

Since the gulf war, our dependence on Middle Eastern oil has grown to the point where more than half of our country's oil and gas consumption is from imports. We cannot allow this situation to continue.

Working together, Congress, the administration, and industry must pass and enact legislative and regulatory initiatives which will provide stability to this extraordinarily important segment of our Nation's economy.

As you know, U.S. relations with our Middle East oil trading partners historically have been unstable. However, the United States does have at least one reliable trading partner. Petroles de Venezuela, the owner of Citgo, has been supplying oil and product to the United States for 70 years—through World War II and the Arab oil embargo.

While maximizing our domestic resources, we should also encourage trading with reliable neighbors and allies such as Venezuela.

THE WOMEN'S HEALTH EQUITY ACT OF 1996

(Ms. SLAUGHTER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. SLAUGHTER. Madam Speaker, I rise today as Chair of the Women's Health Task Force of the Congressional Caucus on Women's Issues. On behalf of the caucus, I have the honor of introducing the Women's Health Equity Act of 1996. A momentous legislative initiative, the Women's Health Equity Act is an omnibus bill comprised of 36 separate pieces of legislation targeting women's health.

The first Women's Health Equity Act was introduced in 1990 as a result of a GAO report that documented of widespread exclusion of women from medical research and energized caucus and women around the Nation to action on women's health issues.

In the 6 years since, we have accomplished a great deal. We have achieved greater equity in both women's health research funding and inclusion of women in clinical trials. The increased funding for breast cancer has resulted in the discovery of the BRCA1 gene-link to breast cancer 18 months ago. Since then, it has been found that the BRCA1 gene seems to inhibit the growth and formation of tumors and may provide therapy for both breast and cervical cancer.

This news is miraculous and is very gratifying to the caucus because it was our initiative that resulted in the increased funding. But, our responsibility does not stop there. We must assure that social policy keep pace with advances in biomedical research. As a part of the Women's Health Equity Act, I have introduced legislation that would do just that.

H.R. 2748, The Genetic Information Nondiscrimination in Health Insurance Act prohibits insurance providers from:

First, denying or canceling health insurance coverage; second, varying the

terms and conditions of health insurance coverage on the basis of genetic information; third, requesting or requiring an individual to disclose genetic information; and, fourth, disclosing genetic information without prior written consent.

The Women's Health Equity Act's initiative to increase funding for breast cancer research has resulted in discovery of potentially lifesaving genetic information and therapy. As therapies are developed to cure genetic diseases, and potentially to save lives, the women and men affected must be assured access to genetic testing and therapy without concern that they will be discriminated against. As legislators, I believe it is our responsibility to ensure that protection is guaranteed and I hope my colleagues will join me in that endeavor.

SPECIAL ORDERS

The SPEAKER pro tempore (Mrs. VUCANOVICH). Under the Speaker's announced policy of May 12, 1995, and under a previous order of the House, the following Members will be recognized for 5 minutes each.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arizona [Mr. SHADEGG] is recognized for 5 minutes.

[Mr. SHADEGG addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri [Mr. SKELTON] is recognized for 5 minutes.

[Mr. SKELTON addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana [Mr. BURTON] is recognized for 5 minutes.

[Mr. BURTON of Indiana addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

INTRODUCTION OF HPV RESOLUTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut [Ms. DELAURO] is recognized for 5 minutes.

Ms. DELAURO. Madam Speaker, I rise today to announce and celebrate the introduction of the Women's Health Equity Act of 1996. Included in the omnibus legislation are two bills that I have authored, the HPV Infection and Cervical Cancer Research Resolution, which I will introduce today, and the Equitable Health Care for Neurobiological Disorders Act of 1996. Both measures will enhance the length and quality of life for women in this

country, and should be enacted by this Congress.

First, I am proud to introduce the HPV Infection and Cervical Cancer Research Resolution. This vital legislation will speed the detection and diagnosis of cervical cancer, and will, in fact, help to save women's lives. Early detection is the most effective method of stopping this killer of women. I know. I am a survivor of ovarian cancer, and early detection saved my life.

My measure expresses the sense of Congress that the National Cancer Institute and the National Institute of Allergy and Infectious Diseases should conduct collaborative basic and clinical research on the human papilloma virus [HPV] diagnosis and prevention as an indicator for cervical cancer.

Approximately 16,000 new cases of cervical cancer are diagnosed each year, and about 4,800 women die from this disease annually. However, if cervical cancer is detected while in its earliest in situ state, the likelihood of survival is almost 100 percent. HPV is a known risk factor for cervical cancer. Of the more than 70 types of HPV that have been identified, two types, types 16 and 18 in particular, have a strong linkage to cervical cancer.

With further study of the natural history of HPV and its association to the development of cervical cancer, HPV testing may prove to be an effective tool to aid the early diagnosis of this deadly disease. Therefore, it is appropriate to recommend basic and clinical research to determine how to utilize this data in the screening of women in clinics and hospitals across the country. My legislation will bridge the gap between new scientific discoveries about the linkage of HPV with cervical cancer and practical application of that knowledge by physicians and qualified health specialists in local communities.

The legislation has received the endorsement of the American Social Health Association. In addition, I am proud to include my bill in the Women's Health Equity Act of 1996.

In addition, I have introduced H.R. 1797, the Equitable Health Care for Neurobiological Disorders Act, into the Women's Health Equity Act of 1996. This legislation requires nondiscriminatory treatment of neurobiological disorders in employer health benefit plans. Under my bill, insurance coverage must be provided in a manner that is consistent with coverage for other major illnesses. Neurobiological disorders, include affective disorders like major depression, anxiety disorders, autism, schizophrenia, and Tourette's syndrome.

Currently, in short, individuals with neurobiological disorders receive much less insurance coverage than illnesses such as cancer, heart disease, or diabetes. This inequality contributes to the myth that such disorders are not physical illnesses and somehow they are the fault of the patient. For the individuals and the families affected by these disorders, the ordeal of coping with the

disease is often compounded by severe financial burdens. My legislation recognizes the physical basis for many mental disorders, and requires their equal health coverage.

Just as the Kennedy-Kassebaum-Roukema health insurance reform bill addresses the need to ensure access to health care for Americans who change jobs, my bill ensures access to health care for Americans who suffer from mental disorders.

□ 1430

Both job portability and comprehensive coverage are key access issues in the health reform discussion. Without comprehensive coverage or health insurance portability, millions of Americans will be forced to seek treatment in expensive health care settings, like emergency rooms, or drain other social service institutions.

Mental disorders severely impact the health and the quality of life for millions of women throughout the Nation. Clearly, the equitable insurance coverage for mental disorders is an issue for all of us in society, as it is a woman's health concern, as well.

Treatments for mental illnesses like depression exist and have a very high rate of success; therefore, it is essential that women suffering from neurobiological disorders have access to the care that they need.

Madam Speaker, I am proud to announce the introduction of these two bills. I urge my colleagues to cosponsor and enact the omnibus bill.

STATUS OF THE DRUG WAR

The SPEAKER pro tempore (Mrs. VUCANOVICH). Under a previous order of the House, the gentleman from Florida [Mr. MICA] is recognized for 5 minutes.

Mr. MICA. Madam Speaker, I come before the House this afternoon really concerned about a report that has now been released to the Congress. It is the National Drug Policy: A Review of the Status of the Drug War.

Madam Speaker, I serve on the Committee on Government Reform and Oversight, and this product is from our subcommittee, which I also serve on, which is the Subcommittee on National Security, International Affairs, and Criminal Justice. This report should be required reading for every Member of Congress, should be required reading for every citizen of the United States, and it should be required reading for everyone who is involved in the media of the United States.

This report details a history of total failure of our Nation's drug policy, and we see that decline almost immediately the moment that President Clinton took office. This is one of the most startling reports to ever be produced by the Congress, and I hope it gets the attention of every Member of Congress and every parent and everyone in the media.

What it does is, it in fact outlines a policy of national disaster. President

Clinton started this when he dismantled the drug office, and did not make drug prevention and attacking the drug problem a priority of this administration.

Madam Speaker, when he talked about cutting the White House staff, he in fact cut 85 percent of the White House drug policy staff, and that is where the cuts came in. That is where the attention was not focused. Then he appointed Joycelyn Elders, who made drugs and drug abuse a joke and sent a mixed message. It was not the message of "just say no," it was the message of "just say maybe," and this report details the disaster that that policy has imposed on this Congress and on the Nation and our children.

Under President Clinton's watch, listen to this, drug prosecution has dropped 12.5 percent in the last 2 years. You have heard the comments about the judiciary he has been appointing and their decisions as far as enforcement, which have made enforcement and prosecution a joke in this country.

Madam Speaker, let me tell you the details of what this report is about and how it is affecting our children. Heroin use by teenagers is up, and emergency room visits for heroin rose 31 percent between 1992 and 1993 alone. In less than 3 years, the President has destroyed our drug interdiction program, and we know that cocaine is coming in from Bolivia, Peru, and Colombia, and transshipped through Mexico, which he recently granted certification in the drug certification program to.

What did we do with the drug interdiction program? We basically dismantled it. What are the results, again, with our children? Juvenile crime, in September 1995 the Justice Department's Office of Juvenile Justice and Delinquency Prevention reported that, now listen to this, and this is from the report: after years of relative stability, juvenile involvement in violent crime known to law enforcement has been increasing, and juveniles were responsible for about one in five violent crimes.

We see what this failed policy of this Clinton administration has brought us. Juvenile use and casual drug use in every area, marijuana, cocaine, designer drugs, heroin. Every one of these areas is dramatically off the charts, and it is the result of a failed national drug policy, and the responsibility and the trail to responsibility leads right to the White House.

Let me say finally that even the media coverage of this situation is terrible. It is a national disgrace that the media is not paying more attention, that they in fact put on one antidrug ad per day in markets and the Federal Government controls the airwaves, so the media should have as much responsibility for getting the message out, the message of this disaster created by this administration, and should begin a policy of education.

Finally, the President's policy, every standard, including drug treatment, is

a disaster, and I will detail this further in another special order.

WOMEN'S HEALTH ISSUES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Colorado [Mrs. SCHROEDER] is recognized for 5 minutes.

Mrs. SCHROEDER. Madam Speaker, I take the floor first of all to say, in this month of women's history, how pleased I am that the President has made more history for women today. I thought the newspaper article was very, very exciting to talk about how the President has nominated the first woman to the rank of 3-star general. She is in the Marines, Maj. General Carol Mutter, and her wonderful motto is "perseverance pays." We salute her, and we thank the President for moving her forward, and I think all of our foremothers would be proud.

But we heard many other Congresswomen take the floor today and talk about the Women's Health Equity Act. The one thing that Congresswomen have the right to make a victory lap about is the progress that we have made on women's health in this body.

If the Congresswomen had not been here, believe me, it would not have happened, because when we first got into this they were even doing breast cancer studies on men. They had no women in any studies, no women in the aging studies, no women in any studies. Basically the Federal Government's message to women was, we may as well go see a veterinarian, because what our own doctors got from Federal studies was really very little. They had to take studies done on men and then try and see if it distilled and was applicable to women.

We got all of that changed. After prior vetoes and everything else, we finally not only got it passed, but a President who would sign it and a lot of it on board. But we are still just beginning. Unfortunately, in this body they tend only to see women's health as circling around reproductive issues and breast cancer. Those are both very important key issues, but there are any number of health issues that affect women that we have just begun to tap.

Starting in 1990, we put together different bills that all of us had dealing with different issues on women's health and we put them in one bill called the Women's Health Equity Act. Then we all cosponsored it together and pushed as much of it as we could.

This year there are 36 bills in there, and it deals with an awful lot of the things still on the table that we have not dealt with, everything from eating disorders, which affect women much more severely than men, all the way through to female genital mutilation, which this body has still refused to deal with, even though our European countries and other countries have, and there are all sorts of international bodies crying out, saying this is a human rights violation and that we
