

106TH CONGRESS
1ST SESSION

S. RES. 19

To express the sense of the Senate that the Federal investment in biomedical research should be increased by \$2,000,000,000 in fiscal year 2000.

IN THE SENATE OF THE UNITED STATES

JANUARY 19, 1999

Mr. SPECTER (for himself and Mr. HARKIN) submitted the following resolution; which was referred jointly pursuant to the order of August 4, 1997, to the Committees on the Budget and Governmental Affairs, with instructions that if one committee reports, the other committee have thirty days to report or be discharged

RESOLUTION

To express the sense of the Senate that the Federal investment in biomedical research should be increased by \$2,000,000,000 in fiscal year 2000.

Whereas past investments in biomedical research have resulted in better health, an improved quality of life for all Americans and a reduction in national health care expenditures;

Whereas the Nation's commitment to biomedical research has expanded the base of scientific knowledge about health and disease and revolutionized the practice of medicine;

Whereas the Federal Government represents the single largest contribution to biomedical research conducted in the United States;

Whereas biomedical research continues to play a vital role in the growth of this Nation's biotechnology, medical device, and pharmaceutical industries;

Whereas the origin of many of the new drugs and medical devices currently in use is based in biomedical research supported by the National Institutes of Health;

Whereas women have traditionally been under represented in medical research protocols, yet are severely affected by diseases including breast cancer, which will kill over 43,900 women this year; ovarian cancer which will claim another 14,500 lives; and osteoporosis and cardiovascular disorders;

Whereas research sponsored by the National Institutes of Health is responsible for the identification of genetic mutations relating to nearly 100 diseases, including Alzheimer's disease, cystic fibrosis, Huntington's disease, osteoporosis, many forms of cancer, and immune deficiency disorders;

Whereas many Americans still face serious and life-threatening health problems, both acute and chronic;

Whereas neurodegenerative diseases of the elderly, such as Alzheimer's and Parkinson's disease threaten to destroy the lives of millions of Americans, overwhelm the Nation's health care system, and bankrupt the Medicare and Medicaid programs;

Whereas 4 million Americans are currently infected with the hepatitis C virus, an insidious liver condition that can lead to inflammation, cirrhosis, and cancer as well as liver failure;

Whereas 250,000 Americans are now suffering from AIDS and hundreds of thousands more with HIV infection;

Whereas cancer remains a comprehensive threat to any tissue or organ of the body at any age, and remains a top cause of morbidity and mortality;

Whereas the extent of psychiatric and neurological diseases poses considerable challenges in understanding the workings of the brain and nervous system;

Whereas recent advances in the treatment of HIB illustrate the promise research holds for even more effective, accessible, and affordable treatments for persons with HIV;

Whereas infants and children are the hope of our future, yet they continue to be the most vulnerable and under served members of our society;

Whereas approximately one out of every six American men will develop prostate cancer and over 49,200 men will die from prostate cancer each year;

Whereas diabetes, both insulin and non-insulin forms, afflict 15.7 million Americans and places them at risk for acute and chronic complications, including blindness, kidney failure, atherosclerosis and nerve degeneration;

Whereas the emerging understanding of the principles of biomimetrics have been applied to the development of hard tissue such as bone and teeth as well as soft tissue, and this field of study holds great promise for the design of new classes of biomaterials, pharmaceuticals, diagnostic and analytical reagents;

Whereas research sponsored by the National Institutes of Health will map and sequence the entire human genome by 2005, leading to a new era of molecular medicine that will provide unprecedented opportunities for the prevention, diagnoses, treatment, and cure of diseases that currently plague society;

Whereas the fundamental way science is conducted is changing at a revolutionary pace, demanding a far greater investment in emerging new technologies, research training programs, and in developing new skills among scientific investigators; and

Whereas most Americans show overwhelming support for an increased Federal investment in biomedical research: Now, therefore, be it

1 *Resolved,*

2 **SECTION 1. SHORT TITLE.**

3 This resolution may be cited as the “Biomedical Revi-
4 talization Resolution of 1998”.

5 **SEC. 2. SENSE OF THE SENATE.**

6 It is the sense of the Senate that funding for the Na-
7 tional Institutes of Health should be increased by
8 \$2,000,000,000 in fiscal year 2000 and that the budget
9 resolution appropriately reflect sufficient funds to achieve
10 this objective.
