

real question before us is, now that we have all this prosperity, now that we have all this confidence, now that we have this dominant position in the world, what are we going to make of this moment? Are we going to relax? Are we going to feed on each other? Are we going to care for each other and build a better tomorrow? I think I know what your answer is, and

I want you to help me make that America's answer.

Thank you, and God bless you.

NOTE: The President spoke at 9:55 p.m. at the Tech Museum of Innovation. In his remarks, he referred to dinner host John Doerr; Mayor Susan Hammer of San Jose; and Reed Hastings, chief executive officer, Technology Network.

The President's Radio Address

September 26, 1998

Good morning. As everyone knows, cancer can be the cruelest of fates—it strikes nearly every family. It struck mine; I lost my mother to cancer.

Losses like these are the reasons why tens of thousands of Americans are coming together today on the National Mall in Washington, DC, with one common purpose: to focus our entire Nation's attention on cancer. Gathering today are patients and survivors, families and friends, doctors, and Americans from all walks of life. The Vice President, who's been a real leader in our administration's struggle against cancer, will join their ranks and will speak about the specific steps we're taking to win the fight.

This morning I want to talk to you about our overall vision of cancer care and research as we approach the 21st century. This is a time of striking progress, stunning breakthroughs. With unyielding speed, scientists are mapping the very blueprint of human life, and expectations of the human genome project are being exceeded by the day. We are closing in on the genetic causes of breast cancer, colon cancer, and prostate cancer. New tools for screening and diagnosis are returning to many patients the promise of a long and healthy life. It's no wonder scientists say we are turning the corner in the fight against cancer.

For 6 years now, our administration has made a top priority of conquering this terrible disease. We've helped cancer patients to keep health coverage when they changed jobs. We've accelerated the approval of cancer drugs while maintaining safe standards. We've increased funding for cancer research and, as part of our balanced budget, strengthened Medicare to make the

screening, prevention, and detection of cancer more available and more affordable.

Still, we know that we must never stop searching for the best means of prevention, the most accurate diagnostic tools, the most effective and humane treatments, and someday soon, a cure. To that end, there are several steps we must take.

First, to build on our remarkable progress, I proposed an unprecedented, multiyear increase in funding for cancer research. As studies proceed, we must remember that patients, as much as scientists, have a critical perspective to add to any research program. That's why I'm announcing that all Federal cancer research programs will, by next year, fully integrate patients and advocates into the process of setting research priorities.

Next, as we continue to unravel the genetic secrets of cancer, we must apply that knowledge to the detection of the disease. I am therefore issuing a challenge to the scientific community to develop, by the year 2000, new diagnostic techniques for every major kind of cancer so we catch it at its earliest and often most treatable stage.

Also, we should give more patients access to cutting-edge clinical trials so they and researchers can get faster results. That's why I'm directing the National Cancer Institute to speed development of national clinical trials systems—a simple, accessible resource for health care providers and patients across our Nation. I'm also urging Congress to pass my proposal to cover the cost of those trials for Medicare beneficiaries who need them most.

Finally, we are fighting against the leading cause of preventable cancer by doing everything we can to stop children from smoking. America needs a Congress with the courage to finish the job and pass comprehensive tobacco legislation.

New technological tools, new networks of information, new research priorities—all are part of our overall approach to health care that puts the patient first. On this day, as Americans from all walks of life and all parts of our Nation renew our national fight against cancer, we do well to remember that we are doing more than curing a disease. We are curing the ills that

disease may cause: the stigmas, the myths, the barriers to quality care. The concerned citizens on The Mall today show that we are overcoming those barriers, one by one, and at the same time building a stronger and healthier America.

Thank you for listening.

NOTE: The address was recorded at approximately 7:30 p.m. on September 25 at the Fairmont Hotel in San Jose, CA, for broadcast at 10:06 a.m. on September 26. The transcript was made available by the Office of the Press Secretary on September 25 but was embargoed for release until the broadcast.

Remarks at a Democratic National Committee Luncheon in Rancho Santa Fe, California

September 26, 1998

Thank you very much. Well, if I had any sense, I wouldn't say anything. *[Laughter]* Thank you, Bill. Thank you, Star. Thank you, Len. And all of you, I can't tell you how much I appreciate you being here. I'm delighted to see Lynn Schenk, and I'm delighted to see Christine Kehoe. And we are determined to see her prevail. If you want to do something for what you just stood up for, send her to Congress. Send her to Congress.

I'd also like to thank all of you who have been my friends over the years, and some of you whom I have just met today, I am very grateful to see you here. I'd like to thank all the people who are responsible for our wonderful meal and the terrific musicians. Let's give them a hand. Didn't they do a great job? Thank you. *[Applause]* The Wayne Foster Group. Thank you so much. Bless you.

It's nice to be here in this humble little house. *[Laughter]* This is the first place I've ever been where the fish are worth more than I make in a year. *[Laughter]* Listen, I want to say, this is really a magnificent home. It's a real tribute to the work that Bill has done over the years and to the feeling that they have for all of us that they open their home to us. And I'm very grateful to be here.

I will be brief. I've had a remarkable couple of days. I was in Chicago yesterday, which most of you know is my wife's hometown. And I

got my Sammy Sosa Chicago Cubs baseball shirt, which was promptly taken away from me last night when I met up with Hillary and Chelsea in northern California.

Hillary has been up in Washington and Oregon and San Francisco campaigning, made an appearance last night for Barbara Boxer up there. And I'm here, and I'll be in Los Angeles tonight and tomorrow. I'm going on to El Paso and San Antonio, Texas, and then I'm going back to Washington on Sunday night to try to bring to a closure this session of Congress with some productive action. But I cannot tell you how much it means to me, not only as your President but as a person, what you have said here and what I have seen all across this country. And I'm grateful, and my family is grateful, and I thank you.

But there is something far bigger than all of us at stake here, and that is our country, our system, and where we're going. And I tell everybody who comes up to me worrying about this, that the real enemy of our party and our principles and our programs and the direction of the country is not adversity. Adversity is our friend. It inspires us to action. It gives energy. It gives us steel and determination. Our real enemy is complacency, or cynicism.

You know, things are going pretty well for our country now, and I'm very grateful that I had a chance to be President, to implement
