

113TH CONGRESS
2D SESSION

S. 2155

To amend the National Telecommunications and Information Administration Organization Act to create a Federal Spectrum Reallocation Commission, to provide for the use of a portion of the proceeds from the auction of reallocated Federal spectrum for deficit reduction, and for other purposes.

IN THE SENATE OF THE UNITED STATES

MARCH 25, 2014

Mr. KIRK introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

A BILL

To amend the National Telecommunications and Information Administration Organization Act to create a Federal Spectrum Reallocation Commission, to provide for the use of a portion of the proceeds from the auction of reallocated Federal spectrum for deficit reduction, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-
2 tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Maximizing Spectrum
5 Efficiency and Value Act of 2014”.

1 **SEC. 2. FINDINGS.**

2 Congress finds the following:

3 (1) Demand for electromagnetic spectrum is
4 sharply rising due to the growing advanced network
5 of communications devices that rely on spectrum to
6 transmit and receive information.

7 (2) It is necessary for the United States to
8 maintain its investments in innovation of spectrum
9 and broadband infrastructure to ensure the United
10 States is a global leader in the wireless age.

11 (3) Spectrum is a finite resource, and in order
12 to spur innovation, the United States must provide
13 for better and more efficient spectrum management.

14 (4) Many spectrum holders do not efficiently
15 use their frequency assignments, and a restructuring
16 of the usable spectrum is a viable solution to make
17 up for this lost opportunity.

18 (5) Making available additional spectrum to
19 meet the demands of broadband technologies and
20 services will prevent dropped connections, blocked
21 service, decreased connection speed, and even higher
22 prices for certain advanced applications.

23 (6) The availability of increased spectrum will
24 allow advanced technologies such as 4G mobile serv-
25 ices, high-speed wireless, high definition television,

1 and more to continue operating without network
2 problems and interference.

3 (7) The United States public debt totals not
4 less than \$14,300,000,000,000.

5 (8) Congress should look for ways to increase
6 Federal Government revenues without creating addi-
7 tional burdens on taxpayers.

8 (9) Auctioning spectrum is the most economi-
9 cally sound method for accurate valuation and as-
10 signment of spectrum to develop the next generation
11 of wireless technologies, expand broadband service to
12 underserved areas of the country, develop an inter-
13 operable public safety network, and reduce the def-
14 itic.

15 (10) Certain frequencies of spectrum have sub-
16 stantial market value and could raise significant new
17 revenue in a public auction.

18 (11) Barriers to a spectrum auction such as
19 regulatory and administrative delays are not condu-
20 cive to the free-market approach and can hurt innov-
21 ation.

22 (12) Federal Government spectrum, while ex-
23 tremely important, is vast and should be included in
24 any spectrum reform initiative.

1 **SEC. 3. FEDERAL SPECTRUM REALLOCATION COMMISSION.**

2 (a) IN GENERAL.—Part B of title I of the National
3 Telecommunications and Information Administration Or-
4 ganization Act (47 U.S.C. 921 et seq.) is amended by add-
