

106TH CONGRESS  
1ST SESSION

# S. 1470

To amend the Clean Air Act to ensure that adequate actions are taken to detect, prevent, and minimize the consequences of accidental releases that result from criminal activity that may cause substantial harm to public health, safety, and the environment.

---

IN THE SENATE OF THE UNITED STATES

JULY 30, 1999

Mr. LAUTENBERG introduced the following bill; which was read twice and referred to the Committee on Environment and Public Works

---

## A BILL

To amend the Clean Air Act to ensure that adequate actions are taken to detect, prevent, and minimize the consequences of accidental releases that result from criminal activity that may cause substantial harm to public health, safety, and the environment.

1 *Be it enacted by the Senate and House of Representa-*  
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Chemical Security Act  
5 of 1999”.

6 **SEC. 2. FINDINGS.**

7 Congress finds that—

1           (1) the Federal Bureau of Investigation and the  
2           Agency for Toxic Substances and Disease Registry  
3           believe that the possibility of terrorist and criminal  
4           attacks on chemical plants poses a serious threat to  
5           human health, safety, and the environment;

6           (2) limiting public access to chemical accident  
7           information does not address the underlying problem  
8           of the vulnerability of chemical plants to criminal at-  
9           tack; on the contrary, providing public access to  
10          chemical accident information may create substantial  
11          incentives to reduce such vulnerability;

12          (3) there are significant opportunities to pre-  
13          vent criminal attack on chemical plants by employ-  
14          ing inherently safer technologies in the manufacture  
15          and use of chemicals; such technologies may offer in-  
16          dustry substantial savings by reducing the need for  
17          site security, secondary containment, buffer zones,  
18          mitigation, and liability insurance;

19          (4) chemical plants have a general duty to de-  
20          sign and maintain safe facilities to prevent criminal  
21          activity that may result in harm to human health,  
22          safety and the environment; and

23          (5) if the Attorney General determines that  
24          chemical plants have not taken adequate actions to  
25          protect themselves from criminal attack, the Attor-

1       ney General must establish a program to ensure that  
2       such actions are taken.

3   **SEC. 3. PREVENTION OF CRIMINAL RELEASES.**

4       (a)   PURPOSE   AND   GENERAL   DUTY.—Section  
5   112(r)(1) of the Clean Air Act (42 U.S.C. 7412(r)(1)) is  
6   amended by striking the second sentence and inserting the  
7   following: “Each owner and each operator of a stationary  
8   source that produces, processes, handles, or stores such  
9   a substance has a general duty in the same manner and  
10   to the same extent as the duty imposed under section 5  
11   of the Occupational Safety and Health Act of 1970 (29  
12   U.S.C. 654) to identify hazards that may result from an  
13   accidental release or criminal release using appropriate  
14   hazard assessment techniques, to ensure design and main-  
15   tenance of safe facilities taking such actions as are nec-  
16   essary to prevent accidental releases and criminal releases,  
17   and to minimize the consequences of any accidental release  
18   or criminal release that does occur.”.

19       (b)   DEFINITIONS.—Section 112(r)(2) of the Clean  
20   Air Act (42 U.S.C. 7412(r)(2)) is amended—

- 21               (1) by redesignating subparagraphs (B) and  
22               (C) as subparagraphs (E) and (F), respectively; and  
23               (2) by inserting after subparagraph (A) the fol-  
24       lowing:

1           “(B) CRIMINAL RELEASE.—The term  
2           ‘criminal release’ means—

3                   “(i) a release of a regulated substance  
4                   from a stationary source into the environ-  
5                   ment that is caused, in whole or in part,  
6                   by a criminal act; and

7                   “(ii) a release into the environment of  
8                   a regulated substance that has been re-  
9                   moved from a stationary source, in whole  
10                  or in part, by a criminal act.

11           “(C) DESIGN AND MAINTENANCE OF SAFE  
12           FACILITIES.—The term ‘design and mainte-  
13           nance of safe facilities’ means, with respect to  
14           the facilities at a stationary source, the prac-  
15           tices of—

16                   “(i) preventing or reducing the vulner-  
17                   ability of the stationary source to a release  
18                   of a regulated substance through use of in-  
19                   herently safer technology to the maximum  
20                   extent practicable;

21                   “(ii) reducing any vulnerability of the  
22                   stationary source that remains after taking  
23                   the measures described in clause (i)  
24                   through secondary containment, control, or

mitigation equipment to the maximum extent practicable;

“(iii) reducing any vulnerability of the stationary source that remains after taking the measures described in clauses (i) and (ii) by—

“(I) making the facilities impregnable to intruders to the maximum extent practicable; and

“(II) improving site security and employee training to the maximum extent practicable; and

“(iv) reducing the potential consequences of any vulnerability of the stationary source that remains after taking the measures described in clauses (i) through (iii) through the use of buffer zones between the stationary source and surrounding populations (including buffer zones between the stationary source and residences, schools, hospitals, senior centers, shopping centers and malls, sports and entertainment arenas, public roads and transportation routes, and other population centers).

1           “(D) USE OF INHERENTLY SAFER TECH-  
2           NOLOGY.—

3           “(i) IN GENERAL.—The term ‘use of  
4           inherently safer technology’ means use of a  
5           technology, product, raw material, or prac-  
6           tice that, as compared to the technology,  
7           products, raw materials, or practices cur-  
8           rently in use—

9           “(I) reduces or eliminates the  
10          possibility of release of a toxic, vola-  
11          tile, corrosive, or flammable substance  
12          prior to secondary containment, con-  
13          trol, or mitigation; and

14          “(II) reduces or eliminates the  
15          hazards to public health and the envi-  
16          ronment associated with the release or  
17          potential release of a substance de-  
18          scribed in subclause (I).

19          “(ii) INCLUSIONS.—The term ‘use of  
20          inherently safer technology’ includes input  
21          substitution, process redesign, product re-  
22          formulation, procedure simplification, and  
23          technology modification so as to—

24          “(I) use less hazardous or benign  
25          substances;

1 “(II) moderate pressures or tem-  
2 peratures;

3 “(III) reduce the likelihood and  
4 potential consequences of human  
5 error;

6 “(IV) improve inventory control  
7 and chemical use efficiency; and

8 “(V) reduce or eliminate storage,  
9 transportation, and handling of haz-  
10 ardous chemicals.”.

11 (c) DETERMINATION AND REGULATIONS.—Section  
12 112(r) of the Clean Air Act (42 U.S.C. 7412(r)) is amend-  
13 ed by adding at the end the following:

14 “(12) PREVENTION OF CRIMINAL RELEASES.—

15 “(A) DETERMINATION OF ADEQUACY.—

16 Not later than 1 year after the date of enact-  
17 ment of this paragraph, the Attorney General,  
18 in consultation with the Administrator, shall de-  
19 termine whether the owners or operators of sta-  
20 tionary sources have taken adequate actions, in-  
21 cluding the design and maintenance of safe fa-  
22 cilities, to detect, prevent, and minimize the  
23 consequences of criminal releases that may  
24 cause substantial harm to public health, safety,  
25 and the environment.

1                   “(B)   CHEMICAL   SECURITY   REGULA-  
2                   TIONS.—If the Attorney General determines,  
3                   under subparagraph (A), that adequate actions  
4                   have not been taken, the Attorney General, in  
5                   consultation with the Administrator, shall pro-  
6                   mulgate, not later than 2 years after the date  
7                   of enactment of this paragraph, requirements to  
8                   ensure that owners or operators of stationary  
9                   sources take adequate actions, including the de-  
10                  sign and maintenance of safe facilities, to de-  
11                  tect, prevent, and minimize the consequences of  
12                  criminal releases that may cause substantial  
13                  harm to public health, safety, and the environ-  
14                  ment.”.

15   **SEC. 4. REGULATIONS.**

16           The Administrator of the Environmental Protection  
17   Agency and the Attorney General may promulgate such  
18   regulations as are necessary to carry out this Act and the  
19   amendments made by this Act.

20   **SEC. 5. AUTHORIZATION OF APPROPRIATIONS.**

21           There are authorized to be appropriated to the Ad-  
22   ministrators of the Environmental Protection Agency and  
23   the Attorney General such sums as are necessary to carry

- 1 out this Act and the amendments made by this Act, to
- 2 remain available until expended.
