

110TH CONGRESS

S. 3584

To comprehensively prevent, treat, and decrease overweight and obesity in
our Nation's populations.

IN THE SENATE OF THE UNITED STATES

SEPTEMBER 25 (legislative day, SEPTEMBER 17), 2008

Mr. BINGAMAN introduced the following bill; which was read twice and
referred to the Committee on Health, Education, Labor, and Pensions

A BILL

To comprehensively prevent, treat, and decrease overweight
and obesity in our Nation's populations.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Obesity Prevention,
5 Treatment, and Research Act of 2008”.

6 **SEC. 2. FINDINGS.**

7 Congress finds the following:

8 (1) In 2001, the United States Surgeon Gen-
9 eral released the Call to Action to Prevent and De-

1 crease Overweight and Obesity to bring attention to
2 the public health problems related to obesity.

3 (2) Since the Surgeon General's call to action,
4 the problems of obesity and overweight have become
5 epidemic, occurring in all ages, ethnicities and races,
6 and individuals in every State.

7 (3) The United States now has the highest
8 prevalence of obesity among the developed nations,
9 according to 2006 data by the Organisation for Eco-
10 nomic Co-operation and Development. The preva-
11 lence of obesity in the United States (34 percent) is
12 more than twice the average for other developed na-
13 tions (13 percent). The closest nation in prevalence
14 of obesity is the United Kingdom (24 percent) which
15 is over 25 percent less than the United States.

16 (4) The National Health and Nutrition Exam-
17 ination Survey in 2006 estimated that 32 percent of
18 children and adolescents aged 2 to 19 and an alarm-
19 ing 66 percent of adults are overweight or obese.

20 (5) More than 30 percent of young people in
21 grades 9 through 12 do not regularly engage in vig-
22 orous intensity physical activity, while almost 40
23 percent of adults are sedentary and 70 percent re-
24 port getting less than 20 minutes of regular physical
25 activity per day.

1 (6) The Institute of Medicine, in their 2005
2 publication “Preventing Childhood Obesity: Health
3 in the Balance”, reported that over the last 3 dec-
4 ades, the rate of childhood obesity has tripled for
5 children aged 6 to 11 years, and doubled for chil-
6 dren aged 2 to 5 years old and in adolescents aged
7 12 to 19 years old. In 2004, approximately
8 9,000,000 children over 6 years of age were obese.
9 Only 2 percent of children eat a healthy diet con-
10 sistent with Federal nutrition guidelines.

11 (7) For children born in 2000, it is estimated
12 the lifetime risk of being diagnosed with type 2 dia-
13 betes is 40 percent for females and 30 percent for
14 males.

15 (8) Overweight and obesity disproportionately
16 affect minority populations and women. According to
17 the 2006 Behavioral Risk Factor Surveillance Sys-
18 tem of the Centers for the Disease Control and Pre-
19 vention, 61 percent of adults in the United States
20 are overweight or obese.

21 (9) The Centers for the Disease Control and
22 Prevention estimates the annual expenditures related
23 to overweight and obesity in the United States to be
24 \$117,000,000,000 in 2001 and rising rapidly.

1 (10) The Centers for the Disease Control and
2 Prevention estimates that the increase in the num-
3 ber of overweight and obese Americans between
4 1987 and 2001 resulted in a 27 percent increase in
5 per capita health costs, and that as many as
6 112,000 deaths per year are associated with obesity.

7 (11) Being overweight or obese increases the
8 risk of chronic diseases including diabetes, heart dis-
9 ease, stroke, certain cancers, arthritis, and other
10 health problems.

11 (12) According to the National Institute of Dia-
12 betes and Digestive and Kidney Diseases, individuals
13 who are obese have a 50 to 100 percent increased
14 risk of premature death.

15 (13) Healthy People 2010 goals identify over-
16 weight and obesity as 1 of the Nation's leading
17 health problems and include objectives for increasing
18 the proportion of adults who are at a healthy weight,
19 reducing the proportion of adults who are obese, and
20 reducing the proportion of children and adolescents
21 who are overweight or obese.

22 (14) Another Healthy People 2010 goal is to
23 eliminate health disparities among different seg-
24 ments of the population. Obesity is a health problem

1 that disproportionally impacts medically underserved
2 populations.

3 (15) Food and beverage advertisers are esti-
4 mated to spend \$10,000,000 to \$12,000,000,000 per
5 year to target children and youth.

6 (16) The United States spends less than 2 per-
7 cent of its annual health expenditures on prevention.

8 (17) Employer health promotion investments
9 net a return of \$3 for every \$1 invested.

10 (18) High-energy dense and low-nutrient dense
11 foods represent 30 percent of American's total cal-
12 orie intake. Fast food company menus are twice the
13 energy density of recommended healthful diets.

14 (19) Research suggests that individuals eat too
15 much high-energy dense foods without feeling full
16 because the brain's pathways that regulate hunger
17 and influence normal food intake are not triggered
18 by these foods.

19 (20) Packaging, product placement, and high-
20 energy dense food content manipulation contribute
21 to the overweight and obesity epidemic in the United
22 States.

23 (21) Such marketing and content manipulation
24 techniques have been used by other industries to en-
25 courage consumption at the expense of health. To

1 help individuals make healthy choices, education and
 2 information must be available with clear, consistent,
 3 and accurate labeling.
