MONTHLY SUMMARY OF FOREIGN COMMERCE OF THE UNITED STATES

January 1935

Compiled by the

DIVISION OF FOREIGN TRADE STATISTICS

ERNEST A. TUPPER, Chief

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON : 1935

BASIS OF UNITED STATES FOREIGN TRADE STATISTICS

Statistics of the trade of the United States with foreign countries are compiled from statistical copies of Shippers' Export Declarations and Import Entries sworn to by shippers, their brokers, or agents, and filed at all the customs ports. The statistics include the trade of the customs districts of Alaska, Hawaii, Puerto Rico, and, beginning with January 1, 1935, the Virgin Islands of the United States, with foreign countries, but do not include the trade of continental United States with those territories. The Philippine Islands and the Panama Canal Zone are considered as foreign countries. Separate statistics are compiled for the trade of the United States with Alaska, Hawaii, Puerto Rico, and, beginning in 1935, with the Virgin Islands of the United States.

Trade of the Philippine Islands with foreign countries is published separately by the Philippine government. Trade of the Panama Canal Zone is included in the statistics published by the country of Panama.

Total exports of merchandise from the United States to foreign countries include exports of all commodities, except gold and silver, in the form of ore, bullion, and coin, which are the growth, produce, and manufacture of the United States and exports of foreign merchandise which had been previously imported into the United States.

Gold and silver exports and imports in bullion form, that contained in ores of all kinds, or in scrap, sweepings, etc., or in coins are not included in the merchandise totals but are shown in separate tables. Statistics on gold and silver movements do not include manufactured articles of gold and silver such as solid or plated ware, sheets, plates, wire, leaf, alloys, and other forms of gold and silver prepared for the use of dentists and jewelers. Such articles are considered as merchandise.

Exports of United States Merchandise (domestic exports) include only commodities, the growth, produce, or manufacture of the United States and commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and other commodities made from imported materials.

Exports of foreign merchandise (reexports) include only commodities of foreign origin, which, at the time of exportation, are in the same condition as when they were imported into the United States.

General imports of merchandise include all commodities entered for immediate consumption, plus those entered for storage in bonded customs warehouses. The term "entry for consumption" applies to the import entry made of goods which are passed through the customs immediately upon arrival and implies that the merchandise has been delivered into the custody of the importer and that the duties have been paid on the dutiable merchandise. The term "entry for warehouse" applies to the import entry made for merchandise entered for storage in a bonded warehouse and thus not entering immediately into merchandising or consumption channels.

Imports for consumption include all commodities which immediately entered the country upon arrival, plus withdrawals from bonded warehouse for consumption. Withdrawal for consumption of merchandise from bonded customs warehouses may be made at any time within 3 years from the date of importation upon payment of duties and charges accruing thereon. The "general imports" and "imports for consumption" for any period will differ to the extent that the "entries for bonded customs warehouses" for the period differ from the "withdrawals from warehouse for consumption."

The value of exports of domestic or United States merchandise is the actual selling price or the value at the time of exportation in the ports of the United States from which they were exported, as declared by the shippers on the shippers' export declarations. Values of cases, boxes, sacks, and coverings of any kind are included. If the merchandise is sold at an interior place, the inland freight charges from the interior point of shipment to the seaport or border point of exportation are included in the value, but freight and other charges from the port of departure in the United States to the destination in the foreign country or noncontiguous territory are not included. The value of exports of foreign merchandise (reexports) which are withdrawn from bonded customs warehouses is their import value and the basis of valuation for those commodities which are exported "not from bonded warehouses", comprising mainly merchandise which was imported free of duty, is the same as that for exports of domestic merchandise.

The value of imports of merchandise is the foreign value converted into United States currency at the rate of exchange prevailing the day the merchandise is shipped to the United States. The value used for compiling import statistics is stated on the import entry and consular invoice and as defined in section 402 of the Tariff Act of 1930, usually is the "market value or the price at the time of exportation of such merchandise to the United States, at which such or similar merchandise is freely offered for sale to all purchasers in the principal markets of the country from which exported, in the usual wholesale quantities and in the ordinary course of trade including the cost of all containers and coverings of whatever nature, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States."

If a higher value than the value described above is established for merchandise intended for export to the United States, then such value must be used for imports.

If neither of the above values can be satisfactorily ascertained, then the value shall be the value at which such or similar merchandise is offered for sale in the principal market of the United States, with allowances for duty, cost of transportation and insurance, commission, etc.

If none of the above values can be ascertained, then the cost of production shall be the value.

The value of certain articles of merchandise, such as coal-tar finished products and intermediate products, is the American selling price or usual wholesale selling price in the principal market of the United States.

The country required to be shown on the export statements is the country of ultimate or final destination. Exporters are instructed to state the country of final destination when goods are shipped through Canada, Panama Canal Zone, England, or any other country for transshipment to some other country to which the goods are sold or destined for a market. In actual practice, however, the exporter frequently does not know the ultimate destination of his products and then reports the country to which the goods were shipped. The country of import is the country in which the merchandise was invoiced, except that when the entry or invoice shows that the goods were actually shipped from some interior or other country through the country where the goods were invoiced, the imports are then shown as coming from the actual country from which the shipment was made.

Tonnage tables.—In the statements of vessels entered and cleared in the foreign trade of the United States, the tonnage is stated in net tons of 100 cubic feet of cargo-carrying capacity excluding space for crew, engines, and other machinery, etc. Vessels touching at a United States port in distress, or for other temporary cause, without discharging cargo, are not included in the figures.

Bunker coal and oil laden on vessels engaged in the foreign and domestic trade are not included in the totals of exports from the United States. Statistics for such transactions are compiled separately.

Intransit trade.—Foreign merchandise, gold and silver, which is shipped intransit through the United States from one foreign country to another, or which is received from foreign countries and transshipped in the ports of the United States to foreign countries, is not included in the import statistics upon arrival, nor in the export statistics when shipped from the United States. Separate statements showing the total value of such trade are compiled.

Units of quantity used in the statistical statements are as follows unless otherwise indicated: Ton, 2,240 pounds. Number of pounds to the barrel: wheat flour, barley flour, rye flour, and corn meal, 196 pounds; rosin, tar, and pitch, 500 pounds gross weight; fish (pickled) and lime, 200 pounds net weight; cement, 376 pounds (four bags to the barrel). Number of pounds to the bushel: Wheat, beans, peas, and potatoes, 60 pounds; onions, 57 pounds; barley and buckwheat, 48 pounds; corn, rye, flaxseed, kafir, and milo, 56 pounds; oats, 32 pounds; malt, 34 pounds. Number of gallons to the barrel: Mineral oil, 42 gallons.

Classification of exports.—Separate statistics by countries and by customs districts are being kept for about 1,400 commodities. Additional accounts are provided for each year at the request of Government offices, trade associations, or interested business concerns when it can be shown that it is reasonable to expect that the exports of the particular article will approximate \$200,000, or more.

BASIS OF UNITED STATES FOREIGN TRADE STATISTICS

(Continued from p. 2)

Classification of imports.—Separate statistics are compiled for about 4,500 import commodities, including every article specially stated in the tariff act. A separate classification may be added when reasonable necessity therefor is shown, without regard to the value of the particular commodity imported. Totals for about 1,200 items or groups of items are compiled and published each month in the Monthly Summary of Foreign Commerce of the United States.

Index numbers.—The adjusted index numbers of value of merchandise exported, including reexports of foreign merchandise and general imports of merchandise, have been corrected for seasonal variation by factors selected from the deviations of the monthly figures for the period 1921 through 1931 from the 12-month moving average.

The indexes of quantity of exports and imports show the change in the volume of trade; or, more specifically, the change in the value of trade adjusted to eliminate the effect of price changes. While the unit value index is unavoidably influenced

to some extent by changes in the grade or type of merchandise included in exports and imports, it reflects fairly well the movement of export and import prices. The indexes have been constructed by the so-called "ideal" formula, the essential feature of which is the use of the quantities of the several articles for the periods compared as weighting factors of their unit values. About 265 commodities are included in the direct calculations for both exports and imports. It is then assumed that the movement in the prices of articles in each economic class not directly covered is the same as for those covered, and their value, adjusted by the computed price index, is included in the aggregative totals from which the quantity index is calculated. In constructing the monthly indexes, the data for each current month is compared with the monthly average for the preceding year and the resulting percentages are converted to the 1923-25 base by the chain method. For the annual indexes, the data for each year is compared with that preceding, and the resulting year-to-year percentages are made into a series by the chain method.
