LETTER OF TRANSMITTAL

RESETTLEMENT ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, May 13, 1936.

Mr. EDWIN A. HALSEY,
Secretary of the Senate.

DEAR MR. HALSEY: In response to Senate Resolution No. 295 dated May 8, 1936, I am sending you herewith a report covering information requested in this Resolution.

Sincerely yours,

R. G. TUGWELL, *Administrator.*

FOREWORD

This report has been prepared to cover information requested in Senate Resolution 295, introduced by Senator W. Warren Barbour and agreed to by the United States Senate on May 8, 1936.

The resolution stated:

Resolved further, That the Resettlement Administration is requested to report to the Senate at the earliest practicable date—

(1) The nature and extent of all expenditures made or proposed to be made by such administration (this subject is treated in part I and part III of this report).

(2) The nature and extent of projects undertaken by it, and the advisability of undertaking future projects (this subject is treated in part I and part III of this report).

(3) The effect of each such project on State and local taxation and on local real estate values (this subject is treated in part II of this report).

(4) The extent to which such projects have benefited and will benefit labor (this subject is treated in part II of this report).

(5) The circumstances relating to the securing of persons as tenants or purchasers in connection with such projects, and the effect on such persons of becoming such tenants or purchasers (this subject is treated in part II of this report).

Additional material, historical, statistical, and graphic, on the program of the Resettlement Administration, is presented in part I, part III, and part IV, of this report.

REPORT ON THE OBJECTIVES, ACCOMPLISHMENTS, AND EFFECTS OF THE RESETTLEMENT ADMINISTRATION PROGRAM

REXFORD G. TUGWELL, ADMINISTRATOR

[Prepared by Special Reports Section, Finance and Control Division]

PART I. SUMMARY OF THE RESETTLEMENT ADMINISTRATION PROGRAM

GENERAL

The problem.—During the years of the depression, more than a million farm families have been on direct relief, dependent at one time or another on local, State, or Federal Governments. A large number of these families are living on land so poorly adapted to its present use that it will not produce enough to afford an adequate American standard of living. Also, other families whose land is more productive have been severely handicapped by excessive financial burdens, uneconomical methods of farm and home management, and insufficient farming equipment. The conditions causing these families to be in need of aid have been developing over a period of decades, becoming intensified in the last few years.

The causes.—The causes are chiefly three: (1) Mistaken policies of land settlement, especially the farming of submarginal land incapable of providing an adequate livelihood; (2) reckless exploitation and exhaustion of lumbering, mining, and oil areas, with the result that the families dependent on these activities are left stranded; and (3) overfarming and overgrazing practices resulting in the destruction of millions of acres through wind or soil erosion. Concomitant causes of present distress were the purchase of farm land at "boom" prices during and immediately following the World War; the spread of unfavorable tenant farming and share-cropping conditions; and, during the early thirties, the marked shift of population from city back to farm caused by widespread industrial unemployment.

Establishment of Resettlement Administration.—The responsibility for the alleviation of this farm-relief problem was placed upon the Resettlement Administration by Executive Order No. 7027 on April 30, 1935. Accordingly, the activities of four Government agencies which had, in one way or another, been dealing with these problems were subsequently transferred to the Resettlement Administration. These agencies were the Division of Subsistence Homesteads of the Department of the Interior, the Division of Rural Rehabilitation of the Federal Emergency Relief Administration, the Land Program of the Federal Emergency Relief Administration, and the Land Policy Section of the Agricultural Adjustment Administration.

Under Executive Order No. 7027 the following functions were prescribed for the Resettlement Administration:

(a) To administer approved projects involving resettlement of destitute or low-income families from rural and urban areas, including the establishment, maintenance, and operation, in such connection, of communities in rural and suburban areas.

(b) To initiate and administer a program of approved projects with respect to soil erosion, stream pollution, seacoast erosion, reforestation, forestation, and flood control.

(c) To make loans as authorized under the said Emergency Relief Appropriation Act of 1935 to finance, in whole or in part, the purchase of farm lands and necessary equipment by farmers, farm tenants, croppers, or farm laborers.

The Resettlement Administration has concentrated its efforts on three closely related major programs: The land use program, the resettlement program, and the rural rehabilitation program.

LAND USE

For many years it has been realized that the land resources of the country were being employed in a wasteful manner. In the early nineteen hundreds this realization gained expression in the conservation movement. This involves, however, a long-time program, looking largely to the future. It has gradually become apparent that worth-while immediate improvement can be secured through a more adequate and proper use of land. Severe floods and dust storms in recent years have shown graphically the need for a well-rounded land program.

State land planning consultants have indicated to the National Resources Board that at least 100,000,000 acres of land now in agricultural use are submarginal and should be retired.

The land acquisition program.—In 1934 there was initiated, under the direction of the land program of the Federal Emergency Relief Administration, an extensive program of 268 submarginal land acquisition projects calling for the acquisition of approximately 20,000,000 acres. A total of \$78,390,000 had been made available to this agency, but the requirements of the relief program made it necessary to rescind \$50,000,000 of this fund. After the transfer of the land program of Federal Emergency Relief Administration to the Resettlement Administration on April 30, 1935, \$20,000,000 was made available for land purchase from Emergency Relief Appropriation Act of 1935 funds. The total funds available for a land acquisition program were, therefore, \$48,390,000. With this money, a program of 206 active projects, involving the purchase of approximately 9,300,000 acres of submarginal land throughout the United States, is under way. This land is being retired from its present uneconomic use; however, it will not lie idle. In many cases, land now being used unprofitably and to the actual detriment of the country's resources can be converted to another type of agricultural utilization (e. g., grazing) and become a valuable asset. Other uses for land acquired under this program will be public forests, parks, recreational areas, wildlife sanctuaries, and Indian reservations. The initial step in the selection of a project is the definition of a "problem" area—that is, an area in which the conditions of land use demand readjustment. To facilitate the definition of such "problem" areas, land use specialists attached to the regional offices cooperate closely with the agricultural experiment

station in each of the States as well as with State planning boards, State conservation commissions, and other agencies concerned with land. Before final decision on the development of a project is made, the present economic status of the occupants of the land, the condition of the soil and native vegetation, including forest resources, and the need of the land for public purposes must be considered. With the ultimate use of the land in mind, it is necessary to explore its relationship to nearby towns and cities, to local public opinion, and to the attitude of various State official agencies. Special consideration is given to the cost of the land and to the possibility of relieving unemployment by the development work on such a project. After it is decided to proceed, the boundaries of the project are carefully defined and proposals to sell land within the purchase area are secured. The solicitors of the proposals are instructed as to the probable values of the various properties. After a sufficient number of proposals have been obtained to insure that the project can be completed, the individual tracts are appraised by expert appraisers, and the owners are then asked to sign a formal offer to sell land to the Federal Government on the basis of the appraised value. When a sufficient number of such formal offers are available, they are submitted to the Washington office for acceptance.

It is then necessary to determine whether the title is sufficiently clear to permit the transfer of the land to the United States in fee simple. This process has been found to require a considerable period of time. The Federal Government has never before undertaken to acquire so large an amount of land in so short a period, and the volume of work involved has placed an unusual burden on the various administrative agencies affected. Three major departments of the Federal Government are concerned; namely, the Department of Justice, the Comptroller General, and the Treasury Department. The Department of Justice must be satisfied that the title is free from defects. The Comptroller General must be satisfied that authority at law exists for the acquisition of each tract, that the money is being spent for a title that is free from serious defects, and that the various reservations such as mineral reservations which may have been stipulated in each transaction not only are legally justified but also are consonant with the purpose of each project and the interests of the United States. Such requirements have naturally caused considerable periods of delay in payment.

Under the land acquisition phase of the land use program, as of April 15, 1936, a total of 9,670,000 acres was under option in the field and options on 8,469,000 acres, costing \$36,344,000, had become accepted legal commitments. As of that date, site acquisition accounts on 2,560,000 acres had been forwarded to the General Accounting Office; and cases involving 1,244,000 acres had been closed. Altogether, as of April 15, 1936, \$42,427,739 of the \$48,390,000 fund available for this program had been encumbered.

Land development program.—After a land acquisition project has been established and land appraisal and optioning are well under way, provisions are made for the ultimate development and use of the land. The estimated cost of the land development work necessary on land purchased in connection with 141 of these acquisition projects is \$40,361,676. The Resettlement Administration has received \$18,000,000 for land development work to date. This work

consists of planting trees, building fire towers, cutting fire lanes, thinning and improvement cutting, constructing check dams or terracing to correct erosion, constructing reservoirs for recreational purposes or for the conservation of wildlife, stream improvement, road building, the restoring of range grasses, and the construction of recreational and administrative buildings.

Under this phase of the program, there was, as of May 1, 1936, a total of 59,521 persons (including 3,581 C. C. men) employed on 134 land development projects. As of April 15, 1936, \$9,242,742 of the \$18,000,000 available had become encumbered.

Continuation of program.—It is expected that additional funds amounting to \$2,351,000 for land acquisition and approximately \$7,300,000 for land development will be made available to the Resettlement Administration shortly and that these funds, together with other land use funds, will have been completely encumbered by June 30, 1936.

By the expenditure of these funds and the purchase of approximately 9,300,000 acres, a beginning will have been made in facing the fundamental land problem. However, as previously indicated, there are approximately 100,000,000 acres of land which should be retired from their present use if the natural wealth of the land is to be preserved and to be protected from destructive wind and water erosion. Recently a thorough survey was made in the field to determine that acreage which it would be most beneficial to acquire if additional funds were secured. It was indicated that the purchase of approximately 24,000,000 acres would be needed to "block in" and "round out" the existing projects and to establish a minimum number of new projects.

Families living on submarginal land.—The farming of submarginal land is not only detrimental to the land, but also to those families who attempt unsuccessfully to provide themselves with an adequate living from it. It is estimated that the number of farm families thus unfortunately situated ranges from 600,000 to 650,000. There are 16,835 families now living on the lands which are being bought. On the basis of a survey involving more than 13,000 of these families the average gross income per family in 1934 was only \$289, including \$72 obtained from relief and other such sources. Forty-seven percent of the families were on relief. The average net income of these families—that is, deducting cash expenses such as feed, seed, fertilizers, interest on debt, and taxes—was only \$88.

A necessary supplement to the program of land retirement is, of course, the resettlement or rehabilitation of the families whose land is acquired. Approximately 6,600 of these families are dependent upon the Resettlement Administration for assistance in resettling.

RESETTLEMENT

Rural resettlement.—Basically, the resettlement program is an attempt to create a new type of frontier; not a new geographic frontier, but a frontier of farm independence for those who wish to avail themselves of new opportunities in rural areas. Projects under this program are highly diversified, being planned in accordance with particular local needs.

The resettlement program may be divided into three phases: (1) The completion of certain rural communities initiated by the Federal Emergency Relief Administration, or by the Division of Subsistence Homesteads of the Department of the Interior; (2) the initiation of new rural resettlement projects; and (3) the initiation of a program involving the construction of suburban resettlement projects.

Completion of subsistence homestead projects.—On May 15, 1935, the program carried on by the Subsistence Homesteads Division of the Department of the Interior was transferred to the Resettlement Administration by Executive Order 7041. Of the \$25,000,000 which had been allocated to the Department of the Interior for construction of subsistence homestead projects, only about \$7,000,000 was expended or committed to May 15. The remaining \$18,000,000 was transferred to the Resettlement Administration, but \$10,000,000 of this amount had been impounded by the President on December 29, 1934. This \$10,000,000 was released to the Treasury by the Resettlement Administration on March 16, 1936. Approximately \$2,000,000 of the \$8,000,000 unimpounded balance was encumbered by the Resettlement Administration before June 16, 1935, after which date the unencumbered and unimpounded balance of the old Subsistence Homesteads Division's funds could no longer be expended. On June 24, 1935, \$7,000,000 of Emergency Relief Appropriation Act of 1935 funds were made available to the Resettlement Administration for the completion of 33 subsistence homestead projects.

Regarding these 33 projects, as of April 30, 1936, the Resettlement Administration had completed construction on 18 projects; construction was in progress on 11 projects; and final plans were being prepared on 4 projects. Other former subsistence homestead projects will be financed from other funds available to the Resettlement Administration. This has been done in the case of 17 projects where the Administrator has requested the preparation of final plans. Construction on some of these 17 projects has been started.

The subsistence homestead projects were designed to be demonstration farm and home communities for low-income industrial employees, providing them with the opportunity of raising their standards of living through the home production of a large portion of family food requirements.

Initiation of new rural resettlement projects.—The rural resettlement projects being initiated by the Resettlement Administration can be divided into five different classes. In 36 projects, resettlement will be an infiltration process where the farm units to be established are to be interspersed among existing farms. Individual farms are purchased from the Federal Land Bank, from those who wish to retire from farming, and others, and will then be improved and either sold or leased to farmers who are being removed from land use areas where they have been struggling for existence on lands unsuited for agricultural development. These infiltration projects are located largely in the New England and Middle Western States where the farm unit pattern is well established and where it is difficult to secure large areas in solid blocks. In 15 other projects the infiltration method will be modified to the extent that the farms being purchased will be grouped quite definitely within existing rural communities, and the development of community and cooperative services for the existing communities will be sponsored by the Resettlement Administration.

Thirty-five projects will be of the "close community" type where the land is assembled in one block. In these cases plans are being made not only for the farms but for joint facilities as well. In 30 cases the land will be subdivided according to standard practice where the farm homes will be located on individual tracts. The needs of the communities, including both new settlers and old residents, will be studied and community facilities provided. The necessary functional cooperative organizations will be organized to take care of cooperative activity, including buying, marketing, processing, and the supplying of utility service.

Other projects will provide garden homes for industrial and agricultural workers. The garden farms are being developed with the idea of giving farm and industrial laborers some security and stability by providing low-cost housing and by increasing their net return through the production of garden truck, dairy products, and poultry products, and by canning fruits and vegetables for home consumption.

Three labor camps are being constructed in California to provide minimum requirements for a decent living for itinerant laborers in that State. Fifty-seven percent of those making a living in agriculture in California are laborers. The living conditions of this group are extremely bad. The camps will provide hot and cold shower baths, flush toilets, stationery washtrays, and in some cases gas plates for cooking. Medical care, recreational areas, and areas for garden-truck farming will be provided. These camps will accommodate four to five thousand itinerant families during the season, each camp providing space for from two to three hundred families at one time.

Altogether (including former subsistence homestead projects) the development of about 140 rural resettlement projects is contemplated by the Resettlement Administration at a total cost (including expenditures by previous agencies) of approximately \$92,000,000. These projects will accommodate more than 17,000 families. As of May 1, 18 projects had been completed and 39 were under construction with 8,640 men working. Up to April 15, approximately \$43,000,000, of which more than \$18,400,000 has been expended or encumbered, has been made available for rural resettlement projects.

Continuation of the rural resettlement program.—Two-thirds of the families in the United States are in a low-income group. In 1929, 915,541 farmers in the United States had gross incomes of less than \$400, including the value of the products raised on the farm for home consumption. The purchasing power of this group is so small that the group contributes little to the economic life of the country, either as producers of raw material or as consumers of manufactured articles. They buy a minimum of the products which industry has to sell and the community serving the group is necessarily limited by the low purchasing power of the farm population. To raise the standard of living of this group and to increase their purchasing power is a major task of the Resettlement Administration. The present program will demonstrate the fact that resettlement is a profitable undertaking where families are moved from poor land to good land, are sold farms that are large enough to yield a satisfactory gross income under supervision, and where 3-percent money enables the purchaser to enjoy immediately a higher standard of living.

The National Resources Board states that there are between 600,000 and 650,000 farm families living on submarginal land at

present. If this problem of agriculture is to be met, this group should be resettled.

An important group, which can be benefited by resettlement, is the group of young people estimated at 2,000,000, who under pre-depression conditions would have moved to town to find work but who are backed up on the farm with no security and little hope for the future. The Resettlement Administration offers a needed opportunity for these young people, many of whom have been trained in agriculture in high schools or through the various extension-service activities.

Suburban resettlement program.—In addition, the Resettlement Administration has undertaken a program of suburban resettlement demonstration projects in the vicinity of four congested areas, to provide homes for low-income industrial and farm families. These projects are located in the vicinity of Berwyn, Md.; Bound Brook, N. J.; Milwaukee, Wis.; and Cincinnati, Ohio. They are demonstrations of the combined advantages of country and city life for low-income rural and industrial families. They provide the living facilities and utilities common to cities, together with farms, gardens, and natural wooded and other recreational areas. These projects entail the construction of a total of 3,500 units at present and are financed from a fund of \$31,000,000 under the Emergency Relief Appropriation Act of 1935. The projects are so designed that the land now being acquired is sufficiently large in extent to provide room for the construction of an additional 13,200 housing units if additional funds become available. Three of these projects are now under construction, and topographical survey work is in progress on the remaining project. A total of 36,785 acres was under option as of May 1, 1936, and 2,948 workers were employed on these projects. As this program reaches its peak of construction activity, more than 20,000 men will receive employment. As of April 15, \$10,452,240 of the \$31,000,000 available was encumbered and it is expected that by June 30, 1936, \$22,500,000 of this fund will have been encumbered.

A project schedule of eight suburban resettlement projects involving a cost of \$68,000,000 was submitted to the President and approved by him on September 23, 1935. However, only \$31,000,000 was allocated to the Resettlement Administration for this program. If sufficient additional funds become available present projects can be enlarged and new projects near congested areas can be initiated.

RURAL REHABILITATION

Loans and grants to individuals.—This program is designed to assist that large group of needy farm families who are not in need of resettlement; whose land is of fair or good quality; but whose income is insufficient to provide a satisfactory standard of living. The Resettlement Administration will have cared for more than 800,000 farm families by June 30, 1936, under the rural rehabilitation program. Five hundred and twenty-six thousand two hundred and thirty-seven cases were under care during March 1936. It is estimated that the total number of different farm families aided under this program through May 1, 1936, was 781,237.

Clients in one classification are listed as "farm-plan" clients. Loans are made under supervised "farm plans" to these farmers who, it is

believed, can become self-supporting through a loan from the Government for the purchase of feed, seed, fertilizer, work animals and other livestock, farm equipment, and other tools needed for the successful operation of the farm. Under a "home plan" prepared in conjunction with the "farm plan", provision is also made for the subsistence needs of the family. The loan for nonrecoverable goods purchased with the money advanced by the Government is secured by a lien on the crop to be grown and that for recoverable goods by a chattel mortgage on the livestock, farm equipment, or other goods purchased. The loan obviously is not a bankable loan, but because of the care and soundness with which the farm plan is prepared and the guidance given, a large majority of loans provide adequate security.

Farmers, under established procedures, are ineligible for a loan if they can obtain loans through regular commercial channels such as the Federal land bank, The Production Credit Corporation or any other private or governmental agency.

It is believed that in the majority of "farm plan" cases the necessary amount to be advanced for the permanent rehabilitation of the client will be the equivalent of direct relief payments over not more than 12 to 18 months. When it is not possible to evolve a satisfactory farm plan for a distressed farm family, grants are made for immediate subsistence needs. Clients in this classification are listed as "emergency" clients. In some cases, clients who receive loans may also receive grants preparatory to the operation of their farm plans; and clients who were at one time "emergency" clients may later become "farm plan" clients.

For its rehabilitation advances to individual clients, the Resettlement Administration will expend approximately \$106,000,000 through June 30, 1936. Against these funds, vouchers for loans aggregating \$57,616,234 had been certified as of April 29, 1936, while vouchers for grants totaling \$13,033,108 had been certified as of the same date. In addition, there was as of April 24, a total of \$14,854,576 in unpaid loan commitments scheduled for future payment. This makes the fund of \$106,000,000 encumbered to the extent of \$85,503,918.

Farm debt adjustment service.—Since September of 1935 the Resettlement Administration has been able to give considerable aid to indebted farmers under the farm debt adjustment phase of the rural rehabilitation program. This was made possible through a \$2,000,000 allocation for the purpose of setting up a farm debt adjustment program. This involves the calling together of farmers and their creditors with a view to working out methods and means of reducing the farmer's indebtedness and alleviating his financial situation. There are about 12,000 persons who serve as State and county farm debt adjustment committeemen whose duty is to call the meetings, supervise the proceedings, and oversee the adjustment of the farmer's debts. These committeemen receive only a small per-diem rate for the time actually served and are augmented by a permanent personnel of 229 persons directly employed by the Resettlement Administration.

Rehabilitation work is greatly aided by the farm debt adjustment program. In many cases it would have been extremely difficult to work out a sound farm plan if it had not been possible first to reduce the indebtedness of clients. This program is not only of value to the farmers but also benefits their creditors since it makes possible the liquidation of long-overdue debts on a sound basis.

From September 1, 1935, to March 31, 1936, adjustments were made in 17,505 cases resulting in a total debt reduction of \$16,076,198 in \$62,506,011 worth of debts. This was a 26 percent reduction. These settlements caused \$1,061,127 of taxes to be paid. At the close of March there were 22,016 pending cases under consideration.

Community and cooperative services.—There are also carried on under the rural rehabilitation program community and cooperative service activities. These have been allowed to proceed more slowly than the loan, grant, and farm debt adjustment programs. The need for haste is less, and more care is needed in preparation of the plan for such a loan. The purpose of this program is primarily to provide supplemental income for the destitute and low-income farm families who require public aid and are clients of the Resettlement Administration. The community type of loan is an extension of the individual farm plan loan program, affording aid to clients to purchase in groups, farm and home supplies, equipments, and services that are needed in profitable operation of the farms which clients cannot afford to buy individually. The cooperative loan includes the usual forms of agricultural cooperative activities, that is, loans for producing, processing and marketing. Loans are made either to cooperative associations or to individual clients to participate therein.

Only five loans to cooperatives have been closed. However, 34 other projects of this type for soil erosion and soil conservation, irrigation, terracing, canning, and marketing have been submitted, and the plans are now undergoing final analysis in Washington. It is estimated that the loans made under this program will be approximately \$5,100,000.

Continuation of the program.—By the expenditure of \$113,100,000 under the supervision of the Resettlement Administration, this current fiscal year, about 800,000 farm families will have been cared for, kept off the relief rolls, and given a new start. Despite these efforts there are still several hundred thousand farm families needing rehabilitation assistance. It has been estimated that applications from about 100,000 farm operators have been received this current year for whom funds had not been provided. The unapproved applications requested funds to the extent of \$35,000,000 to \$40,000,000. In addition to these applications it is estimated that about 225,000 farm families are now receiving employment under the W. P. A., most of whom would be eligible for some type of rehabilitation loan. If these families required initial loans of \$300 each, it would require \$67,500,000 to service them during the first year of the rehabilitation process. Many of the present rehabilitants, while needing less aid next year than they received this current fiscal year, will, nevertheless, need some additional assistance before the process of rehabilitation can be said to be complete from the financial point of view. It is probable that 600,000 families will require at least \$100 on the average or \$60,000,000. In other words, a complete rehabilitation program for the following year would require a minimum of \$167,500,000.

If the rural rehabilitation program is equipped to include a "farm-ownership" program, further funds will be required. Many of the families receiving rehabilitation advances do not own the land that they operate but experience with them reveals that they possess certain qualities that make them potential landowner operators. It is the desire of the Resettlement Administration, through its rural

rehabilitation program, to assist such successful clients toward land ownership. If additional funds are made available it is estimated that as many as 20,000 farmers, now poor renters, could be set up as efficient owner-operators within the next year.

TABLE 1.—*Status of Resettlement Administration program*

	Latest	Month previous	4 months previous	Percent increase latest period over—	
				Month previous	4 months previous
Land acquisition:					
Number of acres on which options have become legal commitments— ¹	8,468,518	8,285,000	5,989,126	2.2	41.4
Number of acres purchased and paid for— ¹	1,244,047	1,178,000	792,161	5.6	57.0

⁸ Active rural resettlement projects include all rural resettlement projects which have been completed, which are under construction, or for which final plans have been approved by the Administrator.

⁹ This represents the number of cases under the care of the Resettlement Administration during the month of March only, and does not include approximately 180,000 farm families which are no longer being aided by the Resettlement Administration, but which have been under its care in the past. It is estimated that between the end of March and the beginning of May 75,000 additional cases have been aided by the Resettlement Administration. This would bring the total number of farm families which have been clients of the Resettlement Administration through May 1, 1936, to 781,237.

¹⁰ The latest figures given in the table above are as of those dates for which detailed State break-downs were available for use in part III of this report. More recent figures for the United States totals show, as of May 1, total loan commitments amounting to \$86,925,426; and, as of May 6, loan vouchers certified of \$61,312,834, and grant vouchers certified of \$13,514,071.

The following tabulation shows the funds available, the expenditures, and the net encumbrances (expenditures plus unpaid commitments) made against these funds by the Resettlement Administration. In the following table, all figures for cents have been dropped. This will cause minor discrepancies between the totals given below and the actual totals of the columns below. Based on reports from the field, it is estimated that, as of April 30, 1936, the funds listed below as available to the Resettlement Administration were encumbered to the extent of approximately \$190,400,000.

¹ Employee figures are based on the pay period Apr. 1-15, 1936. The average annual salary of employees employed during the pay period Mar. 1-15, inclusive, was \$1,470. Included in the total figure for employees given in the above table are approximately 4,000 temporary employees who were appointed for periods ranging from 30 to 120 days in connection with the rural rehabilitation loan program. These employees will be terminated as soon as the planting season is over in the various States. No salary higher than \$8,000 per annum is paid in the Resettlement Administration. There are 8 persons receiving \$8,000, and within the salary range from \$7,000 to \$7,999 there are also only 8 persons. All positions in the Resettlement Administration in Washington are classified by the Civil Service Commission.

² Excludes \$4,269,672 of the \$28,390,000 funds available to the land program, Federal Emergency Relief Administration, which was encumbered by the land program, Federal Emergency Relief Administration, prior to Apr. 30, 1935.

³ Excludes \$6,724,265 of the original allocation of \$25,000,000 to Subsistence Homesteads Division, which was encumbered by Subsistence Homesteads Division prior to May 15, 1935.

PART II. ANALYSIS OF SPECIFIC FEATURES OF THE RESETTLEMENT ADMINISTRATION PROGRAM

EFFECTS OF RESETTLEMENT PROGRAM ON STATE AND LOCAL TAXATION AND ON LOCAL REAL ESTATE VALUES

LAND USE.—In practically all cases where submarginal lands are purchased by the Resettlement Administration for the purpose of taking such land out of unprofitable cultivation and for conversion to more socially desirable uses, problems involving State and local taxation should not often arise, since such lands, as a rule, are already in tax arrears. Instead of affording revenue, they constitute a real burden to the States and localities because of the necessity of providing relief for the occupants of these lands and because certain municipal services, such as school systems, police protection, and roads must be maintained for the people residing on them, even though the productivity of such land is so low that the residents are unable to meet their tax charges. The activities of the Resettlement Administration result in definite benefits to the States and localities affected, since the resettling of the stranded and destitute residents of these submarginal lands, on the one hand, decreases the relief burden and, on the other hand, makes it possible for the localities to reduce expenditures in connection with municipal service.

The effects on particular localities of Federal land purchases and attendant tax exemptions are determined by such factors as the

present size of the tax base and its composition, the scope and concentration of land purchases, the valuation of these properties, the extent of past tax delinquency on the properties, the degree of local dependence on the general property tax, the extent and type of State support through grants-in-aid for particular functions, the receipts from delinquent taxes and from the sale of tax-delinquent land, and the current fiscal condition of the taxing units. Taking all these factors into consideration, in most cases savings in cost to the local government through resettlement should exceed actual losses in revenue.

The exhaustion of previous sources of tax revenue, such as forests or mineral lands, usually causes excessive and chronic tax delinquency on property no longer attractive to private ownership. This results in increasing burdens being thrown upon taxpaying properties, forcing many of them into the same unfavorable status. In the land purchase areas, reductions in the tax base will not be reflected in proportionate decreases in tax revenue, since it is largely, from the very nature of the program, the dead or nonpaying property which is being acquired.

Where the costs of local roads, schools, and other services are in a large degree underwritten by the State or county through a system of subventions or grants-in-aid, the need for resettlement of scattered families is often a matter of county or State-wide concern. In many instances, the continued existence of present scattered uneconomic settlement can be largely attributed to the continuance by the State of necessary grants-in-aid.

The summaries which follow are derived from more detailed studies made in the field and indicate the variety of influence exerted on local governments. Where local revenues are derived chiefly from the general property tax and the tax base is low, the effect of land purchases may somewhat impair operations of local governments or their ability to service outstanding debt. In such cases, receipts through delinquent taxes, being paid by the vendor of submarginal land to the Government, may be sufficient to offset such debts or to provide funds for local governmental services.

Usually, however, revenue from the land under its new use, such as grazing or forestry, will be necessary to sustain local government. Assuming that grazing revenue will be shared with local governments, it will be the principal dependable compensating revenue source of immediate significance.

Sandhills project, LA-NC-8, Richmond, Montgomery, Moore, Scotland, Hoke Counties, N. C.—60,000 acres.—In North Carolina, the State supports the entire minimum school program, pays the teachers' salaries, and owns and pays for most of the cost of operating school busses. The power to consolidate and locate schools is vested in the State school commission which draws up State-wide plans for school location and transportation. The entire highway and road system is also State financed and maintained. Except for certain special school districts, the only property taxes levied in former school districts and townships are for the service of outstanding debt. Hoke County has assumed both the township-road and the school-district debts. Moore and Richmond have assumed the township-road debt, but Scotland County has assumed neither type of debt.

A purchase program in such a situation raises no complicated problem of local government adjustments and involves no serious impairment.

ment of local property-tax revenues. Local property relief has proceeded so far through State assumption of school and road functions that considerable leeway exists for readjustment of local rates for services on outstanding debt and for general governmental functions. Changes in the location of schools and in the maintenance of roads will be made by the State and any savings will be absorbed in the State fiscal system.

The bulk of purchased properties are located in Richmond and Scotland Counties. In a few cases, former school districts and townships which have debt outstanding and unassumed by counties will find revenues impaired by purchase. But delinquent taxes collected against land purchases will provide some cushion for declining revenues in these districts, since delinquency has been heavy for a considerable period on many properties purchased. According to the best estimates, the tax base of the various counties affected by the proposed land purchases will in no case be reduced by more than 3.2 percent. The loss of revenue will be much less in proportion, due to long-term delinquency on properties involved. Consolidated schools serving the purchase area are largely located along highways bordering it. Schools to be discontinued will be mainly of the one-teacher type serving Negro families. Any savings or additional costs will be absorbed by the State, which may change transportation routes as required and utilize abandoned school buildings.

Central Wisconsin game project, LA-WI-5, Wood, Monroe, Jackson, Juneau Counties, Wis.—94,256 acres.—The purchase area in Jackson and Juneau Counties is characterized by high tax delinquency and declining tax base. State and county school aids and State aids to town roads are heavy, usually exceeding taxes realized from the area. The reduction in county-tax bases by purchase will not be severe, although several towns will experience reductions. Substantial delinquent-tax collections and proceeds from sale of county-tax title land will accrue to the counties. In Jackson County, at least, it is immaterial to the county whether the purchase area is included in or excluded from its tax base because of county-aid payments to the area offsetting any tax revenue derived from it.

Zaleski forest and rehabilitation project, LA-OH-5, Vinton County, Ohio—16,236 acres.—In Ohio, townships administer relief and maintain township-road systems. A liberal State equalization law for school support is provided, accompanied by active State control over school-district administration. More than 60 percent of the 1933-34 school receipts in the purchase area was derived from State-aid sources. Schools may be closed and consolidated in and around sparsely settled and declining purchase areas at savings to the State. The State distributes locally a proportion of gasoline and motor-vehicle tax revenues. The township share of the gasoline tax is divided equally among townships and represents a large item in their total receipts. The closing of township roads in purchase areas would release funds to be spent on improved mileage. The purchases in Vinton County would reduce the county tax base by 2.36 percent.

The location of valuable public-utility property in the county makes the effect on county revenues less significant. Township revenues would be reduced by 2.9 percent, and school-district revenues by 0.01 to 9.06 percent. State aids would compensate for any loss of school-district revenues in the face of continuing costs, while county and township revenues from gasoline and motor-vehicle taxes would

be unimpaired. Approximately \$2,435 might be saved in township relief and road costs. A total of \$6,172 in delinquent taxes would be received by the various units. Probably no schools would be closed as a result of the program, but consolidation of several schools might be achieved under State direction.

Cheyenne River project, LA-ND-6, Ransom and Richland Counties, N. Dak.—61,798 acres.—Tax delinquency in the purchase area is high. Fifty percent of the optioned acreage has been delinquent for more than 1 year. Contemplated purchases would reduce the county tax base by 2.52 percent in Ransom and 0.75 percent in Richland, but the loss in effective tax base would be much less, in view of past tax delinquency. Estimated receipts from grazing fees at 2.95 cents per acre for grazing land and 42.4 cents per acre for crop and hay land indicate that one-third of the revenue would be sufficient to equal a 5-year average of taxes paid on land purchased. Townships are likely to reduce road expenditures in proportion to tax receipts, since the maximum road levy is being made. Four schools may be closed, and it is suggested that the Federal Government move one school and repair 3 miles of road for a bus route. One school consolidation also appears possible. It is estimated that opportunities for school abandonment and consolidation offer annual savings approximating \$4,600.

RURAL RESETTLEMENT.—Rural Resettlement projects are necessarily withdrawn from local taxation while the land involved in the project area is being assembled and during the construction of the project. Expenditures for materials and labor which are made during this period, compensate the community for any temporary decrease in tax receipts. The project property again becomes taxable when families have moved into their new homesteads, and when conveyance of the project has been made by the Federal Government to an incorporated association of homesteaders. The improvements brought about by the construction of resettlement projects allow project properties to be assessed at a higher value than that obtaining prior to such improvements. Taxes are paid in a lump sum by the corporations, the corporations in turn collecting the taxes in monthly installments from the individual homesteaders. The increase in the tax base will tend to balance any increase in the cost of local services.

Infiltration projects, where clients are resettled on farms in existing farm communities, would probably require little additional local governmental expenditure, any increase in expenditures being confined primarily to the expansion of educational facilities.

The available evidence would indicate that the effect of resettlement communities on real estate values is very favorable. At El Monte, Calif., all land surrounding the project has been acquired by real estate developers and offered for sale in 1-acre plots at twice the price paid by the Government for the land devoted to the El Monte project. At Longview, Wash., some of the land adjoining the project has commanded offers of two and one-half times the price at which the Government secured its holdings.

The following detailed summaries illustrate the effects of certain particular projects on local taxation and local real estate values:

1. *El Monte, Calif.*—The original cost of the land was at the rate of \$500 per acre for 100 acres. Prior to its purchase by the Government, this property was unimproved and, from the best available information and statistics, returned to the State of California from

\$800 to \$1,200 per year in taxes. It is estimated that the taxes for the El Monte project will be approximately \$3,641 for the coming year. According to data on file, real estate activity has been stimulated by reason of the location of the project. A local real estate broker advises that he is now subdividing and selling lots in the immediate vicinity of the project for an average of \$1,000 an acre. Other local real estate brokers advise that in the past year there has been considerable increase in their sales of real estate in the vicinity of El Monte; that the project created an interest in the county and caused thousands of people to visit this section. Many persons who have been unable to obtain property from the Administration have purchased lots in the vicinity and constructed their own homes, following the program outlined for the families on the Government project. Brokers state that real estate prices have increased 25 percent in the last 2 years.

2. *San Fernando, Calif.*—The original cost of the land was at the rate of \$340 per acre for 40 acres. Prior to its purchase by the Government, this property was unimproved and returned to the State of California from \$500 to \$700 per year in taxes. It is estimated that the taxes for the San Fernando project will be approximately \$2,058 for the coming year. According to Mr. H. L. Cady, manager, California Bank, and Mr. Frank R. Donald, president of the Chamber of Commerce, of Reseda, Calif., the average price of land in the San Fernando Valley, where this project is located, ranged from \$500 to \$1,000 an acre. In some cases land is sold as high as \$2,000 an acre. While the San Fernando project has not increased land prices, the Government activity therein has tended to bring people into the valley.

3. *Longview, Wash.*—The original cost of the land was at the rate of \$200 per acre for 141 acres. Prior to its purchase by the Government, this property was unimproved and returned to the State of Washington from \$200 to \$350 per year in taxes. It is estimated that the taxes for the Longview project will be approximately \$4,547 for the coming year. A real estate company official has reported that lots surrounding the project in Columbia Valley Gardens sell for prices ranging from \$400 to \$900 per acre.

4. *Houston, Tex.*—The original cost of the land was at the rate of approximately \$136 per acre for 320 acres. In 1933 the State received \$1.55 per acre for taxes, for a total of \$496. It is estimated that the taxes for this project will be approximately \$1,670 for the coming year. It is estimated that Government activity has increased land values in the vicinity of this project by approximately \$50 per acre.

SUBURBAN RESETTLEMENT.—As in the case of the rural resettlement projects, the suburban resettlement project property is sold to a nonprofit corporation. Thereafter, the only function of the Federal Government will be to see that restrictions to preserve the original character of the development are carried out. The new community will be governed like other towns of similar size in the State, and will pay its proportionate share of both State and local taxes. The locality in which a housing demonstration is placed will benefit through the construction of schools, parks, and utilities free from bonded indebtedness. By moving additional families into the locality, at no increase in funded indebtedness to the local government, there will be a reduced per capita charge for bond interest and bond retire-

ment. It is also highly probable that the average per capita assessables will be increased.

Land values have increased in the vicinity of land purchased by the Government for several reasons. The purchase of large tracts of land for these projects has removed them permanently from the real estate market. The nature of the development is such that it will beautify the surrounding countryside. Since the projects are in suburban areas, the tenants will require adequate transportation to the cities. An increase of population in any one suburban area will be an incentive to the transportation companies to provide better service. Good transportation service usually encourages higher real estate values.

The expected effect of certain of the suburban resettlement projects on tax problems in the localities where these projects are to be located is described below.

Greenbelt, Berwyn, Md.—The entire area included in the Maryland suburban resettlement project will be incorporated as a village. Since there is no unit of government subordinate to the county in this area the creation of a new municipality does not displace any political organization. The new community will provide on its own account for the usual public services. Schools, however, will be operated and maintained as a part of the county school system. Certain other services will be performed by the county government for the new community. However, the additional taxable property resulting from the development of the project will provide sufficient revenue at the current county-tax rate to cover all increased costs to the county as a result of establishment of the new village.

Greenbrook, Bound Brook, N. J.—It was desired that the entire area of the suburban resettlement project in New Jersey be incorporated as a borough. This area now lies in Franklin township. The tax base of Franklin would be reduced by the amount of the property included in the project. The tax base of Somerset County, however, would be increased by the value of the improvements added in the new borough. While the township and township school-district tax bases would be decreased, their expenditures would also be lessened, since the borough would assume a portion of these responsibilities. The estimated effect of these changes on the tax rates is as follows: It appears likely that the county-tax rate would be reduced by 2.1 cents per \$100 of valuation; the township-tax rate increased by nine-tenths of 1 cent per \$100; and the school-tax rate would remain constant. The net effect on the tax rate is thus estimated as a reduction of 1.2 cents per \$100 in Franklin township and a reduction of 2.1 cents per \$100 in other parts of Somerset County.

Greendale, Milwaukee, Wis.—The entire area of the suburban resettlement project in Wisconsin will be incorporated as a village. This will remove certain property from the tax base of the two towns in which the project area now lies. In the case of the town of Franklin, the reduction in tax base is balanced by the reduction of expenditures made possible by removing certain population and land area from the town. The town tax rate in the case of Greenfield may be reduced by 1.2 cents per \$100 as a result of the change. It is not expected that school taxes will be affected by development of the project. The county tax rate will also show a slight decrease, since the tax yield of the added taxable property will exceed the increased expenditures it

is estimated the county will incur through the establishment of the new community.

RURAL REHABILITATION.—The problem of State and local taxation receives consideration under the rural rehabilitation program. In some cases loan expenditures for the payment of taxes are regarded as necessary. The data contained in table 1 which follows show the proportion of total loans authorized for the specific purpose of paying taxes in certain sample States, and reveal that 2 cents out of every dollar loaned go for the payment of taxes, principally real estate taxes. If these figures should prevail throughout the United States when applied to the total loaning program, it would mean that the rural-rehabilitation program will have contributed about \$1,780,000 to State and local taxation before the end of the current fiscal year.

Additional consideration is given the problem of taxation under the farm debt adjustment program. Table 2 which follows indicates that between September 1, 1935, and March 31, 1936, the voluntary farm debt adjustment committees had brought about adjustments in the indebtedness of 17,505 cases, and that for each one of these cases an average of \$60.62 in taxes had been paid. This does not mean that the rural rehabilitation program provided money for the payment of these taxes, but it does mean that through its efforts debts of farmers had been so composed as to allow for the payment of \$1,061,127 in State and local taxes that would probably not have been paid had such adjustments not been made. Without adjustment many of these cases would have ceased to be owners of land and would have no longer been tax-paying citizens.

The two phases of the program mentioned above, while very specific in nature, do not represent the full effect of the rural rehabilitation program upon this problem. By means of loans the program enables thousands of farm owners to maintain themselves as producers and self-supporting citizens contributing to the upkeep of their local governments.

THE RESETTLEMENT ADMINISTRATION PROJECT PROGRAM AS IT RELATES
TO LABOR

The primary purpose for the establishment of the Resettlement Administration was the rehabilitation and resettlement of destitute farm families. However, although all its efforts have not been directed toward furnishing work for the unemployed, the project program of the Resettlement Administration is providing both immediate and lasting benefits to labor. To meet the immediate situation the Resettlement Administration has created steady employment under modern working conditions at monthly wage rates established by the President. To care for the longer term needs, the Resettlement Administration will insure greater opportunities to a large group of workers through better housing, a fuller participation in community life, and improved educational opportunities.

Near term effect on labor.—There were during April 1936 more than 71,000 workers employed on projects of the Resettlement Administration, and it is expected that at the peak of the program, during the summer, over 100,000 workers will be employed. Ninety percent of these workers are Resettlement Administration clients or persons taken from the relief rolls.

The Resettlement Administration clients are prospective occupants of resettlement communities, rehabilitation clients, and persons whose land has been acquired for resettlement or land-improvement purposes. Workers from the relief rolls are secured through the Works Progress Administration and the United States Employment Service. The Resettlement Administration is contributing to the solution of the pressing transient-relief problem. It is now employing approximately 3,900 transients and the Greenbelt suburban resettlement project at Berwyn, Md., has absorbed all of the able-bodied unemployed transient laborers in Washington.

The Resettlement Administration projects are prosecuted under working conditions favorable to efficient labor and satisfactory to the workers employed. On every project, work is carried on in accordance with recognized safety practices. To insure safe working conditions, projects are prosecuted under the guidance of skilled engineers and are subject to periodic inspection by trained safety men. All workers are covered by compensation insurance. Discrimination on any ground against workers qualified by training and experience is strictly forbidden. Complaints and grievances are given immediate and thorough investigation by persons especially trained for such work. The satisfactory work accomplished by the Resettlement Administration in the labor relations field is evidenced by the total absence of strikes and dissensions on its projects.

Long-term effect on labor.—From the long-term standpoint, various aspects of the Resettlement Administration project program will prove of benefit to labor. The construction of communities and the development and improvement of submarginal land areas will involve the purchase of considerable quantities of building and other materials, thus providing indirect employment for laborers in the production of such materials and aiding the movement toward industrial recovery. The increased business activity stimulated locally by the establishment of successful farms will increase the opportunities for permanent employment in stores, warehouses, and local industries.

The Resettlement Administration strives to broaden the economic opportunities of labor in rural areas. Many goods and services now beyond the purchasing power of these workers are being furnished through cooperative activities sponsored by the Resettlement Administration. Occupants of resettlement communities are supplementing their incomes through canneries, workshops, and other cooperative services. Through such cooperatives impoverished and low-income workers can, through their own efforts, improve their standard of living.

The Resettlement Administration is constructing in the far West migratory farm-labor camps and part-time farms for agricultural laborers. The migratory farm-labor camps will provide a type of shelter that represents an improvement over that now available to migratory agricultural labor in this section. The part-time farms will enable certain types of agricultural labor to raise crops for their own consumption, leaving the cash income which they receive for their labor available for other necessary expenditures.

The construction of suburban resettlement and subsistence home-stead communities, which are designed for those who are employed in industrial or commercial activities, will enable low-income workers to retain more of their earnings for self-advancement because of lower rents and the opportunity to raise vegetables and other foods for home consumption.

It may be said that the Resettlement Administration by creating larger opportunities in rural areas will help relieve the city labor markets from some of the pressure caused by the steady cityward migration of persons who have been unable to make an adequate living on farms.

Reaction of labor organizations to the Resettlement Administration program.—The reaction of labor organizations to the Resettlement Administration program has been extremely favorable. Letters from Mr. William Green, president of the American Federation of Labor, and from Mr. John L. Lewis, president of the United Mine Workers of America, have been received by the Resettlement Administration and are quoted below.

Hon. JOSEPH T. ROBINSON,
United States Senate, Washington, D. C.

MY DEAR SENATOR: The American Federation of Labor is deeply interested in the Resettlement program and in its administration. For that reason, I am writing you to advise you that the American Federation of Labor has found from experience that the administration of the Resettlement program adheres very closely to the prevailing rate-of-wages principle.

We have had very little, if any, objection or complaint from labor representatives where Resettlement projects are being carried on, against those in charge because of alleged failure to pay the prevailing rate of wages. To the contrary, we have been most uniformly advised that those in charge of Resettlement projects pay the prevailing rate of wages.

I heartily approve of the Resettlement Administration, and in behalf of the officers and members of the American Federation of Labor I urge the enactment of such legislation as may guarantee its continuance as a practical and constructive agency of the Government.

Very sincerely yours,

W.M. GREEN,
President, American Federation of Labor.

UNITED MINE WORKERS OF AMERICA.

Dr. R. G. TUGWELL,
Administrator, Resettlement Administration,
Washington, D. C.

DEAR DR. TUGWELL: Several times during the last year I have meant to write you expressing my appreciation of the work the Resettlement Administration is doing and of the manner in which it is being done. From groups of organized labor in many industries and in all parts of the country I have heard comments expressing approval of the work of your agency.

The work of the Resettlement Administration is of value to labor because of the opportunity it has given many workers to reestablish themselves in the housing projects that are being developed both by your Rural and Suburban Resettlement Divisions. Your efforts at rural rehabilitation are also of definite benefit to organized labor in that by improving farm life they tend to reduce the migration of farm workers to cities in search of urban employment.

I have also been impressed by the labor policies being followed by the Resettlement Administration. They have in all respects, subject to the limitations imposed by the works program, met the approval of organized labor groups. I want you to know the deep appreciation which labor has for the policies of your agency.

Sincerely yours,

JOHN L. LEWIS.

Favorable comment has also been received in regard to particular projects being carried on by the Resettlement Administration. For example letters endorsing and requesting the continuance of the Greenhills suburban resettlement project near Cincinnati, Ohio, have been received from the Building Trades Council of Cincinnati; the Central Labor Council of Cincinnati; the Carpenters District Council of Hamilton County, Ohio; Kenton and Campbell Counties, Ky.; Local Union No. 141 of the Sheet Metal Workers; Local Union No. 44 of the International Association of Bridge, Structural, and Ornamental Iron Workers; United Brotherhood of Carpenters and Joiners of America, Local Union No. 712; the Brotherhood of Painters, Decorators and Paperhangers of America, District Council No. 12; Local Union No. 59, of the United Association of Journeymen Plumbers and Steam Fitters; Cement Finishers Union No. 524; United Slate, Tile and Composition Roofers, Damp and Waterproof Workers Association, Local Unions Nos. 38 and 42; the International Association of Bridge, Structural and Ornamental Iron Workers, Local No. 372; the International Association of Marble, Stone, and Slate Polishers, Rubbers and Sawyers, Tile and Marble Setters Helpers and Terrazzo Workers Helpers, Local Union No. 72; the Wood, Wire, and Metal Lathers' Union, Local No. 47; and the Cincinnati local of the International Association of Heat and Frost Insulators and Asbestos Workers.

The following resolution was adopted by the Building Trades Council of Cincinnati in January 1936 and indicates the general attitude of these labor organizations to the Cincinnati suburban resettlement project:

Whereas the United States Government proposes to construct a model town near Mount Healthy, a suburb of Cincinnati, Ohio, as a demonstration in improved housing and living conditions for workers; and

Whereas the aforesaid project is designed to provide (1) employment for thousands of men now unemployed, (2) decent and adequate housing at low rents for workers in the lower income brackets, (3) a solution of one of the gravest social problems confronting the Nation; and

Whereas it is a known fact there is a shortage of decent houses for workers in the renting class in Cincinnati; that more than 30 percent of the people here live in tenements; that workers in the renting class live in crowded, insanitary buildings, many of which have been or ought to be condemned; and

Whereas such conditions above described threaten the health, welfare, and happiness of individuals and the community by the spread of disease, development of juvenile delinquents and criminals; and

Whereas private building, for whatever reasons, has not taken steps to provide decent housing at low rents; and

Whereas certain interests in this community are opposing this project for reasons we believe to be selfish and against the rights of working people to housing and living conditions consistent with the American standard of living: Be it

Resolved, That we, the Building Trades Council of Cincinnati, endorse the said housing projects and urge the Honorable Rexford G. Tugwell, Administrator of the Resettlement Administration, to expedite its construction, and that we are not in sympathy with opposition to the project, but condemn such opposition and censure those fostering it.

THE SELECTION OF OCCUPANTS FOR RESETTLEMENT PROJECTS

Because of the need to assure the success of the Resettlement Administration's projects and the continued independence of the individual homesteaders or tenants, the procedure governing their selection is of great importance.

Family selection is a difficult undertaking. In the resettlement of families in communities, first consideration must be given to those families that are being helped to relocate from the submarginal land on which they have been living and which has been purchased by the Government. Care must be exercised to prevent families financially able to maintain themselves at the average standard of living existing in their area from taking advantage of these opportunities. At the same time, the family should have sufficient income or, in the case of projects based on farming, sufficient ability to indicate a reasonable expectation of their being able to meet continuing payments. It is, therefore, necessary carefully to fit the family to the community being built.

The initial selection of families for resettlement projects is made by the Resettlement Administration with the cooperation of local citizens and authorities. After the establishment of homesteader associations or housing corporations replacement of occupants will become a function of those bodies.

The selection of families varies somewhat according to the nature of the project. For the original subsistence homestead communities, and for the suburban resettlement communities, applications are received from eligible, interested families. As these homesteads are intended for low-income workers, \$1,600 per year is normally taken as the upper limit. Each family is considered according to approved casework procedure, and final selections are made on the basis of carefully worked out criteria. In general these criteria relate, among other considerations, to reasonable prospects of economic stability, to health, to age, and to number of children in the family. In communities already established, the number of applicants has varied from over 37,000 for 140 units in El Monte and San Fernando, Calif., to several hundred in some of the smaller communities, where only 25 homesteads were available.

For the rural resettlement communities, occupants are selected principally from families requiring aid in retiring from submarginal land areas where land use projects are under way; from successful rural rehabilitation clients; from those who have been tenants, share-croppers, or dispossessed owners; and in part from newly married

young people of agricultural background who are without other resources. In harmony with the criteria referred to above, the selection of families for resettlement communities also follows approved case-work procedure.

In all resettlement projects, the object has been to provide security of home tenure on the lowest possible cost basis. To assure the maintenance of a reasonable standard of living, the homes in rural projects are established upon an adequate farming base and those in suburban resettlement and subsistence homestead communities are provided with land for supplementary gardening and part-time farming. The Resettlement Administration, in addition, is planning its projects and its tenant selections so that both the tenants themselves and their neighbors may have access to more adequate educational, health, and recreational opportunities.

Provision is made for both leasehold and sale of homesteads and farmsteads. In the smaller subsistence homestead projects, where, from the outset, commitments for sale were made, the "contract of sale" form is employed. In the larger suburban resettlement projects, the homesteader, being a low-income worker normally renting his home, is a lessee of his home. In the rural projects, provision is made for leasehold, or, if the client prefers, for a sale contract after a trial lease period.

The individual procedure depends upon the basic circumstances. In infiltration projects, where clients are introduced into already established agricultural communities, community organization is impractical, and arrangements are made directly between the Resettlement Administration and the client. In a community project, however, the homesteaders are united in a nonprofit incorporated association, the specific form depending upon the laws of the State in which the community is established. The property as a whole is conveyed by the United States Government through the Resettlement Administration to such association. The contracts with the individual homesteaders are then made by the association and not by the Federal Government. This avoids the danger of separating occupants of resettlement communities from the existing population.

The sale and the lease terms are designed to afford the homesteader maximum security, coupled with a reasonable insistence upon his responsibility for maintaining the property entrusted to him, and for meeting his payment obligations. The basic interest rate involved is 3 percent and the period of amortization is 40 years. In evaluating the property for conveyance, allowance is made for the ability of the homesteaders to pay. Reasonable appraisals, original cost figures, and data and estimates on homesteader incomes permit the calculation of terms just to the homesteader, and, at the same time, terms assuring maximum protection of the Government's investment. Since projects are planned at a cost commensurate with the calculated ability of prospective occupants to pay, it is expected that there will be no serious gap between the evaluation of the property for conveyance and its cost.

Homesteader assured both security and independence of action.—Under this arrangement, the homesteader is assured a high degree of security without the sacrifice of mobility. Should he wish to withdraw he may do so at any time, but he must first offer his property to

his homestead association, which can then repossess it by paying him the equivalent of his accumulated equity. Any new homestead applicant must meet the approval of the association. On the other hand, should the homesteader be unable to keep up his payments, provision is made for the continued use of his home on a rental basis until his equity has been absorbed; or, if the association chooses, the cash equivalent may be paid to him so that he may vacate at once. Thus the homesteader is assured that no equity that he has accumulated will be sacrificed.

The terms of payment under the purchase contracts are so arranged that adequate provision is made for taxes, maintenance, insurance, etc. Responsibility for tax payments and proper upkeep is placed upon the homesteaders' association, which, in turn, collects the monthly sums due from the individual families. Provision is made for credits to the homesteader for maintenance work that he may himself undertake, and all maintenance funds paid by him to the association are reserved for use on his own property. Thus out of these credits, in cases of emergency, the association's ability to carry a homesteader along for a time until he is once again able to pay up, is increased.

Where the procedure involves leasing rather than selling, as in the large suburban projects, the essential elements are the same. However, clients are tenants rather than purchasers. The property is conveyed to a locally organized housing authority which then makes the rental contracts with the individual families. The sums payable to such local corporation by the tenants, as in the sale procedure alluded to above, depend primarily on the calculated ability of low-income workers, eligible as tenants, to pay.

To safeguard the Government's interest during the period of 40 years over which period repayment is provided, a "management contract" is prepared to which the Resettlement Administration is a party. Under this contract the Resettlement Administration or its successor is authorized to supervise generally the management of resettlement properties by homesteader associations or by housing corporations. It is expected, however, that the maximum autonomy will in practice be accorded the local agencies and associations as long as they execute in good faith the responsibilities entrusted to them.

PART III. RESETTLEMENT ADMINISTRATION STATISTICS

LAND USE

Allotments from funds transferred from F. E. R. A. and new funds allocated under E. R. A. A. 1935 have been made to 208 submarginal land purchase projects. The estimated costs used below are those approved by the President in his letters of January 8, March 10, and March 30, 1936. The amount of acreage to be purchased will vary according to the cost per acre. The figures used below for "the number of acres to be purchased" are based on the number of acres that it is estimated in the field can be purchased with the money set aside for the various projects.

* Abstracts indicated a greater acreage than options and were accepted at a higher figure.

From the \$18,000,000 made available for land development work, 141 projects have received allotments. However, two of these projects have been discontinued. The figures given below for the percent completion of the projects are based on the land development work necessary on the projects which it is estimated would involve a total cost of \$40,361,676, although only \$18,000,000 of this is at present available.

TABLE 1B.—*Land development program—projects*

Project no.	Projects	Total funds available	Total allotments as of Mar. 31	Percent of allotments encumbered as of Mar. 31	Number of men working on projects		Percent of physical completion as of Apr. 15

RESETTLEMENT

Under this category are given all rural resettlement projects which have been completed, which are under construction or for which final plans have been approved by the Administrator. There are included former subsistence homestead and F. E. R. A. projects and rural resettlement projects initiated by the Resettlement Administration.

TABLE 2A.—*Rural Resettlement program—projects under development*

¹ Cost of optioning, appraisal, land acquisition, title clearance, etc.; project planning, topographical mapping, soil analysis, plot layouts, architectural planning, material estimates; assistance in procuring household equipment and tools; general construction overhead, inspection; contingency fund; complete management expense for 5-year period.

² Financially unsuccessful, from the point of view of costs and the possibility of self-liquidation. The interests of homesteaders are being guarded by enlargement of the agricultural enterprise, the inducement of enterprises to establish themselves at the site and furnish employment, the formation of cooperatives for local processing of farm products and in like ways. The investment cannot, however, be liquidated in its entirety.

² Project completed but repairs and additions are contemplated.⁴ Initial allotment as of Apr. 13, 1936, not included in totals.

The following table includes all rural resettlement projects to which the Resettlement Administration has allotted funds, but which have not yet been finally approved by the Administrator. After final plans have been prepared, these projects will be considered for development and, if approved, will be undertaken by the Resettlement Administration.

² Preliminary.

The following four suburban resettlement demonstration projects have received allotments from the \$31,000,000 allocation for a suburban housing program. Construction work is in progress on all of these projects with the exception of Greenbrook, N. J. These projects are so planned that additional housing units may easily be built on the present project areas if additional funds for construction become available. It is estimated that at the peak of the program 20,000 men will be employed on these projects.

TABLE 2D.—*Suburban resettlement program—projects*

Project no.	Projects	Number of families to be accommodated by the projects		Cost of housing units	Land cost	Cost for utilities, community buildings, land development, and space for future expansion	Total allotments as of Mar. 31	Percent of allotments encumbered as of Mar. 31	Number of men working on projects May 1
		As now planned	As planned for future						
SR-MD-6...	Greenbelt, Md.....	1,000	5,000	\$3,965,000	1 \$380,000	\$2,605,000	\$4,741,136	51.8	2,377

¹ In addition, approximately \$740,000 has been expended for land from other funds.

On projects administered by the Resettlement Administration, the percent of those homes ready for occupancy which are occupied was 87.8 percent on Mar. 1, 1936, as compared with 87.0 percent on Feb. 15, 1936; 83.5 percent on Nov. 30, 1935; and 74.1 percent on Sept. 28, 1935.

¹ Cancellation of loan vouchers during month in excess of certification of loan vouchers during month.

² \$439,294.26 transferred from Kansas, region VII, to Kansas, region XII; \$13,203.36 transferred from Oklahoma, region VIII, to Oklahoma, region XII; \$575,293.52 transferred from Colorado, region X, to Colorado, region XII.

³ Reports received do not as yet allow the tabulation of vouchers certified prior to organization of region XII to be broken down into vouchers certified in those counties of these four States which are now in region XII and vouchers certified in those counties of these four States which remain in the old regions.

An unpaid commitment in the table below represents that part of a loan to a client which the Resettlement Administration has agreed to pay in the future:

¹ Cancellation of grant vouchers during month in excess of certification of grant vouchers during month.

² \$117,039 transferred from Kansas, region VII, to Kansas, region XII.

³ Reports received do not, as yet, allow the tabulation of vouchers certified prior to the organization of region XII to be broken down into vouchers certified in these counties in these 4 States which are now in region XII and vouchers certified in those counties in these 4 States which remain in the old regions.

The following table includes clients who have received advances from State corporation funds as well as from funds allocated to the Resettlement Administration under the Emergency Relief Appropriation Act of 1935. It is estimated that there were 542,000 clients under care as of the middle of April.

¹ Estimated.

On September 17 the Resettlement Administration received an allocation of \$2,000,000 for the administrative expenses of a farm-debt-adjustment program. This program involves a personnel of over 12,000, most of whom are voluntary committee members receiving a small per-diem rate for the time of a farm debt adjustment committee meeting. The following report covers the period from September 1, 1935, through March 1936:

TABLE 3G.—*Farm debt adjustment, Sept. 1, 1935—Mar. 31, 1936* ¹

PART IV

The following survey shows graphically the location of projects of the Resettlement Administration:

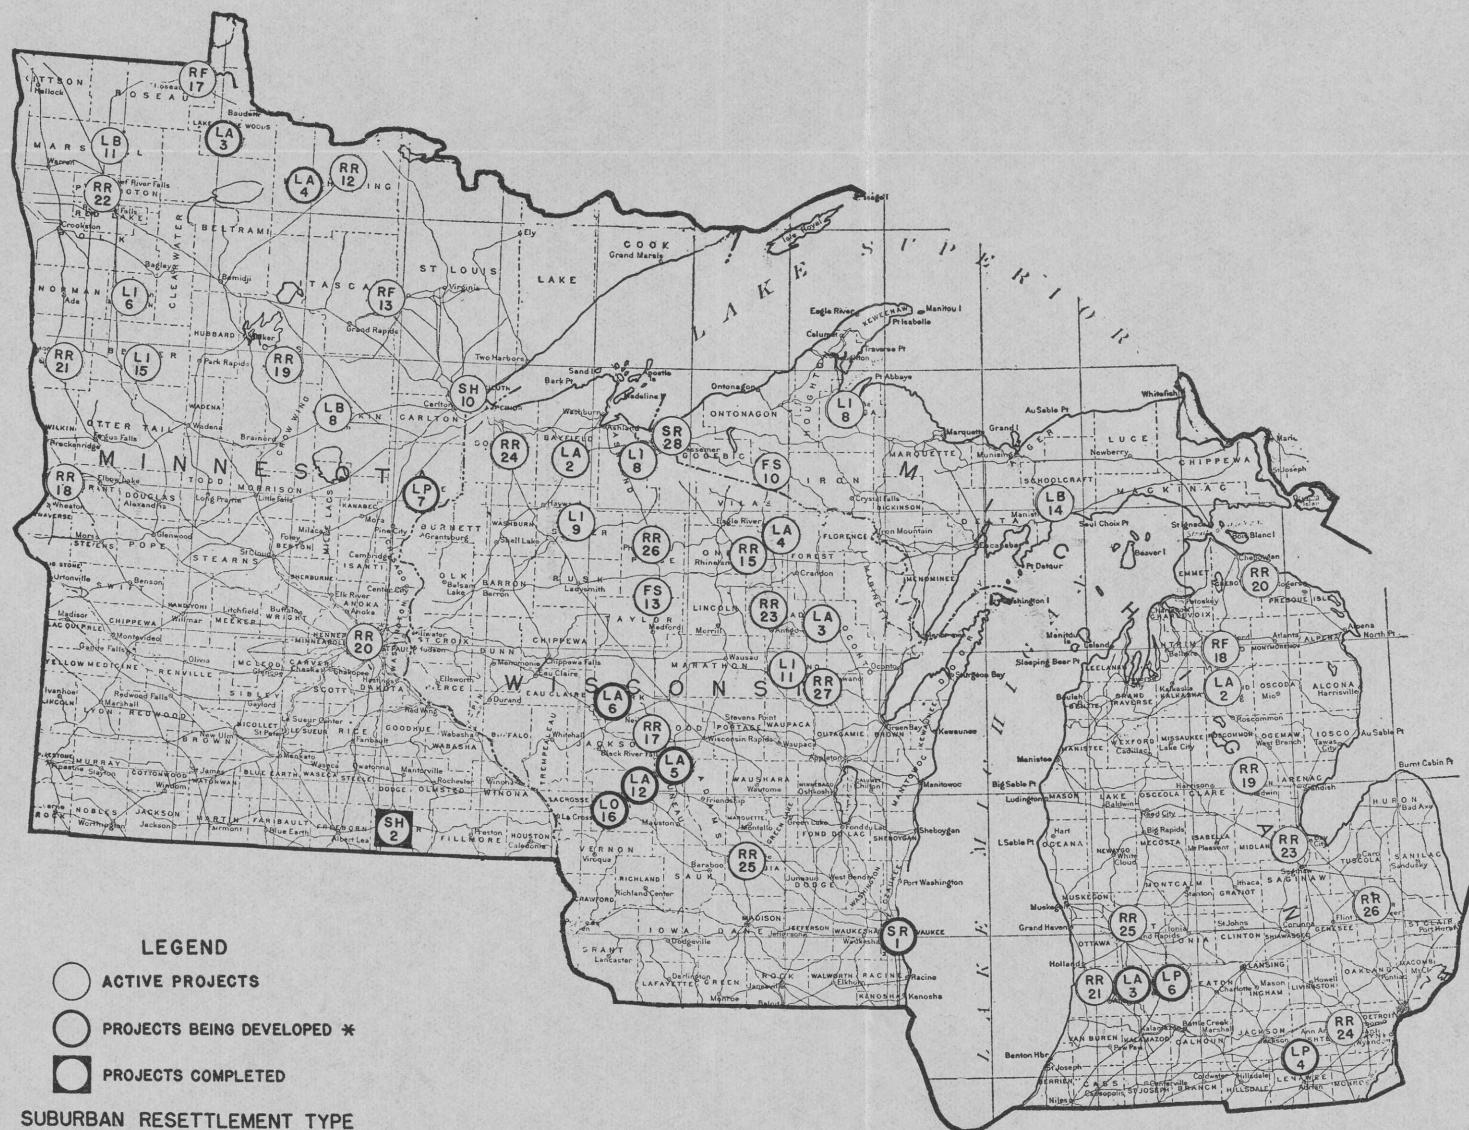

REGION 1

Project no.	City	County	Project
	CONNECTICUT		
*LD and LA-CN 2	Norwich	New London, Windham, Middlesex, Hartford, Tolland.	New London County stranded rural rehabilitation.
	DELAWARE		
*LD and LA-DL 1	Harrington	Sussex, Kent	State demonstration forest.
	MAINE		
*LD and LA-ME 1	Bangor	Penobscot, Washington, Cumberland, Waldo, Franklin.	5 rural problem areas.
*LD and LP-ME 2	Camden	Knox and Waldo	Camden Hills Park.
*LD and LP-ME 3	Bar Harbor	Hancock	Acadia Park.
RR-ME 4		Whole State	State of Maine farms.
	MARYLAND		
*LD and LA-MD 2	Grantsville	Garrett	Garrett County land, agricultural.
*LD and LA-MD 3	Salisbury	Wicomico and 2	Eastern Shore Agricultural.
*LD and LP-MD 4	Thurmont	Frederick and 1	Catoctin Park.
SR-MD 6	Berwyn	Prince Georges	Green Belt.
RR-MD 7	Grantsville	Garrett	Garrett farms.
RR-MD 8	Pocomoke	Frederick, Washington	Cumberland Valley farms.
RR-MD 9		Worcester	Worcester farms.
	NEW HAMPSHIRE		
*LD and LP-NH 1	Concord	Merrimack, Rockingham	Bear Brook recreational demonstration.
	NEW JERSEY		
SH-NJ 1	Hightstown	Monmouth	Jersey homesteaders.
SR-NJ 3	Bound Brook	Somerset	Greenbrook.
RR-NJ 4		Ocean	Archers Corners.
	NEW YORK		
SH-NY 3	Rochester	Monroe	Monroe County homesteads.
*LD and LA-NY 4	Ithaca	Tioga and 3	Land Use Reorganization.
*LD and LA-NY 5	do	Livingston and 9	Wildlife management area.
RR-NY 12	do	Tompkins and 6	Finger Lakes farms.
RR-NY 14	do	Tompkins and 9	New York Valley farms.
	PENNSYLVANIA		
SH-PA 3	Greensburg	Westmoreland	Westmoreland homesteads.
*LD and LA-PA 4	Huntingdon	Bedford and 3	Pennsylvania farm-land use readjustment.
*LD and LA-PA 5	Towanda	Bradford and Tioga	Bradford County land use re-adjustment.
*LD and LP-PA 6	Beaver	Beaver	Raccoon Creek Park.
*LD and LP-PA 7	Birdsboro	Berks and Chester	French Creek Park.
*LD and LP-PA 8	Somerset	Somerset	Laurel Hill Park.
*LD and LP-PA 11	Bedford	Blair and Bedford	Blue Knob Park.
*LD and LP-PA 12	White Haven	Carbon	Hickory Run Park.
RR-PA 17	Upper Nazareth	Northampton	Northampton farms.
RR-PA 18		Huntingdon, Juniata, Bedford, Blair, Centre.	Southern Pennsylvania farms.
RR-PA 19		Bradford, Penn, and Tioga, N. Y.	Northern Pennsylvania farms.
	RHODE ISLAND		
*LD and LA-RI 1	East Greenwich	Providence, Kent and Washington	State forests land acquisition and rural rehabilitation.
*LD and LP-RI 2	Providence	Kent and Washington	Beach Pond recreational.
	VERMONT		
*LD and LA-VT 1	Rutland	Addison, Windsor, Orange, Washington, and Rutland.	Farms-to-forest.

REGION 2

Project no.	City	County	Project
MICHIGAN			
LA-MI 2.....	Grayling.....	19 counties.....	Au Sable State forest, agricultural.
*LD and LA-MI 3.....	Allegan.....	Allegan.....	Allegan Land, agricultural.
*LD and LP-MI 4.....	Waterloo.....	Washtenaw and Jackson.....	Waterloo Park.
*LD and LP-MI 6.....	Hastings.....	Barry.....	Yankee Springs park.
LL-MI 8.....		Baraga.....	L'Anse Indian.
