

researchers. And as a result, a new path has been forged.

Among those who traveled that path was President Xi, who on an exchange program as a younger man visited our State of Iowa and stayed with a local family. Mr. President, as a result of the ties you forged then, families in Iowa still welcome young men and women from China into their homes and communities.

That path has also been traveled by my wife Michelle and our two daughters, who visited China earlier this year. As I was on my visit 5 years ago, they were deeply moved by the history and majesty of this nation and its people. And Michelle even tried her hand at tai chi.

Now this path is being walked in new ways. We recently witnessed an inspiring sight: a Chinese plane landing in Liberia with supplies

to fight Ebola, and it was unloaded by Chinese and Americans and Liberians, working together, shoulder to shoulder. And today we showed that we can bring that same spirit to bear as leaders in the fight against climate change.

In closing, I'd like to recall a Chinese saying that reflects this spirit of possibility: "Nothing is too difficult, as long as people have resolve." And so I propose a toast: To our people and the resolve we share, I wish the best of health to President Xi, his family, and the people of China, may we continue to walk the path of friendship and cooperation for the benefit of ourselves and for the world. *Ganbei*.

NOTE: The President spoke at approximately 1:30 p.m. in the Great Hall of the People.

Joint Statement—United States-China Joint Announcement on Climate Change November 12, 2014

Beijing, China

1. The United States of America and the People's Republic of China have a critical role to play in combating global climate change, one of the greatest threats facing humanity. The seriousness of the challenge calls upon the two sides to work constructively together for the common good.

2. To this end, President Barack Obama and President Xi Jinping reaffirmed the importance of strengthening bilateral cooperation on climate change and will work together, and with other countries, to adopt a protocol, another legal instrument or an agreed outcome with legal force under the Convention applicable to all Parties at the United Nations Climate Conference in Paris in 2015. They are committed to reaching an ambitious 2015 agreement that reflects the principle of common but differentiated responsibilities and respective capabilities, in light of different national circumstances.

3. Today, the Presidents of the United States and China announced their respective post-2020 actions on climate change, recognizing that these actions are part of the longer

range effort to transition to low-carbon economies, mindful of the global temperature goal of 2°C. The United States intends to achieve an economy-wide target of reducing its emissions by 26%–28% below its 2005 level in 2025 and to make best efforts to reduce its emissions by 28%. China intends to achieve the peaking of CO₂ emissions around 2030 and to make best efforts to peak early and intends to increase the share of non-fossil fuels in primary energy consumption to around 20% by 2030. Both sides intend to continue to work to increase ambition over time.

4. The United States and China hope that by announcing these targets now, they can inject momentum into the global climate negotiations and inspire other countries to join in coming forward with ambitious actions as soon as possible, preferably by the first quarter of 2015. The two Presidents resolved to work closely together over the next year to address major impediments to reaching a successful global climate agreement in Paris.

5. The global scientific community has made clear that human activity is already changing the world's climate system. Accelerating climate change has caused serious impacts. High-

er temperatures and extreme weather events are damaging food production, rising sea levels and more damaging storms are putting our coastal cities increasingly at risk and the impacts of climate change are already harming economies around the world, including those of the United States and China. These developments urgently require enhanced actions to tackle the challenge.

6. At the same time, economic evidence makes increasingly clear that smart action on climate change now can drive innovation, strengthen economic growth and bring broad benefits—from sustainable development to increased energy security, improved public health and a better quality of life. Tackling climate change will also strengthen national and international security.

7. Technological innovation is essential for reducing the cost of current mitigation technologies, leading to the invention and dissemination of new zero and low-carbon technologies and enhancing the capacity of countries to reduce their emissions. The United States and China are two of the world's largest investors in clean energy and already have a robust program of energy technology cooperation. The two sides have, among other things:

- established the U.S.-China Climate Change Working Group (CCWG), under which they have launched action initiatives on vehicles, smart grids, carbon capture, utilization and storage, energy efficiency, greenhouse gas data management, forests and industrial boilers;
- agreed to work together towards the global phase down of hydrofluorocarbons (HFCs), very potent greenhouse gases;
- created the U.S.-China Clean Energy Research Center, which facilitates collaborative work in carbon capture and storage technologies, energy efficiency in buildings, and clean vehicles; and
- agreed on a joint peer review of inefficient fossil fuel subsidies under the G-20.

8. The two sides intend to continue strengthening their policy dialogue and practi-

cal cooperation, including cooperation on advanced coal technologies, nuclear energy, shale gas and renewable energy, which will help optimize the energy mix and reduce emissions, including from coal, in both countries. To further support achieving their ambitious climate goals, today the two sides announced additional measures to strengthen and expand their cooperation, using the existing vehicles, in particular the U.S.-China Climate Change Working Group, the U.S.-China Clean Energy Research Center and the U.S.-China Strategic and Economic Dialogue. These include:

- *Expanding Joint Clean Energy Research and Development:* A renewed commitment to the U.S.-China Clean Energy Research Center, including continued funding for three existing tracks on building efficiency, clean vehicles and advanced coal technology and launching a new track on the energy-water nexus;
- *Advancing Major Carbon Capture, Utilization and Storage Demonstrations:* Establishment of a major new carbon storage project based in China through an international public-private consortium led by the United States and China to intensively study and monitor carbon storage using industrial CO₂ and also work together on a new Enhanced Water Recovery (EWR) pilot project to produce fresh water from CO₂ injection into deep saline aquifers;
- *Enhancing Cooperation on HFCs:* Building on the historic Sunnylands agreement between President Obama and President Xi regarding HFCs, highly potent greenhouse gases, the two sides will enhance bilateral cooperation to begin phasing-down the use of high global warming potential HFCs and work together in a multilateral context as agreed by the two Presidents at their meeting in St. Petersburg on 6 September 2013;
- *Launching a Climate-Smart/Low-Carbon Cities Initiative:* In response to growing urbanization and increasingly significant greenhouse gas emissions

from cities and recognizing the potential for local leaders to undertake significant climate action, the United States and China will establish a new initiative on Climate-Smart/Low-Carbon Cities under the CCWG. As a first step, the United States and China will convene a Climate-Smart/Low-Carbon Cities Summit where leading cities from both countries will share best practices, set new goals and celebrate city-level leadership in reducing carbon emissions and building resilience;

- *Promoting Trade in Green Goods*: Encouraging bilateral trade in sustainable environmental goods and clean energy technologies, including through a U.S. trade mission led by Secretaries Moniz

and Pritzker in April 2015 that will focus on smart low-carbon cities and smart low-carbon growth technologies; and

- *Demonstrating Clean Energy on the Ground*: Additional pilot programs, feasibility studies and other collaborative projects in the areas of building efficiency, boiler efficiency, solar energy and smart grids.

NOTE: The joint statement was released by the Office of the Press Secretary on November 11, but due to the 13-hour time difference between Washington, DC, and Beijing, China, the joint statement is dated November 12. An original was not available for verification of the content of this joint statement.

Message to the Congress on Continuation of the National Emergency With Respect to Iran

November 12, 2014

To the Congress of the United States:

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), provides for the automatic termination of a national emergency unless, within 90 days prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent to the *Federal Register* for publication the enclosed notice stating that the national emergency with respect to Iran that was declared in Executive Order 12170 of November 14, 1979, is to continue in effect beyond November 14, 2014.

Because our relations with Iran have not yet returned to normal, and the process of implementing the agreements with Iran, dated January 19, 1981, is still under way, I have determined that it is necessary to continue the national emergency declared in Executive Order 12170 with respect to Iran.

BARACK OBAMA

The White House,
November 12, 2014.

NOTE: The notice is listed in Appendix D at the end of this volume.

Remarks Prior to a United States-Association of Southeast Asian Nations Summit Meeting in Nay Pyi Taw, Burma

November 13, 2014

Thank you very much, Mr. President. It is a great pleasure to be back in this beautiful coun-

try and to once again have the opportunity to consult closely with all of our ASEAN partners.
