- (1) drinking water standards proposed and in effect as of the date of the enactment of this Act will place a large financial burden on many public water systems, especially those public water systems in rural communities serving small populations;
 - (2) the limited scientific, technical, and professional resources available in small communities complicate the implementation of regulatory requirements;
 - (3) small communities often cannot afford to meet water quality standards because of the expenses associated with upgrading public water systems and training personnel to operate and maintain the public water systems;
 - (4) small communities do not have a tax base for dealing with the costs of upgrading their public water systems;
 - (5) small communities face high per capita costs in improving drinking water quality;
 - (6) small communities would greatly benefit from a grant program designed to provide funding for water quality projects;
 - (7) as of the date of the enactment of this Act, there is no Federal program in effect that adequately meets the needs of small, primarily rural

| 1 | communities with respect to public water systems; |
|----|---|
| 2 | and |
| 3 | (8) since new, more protective arsenic drinking |

| 5 | administrations, respectively, are expected to be im- |
| 6 | plemented in 2006, the grant program established |
| 7 | by the amendment made by this Act should be im- |
