

ideas and proposals. They appear to have less to say about the substance and little interest in the impact of legislation on people's lives.

My impression is the Washington press corps often shows a lack of diligence, a follow-the-leader mentality. If one journalist writes about a topic, everybody writes about it. If one talks about it, everybody talks about it. If one states a "fact," others accept it without checking. I often ask myself how many journalists out there think for themselves.

What worries me in all this (and other criticisms of the media) is that the media suggest that politics is little more than the struggle between ambitious politicians for power and has less to do with how we as a country deal with the serious problems confronting us. There are excellent members of the national press corps, but there just seems to be a very large gap between the way many journalists approach a story and the way other people do.

CONCLUSION

One important role of journalism in this country is to try to provide a common ground of knowledge and analysis, an effort to clarify the national debate and link it to people and their lives. The media in our society have a high mission and bear the responsibility to carry it out.

Fortunately, there is a self-correcting process in the media. The competitive instinct is very strong among the multiple sources of information and that sometimes leads to excess and inaccuracies, but also contributes to a corrective process whereby the facts eventually get out straight. If one news outlet reports a story badly, other rival organizations will try to set the record straight.

The proliferation of alternative news sources may also be a positive development. Some argue that the national press is responding to competitive pressures from the tabloid media by trying to imitate them, and this is certainly a concern. Competition, however, may also force the mainstream media to get back to basics—to do what they do best, namely solid beat reporting and in-depth investigative pieces. There has certainly been a trend in the regional press toward issue-oriented coverage of politics and news, and the national media could learn from this positive development.

MEMORANDUM ON THE BALLISTIC MISSILE THREAT

HON. FLOYD SPENCE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1996

Mr. SPENCE. Mr. Speaker, as you know, the President vetoed the defense authorization bill last December due primarily to the legislation's direction that a national defense system be deployed by the year 2003. As I commented during the veto override debate, on a political level, the veto did serve to more clearly define the stark differences between the Clinton administration and this Congress on key national security issues such as ballistic missile defense. It is unfortunate that an issue as fundamentally important as whether or not the American people should be defended against the threat of ballistic missiles in the decade ahead has become so controversial—but it is where we find ourselves.

Adding further to the controversy, the Department of Defense announced last week that they do not intend to spend all of the funding

appropriated for national missile defense programs this fiscal year, as well as the surprising decision to delay several of the most promising theater missile defense programs—an area in which I did not believe there was much controversy until now. The combination of the President's strong opposition to deploying a national missile defense and now, an apparently conscious decision to scale back theater missile programs leaves us plenty to begin sorting through.

The National Security Committee has a responsibility to raise the visibility of important security issues and through discussion, debate and even disagreement, to hopefully inform and educate the citizens of this country. Today, we started that effort with the first in a series of full committee and subcommittee hearings on ballistic missile defense. In addition to hearings, I have prepared a short paper, "Memorandum on the Ballistic Missile Threat," which I distributed to the members of the National Security Committee yesterday.

The text of the memorandum is as follows:

MEMORANDUM ON THE BALLISTIC MISSILE THREAT

(By HNSC Chairman Floyd Spence)

INTRODUCTION

As last year's debate and veto of the FT 96 National Defense Authorization Act (H.R. 1530) demonstrated, Ballistic Missile Defense (BMD) has become a defining national security issue. Today, the United States has no defense against even a single ballistic missile. According to polls, this fact is not appreciated by the American people, who continue to believe that we have the means today to protect ourselves against ballistic missile attack. Although the technology exists to develop and field a limited defense against such threats, the American people remain hostage to a national strategy of conscious vulnerability, codified by the 1972 anti-Ballistic Missile (ABM) Treaty and reinforced by Cold War notions of strategic stability.

The debate over whether deployment of a national missile defense is warranted ought to pivot in large part on forward looking assessments of the ballistic missile threat to the United States. In his December 28 veto message, the President stated that H.R. 1530's call for a national missile defense system addresses a long-range missile threat "that our Intelligence Community does not foresee in the coming decade." The purpose of this memorandum is to address this issue and to provide a better understanding of the missile threats facing the United States now and in the future.

A CLEAR AND PRESENT DANGER

The Clinton Administration has acknowledged that the shorter-range, or theater, ballistic missile threat is real and growing. Secretary of Defense William Perry has stated that ballistic missiles "are clearly becoming a common battlefield weapon."¹ More than 15 countries currently possess ballistic missiles. Most are based on Soviet-derived designs like the SCUD, which was used by Iraq during the 1991 Gulf War. However, the types of theater missiles being sought and acquired by third countries today are of increasing range, lethality, and sophistication.

In addition, more than 25 countries currently possess, or are seeking to acquire, weapons of mass destruction (WMD), including nuclear, chemical, and biological weapons. According to unclassified estimates, some 24 countries currently have ongoing chemical weapons programs.² Ten countries

are reportedly pursuing biological weapons research.³ At least as many are reported to be interested in developing nuclear weapons.⁴ The trend toward proliferation of weapons of mass destruction and the missiles that can carry them is "decidedly negative," with "no limits on the ambitions of unstable actors to acquire the most advanced and deadly weapons available, either through internal or external sources."⁵

The Administration is less convinced, however, of the threat posed by longer-range missiles. In particular, a recently completed National Intelligence Estimate (NIE), prepared by the intelligence community, concludes that the threat to the United States posed by long-range ballistic missiles is lower than previously believed.⁶ A letter by the CIA's Director of Congressional Affairs to Senators Levin and Bumpers, written on behalf of the Director of Central Intelligence (DCI), John Deutch, asserts that the previous intelligence community estimate of the missile threat to the United States, as reflected in the language of H.R. 1530, "overstates what we currently believe to be the future threat." The letter states that it is "extremely unlikely" any nation with intercontinental ballistic missiles (ICBMs) would be willing to sell them; declares that the U.S. early warning capability is "sufficient to provide many years in advance of indigenous development"; and judges the prospect of an operational North Korean ICBM within the next five years to be "very low."⁷

The Administration's conclusions on these issues are seemingly at odds with previous intelligence community estimates; are at variance with the view of other responsible experts within and outside the intelligence community; and have raised troubling questions concerning the politicization of intelligence.⁸

THE ALLURE OF BALLISTIC MISSILES

There are numerous reasons why a growing number of nations seek to acquire ballistic missiles and weapons of mass destruction. Such weapons provide a military edge against regional adversaries and serve as symbols of national power and prestige. Ballistic missiles offer small and medium powers—for the first time—a strategic weapon potentially capable of deterring great powers militarily and politically. An adversary armed with ballistic missiles and WMD may deter the United States from undertaking certain actions for fear of retaliation against U.S. regional assets of allies. Long-range ICBMs are even more attractive assets for hostile powers wishing to deter the United States from exercising its power projection capabilities by placing U.S. territory directly at risk and threatening our most valued asset: the American people. Importantly, the lack of any effective defenses against ballistic missiles may actually serve to encourage hostile states to acquire missile capabilities and makes them the weapon of choice for nations seeking to threaten others. As the International Institute for Strategic Studies in London has concluded, "the ballistic missile, mainly on account of its range, speed and cost relative to that of a manned aircraft, is a favored delivery means for proliferating states and is likely to remain so until a proven anti-ballistic missile defense system has been deployed."⁹

The proliferation of these weapons heightens the risk that adversaries will seek to use them or threaten their use against the U.S. or American allies and interests. For instance, in the Gulf War, Iraq used SCUD missiles against Israel as political weapons in an attempt to draw Israel into the conflict and fracture the allied coalition. Libya recently declared its willingness to fire ballistic missiles at Naples, Italy, the home of the U.S.

Footnotes at the end of article.

Sixth Fleet.¹⁰ In fact, Libya launched ballistic missiles against a NATO base in Italy in 1986. Libyan leader Muammar Qaddafi has spoken of his desire to acquire "a deterrent—missiles that can reach New York," and has stated, "We should build this force so that they [the U.S.] and others will no longer think about an attack."¹¹ Palestine Liberation Front leader Abu Abbas warned ominously in 1990 that "some day we will have missiles that can reach New York."¹² And Iranian President Hashemi Rafsanjani has called missiles "the most important and the most essential weapons of the world."¹³ Clearly, the incentive to develop or otherwise acquire these weapons is enhanced by the lack of defenses against them.

INTELLIGENCE COMMUNITY ANALYSIS

The conclusions expressed in the CIA letter referred to above have required the intelligence community to adopt a number of benign assumptions about the ballistic missile threat to the United States that are not supported by previous intelligence estimates or independent analyses.¹⁴ For example:

An assumption that nations will be limited to their indigenous industrial and technological base when developing ICBMs and that foreign assistance will be minimal or nonexistent. By discounting the likelihood that ICBM components or entire missiles may be purchased from more advanced nations, the intelligence community appears to place faith in a universal adherence to the Missile Technology Control Regime (MTCR) or in self-imposed restraints on trade of such items. However, the MTCR, which establishes guidelines for controlling the transfer of missile equipment and technology, is a voluntary effort, lacks the force of international law, contains no enforcement mechanisms, and has been repeatedly violated. For example, Russia has transferred critical missile components, in contravention of MTCR guidelines, to India and Brazil.¹⁵ More recently, missile guidance components capable of being used in an ICBM were intercepted in Jordan in transit from Russia to Iraq.¹⁶ Regardless of whether this particular transfer was sanctioned by the Russian government or was a "rogue operation," the incident is troubling and demonstrates that the MTCR provides no guarantee against the transfer of ICBM technology.

In addition, several known proliferant states—such as China and North Korea—are not members of the MTCR. Chinese sales of intermediate-range missiles to Saudi Arabia and North Korean exports of SCUD missiles and production technology to Iran and Syria are clear indicators that arms control regimes like the MTCR cannot halt potentially dangerous transfers of missile technology.

Furthermore, the assertion in the December 1995 CIA letter that sales of ICBMs are "extremely unlikely" is seemingly at odds with the assessment by Larry Gershwin, former National Intelligence Officer for Strategic Programs at the CIA, who stated in 1993, "We also remain concerned that hostile nations will try to purchase from other states ballistic missiles capable of striking the United States."¹⁷ Indeed, Russia has aggressively marketed variants of the SS-25 and SS-19 ICBMs for space launch purposes.¹⁸ A recent change in the START I Treaty would allow Russia to transfer a missile to any other country as long as it is called a "space launch vehicle" and it remains under Russian control.¹⁹ However, as a practical matter, the United States has no ability to verify that such a missile will be used to launch a satellite (as compared to a warhead), or that Russians "control" it.

The intelligence community's focus on indigenous production also discounts the possibility that the "import" of scientific exper-

tise acquired from other nations may accelerate the indigenous development of potentially hostile states of long-range missile capabilities. Former DCI James Woolsey has testified that "the acquisition of key production technologies and technical expertise would speed up ICBM development."²⁰ Given Russia's dire economic situation, the prospect that Russian scientific and technical talent will seek work elsewhere (the "brain drain" factor) is troubling.

In short, the compliance problems and loopholes intrinsic to arms control agreements, the increasing availability of foreign expertise, the strong incentives that exist for missile and component sales by states in need of hard currency, and the geopolitical desirability of long-range missiles, justify a more sober assessment of the likely future missile threat to the United States.

An assumption that countries with the capability to develop ICBMs will not do so. The recent intelligence community assessment reflects an apparent and questionable conclusion that those nations most technically competent to develop ICBMs, such as Japan, Ukraine, and India, have little motive to acquire ICBM acquisition could easily and rapidly change, and it is prudent to assume relations and attitudes among nations will be relatively constant in the international order in the coming decade. Indeed, few predicted the monumental changes in the strategic environment that have occurred over the past 5-10 years. At a minimum, any analysis that assumes continuity must be balanced with an equity valued analysis that postulates alternative futures.

It is conceivable, for example, that India might want ICBMs to deter the United States or other powers from becoming involved in any future India-Pakistan conflict. Ukraine might want ICBMs if it finds, once Kiev is bereft of all nuclear weapons now based on its territory, that the United States loses interest in Ukraine's future, or if Ukraine wishes to increase its leverage in future dealings with Moscow. And Japan may look at some future point to acquire long-range missile capabilities for deterrence purposes if it no longer has faith in U.S. security assurances, or if China or Russia assumes more aggressive international or regional stances.

It is important to note that existing SLVs in these and other countries could be transformed into ICBMs in reasonably short order. In fact, there is no practical ability to distinguish between an ICBM and SLV for verification purposes—thereby denying the United States "timely warning" of a new missile threat. A report of the Proliferation Study Team, chaired by former National Security Agency Director LTG Williams Odom (USA, Ret.), noted in 1993 that "[t]he conclusion that the probability is quite low for the emergence of new ballistic missile threat to the United States during this decade or early in the next decade can be sustained only if plausible but unpredicted developments, such as the transfer and conversion of SLVs, are dismissed or considered of negligible consequence."²¹ Moreover, according to the study team's report, the transfer and conversion of SLVs would require "relatively modest effort."²²

The System Planning Corporation found in a 1992 report that conversion of SLVs to military ballistic missiles would be "fairly straightforward" and that extending the range of missiles has already been achieved by China, North Korea, Iraq, and Israel.²³ Additionally, a report prepared in 1992 by Science International Corporation concluded: "The increasing availability of space launch vehicles and space launch services could result in the ability of certain Third World countries to threaten the continental

U.S. with United States with ICBMs carrying nuclear, chemical, or biological payloads in the mid- to late-1990s."²⁴

An assumption that there is a low risk of deliberate, unauthorized, or accidental missile launch by Russia or China. According to Russian sources and U.S. experts, the Russian General Staff may have operational control of the strategic nuclear forces and could launch those forces without President Yeltsin's permission. Given the elevated emphasis being placed on nuclear weapons in Russia's new military doctrine, this is a particularly worrisome prospect. Russian General Geliy Batenin, former commander of an SS-18 ICBM division and a military advisor to President Yeltsin, has warned that the General Staff and even individual ICBM flight crews could execute an unauthorized missile launch. Batenin has also warned that Russian nuclear submarines may carry launch codes that would allow a submarine commander to conduct an unauthorized launch of SLBMs.²⁵

Russian political instability, the erosion of Russian military discipline, and the deterioration of technical infrastructure, including radar and early warning systems, are conditions that increase the possibility of unauthorized or accidental nuclear use.²⁶ Brookings Institution analyst Bruce Blair has testified that "The world remains unsafe as long as there are thousands of launch-ready nuclear weapons at the fingertips of a Russian command system that is tottering on the edge of civil collapse."²⁷ The Russian General Staff's unauthorized nuclear alert during the August 1991 coup attempt, the October 1993 Parliamentary crisis, the January 1995 nuclear alert in reaction to Norway's launch of a meteorological rocket, and recent nuclear sabre rattling against proposed NATO expansion, should cause more than a little concern about the Russian nuclear threat.²⁸ It is disturbing the extent to which knowledgeable Russians are apparently more worried about the possibility of unauthorized or accidental use of Russian nuclear weapons than the US intelligence community.²⁹

The solidity of China's command and control system is also in question. Based on admittedly limited knowledge, it appears that technical control over China's ICBM force is significantly less structured than that of either Russia or the United States. Also, China's willingness to use ballistic missiles for political purposes was evident in the recent series of Chinese missile launches against "targets" off the coast of Taiwan. And the reported Chinese warnings to the United States that it would consider nuclear strikes against American cities to deter U.S. involvement in a possible future conflict with Taiwan reinforce the conclusion that China believes ballistic missiles carry both political and military utility.³⁰

SUMMARY CONCLUSIONS

The desire of nations to acquire ballistic missiles that can threaten the United States or U.S. and allied interests has not abated. In fact, the absence of ballistic missile defenses may actually encourage other states to acquire such weapons. Perhaps the only way Third World nations can directly challenge the United States in the next ten to twenty years given overall U.S. military capabilities is by developing or acquiring missiles capable of deterring U.S. action or making the "price" of such action exceedingly high.

The ability of other nations to acquire ballistic missile capabilities will expand and under any circumstances is unlikely to be halted by arms control regimes like the MTCR. The countries of greatest proliferation concern are either not members of these regimes or have failed to abide by their

international nonproliferation obligations under them.

Indigenous development of ICBM capabilities is one way, but not the only or even most probable way, for other nations to acquire long-range missile capabilities. Given the willingness of regimes such as North Korea to trade in missiles and components, and Russia's refusal or inability to control the flow of missile components as well as scientific and engineering talent to Third World countries, the trend is clearly in the direction of more proliferation rather than less.

The Russian military is not immune to the tremendous societal strains currently underway in Russia. These strains, along with changes in military doctrine that increase reliance on nuclear weapons, call into question the sanguine assessment that the risk of a deliberate, accidental, or unauthorized ballistic missile launch from Russia remains low. Likewise, Chinese threats to use ballistic missiles raise troubling political and military concerns.

The intelligence community's recent downgrading of the long-range missile threat is premised on assumptions that are highly questionable. The latest intelligence community estimate of the long-range missile threat to the United States is at variance with previous intelligence estimates, the public testimonies and statements of acting and former U.S. intelligence officials, and the analysis of respected non-governmental experts.

The American people remain entirely vulnerable to a ballistic missile attack. As recent focus groups have reaffirmed, Americans are surprised and angered when presented with the knowledge that they remain unprotected against this threat.

BELMAR ST. PATRICK'S DAY PARADE

HON. FRANK PALLONE, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1996

Mr. PALLONE. Mr. Speaker, on the afternoon of Sunday, March 3, 1995, the 23d An-

nual St. Patrick's Day Parade will move through the streets of Belmar, NJ.

Mr. Speaker, from its modest beginnings little more than two decades ago, the Belmar event has become the biggest and best-attended St. Patrick's Day Parade in the State of New Jersey, and one of the finest in the Nation. While not quite as big as the New York City parade, the Belmar event has steadily been attracting crowds of more than 100,000 people, drawn from the Jersey Shore area and throughout our State, surrounding States and other nations, including Ireland itself. Thousands of marchers are expected this year, including members of community organizations, elected officials, marching bands, floats, bagpipers, and leaders of Irish-American organizations. Both the participants and the many spectators always have a wonderful time.

The grand marshal this year is Mr. John F. Kelly of Sea Girt, NJ, a retired Elizabeth, NJ, police officer and a member of numerous community organizations. The deputy grand marshal is Rosemarie Plunkett Reilly of Belmar, the director of the Reilly Funeral Home. A previous grand marshal, Monmouth County Freeholder Thomas J. Powers, will again serve as parade commentator.

The Belmar St. Patrick's Day Parade was established in 1973 by members of the Jerry Lynch Social & Athletic Club. Mr. Lynch is credited with being the parade founder. The first parade, held in 1974, had club members marching in top hats and tails, followed by four marching bands, and numerous fire engines. That year, the crowd of spectators was not much bigger than the contingent of marchers. The first grand marshal was my predecessor, and a name well-known to many of the Members of this body: the late Congressman James J. Howard, a life-long resident of the Jersey Shore who took great pride in his Irish heritage. For their tireless efforts to ensure that the 1996 parade will be another memorable experience, I wish to pay tribute to all of the members of the Belmar St. Patrick's Day Committee, particularly the chairman, Dave Stanley.

Mr. Speaker, it is a great honor for me to pay tribute to the Belmar St. Patrick's Day Parade, a great and proud tradition of the Jersey Shore for Irish-Americans and people of all backgrounds.

TRIBUTE TO LOIS MCDANIEL

HON. EDOLPHUS TOWNS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1996

Mr. TOWNS. Mr. Speaker, Lois McDaniel is a native of Batesburg, SC and embodies the philosophy that hard work pays big dividends. Lois attended South Carolina State College and Pace University's evening program. She currently serves as the calendar information officer for the Department of City Planning and secretary to the New York City Planning Commission for land use and zoning matters. In her capacity she conducts televised public hearings at city hall for the N.Y.C. Planning Commission.

Prior to joining the Department of City Planning, Ms. McDaniel served as executive secretary to the president of the Bedford-
