

Jan. 20 / Administration of William J. Clinton, 1999

Letter to Congressional Leaders Transmitting the Russia-United States Fisheries Agreement Extension

January 20, 1999

Dear Mr. Speaker: (Dear Mr. President:)

In accordance with the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*), I transmit herewith an Agreement Between the Government of the United States of America and the Government of the Russian Federation extending the Agreement on Mutual Fisheries Relations of May 31, 1988, with annex, as amended and extended (the "Mutual Fisheries Agreement"). The present Agreement, which was effected by an exchange of notes in Moscow on July 28 and November

23, 1998, extends the Mutual Fisheries Agreement to December 31, 2003.

In light of the importance of our fisheries relationship with the Russian Federation, I urge that the Congress give favorable consideration to this Agreement at an early date.

Sincerely,

WILLIAM J. CLINTON

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Albert Gore, Jr., President of the Senate.

Remarks to the Montgomery County Community in Norristown, Pennsylvania

January 20, 1999

Thank you very much. First, let me say to all of you that when we came in here tonight, I think it's fair to say that Hillary and Al and Tipper and I were literally overwhelmed by this reception. And I knew that this was a wonderful community; I knew this was a wonderful school. I knew there was a lot of enthusiasm, but it didn't all quite add up until I realized that we had caused your exams to be delayed. And I want you to know that we're having such a good time, we'd be delighted to come back about this time next term if you want. We can make this a regular thing. *[Laughter]*

I want to thank Dr. Williams for his magnificent invocation. I thank Dr. Woodall for the remarks he made, for making us welcome here, and for the example that he and Mr. Spencer, the principal here, all the teachers here, and all the students and teachers from this school and the other schools here represented. I thank you for what you're doing and for the example you're setting for America.

I'd like to thank all of our musicians and the choir for playing and singing for us. I thought they were great. And I want to thank Melissa for speaking so well. Weren't you proud of her? Did she do a great job, or what? *[Ap-*

plause] I'm glad I never had to run against her for anything. *[Laughter]*

I also want to thank all these wonderful people from Pennsylvania who have come here, all the officials and citizens from this area and from Philadelphia and nearby areas. Let me say, there was a lot of talk tonight keying off Reverend Williams' invocation about vision.

I'd like to say something else, if I might, out of respect to others. It is a good thing to have a vision, because otherwise you never know where you're going. So you have to have one. I ran for President, beginning in 1991, because I thought our country was drifting and because I believed that if you look at these young people here—one elementary school in this area has kids from 50 countries speaking 13 languages—and if you look at all these young people and their parents and everybody in this room, and you imagine what the world is going to be like, and you know it's going to get smaller and smaller, and we're going to have more and more relationships, and the borders will become more and more open, it's hard to imagine any country in the world that is remotely as well positioned as America to give people the chance to make the most of their own lives.

But we had to have a vision. My vision for the 21st century was pretty simple. I wanted us to have a country for the children of the Gores and the Clintons and all the other kids in our country where every person who was a responsible citizen would have a genuine opportunity to live out their dreams. I wanted us to have a country where over all the differences between us—we would relish those differences, our racial, our religious, our cultural differences; our serious differences we would debate seriously. But we would honor our common humanity and our shared values as Americans enough to say, what unites us is so much more important than what divides us; we will build one America in the 21st century.

And I wanted us to continue to be the country, as we grew more diverse and, therefore, had deeper and deeper ties with more and more other people around the world. I wanted America to recognize that because of our wealth and position, we have not only the opportunity but a responsibility to continue to be the world's leading force for peace and freedom and prosperity for others. It is good for ourselves to do the right thing in trying to build the rest of the world and build closer ties.

Now, it is a good thing to have a vision; you can't get started without it. Otherwise you don't know where you're going. The Vice President talked about Tommy Lasorda and Mike Piazza. My favorite baseball player of all time, because he was such a wonderful speaker, was Yogi Berra. You know, Yogi Berra said, "We don't know where we're going, but we're making good time." [Laughter] So you have to have a vision. But you have to have something else, too. You have to have people who are willing to act on it.

I hope you could see with the four of us up here, we like being together. We've worked closely together. We see ourselves as a family, and we see our allies as a family. When I came to Washington, I wanted to do something about homelessness, but Tipper Gore helped me do it. I wanted to raise the consciousness of America about all kinds of things that we sort of kept hidden under the rug but were hurting people. Mental health was one of the most important. Tipper Gore helped me do it.

I wanted to prove that we could have a smaller Government—we now have the smallest Federal Government since 1962—but I wanted to do it in a way that wouldn't just throw good

Federal employees in the street and that would enable us to do more. The Vice President made it possible for us to do that; he led that effort.

I wanted to prove that we could grow the economy and improve the environment by doing things like building new cars that would triple gas mileage. The Vice President has led our efforts there, and in dealing with all the promise of new technology in trying to hook up all our schools and libraries to the Internet, and in managing a big portion of our relations with Russia, South Africa, and other countries. I can say without qualification that no Vice President in history has had so much responsibility or done so much good. So the vision requires an action.

And if it hadn't been for Hillary, for all the good intentions in the world, we wouldn't have done nearly as much to advance the cause of health care or child care or education or to observe the millennium. We wouldn't have been able to do it.

When I see Joe Hoeffel standing up here talking—and I know he's going to be a strong force on the committees that he's gotten; I see another new Congressman out there, my long-time friend Bob Brady from Philadelphia. I know that they will be implementers of a vision. Or Chaka Fattah, who got you all worked up, up there, when he stood up; do you know what he did? He passed a bill in the Congress last year that I was for, but I could not have passed it. I'll tell you the truth: I could not have done it. But he went around to Republicans and Democrats alike and said, "You know, I come from Philadelphia. There are a lot of poor kids there that have never had a real chance. They come from poor families. They live in tough neighborhoods, but they've got good minds. Will you help me pass a bill that will provide the necessary financial support for college students to come in and mentor these kids in middle schools so they'll go on to college?" And we did it because of that.

Now, I'll give you one other example. Last time I came here as President was in 1993, to a conference on entitlement reform. Entitlement reform is a fancy way of saying with everybody living longer and the baby boomers about to retire, all the rest of you aren't going to be able to afford to pay our medical and retirement bills unless we do something. That's what entitlement reform means.

And I knew the first thing we had to do was to get the economy going. And I said, "You know, I've got this economic plan, and it's not going to be very popular with a lot of people because it has a lot of tough decisions. We're asking people who are the wealthiest people in America to pay a little more in income taxes, sometimes a lot more if they were really well off. We're asking people who are used to getting Government programs to do without a few hundred of them until we get this budget in balance. But if we do it, we'll lower interest rates, cutting home mortgages and the interest rates on car payments and credit cards, and we'll get investment back in the country. We'll have jobs coming back in the country. And the money you will save on the stock market going up and the interest rates going down will be far greater than the money those of us who are well off had to pay in a little more taxes." It was very controversial, and people said, "Oh, it will bring an end to the economy. It will end the American economy as we know it. It will drive us into recession."

Well, you heard what the Vice President said about the country with the longest peacetime expansion in history, the lowest peacetime unemployment since 1957, and all of that. What you should know is that this county, this county has had, since that economic program passed and the interest rates started going down, 1,800 new businesses and 44,000 new jobs, the highest growth in the State of Pennsylvania.

The decisive vote that made all that possible was cast in Congress by Marjorie Margolies-Mezvinsky. We won by one vote in the House, and it was tied in the Senate. The decisive vote in the Senate was cast by Al Gore. And as he says, since he gets to vote whenever there's a tie, whenever he votes, we win. *[Laughter]*

Now, the point I'm trying to make is we had a good vision, but somebody has got to carry the water; somebody has to make the decisions; somebody has to push the rocks up the hill; somebody has to take that step and jump off the diving board; someone has to move. People have to act on their vision. That's why I said last night and that's why that sign says, "Let's get to work." We have a good vision, but we must act.

And for all of you, I thank you. I wanted to come here to this school because this school district represents what I think America ought to do. I know not every school district has the

resources. So if we want everybody to end social promotion but have summer school and after-school programs, we have to provide the funds from Washington to help the school districts do it. If we want to turn around schools that aren't working, we have to provide help from Washington. And we're doing that.

But I want people to see this school district all over America, on the news tonight, in the articles tomorrow. I want people to know we came here to a place that has done important things, to give kids who need it extra help, to have high standards, to do things that will create a vision that people will want to act on. I think to have a motto like "learn and live to serve" is a stunning thing, and I hope you will live by it all your lives.

Most of you here know this, but for the benefit of the press, I want to say this: Every high school graduate in this school district gets a license, a driver's license-sized copy of the diploma, and on the back it has the computer skills the graduate has mastered. That's a driver's license to the future. I would like to see that modeled in other places all across America, as well.

So you've already heard what we have to say, but it's plain that America is working again. But every one of you knows—if we had time to do it, I'd give everybody a piece of paper, and I'd ask you to write down—you might do this when you go home tonight. I'd ask you to write down somewhere between three and six things—no more than six—that you believe are the long-term challenges that will face you young people in the 21st century and what is it that we could do now that would pave the way to a better future for you.

I can tell you that I did my best in the State of the Union last night to say, "Okay, we've got America working again, but what are the long-term challenges?" And you've heard them talked about tonight, and I won't belabor them. But let me say, we have to build strong communities in the 21st century that gives everyone a chance at opportunity. That means we have to do more to have the kind of economic opportunity in places where unemployment is high and people make low wages that you have here. That means putting more money in there. It means teaching adults better skills. It means teaching those who are first-generation Americans to read better, if that is what it takes. It means doing whatever is necessary to get

these economies going. It means continuing to drive the crime rate down. It means making all communities livable communities, to set aside the land that we need to set aside, to have the green space, to manage the traffic, to do the things that will make people free and happy if they live anywhere in America.

These are the kinds of things we have to do. It means reconciling work and family. One of the best things that the Gores have done is, for the last 7 years, they have had a conference in Tennessee every year on the challenges modern families face. And most all of them relate somehow or other to the need to balance work and family, a challenge that faces Americans in all income groups. I'll bet there is not a family here that has not at some point in the last couple of years faced some sort of challenge of balancing your responsibilities to your children to your responsibilities to your work.

That's why we want a child care plan that includes help for stay-at-home parents when the children are very young, but real help for working people that can't afford quality child care on their own. Because in America, when I look at all of you, I want you to be free and confident, when you start your families, that you can do what you want in your work life, but you know that your first responsibility is to raise your children, and you're going to be able to succeed at that responsibility.

The Vice President told you that rather gripping story about the HMO's. The truth is we have to manage the health care system; it's like any other system. We have to keep the costs as low as possible. But the quality of our people's health counts most. That's why we say you ought to be able to see a specialist if you need one. You ought to be able to go to the nearest emergency room. You ought to be able to have your medical records private and all of the other things in our Patients' Bill of Rights, because we've got to balance the need to save money with the fundamental necessity of providing quality health care to all Americans.

And I'd just like to say one other thing. We've said a lot about education tonight, but I would like to say something about the very first subject I talked about last night in the State of the Union, and that is the aging of America. And again I want to say, this is an issue that should be of primary importance not to today's retirees but to tomorrow's retirees, their children, and

their grandchildren yet unborn. Because when the baby boomers retire—and that includes the parents of just about all of the students here; people between the ages of 34 and 52 were the people born in the generation after World War II, the largest group of people in history in America, young people, until the present class of students which numbers over 53 million. Now, when we retire, we're going to double the number of seniors by the year 2030. There will be two people working for every one person drawing Social Security. And what we've got—and the average life expectancy is already 76 years old plus; for the young people here, it's probably about 83 years. This is a high-class problem. The older you get, the more you'll be glad that that's going up. *[Laughter]* This is a high-class problem. But we do not want to get into a position where our retirement is a financial burden to our children and undermines our children's ability to raise our grandchildren.

So when I tell you that we ought to set aside roughly 75 percent of this surplus we've got for the next 15 years to save Social Security and to save Medicare, and in the process, since we'll be saving the money, we'll be paying down the national debt, giving us the lowest level of debt we've had as a nation since before World War I in 1917, keeping interest rates down, investment high, jobs creation going, and incomes rising—I say that not just for those of us who will be older but for our kids and our grandkids. And I hope you will see it that way.

This is a big test for us. We haven't had this kind of situation in a long, long time. And very rarely do societies have the luxury of being financially strong enough, militarily secure enough, and having enough information about the future to make the kind of decisions that I asked the American people to make last night. Yes, we ought to give some tax cuts, but they ought to be the right kind. They ought to be for child care. They ought to be for helping us to deal with our environmental challenges. They ought to be for people saving for their own retirement, because Social Security will never be enough for that. They ought to be for raising children.

But we can save this money now and lift a burden from the young people here. I want every parent here to look at the young people here and ask yourselves: Do you really want to run the risk of squandering this surplus that

we have worked so hard for until we know for sure that our retirement will not compromise the integrity of their lives and their ability to raise their children as we have tried to raise them?

Now, the young people here are going to have a fascinating time. The Internet is already growing by, you know, millions and millions of new pages every week. It's the fastest growing communication mechanism in human history. People are able to move around as never before, and even if you can't leave town now, you've got people from all over the world right next door.

We are learning things that we have never imagined before. We are on the verge of not only unlocking the mysteries of the human gene but actually finding medical treatments to cure or even prevent things from Alzheimer's to arthritis to all kinds of cancers. This is a stunning time.

I went to the auto show in Detroit the other day, and one thing I'm looking forward to—I love this job, and I'm not looking forward to 2 years from now being barred from being President by the Constitution's two-term limit. But one thing I am looking forward to, now that I've been to the Detroit auto show, is getting back in those cars, because the cars of the future are going to be environmentally sound and hilariously fun to drive and safer.

This is going to be an interesting time for you to live in. But we have to do our best in this time to, first of all, make it safe, dealing with the challenges of nuclear and chemical and biological weapons, to give you the strongest communities possible, to build one America across our lines of diversity, and to think about the future.

When I ran for President in 1992, before I ever made the decision to run, a young man

who is now not quite so young, he's a graduate student, named Sean Landris was driving me around Los Angeles. I was an anonymous, virtually anonymous Governor of Arkansas. But Sean Landris knew something about me and the speeches I had made and the things I was interested in, and he said, "Are you going to run for President?" And I said, "Well, I haven't decided yet, but I might." He said, "Well, if you do, here's what I think your theme song ought to be." And he had a little tape deck in his car, and he put this tape deck in and this old Fleetwood Mac song, "Don't Stop Thinking About Tomorrow," which was made before he was born. So we made it our theme song.

And I believe that those of us in positions of responsibility have no higher responsibility than to think about your tomorrows. And when you reach our age, you will want more and more to think about the tomorrows of your children and your grandchildren.

What I tried to say last night is, there's never been a time when we had brighter tomorrows. All we have to do is act on our vision. Let's get to work.

Thank you, and God bless you.

NOTE: The President spoke at 7:30 p.m. in the gymnasium at Norristown Area High School. In his remarks, he referred to Rev. Charles D. Williams, pastor, Mt. Zion AME Church, who gave the invocation; Michael V. Woodall, superintendent, Norristown Area School District; Barry E. Spencer, principal, and Melissa Ghoston, student council president, Norristown Area High School; Tommy Lasorda and Yogi Berra, members of the Baseball Hall of Fame; and Mike Piazza, catcher, New York Mets. The transcript released by the Office of the Press Secretary also included the remarks of Vice President Al Gore.

Remarks to an Overflow Crowd in Norristown

January 20, 1999

Thank you very much. You know, I felt, even when I thought there were just a couple of hundred people here, I felt so badly for you having to wait and wait and wait.

But let me tell you, you should know at least it is a lot cooler in here than it is in there. We have had a wonderful, wonderful time here. We are very grateful to all of you for coming out, for supporting your schools, supporting your
