(b) METERING OPTIONS.—Electrical energy usage options to be considered for a covered defense structure include the following:

(1) Installation of a smart meter at the electric power supply cable entry point of the covered defense structure, with remote data storage and retrieval capability using cellular communication, to provide historical energy usage data on an hourly basis to accurately determine the optimum cost effective energy efficiency and energy resilience measures for the covered defense structure.

(2) Use of an energy usage audit firm to individually meter the covered defense structure using clamp-on meters and data storage to provide year–long electric energy load profile data, particularly in the case of a covered defense structure located in climates with highly variable use based on weather or temperature changes, to accurately identify electric energy usage demand for both peak and off peak periods for a covered defense structure.

(3) Manual collection and calculation of the connected load via nameplate data survey of all the connected electrical devices for the covered defense structure and comparison of such data to the designed maximum rating of the incoming electric supply to determine the maximum electrical load for the covered defense structure.

Consultation.

(c) CYBERSECURITY.—The Secretary of Defense and the Secretaries of the military departments shall consult with the Chief Information Officer of the Department of Defense to ensure that the electrical energy metering options considered under subsection (b) do not compromise the cybersecurity of Department of Defense networks.
