

to attack these problems and what in the end would be the best thing, best way to solve the problem.

I would conclude by pointing out that if people own a property, that leads to better stewardship. We tend to take better care of things we own than things we rent or borrow. And if the Government and local community would enforce some of the already existing laws on the books, we should be able to bring the ownership and better stewardship and government compliance all together. Because in the end, incentives are better than commands. People are more apt to do things if you give them incentives rather than commands out of Washington. We think that through ownership and incentives, pollution problems can be reduced and we should clearly define the rights of property owners, clearly define what the Government is supposed to enforce and not have this vague set of books where the rules and enforcement are so vague that the actual citizen has no idea how to comply with the rules.

I think the rules to air, water, and wildlife can be defined and I think they can be enforced so when you bring in the clear definition of these rules, you bring in the idea of ownership being better stewardship; incentives are better than command, I think pollution can, in the end, be diminished.

Also we need to understand that when you set up government programs, they suffer in themselves. They are like a black hole. They require more money and sometimes the Government will act with improper knowledge. If we abide by a set of rules for ecosanity, I think we can prevent that.

Also I should point out, Mr. Speaker, that sometimes Government subsidies cause waste. When you have the Government involved spending this money, it sometimes creates less efficiency and leads to greater pollution because in the end if you do not have the efficiency, you cannot have less pollution. Of course, I would conclude by saying the media gives false alarms by extensive publicity, as I point out. A good example is in the area of the energy crisis as well as talking about overpopulation. So all of us need to be aware of stories that come out of the media when, in fact, if we obey these seven rules of ecosanity, we can have a better understanding how to cope. We need to understand and not react out of fear. Mr. Speaker here is a common-sense agenda for further protecting and improving the environment.
