

110TH CONGRESS
1ST SESSION

S. 1509

To improve United States hurricane forecasting, monitoring, and warning capabilities, and for other purposes.

IN THE SENATE OF THE UNITED STATES

MAY 24, 2007

Ms. LANDRIEU (for herself, Mr. KERRY, Mr. NELSON of Florida, and Mr. MARTINEZ) introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

A BILL

To improve United States hurricane forecasting, monitoring, and warning capabilities, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Improved Hurricane
5 Tracking and Forecasting Act of 2007”.

6 **SEC. 2. FINDINGS.**

7 Congress makes the following findings:

8 (1) Scatterometers on satellites are state-of-the-
9 art radar instruments which operate by transmitting
10 high-frequency microwave pulses to the ocean sur-

1 face and measuring echoed radar pulses bounced
2 back to the satellite.

3 (2) Scatterometers can acquire hundreds of
4 times more observations of surface wind velocity
5 each day than can ships and buoys, and are the only
6 remote-sensing systems able to provide continuous,
7 accurate and high-resolution measurements of both
8 wind speeds and direction regardless of weather con-
9 ditions.

10 (3) The Quick Scatterometer satellite
11 (QuikSCAT) is an ocean-observing satellite launched
12 on June 19, 1999, to replace the capability of the
13 National Aeronautics and Space Administration
14 Scatterometer (NSCAT), an instrument which lost
15 power in 1997, 9 months after launch in September
16 1996.

17 (4) The QuikSCAT satellite has the operational
18 objective of improving weather forecasts near coast-
19 lines by using wind data in numerical weather-and-
20 wave prediction, as well as improve hurricane warn-
21 ing and monitoring and acting as the next “El Nino
22 watcher” for the National Aeronautics and Space
23 Administration.

24 (5) The QuikSCAT satellite was built in just 12
25 months and was launched with a 3-year design life,

1 but continues to perform per specifications, with its
2 backup transmitter, as it enters into its 8th year—
3 5 years past its projected lifespan.

4 (6) The QuikSCAT satellite provides daily cov-
5 erage of 90 percent of the world's oceans, and its
6 data has been a vital contribution to National
7 Weather Service forecasts and warnings over water
8 since 2000.

9 (7) Despite its continuing performance, the
10 QuikSCAT satellite is well beyond its expected de-
11 sign life and a replacement is urgently needed be-
12 cause, according to the National Hurricane Center,
13 without the QuikSCAT satellite—

14 (A) hurricane forecasting would be 16 per-
15 cent less accurate 72 hours before hurricane
16 landfall and 10 percent less accurate 48 hours
17 before hurricane landfall resulting in—

18 (i) with a 16 percent loss of accuracy
19 at 72 hours before landfall, the area ex-
20 pected to be under hurricane danger would
21 rise from 197 miles to 228 miles on aver-
22 age; and

23 (ii) with a 10 percent loss of accuracy
24 at 48 hours before landfall, the area ex-
25 pected to be under hurricane danger would

1 rise from 136 miles to 150 miles on aver-
2 age; and

3 (B) greater inaccuracy of this type would
4 lead to more “false alarm” evacuations along
5 the Gulf Coast and Atlantic Coast and decrease
6 the possibility of impacted populations suffi-
7 ciently heeding mandatory evacuations.

8 (8) According to recommendations in the Na-
9 tional Academies of Science report entitled “Decadal
10 Survey”, a next generation ocean surface wind vec-
11 tor satellite mission is needed during the three year
12 period beginning in 2013.

13 (9) According to the National Hurricane Cen-
14 ter, a next generation ocean surface vector wind sat-
15 ellite is needed to take advantage of current tech-
16 nologies that already exist to overcome current limi-
17 tations of the QuikSCAT satellite and enhance the
18 capabilities of the National Hurricane Center to bet-
19 ter warn coastal residents of possible hurricanes.

20 **SEC. 3. PROGRAM FOR IMPROVED OCEAN SURFACE WINDS**
21 **VECTOR SATELLITE.**

22 (a) REQUIREMENT.—The Administrator of the Na-
23 tional Oceanic and Atmospheric Administration shall, in
24 consultation with the Administrator of the National Aero-
25 nautics and Space Administration and the head of any

1 other department or agency of the United States Govern-
2 ment designated by the President for purposes of this sec-
3 tion, carry out a program for an improved ocean surface
4 winds vector satellite.

5 (b) PURPOSES.—The purposes of the program re-
6 quired under subsection (a) shall be to provide for the de-
7 velopment of an improved ocean surface winds vector sat-
8 ellite in order to—

9 (1) address science and application questions
10 related to air-sea interaction, coastal circulation, and
11 biological productivity;

12 (2) improve forecasting for hurricanes, coastal
13 winds and storm surge, and other weather-related
14 disasters;

15 (3) ensure continuity of quality for satellite
16 ocean surface vector wind measurements so that ex-
17 isting weather forecasting and warning capabilities
18 are not degraded;

19 (4) advance satellite ocean surface vector wind
20 data capabilities; and

21 (5) address such other matters as the Adminis-
22 trator of the National Oceanic and Atmospheric Ad-
23 ministration, in consultation with the Administrator
24 of the National Aeronautics and Space Administra-
25 tion, considers appropriate.

1 (c) ANNUAL REPORTS.—

2 (1) REPORTS REQUIRED.—Not later than six
3 months after the date of the enactment of this Act
4 and annually thereafter until the termination of the
5 program required under subsection (a), the Adminis-
6 trator of the National Oceanic and Atmospheric Ad-
7 ministration shall submit to the Committee on Com-
8 merce, Science, and Transportation of the Senate
9 and the Committee on Science and Technology of
10 the House of Representatives a report on the pro-
11 gram required under subsection (a).

12 (2) ELEMENTS.—Each report under paragraph
13 (1) shall include the following:

14 (A) A current description of the program
15 required under subsection (a), including the
16 amount of funds expended for the program dur-
17 ing the period covered by such report and the
18 purposes for which such funds were expended.

19 (B) A description of the operational status
20 of the satellite developed under the program, in-
21 cluding a description of the current capabilities
22 of the satellite and current estimate of the an-
23 ticipated lifespan of the satellite.

24 (C) A description of current and proposed
25 uses of the satellite by the United States Gov-

1 ernment, and academic, research, and other pri-
2 vate entities, during the period covered by such
3 report.

4 (D) Any other matters that the Adminis-
5 trator of the National Oceanic and Atmospheric
6 Administration, in consultation with the Admin-
7 istrator of the National Aeronautics and Space
8 Administration, considers appropriate.

9 (d) AUTHORIZATION OF APPROPRIATIONS.—There is
10 authorized to be appropriated to the National Oceanic and
11 Atmospheric Administration \$375,000,000 to carry out
12 the program required under subsection (a).
