

Statement on the Terrorist Bombing in Jerusalem *August 9, 2001*

I deplore and strongly condemn the terrorist bombing in downtown Jerusalem today. My heartfelt sympathies and those of the American people are with the victims of this terrible tragedy and their families.

Nothing is gained through cowardly acts such as this. The deliberate murder of innocent civilians is abhorrent to all, a threat to peace, and inconsistent with the parties' signed agreements to put aside violence. Palestinian Authority Chairman Arafat must condemn this horrific terrorist attack, act now to arrest and bring to justice those responsible, and take immediate, sustained action to prevent future terrorist attacks.

I urge the parties to return immediately to the cease-fire commitments they have previously made and to renew effective security cooperation so this kind of terrorism will not happen again. The United States

stands ready to assist the parties in this effort, as it has in the past, but the effort must begin with the parties acting to fulfill their obligations under the Tenet work plan.

The United States remains committed to implementation in all its elements of the Mitchell Committee Report, which provides a path to return to peace negotiations based on United Nations Security Council Resolutions 242, 338, and the Madrid Conference. To get to Mitchell, the parties need to resume effective security cooperation and work together to stop terrorism and violence.

I call upon the leaders of the Palestinian Authority and Israel to demonstrate foresight and responsibility by choosing the path toward a better future for their people.

Address to the Nation on Stem Cell Research *August 9, 2001*

Good evening. I appreciate you giving me a few minutes of your time tonight so I can discuss with you a complex and difficult issue, an issue that is one of the most profound of our time.

The issue of research involving stem cells derived from human embryos is increasingly the subject of a national debate and dinner table discussions. The issue is confronted every day in laboratories as scientists ponder the ethical ramifications of their work. It is agonized over by parents and many couples as they try to have children or to save children already born. The issue is debated within the church, with people of different faiths, even many of the same faith, coming to different conclusions. Many people are finding that the

more they know about stem cell research, the less certain they are about the right ethical and moral conclusions.

My administration must decide whether to allow Federal funds, your tax dollars, to be used for scientific research on stem cells derived from human embryos. A large number of these embryos already exist. They are the product of a process called in vitro fertilization, which helps so many couples conceive children. When doctors match sperm and egg to create life outside the womb, they usually produce more embryos than are implanted in the mother. Once a couple successfully has children, or if they are unsuccessful, the additional embryos remain frozen in laboratories. Some will not survive during long storage; others
