man whose honesty and integrity were legend, he wrote most of those provisions of the early radio law that were so sound in principle that they remain the keystone of the Communications Act, which otherwise has been so twisted and distorted by Congressional patchwork, and ridiculous FCC interpretations, and outlandish court actions as to make it punitive, as well as contradictory!!!

Louis Caldwell, whose firm still represents our companies, was my mentor and my benefactor! As a young man, a second generation American of Scandinavian descent, from Michigan, who had begun on the announcing and general talent side, I learned from him logic I shall never forget! Mr. Caldwell was aware of our awesome responsibilities as licensees, and he never allowed his clients to forget them. But he never backed away from an encounter where fundamental free enterprise concepts were involved. Louis Caldwell was perhaps the most unforgettable person it has been my good fortune to know. There are others, long departed, who were men of courage and integrity and who had great influence, not only on my life, which is unimportant, but on the development of the broadcast media in the best interests of our nation and our people, and in the American tradition of being entitled to the rewards of their labors and of risking their capital in pioneering radio, and latterly television in which the losses were astronomical during the first dozen years!

I shall mention only a few of these sincere, dedicated men: General David Sarnoff, Edwin W. Craig of WSM, Nashville; Harold V. Hough of WBAP, Fort Worth; James D. Shouse, of CBS and Crosley-AVCO; Earle C. Anthony of KFI, Los Angeles.

We owe an enormous debt to others of that first generation who are still here—stalwart defenders of our system and who are as young in zeal and dedication as they were when it was "fun" to be a broadcaster with the rewards "slim." Among these are such innovators and fine gentlemen as Niles Trammell, Rosel H. Hyde, Frank Stanton, J. Leonard Reinsch, Clair McCollough, John Fetzer—to name only a few.

I will not resort to flaming rhetoric to exhort all of you to defend the freedom and sanctity of American broadcasting! That is why you are here! It is the reason for being of the National Association of Broadcasters!!! It is your obligation to defend that which you and your predecessors fashioned by popular demand—the expressed wishes of a nation of 220 million Americans—including the three percent of self-anointed intellectuals who preach what they seldom practice!

In the words of that fine man of note, Johnny Mercer, let us strive to eliminate the "negative" and accentuate the "positive"—let us all acclaim what is right about broadcasting!

AMNESTY?

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. EDWARDS of California. Mr. Speaker, the following article is a thoughtful, well-reasoned proposal by the World Without War Issues Center of Berkeley, Calif., regarding the question of amnesty. In the controversy surrounding this issue, I feel that the ideas presented here can add affirmatively to the dialog on the subject, and I recommend that the article be carefully and considerately read by all those concerned about the question.

The article follows:

AMNESTY? A POLICY PROPOSAL FROM THE WORLD WITHOUT WAR ISSUES CENTER

THE PROBLEM

During the Vietnam years, many young men have left the country, deserted the armed forces, or gone underground to avoid military service. Others have openly refused induction and accepted the penalty of the law. When the war finally ends, the nation must decide, as we have in past wars, whether to bring these men back into the life of our society. National policy toward these men could be an important element in reuniting our society—or it could further divide us.

Competing perspectives on the wisdom of a policy of amnesty rest their case on different values: equal justice under the law, respect for conscience, the requisites of political community, of reconciliation and reunification.

THE ISSUE

Should the policy of the United States be to grant amnesty to men who illegally refused to serve in the military during the Vietnam war? Should alternate service be a requirement for amnesty?

AT STAKE

(1) An opportunity to support conscientious opposition to participation in war, balanced by (2) a concern for the maintenance of political community and a system of law as an alternative to violence in the resolution and prosecution of conflict. Both are key elements in a framework of understandings capable of leading us away from war.

MAJOR CURRENT APPROACHES TO AMNESTY

(1) One approach opposes amnesty on the grounds that those who evaded military service or deserted chose to break with this political community. "They may join another if they choose. Our community owes them nothing." To reward these men with amnesty would be an extreme injustice to those who accepted their responsibilities, many of whom died. (2) Another approach argues that those who refused to serve responded to demands of conscience to resist an unjust and illegal war. Amnesty is their due. They recognized the terrible path this country was pursuing and refused to go along with it. Any attempt to make amnesty conditional would make these young men admit they were wrong when, in fact, the government was wrong. (3) A third position focuses on the need for national reconciliation. It favors amnesty as a step in that direction, but insists on alternate service requirement to be equitable to those

* "A general determination that whole classes of offenses and offenders will not be prosecuted." *Encyclopedia of the Social Sciences*.

who served. (4) The policy WWWIC proposes approaches amnesty in the context of values and goals essential for an end to war.

PRIMARY VALUES AND GOALS OF THE WWWIC AMNESTY PROPOSAL

A concept of political community and responsibility

The United States of America is a political community we wish to sustain. A major goal for those who would end war is the establishment of a transnational political community with effective legal institutions capable of enforcing agreements and providing alternate channels for the resolution and prosecution of conflict. Thus, respect for law and political obligation are essential concerns for those who wish to sustain this political community while working for one capable of ending war.

Respect for conscience

The conscientious withdrawal of consent from unjust laws or policies, if carried out in a manner which does not undermine the authority of the political process, can be a tremendous spur to needed change. It can awaken the latent moral forces in our society which dictate and sustain attempts to end war. Therefore, support for individual conscience is a primary value for those who seek to build the institutions of peace.

Equity

Men caught in the moral vise of this war responded in a wide variety of ways. To be fair to all of those faced agonizing decisions about military service, we must not be vindictive toward those who went outside the law in their refusal to serve, nor should we treat inequitably those who accepted their responsibilities under the law by releasing from responsibility those who did not accept theirs.

Concern for reconciliation and reunification

National reconciliation demands attempts to heal the deep divisions in our society which have resulted from the Vietnam war. Amnesty could be one essential element in achieving a unified political community and in reconciling the many points of view involved. Such a renewed sense of community could facilitate a positive American role in the attempt to create alternatives to war.

A perspective on war

The values we have just stated conflict. All are important. We attempt to balance them within our perspective on what is required to end war. That perspective, stated in the World Without War Council publication, *To End War*, values law and conscience, amnesty for those who conscientiously refused to serve and equitable treatment for those who did; concern for the specific choice to be made and a determination to make that choice a part of a long range policy that can help end war in the world.

A WORLD WITHOUT WAR AMNESTY PROPOSAL

Many young men now stand outside the law because of their response to military service during the Vietnam war. WWWIC urges the adoption of a policy of conditional amnesty which embodies the following principles and procedures.

A. An Amnesty Review Board: should be created and empowered to consider applications for amnesty, to classify the applicant's refusal to serve according to the categories in Section B, and to set appropriate and equitable conditions for amnesty which maximize the chances for national reconciliation and the maintenance of a sense of political community and political obligation. This policy should take effect when a durable cease-fire is achieved or when Americans are no longer being drafted for military activity in Indochina.

B. Who should be granted amnesty? On what conditions?

(1) Those who openly and nonviolently refused to serve and willingly accepted the

penalty of civil or military law for their refusal.

The men in this group have fulfilled the minimum commitment of a citizen in a democratic society; the commitment to obey the law or willingly accept the law's penalty for open and nonviolent civil disobedience. They should be distinguished from those who left the country, deserted, or went underground. Any amnesty policy should make generous pardon provisions for men who went to jail for their beliefs and did not break with this political community.

(2) Those who left the country to avoid the draft and those who went underground and attempted (successfully or unsuccessfully) to avoid the penalty of the law for their refusal to serve.

The men in this group acted for a wide variety of reasons. Some were denied conscientious objector status by their draft boards. Others did not apply because they objected only to this war and therefore did not qualify for CO status. Still others simply denied an obligation to the political community for reasons which may or may not have grown out of conscientious opposition to war. We believe that although these differences in motivation are crucial to the health of a democratic society, they do not lend themselves to bureaucratic determination.

Therefore, the Amnesty Review Board should grant amnesty to all the men in this group (or recommend pardon for those imprisoned) subject to an acknowledgment of the concept of political obligation evidenced by acceptance of an appropriate civilian alternate service assignment.

(3) Those who deserted from the military. We believe that a man may become conscientiously opposed to participation in war after he enlists or accepts induction. Therefore, the Board may grant amnesty to the men in this category subject to a willingness to accept assignment to appropriate civilian or military service.

C. Limitations on the Board's powers:

(1) The Board may grant amnesty only for a failure to fulfill responsibilities under the Selective Service Act or the Universal Code of Military Justice, not for violations of any other civil laws.

(2) The Board may only grant amnesty for nonviolent acts.

(3) The Board may only grant amnesty to those who acknowledge the concept of political obligation by evincing a willingness to perform an alternate service assignment if required by the Board.

D. Alternate Service.

Alternate service should be broadly interpreted to include a wide range of constructive work opportunities.

WHY DOES WWWIC SUPPORT AMNESTY?

Amnesty can heal some of the wounds of war. It can help re-knit an American political community torn asunder by this war. National reconciliation is a prerequisite for a positive American role in establishing the institutions and understandings that can end war in the world.

WWWIC supports those who are conscientiously opposed to participation in war and wish to fulfill their obligation to this political community outside the military. It believes that such individuals can provide a moral impetus to the whole society to pursue the creation of alternatives to war. Amnesty could return many of these young men to this country and offer them opportunities for service consistent with principled objection to war.

WHY SHOULD AMNESTY BE CONDITIONAL?

It is false to assume that men who left the country or deserted are traitors or cowards. It is just as false to assume that they are all moral heroes whose just reward is unconditional amnesty. These men acted

in a wide variety of ways for a wide variety of reasons. Equity for those who served and for those who resisted openly and accepted the legal penalty for their acts dictates that those who chose to leave the country or the military perform an alternate service assignment as a condition of amnesty.

Membership in a political community involves obligations as well as rights. One of those obligations is to obey the law or submit to its authority if conscientious refusal to obey is indicated. Unconditional amnesty would tend to undermine respect for law in a country and world that need law if we are to move away from war and violence.

Finally, an alternate service program sensitively and wisely administered is an opportunity: an opportunity to dramatize concepts of conscience and war and of work to end war, and an opportunity to utilize the talents, energies, and moral concern of men who can help lead the way to a world without war.

THE ENERGY DEVELOPMENT AND SUPPLY ACT OF 1973

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. VANIK. Mr. Speaker, yesterday, on the floor of the House I outlined the incredible pattern of mismanagement, confusion, and blatant abuse which characterizes the Federal Government's "nonpolicy" in energy. It is clear that a matter so critical to the national well-being demands an imaginative response by experts completely dedicated to improving the welfare of all our citizens. We can no longer rely on the private sector to solve a vital public problem.

A central feature of any solution to our future energy needs is research and development. We must begin immediately a comprehensive program of research into alternative energy sources which pose little or no threat to our precious environment.

To conduct the desperately needed program of new energy sources research, I propose the establishment of a NASA-type agency. This agency, the Energy Development and Supply Commission will coordinate the Nation's energy policies and develop new sources of clean, cheap energy.

Mr. Speaker, there has been a great deal of rhetoric about the energy crisis and solutions have been offered. But no one has offered solution to the problems of funding the magnitude of research and demonstration projects which are required. No one is saying where the money should come from to finance this national effort. This is the most important aspect of the legislation which I am introducing: It does provide funding. It is responsible legislation which identifies a problem and then provides the funds to pay for the solutions. Through the creation of an energy development and supply trust fund, this legislation provides a regular source of revenue—collected from energy consumers—to finance the development of the energy of the future.

The trust fund will be formed from the revenues gained by the imposition of

an energy use tax and will provide approximately \$3.5 billion per year for the Commission to solve our Nation's energy problems.

CREATION OF THE FUND

The fund will be developed from a variety of sources. First, there will be a tax on natural gas and electricity use. Each of these taxes will have an exemption level which will free residential and small commercial users from the tax. The tax will generally fall on the largest users of these energy sources who are generally the most inefficient and wasteful users.

Inexpensive fuel has been a boon to American industry, but only now are we realizing the adverse consequences of this policy. With the cost of fuel insignificant relative to other factors of production, there has been little economic incentive for industry to use energy efficiently. Grossly inefficient industrial processes have resulted. In certain phases of the manufacturing of glass, for example, the wastage of natural gas is as high as 50 percent. There is a similar problem in the use of electricity because the larger consumers are given lower rates. The tax I propose on fuel and use would stimulate more efficient consumption of natural gas and electricity by the largest consumer of these resources. This tax will raise \$2 billion for the fund.

Second, there is imposed a nominal tax of 0.5 cent a gallon on kerosene, gas, oil, and fuel oil with exemption from the tax on the first 2,500 gallons. This will free the homeowner and small businessman from this tax, but such a tax would stimulate conservation of petroleum in the larger heating and industrial processes, while adding \$500 million to the trust fund.

The conservation taxes are supplemented by a new system of imports of foreign petroleum. The ill-conceived import quota system, which has led to severe crude oil shortages among midwestern refineries, will be abolished. In its place will be a flexible tariff structure to control the influx of foreign crude oils. The tariff will be equal to 90 percent of the difference between the domestic price of crude oil and the foreign price plus its shipping costs to the port of entry. The tariff level under this formula will be adjusted periodically.

The revenue raised by this provision will vary as the price of domestic and foreign oil varies, but it is estimated that this will add about \$1 billion to the trust fund. Ideally, funds for research would be generated internally from industry. But the large oil companies have found it more profitable to gear their capital expenditures to sales and promotion rather than research and development. The Washington Post revealed that the oil industry has spent over \$3 million informing the public of the crisis in our energy sources. At the same time, Senator METCALF has compiled statistics which reveal that the electric utilities expend 3.3 times as much capital on promotion as they do on research and development.

One major oil company has just spent millions telling the American people how

they changed two "s"'s to "x"'s. The stripes of the energy industry have not changed: They are more interested in profits and sales today than in meeting the problems of the future. The American people cannot rely on the energy industry for the hard research required. A trust fund is needed; a trust fund is the only way to provide for the high level of steady effort that is required.

ADMINISTRATION OF THE TRUST FUND

Moneys from the trust fund will provide funding for a wide range of activities designed to promote a more coherent approach to energy policy planning. A five-member Energy Development and Supply Commission will direct the Nation's energy effort.

These five Commissioners shall be selected from academic research, and public service backgrounds. Mr. Speaker, I just want to say at this point that we are going to be asking the American people to take on some tremendous new responsibilities in order to meet the problems of the energy crisis. This is an hour in which we have got to see that the most highly qualified people—from every aspect—are in the positions of responsibility. We must have people of unquestioned loyalty to the public interest.

The activities of the Commission can be categorized under four headings:

- Data collection;
- National security;
- Research and development; and
- Publication and reports of recommendations.

DATA COLLECTION

The first prerequisite for intelligent policy is adequate information. For too long the agencies of the Federal Government have been mere sound boxes, resonating the industry line. To circumvent the persistent problem of information caps, this bill empowers the Energy Development and Supply Commission to conduct annually an extensive data and survey collection to gage the Nation's energy resources. This comprehensive mineral deposit inventory shall be provided to all other agencies of Government involved in energy matters in order to coordinate planning among these agencies.

NATIONAL SECURITY

The second major function of the Commission relates to the much abused problem of national security. For too long, the oil industry has played on our fears to goad us into policies which are not in the national interest. Each year, industry spokesmen, costumed in red-white-and-blue bunting, come before congressional committees to present their well-orchestrated case for special gifts from the public treasury. Emotionalism of this sort has little place in public debate; it undermines rational approaches to reasonable solutions. The issue of national security should not be used to hammerlock the American people.

In March of 1959, I pointed to manipulation of the national security issue by the oil companies. At that time I presented essentially the same solution I offer today—the establishment of a pe-

troleum reserve for national security. I addressed the House with these words:

If we desire to protect the national security, it would seem more prudent to discover our own reserves and keep them stored in the ground for future emergencies . . . In the meantime it would seem wise for us to consume foreign supplies while they remain easily accessible.

Under the bill I am introducing today, this vital issue will finally be removed from the arena of self-serving, partisan debate. The Commission will be authorized to establish and maintain national defense petroleum reserves. These reserves shall be of sufficient size to protect our country against a 1-year interruption of imported petroleum from foreign countries which the Commission determines to be an insecure source of petroleum.

ENERGY RESEARCH

The third and most important function of the Commission is to supervise and coordinate the conduct of research into all aspects of energy supply, transmission, and utilization. The primary thrust of this research—funded by the trust fund—will be to seek the quality of our environment. Through a truly imaginative energy policy, it may be possible even to halt the present frightening deterioration of the world's environment. Research will be directed in five key areas:

First, the development of all aspects of solar energy.

Second, the development of processes of energy conservation.

Third, the decrease of the environmental impact of energy, generation, transmission, and distribution especially in the area of nuclear fission.

Fourth, the increase of efficiency of energy generation, transmission, and distribution.

Fifth, the exploration of other areas of energy development such as the gasification of coal, oil shale, heat, and energy from solid waste projects.

This research can be carried on either through contract or through in-house research, similar to the type of research conducted at NASA laboratories. It would be my expectation that much of this research would be carried on at existing facilities. For example, the NASA Jet Propulsion Labs at the Lewis Research Center in Cleveland, Ohio, are vastly underutilized. While Lewis continues to carry on a substantial volume of NASA research, it is capable of expanding its research into a wide range of energy development, transmission, and utilization efficiency questions.

ENERGY REPORTS

In conjunction with its activities of data collection, national security, and research and development, the Commission will publish reports and recommendations on the entire range of its findings. These reports will enable not only Congress but people outside of Government to take informed action on energy issues.

The Government is now being held ransom by the energy industry. We who are directly involved with questions of policy are consistently told that the en-

tire issue is too complex for the layman's mind. In matters of tax, we are urged to walk softly; a mistake here, we are told, could precipitate the economic collapse of the industry and the country as well. Confronted with this impressive barrage, most of us have been willing to defer decision to "the experts"—the oil company executive, the natural gas pipeline owner, the petroleum engineer.

This is not—nor can it be—just and responsible Government. We must combat this tyranny of expertise with informed action. The Members of Congress are the trustees of the public welfare, and we must act. We can no longer afford to defer decisions of public interest—decisions which can cost the American consumer billions of dollars and irreversibly injure our environment—to those who would subvert those interests.

The funds provided by this legislation for energy research will help but will not entirely solve the energy problem—a problem which has become so complicated that many things must be done in addition to research. Thus this bill seeks to provide for a comprehensive determination made by public experts of the exact extent of oil and gas reserves in America, which I estimate are understated by at least 50 percent—the suppression of reserves reduces local and State tax assessments and multiplies the value of oil and gas which secretly remains underground. This bill seeks to repeal the oil quota law so as to permit all oil seeking entry into the United States to enter in unlimited quantity under a tariff system. The legislation authorizes the Government to acquire oil reserves of imported oil and—utilizing former producing oil wells—store the reserves in underground facilities for future civilian and military use. Such storage will provide a hedge against even higher prices and provide a reserve defense supply. This legislation seeks to eliminate wasteful usage of oil and gas—and this will require the cooperation of every level of government and all of the people. Local building codes must be established to conserve energy, not waste it. More people must live closer to their place of employment. Automobiles must be more efficient, perhaps smaller with more miles per gallon.

Of course, other, new policies are required.

First, tax policies must be adopted which provide the maximum incentive for the producer and developer of resources and must be designed to eliminate the incentive to hold supplies off the market once they are discovered.

Second, new customers of gas and oil must bear the greater burden of increased needs; established users are entitled to some benefits from early commitment and long-term contracts.

Third, the oil consuming nations must organize into a compact to negotiate with the Organization of Petroleum Exporting Countries—OPEC—for fair and reasonable prices. Under the coffee agreements, this type of agreement has helped stabilize commodity supplies and prices. The same policy could be helpful in energy supplies.

**ELI LILLY & CO. OF INDIANAPOLIS:
MEETING RESPONSIBILITIES TO
SOCIETY**

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. BRAY. Mr. Speaker, some persons find it fashionable to constantly attack major corporations for their supposed shortcomings in meeting responsibilities to society. Unfortunately, it leaves the impression with many that this is the general rule for American business and industry.

This simply is not true. American industry has been and is fully aware of what these responsibilities should be. For a close look at what one major firm has done and is doing, I am pleased to include the following, from Eli Lilly & Co.'s 1972 report to the shareholders:

LOOKING BEYOND FINANCIAL RESULTS—PRODUCTIVITY, PRICING, AND RESPONSIBILITIES TO SOCIETY

Any major corporation has responsibilities to society that reach far beyond the financial figures contained in annual reports to shareholders. How well these responsibilities are discharged is often unseen and, therefore, unappreciated, partly because such benefits are elusive and difficult to capture in concrete form and partly because business often has not devoted enough attention to communicating this important aspect of economic life. However, these responsibilities and how well they are met need to be recognized because society expects more from business than profitable operations.

In simple terms, industry utilizes society's human and material resources to produce what people want to satisfy their needs. The benefits provided to society in the conversion process are measured by the usefulness of industry's products and by the efficiency—or productivity—of the conversion process.

We believe the discovery and development of new Lilly products represent significant progress in the vital life sciences. These products play a part—a significant part, we think—in improving the quality of living. They do it by preventing or combating illness, reducing the time (and thus the cost) of hospital care, and helping increase the world supply of food and fiber. As our company becomes more productive, its products help many, including the physician and the farmer, also to become more productive.

The company invested more than \$360 million in capital additions in the past ten years. Although capital investment is important in improving productivity, such expenditures must be accompanied by an even larger and more significant investment in people. Lilly employees, skilled in many special fields and organized into effective working groups, are considered the company's greatest asset, although they are not included in the listing of total assets that appears in our financial statements.

FIRST PHASE OF PRODUCTIVITY

The company invested \$465 million in research and development in the past ten years; however, the productivity of research organizations does not depend on how much money is spent but on how wisely it is administered. The value of output from research depends upon scientists' ability to innovate. Therefore, there is a need to seek out, to employ, and to stimulate men and women with particular skills, to provide them with the proper surroundings and equipment in an atmosphere where established concepts can be questioned, where a broad variety of

views can be exchanged and examined, and where the mind is free to explore.

The successful coordination of creative efforts in many disciplines is a particular necessity at Eli Lilly and Company because of the diversity and scope of its research and development activities. Approximately 2,300 employees are assigned to scientific pursuits. While the major research endeavor is carried out in Indianapolis, groups also are at work throughout the world.

Research in the field of human medicine has led to many beneficial products in the past dozen years. These products have included:

Velban® and Oncovin®—two anticancer agents developed in our laboratories and derived from a variety of the periwinkle plant that grows in India and Madagascar.

Keflin® and Loridine®—injectable antibiotics of the cephalosporin family, used widely in life-threatening infections.

Kafocin® and Keflex®—orally effective antibiotics, also of the cephalosporin family, for use against respiratory and urinary infections.

Among introductions improving world agricultural production have been:

Tylan®—an antibiotic that protects the health of poultry and livestock and that increases meat production through higher weight gain and feed efficiency.

Treflan and Balan®—herbicides that, by controlling weeds, increase yields in soybean, cotton, tobacco, lettuce, peanut, and other important crops.

Coban®—an agent that protects broiler chickens from coccidiosis, a serious disease of poultry.

In addition, Lilly scientists contribute an average of 320 scientific papers annually that add to the world reservoir of scientific knowledge.

MARKETING COMPLETES THE CYCLE

Products that result from greater research productivity, and that are manufactured with improved production processes, must be marketed effectively for the economic cycle to be completed. Our customers vary in many respects save one—they expect and need to be provided a high standard of technical information and services. Providing these services is the job of Lilly marketing groups around the world.

A surgeon in Houston, a cotton grower in Mississippi, a veterinarian in Japan, a cosmetic buyer in New York, a pork producer in Indiana, a pharmacist in Los Angeles, a poultryman in Brazil, a pediatrician in London—they and thousands like them listen with interest and respect to sales personnel from Lilly, Elanco, and Elizabeth Arden. They learn what a product will do, and—equally important—what a product will not do.

Effective marketing requires sales personnel with special education and skills. It takes intelligence, integrity, and hard work. But when the customer's need is fulfilled, the company and society benefit because our productivity helped someone else become more productive. This means shorter illnesses, less expensive meats, more bountiful crops. Effective marketing also means earnings, which, when reinvested, enable the company to become even more productive.

Further marketing productivity is expected to result from the recent formation of Dista Products Company in the United States, a new organization that will broaden and make more effective our communications with the medical community. The creation of this division reaffirms our belief in the value of personal contact in the sale of our products. By shifting a group of valuable Lilly therapeutic agents to the new Dista organization and staffing the division with our usual professional caliber of personnel, we believe that the needs of medical and allied professions and the public will be better served.

IMPROVING PRODUCTIVITY

Two of the major problems facing the United States today are inflation at home and increasing competition in world markets. One way to deal with both inflation and competition is to step up this nation's productivity. The U.S. citizen cannot prosper in an unproductive and noncompetitive economy. Business must assume an aggressive role in a national effort to stimulate and foster a climate in which the two resources of human effort and technology are best developed.

Improved productivity is not determined by a company's size, how hard employees work, how fast machinery runs, or any other single element. It is achieved by the interaction of many complex factors, including the combination of people and technology; the blending of employees into successful teams; the use of the most effective management techniques; and the generation of new solutions and innovative procedures applicable to research, production, and marketing.

Measuring the productivity that results from all the things Lilly employees do is not an easy task. No firm guidelines have been developed. We cannot really identify the extent to which product discoveries, process innovations, greater effort by employees, better production equipment, high quality of products, or management skills result in improved productivity. It is, in fact, a combination of all these factors that brings about such improvement.

Statisticians and economists experience similar problems in assessing productivity growth of the United States economy. Still, the U.S. Bureau of Labor Statistics uses certain measures that are recognized as standard guidelines. With 1967 as a base year (equal to an index of 100), the index of productivity in the private sector of the U.S. economy for 1972 is expected to be near 113. In comparison, the 1972 productivity index for Eli Lilly and Company is 157. In the past ten years, productivity of the private sector of the U.S. economy increased nearly 3 percent a year, while Lilly productivity increased more than 8 percent a year.

INCREASED PRODUCTIVITY ALLOWS STABLE PRICES

Thus, Lilly productivity increased more rapidly than the industrial average for the United States. This productivity enabled the company to sell its products at declining or stable prices despite steadily increasing costs of raw materials and labor. The chart at right compares the trends of Lilly product prices with the U.S. Consumer Price Index for the past five years.

We feel that one of our important corporate responsibilities is to take the resources entrusted to us and to use them to provide products needed by the public, tax revenues to support government, a reasonable return to our shareholders, and increased compensation for employees.

When we look beyond financial results, one of the company's major objectives was summarized by Mr. Eli Lilly, honorary chairman of the Board of Directors when he said: "Merely bigness in business is not enough. After all, it is not how big a business is but how good . . . no matter how well anything is being done it can always be done better."

**HOUSE PASSES CLEMENTE MEDAL
LEGISLATION**

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I want to congratulate my col-

leagues for their action in passing today H.R. 3841, a bill to strike a gold medal in honor of Roberto Clemente, the great rightfielder of the Pittsburgh Pirates who was killed while on a mercy mission to Nicaragua.

Hopefully the other body soon will act and the President can sign into law this bill honoring a man who not only was an outstanding athlete but also a humane and selfless individual.

Clemente's death has left an indelible imprint on hundreds of thousands who remember his 15 years of exemplary play in the National League.

In 1971, when he led the Pirates to a seventh game victory over the Baltimore Orioles, baseball buffs across the country readily conceded that Clemente was the best modern day player ever to wear a uniform and certainly one of the alltime greats in baseball history.

He could do everything and well. His play became the standard for others to emulate.

Just last week, the baseball writers of America, waived the normal 5-year waiting period and almost unanimously voted Roberto Clemente into Baseball's Hall of Fame.

H.R. 3841, which I authored, along with seven of our colleagues, Representatives MORGAN, CLARK, DENT, BADILLO, MIZELL, HEINZ, and BENITEZ, calls for the striking of a gold medal and up to 200,000 copies.

The gold medal will be presented to Mrs. Clemente and the copies will be sold by the Chamber of Commerce of Greater Pittsburgh with all proceeds going to the Roberto Clemente Memorial Fund, which is administered by the Pittsburgh Pirates Baseball Club.

All costs connected with striking the medal will be assumed by the chamber. Therefore this legislation does not cost the taxpayers one penny.

The Clemente Fund, established shortly after Roberto's death, hopes to build a sports city complex in Puerto Rico for the children of that country. This was a dream of Clemente's and a project he had begun while still an active player in the major leagues. The fund also will carry out some work with the residents of Nicaragua who were victims of the same earthquake and storms which caused the plane, in which Clemente was carrying relief supplies, to crash.

I think the House took a very long stride today in assuring that an appropriate memorial to the memory of Roberto Clemente will exist.

I would like now to include in the RECORD various articles and editorials on Roberto Clemente, his life and tragic death.

ROBERTO CLEMENTE

Statement by the President Following the Death of the Pittsburgh Pirates Rightfielder on a Mercy Flight to Nicaragua, January 2, 1973.

Every sports fan admired and respected Roberto Clemente as one of the greatest baseball players of our time. In the tragedy of his untimely death, we are reminded that he deserved even greater respect and admiration for his splendid qualities as a generous and kind human being.

He sacrificed his life on a mission of mercy. The best memorial we can build to his mem-

ory is to contribute generously for the relief of those he was trying to help—the earthquake victims in Nicaragua.

NOTE: Roberto Clemente, 38, died in the crash of a cargo plane off the coast of San Juan, P.R., on December 31, 1972. As head of Puerto Rican efforts to aid victims of the Nicaraguan earthquake, Mr. Clemente was escorting relief supplies to Managua at the time of the crash.

On Wednesday, January 3, the President met with Pittsburgh Pirates president Dan Galbreath and pitchers Dave Giusti and Steve Blass to discuss a proposed Committee for a Roberto Clemente Memorial Fund for Nicaraguan Earthquake Victims.

[From the Washington Star, January 5, 1973]

A MEMORIAL FOR CLEMENTE

Even in the land of heroes that big-league baseball represents, Roberto Clemente was special.

He was like DiMaggio. He could do it all and make it seem effortless—run, field, hit consistently, hit with power, and throw so powerfully that perhaps no other outfielder ever matched the Clemente arm. And he was like Atlanta's Hank Aaron, in that, playing for Pittsburgh, a town where the media is not concentrated, the acclaim he deserved came late in his playing career.

Finally, after he dominated the 1971 World Series, public recognition caught up. Here was a superstar. He hit over .300 in 13 of his 18 years as a Pirate, and won the batting championship four times. Last year he got his 3,000th hit, something only 10 players ever accomplished.

Now he is dead, and the circumstances of his death also were special. In his native Puerto Rico, Clemente was both a national hero and a tireless worker for good causes. And so it was not unnatural that he be named head of a committee to rush relief supplies from Puerto Rico to the victims of the earthquake which practically wiped out Nicaragua's capital of Managua. He didn't just lend his name to the effort. On New Year's Eve, Clemente took off for Managua to make sure the supplies were delivered properly. He and four others were killed when the plane crashed.

It doesn't help very much, of course, to say he died on a mission of mercy. His death in any case is sad and brutally abrupt.

And yet, as President Nixon noted, the mission he was on could well serve as a suitable memorial for him. The baseball writers will quickly take care of getting the Clemente name into the Hall of Fame. The people of Puerto Rico will honor his name in other ways. For anyone else who cares, an appropriate tribute would be a contribution to the homeless and otherwise needy people of Nicaragua.

CLEMENTE ELECTED TO BASEBALL'S HALL OF FAME

(By Ira Miller)

ST. PETERSBURG, FLORIDA.—Roberto Clemente always wanted to be remembered simply as a "player who gave his best."

The epitaph was gentle enough, but hardly befitting a star of Clemente's greatness.

Today, baseball officially gave Clemente what is considered a more deserving remembrance—election to the Hall of Fame less than three months after he died on a New Year's Eve mercy flight.

Clemente's widow, Vera, Baseball Commissioner Bowie Kuhn and officials of the Pittsburgh Pirates, for whom Clemente started 18 seasons, were on hand today for the announcement at a news conference.

Officially, the purpose was to announce the results of the special yes-or-no Hall of Fame vote on Clemente's candidacy, but the fact of his election was not one of baseball's best-kept secrets.

Only the size of the vote had been in question.

A total of 424 members of the Baseball Writers Association of America returned ballots. A total of 393 voted for Clemente's immediate election, 29 against it and two abstained.

Most of those who filed negative votes noted that they didn't vote against Clemente's election but against the relaxed voting system (waiving the five-year wait rule).

He becomes only the second player admitted to the baseball shrine without the customary five-year waiting period. A dying Lou Gehrig was elected by acclamation in 1939.

Clemente died with four other men in the crash of an old, propeller-driven DC-7 airplane in which they were ferrying supplies from Puerto Rico to earthquake victims in Managua, Nicaragua.

The plane, delayed several times before takeoff, crashed into the ocean near the San Juan Airport. Clemente's body never has been recovered.

Clemente, who was 38 at his death, won four National League batting titles—in 1961, 1964, 1965 and 1967. He averaged .317 for his career, won the Gold Glove for fielding excellence a dozen times, was the league's Most Valuable Player in 1966 and the outstanding player in the 1971 World Series.

His final regular-season hit in 1972 was his 3,000th. Only 10 other players ever got that many.

In the three years before 1972, he batted in succession .345, .352 and .341. He hit .312 in 1972 when he was bothered by injuries.

But Clemente's finest moment by far was the '71 World Series. He batted .414, hit safely in every game, homered to start Pittsburgh's seventh-game victory and was brilliant defensively.

The performance earned Clemente the national recognition he claimed long had been denied him because he was Puerto Rican. When it was over, he said, "I finally have peace of mind."

"Now, everyone knows the way Roberto Clemente plays," he said at the time. "I believe I'm the best player in baseball today... and I'm glad I was able to show it against Baltimore in the series."

The formal induction ceremonies for Clemente and five others named to the Hall of Fame earlier this year—Warren Spahn, Monte Irvin, and old timers Mickey Welch, George "Highpockets" Kelly and Umpire Billy Evans—will be held Aug. 6 at Cooperstown, N.Y.

Clemente did not live to see one of his fondest dreams realized—creation of a "sports city" for Puerto Rican youth. But hundreds of thousands of dollars in donations since his death assure the facility will be constructed.

A diamond-studded, gold 1971 World Series championship ring bearing the name of Clemente was presented last night in Bradenton to the Baseball Hall of Fame.

The presentation was made to Ken Smith, director of the Hall of Fame, as part of the 10th annual Manatee County Chamber of Commerce Hall of Fame banquet.

A WORTHY MEMORIAL

Roberto Clemente was a hero to young and old in Puerto Rico. He was particularly revered by the poor, who knew him not only as a baseball star but a man who devoted time and money to programs for poverty-stricken youngsters on his native island.

Clemente died before his ambitious dream of a "sports city" for Puerto Rican children could come true. In death, he may yet contribute what he had planned—a sports and recreation facility which could brighten the lives of thousands of island youngsters. Mrs. Vera Clemente, widow of the Pirate star who died in a plane crash December 31, recently made a heartening announcement. She said a 600-acre site had been selected for the

Roberto Clemente Sports City near San Juan International Airport.

Roberto had envisioned a broad program encompassing numerous sports. He explained: "Lots of kids don't participate in sports because they don't like one sport especially. But if you can have all sports where he can participate, I bet you that he will like at least one of them and keep going."

The project outlined by Mrs. Clemente promises to fulfill Roberto's expectations. She said the sports city, costing about \$14 million, would require 2½ years to construct. About 230 acres would be devoted to sports facilities, 50 acres for water sports and 300 acres for passive recreation. Included in the plans are facilities for baseball, soccer, volleyball, handball, tennis, track and field, target shooting, archery, cycling, roller skating, golf, horseback riding and swimming.

The Pirates and a San Juan newspaper and bank already have collected about \$500,000 for the project.

The Roberto Clemente Sports City promises to become a fitting memorial to a man who befriended the needy with more than kind words.

OEO CRACKDOWN

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. LANDGREBE. Mr. Speaker, I include the following editorial from the Indianapolis News of Wednesday, March 7, 1973, in the RECORD. I believe this editorial tells the story of OEO very well.

It follows:

OEO CRACKDOWN

Efforts by the Nixon administration to phase out the controversial Office of Economic Opportunity have met with predictable cries of outrage and alarm.

To hear the critics tell it, Nixon and Acting OEO Director Howard Phillips are abolishing everything that is good and holy in government, showing their insensitivity to poor people and the "needs" of the disadvantaged. A glance at the background of OEO, however, and at the Phillips pruning exercise, suggests a different picture: For it is clear on the record that OEO has done very little to abolish poverty, but a great deal to build empires for bureaucrats and interest blocs.

Phillips states the matter well, we think, when he asserts that "some of the projects funded by this agency have kept a lot of people comfortable in their poverty—but this agency has not done enough to lift people out of poverty. Many of the things it did had a negative impact. Some grants tended to foster the welfare ethic, rather than the work ethic. Some programs were premised on a belief that the problems of poverty are political rather than economic. . . . Too much of the anti-poverty money has gone into setting up an administrative bureaucracy, rather than into the hands of the poor."

As noted on this page by The News Washington correspondent Lou Hiner Jr., the poverty bureaucrats have responded to Phillips' effort to dismantle some of the more wasteful programs by filing suit to prevent the abolition of their jobs. This is an all-too-typical example of the high-handed attitude of tax-consumers toward the people who have to pay the taxes; these bureaucrats feel they have a vested right to a place on the public payroll and to absorb the energies and resources of working Americans.

Hiner quotes estimates that since 1964 more than \$2.8 billion has been poured out for OEO projects and that in some instances

up to 85 per cent of money for local programs has gone to pay bureaucratic salaries. The results of this expenditure in terms of generating local effort have been poor indeed, particularly when compared to private self-help programs conducted here in Indianapolis by Flanner House and other agencies. Any way you look at it, OEO has been a wasteful proposition and richly deserves the cutback which Phillips is attempting.

The present danger is that the orchestrated outcry from the welfare coalition, the bureaucrats and the leftward ideologues will weaken the resolve of the administration to back Phillips' hand and to get on with the job of unraveling this bureaucratic mares' nest. Citizens who are tired of seeing their money used for big-spending projects and radical agitation should let their congressmen know how they feel and urge full-scale support for Phillips.

CUBAN EXILES PETITION THE PRESIDENT TO FULFILL HIS PROMISES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RARICK. Mr. Speaker, last week I pointed out the possible threat to the American right of political asylum posed by the Pact of Bilateral Agreement on Air Piracy signed February 15 by the United States and Cuba—CONGRESSIONAL RECORD, March 21, 1973.

It is my fear, and the fear of many Cuban refugees in exile in this country, that this agreement will sign the death notices of many thousands of Cubans unable to escape from the Communist-held island. Although I have been assured by the State Department that our traditional policy regarding political asylum has not changed, I was also advised that just because a Cuban desires not to live under communism does not constitute grounds for his being granted political asylum. This most certainly is a change.

Oppressed people the world over, especially those in Cuba, have long looked to the United States as a refuge from tyranny. And now this hope is being taken from them in the name of preventing air piracy. This is piracy of freedom in its most blatant form.

The antihijacking agreement has been referred to as a "treaty", but it certainly is not. It has never been ratified by the Senate, and is nothing more than de facto law promulgated by Presidential fiat.

The Washington Post, March 27, carried a large paid advertisement placed by many well-known Cuban exiles, petitioning the President to fulfill the promises made to the Cuban people. While they are not opposed to an antihijacking agreement between the United States and Cuba, they do question "the grave consequences that the application of the Agreement might bring in the future."

These people know better than anyone the tyranny that grips the oppressed people of Cuba, and they have a right to be heard in their appeal for help.

I here insert the text to the petition of the Cuban-American Sertoma Club of Coral Gables:

TO THE HONORABLE RICHARD M. NIXON, PRESIDENT OF THE UNITED STATES OF AMERICA

TO THE WORLD-WIDE PUBLIC OPINION:

The undersigners, Cuban exiles, because of the consternation created among one million Cuban Refugees and facing the anguish and sorrow created for the eight million Cubans on the Island of Cuba, due to the reach and significance of the articles contained in the Pact of Bilateral Agreement on Air Piracy, signed last February 15 between the United States Government and the Communist tyranny of Cuba, with the highest respect and also with natural patriotic firmness, wish to make the following public statement:

I. That they respect the United States right to make such Treaties as it may deem convenient for the welfare and security of its People; in such sense, they are not opposed to the Air Piracy Treaty, but only to those parts which they consider fundamental within its contents, and specially Point II, which unusually and practically forbids all kind of actions against the actual Cuban regime, no matter where it takes effect.

The United States Government, through its spokesmen, has stated that such Agreement does not change the status of its relations with the Cuban regime. However, there is a flagrant contradiction between the above referred statement and the contents of Point II of said Agreement, which leaves the impression of having been worded in Havana and later unexplainably accepted by the Government of the United States, without foreseeing the grave consequences that the application of that section of the Agreement might bring in the future to the ever good relations between the free and democratic People of Cuba and the free and democratic People of the United States.

II. That with the noble intention of avoiding events which may result in differences of opinion between Cuban Exiles and Americans, we have decided to give publicity to this document, hoping to achieve a rapid and healthy rectification on the part of the United States Government, of the serious mistake made, and a decided explanation from President Nixon, who has always had the backing and respect of the Cuban People, "his Cuban friends" as frequently and with human warmth, he has stated.

III. That we are under the protection of the laws of this great Nation, traditional cradle of all world exiles, and that we respect them; but allow us to say that, first of all, we are Cubans who came here and to other shores of America seeking Freedom and aid for our Fatherland, and to procure means and ways for a dignified and patriotic struggle against the tyranny, and for the Freedom, Independence and Sovereignty of Cuba within a democratic frame and of truly Social Justice, where opportunely the People may plainly exercise the right to choose its own destiny through a majority consent of its citizenry cleanly expressed in the ballots.

IV. That the struggle of the Cuban People of Cuba for its liberation and afterwards to enjoy living in Democracy, Justice and Freedom, as the American People and Other People on Earth do, is an inalienable right of every Cuban and a patriotic duty imposed upon each son of Cuba, in spite of all adversities, obstacles, conspiracies, and Agreements.

The People Of Cuba cannot consent to anything or anybody to conspire so that Communist slavery reigns forever in our country and to make permanent exiles out of us, or classic immigrants, nor has it granted plenipotentiary powers to foreign person or government, be it large or small, to negotiate its future.

IV. That the struggle of the Cuban People towards its liberation is safeguarded by the Right to Self-Determination of the People and by multiple Interamerican Treaties

and Agreements and also by the United States of America, such as: Monroe Doctrine (1823); American Congress Joint Resolution and Paris Treaty (1898); Cuba-United States Treaty, Suppressing the Platt Amendment and Extending the Guantanamo Naval Base Concession (1934); Declaration of Lima (1938); Rio de Janeiro Treaty of Reciprocal Assistance (1947); Organization of American States-OEA-Chart (1948); Declaration of Caracas (1954); Punta del Este, Uruguay Resolutions (1962); American Congress Joint Resolution, Made Public Act by Sanction of the Executive Power and Therefore, Mandatory (Resolution No. 230, October 3, 1962); IX Meeting of Consultation of Foreign Ministers of America in Washington (July, 1964); Declaration to the Cuban People from the Foreign Ministers of America in Washington (July, 1964).

We must specifically insist that the hereinabove mentioned Point II of the Air Piracy Treaty, of February 15, 1973 arbitrarily violates and consequently is in open conflict with Joint Resolution #230, October 3, 1962, of the United States of America Congress, which was declared a Public Act when it was sanctioned by the President and which, logically, modified the Neutrality Act of that country in regards to Cuba.

Said Joint Resolution establishes that the United States of America shall offer full cooperation to free Cubans in their just struggle against the actual Cuban regime. Now we find that as per the controversial Point II of the Treaty or Agreement on Air Piracy, the United States will punish in accordance with its laws and will not permit any Cuban to prepare, promote or take part in expeditions or other important activities, from its territory or any place in America against the totalitarian regime imposed in Cuba by deceit, force and terror.

We have pointed out the substance of both texts, so that the present contradictions and confusion may be evidenced and to show, from another point of view, how the United States Government has gone so far in concessions and attributions in this Agreement that not only penetrates into the subject of Cuba's sovereignty but also of the rest of the nations of the world, to the point where many might consider it outrageous and humiliating.

VI. That in the same manner that the People of Cuba in exile and in the island of Cuba censored and exposed the Kennedy-Khrushchev Pact, born as a consequence of the October, 1962 Missile Crisis, which in the long run has served only to protect and perpetuate Castro and his regime in power, now equally, free and democratic Cubans censor and expose any coexistence intent tending to maintain the Cuban tyranny in power and unjustly condemning our People to live under a prison-regime which has destroyed the Cuban Nation, established permanent rationing and poverty and violated every principle of the Interamerican System, reiterated and ostensibly interfering besides, in the internal affairs of numerous Latin American countries and the United States of America. Frankly speaking, nothing has changed in the Homeland of the great Cuban Patriot Jose Marti that justifies the modifications of OAS sanctions against the tyranny and nothing has changed in Cuba to overlook the crimes, the thousands of political prisoners, hunger, terror and the violation of all Human Rights which characterize the totalitarian regime of the Cuban Judas, Fidel Castro.

VII. That for those free and democratic Cubans who have a clear concept of Dignity and Honor, to walk paths of contemptible coexistence with Castro and his communist tyranny now, is nothing else than treason to

the cause of Cuban Freedom, and we consider it is also treason to the forefathers and liberators of the Americas and to the fundamental principles on which destiny and democratic security of the Western Hemisphere and the Free World rest; and also, of course, to the rights, beliefs, and hopes of a better a more just future that all Peoples on Earth deserve.

VIII. That all free and democratic Cubans are eternally gratefully to the People of the United States of America and to the different Administrations of the United States Government since our long and hard exile began, and also to all other Peoples and Governments of America, for the generous aid and job opportunities offered to support our homes with dignity; but with nobility and respect we remind everyone that gratitude does not mean submission; that eternal gratitude does not mean the acceptance of indignities which carry on pain and crucifixion for the Cuban People.

As a distinguished diplomat and intellectual of our Americas stated in a very right sentence: "The solution of the Cuban problem is not to supply the Cubans a diluted and false substitute of Fatherland, but to provide them with an honorable return to their ever-homeland."

Let it be known to the whole world that we left Cuba to return with dignity and to a redeemed Fatherland and that, in such sense we consider that the Organization of American States—OAS—and its Nation Members, deplorably have not lived up to their duty to aid the People of Cuba, and to the Agreements and Treaties which demand from them a firmer and more decorous attitude because, after all, the Battle for Cuba is also the Battle of America.

IX. That the Forefathers and Liberators of the Cuban Homeland, whose struggles and examples are inspiration for our battle of today taught us "that the problems of Cuba concern the Cubans fundamentally"; "that we have nothing while we do not have our Fatherland"; "that the historic truth stands above all"; "that no matters what might happen, Cuba should not and cannot wait for extraneous solutions"; "that Cuba cannot live deprived of the rights enjoyed by other countries, not to consent that it be said it only knows how to suffer"; and "that struggles for Freedom are very costly, but one becomes fond of them, the more time passes and difficulties multiply".

X. That in this occasion we make ours, and take this opportunity to remind them all, the visionary phrases of the great American Patriot, Patrick Henry, when he said:

"Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid, it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death!"

President Nixon: You have demonstrated that you are a sensitive and highly intelligent man, a qualified ruler, a person who works for History. Fulfill your promises to the noble People of Cuba, who has deposited their faith in you; but if you cannot fulfill those promises, do not deny our right, nor allow Russia or anybody else to do it!

Regardless and beyond all impediments the Cuban people will not renounce the right to be free!

Given in Miami, Florida, on the 23rd day of March, 1973.

Signed by: In alphabetical order.

Dr. Jose Alvarez Diaz, Former Secretary of Treasury Department.

Manuel Artime, Former Civil Chief in the Bay of Pigs Invasion.

Ruben Batista Iic. on behalf of his father the former President of Cuba Fulgen cio Batista Zaldivar.

Dr. Jose Borell, President of the Y.M.C.A. International "Jose Marti".

Juanita Castro, Chairman of "Marta Abreu Foundation".

Reinaldo Vergara, Former President of the Cuban American Sertoma Club.

Dr. Jose M. Vidafia, Chairman of the Cuban Rotary Club in Exile.

Herberto Valdes Mollinado, President of the Central Executive Committee of the Cuban Municipalities in Exile.

THE LESSON OF WATERGATE

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. RONCALIO of Wyoming. Mr. Speaker, with the continuing revelations about the Watergate break-in, the circle of involvement on the part of administration officials widens, but awareness of what is really at stake has yet to be fully realized.

When corruption was exposed in previous administrations, of both parties, the public outcry was immediately felt and the Congress reflected this outraged response. Prosecution always followed.

The inclination of far too many to dismiss the evidence of wrongdoing as a common occurrence among public officials leads me to question whether we Americans have lost our capacity for outrage.

Has the estimation of public servants fallen so low that the events of the past months can be seen as an ordinary part of politics? I would hope not.

What has been happening reflects on every public servant, you and me included, aggravating the cynicism which is eroding democracy today. Unless Congress resolves to investigate these matters fully, Watergate will have afforded no lessons. Confirmation will be delayed, the office of the Director of Management and Budget will not be subjected to confirmation, the effectiveness of campaign reform will be voided and the accountability of the executive branch will be an illusion.

I am pleased to know that a call to conscience has been issued from the heartland of America, from the small community of Douglas, Wyo. Mrs. Betty Rider Bass, in an editorial in the Douglas Budget on March 22, asks questions which Congress cannot ignore.

She rightly appraises the Watergate and related episodes as an opportunity for Congress to compensate for past laxity and indifference and to address a demoralizing trend where wrongdoing is not fully called into account.

I urge my colleagues to read her editorial, "The Good Old Days—When a Scandal Was a Scandal," not because it tells us what is wrong with some administration actions but because it warns us that many Americans wonder what is wrong with government as a whole.

This is not a partisan statement. The citizens of Converse County supported the reelection of the President. For them, these questions are no matter of sour grapes.

Americans of both political parties ought to be alarmed at what has happened and we, in Congress, ought to act positively to reassure them that a scandal is still a scandal and housecleaning is still the rule in matters such as these.

THE GOOD OLD DAYS—WHEN A SCANDAL WAS A SCANDAL!

(By Betty Rider Bass)

Oh, for the good old days when a scandal was a scandal and everyone knew it as such!

CXIX—626—Part 8

Who will forget the vicuna coats or Bobby Baker? In those days, a person close to the President and involved in a shady dealing of any kind, was banished in disgrace.

And everyone knew it—and condemned the weak one—and his "boss".

But now—the magnitude of scandals under investigation by Senate committees is unbelievable . . . the far-reaching effects of the dishonest and totally underhanded Watergate bugging "caper"; the unexplained hundreds of thousands of dollars given to the re-election of the president committee . . . then tens of thousands of that money dispersed for apparently ulterior purposes—the acceptance by the Re-Election Committee of large sums of monies from corporations, a strictly illegal transaction. Even the sale of wheat to Russia was judged a sneaky way of allowing certain wheat dealers large profits from the sale.

Have people's ideas of right and wrong changed so much they are indifferent to such obvious wrongdoing on the part of the Administration? Was the President aware of what was going on in the above instances? If he wasn't, he should re-evaluate his aides and advisors to see who actually is governing this land of ours.

Congress is attempting to make up for a number of years of laxity, compromise, possible indifference to its total responsibility to the American people. A little comfort is felt at seeing Republicans as well as Democrats become alarmed at the trend of government of our great country.

Not only lawmakers must be alarmed and vocal. It is everyone's duty to protest dishonesty and corruption in all levels of government—even though it's easier to turn one's head and hope someone else will do the protesting.

ABUSE OF CORPORATE POWER

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. KASTENMEIER. Mr. Speaker, the disclosure of the attempt by the International Telegraph and Telephone Corp. to influence U.S. policy toward Chile should come as no surprise. After all, American corporations, for decades, have manipulated and subverted our foreign policy, when it suited them, in order to enhance their own economic interests. The ITT incident is but another chapter in this long history of the abuse of corporate power. In this respect, I would like to call to the attention of my colleagues the editorial which appeared in the March 22, 1973, New York Times:

I.T.T.'S BRAZEN BEHAVIOR

Sordid, even against the dreary backdrop of earlier revelations, are the latest disclosures about the effort of the International Telephone & Telegraph Corporation to block the democratic election of a President of Chile and to enlist United States Government help for that abortive project. On I.T.T.'s own testimony, it offered the White House and the Central Intelligence Agency a million-dollar contribution to underwrite a plan for preventing the election of Dr. Salvador Allende in 1970.

And who carried that offer to Henry A. Kissinger in the White House and to Richard Helms, then director of the C.I.A.? None other than Mr. Helms' distinguished predecessor as head of the intelligence organiza-

tion, John A. McCone, still a consultant to the C.I.A. as well as a director of I.T.T. According to Mr. McCone, Mr. Helms had earlier promised "some minimal effort" by the C.I.A. to try to bring about Dr. Allende's defeat.

Mr. McCone says, and there is no reason to doubt him, that I.T.T. did not originate the plan for which the contribution was offered. But a year after the offer, after Chile had expropriated the I.T.T.-controlled Chilean Telephone Company, the American conglomerate did submit to the White House an eighteen-point plan designed to insure "that Allende does not get through the crucial next six months."

William R. Merriman, an I.T.T. vice president, explained to a Senate subcommittee that Dr. Allende "had stolen our property without compensation," and that the company was simply trying to get help from the Government to force Chile "to pay us off. That's all we wanted." How can that statement be reconciled with the revelation that Mr. McCone's million-dollar offer was made even before Dr. Allende had been elected and a year before his Government moved against I.T.T.?

Here is exactly the kind of brazen behavior on the international scene that has given a bad name to giant American business firms and that prompted Senator Frank Church of Idaho to launch his investigation into their conduct. No Marxist critics, whether at home, in Chile or elsewhere, could inflict half as much damage on the standing of American international corporations or half as much discredit on the free enterprise system as has I.T.T.'s own behavior. Ironically, its antics have helped Dr. Allende enormously rather than hurting him.

While the record is still far from complete, there is no evidence yet that the Nixon Administration ever seriously considered the more extreme shenanigans which the corporation advocated to bring down Dr. Allende. Unfortunately, however, as a working paper of the Securities and Exchange Commission has disclosed, the Administration did come in force to the aid of I.T.T. in its successful effort to retain the Hartford Fire Insurance Company in a controversial 1971 antitrust settlement.

Thus if I.T.T. has furnished ample material for a book on how a giant corporation should not behave in the last half of the twentieth century, the Administration has supplied the stuff for a chapter on the pitfalls of a close relationship between such a firm and the Government.

MAN'S INHUMANITY TO MAN—
HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. SCHERLE. Mr. Speaker, for more than 3 years, I have reminded my colleagues daily of the plight of our prisoners of war. Now, for most of us, the war is over. Yet, despite the cease-fire agreement's provisions for the release of all prisoners, fewer than 600 of the more than 1,900 men who were lost while on active duty in Southeast Asia have been identified by the enemy as alive and captive. The remaining 1,220 men are still missing in action.

A child asks: "Where is Daddy?" A mother asks: "How is my son?" A wife

wonders: "Is my husband alive or dead?" How long?

Until those men are accounted for, their families will continue to undergo the special suffering reserved for the relatives of those who simply disappear without a trace, the living lost, the dead with graves unmarked. For their families, peace brings no respite from frustration, anxiety, and uncertainty. Some can look forward to a whole lifetime shadowed by grief.

We must make every effort to alleviate their anguish by redoubling our search for the missing servicemen. Of the incalculable debt owed to them and their families, we can at least pay that minimum. Until I am satisfied, therefore, that we are meeting our obligation, I will continue to ask, "How long?"

SEX DISCRIMINATION IN CREDIT

HON. BELLA S. ABZUG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Ms. ABZUG. Mr. Speaker, this afternoon, I had the opportunity to appear before a conference on "Women as Economic Equals" here in Washington to present my views on discrimination in the granting of credit on the basis of sex or marital status.

As you may be aware, my bills, H.R. 246, 247 and, 248—which I also introduced in the 92d Congress—would prohibit discrimination on the basis of sex in the granting of consumer credit, mortgage loans and all loans granted by banks or credit unions whose deposits are federally insured.

I look forward to early hearings on this legislation in the Banking and Currency Committee and fully expect that the 93d Congress will respond to the desires of 53 percent of the population by granting women equal credit opportunity.

I insert in the RECORD at this point the text of my statement before the conference:

STATEMENT OF CONGRESSWOMAN BELLA S. ABZUG

If ever a woman is made to feel like a non-person, it is when she applies for credit. However, capable and reliable she may be, she is treated—solely because of her sex—as though she were totally dependent and unreliable when she applies for a loan, consumer credit or a mortgage. If she is married, she receives credit only through her husband. He may be unemployed, unemployable, gone—or even dead; still she is often forced to get credit in his name.

Last May, hearings were held before the National Commission on Consumer Finance. As a result, a great many investigations were started by groups including N.O.W. and the Women's Legal Defense Fund. For example, inquiries were made of BankAmericard, asking that they state the qualifications by which they measure loan requests, such as minimum term of employment and residence, minimum income, co-signers needed and other factors. Three Northern Virginia banks referred these requests to the United Virginia BankAmericard Center, which sets the policy for all. The Center assured the writers that there were "no current minimum requirements." Nonetheless, complaints from women about these same banks kept coming in. Let me give you a few illustrations:

October 1972: Equitable Trust refused to issue a card to a married woman who would not have her husband co-sign. She was told that it couldn't be processed without his signature.

November '72: A married woman requesting BankAmericard from a Maryland bank, received a card made out in her husband's name—though he had not asked for it. He was unemployed and the wife's income supported the family (as it true in a rising percentage of families). When the woman protested, she was told that "in Maryland, a woman's income doesn't count for anything"—and that it was a mistake to have issued a card to her at all.

August '72: A woman earning over \$8,000 annually, and receiving \$15,000 annually in child support from her former husband, was refused a credit card from Suburban Trust because she was "a newly separated person." When she inquired whether her former husband's credit card would be revoked for the same reason, she was told it would not but of course there was no sex discrimination involved; if he were to apply now, he might be refused also. (If so, it would certainly make history.)

March '73: A single woman who applied to United Virginia Bank and was refused, assumed it was because of a relatively short period of employment. A year later she re-applied and was told that she herself had to write her creditors to send references, though she makes \$11,000 a year.

March '73: The Equitable Trust bank lends a note of charm by sending a letter of "congratulations on your marriage" to single card holders; but spoils it by adding that "we must now delete your account number, please return your card, enclosed is an application for your husband."

The pattern is clear: there is an actual abuse and misuse of law involved, since banks are regulated by a Federal agency to be operated in accordance with "sound banking policy." To issue credit cards to unemployed men but not women, to make women non-persons unless attached to males, is not sound banking policy nor sound business policy. In the instance we have discussed, National BankAmericard, Inc., should be urged to insist that its franchisee banks adopt non-discrimination policies in the issuance of credit cards to women.

It is hopeful to note that among the sponsors of this conference are the same banks mentioned in the complaints I reported. We can take this as an indication of their willingness to discuss the problem, to open their minds, and to change their policies.

But only legislation can effect real and permanent change. A few states have recently passed legislation prohibiting sex discrimination in mortgage loans. They are: Colorado, Idaho, Illinois, Indiana, Kansas, Massachusetts, Maryland, New Hampshire, New Jersey, New York, Pennsylvania, South Dakota, Washington State has passed legislation covering all forms of credit and financing; other states that have introduced such measures include Connecticut, Georgia, New York and Texas. New York has State and local (New York City) statutes prohibiting discrimination in the financing of housing.

Credit discrimination on the basis of sex is not only irrelevant and unfair but a peculiarly paralyzing form of denial of opportunity: without credit, a woman cannot get loans and therefore cannot go into business.

I have introduced in this session of Congress three bills, H.R. 246, 247, and 248, which go to the heart of the problem, which I'm sure many of you are familiar with.

The first bill, H.R. 248, covers all federally insured banks, savings and loan associations and credit unions. It would prohibit any of these institutions from discriminating against anyone because of sex or marital status.

A study on banking practices done by the St. Paul, Minnesota, Department of Human

Rights revealed widespread abuses by banks in that city toward women. The conclusions of the report were that:

Approximately 39% of the banks interviewed revealed discrepancies in the loan policies stated to males and females: Two banks allowed the male interviewed to obtain a loan when under the same set of circumstances they would not make any statement or commitment to the female interviewed. Three banks that had a policy of requiring both signatures on a loan would make an exception for the male interviewer but not the female interviewer. Two banks would allow the male interviewer to receive a loan without his wife's signature, but would not allow the female to receive the same loan without her husband's signature. Two banks would grant a loan to a married man but the same loan is an exception to policy for married women.

This bill would eliminate these abuses by making it illegal for institutions covered by the bill to engage in any of the practices just described.

The second bill, H.R. 246, relates to mortgage transactions. Loans which are federally-related mortgage loans will be subject to the same prohibition against discrimination because of sex or marital status. The coverage is broad. The term, federally-related loans, includes any loan which is secured by residential real property and is made in whole or in part by any bank or other financial institution, the deposits or accounts of which are insured by any agency of the Federal government. Other lenders are covered also, but the point I want to make is that this is a critical and necessary area that has long been ignored. The men that control the mortgage market have effectively prohibited women heads of households from exercising their right to use money for shelter, one of our basic rights.

The unique feature of these two bills is their disclosure requirements: the leader must disclose to the appropriate Federal Agency why credit applications were turned down, and keep records that will be available to the public so that banking practices can be documented and possibly used in suits against offending institutions. In order to protect borrowers' rights of privacy, individual borrowers may elect to keep records of their applications secret.

The third bill, H.R. 247, amends the Truth-in-Lending Act to cover discrimination on the basis of sex or marital status in the granting of consumer credit.

George Williams, director of Parents Without Partners, says that his organization represents "85,000 case histories" of women who have suffered from the tendency of financial officers to moralize. The only solution, he says, is the legislative process, which can free women from the effect of male bias.

It is time that women exercise their right to take part in all aspects of American economic life. There is no rational reason to have any sort of obstacle to women who want to exercise their economic rights. I hope that all of you will urge the Congress to support this legislation and end the discriminatory practices which have for too long prevailed in the area of finance and credit.

EXTENDING WEST FRONT OF CAPITOL

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. ROYBAL. Mr. Speaker, I believe that my colleagues would find the thoughts of the American Institute of

Architects helpful in their considerations on the upcoming vote to extend the west front of the Capitol.

The material follows:

RESOLUTIONS PASSED AT THE SEPTEMBER 1971 MEETING OF THE BOARD OF DIRECTORS OF THE AMERICAN INSTITUTE OF ARCHITECTS

The final report of the Task Force on the West Front of the Capitol was presented by Milton L. Grigg, FAIA, Chairman and is in the appendix of these minutes.

Resolved, That the AIA accepts the Task Force Report on the West Front of the Capitol, endorses and supports its findings and recommendations, and directs that this report be promulgated as reaffirmation of existing AIA policy; and, be it further

Resolved, That the AIA Board express appreciation to the members of the Task Force and the Architect of the Capitol for their cooperation.

REPORT OF THE 1971 AMERICAN INSTITUTE OF ARCHITECTS TASK FORCE ON THE WEST FRONT OF THE U.S. CAPITOL, SEPTEMBER 1, 1971

In response to a request from George M. White, FAIA, Architect of the Capitol . . . "to have The American Institute of Architects review the information and circumstances involved in the proposed extension of the West Front of the United States Capitol," the President of The American Institute of Architects, Robert F. Hastings, FAIA, appointed a review Task Force.

The AIA members appointed by President Hastings to this Task Force were: Milton L. Grigg, FAIA, Chairman; William W. Caudill, FAIA; Leon Chatelain, Jr., FAIA; Francis D. Lethbridge, FAIA; Harry M. Weese, FAIA; and Maurice Payne, AIA, Staff.

They were directed by President Hastings, "to examine AIA's position on the West Front of the Capitol now that the engineering report (the Praeger Report) has been submitted."

The full Task Force met at AIA Headquarters in Washington, D.C. on May 26 & 27, 1971, to review background material previously distributed including the Praeger-Kavanaugh-Waterbury report on "Feasibility and Cost Study—Restoration of the West Central Front of the United States Capitol." Architect White, Assistant Architect of the Capitol Mario E. Campioli, AIA, and Philip L. Roof, Executive Assistant to the Capitol Architect, met for a period of time with the Task Force and were the gracious hosts for a general tour of the Capitol building by the Task Force on the afternoon of May 26th.

Subsequent detailed inspections of the Capitol and informal meetings with the Capitol Architect were held.

RESTORE THE WEST CENTRAL FRONT OF THE U.S. CAPITOL

Having studied and analyzed the report by Praeger-Kavanaugh-Waterbury on "Feasibility and Cost Study—Restoration of the West Central Front—United States Capitol—January 1971", the AIA Task Force is unanimous in endorsement of the method of analysis, the general findings and the conclusions of the report. It offers conclusive evidence to sustain the Institute's resolution for, and belief in the practicality of restoration of the West Front in situ.

It is our opinion that the proposed restoration as recommended by the Praeger Report fulfills the five conditions for restoration as set down by Congress in Public Law 91-145:

1. That the restoration can, without undue hazard, be made safe, sound, durable and beautiful for the foreseeable future.

2. That restoration can be accomplished with no more vacation of the west central space than would be required by any extension plan.

3. The Praeger Report provides proper methods of restoration. The Task Force recognizes that the work could be done on a

competitive, lump sum, fixed price construction bid or bids but we feel that competitive bidding or a fixed profit and overhead with the work being done on a cost basis should be strongly considered in the same way the White House restoration was accomplished.

4. It would be impossible for anyone at this stage of study to guarantee a total restoration cost. However, the Task Force felt that the Praeger Report methods and budget allowed adequate contingency.

5. The Task Force is certain that the restoration work would not exceed the projected time estimated for accomplishing the extension plan.

This Task Force recommends that the present perimeter facades of the Capitol building be declared inviolable and the surrounding grounds, bounded by First Streets, East and West, and Independence and Constitution Avenues, be declared open space, devoid of significant structures protruding above present grade levels. Extant mature tree groupings in these surrounding grounds also should be declared inviolable and sub-surface development be encouraged but confined to areas now either in grass, paving or shrubbery.

PREPARE A COMPREHENSIVE PLAN FOR LONG RANGE DEVELOPMENT OF THE PROPERTIES UNDER THE JURISDICTION OF THE ARCHITECT OF THE CAPITOL AND THE SURROUNDING AREAS

The Task Force observed, that the present space usage in the Capitol is crowded, misused, or underused; that many functions now located in the Capitol have questionable need of being there; and some functions are duplicated. The Task Force was made aware of the need for additional space by Members of the House of Representatives, especially space adjacent to the House Chamber.

Present preliminary findings of the Architect of the Capitol, following a space need study of the House of Representatives, would seem to indicate that any proposed future extension of the Capitol will not begin to meet present, least of all projected space needs.

The Task Force reaffirms the AIA's historic position that Master Planning of the Capitol must be undertaken if impetuous action by the Congress is to be avoided. This planning should include 1) an inventory space utilization of present buildings; 2) an analysis of floor area ration within the confines of the present Capitol area; 3) a study of possible new land acquisition; 4) a study with particular reference to below surface development capability, categories of use, and environmental factors.

Consideration must be given to the displacing of routine services or lower priority functions now occupying space in the Capitol to new locations.

With the realization of the Metro system, the Visitor's Center at Union Station and the emergence of new people-mover systems, all parking should be removed and the Capitol's surrounding grounds cleared of all but official business cars. New systems of shuttles, horizontal elevators and even a Metro branch should be considered. They could provide fast, automatic, safe and frequent service between all of the buildings in the Capitol complex and would make ready proximity a question of time rather than distance.

It is the recommendation of the Task Force that the Architect of the Capitol could and should request the counsel and guidance of leading architects and other design professionals. Since the future of our Capitol is of deep concern to all Americans, their gratuitous participation in the development of a comprehensive plan can be expected.

TASK FORCE OBSERVATIONS ON THE PRAEGER REPORT

Settlement

(1) Soil pressures are such that there is a 2-to-1 factor of safety.

(2) Further settlement can be expected over the next 150 years, but in order of the 1/2 inch of the past, which occurred at the outset.

(3) There has been no evidence of differential settlement.

Cracking

(1) Thermal movement and frost action over the years, as between the interior rubble wall and the sandstone face, has caused local failure of cut stone creating a natural pattern of vertical cracks from top to bottom approximately 30 feet apart.

This is a natural phenomenon which designed control joints obviate. The report recommends making control joints of the existing pattern of cracks. There is no reporting of settlement cracking nor out-of-plumb walls.

Erosion and spalling

(1) Sandstone weathers well when laid on bed faces for natural drainage of trapped moisture from within the wall. Improper stone cutting in some cases, but more important, the use of oil paint over the years, has trapped moisture and contributed to surface spalling. The effect is superficial and akin to accelerated weathering. Modern paints which allow the wall to breathe obviate this. The aesthetic effect is that of time making its mark. No attempt should be made to deny these minor inroads of time.

(2) Significant deterioration was noted on marble surfaces on the Olmsted terraces—a condition that should "flash a warning" whenever future consideration is given to wearability of various stone surfaces.

Loose or cracked stones

(1) Certain stones, voussiors, flat arches, quoins, and cornice members are in need of affixing to the backup masonry. They are visible and can be treated with modern rock bolting techniques and post tensioning.

Wall Strength

(1) The facing stone is bonded to the rubble wall with alternate courses, making a physical bond uniting the wall in a series of vertical shafts separated by the aforementioned natural control joints. These walls are over 4 feet thick at the foundations. They are not overstressed, taking 236 p.s.i. maximum loading with the stone itself capable of 6000 in the case of sandstone and 14,000 for rubble fieldstone. The lime mortar is the limiting factor, but there is no reporting of vertical displacement or cracking of interior walls. It is proposed that a grout injection to fill voids in the mortar matrix and bond the exterior wall to the interior would add strength.

After paint removal and patching and further measurements, it may prove that grout injection could be limited to the lowest story or localized or could be eliminated altogether. It is not clear that so-called solidification of the wall is called for, but this task force defers to the judgement of the Praeger report.

(2) On page 10, near the conclusion of the portion of the report on the experimental wall grouting, amplification and clarification would seem desirable. The type of epoxy as a final bonding material is questioned and should be clarified to the extent that description is not found with respect to the viscosity of the material proposed. Elsewhere, it is reported that various formulations seem to be identified. Furthermore, experience elsewhere indicates that ferrous metals and certain epoxy compounds are not mutually compatible and that deterioration may occur in both materials through chemical action; hence, use of iron reinforcing rods should be evaluated.

(3) There is discussion of the thermal effect of solidification of the wall resulting from the infilling of the present cavity. This phenomenon is not discussed in great detail other than to conclude that there is to be predicted a 10% net increase in heat gain or heat loss in the solidified wall. The effect of

this change in the internal structure of walls of such comparatively great mass bears closer investigation.

It is probable that it will require an interval of time, perhaps 18 months to 2 years, for the long stabilized thermal and hydro balance within the walls to become re-established, responsive to modifications resulting from the filling of the voids and the possible modification in the reverse permeability or breathing property of the wall.

Moisture

(1) It is difficult to accept the categorical statement that "condensation in the wall will not occur during the summer". The computations on Figure 22 do not appear to indicate a recognition of the lag in change of the ambient humidity and temperature of the internal wall volume and it is possibly questionable whether the conclusions shown thereon are valid without further experimental documentation.

(2) The Praeger Report does not contain a bibliography, therefore the following paper may have been available to the authors. Reference is made to *Consolidation des Monuments D'Architecture par injection dans les Maçonneries*, Moscau N. Zvorkine. From this, it is seen that the Russian experiences indicate that the epoxy infilling should not be impermeable to moisture; therefore, the formulation of the material ultimately used should be investigated in light of these reported results it was found that the dilution of the epoxy with a solvent helped to provide better penetration and greater adhesion and, at the same time, did not produce a mass incapable of "breathing". In the same connection, we were informed by Dr. R. M. Organ, Chief, Conservation—Analytical Laboratory, Smithsonian Institution, that Save-stone is an excellent material, particularly if the manufacturers are at this time employing the Lewin Sayre patents. Acrylic plastic compounds have elsewhere been found to be very deleterious in these uses and should be avoided. The Report suggests quite discouraging results from the several experimental methods of removing the old paint from the stone. From other sources, it has been found that the Methylene Chloride paint remover which was used, while not formulated for removal from stone surfaces, actually can be made very effective when combined with a neutral jelly to create an emulsion, keeping the mixture moist for a longer period. (Actually, in the results cited, the coated stone surfaces were covered with aluminum foil to prevent accelerated evaporation.) The latter expedient might increase the effectiveness of the gel remover reported. In this connection, it is somewhat surprising to find that the report does not cover the matter of vapor transmission more positively. It would seem desirable to investigate the advantages of providing a vapor barrier back of the plaster on exterior wall surfaces. It is possible that this will alleviate the tendency for plaster fatigue through thermal and moisture changes as well as more effectively stabilizing the moisture content of the interior of the interior of the wall volume. This vapor barrier, if found to be necessary, could be of the framed-in-place variety, thus avoiding extensive replastering.

(3) Apparently, the authors of the Report have not found conditions to indicate the desirability of horizontal moisture barriers in the base of the walls to offset the capillary action often found in walls of this mass and porous character.

Performance design

(1) The Praeger Report analyzes the structure and loadings of the West Front portion of the Capitol building and proves they are within the parameters of sound practice. The effects of static and dynamic loadings and soil pressures due to dead load, live load, wind and seismic forces, and sonic booms

have been given complete attention and analysis.

Painting

(1) The continued use of oil paint in many applications 15 to 105 mils thick has caused accelerated but not severe weathering. Modern breathing paints will obviate this difficulty. The Capitol is made of three materials: yellowish sandstone (original wings), Walter's marble House and Senate extended wings, marble East Front extension and the cast iron dome. White paint on the sandstone and dome is used to unify the ensemble. This has been the style for more than 100 years. The White House is painted stone. London abounds in painted stone. The tradition of painting should continue.

INDEPENDENT LEGAL SERVICES CORPORATION

HON. BELLA S. ABZUG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Ms. ABZUG. Mr. Speaker, the Nixon administration has in the works yet another device by which to deny millions a fundamental right guaranteed them by our Constitution.

The millions are the poor, the elderly, the infirm—those who need help most.

The right is representation in the legal process by competent counsel.

It is important at this particular time, when drastic cuts are being made in so many social programs, that the legal services program remain intact and above the political fray.

The Nixon administration is preparing legislation to set up State corporations, destroying the concept of a national independent legal services corporation. Each State corporation, funded through revenue sharing would be under a separate board of directors. One suggestion is that the directors be chosen by the State legislature, another that they be designated by the State bar association. This would clearly be far more likely to subject the program to political control, making it difficult, if not impossible for the poor to pursue the rights and remedies guaranteed to them under the law.

I would like to submit a letter from the directors of MFY Legal Services in New York City. Since the program began, MFY has been providing legal assistance to thousands of people in low income areas of Manhattan. Without these offices, and those around the country like them, literally millions of people would have nowhere to go to seek redress of their legal grievances.

We must create a strong and Independent Legal Services Corporation to guarantee that all citizens will have equal access to all available remedies under the law.

The letter and a relevant article follow:

[From the New York Times, Mar. 12, 1973]
WHITE HOUSE PLANS CHANGES IN LEGAL AID TO POOR THAT CRITICS SAY WILL WEAKEN PROGRAM

(By Warren Weaver, Jr.)

WASHINGTON.—The White House is drafting fundamental changes in Federal legal

services for the poor aimed at decentralizing them and, in the eyes of its critics, seriously undermining the program.

According to private lawyers who have been consulted, the Nixon Administration is preparing legislation to replace the Office of Legal Services with a national legal services corporation that would serve as a transitional agency while separate corporations were being set up in each of the 50 states.

Each state corporation, funded through revenue sharing, would be under a board of directors. One suggestion is that the directors be chosen by the state legislature; another, that they be designated by the state bar association. Earlier drafts would have given the Governor direct control over the board.

Supporters of the legal services program fear that, one way or another, this would subject the effort to political control, making it difficult, if not impossible, for poor people to bring class action suits against the governmental and economic establishment. Such suits were one of the original purposes of the program.

"These boards are likely to be full of retired lawyers, party contributors or men with political connections, who have damn little sympathy for the idea of welfare recipients going into court to challenge the state government," predicted one lawyer.

Some sort of legislation is essential to keep the legal services program in operation because its parent agency, the Office of Economic Opportunity, is being dismantled by the Nixon Administration and will cease to exist within three to four months.

Leading Congressional Democrats have introduced legislation for a legal services corporation that would continue to operate the program on a national basis. The White House has endorsed the idea of a corporation but has not yet made public any details of its version of the organization or its aims.

Unless bipartisan agreement can be reached, supporters of the activity fear that President Nixon would veto a Democratic plan, ending the program altogether.

Under one draft of the Administration bill, any state that declined to set up its own legal services program would still be subject to a program operated by the national corporation. Such a system, however, could permit a state with little enthusiasm for the program to set up its own version but then keep it as inactive as possible.

White House proposals call for the board of the national corporation to be appointed by the President. Critics would like to make its members subject to Senate confirmation.

One source of concern to backers of legal services is the fact that, under the Administration plan, Congress would play no part in drafting guidelines for the state programs and, thus, in attempting to insure that some sort of effective activity continued.

MFY LEGAL SERVICES, INC.,

New York, N.Y., March 15, 1973.

Congresswoman BELLA ABZUG,
New York, N.Y.

DEAR CONGRESSWOMAN ABZUG: The issue of the future shape of legal services to the nation's poor will soon be before Congress in an immediate way. We understand that the Administration's legal services bill will be introduced within the next several weeks. It, together with the three bills now pending, will supply the framework within which Congress will consider legal services.

Evidently, as reported by Warren Weaver, Jr. in the New York Times of Monday, March 12, 1973 (a copy of the Times article is enclosed) the Administration is seriously considering a revenue sharing scheme involving the establishment of separate legal services corporations in each state. Presumably, under this approach, each state would establish its own policies and administer its own

legal services program, financed by revenue sharing funds.

We (and we believe, most persons knowledgeable about and concerned with an independent and nonpolitical legal services program) are strongly opposed to the revenue sharing and state control plan attributed to the Administration. We believe that this approach would maximize the possibility of political interference with our programs and would make far more difficult our goal of operating a mature, responsible and stable law practice to the benefit of indigent citizens.

The eight year history of OEO funded legal services is replete with examples of attempts on the part of state and local governments to politicize legal services programs. In states as diverse as California, Connecticut, Missouri and Mississippi, governors have attempted to control or subvert the legitimate, traditional and professionally mandated representation of poverty clients by their attorneys. It is easy to predict that, under the revenue sharing and local control approach, many states would, by the choice of their governors, have no, or only the most hollow of, legal services for the poor. Even in those states which will establish programs (New York would probably be one) we can anticipate that such programs would be far more susceptible of political pressure than would a national program. For example, we fully believe that a powerful and well-financed commercial real estate lobby concerned about the vigor of legal services representation of poor tenants may well find reader listeners to its complaints in Albany than in Washington.

Moreover, we share with the American Bar Association and others the conviction that our programs must be operated in accord with the highest of professional standards. We believe that this will be much more difficult to achieve with 50 individual programs, each of which will relate most directly to different state bar associations with differing standards and likely with differing ideas about the ethical responsibilities of poverty lawyers. We submit that a national standard is preferable.

The President has in the past, repeatedly voiced his support for the concept of a national legal services corporation. So, too, have the Association of the Bar of the City of New York, The New York County Lawyers Association, The New York State Bar, the National Legal Aid and Defender Association and legal services people throughout the country. It is difficult to understand why, in the face of this unanimity of opinion by concerned and knowledgeable persons and organizations, the revenue sharing and local control approach seems to have surfaced. One can only speculate that its advocates do not wish to see a vigorous, independent, responsible national program which can truly deliver on the American promise of equal access by the poor, as well as by the rich, to our system of social justice.

It is our sense that the revenue sharing and local control struggle will be much more difficult if this approach is, in fact, embodied in the Administration bill soon to be introduced in Congress. Since we gather that the Administration bill is not yet fully formulated, we ask that you use your good offices within the White House to urge the President to proceed, as he has suggested in the past that he would, with a national legal services corporation.

We earnestly submit that one national legal services corporation and not 50 state corporations will best serve the interest of our indigent clients. If you agree, we and our client communities will be most grateful for your efforts to that end.

If you feel you need further information or details, we would be happy to meet with

you or a member of your staff at your convenience.

Yours very truly,

GEORGE C. STEWART.
NANCY E. LEBLANC.

CONGRESS AS THE CRISIS

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. QUIE. Mr. Speaker, this year, a great deal of ink has been used discussing the "constitutional crisis" over impoundment of funds. Earlier I expressed the view that Congress was as responsible as the President for the current situation. Secretary Weinberger has written the New York Times expanding on this theme and I submit it for printing in the RECORD. While I may differ on a few points with the Secretary, the basic thesis stands up under scrutiny.

The article follows:

CONGRESS AS THE CRISIS

(By Caspar W. Weinberger)

WASHINGTON.—The avalanche of newspaper articles on the so-called "constitutional crisis" would be more useful to the public if the issues they describe were not so patently false.

The public deserves to understand precisely what is involved in this media-made "crisis"—which basically is nothing more and nothing less than a full-scale battle over whether or not Federal taxes will be raised.

President Nixon, in line with his re-election campaign pledge, has submitted a budget that eliminates now, and for at least three more years, any need to raise taxes—while permitting responsible spending increases for programs that work. Congress wants to boost spending far beyond the \$19 billion increase for fiscal year 1974 proposed by President Nixon.

That is the crux of the "crisis," and no amount of high-flown rhetoric, including in The New York Times, about "constitutional questions" or "the precarious relationship between the Executive and Congress" should be allowed to obscure it from the people most involved in its outcome—the taxpayers who foot the bill.

Only Presidential intervention prevented an additional \$11-billion increase in this fiscal year's budget. Left to its own devices, Congress had created a spending momentum that would have pushed the budget \$19-billion above President Nixon's 1974 request, and \$24 billion above the President's proposals for 1975.

The results of such a spending binge were and are predictable: Either taxes would have to be raised, or we would fuel still another round of runaway inflation, or both. President Nixon acted responsibly to forestall these threats to our nation's economy. And he did it in the face of predictions from virtually every outside economist and columnist that a tax increase in 1973 was inevitable.

The President accompanied this by setting a spending ceiling and, when it was clear that ceiling would be exceeded, impounded sums appropriated by Congress. Incidentally, both houses of Congress agreed, separately, that a \$250-billion spending ceiling was proper. Yet less than a week later they adjourned, having exceeded that ceiling by \$11 billion in spending they believed was required.

Historians have been quoted to the effect that these Presidential impoundments are unprecedented in scope. That is inaccurate. A check of previous budgetary actions by Presidents Kennedy and Johnson shows that both consistently impounded a higher percentage of funds than President Nixon.

Here are the facts: As of Jan. 29 of this year, 3.5 per cent of the total unified budget was being impounded. That compares with 7.8 per cent on June 30, 1961, under President Kennedy, 6.1 per cent in 1962, 4 per cent in 1963; 3.5 per cent in 1964 under President Johnson's first budget, 4.7 per cent in 1965, 6.5 per cent in 1966, 6.7 per cent in 1967, and 5.5 per cent in 1968. So much for the "unprecedented impoundments" myth.

President Nixon's second step was to order the most exhaustive evaluation of Federal programs ever undertaken. Those in the Office of Management and Budget who conducted the evaluation used only one criterion: Does the program work?

Of the more than 1,000 Federal grants programs reviewed, 115 were found to be riddled with waste and inefficiency. There is no money for such programs in President Nixon's 1974 budget.

Included were programs that build ponds and decorative fences for gentlemen farmers; build hospitals where an excess of hospital beds exists; subsidize urban renewal to the principal benefit of land speculators; subsidize public school education in some of the wealthiest communities in the nation at the expense of some of the poorest; and subsidize teacher training when 70,000 teachers already are without jobs.

Every dollar wasted on such programs means a dollar withheld from those who truly need and deserve our help.

Presidential critics have also been quoted as saying that Congress was being denied access to the Administration staff. In fact, President Kennedy invoked "executive privilege"—and thereby kept key staff from appearing before Congress—six times in three years. President Nixon has exercised the same privilege only four times in more than four years.

If the media want to focus on a legitimate governmental crisis, they would do well to summon public attention to the antiquated and illogical manner in which the Congress attempts to enact the budget. Nowhere among its 300-odd committees and subcommittees, each responsible for a small portion of the budget, is there one focal point where a goal or spending ceiling can be set and monitored to assure spending sanity.

Until the Congress gets its budget-making house in order, it is clear that strong Presidential leadership is the only weapon the people have to prevent higher taxes and ruinous inflation. If that is a constitutional crisis, it is clear that it was long overdue.

TESTIMONY OF ROSS PEROT

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. CHAMBERLAIN. Mr. Speaker, last week, on Wednesday, March 21, Mr. Ross Perot, chairman of the board of Electronic Data System, Inc., appeared at the tax reform hearings now being held by the House Ways and Means Committee and presented his views relating to the tax treatment of capital gains. Without taking a position on the content of his statement, I feel that he

made a most provocative suggestion that is deserving of much closer examination.

Because of the broad interest of the members of the committee in his novel suggestion for stimulating investment, I felt that many of my colleagues might wish to review his prepared testimony and I therefore insert his prepared statement at this point in the CONGRESSIONAL RECORD.

TESTIMONY OF ROSS PEROT

Mr. Chairman, members of the Committee, my name is Ross Perot, Chairman of the ad hoc Committee on Capital Gains. I am the Chairman of the Board of Electronic Data Systems, Inc., and also the major investor in du Pont Gloire Forgan, an investment banking and brokerage firm.

Thank you for allowing me to appear before you today. Although I never had the opportunity to acquire formal training in business, tax law or economics, I have had the unique experience in living and working in almost every strata of our economic system. During most of my life I lived and worked under very modest circumstances, at times not having enough to make ends meet, at other times making just enough, and more recently having been extremely fortunate in building a successful business.

In the past two years I have become a careful student of our capital raising system as a result of our investments in Wall Street. As a result of these various experiences, I have acquired a practical working knowledge of most phases of our economy, our capital system, and the impact of our tax system upon it.

The most valuable resource in the American economic system is the working American. It is the working American who makes our country the world's largest market for goods and service.

It is the working American who is the backbone of our tax system.

It is the working American who, as buyer, creates business growth, business profits and business taxes.

It is the working American who, as investor, helps to create his own job and jobs for others by his investments in common stocks; mutual funds; participation in investment groups; or, more indirectly, by investment in common stocks through his retirement or profit sharing funds.

Collectively, he is the world's largest financial institution. Only he can provide sufficient money to allow our capital needs to be met.

In short, the working American is an economic miracle, supporting his family and bearing the burdens of his city, his state and his nation.

It is of and for this working American that I wish to speak today.

I believe that the working American needs a tax break. America's working families need a government policy which encourages and permits them to accumulate a stake—to accumulate capital—so that they can enjoy, as others enjoy, a meaningful share in the growth and gain of this economy.

Under our system, success assumes one fundamental point—that each willing American worker has a job available to him. Jobs can never be taken for granted.

During our lifetimes, we have seen men looking for jobs that did not exist. We have seen the defeat and despair on good men's faces who could not provide for their families. None of us want to see that again. It is only as a working American that the average American can continue to be our most important resource. Our national planning objective should be to see that the working American continues to have a job—a better job. The better his job, the larger customer he becomes and the United States continues to grow as the collective customer. We must also create many new jobs as our popula-

tion expands—we must see that his children have jobs.

If these fundamental goals are to be met, we must be mindful of the intricacies of our economic system. Its workings and interrelations are much like those of a complex watch. Adjust one part improperly and you damage the entire mechanism.

All of us are concerned about the deterioration of America's competitive position. We have seen our country lose its leadership role in one industry after another. We are determined to regain that role. We must make the words, "Made in USA" the symbols of excellence, and competitive cost. There is no question that we can do it. There is no question that we must do it. The question is how do we do it.

We can take a number of intermediate steps to protect our economic system by taking full advantage of the fact that we are the world's largest customer. The millions of working Americans are the buyers in this market. At a time when other nations are able to sell goods and services at a lower cost than the United States, the fact that we are the principal country to sell to, and the average American is the principal buyer, may provide the key to our future economic stability. The sooner we do this, the better.

During this period while we operate under this temporary umbrella, we must take the long-term steps necessary to regain our true competitive position. First, if that is to be accomplished, it is imperative that we spend hundreds of billions of dollars to modernize and expand our industrial capacity in order to allow the working American, with his high standards of living, to compete effectively with his counterparts around the world. This is going to take money—lots of money—more money than we have ever raised before in our country. It is that money—that massive new investment—which will protect the jobs we have and create the jobs we must have in the future.

Second, during this same period, we are going to have to launch and complete a very expensive search for new energy sources. We must complete a huge expansion of our public utility systems. Dramatic improvements must be made to our cities. The list of requirements is endless.

What mechanism will we use to raise this money? The United States capital market is without question the finest in the world. Ask any businessman from any other country. There is only one Wall Street. It is a great resource for accomplishing our national goals. Simply stated, it is an alternative to oppressive taxes. What I am saying, though, is that we must strengthen this capital market, because it is going to have unique and urgent demands made on it during the next few years.

For purposes of my discussion, I would like to have us think of the New York Stock Exchange and the other major stock exchanges in our country simply as scoreboards reflecting corporate performance. Under normal conditions, as a company is growing in size and profits, the stock will rise. It is a winning company. It pays more taxes and creates new jobs, with each new worker being a new taxpayer. If every company were a winning company, we wouldn't have to be preoccupied with raising more taxes, trade deficits, and the like. The taxes from these companies and their employees would be more than adequate to meet our growing needs.

There is one unique characteristic about these scoreboards though—the scores can go down as well as up. There are those in this country who assume that no matter what conditions prevail, the scoreboards will always reflect corporate performance. The facts are—this scoreboard also reflects the willingness of people to invest in America's businesses.

In plain talk, I am saying that these scoreboards could conceivably flicker or even go

out if the capital markets are badly enough abused. I have seen the scoreboard flicker. I invested sixty-five million dollars to keep the scoreboard lights burning at a time of crisis. The fact that I took a risk of this size is the strongest evidence I can give you of my conviction that we must keep the financial springs flowing in this country without interruption.

Now, if I may, I would like to focus on capital. Perhaps we could think of the flow of capital in the United States as being comparable to the Mississippi River. Looking at this great river, it is inconceivable that the water in it could ever dry up. True, it will have periods of high water and low water, but there is always sufficient water to move the ships and barges down the river.

The flow of capital in the United States, because of its massive size, is comparable to the Mississippi River. However, the Mississippi River has its springs, creeks, small rivers, and other tributaries. Simply by clogging the springs and damming the tributaries, it would be possible to turn the Mississippi River into a ditch. In the same fashion, if we should clog the springs and other tributaries of our capital market, it too, could turn into a dry and empty ditch at a time when it should be at full flow.

Once again, I come back to the average working American. He is the key. The millions of individual investors in our country, the American workers, are like the springs that are the source of the many tributaries that form the Mississippi River. We must make investing in our companies an attractive option to him. Only he has enough money to finance the work that must be done. Collectively, the individual investors make up the world's largest financial institution.

Money moves around the world. Like the ocean tides, money ebbs and flows, forming huge pools in various places at varying times. Right now, too much is flowing away from our country, and even the dollar is threatened, because the world's largest customer, the working American, can best satisfy some of his wants by purchasing goods made in other countries. Our challenge in this decade, in order to protect our jobs and our tax base, is simply to get the money flowing back our way.

At a time when our principal economic competitors, the Germans and the Japanese, are subsidizing business and charging no capital gains taxes—at a time when these governments have shown a total understanding of the importance of industry creating jobs—it is a paradox that some people in our country are proposing programs under the guise of fairness that would dramatically weaken our international competitive position.

What we are discussing here today can impact millions of working people in a positive or very negative way.

As you know, the greatest wisdom in our country comes from the everyday people. Recently, a construction worker came up to me in an airport and handed me an envelope. He said, "I am from the mountains of West Virginia. We have a saying out there that you will like." Scrawled in pencil were these words, "There ain't many hunters, but everybody wants the meat." That says it all. The hunters make this country great. The hunters are the workers—the taxpayers. Our challenge is to develop as many hunters as possible. We have a delicate balance in our Nation between the taxpayer who produces more than he uses, and the tax user who cannot produce as much as he needs. In every possible way, we must move the balance to favor those who can and will build the tax base.

At this time, our financial springs should be flowing at the maximum rate to provide the money to create the plants, the jobs, and the new streets, roads, and the other improvements to our cities. Some are proposing

that we raise capital gains taxes. This will have the effect of clogging the springs. Why?

Simply because the average American has an option about where to invest his money. If there is not an economic advantage to investing in our capital system, with the possibility of gain as well as loss, he will invest his money in other areas. The financial tributaries will begin to dry up, and our capital rivers will begin to drop—just at the time when we need to have these rivers full to the banks.

The proposal I want to make will cause the financial springs to flow to fill the capital river. The markets will become liquid. Our economy will become strong, as we build the new plants and make our industries more competitive. Most importantly, I know through my own experience that the hardest part of the American economic system is getting started. This proposal will allow people who work and strive and save to get started—and get ahead.

My capital gains tax proposal is simple. The millions of ordinary citizens who work, pay taxes, save money, and dream that their children will have a better opportunity, are the financial backbone of this country. Only they have enough money to save and invest for the huge capital expansion necessary to make and keep the United States competitive.

Therefore, I propose—That every American be given the opportunity to accumulate \$100,000 in capital gains—tax free, in other words, up to a lifetime total of that amount. This is meant only for the average working American who is trying to accumulate a stake in life which all American families want and need.

Another economic miracle will take place if this materializes. We will be building a whole new base of substantial taxpayers. Once these taxpayers cross the \$100,000 threshold, I propose that they be taxed in the same way all other capital gains taxes are handled. In addition to building a new tax base of substantial individuals in this country, we will reap additional benefits from improved corporate earnings and from the many new jobs created by these capital investments.

What does all this mean to the typical middle-aged worker? It means a great deal. Maybe he doesn't want to invest. However, in all probability his retirement income is tied to stock values. Profit sharing funds are also invested in securities. Damage the capital market in this country and prices will drop. The price of a blue-chip stock such as IBM is only worth what someone will pay for it. Keeping industry strong and the market liquid protects the middle-aged worker's job, protects the value of his retirement funds, keeps down the costs of such basic services as electricity, water, and gas. Damage the securities markets and you impose a huge additional tax burden on this middle-aged worker.

I know I speak for this average American also when I say that he considers it very important for his children to have an opportunity to achieve goals and dreams beyond his own grasp.

I am sure you are wondering what sort of capital gains tax I would propose for persons in my category. I will leave that to your judgment. It would be self-serving for me to discuss this, although I will say that I certainly expect to pay my fair share.

It is fundamentally important to give the man who is trying to get started a chance to get ahead. We can best do this by allowing him to invest in our country's future—the businesses that provide the jobs. As these jobs grow, he will grow. As he grows, the tax base grows. As that happens, the United States becomes stronger.

A current catch phrase is, "Money made by money should be taxed like money made by men". While catchy, this statement is invalid. It equates two totally different types

of money—income money and investment money—as being the same and operating in the same environment.

Both fish and cattle are sources of meat. It would be illogical to take the position that since both fish and cattle represent meat, that both could be grown in the same environment. Fish require water. Cattle require pasture. Investment money cannot be grown in the same environment as ordinary income for the simple reason that the investor has options about where to invest his money—or whether he will invest it at all.

In addition, this catch phrase incorrectly assumes that a job will exist to allow "Money to be made by men". It incorrectly assumes that the capital money rivers will always flow. These money rivers, like water, will seek alternate sources if the channels are clogged. Seriously, this catch phrase misses a fundamental point, in that it assumes that the market—the scoreboard—will stay constant no matter what happens to the financial springs. The scoreboard will, in fact, drop as the financial springs dry up. Maybe the best answer I can give is that if I were running our Internal Revenue Service, I would rather collect a 35% tax on a \$100 stock than a 70% tax on a \$40 stock. You logically say, "But will the stocks really go down?" The answer is an unequivocal "Yes".

Fewer people will invest. Stock prices will drop.

Industry will have difficulty raising new money to modernize its plants.

Profits will drop.

Stock prices will drop further.

Men will be laid off.

The tax base will wither.

If we are to raise the capital requirements for our future, the working American must be given opportunity through our tax laws to become a participating capitalist.

I propose that he be given a proper incentive to share in capital gains—and that faith in him will be returned to us manifold by his faith in his own land, his own system.

Again the words, "Made in USA" will become the hallmark of excellence and economy.

DESALTERS AND WATER RECLAMATION—A CALL FOR NATIONAL PARTICIPATION

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. HANNA. Mr. Speaker, suppliers of drinking water nationwide have been invited to participate in the National Water Supply Improvement Association, which is dedicating itself to promoting desalination, water reclamation and other water sciences in the interest of raising the quality of substandard water supplies.

As we consider legislation for new drinking water standards it is well to keep in mind that today many hundreds of thousands of Americans in three-quarters of the States do not have available drinking water that meets the old recommended Public Health Service standards.

In several areas of the United States during recent years, desalters of various types researched by the Office of Saline Water of the U.S. Department of the Interior have been incorporated into public water supply systems. American manufacturers have researched the processes and designed the hardware to build the

installations. Efficiencies have increased.

A fledgling industry has been brought into being. The formation of NWSIA at this time in 1973 is particularly fortuitous. The Federal Government is reappraising its water resources programs. NWSIA will be ready to assist in assigning proper weights to the new programs and the use of the water sciences.

I am proud that the Orange County Water District in my home county in California has pioneered with water factory 21, a combination of desalination, wastewater reclamation, and conjunctive use of surface and groundwater to protect and improve the quality of community water supplies for most of the people of the county. Langdon W. Owen, secretary manager of the OCWD, conceived water factory 21, and with the help of the Office of Saline Water and the Orange County Sanitation District is bringing it to completion. Mr. Owen also took a leading role with Royal B. Newman, executive director of the Virgin Islands Water and Power Authority, and William E. Warne, of Sacramento, who formerly headed the California Department of Water Resources, in organizing NWSIA. Mr. Newman, the president of NWSIA, is calling on all of those agencies, institutions and individuals who are interested in improving the quality of drinking water supplies to join the new organization.

Mr. Owen describes in his letter to me what their purposes are, and he has attached a summary statement and explanation of the organization meeting, which was held February 1 and 2, in Washington, D.C. Mr. Speaker, through inclusion of Mr. Owen's letter and summary statement at the conclusion of my remarks, may I request members who are interested in this subject to advise their constituents concerning the National Water Supply Improvement Association, and to inform them how they may participate in its work.

ORANGE COUNTY WATER DISTRICT,
Santa Ana, Calif., February 27, 1973.

HON. RICHARD T. HANNA,
House of Representatives,
Washington, D.C.

DEAR DICK: William E. Warne told me on his return from Washington, of your cooperation and interest in our new National Water Supply Improvement Association. I am attaching a summary statement concerning the organization meeting, the Association, its purposes, officers, and plans.

We have about 350 names of individuals in almost every State of the Union, most of them representing government agencies of all levels, colleges and universities manufacturing companies, and suppliers or consulting groups who have participated in great or small ways in the successful effort to organize NWSIA. Our basic purpose is to exchange technical information, and provide the use of desalination and other water sciences in improving the quality of substandard drinking water supplies. Sadly, there are presently many areas which have poor water in which the health and welfare of millions of Americans are being degraded.

Mr. Royal B. Newman, the first President of NWSIA, is inviting the broadest participation of interested groups and individuals in the work of the Association. I am Chairman of the Membership Committee, and would be most interested in receiving the inquiries of all parties who are prepared to

participate in active programs to improve our community water supplies.

The attached statement describes the organization of NWSIA, and its present status. We appreciated the interest you took in our meeting, and that of your colleague, Representative Harold T. (Blizz) Johnson, and many others. Thank you very much.

Sincerely,

LANGDON W. OWEN,
Secretary Manager.

NATIONAL WATER SUPPLY IMPROVEMENT
ASSOCIATION ORGANIZED

The organizational meeting of the National Water Supply Improvement Association was held February 1 and 2, at the Dupont Plaza Hotel in Washington, D.C. Temporary Chairman William E. Warne presided over the meeting, which elected Mr. Royal B. Newman, Executive Director of the Virgin Islands Water and Power Authority, St. Thomas, Virgin Islands, as president, to serve until the First Annual Meeting is completed in June, 1973. Thirty-eight persons attended the organizational conference, including Representative Harold T. (Blizz) Johnson, senior member from California of the House Interior and Insular Affairs Committee.

Warne, of Sacramento, California, a former Director of the California Department of Water Resources, reviewed the objectives proposed for NWSIA, and during the meeting the charter members developed and approved a constitution, elected officers, assigned committee members, and declared their intent to conduct the First Annual Meeting in Florida in June, for the purpose of pursuing the goals adopted. The objectives as established by the Constitution of the new national organization of water suppliers interested in improving the quality of public drinking water through use of desalination and other advanced water sciences are:

A. To promote the use of desalination, waste water reclamation, and other water sciences, and to exchange and spread information concerning the state of the art of desalination, waste water reclamation, and other water sciences to enhance the quality of the environment and of city life by: (1) promoting the conjunctive and efficient use of waters; (2) promoting integration of waters from various sources to supply urban needs; (3) promoting the enhancement of the urban environment and the protection of the public health through raising the quality of substandard community water supplies; (4) advocating operations, methods and procedures conducive to aesthetic, recreational and multiple-uses of community water supplies; (5) minimizing waste and increasing the efficiency of use of urban water supplies; and (6) encouraging regional solutions to water supply, disposal and management problems.

B. To uphold the public interest in adequate, wholesome, clean and sweet community water supplies, and to identify the real costs of poor quality water.

The proposed Constitution had been distributed to most members of the organizational committee previous to the Washington Conference. The Constitution was discussed by the members present, and appropriate additions and corrections made. Having fully analyzed the Constitution and objectives of the organization, the Constitution was adopted on February 2, 1973. The membership for the organization was divided into three categories:

A. *Division One:* Organizations and agencies of Federal, State, or local levels of government and utilities, whether publicly or privately owned, that are engaged in supplying water from whatever sources for community water systems or to users of community water services. (Each member of Division One shall designate in writing its individual representative, who shall serve NWSIA until the member designates his successor.)

B. *Division Two:* Companies and organizations engaging in supplying equipment, material or services used by suppliers of community water services in their projects or operations. (Each member of Division Two shall designate in writing its individual representative, who shall serve NWSIA until the member designates his successor.)

C. *Division Three:* Individuals or organizations interested in the objectives and programs of the Association, whether or not they are engaged in research into or application of water sciences; operation or management of water services; or education or training of practitioners of any phase of the water sciences. (Each organization of Division Three shall designate in writing its individual representative, who shall serve NWSIA until the member designates his successor.)

Officers and a Board of Directors were elected at the final session of the organizational meeting. In addition to President Newman, the Officers are:

First Vice President—Mr. Don Doud, Dupont Company, Wilmington, Delaware.

Secretary—Mr. Langdon W. Owen, Secretary Manager, Orange County Water District, Santa Ana, California.

Treasurer—Mr. Robert E. Bailie, DSS Engineers, Inc., Fort Lauderdale, Florida.

Several standing and special committees were established, and after short meetings, preliminary reports were given. The standing committees are:

FINANCE COMMITTEE

The Finance Committee to be Chaired by Mr. Ivey, adopted the following schedule of annual dues:

Division I—Utilities

Annual Billings in excess of \$5,000,000—\$150.

Annual Billings from \$500,000 to \$5,000,000—\$100.

Annual Billings less than \$500,000—\$50.

Public Agencies—\$150.

Division II—Suppliers

Each—\$500.

Consultants

100 plus employees—\$300.

10-99 employees—\$150.

1-10 employees—\$75.

Division III—Individuals

Each—\$10.

The Finance Committee will follow up the actions of the Membership Committee. The Finance Committee will also prepare and suggest for adoption by the Board of Directors plans for financing the activities of the Association and an annual budget to govern the operations of the Association. Modification of dues rates, alterations of financing plans, and budget amendments shall be reviewed by the Finance Committee and recommendations by the Committee made thereon prior to their adoption by the Board of Directors. The Finance Committee will explore sources of financing to further the Association's activities.

BYLAWS AND CONSTITUTION COMMITTEE

The Bylaws and Constitution Committee Chaired by David L. Firor, National Association of Conservation Districts, Athens, Georgia, will review the Constitution and Bylaws prepared by the Board, and present a report at the First Annual Meeting. The Committee will operate on a continuing basis to effect provisions of the Constitution for membership initiative in amending the documents governing the Association.

LEGISLATIVE COMMITTEE

The Legislative Committee, Chaired by Mr. Warne, reported its intent to make the nature and purposes of the organization apparent. The Legislative Committee shall recommend to the Board of Directors and on approval, institute programs (a) to disseminate information concerning legislation proposed for consideration in the Congress, in

the State Legislature, or by other governments affecting the interests of the Association; (b) prepare position papers for consideration by the Board and for presentation when appropriate to legislative committees on matters related to the interests and objectives of the Association; and (c) present a legislative summary to the Annual Meeting.

MEMBERSHIP COMMITTEE

The Membership Committee, Chaired by Mr. Owen, will canvass the United States for membership in NWSIA. The Membership Committee shall seek and review applications for membership in the three Divisions of the Association, and the committee shall make recommendations to the Board of Directors. The purpose of the Membership Committee shall be to obtain the widest possible participation in the Association among qualified applicants. Charter member rolls are open until the conclusion of the First Annual Meeting. A geographic spread of membership will be sought.

PROGRAM COMMITTEE

The Program Committee, Chaired by Robert Bailie, DSS Engineers, Inc., Fort Lauderdale, Florida, outlined a proposed three-day First Annual Meeting to be held in Fort Lauderdale, Florida. The program will include some technical papers, some papers dealing with the organization and the goals of the organization, and some comments by leaders in the field. Time will be set aside for Executive Committee sessions. Visits will be planned to sites in the Florida and Caribbean areas. The tentative date for the First Annual Conference of the National Water Supply Improvement Association was set as June 18, 1973.

TECHNICAL AND PUBLICATIONS COMMITTEE

The Technical and Publications Committee, Chaired by Nabil El-Ramly, Professor, University of Hawaii, will recommend programs to be instituted by the Board of Directors to assess, evaluate and disseminate information concerning the state of the art and advances made in desalination and other water sciences. The Technical and Publications Committee will be primarily responsible to fill the needs of the Active Members of the Association, but public education will be a worthy secondary purpose of its program.

The Board of Directors is made up of eleven members. Six directors from Division One are Messrs. Royal Newman, Virgin Islands, Don Owen, California, W. L. Ivey, Austin, Texas, John Hatch, South Dakota Department of Health, Pierre, South Dakota; W. E. Steps, Kansas Water Resources Board, Topeka, Kansas; and Dr. Robert O. Vernon, Division of Internal Resources, Tallahassee, Florida. Two directors from Division Two are Messrs. Robert Bailie and Don Doud. Three directors from Division Three are Messrs. William Warne, David Firor, and Professor Nabil El-Ramly.

The luncheon speaker at the NWSIA organization meeting on February 2 was Congressman Harold T. (Blizz) Johnson of California. Congressman Johnson is one of the senior members of the House Interior and Insular Affairs Committee, and Chairs the subcommittee which hears matters related to the Bureau of Reclamation and the Office of Saline Water.

Congressman Johnson noted, "the organization you have created sounds very good to me. We have needed this type of organization for years. We need the help of everyone who is thinking about the programs for water resources development and the practical application of the water sciences. We are going to give very serious consideration in all of the committees to these subjects in the months ahead. It takes expertise to perfect a record, and we hope that the organization that you have put together can give that expertise and testimony before the

hearings that are going to be held in both the Senate and the House.

It is time the drinking water suppliers became involved in the intricacies of the employment of desalters, waste water reclamation, and other methods of extending the usefulness of water suppliers."

MINORITY STAFFING: BIPARTISAN HISTORY OF A KEY CONGRESSIONAL REFORM

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. CLEVELAND. Mr. Speaker, on tomorrow, Wednesday, March 28, I will have the pleasure of joining with my colleagues Mr. ANDERSON from Illinois, Mr. FRASER from Minnesota, and Mr. GIBBONS from Florida, in introducing legislation to guarantee one third of committee staffing resources to the minority party.

Equitable provision of minority staffing on congressional committees has long been a nonpartisan objective of reform advocates as a means of improving the legislative process through better scrutiny of legislative proposals, more informed debate on their merits, and consideration of alternatives.

I think it useful, however, to review the evolution of this proposal for the benefit of new Members and others whose recollections may have been influenced by the partisan rhetoric on the issues emanating from the leadership on the other side of the aisle during this session.

None other than our colleague RICHARD BOLLING of Missouri, a ranking member of the Committee on Rules, said in his book, "House Out of Order" back in 1965:

Without the staff to frame alternative proposals, the minority cannot make its position clear on bills sponsored by the majority. Surely the discussion of alternative is an important part of the democratic process, because it informs the public, compels a more careful and penetrating consideration of bills, and in my experience nearly always results in sounder legislation.

Sharing these sentiments, I wrote the following as chairman of the House Republican task force on congressional reform and minority staffing in our 1966 report, "We Propose: A Modern Congress:

The serious threat to an effective Congress, and therefore to representative government itself, which is posed by the lack of adequate staff for the minority has not been fully understood, even by some members of the minority. Interest and concern is growing, however, and the time is not far off when, I believe, the majority of both parties in Congress will realize what adequate minority staffing would really mean for them in terms of increasing their effectiveness—and that of representative government.

A statement by a group of political scientists, reprinted in the book, supported these views and added:

The country cannot afford gamesmanship or petty, cheap politics at the Congressional level. Yet, we are witnessing an outstanding

example of partisan pettiness in the denial to the minority in Congress that right to exercise its legislative function by refusing to grant it necessary staff support.

On the minority side of the aisle, I want to acknowledge the initiative of our former colleague Fred Schwengel of Iowa and his work as head of the old House Republican Conference Subcommittee on Increased Minority Staffing, and that of JOHN ANDERSON, chairman of the House Republican Conference and now ranking Republican on the Committee on Rules.

Leading Democratic spokesmen for this reform have included Representative FRANK THOMPSON of New Jersey and, of course, Mr. BOLLING.

On July 16, 1970, the House adopted by teller vote of 105-63 an amendment to the then-pending Legislative Reorganization Act what was to become known as the Thompson-Schwengel amendment, governing staffs of standing committees. It stated:

The minority party on any such standing committee is entitled, if they so request, to not less than one-third of the funds provided for the appointment of committee staff personnel pursuant to each primary or additional expense resolution.

This language had the support of Mr. GIBBONS, who again joins us now, and Mr. FRASER, who said:

One of the reasons why I support this amendment is I found in all the years that I served in (the Minnesota) legislature I was a member of the minority group in the State senate. I fought hard to get minority rights. I find it impossible now that I am in the majority suddenly to decide that I was wrong all those 8 years.

And yet, 6 months later, just prior to House adoption of the rules of the 92d Congress, the Democratic caucus adopted a motion offered by Representative CHET HOLIFIELD, Democrat of California, deleting the one-third minority staffing provision from the proposed rules and, in its place, substituting the following:

The minority party on any such standing committee is entitled to and shall receive fair consideration in the appointment of committee staff personnel pursuant to each such primary or additional expense resolution.

When the revised rules were brought to the House floor by Rules Committee Chairman William Colmer as House Resolution 5 on January 22, 1971, he made the following observation about the minority staffing change:

Let me say to you in just so many words, let me say to my friends over here on the Republican side, that you cannot win—I know that is pretty blunt on the thing that you are interested in. The caucus, the Democratic caucus, bound the Members, wisely or unwisely, on one issue and one issue alone and that was the Holifield amendment on the money question." CONGRESSIONAL RECORD, volume 117, part 1, page 142.

Mr. HOLIFIELD gave his rationale in these terms:

Mr. Speaker and my Democratic colleagues, you are down to the place where the gut cutting occurs. You are going to be practical and take what you can get, or you are going to open up a Pandora's box—and you do not know what you are going to get . . .

Let us vote for the Democratic Party and

the control of the Democratic Party and its staff to inaugurate and to enact the legislation we pledged ourselves to in our platform—the Democratic Party platform of the majority party. The people placed on us the responsibilities of leadership. Do not take away the tools.

Vote "yea" on the previous question or you will be like the dog in Aesop's Fables who looked down into the water and saw his own reflection of a big bone in his own mouth. He opened up his jaws to grab for it and he lost the bone in his mouth." CONGRESSIONAL RECORD, volume 117, part 1, page 142.

Commented THOMPSON:

With respect to the one-third rule, I must confess my dismay and disappointment. I must reassert my conviction of the principle in support of the principle of a reasonable share of the staff to the minority and I pledge myself at any future opportunity, I will support it." CONGRESSIONAL RECORD, volume 117, part 1, page 138.

An attempt to defeat the previous question on the rules and thereby open the rules to an amendment to restore the minority staffing provision of the 1970 act was beaten back by a 213-174 vote. The rules were then adopted on a 226-156 party-line vote with Mr. Thompson voting "present."

At the beginning of the 93d Congress, on January 29, 1973, Mr. ANDERSON and I introduced House Resolution 167 to provide the minority party on each committee, upon request, with "up to one-third" of a committee's investigative staff funds.

On February 5, 1973, John Gardner of Common Cause and Ralph Nader joined us along with Minority Leader GERALD R. FORD and Minority Whip LESLIE C. ARENDS in a press conference to build support for minority staffing reform.

For full texts of following statements, see CONGRESSIONAL RECORD of February 6, pages 3229-3232.

Said Gardner:

Common Cause strongly supports House Republicans in their effort to reinstate a provision of the 1970 Legislative Reform Act that allowed minority members of committees to select their own professional staff members . . . It is an essential part of any congressional reform program. (Emphasis added.)

Added Nader:

Committee staff is essential to carry out Congressional responsibilities in preparing just legislation and overseeing the Executive branch of government. As long as the Congress is going to be organized along two-party lines, committee staff should be adequate for both the majority and minority parties.

There is inadequate staff for the Democrats and even less adequate staff for the Republicans. Today, the focus is on the latter problem.

At the same joint press conference, I released figures compiled by the House Administration Committee staff demonstrating that the minority party is given only 13 percent of committee employees and 14 percent of staffing funds.

On February 27, 1973, the House Rules Committee defeated the Anderson-Cleveland proposal, and by an 8-4 party-line vote acted to bring resolutions authorizing travel and investigation activities of nine committees to the House floor un-

der a closed rule, thereby to prevent the offering of the Anderson-Cleveland amendment—See press release, House Republican Research Committee, February 27.

Commented Representative MARVIN ESCH, Republican of Michigan, another GOP reform advocate:

In voting against an open rule on this measure, the eight Rules Committee Democrats placed themselves directly counter to the position taken last Thursday by the House Democratic caucus in favor of open rules.

On February 28, an attempt was made to obtain floor consideration of a rephrased Anderson-Cleveland amendment reading as follows:

Up to one-third of the funds authorized pursuant to this resolution shall be made available to the minority of the committee upon the request of a majority of such minority. ("Dear Colleague" letter from me February 27, CONGRESSIONAL RECORD, February 28, p. 5929.)

We sought to defeat the previous question on a committee investigations resolution so as to gain consideration of the amendment. Mr. BOLLING, floor manager of the resolution, opposed our move to defeat the previous question, arguing that it was unnecessary in that a closed rule was technically not in effect:

In other words, I could yield for an amendment, so that the description of the parliamentary situation has not been accurate up to this point.

Mr. BOLLING. I am merely pointing out that there is another way, if I choose to yield.

Mr. CLEVELAND. Will the gentleman yield?
Mr. BOLLING. No, I would not. CONGRESSIONAL RECORD, February 28, page 5929.

Continued Mr. BOLLING:

I am for the minority having up to one-third of the committee staff. I helped construct the provision of the Reorganization Act which provided that the minority would get one-third of the professional staff.

It had some key language in it which is the crux of the situation. When it gives to the minority an absolute right to select one-third, it reserves to the majority of the committee the right not to retain in its employ people who are of a certain kind. Now, it is understood that people of this particular kind would never be employed by those in the minority, but since the majority is responsible for the orderly management of committees, when it organizes committees it has to retain the responsibility across the board.

There may be some of us who are not aware that in this institution there have been deliberately employed staff who were expected to wreck the operation of a committee, and the majority could not do a thing about it until a sufficient number of the minority became so outraged that they joined in correcting the situation.

Now, I am for—I repeat, I am for the majority [sic] having up to one-third of the staff, but the Reorganization Act said:

"The committee shall appoint any person so selected whose character and qualifications are acceptable to a majority of the committee."

The vote came on a move to defeat the previous question, and was 204-191, blocking action on the minority staffing issue. Fourteen Democrats joined the Republicans on this vote. One voted "present" (see CONGRESSIONAL RECORD, page 5931.)

On March 7, 1973, the House took up

House Resolution 259 which would amend rule XI of the House rules to provide for more open committee meetings. Although the bill came to the floor under an open rule which would make it open to amendment, Mr. ANDERSON was informed in advance by the parliamentarian that a minority staffing amendment might not be in order on grounds of germaneness. Thus another procedural move to defeat the previous question on the rule would be necessary if such an amendment were to be in order for a direct vote. Mr. ANDERSON and I meanwhile had redrafted our amendment to meet the objections raised by Mr. BOLLING, using the language identical to that which now applies to professional minority staff.

Our joint "Dear Colleague" letter announcing our intentions stated:

Mr. Bolling has read this language in draft and has assured us that it meets the objections he previously raised.

In the same statement, however, he made it clear that at the time of that conversation he was not in a position to support the amendment we would offer. CONGRESSIONAL RECORD, March 7, 1973, page 6703.

The amendment:

32(c) The minority party on any such standing committee is entitled, upon request of a majority of such minority, to up to one-third of the funds provided for the appointment of committee staff pursuant to each primary or additional expense resolution. The committee shall appoint any person so selected whose character and qualifications are acceptable to a majority of the committee. If the committee determines that the character and qualifications of any person so selected are unacceptable to the committee, a majority of the minority party members may select other persons for appointment by the committee to the staff until such appointment is made. Each staff member appointed under this subparagraph shall be assigned to such committee business as the minority party members of the committee consider advisable." CONGRESSIONAL RECORD, March 7, 1973, page 6703.

I took the occasion to comment:

So we have walked across the aisle. We have embraced the language of the man who led the fight against the resolution, the Minority Staffing Resolution.

In the name of fairness and congressional reform, what more could we do? What more can you ask? H1431.
can you ask? CONGRESSIONAL RECORD, March 7, 1973, page 6703.

Neither Mr. BOLLING nor Mr. THOMPSON responded. Nor did they take part in the floor debate. House Majority Leader THOMAS P. O'NEILL did:

Mr. O'NEILL. What does the gentleman (Anderson) want? Does he want to think he runs this Congress?

The Democrats were elected as the majority party. The Republicans do not use the staff they have at the present time. They use it with their eyes on the next election. That is not the way it should be. We are the majority.

Mr. ANDERSON of Illinois. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. The gentleman does not yield. We are the majority party over here, and my earnest opinion is that we give the Republican Party far too much as it is at the present time.

Mr. ANDERSON of Illinois. Mr. Speaker, I believe I still have some time remaining.

I am surprised; I am deeply shocked and surprised that my friend and former colleague on the Committee on Rules, the dis-

tinguished majority leader of this body, would take that kind of partisan view of the situation: "We are in the majority; we have the right to lord it over you with respect to staff; if you were in the majority, you would do the same to us."

I can assure the gentleman that if I were in the majority party of this House, I would be in the well fighting for his rights to have fully one-of staff on every committee. CONGRESSIONAL RECORD, March 7, 1973, page 6704.

The previous question was then adopted 197 to 196 with 17 Democrats voting "nay." Proponents of minority staffing lost the chance for a direct vote on their amendment by only one vote. As he did the previous week, Representative JOHN CULVER, Democrat of Iowa, voted "present."

Analysis of the composition of the votes February 28 and March 7 is worth while, indicating that 23 Democratic Members have been willing to associate themselves with the minority staffing cause under the parliamentary opportunities offered to date this session.

On February 28, the vote was 204 to 191, with 14 Democrats voting with the minority. On March 7, it was 197 to 196 with 17 Democrats voting with the minority. As I indicated earlier, one voted "present" both times.

Significantly, eight Democrats voted with the minority on both occasions, six did on the first vote but went against the minority on the second, while eight who voted against the first time voted for on the second.

Shifts toward the minority position on the second vote could be accounted for by the fact that an open rule was in effect, while shifts against might be interpreted as pressure from the leadership as privately reported to me in one case.

Moreover, one Democrat recorded absent on February 28 was present March 7 and voted with the minority. On the latter occasion, three other Democrats voted with the minority but later changed their votes.

ST. PAUL'S OPEN SCHOOL

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1973

Mr. QUIE. Mr. Speaker, it is always a pleasure when I can draw attention to an innovative educational project in Minnesota. Parents and educators looking for new methods of motivating students should be interested in the experience in St. Paul with an open school. Emphasis is placed on self-direction, freedom, and individualized instruction. I submit an article from the October 1972 issue of American Education on the St. Paul Open School for the information of my colleagues:

BUMPY ROAD TO THE OPEN SCHOOL (By Nancy Pirsig)

How many public schools can you name where teachers have had to devote a large part of two staff meetings to the question of how to get the students to leave the building at night? Where your child calls his teachers by their first name—and so do you? And when did you last hear a 13-year-old boy ask,

"Why do we have to have a Christmas vacation?"

All of the above apply to Minnesota's St. Paul Open School, begun in September 1971 as an alternative form of education within the St. Paul public school system. The months since then have been filled with a mixture of triumph and despair, in about equal parts. Looking back, those involved say also that anyone interested in setting out on a similar venture had better expect a variety of bumps and detours along the way. In this sense, at least, the St. Paul Open School has some lessons to teach, though the ingredients of its day-to-day operations may very well be unique. These include:

Its size—500 students.

Student age range—five through 18, or kindergarten through 12th grade.

A voluntary, citywide enrollment that accurately reflects the city's population mix of whites, Indians, chicanos, and blacks, and all its socioeconomic classes.

A program that not only offers a wide, wild array of classes, minicourses, and individual projects, but allows every child to make his own choices about what he studies.

And last but hardly least, the fact that parents and teachers were responsible for the school's being created at all—one of the rare instances, as a staff member points out, in which educational change came from the bottom up.

The organization responsible for the school's creation, Alternatives, Inc., was organized in October 1970 by a group of parents concerned about what they regarded as the stultifying effects of their children's traditional schooling. Out of their discussions came a basic goal: the establishment, by the fall of 1971, of an ungraded, kindergarten-through-12th grade, public, Open School. That concept quickly attracted other parents of like feeling, plus students, teachers, and just plain interested citizens. In short order the movement became 2,000-strong and, as it turned out, unstoppable. Nevertheless, even some of the most ardent supporters suspected that to get the enterprise under way in less than a year was impossible—and even though the school did in fact open on schedule, it did so with what most members of the staff feel was far too little in the way of money, planning time, equipment, staff training, organization, and materials.

Financing was only partly met with funds provided by the local school district, these being supplemented by two major grants, both for \$100,000 and both renewed at a level of \$90,000 for the 1972-73 school year. The first came from the U.S. Office of Education through Title III of the Elementary and Secondary Education Act. The second was from St. Paul's Hill Family Foundation and paved the way for smaller grants from other local foundations and firms. Much of the original equipment and supplies was donated. Despite the interest and generosity lying behind this support, the total fell far short of what almost any experienced educator would have regarded as the absolute minimum necessary to launch such an undertaking.

Says Principal Wayne Jennings, "We had a school that should not have started with so little and, having done so, should have fallen on its face—which it nearly did."

That it did not is attributable in great measure to the extraordinary dedication and energy of its 20 full-time staff members, who were picked specifically for the school; to untold contributions of time by aides and volunteers, and to enormous patience and understanding on the part of parents, even in the face of more difficulties than anyone had anticipated. One parent probably spoke for most when she commented, "I hope increased order will come, but we have to be very tolerant about the first year. The fact that the teachers have even survived—and

with some degree of grace—why, you can't ask for more."

The teachers, however, spend little time congratulating themselves for mere survival. They dwell rather on the need for further training and professional growth and for identifying techniques fitted to the particular objectives and character of this daring educational enterprise. They are, in short, finding that the "open school" concept is more easily proposed than achieved.

One of the earliest dilemmas they encountered was how to handle classes in which the ages of the pupils may range from six to 16, a situation that came about at the instigation of the Alternatives, Inc., parents. Among other things, they argued, a diverse age mix promised a more natural setting—more like that of a family, where younger children learn from older students and where the latter begin to take on "adult" responsibilities.

Not all classes, of course, run the gamut of ages. The course in "Junior High School Math" necessarily encompasses a relatively narrow age range, and certain other courses may similarly be restricted either because of the level of work involved or simply because the teacher wants it that way. But by and large, children of various ages group themselves more or less as they see fit.

Within such classrooms the teachers have found it advisable to encourage the students to sort themselves out according to their interests and abilities, with each group then pursuing the subject matter at hand in terms of those factors. In practice, the mixing of ages seems on the whole to work out rather well and to bring about certain benefits. For many of the older students the experience of helping to teach a young classmate gives new zest to school, and many of the younger children are reading books and tackling math problems at levels far above their supposed capacities. On the other side of the coin, many of the older students have just about run out of patience with the exasperating inquisitiveness of the younger boys and girls, and some of the latter sometimes seem to feel overwhelmed by the presence of crowds of teenagers.

Such varied evaluations are par for St. Paul. There seems to be no physical, philosophical, or practical aspect of the operation to which those involved will give unanimous agreement. But the one statement that probably comes closest to getting it is this: The students truly enjoy the school. In many cases they attend more willingly—and more frequently—than they attended previous schools. Overwhelmingly, their parents report, they prefer this school to any other they have attended.

"Our 14-year-old has always gone to school more or less willingly," says one parent, "but now she really loves to go. It's delightful to see her so happy."

Says another parent: "My eight-year-old was miserable in her former school, even though her teachers thought she was doing just fine. This year she goes happily and has enjoyed a really broad range of activities—poetry, improvisational acting, dabbling in French and science, and surprisingly, more phonics than she ever had before."

And still another: "My 16-year-old insists that if he couldn't go to this kind of school, he would simply drop out. After this year, I really can't imagine any other kind of learning environment that would be adequate for our three boys."

The four floors of the school that evokes this fiery endorsement (a converted industrial building along a busy thoroughfare) are divided into 16 "learning centers" or resource areas—an Early Learning Center, for example, and places designated for such subjects or activities as math-science, shop, home economics, or art. Each area contains materials needed for the activities centered there. Also, around the edges of each floor of

the building are small rooms variously used as quiet reading areas, as staff offices, as places for holding a class or a conference without interruption, and as small "museums" containing collections of Afro-American and Native American art objects.

When the children arrive at the school in the morning they generally go first to their advisor's area, since they are required to check in there at some point during the day for attendance purposes. Each student is also supposed to drop off a daily, weekly, or monthly schedule of activities he intends to follow, so that the advisor can have an idea of what the students he is responsible for are doing, and where. However, the advisor makes no attempt to enforce the schedule; the student alone is responsible for following it.

A master agenda of all current and planned activities available to the students in the various resource areas is updated and reissued monthly. It includes specific classes offered at set times and days, together with general or "possible" activities. Many of the entries are specifically aimed at whetting the youngsters' appetites. Thus students noting that a course is being offered in "Math-Creative Logic" presumably find the prospect of taking it less formidable when they learn that it involves such games as Smarty Bingo, Action Fractions, Go, and Five-in-a-Row Tic Tac Toe. But there are also such conventional sounding courses as "The Civil War" and "Beginning Sewing." Even with these however, what might be staid or routine in another setting has a way of turning out differently in the St. Paul Open School. A visitor to the Beginning Sewing class, for instance, is as likely to see boys there as girls, and perhaps a 17-year-old helping a seven-year-old thread her (or his) sewing machine. Or take Joe Nathan's Civil War class. Five students, aged 11 to 17, took the class for the full year. Besides reading books and magazines about the subject, they pored over old newspapers at the Minnesota Historical Society. They built a model of the Gettysburg battlefield, an exercise that incidentally called upon them to display basic skills in math, shop, and art. And as a wind-up, they took a two-week trip to Gettysburg, earning expense money by holding bake sales and giving talks along the way.

Last fall a group of 28 students went camping in the South Dakota Badlands as part of their work in a class in prehistoric life and one in Native American Studies. The youngsters in the group ranged in age from seven to 17 and included five black students, six Ojibwa, and 17 whites. Fourteen students in a class in Spanish spent a month at a Mexican school, living in Mexican homes, and then subsequently hosted nine exchange students from Mexico.

A cross-disciplinary project whose central motif was the nose rather than cultural heritages was carried out by an ecology class led by teacher Joe Nathan. It was touched off when some of the students got to talking about the smells that pervaded the school's neighborhood. Then came a walk during which three "odor polluters" were pinpointed. When officials of these firms declined to meet with members of the class to discuss the problem, the students successively 1) got advice from a consumer-action group about what to do next, 2) did research into anti-pollution laws, 3) consulted with a lawyer, 4) filed complaints with the St. Paul Pollution Control Agency, 5) circulated petitions, and 6) took their case to the news media. The end result, after considerable additional agitation, was that the three firms were found in violation of St. Paul's anti-pollution laws and ordered to submit implementation plans for controlling the odors caused by their operations. Nathan figures that in the course of their various activities, which included testifying at State hearings on air-pollution

guidelines, members of the class immersed themselves in such traditional subject-matter disciplines as political science and government, speech, sociology, science, law, and math (the comparative measurement of smell)—and learned these subjects in a way none of them is likely to forget.

Members of the staff see such projects as illustrating important and basic advantages of the Open School arrangement—its flexibility to launch undertakings the students find genuinely exciting and rewarding, its ability to accommodate youngsters of varying ages, and its capacity to overcome the arbitrary and unrealistic compartmentalization of subject fields. Which is not to say that everything is peaches and cream. Far from it. The project is still as much experimental as resolved, and problems remain plentiful.

During the first year some youngsters—relatively few, but enough to cause concern—steadfastly decline to display even minimal interest in any of the various subject areas. Some abandoned any pretense at filling out a schedule of activities. A few went for weeks at a time without seeing their advisors, spending inordinate amounts of time “horsing around in the lobby,” as one parent mentioned, or “rapping” with friends or playing ball or leaving school or “wandering,” never settling down. Some, especially the high-school-aged, claimed they were bored—that “nothing’s happening.”

Such indifference and apathy have been a source of widespread agony among the staff and continue to be so now that the new term is under way. And the teachers fret also about whether most students can really handle the wideopen freedom of choice offered to them, about the effectiveness of the advisor-student relationship, even about whether authentic, certifiable learning truly occurs in this open, noncoercive situation.

“We’ve been surprised by some things that happened to us,” says teacher Dave Evertz, “such as the difficulty of getting students involved. We expected it to be easier.”

Adds another teacher, Joan Sorenson: “We have to get away from the ‘rising curtain’ syndrome, where the students come in and sit down, watch the curtain rise, watch the actors-teachers perform and, if they don’t like it, act bored or leave. We have to get the kids away from wanting us to put on a show but not wanting to participate themselves. And it’s hard. We feel guilty if we don’t ‘perform’ well enough. We ask ourselves, ‘Where did I fail today?’”

The problem seems to boil down to trying to figure out how to motivate students who don’t have to show up.

“The school’s greatest need in my view is in the area of teacher development,” says Nathan. “Most teachers, here and everywhere else, have been trained primarily to transmit knowledge, to package and deliver a body of information. But at this school we are putting increased emphasis on helping kids to explore, and we tend to continue trying to accomplish that objective by imposing our own viewpoints and values on them.”

As the Open School teachers search for ways of breaking out of the mold of functioning primarily as “transmitters of knowledge,” they see themselves as carrying out three broad responsibilities, each requiring different skills: First, to develop resource areas that are demonstrably effective and stimulating. Second, to act as “learning facilitators.” And third, to serve as genuinely useful and maybe even inspiring advisors or counselors.

“As counselors,” says Nathan, “we inevitably find ourselves called upon to try to help students with their emotional problems. And that’s important, because a kid’s hang-ups obviously have a significant effect on his progress in school. But we haven’t had much training in this field, and we really don’t know as much as we should about how to deal with these situations.”

Evertz agrees that the advisor-student relationships needs straightening out. “We’re all struggling with it, trying to figure out how you create relationships that really amount to something. Some of the staff are more successful than others, but even the successful ones aren’t sure why. I see a technique that seems to be working for someone else, so I try it and it fizzles. I guess that the ‘magic’ element is honesty. Some of my relationships with students are honest and some are not, and the latter tend to become directive and manipulative. Of course, with some of the students your need to be directive, especially the younger ones, but it should be honest, deliberate directiveness, aimed at helping the youngster and not just stringing him along.”

The concern so obviously felt by Evertz and Nathan and the other members of the staff stems not simply from their personal sense of success or failure but from the fact that the advisor-student relationship is at the crux of the St. Paul Open School’s operational theory. This theory holds that as a student exercises his freedom to choose among various activities, he will be guided by interests and needs he has identified as a consequence of a close relationship with his advisor; and, furthermore, that together they will agree upon the student’s educational goals.

Those propositions sound so reasonable that no one anticipated any difficulty with them, but in practice they have generated much puzzlement and even opposition. A high-schooler refused to discuss “goals” because “I don’t know what I want to be yet.” An eight-year-old had difficulty in developing a practical and feasible way of accomplishing the goal of “improve spelling” and had to be coaxed into picking a workable number of specific words to master each week.

“At first,” says Miss Sorenson, “the students tended to write down what they thought they should do, or what we wanted them to do. They didn’t really examine their own personal, private desires and interests or what direction they wanted to head in or how their interests fitted into the reality of their lives rather than into something called ‘school.’ And, of course, no one had ever asked them to think about these things before. They had quite literally been taught to be passive. Just do what teacher tells you.”

Prior to the end of the school term last spring the staff had come up with a six-page guide to student program planning, illustrating a variety of goals and how one might achieve them, together with a formal Progress-Evaluation Worksheet for keeping track of work or projects completed. “And this year,” says Miss Sorenson, “we are trying to get parents in on the goal-setting so that they understand what their children are trying to accomplish and can help them stay on the track.”

With the new term now under way, members of the staff feel they have made considerable progress with the pesky business of trying to strengthen the advisor-student arrangement and with the other puzzles that beset the school during its first year of operation. They do not suppose that their lives will suddenly become placid, but they do feel that they have a good handle on the situation and that the school’s performance so far augurs well for the future. And a comfortably large proportion of the parents agree.

“Our 11-year-old girl had been completely turned off by school,” says the mother with five children in the Open School. “Now she’s our great success story. She’s completely switched around. She’s doing good things, and she’s beginning to be pleased with herself. Not having to compete has been just marvelous for her.”

Says a father of three boys: “The main positive thing we’ve observed is the social

climate—the freedom of the youngsters to move about and encounter other youngsters they might not meet otherwise, and the encouragement to reach out and to develop the ability to find one’s own way. Our boys have a much greater awareness of the world around them.”

“My 12-year-old son,” says another parent, “is much more outgoing and self-reliant, thanks in part to the fine relationship he has developed with his advisor. He is rid of the feeling that ‘I have to be perfect’ and he doesn’t fear failure any more. He is more free, one might say, to be confident.”

To which Evertz adds: “One thing I particularly notice is the beautiful way many of the younger kids became independent. At the start of the year they would hang on you, not let you alone; now they can just say ‘Hi, Dave’ and go off about their business. It’s been great to see that happen.”

The staff sees such reactions as these as not just being nice compliments but as evidence that they seem to be making progress toward achieving a full measure of what they think school is all about—that is, of helping a youngster develop as a whole being. They do not play down the importance of cognitive knowledge, but neither do they consider it more important than affective knowledge. Rather the two are seen as inseparable: What you learn about the Civil War is inextricably bound up with how you learn about it. Thus the ability to memorize an accumulation of facts—the kind of thing measured by most standard tests—is considered interesting but not crucial. There are no “grades” or report cards. Basic values, less easy to articulate and evaluate, are what the staff hopes the youngsters will absorb.

“Some parents have complained that their kid isn’t ‘doing something,’” says Nathan. “We are trying to make it clear, both to ourselves and to the parents, that we need a new definition of what ‘doing something’ means. We place value on an older student’s helping a younger one, a shy youngster’s development of the ability to hold his own in an argument.” Nathan’s notion of an “A” student is exemplified by a boy who had dropped out of a conventional school and then found his way to the Open School but spent most of his time away from the building. It later turned out that he was busy organizing a center aimed at helping drop-outs find jobs or encouraging them to return to school.

“At first,” says Nathan, “his mother was extremely upset, both with her son—they used to have lots of fights—and with us. She thought we were a bad influence. But she wound up feeling it had been a terrific experience. I guess she came to see the value of giving her son a chance to be purposefully free—to come to a school that let him express his own viewpoints and feelings and gave moral support to his projects and encouraged him to do things he felt were important. He not only could talk about philosophical ways to improve society, he had a very direct community experience in doing something concrete. And he was able to explore ideas and interests which, because they weren’t standard of ‘normal,’ had in effect been closed to him. He is now headed for college, he knows exactly what he wants to take, he is highly motivated—and his mother realizes how good it’s been.”

Adds Jennings: “What we want is for kids to learn those skills and subjects they will need for competence in life—to be humane, effective people and responsible, competent citizens of the world.”

Summing up the “school that should have fallen on its face,” Jennings says, “I know of no other school that’s testing so many of the traditional assumptions about what schools are and should be, and testing them all at once. Not some little experiment in modular scheduling, but the whole concept of student-designed education. Not whether

it's worthwhile to teach 15 minutes more of math a day, but how you motivate kids to take math without ever forcing them to. And doing all these things with all-aged kids at once."

To which Miss Sorenson adds: "Perhaps the most important thing that's happened is that we've established an atmosphere in which kids feel accepted—every kind and variety of kid, with all their different per-

sonalities and problems and peculiarities, but all accepted on a human basis, as people in their own right. Maybe that's why the students feel good about the school, and maybe that's a big accomplishment."

SENATE—Wednesday, March 28, 1973

The Senate met at 12 o'clock meridian and was called to order by the President pro tempore (Mr. EASTLAND).

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou Divine Creator of all that is beautiful and good and true, we thank Thee for the beauty of this season. For buds and blossoms, for lush lawns and soothing sun, for calm winds and bounding waters, for scampering wildlife and the lyric notes of the birds we give thanks to Thee. As we thank Thee for the new life in nature we thank Thee for the promise of new life in man. May the beauty of sight and sound without be matched by the beauty of life within each of us. Help us to walk with Thee in the holiness of beauty and to worship Thee in the beauty of holiness. We pray Thee so to assist us and all men that at last all nations may come under Thy rulership and men dwell in the peace of Thy kingdom.

We pray through Him whose life was above all life. Amen.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries.

FEDERAL DRUG LAW ENFORCEMENT—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States, which, with an accompanying paper, was referred to the Committee on Government Operations. The message is as follows:

To the Congress of the United States:

Drug abuse is one of the most vicious and corrosive forces attacking the foundations of American society today. It is a major cause of crime and a merciless destroyer of human lives. We must fight it with all of the resources at our command.

This Administration has declared all-out, global war on the drug menace. As I reported to the Congress earlier this month in my State of the Union message, there is evidence of significant progress on a number of fronts in that war.

Both the rate of new addiction to heroin and the number of narcotic-related deaths showed an encouraging downturn last year. More drug addicts and abusers are in treatment and rehabilitation programs than ever before.

Progress in pinching off the supply of

illicit drugs was evident in last year's stepped-up volume of drug seizures worldwide—which more than doubled in 1972 over the 1971 level.

Arrests of traffickers have risen by more than one-third since 1971. Prompt congressional action on my proposal for mandatory minimum sentences for pushers of hard drugs will help ensure that convictions stemming from such arrests lead to actual imprisonment of the guilty.

Notwithstanding these gains, much more must be done. The resilience of the international drug trade remains grimly impressive—current estimates suggest that we still intercept only a small fraction of all the heroin and cocaine entering this country. Local police still find that more than one of every three suspects arrested for street crimes is a narcotic abuser or addict. And the total number of Americans addicted to narcotics, suffering terribly themselves and inflicting their suffering on countless others, still stands in the hundreds of thousands.

A UNIFIED COMMAND FOR DRUG ENFORCEMENT

Seeking ways to intensify our counter-offensive against this menace, I am asking the Congress today to join with this Administration in strengthening and streamlining the Federal drug law enforcement effort.

Funding for this effort has increased sevenfold during the past five years, from \$36 million in fiscal year 1969 to \$257 million in fiscal year 1974—more money is not the most pressing enforcement need at present. Nor is there a primary need for more manpower working on the problem—over 2,100 new agents having already been added to the Federal drug enforcement agencies under this Administration, an increase of more than 250 percent over the 1969 level.

The enforcement work could benefit significantly, however, from consolidation of our anti-drug forces under a single unified command. Right now the Federal Government is fighting the war on drug abuse under a distinct handicap, for its efforts are those of a loosely confederated alliance facing a resourceful, elusive, worldwide enemy. Admiral Mahan, the master naval strategist, described this handicap precisely when he wrote that "Granting the same aggregate of force, it is never as great in two hands as in one, because it is not perfectly concentrated."

More specifically, the drug law enforcement activities of the United States now are not merely in two hands but in half a dozen. Within the Department of Justice, with no overall direction below the level of the Attorney General, these fragmented forces include the Bureau of Narcotics and Dangerous Drugs, the Office for Drug Abuse Law Enforcement,

the Office of National Narcotics Intelligence, and certain activities of the Law Enforcement Assistance Administration. The Treasury Department is also heavily engaged in enforcement work through the Bureau of Customs.

This aggregation of Federal activities has grown up rapidly over the past few years in response to the urgent need for stronger anti-drug measures. It has enabled us to make a very encouraging beginning in the accelerated drug enforcement drive of this Administration.

But it also has serious operational and organizational shortcomings. Certainly the cold-blooded underworld networks that funnel narcotics from suppliers all over the world into the veins of American drug victims are no respecters of the bureaucratic dividing lines that now complicate our anti-drug efforts. On the contrary, these modern-day slave traders can derive only advantage from the limitations of the existing organizational patchwork. Experience has now given us a good basis for correcting those limitations, and it is time to do so.

I therefore propose creation of a single, comprehensive Federal agency within the Department of Justice to lead the war against illicit drug traffic.

Reorganization Plan No. 2 of 1973, which I am transmitting to the Congress with this message, would establish such an agency, to be called the Drug Enforcement Administration. It would be headed by an Administrator reporting directly to the Attorney General.

The Drug Enforcement Administration would carry out the following anti-drug functions, and would absorb the associated manpower and budgets:

- All functions of the Bureau of Narcotics and Dangerous Drugs (which would be abolished as a separate entity by the reorganization plan);
- Those functions of the Bureau of Customs pertaining to drug investigations and intelligence (to be transferred from the Treasury Department to the Attorney General by the reorganization plan);
- All functions of the Office for Drug Abuse Law Enforcement; and
- All functions of the Office of National Narcotics Intelligence.

Merger of the latter two organizations into the new agency would be effected by an executive order dissolving them and transferring their functions, to take effect upon approval of Reorganization Plan No. 2 by the Congress. Drug law enforcement research currently funded by the Law Enforcement Assistance Administration and other agencies would also be transferred to the new agency by executive action.

The major responsibilities of the Drug Enforcement Administration would thus include:

- development of overall Federal drug law enforcement strategy, programs, planning, and evaluation;
- full investigation and preparation for prosecution of suspects for violations under all Federal drug trafficking laws;
- full investigation and preparation for prosecution of suspects connected with illicit drugs seized at U.S. ports-of-entry and international borders;
- conduct of all relations with drug law enforcement officials of foreign governments, under the policy guidance of the Cabinet Committee on International Narcotics Control;
- full coordination and cooperation with State and local law enforcement officials on joint drug enforcement efforts; and
- regulation of the legal manufacture of drugs and other controlled substances under Federal regulations.

The Attorney General, working closely with the Administrator of this new agency, would have authority to make needed program adjustments. He would take steps within the Department of Justice to ensure that high priority emphasis is placed on the prosecution and sentencing of drug traffickers following their apprehension by the enforcement organization. He would also have the authority and responsibility for securing the fullest possible cooperation—particularly with respect to collection of drug intelligence—from all Federal departments and agencies which can contribute to the anti-drug work, including the Internal Revenue Service and the Federal Bureau of Investigation.

My proposals would make possible a more effective anti-drug role for the FBI, especially in dealing with the relationship between drug trafficking and organized crime. I intend to see that the resources of the FBI are fully committed to assist in supporting the new Drug Enforcement Administration.

The consolidation effected under Reorganization Plan No. 2 would reinforce the basic law enforcement and criminal justice mission of the Department of Justice. With worldwide drug law enforcement responsibilities no longer divided among several organizations in two different Cabinet departments, more complete and cumulative drug law enforcement intelligence could be compiled. Patterns of international and domestic illicit drug production, distribution and sale could be more directly compared and interpreted. Case-by-case drug law enforcement activities could be more comprehensively linked, cross-referenced, and coordinated into a single, organic enforcement operation. In short, drug law enforcement officers would be able to spend more time going after the traffickers and less time coordinating with one another.

Such progress could be especially helpful on the international front. Narcotics control action plans, developed under the leadership of the Cabinet Committee on International Narcotics Control, are now being carried out by U.S. officials in cooperation with host governments in 59 countries around the world. This wide-

ranging effort to cut off drug supplies before they ever reach U.S. borders or streets is just now beginning to bear fruit. We can enhance its effectiveness, with little disruption of ongoing enforcement activities, by merging both the highly effective narcotics force of overseas Customs agents and the rapidly developing international activities of the Bureau of Narcotics and Dangerous Drugs into the Drug Enforcement Administration. The new agency would work closely with the Cabinet Committee under the active leadership of the U.S. Ambassador in each country where anti-drug programs are underway.

Two years ago, when I established the Special Action Office for Drug Abuse Prevention within the Executive Office of the President, we gained an organization with the necessary resources, breadth, and leadership capacity to begin dealing decisively with the "demand" side of the drug abuse problem—treatment and rehabilitation for those who have been drug victims, and preventive programs for potential drug abusers. This year, by permitting my reorganization proposals to take effect, the Congress can help provide a similar capability on the "supply" side. The proposed Drug Enforcement Administration, working as a team with the Special Action Office, would arm Americans with a potent one-two punch to help us fight back against the deadly menace of drug abuse. I ask full congressional cooperation in its establishment.

IMPROVING PORT-OF-ENTRY INSPECTIONS

No heroin or cocaine is produced within the United States; domestic availability of these substances results solely from their illegal importation. The careful and complete inspection of all persons and goods coming into the United States is therefore an integral part of effective Federal drug law enforcement.

At the present time, however, Federal responsibility for conducting port-of-entry inspections is awkwardly divided among several Cabinet departments. The principal agencies involved are the Treasury Department's Bureau of Customs, which inspects goods, and the Justice Department's Immigration and Naturalization Service, which inspects persons and their papers. The two utilize separate inspection procedures, hold differing views of inspection priorities, and employ dissimilar personnel management practices.

To reduce the possibility that illicit drugs will escape detection at ports-of-entry because of divided responsibility, and to enhance the effectiveness of the Drug Enforcement Administration, the reorganization plan which I am proposing today would transfer to the Secretary of the Treasury all functions currently vested in Justice Department officials to inspect persons, or the documents of persons.

When the plan takes effect, it is my intention to direct the Secretary of the Treasury to use the resources so transferred—including some 1,000 employees of the Immigration and Naturalization Service—to augment the staff and budget of the Bureau of Customs. The Bureau's

primary responsibilities would then include:

- inspection of all persons and goods entering the United States;
- valuation of goods being imported, and assessment of appropriate tariff duties;
- interception of contraband being smuggled into the United States;
- enforcement of U.S. laws governing the international movement of goods, except the investigation of contraband drugs and narcotics; and
- turning over the investigation responsibility for all drug law enforcement cases to the Department of Justice.

The reorganization would thus group most port-of-entry inspection functions in a single Cabinet department. It would reduce the need for much day-to-day interdepartmental coordination, allow more efficient staffing at some field locations, and remove the basis for damaging inter-agency rivalries. It would also give the Secretary of the Treasury the authority and flexibility to meet changing requirements in inspecting the international flow of people and goods. An important by-product of the change would be more convenient service for travelers entering and leaving the country.

For these reasons, I am convinced that inspection activities at U.S. ports-of-entry can more effectively support our drug law enforcement efforts if concentrated in a single agency. The processing of persons at ports-of-entry is too closely interrelated with the inspection of goods to remain organizationally separated from it any longer. Both types of inspections have numerous objectives besides drug law enforcement, so it is logical to vest them in the Treasury Department, which has long had the principal responsibility for port-of-entry inspection of goods, including goods being transported in connection with persons. As long as the inspections are conducted with full awareness of related drug concerns it is neither necessary nor desirable that they be made a responsibility of the primary drug enforcement organization.

DECLARATIONS

After investigation, I have found that each action included in Reorganization Plan No. 2 of 1973 is necessary to accomplish one or more of the purposes set forth in Section 901(a) of Title 5 of the United States Code. In particular, the plan is responsive to the intention of the Congress as expressed in Section 901(a) (1): "to promote better execution of the laws, more effective management of the executive branch and of its agencies and functions, and expeditious administration of the public business;" Section 901 (a) (3): "to increase the efficiency of the operations of the Government to the fullest extent practicable;" Section 901(a) (5): "to reduce the number of agencies by consolidating those having similar functions under a single head, and to abolish such agencies or functions as may not be necessary for the efficient conduct of the Government;" and Section 901(a) (6): "to eliminate overlapping and duplication of effort."

As required by law, the plan has one logically consistent subject matter: consolidation of Federal drug law enforcement activities in a manner designed to increase their effectiveness.

The plan would establish in the Department of Justice a new Administration designated as the Drug Enforcement Administration. The reorganizations provided for in the plan make necessary the appointment and compensation of new officers as specified in Section 5 of the plan. The rates of compensation fixed for these officers would be comparable to those fixed for officers in the executive branch who have similar responsibilities.

While it is not practicable to specify all of the expenditure reductions and other economies which may result from the actions proposed, some savings may be anticipated in administrative costs now associated with the functions being transferred and consolidated.

The proposed reorganization is a necessary step in upgrading the effectiveness of our Nation's drug law enforcement effort. Both of the proposed changes would build on the strengths of established agencies, yielding maximum gains in the battle against drug abuse with minimum loss of time and momentum in the transition.

I am confident that this reorganization plan would significantly increase the overall efficiency and effectiveness of the Federal Government. I urge the Congress to allow it to become effective.

RICHARD NIXON.

THE WHITE HOUSE, March 28, 1973.

EXECUTIVE MESSAGES REFERRED

As in executive session, the President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received today are printed at the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had passed the bill (H.R. 3841) to provide for the striking of medals in commemoration of Roberto Walker Clemente, in which it requested the concurrence of the Senate.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions:

H.R. 5445. An act to extend the Clean Air Act, as amended, for 1 year;

H.R. 5446. An act to extend the Solid Waste Disposal Act, as amended, for 1 year; and

H.J. Res. 5. A joint resolution requesting the President to issue a proclamation designating the week of April 23, 1973, as "Nicolaus Copernicus Week" marking the quincentennial of his birth.

The enrolled bills and joint resolutions were subsequently signed by the President pro tempore.

HOUSE BILL REFERRED

The bill (H.R. 3841) to provide for the striking of medals in commemoration of Roberto Walker Clemente was read twice by its title and referred to the Committee on Banking, Housing and Urban Affairs.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, March 27, 1973, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

BILLS ON THE CALENDAR

Mr. SCOTT of Pennsylvania. Mr. President, I merely wish to say, for the benefit of all Senators, that under the Reorganization Act bills on the calendar stay there 3 days unless the majority or minority leader, as authorized by statute, waive the 3-day provision.

I note that all the bills on the calendar at the present time, except Calendar Nos. 92 and 93, have been on the calendar for more than 3 days. The Daily Digest, which appears in each CONGRESSIONAL RECORD, will serve to bring up to date any developments which occur after the printing of the last edition of the calendar. So that by yesterday we were up to Calendar No. 91, and we disposed of Calendar No. 91. There have been added Calendar Nos. 92 and 93.

I would urge all Senators to designate someone in their office—perhaps their legislative assistant—to look at the calendar daily and to look at the Digest, and if they wish to be especially notified with regard to any bill, that they let us know, or if for any reason they wish to suggest a time of consideration, that they let us know. We will be very glad to cooperate.

We have been observing at least the 1-day notice. We are committed to observing the full 3 days notice, although there will be times when the majority and minority leaders—for reasons of emergency or for reasons where it is important to accommodate a situation—will feel constrained to ask for a waiver of the notice. However, we will do our best

to protect all Senators. I merely wanted the RECORD to show it.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SCOTT of Pennsylvania. I yield.

Mr. MANSFIELD. I am in full accord with the remarks just made by the distinguished Republican leader.

The PRESIDING OFFICER (Mr. HASKELL). Under the previous order, the Senator from Alaska (Mr. STEVENS) is recognized for not to exceed 15 minutes.

Mr. GRIFFIN. With the permission of the majority leader and the acting majority leader, I ask unanimous consent that the order be reversed and that the Senator from Alaska may be recognized second.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator from Michigan (Mr. GRIFFIN) is recognized for not to exceed 15 minutes.

LAST AMERICANS LEAVE VIETNAM

Mr. GRIFFIN. Mr. President, during the next 24 hours the last of our remaining American combat troops will leave Vietnam. And during that period, the last of the known American prisoners of war held by North Vietnam and the Vietcong will be released to head for home.

Remaining in Vietnam will be only the Marine guard at the U.S. Embassy, some military attachés, and the soon-to-be terminated U.S. military delegation to the Joint Commission to Oversee the Repatriation.

This is a moment and a day, I suggest, that should not pass unnoticed, now that the long, difficult process of American disengagement from Vietnam has finally been accomplished.

As the last American combat soldier leaves Vietnam, it is noteworthy that South Vietnam is a free nation; its people have not been taken over by force; the country has not been conquered. To be sure, the nation is still beleaguered; there are still serious problems. But the South Vietnamese are able now to defend themselves as a result of help given by the United States.

All in all, during the period from January 1, 1965, to December 31, 1972, about 2,594,000 Americans served in Vietnam. The number stationed in Vietnam at one time reached a peak of 543,000 shortly before newly inaugurated President Nixon announced his Vietnamization program and set a timetable for the first of a series of orderly withdrawals of American forces.

As the months went by, President Nixon continued to announce withdrawal goals. Each and every announced withdrawal occurred on or before the date set by President Nixon.

Now it can be said that his plan for ending U.S. participation in the Vietnam war has worked.

Now, as we await word expected within a matter of hours that the last and final U.S. combat soldier has left Vietnam, it is most appropriate that we take a moment to salute the leadership that made this day possible, and to say, "Thank you, Mr. President, for a job well done."

ORDER OF BUSINESS

Mr. GRIFFIN. Mr. President, I have some time remaining, and I am glad to yield 2 minutes to the Senator from Connecticut.

Mr. RIBICOFF. I thank the distinguished assistant minority leader.

THE PRESIDENT'S REORGANIZATION PLAN FOR DRUG LAW ENFORCEMENT

Mr. RIBICOFF. Mr. President, I congratulate the President on his reorganization plan, submitted today, to place primary responsibility for Federal drug law enforcement in a single, new agency in the Justice Department.

The plan also gives the Federal Bureau of Investigation its first significant antidrug role by requiring that the new agency draw on the FBI's expertise in such related areas as combating organized crime's major participation in drug trafficking.

Both of these provisions are consistent with the legislation I introduced more than a month ago with eight cosponsors. At that time I urged that all Federal law enforcement efforts in the drug field be unified in a single agency in the Justice Department and that the FBI's expertise and resources be made available for the first time for this Nation's battle against drug trafficking. While my proposal would have accomplished the goal of unifying our drug enforcement efforts in the Justice Department by designating the FBI as the primary drug enforcement agency, I am satisfied that the President's plan for an all-new drug agency in the Justice Department assures a major drug enforcement role for the FBI. No longer will the FBI—the Nation's No. 1 law enforcement agency—be excluded from dealing with the Nation's No. 1 crime problem—drug trafficking.

As the President said this morning in his message to Congress:

My proposals would make possible a more effective anti-drug role for the FBI especially in dealing with the relationship between drug trafficking and organized crime. I intend to see that the resources of the FBI are fully committed to assist in supporting the new drug enforcement administration.

The President's reorganization plan represents a sorely needed response to the overlapping jurisdictions, competing interests, and breakdown in communications which have plagued our drug law enforcement efforts and have allowed many major traffickers to prove themselves better organized than the Federal agencies pursuing them. Despite a sevenfold increase in funding of Federal drug law enforcement efforts over the past 5 years, the situation today remains one of major heroin traffickers being identified by the hundreds, but being apprehended only by the dozens, of heroin being smuggled into our Nation each year by the tons but being seized only by the pounds.

For the past 3 months, the Government Operations Subcommittee on Re-

organization, which I chair, has been investigating the present crazy-quilt of overlapping and disorganized drug enforcement efforts throughout the Federal bureaucracy. No less than nine Federal agencies are budgeted at more than a quarter billion dollars to perform drug law enforcement functions. Many more agencies have related functions. There is no overall coordination.

Our best efforts to stem the flow of heroin and other deadly and dangerous drugs have been most seriously undermined by intense rivalry and bitter feuding between the two primary drug enforcement agencies—the Bureau of Narcotics and Dangerous Drugs—BNDD—in the Justice Department and the narcotics unit of the Customs Bureau in the Treasury Department.

The findings of my subcommittee have been supported in studies by the Government Accounting Office, by a task force of the American Bar Association and the Drug Abuse Council, and by the National Commission on Marihuana and Drug Abuse.

The administration's own National Drug Abuse Strategy Report, released today by the White House with the reorganization plan, also acknowledged the problem:

This (drug law enforcement) effort is at the present time handicapped by fragmented responsibility. There is too much jurisdictional overlap and organizational redundancy, and there is too little sharing of information and expertise. . . . Under these circumstances efficient coordination has become increasingly difficult. Even more serious is the overlapping jurisdiction between departments.

The time is long overdue for Federal narcotics agents to stop fighting each other and to unite in the fight against today's merchants of enslavement and death—the drug traffickers. The President deserves credit for recognizing this problem and proposing a solution to it.

The President's plan would transfer the Customs Bureau's drug enforcement unit from Treasury to the Justice Department and combine it there with BNDD, along with two other Justice Department agencies, the Office of Drug Abuse Law Enforcement—DALE, and the Office of National Narcotics Intelligence—ONNI. The plan would draw all these efforts together into a new Drug Law Enforcement Administration.

The President's reorganization plan will be referred to my Subcommittee on Reorganization. My subcommittee will promptly hold hearings on the President's plan. The hearings will explore how the new agency will coordinate intelligence and other functions related to drug enforcement throughout the Federal bureaucracy, including those carried out by the Internal Revenue Service and the Secret Service in the Treasury Department, the Central Intelligence Agency, the military intelligence agencies in the Defense Department, the Agency for International Development (AID), and diplomatic efforts in the State Department, the Food and Drug Administration in the Department of Health, Education, and Welfare, and the Coast Guard and the Federal Aviation Admin-

istration in the Transportation Department. Also to be considered will be the relationship between the new agency and the Cabinet Committee on International Narcotics Control, the Special Action Office for Drug Abuse Prevention (SAODAP), and the new Office of Federal Drug Abuse Management within the Office of Management and Budget (OMB). The hearings will include testimony regarding the need for better coordination between investigations by narcotics agents and prosecutions by U.S. attorneys.

The President's reorganization plan represents a major step forward by seeking, first, to end the petty bureaucratic infighting that has undermined the primary drug enforcement agencies; second to bring the FBI into drug law enforcement for the first time; and third, to promote cooperation among departments and agencies with related functions.

The vast dimensions of today's drug-abuse crisis deserves a far better law enforcement response than the present scrambling bureaucracy provides. If we are to succeed, there must be a bipartisan approach to finding the solution. The President's reorganization plan is an important step in that direction.

ORDER OF BUSINESS

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time be charged against the time allotted to me.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, I yield to the distinguished Senator from Wisconsin.

Mr. PROXMIRE. I thank the Senator from Michigan for his graciousness.

ORDER FOR RECOGNITION OF SENATOR PROXMIRE DURING CONSIDERATION OF THE REVALUATION BILL

Mr. PROXMIRE. Mr. President, I ask unanimous consent that when the revaluation bill comes before the Senate and after the manager of the bill and the ranking minority Member are recognized, I be recognized to call up an amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. GRIFFIN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 8 minutes.

Mr. GRIFFIN. I suggest the absence of a quorum, and I ask unanimous consent that the time be charged against the time allotted to me.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CANADIAN ROUTE IS NOT A REASONABLE ALTERNATIVE TO THE TRANS-ALASKA PIPELINE

Mr. STEVENS. Mr. President, those who suggest the oil from the North Slope should be shipped through Canada in a trans-Canada pipeline overlook several important facts.

The Canadian native land claims have not yet been settled. The Canadian natives—Eskimos and Indians—have not yet agreed to terms settling their aboriginal claims. Any proposed scheme to withdraw Canadian oil from Canada's North Slope or to ship Alaskan oil across Canada and through Canadian native lands will certainly be met with a law suit prosecuted by Canadian natives. Until these claims are settled, and settlement can only be years away, any trans-Canada route will only result in litigation.

Canadian environmentalists have also indicated they will seek to halt any pipeline through Canada. The same arguments are being made by them as are made by those who oppose the trans-Alaska route. Moreover, because longer stretches of Canadian territory will be traversed, the environmental impact investigation in Canada will have to be even more extensive and will result in greater problems than the relatively short trans-Alaska route. The trans-Canada route will cover approximately 3,200 miles while the trans-Alaska route is 789 miles long.

The Canadians have indicated they want to own the pipeline totally, not just control it by owning 51 percent of the stock. Walter Gordon, former Canadian Finance Minister, for example, has indicated Canada must have total control of any pipeline from the Mackenzie Valley. Referring to a proposal that Canadians have a majority control of the pipeline company, Gordon insisted on "not just 51 percent, but complete control." The Canadians are concerned about their own impending energy crisis. They want the pipeline to carry Canadian products to Canada not south to the United States. Moreover, they want assurances concerning the ultimate destination of Alaskan oil. I request unanimous consent that an article concerning the recent remarks of Mr. Gordon be inserted in the RECORD at the close of my speech.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 1.)

Mr. STEVENS. Mr. President, the U.S. petroleum industry does not seek authority to build a Canadian pipeline for the

shipment of Alaskan oil. There is no application for the building of such a route because the American petroleum industry is convinced that the quickest and easiest method for the shipment of Alaskan oil, as well as the most secure route, is found through Alaska to Valdez and then by ship to the west coast.

In summary, the United States cannot afford to wait until a trans-Canada pipeline can be built. We cannot afford to allow Canadian policy decisions to determine the shipment of American oil. Alyeska Pipeline Service Co. is ready to begin work on a trans-Alaska pipeline within 90 days of permission being granted. Moreover, the construction of the trans-Alaska pipeline will take 3 years. Construction and engineering for a Canadian line would take 3 to 5 years longer.

The cost of the Canadian oil line will be much higher than a trans-Alaska route. This is due to the fact that the length is greater and the terrain is similar to the most costly segment of the Alaskan route—permafrost. It has been estimated by Mr. William P. Wilder, chairman of Canadian Arctic Gas Study, Ltd., that the price of a gas pipeline from the North Slope and Mackenzie Valley to the United States will be \$5 billion. An oil pipeline will, of course, be much more. The State of Alaska has estimated the cost of a trans-Canada oil line at roughly \$7.5 billion to \$8 billion. In comparison, Alyeska Pipeline Service Co. estimates the cost of a trans-Alaska route at \$3.5 billion.

It is vital that oil from Alaska's North Slope be transported to the lower 48 as soon as possible.

In 1967 this country imported 195,400 barrels—8.1 percent of our imports—from the Middle East. We imported 963,300 barrels—39.7 percent of our imports—from Venezuela.

The United States now imports 1.7 billion barrels, about 29 percent of its oil requirements, at a cost of about \$4 billion. This was a level we did not expect to reach until 1980. In only 1 year—from 1971-72—our Middle East imports of crude oil and petroleum products grew from 344,200 barrels to 473,800 barrels daily, an increase of 38 percent. Adding in north African crude oil and petroleum products imports, which grew from 90,200 barrels daily in 1971 to 289,000 barrels daily in 1972, the increase in imports was 99 percent. At the same time imports from all Western Hemisphere nations excluding Canada, Mexico, and the Caribbean were 529,700 barrels in 1971 and 629,700 barrels in 1972. This was an increase of only 19 percent.

While Middle East imports rose 49 percent from 1967-72, Venezuelan imports decreased.

Mr. TOWER. Mr. President, will the Senator yield for a question?

Mr. STEVENS. I yield.

Mr. TOWER. The Senator is aware, of course, that the OPEC countries already have served notice they are going to start charging more for their crude. Therefore, we cannot expect that it will come in at the current price.

Mr. STEVENS. I am confident that is a correct statement. But the real problem

is that we are playing with a feather pillow every time we want to figure what the price will be. These prices are constantly rising. I do not think there is any way they can estimate the cost of American oil in 1980 or 1985.

Mr. TOWER. I suppose the Senator is aware that much of the current surplus in Europe is Middle East oil money.

Mr. STEVENS. I was going to touch on that. It is money representing windfall profits to the Arab nations, in particular. That disrupted our money abroad and led to the tremendous surplus in dollars in Germany in August 1971 and at the time of the recent devaluation. The Senator is absolutely correct.

Our demand for oil is steadily increasing. I am informed experts estimate that America's dependency on foreign oil could soar to 6 billion barrels, about 60 percent of domestic consumption, by 1985. With increases in costs, our foreign payments, mostly to Middle East nations, will probably total \$17 to \$20 billion per year. Our trade deficit is presently \$6½ billion. Were we to import 65 percent of our petroleum requirements, our deficit for oil alone would probably be \$20 to \$30 billion per year.

As the Senator from Texas said, these are current prices. We do not know what those prices will be.

Walter Levy indicated yesterday that by 1980 the Atlantic nations and Japan will import 41 million barrels per day. These countries presently import 23 million barrels daily. Most of this oil—35 to 40 million barrels—will come from the Middle East.

On our recent trip to the Iron Curtain countries and to Eastern European countries, we found that it is estimated that they will have an increased daily demand. They also are looking to the Middle East and to Africa to satisfy their demands. I think the whole world will be looking to that oil, and it is important that we start estimating our reserves.

Time magazine this week in its cover story revealed some interesting facts. While the world consumption of petroleum is increasing by 8 percent per year, the United States, which consumes nearly 40 percent of the total consumption, is rising by 8.7 percent. The Middle East states, many of which are highly unstable politically, control 60 percent of the world's known reserve.

The income of these Middle East states was \$4.4 billion just 5 years ago. Today it is more than \$10 billion. It has more than doubled in 5 years. By 1980 it will quadruple again, and their income will be at least \$40 billion. This is compared with an income, just 5 years ago, of \$5 billion. If this is the case, the income of the Arab nations would be greater than the combined earnings of the 500 largest U.S. industrial multinational corporations; 500 of them do not have the income that would be received by these small Arab nations.

The wealthiest oil state, Saudi Arabia, with a population smaller than New Jersey, will have greater monetary reserves than the United States and Japan together if this occurs.

With only half the income expected, the Arab States by 1985 will have nearly

\$120 billion in official reserves. Saudi Arabia alone will probably have foreign currency holdings of \$30 billion by 1980. Comparatively, the United States today has only \$13 billion in monetary reserves.

Leverage by the Middle East countries, members of the Organization of Petroleum Exporting Countries—OPEC—is increasing daily. Because of this Nation's firm commitment to a free and independent State of Israel, and because of a natural desire to increase their wealth, these Arab nations are pursuing economic policies inimical to the United States. Since 1970, the 11 major petroleum producing countries who make up OPEC have increased oil prices 72 percent. They have taken other steps as well, as the Senator from Texas mentioned, to counter the dollar devaluation. For example, they recently indicated they will raise the price of oil 10 percent this year.

Should oil consumers decide to unite, OPEC has indicated that it may impose a boycott on any nations which unite as importing countries. Nonetheless, I believe an organization of oil importing states is necessary and that this country should take the leadership in its formation.

However, the necessity for such drastic action would be alleviated were we to increase our domestic production with a secure trans-Alaska route.

No further exploration in Alaska will occur until industry is certain that transportation of new reserves in the immediate future is possible. There are 13 to 15 possible basins for exploration in Alaska that have not been explored. Because of the impending expiration dates on many leases on the North Slope, which, again, the Senator from Texas is familiar with, private investors and oil-producing countries are just not willing to expend the large amounts of capital necessary when the transportation of oil to the lower 48 is in such doubt.

All of these reasons, the balance-of-payments problems, the international security problem, the possibility of impending law suits in Canada, the risks of Canadian control of a trans-Canada pipeline, urge that the most feasible, most direct means of obtaining the Alaskan oil should be pursued. This is the trans-Alaska pipeline.

In testimony before the Senate Interior Committee only yesterday, Thornton F. Bardshaw, president of the Atlantic Richfield Co. stated:

Each day's delay in bringing Alaskan oil to U.S. markets results in balance of payment loss to the United States of about \$5 million. By the early 1980's, the balance of payments loss will be about \$10 million per day.

The North Slope's 9.6 billion barrels equal about 25 percent of this country's proved reserves. When the trans-Alaska pipeline is carrying its full capacity of 2 million barrels daily, Alaska will displace about \$2.5 billion worth of foreign oil per year. Mr. Bradshaw testified that the effect of the trans-Alaska pipeline on this Nation's balance of trade between 1977 and 1987 would be \$20 to \$30 billion for oil alone. Natural gas would, of

course, increase this and offset our balance-of-payments problems. He concluded:

The projected loss in 1980 trade deficits for each 24-hour delay comes to nearly \$10 million. This means that the American taxpayer and consumer of 1980 will suffer an added balance of trade deficit of more than \$450 million since the Appeals Court decision of last February 9.

Clearly the trans-Alaska pipeline must be built now. We can afford to wait no longer for the initiation of this project.

EXHIBIT 1

[From the Toronto Daily Star, Feb. 26, 1973]

CANADA MUST HAVE TOTAL CONTROL OF ARCTIC PIPELINE, GORDON SAYS

Walter Gordon, former Canadian finance minister, said last night Canada must have total control of the Mackenzie Valley pipeline if it is built to carry natural gas from the Arctic.

Referring to an international consortium's assurances that Canadians would have majority control of the pipeline company, Gordon, honorary chairman of the Committee for an Independent Canada, insisted on "not just 51 per cent, but complete control."

He told a panel on a CFRB radio show:

"I think we should help the United States. It would be selfish and improper to say to the Americans: 'You can't transfer your own gas from Alaska to the U.S. border.' But we should not agree that if the pipeline is built, it will be on the understanding that Canadian gas or oil must also be transported across the border."

He said the same reason underlies his recent call for a crown corporation to control Canadian oil production: "If we need it for ourselves, then I certainly don't think we should let anyone else have it."

Gordon said he didn't think the United States would retaliate if Canada said it also was worried about a future energy crisis.

"I think we should explain the facts to the Americans," he said.

"If one of those facts is that we really don't believe we have any surplus to take care of our own needs over 50 years, or whatever period you want to say, then I'd be surprised if they would think this was unreasonable."

Gordon said the government body he proposed would buy, not confiscate, U.S. holdings in Canadian oil lands to avoid domestic shortages predicted within 20 to 30 years.

He said the government might start off by investing \$500 million a year in this program, then \$1 billion annually for 10 years.

"Then if there is a real crisis . . . you can be sure we will be spending a great deal more than that," he said.

"People don't like to think about spending very large amounts of money in advance of a crisis, but I think this time we had better think about it seriously."

He said such a move should not lower living standards.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STEVENS. I am happy to yield.

Mr. TOWER. Could the Senator quote us some figures of the cost of delaying the construction of the Alaska pipeline? It is a phenomenal cost.

Mr. STEVENS. The delay today is costing \$5 million daily.

Mr. TOWER. And ultimately this cost will have to be passed along to the consumer?

Mr. STEVENS. It will be. It will have to be passed along to the consumer. The delay we are involved in now is a delay caused by extreme conservationists, who

refuse to face the fact that we have spent \$12 million in environmental studies and that we have made changes in the pipeline that have increased the cost from \$900 million to \$3.5 billion to meet their objections. Still they insist on opposing the early construction of the pipeline, which I think ultimately will change this country's policies toward Israel. We will not be able to withstand the leverage of the Arab countries in the period between 1975 and 1979 or 1980 unless we have Alaskan oil available.

Mr. TOWER. May I say I concur with the Senator from Alaska's statement. I think he has made a very comprehensive, instructive, constructive, and, I believe, a dispassionate and realistic statement.

Mr. STEVENS. I thank my colleague from Texas and thank the Senator from Michigan for yielding to me.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator has 1 minute remaining.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the time for the quorum call be charged against the time allotted to the Senator from West Virginia (Mr. ROBERT C. BYRD).

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

REMOVAL OF INJUNCTION OF SECRECY ON EXECUTIVE F, 93D CONGRESS, 1ST SESSION

Mr. ROBERT C. BYRD. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the Convention concerning the Protection of the World Cultural and Natural Heritage, done at Paris on November 23, 1972—Executive F, 93d Congress, 1st session—transmitted to the Senate today by the President of the United States, and that the convention with accompanying papers be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the Record.

The PRESIDING OFFICER. Without objection, it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Convention concerning the Protection of the World Cultural and Natural Heritage, done at Paris on November 23, 1972. I transmit also, for the information of the Senate, the report from the Department of State with respect to the Convention.

This Convention creates international machinery for the identification and protection of natural and cultural areas of outstanding universal value which constitute the common heritage of mankind. For this purpose, the Convention es-

establishes a World Heritage Committee to develop and maintain lists of areas of outstanding importance and a World Heritage Fund to provide international assistance for the protection and conservation of these areas.

While the Convention places basic reliance on the resources and efforts of the States within whose territory these natural and cultural sites are located, it would also provide a means of assisting States which have insufficient resources or expertise in the protection of areas for the benefit of all mankind.

I therefore recommend that the Senate give early and favorable consideration to the Convention submitted herewith and give its advice and consent subject to a declaration for which provision is made under Article 16(2), as explained in the report from the Department of State.

RICHARD NIXON.

THE WHITE HOUSE, March 28, 1973.

ORDER FOR RECOGNITION OF SENATORS JACKSON AND MATHIAS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, following the recognition of the two leaders for their designees under the standing order, the distinguished Senator from Washington (Mr. JACKSON) be recognized for 15 minutes, to be followed by the distinguished Senator from Maryland (Mr. MATHIAS) for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. ROBERT C. BYRD. Mr. President, I ask that during the debate on the dollar revaluation bill today, Mr. Richard Fay, a member of the staff of the Subcommittee on Migratory Labor of the Committee on Labor and Public Welfare, be granted the privilege of the floor. I make this request on behalf of the able Senator from Wisconsin (Mr. NELSON).

The PRESIDING OFFICER. Without objection, it is so ordered.

RESCISSION OF REMAINDER OF TIME UNDER SPECIAL ORDER RECOGNIZING SENATOR ROBERT C. BYRD

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to vacate the remainder of my time under the order.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order there will now be a period for the transaction of routine morning business for not to exceed 30 minutes with statements limited therein to 3 minutes each.

DAMAGE TO THE ENTIRE INDIAN MOVEMENT CAUSED BY EVENTS AT WOUNDED KNEE

Mr. BARTLETT. Mr. President, I have been watching with increasing concern the sequence of events at Wounded Knee, S. Dak.

I am concerned not only because of the potential physical hazards involved in the siege but also because of the harm this action can do to the entire Indian movement.

During my term as Governor of Oklahoma, I felt we made great strides in helping the Indian and in helping the Indian help himself. This was all accomplished through peaceful means. Tribal government, business, and local leaders all worked together to restore to the Indian his proper share of the action and the responsibility which goes with that share.

Incidents such as Wounded Knee can serve only as a setback to that progress.

Regrettably, much of the publicity surrounding this siege at Wounded Knee has tended to glamorize its participants including the recent gesture of Marlon Brando. The Washington Post sympathetically called it a "cry of anguish" in behalf of the Indian. More correctly, it should be termed an insurrection by a very small minority of anarchists. What has not been mentioned is that these anarchists are contesting the democratically elected representative of the Oglala Sioux Tribe—elected representatives who by their constitution are subject to recall by the members of the tribe. Their only claim to renown are criminal records ranging from assault to armed robbery. And I am referring to some of the leaders of the AIM movement.

Naturally, tribes throughout Oklahoma and the country are indignant at this blatant attempt to seize power.

No concession or compromise should be shown these criminals. To do so would not only invite future incidents, but also be a slap in the face to those Indians who have displayed such a high regard for the law and who have worked so hard to bring real progress to the Indian movement.

LEAVE OF ABSENCE

Mr. ROBERT C. BYRD. Mr. President, at the request of the distinguished senior Senator from North Carolina (Mr. ERVIN), I ask unanimous consent, in conformity with paragraph 1 of rule V of the Senate, that the Senator from North Carolina (Mr. ERVIN) be granted leave of absence from the Senate for the remainder of this week due to the death of a brother.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. BELLMON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HUDDLESTON). Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

INTERCHANGE OF JURISDICTION OF CERTAIN CIVIL WORKS

A letter from the Secretary of the Army and the Secretary of Agriculture giving notice of the intention of the Departments of the Army and Agriculture to interchange jurisdiction of civil works and National Forest lands at Winochee Lake project in the State of Washington (with accompanying papers). Referred to the Committee on Agriculture and Forestry.

REPORT ON AIR FORCE MILITARY CONSTRUCTION CONTRACTS

A letter from the Secretary of the Air Force transmitting, pursuant to law, a report on the Air Force military construction contracts awarded by the Department of the Air Force without formal advertisement for the period July 1, 1972, through December 31, 1972 (with an accompanying report). Referred to the Committee on Armed Services.

PROPOSED LEGISLATION BY THE SECRETARY OF COMMERCE

A letter from the Secretary of Commerce transmitting a draft of proposed legislation to provide for more effective utilization of officers of the uniformed services (with accompanying papers). Referred to the Committee on Armed Services.

PROPOSED LEGISLATION BY THE DEPARTMENT OF DEFENSE

A letter from the General Counsel of the Department of Defense transmitting a draft of proposed legislation to make permanent certain provisions of the Dependents Assistance Act of 1950, as amended, and for other purposes (with accompanying papers). Referred to the Committee on Armed Services.

STATUS OF THE ALL-VOLUNTEER FORCE AND THE END OF THE DRAFT

A letter from the Acting Assistant Secretary of Defense transmitting a special report concerning the status of the all-volunteer force and the end of the draft (with an accompanying report). Referred to the Committee on Armed Services.

PROPOSED LEGISLATION BY THE SECRETARY OF HOUSING AND URBAN DEVELOPMENT

A letter from the Secretary of Housing and Urban Development transmitting a draft of proposed legislation entitled "The Flood Disaster Protection Act of 1973" (with accompanying papers). Referred to the Committee on Banking, Housing and Urban Affairs.

PROPOSED LEGISLATION BY THE DEPARTMENT OF AGRICULTURE

A letter from the Under Secretary of Agriculture transmitting a draft of proposed legislation to transfer from the Agricultural Credit Insurance Fund to the Rural Housing Insurance Fund the assets, rights, and liabilities of the Government with respect to those few farm labor housing loans and rural rental housing loans that were insured through the Agricultural Credit Insurance Fund prior to the establishment of the Rural Housing Insurance Fund in 1965 (with accompanying papers). Referred to the Committee on Banking, Housing and Urban Affairs.

PRESERVATION OF ESSENTIAL RAIL TRANSPORTATION SERVICES

A letter from the Secretary of Transportation transmitting, pursuant to law, a full and comprehensive plan for the preservation of essential rail transportation services in the Northeast section of the Nation (with an accompanying report). Referred to the Committee on Commerce.

PROPOSED LEGISLATION BY THE DEPARTMENT OF TRANSPORTATION

A letter from the Secretary of Transportation transmitting a draft of proposed legislation to amend certain laws affecting the Coast Guard (with accompanying papers). Referred to the Committee on Commerce.

REPORT OF THE SECRETARY OF COMMERCE

A letter from the Secretary of Commerce transmitting, pursuant to law, his annual report for the fiscal year ended June 30, 1972 (with an accompanying report). Referred to the Committee on Commerce.

REPORT BY THE SECRETARY OF TRANSPORTATION

A letter from the Secretary of Transportation transmitting, pursuant to law, a report entitled "Activities Relating to Title II of the Ports and Waterways Safety Act of 1972" (with an accompanying report). Referred to the Committee on Commerce.

PROPOSED LEGISLATION BY THE SECRETARY OF TRANSPORTATION

A letter from the Secretary of Transportation transmitting a draft of proposed legislation to give effect to the International Convention on Conduct of Fishing Operations in the North Atlantic, signed at London under date of June 1, 1967, and for other purposes (with accompanying papers). Referred to the Committee on Commerce.

REPORTS OF THE AMERICAN ACADEMY OF ARTS AND LETTERS AND THE NATIONAL INSTITUTE OF ARTS AND LETTERS

A letter from the Executive Director of the National Institute of Arts and Letters transmitting pursuant to law, reports of the American Academy of Arts and Letters and the National Institute of Arts and Letters (with accompanying reports). Referred to the Committee on the Judiciary.

PROPOSED LEGISLATION BY THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

A letter from the Acting Secretary of Health, Education, and Welfare transmitting a draft of proposed legislation to provide for the extension of the Developmental Disabilities Services and Facilities Construction Act, and for other purposes (with accompanying papers). Referred to the Committee on Labor and Public Welfare.

ORDER BY THE POSTAL RATE COMMISSION

A letter from the Secretary of the Postal Rate Commission transmitting, pursuant to law, an order by the Postal Rate Commission promulgating rules governing evidentiary and filing requirements in rate and classification cases (with accompanying papers). Referred to the Committee on Post Office and Civil Service.

PROPOSED LEGISLATION BY THE VETERANS' ADMINISTRATION

A letter from the Administrator of Veterans' Affairs transmitting a draft of proposed legislation to provide for the conversion of Servicemen's Group Life Insurance to Veterans' Group Life Insurance, and for other purposes (with accompanying papers). Referred to the Committee on Veterans' Affairs.

PRINTING OF REPORT ON SERVICES AS A SENATE REPORT (S. REPT. NO. 93-94)

Mr. KENNEDY. Mr. President, the Subcommittee on Federal, State, and

Community Services of the Special Committee on Aging recently issued a report, "The Rise and Threatened Fall of Service Programs for the Elderly."

The report has attracted considerable interest; it deals with social services available under several titles of the Security Act; and it comments on regulations now under consideration by the Department of Health, Education, and Welfare.

To meet the demands for copies, and to assure that libraries and Government agencies have a supply, I ask unanimous consent that it be published as a Senate report.

The PRESIDING OFFICER. Without objection, it is so ordered.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HUMPHREY:

S. 1403. A bill to amend the Communications Act of 1934 to provide grants to States and units of local government for the establishment, equipping, and operation of emergency communications centers to make the national emergency telephone number 911 available throughout the United States. Referred to the Committee on Commerce.

S. 1404. A bill to amend title 39, United States Code, with respect to the financing of the cost of mailing certain matter free of postage or at reduced rates of postage, and for other purposes. Referred to the Committee on Post Office and Civil Service.

By Mr. BIBLE:

S. 1405. A bill for the relief of Angel C. Alonso and Daisy Santa Maria Alonso. Referred to the Committee on the Judiciary.

By Mr. BAKER:

S. 1406. A bill to amend the Highway Safety Act of 1966, title 23, United States Code, section 401 et seq., and for other purposes. Referred to the Committee on Commerce.

By Mr. BURDICK:

S. 1407. A bill to amend the Interstate Commerce Act in order to give the Interstate Commerce Commission certain authority over railroad car service when an emergency is or may be imminent. Referred to the Committee on Commerce.

By Mr. HARTKE:

S. 1408. A bill to permit officers and employees of the Federal Government to elect coverage under the old-age, survivors, and disability insurance system. Referred to the Committee on Finance.

By Mr. MCINTYRE:

S. 1409. A bill to amend and extend the Economic Stabilization Act of 1970. Referred to the Committee on Banking, Housing and Urban Affairs.

By Mr. MCINTYRE (for himself, Mr. SPARKMAN, and Mr. TOWER) (by request):

S. 1410. A bill to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury. Referred to the Committee on Banking, Housing and Urban Affairs.

By Mr. MCGOVERN (for himself and Mr. ABOUREZK):

S. 1411. A bill to authorize the Sisseton and Wahpeton Sioux Tribe of the Lake Traverse Reservation to consolidate its landholdings in North Dakota and South Dakota, and for

other purposes. Referred to the Committee on Interior and Insular Affairs.

By Mr. MCGOVERN (for himself and Mr. ABOUREZK):

S. 1412. A bill to declare that certain federally owned lands are held by the United States in trust for the Sisseton-Wahpeton Sioux Tribe of the Lake Traverse Indian Reservation in North and South Dakota. Referred to the Committee on Interior and Insular Affairs.

By Mr. JAVITS:

S. 1413. A bill to increase the authorization for fiscal year 1974 for the Committee for Purchase of Products and Services of the Blind and Other Severely Handicapped. Referred to the Committee on Labor and Public Welfare.

By Mr. MANSFIELD (for himself and Mr. SCOTT of Pennsylvania):

S.J. Res. 85. Joint resolution to abolish the commission authorized to consider a site and plans for building a national memorial stadium in the District of Columbia. Referred to the Committee on the District of Columbia.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HUMPHREY:

S. 1403. A bill to amend the Communications Act of 1934 to provide grants to States and units of local government for the establishment, equipping, and operation of emergency communications centers to make the national emergency telephone number 911 available throughout the United States. Referred to the Committee on Commerce.

EMERGENCY TELEPHONE ASSISTANCE

Mr. HUMPHREY. Mr. President, today I am introducing legislation to provide for a single, nationwide emergency telephone number. This bill would assist States and local governments in financing the costs incidental to establishing this emergency service.

Mr. President, the Congress has recently been concerned with helping the victims of crime. We have considered legislation to compensate those that have received physical abuse at the hands of criminals. I have proposed a bill providing for group life insurance and death benefits for policemen, firemen, and prison guards. All of these proposals demonstrate a national concern for the victims of crime and are long overdue.

Yet we in Congress often overlook simple, practical proposals that might prevent our citizens from becoming victims of crime. A nationwide three-digit telephone number is an idea that can be implemented immediately. It could save the vital seconds that are so crucial during an emergency.

Mr. President, this idea is not new. Today about 22 million Americans are enjoying the luxury of a single emergency number. The "911" service has been in operation in some areas since 1968. The commanding officer of the Communications Division of the New York City Police Department has reported that "911" gives the citizen access to the police with unprecedented speed. He is quoted as saying:

It has proven to be one of the great successes in law enforcement.

London, England, has had an emergency number since 1937. This service is

at least partially responsible for the higher rate of criminal apprehensions in Great Britain as compared to the United States. Similarly, Great Britain has a better method of turning in fire alarms which has resulted in a death rate from fires four times lower than our own.

Something must be done. The St. Louis directory lists 161 emergency numbers on one page. Our own area, the District of Columbia, has at least 45 emergency numbers. Los Angeles County has 50 numbers for police alone. It is impossible for most Americans to memorize the emergency numbers in their area. Even if they did, the 25 million Americans who move every year would have to go through the process again.

Dialing "O" for operator may be the most simple way to get assistance, but it is not the fastest. One often has to wait a long time for the operator to answer and then must wait again while the operator relays the call or information desired. Emergency calls constitute only a minor fraction of about 1 percent of the operator's daily work. Consequently, they cannot be expected to respond as fast as someone trained especially for emergencies.

Mr. President, since 1967 my colleague in the Congress, Representative J. EDWARD ROUSH, has taken the lead in advocating a uniform, emergency nationwide telephone number. As a result of his efforts his hometown of Huntington, Ind., became the first in the Bell System to adopt "911" service. Five years later, only 10 percent of our population is enjoying the benefits of quick and expert assistance in cases of crime, accident, poisoning, fire, and other emergencies.

In 1970, the Franklin Institute Research Laboratories with the National Science Foundation undertook a study to determine if a need existed for a single emergency telephone number and if the implementation of such a system were feasible. In their report they noted a lengthy questionnaire that had been sent to a select group of metropolitan fire and police chiefs, sheriffs, poison control centers, and smalltown police and fire chiefs. The results were as follows:

A study of responses to questionnaires and discussions with persons in all phases of emergency work have led FIRC to conclude that a single emergency telephone number is feasible and should be implemented nationally.

The legislation I am proposing today would make it possible for all areas of the country to receive the benefits, in terms of life and well-being, of a national emergency telephone number.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1403

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title III of the Communications Act of 1934 is amended by adding at the end thereof the following new part:

"PART V—GRANTS FOR EMERGENCY COMMUNICATIONS CENTERS ESTABLISHED TO MAKE AVAILABLE THE NATIONAL EMERGENCY TELEPHONE NUMBER 911

"FINDINGS AND PURPOSE

SEC. 399A. (a) Congress finds that (1) there is a need to establish a single emergency telephone number of the United States so that its citizens during times of emergency may easily obtain rapid assistance; (2) efforts are underway to establish 911 as that number; (3) State and local governments need Federal assistance to enable them to cooperate in establishing such number.

"(b) It is the purpose of this part to assist State and local governments in establishing 911 as the emergency telephone number by providing grants for the establishment, equipping, and operation of emergency communications facilities to be used to make such number available in the areas served by such centers.

"AUTHORIZATION OF GRANTS

"SEC. 399B. (a) The Commission is authorized to make grants under this part to assist State governments and units of general local government in meeting the costs of establishing, equipping, and operating emergency communication centers to make the national emergency telephone number 911 available in the areas served by such emergency facilities. Grants under this part shall be allocated by the Commission among the States on such basis as the Commission determines will most effectively carry out the purposes of this part.

"ADMINISTRATIVE PROVISIONS

"SEC. 399C. (a) (1) The amount of any grant made under this part to establish, equip, and operate an emergency communications facility shall not exceed one-half the cost (as determined in accordance with regulations prescribed by the Commission) of establishing, equipping, and operating such center.

"(2) Not more than one-third of any grant made under this part may be expended for the compensation of personnel. The amount of any such grant expended for the compensation of personnel shall not at any time exceed the amount of State or local funds actually expended for the compensation of personnel employed in such center.

"(3) No part of any grant made under this part may be used for the acquisition of land on which a communications center is to be established.

"(4) Grants under this part may be paid in advance or by way of reimbursement, and at such intervals, as the Commission may determine, and adjustments shall be made for overpayments and underpayments.

"(b) (1) Each recipient of assistance under this part shall keep such records as the Commission shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(2) The Commission and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for purposes of audit and examination to any books, documents, papers, and records of the recipients that are pertinent to the grants received under this part.

"(c) The Commission may arrange with and reimburse the heads of other Federal departments or agencies for the performance of any of its functions under this part.

"(d) The administration may prescribe such regulations as it determines are necessary to carry out the purposes of this part.

"DEFINITIONS

"SEC. 399D. As used in this part—

"(1) The term 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any territory or possession of the United States.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 399E. For the purpose of making grants under this part, there are authorized to be appropriated \$5,000,000 for the fiscal year ending June 30, 1974; and \$7,500,000 for the fiscal year ending June 30, 1975."

By Mr. HUMPHREY:

S. 1404. A bill to amend title 39, United States Code, with respect to the financing of the cost of mailing certain matter free of postage or at reduced rates of postage, and for other purposes. Referred to the Committee on Post Office and Civil Service.

EDUCATIONAL AND CULTURAL POSTAL AMENDMENTS

Mr. HUMPHREY. Mr. President, I am today introducing the Educational and Cultural Postal Amendments of 1972. This is a bill to amend the Postal Reorganization Act of 1970 to deal with the current crisis affecting access by the American public to magazines, books, small newspapers, and other educational and cultural materials, especially through public, school, and college libraries. The Post Office and Civil Service Committee has scheduled hearings on bills relating to this subject on April 2 and 3.

I do not use the word "crisis" lightly. As a result of the first proceeding before the Postal Rate Commission under the Postal Reorganization Act, a new schedule of postal rates was established to take effect over a period of years beginning July 6, 1972. This schedule provides for rate increases of a kind never before experienced in the entire history of the postal service in this country.

Let me give a few examples:

Rates on magazines and newspapers published by educational and other non-profit organizations would be increased over a 10-year period by 255 percent.

Rates on materials sent in interlibrary loans among libraries and other educational institutions would be increased over a 10-year period by 130 percent.

Rates on regular magazines and newspapers in second class would be increased over a 5-year period by 126 percent.

Rates on books, educational films, and other educational cultural materials would be increased over a 5-year period by 70 percent.

These increases are of a magnitude which is bound to have a catastrophic effect on the creation of these informational, educational, and cultural materials, and the access to these materials directly and through our libraries and educational institutions.

The impact on libraries is multiplied several fold by the simultaneous proposal of the administration to completely eliminate for fiscal 1974 the several library and educational materials programs of the Federal Government, programs which in the fiscal year 1972 received some \$200 million.

Many Members of the Senate were concerned in 1970 about what would happen to the distribution of informational, educational, and cultural materials

through the mails under the Postal Reorganization Act. However, there was no indication 3 years ago that the rate increases under the new system would be of such incredible magnitudes. For example, in the Senate Committee report on the reorganization bill the following passage occurs as an illustration of rate increases which the committee thought might be expected under the new legislation.

Notwithstanding its rejection of a proposal to impose its views on the new Postal Service by law, the committee agreed that this report should specifically express committee concern over the rates to be established for certain classes of mail. Accordingly the committee alerts the Rate Commission established by this bill to the public service which certain preferred rates have historically performed.

Reduced rates for within-county newspapers, for libraries, for books, and for associations of rural electrification co-ops were enacted for very good reason—that the public generally benefits from such rates. Additionally, the Rate Commission should take into account the preferential rates for the mailings of authorized non-profit organizations . . . and the rates of classroom publications . . .

The committee does not believe that small incremental increases in rates spread out over 5 and 10 year periods will be detrimental to mail matter allowed preferential rates because they contribute to the public welfare. But the Rate Commission should be aware of this special problem as it assembles its schedules of rates and fees.

Despite this assurance, there was enough uneasiness in the Senate on the potential impact of the legislation on the distribution of these materials that the Senate by unanimous vote agreed to a floor amendment by the majority and minority leaders, Mr. MANSFIELD, and Mr. SCOTT. This amendment, now in the law, requires that the rates on books, educational films, and other materials in the so-called special fourth-class rate and the library rate be uniform for the entire country. As the sponsors of the amendment stated, the amendment at least guaranteed equal access by the American public to these materials regardless of how far they might live from publishing centers, largely in the East.

We now have had enough experience with postal operations under the reorganization act to realize that the Congress must face once more, in the light of present facts, its responsibilities relating to the impact of increased postal rates on the educational, scientific, cultural, and political life of this country. As a result of oversight hearings in the Post Office and Civil Service Committee of the House of Representatives in 1972 on the operation of the Postal Reorganization Act, two principal bills have been introduced in the House, both by members of the House committee. The Udall bill (H.R. 4128) seeks to ameliorate the present crisis in five ways:

First, by providing special lower rates—to help small-volume periodicals and newspapers—for the first 250,000 pieces in each publication issue of regular second-class publications.

Second, by spreading the full regular second-class rate increases over a period of 10 years rather than 5, the same 10-year adjustment period now provided for

nonprofit second-class periodicals and newspapers, for nonprofit third-class materials, and for the interlibrary loan rate in fourth class.

Third, by providing that costs for any rate increases for nonprofit periodicals and newspapers after July 1, 1974, be borne 50 percent by increased rates and 50 percent by appropriations.

Fourth, by providing that regular rate second-class periodicals and newspapers also benefit by this 50-50 sharing of increased costs, but only with respect to any further rate increases which may result from future actions of the Postal Rate Commission and the Board of Governors.

Fifth, by providing that the intent of the Congress that rate increases under the Postal Reorganization Act are spread out over a period of years be guaranteed, through a provision which protects this transitional period from the vagaries of recommendations in the budget.

The second bill in the House of Representatives by Congressman WILLIAM D. FORD and several cosponsors (H.R. 528) is identical with the Udall bill on all five of these points. However, it goes further, and extends the relief given for the distribution of periodicals and newspapers to books, educational films, and other educational and cultural materials in the special fourth-class category. It also provides that there be written into the Postal Reorganization Act a specific provision that the Postal Rate Commission must take into account in recommending rates the "educational, cultural, scientific, and informational value to the recipient of mailed materials." This provision is included because, despite a clear legislative history and a finding by the hearing examiner that the Congress wished the Postal Rate Commission to give special attention to the impact of increased rates on these materials, the Postal Rate Commission and the Board of Governors gave only lip service to this congressional intent. My bill is identical to the Ford bill, except for technical drafting changes.

In the Senate there is also a bill pending by the Senator from Massachusetts (Mr. KENNEDY) and several cosponsors (S. 842). This bill is similar to the Udall bill in the House except that it does not contain the provision relating to the 50-percent ceilings on future rate increases for nonprofit and regular rate periodicals and books. The Kennedy bill also differs from the Ford bill in the House in that it contains no other provisions relating to books and other educational and cultural materials in special fourth class.

I welcome cosponsorship of my bill by other Members of the Senate. I think all Senators are beginning to hear from their States concerning the crisis faced by our libraries of all kinds. If the President's budget recommendations for fiscal 1974 are carried out—either by an actual reduction in appropriated funds or by subsequent withholding of appropriated funds by the administration—the impact on libraries and educational systems will, to repeat, be catastrophic. For example, I am told that the American Library Association now estimates that if the President's budget recommendations on

library programs are adopted at least 2,000 public librarians will lose their jobs on July 1, 1973. The prospect for my State is a loss of 150 public librarians, great cuts in mail and bookmobile services, and tens of thousands of volumes of current books not acquired.

I hope that the Congress will reinstate these library and educational materials funds and also enact legislation limiting the blanket power claimed by the administration to impound appropriated funds. However, that issue may come out, we must also consider the impact of the present schedule of postal rate increases on the functioning of our school, public, and college libraries and our entire educational system. Testimony by the American Library Association in the first postal rate proceeding indicates that some 50 percent of the receipts of books by libraries and college stores came through the mail, and the special fourth class postage charges are paid by the recipient. In the case of small libraries the volume of materials received through the mails is closer to 90 percent. The library association testimony also clearly shows that each dollar increase in postal charges will result in similar decreases in the amount of funds available for acquiring up-to-date materials for library collections.

I intend to present in the hearings before the Post Office and Civil Service Committee estimates of the cost of the several provisions in my bill, after having an opportunity to consult with the Postal Service. I can say now, however, that the cost of the key provision relating to the stretching out of the transition period for rate increases on other special fourth class educational and cultural materials is relatively modest.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1404

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Educational and Cultural Postal Amendments of 1973".

Sec. 2. (a) Section 3626 of title 39, United States Code, is amended—

(1) by inserting "(a)" immediately before "If the rates of postage for any class of mail or kind of matter";

(2) by striking out "with annual increases as nearly equal as practicable, so that—" and inserting in lieu thereof "with annual increases as nearly equal as practicable for mail under former sections 4421, 4422, and 4452 and with biennial increases (after 1972) as nearly equal as practicable for mail under former sections 4358, 4359, and 4454 so that—";

(3) by inserting "(and the ninth year in the case of mail under former section 4358)" immediately after "tenth year" in paragraph (1);

(4) by deleting "4359" and "4554(a)" in paragraph (2);

(5) by deleting the word "and" at the end of paragraph (1), deleting the period at the end of paragraph (2) and inserting in lieu of the period a semicolon and the word "and", and adding immediately below paragraph (2) the following new paragraph (3):

"(3) the rates for mail under sections 4359 and 4554(a) shall be equal, on and after the

first day of the ninth year following the effective date of the first rate decision applicable to that class or kind concerned, to the rates that would have been in effect for such mail, if this subsection had not been enacted."

(6) by adding immediately after "unless he files annually with the Postal Service a written request for permission to mail matter at such rates," the following new sentence: "Notwithstanding any other provision of this section, rates established by the Postal Service for the first 250,000 pieces of each issue of a publication of any class or kind authorized to be mailed under former sections 4358 and 4359 of this title shall not exceed 66 2/3 per centum of the otherwise applicable temporary or permanent rate then in effect"; and

(7) by adding at the end of such section the following new subsections:

"(b) Notwithstanding any other provision of this title, the revenues received from any increase in rates for mail under former section 4358 required by the provisions of this chapter after July 6, 1972, if this subsection (b) had not been enacted, shall not exceed 50 per centum of the amount that would otherwise be received from any increase in rates for such class.

"(c) Notwithstanding any other provision of this title, the revenues received from any increase in rates for mail under former section 4359 and 4554(a) established in any proceeding under the provisions of this chapter instituted after July 6, 1972, if this subsection (c) had not been enacted, shall not exceed 50 per centum of the amount that would otherwise be received from any increase in rates for such classes."

(b) The changes in existing law made by this section shall become effective on such date (not later than the ninetieth day after the date of enactment of this Act), published in the Federal Register by the United States Postal Service, as the Postal Service shall determine.

Sec. 3. Section 2401 of title 39, United States Code, is amended—

(1) by deleting in subsection (b)(1) "there are authorized to be appropriated to the Postal Service the following amounts:" and inserting in lieu thereof "the Secretary of the Treasury, at the beginning of each fiscal year, shall credit to the Postal Service Fund, out of any moneys in the Treasury not otherwise appropriated, the following amounts:"

(2) by deleting in subsection (b)(1)(A) "1972" and inserting in lieu thereof "1974"; and

(3) by amending subsection (c) to read as follows:

"(c) At the beginning of each fiscal year, the Secretary of the Treasury shall credit to the Postal Service Fund, out of any moneys in the Treasury not otherwise appropriated, such sums as may be determined by the Postal Service annually to be equal to the difference between the revenues the Postal Service would have received if sections 3217, 3403-3405, and 3626 of this title and the Federal Voting Assistance Act of 1955 had not been enacted and the estimated revenues to be received on mail carried under such sections and Act. Determinations by the Postal Service under this subsection (c) shall be subject to verification by the Comptroller General of the United States."

Sec. 4. Section 3622 of title 39, United States Code, is amended—

(1) by striking out the word "and" immediately following the semicolon at the close of paragraph (7);

(2) by renumbering paragraph (8) as paragraph (9); and

(3) by inserting immediately below paragraph (7) and above the renumbered paragraph (9) the following new paragraph (8):

"(8) the educational, cultural, scientific,

and informational value to the recipient of mailed materials; and".

By Mr. BAKER:

S. 1406. A bill to amend the Highway Safety Act of 1966, title 23, United States Code, section 401 et seq., and for other purposes. Referred to the Committee on Commerce.

Mr. BAKER. Mr. President, I sent to the desk for appropriate referral the administration's proposed "Highway Safety Act of 1973."

The introduction of this bill is most timely because the full Committee on Public Works is scheduled to begin markup tomorrow on a bill that will expand the highway safety provisions now in law.

The administration's proposal would carry forward the implementation of the 18 highway safety standards that have been issued, including the proposal of some amendments in sections 402 and 403 of title 23. The bill also earmarks funds for highway safety purposes on Indian reservations.

Mr. President, to give my colleagues a better understanding of this important initiative, I ask unanimous consent that the following items be printed at this point in the CONGRESSIONAL RECORD:

A copy of the proposed administration bill, a section-by-section analysis of that bill, a justification statement prepared by the administration, and a copy of a letter of explanation from Secretary of Transportation Brinegar to the President of the Senate.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1406

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Highway Safety Act of 1973".

Sec. Subsection (b)(1) of section 402 of title 23, United States Code, is amended by deleting subparagraph (E) and substituting in lieu thereof the following:

"(E) provide for planning, administration, and evaluation of the State program, including (i) identification of the State's highway safety problems, the solutions thereto, and the capability of the State for effecting the solutions; (ii) formulation of objectives for achieving program goals; (iii) development of plans for allocation of resources and specification of steps to achieve objectives; (iv) evaluation of achievements; and (v) revision of the program as necessary to ensure the accomplishment of the purposes of this section."

Sec. 3. (a) Subsection (c) of section 402 of title 23, United States Code, is amended by deleting all that precedes "75 per centum in the ratio which the population" and inserting in lieu thereof the following:

"(c) Funds authorized to be appropriated to carry out this section shall be used to aid the States, and Indian tribes that have recognized governing bodies that perform governmental functions, to conduct the highway safety programs approved in accordance with subsection (a), including the training of personnel required to implement the highway safety programs, and the conducting of demonstration programs that the Secretary determines will contribute directly to the reduction of accidents, and deaths and injuries resulting therefrom. Such funds shall be subject to a deduction not to exceed 5

per centum for the necessary costs of administering the provisions of this section, and the remainder shall be apportioned among the several States, and such Indian tribes. One-half of 1 per centum of the funds authorized to be appropriated to carry out this section shall be apportioned to the Secretary of Interior for allocation to such Indian tribes. The Secretary of Transportation shall prescribe regulations for the division of the funds among such Indian tribes. The funds available for apportionment to the States shall be apportioned."

(b) Subsection (c) of section 402 of title 23, United States Code, is amended by inserting immediately after the third sentence the following:

"Public road mileage as used in this subsection shall be determined as of the end of the calendar year preceding the year in which the funds are apportioned and shall be certified by the Governor of the State and subject to approval by the Secretary."

(c) Subsection (c) of section 402 of title 23, United States Code, is amended by deleting the fifth and sixth sentences and substituting in lieu thereof the following:

"The Secretary shall not apportion any funds under this subsection to any State which is not implementing a highway safety program approved by the Secretary in accordance with this section. Whenever he determines it to be in the public interest, the Secretary may suspend, for such periods as he deems necessary, the application of the preceding sentence to a State. If the Secretary so suspends, he shall apportion the funds that would otherwise be available to a State under this section only to the extent, as determined by the Secretary, that such State is implementing a highway safety program approved by him in accordance with this section. The Secretary shall apportion to the State the funds withheld from apportionment if he determines that such State has begun implementing an approved program during the fiscal year for which the funds were withheld. If the State does not begin implementation in such time, the Secretary shall reappropriate the withheld funds to the other States as part of the ensuing apportionment for the next fiscal year in accordance with applicable provisions of law. Federal-aid highway funds apportioned to any State which is not implementing a highway safety program approved by the Secretary in accordance with this section shall be reduced by amounts equal to 10 per centum of the amounts which would otherwise be apportioned to such State under section 104 of this title, until such time as such State is implementing an approved highway safety program."

Sec. 4. (a) Subsection (d) of section 402 of title 23, United States Code, is amended by deleting the period at the end of the first sentence and inserting in lieu thereof the following: "and except that, in the case of a local highway safety program carried out by an Indian tribe, if the Secretary of Transportation is satisfied that the Indian tribe does not have sufficient funds available to meet the non-Federal share of the cost of such program, he may increase the Federal share of the costs thereof payable under this chapter to the extent necessary."

(b) Section 402 of title 23, United States Code, is amended by adding at the end thereof a new subsection (1), as follows:

"(1) For the purpose of the application of this chapter to Indian tribes that have recognized governing bodies that perform governmental functions, such tribes shall together be considered to be a 'State' and the Secretary of the Interior shall be considered to be the 'Governor' of that State: *Provided*, That, notwithstanding the provisions of subparagraph (C) of (b)(1) hereof, 95 per centum of the funds apportioned to the Secretary of the Interior shall be expended by such tribes to carry out highway safety pro-

grams within their jurisdictions: *And provided further*, That the standards promulgated under this section shall be applicable to individual Indian tribes only to the extent determined appropriate by the Secretary of Transportation."

Sec. 5. Section 403 of title 23, United States Code, is amended to read as follows:

The Secretary is authorized to use funds appropriated to carry out this section to carry out safety research which he is authorized to conduct by subsection (a) of section 307 of this title. In addition, the Secretary may use the funds appropriated to carry out this section, either independently or in cooperation with other Federal departments or agencies, for making grants to or contracts with State or local agencies, institutions, and individuals for (1) training or education of highway safety personnel, (2) research fellowships in highway safety, (3) development of improved accident investigation procedures, (4) emergency service plans, (5) demonstration projects, and (6) related activities which are deemed by the Secretary to be necessary to carry out the purposes of this section. The Secretary may, where he deems it to be in furtherance of the purposes of this chapter, vest in State or local agencies, on such terms and conditions as he deems appropriate, title to equipment purchased for demonstration projects with funds authorized to be appropriated to carry out this section.

Sec. 6. Subsection (a) (1) of section 404 of title 23, United States Code, is amended by inserting immediately after "Federal Highway Administrator," the following: "the National Highway Traffic Safety Administration."

Sec. 7. Section 106 of the Highway Safety Act of 1966 (80 Stat. 735) is amended by deleting the first sentence and substituting in lieu thereof the following:

"No portion of any statement or information relating to a highway crash that has been furnished by an individual to the Secretary pursuant to research conducted under section 403 of title 23, United States Code, and no portion of any research report of the Secretary relating to such crash or the investigation thereof pursuant to research conducted under section 403 shall be admissible in any subsequent criminal, civil, or administrative proceeding, except administrative proceedings conducted by the National Transportation Safety Board under section 5(b) (1) of the Department of Transportation Act or by the Department of Transportation under section 103 of the National Traffic and Motor Vehicle Safety Act."

Sec. 8. The first sentence of subsection (a) of section 202 of the Highway Safety Act of 1966 (80 Stat. 736) is amended by deleting "March 1" and substituting in lieu thereof the following: "July 1".

Sec. 9. The following sums are hereby authorized to be appropriated:

(a) \$150,000,000 for the fiscal year ending June 30, 1975, out of the Highway Trust Fund, for carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the National Highway Traffic Safety Administration.

(b) \$30,000,000 for the fiscal year ending June 30, 1975, out of the Highway Trust Fund, for carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the Federal Highway Administration.

(c) Such funds as are necessary, out of the Highway Trust Fund, for carrying out section 403 of title 23, United States Code (relating to highway safety research and development), by the National Highway Traffic Safety Administration.

(d) Such funds as are necessary, out of the Highway Trust Fund, for carrying out sections 307(a) and 403 of title 23, United States Code (relating to highway safety research and development), by the Federal Highway Administration.

SECTION-BY-SECTION ANALYSIS OF DRAFT BILL TO AMEND THE HIGHWAY SAFETY ACT OF 1966

Section 2. This section amends subsection (b) (1) of section 402, United States Code, to delete the express requirement for inclusion in each State's comprehensive program of a driver education program and to add the requirement for the inclusion in the comprehensive program of provisions for planning, administration, and evaluation. This amendment clarifies the Secretary's authority to require the planning, administration, and evaluation activities as a precondition to Secretarial approval of the program and limits subsection (a) of section 402 to substantive program requirements and subsection (b) of that section to administrative requirements. The amendment leaves unchanged the requirement in subsection (a) for the promulgation of a driver education standard.

Section 3. Paragraph (a) of this section amends subsection (c) of section 402 of title 23, United States Code, to authorize expressly the expenditure of section 402 Federal funds for the training of personnel required to implement the highway safety programs, and the conducting of demonstration programs that the Secretary determines will contribute directly to the reduction of accidents, and deaths and injuries resulting

Paragraph (c) of this section amends subsection (c) of section 402 of title 23, United States Code, to authorize the Secretary to suspend, when he deems it to be in the public interest, and for such periods as he deems necessary, the prohibition in that subsection against his apportioning any section 402 Federal funds to a State that is not implementing a section 402 program approved by him.

If the Secretary suspends the prohibition with regard to a particular State, he is authorized by this amendment to apportion the funds that would otherwise have been available to the State under section 402 only to the extent, as determined by the Secretary, that such State is implementing a highway safety program approved by him in accordance with section 402. The Secretary is required to apportion to the State the funds withheld from apportionment if he determines that the State has begun implementation of a fully approved program during the fiscal year for which the funds were withheld. If the State does not begin such implementation during that fiscal year, the Secretary is required to reapportion the withheld funds to the other States as part of the ensuing apportionment for the next fiscal year in accordance with applicable provisions of law.

Section 4. Paragraph (a) of this section amends subsection (d) of section 402 of title 23, United States Code, to authorize the Secretary to increase, to the extent necessary, the Federal share of the costs to an Indian tribe of implementing a section 402 program if he is satisfied that the tribe cannot meet its share of such costs.

Paragraph (b) of this section amends section 402 by adding a new subsection "(1)" providing that, for the purpose of chapter 4 of title 23, Indian tribes having recognized governing bodies that perform substantive governmental functions shall together be considered to be a "State" and the Secretary of the Interior shall be considered to be the "Governor" of that State. To ensure that the tribes derive the maximum benefit from the funds apportioned to the Secretary of the Interior, this amendment requires that 95 per centum of the funds shall be expended by the tribes for section 402 programs within their jurisdictions. This amendment also provides that the program standards shall apply to particular Indian tribes only to the extent deemed appropriate by the Secretary.

Section 5. This section makes two amend-

ments to section 403 of title 23, United States Code. First, it amends section 403 to authorize the Secretary to perform any of the research and development activities authorized by the section through the giving of grants. The use of grants under the section appears presently to be limited to the conduct of training projects for highway safety personnel. The expanded grant authority supplements the Secretary's current authority to contract for the performance of any of the section 403 activities.

Second, this section amends section 403 to authorize the Secretary, where he deems it to be in furtherance of the purposes of chapter 4 of title 23, to vest in State or local governments, on such terms and conditions as he deems appropriate, title to equipment purchased for demonstration projects by such government with funds authorized to be appropriated to carry out section 403. The equipment is to be transferred subject to the condition that it be used for carrying out the purposes of chapter 4.

Section 6. This section amends subsection (a) (1) of section 404 of title 23, United States Code, to provide expressly that the Administrator of the National Highway Traffic Safety Administration is a member of the National Highway Safety Advisory Committee.

Section 7. This section amends section 106 of the Highway Safety Act of 1966 (80 Stat. 735) to prohibit the admission into evidence of any portion of any statement or information relating to a highway crash that has been furnished by any individual to the Secretary pursuant to section 403 of title 23 or of any portion of any report of the Secretary relating such crash or investigation thereof pursuant to section 403, in any subsequent criminal, civil or administrative proceeding, except administrative proceedings held by the National Transportation Safety Board under section 5(b) (1) of the Department Act and administrative proceedings held by the Department of Transportation under section 103 of the National Traffic and Motor Vehicle Safety Act. With respect to proceedings other than the expressly exempted proceedings of the Board and this Department, this amendment eliminates the requirement in section 106 for the admissibility of facts contained in departmental crash reports and the provision that employees or agents of the Department involved in the investigation of an accident may be required to testify as to the facts developed in such investigation. This amendment does not prevent a party or witness to a crash from adducing in any proceeding any statements or information which he may have also previously furnished the Secretary concerning such crash. It simply prevents him or any other person from attempting to use the knowledge of departmental employees or agents concerning those statements or information for evidentiary purposes.

Section 8. This section amends subsection (a) of section 202 of the Highway Safety Act of 1966 (80 Stat. 736) to change the date for the submission to the Congress of the annual report on the administration of the Act from March 1 to July 1.

Section 9. Paragraph (a) of this section authorizes the appropriation, for carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the National Highway Traffic Safety Administration, out of the Highway Trust Fund, of \$150,000,000 for the fiscal year ending June 30, 1975.

Paragraph (b) of this section authorizes the appropriation, for carrying out section 402 of title 23, United States Code (relating to highway safety programs), by the Federal Highway Administration, out of the Highway Trust Fund, of \$30,000,000 for the fiscal year ending June 30, 1975.

Paragraph (c) of this section authorizes the appropriation, for carrying out section 403 of title 23, United States Code (relating to highway safety research and develop-

ment), by the National Highway Traffic Safety Administration, out of the Highway Trust Fund, of such funds as are necessary.

Paragraph (d) of this section authorizes the appropriation for carrying out sections 307(a) and 403 of title 23, United States Code (relating to highway safety research and development), by the Federal Highway Administration, out of the Highway Trust Fund, of such funds as are necessary.

STATEMENT OF JUSTIFICATION

Section 2. The Department believes that one of the best uses of section 402 Federal funds would be to improve the effectiveness of all funds, State, local and Federal, spent for highway safety purposes. Since the ratio of Federal dollars to State and local dollars spent for such purposes is only 3:100, the use of Federal funds in this way would produce a multiplier effect and make a contribution to highway safety to an extent far beyond the amount of those funds.

To this end, section 2 of the bill would clarify the Secretary's authority to require that, as a precondition to Secretarial approval of a State program, the program provide for extensive planning, comprehensive administration and evaluation.

This amendment would help ensure that each State could properly synthesize its measures for implementing the standards into a single, cohesive highway safety program. By requiring improved planning, this amendment would also facilitate the coordination of the diverse elements and agencies involved in each State's program.

Section 2 would also amend section 402 so that section 402(a) would contain only substantive program requirements and section 402(b) would contain only administrative requirements. This rearrangement of requirements would be accomplished by deleting subparagraph (E), relating to driver education, from section 402(b) (1). The requirements in that subparagraph were incorporated into a standard on driver education in 1967. Under the proposed revision of the standards, one of the standards, No. 4, would relate solely to traffic safety education. The revised standard would contain upgraded and strengthened requirements for public and private driver education.

Section 3(a). This subsection would amend section 402(c) to authorize expressly the expenditure by the States of section 402 Federal funds for the conduct of manpower training programs necessary for the training of personnel required to implement a highway safety program standard within the States and of demonstration programs that the Secretary determined would contribute directly to the reduction of crashes, and the deaths and injuries resulting therefrom. Section 402(c) expressly authorizes the expenditure of section 402 Federal funds for the implementation of the State highway safety programs under section 402. However, even though section 402 requires or permits the inclusion in the State programs of demonstration projects (402(a)) and certain manpower training programs (e.g., 402(b) (1) (E)), section 402(g) appears to prohibit the use of section 402 Federal funds for these activities. Section 402(g) provides that such funds may not be used for the research and development activities authorized by section 403. To make it clear that these jointly authorized activities, which can be characterized as action programs or as research and development programs, may be funded under section 402, this amendment would expand the expressly authorized uses of section 402 funds to include these activities. This would be appropriate since these activities are frequently most effectively directed by the State and local levels of government.

This subsection would also amend section 402(c) to authorize the apportionment of one-half of one per centum of section 402 Federal funds to Indian tribes. A separate apportionment has been proposed since, al-

though American Indians are disproportionately involved in fatal crashes and alcohol-related crashes, their highway safety needs are not being met under section 402. In some cases, this situation results from the position of State governments that they have no jurisdiction over Indian reservations. In others, State governments have concluded that Indian tribes are ineligible for Federal assistance under section 402. In almost all cases, there are a wide variety of factors that complicate relationships between State governments and Indian tribes.

This amendment, in conjunction with section 4 of this bill, would eliminate these obstacles to meeting Indian highway safety needs by providing Federal section 402 funds directly to the tribes through the medium of the Secretary of Interior. Use of the Secretary as the intermediary would substantially reduce administrative costs of providing the assistance by utilizing his Department's existing manpower, expertise and long-established liaisons with the tribes.

Sections 3(b). This subsection would amend section 402(c) to require that public road mileage to be used as a basis for the apportionment under that subsection to be determined as of the end of the calendar year preceding the year in which funds are to be apportioned and be certified by the Governor of the State and subject to the approval of the Secretary. While section 402 (c) provides a definition of "public roads" for the purpose of that subsection, it does not ensure uniformity among the States in either the application of the definition or the timing of the determination. The procedures that would be established by this amendment would secure for each State its fair share of apportioned funds.

Section 3(c). To insure that the States implement the standards, section 402(c) prohibits the Secretary from apportioning any section 402 Federal funds to a State that is not implementing a program approved by him. The funds which would otherwise have been apportioned to the nonimplementing States are required to be reapportioned to the implementing States. The Department believes that the withholding in all cases of all funds from a State whose program may be deficient in only one or two standard areas could be counterproductive. This subsection of the bill would improve the effectiveness of the penalty by giving the Secretary more flexibility in assessing it and by enabling the States to recoup withheld funds. The amendment would authorize the Secretary to withhold all or a portion of a State's section 402 Federal funds for the State's failure to implement a fully approved program. Thus, the Secretary could still withhold all of a State's section 402 Federal funds for its nonimplementation of even a single standard. If the State remedied its failure within a specified period of time, it would receive the full amount of funds due it. Otherwise, the withheld funds would be redistributed to the implementing States.

As amended, the penalty authority could be utilized in appropriate cases to obtain implementation more quickly and with minimal dislocation of the financial arrangements of the States' highway safety efforts. The opportunity of the States to obtain immediate benefits from adopting and implementing a fully approved program would substantially increase the incentive to conform with the requirements of section 402.

Section 4. This section complements section 3(a) by providing that for the purposes of chapter 4 of title 23, Indian tribes having recognized governing bodies that perform substantive governmental functions shall together be considered as a "State" and the Secretary of the Interior shall be considered to be the "Governor" of that State. So that the absence of a substantial income would not prevent some tribes from participating in the benefits of this amendment, the Sec-

retary would be authorized to increase the Federal share payable where he determined that tribe could not meet its share of the costs. To ensure that the Indians receive the maximum benefit from the Federal assistance, this amendment would also require that 95 per centum of the funds apportioned to the Secretary of the Interior be expended by the tribes within their jurisdictions. Since some of the highway safety needs of the Indians may be already being satisfied, this amendment provides that the standards shall apply to particular tribes only to the extent deemed appropriate by the Secretary.

Section 5. This section of the bill would expressly authorize the Secretary to perform any of the research and development activities authorized by section 403 through the giving of grants. The use of grants under section 403 appears to be limited to the conduct of training projects for highway safety personnel. The expanded grant authority would supplement the Secretary's current authority to contract for the performance of section 403 activities. In addition to expanding the Secretary's flexibility in implementing section 403, this amendment would also increase the number of persons and firms who would be eligible to perform the research and development activities.

This section of the bill would also authorize the Secretary to transfer, where he deemed it to be in furtherance of the purposes of chapter 4 of title 23, equipment purchased for section 403 demonstration projects to participating State and local governments. This authority would be especially important where the equipment had become an integral part of a project that a State desires to continue as part of its section 402 program. An example of such equipment would be communications equipment acquired for emergency medical services demonstration projects that would otherwise have to be replaced, probably with section 402 Federal funds, if the State were to continue such services. This amendment would ensure that the participating government would retain possession of the equipment and thereby prevent dislocation of the highway safety activities dependent upon the equipment.

Section 6. This section would expressly add the National Highway Traffic Safety Administration to the National Highway Safety Advisory Committee. Such addition would be appropriate since the National Highway Traffic Safety Administration shares with the Federal Highway Administration the responsibility for administering the Highway Safety Act.

Section 7. Pursuant to the Highway Safety and National Traffic and Motor Vehicle Safety Acts, multidisciplinary accident investigation teams have been established to conduct in-depth studies of motor vehicle crashes. The data collected by the teams are being used to develop a reliable and extensive data base concerning the causes and effects of such crashes. The data have already contributed to the identification of several of the most common vehicle defects due to either normal use or lack of maintenance. They have also contributed to the promulgation of Federal motor vehicle safety standards.

The full value of the teams, unfortunately, cannot be realized under the provisions of section 106 of the Highway Safety Act. Despite assurances by the teams that their only purpose is safety research, they have been hampered in their work by the reluctance of parties to crashes to divulge crash information. The instances in which this has occurred are numerous. In a single year, one team was unable to obtain the full or, in many cases, even the partial cooperation of parties to more than 500 crashes. This refusal generally stems from the fear of an individual or of his legal counsel or insurer that his statements to the research team might be used against him in a subsequent proceeding.

The Department believes that it would be in the interest of highway safety to protect

people who voluntarily contribute to safety research so that their very act of public spiritedness does not place them in jeopardy.

To remove the impediments to research and to protect such persons, this section would amend section 106 of the Act to provide that no information furnished the Secretary by an individual concerning a crash and no portion of any report of the Secretary relating to a crash or the investigation thereof would be admissible in any subsequent proceeding, except certain proceedings conducted by the National Transportation Safety Board and the Department of Transportation. Similar restrictions on the use of reports by the Board on any accident or the investigation thereof appear at 49 U.S.C. 1441(e).

The Department believes that enabling the teams to assure parties to accidents and their representatives that their statements will not be used against them will allay their fears. The narrow exception concerning the Board's proceedings would permit this Department to continue to aid the Board in its safety work. The exception for this Department would ensure that the teams could continue to aid the Department in its establishment of Federal motor vehicle safety standards.

Section 8. Section 202(a) of the Act requires that the annual report on the administration of the Act be submitted by March 1 of the following year. However, some of the data necessary for the report are typically not available for analysis until after the date. This information includes many types of data from State agencies, such as detailed information on crashes, and deaths and injuries resulting therefrom. In order to provide adequate time for the preparation of a complete, comprehensive report, section 8 of the bill would change the submission date to July 1.

Section 9. This section would authorize the appropriation from the Highway Trust Fund of \$150,000,000 in contract authority for fiscal year 1975 for the implementation of section 402 by the National Highway Traffic Safety Administration. These funds would be available for obligation in 1974. The new authorization is necessary to continue the program for the reduction of this Nation's tragic highway crash toll.

The proposed level of contract authority was determined primarily by the evaluation of the effectiveness of the section 402 program. We have not yet developed and validated ways of cost effectively impacting the target groups in the general population that contribute disproportionately to highway deaths and injuries. Accordingly, we will continue our current level of effort through 1974. In the coming fiscal years, we will be intensifying our continuing evaluative effort to identify cost-effective measures so that we may guide the States and communities in concentrating their efforts. By late spring of this year, we will complete our analysis of the first year of Selective Traffic Enforcement Project data and the second year of Alcohol Safety Action Project data. The analysis of this data will represent the first comprehensive evaluation of these demonstration projects. By fiscal year 1975, we anticipate having gained sufficient knowledge from these and other evaluative efforts to recommend inclusion of certain measures in the State and local programs. Current indications are that these measures will be in the following areas: (1) alcohol countermeasures; (2) selective and intensified traffic enforcement and related adjudication; (3) comprehensive traffic safety education; and (4) improved program planning, administration, and evaluation.

For carrying out section 402 by the Federal Highway Administration, this section would authorize the appropriation of \$30,000,000 for fiscal year 1975 out of the Trust

Fund. This contract authority would also be available for obligation in fiscal year 1974 and is commensurate with the current knowledge about cost-effective safety measures.

This section would also authorize open-ended funding out of the Trust Fund for the implementation of section 403 by the National Highway Traffic Safety Administration and of sections 307(a) and 403 by the Federal Highway Administration.

THE SECRETARY OF TRANSPORTATION,

Washington, D.C., March 27, 1973.

HON. SPIRO T. AGNEW,
President of the Senate
Washington, D.C.

DEAR MR. PRESIDENT: The Department of Transportation is submitting for your consideration and appropriate reference a draft bill "To amend the Highway Safety Act of 1966, title 23, United States Code, section 401 et seq. and for other purposes."

Since the enactment of the Highway Safety Act of 1966, the Department has issued 18 highway safety program standards to guide the efforts of the States in solving the problems of highway safety. Recently, the Department proposed to revise and consolidate these standards to increase the effectiveness of these efforts and to improve the program management capability of the States. To assist in the implementation of the programs, the Department has conducted manpower training programs, and developed and demonstrated new techniques for improving highway safety. This combined Federal-State effort is beginning to show benefits. Despite substantial annual increases in the number of drivers, vehicles and total vehicle miles, the rate of highway deaths per one hundred million miles driven has steadily declined to a record low.

The purpose of this legislation is to amend the Act to improve the Department's and the States' effectiveness in promoting highway safety.

To emphasize the need for maximizing the effectiveness of the State highway safety programs, this legislation would expressly require, as a precondition to Secretarial approval of a State program, that the program provide for extensive planning, administration and evaluation measures. This requirement would help to ensure that each State would properly synthesize its measures for implementing all of the standards into a single, cohesive program.

This legislation would amend section 402 so that section 402(a) would contain only substantive program requirements and section 402(b) would contain only administrative requirements. This clear separation of requirements by type would be accomplished by deleting subparagraph (E), relating to driver education, from section 402(b)(1). This amendment would not affect the driver education program since the requirements of subparagraph (E) have already been incorporated into a standard on that subject. A proposal to upgrade the requirements in that standard was published last year.

The Act provides that section 402 Federal funds may not be used for purposes authorized under section 403. This provision has created confusion about the intent of the statute with regard to the expenditure of section 402 funds for purposes which are authorized by both sections. To clarify the statutory intent, this legislation would expressly authorize the use of such funds for manpower training programs, and for demonstration programs that the Secretary determined would contribute directly to the reduction of accidents, and deaths and injuries resulting therefrom.

To clarify and standardize the procedures and criteria for determining the public road mileage to be used as a basis for apportioning Federal assistance under section 402, this legislation would add a requirement that

such mileage be determined as of the end of the calendar year preceding the year in which the funds were to be apportioned and be certified by the Governor of the State and subject to the approval of the Secretary.

The Act requires the Secretary not to apportion any funds to a State which is not implementing a program approved by him. The unapportioned funds are to be redistributed to the implementing States. This legislation would improve the effectiveness of the penalty by giving the Secretary more flexibility in assessing it. The Secretary would be authorized to withhold all or a portion of a State's highway safety funds for the non-implementation of an approved program. The State would have the incentive of being able to receive the full amount of funds due it if it remedied its failure within a specified period of time. Otherwise, the withheld funds would be redistributed to the other States.

The problems of highway safety, like many other problems in this country, affect the American Indian disproportionately. The highway fatality rate and the percent of fatal crashes involving alcohol are above the national average. To ensure that the American Indian participates fully in the highway safety program, this legislation would make it clear that under the Act, "State" includes the Indian tribes collectively under the Secretary of the Interior as the "Governor" of that "State". As a "State", the tribes would be eligible to receive Federal funds under section 402.

This legislation would increase the Secretary's flexibility in implementing section 403 by expressly authorizing him to perform any of the research and development activities authorized by that section through the giving of grants. Presently, the giving of grants under section 403 appears to be limited to training projects for highway safety personnel.

This legislation would authorize the Secretary to transfer, where he deemed it to be in furtherance of the Act, equipment purchased for section 403 demonstration projects to participating State and local governments. This authority would be especially useful where the equipment had become an integral part of a project that a State seeks to continue as part of its section 402 program. An example of such equipment would be communications equipment purchased for demonstration projects in emergency medical services that would otherwise have to be replaced, possibly with section 402 Federal funds, if the State were to continue such services.

The Act expressly provides that the Secretary and the Federal Highway Administrator shall be members of the National Highway Safety Advisory Committee. To reflect the joint administration of the Act by the National Highway Traffic Safety Administration and the Federal Highway Administration, this legislation would expressly add the Administrator of the former Administration to the Committee membership.

Multi-disciplinary accident investigation teams, acting under present authority have had difficulty in persuading witnesses and especially parties to accidents to provide information necessary for highway safety research. This legislation would protect persons who are willing to aid the research effort by prohibiting the use of team accident reports as evidence and would thereby facilitate the obtaining of vital crash information.

The Act requires that the annual report on the administration of the Act be submitted by March 1 of the year following the year to which the report relates. However, some of the data necessary for the reports are typically unavailable for analysis until after that date. In order to provide adequate time for the preparation of a complete, compre-

hensive report, this legislation would change the submission date to July 1.

Full financing of the Highway Safety Act out of the Highway Trust Fund would be appropriate since the cost of insuring the safe operation of highway transportation is properly considered an integral part of the cost of highway transportation. Consequently, this legislation would authorize \$150,000,000 in contract authority for fiscal year 1975 from the Trust Fund for the carrying out of section 402 of the Act by the National Highway Traffic Safety Administration. For carrying out this section by the Federal Highway Administration, contract authority would be authorized from the Trust Fund in the amount of \$30,000,000 for fiscal year 1975. These funds would be available for obligation in fiscal year 1974.

This legislation would also authorize the appropriation of such funds as are necessary out of the Trust Fund for carrying out section 403 by the National Highway Traffic Safety Administration and for carrying out sections 307(a) and 403 by the Federal Highway Administration.

After a careful examination of this proposed legislation, the Department has concluded that no significant environmental impact would result from its implementation.

We urge the prompt introduction and early enactment of this legislation.

The Office of Management and Budget has advised that the enactment of this proposed legislation would be consistent with the program of the President.

Sincerely,

CLAUDE S. BRINEGAR.

By Mr. HARTKE:

S. 1408. A bill to permit officers and employees of the Federal Government to elect coverage under the old-age, survivors, and disability insurance system. Referred to the Committee on Finance.

Mr. HARTKE. Mr. President, today I introduce legislation to give Federal employees the option of choosing social security coverage.

Mr. President, Federal employees represent the single largest group of workers in the United States who have been denied the privilege of obtaining the benefits of the social security system. As the largest single employer in the United States, the Federal Government can ill afford to continue to refuse to permit its employees the same protection as afforded almost all citizens.

Mr. President, I ask that a table listing the number of Federal employees in each State be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Federal civilian employment by state—1970

Alabama	54,308
Alaska	14,481
Arizona	27,502
Arkansas	16,561
California	303,536
Colorado	42,314
Connecticut	20,440
Delaware	4,719
District of Columbia	192,918
Florida	69,343
Georgia	73,764
Hawaii	26,338
Idaho	8,155
Illinois	110,726
Indiana	44,447
Iowa	18,067
Kansas	22,329
Kentucky	34,685
Louisiana	27,586
Maine	15,077

Maryland	121,814
Massachusetts	63,481
Michigan	53,436
Minnesota	29,286
Mississippi	20,278
Missouri	65,028
Montana	10,292
Nebraska	15,090
Nevada	8,051
New Hampshire	5,467
New Jersey	65,870
New Mexico	25,051
New York	177,834
North Carolina	37,331
North Dakota	8,051
Ohio	96,922
Oklahoma	52,836
Oregon	24,109
Pennsylvania	137,693
Rhode Island	14,619
South Carolina	29,301
South Dakota	9,251
Tennessee	44,803
Texas	144,666
Utah	38,250
Vermont	3,653
Virginia	138,764
Washington	52,563
West Virginia	13,279
Wisconsin	25,512
Wyoming	5,186

Total, United States..... 2,665,093

Mr. HARTKE. Mr. President, a Federal employee should be allowed to make the choice as to whether he will come under the social security system in addition to his civil service coverage. In effect, this puts the Federal employee on the same level as a private employee since most private employees get social security coverage in addition to whatever private pension they may have.

New Federal employees would have 2 years from the date of their employment within which to file a certificate indicating their desire for such coverage. Existing employees likewise have 2 years to make such election. This election generally can be retroactive for a 1-year period if the employee so chooses and if he pays the tax due.

In addition in order that employees might have a further opportunity because of changed family or financial conditions or for other good reason to elect coverage, at the end of a 5-year period each employee should have one further chance to elect coverage—there would be 6 months to elect coverage at that point.

The employee should continue to pay the employee tax but there would be no employer's share to be paid. This follows the precedent established in 1965 when coverage was extended to 1½ million individuals who receive earnings in the form of tips and gratuities. At that time, the Chief Actuary of the Social Security Administration testified that extension of social security coverage of these 1½ million individuals was an actuarially sound solution to that coverage problem. This would be equally true of extension of coverage to Federal employees because they are, as a group, generally conceded to be superior risks in terms of insurance actuarial considerations.

This Hartke proposal is supported by the National Association of Letter Carriers, the National Association of Internal Revenue Employees, the National Federation of Federal Employees, and the American Federation of Government

Employees. Its cost has been estimated at 0.025 percent of payroll or about \$155 million for 1974.

This proposal is actuarially sound. It is in the interest of the employees because it permits them to make the election in their own interest and it is in the interest of the Federal Government, not only from a budgetary point of view, but also because it closes the final large gap of coverage which remains under the social security system.

By Mr. JAVITS:

S. 1413. A bill to increase the authorization for fiscal year 1974 for the Committee for Purchase of Products and Services of the Blind and Other Severely Handicapped. Referred to the Committee on Labor and Public Welfare.

AMENDMENT TO JAVITS-WAGNER-O'DAY ACT

Mr. JAVITS. Mr. President, I introduce for appropriate reference a bill to amend Public Law 92-28 to increase the authorized appropriation for fiscal year 1974 from \$200,000 to \$240,000 for the Committee for Purchase of Products and Services of the Blind and Other Severely Handicapped. This legislation was proposed by the administration to the Congress and is consistent with the President's 1974 budget request.

The original cost estimates for operating the committee, when enacted in June of 1971, was based on little actual funding experience. Since the estimates were developed it has been found that an increase of \$40,000 is needed in view of recent pay increases, unexpected space rental costs, and higher than expected postage costs. The proposed changes would permit the agency to carry out the duties and functions charged by the Congress so the blind and other severely handicapped will have enhanced opportunities to become self supporting.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

S. 352

At the request of Mr. McGEE, the Senator from New Jersey (Mr. CASE) was added as a cosponsor of S. 352, the voter registration bill.

S. 368

At the request of Mr. STAFFORD, the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 368, the Uniform Services Special Pay Act of 1973.

S. 609

At the request of Mr. McGEE, the Senator from West Virginia (Mr. ROBERT C. BYRD) was added as a cosponsor of S. 609, a bill to amend the Internal Revenue Code of 1954 with respect to .22 caliber ammunition recordkeeping requirements.

S. 648

At the request of Mr. McGEE, the Senator from Delaware (Mr. BIDEN) and the Senator from Missouri (Mr. EAGLETON) were added as cosponsors of S. 648, to amend the Public Health Service Act to expand the authority of the National Institute of Arthritis, Metabolism, and Digestive Diseases in order to advance the national attack on diabetes.

S. 650

At the request of Mr. PACKWOOD, the Senator from Alaska (Mr. GRAVEL) was added as a cosponsor of S. 650, to equalize Federal tax treatment of unmarried individuals.

S. 707

At the request of Mr. RIBICOFF, the Senator from Delaware (Mr. BIDEN) was added as a cosponsor of S. 707, to establish a Council of Consumer Advisers in the Executive Office of the President, to establish an independent Consumer Protection Agency, and to authorize a program of grants, in order to protect and serve the interests of consumers, and for other purposes.

S. 1033

At the request of Mr. PACKWOOD, the Senator from New Mexico (Mr. DOMENICI) was added as a cosponsor of S. 1033, the Timber Export Administration Act of 1973.

S. 1199

At the request of Mr. HOLLINGS, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 1199, amending the Internal Revenue Code to permit a married couple to deduct certain household and dependent care expenses when one spouse is a full-time student to the same extent that a deduction would be allowable were both spouses employed.

S. 1255

At the request of Mr. MUSKIE, the Senator from Rhode Island (Mr. PASTORE), the Senator from Massachusetts (Mr. BROOKE), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Vermont (Mr. STAFFORD) were added as cosponsors of S. 1255, the Property Tax Relief and Reform Act.

S. 1296

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that, at the next printing, the names of the Senator from Minnesota (Mr. MONDALE), the Senator from Alabama (Mr. SPARKMAN), and the Senator from New Jersey (Mr. WILLIAMS) be added as cosponsors of S. 1296, the Grand Canyon National Park Enlargement Act.

The PRESIDING OFFICER (Mr. HASKELL). Without objection, it is so ordered.

SENATE JOINT RESOLUTION 21

At the request of Mr. MCGEE, the Senator from Maryland (Mr. MATHIAS) was added as a cosponsor of Senate Joint Resolution 21, a joint resolution to create an Atlantic Union delegation.

REMOVAL OF COSPONSOR OF A BILL

S. 1134

Mr. HATFIELD. Mr. President, I am presently listed as a cosponsor of S. 1134, the Deep Seabed Hard Mineral Resources Act. This is an error, and I ask unanimous consent that the official record be corrected. I am not a cosponsor of this legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR A STAR PRINT OF A BILL

Mr. GRIFFIN. Mr. President, due to a clerical error, section 3 of S. 1296 as in-

troduced, entitled Grand Canyon National Park Enlargement Act, contains an error on page 2, lines 15 and 16.

The park area is described as "one million one hundred and sixty-three thousand seven hundred and sixty-five" acres, when in fact it should have read "one million one hundred and ninety-six thousand nine hundred and twenty-five" acres.

On behalf of the principal sponsor of the measure, the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that a star print of S. 1296 be made which corrects the error by making the appropriate change.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 19—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO THE ESTABLISHMENT OF AN APPROPRIATIONS CEILING

Mr. BARTLETT. Mr. President, I have at the desk a concurrent resolution to establish an appropriations ceiling. I make the unanimous-consent request that it be referred to the Committee on Government Operations and at such time as it is reported by that committee, if it is reported, that it then be referred to the Standing Committee on Rules and Administration, where it would be otherwise referred.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, I think I understood what the distinguished Senator's request was. I shall not object provided the distinguished Senator from Nevada (Mr. CANNON) may so object on his return to the Senate on tomorrow, or Friday, or Monday. He is chairman of the Committee on Rules and Administration, and I do not think he would have objection. This concurrent resolution would ordinarily be referred to that committee.

In view of the fact that he is not on the floor at this time, I will not object if we could have the understanding that the distinguished Senator from Nevada (Mr. CANNON), who is chairman of the committee, could void the unanimous consent if he so chose to do so. I do not think he would object, but I cannot speak for him.

Mr. BARTLETT. Would the Senator agree to this: If I could contact him by phone or otherwise and he were agreeable to this request, we could proceed with referral tomorrow or Friday?

Mr. ROBERT C. BYRD. Surely. That is perfectly all right. I would then make it clear for the record that there was no objection.

The PRESIDING OFFICER. Does the Senator from West Virginia wish to hold up the printing of that measure?

Mr. ROBERT C. BYRD. No; let the printing go ahead.

Mr. BARTLETT. My interest, of course, is to have the measure printed and be in the hands of the Government Operations Committee on Monday, where I am going to testify on behalf of it.

Mr. ROBERT C. BYRD. Yes. Again I say I do not think the Senator from Nevada would object. He is chairman

of the committee and, as a courtesy to him, I would like not to object to the request on condition that the chairman of that committee, which has jurisdiction over this measure, would not object, and I do not think he would because, as I understood the Senator, after the Committee on Government Operations has an opportunity to consider the measure, and if it reports the measure, it would then be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. That was a part of the unanimous-consent request.

Mr. ROBERT C. BYRD. With that understanding, I do not object.

Mr. BARTLETT. Mr. President, I make the request with that understanding.

The concurrent resolution is as follows:

S. CON. RES. 19

Resolved by the Senate (the House of Representatives concurring), That the Standing Rules of the Senate are amended by adding at the end thereof the following new rule:

"RULE XLV

"APPROPRIATIONS CEILINGS

"1. For the purposes of this rule—

"(1) 'budget' means the budget of the United States Government transmitted to the Congress by the President pursuant to the Budget and Accounting Act, 1921; and

"(2) 'obligational authority includes loan authority.

"2. (a) The Committee on Finance and the Committee on Appropriations shall meet jointly, at the beginning of each regular session of Congress, and after study and consultation, giving due consideration to the budget transmitted by the President with respect to the next fiscal year, report as soon as practicable to the Senate a bill or joint resolution specifying the total amount of new obligational authority to be made available for the United States Government in general appropriations measures for such year.

"(b) If the amount specified in such a bill or joint resolution with respect to a fiscal year agreed to by the Senate and House of Representatives is not the same, conferees on the part of the Senate shall be appointed not later than two days after the House of Congress passing the bill or joint resolution last passes such bill or joint resolution, unless within those 2 days both Houses of Congress agree upon the same total amount of new obligational authority with respect to such fiscal year without the convening of a committee of conference. Upon appointment of conferees, the Senate conferees shall meet immediately with the conferees on the part of the House of Representatives, in such committee of conference, to resolve differences between the two Houses.

"(c) It shall not be in order in the Senate to consider any measure providing new obligational authority with respect to any fiscal year until there has been enacted into law with respect to such fiscal year a bill or joint resolution of the kind referred to in subparagraph (a) of this paragraph. The provisions of this subparagraph shall not preclude the holding of hearings or other consideration of the budget submitted by the President by any committee of the Senate, or any subcommittee thereof, or by the Senate Members of any joint committee of the two Houses, or any subcommittee thereof.

"(d) After such a bill or joint resolution has been enacted into law with respect to such fiscal year, the amount so established shall be effective for purposes of this rule unless there subsequently has been enacted into law a bill or joint resolution with respect to such fiscal year establishing a different amount. If such a bill or joint resolution has been enacted, the amount established in such subsequent bill or joint

resolution shall be effective for purposes of this rule for such fiscal year. The provisions of subparagraph (b) of this paragraph shall apply with respect to any such subsequent bill or joint resolution.

"3. (a) Except as otherwise provided in subparagraph (c) of this paragraph, all general appropriations measures, including any such measure which has passed both Houses of Congress without any differences, with respect to a fiscal year shall be committed to the same committee of conference of the two Houses. The conferees on the part of the Senate to such committee shall not meet until all such measures with respect to such fiscal year have been committed to that same committee of conference. Such conferees shall thereafter consider all such measures together at the same committee of conference, and all conference reports with respect to such measures shall be filed in the Senate at the same time. The total amount of new obligatory authority to be made available for that fiscal year under all conference reports with respect to such measures shall not exceed the total amount of new obligatory authority established and in effect for the United States Government at the time such conference reports are reported to the Senate. However, conference reports, providing new obligatory authority in excess of the total amount of new obligatory authority then in effect, may be filed if the committee of conference at the same time recommends an increase in the total amount of new obligatory authority then in effect which amount, when so increased, will not be less than the total amount of new obligatory authority contained in such conference reports. Such conference reports may not be considered until such total amount has been so increased by bill or joint resolution.

"(b) It shall not be in order to consider any conference report on any such measure in the Senate if such report has not been considered by the committee of conference in accordance with this paragraph. No point of order may be made in the Senate with respect to any portion of a conference report containing an item providing new obligatory authority which is less than the amount passed by either House.

"(c) The provisions of this paragraph shall not apply to any general appropriations measure making deficiency, emergency, or supplemental appropriations.

"4. It shall not be in order in the Senate to consider any conference report on a general appropriations measure making deficiency, emergency, or supplemental appropriations with respect to a fiscal year if the total amount of new obligatory authority provided under such measure, when added to such authority for such year already enacted into law or contained in conference reports filed but not enacted into law, exceeds the total amount of new obligatory authority established and in effect for the United States Government at the time such deficiency, emergency, or supplemental appropriations measure is to be considered."

Sec. 2. The Rules of the House of Representatives are amended by adding at the end thereof the following new rule:

"RULE XLV

"APPROPRIATIONS CEILINGS

"1. For the purposes of this rule—

"(1) 'budget' means the budget of the United States Government transmitted to the Congress by the President pursuant to the Budget and Accounting Act, 1921; and

"(2) 'obligatory authority' includes loan authority.

"2. (a) The Committee on Ways and Means and the Committee on Appropriations shall meet jointly, at the beginning of each regular session of Congress, and after study and consultation, giving due consideration to the budget transmitted by the President with respect to the next fiscal year, report as soon

as practicable to the House a bill or joint resolution specifying the total amount of new obligatory authority to be made available for the United States Government in general appropriations measures for such year.

"(b) If the amount specified in such a bill or joint resolution with respect to a fiscal year agreed to by the Senate and House of Representatives is not the same, conferees on the part of the House shall be appointed not later than two days after the House of Congress passing the bill or joint resolution last passes such bill or joint resolution, unless within those 2 days both Houses of Congress agree upon the same total amount of new obligatory authority with respect to such fiscal year without the convening of a committee of conference. Upon appointment of conferees, the House conferees shall meet immediately with the conferees on the part of the Senate, in such committee of conference, to resolve differences between the two Houses.

"(c) It shall not be in order in the House to consider any measure providing new obligatory authority with respect to any fiscal year until there has been enacted into law with respect to such fiscal year a bill or joint resolution of the kind referred to in paragraph (a) of this clause. The provisions of this paragraph shall not preclude the holding of hearings or other consideration of the budget submitted by the President by any committee of the Senate, or any subcommittee thereof, or by the House Members of any joint committee of the two Houses, or any subcommittee thereof.

"(d) After such a bill or joint resolution has been enacted into law with respect to such fiscal year, the amount so established shall be effective for purposes of this rule unless there subsequently has been enacted into law a bill or joint resolution with respect to such fiscal year establishing a different amount. If such a bill or joint resolution has been enacted, the amount established in such subsequent bill or joint resolution shall be effective for purposes of this rule for such fiscal year. The provisions of subparagraph (b) of this clause shall apply with respect to any such subsequent bill or joint resolution.

"3. (a) (1) Except as otherwise provided in subparagraph (3) of this paragraph, all general appropriations measures, including any such measure which has passed both Houses of Congress without any differences, with respect to a fiscal year shall be committed to the same committee of conference of the two Houses. The conferees on the part of the House to such committee shall not meet until all such measures with respect to such fiscal year have been committed to that same committee of conference. Such conferees shall thereafter consider all such measures together at the same committee of conference, and all conference reports with respect to such measures shall be filed in the House at the same time. The total amount of new obligatory authority to be made available for that fiscal year under all conference reports with respect to such measures shall not exceed the total amount of new obligatory authority established and in effect for the United States Government at the time such conference reports are reported to the House. However, conference reports, providing new obligatory authority in excess of the total amount of new obligatory authority then in effect, may be filed if the committee of conference at the same time recommends an increase in the total amount of new obligatory authority then in effect which amount, when so increased, will not be less than the total amount of new obligatory authority contained in such conference reports. Such conference reports may not be considered until such total amount has been so increased by bill or joint resolution.

"(2) It shall not be in order to consider any conference report on any such measure in the House if such report has not been considered by the committee of conference in accordance with this paragraph. No point of order may be made in the House with respect to any portion of a conference report containing an item providing new obligatory authority which is less than the amount passed by either House.

"(3) The provisions of this paragraph shall not apply to any general appropriations measure making deficiency, emergency, or supplemental appropriations.

"(b) It shall not be in order in the House to consider any conference report on a general appropriations measure making deficiency, emergency, or supplemental appropriations with respect to a fiscal year if the total amount of new obligatory authority provided under such measure, when added to such authority for such year already enacted into law or contained in conference reports filed but not enacted into law, exceeds the total amount of new obligatory authority established and in effect for the United States Government at the time such deficiency, emergency, or supplemental appropriations measure is to be considered."

Sec. 3. The provisions of this concurrent resolution are agreed to by the Congress—

(1) as an exercise of the rulemaking powers of that House of Congress to which they specifically apply; and such rules shall supersede other rules only to the extent that they are inconsistent therewith; and

(8) with full recognition of the constitutional right of either House to change such rules (so far as relating to the procedure in such House) at any time, in the same manner and to the same extent as in the case of any other rule of such House.

LAND USE POLICY AND PLANNING ASSISTANCE ACT OF 1973—AMENDMENT

AMENDMENT NO. 61

(Ordered to be printed, and referred to the Committee on Interior and Insular Affairs.)

Mr. NELSON (for himself, Mr. JACKSON, and Mr. HATFIELD) submitted an amendment, intended to be proposed by them, jointly, to the bill (S. 268) to establish a national land use policy, to authorize the Secretary of the Interior to make grants to assist the States to develop and implement State land use programs, to coordinate Federal programs and policies which have a land-use impact, to coordinate planning and management of Federal lands and planning and management of adjacent non-Federal lands, and to establish an Office of Land Use Policy Administration in the Department of the Interior, and for other purposes.

PAR VALUE MODIFICATION ACT—AMENDMENTS

AMENDMENT NO. 62

(Ordered to be printed, and to lie on the table.)

Mr. CHILES submitted an amendment, intended to be proposed by him, to the bill (S. 929) to amend the Par Value Modification Act.

AMENDMENT NO. 63

(Ordered to be printed and to lie on the table.)

Mr. HATFIELD. Mr. President, I send to the desk an amendment to S. 929, the Par Value Modification Act, which directs the Secretary of the Treasury to

coin no more than 60 million \$25 gold pieces commemorating the American Revolution Bicentennial. This represents a potential total sale value of \$1.5 billion. However, as the coin would contain two parts gold to one part of such other metal or alloy as the Secretary of the Treasury deems appropriate, this would probably represent only about \$1 billion in gold sales or only about 4 percent of the current market value of gold held by the U.S. Treasury.

Such an "American Revolution Commemorative" coin would represent a fitting tribute to 200 years of the continuing American Revolution—a revolution that has worked. It would dramatize the strength and wealth of the richest and most prosperous country in the world—a country that has gone from a paper currency that was once "not worth a Continental" to one where at least one coin is "as good as gold."

The "American Revolution Commemorative" coin is set at \$25, so that it is within the financial reach of virtually all American families, and the number of coins to be issued is roughly equal to the number of households in the United States. The Secretary of the Treasury is authorized to limit the number of gold pieces which any one person may purchase, thus insuring that all American families may have the chance to share in this commemorative issue.

The American Revolution was a shining symbol to the world of 1776. With great pride we should settle for no less a symbol of its 200th anniversary than a gold coin. This coin, of modest denomination and available to all American families, would be a widely popular and worthy symbol that the American Revolution and its memory are still as "good as gold," and it will increase in worth and value to its holders, as has the Revolution that it commemorates.

AMENDMENT NO. 64

(Ordered to be printed, and to lie on the table.)

Mr. HATFIELD. Mr. President, I send to the desk an amendment to S. 929, the Par Value Modification Act, which legalizes the holding, buying, and selling of gold by any American citizen and which directs the Secretary of the Treasury to sell not less than 10 million ounces of gold per year by auction to American citizens.

My position, and those of my cosponsors, on legalizing gold ownership by American citizens is well known. I originally proposed legislation to this effect in the 92d Congress. This bill is even more needed today when it appears that there has emerged a broad consensus among American, European, and International Monetary Fund officials that gold should be deemphasized as part of the world's monetary system. Our own Joint Economic Committee's Subcommittee on International Economics has made the same recommendation. The time is now for the "sense of the Senate" to be heard on this issue when the Group of 20 of the IMF are meeting in Washington this week to consider reforming the international monetary system. As I noted earlier in a lengthier discussion of this issue, more than 70 coun-

tries allow their citizens to hold gold. Surely American citizens should be granted no less a privilege. Indeed, when the roughly \$50 billion in gold held by the world's monetary authorities is allowed to be sold gradually over the years, there will be more than enough gold available for purchases by American citizens.

However, legalization of gold holdings by Americans is only half the picture of demand and supply. Increased demand alone would simply drive up the speculative price of gold to even higher, destabilizing levels—and would benefit only speculators, and Russian and South African gold sales in European markets. The other half of this equation—the supply side—also requires analysis and action. This amendment would direct the Treasury to sell no less than 10 million ounces of gold by auction annually. This represents only about 3 percent of our existing gold holdings—enough gold to sell at this rate past the year 2000. The adoption of this amendment by the Senate would indicate a "sense of the Senate," in that it believes gold should be gradually "demonetized" and play a gradually diminishing role as a part of the international monetary system. This "sense of the Senate" would reinforce the Treasury in its negotiations with other countries in the reform of the international monetary system now taking place. That is why this amendment is so crucially needed now, while the Committee of 20 are meeting in Washington.

The Senate should send a signal of its views on the future role of gold.

This amendment would have other strong effects:

First. It would tend to stabilize gold markets, in that future gold supplies—about 50 million ounces produced annually—flowing to markets would be increased by 20 percent—thus probably more than offsetting any increased demand for gold by legalization of American gold holdings. The abnormally high gold prices in current weeks only tends to shake the world's confidence in the dollar and the current arrangement of par values. The great divergence between free market gold prices—now over \$90 per ounce—and the new official price of \$42.22 per ounce only tends to weaken the present monetary system and the strength of the dollar. The United States alone is sitting on about \$12 billion of gold—at official prices—but which is more than \$25 billion at free market prices. Surely the "sense of the Senate" that the United States—as well as the IMF and other monetary authorities—should begin a gradual sell-off of the "surplus stockpile" would be a major signal that it is the dollar and not gold that is the more reliable repository as a storehouse of value.

Second. It would fight inflation and help achieve the price stabilization objectives of the administration. Prices of industrial gold use—be it for class rings, wedding bands, jewelry, dental, electronics—have more than doubled in the past 2 years. Limited gold sales would reduce these prices.

Third. It would provide jobs to the gold industry whose 1,700 firms and 65,000 employees are affected by inflated

gold values and the restricted volume of production.

Fourth. It would aid the U.S. balance of payments. U.S. gold users now import between 6 and 8 million ounces—or roughly half a billion dollars. Treasury sales of 10 million ounces would probably eliminate such imports and might even provide some export earnings. At free market auction price of \$50 per ounce, this is a \$500 million balance-of-payments savings; at \$70 per ounce, this saves—or earns—\$700 million.

Fifth. Finally, for budgetary reasons, the U.S. Treasury reduces its expenditures—such "stockpile" sales would be regarded as a "negative expenditure," thus helping to keep us below a \$268 billion ceiling. Depending upon the market value of gold, given the offsetting increased demand from American purchases and Treasury sales, the revenue effect should be between \$0.5 and \$1 billion over the next 30 years that the gold stock would persist at this gradual rate of reduction.

Above all, the holding, buying, and selling of gold, both by American citizens and the American Government, will signal to the world that gold is being "demonetized," that the dollar and other paper currencies are the better monetary standards for the world, that Americans can now be as free as others to hold and trade in gold. The Senate should ratify this commonsense view that gold should be useful to mankind above ground, and not simply a metal to dig up in one country and bury in another.

AMENDMENT NO. 65

(Ordered to be printed, and to lie on the table.)

Mr. NELSON submitted an amendment, intended to be proposed by him, to Senate bill 929, supra.

AMENDMENT NO. 66

(Ordered to be printed, and to lie on the table.)

Mr. PROXMIER submitted an amendment, intended to be proposed by him, to Senate bill 929, supra.

AMENDMENT NO. 67

(Ordered to be printed, and to lie on the table.)

CONTROL OF FEDERAL EXPENDITURES

Mr. BAYH. Mr. President, I send to the desk an amendment to S. 929, the devaluation bill. This amendment would set a spending ceiling for fiscal 1974 of \$268.7 billion, precisely as suggested by President Nixon. It would also grant the President the authority to reserve from expenditures such amounts as are necessary to meet that spending ceiling during fiscal year 1974, provided that he withholds funds proportionately and within specified limits in all programs and activities except nine in which withholding would not be appropriate or legal, such as interest on the debt and judicial salaries. This assures that congressional priorities are respected even if it develops that withholding is necessary.

President Nixon stated in his budget message that—

The surest way to avoid inflation or higher taxes or both is for the Congress to join me in a concerted effort to control federal spending.

He specifically suggested that before Congress acts on the budget:

It establish a rigid ceiling on spending, limiting total 1974 outlays to the \$268.7 billion recommended in this budget.

The amendment I introduce today accomplishes that goal.

Like many others across the country, Mr. President, I am deeply disturbed about the priorities suggested in President Nixon's proposed budget. As a member of the Appropriations Committee, I hope to play a role in ordering our priorities in a way which meets more human needs than the budget the administration proposed. But while I disagree with the President's priorities, I do agree with the President that the limit on our expenditures in fiscal 1974 should be the revenues which would be produced by a full-employment economy—\$268.7 billion under current tax laws. I believe there is a sufficient amount within the proposed limit, if we choose priorities carefully and demand that the funds be spent effectively and efficiently in all areas, to continue and, where appropriate, to expand important programs.

I favor the \$268.7 billion limit for two basic reasons, one economic and one social. First, it represents a full-employment balanced budget. If we spend significantly more than this, we will risk sparking more inflation—especially in view of the unsatisfactory weak phase III guidelines. If we spend significantly less, we will risk an increase in the already too high level of unemployment. The stimulative effect of a full-employment balanced budget is needed to combat the over 5-percent unemployment we now suffer.

Second, at this point in time it appears the full \$268.7 billion may be needed to meet the legitimate domestic and foreign policy demands on the Federal Government. We can decide on that finally only after the appropriations hearing process is completed, of course, but I see no good reason to tie our hands now to another figure. I will join the fight to cut unnecessary or wasteful spending anywhere in the budget—in poverty programs or defense, in foreign aid or health—but it does not now appear likely we will be able to cut enough out of the budget to finance needed and valuable programs and still spend less than \$268.7 billion. And, as I said, it would be inflationary to spend more under current tax laws. If Congress approves tax reform measures which raise revenues without affecting individual taxpayers—if, for example, we repeal the accelerated depreciation for business boondoggle as I have proposed—then those funds could be spent to meet real needs without inflationary impact. But we cannot responsibly act now in the hope that meaningful tax reform will be passed in time to affect the 1974 budget.

In detail, my amendment does the following:

Sets a spending ceiling of \$268.7 billion for fiscal year 1974;

Directs the President to report to Congress by June 1, 1973, on revised estimates of full-employment revenues for fiscal 1974, so that Congress can reassess the spending ceiling, if appropriate;

Directs the President to withhold funds proportionately in all programs and activities—with the following exceptions: interest; veterans benefits, and services; payments from social insurance trust funds; public assistance maintenance grants; medicaid; social services grants under title IV of the Social Security Act; food stamps; military retirement pay; and judicial salaries—if clearly necessary to meet the \$268.7 billion limit; limits to 10 percent the amount by which any one program, activity or item within any spending authority may be reduced; and provides that if the President wishes to exceed the 10-percent limitation he shall submit his proposal to Congress and it will be effective unless disapproved by either House within 60 days under an expedited procedure.

I should add a word about the grant of authority to the President to withhold funds. In my view, unilateral Executive impoundments of funds imposed, because the President no longer believes a program worth while or because of broad economic policy considerations are unconstitutional and in violation of the doctrine of separation of powers. For that reason I am a sponsor of S. 373, the impoundment procedures bill introduced by the distinguished senior Senator from North Carolina (Mr. ERVIN). But in the present situation—with inflation a serious problem, and with Congress about to reform its budgetary procedures, hopefully in time for the fiscal 1975 budget—I believe a temporary and limited grant of power to the President to withhold funds to keep spending to \$268.7 billion is proper. This part of my amendment is very similar to a provision, introduced by our former colleague, Len B. Jordan, which the Senate passed last year as part of the debt-ceiling extension. It is also similar to amendment No. 51 to S. 929 introduced by the distinguished Senator from Texas (Mr. BENTSEN). But my version differs from Senator BENTSEN's in one crucial respect: while under his amendment it takes a resolution passed by both Houses to disapprove a proposed withholding in one program in excess of 10 percent under mine it takes only the disapproval of one House. To require both Houses to act affirmatively within 60 days to disapprove a large reduction in a program is to grant the President too much power to reorder priorities without congressional input, especially in view of the fact that our early action this year will provide sufficient time for the President to suggest and Congress to make necessary adjustments as the year goes along.

Finally, Mr. President, I wish to make an obvious point. The proposal I put forward today is not a final answer to our budgetary problems. It is but a temporary measure to deal with immediate problems. Within the next year, I hope, Congress will reform its procedures so as to control spending as well as obligational authority; to get an overview of the entire budget, including contract authority and other so-called backdoor spending; and to consider fully the economic consequences of Government spending.

Mr. President, I ask unanimous consent that the text of my amendment be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 67

At the appropriate place, insert the following new section:

"SEC.—(a) Expenditures and net lending during the fiscal year ending June 30, 1974, under the budget of the United States Government, shall not exceed \$268,700,000,000.

"(b) (1) Notwithstanding the provisions of any other law, the President shall in accordance with this section, reserve from expenditure and net lending, from appropriations or other obligational authority heretofore or hereafter made available, such amounts as may be necessary to effectuate the provisions of this section. In no event, however, shall such reservations be made until there is sufficient information available to indicate clearly that the figure referred to in subsection (a) of this section is going to be exceeded, and the President has submitted to Congress the reasons he has decided to impose reservations under this section.

"(2) In carrying out the provisions of paragraph (1) of this subsection, the President shall reserve amounts proportionately from appropriations or other obligational authority available for all programs and activities except for expenditures and net lending for

"(A) interest;
 "(B) veterans' benefits and services;
 "(C) payments from social insurance trust funds;
 "(D) public assistance maintenance grants;
 "(E) medicaid;
 "(F) social services grants under title IV of the Social Security Act;
 "(G) food stamps;
 "(H) military retirement pay; and
 "(I) judicial salaries.

"(3) In carrying out the provisions of paragraphs (1) and (2) of this subsection, no amount specified in any appropriations or other obligational authority for fiscal 1974 for any activity, program, or item within such appropriation or other authority may be reduced by more than 10 per centum.

"(c) In the administration of any program as to which—

"(1) the amount of expenditures is limited pursuant to subsection (a) of this section; and

"(2) the allocation, grant, apportionment, or other distribution of funds among recipients is required to be determined by application of a formula involving the amount appropriated or otherwise made available for distribution; the amount available for obligation (as determined by the President) shall be substituted for the amount appropriated or otherwise made available in the application of the formula.

"(d) In carrying out the provisions of subsections (a) and (b), should the President find it necessary or desirable to exceed the 10 per centum limitation provided in paragraph (3) of subsection (b), he shall notify Congress of those programs and activities for which he believes it desirable to reduce funds in excess of such 10 per centum, the amounts of such excess reductions; and the reasons for and anticipated impact of such reductions. Any such excess reduction shall be effective within the first period of sixty calendar days of continuous session of Congress after the date on which such notice is transmitted to it, unless between the date of such transmittal and the end of the sixty-day period, either the Senate or the House of Representatives agrees to a resolution stating that it does not favor that excess reduction. For the purpose of this subsection, (1) continuity of session is broken only by an adjournment of Congress sine die, and (2) the days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the sixty-day period.

"(e) If the committee to which a resolution with respect to a proposed excess reduction has been referred has not reported it at the end of ten calendar days after its introduction, it is in order to move either to discharge the committee from further consideration of any other resolution with respect to the proposed excess reduction which has been referred to the committee.

"(1) A motion to discharge may be made only by an individual favoring the resolution, is highly privileged (except that it may not be made after the committee has reported a resolution with respect to the same proposed excess reduction), and debate thereon shall be limited to not more than one hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(2) If the motion to discharge is agreed to or disagreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same proposed excess reduction.

"(f) When the committee has reported, or has been discharged from further consideration of a resolution with respect to a proposed excess reduction, it is at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion is highly privileged and is not debatable. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(1) Debate on the resolution shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate is not debatable. An amendment to, or motion to recommit, the resolution is not in order, and it is not in order to move to reconsider the vote by which the resolution is agreed to or disagreed to.

"(g) Motions to postpone, made with respect to the discharge from committee or the consideration of, a resolution with respect to a proposed excess reduction, and motions to proceed to the consideration of other business, shall be decided without debate.

"(1) Appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, or the procedure relating to a resolution with respect to a proposed excess reduction shall be decided without debate.

"(h) The President shall submit to Congress on or before June 1, 1973 revised estimates, if any, of full-employment revenues for the fiscal year ending June 30, 1974."

AMENDMENT NO. 68

(Ordered to be printed.)

Mr. EAGLETON proposed an amendment to Senate bill 929.

NOTICE OF HEARINGS RELATING TO POSTAL RATES FOR SECOND-CLASS MAGAZINE PUBLICATIONS

Mr. McGEE. Mr. President, I wish to announce that hearings have been scheduled for April 2 and 3, 1973, on S. 411, S. 630, S. 842, and H.R. 4128, legislation relating to postal rates for second-class magazine publications.

The hearings will be held Monday, April 2, and Tuesday, April 3, at 10 a.m., in room 6002, Dirksen Senate Office Building. Those wishing to testify may arrange to do so by contacting Mrs.

Donna Yee of the committee staff at 225-5451.

NOTICE OF HEARING ON OCEANS AND INTERNATIONAL ENVIRONMENT

Mr. PELL. Mr. President, I wish to announce that on April 17, the Subcommittee on Oceans and International Environment of the Committee on Foreign Relations will begin 2 days of public hearings on the Convention on the Establishment of an International Fund for Compensation for Oil Pollution Damage and the amendments to the 1954 Prevention of Pollution of the Sea by Oil Convention (Ex. K, 92-2) and the Oil Pollution Compensation Act (S. 841). The hearings will be held in room 4221 of the Dirksen Senate Office Building, beginning at 10 a.m.

At that time the committee expects to hear executive branch witnesses and other interested individuals. Persons wishing to testify should communicate with the chief clerk of the committee.

NOTICE OF HEARINGS ON S. 1155

Mr. PELL. Mr. President, I wish to announce that on April 16 the Subcommittee on Oceans and International Environment of the Committee on Foreign Relations will conduct public hearings on S. 1155, the United Nations Environment Program Participation Act of 1973. The hearings will be held in room 4221 of the Dirksen Senate Office Building, beginning at 10 a.m.

At that time the committee expects to hear executive branch witnesses and other interested individuals. Persons wishing to testify should communicate with the chief clerk of the committee.

NOTICE OF HEARINGS ON FOOD PRICES

Mr. JOHNSTON. Mr. President, the Subcommittee on Production and Stabilization of the Committee on Banking, Housing and Urban Affairs will commence hearings on food prices at 2 p.m. April 4, 5, 6, and 9, in room 5302, New Senate Office Building.

All persons wishing to testify should contact Gerald Allen, room 5300, New Senate Office Building; telephone 225-7391.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ROBERT C. BYRD. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

James F. Companion, of West Virginia, to be U.S. attorney for the northern district of West Virginia for the term of 4 years, vice Paul C. Camilletti, resigning.

James N. Gabriel, of Massachusetts, to be U.S. attorney for the district of Massachusetts for the term of 4 years, vice Joseph L. Tauro.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations

to file with the committee, in writing, on or before Wednesday, April 4, 1973, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARING ON NOMINATION

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, April 4, 1973, at 10:30 a.m., in room 2228, Dirksen Office Building, on the following nomination:

Vincent P. Biunno, of New Jersey, to be U.S. district judge for the district of New Jersey, vice Robert Shaw, deceased.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Mississippi (Mr. EASTLAND) chairman; the Senator from Arkansas (Mr. McCLELLAN) and the Senator from Nebraska (Mr. HRUSKA).

NOTICE OF HEARING ON NOMINATION

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, April 4, 1973, at 10:30 a.m., in room 2228, Dirksen Office Building, on the following nomination:

Daniel J. Snyder, Jr., of Pennsylvania, to be U.S. district judge for the western district of Pennsylvania, vice Joseph F. Weis, Jr.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Mississippi (Mr. EASTLAND) chairman; the Senator from Arkansas (Mr. McCLELLAN) and the Senator from Nebraska (Mr. HRUSKA).

ADDITIONAL STATEMENTS

OPENING STATEMENT OF SENATOR McCLELLAN FOR SUBCOMMITTEE ON DEFENSE APPROPRIATIONS BUDGET HEARINGS

Mr. COTTON. Mr. President, on Monday, we began our hearings in the Defense Appropriations Subcommittee on the fiscal 1974 budget for the Department of Defense. The chairman of the Committee on Appropriations, the distinguished senior Senator from Arkansas, set the tone for our deliberations this year with a well documented opening statement that is valuable reading for every Senator and every citizen.

In comparing defense spending to other areas the chairman noted that:

20 years ago, defense spending was nearly double that of all other federal agencies and departments combined. Today, the other federal agencies spend a total of more than twice as much as defense.

20 years ago, defense spending was nearly double that of all state and local governments combined. Today, state and local government spending is more than double that for defense.

20 years ago, total defense manpower was nearly equal to all other public employment—federal, state and local—combined. Today, such public employment exceeds defense manpower by nearly 4 to 1.

20 years ago, about 49 cents out of every tax dollar—federal, state and local—went for defense. Today, this figure comes to around 20 cents—a reduction of 60%.

Today, the defense share of the U.S. gross national product, of the labor force, and of the federal budget is lower than at any time since 1950.

Today, defense spending has gone below prewar levels in terms of what the dollar will buy for the first time in American history—either after or during a war.

Mr. President, these are powerful facts that disprove indeed the two misconceptions that defense spending is the cause of our runaway budget and that the humanitarian concerns are being short-changed. As it has been noted before, the priorities in the budget between human resources and defense have been almost exactly reversed since 1969—with human resources outlays rising to 47 percent of the 1974 budget while defense drops to 30 percent. In order that the entire Senate as well as the public might have the opportunity to read this excellent analysis of what the chairman has rightfully described as "the premium for America's survival insurance" I ask unanimous consent that the full statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CHAIRMAN JOHN L. MCCLELLAN

(NOTE.—In constant fiscal 1973 prices, present defense outlays are \$34.3 billion (about one-third) below the fiscal 1968 wartime peak. They have fallen sharply in each of the past 5 years, and fiscal 1973 outlays represent the lowest level since fiscal 1951.)

Today, the Senate Defense Appropriations Subcommittee begins hearings on the Fiscal 1974 budget for the Department of Defense.

The Administration has requested Congressional approval of new defense budget authority totaling \$85.2 billion, with outlays during the coming fiscal year expected to reach \$79 billion.

Such expenditures by any measure are an immense sum.

There can be little question that the premiums for America's survival insurance are high.

However, there are other significant facts which relate to our national defense commitment.

These facts and their supporting statistics are seldom given headlines.

They are frequently omitted in discussions of federal spending.

They are rarely cited by the critics.

They are not popular indicators of our defense posture, but nonetheless, they are true; and they especially warrant full consideration as these hearings progress:

20 years ago, defense spending was nearly double that of all other federal agencies and departments combined. Today, the other federal agencies spend a total of more than twice as much as defense. (In 1953 defense spending \$50.4 billion—all other agencies and departments \$26.8 billion. In 1973 defense spending \$74.8 billion—other agencies and departments \$174.9 billion.)

20 years ago, defense spending was nearly double that of all state and local governments combined. Today, state and local government spending is more than double that for defense. (In 1953 defense spending \$50.4 billion—all state and local governments \$27 billion. In 1973 defense spending \$74.8 billion—all state and local governments \$182.5 billion.)

20 years ago, total defense manpower was nearly equal to all other public employment—federal, state and local—combined. Today, such public employment exceeds defense manpower by nearly 4 to 1. (In 1953 defense manpower 4.8 million—all other 5.4 million. In 1973 defense manpower 3.3 million—all other 12.8 million.)

20 years ago, about 49 cents out of every tax dollar—federal, state and local—went for defense. Today, this figure comes to around 20 cents—a reduction of 60%.

Today, the defense share of the U.S. gross national product, of the labor force, and of the federal budget is lower than at any time since 1950. (6.2% of the gross national product—5.8% of the labor force, and—29% of Federal outlays.)

Today, defense spending has gone below prewar levels in terms of what the dollar will buy for the first time in American history—either after or during a war. (For example, defense outlays \$82.6 billion in 1964—at 1973 price levels. In 1973 \$74.8 billion in defense outlays.)

These facts refute many of the erroneous contentions and impressions about the defense budget—such as: that it continues to grow; that it dominates public spending; that it is the root of all of our economic ills; and that it is an unnecessary and exorbitant drain on our nation's resources.

These facts also disprove two other popular misconceptions—(1) that defense spending is the prime cause of the rapidly increasing high cost of the Federal Government, and (2) that civic, human resource programs have been shortchanged at the expense of defense priorities.

Since 1964 the cost of government has gone up \$150 billion—from \$118.6 billion to \$268.7 billion in fiscal 1974. Of that total increase, only 19% or \$28.6 billion is attributable to military spending. The remaining 81% or \$121.4 billion is attributable to nonmilitary functions and services, such as human resources and general government.

While total federal outlays have gone up about 127% during this period, defense spending has been rising far less rapidly than any other major item in the budget—increasing by only 58% from \$49.5 billion to \$78.2 billion. On the other hand, social programs such as federal aid to education jumped 466% (from \$1.1 billion to \$6.3 billion); public assistance went up 245% (from \$3.1 billion to \$10.7 billion); social security 235% (\$16.2 billion to \$54.2 billion); and, health care and services (including Medicare and Medicaid) increased dramatically by 4,571% (from \$393 million to \$18.4 billion).

There is much talk about reordering national priorities. Unquestionably, some new directions and emphasis may be practical and required if we are to meet our nation's present needs and our commitment to its future. But it clearly appears from the statistics which I have just cited that the reordering of priorities has been in progress—been underway—for quite some time now.

They also indicate that we have not been maintaining a strong national defense wholly at the expense and to the detriment of urgently needed social, civic, and human resource programs. They clearly demonstrate that we have not forsaken or grossly neglected the domestic obligations of the Federal Government.

They further indicate that America has been streamlining its defense establishment—making it more efficient and effective

and at less cost—so that more money can be spent on nonmilitary services and projects.

This is not to suggest that more reductions cannot or should not be made in defense spending. The long sought ceasefire in Vietnam has finally been attained. The days of pouring billions of dollars into this part of the world to support military actions—some \$112 billion over the past ten years—are finally ending. The Congress can now, and I know it will, endeavor to hold the line on military spending and help move this nation in the direction of a balanced budget.

It should be noted, however, that the cessation of hostilities in Southeast Asia will not result in any extra large financial "peace dividend" in Fiscal 1974. Such dividends—reductions—have been taking place since 1968. Since then, the Department of Defense payroll has been cut by 30%—by a total of some 1,440,000 military and civilian personnel. Troop strengths will soon be at a 24 year low. Personnel and procurement have been cut by \$24 billion over the past 5 years. Unfortunately, however, we have realized a net saving of only \$1.5 billion from these cuts because of inflation and pay increases.

The impact of inflation on the defense budget has been enormous. Without adding or promoting a man and without buying an additional item from industry, the same programs that cost \$50.8 billion in fiscal 1964 would cost \$87.7 billion in 1974—an increase of \$36.9 billion. Programs that cost \$22.5 billion in 1954 would now cost \$55.5 billion more 20 years later. Meanwhile, in terms of constant dollars, our expenditures for research and development have dropped \$1.5 billion since 1964 (\$10.2 billion to \$8.7 billion).

For fiscal 1974, the President has requested Defense appropriations totaling \$83.5 billion, exclusive of the military assistance program. This is 29 percent of his total budget of \$288 billion and 48 percent of the \$172 billion that will be considered by the Congress for appropriation.

This \$83.5 billion also represents an increase of approximately \$5.7 billion over the budget authority granted for the current fiscal year. Of this \$5.7 billion increase, approximately \$3.633 billion is for increases in the pay of civilian, military, and retired service personnel (\$2.633 billion), and increases in the cost of goods and services (\$1.0 billion). The Department of Defense and the Congress can exercise little or no control over these recently enacted statutory increases.

Congress can make reductions in other items (totaling \$2.750 billion) where feasible, or advisable. They include:

- (1) Legislation for a "reform" of the military retirement system, \$390 million.
- (2) Legislation for additional all-volunteer force programs, \$150 million.
- (3) Increases in various procurement programs, \$1 billion.
- (4) Increases in various research and development programs, \$595 million.
- (5) Increases in various construction programs, \$432 million.
- (6) Increases in various housing programs, \$183 million; for a total of \$2.750 billion.

In considering the 1973 Defense budget last year, we were able to recommend and to secure reductions of more than \$5 billion below the President's request. We may not be able to surpass or even equal this in Fiscal 1974, but I anticipate that some realistic spending cuts can be made in the budget we are now considering without diminishing or weakening our national defense posture.

This is our purpose; and this is what we shall undertake to accomplish, as we make a careful study of the budget request submitted to us and in the further processing of this bill.

A MULTINATIONAL PROBLEM

Mr. SYMINGTON. Mr. President, as the problems incident to the value of the dollar continue to grow, one can only note with interest a recent editorial in the St. Louis Post Dispatch, entitled "A Multinational Problem."

This editorial points out that:

Multinational corporations, most of which are U.S.-owned, hold a pool of liquid assets valued at 268 billion dollars, which is more than three times the total reserves held by industrial nations in defending currency values. Thus, individual nations, including the United States, are presently in an indefinable monetary position.

I ask unanimous consent that the editorial in question be inserted at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post Dispatch, Mar. 17, 1973]

A MULTINATIONAL PROBLEM

Things are rarely what they seem. Back in the 1960s, multinational corporations were the object of home country pride and foreign courting. They were a status symbol, exemplified by the Middle East sheik who invested more money in a Coca Cola franchise than in hospitals.

Today, these global operations are increasingly viewed as ogres, feeding both on rich and poor countries. They are a symbol of avarice and the target of political leaders.

The truth, as always, is somewhere in between. Like the national corporations before them, the rise of multinationals should be viewed as a mixed blessing which would produce optimum benefits only after an international government mechanism is established to monitor them. When big business emerged in America virtually unrestricted about a century ago, people began to worry about the future of competition because of the power of the new firms and the tactics they used. The political result was enactment of antitrust laws. A similar response on an international scale is now in order.

Multinational corporations have contributed to the spread of technology and the introduction of products at mass market prices. Their success shows that humankind can overcome both natural and man-made barriers to trade. Their benefits arise in the hope that with closer integration of various countries the likelihood of violent conflict diminishes. From a selfish viewpoint, nearly 25 per cent of U.S. corporate profit now comes from foreign affiliates. The value of U.S. exports to these affiliates is rising at a faster rate than the value of other U.S. exports.

But such favorable factors are counterbalanced by a single, awesome statistic which shows the extent of power held by multinational corporations. These firms, most of which are U.S.-owned, hold a pool of liquid assets valued at 268 billion dollars, which is more than three times the total reserves held by industrial nations in defending currency values. Thus, individual nations, including the United States, are presently in an indefensible monetary position.

While governments pursue independent and often conflicting development policies, the global entrepreneurs carry on a closely integrated operation. They can move, for example, massive amounts of money from country to country in response to speculative profit easier than a single government can respond to them.

As yet there is no international strategy to develop a response. The emphasis remains on national solutions to international problems. The goals should be to protect com-

petition from a worldwide perspective through antitrust agreements, to assure the equitable division of taxes, labor and profits, and, not the least important, to establish a system of compensation to owners of expropriated property. New rules of international conduct are needed so that the full benefits of multinational corporations will be realized. Under proper supervision, the growth of these enterprises would tend to discourage trade wars and encourage the emergence of a new global economic system.

VICE PRESIDENT AGNEW DISCUSSES THE NEED FOR FLEXIBILITY IN URBAN TRANSPORTATION PLANNING

Mr. BAKER. Mr. President, earlier this month, Vice President AGNEW addressed a luncheon meeting of the International Rapid Transit Seminar in Los Angeles.

His remarks were most timely, as he evaluated the need for greater community flexibility in meeting urban transportation needs, whether those needs involve highway construction, the acquisition of buses, the construction of a rail mass transit system, or a combination of such alternatives.

Shortly before the Vice President's speech, the Senate adopted the so-called Muskie-Baker amendment as a part of S. 502. That amendment would grant such flexibility in the use of the \$850 million-a-year urban system highway program.

Mr. President, because of the significance of the Vice President's speech, I ask unanimous consent that it be included at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE VICE PRESIDENT OF THE UNITED STATES

I am particularly pleased to be with you today as you meet to express your concern over what is one of the more serious problems facing Los Angeles—and cities across the Nation—that of providing for the movement of people and goods without destroying our environment or our quality of life.

The people who settled this State were strong men and women who saw an opportunity to prosper by their own initiative and seized that opportunity. Californians are still seizing the opportunity to shape their own communities. That is the choice they made in San Francisco when they decided to build the Bay Area Rapid Transit. That is why you are assembled today—to commit yourself to the concept of rational progress through community deliberation. In a sense, the laboratory research to improve the quality of our lives is shifting from the Federal to the local level. It is shifting from Washington to communities such as Los Angeles. We in the Nixon Administration commend you for accepting that challenge—for realizing that there can be no future without a present; that there can be no ending without a beginning.

I assure you that President Nixon applauds such efforts. In his inaugural address, and again in his State of the Union message, the President called upon the American people to accept the challenge to control their own destiny and shape their own future. And that is the fundamental purpose of your meeting today. For his part, the President has pledged that substantial decision-making authority over Federal programs will be returned to the States, the local communities through their elected officials. As a for-

mer Governor and county chief executive, I endorse this policy fully. Local officials have a detailed, on-the-job understanding of their local problems. What they need now are the tools to solve these problems.

This Administration intends to assist you in every way possible. There is no place in the Nixon Administration for an omnipotent and omnipresent Federal bureaucracy which seeks to impose from Washington those decisions which can better be made on the local level. There is no place in the Nixon Administration for Federal agencies which set the goals and priorities for each community in this Nation. Indeed, there is no place in the Nixon Administration for Federal officials who lecture local officials instead of listening to them.

Rather, the role of the Federal Government is to create the flexibility, financial and otherwise, that will help urban areas to make their own decisions as to when and where and how they want to spend their Federal dollars. There is a delicate balance that must be achieved—a balance between the Federal responsibility to insure that the life lines of our urban areas remain open and the equal responsibility to see that Federal funding policies do not tie the hands of local officials who seek the best answer to their local problems.

We in Washington can establish general policy, based on the needs of the Nations as a whole and the resources we have to meet those needs. We can also share with you our findings garnered from the successes and failures of communities such as your own. What we cannot and will not do is strip you of the right to make decisions—indeed, the responsibility to make decisions—on matters which affect the way you live in your own community. This is a responsibility that the Federal Government must share with you. We must make certain that Federal financing and policies do not preclude good solutions you wish to implement at the local level.

This is not to say that there is no Federal policy towards transportation. Quite the contrary. This country began its surge towards economic pre-eminence when the Federal Government adopted a clear policy of encouraging an extensive railroad system. Further, there is no question that this country prospered through Federal-aid roads which brought farm products to our cities and then through our system of interconnected Federal and State highways which made the bounty and beauty of this great land available to all our citizens.

The focus of the Federal concern in transportation, however, has now shifted to our urban areas. This is where squeeze has turned to crunch; where the question is no longer how to get from A to B, but rather how to protect our communities and ourselves in getting from A to B. We must find ways to prevent the erosion of tax base caused by inner-city highways and ways to avoid smothering under a blanket of pollution, or aging perceptibly during a traffic jam. And I am not just talking about Los Angeles or the other major cities of this country; I am talking about the 264 urban areas in this Nation which contain 75 percent of our population. The transportation problem which faces urban areas today is the same in Houston, Texas as it is in Los Angeles. The problem you are meeting today to consider—how to achieve a truly balanced transportation system, a system that provides needed mobility to all our citizens, regardless of their income, age, or handicap—needs to be resolved in almost all our urban areas.

We as a Nation have come to recognize that our urban areas are complex and inter-related and that the decisions we make about one element of our urban society have ramifications throughout the entire society. For this reason, the President has proposed the establishment of a Department of Commu-

nity Development which can integrate the related factors of urban problems. He has also restructured the current Cabinet to stimulate the most sophisticated and sensitive response to our problems. Our cities and the citizens will no longer accept inefficient spending directed from Washington.

In transportation, the Federal Government and urban areas such as Los Angeles are recognizing that the automobile alone, as we know it today, is not the answer to urban transportation problems. While it is perfectly adapted to taking a family on an outing, it is clearly not the most efficient way of getting from home to work and then home again in a busy city.

The automobile is not a monster, but it will become one if we allow ourselves to become totally dependent on it for our urban transportation. We can develop more rational and efficient ways to move around in our cities, and mass transit—whether it be bus, rail, or an innovative new system—can free us from our automobile servitude.

We must provide alternatives to the automobile wherever possible. There are many people who either do not want or do not need to use their automobiles for a particular trip—who would prefer a convenient alternative. The private commuter bus cooperatives springing up in Los Angeles and elsewhere are but one indication of this growing trend.

To provide such an alternative, local decision makers must have the flexibility to use their transportation dollars to create a balanced system for their community. To this end, the President has proposed highway/mass transit legislation which would open the Highway Trust Fund to bus and rail expenditures through the establishment of a \$1.1 billion urban fund; would send some Federal highway and transit funds directly to urban areas; would encourage the creation and strengthening of metropolitan area-wide institutions to plan and implement highway and transit facilities; and would permit the transfer of funds designated for controversial Interstate highway segments to other highway or transit projects which State and urban officials feel will better meet the needs the Interstate highway was to serve.

This latter point makes a great deal of sense. Highways are not an end in themselves. Their purpose is to solve the needs of a transportation corridor. If there is a more efficient and effective way, or a combination of ways, to meet these transportation needs, is it not wiser to give localities real flexibility? In our view, it clearly is.

The Senate last week acted favorably on President Nixon's highway and mass transit proposals. Only the concurrence of the House is necessary now to provide our States and localities with the flexibility they will need to achieve a truly balanced transportation system.

If there is one keystone to this Administration's philosophy of government, it is efficient and effective delivery of services to the American people. As I travel around the country, I have noticed a syndrome among local officials that you might call the "use-it-or-lose-it syndrome." It goes like this. If you have a right to a Federal dollar, you'd better use it before you lose it—whether or not you need whatever project that Federal dollar will buy. That is as logical as a bean farmer buying 2,000 pounds of beans at a supermarket because they're on sale that day. This Administration, therefore, is attempting in a number of ways to lessen the categorical dollars that must be used or lost by local governments. Our major effort in this regard is Revenue Sharing, which returns to the States and localities dollars which can be used for almost any purpose. A related effort is found in the Administration's Highway/Mass Transit Legislation which I have just described.

Along with this flexibility, however, I believe we all have to become mass transit conscious. A modern bus can take the place of 30 automobiles with less pollution. The efficiency and environmental soundness of a rail system is even more impressive. Indeed, subways are the one underground movement we can all agree to support.

But there is more to the problem than just building new facilities. We should give the same advantages to people who use mass transit as we give to people who drive, be they employees or customers. I doubt that many of you provide the same fringe benefits for your employees who commute by mass transit as you do for employees who drive their automobiles into the city. For example, one of the fringe benefits that has been given employees and customers for years is free or reduced rate parking. We have even required new office developments to include a certain amount of off-street parking at considerable added expense to developers and occupants. In the District of Columbia alone, the Federal Government subsidizes employee parking to the tune of \$800,000 a month. Even now in Los Angeles, the crunch is on because new office buildings are economically unable to accommodate all the parking that is necessary. One solution might be to provide similar fringe benefits to public transit users as is now being done, for instance, for employees at the Colorado National Bank in Denver. The bank buys tokens from the Denver bus system and sells them to their employees at half price, in this case 17½ cents each. Further, the bank provides no parking facilities for its employees. The results have been impressive. Forty-three percent of the bank's employees, some 324 people, now participate in this program, an increase of 62 percent from those who rode the bus before the plan was initiated. Indeed, the bank now estimates that over 100 cars have been eliminated from the downtown area.

If advantages accrue only to those who drive their automobile, people are encouraged to continue to drive.

The reason people now drive their automobiles into town is not necessarily because they want to do so, but because there are all too often no alternatives. The great success of the shopping malls around this Nation has shown that people don't mind walking from store to store. What they do want, however, is an environment which is designed for them to walk in. They want to go where they feel they can safely take their children and perhaps even let them loose while they do some shopping. This environment exists in auto free zones and pedestrian malls—it can come about if we plan our cities with an urban sense and an urban sensibility.

What I am supporting today is not new. Indeed, in the early part of this century, Pacific Electric operated an extensive system of pollution-free trolley cars in Los Angeles. The tracks got in the way of the automobiles, however, and the system was discontinued. Paradoxically, you are now considering ways of recreating the efficiency and environmental integrity of that system at a cost of several billions of dollars. Perhaps that is an unfair oversimplification, but we have come nearly 180 degrees since those tracks were removed to facilitate automobile traffic.

We needed also the commitment of the Federal, State and local governments to fund transit as they have been funding the automobile. I was pleased to note that California has acted to free ¼ of 1 percent of its sales tax for mass transit purposes. For our part, the Federal Government will make available a billion dollars for this year alone to fund mass transit.

As community leaders, I know you will work to provide local funding also. Atlanta, you already know, is a community which

realized what was needed and was willing to tax itself to meet that need. Those metropolitan Atlanta counties participating in the plan raised their sales tax by a penny per dollar with the proceeds dedicated exclusively to mass transit. The revenues accruing from that decision are approaching \$4 million a month. Further, the plan has been in effect since last April, and the amount going for transit has risen as transit improvements have reinvigorated the downtown area. This is a splendid example of what I like to call a victorious circle.

In short, ladies and gentlemen, the Federal Government with the cooperation of State and local governments everywhere, is now entering the era of multi-modalism. But no program or policy can go anywhere without strong public support at the local level. This is where the hard-headed expertise of those of you who have sharpened your intellect in the world of finance can make a real contribution to the city you call your headquarters. I have cited some examples of new transportation strategies in the short time I have had today. Several, such as making transit discounts a fringe benefit for employees and shoppers, can be initiated almost immediately. Others, such as rapid rail transit and auto free zones, require further planning. Yet each of these recommendations can contribute to the solution. What is required is that you agree not only that transit is needed but that it is needed now and that you are willing to support it now.

There is no doubt in my mind that Los Angeles and its 9 million people need a mass transit system—and need it soon. What kind of system is up to you. But a decision must be made. People are ready for change. We see evidence of this in the hearings the Environmental Protection Agency has been holding over these past several weeks. We see it in the lines of traffic jamming the Los Angeles freeway. Indeed, we see evidence of it in the mothers who are organizing because their children can't play outside during smog alerts.

There is only one conclusion that can be reached. We are living in a time of change, and if we are not the architects of that change, we will inevitably be its victims. As influential leaders of Los Angeles interested in transit problems, you can mobilize community support for these proposals. As enlightened citizens, I am sure you will.

REHABILITATION ACT VETO

Mr. RIBICOFF. Mr. President, I am shocked that the President has again vetoed the Rehabilitation Act of 1972. This legislation passed the House and Senate overwhelmingly in 1972 and again in 1973.

The act would provide funding to extend and improve the Federal commitment to the rehabilitation of the physically and mentally handicapped. In Connecticut alone, vocational rehabilitation services estimated at \$6.7 million in fiscal 1974 would be authorized. Another \$978,000 would be available to our State for the establishment and implementation of services for the severely handicapped who are not generally included in existing programs.

Rehabilitation centers throughout the country, and especially those in Connecticut, have been instrumental in helping the handicapped to become full participants in society. Blind and crippled human beings have been helped immeasurably by the Federal rehabilitation effort.

In Connecticut in fiscal 1972, for example, some 6,458 individuals were re-

ferred to the State rehabilitation center, and 2,350 of them were completely rehabilitated. As a result, the earnings of these people rose from \$1,057,500 to \$9,400,000 a year after rehabilitation. In addition the self-sufficiency achieved by these people meant that disability and welfare benefits to these people and their dependents could be reduced by \$838,000 in a 1-year period. Similar results can be found throughout the State of Connecticut and the Nation. All of us in Congress support economy in Government. But economies should not be made at the expense of successful health programs.

This is no time for us to turn our backs on those in America who, through no fault of their own, are handicapped. I will vote to override the President's veto of this legislation and I urge all Senators to join me.

THE EXEMPLARY PUBLIC SERVICE OF ELLIS ARMSTRONG

Mr. BENNETT. Mr. President, Mr. Ellis Armstrong, a distinguished Utahian who for the past 4 years has served as U.S. Commissioner of Reclamation, is leaving the Government on April 1 to assume the position of vice president of URS Systems Corp.

Mr. Armstrong has brought great honor to his State and a high degree of professional competence to his years of service to our Nation. He is the only man ever to have served as both Commissioner of Reclamation and Commissioner of Public Roads, a position which he held in the Eisenhower administration. Additionally, he has served in various capacities with the Bureau of Reclamation for over 23 years, and as a consulting engineer in private business for 12 years. He is also a former director of highways for the State of Utah.

Seeing Mr. Armstrong leave the Government after contributing so much leaves me with a feeling of regret. His leadership in the Federal development of water resources will be missed. But I am pleased to note that in his new position in the private sector he will continue to lend his considerable talents to the areas of water resources, pollution abatement, and energy-related services.

I wish Ellis Armstrong all the best in this new assignment, and express our gratitude to him for his exemplary public service.

ENVIRONMENTAL CHANGE CAN BE GUIDED

Mr. CRANSTON. Mr. President, efforts to halt environmental deterioration have been plagued by an unfortunate polarization.

On the one hand, many environmentalists have too often espoused a thoughtless obstructionism to any plan for growth. On the other hand, some members of the construction industry and related growth fields have attacked the environmentalists' valid concerns as woolly head meanderings of some lunatic fringe.

Neither extreme approach helps our Nation resolve its environmental dilemma.

Therefore, it was quite refreshing to read an essay in the Los Angeles Times of March 25, 1973, by Walter Shorenstein, a highly respected business executive dealing primarily in real estate and a community leader in the San Francisco Bay area. Mr. Shorenstein's approach combines a sensitivity to environmental needs with an understanding of the problems created by our unavoidable growth.

I think my colleagues will benefit greatly from Mr. Shorenstein's discussion. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ENVIRONMENT: CHANGE CAN BE GUIDED—OUR BEST BET FOR PROTECTING THE ENVIRONMENT IS TO DIRECT GROWTH IN WISELY CONTROLLED COURSES WHICH WILL ENHANCE ALL ASPECTS OF OUR DAILY LIVING (By Walter H. Shorenstein)

Scarcely a day goes by that we in California do not read of an effort somewhere in our state to stop new construction in the name of preserving the environment.

It may be an initiative to limit the height of all buildings in San Francisco. It may be a drive to halt a freeway connection in Los Angeles.

It may be an effort to halt resort development in a mountain area. Whatever the merits of the various causes, there is in all of them the general assumption that man-made structures are automatically inimical to the environment.

Obviously this is a dangerous oversimplification created out of the rising concern over the quality of the environment coupled with a lack of knowledge of some facts of demography.

We cannot—any more than King Canute—halt the tides of growth and change by refusing to acknowledge their existence. We can best enjoy their benefits and best remove or limit unpleasant side effects by directing growth and change in wisely controlled courses.

The demographic facts should demonstrate why absolute no-growth policies are bound to fail in urban areas. Our rising national population alone points to the need for more housing, more office space, more schools and factories. Americans are not only becoming more numerous, they are moving west in large numbers. And, they are moving to cities.

At the beginning of the 19th century, only 55% of our national population lived in urban areas; today it is more than 75%. By the year 2000, most demographers agree, nine out of 10 Americans will be citydwellers. An inexorable tide of urban population growth is coming our way. We must be prepared for it.

At home or at work; these people must have shelter. They can be accommodated horizontally in endless chains of suburbs, with consequent sacrifice of open space and the necessity to commute great distances, or they can be accommodated vertically in high-rise towers. From an environmental point of view, the choice would seem obvious.

The modern high-rise building is one of the great engineering miracles of our age, ranking in its time with the pyramids of ancient Egypt and the Gothic cathedrals of the Middle Ages. It is an extraordinarily efficient means of comfortably housing a maximum number of human beings on a minimum of precious ground. High-rise buildings conserve rather than consume open space.

It must be remembered too that the urban real estate developer has strong interest in improving the quality of the urban

environment. His edifice represents a large and long-term personal investment.

Urban blight brings him rising costs and declining income. So for economic as well as civic-minded motives, the developer has a vested interest in the future preservation and growth of his city.

For perhaps different reasons, the average citizen also has a strong motive for encouraging planned improvement and growth of his urban environment.

If he works in the city, he will prefer a modern, centrally located high-rise office building because it is convenient, comfortable and close to transportation. And, of the monthly rent his company pays to occupy this building more than 20% of it is returned to the community in the form of taxes which pay for schools and hospitals and fire departments.

MAJOR INVESTMENT

Another 30% of the rent is returned to the community in wages and fees for building services. The building itself represents a major investment in local economy. About 35% of the construction cost of a modern office building, for example, goes into wages and fees. High-rise buildings provide the best means, from both the economic and the environmental standpoints, of sheltering the increases in the working population.

Let us have the courage to accept as given facts that our cities will grow and change. Let us also be resolved to allocate sufficient resources to keep our cities compatible with the environment.

High-rise buildings in themselves are not enough to do this. We must look to solutions for our urban problems that go beyond simply improving designs for roads and buildings within the old pattern of local planning.

We must have better planning, planning not on a patchwork block-by-block basis, but on a wide regional level, predicated less on institutionalizing the errors of yesterday, but instead on anticipating the much more challenging problems of tomorrow.

GREATER TRUST NEEDED

Secondly, we must have closer coordination and greater mutual understanding and trust between the private sector and government, so that the efforts of both can be directed toward the common goal of improving the urban environment, rather than dissipating energy in struggles for power leading to decisions dictated by political expediency.

We must, seriously and at once, address ourselves to the urgent problems created by the automobile in our cities. Today, more than half of the typical downtown area—in Los Angeles it's almost two-thirds—is dedicated to the automobile in the form of streets, parking lots and garages. The automotive by-products of pollution and traffic congestion long ago reached unacceptable levels.

Some cities have attempted to deal with the problem of banning automobiles from certain areas, only to find increased congestion in surrounding sections. Others, like Minneapolis and Houston, have experimented with utilizing air-rights over existing streets to provide car-free pedestrian spaces. Still others, with San Francisco as a current example, have invested heavily in mass transit.

Whatever the best solution, or combination of solutions, proves to be, it is evident that finding a means of breaking the stranglehold of the automobile on our cities is a project of utmost priority.

Finally, there is the problem created by our increasing need for electrical energy and fuel for energy production, both in absolute terms and on a per capita basis. As the population continues to concentrate in urban centers, the need for new power facilities near the centers of population becomes an ever greater economic and planning problem.

Although both face serious problems, Los Angeles and San Francisco are cities with

bright futures, perhaps the brightest of any two cities in the United States.

Complementary rather than competitive, each offering different advantages, opportunities, and life-styles, they stand in supremely strategic market positions as America again faces west, toward Asia and the entire Pacific Basin with their rapidly growing new markets for U.S. goods and services. If we in California are to realize the promise of growth without unpleasant and even dangerous side effects, we must face our problems realistically.

It will take effort to fully recognize our problems and place them in a logical scheme of priorities. It will take imagination to find the best solutions. It will take great energy and resources to implement these solutions.

But these solutions will never be imagined, the resources never assembled, the solutions never implemented, if we sit by the sea and order the tide to come no closer.

NEWSPAPER EDITORS URGE THIS COUNTRY NEEDS ALASKAN OIL

Mr. STEVENS, Mr. President, over the past 2 months a number of newspaper editors in major cities across the country have cited the immediate need for Alaskan oil. They have asked Congress to act quickly to amend the Mineral Leasing Act of 1920 and to permit the courts to decide on the major National Environmental Policy Act issue. Some have gone further and have urged, as I have, that Congress should mandate the building of the trans-Alaska pipeline now.

All are agreed that the energy crisis facing this Nation is critical.

Because these newspapers are representative of a majority of our citizens, I request unanimous consent to have these editorials printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) Post-Herald, Feb. 14, 1973]

THE ALASKAN OIL FOLLIES

Were it set to music, the five-year battle over the proposed Alaskan oil line would be the worst flop since the boys at the firehouse tried to put on a Ziegfeld follies without women.

After years of dickerings, the pipeline project finally seemed ready to go last summer when a federal judge said he was satisfied the government had considered all possible routes.

But now a federal appeals court has overturned the judge's ruling—not because the pipeline would damage the wilderness, as some nature lovers contend, but because the right-of-way would be wider than permitted under a mineral leasing law passed by Congress 53 years ago.

"Whether this restriction made sense then, or now, is not the business of the courts," commented Judge J. Skelly Wright.

As to the basic question of whether the pipeline proposal is environmentally sound:

"Not ripe for adjudication," the judge said.

So now the oil companies either can take their case to the Supreme Court or ask Congress to widen the pipeline limits in the 1920 law. To be safe, they'll probably have to do both.

How long this will take nobody knows. But if events up to now are any guide, we'll be lucky to see Alaskan oil by the end of the century, never mind the end of the decade.

Meanwhile, the energy squeeze grows tighter; there is talk of gasoline rationing this Spring, and the increasing reliance on

foreign oil aggravates the nation's foreign trade deficit.

Ah, well, that's show business. Or as the boys at the firehouse might say: Things are bound to get better unless they get worse.

[From the Brooklyn (N.Y.) Bulletin, Feb. 27, 1973]

PIPELINE DELAY REEMPHASIZES FLIGHT

No matter how it looks from an ecological standpoint, one good thing must be said for the proposed Alaska pipeline. By and large it follows the shortest distance between two points to get oil to the people who need it.

Nothing so logical or direct, however, is evident in the process of deciding whether or not the 750-mile pipeline shall be built. The governmental deliberation and court litigation in this case seems to be routed through Timbuktu.

The U.S. Court of Appeals in Washington has now sent the pipeline controversy back to Congress on the strength of a law written in 1920 which says no pipeline crossing federal land can claim right-of-way more than 50 feet wide. It is doubtful that Congress in 1920 contemplated we would one day face the challenge of erecting a heated pipeline to carry oil across the desolate frozen tundra of Alaska. Engineers say there is no way this project could be carried out without exceeding that limitation.

For that matter, Congress in 1920 could not have contemplated that the tin-lizzies then on the streets and the canvas-winged airplanes then overhead would develop into a transportation system with fuel demands sending Americans to the Arctic Circle in search of petroleum. Surely it did not envision that national security, international trade balances, and the need to light and heat homes would combine to make it a national necessity to develop domestic oil resources that its 50-foot law would leave untapped.

The law is the law, however, and the Court of Appeals decision has thrust the pipeline controversy back into the political arena to be buffeted once again by the environmental lobby. What is worse, the court withheld judgment on another issue that promises even more delay. Ecologists are also demanding in court that the government consider rerouting the pipeline through Canada.

Congress can do more than make the necessary amendment in the 1920 law. It can declare that it is in the national interest to develop the North Slope oil resources in Alaska and to transport the oil across U.S. territory. It can do so with insistence that the pipeline be built with strict adherence to provisions for minimum ecological disturbance—provisions already laid down by the Interior Department on the basis of a nine-volume, 3,000-page study of the environmental impact of the project.

More than four years have passed since these Alaskan oil discoveries promised some relief for our dependence on foreign fuel sources. As one weary pipeline official commented on this latest detour in getting the new fields developed, "this country will have to make up its mind whether it wants to keep running or not." That is exactly how the issue is being drawn. The United States of America must establish energy and environmental policies based on a realistic appraisal of what it is going to take to keep our country going.

[From the Chicago (Ill.) Daily News, Mar. 10, 1973]

UNITED STATES NEEDS ALASKAN OIL

It is time for Congress to step in and speed the building of the trans-Alaska pipeline. After 3½ years of delay, the need for new supplies of oil and natural gas grows more critical each month that the deposits in the Arctic go untapped.

Frustrated by a round of court decisions

blocking the issuance of right-of-way permits, the Nixon administration and several lawmakers acting on their own have introduced more than half a dozen bills in Congress to get the pipeline moving.

The latest court setback came when a federal appeals judge ruled that the 200-foot right-of-way planned for the line violated the 1920 Mineral Leasing Act. That law would limit the Alaskan right-of-way to 54 feet, which engineers say is not room enough for the construction and maintenance equipment to be used in Alaska.

The pipeline corridor's width, however, is only one matter that would be solved under pending legislation.

A major dispute has been over the pipeline's potential damage to the Alaskan wilderness. The choice is between risking some environmental harm and reaping a guaranteed payoff in added energy resources. Protection of the wilderness is no small consideration, but it should be understood that extensive technical safeguards, have been taken against the most feared occurrences—damage to the tundra's ecology and oil spills on land and at sea. In fact, the valid safety precautions mandated by the government have contributed to a near tripling of the expected cost of building the line.

A second dispute is over whether the pipeline should traverse a 3,200-mile route through Canada and end in Chicago instead of crossing Alaska. The Canada route would parallel a natural-gas pipeline planned for the late 1970s or early '80s. The pipeline companies themselves, however, favor the trans-Alaska route for oil. They point out that natural gas, critically needed in the Midwest, cannot flow until after oil production begins in Alaska. To build the trans-Canada oil line first would only delay the gas flow by several years.

The economic payoffs from the Alaskan oil would be large. If the oil starts to flow about three years from now, it will come as U.S. dependence on oil imports is soaring. The President's Council of Economic Advisers estimates that over the expected 20-year life of the Alaskan field the United States would save \$15 billion to \$17 billion in foreign oil spending—at current prices.

Hearings on the pipeline-permit bills are under way in Washington. And on the basis of the vast store of evidence accumulated, the responsible action of Congress would be to clear the Alaska pipeline quickly with a bill specifically eliminating the legal problems that now block construction.

[From the Dallas (Tex.) Morning News, Feb. 12, 1973]

PIPELINE DELAYS

To a nation running dangerously short of oil and natural gas, the news that a trans-Alaska pipeline will not be completed before the end of 1976 at the very earliest is disappointing. The project has been fraught with delays that are no longer excusable.

Early in 1968, the largest oil field ever found on the North American continent was discovered at Prudhoe Bay, on the north slope of Alaska. Today, five years after that discovery, the oil is still locked in the frozen north.

A consortium of oil companies with north slope petroleum interests proposed building the pipeline across Alaska to bring the oil to market. Once the oil became marketable, another pipeline would be built across Canada to bring natural gas from the field to the U.S. Midwest. But those efforts were halted by environmentalists who filed lawsuits charging that the north slope environment would be destroyed.

The environmentalists' arguments were valid. The oil companies had intended to rush in and build a pipeline much as they had always been built, without taking into spe-

cial consideration the fragile Arctic tundra which the pipeline must cross.

But following the court injunction which halted pipeline construction, the oil companies spent thousands of man-hours and millions of dollars developing and testing safe technology for transporting hot oil across frozen ground. Their methods have been studied in detail and approved by the Department of Interior, and a federal district judge has ruled that the oil can be transported without damage to the tundra.

Through appeals, however, the environmentalists have persisted in blocking the pipeline. The latest snag was a ruling by an appeals court that the proposed pipeline corridor is too wide under federal law.

The Prudhoe Bay oil and gas would help to ease the nation's energy gap. But what could be more important, beginning of pipeline construction would revive the search for more petroleum deposits in that part of the world.

This nation is heavily dependent on petroleum energy and will remain so for many years. Therefore, additional domestic petroleum reserves must be found to avoid an overdependence on foreign oil. The north slope of Alaska is one of the promising areas for finding oil and gas. Further delays in building the trans-Alaska pipeline mean more delays in searching for those needed reserves.

[From the Denver (Colo.) Post, Feb. 22, 1973]

ALASKA PIPELINE SHOULD BE BUILT

The Nixon administration has met with key senators to discuss ending the legal blockade of the trans-Alaska oil pipeline. Chances appear good that a bill will be introduced soon to lift that blockage.

Such action is necessary. Of all the steps that can be taken quickly to add to the nation's oil supply in time of growing shortage the Alaska pipeline is one of the most logical.

The Alaska North Slope is a sure source of oil. Its reserve—at least 10 billion barrels—is not great in the overall U.S. picture. But it is a substantial resource and one that should be tapped. And considering the 1972 balance of payments deficit, imports of foreign crude—while essential—are not the easy alternative they once were.

We were, therefore, disappointed with the U.S. Appeals Court ruling earlier this month. The court barred the pipeline because it said the line could not be built under rules spelled out in the 1920 Mineral Leasing Act.

But since the court has ruled as it has—saying the 1920 law restricts public land right-of-way for pipelines to 25 feet width—there is a sure recourse in Congress.

The 789-mile line running south to Alaska's ice-free ports would be 48 inches in diameter, far larger than anything contemplated in 1920. The project obviously needs much more access than the 25-foot limit allows.

So the law should be changed.

The Department of Interior study of this project, released a year ago, makes the basic case for the pipeline in strong fashion. It concedes that there will be environmental damages. But it also outlines safeguards that can be insisted on as part of the pipeline authorization.

As to the alternative pipeline routes proposed through Canada, it must be recognized that Canada is by no means ready for a firm decision on a cooperative venture.

In any case, the environmental argument is diffuse. A decision against the Alaska pipeline might only increase the pressure to tackle northwest Colorado for oil shale. Or it might mean increased dependence on coal alternatives to petroleum.

Meanwhile, the noose of shortages is being tightened.

With construction time reckoned in years for projects to supplement our energy

sources, it is clear that we can't delay. Giving early approval to the Alaska pipeline is required. We think Congress should act.

[From the Detroit (Mich.) News, Feb. 23, 1973]

UNITED STATES NEEDS ALASKAN PIPELINE

Should this country let a law passed in 1920, when fuel supplies seemed inexhaustible, block a major oil transportation project designed to help solve the energy crisis of modern America?

The answer is no, of course. The 1920 Mineral Leasing law should be amended, and construction should start at once on the long-delayed trans-Alaska oil pipeline.

For years the proposed pipeline has been the subject of legal challenges, hearings and studies. Last March, when the Interior Department added volume 13 to a series of exhaustive studies on the impact of the pipeline, it appeared that the quibbling might cease and the work might begin. Unfortunately, that did not prove to be the case.

Environmentalists, who have fought the project every step of the way, raised still another legal challenge. Subsequently, the U.S. Court of Appeals ruled that the pipeline cannot be built unless the 1920 law is changed. Under the existing law, the court said, the rights-of-way of the proposed project would be too wide.

To answer that objection, Sen. Ted Stevens, R-Alaska, intends to introduce the proper amendment to the 1920 law. He has already introduced a bill to authorize the construction of the pipeline and prevent further legal delay. His efforts deserve the support of every citizen and lawmaker who grasps the proportions of the energy problem.

Most of this nation's energy comes from petroleum and natural gas, but the United States does not have sufficient domestic supplies to fulfill its foreseeable economic demands and requirements of national security.

The public should be grateful for the early efforts of the environmentalists to obtain basic protective measures for the Alaska project. Now that they have assured that the greatest precautions will be taken, their obstructionism has served its purpose. To carry it further would be to place conservation efforts above critical human needs which the oil line would answer.

This country must have that oil. Let's take the final steps necessary to get it.

[From the Fort Worth (Tex.) Star-Telegram, Feb. 25, 1973]

SOLUTIONS NEEDED, NOT MORE BARRIERS

Finding an adequate solution to the mounting energy crisis is a little like disposing of an iceberg. It takes a lot of chipping away in a lot of places. Fortunately, there are some perceptive and able people working on the problem in a variety of directions.

One of them is Alaska's Sen. Ted Stevens, who has introduced a bill in the Senate to sweep away fresh barriers thrown up against completion of the 800-mile trans-Alaska oil pipeline. His action may, if it is pursued without delay in the congressional process, prevent another full year's delay in getting the \$3 billion pipeline laid from the vast North Slope oil deposits to Valdez on the Gulf of Alaska.

Another year's delay not only would raise the total cost of building the line by about \$250 million, but it would be another year in which the fuel shortage crisis would get tighter around the nation's throat. And it would add another year to the long wait before the nation could finally begin to use the North Slope oil—which now is estimated to comprise 20 per cent of the nation's known reserve.

Senator Stevens' action became necessary when the U.S. Court of Appeals recently held that a 1920 leasing law prevents construction of the pipeline because of right-of-way

limitations. The new bill, co-sponsored by Alaska Sen. Mike Gravel, would amend the 1920 law and give a badly needed green light to a project that will contribute to easing the energy crunch.

Other things need to be done in Washington, however, and the urgency is of the same magnitude as that attending the Alaska pipeline go-ahead. One of them concerns making use of the oil reserves that lie under the Outer Continental Shelf, and another one of them concerns adjusting the government's pricing and taxing policies to provide the oil industry with incentives to continue the search for new U.S. petroleum reserves.

Chairman of the Board N. H. Wheless, Jr. of the Mid-Continent Oil and Gas Association spoke bluntly on those propositions at a recent meeting in Tulsa.

"Any further delay in adopting a program and schedule for leasing and developing the Outer Continental Shelf lands would be adding to the several years of lead time required to establish significant production capacity," he said, and added: "Three to five years will be required to develop production. Lost time in getting started cannot be made up. Any delay today in beginning would result in an equal delay in reaching full production in the late 1970s and the 1980s—when availability of domestic sources of petroleum will be of even more vital importance to the nation than it is today."

On the question of encouraging rather than discouraging the search for new petroleum reserves, Mr. Wheless told his audience, and the entire country, that the adoption of governmental policies conducive to the investment and risk-taking necessary to finding new fuel supplies is vital. And there is no question but that past governmental policy has had the effect of stifling the risk-taking incentive, not encouraging it.

"The producing segment of the oil and gas industry wants to continue to fill its essential role as the nation's principal supplier of clean and secure energy, but we must be allowed to respond effectively to the challenges facing us," Mr. Wheless said—and we hope administrative policymakers in Washington get his message, in the interest of reaching for solutions instead of compounding the problem.

[From the Indianapolis (Ind.) News, Feb. 23, 1973]

TIME TO START

It is now fairly clear that the trans-Alaskan oil pipeline will be built eventually, despite efforts by environmentalists to block it. The only real question is when.

As the result of various delaying tactics waged by lovers of the Arctic environment (some of whom we suspect have never been there), the latest estimate is that the pipeline will not be operational until 1977 at the earliest. This is most regrettable, for the nation, currently in the midst of a far-reaching energy crisis, needs Alaskan oil and natural gas well before then. The North Slope's vast reserves, the full extent of which are still unknown, are sufficient to ease the current crisis and free the United States from price blackmail being practiced by various Mideast countries. Developing them is also considered less expensive than relying more heavily on foreign imports.

A four to five year delay is also unnecessary, because environmentalists have already won most of their points. They originally pointed out that the proposed pipeline did not guard adequately against oil spills and that it would be subject to disruption by earthquakes. Since then the oil companies have spent millions perfecting the design. It is now about as foolproof as it can be made, a fact established by extensive tests conducted by the Department of Interior.

It was somewhat ludicrous in the first place to suppose that in the vastness of the Arctic a pipeline only a few feet wide would

make much of a dent on the environment. That effect is now reduced to practically zero as a result of the new design.

Continued opposition by environmentalists will not produce much by way of new safeguards. Nor will it permanently block the project. The pipeline is an economic necessity, and the time to start it is now.

[From the Kansas City (Mo.) Star, Mar. 1, 1973]

NEW DELAY ON ALASKAN PIPELINE DENIES UNITED STATES NEEDED OIL

The long-delayed Alaskan oil pipeline has run into another frustrating legal snag, and this time on a technicality unrelated to the merits of the project. The U.S. Circuit Court of Appeals in Washington, overruling a lower court, has blocked construction of the project on environmentalist groups' objections that the 146-foot right of way for the line exceeds the 50-foot allowance prescribed more than half a century ago in the Mineral Leasing Act of 1920.

The court held in effect that this restriction must be resolved by amending the law before even the environmental questions about the project can be considered, let alone a construction permit issued. President Nixon, in response, has directed his subordinates to do whatever is necessary "to get on with" the pipeline.

Sen. Ted Stevens (R-Alaska) has introduced a bill specifically to authorize the project as planned. The measure also would attempt to declare that the pipeline meets all environmental requirements, thereby forestalling further court action.

Walter Hickel, then secretary of the interior, was all set to issue the necessary permit in April of 1970 when the environmentalists obtained a federal court injunction in Washington. For the next 28 months the project sat on the shelf while the Interior Department prepared an exhaustive 6-volume environmental impact statement as required by a 1969 law.

The 800-mile pipeline was redesigned in some respects to meet assorted ecological fears that the hot oil could melt the permafrost and cause the 48-inch line to buckle, that an earthquake could cause oil spills and that the line could prove a barricade to migrating wildlife.

With the impact statement finally finished and reviewed at public hearings, the federal district judge dissolved the injunction to expedite the case on up to the Supreme Court for final adjudication. But now the right of way question poses further delay.

Already, with the design changes and inflation, the project's costs have soared from \$900 million to around \$3 billion. The nation's growing energy crisis, meanwhile, heightens the urgency to tap the rich Alaskan domestic oil source on the North Slope.

The administration, which has found itself compelled to ease oil import quotas during this winter's fuel shortages, does not intend to rely for the long course on oil from the Middle East nations, with their volatile politics and price-gouging tactics.

The present secretary of interior, Rogers C. B. Morton, has declared his intention to issue a permit for the line, which would carry the oil south to the ice-free port of Valdez and thence by tanker to the West Coast, as soon as the environmentalists have had their day in court.

But with this latest complication, that day grows longer—and so does the nation's waiting to enjoy the sorely needed benefits of the Alaskan oil reserves.

[From the Memphis (Tenn.) Press-Scimitar, Mar. 5, 1973]

PERILS OF PIPELINE

The Nixon administration deserves high marks for its persistent efforts to pipe oil out of Northern Alaska to an ice-free tanker port at Valdez.

U.S. Interior Secretary Rogers C. B. Morton says he'll ask Congress and the U.S. Supreme Court to remove all roadblocks this year to the 789-mile pipeline.

Congress will be asked to amend a 1920 law that severely restricts pipeline rights-of-way on public lands.

The Supreme Court will be asked to decide, once and for all, whether the pipeline plan meets environmental standards.

This may sound like a fairly simple process. But the pipeline project has taken so much flak from courts, conservationists and congressmen in the past four years that nothing is simple any more.

The most perilous thing about the pipeline is getting it approved. The dangers (real or imagined) of operating it seem inconsequential compared to that.

To argue, as some wildlife lovers do, that the line should go through Canada is not very convincing. Even more fish and caribou would be disturbed by the Canadian route than by the much shorter Alaskan route.

The primary consideration is that the nation needs Alaskan oil. Every barrel piped from Prudhoe Bay will be one less barrel we have to import from the unstable Middle East.

That alone should be enough to prod Congress and the Supreme Court into the prompt action that Secretary Morton suggests.

[From the New Orleans (La.) Times-Picayune, Feb. 15, 1973]

ARCHAIC FEDERAL ACT CAUSES TROUBLE

Again a court barrier has been thrown in front of the proposed trans-Alaskan oil pipeline and the reason proves what we have said before: The 53-year-old federal Minerals Leasing Act needs modernizing.

That Alaskan oil would help plenty. It doesn't seem reasonable that homes go unheated, industry closes down, electric companies are squeezed and transportation suffers for want of oil and its products just because the act of 1920 limits pipeline rights-of-way over public lands to 25-foot strips on each side of the pipeline.

The oil transmission line from the rich reserves on Alaska's North Slope to the ice-free port of Valdez, a tanker terminal, embraced a 146-foot right-of-way and it had approval of the Interior Department.

The United States Court of Appeals pointed to the right-of-way limit prescribed in the law and sent the case back to district court, ordering it to enjoin the secretary of interior from issuing a special right-of-way permit for laying the pipeline.

Any resemblance of a 1920 pipeline to a present high-capacity pipeline is remote. Yet the law is rigid in its antiquity.

Louisiana and other coastal states have been saying for years that the Minerals Leasing Act needs overhaul for another reason: Its terms are unfair and out of step. This is the law which provides a 37.5 per cent share of revenues from federal inshore lands for states in which those revenues are produced.

But see what has happened since 1920. There are now heavy revenues from federal offshore lands and the activity is bound to spread. Adjacent states receive no share of this money although they pick up the tab for public education, roads, health services—the whole list of governmental services—for families of workers whose employment is with the federal offshore industry.

When a home is cold or a breadwinner is out of work because his plant is down for lack of oil, an excuse that an archaic federal law stands in the way of more oil is unacceptable.

When a state is pinched to provide adequate school funds, passable roads and other services, it is galling that the same old law discriminates between states in sharing of revenues.

Question: When is the Minerals Leasing Act of 1920 to be modernized?

[From Oil and Gas Journal, Feb. 19, 1973]
A 92-FOOT RIGHT-OF-WAY BLOCKS ALASKAN OIL

The decision of the U.S. Court of Appeals on the Alyeska pipeline case is a most unfortunate verdict. It illustrates forcefully the rough road facing those striving to do something about the nation's energy shortage.

The decision, of course, is unfortunate for the Alaskan economy and for the oil companies who have millions of their stockholders' dollars tied up in dormant projects. But of far greater importance is the decision's impact on consumers of energy and on the administration's efforts to increase this country's domestic petroleum supply.

Denial of Alaskan oil indefinitely means imports of more foreign oil will be necessary at a time when the President is striving to balance the U.S. trade deficit. Price of foreign crude is bound to rise in wake of devaluation of the dollar, meaning American consumers must soon pay more for foreign oil and thus aggravate balance-of-payments woes.

The court certainly can be faulted for its narrow decision which not only sidestepped the important environmental issue but also complicated and prolonged the avenue of further appeal to the Supreme Court.

The court limited itself to the width of extra right-of-way for the actual line requested by Alyeska—92 ft in addition to the 54 ft explicitly allowed by the Mineral Leasing Act of 1920. The opinion held that the 92 ft extra could not be granted, although the Government in the past has granted temporary use permits of this nature. Alyeska was told it would have to seek relief by asking Congress to change the leasing act.

Since the ruling on the right-of-way stymies the project, the court said in the interest of speedy action—it already had taken 6 months on the decision—the majority declined to rule on whether the environmental impact statement submitted for the project by the Interior department was sufficient. This means that even if the extra right-of-way is granted on appeal to the Supreme Court, there's a good chance the case must go back for a ruling by lower courts on the environmental issue.

The dissenting opinion of Judge MacKinnon termed avoidance of the environmental issue "a monstrous refusal to perform a judicial obligation."

True—but there's no advantage now for the petroleum industry to rant against the decision or against environmentalists' legal tactics. Options are few—all tough. Either appeal, ask Congress to amend the law, or both. For the sake of forcing an ultimate decision on the issues, both options should be pursued at once.

In the final analysis, fault for the confusion and delay must rest with Congress for writing environmental laws which invite a host of capricious class-action suits and impose narrow restrictions on administrative judgment. As a result, American consumers will be denied indefinitely the use of vitally needed Alaskan petroleum.

[From the New York Daily News, Mar. 10, 1973]

GASOLINE RATIONING

Authority has been proposed for President Nixon by the Senate Banking Committee. Oil shortages have already appeared in the U.S. and we are becoming more and more dependent on foreign sources.

If we're having oil shortages why doesn't Congress do something about it, like getting the Alaskan pipeline built? Alaska could supply enough oil to stop the rise in imports until at least 1985.

But the U.S. Court of Appeals in Washington has ruled, in an environmental suit, that a 1920 law forbids rights-of-way across Federal land of more than 54 feet—and the pipe-

line needs more. So the Interior Department is asking Congress to change the law and make the right-of-way wider.

That should be done right now, so the courts could then tackle the environmental question still not settled.

The energy crisis is here. Everything possible should be done to solve it.

[From the Portland (Oreg.) Journal, Feb. 16, 1973]

OIL NATION'S LIFELOOD

Environmental groups which have been successful in blocking construction of the Alaska pipeline see the issue in terms of oil company profits versus protection of the Alaskan landscape.

To the Department of Interior, the state of Alaska and those industries which bear responsibility for fueling the U.S. economy, providing an employment base and heating homes, schools and all manner of public institutions, the issue is a lot more complicated than that.

The U.S. Appeals Court for the District of Columbia has stopped the Department of Interior from issuing construction permits for the huge project, based on a 1920 provision of the Mineral Leasing Act which limits the width of right-of-way for construction across public lands to 54 feet. This limitation could not possibly be met in the pipeline project. The court did not even address the issue of the adequacy of the Interior Department's massive impact statement.

The decision comes at a time when the nation is headed into both a short-term and long-term energy crisis which cannot be solved by any single approach. It was severe enough this winter that some public institutions had to be closed temporarily in the Midwest.

The nation is being warned that in the next 10 years we will be increasingly dependent on oil from the Middle East, which poses dangers from the standpoint of that region's instability, rising costs imposed by nations which know they "have us over a barrel" and our critical imbalance of payments problems.

The tapping of Alaskan oil is seen as one step to alleviate though by no means to solve this dilemma.

The nation has to do what it can to institute energy-saving programs and to continue to look for additional sources. It is acknowledged that we have ample potential energy on our own soil in enormous deposits of coal and oil shale but that at this stage they cannot be adequately tapped without unacceptable costs and environmental damage.

Scientific possibilities are on the horizon which may ultimately solve all of the nation's energy problems. They are not just around the corner.

This week Don Hodel, Bonneville Power administrator, warned that the electric power situation in this region will become worse before it improves and that the next five years will be critical. Yet we are one of the least threatened regions from the standpoint of electric power and energy sources as a whole.

The transport of oil by pipeline overland and by tanker across the seas does impose environmental damages. We repeatedly hear about the alarming degree to which the oceans have been polluted.

Yet we are terribly dependent on oil in so many of our activities that we take for granted.

It is fully accepted that the tapping and transportation of oil must be accompanied by the highest possible standards of environmental protection. Yet we haven't found a way to get along without oil, and we are not likely to within the foreseeable future.

[From the St. Louis (Mo.) Globe-Democrat, Mar. 2, 1973]

PUSH AHEAD ON ALASKAN PIPELINE

As the energy crisis grows, it becomes apparent how stupid it is for the United States

to allow the stalemate on the trans-Alaska pipeline to drag on and on.

The 800-mile oil pipeline should have been built years ago. But now it is blocked once more after a U.S. Court of Appeals has ruled that the width of the right of way breaks a 1920 law that limits the right of way width across public lands to 25 feet on either side of the pipeline.

So the tapping of an estimated 40 to 100 billion barrels of oil on the Alaskan north slope still is many years away.

How ludicrous this is can be seen by the fact that this country is increasing its imports of oil by huge amounts every year—and still is critically short of fuel.

Sen. Henry M. Jackson has pointed out that last year the United States had to import 27 per cent of its oil and this year the figure will jump to 35 per cent. The nation should have a 90-day reserve of oil but has a reserve of only six days.

Only six days! No wonder there is talk of rationing gasoline this summer.

It borders on national madness to dilly-dally on the Alaskan pipeline in the face of this alarming shortage. Congress should act as quickly as possible to amend the 1920 law so the pipeline can be built.

The Department of the Interior should then grant the consortium of companies planning to build the pipeline the permit to go ahead. The alternative is to become increasingly dependent on the Middle East oil countries that continually raise their prices and continually juggle quotas to impose their demands. They literally have the United States over the barrel.

Americans who want to avoid rationing of fuel should demand that Congress and the President take action to get the Alaskan pipeline going.

[From the San Diego (Calif.) Evening Tribune, Feb. 17, 1973]

THE NEED FOR ALASKAN OIL

President Nixon's emphasis this week of a fuel shortage that threatens to become critical points out the urgent need of legislation to hurdle the latest roadblock to construction of the controversial Alaskan pipeline.

The appeals court decision, holding that present law does not permit the 200-foot right-of-way required for the 800-mile transmission of oil from Alaska's North Slope to the ice-free port of Valdez, was cheered by the conservation groups who contend that the pipeline would be harmful to wildlife and a blight to the Alaska landscape.

But the ruling also wipes out the alternative urged by the environmentalists—a pipeline across Canada to United States terminals.

Alaska's two senators, although of opposing political faiths, are agreed that benefits of the trans-Alaska pipeline to their state outweigh the disadvantages.

Republican Ted Stevens and Democrat Mike Gravel are preparing bills to get around the limitations of a 1920 federal law.

Congress, after repeated warnings of the imminent crisis in meeting this country's demands for energy, should waste no time in approving the legislation.

The United States needs the raw treasure locked beneath the frozen slopes of the Alaskan mountain ranges.

The lawmakers, divided in their views on the best method of bringing it to the refineries and the market, must insure that all options are kept open.

[From the San Diego (Calif.) Union, Feb. 18, 1973]

PIPELINE DELAY REEMPHASIZES FLIGHT

No matter how it looks from an ecological standpoint, one good thing must be said for the proposed Alaska pipeline. By and large it follows the shortest distance between two points to get oil to the people who need it.

Nothing so logical or direct, however, is evident in the process of deciding whether or not the 750-mile pipeline shall be built. The governmental deliberation and court litigation in this case seems to be routed through Timbuctoo.

The U.S. Court of Appeals in Washington has now sent the pipeline controversy back to Congress on the strength of a law written in 1920 which says no pipeline crossing federal land can claim right-of-way more than 50 feet wide. It is doubtful that Congress in 1920 contemplated we would one day face the challenge of erecting a heated pipeline to carry oil across the desolate frozen tundra of Alaska. Engineers say there is no way this project could be carried out without exceeding that limitation.

For that matter, Congress in 1920 could not have contemplated that the tin-lizzies then on the streets and the canvas-winged airplanes then overhead would develop into a transportation system with fuel demands sending Americans to the Arctic Circle in search of petroleum. Surely it did not envision that national security, international trade balances, and the need to light and heat our homes would combine to make it a national necessity to develop domestic oil resources that its 50-foot law would leave untapped.

The law is the law, however, and the Court of Appeals decision has thrust the pipeline controversy back into the political arena to be buffeted once again by the environmental lobby. What is worse, the court withheld judgment on another issue that promises even more delay. Ecologists are also demanding in court that the government consider rerouting the pipeline through Canada.

Congress can do more than make the necessary amendment in the 1920 law. It can declare that it is in the national interest to develop the North Slope oil resources in Alaska and to transport the oil across U.S. territory. It can do so with insistence that the pipeline be built with strict adherence to provisions for minimum ecological disturbance—provisions already laid down by the Interior Department on the basis of a nine-volume, 3,000-page study of the environmental impact of the project.

More than four years have passed since these Alaskan oil discoveries promised some relief for our dependence on foreign fuel sources. As one weary pipeline official commented on this latest detour in getting the new fields developed, "this country will have to make up its mind whether it wants to keep running or not." That is exactly how the issue is being drawn. The United States of America must establish energy and environmental policies based on a realistic appraisal of what it is going to take to keep our country going.

[From the Seattle (Wash.) Daily Times, Feb. 13, 1973]

TIME TO RENEW ALASKA-OIL EFFORTS

The physical difficulties of extracting oil from Alaska's North Slope under Arctic weather conditions are matched, it appears, by the magnitude of the legal problems that beset the giant North Slope undertaking.

Nonetheless, the needs of a nation facing an energy crisis and of the State of Alaska, facing bankruptcy, require the most vigorous efforts possible to surmount the legal barriers.

The United States Court of Appeals in Washington, D.C., last week sidestepped environmental questions involved in the proposed North Slope-to-Valdez pipeline and ruled that the federal government could not issue a permit for the project because of a 1920 law limiting right-of-way width.

Alaska Senators Stevens and Gravel rightly are prepared to introduce legislation to modernize that out-of-date law.

But, as all interested parties agree, the larger question of whether the government

has properly met the requirements of environmental law must run its course through the courts, including the United States Supreme Court. This process, which already has cost years of delay, should be expedited.

And in anticipation of an eventual favorable federal decision, the State of Alaska and the oil industry would be well advised to compromise their revenue differences in their own and the national interest.

It has sometimes been suggested by those uninformed as to the nature of Uncle Sam's energy crisis that the nation might be better off simply leaving the North Slope oil in the ground—as a national reserve, so to speak.

Such reasoning overlooks the fact that this country's energy problems lie primarily in the medium-term future. Over the next 10 to 15 years, the nation faces a dangerous and costly dependency on foreign oil supplies.

Beyond that period, approaching the turn of the century, advances in technology—including shale-oil, coal liquefaction, the fast-breeder reactor, nuclear fusion and solar heat—are expected to open up new energy sources.

Alaska cannot wait indefinitely to cash in on its oil riches. And neither can Uncle Sam.

[From the Tulsa (Okla.) Tribune,
Feb. 12, 1973]

WE'LL HAVE TO HAVE THE OIL

The U.S. Circuit Court of Appeals has blocked the Alaska pipeline from the Prudhoe oil field on the grounds that the 1920 Mineral Leasing Act stated that the allowable right-of-way for pipelines through public lands must be limited to 25 feet on either side of the pipe. The Alaska pipeline required a total right-of-way of 146 feet.

The court acknowledged that the 48-inch line couldn't be built within a 50-foot limitation and said that it was therefore forced to prevent the building of the line until and unless Congress changes the law.

The matter will be quickly appealed to the Supreme Court, but additional months of delay are guaranteed and the ecologists who don't want the pipeline built at all are delighted.

So the oil companies are in the position of having paid for more than \$900 million worth of leases which they are forbidden to exploit. And America, which is running seriously short of domestic oil and is in a poor balance-of-payments position to purchase additional foreign oil must be denied access to at least 10 billion barrels of American oil for a period, at the shortest, of another three years.

The 1920 act is, of course, ridiculous by modern standards. It was passed when pipelines rarely exceeded a foot in diameter and when most of the digging was done by pick-and-shovel. No one envisioned the great energy-carriers of the present. The Soviet Union, incidentally, is completing a 56-inch line from its own Arctic.

Oddly, the narrower the working space the more potential damage to the arctic ecology. The Canadians, for example, decree that tractors and bulldozers must make a new track each time they pass over the delicate permafrost to avoid serious gullying. The narrower the allowed working space, the greater the damage.

America is approaching a moment of truth. Our appetite for gasoline and fuel oils continues to mount as does the opposition to pipelines, offshore drilling and new refineries. Next summer, gas rationing in some parts of America is a real possibility.

If we think we can keep our oil locked up and buy the difference from abroad we're going to have to work harder to sell more abroad. The American dollar is already in distress and we can't get rich printing Pancho Villa pesos. These simple facts of life haven't yet made any impression on the Sierra Club, the Wilderness Society, Environ-

mental Defense Fund, Inc. and Friends of the Earth.

Their members may have more time to think about it when they start riding the bus out to the forests to look for firewood.

[From the Tulsa (Okla.) World,

ALASKAN OIL DELAY

For the past three years the mammoth Alaskan oil pipeline project has been delayed time and again, by the opposition of environmental groups. Nonetheless, it moved slowly ahead, through a bureaucratic and judicial maze, toward a beginning of construction. But last week the endeavor ran into an obstruction, in the U.S. Circuit Court of Appeals here, that only Congress can remove in a reasonable period of time.

And, in view of the darkening fuel-supply prospect in this country, we think that Congress should get itself in a mood to do just that. This could, ideally, be a rather simple matter. What the appeals court said was that the land-use permit for the pipeline, issued by the Interior Department, doesn't conform to a 1920 federal law. Under that old statute, the limit of use by a pipeline company is 25 feet on either side of a line that crosses federal land, and Interior has gone considerably beyond that in this case.

But in this case the 25-foot limitation is patently ridiculous. The trans-Alaska pipeline would extend 789 miles, carrying heated crude oil from the Arctic North Slope southward to an ice-free port on the Pacific. It has been described as the largest private-industry undertaking in history. Certainly it would be related to national security. The construction and maintenance of such a project—its scope far beyond the visions of 1920—cannot be carried on in the width of an ordinary village street.

So, as the court made clear, all Congress has to do is grant the needed extra right-of-way. That could be done in a short space of time if Congress is troubled enough by the developing fuel crisis. But undoubtedly there will be some resistance to any such move, and not only from environmentalists. Some lawmakers strongly favor an alternative—piping the oil across Canada instead of Alaska directly to the upper Midwest. The trouble is that several more years would be required to obtain the oil that way, and time is running out. Congress should hasten a start on the trans-Alaska line, which is ready for construction, and then consider a cross-Canada artery, for which plans aren't very well developed. Both will be needed in the year ahead.

A sufficient omen for Congress should be the near-crippling fuel oil shortages that have hit some areas this winter—and a mild winter it has been in most of the major urban sectors. There's even talk of a gasoline shortage this summer. And by some estimates, this country will be importing half the oil it uses by 1985, to the severe detriment of its economy and possibly its security.

That could be offset in no small degree by the 2 million barrels a day which would flow down the Alaska pipeline. Though the environmental safeguards set up by Interior for this project aren't perfect, they are strong and can be improved upon as necessity dictates. Alaska will not be despoiled by the line, but the national interest will take a beating if construction is delayed much longer.

[From the Washington Evening Star and
Daily News, Feb. 19, 1973]

ALASKAN OIL DELAY

For the past three years the mammoth Alaskan oil pipeline project has been delayed, time and again, by the opposition of environmental groups. Nonetheless, it moved slowly ahead, through a bureaucratic and judicial maze, toward a beginning of construction. But last week the endeavor ran into an ob-

struction, in the U.S. Circuit Court of Appeals here, that only Congress can remove in a reasonable period of time.

And, in view of the darkening fuel-supply prospect in this country, we think that Congress should get itself in a mood to do just that. This could, ideally, be a rather simple matter. What the appeals court said was that the land-use permit for the pipeline, issued by the Interior Department, doesn't conform to a 1920 federal law. Under that old statute, the limit of use by a pipeline company is 25 feet on either side of a line that crosses federal land, and Interior has gone considerably beyond that in this case.

But in this case the 25-foot limitation is patently ridiculous. The trans-Alaska pipeline would extend 789 miles, carrying heated crude oil from the Arctic North Slope southward to an ice-free port on the Pacific. It has been described as the largest private-industry undertaking in history. Certainly it would be related to national security. The construction and maintenance of such a project—its scope far beyond the visions of 1920—cannot be carried on in the width of an ordinary village street.

So, as the court made clear, all Congress has to do is grant the needed extra right-of-way. That could be done in a short space of time if Congress is troubled enough by the developing fuel crisis. But undoubtedly there will be some resistance to any such move, and not only from environmentalists. Some lawmakers strongly favor an alternative—piping the oil across Canada instead of Alaska, directly to the upper Midwest. The trouble is that several more years would be required to obtain the oil that way, and time is running out. Congress should hasten a start on the trans-Alaska line, which is ready for construction, and then consider a cross-Canada artery, for which plans aren't very well developed. Both will be needed in the year ahead.

A sufficient omen for Congress should be the near-crippling fuel oil shortages that have hit some areas this winter—and a mild winter it has been in most of the major urban sectors. There's even talk of a gasoline shortage this summer. And by some estimates, this country will be importing half the oil it uses by 1985, to the severe detriment of its economy and possibly its security.

That could be offset in no small degree by the 2 million barrels a day which would flow down the Alaska pipeline. Though the environmental safeguards set up by Interior for this project aren't perfect, they are strong and can be improved upon as necessity dictates. Alaska will not be despoiled by the line, but the national interest will take a beating if construction is delayed much longer.

FISCAL AND BUDGETARY REFORM ACT

Mr. HUMPHREY. Mr. President, I would like to bring to the attention of my colleagues an editorial appearing in the Pittsburgh Post-Gazette. The editorial points out that the President is not without fault in regard to the huge national debt.

Yet it is the responsibility of Congress to see that the country is put back on the road of fiscal responsibility. Despite this responsibility, the Congress lacks an effective mechanism for viewing the Federal budget in its entirety. The editorial supports the efforts those Members of Congress who are attempting to establish a mechanism for budget analysis and program evaluation.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO CONTROL FEDERAL SPENDING

Had Congress heeded the warning Thomas Jefferson issued more than 157 years ago—"to preserve our independence we must not let our leaders load us with perpetual debt; we must make our election between economy and liberty, or profusion and servitude"—it would now be in a stronger position to fight its battle of the budget with President Nixon.

The warning has been ignored. Endless deficit spending, without regard for consequence, has pushed the federal debt to more than \$450 billion (debt service alone in fiscal 1974 will be \$26.1 billion), and the end is not in sight. This reckless performance has prompted Rep. Wilbur Mills, chairman of the House Ways and Means Committee, to observe that deficit financing is the sole basic cause of inflation.

President Nixon is not without fault in this fiscal irresponsibility. He has submitted a series of budgets calling for deficits aggregating nearly \$100 billion. In an attempt to get control of the budget as a damper on inflation, however, he has tried to impose a \$250-billion ceiling on spending and has been impounding federal funds and refusing to spend them, to the outrage of a spendthrift Congress.

Against that backdrop, it is encouraging to see recognition within Congress of its basic fiscal failure. It has been appropriating piecemeal without sufficient concern for aggregate spending and an impact upon the budget.

In an effort to remedy that situation, Pittsburgh's Rep. William S. Moorhead and Sen. Hubert Humphrey are jointly sponsoring the Fiscal and Budgetary Reform Act of 1973. This act would establish under the Joint Economic Committee a Congressional Office of Budget Analysis and Program Evaluation. Its major purpose, as Mr. Moorhead has testified, is to set up the structure and procedures within the Congress whereby the authorization processes would be more closely related to the activities of the appropriations committees. In short, the various committees of Congress would know what each was doing with its chunk of the budget (now more than \$250 billion annually) in the hope that an overall spending ceiling could be set and observed.

Although the share of the national income that passes through the hands of the Federal Government is approaching 30 percent, Congress lacks any mechanism for considering the federal budgetary program in its entirety. That is what Messrs. Moorhead and Humphrey commendably wish to remedy.

We earnestly hope that they will succeed. If the budget is to be brought under control and inflation curbed, someone in government must exercise fiscal responsibility. If Congress won't do it, the President must.

Control of the purse strings rests constitutionally with the Congress. It should meet that responsibility. As Mr. Moorhead has said, Congress must become a fiscal participant rather than a fiscal observer.

NORTHLANDS REGIONAL MEDICAL PROGRAM

Mr. MONDALE. Mr. President, one of the victims of the administration's proposed budget for fiscal year 1974 is the excellent northlands regional medical program in my own State, Minnesota.

Largely due to the work of the northlands program—funded under the Federal regional medical program, which the budget proposes to end—the number of Minnesota hospitals with expert intensive coronary care units has increased from 18 in 1967 to more than 120 today.

Loss of the northlands regional medical program would be a tragedy for health care in Minnesota.

And the President's announced intention of ending the national regional medical program without congressional approval is yet another example of the administration's lawless disregard for the constitutional responsibilities of the Congress.

Mr. President, I ask unanimous consent that a fine article on the northlands regional medical program by Gordon Slovut of the Minneapolis Star may appear at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON CUTBACK DOOMS AREA HEALTH-CARE PROGRAM

(By Gordon Slovut)

The Northlands Regional Medical Program, an experiment which poured \$6.5 million in federal funds into Minnesota health care projects since 1967, has been marked for elimination by the Nixon administration.

Northlands is one of 56 regional medical programs in the nation—originally conceived by the late President Lyndon Johnson as a vehicle for attacking heart disease, cancer and stroke—which the administration is scuttling.

Dr. Winston R. Miller, Northlands director, said he has been told to prepare "phase-out" plans for all Northlands projects under way.

He said he is to prepare alternate phase-out plans—one based on a complete shutdown on June 30, the other with some projects allowed to last until Feb. 15, 1974.

The best-known of scores of Northlands projects involved greatly expanding intensive coronary care units—for heart attack victims—in Minnesota hospitals and the training of nurses and doctors to run them.

In 1967, there were 18 Minnesota hospitals with special heart units. There now are more than 120. The death rate in Minnesota hospitals of persons who arrived with heart attacks fell about 10 percentage points over the period, according to one study.

Dr. George B. Martin, Thief River Falls, president of the Minnesota State Medical Association, said he strongly suspects the coronary unit program had much to do with the improved survival of heart attack victims in Minnesota.

Miller said the coronary nurse training program, started as part of the Northlands project, will be continued by the Minnesota Heart Association.

He isn't sure that many other Northlands-backed projects, such as a motorized clinic which visits doctor-less communities in northwestern Minnesota, or a research project aimed at finding out why some women in the state still die of cancer of the cervix, will be continued.

Decisions about where Northland's funds—considered "seed money"—to find ways to improve health, correct the shortage of health manpower and find better ways of delivering care—were made by a 42-member board with representation from organized medicine, dentistry and other health professions, disease-oriented groups such as the heart association, business, labor and consumer representatives.

Martin said doctors were never unanimous about the worth of the program. Some liked it, some considered it a federal intrusion and some ignored it, he said.

Martin said that, on balance, the regional program was beneficial.

"In my opinion it helped better understanding between all aspects of the medical and health-care community, Martin said.

"It got the University and Mayo together, and got those two dealing with the practicing physicians. It got doctors and nurses talking

to each other and it got doctors in neighboring towns talking to each other, working cooperatively."

Martin said he believes the administration's decision to eliminate the program will stick and he regrets that the program will be folded so rapidly.

The rapidity, he said, makes it difficult to find ways to carry on the Northlands-instigated projects.

According to a publication of the American Medical Association, the administration says it will drop regional medical programs because "the regionalized systems of health care, as originally envisioned in the legislation have not, in fact, been realized during the seven years of this program's existence . . . nearly all of the RMP projects overlap other grant programs."

ADM. ELMO R. ZUMWALT, U.S. NAVY CHIEF OF NAVAL OPERATIONS, INVITED TO ADDRESS A JOINT SESSION OF THE GENERAL ASSEMBLY OF SOUTH CAROLINA

Mr. HOLLINGS. Mr. President, on behalf of Senator THURMOND and myself, I bring to the attention of the Senate a concurrent resolution passed by the General Assembly of South Carolina on March 21, 1973, inviting Adm. Elmo R. Zumwalt to address a joint session of the general assembly on Wednesday, March 28, 1973.

Although the admiral will be unable to attend, the purpose of this invitation is to recognize the authority for the establishment of a National Naval Museum at the Patriot's Point area in Charleston, S.C. This museum is one of its kind and will be a tribute to the people who have played a significant role in our naval history.

I ask unanimous consent that this concurrent resolution be printed in the RECORD.

There being no objection, the concurrent resolution was ordered to be printed in the RECORD, as follows:

CONCURRENT RESOLUTION

Inviting Adm. Elmo R. Zumwalt, U.S. Navy, Chief of Naval Operations, to address a joint session of the General Assembly at 12 o'clock noon, on Wednesday, March 28, 1973

Whereas, legislation to create the Patriot's Point Development Authority will be signed by Governor John C. West in fitting ceremonies on March 28, 1973; and

Whereas, among other things this authority is charged with the responsibility of establishing a National Naval Museum at the Patriot's Point area of Charleston County; and

Whereas, it seems only fitting that Adm. Elmo R. Zumwalt, United States Navy, Chief of Naval Operations, be extended an invitation to address the General Assembly on this memorable occasion.

Now, therefore, be it resolved by the House of Representatives, the Senate concurring: That Admiral Elmo R. Zumwalt, United States Navy, Chief of Naval Operations, is hereby invited and requested to address a Joint Session of the General Assembly of South Carolina in the Hall of the House of Representatives at 12 o'clock Noon on Wednesday, March 28, 1973.

EDWARD STEICHEN

Mr. RIBICOFF. Mr. President, Edward Steichen, who died Sunday, March 25, 1973, in West Redding, Conn., was quite

possibly the best photographer who ever lived.

Alden Whitman of the New York Times described Mr. Steichen and his photography this way:

A humanist, he disclosed and interpreted man to man through probing portraiture; and, as a person of extraordinary sensitivity, he gave his century a new vision of flowers, trees, insects and cityscapes as well as of commercial artifacts.

Mr. Steichen's camera lens was like a painter's brush. His pictures possessed mood and emotion and, they were composed with a keen sense of design.

I can think of no more fitting way to characterize the work of Edward Steichen. He was truly a great American artist whose influence on photography was enormous. Through his pictures, he brought beauty and pleasure and new perception to people all over the world.

I had the privilege of knowing Edward Steichen. Conversing with him was enlightening and enjoyable, for his manner was genuine and totally without pretense and direct. Typical of him was this comment he made on the occasion of his 90th birthday in 1969, he said:

When I first became interested in photography I thought it was the whole cheese. My idea was to have it recognized as one of the fine arts. Today I don't give a hoot in hell about that. The mission of photography is to explain man to man and each man to himself. And that is no mean function. Man is the most complicated thing on earth and also as naive as a tender plant.

Whether he actually gave a hoot or not, Mr. Steichen's pictures did, in fact, elevate photography to a fine art. He combined the best of modern technological accomplishment with the ancient desire of the artist to entertain and instruct. He was a man very much in touch with his times and the people who lived them. We are all better because of him.

Alden Whitman's obituary of Edward Steichen appeared in the March 26, 1973, issue of the New York Times. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDWARD STEICHEN IS DEAD AT 93; MADE PHOTOGRAPHY AN ART FORM
(By Alden Whitman)

Edward Steichen, the photographer, died yesterday at his home in West Redding, Conn., after an illness of several months. He would have been 94 years old tomorrow.

The first photographs Mr. Steichen took were so disappointing they were almost his last. He was 16 years old in 1895 and had bought a Kodak with his mother's money. He made 50 exposures, chiefly of subjects about the house.

"When the film came back, I had a real shock," he recalled. "Only one picture in the lot had been considered clear enough to print."

"My father thought one picture out of 50 was a hopeless proposition, but my mother said the picture (of his sister at the piano) was so beautiful and so wonderful that it was worth 49 failures."

Brightened by his mother's cheerful attitude, the youth went on to teach himself photography, experimenting as he learned. Ultimately he became not only the country's most celebrated and highest-priced photographer but also a craftsman of genius and world renown who transformed his medium

into an art. His stature was so lofty that his admirers spoke of him as "De Lawd."

A humanist, he disclosed and interpreted man to man through probing portraiture; and, as a person of extraordinary sensitivity, he gave his century a new vision of flowers, trees, insects and cityscapes as well as of commercial artifacts.

Mr. Steichen's camera lens was like a painter's brush. His pictures possessed mood and emotion, and they were composed with a keen sense of design, a heritage of his years as a fashionable painter in the manner of Whistler and Sargent.

LIKE IMPRESSIONIST WORKS

Some of his photographs resembled French impressionist paintings in their blurred softness; some, in their use of light and shadow, seemed like Rembrandt; others were utterly stark, as if they had been executed by De Chirico. Few of his pictures were dull or jaded.

"I know that to him the universe is as fresh and as strange now as it was back then," Carl Sandburg said a few years ago of Mr. Steichen, his brother-in-law and longtime friend.

Explaining his conception of his art, Mr. Steichen put it this way:

"I don't think any medium is an art in itself. It is the person who creates a work of art. It's perfectly clear that photography is different from any other medium—but that's only procedurally."

"Every other artist begins from scratch, a blank canvas, a piece of paper, and gradually builds up the conception he has. The photographer begins with the finished product. When that shutter clicks, anything else that can be done afterward is not worth consideration."

"At that point the differences between photography and any other medium stop because the photographer has brought to that instant anything any artist has to bring into action for the creative act."

In line with this view, Mr. Steichen concentrated on preparation. He once took more than 1,000 shots of a single cup and saucer as he experimented with the effects of various lighting arrangements. It was this infinite pain—and the knowledge that it produced—that gave his pictures their special quality.

His picture of Auguste Rodin, the sculptor, was a case in point. Before taking the photograph, Mr. Steichen spent every Saturday for a year studying Rodin as he walked among his works at his Paris studio; and only when he had decided on the composition he wanted did he bring his camera.

SCRUTINIZED 10,000 PRINTS

Mr. Steichen was almost as famous as a picture editor as he was as a picture taker. In 1942, in World War II, he set up the exhibition "Road to Victory" at the Museum of Modern Art in New York. He scrutinized 10,000 prints before selecting 150 that he believed reflected the quality and spirit of the American people, their land and their resources.

Ten years later, as director of the museum's department of photography, he traveled to 11 countries in search of material for the "Family of Man" exhibition. He selected 503 pictures as, he said, a "mirror of the essential oneness of mankind throughout the world." The exhibition opened in 1955 and was ultimately viewed by more than 9 million people in 69 lands. In book form, "The Family of Man" sold 3 million copies.

Outside of photography, Mr. Steichen achieved a more limited renown for his cross-breeding of plants, especially delphiniums, in which he had been interested since 1910. His delphiniums sprouted flowers so profusely that they resembled bushes rather than the usual spires. He also developed a new type of oriental poppy, more delicate and smaller than the usual flower.

Six feet tall and with wide-set blue eyes,

Mr. Steichen was not a jocose person. "On looks Steichen might be taken for a priest," Mr. Sandburg wrote in 1929. "He is solemn, with grave spiritual quality; reverence is a commanding element in his make-up."

Starting in 1957, the photographer altered his visage by growing a magnificent white beard that was flecked with gray and black. It gave him the appearance of a biblical patriarch, especially when he neglected to trim it regularly.

Even as an old man he had the questing, eager mind that set him apart as a youth.

Edouard (it became Edward early in his career) Jean Steichen was born March 27, 1879, in Luxembourg, the only son of Jean Pierre and Marie Kemp Steichen. Three years later the family migrated to Hancock, Mich., where the elder Steichen worked in the copper mines and his wife had a millinery shop. Their daughter, Lillian Paula, who became Mrs. Sandburg, was born in Hancock. She survives her brother.

Edward's mother was the dominant influence in his childhood, shaping an outlook on the world that remained with him through his life. Recalling an instance of this in his autobiography, "A Life in Photography," he wrote:

"Once, when I was 10 years old, I came home from school, and as I was entering the door of her millinery shop I turned back and shouted into the street, 'You dirty little kike!'"

"My mother called me over to the counter where she was serving customers and asked me what it was that I had called out. With innocent frankness, I repeated the insulting remark. She requested the customers to excuse her, locked the door of the shop and took me upstairs to our apartment."

IMPORTANT MOMENT

"There, she talked to me quietly and earnestly for a long, long time, explaining that all people were alike regardless of race, creed, or color. She talked about the evils of bigotry and intolerance."

"This was possibly the most important single moment in my growth toward manhood, and it was certainly on that day the seed was sown that, 66 years later, grew into an exhibition called 'The Family of Man.'"

After the family moved to Milwaukee, Edward left school at the age of 15 and became an apprentice in lithography at the American Fine Art Company, working up from nothing a week the first year to \$4 the fourth. He added to his pay by becoming the unofficial photographer of picnics and outings. He also painted and sketched in his spare hours.

As a lithographer, the youth made his mark by creating a large Ruben's like woman reclining in the enlarged capital "C" of the slogan "Cascarets—They Work While You Sleep." The figure of the languorous lady was almost as famous as the Gibson Girl.

At the same time he was experimenting with his camera, trying to capture on film the blurred softness of a painting. To achieve a misty effect, he would spit on his lens or give the tripod a kick as he tripped the shutter. One of these out-of-focus pictures, "The Lady in the Doorway," brought him recognition as a photographer in the Second Philadelphia Salon in 1899.

A year later he was on his way to Paris, intending to study painting and to continue with photography, the latter in line with a promise to Alfred Stieglitz, a photographic pioneer, whom Mr. Steichen had met in passing through New York.

NOTED FOR PORTRAITS

Painting and photographing by turns, he built a reputation for portraiture of notables—his Rodin won a prize, and his picture of Maurice Maeterlinck, the poet and playwright, was highly regarded. Returning to New York in 1902, he became friendly with Mr. Stieglitz, opened a studio at 291 Fifth

Avenue and began doing portraits commercially.

His "most concentrated and exciting experience" was in snapping J. P. Morgan and Eleonora Duse, the actress, in less than an hour. The Morgan picture came about accidentally when a painter, finding the financier too restive for a sitting, got Mr. Steichen to take a picture from which to paint.

Using a janitor as a stand-in, Mr. Steichen composed the picture before the banker arrived and quickly made a two-second exposure. Then he made another exposure for himself, with a different position of the hands and head that brought out Morgan's dynamic self-assertion.

Morgan liked the picture taken for the portrait, for which he paid \$500, but tore up a print of the second exposure. Later, though, when he was told how wonderful it was, he offered \$5,000 for it.

In 1905, Mr. Steichen, with Mr. Stieglitz, established the Photo-Secession Galleries, where art works of all mediums were shown. Through it, Mr. Steichen introduced Cézanne, Picasso, Rodin, and Matisse to the United States. But, restless and feeling stultified as a professional portrait photographer, Mr. Steichen returned to Paris in 1906 and devoted himself to painting, photography and botany at his home in Voulangis.

When the United States entered World War I in 1917, the photographer volunteered for service as an aerial cameraman with the Signal Corps. He took part in major operations in France and won both a Distinguished Service Citation and membership in the Legion of Honor. With the Armistice he returned to Voulangis and his palette.

"One morning, when I went to my studio, I found a very free copy of a flower painting I had been working on," he recounted. "It had been done by the gardener, a Brittany peasant, and it had the curious charm and direct simplicity of much primitive painting. As such, it was better than what I had been trying to do."

"I called the gardener, and we pulled all the paintings out of my studio into an open area and made a bonfire. I was through with painting."

"The wartime problem of making sharp, clear pictures from a vibrating, speeding plane 10,000 to 20,000 feet in the air had brought me a new kind of technical interest in photography. . . . Now I wanted to know all that could be expected from photography."

Mr. Steichen spent three years in experimentation. His pictures became precise, filled with detail and with light and shadow. And in 1923 he signed to do portrait and fashion photography for *Vanity Fair* and *Vogue* magazines for \$35,000 a year. Among those who posed for him over the years were Greta Garbo, Charlie Chaplin, Beatrice Lillie, Mary Pickford, Martha Graham, the Barrymores, Katherine Cornell, Paul Robeson and Lillian Gish.

WORKED FOR AD AGENCY

Branching out from the Condé Nast Publications, Mr. Steichen took commissions from the J. Walter Thompson agency for advertising work. He promoted such things as mattresses, creams, silks, pills and vacuum cleaners. He was often reproached for going commercial, but he steadfastly denied any meretriciousness.

"If my technique, imagination and vision are any good I ought to be able to put the best values of my noncommercial and experimental photographs into a pair of shoes, a tube of toothpaste, a jar of face cream, a mattress or any object I want to light up and make humanly interesting in an advertising photograph," he once said. He added:

"A thing is beautiful if it fulfills its purpose, if it functions. To my mind, a modern icebox is a thing of beauty."

In 1938, however, he closed his New York studio, announcing that his work had become routine and repetitious. He did not retire,

but spent more time with delphiniums ("my vital preoccupation") at his Umpawaug Breeding Farm in West Redding.

When World War II broke out, he organized a unit of photograph naval aviation operations. By the end of the war he was in charge of all Navy combat photography. He was discharged in 1946 with the rank of captain. His war experiences are recorded in "The Blue Ghost: A Photographic Log and Personal Narrative of the Aircraft Carrier U.S.S. Lexington in Combat Operations." He also supervised the film "The Fighting Lady."

For 15 years, from 1947 to 1962, he was with the Museum of Modern Art, supervising exhibitions of photography. To achieve objectivity, he virtually gave up his own work in those years. The museum honored him in 1961 with a one-man show of 300 pictures taken from more than 30,000 negatives. It later established the Edward Steichen Photography Center.

After he retired from the museum, he produced a documentary show on the plight of the farmer during the Depression. It opened in 1962 as "The Bitter Years: 1935-41—Rural America as Seen by the Photographers of the Farm Security Administration."

Mr. Steichen, even in his advanced years, never gave up photography completely. On his farm in recent years he experimented with a movie camera, filming a flowering shadblow tree. The result was a startlingly beautiful chronology of its moods and seasons.

At his 90th birthday party at the Plaza Hotel in 1969, Mr. Steichen took the floor to say:

"When I first became interested in photography, I thought it was the whole cheese. My idea was to have it recognized as one of the fine arts. Today I don't give a hoot in hell about that. The mission of photography is to explain man to man and each man to himself. And that is no mean function. Man is the most complicated thing on earth and also as naive as a tender plant."

RECEIVED MANY HONORS

He received many awards and decorations, including the Presidential Medal of Freedom, the Distinguished Service Medal and decorations from France and Luxembourg. At the end of this month he was to be honored at the Birmingham (Ala.) Art Festival.

Mr. Steichen married three times. His first wife was the former Clara E. Smith. They were married in 1903 and had two daughters, Dr. Mary Steichen Calerone, a physician and co-founder of the Sex Information and Education Council of the United States, and Kate Rodina Steichen, a writer. After a divorce in 1921, he married Dana Desboro Glover, an actress, who died in 1957. In 1960, he married Joanna Taub, a woman in her twenties.

They lived in West Redding in a Steichen-designed house on property strewn with rocks. Under one, a large perpendicular boulder, he said, he hoped to be buried.

A memorial service will be held at the Museum of Modern Art in New York at a date to be announced.

AMERICAN TECHNOLOGY OVERSEAS IS A SCARE STORY

Mr. HARTKE, Mr. President, in recent testimony before the Subcommittee on International Trade of Senate Committee on Finance, Mr. Andrew Biemiller, legislative director of the AFL-CIO unveiled the information that one of this Nation's most reliable rocket launch system, the Thor-Delta, was now in the process of being sold to the Japanese by McDonnell Douglas, a multinational firm.

From some reaction to this statement,

you would have thought Mr. Biemiller had brought a skunk to the lawn party rather than supplying the committee with some useful and appropriate information as part of its inquiry into multinational concerns and their effects on the American economy. Mr. Biemiller has been accused, among other things, of muddying the Japanese-American trade waters at a time when American concerns are striving to complete successful negotiations with a most difficult trading partner; anything that disrupts American trade, in the eyes of these critics, imperils the Nation. The selloff of technology is not trade—it is an economic fire sale with no return to the Nation—only to the companies involved.

Mr. Biemiller is accused of telling a "technology scare story." The fact is, Mr. Biemiller has done this Nation a great service in revealing what is happening to an entire high technology, high employment industry that has been one of the mainstays of our economy. The real "scare story" is that we are sitting complacently by and excusing this action and apologizing for it while the U.S. economy is being undermined by the selloff of our production of sophisticated launch facilities, military aircraft, commercial aircraft, and private aircraft. It is not a scare story. It is a bare fact. We are selling off our aerospace technology and there is not one single denial of this fact by the State Department, the Defense Department or the companies involved. Their only response has been that this entire selloff of technology is "good for us."

There is no intent to dwell on the potential military aspects of the Thor-Delta rocket. It can be provided with a guidance system quickly and easily. That is no impediment at all. The rocket can be modified and made militarily operable. Even the Pentagon concedes that point.

But more broadly, I think that these critics of Mr. Biemiller miss the main point. That is, in our zeal to export, we should be careful about what we are exporting. And we should be particularly careful when we seek to export technologies which are a basic part of our industrial resources—and our ability to produce and expand jobs.

It is one thing to export the fruits of our technology. It is quite another to export the technology itself.

For if we export our technology, what have we to sell? If others can purchase our technology, they then cease to have any need for the goods we formerly fashioned from that technology.

That is just what has been happening, Mr. Biemiller reminds us—as I read his testimony—in our aerospace industry. Here is an industry where, we have long been told, America is absolutely supreme. We have the most advanced technology. We have the most skilled labor force in the world to operate that technology. As a result of the combination of the high technology and the high skills associated with it, we are supposedly strong in exports of the fruits of this industry.

But what is the actual case? The technology of this "vital" industry is being shipped abroad in wholesale lots. It is not just the Thor-Delta, it is an entire complex of the technology involved in the

production of military and commercial air hardware.

Developing this technology cost hundreds of millions of dollars in taxpayer funds, the education of highly trained Americans, and expensive trial and error testing. It is now being sold at a fraction of its worth.

With the selling of the technology, the highly skilled manpower which was trained and used to develop it is no longer of any need. Can anyone then wonder why aerospace workers are concerned—and rightly so—when they can see the technology which is the basis for their jobs is rapidly being sold out from under them?

When are we going to wake up to the fact that if we continue to erode our technology, we erode our ability to compete, we erode our industrial base, and we erode the jobs which depend on that base?

The implications of the accelerating sell-off of technology is also of concern to specialists in the field such as Dr. Harvey Taufen, of the Hercules Corp., who recently reported that Japan has paid about \$90 million a year, or about \$1 per capita, "to get all the results of all the successful, proven technology in the world." As a result, "Japan's shopping has brought it the most incredible bargains in the world."

Supporting Mr. Taufen, Nathaniel Brenner, marketing director for Coates and Welter Instrument Corp., said in an article in *Chemical and Engineering News* last year that:

Technology is not an aesthetic pursuit like music or poetry, but rather a commodity of commercial value, with an investment cost which can be measured, a dollar value that can be computed and a clear market advantage for those who have it versus those who don't... the product of this investment, like the product of the oil well or the factory, cannot be given away to foreign countries by multinational corporations or by any other channel without a clear, measured quid pro quo or the United States will suffer exactly what a corporation suffers that sells below cost for an extended period—bankruptcy.

Anyone who is naive enough to believe that the Japanese or British governments permit foreigners to license their processes as freely as the U.S. does ours has simply never tried to negotiate these transactions.

Mr. President, this is why we urge a new look at our present trade practices for the clear and present danger that they are.

CHILD ABUSE

Mr. MONDALE. Mr. President, on Monday and Tuesday of this week the Subcommittee on Children and Youth, of which I am chairman, held hearings on S. 1191, the Child Abuse Prevention Act.

I was both touched and angered by the testimony presented to the subcommittee. I was touched by the personal story of a reformed child abuser who has now devoted her life to working with other parents who have the same terrible problem of being unable to control their anger against their children. And I was angered and disappointed by testimony demonstrating the disorganized, cal-

lous way that the Federal Government has dealt—or more accurately, not dealt—with this problem in the past.

It is gratifying to see that the hearings—coming at a time when more and more horrifying cases of child abuse are being reported in the media every day—are stimulating public discussion of possible solutions to this problem.

I ask unanimous consent to insert in the RECORD at this time Colman McCarthy's thoughtful analysis, "Suffer the Little Children," which appeared in the *Washington Post* on Monday; articles from the *Post* and the *Washington Star-News* describing the testimony presented at the subcommittee's hearings.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUFFER THE LITTLE CHILDREN

Adults have been beating, torturing and killing their children ever since we supposedly became a little higher than the animals. Only lately, though, is anyone asking why we do it and why can't we prevent it. Social scientists, lawyers, psychiatrists and a few parent groups have been seriously studying the derangement for the past 10 years. As an important part of this discussion, hearings on child abuse were opened yesterday by the Senate Subcommittee on Children and Youth. We have had attention on the subject before, but we still stumble along to solutions, never surefooted about whose responsibility it is to think about the unthinkable.

As with the crime of rape, exact figures on child abuse are unavailable. Dr. C. Henry Kempe, a Denver pediatrician who directs the National Center for the Prevention and Treatment of Child Abuse and Neglect estimates some 60,000 cases were reported last year. The unreported are unknown. Occasional child abuse cases reach the courts—it is odd how seldom we think of children as having legal rights—and the trials are reported by the press. A common impression from these accounts is that the murdering or battering adults are fringe cases, exceptions to the happy rule that most parents are naturally loving. Actually taken to an extreme, certain seemingly normal styles of child-raising can easily lead to violence. Two Denver psychiatrists working with Kempe, write: "There seems to be an unbroken spectrum of parental action toward children, ranging from the breaking of bones and fracturing of skulls through severe bruising to severe spanking and on to mild 'reminder pats' on the bottom. To be aware of this, one has only to look at the families of one's friends and neighbors, to look and listen to the parent-child interactions at the playground and the supermarket, or even to recall how one raised one's own children or was raised oneself."

"The amount of yelling, scolding, slapping, punching, hitting and yanking acted out by parents on very small children is almost shocking. Hence we have felt that in dealing with the abused child we are not observing an isolated, unique phenomenon, but only the extreme form of what we would call a pattern or style of child rearing quite prevalent in our culture."

Writes James Delsordo, a Philadelphia social worker: "They obviously cannot help themselves. The abuse of their children seems to be rooted in an overflow of their own frustration, irresponsibility and lack of belief in themselves and anything else. In such cases, the possibility of the family remaining intact is remote. The parents are generally vacuous, pleasure-seeking and devoid of guilt, except for periods of extreme remorse and self-pity. They make promises

easily and plead with the case-worker for 'one more chance.' Most parents respond poorly to formal psychotherapy."

Is child abuse preventable? Specialists like Kempe—regarded as a pioneer in the field—believe so. In "Helping the Battered Child and His Family," (Lippincott) Kempe writes that only 10 per cent of America's battering parents are too mentally ill to be helped while a child is in the home. The other 90 per cent may be helped. He sees changes in the traditional social agencies as essential. For one thing, welfare departments often make a parent feel uncared for, exactly the feeling that is passed onto the child through a brutal beating. Kempe and his associates say that a violent parent suffers from a "deprivation of basic mothering—a lack of the deep sense from being cared for and cared about from the beginning of one's life." At Kempe's center in Denver, a child protection team includes pediatricians, psychiatrists, social and welfare workers and a nurse.

It is not true that the busing parents are found only among the uneducated and poor, though—as in other crimes—these are often the first to be hauled into court. Violent parents are in all parts of society. Dr. Sidney Wasserman of the Smith College School of Social Work says: "How easy it is to deny that within all of us lies a potential for violence and that any of us could be unreachable. What is more repugnant to our rational 'mature' minds than the thought of committing impulsive, violent acts against a helpless child? We tell ourselves that the primitive, untamed instincts responsible for such acts could not erupt in us. But stripped of our defenses against such instincts and placed in a social and psychological climate conducive to violent behavior, any of us could do the 'unthinkable.' This thought should humble us; perhaps we are not battering parents only because conditions do not lead us to commit 'unnatural' acts."

In addition, treatment includes Families Anonymous, a program similar to Parents Anonymous. The latter has chapters in some dozen states and was founded in California by a former child abuser (a woman known as Jolly K.). Parents Anonymous chapters are not only for those who have beaten their children but for those who have not but are bewildered—as so many parents are—by the puzzles of child rearing. (Information about PA is available from Jolly K., National Parent Chapter, 2009 Farrell Avenue, Redondo Beach, California 90278.)

Although everyone knows that children's atrocities are occurring, even getting them reported is a challenge. A 1967 survey showed that a fifth of some 200 physicians said they seldom or never considered child abuse when examining an injured child; even if they had a suspicion and were legally protected to report it, a fourth said they would not. In "A Silent Tragedy," a book to be published in May by the Alfred Publishing Company, Peter and Judith DeCourcy argue that "the first requirement for helping abused children is an adequate reporting law. Such a law should protect the often frightened person making the complaint; therefore, anonymous complaints should be accepted. Investigations of all complaints should be made immediately... Reporting should be mandatory for any person who knows of child abuse or neglect..."

In the end, many child abuse cases involve parent abuse also; the optic nerve of reform easily sees the battered body of the child, but the disturbed personality of the parent should be sighted also. To protect children before they are abused is the ideal, rather than only after. But until aid is offered to potentially dangerous parents—as Dr. Kempe, Jolly K., and others offer aid—helping abused children will mostly be catch-up work. Families, meaning mothers, fathers and children, deserve better.

TOUGHENED CHILD ABUSE BILL PLANNED

(By Martha M. Hamilton)

Reacting to photographs of scalded, charred, beaten and abused children treated at Children's Hospital here, Sen. Walter F. Mondale (D-Minn.) promised yesterday to strengthen his own bill for dealing with the problem of child abuse.

Mondale watched, distressed, as members of the Children's Hospital child abuse team recounted the histories of the Washington area children, whose photographs were vivid testimony on child abuse.

The abuses were "the most nauseating, disgusting" he has encountered in nine years in the Senate, Mondale, chairman of the Senate Subcommittee on Children and Youth, told the Children's Hospital team.

The Children's Hospital group catalogued what they called weaknesses in the District of Columbia's procedures for dealing with child abuse as well as documenting the problem with slides and case histories.

They showed Mondale photographs and told the stories of:

A 4-month-old boy, admitted to Children's with brain damage caused by blood clots, who died about four months after being admitted. The photograph of the baby showed his body stretched out and rigid, his fists clenched and legs extended. He was breathing but not much else, Dr. Annette Heiser, director of the child abuse team, said.

His brother subsequently was admitted to Children's. The brother, who later recovered and was placed in a foster home, was unconscious and covered with both old and new bruises. "He had old sores on the back and several on the abdomen, which appeared to be healed cigarette burns," Dr. Heiser said.

Under the District's existing law, there is no legal procedure to assure that the brothers and sisters of a child who is identified as "abused" are safe, she said.

A child who the police had determined was not abused and who was scheduled to go home on a Friday but developed a fever and had to be detained. The next day the child's brother was brought to the hospital dead on arrival as a result of a beating. "Because of the system the first child was going to go back to the home," Dr. Heiser said.

"There should be a means for handling a conflict between a medical diagnosis and a police judgment," she said. "Either a third party . . . should become involved or the law should provide some means of holding a child solely on a medical judgment until a multi-disciplinary evaluation can be made of the family."

Reporting of child abuse cases is improving, the Children's group said, but needs improvement. Of about 150 cases reported last year, about 100 of those were reported from Children's where special procedures have been developed, Nan Huhn, a lawyer for the city said.

Members of the child abuse team were sharply critical of a proposal by the department of human resources to break up a centralized, highly specialized unit of social workers who deal with neglected and abused children in the District.

The Mondale proposal, which would cost about \$90 million over five years, would expand the federal role in dealing with child abuse and focus more directly on the problem, creating a National Center and a National Commission on Child Abuse and Neglect.

[From the Evening Star & Daily News, Mar. 28, 1973]

CHILD ABUSE: PROBLEMS AND PREVENTIVES
MONDALE EYES TOUGH BILL

(By Martha Angle)

With a short but shattering slide show, a team of specialists from Children's Hospital

yesterday brought home the problem of child abuse to a Senate subcommittee.

As many in the darkened hearing room diverted their eyes, images of brutally tortured children flashed across the screen while Dr. Annette Heiser recited the case histories of their abuse.

Cigarette burns, fork puncture wounds, scalded skin, broken limbs, whipping scars, "charred lower extremities"—were among injuries suffered by infants or pre-teen children at the hands of their parents and guardians.

"I have seen some pretty rough things in my nine years in the Senate, but this is the most nauseating thing I have ever seen," said Sen. Walter F. Mondale, D-Min., as the slide presentation ended.

"To think that we don't have any comprehensive system for saving these children from this kind of inhumane brutality and torture seems utterly beyond belief," Mondale added.

"We're going to do something here," he promised the Children's Hospital team. "We're going to pass a strong bill, and after this presentation it's going to be a lot stronger than I originally planned."

Mondale is sponsor of legislation to provide \$90 million in federal grants over a five-year period for prevention and treatment of child abuse, to require states to draw up comprehensive plans for such programs, and to create a National Center of Child Abuse and Neglect to serve as a research and information clearinghouse on the subject.

Stephen Kurzman, assistant secretary of Health, Education and Welfare, yesterday told Mondale's Senate Labor and Public Welfare subcommittee the Nixon administration is opposed to his bill, believing the problem of child abuse should be handled at the state and local level.

Kurzman said HEW is already planning to institute some of the programs outlined in the Mondale bill, and will have spent about \$231 million over a four-year period ending next year on child abuse research, prevention and treatment.

Mondale challenged Kurzman's spending figure, and Dr. Robert H. Parrott, director of Children's Hospital here, said that "if indeed \$231 million has been made available, very very little of it is getting through to the District of Columbia."

Last year, he said, Children's Hospital handled about 100 of the 150 child abuse cases reported in the District "and we estimate there are three times that many occurring each year but going undetected." Other hospitals have been slow to recognize the problem and identify cases of child abuse, he said.

Other members of the Children's Hospital team said they have noticed a sharp increase in District child abuse cases this year, largely because doctors and others are becoming more conscious of the problem and better at recognizing abusive symptoms.

At their own initiative—and with no funding support—pediatricians, nurses, social workers and psychiatrists at Children's Hospital have formed a special team to handle cases involving abused children, testimony showed.

But team members said their efforts are severely hampered by a lack of personnel and funding, legal limits on the degree to which outsiders may intervene in a family situation, the absence of a central registry of child abuse reports, excessive caseloads of social workers who attempt to follow up on children who have been returned to the home and a host of other problems.

SPORTS EXPO FOR YOUTH

Mr. HUMPHREY. Mr. President, I wish to bring to the attention of my colleagues in the Senate a significant

proposal for a constructive recreational program in the Washington, D.C. metropolitan area on behalf of disadvantaged youth.

Known as Sports Expo, this program will use ongoing clinics in the development of athletic skills to enable young men and women to have a sense of achievement where otherwise they might have known only disappointment and failure—developing those characteristics of self-confidence and the desire to achieve competence in their chosen vocations, that are so important in their later lives.

Sports Expo is a nonprofit endeavor of BilJac Associates, a small black-owned business consultant firm located in Alexandria, Va. I am advised that already a distinguished advisory panel has been formed to aid the organization of this important demonstration project—including Mathew Guidry, of the President's Council on Physical Fitness and Sports; Samuel Jones, at Federal City College; Calvin Rolark, president of the United Black Fund; Robert V. Donahoe, executive director of the UGF in the District of Columbia; Charles Taylor, at American University; Dr. Herman Tyrance, at Howard University; George I. Rose, assistant secretary for employment and social services, State of Maryland; the Honorable SHIRLEY CHISHOLM; James Ward, a vice president in the Marriott Corp.; William Jaimeson, in the Territorial Council for Business Opportunities; the Reverend David Eaton; and Miss Lucy O'Neil, presently associated with Sports, Inc.

Mr. President, I ask unanimous consent that a prospectus on Sports Expo, submitted to my office by Mr. William S. Hardy, president of BilJac Associates, Inc., be included at this point in the RECORD.

There being no objection, the prospectus was ordered to be printed in the RECORD, as follows:

SPORTS EXPO

Recreation for Personal Development has been sponsored as a non-profit endeavor of BilJac Associates, Inc., a small black-owned business concern. The initial project is Sports Expo. Sports Expo will operate on the premise that negative social trends can be reversed if Americans accept responsibility for each other.

PROJECT OBJECTIVES

To develop in youth through sports interaction with professional and academic athletes a sense of social awareness within the socio/economic systems and to equip them to deal successfully within the system rather than without.

The clinics will create a positive environment for youth in which a good self-image and the will to succeed can be developed. Replacing a damaged self-image is a slow and painful task. It is possible on an individual level, however, to provide building blocks of small successes and accomplishments which will eventually make up a positive self-concept. We are striving for each youth to believe "I am somebody".

To encourage positive social behavior through providing a channel of constructive personal development.

MOTIVATION

One way in which young people have traditionally learned leadership and self worth is through participation in sports. Sports have also provided an escape beyond the nar-

row confines of a limiting and debilitating environment.

The development of this interest in sports can offer an avenue for acquiring personal discipline and confidence often atrophied by unrewarding school experiences and the discouragement of poverty and racism. Therefore, for the more than 100,000 disadvantaged school-aged youth living in Washington's inner city area, professionally conducted sports clinics are not only a natural response to youth's interest in both organized sports and leisure time activities, but also a viable vehicle for personal development.

Sports Expo believes that young people living in Washington's inner city areas—and elsewhere across the country—do not need pity. They need help in developing their valuable potential. They are often open to counsel from adult athletes, particularly those who share similar backgrounds.

METHOD

The machinery of Sports Expo is really very simple: successful adults will use sports as a means to develop the potential of youth who need encouragement to learn to live useful lives. Clinics in football, baseball, basketball and track—and later in tennis, golf, bowling and gymnastics—are planned in response to local interest.

However, no program of the magnitude envisioned for Sports Expo can go into operation untested. It is only good business to employ first a pilot project as part of the continuing long range planning. A series of model clinics will be held beginning in March and running through mid-June to refine the teaching approach and techniques used by the athletes and to insure a logistically smooth operation when Sports Expo goes into full swing this summer.

Some 20 professional athletes and 20 college and high school athletes and instructors will participate in the model project. Over 1,000 boys and girls will benefit. A series of three day football, basketball, track and baseball clinics will be held using donated facilities at Howard University and other available facilities. The professional and academic athletes will be assisted by volunteers from area colleges and high schools, community centers and recreation departments as well as from the YMCA and the Police Boys Clubs.

Clinics will meet from 2 to 4 hours each evening. While intended primarily for teenagers, other family members may attend. Each clinic will concentrate on a specific sport and will be limited to approximately the first 75 youth who register. Clinics will require a minimum of 50 trainees.

Daily programs will follow a tight, discipline-promoting schedule. Each session will begin with a film and illustrated lecture on some aspects of the sport under study. A structured play or application period will follow. Participants' efforts to apply what they have learned will in turn be recorded on video tape for "instant replay" and further instruction in small groups.

Emphasis on accomplishing assignments repeatedly will help build the participant's confidence in his own abilities. During each session agility drills will be taught to help trainees continue their physical conditioning after the clinic has ended and to allow for further successes.

A cleanup period followed by a nutritious training meal will end the session. The meal will allow more time for personal interaction between trainees and staff. It will also insure against the likelihood that many of the youth would not have a proper meal awaiting them at home.

An obvious purpose of the "living laboratory" situation will be to provide evidence that this project can effectively fulfill its objectives. Also, awareness of *Sports Expo* needs to be generated in inner city neighborhoods, while businessmen and corporations in the Washington Metropolitan Area must

be alerted to the program and its aims. The model project is primarily intended as a time of evaluation and planning which will result in a definite proposal of the nature to solicit sufficient funding for a long term program.

FINANCE/ADMINISTRATION

How will *Sports Expo* be financed? Through the tax deductible contributions of civic minded organizations and individuals. The immediate need, of course, is for seed money to finance the model project. A minimum of \$80,000 and a maximum of \$91,000 are needed to cover expenses of the model project.

While initial salary costs are provided by BilJac Associates, it is intended that eventual donations will relieve the firm of this burden. In no way will BilJac Associates, Inc., derive financial benefit from *Sports Expo*.

Although many expenses will be nominal due to donated equipment, facilities and meals, a cost of approximately \$57-\$87 per participant is projected for the demonstration period, depending upon the length of particular clinics. Expenses will be accrued in the areas of fees paid to professional and academic sports personnel to insure their participation and by such items as transportation, insurance, publicity, etc.

However, the model project is only the beginning of *Sports Expo*. During the primary project an advisory board will be formed of both individuals and organizations. A membership of approximately 35 is projected, the members to represent a cross section of business, social and political concerns. Responsibilities of the Board of Advisors will be financial as well as advisory.

JAYCEES DRIVE FOR SCHOOL LUNCH PROGRAM

Mr. McGOVERN. Mr. President, I recently became aware of a remarkable new development in the fight to end hunger and malnutrition in America. Two young men, Mr. Robert Benedict, national Jaycees director for improved child nutrition, and Mr. David Jones, associate director, visited with me in my office to describe their nationwide drive to bring school lunches to millions of needy children.

Mr. Benedict and Mr. Jones explained that they were focusing on the problem of some 18,000 schools around the country that do not have the facilities to provide lunches to children. As they explained their program to me, they plan to encourage Jaycee chapters throughout the Nation to survey the needs of these schools, to develop community support for school lunch programs in these schools, and then to bring these needs, supported by hard evidence, to the Department of Agriculture to provide the funds to buy the equipment.

Mr. President, I want to make sure that when the community-level efforts of the Jaycees bear fruit, that the Federal Government will be in a position to respond to the requests of these local communities. For that reason, the staff of the Select Committee on Nutrition has analyzed the administration's budget request for school equipment funds. This analysis shows that \$16.1 million has been requested for fiscal year 1974 for equipment—the same amount as was requested for the last fiscal year. The Congress has authorized \$40 million. This \$16.1 million will help modernize 5,000 schools, but will only provide new fa-

cilities for 1,300 of the 18,000 schools that need facilities.

I believe that the Congress needs to carefully examine the administration's budget request in this light, and hopefully provide increased funds to fulfill the efforts that the Jaycees are going to make.

Again, I want to commend Mr. Benedict and Mr. Jones for their great leadership in this area, as well as the national Jaycees.

AN END TO THE USE OF DES

Mr. RIBICOFF. Mr. President, on March 20, I released a memorandum prepared by the FDA's Director of Veterinary Medicine Review, which revealed that there are at least 18 potentially cancer-causing substances being used in food animals. For practically all of these, inadequate testing methods exist for the detection of residues of these substances in human food.

Of all the substances discussed in this memorandum, the one which is most clearly linked to cancer is diethylstilbesterol—DES—an estrogenic growth hormone used by meat producers in food animals to stimulate their growth. In August 1972, the FDA announced that use of DES in the feed of animals intended for human consumption would be prohibited after January 1, 1973. The FDA took this action after it had been shown that DES caused cancer in test animals and that residues of DES were present in the tissue of animals slaughtered for meat. Action was taken only after several Members of Congress, as well as environmental and health groups, had repeatedly urged the FDA to ban DES; a lawsuit had been filed by the National Resource Defense Council to have DES taken off the market; and a bill had been introduced in the Senate to accomplish by further legislation what the administrative process had failed to do by enforcement of existing law. That bill, S. 2818, passed the Senate on September 20.

The FDA's action, though long overdue, was inadequate to protect the interests of consumers. It failed to do so in two respects: the FDA permitted the continued use of DES, a known carcinogen, in animal feed for several months, a procedure which the GAO has determined to be illegal, and it failed to prohibit—even on an interim basis—the injection of DES into food animals. At this time, DES may still legally be used in food animals by implanting the hormone in the animals' ears, despite the fact that recent research reveals that this method, too, results in residues of this carcinogenic drug. DES implants had been used extensively prior to the ban on DES in animal feed and it is reasonable to expect that implants will be used much more widely now that the ban on DES in animal feed is in effect.

At the time DES was banned from animal feeds, FDA announced that the implants would be permitted to continue, because there was no evidence of DES residues from implants in slaughtered carcasses. The reason why no residues had been found is by no means reassur-

ing: in spite of the known problems concerning DES, neither the FDA nor the Agriculture Department had tested the carcasses of animals implanted with DES for residues. The FDA did not suspend implants on an interim basis while testing of animals implanted with DES proceeded. Instead, it left the public potentially at risk pending the results of future tests.

Now, months later, results of tests on implants have begun to appear. An FDA progress report dated December 18, 1972, shows that "FDA scientists have concluded that there is no question" that DES residues were present in the liver and kidneys of steers slaughtered 30 and 60 days after implantation. The report indicates that additional studies are in progress on steers to be slaughtered 120 days after implantation. It was announced in December that results of these studies would be available in mid-March. Now we are told that they will not be available until the end of April.

The FDA statement of December 18 indicates that "if any residue of DES is found in liver or kidney 120 days after implant, all approval of DES for this use will immediately be withdrawn." While I am pleased that the FDA appears ready to act once it has been conclusively proven that the public is being exposed to carcinogenic residues, I find it regrettable that it is taking so long to accumulate the data for decision, and that consumers must continue to bear the risk of exposure in the interim. By the time FDA and the Department of Agriculture decide whether to ban implants, at least 8 months will have passed since DES was banned in animal feed.

There are at least four reasons why DES or any other carcinogenic substance—actual or potential—should not be permitted to be introduced into food animals:

First, the danger of low-level residues;

Second, the inadequacy of the Department of Agriculture tests;

Third, the impossibility of enforcing regulations requiring a long withdrawal period; and

Fourth, potential harmful effects even if no residues are present.

1. DANGER OF LOW-LEVEL RESIDUES

Both FDA and the Department of Agriculture agree that DES is a carcinogen and that no residue of DES should be permitted in meat.

There is no way of determining what is a "safe" amount of a carcinogen. There does seem to be some relationship between carcinogenicity in animals and carcinogenicity in human beings. But the precise relationship varies with different substances and different species and is usually indeterminate. Because a given amount of a carcinogen may produce radically different effects in different species and different organisms, it is possible that carcinogens which at a given level produce tumors in animals could produce tumors in human beings at drastically lower levels. There is no assurance that a carcinogen—even in minimal amounts—will not cause ill effects in human beings.

In addition, it is difficult to determine a definite relationship between a given

substance and human cancer. Because cancer may take from 10 to 20 years to appear and because we do not know enough about the precise mechanism of the disease, it is extremely difficult to establish conclusively a causal relationship between a particular substance and its cancer-causing effect.

Therefore, where a substance poses a potential threat of carcinogenicity, it is only prudent to avoid the presence of residues in the food supply in any amount. It is impossible, however, to determine that absolutely no residue of a substance remains. The determination that no residue exists is only as accurate as the sensitivity of the test used. If the required test is sensitive enough to measure residues—for example, at 25 parts per billion—and no residues are found, there is no assurance that residues below that level are not present. No matter how sensitive a test is used, it will always be possible that some residues will be present below the detection level. Thus, a zero tolerance level is a fiction. A de facto tolerance level is effectively set at the sensitivity of the test used. Thus, DES residues may be present at levels that the tests used cannot detect, and there can be no assurance that the presence of such residues is not a danger to the public health. The only proper course of action is to prohibit the introduction of DES in food animals in any form.

2. INADEQUACY OF DEPARTMENT OF AGRICULTURE TESTING DATA

As I have mentioned previously, the Department of Agriculture is currently performing tests to determine whether DES residues remain present in cattle 120 days after implantation. If no residues are found, the FDA is apparently ready to promulgate regulations permitting DES implants, provided that steers are not slaughtered until 120 days after implantation. Even if the Agriculture Department tests show no residues, however, I am not convinced that these tests would constitute sufficient proof that DES residues would not be present in an appreciable number of animals slaughtered after a 120-day withdrawal period.

Only eight steers implanted with DES are being tested under the 120-day withdrawal period. Given the wide variation in metabolic response in different animals, a showing of no residues in only eight animal carcasses would be far from persuasive evidence that residues would not appear in an appreciable percentage of cases.

3. IMPOSSIBILITY OF ENFORCING REGULATIONS REQUIRING A LONG WITHDRAWAL PERIOD

Even if a fully adequate test showed that no residues remain in animals after a 120-day withdrawal period, however, it would be impossible to enforce a regulation requiring such a lengthy waiting period before slaughter.

DES implants are administered at thousands of different locations. Even if a Department of Agriculture inspector were present at each of these locations to observe the implantation, a method of identifying the cattle implanted on a given date would have to be devised to assure that none could be slaughtered until 120 days had elapsed. The estab-

lishment of such an inspection program is beyond the capability of the Department of Agriculture.

Under the Delaney clause (21 U.S.C. 348(c)(3)(A)) no animal drug which causes cancer in man or animals may be used in food animals unless the Secretary of Health, Education, and Welfare prescribes regulations which will result in the absence of residues under testing procedures he shall establish and if it is reasonably certain that such regulations will be followed in practice.

The FDA and the Department of Agriculture have maintained that random testing of meat samples can be an adequate substitute for direct supervision of the implants. I do not believe that such testing could become an adequate regulatory tool. There are three reasons for this belief.

First, the tests performed by the Department of Agriculture to determine whether DES residues are present are extremely sophisticated and difficult to perform accurately. While Department of Agriculture specialists operating under ideal laboratory conditions may be able to use this test to produce accurate results, it is highly doubtful that it could be adapted for use in the field by less qualified technicians. This test is not likely to become a practicable regulatory tool.

Second, this test involves implantation of animals with radioactive material to make possible identification of residues. There is a substantial question whether the public would be well served if it had to tolerate meat that had undergone radioactive treatment in order to assure that no cancer-causing residues are present. The test itself, if used on food animals, seems to pose unacceptable risks to public health.

Third, and most important, the monitoring of meat samples involves inspection of a relatively small number of carcasses. The vast majority remains uninspected. Inspected carcasses represent only a fraction of 1 percent of the total animals slaughtered for food. A meat producer who violates a regulation requiring a long withdrawal period, therefore, runs only a minimal risk of having DES residues in his product detected.

I believe that a regulation establishing a 120-day withdrawal period would be unenforceable and not "reasonably certain to be followed in practice," as the law requires. If this is so, the Secretary is under a legal obligation to withdraw new animal drug approval for DES implants. I call on him to do so, regardless of the results of the current tests.

4. HARMFUL BIOLOGICAL EFFECTS EVEN WHERE NO RESIDUES REMAIN

Even if it could be shown that no DES residues are present after a 120-day withdrawal period, that a practicable regulatory test to detect all residues existed, and that regulations establishing a 120-day withdrawal period were reasonably certain to be followed in practice, there would still be strong reasons for banning DES.

A carcinogenic substance may induce harmful biological changes in an organism even if no residues of the substance remain. The results of a study by French

scientists have shown that, even where no DES residues remain after slaughter, animals which had eaten the meat of cattle implants of DES had become infertile. The study indicated that consumption of the meat of such cattle "may have an unfavorable effect on the reproductive functions of consumers." The effect of DES on human fertility has been confirmed by the FDA's recent decision to allow use of the drug as a "morning-after" contraceptive. I am not satisfied that the safety of DES would be conclusively shown even if it could be established that no actual residues were present in slaughtered carcasses.

The Canadian Government recently took action to ban DES both in animal feeds and through implants. It should be emphasized that the Canadian food and drug authority did not base its action on the presence of residues in meat. It concluded that DES could present a significant potential health hazard through biological changes induced in muscle tissue even where no detectable residues were found.

Canada is a meat-exporting country, and the meat industry is an important element of the Canadian economy. The Canadian Government would not have taken this action if it did not believe that DES presented substantial public health problems. The Government's action had the full support of the Consumers' Association of Canada.

It is time for FDA and the Department of Agriculture to cut the bureaucratic redtape and take decisive action to protect American consumers from the needless exposure to the risk of cancer.

Twenty-two governments have already taken action to ban totally the use of DES in livestock. American consumers are entitled to expect that their Government will act as effectively to protect them from potential hazards to their health.

MINNEAPOLIS TRIBUNE OPPOSES NIXON PLAN FOR MEDICARE, MEDICAID CUTBACKS

Mr. HUMPHREY. Mr. President, an excellent editorial in the March 27 Minneapolis Tribune makes a strong case against the cutbacks in medicare and medicaid that President Nixon has proposed.

The editorial points out that the administration is trying to justify the cuts by arguing that they can be made up out of the higher social security benefits Congress voted for older Americans last year. However, as the editorial goes on to say:

Social security was not increased in order that medicare and medicaid could be reduced. It was increased to meet the increased cost of living.

President Nixon failed last year in his attempt to limit the social security increase to 10 percent instead of the 20 percent approved by Congress. Now he is trying to get that money back from older Americans through the back door.

Fortunately, however, he has been effectively thwarted by the Senate. I have joined with 51 other Senators, led by my distinguished colleague from Minne-

sota (Mr. MONDALE), in introducing a concurrent resolution putting the Senate formally on record in opposition to the proposed cuts in medicare and medicaid. This resolution (S. Con. Res. 18), supported by a majority of the Senate, makes it clear that the cuts have no chance of passing and that this threat to the financial security and the health of older Americans has been lifted.

I ask unanimous consent that the Minneapolis Tribune editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHTING MEDICARE CUTBACKS

Although President Nixon failed in his attempt last year to trim down the new Social Security increase, his Medicare and Medicaid proposals this year could veto all or much of the increase for many elderly Americans. Under the proposed cutbacks, the administration would have the patient pay the full bill for the first day of hospitalization (instead of just \$72 of the bill now), then 10 percent of the cost between the first and 61st days (this portion is now free). Those patients with doctor-bill coverage would pay the first \$85 of the bill (instead of the present \$60) and 25 percent of any amount over that (up from 20 percent). Dental care and other "low priority" services under Medicaid would be dropped.

These cutbacks would wipe out the Social Security increase (which averaged about \$29 a month) for any Medicare recipient in a lengthy stay in the hospital, and would take a big chunk out of the increase even for a minimum stay. For example, the average daily hospital cost in Minneapolis is about \$115. Using a much lower national average figure of \$70, Sen. Walter Mondale, who is fighting the cutbacks, said that under the Nixon proposal a three-week stay would cost at least \$200 and a 60-day stay a minimum of \$500. Mondale figures the administration proposal would result in Medicare recipients paying out an additional \$1 billion a year from their own pockets.

Defending the administration proposal, Caspar Weinberger, secretary of health, education and welfare, said the average stay in the hospital, about 12 days, would cost the Medicare recipient about \$105. Even this, we feel, is too much for a recipient whose income from Social Security (the national average for a single person is less than \$2,000 a year) is already below the poverty level.

To defend Medicare cutbacks on the grounds that patients can pay more because of the Social Security increase, as the administration did last month, seems to us to be a subversion of the intent of Congress. Social Security was not increased in order that Medicare and Medicaid could be reduced. It was increased to meet the increased cost of living. The elderly sick should not have this increase taken away from them. We hope Mondale and the other congressmen fighting the cutbacks meet with success.

GENOCIDE CONVENTION WOULD NOT ENDANGER U.S. COMBAT SOLDIERS

Mr. PROXMIRE. Mr. President, opponents of ratification of the Genocide Convention often cite as a danger of the convention the alleged possibility that U.S. combat soldiers could be tried and punished by the courts of an enemy country. For example, my esteemed colleague from North Carolina, Mr. ERVIN, contends that the convention would "make soldiers

punishable for serving their country in combat" as the fifth of his objections to the convention presented in a recent speech. I am continuing my rebuttal of those objections.

There is an unspoken assumption in this objection, and recognition of this assumption vitiates the force of the objection. The assumption is that the Genocide Convention would subject servicemen to criminal proceedings that would not be possible at the present time. In fact, this is not the case. The example from very recent history, the war in Vietnam, is most persuasive on this point. If, for example, the North Vietnamese wished to try American servicemen, they had all the possibilities of doing so under a convention already in force and ratified by this country, the Geneva Convention of 1949. One provision of that convention is the requirement that countries punish for war crimes and extradite for such crimes to one another. If, therefore, the North Vietnamese wished to try American servicemen for war crimes, they could do so without the Genocide Convention, which adds nothing to that power. The charges most likely to be brought against servicemen would be under the Geneva Convention and not under the Genocide Convention.

In addition, no objective observer could reasonably construe the proper actions of a combat soldier as being done with the intent to exterminate a people as a whole, and the presence of such an intent is a requirement for a true finding of genocide under the convention.

It may be argued, of course, that a foreign enemy would disregard all of these provisions. In this case it would be abusing the convention and hence breaking it; this is not an objection that any law or treaty can countenance.

Another protection built into the convention is the safeguard against improper extradition. If genocide were alleged against American servicemen who had already returned to America, an American court would have to find that the evidence was sufficient to justify bringing a charge of genocide before allowing the extradition. In addition, the United States would be obligated to extradite only in accordance with extradition treaties in force.

I believe the United States should ratify the Genocide Convention immediately to reaffirm our standing among nations dedicated to world peace and order.

THE FACTS ABOUT THE F-15 FIGHTER PLANE

Mr. GOLDWATER. Mr. President, on March 18, the Washington Star-News published on its front page an article designed to sabotage and undermine the F-15 fighter plane development program through a series of dramatic and sensational but unsupported allegations.

The article in question was written by Mr. Orr Kelly of the Star-News who has systematically attempted to cast suspicion upon Defense Department programs vitally needed for the security of the United States.

Mr. President, I want to point out that the F-15 fighter is sorely needed. It is

the only Air Force fighter plane now in the development stage. Its development is being closely watched by the Senate Armed Services Committee and other committees of the Congress who are charged with responsibility for military matters.

The story by Mr. Kelly creates the impression that the Defense Department is busily attempting to cover up a 21-percent increase in the cost of the F-15 and is hiding the fact that the F-100 engine being developed for the F-15 has had 52 undisclosed major breakdowns in its hardware.

At the conclusion of my remarks, I shall include in the record a fact sheet answering in detail Mr. Kelly's allegation. But for immediate purposes, let me say that no phase of the F-15 development has been hidden from me or my colleagues nor have there been 52 major breakdowns in the hardware of the F-100 engine. In the Pratt and Whitney development of the F-100, several design deficiencies have cropped up, just as they do in the development of any engine for a new aircraft. Each of these deficiencies has been effectively and systematically corrected and no one or group of these deficiencies could accurately be called "a major breakdown."

My concern, Mr. President, is with the overall impression created by this news story. To the casual reader, it seems to say that the Defense Department is squandering the taxpayers' money on a useless aircraft and attempting to hide the true situation from the Congress. This is certainly not the case and the fact sheet I shall present will bear me out. And I would just like to say, Mr. President, that I will continue to counter these unfounded stories aimed at the Department of Defense and the development of new and needed items of hardware for the military every time they crop up, whether the author happens to be Mr. Kelly or someone else.

I ask unanimous consent to have this fact sheet printed in the RECORD.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

[Fact sheet on Washington Star & News article]

F-15 COST IS HIDDEN

(By Orr Kelly)

CHARGE

A secret Defense Department Study shows a 21% cost increase on the F-15. This has been kept from Congress.

FACT

A parametric study by the Cost Analysis Improvement Group (CAIG) of the Office of the Secretary of Defense was accomplished in 1972, using a broad data base from past aircraft development programs. The results of this analytical effort were approximately 21% higher than the present Selected Acquisition Report (SAR) figures.

COMMENT

The SAR program estimate bases are negotiated contracts at target, negotiated options with not-to-exceed ceilings, cost trade-off studies at program go-ahead, unique management controls and a sophisticated performance measurement system that permits validation of the program estimate. The SAR estimate is now over three years old with 85% of the development program funded and still on budget target. Additionally, the

SAR values are substantiated within 2-3% by an Air Force Independent Cost Analysis (AF/ICA), validated by the Aeronautical Systems Division of the Air Force Command. This Air Force ICA has been examined and indorsed by the Air Force Auditor. Since the SAR is the DOD best estimate of costs, internal estimates considered in the process of arriving at the SAR estimates are not normally distributed.

CHARGE

The F-100 engine being developed for the F-15 has had 52 hitherto undisclosed major breakdowns in its hardware.

FACT

The developmental testing of the Pratt & Whitney F-100 engines has identified several design deficiencies, each of which has been systematically and effectively corrected. These have neither been major in scope nor have they been secreted by the contractor or the Air Force.

COMMENT

The identification of design deficiencies and performance inadequacies is a fundamental element in the development of all hardware, but it is particularly key in the area of aircraft engine development. To expect the test and qualification of an engine not to identify such deficiencies would be both impractical and unrealistic. The assertion that those technical problems identified to date in the F-100 engine program are "major breakdowns" is not documented in fact. Additionally, the Air Force has been open with both the press and the Congressional staff in discussions of all significant test results of the F-100 engine program.

CHARGE

The CAIG estimate has set off a bitter dispute within the Pentagon.

FACT

The existence of both the CAIG and the Air Force ICA has been thoroughly discussed between OSD and the Air Force without conflict.

COMMENT

The only dispute that is evident as a result of the CAIG and ICA difference is one of academic merit. The proponents of each method indorse the analytical basis and fundamental assumptions of their model. The differences in the conclusions of the two approaches have led to the recent and ongoing efforts to combine the merits of each, and thereby, hopefully to develop an improved model from which to work.

CHARGE

Some of the early production models of the F-15 will be equipped with engines that have not passed military qualification.

FACT

Engine qualification is currently scheduled to be completed by May 1973, and the first production aircraft is not due for delivery until November 1974.

COMMENT

The very conservative F-15 program approach of "fly-before-buy" has provided sufficient program flexibility to insure that such unwarranted risk need not be taken. Even with the delay experienced to date in completing engine qualification, the F-100 engine will be fully qualified at least a year before installation in a production aircraft.

CHARGE

Recent decision to proceed with production of the F-15 was a significant departure from the "fly-before-buy" concept.

FACT

The F-15 program has always maintained adherence to Mr. Packard's interpretation of the "fly-before-buy" concept. Explaining this approach to a Congressional Committee, Mr. Packard said: "In my mind, fly-before-buy means having an acceptable level of

confidence that we know what we are doing before we move ahead . . .".

COMMENT

Both the experience gained in the F-15 flight test program and the overall engine test program have generated the necessary level of confidence to proceed with the FY 1973 production of 30 F-15s. Production configured engines are currently flying in some RDT&E aircraft. The F-15 has bettered all of the current DCP thresholds except two.

CHARGE

There are F-15 associated costs hidden as other efforts to minimize the total F-15 costs.

FACT

There are on-going development efforts such as the GAU-7A 25 mm gun and the Tactical Electronic Warning Systems which, if successful, will have application to the F-15 aircraft.

COMMENT

The management decision to develop such high risk subsystem as the GAU-7A and TEWS outside of the F-15 program was, in no way, an effort to hide funds expended. Costs associated with these efforts have been reported to Congress and have in every case been clearly identified as having potential application to the F-15, as well as other aircraft.

CHARGE

When the engine cost went up \$552 million, \$522.8 million was deleted in needed spares, in an effort to offset the cost increase.

FACT

The engine cost increase of \$552 million was a net increase cost projected from the re-priced engine contract after deletion of the Navy F-14B engines. Subsequently, in May 1972, DOD directed a change in reporting cost on the SAR report. This change was applicable to all SAR reports and in no way related to the F-15 engine costs. Previous SAR documents included a last page titled, "Additional System Costs" which included a wide variety of cost categories such as (1) Modifications, (2) Component Improvements, (3) Modification Spares, (4) Replenishment Spares, (5) Common AGE, (6) Common AGE Spares and (7) War Consumables. The revised reporting eliminated all costs categories except (1) Modifications and (2) Component Improvement. The effect of this direction was to reduce the total dollar value of "Additional System Costs" reported by approximately \$520 million.

COMMENT

The increase in engine cost was appropriately reflected within the total system acquisition cost of the F-15, and was properly reported in the main body of the SAR. The reduction in reported "Additional Systems Costs" prompted by the DoD Directive does not impact the reported system acquisition cost.

CHARGE

F-15 program includes a \$15.5 million spin inhibitor system designed to solve a serious problem.

FACT

The F-15 does not have a spin problem and there is no spin inhibitor system either existing or envisioned.

COMMENT

The F-15 design has displayed such a resistance to spin that difficulties have been encountered in attempting to spin the 3/4 scale F-15 spin model. The assertion of a spin problem in the F-15 aircraft is unfounded.

SOCIAL SERVICES—THE HUMAN DIMENSION

Mr. MONDALE. Mr. President, in recent weeks a large number of my colleagues and I have joined in vigorously

protesting new regulations proposed by the Department of Health, Education and Welfare regarding Social Services.

We have tried to emphasize the severe and tragic impact these regulations would have on individuals currently benefiting from day care programs, alcohol and drug abuse programs, day activity centers for the retarded and other programs currently made possible through Social Services.

It is one thing to talk in Washington about the statistics involved, but it is quite another to see first-hand the individuals who need these programs so desperately. I had the opportunity last week to visit a day care center in Minneapolis and talk with working mothers who depend on that center to keep themselves and their children off the welfare rolls. It is a sobering experience to visit one of these centers while HEW's sword of Damocles is threatening the self-reliance of those who use it; I strongly recommend such a visit to anyone who doubts the value of the Social Services program.

It is the human dimension of Social Services that makes this entire matter so urgent and so important, and yet it is that same human dimension that has been lost in the new HEW regulations. This week there appeared in the Minneapolis Tribune an article by Sam Newlund which dramatizes as effectively as any article could precisely what effect these regulations will have on a 4-year-old girl in Minneapolis. I highly commend the article to my colleagues and I especially commend it to Secretary Weinberger, who has it within his authority to reverse the proposed regulations.

Mr. President, I ask unanimous consent that the Minneapolis Tribune article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROPOSED U.S. RULES KEEP CITY GIRL, 4, FROM DAY-CARE CENTER URGED BY DOCTOR
(By Sam Newlund)

A proposed set of controversial federal rules has spurred a national uprising among human service advocates.

The proposed regulations also mean quite a bit to Tracy Ybarra, a frisky Minneapolis 4-year-old who lives at 3647 N. 6th St.

The rules aren't in effect yet. They are supposed to begin April 1. That date may be extended, and the regulations may be softened.

But for Tracy, the uncertainty means that she can't attend a day care center which a child psychiatrist said she needs.

Tracy, the dark-eyed, gregarious daughter of Mrs. Shirley Ybarra, was referred to the Northeast Child Development Center, 1929 2nd St. NE., by Dr. Joel Finklestein, a child psychiatrist at the Minneapolis Clinic of Psychiatry and Neurology.

Mingling with other children at the day care center, Finklestein said, could help solve Tracy's behavior problems. He said the problems include temper tantrums and "screaming as in fear with night terrors."

Tracy was struck by a car while crossing a city street last year. The shock, the psychiatrist said, may have worsened her emotional troubles.

The child is barred from the day care center because of a highly controversial set of regulations issued Feb. 16 by the Department of Health, Education and Welfare (HEW). They have the effect of severely limiting eligibility and federal support for

a wide range of social services under current federal aid matching programs.

Besides day care, the regulations affect such services as alcohol- and drug-abuse programs, day activity centers for the retarded and homemaker services for the elderly.

For the most part, the rules limit services to welfare recipients. Tracy and her divorced mother are welfare recipients (Aid to Families With Dependent Children). But because Mrs. Ybarra is not working or undergoing job training, their status as welfare clients does not make them eligible.

Under the old rules, Tracy would be eligible as a "special needs" child. This means that an allowable reason for day care is not just to allow a parent to work or train, but to give the child a prescribed educational experience because of physical or emotional problems.

But the new rules, among other things, remove the "special needs" category of eligibility. Tracy, therefore, fits none of the eligibility pigeon-holes of the new rules.

At the center where Tracy would have gone, 32 of the 55 children now enrolled would be denied service by the regulations, according to Morris Manning, day care center director.

On a state level, the Department of Public Welfare estimates that the regulations would remove half of the 4,000 Minnesota youngsters now in federally aided day care centers.

"There is no question," Dr. Finklestein said, "that day care centers are marvelous adjuncts for people who need this kind of care." To have Tracy "out of the home and to bring her in contact with more children," he said, could have been "a corrective emotional experience."

Manning said the center is full now, but that Tracy would have been high on the list except for the new regulations.

The regulations were issued, according to HEW Secretary Caspar W. Weinberger, in an attempt "to bring some order out of what was promising to become a chaotic situation."

It was apparent, he said, that without "strong effort at the federal level, the expenditures by states for social services would soar out of control."

But there still is confusion. The April 1 effective date of the regulations may be extended, according to the best guess of knowledgeable Congressional sources.

Weinberger also has hinted that HEW may back off on at least one rule which does not allow private contributions to be counted as part of the matching money used to attract federal aid for social service programs such as day care.

Meanwhile, in a direct challenge to the Nixon administration's rules, Democratic lawmakers have introduced legislation which would nullify many of the changes.

Mrs. Eddie Hertzberg, coordinator of the Greater Minneapolis Day Care Association, listed 34 city day care centers which receive federal aid. All but 10 of them, she said, have federal aid for all of their enrolled children.

Private day care in the Minneapolis area, Mrs. Hertzberg said, costs from \$25 to \$38 a week.

PUBLIC HEALTH PROGRAMS

Mr. DOMENICI. Mr. President, all too often, in our eagerness to address the major issues encompassed in a legislative proposal, we overlook some important side issues which may have serious unintended consequences. I am pleased that the distinguished Senator from Idaho (Mr. CHURCH) was able to foresee the possibility of such a situation in regard to S. 1136, a bill passed by this body yesterday.

This bill, which would extend the authorities of various health programs from June 30, 1973, until June 30, 1974, is far-reaching legislation, affecting as it does most health-care institutions and personnel across this entire Nation. As such, the detrimental effect of unintended consequences would be very great indeed.

In view of recent judicial rulings, it is conceivable that the allocation of Federal assistance to health-related activities involved in S. 1136 would be conditioned on the recipient institution requiring doctors and other health-care personnel to participate in abortions and sterilization procedures. Senator CHURCH's amendment simply provides that Federal assistance contained in S. 1136 could not be conditioned on any requirement and that personnel will not be penalized for refusing to participate in abortions and sterilization procedures.

WOMEN EQUALITY GROUPS FIGHTING CREDIT BARRIERS

Mr. PACKWOOD. Mr. President, earlier this month, I joined with Senator WILLIAMS in cosponsoring S. 867, a bill to eliminate discrimination in the extension of credit to women.

I am certain that this issue will engender considerable debate, some heated and some enlightened. However, I am equally certain that, when all of the evidence is in and the arguments have been presented, there will be but one conclusion that can be reached: Women and men similarly situated should have equal access to consumer credit channels.

From time to time, we have all been advised of examples of "improvements" adopted by credit-extending institutions in their treatment of women. We are presumably expected to digest these trends and become complacently satisfied with the progress that has been made. In short, I suppose we are expected to recite that over-used cliché—"You've come a long way, baby!"—and be done with it. I cannot accept that attitude.

It is simply for this reason that I have joined with my colleague from New Jersey in urging the Congress to approve S. 867. We have, indeed, gone a considerable distance in overcoming discriminatory barriers to women in their efforts to secure equal status with men in credit transactions. We have not yet gone the full distance however. We must not relax our vigilant efforts one iota until we have succeeded in eliminating any and all considerations of the sex of the applicant in the process of securing consumer credit.

In yesterday's edition of the New York Times, Ms. Marilyn Bender published an excellent review of the problems women face in their efforts to secure credit. Also contained in this article is a summary of the efforts that have been taking place, the actions that have been taken, and the proposals that are being considered—all directed at eliminating sex discrimination in the extension of consumer credit.

I highly recommend this article for the consideration of my colleagues and ask that it be printed in its entirety in the RECORD.

There being no objection, the article

was ordered to be printed in the RECORD, as follows:

**WOMEN EQUALITY GROUPS FIGHTING
CREDIT BARRIERS**

(By Marilyn Bender)

A revolt against what many women and civil rights lawyers perceive to be sex discrimination in the extension of credit is gathering momentum.

Under the slogan "Give credit to a woman where credit is due," the assault takes two forms: a search for legal redress and well-publicized pressure tactics against the business community.

Some barriers are buckling more quickly than expected with support from politicians seizing "a nice clean issue, not abortion" (as one feminist put it), and from retailers and bankers aware that the female 53 per cent of the population dominates the consumer economy. There have been these developments:

Sex discrimination in the granting of credit is under attack in bills pending in both houses of Congress and at least half a dozen state legislatures including New York's. The first state law specifically banning sex discrimination in credit and insurance transactions was just passed in Washington.

The community property law was amended last year in the State of Washington to make wives equal managers of the property. A lawsuit soon to be filed in United States District Court in Louisiana will challenge "the arbitrary designation of the husband as sole manager of the community property." Such changes would give creditors additional protection and have profound implications for women's credit opportunities in the eight community property states.

The National Commission on Consumer Finance, which held hearings on the subject last May in Washington, D.C., recommended in a recently released report that states review and amend laws that inhibit the granting of credit to women.

Hearings by state commissions have since been held in Pennsylvania, California, Idaho and New Hampshire and by the Federal Deposit Insurance Corporation. Government investigations have been started in Wisconsin, Virginia, Missouri and Michigan.

The Center for Women Policy Studies in Washington, D.C., has received a grant from the Ford Foundation to study the problem.

The National Organization for Women has produced a manual for groups wanting to set up a credit project. Two to three dozen NOW chapters already have.

Such projects by women's groups in Dallas, Minneapolis and St. Paul and Baltimore against department stores and other retail grantors of credit have made it easier for women to open charge accounts in their own name. The Baltimore Credit Bureau Inc. agreed to set up independent credit records for women.

"Discrimination in credit deprives women of participating in the major American way of life and denies them equal access to the same opportunity men enjoy," asserts Barbara Shack, director of the women's rights project of the New York Civil Liberties Union. Like many other experts in this new area of civil rights, she acknowledges that reluctant merchants and lenders do not act necessarily out of male chauvinism.

Many are intimidated by the confusion surrounding the legal property rights and liabilities of women in the United States.

Still, three areas of inequitable treatment have clearly been identified in the hearings, investigations and surveys: retail credit, mortgages and bank loans. Women have "second class status" in stores and banks, according to the most thorough survey on the subject of women and credit, which was published last month by the Oregon Student Public Interest Research Group, an offshoot of Ralph Nader's consumer movement.

CLASS DOES NOT MATTER

That status cuts across age, race and economic class, although those of child-bearing age, the separated and divorced and those who most need credit to survive, show the greatest bruises.

Mrs. Eddlene Bloom of Oak Park, Mich., who was divorced last November, has sole title to a new Volvo, to a home valued at \$38,000 more than \$30,000 income in alimony and child support, and a savings account of \$3,000 in the same bank where she and her former husband had a joint checking account for 10 years. She also works part-time.

Yet last January when she applied to the J. L. Hudson Company for a charge account, she was asked for the names of her former husband and her lawyer. "Just to be safe, so we can verify your ability to pay," she was told. She received the charge plate, marked Ms., in two weeks. Last month, though, her application for a Master Charge account through her bank was turned down.

What disturbs Mrs. Bloom and other divorced women is to be "automatically" classified as a credit risk. "For years, I handled all the bills for the household," she said. "I am the one who insured our excellent credit rating, except that it turned out to be 'his' not 'our.'"

Indeed, while the married woman "is a nonperson when it comes to credit," as Representative Bella Abzug, Democrat of Manhattan, has said, the divorced or separated woman runs into what the Oregon study terms "the catch 22." The store will not extend credit "because the credit check will frequently find that she has no credit rating at all. The entire credit history belongs to the husband." The report recommended that wives be given separate files in credit bureau records.

ALIMONY OFTEN DISREGARDED

Many credit managers and lenders refuse to consider alimony or child support as income, moreover, because they do not regard it as a steady and certain source.

On the other hand, they are also reluctant to count the salary of the young working wife.

Take the case of Paul Wintjen, 27, of Milford, Del. and his wife, Marjorie, 25. Last year they were told their combined income of \$14,000 a year was too low to qualify for a Veterans Housing Administration mortgage with which they wanted to finance a \$19,900 house with a 10 per cent down payment.

Mr. Wintjen was earning \$9,500 a year as manager of a fast food restaurant. The bank refused to count the \$4,500 salary of Mrs. Wintjen, a hospital technician. However, the bank lending officer suggested that one half of her income would be computed if she would submit a medical certificate of sterilization. If her husband were to have a vasectomy, though, her income would not be counted "because you can still get pregnant."

Mrs. Wintjen bitterly reflects that "my income is counted 100 per cent by the state of Delaware and the United States Government for income taxes."

Proof of inability to bear children has customarily been demanded of young wives by bankers, who seem to regard the age of 38 as the frontier of safety. They are also biased in favor of nurses and teachers (as opposed to secretaries and assemblyline workers) on the theory that they are likely to go promptly from childbirth back to the job because their services are so much in demand.

A survey by the United States Savings and Loan League showed that 72 per cent of 421 banks queried said they would ignore part or all of a working wife's income. Only 28 per cent said they would count all of it.

Since 1965, the Federal Housing Administration's official policy has been to disallow a young wife's income only if she has no definite record of employment. In 1971, the Federal National Mortgage Association (Fannie Mae) repealed its guidelines of counting 50 per cent of a wife's gross earnings.

But the present determination of whether the joint income is likely to continue has been criticized by women's rights groups as being too subjective. And even when guidelines are loosened, they say, word does not necessarily filter down to the loan officers in the field.

Particularly vexing to women's rights groups is what they view as the inconsistency of credit policies as well as the "wide gap between policy and practice" (as the Women's Equity Action League found in its Dallas project).

In February, 1972, the St. Paul Department of Human Rights tested 23 banks by sending a man and a woman with identical credentials to apply for a \$600, 18-month auto loan. Both were 24 years old, married, earning \$12,000 a year as research analysts and the sole support of their student spouses. Both had good credit histories. Thirty-nine per cent of the banks revealed discrepancies in their loan policies (such as requiring a co-signature only in the case of the female), and nine banks were found to discriminate.

Most of the practices used in extending credit "are based on outmoded assumptions about the status and role of women in society," said Senator Harrison A. Williams Jr., Democrat of New Jersey in introducing his credit discrimination bill.

He pointed out that nearly 43 per cent of the female population worked and more than 44 per cent of married women living with their husbands were employed. Three out of 10 married women with children under 6 are in the labor force.

Feminists argue that there is no valid evidence to support the assumption that women are bad credit risks. A 1941 study by David Durand for the National Bureau of Economic Research offered statistical proof that women were better credit risks than men. A few more recent studies, as summarized in the Oregon report, either confirm this or conclude that marital status is not a reliable determinant of credit worthiness.

Title VII of the Civil Rights Act of 1964, which introduced the sex discrimination ban into Federal law, is addressed to employment. There is no Federal law or constitutional court interpretation to protect women in credit transactions. Some feminists argue that the Equal Rights Amendment, if ratified, would be a powerful tool against credit discrimination.

In Congress, three bills introduced by Mrs. Abzug would bar discrimination by sex or marital status in federally-related mortgage transactions, by federally insured banks or by creditors through an amendment of the Truth in Lending Act. A bill by Representative Margaret Heckler, Republican of Massachusetts, is also drawn to cover consumer lending.

Senator Williams's bill is broadly written to extend the Consumer Credit Protection Act. It also contains a provision for individual suits in a civil action, with damages equal to the amount of credit refused.

STATE LAWS DEFINITIVE

It is in state law, however, that property rights are defined and that creditors try to cover their risk. The Married Women's Property Acts, prevailing in 42 states, give women the right to contract in their own names. However, state laws also make husbands responsible for their wives' support. The ambiguous word "necessities" is often stated in connection with support and it gives some creditors pause.

In 11 states, there are some limitations on the liability of a wife for the contracts she signs and creditors fear she might disclaim her obligation.

So it is that creditors ask for information about a husband's income or demand his co-signature because they want double protection in collecting the debt. "They have no

right to it," says Mrs. Shack, of the New York Civil Liberties Union. She advises women who refuse to give it that they are within the rights, in New York at least. Furthermore, Mrs. Shack says, creditors should realize that the wife's earnings are free from her husband's claims so "she is really a better credit risk than he."

In the eight community property states, the wife is supposed to own half the property acquired after marriage. But until amendments like the one passed last year in Washington, the husband is sole manager of the community property.

Recent attempts to write a ban on sex discrimination into state or municipal law have usually proceeded on oblique courses. Washington has just passed the first law that flatly gives the right to engage in credit transactions without discrimination by sex or marital status.

CONSCIOUSNESS STRESSED

Most other efforts have been directed toward amending a public accommodation law to include a sex discrimination ban and then have a court or agency construe a bank or a retail store as a public accommodation. Such a bill just passed the New York State Assembly. Mrs. Shack has also filed a complaint under a sex discrimination ban in the state human rights law relating to loans for housing, land or commercial space. A bill signed and passed by the New York City Council is similarly related to housing.

Ira M. Millstein, a New York lawyer who served as chairman of the National Commission on Consumer Finance, is one of those who believe that legislative change is not the most important tactic.

"A lot of women are still not aware they should be entitled to credit," he said. "Until they are conscious that a woman with income is a person entitled to credit, period, that marital status shouldn't interfere, that she should be judged as any wage earner for better or worse, what good will it do to put another law on the books?"

"As soon as women start stamping their feet and raising hell and getting to the right person in the credit granting office, it will get done," he declared.

BEWARE PHASE III

Mr. MUSKIE. Mr. President, I commend to my colleagues an article written by Gardiner Means, former economic analyst and fiscal adviser to the Truman administration. Writing in the Washington Post "Outlook" section on February 18, Mr. Means point out that because of faulty diagnosis of the causes of inflation, the administration's planned stagnation of 1969-70 turned into a recession. According to Mr. Means, the inflation we were experiencing then—and still labor under—arises from price and wage pressures in concentrated industries. He terms this phenomenon "administrative inflation," in contrast to standard "demand inflation" or "reflation" which is part of economic recovery. He warns that phase III "may turn out to be so weak that it will allow substantial administrative inflation."

I ask unanimous consent that Mr. Means' article be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEWARE PHASE III

(By Gardiner C. Means)

(NOTE.—Charts referred to in text not printed in RECORD.)

While Congress complains that the White House has been usurping its powers, the peril

in the economic field is that Congress might give President Nixon a blank check for Phase III of his anti-inflation program—a plan that may well put more people out of work without curbing rising prices and further weaken confidence in the dollar.

The dangers in Phase III arise from a faulty diagnosis of the forces creating today's inflation. The Nixon administration, which appears ready to repeat its earlier mistake of relying heavily on monetary and fiscal policy, is still treating inflation as if it were the result or aftermath of too much money chasing too few goods, a textbook inflation stemming from excess demand. But in the past four years there has been no excess demand. Indeed, in the past 20 years, when prices rose 50 per cent, there was only a year and a half, during 1967 and 1968, when there was excess demand.

Rather, most of our price increases have come from two quite different types of inflation, both of which are operating today.

INFLATION IN RECESSION

The first, which is our major problem, arises from the exercise of market power. It can be initiated by business managers in an effort to widen profit margins. It can be caused by labor leaders seeking excessive pay increases. In either case, it is an "administrative" inflation that does not rely on classic supply-demand forces.

Such inflation can occur whether employment is full or less than full, and whether we are in a recession, as we were in 1969-70, in stagnation, as in 1971, or in a recovery. In any of these periods administrative inflation can show up in price rises for autos, steel, machinery and other products of the concentrated, less competitive industries.

The first clear case of an administrative inflation occurred in the 1950s. From 1953 to 1958, the wholesale price index climbed 8 per cent (see Chart 1 on Page B4) at the same time that manufacturers idled an increasing portion of their production capacity and joblessness became excessive. What we had, in short, was simultaneous inflation and recession, something impossible, according to the textbooks.

It is clear that the major cause of the wholesale price was a 36 per cent boost in steel prices and substantial price increases in steel-using industries; together, these accounted for more than half of the wholesale advance. Subsequent information has also made it clear that the steel price boosts involved a considerable widening of profit margins.

REFLATION: A GOOD THING

The second inflationary force we are experiencing today is the "reflation" of prices that occurs in periods of recovery, which explains part of the recent rise in food prices.

In a recession, flexible prices such as those for food, cotton and hides tend to fall sharply. But administered prices, especially in the less competitive industries, tend to fall little. In a recovery, the reverse tends to happen: Prices for food and other flexible items tend to bounce back the most, while prices in the steel, auto and other concentrated industries tend to rise the least.

This is precisely what happened in the Depression and post-Depression period (see Chart 2), and price data collected from buyers by the National Bureau of Economic Research show that it also happened in the recession-recovery cycles of 1957-58 and 1960-61. It is similarly involved in the current recovery from the 1969-70 recession.

Reflation is a necessary part of the recovery process and should be considered a good thing that helps restore balance in both prices and employment. During the Depression, for example, joblessness hit almost entirely in the concentrated industries whose prices had fallen the least; the later job recovery also came mostly in these industries. What happened was that rising demand during the recovery

lifted the more sensitive market prices while it increased employment in the concentrated industries whose prices were least sensitive, thus restoring the pre-Depression price balance and full employment.

The current reflation thus should not be interfered with. The big problem today is to prevent or minimize administrative inflation. And it is the failure to recognize that we are faced with administrative inflation, and the failure to apply the lessons of the past, that constitute the current danger.

DISMAL FAILURES

On two past occasions, the effort to treat administrative inflation by measures designed to control demand inflation resulted in dismal failures.

In 1957, the Federal Reserve Board sought to control the administrative inflation of the 1950s through a tight money policy that more than halted the growth of the nominal stock of money and produced a 10 per cent drop in the real stock of money. This precipitated the recession of 1958.

The failure of this effort arose from the fact that, while a tight money policy can control demand inflation, it cannot control an administrative inflation. This was acknowledged in 1959 by the chief economic adviser to the Federal Reserve Board, Woodlief Thomas, who noted that "Recent discussion of the influence of administered prices, stimulated by . . . the Kefauver Committee, has made a significant contribution to a better understanding of the problems of inflation and fluctuations in economic activity and employment. This contribution is in pointing out that there are unstabilizing forces in pricing actions of the private economy—on the part of both labor and management—that cannot be effectively controlled or corrected by government actions in the area of fiscal and monetary policies."

The Nixon administration's first attempt to control inflation, beginning in 1969, was also a complete failure due to faulty diagnosis.

On taking office, President Nixon announced that prices and wage rates would be left to the free market and inflation would be controlled by fiscal and monetary means. A large budget surplus, based on the Johnson surtax, was maintained throughout 1969, and so tight a money policy was adopted that expansion in the money stock was halted. There was no excess in demand. Yet in 1969 the wholesale price index rose 4.8 per cent, more than twice the rate of the years from mid-1965 to the end of 1968.

In his 1970 Economic Report, the President tried to explain this price rise by saying, "The inflation unleashed after mid-1965 had gathered powerful momentum by the time this administration took office a year ago." He called the growth of total spending "the driving force of the inflation" and outlined a program to "slow down the rapid expansion of demand."

The program was to take the heat out of the inflation by creating 2½ years of stagnation. Economic growth was to be halted to mid-1970, followed by two years in which the gross national product was, by plan, to be kept some 30 billion below the economy's estimated potential. This called for putting an additional 2 million people out of work so as to increase the unemployment rate to about 6 per cent.

ADMISSION OF FAILURE

This brutal plan was successful in creating stagnation (see Chart 3). The continued budget surplus became a restraining force and the money stock, measured in constant purchasing power, was reduced. Real demand declined, industrial production started down in the summer of 1969, and unemployment increased as planned. By the end of 1970, the objective of 6 per cent unemployment had been achieved.

But stagnation did not prevent inflation.

The reason is simple. The driving force of the inflation in 1969 was not "the growth of total spending." Rather, the President had unleashed the forces of administrative inflation by rejecting the price-wage guideline principle. The inflation in the 1969-70 recession was entirely administrative inflation, the kind of inflation that Woodlief Thomas had said could not be controlled by fiscal and monetary measures.

The administrative character of this inflation-in-recession is easily shown by examining the main sources of the rise in the wholesale price index (see Chart 4). The great bulk of the price increase during the recession was contributed by the concentrated industries. In the more competitive industries, prices went up little or went down. The only exception was the fuel and power index, which rose 11 per cent, largely because of the scarcity of pollution-free fuels.

The dismal failure of this program was acknowledged by the August, 1971, price-wage freeze after it had already cost the country nearly \$50 billion in lost GNP and promised more loss until reflation could restore full employment. No apology was given to the millions who suffered unnecessary unemployment or to the stockholders whose profits were reduced.

KENNEDY'S GUIDEPOSTS

Now, with the new emphasis on monetary and fiscal policy and with the weakening of price and wage controls in Phase III, it looks as if the Nixon administration is about to repeat these same errors. This is all the more disturbing because we have had importantly successful experiences in the control of administrative inflation, the Kennedy guideposts and the Nixon Phase I and II, which point the way toward an effective program.

The Kennedy guideposts directly faced the problem of administrative inflation. When the program was being drafted in 1961, unemployment was above 6 per cent and the problem was recognized as one of preventing administrative inflation while expanding demand through fiscal and monetary measures to achieve full employment.

The Kennedy program was both an outstanding success and a partial failure. Its success was in holding down administrative inflation while achieving full employment. By the fall of 1965, unemployment was down close to 4 per cent. Labor had adhered to the wage guideposts so closely that the labor cost per unit of manufacturing output was down 3 per cent. Management had not adhered as closely and industrial prices rose a little. This in itself was not serious and might have been corrected. Nearly full employment had been achieved with an annual rise in the wholesale price index of only 0.6 per cent.

But this goal had been achieved at the expense of a serious distortion in the relation between prices and wage rates because the guidepost program took no account of the reflation rise in the more competitive prices, which was appropriate to recovery. The increase in demand which reduced the unemployment rate from over 6 per cent to 4 per cent could be expected to raise the average of farm prices and other flexible market prices substantially and produce only a small increase in the most administered prices, thus bringing a moderate increase in prices and living costs. Yet the wage guidepost took no account of this appropriate rise in living costs.

NO DEMAND INFLATION

Because of the failure to include a cost-of-living factor in the wage guidepost, the program suffered a partial breakdown. By 1965, the rise in living costs had absorbed more than a third of labor's legitimate productivity gains and had significantly widened profit margins.

When this unfairness became obvious, labor refused to play ball and forced wage

increases larger than the increases in productivity. Management, striving to maintain the widened profit margins, passed along the increases in labor costs. This struggle lifted the wholesale index by another 3.5 per cent from mid-1965 to mid-1967 and brought wages and profits more nearly into line with each other.

Even with the partial breakdown of the wage guidepost, full employment was maintained throughout 1966 and 1967, and the rise in the wholesale price index from mid-1961 to mid-1967 was only 6 percent—just a little more than the reflation that could have been expected in moving from more than 6 percent unemployed to the 3.8 percent reached in 1967.

In no part of this period is there evidence of demand inflation. Farm and other sensitive market prices rose rapidly until relatively full employment was reached, but they were little higher in mid-1967 than in mid-1965. Most of the rise in those two years was administrative as labor sought to recover from the unfairness of the wage guidepost.

It seems likely that, with an appropriate living-cost provision in the wage guidepost, the full reflation could have been accomplished by 1965 with negligible administrative inflation, and full employment could have been maintained without further inflation.

THE NIXON PROGRAM

The Nixon guidelines program, initiated in August, 1971, after the failure of the stagnation policy, also directly faced both the need to control administered prices and the necessity of reflation.

The guidelines introduced in Phase II were a distinct improvement over the Kennedy guideposts in three respects. The wage guideline included a factor for the cost-of-living rise that could be expected from reflation, and the price guideline focused on containing profit margins, which allowed businesses to increase profits by producing more but not by increasing prices relative to costs. Finally, Phase II was backed by authority to exercise controls.

Phases I and II were quite successful in preventing administrative inflation. In the first 15 months to November, 1972, the weighted index for the six most concentrated industrial groups of Chart IV went up only 2.2 percent, while that for the three mixed groups went up 3 percent, mostly because of the scarcity of pollution-free fuels. Both of those increases could be expected as a part of the reflation accompanying the partial recovery. The cost-of-living factor meant that the non-farm labor cost per unit of output increased, but by less than 1.5 percent.

On competitive prices, special developments led to price increases exceeding those to be expected from reflation alone. A severe drought in Texas and the destructive corn blight in 1970 broke the cattle cycles so that less meat and fewer hides were available in 1972. Then drought in other parts of the world forced up grain and feed prices and, in turn, produced abnormally high prices for hogs, poultry and eggs, and also caused a further increase in beef prices.

Next summer, as the effects of these abnormal developments pass, food prices could be expected to fall if there is no further recovery. With a complete recovery to full employment, the reflation can be expected to be completed without much further rise in food prices, particularly if farm production is allowed to expand.

A FAIR DEAL

Phases I and II have also been substantially fair to both labor and capital. In the last half of 1972, the division between capital and labor of the income generated by non-financial corporations has been almost exactly the same as that in 1969 and as that in the eight years of the Eisenhower administration. While profits per unit of output have gone up faster than the compensation to labor, interest costs per unit of output

have gone up less, so that the total compensation to capital and to labor have risen together.

The success of Phases I and II in preventing administrative inflation suggests the need for retaining this type of program until reflation is complete and full employment is achieved.

But instead of perfecting the controls over administrative inflation, the Nixon administration persists in returning to the myth of a momentum from demand inflation and emphasizing fiscal and monetary restraints. Thus, the President's 1973 Economic Report, after recognizing the existence of nonclassical inflation, attributes it to momentum from the preceding demand inflation, saying: "Inflationary expectations and behavior left over from the country's experience since 1966, even though reduced in 1972 from previous heights, have not been completely eliminated."

The demand inflation arising from the Vietnam war was indeed real, but it did not start until mid-1967. In calendar 1966, the federal budget was in essential balance, and in the first half of 1967 there was practically no increase in the wholesale price index. But with the economy already at full employment, rapidly increasing military needs could be expected to produce an excess in demand and a demand inflation unless other demand was restricted.

THE JOHNSON SURTAX

This danger of demand inflation was well recognized by the administration, and in January, 1967, President Johnson recommended a 6 per cent surtax to be effective by mid-1967. The Congress failed to act. The President repeated his request in the summer of 1967, raising the requested rate to 10 per cent. Again, in January, 1968, the President repeated his request.

It was not until mid-1968 that the surtax finally passed, a year and a half too late. By that time, demand inflation had carried the wholesale price index up at an annual rate of 2.2 per cent from its mid-1967 level, with the increase approximately equal for competitive and administered prices.

The surtax brought the federal budget into essential balance by the last quarter of 1968 and insured a substantial surplus in 1969. It seems probable that, if the surtax had been passed in early 1967 and the guidepost policy stressed, full employment could have been maintained without either demand inflation or serious administrative inflation. As it was, the prime source of the 1967-68 demand inflation had been removed by the end of 1968.

Actually, there was no excess demand when President Nixon took office and little momentum from the preceding year and a half of mild demand inflation. And today one cannot take seriously the claim that a year and a half of demand inflation in 1967-68 at the rate of 2.2 per cent a year could engender such a momentum that, with no excess in demand in 1969, wholesale prices would rise 4.8 per cent and that four years later, with a recession in between, momentum from the earlier inflation is still the problem.

THE DANGERS AHEAD

Because of this faulty diagnosis and the President's willingness to use unemployed workers as an instrument of policy, there are serious dangers in the Phase III program he announced last month.

The first danger is that fiscal and monetary policy will again be used in an effort to prevent an administrative inflation that it cannot control. This would create more unemployment without reducing the pressures producing administrative inflation. The appropriate level of demand in the economy will not have been reached until full employment is attained and maintained. A restrictive fiscal and monetary program can prevent demand inflation, but

it cannot prevent the arbitrary lifting of prices and wage rates in the less competitive industries or achieve price reductions where costs have gone down.

The Phase III guidance program may turn out to be so weak that it will allow substantial administrative inflation, regardless of Mr. Nixon's "big stick" in the closet. The profit margin provisions have already been weakened to the point that there would be room for considerable administrative inflation even if the guidelines were consistently adhered to. And the administrative inflation is likely to be greater still because the pressures for adherence have been greatly relaxed.

The last danger is that the employment goal will be too niggardly. Even apart from human considerations, each extra 500,000 persons employed can produce an extra \$6 billion or \$7 billion of production, while the resulting wages, profits and taxes can provide a corresponding market.

In the light of all this, it is vital that Congress refuse to simply renew the Economic Stabilization Act expiring April 30. A mere renewal, leaving it entirely up to Mr. Nixon to use this crucial authority as he wishes, would be an abdication by the Congress of its responsibility for basic policy and another transferral of vast power to the White House.

A NECESSARY NUISANCE

Rather, Congress should make mandatory the price guidelines of Phase II for all corporations controlling assets, or having yearly sales, of more than \$500 million. To enforce this policy, Congress should create an interim wage-price guidance board equivalent to the President's Cost of Living Council, thus making that unit accountable to the Congress as well as to the White House. Businesses with assets or sales below the \$500 million cutoff should operate under voluntary guidelines unless the wage-price board finds that mandatory controls are necessary.

The wage guidelines should parallel those for prices: mandatory for workers in corporations with assets or yearly sales of more than \$500 million, voluntary for others unless the wage-price board decides otherwise.

Nor should Congress stop there. The legislation should make Congress' intent specific and clear on several other fronts:

It should adopt 4 per cent unemployment as the interim goal for the end of 1973 and 3.8 per cent for the end of 1974.

It should recognize that some reflation is to be expected in moving from the present level of employment to the interim goals.

It should approve the principle of a full employment budget—a budget that would balance at the interim employment goal but operate with a deficit when unemployment is more than the interim goal and a surplus when unemployment is less than the interim goal.

It should direct the Federal Reserve Board to adopt a "full employment monetary policy" under which it would expand the monetary stock to that level estimated as necessary to support the interim job goal but not to an extent that would result in excess demand and demand inflation.

In passing such legislation, Congress must be aware that while controls are a nuisance to both management and labor, that nuisance would be small compared to the "nuisance" the President was willing to impose on individuals by putting 2 million people out of work in his earlier attempt to control inflation.

The Congress should also recognize that some distortions can be expected in the economy as a result of prolonged price-wage guidance (though the President's 1973 Economic Report was not able to report any significant distortions to date or any other significant costs of the guideline program). But such distortions as may develop in the next two years are likely to be insignificant compared to the distortions that would arise with ad-

ministrative inflation. And the costs are likely to be insignificant compared with the advantages of a quick return to full employment.

Such an interim program should allay the fear in foreign quarters of run-away inflation in the United States and give ample time to develop a more permanent program to maintain full employment without administrative inflation.

NASA AND THE DREAMS OF OUR YOUTH

Mr. MOSS. Mr. President, the Committee on Aeronautical and Space Sciences has been conducting hearings for some weeks now on the NASA authorization bill S. 880.

Those of us in the Congress who are concerned about fiscal responsibility sometimes become so engrossed in our needs to cut this and trim that to reach a mechanical balancing of the budget that we sometimes fail to see the necessity of providing hope for our youth.

If the United States is to maintain its leadership in education, scientific programs and technology, new directions must be sought to coalesce the drive and dreams of the young. Such a program takes vision and courage.

This point has been brought home to me recently by a letter which I have received from a student in the masters program in physics at the Louisiana Tech University.

I ask unanimous consent that this thought-provoking letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOUISIANA TECH,

Ruston, La., January 31, 1973.

HON. FRANK E. MOSS,
U.S. Senate,
Washington, D.C.

DEAR SIR: This letter is from a concerned citizen speaking out for NASA. Since you serve on the space committee, I have a plea to make to you. Thus, I now call for your attention.

NASA has been taking a beating from the President and the Congress for the past few years. I feel that the time has come for it to stop. Before I relate my own experience, let me tell you about my background.

I was born in Houston, Texas on October 5, 1949. I have attended school since the age of five. This May I will graduate from Louisiana Tech University with a Master of Science degree in Physics. I have worked every summer since high school and am presently a graduate assistant. This has been done to pay my way through college. I have worked hard to get to this point, and I am ready for the job market upon graduation. But, that is the problem—what market?

This past summer I applied to NASA's summer program at MSC in Houston. However, this program was dropped due to a lack of funds. But summer jobs are always hard to come by.

This past October NASA came to this campus interviewing for permanent jobs. Only sixty jobs would be given, but there was a chance that I might secure one of them. Well, I waited; but I never did hear from them. Last week I called Houston. I was then told that I was to be offered a job; but the President had cut the NASA budget by some \$200 million. I am angry; hence this letter is being written. What good is a committee; if one man can control all of its planning and work?

I am tired of scientists and engineers

existing for and when the government needs them. We are professionals, not light switches to be turned off and on when needed. The power crisis is now upon us. The government, after delaying the needed research, now wishes to bring about a solution. The solution being to hire the scientists and engineers needed to bring about the desired result. Then, as in the past, they will be fired; for that is part of the cycle, too.

I cannot accept this fate. Give us a little respect. Do not take the cut in funds for NASA. If the people do not understand NASA, inform them of its activity and usefulness. Its science is for peace, not war. Remind them that a President committed us to the moon by 1970, which caused the sharp rise in monies needed to get there, not NASA. NASA was the means to the goal. How many advances have come from space research? How many more will come. I want to help; but I am limited by what? Money? How can a country grow without an imagination in its future? Only you can give the country what it needs; and thus, you must decide on my future and that of many others.

Let me now take the time to thank you for listening. I must be heard; for the disappointment in my heart is deep. America seems not to be the future of tomorrow, but the great of the past. You can only hurt the country by not keeping NASA strong. Please, help!

A concerned citizen,

RANDALL J. MILLER.

CABLE TELEVISION

Mr. KENNEDY. Mr. President, last week I had the pleasure of addressing a group of participants at a legislative conference of the National Cable Television Association. It was the first public opportunity I have had to discuss my thoughts on some of the issues surrounding this most complex and challenging field, and I would like to share some of those thoughts with my colleagues. I thus ask unanimous consent that the speech I delivered on March 21 be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR EDWARD M. KENNEDY

When we look into the future we see dramatic and revolutionary changes in the reception of information and all forms of communications. Data transmission, personal communication, educational training, public participation in the political processes, entertainment—all of these should be easier, faster, and more convenient in the years ahead.

Our newspapers will be delivered not to our doorsteps but by facsimile reproduction. Mail will be speeded by electronics. Our wives will do the shopping by remote control and pay our bills by pushing buttons. Advanced professional training, as well as elementary education, will be available at bedside. Even the opinion pollsters will reach into our households electronically to sample our views.

And when we turn the television knob from channel to channel, there will be new images: a city council session, a Spanish language program, chamber music, a garden society lecture, silent movies, even high school sports. By activating the little black box on top of the set we will be able to see, for a nominal price, first run movies, Broadway shows, and sports spectacles.

How much of this is fantasy? How much is fact? The reality of these glimpses into the future lies with successful expansion of cable television. We do not know for certain that a cabled household will participate in

more than a token sampling of this electronic magic. But we do know for certain that without broadband, two-way communications made possible by the coaxial cable, households of tomorrow will receive substantially less.

For each family, CATV can magnify and intensify the impact of television. And this impact already is tremendous. The average television set runs about seven hours a day. Pre-school children, according to studies, spend from 22 to 25 hours a week watching television—perhaps more time than they spend with their fathers. For these reasons, cable TV should have a constructive and enlightening influence on these impressionable viewers, as well as upon their communities. But if the "blue sky" promises remain unfulfilled, cable will just be expanding the vast wasteland that gives boob tubes and idiot boxes their nicknames.

Despite the many obstacles which have stood in the way of development, cable systems continue to expand. More and more cities are being wired each month. In Massachusetts, where the federal freeze on full cable expansion was followed by a year's moratorium imposed by the State CATV Commission, over one-third of all homes are in communities covered by cable systems or which have granted franchises for their development. Nationally, in the past five years the number of wired households has more than doubled, reaching an estimated six million. In the past year alone, since the Federal Communications Commission lifted the lid on cable development, over 2,200 applications for certificates of compliance have been received from cable developers. 800 of these already have been issued. Some projections of future growth suggest that, under favorable conditions, 26 million homes will be wired by cable in the next five years.

Can a better climate be developed for cable TV? This industry has become one of the most controversial topics in recent years. Cable operators are finding it necessary to contend with a formidable array of forces.

The industry had already committed close to a billion dollars in capital investments—twice that of the broadcasting industry. Requirements for the next ten years may reach \$15 billion. A large number of shareholders and investors must be convinced of cable TV's potential before the industry's external financing needs can be met.

Local governments, of course, have always had the basic responsibility for regulating cable systems. Each mayor and city council has special concerns and requirements which must be allayed or satisfied before a franchise is issued. State governments are getting involved, and systems must contend with these too. Yesterday, for example, the Massachusetts CATV Commission published detailed procedural regulations governing issuance of franchises.

Here in Washington—where you have assembled this week to evaluate these trends, and to try to hasten CATV development—you face three separate battle fronts. There is the Office of Telecommunications Policy in the White House, whose Director vacillates between praising CATV as "the biggest potential source of diversity" and condemning it as "basically a parasite of the broadcasting industry." OTP should be issuing its report on cable television any day now. We are all anxious to see what it has to say.

Next, there is the Federal Communications Commission, sometimes off again, sometimes on again, with seven Commissioners seeming to espouse at least twice as many viewpoints, who concurred long enough to tentatively agree on a slightly open door policy for cable TV.

Third, there is the Congress, which is perhaps as perplexed by—as it is concerned about—cable development, and which must follow its past pattern of inaction on CATV with an effort to resolve some of the sub-

stantial remaining issues facing your industry today.

Telephone companies have their own interests to protect, and haven't stopped trying to flog new cable developers with their telephone poles to insure that protection. Community and minority groups want a piece of the action too, and their desires should not be taken lightly.

Finally, there are the broadcasters and the program producers, two special-interest groups having the most to lose and the most to gain from cable expansion.

The FCC stated as its basic objective, in its February 12, 1972, Report and Order: "to get cable moving so that the public may receive its benefits, and to do so without jeopardizing the basic structure of over-the-air television."

There seems to be a strong feeling that the full potential of cable television will not be reached unless it gets a "television-signal oriented" start. But television signals don't emerge from trees; they are produced by the broadcasting industry. And they reach the viewer without direct charge to him.

I am sure that some of you may take a "broadcasting be damned" attitude towards your rival industry; no doubt that feeling is sometimes mutual. But I believe, however, that there remains a substantial public interest in maintaining the viability of broadcasting. It provides free programming of almost universal reach—something cable cannot do in the foreseeable future. It is not my belief that the public will accept lightly the prospect of having to pay in the future for what it is now getting free. It may be that control of distant signals and restrictions on siphoning will have to be adjusted—even on a market by market basis—in order to protect broadcasters against economic disaster. One of the FCC's rules clearly provides for this. But in making these adjustments, we should bear in mind the FCC's own observation, and in the language of the FCC, be "guided by the standard of what will best serve the public interest and not by a desire to protect any industry from the impact of new technology."

To producers of television programming, the name of the game is copyright protection. The ink on the pages of the Second Circuit's opinion in *CBS vs. Teleprompter* is hardly dry, and already the distant-signal opening given cable by the FCC last year has been slammed shut, and worse! The court has fired a salvo into the halls of Congress as indicated in the concluding language of the opinion. It reads:

"We hope that the Congress will in due course legislate a fuller and more flexible accommodation of competing copyright, antitrust, and communications policy considerations, consistent with the challenges of modern CATV technology."

Copyright revision legislation will soon be introduced which will deal with the rights and liabilities of cable television systems. Surely one of your objectives when you meet tomorrow with your elected representatives is to make something happen in this area without undue delay. As a member of the Judiciary Committee, I will have the opportunity to participate directly in the development of this legislation. Those of us charged with decision-making will be guided above all else by the extent to which you can demonstrate the value of the services you will be rendering the public. Thus your industry in large part can by its own actions play a major role in the shaping of its future.

Let me expand further on this thought. I know, for example, that you will want to take a hard line before Congress and the FCC on copyright liability and anti-siphoning rules. Inflexibility on these points, however, can only prolong and accent two criticisms of your industry: that you want something for nothing, and that you want to sell to the public something that is now getting

free. Your opponents are saying, these things, and saying them persuasively. Let me quote from the Comments before the FCC of Maximum Service Telecasters:

"Logically it would seem that CATV systems would have much greater economic motivation to develop and provide both attractive, original programming of their own and the new non-program communications services they promise if their success were dependent on their ability to do these things rather than on artificial and unfair exploitation of outside signals."

Cable proponents seem on occasion to be selling government decisionmakers a philosophy of "let us expand now, and we will provide service later." I believe, however, that you will find that your willingness to provide more services to the public now will result in governmental responses that will make cable a good investment and allow it to expand even faster.

It seems to me that the time is now to turn some of cable's billion dollar investments from stringing more wire to the development of enriched programming and broader consumer services. To say that there is no money in this approach may prove to be a shortsighted attitude and eventually a major contribution to the industry's own undoing. For, between the chicken of growth and the egg of service, Congress and the public want to see evidence that the American people will in fact be best served by public policy decisions fostering cable's growth.

Cable system origination in New York City and the ATC agreement with minorities in California serve as outstanding models of cable's immediate potential. Elsewhere there is more promise than progress. Both government and cable interests must work together to insure that "blue sky" promises not give way to barren desert performance, where cable offers the best, makes the most, and then provides the least. Innovation and diversity imply something new and different; if all that cable brings into our homes are additional channels of movies and sports, then the public will find itself the victim of a bait and switch scheme of incomparable proportion, and government will respond accordingly. We are all aware that the rules of this game will constantly change in response to the performance of the players, the impact on opposing teams, and the reaction of the fans.

With confidence in the ability and willingness of cable television to realize its potential and without any lessening of support for free and independent broadcasting, we can commit ourselves to a national policy supporting as rapid and universal development of CATV as possible. We can move towards coordinating federal programs to support demonstration uses of cable for government purposes, including education, health, environmental protection, and the like. We can even consider government supported research for translating technological potential into actual public benefits, and government underwriting of financing of systems in marketplaces where private development would be impractical and uneconomical.

The door to cable development has indeed been set ajar, and I am sure that your industry will cross the threshold responsibly. Congress and the public will then respond to open that door more fully, so that we all might ultimately realize the potential of one of technology's most powerful weapons against ignorance and isolation.

SENATOR CHURCH'S AMENDMENT ON ABORTION

Mr. EAGLETON. Mr. President, because my presence was required in committee sessions yesterday, I was unable to participate in the floor debate on the Church amendment to S. 1136, the Pub-

lic Health Service Act extension. I did vote in favor of the Church amendment and want to take this opportunity to express my views on it and on the subject of legalized abortion.

As an individual and as a member of the U.S. Senate, I have consistently opposed legalization of abortion. During consideration of the Family Planning and Population Research Act of 1970 (Public Law 91-572), I was instrumental in barring the use of Federal funds for abortion as a method of family planning.

I was very much surprised by the recent decision of the Supreme Court outlawing State restrictions on the performance of abortions during the first 3 months of pregnancy. I think this was an improvident decision but, in any case, it is clear that the Constitution precludes any Federal legislation, other than a Constitutional amendment, intended to override the Court's decision.

What is clearly permissible, in my view, is legislation of the kind that I joined with Senator CHURCH in sponsoring and which was adopted by the Senate yesterday. This measure would prohibit the imposition of any requirement, as a condition or consequence of Federal aid to health care institutions, forcing individuals or institutions to participate in abortion or sterilization procedures contrary to their religious or moral beliefs.

The Supreme Court grounded its decision on a "right of privacy" that is nowhere expressly stated in the Constitution. However, the first amendment to the Constitution clearly states a right of every individual to freely exercise his or her religious beliefs. We know that participation in abortion or sterilization procedures is contrary to the religious and moral beliefs of a great many Americans. I believe it is fitting and proper that their freedom of conscience—their right to adhere to the tenets of their religion—be protected by Congress.

As was pointed out in yesterday's debate, there have been court decisions in Montana requiring the performance of sterilizations in Catholic hospitals based on the finding that these hospitals have received public assistance, including Federal construction funds under the Hill-Burton Act. It is my earnest hope that the legislation adopted yesterday by the Senate will be enacted into law and operate to remove the legal basis for any such court orders in the future. In the event that S. 1136 goes to a conference committee, I would hope to be named a conferee, as a member of the Senate Health Subcommittee. In that case, Mr. President, it will be my intention to exert my best efforts on behalf of the retention in the final bill of this freedom of conscience provision regarding abortion.

U.S.-LATIN AMERICAN RELATIONS

Mr. MUSKIE. Mr. President, I have been increasingly concerned in recent years by a deterioration in U.S.-Latin American relations. U.S. policy—or non-policy—has verged on indifference. I believe it is time to reassert the best traditions of a good-neighbor policy toward Latin America. The opportunities for

strengthening the political and economic ties between our two hemispheres are great. In cooperation with the nations of Latin America, we must come forward with a set of initiatives which will put U.S.-Latin American relations back on a healthy, cooperative path.

Sol Linowitz, former U.S. Ambassador to the Organization of American States, has recently written an article setting out several constructive steps that the United States might take to improve our relations with Latin America. I believe Ambassador Linowitz' article deserves careful study, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOK, MR. PRESIDENT, LATIN AMERICA IS ON THE MAP, TOO

(By Sol M. Linowitz)

Not long ago the *Jornal do Brasil* (a not unfriendly Brazilian newspaper) ran a cartoon that shows President Nixon standing before a globe of the earth contemplating Europe, the United States, and Asia. In the next panel, Nixon, crouching down, peers in astonishment at South America and exclaims: "Look, there's a map on the underside, too!"

The cartoon's implications are painfully clear: To Latin Americans, President Nixon is the first U.S. President in this century who has prided himself on his mastery of world affairs, yet has had literally no policy for Latin America. Other Presidents during the past seventy years, whether their goals were regarded as constructive or jingoistic, at least seemed to have some clear idea of what they wanted to accomplish "south of the border." Theodore Roosevelt had his Big Stick and Gunboat policies, replete with territorial-imperialist chest pounding. FDR launched the well-meaning, paternalistic Good Neighbor policy. And John F. Kennedy created the Alliance for Progress, which was later furthered by Lyndon B. Johnson. But the Nixon administration has seemed rudderless in this area, and Latin Americans speak bluntly of the Nixon "non-policy" toward Latin America.

Ironically, the relationship between the United States and Latin America inherited by the Nixon administration was basically a healthy, cooperative one.

There were, of course, problems and quarrels. But under the Alliance for Progress, Latin America had managed to achieve an annual average of 2.4 percent real per capita growth. This was exactly one decimal point below target, but far better than might have been expected during the 1960s, when the area's terms of trade and income from export commodities suffered badly. During that decade the United States contributed over \$8 billion in bilateral aid and was responsible for much of the \$6.5 billion in loans from international institutions such as the World Bank and the Inter-American Development Bank. The Latin Americans themselves, moreover, put up at least 90 percent of the capital required to fuel development and built up a sizable infrastructure of public-works projects and social programs.

One of the Alliance's crowning achievements was in export expansion and diversification—which is the critical bone of contention between the United States and Latin America today. Under the Alliance, Latin America moved away from the wasteful import-substitution policy that had been its mainstay during the 1950s, and concentrated instead on diversifying its exports. However, toward the end of the decade, Latin American leaders realized that further success in this program would require the United States and other countries of the developed world to tear down the trade barriers to Latin

American-manufactured exports. It was at this stage that President Nixon stepped onto the scene.

Then came two striking developments in U.S.-Latin American relations: the Rockefeller mission to Latin America and the Latin American meeting that produced the document called the consensus of Viña del Mar.

In late January 1969, Nixon announced that he was sending Gov. Nelson Rockefeller—a former Co-ordinator of Inter-American Affairs, long known for his deep interest in the area—on a fact-finding mission to a dozen Latin American capitals. Rockefeller surrounded himself with highly respected experts from a wide range of disciplines and embarked on a whirlwind tour of Latin America. Some skeptics asked whether still another study was in fact necessary, but when it came out, the Rockefeller report did demonstrate the importance of Latin America for the United States objectives, and recommended significant action. The President accepted the report, and Latin Americans waited to see whether he would act on it.

Meanwhile—at precisely the same time as the Rockefeller mission—there was a meeting of CECLA—the Special Coordinating Committee on Latin America, which consists of all OAS members except the United States. The purpose of the meeting was to coordinate the Latin American position within the Alliance, and the conferees agreed on a statement issued as the consensus of Viña del Mar.

The consensus covered a good deal of ground, ranging from international financing to the transfer of technology and the role of foreign direct investment; and from tariffs and quotas to the prices of commodities on the world markets.

Specifically, it asked that the United States eliminate tariff and non-tariff barriers on goods from the developing world and that it champion Latin exports by helping secure similar treatment for them in other developed markets. The CECLA group also sought greater financial cooperation that would allow recipients of aid to set their own priorities with no strings attached to the foreign aid they received.

Few national leaders in their first year in office have had such clear guides as the consensus and the Rockefeller report by which to formulate a foreign policy for a region. Yet for some inexplicable reason, the major Latin American policy statement, on October 31, 1969, the President indicated his awareness of the key problems, and then to the great disappointment of Latin Americans did very little about them.

The Nixon proposal for Latin America, as outlined in the October speech, was known as Action for Progress in the Americas; its ideas were meant to be the backbone of the Nixon policy for Latin America. On the face of it, the program seemed to offer highly positive concessions to Latin America in four key areas.

First, with respect to trade preferences, the statement said that the United States would urge other industrialized countries to agree on a uniform, nondiscriminatory system toward developing countries. The system would be very generous, with no ceiling on preferential products that Latin America felt it could sell to the United States; and the United States would be prepared to go ahead with preferences for Latin America on a number of products if Europe and Japan could not be persuaded to go along on a more general trade preference for all developing countries.

A second point was the untangling of U.S. AID (Agency for International Development) loans. It was emphasized in the policy statement as a significant step forward. What was not underscored was the fact that while AID recipients would no longer be tied to U.S. sources alone, they would be free to purchase manufactured imports with AID funds only from sources within Latin America.

A third and slightly related point was the promise to move toward increased multilateralization of U.S. aid for Latin America.

The program's last key point concerned the need to "deal realistically with governments in the inter-American system as they are." The President conceded that each nation had a right to decide whether or not it wanted foreign private investment. Without threatening countries that might choose the path of expropriation, the President quietly warned that such action might seriously affect investor confidence.

Latin Americans accepted these key policy positions with a sense of hope, which has over the months turned to cynicism and disillusionment.

One major setback to Latin American confidence in the new program came on August 15, 1971, when the Nixon new economic game was announced. The plan placed a 10 percent surcharge on imports to protect the U.S. balance of payments, and Latin America found itself lumped in with the other exporting areas. Many commodities that make up the bulk of Latin American exports were excluded, and White House spokesmen pointed out that only 22 percent of Latin American exports would be affected by the surcharge. However, they missed two important points that did not escape Latin Americans: First, the exports affected were fast-growing manufactured products, which Latin producers had worked long years to be able to manufacture for successful marketing in the United States. Second, Latin America's dollar-trade deficit with the United States had exceeded a billion dollars the previous year; and Latin Americans understandably felt that they should not be penalized in the same category as the European, Japanese, and other exporters who had contributed to the balance of payments predicament of the United States.

Quite clearly, the President had missed an extraordinary opportunity. He could have said he recognized that Latin America was not a factor in U.S. economic problems and could have absolved the area from the added burden of the surtax. Having failed to do so, however, he could no longer blame a protectionist Congress (as his administration had been doing) for the failure to live up to his commitment on trade preferences for Latin America.

The predictable result was to unite Latin America firmly against the United States. Even such strange bedfellows as Brazil and Chile were able to get together with other Latin American countries in an emergency CECLA meeting in Buenos Aires that condemned the U.S. action and explored possible sanctions against the United States. A belated decision (made after the CECLA affair) to roll back the 10 percent AID cut failed to overcome the resentment and hostility that had been aroused.

The promised multilateralization of aid also proved to be a disappointment to the Latin Americans. At the beginning of last year, President Nixon issued a statement that appeared to increase politicization of multilateral aid channeled through the Inter-American Development Bank and the World Bank. He warned that all U.S. aid—including that funneled through multilateral institutions—would, in the absence of special circumstances, be cut off from countries that expropriated U.S. investments without prompt and adequate compensation.

Other statements exacerbated the situation. While still secretary of the treasury, John Connally stated in an interview: "The United States can afford to be tough with Latin Americans because we have no friends left there anymore." Later, as good-will ambassador to Latin America, Connally warned Venezuelans that "the United States has the power to export prosperity or poverty to any country in the world to which it chooses to do so."

Against this background it is quite clear that the Nixon non-policy toward Latin

America has had one effect: It has united Latin America in opposition toward the United States and its surrogates—the hundreds of subsidiaries of U.S. corporations spread throughout the region. On other issues it has helped set Latin American leaders against each other in their efforts to vie for leadership of the region precisely at the time when the nations of Latin America should be working solidly together for development of the continent.

Neither the United States nor U.S. private investment in the area has benefited from this non-policy toward Latin America. Therefore, what we now need—and need badly—is a cohesive policy for Latin America that will take into account the hemisphere's special requirements and desires. And this challenge presents the new Nixon administration with an extraordinary opportunity at a pivotal moment.

What should be the ingredients of such a policy? Here are a few suggestions:

1. *Define U.S. goals in the hemisphere, and spell out just as clearly what the United States expects of others. Then stick to these commitments.*

There is no need of studies and analyses that make clear what our approach should be and how we should go about it. What we need—and desperately—is to recognize that clarity, like charity, must begin at home. To talk about "partnership" at a time when there is not even a constructive dialogue is neither realistic nor constructive. To be effective, a partnership must begin at the top—with the President. There must also be a genuine commitment on the part of the President, which in turn is reflected throughout the administration.

2. *Move the Alliance for Progress toward a second stage, in which it would really be directed on a multilateral basis, with goals mutually defined.*

We have long since passed the time when the United States can attempt to direct the destiny of Latin America. It is now necessary for all sides to participate in setting up goals and guideposts. The consensus of Vina del Mar and the recommendations of the Rockefeller commission can be important guides in establishing common objectives. The United States should indicate its readiness to join in developing such common goals.

3. *Use existing inter-American institutions to conduct as much of our governmental business with Latin America as possible.*

The OAS and the Inter-American Development Bank are two established organizations in which the United States can place its trust in dealing with the area. Both are staffed with dedicated international civil servants who are seeking to develop the region and who can speak both the language of the United States and that of Latin America. We should make clear our confidence in, and respect for, such inter-American institutions.

4. *Once the United States has agreed to the principle of multilateralism, we should assure that decisions with respect to multilateral aid are truly multilateral.*

As is true with any corporate board of directors, the role of the board of a multinational institution is to set overall standards and leave everyday management to the professional managerial staff. The same should apply in the case of international lending institutions. It would be helpful in this regard if Japan, European countries, and others were to join such institutions as the Inter-American Development Bank in order to assure that they are truly multilateral and not dominated by the political influence, express or implied, of the United States.

5. *Open up the U.S. market to Latin American products to the greatest extent possible and in a way that will truly benefit interhemispheric trade.*

One idea worth exploration would be for the United States to allow Latin American

products to come in free of all duties and quotas to the extent of the almost \$2 billion trade surplus it has with the region. There is no reason why a nation as powerful as the United States must make its mark at the expense of its developing neighbors. To make the formula more acceptable to Congress, the United States could insist that Latin nations reduce their barriers against U.S. exports to the degree they benefit from increased exports to the United States.

6. *Help rekindle the fire of economic integration.*

During the first eight or nine years, regional integration worked well, but it has since been stymied in its growth. Both LAFTA (Latin American Free Trade Association), which includes all of South America plus Mexico, and the Central American Common Market have run into difficult times. At the presidents' summit meeting in April 1967, a Latin American common market was the leading item on the agenda. The United States could help revive interest in it by offering to become a nonreciprocal member—which would open up its markets—but not insist on the same from Latin Americans. A major market outside the area could be the stimulus that regional integration needs to set its export goals high and to develop the way to reach them.

7. *Make clear the nature of the relationship between the U.S. government and Latin American subsidiaries of U.S. parent companies.*

If the U.S. government has a responsibility for helping American companies in conflict with foreign governments, then it must also be prepared to be responsible for companies that conduct themselves badly in a particular country. The United States could insist that American companies follow a specific code of conduct of responsible international companies that would state what rights companies should be able to expect when dealing internationally, and what duties to the host country they have in return. If a U.S. company is wronged under such a code, then the U.S. government could, in good conscience, step in to make this known to an international tribunal, while avoiding any unilateral action.

8. *Accept the idea that Latin American countries—like other countries of the world—have the freedom to determine their own political, social, and economic systems on behalf of Latin Americans and in a Latin American way.*

The United States must learn to understand and accept the fact that differences exist among people and their ways of looking at things. And it must learn to adapt to these systems when they pose no intrinsic danger to the United States, and to avoid hostile knee-jerk reaction when disagreement occurs.

There is, of course, no guarantee that such policies will entirely abate hostility and tension. But they could begin to change the climate and move us back to a spirit of cooperation, rather than conflict. The need has never been greater, both in our own interest and in the interest of hemispheric progress and world peace.

RESOLUTIONS OF THE MAINE STATE LEGISLATURE

Mr. MUSKIE. Mr. President, I have recently received two resolutions passed by the 106th Legislature of the State of Maine. These are: First, Joint Resolution Memorializing Congress for the Purpose of Amending the United States Constitution Relative to Abortion; and second, Joint Resolution Memorializing the President and Congress of the United States To Obtain a Full Accounting of POW's and MIA's.

On behalf of my colleague, Senator HATHAWAY, and myself, I ask unanimous

consent that these resolutions be printed in the RECORD at this point.

There being no objection, the resolutions ordered to be printed in the RECORD, as follows:

JOINT RESOLUTION AMENDING THE U.S. CONSTITUTION RELATIVE TO ABORTION

We, your Memorialists, the Senate and House of Representatives of the State of Maine in the One Hundred and Sixth Legislative Session assembled, most respectfully present and petition your Honorable Body as follows:

Whereas, medically and scientifically a human embryo or fetus exists as a living and growing human individual from the moment of conception; and

Whereas, the moment of birth represents merely an identifiable point along the course of human development and not the beginning of human life; and

Whereas, respect for human life has been a hallmark of civilized society for millennia; and

Whereas, the Maine Legislature has supported and shown concern for the life of the unborn child by rejecting all attempts to liberalize, modify or change the State's abortion law; and

Whereas, the United States Supreme Court by decision has ruled against the unborn; and

Whereas, the Maine Legislature wishes to establish and define the rights of the unborn; now, therefore, be it

Resolved: By your Memorialists, that the United States Congress propose an amendment to the Constitution of the United States to read:

1. As used in the Fifth and Fourteenth Articles of Amendment to the Constitution of the United States, dealing with the deprivation of life, the word "person" shall apply to every human being regardless of the stage of his biological development.

2. Nothing herein shall prohibit any state from adopting such laws as are necessary to preserve the life of the expectant mother.

3. Congress and the several states shall have the power to enforce this amendment by appropriate legislation; and be it further

Resolved: That certified copies of this resolution be immediately transmitted by the Secretary of State to the President of the Senate and the Speaker of the House of Representatives of the United States Congress, to each Member of the Maine Congressional Delegation and to the Legislatures of each of the several states attesting the adoption of this resolution by the One Hundred and Sixth Legislature of the State of Maine.

JOINT RESOLUTION TO OBTAIN A FULL ACCOUNTING OF POW'S AND MIA'S

We, your Memorialists, the Senate and House of Representatives of the State of Maine in the One Hundred and Sixth Legislative Session assembled, most respectfully present and petition the President and Congress of the United States, as follows:

Whereas, the North Vietnamese and their allies have not as agreed, satisfactorily accounted for all prisoners of war or persons missing in action; and

Whereas, the recent list of 555 prisoners of war released by North Viet Nam in response to agreement, does not include names of 56 known prisoners of war and is considered no more accurate than their earlier lists; and

Whereas, the United States Government has received the names of only 7 of 317 servicemen known to be missing in Laos; and

Whereas, the tragedy of leaving American prisoners behind previously experienced in Korea must not be repeated; and

Whereas approximately 1,400 families must not be abandoned to live in torturous anxiety as to the whereabouts of their loved ones; now therefore, be it

Resolved: That we, your Memorialists, respectfully recommend and urge the President and Congress of the United States to consider the feeling of this State expressed in the foregoing preamble as well as those of the Nation and to do everything within their power to obtain a satisfactory and complete accounting of all prisoners of war and persons missing in action; and be it further

Resolved: That the Secretary of State be directed to transmit forthwith suitable copies of this Memorial to the President of the United States, to the Speaker of the House of Representatives and the President of the Senate of the United States Congress and to the Members of said Senate and House of Representatives from the State of Maine.

THIRD ANNIVERSARY OF SOUTH VIETNAM'S LAND-TO-THE-TILLER PROGRAM

Mr. PACKWOOD. Mr. President, it was 3 years ago yesterday that President Nguyen Van Thieu promulgated the land-to-the-tiller law in South Vietnam, and announced that this basic reform was to be carried out over a 3-year period. By the end of those 3 years, the goal was to distribute some 2.5-million acres—half the cultivated land in South Vietnam—to 800,000 tenant farmer families.

The underlying goal, of course, was to deal with the basic land-based grievances of this impoverished, majority portion of the rural population—grievances which had led to substantial support for the Communist Vietcong just as similar grievances had produced crucial peasant support for revolutions in Russia, China, and Cuba and for other 20th century upheavals.

Yesterday was the third anniversary of the land-to-the-tiller law, the day for which the original goals were set. It therefore seems highly appropriate to examine what the actual achievements have been. Today, 1,850,000 acres of landlord-owned lands, and 450,000 acres of government-owned lands have been distributed, altogether 2.3-million acres, out of the original goal of 2.5 million. They have been distributed to a total of approximately 750,000 families out of the original goal of 800,000 families. Over 150,000 more families are in the process of receiving title to additional lands. Landlords are receiving fair compensation.

Thus, rare for a reform program of such scope and magnitude—assuredly even in this country, let alone in South Vietnam, in the midst of a war—the original land distribution goal has been more than 90-percent fulfilled. If one counts the further land now in the final distribution process, the goal has indeed been 110-percent fulfilled.

This has, in fact, constituted one of the most sweeping and effective programs of social and economic reform in postwar Asia rivaling fully the land reforms of Japan, Taiwan, and South Korea. For the first time, it has given the South Vietnamese peasant, over 5 million people in the 750,000 households that have now received their land, a real stake in their society.

While the land reform has been going on, rice production has increased by one-third. While it has been going on, Vietcong recruitment has dropped from the

range of 5,000 to 7,000 men, recruited each month from the South Vietnamese countryside, to fewer than 1,000 men recruited each month. A recently-published report by Control Data Corp., carried out for the Agency for International Development, which was based on more than 900 random-sample interviews with Mekong Delta peasants, has shown an accompanying, dramatic shift in peasant attitudes and allegiances toward the government in Saigon.

The British used land reform against the Malaysian insurgency. The Venezuelans used it against Castroite guerrillas in the early 1960's, and the Bolivians found it was virtually 100-percent successful as a means of heading off the appeal of Che Guevara. Such land reforms did not cost a single life. They did not kill a single man, woman or child. But, again and again, they have resolved the basic, deep-seated grievances which had led, or were leading, an impoverished peasant population toward massive violence. And one may add to this list the land reforms of Japan, Taiwan, and South Korea, and those also of Iran and Mexico, each and every one of which has given great impetus to agricultural production and to overall economic development. Several of these, too, may have headed off massive political violence.

Unlike the countries which I have described, the old governments of Tsarist Russia, pre-1949 China, and Batista's Cuba did not learn the lesson in time: They were unseated by revolutions which relied predominantly on the support of a landless peasantry.

In South Vietnam, it is tragic that the lesson was not learned earlier. But it was, at least, and in fact, learned. When the Thieu government does something bad, let us say so, loudly, and clearly. But when it does something good—when it helps 5 million of its most impoverished, most aggrieved citizens toward a better life and toward personal dignity—let us also say so, again loudly and clearly.

And let us not lose this precious lesson for the future, or fall into the trap of thinking that the only possible attitudes toward the peasant populations who together constitute 70 percent of the population of the third world are attitudes of total neglect or massive violence—total neglect of their awesome poverty, massive violence as a response, if that poverty makes them prey to those who organize for revolution. For the third world, there is a third alternative: the alternative of humane, consistent support for programs that will ameliorate the poverty of the hundreds of millions who till land that they do not own themselves, desperate and hungry; the alternative of programs that, through providing them with a real stake in their society, will give an assured motivation to increase food production, and a solid reason to eschew massive bloodletting.

Such programs will not only help mightily to prevent future Vietnams, in which millions would surely die, just as 7 million or more have died already in the great peasant-based revolutions of the 20th century, but they will also provide the only base which has really worked for consistently increased agricultural production, sparked by the

knowledge that increased production redounds to the farmer's benefit, not to the landlord's.

President Thieu has carried out a massive land reform program. That was wise and well done. This body supported President Thieu, with appropriate financial and technical assistance through the foreign aid program, in carrying out that land reform. The direct and indirect support cost has been equal to far less than a single week's cost of the war.

Let us hope that the lessons learned from Vietnam—as to the passion and power of peasant grievances and the urgent need for programs that will address such grievances in time—will not be lost upon us, or upon our friends around the world. It would only compound the tragedy of Vietnam, if a lesson that were bought so dear, were lost almost before it was grasped.

So, I may say honestly to President Thieu, that while very far indeed from agreeing with all the policies of his government, I recognize that one very humane and very positive, and very successful policy is that of land to the tiller, and for this broad and dramatic success, I believe the South Vietnamese are to be congratulated.

SOCIAL SERVICES—THE PEOPLE SPEAK

Mr. MCINTYRE. Mr. President, I am deeply concerned over the proposed regulation changes affecting the State social services programs, conducted under title IV-A and other titles of the Social Security Act. The impact of these changes would be a drastic curtailment of Federal support for these vitally needed social services. And without this Federal support many of the services simply could no longer be provided.

Many of us have talked about the new regulations in terms of their symbolic value, as indicating a policy direction the administration is setting out to implement. And much is said about this trend toward self-help and local initiative and away from reliance on the Federal Government as the prime mover in solving social problems. The debate over this trend is an important one and one that I hope the Congress will give its full attention to in the months ahead.

Today, however, I want to talk about these proposed regulation changes in more particular terms. I want to turn our attention away for a moment from the overriding significance these changes represent, and look directly at the individuals caught up in this controversy.

A public meeting was held recently in my State of New Hampshire to gather together as many of these people as possible. They represented every facet of the social services program—from the mothers whose children receive day-care services to those receiving help in mental health centers to those who run these programs and administer the social services funds.

I feel that hearing their stories is crucial to any real understanding of the issue. Take, for example, the situation faced by Camp Mayhew in Bristol, N.H. This is a year-round program for dis-

advantaged boys to try to provide for them those normal boyhood experiences they have missed. The camp has been able to expand its program from an enrollment of 10 boys in 1969 to 66 this past year. If the new regulations go into effect, they would only be able to provide services for 18 to 24 boys in 1973, based upon their private income.

Or take the situation the North Conway, N.H., day-care center is facing. This center cares for 44 children and gives many mothers the opportunity to work instead of just living off welfare. With the new regulations they face a deficit of \$8,300 and will be forced to close in early 1974. And another program in Berlin, N.H., which provides professional counseling and therapy for adults, will also be forced to close its doors.

Mr. President, I know that our resources are not unlimited, that we must set priorities in Federal spending. The Congress realized last fall that spending for the social services program was too open ended and was creating a crisis in the Federal budget. This is why we adopted the \$2.5-billion ceiling for the program—to prevent abuses and to require States to more carefully order their priorities.

This action was necessary. But the new regulations, I feel, go too far in restricting the program. The material that I would like to share with my colleagues today illustrates this in the way which I feel is the most persuasive—this is the human side of the story. These people know the real impact of these changes, and we should listen carefully to what they have to say.

Therefore, Mr. President, I ask unanimous consent that the statements of many of those who met in Concord, N.H., on March 10, to protest the proposed changes in the social services program, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BERLIN, N.H.,
March 9, 1973.

To: State Congressional Delegation.
Subject: Proposed changes in Social Service Rules.

I am Dale True, a resident of Berlin N.H., Pastor of the United Church of Christ and the United Methodist Church in Berlin, and a member of the Board of Governors of Holiday Center, a non-profit social agency serving adults of the Berlin area. The Center provides professional services for persons needing counselling, therapy, referral service in the field of mental rehabilitation; provides opportunity for social contact for the lonely, forgotten, and people with problems or handicaps; provides encouragement for self-development through experiences of learning, art, crafts, and other cultural experiences; and helps fulfill the need to be of service to others as well as helping develop a feeling of being wanted and giving a sense of worthwhileness to individuals. About one-half the members are over 60 years old.

During the period July 1, 1971 to July 1, 1972, approximately 3600 people used the Center a total of 11,950 times. During February, 1973, 191 members and 384 guests used the Center a total of 1423 times.

There is no question in the minds of the staff members, members of the Board of Governors, many professionals in the area,

as well as the people using the Center that the services rendered by Holiday Center are fulfilling a vital need for many people in the Berlin area. If the operation of the Center was terminated, it would be a severe loss to the community. A major part of our funding is from funds provided through Title IVA and most of the matching funds provided locally are donated private funds through United Fund.

We protest the action of the Department of Health, Education and Welfare in proposing new regulations which would drastically effect our social service agency, in all probability requiring that the Center be closed.

The citizens of the Berlin area who need these services deserve a better break than having a door closed in their faces.

We respectfully appeal to our New Hampshire Congressional Delegation to do all in its power to prevent the implementation of the proposed new HEW regulations.

DALE TRUE,

Board of Governors, Holiday Center,
Berlin.

STATEMENT OF BEN ADLER

Mr. Chairman, Members of the Committee: My name is Ben Adler, and I am Director of Services for the Aging in Manchester.

We are currently providing service in the areas of recreation, nutrition, health, transportation and employment. Manchester, being a mill city, its older inhabitants being former employees of mills, number 11,000 plus.

Seventy five percent of those over 60 live within a ¾ mile radius of downtown, in solitary rooms, with primitive or no cooking facilities. Because of their former employment, they are forced to live off minimum, yes minimum social security and have not been able to save any money to draw on during these aging years.

Our department is committed to two areas; one, the identification of these aging through outreach, and the referral of the problem through cooperation with every agency in the city providing service to the aged. Either the service is brought to the person or the person is brought to the service.

Within the department there are employment opportunities for the aging; this has also led to other job opportunities in the community. The coordination of services, the avoiding of duplication of service, the provision for an outlet for sale of their handmade articles, creation of recreation areas to prevent social atrophy and depression, the alleviation of housing problems, the geriatric diagnostic clinic, homemaker services, and basic feeding program are not luxuries—they are necessities and must be continued.

Keeping our aging as independent and at home as long as possible, is much cheaper than institutionalization and much healthier for all society. Thank you.

CAMP MAYHEW: A CAMP FOR DISADVANTAGED BOYS OF NEW HAMPSHIRE, NEWFOUND LAKE, BRISTOL, N.H.

Camp Mayhew is a full year around program for culturally and/or economically disadvantaged boys from New Hampshire, ages 10-12. The program has three components:

- (1) A four week residential camp session on Mayhew Island, Newfound Lake, New Hampshire, consisting of:
 - (a) Red Cross swimming program.
 - (b) Day hiking and overnight camping.
 - (c) An athletic program including volleyball, softball, basketball, baseball, canoeing, sailing and ropes course.
 - (d) An introductory environmental studies program designed around the natural setting and resources of Mayhew Island and Newfound Lake. Weekly sound and color nature films are used to supplement this program.

(e) The usual camp program of barn fires, singing, story telling and arts and crafts.

(f) A Work Hour Program in which boys are given "real work" to be performed (trail clearing, wood chopping, light carpentry, painting, etc.) thus, gaining introductory instruction in tool use. Such work earns "Mayhew Money" which is all that can be used in the camp store. (Through this mechanism we hope to teach the rudiments of saving and monetary planning, as well as to instill a "Work Ethic.")

(2) A year around follow up by the director with each boy which usually consists of three visits, one at his school, one with his family and one for a small group outing.

(3) The placement of our qualified graduates in private summer camp programs under full scholarships.

Camp Mayhew's intensive athletic-camp skills program of instruction is used as a vehicle for developing within 72 socially and/or economically disadvantaged boys from New Hampshire those normal boyhood experiences of which they have been deprived. Mayhew also offers these boys the chance to be a winner, to enjoy strong male influences and affection and the unhindered opportunity to develop their sense of self worth.

With these goals in mind the college-aged staff at Mayhew are selected for their genuine desire to help boys, their competency in athletic/camp skills and their commitment to the Mayhew Philosophy. This, coupled with the directors experience as a teacher, coach and guidance counselor, enables Camp Mayhew to perform in an area of social welfare where little has previously been done. Boys within low income or welfare families generally do not have the opportunity to germinate and experience success in a natural environment far removed from the distractions of modern day life. Mayhew provides this opportunity.

Mayhew can and does alter *minor* behavioral and emotional problems which some of its boys have, but is not equipped to work with boys who have records of deep-seated emotional and behavioral problems.

What kind of boy should Mayhew serve? A boy who needs and is able to respond to: strong male affection, competent instruction in athletic skills, the enjoyment of competition, the satisfaction of using his abilities to their maximum potential and most importantly, a boy who still has the capacity to make positive changes in his outlook and approach toward becoming a better citizen.

The Camp Mayhew program has an annual budget of approximately \$40,000 which provides for full tuition scholarships of \$550 each for 72 boys. Our funding is from four sources:

(1) Federal Grants which are routed through the New Hampshire Division of Welfare for Title IVa funding. In 1972-73 this consisted of \$4000 from the Manchester Model Cities Agency which was matched for \$16,000.

(2) Private grants which again are routed through the New Hampshire Division of Welfare for Title IVa funding. In 1972-73 this consisted of a \$1,250 grant from the Pearson Trust which was matched for \$5,000.

(3) A Community Sponsorship Program in which service groups (Lions, Rotarians, etc.) and business concerns make tuition gifts for boys from their community. Last year Mayhew had 8 sponsors who contributed half tuition for 8 boys for a total of \$2,000.

(4) Private solicitation in and out of the state of New Hampshire. Last year approximately \$9,700 was contributed.

How will the title IVa regulations affect Mayhew?

(1) There now exists confusion over whether any grant from the Model Cities Agency would be match granted. This would cause a decrease of our program in Manchester of 40 boys to 4 boys.

(2) The cut-off of donated funds as the States share in claiming Federal matching

funds would cost us the loss of two or three initiating grants. At present, we have negotiated for such funds with the New Hampshire Charitable Trusts, the Groton School Camp Association, the Manchester Housing Authority and several United Funds. The loss of tuition is estimated to be at least \$8,000. This would cause a decrease in the number of boys from other parts of New Hampshire of 20 to 5.

Thus Camp Mayhew, which has built its enrollment from 10 boys in 1969 to 66 boys in 1972 would only be able to provide services for 18-24 boys in 1973, based upon our private income and pledges.

Since its inception in 1969, Camp Mayhew has provided its services to the State of New Hampshire at no cost to the State and small cost to Federal agencies.

STATEMENT OF JACKIE HOWE

Ladies and Gentlemen: My name is Jackie Howe. I represent the North Conway Day Care Center of which I am the director. I am here to express my concern over the new regulations for the Title Four A funds. We care for a total of forty four children of which seventeen are from one parents homes; mothers working rather than being on welfare. Our fees are based on federal guide lines as established for the free lunch programs. This year we raised \$5,391 for Title Four A matching funds, a receiving \$16,173.

Our community has deep concern for these programs as evidenced by a new \$152,000 multi-purpose building built by private funds under the leadership of a church. We also are now developing a sheltered workshop building program. The total programs care for 120 children each day seventy five percent of them are low income.

My own program has already received for next years budget private gifts of seven hundred dollars, organizations gifts of \$1,000 dollars and revenue sharing funds of five thousand dollars. We have pledges of fifteen hundred dollars more from a local church and plan fund drives as well. This from a community of about twenty five hundred to three thousand people. I feel our people have responded well and reached a saturation point.

Cutting our budget from forty one thousand to thirty one thousand for 1973-1974, with all our efforts we face a deficit of eight thousand three hundred dollars and will be forced to close in early 1974 as all our funds under the new regulations cannot be matched. The closing will not only have deep personal tragedy but will place several mothers on welfare and leave rooms and equipment useless.

HOMEMAKER SERVICE PROVIDES A CHOICE

(Statement of Henrietta Charest, Director-Supervisor, Sullivan County Homemaker Service)

Homemaker/Home Health Aides are employees trained in the skills of homemaking, who provide care in the home, to families and individuals during periods of stress or crisis. They are neither maids nor nurses. It might be said that they are women giving the kind of care a relative might give if the need arose.

The Homemaker/Home Health Aid Agency makes individual considerations concerning the placement of a Homemaker, fees charged, length and hours of service. All Homemakers have on the job supervision. Specifically many of these women now have gainfully rewarding, classified occupations in the labor market that they never had before, thereby enabling them to supplement family incomes, reduce or eliminate welfare needs, obtain future Social Security coverage for their later years, and obtain promotional advancement within this field.

What will happen in Sullivan County and around the state, if this kind of service is not available? Choices will simply *not* exist. It is

the Right in most cases, of every human being, to decide whether or not to enter an institution, either permanently or temporarily. But if the option is non-existent then the whole discussion of Rights becomes academic.

The following two cases are fictitious and intended only to indicate the kinds of clients served by any Homemaker agency. For example—Mr. Z is old, alone, a victim of Parkinson's disease. He is a recipient of State Assistance and operates a small business out of his home. He is confined now to a wheel chair—but he wants to stay home, provide his small service, be among his own belongings, within reach of his old and familiar friends. He needs someone to clean his house, do his shopping and make his meals. A homemaker does it in three hours a day. Compare this cost to the cost of 24 hours a day care in a nursing home—where professional nurses are being paid. Mr. Z *needs* a homemaker not a nurse. He needs his home and the comfort of his friends—not an institution. He has a choice if a Homemaker/Home Health Aide Service is available. If it's not available he certainly still has a Right—but he has no choice.

Mrs. X is 26 years old, foreign born, the mother of two small children. Her husband, a military man, is in Europe. Mrs. X is severely depressed and under the out-patient care of a county clinic. She *needs* someone to come each day—give her supportive care—help her to cope with her children. In short Mrs. X *and* her children need some mothering. She cannot manage her life without help. Her homemaker is a 50 year old woman and the mother of nine. What are Mrs. X's choices? She can have a homemaker and the facilities of other supportive services or she can be admitted to the state hospital and place her children in foster homes. Cost comparisons here are clearly apparent. It costs less in terms of dollars for Mrs. X to stay home and avoid institutionalization for herself and foster care for her children. In human terms the cost of splitting this family cannot be measured.

New Hampshire Home Care Services Association, a central agency, has been established after many months of dedicated effort. It offers assistance to initiate new agencies and provide fiscal assistance along with standardized training.

If funds are cut will new agencies start out without a central agency to help and/or will a central agency be available to help? Will agencies survive the rigors and difficulties of operation without a strong central arm? Funding cuts resulting from the proposed regulation changes strike at the very heart of New Hampshire's effort to care for its families in their own homes whenever possible. These funding cuts for service make it impossible for communities to provide Homemaker/Home Health Aide in the State of New Hampshire. Who can measure the irreparable damage done to our communities, individually, or to our state as a whole. Multiply Mr. Z and Mrs. X hundreds of times over around the state. We in Homemaker Services see that to *cut* these funds is to make it *impossible* for all people in the State of New Hampshire to exercise their *Rights* because their choices have been eliminated.

SOCIAL SERVICES A PART OF PUBLIC HOUSING

(Statement of Mary Mongan, Director of Tenant Services, Manchester Housing Authority)

At one time the prime responsibility of housing was to give shelter, however, in recent years the nation as a whole, through the media of television, has become aware that you cannot concentrate into such dense living conditions families already burdened with financial and social problems and ignore the outcome, as we have seen happen in St. Louis, and as I have seen just recently in

nearby Lynn, Mass. They will destroy that which shelters them.

In 1970 Congress recognized that shelter alone did not make a home and therefore, declared that low-income families should have their social and individual needs met in addition to purely housing and financial needs, and listed 8 broad areas of needs as primary goals:

- Physical health.
- Mental health.
- Economic security.
- Personal fulfillment.
- Participation in community life.
- Freedom of choice in personal living.
- Possession of a system of ethical values.
- Perpetuation of social institutions.

ALL OF THEIR GOALS ARE HOUSING GOALS

All of us are aware of the increasing cost of living, but it is more so for low income families, for every day they must make decisions as to what are the priorities for their family—and often a crisis occurs that requires that they again alter that choice. That crisis can be anything from a pair of shoes to a tooth extraction: for with a family of seven or more, a child has but one pair of shoes and never sees a dentist until it is too late.

In 1970 HUD provided funds for modernization programs and committed housing authorities to programs for upgrading physical and social conditions in low rent housing. At this time local housing authorities began working with their tenants to determine needs and to initiate programs to meet those needs. HUD could not provide funds for programs: therefore in June 1971 an agreement was entered into by Housing and Urban Development and the Department of Health, Education and Welfare, whereby HEW would provide funds specifically for housing authorities under title 4-A and B.

Programs were initiated and implemented and improvements are now visible—our crime rate has dropped, maintenance cost is showing signs of decreasing, parents are looking for employment because of our day care centers, youth have found summer employment through Neighborhood Youth Corps programs, educational institutions are responding to our needs, and the elderly are less lonely and receiving health needs such as nutritional programs and home care.

No longer do our youth have to carry the tag of "Project Kid" because they are now able to participate in community programs at boys clubs, girl clubs, scouting programs, summer camps (which also gave us the opportunity of seeing they had physicals) baseball and football teams, where they all had a chance to play.

When a housing authority has 1000 children out of school, every day, all summer, activities well supervised must be planned to keep them busy, or housing authorities will see their cost of maintenance increase and more frequent visits from the police and fire departments.

If a large family of low income were to give their family every possible health need, whether it be preventive or crisis oriented, that family if they were not on the welfare rolls would have to be, for many a mother in our housing areas must neglect that ear ache or sore throat because of the cost, hoping that it will quietly go away without further incidence. I have seen mothers want to consult a doctor, if for nothing more than her own peace of mind, but knowing the cost, and not having a way to pay it, can not make that call. Dental care is sadly neglected and there are many at the age of 13 who must end up with total extraction—and no dentures to replace them.

The new rules, as proposed, will limit our scope of services and will completely tie our hands to implement programs. Service agencies within our community, which have only private funds to work with for matching purposes, will not be able to assist us, for no

public funds are readily available for social services.

Low income persons are no different than any other human beings, if they are content and cared for, they respond to demands made upon them with a positive attitude and will assert themselves to help themselves; but, put them all together as public housing does, with every possible social ill facing them, day after day, and seeing no possible way out available to them will give out negative responses and retaliate. It is a very human instinct to do so.

We can begin to cure the many social problems of housing, but only by providing services that are programmed to meet housing needs—all we ask is to be able to provide more than shelter for persons who must reside in public housing.

STATEMENT OF CHARLES LEAHEY, PRESIDENT, OPPORTUNITY HOUSE, CONCORD, N.H.

Styles change—in clothes and in government. When the style of government is changed, those who make the decision must do more than talk theory to a mirror. They have to remember the old rules. They have to take account of the fact that the old rules created the facts of today and the legitimate hopes which many have for tomorrow.

In 1965, the New Hampshire Legislature and the Governor of New Hampshire invited and challenged private citizens to become partners in an imaginative attack on the problem of mental illness. The objective was to bring treatment to people where the people were—at home. The method was to stimulate groups of local citizens to organize centers for the treatment of the mentally ill. The inducement was a commitment of money, two dollars of State money for every dollar of money raised locally, and a commitment of professional advice and guidance to be used when necessary or desired.

Local groups have created and now sustain fifteen community mental health agencies throughout the State. The agencies are non-profit, private agencies, directed by dedicated laymen and staffed by professionals in the field of mental health care. The Division of Mental Health, through the Office of Community Mental Health, provides administrative direction and support—but the care that citizens of New Hampshire require and are entitled to is provided by the agencies themselves.

The many partnerships which the State of New Hampshire has invested in are improving and expanding the necessary services they provide each year. While the State has never fully met its financial commitment to its "junior" partners, it is clear that without the funds and overall direction the State provides, no amount of individual commitment and effort at the local level could have created the agencies that exist today.

The old rules have created fifteen successful partnerships between the State and groups of private citizens. These fifteen partnerships, in the aggregate, are receiving \$1,402,484 in grants, which are applied toward total budgets of \$2,900,000, to provide mental health care to 12,000 citizens of New Hampshire. These agencies are classic examples of the creative partnership between an "investor" who seeks long-range objectives for his investment and the executives who provide a local base, know-how, energy and leadership. And although the original objectives of the community mental health program are far from being achieved, a new task is being planned for these groups. The key to any plan to reduce the New Hampshire Hospital to a manageable size while upgrading the care it provides, requires that the partners provide greatly expanded aftercare services at the local level.

Now government has adopted a new style. We are told that father knows best, and

what is best is to live without federal dollars.

We are told to forget the fact that federal money is, after all, our money. We are told that this is the lesson of self-reliance. What we are not told is how the new system of self-reliance works, nor are we told just who is supposed to become self-reliant. We are left to discover the facts for ourselves as best we can.

The facts that we can discover suggest that self-reliant people had best avoid mental illness. Because what we find is that if we must face that problem, father isn't going to do one damn thing about it.

The new rules were not created by Congress. They were imposed by the Secretary of Health, Education and Welfare even though Congress appropriated funds to provide mental health services. If HEW's guidelines in this area stand, federal funds to assist and encourage either the State or local groups to provide aftercare services locally will be gone.

In the present fiscal year, \$511,532, more than one-third of the total grant of \$1,402,484 made by New Hampshire to its fifteen local partners, came through the Division of Welfare. The \$511,532 consisted of \$138,000 transferred from the Division of Mental Health and the balance of approximately \$373,000 from federal funds available for social services, specifically mental health care for potential or former welfare recipients. Most of the total grant was used to fund aftercare programs for former hospital patients, in particular residential half-way houses and out-patient care at local clinics.

If federal matching funds are withdrawn, the \$350,000 total increase for 1974 that the Governor has recommended in community mental health funds will not even make up for that loss. Because of tremendous needs in existing programs at the local level, the result will be to destroy the effort to provide aftercare services in local clinics. Without such services, any talk of a permanent and meaningful reduction in the population of the New Hampshire Hospital or a genuine and significant improvement in the services it provides—without substantial expenditures of additional State funds at the Hospital—is talk, empty and ignorant talk.

There is one other fact. For many of the State's partners, additional local effort is not possible. If they are pressed any harder, many of them will simply collapse. Public funds are essential. If HEW's decision stands, the State will have to provide three or four times \$350,000 in increased State aid if current programs are to be maintained and a meaningful aftercare program is to develop.

The local agencies cannot set the new style in government. And they cannot afford it. The lesson of self-reliance is lost on us and will have even less meaning for those who need care which is not available. Those are the facts. The rest is suitable material for debaters.

TITLE IV A FUNDING

When we speak of the mentally retarded most people envision the inevitably charming child pictured with one or another movie star or sports hero on television or in a national magazine. The whole idea behind this approach is that the viewing audience is supposed to feel sorry for the retarded person, give him a handout and be done with him, forget him. Like any minority group the retarded today are not interested in the free ride. They do not want to sponge off their more fortunate friends the taxpayers. They want the opportunity to make it on their own, to have a job or at least a chance at training for work. They want to be considered useful to their society and acquire the dignity everyone is entitled to: the dignity of living free and self-sufficiently.

At the present time there are thousands of mentally retarded people sitting at home:

staring at television, locked in rooms, truly imprisoned by their disability. There are many more placed in state institutions where most of them receive little better than baby-sitting service. Last year we saw the horror of the Willowbrook School, a state institution in New York, that reminded us of Dachau, Buchenwald or Auschwitz. Luckily our own state institution in Laconia is a more respectable habitat for our retarded population but even still the services provided there are inadequate despite the good intentions of those in charge.

The trend in the field of mental retardation that we now believe is the best one, is the trend which supports the establishment of community based programs for the retarded rather than blanket institutional programs. These community programs should include a three component system, the three components being special employment, special recreation, and special housing facilities as homelike as possible. This system is designed to give the mentally retarded individual the opportunity to develop a life-style as natural and free as possible. Basically this system gives the mentally retarded the chance to help themselves.

During the past few years we have all become aware of the massive ecology movement, intent upon preserving and making better use of our environment's natural resources. Thousands of people have rallied to recycle paper and glass so that future generations will have a less spoiled environment to live in. The economics of this movement are obvious. To sum them up in an old saying: "Waste not, want not." It is my belief that our mentally retarded population, like our trees and minerals, is a tremendous resource that we have wasted, exploited and ignored without just cause for hundreds of years. The time has come for PEOPLE-ECOLOGY . . . to use our resource of mentally retarded people to its best advantage, gaining for them the dignity and freedom of a respected role in society. It is our belief that the community based system offers the best chance for the retarded to learn to help themselves. In more practical language, the language of money, the community based program should cost a mere fraction of a typical institutional program. At the present time it costs nearly five times as much money to maintain a child in Laconia as it does to maintain him in the community.

The key component to the success of the community based program is the special employment work center. In the sheltered workshop or the work activities center the retarded people can provide services to local business, doing work efficiently and proudly to support a great part of the life functions. At New Horizons we are doing jobs for industry in the Keene area, not because we needed a handout, but because we can do the job better than the company itself. These jobs involve sorting, packaging and assembling items that are usually a headache to the company, jobs that would normally require a skilled worker to leave his work station, wasting his and company time. The workers who work for us at New Horizons are mostly graduates from the New Hope Center Inc., a community based development center we are a part of.

Our mentally retarded workers attack these jobs with a fervor and energy unequalled by the average normal worker. Each piece is a new challenge and a new accomplishment and the payment they receive is treasured like pure gold.

One of the greatest thrills of my experience in this work came last fall. One of our workers, a severely retarded boy who had failed at almost everything in his seventeen years, finally found success in one of our jobs. Suddenly this boy was on the top of the heap, making more money than anyone else. Then one day his father brought him to work and informed us that his son had purchased with his own hard earned money a new winter

coat. Never have I seen one of our workers so pleased with himself and never have I seen a parent, who long ago gave up hope for his son, as proud as this man was. There is more work available in our community and we hope to grow and expand our work force as time goes on. Our feeling is that we are becoming an important service in the community. While our community based program will never be totally self-sufficient, our mentally retarded people are working very hard to take the bite off the taxpayers and carry their own weight.

It would be wonderful if some of the mentally retarded people that I know could be here this morning to tell you themselves what great satisfaction they receive from earning a living like their parents and brothers and sisters. Unfortunately most of them would not be able to speak under these circumstances and so I am here as their stand-in. I cannot duplicate or substitute their overwhelming compassion for others, their innocent desire to give and take love. Nor can I duplicate their mysterious standoffishness or their unreasoning hatred. I cannot duplicate their anger and childish sorrow, but neither can I duplicate their explosive joy. I can't be crippled or have a speech problem and I cannot duplicate their uncanny ability and determination to carry out a fiercely dull job with care and satisfaction. To be retarded is something we can only slightly relate to if we can remember what it was to be three or four years old.

It would be wonderful if sometime in the future there was a movement, similar to the Civil Rights struggle of blacks and Indians, carried on by the retarded. If there was such a movement there will be no Martin Luther Kings, no Cesar Chavezes. There will be no Selmas, no Birmingham, no Wounded Knees. No one will take over or bomb any buildings. If there is such a movement those of us who are involved now will be in the forefront of it. The time has come to stop begging the government for assistance. The time has come to demand the equal opportunity retarded people are entitled to as stated in the Constitution. The time has come to realize that the plight of the retarded affects every one of us whether in our hearts or in our wallets.

In his Inaugural Address last January, President Nixon said that the time has come for people to help themselves. We agree. But the people in power must realize that the mentally retarded need more than a tough jaw to make it in this world. The retarded have all the incentive you could ask for but they need financial support to get them on their way to self-sufficiency. It does not matter what name the people in Washington give to the dollars we need to help the mentally retarded so long as they give us enough dollars. Today we are all concerned about the dollars we call IV A. The new guidelines from Washington will eliminate the chances for hundreds of people throughout the state to develop. They will have little chance to grow because they are too young or because they are already not on welfare. This is criminal, and this is unintelligent. The children and young adults who will not participate in these programs because they are not on welfare will assuredly be on welfare very soon. We will pay much more expensively for their care later if we fail to care for them now. It is ridiculous to condemn these mentally retarded people to an unhappy and expensive institutional life. I call on every man and woman of good conscience to join with us in this battle. Let us help the mentally retarded now so that they may help themselves later. We will win.

STATEMENT OF NANCY CALLAHAN

Project Second Start is a daytime adult education program which attacks the multifaceted problems of the "undereducated" through integrated programs and services.

Located at the First Congregational Church in Concord it has served citizens in the greater Concord area for the past two years. Begun by a few concerned citizens, it was made possible by the financial support of many local individuals and groups from Saint Andrew's Church in Hopkinton to the Junior Service League in Concord.

A private non-profit corporation with a local board of directors, Second Start is currently funded by the following private sources:

Catholic Diocese of Manchester, Episcopal Diocese of New Hampshire, Greater Concord United Fund, Local groups and individuals.

For the past two years, the private contributions have been matched by the federal government on a three-to-one basis under Title IV A of the Social Security Act. The private sources have generated enough money to adequately fund Second Start. The newly proposed Health, Education, and Welfare regulations state that private money will no longer be matchable. If the regulations become effective, they will eliminate two-thirds (\$18,000) of the total operating budget (\$27,000) of Second Start.

During the past two years, Second Start has served over two-hundred adults from Concord and the surrounding towns. In an atmosphere of informality, acceptance, and concern, it has seen thirty-six of its enrollees successfully complete the high school equivalency examination and receive their high school equivalency certificates. The reading level of the students has increased on the average of two-grade levels after four to five months in the program. Half of the typing and clerical class will be employable by May of this year. Other less tangible forms of progress and growth are occurring in the consumer education talk-ins, the human relations discussion group, the art class, the student advisory committee, the counseling. And Second Start is only just beginning to meet the needs of the more than 37% of the adults in Concord and 39% of the adults in Merrimack County with less than a high school education. It is just beginning to make a difference in the community and to the students. As one student remarked,

"Finding so many people who care so much all at once is a rare experience."

STATEMENT OF VISITING NURSE ASSOCIATION OF CONCORD

Many federal tax dollars are going into various programs. As a representative of an agency that renders health services to consumers of varied financial backgrounds on the local level, I am concerned. I am concerned about financing for health needs. To maintain physical equilibrium should be a freedom for all.

To render good services, money needs to be available for care of the chronically ill; the custodial aged; the young child; and families. Title IV A funds have given a financial base for a health agency to work from—particularly when matching funds could come from any source. These same funds would be the hardest local tax dollar to acquire.

To enforce the eligibility requirements will take many dollars—for staff, space and supplies. Would it not be better to fund services at the local level with the local provider enforcing the financial regulations? The philosophy of the agency I represent has long been that fees would be collected whenever possible, with documentation on sliding scale fees.

Most people seek health services when they have an acute problem, but very few are able to cope with extended illnesses. Nor are they able to afford preventative services.

Rules being proposed on H.R. 1 should concern everyone of us because of the severe cutback to the health consumer on the local level.

STATEMENT OF MAYOR SYLVIO DUPAIS,
MANCHESTER, N.H.

GENTLEMEN: We Need Your Help!

We need your help because the City of Manchester will be adversely affected by the proposed changes in the Title IV-A regulations.

The changes in the regulations will set back the development of services in our City to the elderly, to children, and to teenagers at least three years, back to a point where a comprehensive elderly program did not exist, where health and social services were not available in our summer programs, and where day care was limited to less than 100 children.

The Department of Housing and Urban Development has told our Model Cities Program to develop alternative sources of funding. Through this mission, they have woven comprehensiveness into several of their programs and with the help and assistance of the Division of Welfare, have strengthened and expanded several programs to serve areas far greater than their limited resources would allow.

Last year, through the cooperation of the Division of Welfare and the Model City Agency, approximately 1 million dollars was made available to the City. While I am concerned over the loss of these funds, I am more concerned over the loss of services to people—services such as:

- Day care;
- Summer camperships;
- Workrecreation;
- Health services;
- Elderly crafts;
- Hot lunches for the elderly;
- Vocation education;
- School guidance counseling;
- Homemaker services; and
- Elderly transportation.

Should these regulations take effect, all of these programs will be severely jeopardized and many may have to be eliminated simply because funds do not exist to completely assume these programs at the present time.

A prime concern of the Model City Agency is the continuation of a dialogue between the Agency and United Community Services of Greater Manchester. The intent of this was again to seek out and develop alternative sources of funding so that many of the programs of the Agency could continue to satisfy needs of the City. However, under the proposed regulations, private funds are not acceptable as a match, and this dialogue could become meaningless.

Gentlemen, surely in our national priorities there is a place for children, there is a place for youth, there is a place for elderly, and there is a place where the emotionally disturbed child can be helped.

We cannot question the fact that reform of welfare is needed or that some social programs do not accomplish their purpose, but neither should we substitute a meat axe for a scalpel, or change for change's sake in place of common sense.

Careful consideration must be given to these proposed changes, their impact must be measured not in terms of dollars spent, but rather in the human terms of services rendered.

Gentlemen, we need your help!

STATEMENT OF MALCOLM McLANE, MAYOR,
CONCORD, N.H.

I join other speakers here today to protest the revolutionary change proposed by the federal government in the method of financing needed social services throughout the United States. I speak not only as Mayor of the City of Concord, representing all of our citizens, but also as an active volunteer in charitable service to those in need. I have just ended a three-year term as President of the United Way, formerly the United Fund of Greater Concord.

Ever since President Nixon took office over

four years ago he has repeatedly urged that all citizens become actively involved as volunteers in service whether in government effort or in private charitable endeavor. There are, of course, millions of persons in this country who contribute either cash or time to worthy causes. The need for voluntarism has never been more fully recognized. The President has only recently named Governor Romney to head up this effort nationally.

For some years now the efforts of local public and private agencies offering social services have benefited from 3-for-1 matching funds received from the federal government under Title IV, A of the Social Security Act, as amended. This has meant greatly expanded services to those in need. At least six of our United Way agencies have offered services under this program, including Visiting Nurses, the Mental Health Center, Child and Family Services, Day Care Center, Project Second Start and Opportunity House. Old services have been expanded and new services created as needed with this source of financial support. It is this program which is now to be drastically slashed under new regulations proposed by the Secretary of the Department of Health, Education and Welfare.

The first and most objectionable of these new regulations is one that prohibits the use of donated funds, namely from private charitable sources, to be used by the State in securing the federal matching funds. This technique has been most important in New Hampshire because the State itself has often failed to put up its 25% matching share to take advantage of available federal funds. The latter then pass by default to other states. By use of such donated funds, the Welfare Department and contracting private agencies have continued to offer desirable social services to those in need. All this is now threatened by the new regulations. It is hard to see how the President can, on the one hand, encourage voluntarism and hope for a positive outpouring of volunteer effort for public causes, and, on the other hand, undercut the volunteer effort by prohibiting it from sharing in the available federal funding of worthy social services. Volunteer effort has stretched itself to the limit to fund and operate many worthwhile services in a cooperative program with state and federal assistance. This is no time to undercut that effort.

Additional changes in the regulations which I deplore would drastically limit those eligible for social services under Title IV, A programs to persons currently on relief or within a very few months of going on or coming off direct welfare payments. This overlooks the fact that there are vast numbers of persons and families who live just above the welfare limits who need help if they are to stay off welfare. The need for day care centers in this situation is obvious, as well as health and mental health services. With such services many more may be able to stay off welfare rolls, the objective of the administration. Why push them back onto welfare by cutting off needed social services so soon after one reaches a limited level of self-support.

Lastly there are certain needed services which would be cut off under the new regulations, including particularly mental health treatment services offered in Concord by the Mental Health Center and Opportunity House.

In summary, I say that the President makes a great mistake in so drastically curtailing federal support of needed social services in a way that strikes so hard and so directly at the cooperative efforts of voluntarism. If the President's concern is to limit spending in these areas, let the limits be set and the funds allocated to the States without restrictions which destroy the concept of cooperation between public and private

agencies and the concept much praised by the President of voluntarism.

SOCIAL SERVICES REGULATIONS

Mr. MUSKIE. Mr. President, many of us have expressed concern recently about the direction of the regulations proposed February 16 by the Department of Health, Education, and Welfare regarding the implementation of social services programs under title IVA of the Social Security Act.

The guidelines proposed by the administration would have severely curtailed social services programs in the States. In my own State of Maine, many ongoing and worthy programs would have to terminate if the guidelines proposed on February 16 were finally promulgated. Those guidelines would mean a cutback in services to more than 74,000 people in Maine at a cost of \$3.8 million in fiscal 1974.

At a recent hearing of my Subcommittee on Intergovernmental Relations, Secretary Weinberger promised to revise the guidelines to allow the States to use donated private funds as the States share in claiming Federal matching money under title IVA programs.

I am hopeful that the guidelines will be further revised to prevent disastrous cutbacks of social services programs across the country.

Recently, Gov. Kenneth M. Curtis of Maine outlined in great detail the impact of the proposed regulations on social services programs in my State. In a letter to Secretary Weinberger, the Governor strongly protested many of the provisions of the proposed regulations. I think it would be helpful for members of the Senate to focus on the issues raised by Governor Curtis.

I ask unanimous consent that the letter Governor Curtis wrote to Secretary Weinberger be included in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

STATE OF MAINE,
OFFICE OF THE GOVERNOR,
Augusta, Maine, March 2, 1973.

HON. CASPAR WEINBERGER
Secretary, Department of Health, Education
and Welfare, Washington, D.C.

DEAR SECRETARY WEINBERGER: This letter is in response to the regulations drafted by the Department of Health, Education and Welfare to implement the Social Services Amendment to the State and Local Fiscal Assistance Act of 1972 (P.L. 912-512).

The Maine Department of Health and Welfare has completed a comprehensive review of the impact of the proposed regulations in Maine. On the basis of this study, I strongly protest certain provisions of the proposed regulations. I am most concerned about the provisions that would:

1. Restrict target populations eligible to receive social services through a re-definition of eligibility,
 2. Restrict the types of services for which Federal funding is available,
 3. Prohibit the expansion or initiation of services using public money without additional tax dollars above the 1972 level, and
 4. Prohibit the use of donated private funds or in-kind contributions as the State's share in claiming Federal matching money.
- For specific reference to sections in the Federal Register which should be changed, please refer to Attachment I.

As presently drafted, the regulations will have a very serious and detrimental impact on social service programs. In Maine there will be a cutback in services to more than 74,000 people at a cost of \$3.8 million in FY 1974.

Because the regulations will restrict eligibility almost exclusively to welfare recipients, additional incentives will be created to get on welfare or stay on welfare in order to receive essential services. The regulations will also destroy many worthwhile programs by prohibiting the use of private "seed" money and restricting the types of services which can be funded. In addition, the HEW proposals will very likely increase administrative costs by requiring repeated and complicated eligibility determinations. Finally, the states ability to expand needed services will be

severely limited by the requirement that expansion or initiation of new services using public dollars must be accomplished with "new" money above 1972 levels.

Enclosed is a State-wide summary of the impact the proposed HEW regulations will have in Maine with additional detailing by major restrictions in the proposed policy. (See Attachment II)

I am asking you to take action to prevent the restrictive provisions of this proposed policy from being implemented. I also request that immediate action be taken to extend the review period to at least 90 days so that all states may have an opportunity to assess the impact of these proposed restrictions on their social service programs.

Sincerely,

KENNETH M. CURTIS,
Governor.

ATTACHMENT I

Following is a reference to the Sections in the Federal Register (Proposed Rule Making) dated February 16, 1973 which must be changed:

REFERENCE

221.6(C) (2), 221.6(C) (3) (i), 221.6(C) (3) (iii), 221.6(C) (3) (IV) (a), 221.6(C) (3) (IV) (b), 221.6(C) (3) (IV) (c), and 221.6(C) (4). 221.7(b), 221.9, 221.30(a) (6), and 221.30(b). 221.53(i), 221.54(b) (3), and 221.62.

ACTION

We strongly urge that the current regulations pertaining to these referenced areas remain in effect. The current regulations are listed in: Federal Register Volume 35, No. 230, published November 26, 1970; Federal Register Volume 34, No. 18, published Jan. 28, 1969.

SUMMARIZED EFFECT IN MAINE OF THE PROPOSED HEW POLICY

Col. 1 (Service category) is a listing of the social service areas which will be affected by the proposed regulations.

Col. 2 (Services Under Present Regulations March 30, 1973) is a listing of the people currently receiving services and the cost of these services by each service area. Important—Current services reflect the cuts which have already been made in social services in Maine resulting from the Social Services Amendment to the Revenue Sharing Act. These cuts made effective Jan. 1, 1973 amounted to over \$1,000,000 affecting approximately 30,000 for the last half of fiscal year 1973.

Col. 3 (Deprived of service April-June 1973) is a listing by service area of the number of people and dollars which would be cut back as a result of the proposed HEW policy restrictions for the last quarter of fiscal year 1973.

Col. 4 (Deprived of service in 1974) is a listing by service area of the number of people and dollars which would be cut back in fiscal year 1974 as a result of the proposed HEW policy.

Note: The dollar figures are essentially accurate in each column. Approximately 15 percent of the people receive more than 1 service. Therefore, the totals listing the number of people should be reduced 15 percent to reflect the actual numbers of individual people affected. The impact in Maine of the proposed HEW policy will be: A cutback in services to over 38,000 people at a cost of over \$1,800,000 for the last quarter of fiscal year 1973. A cutback in services to over 74,000 people at a cost of over \$3,800,000 for fiscal year 1974.

EFFECT OF ELIGIBILITY RESTRICTIONS WHICH LIMIT THE PROVISION OF SOCIAL SERVICES PRIMARILY TO WELFARE RECIPIENTS

[Relating to Services Provided Directly by the Department of Health and Welfare]

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER (Mr. HUDDLESTON). Is there further morning business? If not, morning business is closed.

QUORUM CALL

Mr. BELLMON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF EMERGENCY LOAN PROGRAM UNDER CONSOLIDATED FARM AND RURAL DEVELOPMENT ACT

The PRESIDING OFFICER. Under the previous order, the Senate will now resume consideration of the unfinished business, which the clerk will state by title.

The legislative clerk read as follows:

H.R. 1975, to amend the emergency loan program under the Consolidated Farm and Rural Development Act, and for other purposes.

The Senate resumed the consideration of the bill.

Mr. BELLMON. Mr. President, I ask unanimous consent that the following staff members of the Committee on Agriculture and Forestry be permitted to be present on the floor during the consideration of H.R. 1975:

Harker T. Stanton, Michael R. McLeod, Henry J. Casso, Forest W. Reece, James W. Giltmier, James E. Thornton, John A. Baker, William A. Taggart, Cotys M. Mouser, James M. Kendall.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BELLMON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Senator from New York (Mr. JAVITS) I ask unanimous consent that Kelley Costley of the staff of the Committee on Labor and Public Welfare be allowed the privilege of the floor during debate on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, H.R. 1975 is designed to restore to operation the original Farmers Home Administration emergency loan program, which has been superseded by the Disaster Relief Act of 1970 and the Agnes-Rapid City Relief Act of 1972.

The Farmers Home Administration emergency loan program was conceived to provide Government loans to farmers and ranchers who, as the result of a drought, flood, or other natural disaster, did not have sufficient assets to obtain credit from conventional private lending sources.

The 1970 act provided for Government forgiveness of \$2,500 of the principal amount of FHA loans in disaster areas declared by the President. Following Hurricane Agnes and the Rapid City flood last year, the President requested legislation making victims of those two disasters eligible for loans with a \$5,000 forgiveness and 1 percent interest. The bill was amended by Congress to extend these benefits to residents of areas designated for disaster assistance between June 30, 1971, and July 1, 1973.

Loans under the 1970 and 1972 act were terminated by the administration

on December 27, 1972, when it was estimated that the forgiveness feature and interest subsidies could result in a cost to the Government of \$800 million.

As I indicated a moment ago, Mr. President, the bill now before the Senate would repeal the 1970 and the 1972 acts. This means that upon passage of this act farmers, ranchers, and oyster planters who are struck by a natural disaster will be able to obtain insured loans from the Farmers Home Administration at 5-percent interest if they are unable to obtain credit from private sources. The repayment period may be extended up to 12 years in the case of production loans and up to 40 years in the case of real estate loans. Disaster areas may be designated either by the President or the Secretary of Agriculture.

As a reference point, Mr. President, in fiscal 1970 FHA made \$90 million in emergency loans of which about \$2 million was forgiven; in fiscal 1971, \$16.6 million was forgiven out of total loans of \$127.6 million; and in fiscal 1972, \$7 million was forgiven out of total loans of \$108.9 million.

In contrast, as of March 15, 1973, Farmers Home had committed loans of \$383.5 million with forgiveness of \$250 million. The forgiveness alone thus far in 1973 is nearly twice as great as total loans committed in any previous year.

Mr. President, it will be noted in the report on H.R. 1975 that the Committee on Agriculture and Forestry gave extensive consideration to the various classes of applicants affected by the repeal of the 1972 act. The first consideration was in early February when the committee considered my bill, S. 418. Several members of the committee expressed concern for those individuals who attempted to apply for a loan prior to the termination date but were told by FHA personnel to return later when there would be more time to process their application. As a result of the termination, these individuals, numbering about 60,000 by USDA estimates, will not get the \$5,000 forgiveness as will the

84,485 farmers whose applications were completed prior to the cutoff date.

I share the concern of my colleagues who represent these 60,000 farmers—and, by the way, many of them are in my own State. In addition, there are approximately 80,000 farmers in counties where disaster designations have been requested but not made by the Secretary of Agriculture because of the \$5,000 forgiveness and 1-percent interest rate.

Mr. President, I ask unanimous consent to have printed in the RECORD a summary of requests by State for disaster designation.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF REQUESTS FOR NATURAL DISASTER DESIGNATION BY SECRETARY OF AGRICULTURE PENDING IN THE NATIONAL OFFICE NOT APPROVED AS OF CUTOFF ON DEC. 27, 1972, AND THOSE RECEIVED SINCE THEN

Mr. BELLMON. Mr. President, as the Senate will recall, H.R. 1975, as adopted by the other body, contained a provision requiring the Department of Agriculture to accept applications for a period of 18

days after enactment from farmers in those counties which presently are under disaster designations.

Mr. President, after extensive discussion at several committee sessions over a period of 2 months, a majority of the Committee on Agriculture and Forestry concluded that making emergency loans available in a timely manner was the important issue that demanded attention now. It is spring planting time in many areas. The farmers there need credit now—not the vague hope that Congress or the Supreme Court will force the administration to reinstate the more liberal provisions of the present law. That law is already on the books. It is not and will not be used by the administration. What is needed now is an emergency loan program to assist producers during the current growing season. Legislative or court action to define Presidential controls over Federal spending will take months. Food producers need loans so they can get on with their work.

This bill amends the House act by removing the 18-day provision. The committee amendments make it clear that any loans approved at the time of enactment of this bill will be made under provisions of the 1972 act.

Despite the concern we may have about changing the rules in midstream, the administration has said they will make no more loans under the provisions of the present law. Therefore, Mr. President, the choice the Senate has is plain: Either Congress passes a new law which the President will sign and utilize, or food producers will be denied essential loans. At a time when a limited supply of food is forcing prices up, it seems folly for Congress to delay enactment of this vital legislation.

The Government will undoubtedly appeal a Federal district court ruling which requires Farmers Home Administration to accept and process applications under the 1972 act in one State. If the Supreme Court upholds the lower court ruling it will probably require FHA to accept and process applications in all designated counties. In the meantime, there are still farmers who need credit now and in the view of the Committee on Agriculture and Forestry, they will benefit most if we pass the committee bill today, go to conference with the House as soon as possible, and attempt to have a bill on the President's desk in short order—a bill that he will sign and utilize.

Mr. President, I ask unanimous consent that the committee amendments to H.R. 1975 be adopted en bloc, and that the bill as so amended be considered as original text for the purposes of amendment.

The PRESIDING OFFICER. Is there objection?

Mr. HUMPHREY. Mr. President, I object to the amendments being adopted en bloc.

The PRESIDING OFFICER. Objection is heard.

The clerk will report the first committee amendment.

The legislative clerk read as follows:

On page 1, in line 5, after "repealed," insert "except as to loans made or approved, whether disbursed or not, prior to the date of enactment of this act."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. HUMPHREY. Mr. President, do we have a time allocation under any unanimous-consent agreement?

The PRESIDING OFFICER. Time is not under control.

Mr. HUMPHREY. I ask the distinguished Senator from Oklahoma whether it would be agreeable with him, since this amendment relates to section 8 of the bill, that we vote on these two amendments en bloc?

Mr. BELLMON. Which ones?

Mr. HUMPHREY. The first amendment, on lines 5, 6, and 7.

Mr. BELLMON. It is agreeable to me to vote on those two amendments en bloc.

Mr. HUMPHREY. The situation would be that the amendment that was just read by the clerk, plus the second amendment, which strikes section 8, would be voted on en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. I will address myself, then, to the amendments.

Has the Senator from Oklahoma completed his statement?

Mr. BELLMON. I have completed my statement, Mr. President, but should we not call up the other committee amendment at this time?

The PRESIDING OFFICER. The question is on agreeing to the two amendments en bloc.

Mr. HUMPHREY. We have agreed to vote on the amendments en bloc. I will address myself now, Mr. President, to the consideration of these amendments.

I rise in opposition to the committee amendments to H.R. 1975.

This bill, as it passed the House of Representatives, contained an amendment offered by Representative BERGLAND of Minnesota. The amendment would require the Secretary of Agriculture to reopen the existing farmers home emergency loan program for a period of 18 days to allow disaster victims in secretarily designated counties the same opportunity to submit applications that was granted earlier this year to victims in Presidentially designated counties.

The amendment of the Representative from Minnesota's Seventh District, Mr. BERGLAND, which was stricken from the bill as reported by the Committee on Agriculture, which reads as follows:

Sec. 8. Notwithstanding the repeal herein of section 5 of Public Law 92-385, and notwithstanding any other provision of law, the Secretary of Agriculture shall make loans in accordance with the provisions of section 5 of Public Law 92-385 to eligible applicants in natural disaster areas determined or designated by the Secretary of Agriculture where such determination or designation had been made after January 1, 1972 and prior to December 27, 1972. The authority to accept applications for such loans shall expire 18 days after the effective date of this Act.

The language I have just read is language that was stricken from the House bill. It is the language that I seek to restore. The amendment that I read, the Bergland amendment, was overwhelmingly approved by the other body and was added to the bill as a matter of simple justice and fair play.

When Secretary Butz administratively and abruptly terminated the FHA disaster loan program on December 27, 1972, he, in fact, denied disaster victims in more than 500 secretarily designated counties of any further opportunity to apply for disaster assistance. However, the same was not true for disaster victims in the 354 Presidentially designated counties in 21 States. They were given an additional 18 days within which to submit their applications.

It is very hard for the general public to understand the difference between Presidentially designated counties and secretarily designated counties. For our purposes, there are no differences. The fact is that there are areas that were afflicted with disaster, areas which ought to be treated identically, and they were treated identically in the original legislation for disaster emergency relief.

What happened was the action taken by the administration in late December permitted some 18 additional days for the residents in Presidentially designated counties who were eligible for disaster relief to submit their applications.

All we are asking now, by the restoration of the language in the House bill, is that the secretarily designated areas be treated the same as those Presidentially designated. I am sorry that we have to deal here with some bureaucratic jargon that confuses everybody; but when you are rained or flooded out, it does not make any difference whether you are designated by the Secretary or by the President if you are a victim of a flood. When you are drowned, you are drowned. All I am saying is that the language of the law should treat those areas identically, because they have all suffered from the same identical disaster. There is no justice or equity at all in treating one group as if they were secretarily designated and another as if they were Presidentially designated. This action by the administration is a gross inequity.

Ironically, many of the farmers in my State were specifically told by their local FHA offices to withhold the filing of their applications until after the first of the year so that all the applications could be properly documented.

Also, the FHA offices discouraged the early filing of applications to avoid being inundated with applications all at one time. They wanted to establish an orderly flow of applications in order to handle applications in a systematic manner.

In other words, the local FHA officials said to our farm people, in effect: "Wait a minute. This is Christmas time. We have a lot of office work to do. Come in sometimes after the first of the year, say early in February or March. You may need to have someone to help you—an accountant, a lawyer, or a banker. Some in and make your application later. We will take care of it then." After all, the original law, to which we are directing our attention, ran until June 30, 1973. So our farm people said, "That sounds reasonable." After all, they wanted to enjoy Christmas and the New Year. But while they were not looking, on Decem-

ber 27, a belated Christmas present was given to them, not from Santa Claus, but from Scrooge.

Mr. President, our people were cut off. We do not think that is the way the Government should operate. It is not only the people of Minnesota who were cut off but also the people from 25 other States.

I yield to the senior Senator from Minnesota.

Mr. MONDALE. Mr. President, I join my colleague from Minnesota in the argument he is making. In the nearly 9 years I have been in the Senate I do not recall a single time when I felt that the citizens of the United States had been more unfairly treated than they have in this instance.

In this case the law was passed after Hurricane Agnes to give faster loans to the victims of the national disaster and of administratively declared disasters. We had a dispute here in the Committee on Agriculture and Forestry and in the Committee on Banking, Housing and Urban Affairs, of which I was a member, and we made it very clear at the time that this bill was to extend the disaster provisions as a matter of law to the victims of administratively declared disasters.

I think the record clearly showed that that included farmers of western Minnesota and, I think, 26 States similarly situated. That law was passed; the President signed it, and he had a big television presentation on how help was on the way. Federal regulations were issued saying that this would be in effect until July 1973. There were issued to the public, to lawyers, and to the bankers of this country so they were assured of it. FHA office managers were told that the law meant what it said, and they began to administer the law in the local offices. Many of these farmers went to the offices and said, "I would like to take out my disaster loan". They were told, "Why don't you wait until spring when you can assess the situation better. The law is in effect until next July."

Most of them did that, and then, without notice, the ax fell. Many of those who insisted on being cared for immediately got their loans, while those who accepted the advice of the officials of this Government were without any help.

I cannot believe that this society ever intends to deal with its citizens in that way. Many of these farmers are in danger of losing their farms. We talk about farm prices but many of these farmers did not have anything to sell. Many of them put crops in twice last year. They put in crops, they were flooded out, and then they planted again. These are farmers trying to provide for their families; they work hard. Then, here is a law that is passed, under which they are fully entitled. Then suddenly the Government says, lawlessly, unconscionably, and, in my opinion, cruelly, "We are not only going to cut it off but we are not going to give you notice."

That is what the court in Minnesota addressed itself to in harsh language. I do not think this Government can deal with its citizens in this way. I do not

think I have ever seen anything more outrageous than the way in which these farmers and small businessmen have been dealt with.

Mr. HUMPHREY. I thank my colleague. He will recall with me our visit to Alexandria, Minn., where we had several hundred farmers in to talk with us in public hearings about how our Government was terminating programs. Much of that discussion was directed to disaster relief.

We had situations where farmers on this side of the road applied prior to December 27 and the FHA official said to them, "Look, you need not be in a hurry. We have so much paperwork here, maybe you can bring in a better documented case later. Why don't you come in late January or February. You have between now and June 30." Those who followed this advice, later found their applications being refused.

Mr. President, these good people, in the spirit of wanting to cooperate with their Government found themselves being denied assistance. So you have the cruel situation of neighbors, who were victims of the same flood, people who suffered the same damages, where one got his application in before December 27 getting assistance, and another, filing after December 27, having his application denied because the law was violated by the Government itself.

There is a point here that needs to be emphasized. If a citizen violates the law he is subject to prosecution, but apparently for Government officials that is the standard of the day. As the senior Senator from Minnesota said, the law as described in rules and regulations was printed in the Federal Register. Everyone knew what the law was. Everyone interested in this program knew what to expect, but they did not expect that the Government of the United States would deny the loans and violate the law. But that is what the Federal court in Minnesota has ruled. It has ruled that the Secretary of Agriculture has acted in an arbitrary and capricious manner, ignoring the intent and purpose of the law.

As a result of this highly discriminatory action, a legal suit was filed in Minnesota by some farm families against Secretary Butz. The decision was handed down by District Judge Miles Lord, charging that Secretary Butz had violated Federal statutes, violated his own Department's regulations, and denied these victims due process of law. The judge has ordered the Department to restore the emergency loan program in the 15 secretarily designated counties in Minnesota. While this decision offers the people of my State some hope of equitable treatment under the law, it is still subject to appeal and further court action would be required to bring similar relief to disaster victims in other States who are eligible for such relief.

Mr. President, I have a copy of Judge Lord's decision and I would like to request unanimous consent that it be printed at this point in the RECORD.

There being no objection, the decision was ordered to be printed in the RECORD, as follows:

[U.S. District Court, District of Minnesota;
No. 4-73 Civ. 41]

MEMORANDUM AND ORDER
