

NOTE: The President's remarks were videotaped at approximately 6:15 p.m. on January 31 in the Map Room at the White House for later broadcast. The transcript was made available by the Office of the Press Secretary on February 1 but was embargoed for release until 5 p.m. In his remarks, the President referred to Governor Pedro Rossello and Resident Commissioner Carlos A. Romero-Barcelo of Puerto Rico. A tape was not available for verification of the content of this address.

Statement on the Crash of Alaska Airlines Flight 261

February 1, 2000

In times of tragedy, the American people pull together as one and offer their prayers and solace to those in need. Today our Nation prays for the men and women who were aboard Alaska Airlines flight 261, and for their families and friends.

Since last evening, the United States Coast Guard has been on the scene engaged in search and rescue operations. The National Transportation Safety Board's Go Team arrives this morning and a joint command center is being established at the Port Hueneme Naval Center.

Underlying all these efforts is a strong and heroic determination to save lives and to find out exactly what went wrong, so that lives can be saved in the future. Throughout this difficult day, and in the days and weeks to come, we will keep the passengers and crew of flight 261 in our thoughts, and let us hope that God's mercy will shine on them and their families.

Statement on Export Controls on High-Performance Computers and Semiconductors

February 1, 2000

In July, 1999, I announced reforms to the administration's export controls on high-performance computers (HPC) and semiconductors that were intended to strengthen America's high-tech competitiveness and maintain controls necessary to protect our national security. At that time, I directed my national security and economic advisers to review HPC technology advancement every

6 months, and to provide me with recommendations to adjust our HPC export controls if warranted.

Today, based on the recommendations I have received from agencies as a result of their review, I am announcing additional reforms to U.S. export controls on HPC's. This decision reflects my commitment to a control system that will enhance U.S. national security by implementing controls on computer exports that are effective and enforceable.

I have decided to raise the licensing threshold for HPC exports to Tier 2 countries. I have decided also to raise the licensing threshold for Tier 3 countries and the threshold above which proposed exports to Tier 3 countries must be notified to U.S. Government export control agencies, and to adjust the Tier 3 country grouping. The administration will continue its policy of maintaining a lower threshold for military end-users that civilian end-users. Export control agencies will examine the benefits of maintaining a civil/military differential in the course of their next review of HPC levels. Due to the ever-increasing rate of technological change, agencies will review control levels by April, 2000, to determine if further changes are warranted.

The changes to the pre-export notification threshold and the Tier 3 country group require congressional review period of 6 and 4 months, respectively, before they can go into effect. I will continue to work with the Congress to pass legislation that would reduce these periods to one month, so that we can keep up with the rapid pace of technological change. I also will work with Congress to explore longer-term solutions to how we control exports of items like computers and microprocessors when they become widely available commodities.

Message on the Observance of Lunar New Year, 2000

February 2, 2000

Warm greetings to all those celebrating the Lunar New Year. I am delighted to join you in welcoming 4698, the Year of the Dragon.

This ancient and joyous festival, marked by parades, dancing, music, and feasting,

celebrates the miracle of life, the promise of a new year, and the blessings of family, friends, and community. It also reminds us of the many contributions that Asian Americans bring to our national life and of the many ways in which their customs, history, and traditions have enriched our country's cultural heritage.

Asian Americans play a key role in all segments of our society, from the scientists who have helped to build our national defense and to power our unmatched technological progress to the artists whose talents grace our literature, stage, and screen. America is strengthened by these contributions, and we must work to ensure that Asian Americans are afforded every opportunity to be active and equal participants in our national life.

As people across America and around the world mark the beginning of a new lunar cycle, Hillary joins me in extending best wishes to all for health, happiness, prosperity, and peace in the new year.

Bill Clinton

Proclamation 7271—American Heart Month, 2000

February 1, 2000

By the President of the United States of America

A Proclamation

In the past half century, our Nation has made enormous progress in the fight against heart disease. Through careful research, scientists and doctors have identified key factors—including smoking, high blood pressure, high blood cholesterol, diabetes, obesity, and physical inactivity—that increase the risk of heart disease. Working with dedication and determination, they have developed new treatments and procedures, such as cardiopulmonary resuscitation, defibrillation, clot-dissolving medicines, angioplasty, and cardiac imaging devices, that have saved many lives. As a result of these advances, the death rate from coronary heart disease has fallen dramatically in our Nation, with a nearly 60-percent reduction since its peak in the mid-1960s.

While these developments are significant, heart disease remains a serious health problem. Despite our knowledge of the importance of exercise and a proper diet to maintaining a healthy heart, studies indicate that both physical inactivity and obesity are on the rise throughout our country. Today, more than 58 million Americans have one or more types of cardiovascular disease (CVD), and each year nearly 1 million Americans die from CVD—more than from the next 7 leading causes of death combined. Furthermore, rates of coronary heart disease deaths and the prevalence of some risk factors remain disproportionately high in minority and low-income populations.

As we stand at the dawn of this new century, it is crucial that we build on the developments of the last century to reduce the incidence of CVD, to address the disparity among various segments of our population, and to make further progress in the fight against heart disease. To help meet this challenge, my Administration has launched the *Healthy People 2010* initiative, which addresses health problems that can be prevented through better care and increased public awareness. Among the initiative's ambitious goals are improving the prevention, detection, and treatment of heart disease risk factors, earlier identification and quicker response in the treatment of heart attacks, and prevention of recurrent cardiovascular events, such as second strokes.

The work of researchers at the National Human Genome Research Institute of the National Institutes of Health (NIH) also holds great promise for the fight against heart disease. With the completion of their monumental project of mapping and sequencing all human chromosomes, we will soon have the capability to identify at birth all those who are genetically predisposed to heart disease and provide them with the treatment and guidance they need through the years to live longer, healthier lives.

The Federal Government will continue to support research and public education to improve heart health through the National Heart, Lung, and Blood Institute, also at NIH. And all Americans should remain grateful that the American Heart Association, through its research and education programs
