- (1) immediate, tactical military innovation; and

- (2) foundational research, science, and engineering to address long-term challenges;

Whereas the national security innovation emanating from the defense laboratories will be predicated on—

- (1) a sufficient pipeline of trained and experienced scientists and engineers eligible for a security clearance; and
- (2) the facilities, infrastructure, instrumentation, and support capabilities needed—
 - (A) to attract and retain those scientists and engineers; and
 - (B) to bolster the activities of those scientists and engineers to meet the technology problems of the Department of Defense;
