**Executive Order 12897—
Garnishment of Federal Employees’
Pay**

February 3, 1994

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 5520a(j)(1)(A) of title 5, United States Code, as added by section 9 of Public Law 103–94, it is hereby ordered as follows:

Section 1. The Office of Personnel Management, in consultation with the Attorney General, is designated to promulgate regulations for the implementation of section 5520a of title 5, United States Code, with respect to civilian employees and agencies in the executive branch, except as provided in section 2 of this order.

Sec. 2. The Postmaster General is designated to promulgate regulations for the implementation of section 5520a of title 5, United States Code, with respect to employees of the United States Postal Service.

William J. Clinton

The White House,
February 3, 1994.

**Proclamation 6648—American Heart
Month, 1994**

February 3, 1994

*By the President of the United States
of America*

A Proclamation

The heart is one of nature’s most efficient and durable machines. During an average lifetime, the heart contracts an amazing 2.5 billion times. Although we now realize that

it functions as a life-giving pump, the human heart was thought of by ancient man as the very soul of one’s being. Certain words, such as “courage” and “cordial,” are derived from the Latin word for heart, symbolizing its prominence and significance.

Heart disease was not recognized until about 1500 A.D., for the heart was considered so delicate and sensitive that death was believed to be inevitable if the heart were injured in any way. Although most causes of heart disease observed early in the 20th century are still present today, the treatment and cures of the disease are now dramatically altered.

Today, heart disease is one health threat that Americans can conquer. Extraordinary scientific advances, together with increased public awareness, have forged one of this century’s greatest medical achievements, saving untold lives through improved prevention and treatment. However, as long as cardiovascular diseases and stroke threaten the lives of Americans, we must continue in our diligent efforts to fight these diseases.

Today, many Americans are joining in this fight by taking steps to reduce their chances of developing a cardiovascular disease. They have learned to avoid the major risk factors by controlling blood pressure and blood cholesterol, by avoiding tobacco products, and by becoming more physically active.

At the same time, scientists are developing better ways to detect and treat cardiovascular diseases and stroke. Revolutionary advances are reducing the physical suffering exacted by heart disease and are making diagnosis and treatment more successful.

The Federal Government has contributed to these achievements by supporting research and public education through its National Heart, Lung, and Blood Institute. The American Heart Association, through its research and education programs and its vital network of dedicated volunteers, has played a crucial role in bringing about these remarkable accomplishments.

The results of the many scientific and public education achievements are dramatic. From 1972 through 1990, the death rate from heart disease dropped 39 percent and the death rate from strokes fell 57.4 percent.
