

115TH CONGRESS  
1ST SESSION

# H. R. 2858

To establish a task force to review policies and measures to promote, and to develop best practices for, reduction of short-lived climate pollutants, and for other purposes.

---

## IN THE HOUSE OF REPRESENTATIVES

JUNE 8, 2017

Mr. PETERS (for himself, Mr. CURBELO of Florida, Mr. CARTWRIGHT, Mr. DELANEY, Mr. LOWENTHAL, Mr. LIPINSKI, Mr. COFFMAN, and Mr. CARBAJAL) introduced the following bill; which was referred to the Committee on Energy and Commerce

---

## A BILL

To establish a task force to review policies and measures to promote, and to develop best practices for, reduction of short-lived climate pollutants, and for other purposes.

1       *Be it enacted by the Senate and House of Representa-*

2       *tives of the United States of America in Congress assembled,*

3       **SECTION 1. SHORT TITLE.**

4       This Act may be cited as the “SUper Pollutant Emis-

5       sions Reduction Act of 2017” or the “SUPER Act of

6       2017”.

1     **SEC. 2. FINDINGS AND PURPOSE.**

2         (a) FINDINGS.—Congress makes the following find-  
3         ings:

4             (1) Carbon dioxide emissions are estimated to  
5         account for 40 to 45 percent of anthropogenic radi-  
6         tive forcing (or manmade global warming), while  
7         the remainder is driven by non-carbon dioxide cli-  
8         mate pollutants, primarily short-lived climate pollut-  
9         ants. These short-lived climate pollutants, or “super  
10        pollutants”, have shorter atmospheric lifespans than  
11        carbon dioxide, but cause about 25 to 2000 times  
12        more warming per ton over a 25- to 100-year period,  
13        and in many cases the emissions are growing much  
14        faster than carbon dioxide.

15             (2) Several of the short-lived climate pollutants  
16         are also potent air pollutants that harm human  
17         health and reduce crop yields. Reducing these pollut-  
18         ants can save thousands of lives every year in the  
19         United States and prevent millions of premature  
20         deaths from air pollution worldwide, while also in-  
21         creasing agricultural production.

22             (3) International efforts to address short-lived  
23         climate pollutants are underway, including the Cli-  
24         mate and Clean Air Coalition to Reduce Short-Lived  
25         Climate Pollutants, led by the Department of State  
26         and the United Nations Environment Programme,

1 the Global Methane Initiative, and the recently final-  
2 ized Kigali Amendment to the Montreal Protocol on  
3 Substances that Deplete the Ozone Layer. The  
4 Kigali Amendment, agreed to by 197 countries in  
5 October 2016, could mitigate 80 billion metric tons  
6 of carbon dioxide equivalent emissions by 2050,  
7 avoiding up to 0.5°C warming by the end of the cen-  
8 tury.

9 (4) Many of the technologies to reduce short-  
10 lived climate pollutants already exist, but in some  
11 cases, adoption of such technologies has been slow.  
12 Most alternatives to the super pollutant HFCs are  
13 invented and produced by American companies and  
14 many American companies that previously used  
15 super pollutants are introducing alternatives in do-  
16 mestic and export markets. The appliances that use  
17 alternatives to HFCs and enhance energy efficiency  
18 are also designed in the United States. United  
19 States leadership and innovation in development of  
20 new technologies to replace super pollutants is ex-  
21 pected to result in job growth and benefits for the  
22 United States economy.

23 (5) The Federal Government has a number of  
24 programs and initiatives that aim to, or the out-  
25 comes of which, reduce emissions of short-lived cli-

1       mate pollutants, but these programs are scattered  
2       across multiple agencies and there is insufficient co-  
3       ordination to maximize reductions of these pollut-  
4       ants. In February 2012, the Government Account-  
5       ability Office published an annual report, “Opportu-  
6       nities to Reduce Duplication, Overlap and Frag-  
7       mentation, Achieve Savings, and Enhance Revenue”,  
8       which examined the efficiency and efficacy of Gov-  
9       ernment programs, including those that address die-  
10      sel emissions that contain black carbon, a short-lived  
11      climate pollutant.

12                     (6) Executive Order 13514 requires Federal  
13       agencies to develop plans for reducing hydrofluoro-  
14       carbons and methane, but few agencies have focused  
15       on these compounds in their annual Strategic Sus-  
16       tainability Performance Plans. Executive Order  
17       13693 directs Federal agencies to take into account  
18       environmental and sustainability factors in Federal  
19       acquisition processes, including in the purchase of  
20       products using high-global warming potential hydro-  
21       fluorocarbons. In May 2016, the Department of De-  
22       fense, General Services Administration, and National  
23       Aeronautics and Space Administration finalized and  
24       published a rule to amend the Federal Acquisition  
25       Regulation (FAR), Rule 81 FR 30429, directing

1     Federal agencies to procure, when feasible, alter-  
2     natives to high-global warming potential hydroflu-  
3     rocarbons. The rule also encourages improved refrig-  
4     erant management and the use of reclaimed (instead  
5     of virgin) hydrofluorocarbons as examples of sustain-  
6     able procurement under the FAR.

7                 (7) Because of their short atmospheric life-  
8     times, reducing global emissions of short-lived cli-  
9     mate pollutants can quickly cut the rate of global  
10    temperature rise in half, by 2050, and help stabilize  
11    global temperatures below 2°C above pre-industrial  
12    temperatures by 2100, when combined with reduc-  
13    tions of global emissions of carbon dioxide. Such re-  
14    duction in short-lived climate pollutants is possible  
15    with the use of currently available technologies.  
16    Without short-lived climate pollutant mitigation,  
17    warming can exceed 2°C within 35 years. Cutting  
18    short-lived climate pollutants along with carbon diox-  
19    ide can also reduce the rate of projected global sea-  
20    level rise by half and total sea-level rise by a third.  
21    Steps to reduce short-lived climate pollutants are  
22    likely to have air quality and public health benefits  
23    as well.

24                 (b) PURPOSE.—The purpose of this Act is to—

1                         (1) coordinate and optimize the Federal Gov-  
2     ernment's existing efforts to address short-lived cli-  
3     mate pollutants;

4                         (2) reduce overlap and duplication of such ef-  
5     forts; and

6                         (3) encourage Federal operations, programs,  
7     policies, and initiatives to reduce short-lived climate  
8     pollutants by—

9                             (A) ensuring that the coordinated Federal  
10    programs are effective and forward-looking in  
11    their efforts to control short-lived climate pol-  
12    lutants;

13                             (B) ensuring coordination of such Federal  
14    operations, programs, policies, and initiatives  
15    with State, local, regional, tribal, and industry  
16    efforts; and

17                             (C) supporting such State, local, regional,  
18    tribal, and industry efforts.

19     **SEC. 3. TASK FORCE ON SUPER POLLUTANTS.**

20                         (a) ESTABLISHMENT.—Not later than 90 days after  
21    the date of the enactment of this Act, the President shall  
22    establish the “Task Force on Super Pollutants” (referred  
23    to in this section as the “Task Force”).

24                         (b) DUTIES.—The Task Force shall—

- 1                             (1) review existing and potential policies and  
2                             measures that promote reduction of short-lived cli-  
3                             mate pollutants, in part by identifying and evalu-  
4                             ating programs and activities of the Federal Govern-  
5                             ment that contribute, or could contribute, to such  
6                             reduction;
- 7                             (2) identify and recommend specific existing  
8                             Federal programs and activities evaluated under  
9                             paragraph (1) that are unnecessarily duplicative and  
10                            can be consolidated to achieve greater efficiency and  
11                            effectiveness;
- 12                            (3) identify gaps where programs do not exist,  
13                            and recommend focused programs and activities to  
14                            fill these gaps to achieve reductions of short-lived cli-  
15                            mate pollutants, with an emphasis on industry  
16                            standards and public-private partnerships where pos-  
17                            sible;
- 18                            (4) identify and highlight programs and activi-  
19                            ties where reductions in short-lived climate pollut-  
20                            ants can continue to spur innovation and job cre-  
21                            ation in the private sector and increase United  
22                            States competitiveness in the global market for new  
23                            technologies to replace those using short-lived cli-  
24                            mate pollutants;

(5) identify, compile, evaluate, and develop best practices for reductions of short-lived climate pollutants, including by—

(B) identifying and evaluating cost-effective mitigation projects, strategies, and policies at the State, local, and tribal level, with the greatest potential for reduction of short-lived climate pollutants; and

14                         (6) not later than 18 months after the date of  
15                         enactment of this Act, submit to Congress a report  
16                         on the findings and recommendations developed  
17                         under paragraphs (1) through (5), including quan-  
18                         tification of cumulative emission reductions achiev-  
19                         able for each short-lived climate pollutant through  
20                         implementation of Task Force recommendations.

21 (c) MEMBERS.—The Task Force established under  
22 subsection (a) shall include representatives of—

23                   (1) all relevant Federal agencies, including—  
24                   (A) the Secretary of Energy;

(B) the Administrator of the Environmental Protection Agency;

3 (C) the Secretary of the Interior;

4 (D) the Secretary of Transportation;

5 (E) the Secretary of Agriculture;

6 (F) the Secretary of State;

7 (G) the Secretary of Commerce; and

(H) the Secretary of Health and Human Services;

(2) relevant offices and councils within the Executive Office of the President, including—

15 (C) the Council on Environmental Quality;

21 (5) relevant industry organizations, rep-  
22 resenting at least the following sectors:

(A) Energy supply and transmission, including fossil fuels

### 25 (B) Solid waste

## 4 (E) Agriculture.

## 5 (F) Wastewater.

6 (G) Buildings.

(H) Other sectors as determined appropriate by the President.

(d) DEFINITION.—In this Act, the term “short-lived climate pollutant” means any of the following:

## 11 (1) Black carbon.

## 12 (2) Methane.

### (3) Hydrofluorocarbons.

#### (4) Tropospheric ozone and its precursors.

(5) Emissions from banks of ozone-depleting substances
