

out and said, "You know, he always kept me up. He made me laugh."

One of the members of the family said he was the salt of the Earth and the spice of life. Everyone who talks about him has clear, vivid memories of his wit and his wisdom and, I might add, his remarkable ability to be both brutally honest and always kind.

When I was a young boy, badly in need of a hand up and a little kindness and wisdom, whenever I was at his house and Ollie's, I always felt at home. But he always treated everybody that way. After I became a grown man, he only called me one time, in our whole life together, just once, to tell me that in 1979, a year before all the experts said it, that I could not be re-elected Governor because I had made people mad. And I said, "Well, what do you think I ought to do about it?" He said, "Tell them you made a mistake and undo it, for goodness sake." I said, "I can't do that." He said, "Good, after the next election, you'll have a lot more time to spend with me." [Laughter] And he was right.

After Ollie got sick and died, he still continued to drive around and be active. And I told Reverend Hight this morning the funny story he told me. In the last few years, he used to take two ladies who were older than he was, in their nineties, driving once a week. He said, "Nobody else would go take them out, so I would just go take them out once a week and drive them around. We have a grand time." He was about 87 at the time. And I said, "Do you like these older women?" He said, "You know, I do. It seems like they're a little more settled." [Laughter]

The great poet William Wordsworth said that the last, best hope of a good man's life are the little unremembered acts of kindness and love. I'll bet you every person here today who ever met that man has an act of kindness and love that you remember.

He really did the things that matter most in life very well. He was a great husband, a great father, a great grandfather, a great uncle. He was a great friend.

My most vivid memory of him, I think, will always be after Ollie got sick and they had to put her in a place where she could be cared for. And he was going through this awful period when she was failing, and he loved her so much. I stopped to see him one night in his house, and we were all alone there. We talked and shot the breeze for a long time. We laughed, and he told stories, and everything was just normal. And finally, it was real late, and I had to drive back to Little Rock, and I said, "Buddy, I've got to go." He said, "Okay." I was on my way out the door, and he grabbed me by the arm, and I turned around, and he had tears in his eyes—it was the only time I ever saw them—and I said, "This is really hard, isn't it?" And he smiled, and he said, "You know, it is. But when I married her, I signed on for the whole load, and most of it's been pretty good." I have never heard a better testament of love and devotion than that.

So I say of his great life, all of it was more than pretty good. If our country and our world had more people like Henry Oren Grisham, how much better it would be, how many more children would have a happy childhood, how much more peace and harmony there would be.

Conrad's poem said it all, and I'm pretty sure God heard it.

Thank you. God bless you.

NOTE: The President spoke at approximately 10:20 a.m. at the Brazzel/Oak Crest Chapel. Henry Oren Grisham was the President's great-uncle. In his remarks, the President referred to Rev. I.V. Hight, pastor, Unity Baptist Church; and Mr. Grisham's late wife, Ollie, his sons, Duayne and Conrad, and his daughters, Falva Grisham Lively and Myra Grisham Irvin.

Remarks to the United Nations Special Session on Environment and Development in New York City

June 26, 1997

Thank you very much. Mr. President, Mr. Secretary-General, ladies and gentlemen: Five

years ago in Rio, the nations of the world joined together around a simple but revolutionary

proposition, that today's progress must not come at tomorrow's expense.

In our era, the environment has moved to the top of the international agenda because how well a nation honors it will have an impact, for good or ill, not only on the people of that nation but all across the globe. Preserving the resources we share is crucial not only for the quality of our individual environments and health but also to maintain stability and peace within nations and among them. As the father of conservation in our Nation, John Muir, said, "When we try to pick anything out by itself, we find it hitched to everything else in the universe."

In the years since Rio, there has been real progress in some areas. Nations have banned the dumping of radioactive wastes in the ocean and reduced marine pollution from sources on land. We're working to protect the precious coral reefs, to conserve threatened fish, to stop the advance of deserts. At the Cairo Conference on Population and Development, we reaffirmed the crucial importance of cooperative family planning efforts to long-term sustainable development.

Here in America, we have worked to clean up a record number of our toxic dumps, and we intend to clean 500 more over the next 4 years. We passed new laws to better protect our water, created new national parks and monuments, and worked to harmonize our efforts for environmental protection, economic growth, and social improvement, aided by a distinguished Council on Sustainable Development.

Yesterday I announced the most far-reaching efforts to improve air quality in our Nation in 20 years, cutting smog levels dramatically and, for the first time ever, setting standards to lower the levels of the fine particles in the atmosphere that form soot. In America, the incidence of childhood asthma has been increasing rapidly. It is now the single biggest reason our children are hospitalized. These measures will help to change that, to improve health of people of all ages, and to prevent as many as 15,000 premature deaths a year. Still, we have much more to do, especially in reducing America's contribution to global climate change.

The science is clear and compelling: We humans are changing the global climate. Concentrations of greenhouse gases in the atmosphere are at their highest levels in more than 200,000 years, and climbing sharply. If the trend

is not changed, scientists expect the seas to rise 2 feet or more over the next century. In America, that means 9,000 square miles of Florida, Louisiana, and other coastal areas will be flooded. In Asia, 17 percent of Bangladesh, land on which 6 million people now live, will be lost. Island chains such as the Maldives will disappear from the map, unless we reverse the predictions.

Climate changes will disrupt agriculture, cause severe droughts and floods and the spread of infectious diseases, which will be a big enough problem for us under the best of circumstances in the 21st century. There could be 50 million or more cases of malaria a year. We can expect more deaths from heat stress. Just 2 years ago, here in the United States in the city of Chicago, we saw the tragedy of more than 400 of our citizens dying during a severe heat wave.

No nation can escape this danger. None can evade its responsibility to confront it. And we must all do our part, industrial nations that emit the largest quantities of greenhouse gases today and developing nations whose greenhouse gas emissions are growing rapidly. I applaud the European Union for its strong focus on this issue and the World Bank for setting environmental standards for projects it will finance in the developing world.

Here in the United States, we must do better. With 4 percent of the world's population, we already produce more than 20 percent of its greenhouse gases. Frankly, our record since Rio is not sufficient. We have been blessed with high rates of growth and millions of new jobs over the last few years, but that has led to an increase in greenhouse gas emissions in spite of the adoption of new conservation practices. So we must do better, and we will.

The air quality action I took on yesterday is a positive first step, but more must follow. In order to reduce greenhouse gases and grow the economy, we must invest more in the technologies of the future. I am directing my Cabinet to work to develop them. Government, universities, business, and labor must work together. All these efforts must be sustained over years, indeed, over decades. As Vice President Gore said Monday, "Sustainable development requires sustained commitment." With that commitment, we can succeed.

We must create new technologies and develop new strategies like emissions trading that will both curtail pollution and support continued

economic growth. We owe that in the developed world to ourselves and, equally, to those in the developing nations. Many of the technologies that will help us to meet the new air quality standards can also help us to address climate change. This is a challenge we must undertake immediately and one in which I personally plan to play a critical role.

In the United States, in order to do our part, we have to first convince the American people and the Congress that the climate change problem is real and imminent. I will convene a White House Conference on Climate Change later this year to lay the scientific facts before our people, to understand that we must act, and to lay the economic facts there so that they understand the benefits and the costs. With the best ideas and strategies and new technologies and increased productivity and energy efficiency, we can turn the challenge to our advantage.

We will work with our people, and we will bring to the Kyoto Conference a strong American commitment to realistic and binding limits that will significantly reduce our emissions of greenhouse gases.

I want to mention three other initiatives briefly that we are taking to deal with climate change and to advance sustainable development here and beyond our borders.

First, to help developing nations reduce greenhouse gas emissions, the United States will provide \$1 billion in assistance over the next 5 years to support energy efficiency, develop alternative energy sources, and improve resource management to promote growth that does not have an adverse effect on the climate.

Second, we will do more to encourage private investment to meet environmental standards.

The Overseas Private Investment Corporation will now require that its projects adhere to new and strengthened environmental guidelines, just as our Export-Import Bank already does and as I hope our allies and friends soon will. Common guidelines for responsible investment clearly would lead to more sustainable growth in developing nations.

Third, we must increase our use of new technologies, even as we move to develop more new technologies. Already, we are working with our auto industry to produce cars by early in the next century that are 3 times as fuel-efficient as today's vehicles. Now we will work with businesses and communities to use the Sun's energy to reduce our reliance on fossil fuels by installing solar panels on one million more roofs around our Nation by 2010. Capturing the Sun's warmth can help us to turn down the Earth's temperature.

Distinguished leaders, in all of our cultures we have been taught from time immemorial that, as Scripture says, "One generation passes away and another comes, but the Earth abides forever." We must strengthen our stewardship of the environment to make that true and to ensure that when this generation passes, the young man who just spoke before me and all of those of his generation will inherit a rich and abundant Earth.

Thank you very much.

NOTE: The President spoke at 6:30 p.m. in the United Nations General Assembly. In his remarks, he referred to General Assembly President Razali Ismail and U.N. Secretary-General Kofi Annan.

Statement on the Supreme Court Decision on the Line Item Veto

June 26, 1997

I am very pleased with today's Supreme Court decision that turned back the challenge to the line item veto. This decision clears the way for the President to use this valuable tool for eliminating waste in the Federal budget and for enlivening the public debate over how to make the best use of public funds.

The line item veto enables Presidents to ensure that the Federal Government is spending public resources as wisely as possible. It permits the President to cancel discretionary spending, new entitlement authority, and certain types of tax provisions that benefit special interests at the expense of the public interest.
