

up being a much more attractive (i.e., less costly) investment than having to retrain an American high school dropout or a poorly trained high school graduate.

Take Korea for example. In a global economy, what economists know as "the theory of factor price equalization" holds that an American worker will have to work for wages commensurate with a Korean's wages unless he works with more natural resources than a Korean (and no American can, since there is now a world market for raw material to which everyone has equal access); unless he has access to more capital than a Korean (and no American can since there is a global capital market where everyone borrows in New York, London and Tokyo); unless he has more skilled co-workers than a Korean (and no American can claim to since multinational companies can send needed knowledge and skills anywhere in the world); and unless he has access to better technology than a Korean (and few Americans have, since reverse engineering—tearing a product apart to learn how it is made—has become an international art form, highly refined in Korea). Adjusted for skills, Korean wages will rise and American wages will fall until they equal each other. At that point, factor price equalization will have occurred.

The implications for the future are simple. If America wants to generate a high standard of living for all of its citizens, skill and knowledge development are central. New brainpower industries have to be invented and captured. Organizing brainpower means not just building a research and development system that will put us on the leading edge of technology, but organizing a top-to-bottom work force that has the brainpower necessary to make us masters of the new production and distribution technologies that will allow us to be the world's low-cost producers.

To do this will require a very different American educational system. And building such a system is the new American challenge.

Progress has to start by ratcheting up the intensity of the American high school. The performance of the average American high school graduate simply lags far behind that found in the rest of the industrial world. Those Americans who complete a college course of study end up catching up (the rest of the industrial world doesn't work very hard in the first couple of years of university education), but three quarters of the American work force doesn't ever catch up.

The skill gap doesn't end there. Non-college-bound high school graduates elsewhere in the industrial world go on to some form of post-graduate skill training. Germany has its famous apprenticeship system; in France every business firm by law has to spend one percent of its sales revenue on training its work force; and with lifetime employment as a fact of life, Japanese companies invest heavily in the work force's skills since they know that it is impossible to hire skilled workers from the outside. In America, government-funded programs are very limited in nature, and, with high labor-force turnover rates, American companies quite rationally don't want to make skill investments in people who will leave and take their skills elsewhere. The net result is a compounded skill gap for those Americans who do not graduate from college. Closing this gap and giving the country a competitive edge should be America's number one educational priority.●

ARMENIAN GENOCIDE

● Mrs. BOXER. Mr. President, I rise today to commemorate the anniversary of a most tragic chapter in his-

tory—the genocide of the Armenian people. Eighty-one years ago today, the Ottoman Empire began the systematic elimination of the people of Armenia. It is of paramount importance that we recall this horrible time so that it will never be repeated.

On April 24, 1915, the Ottoman Empire began arresting hundreds of political, religious, and intellectual leaders throughout Anatolia. In the following 2 years, the Ottoman regime carried out a systematic, premeditated, centrally planned genocide, taking the lives of approximately 1.5 million people.

The Armenian genocide remains one of the most horrifying events in human history. Armenians perished from execution, starvation, disease, physical abuse, and exposure to a harsh environment. More than 500,000 people were forced from their homes, and within a few years, the entire Armenian population had been either killed or exiled.

On May 28, 1918, the Armenians were able to defeat a Turkish attack, with the help of volunteers from abroad. They gained freedom for a brief period, but in 1920 the Soviet Union joined the Ottoman Empire and subjugated the Armenians once again. It was not until 1991, after the breakup of the Soviet Union, that independence was restored and the Republic of Armenia was born.

I salute the Armenian people for their strength and courage. Yet even though they have gained independence, their struggle still continues. To this day, many people continue to refute the facts of the Armenian Genocide. We cannot let the suffering inflicted upon the Armenian people be forgotten or denied. Only through remembrance can we prevent ourselves from repeating the horrors of the past.

The Armenian tragedy is the world's tragedy, and we must work together to discourage prejudice, to end discrimination, and to prevent genocide at all costs. In a country where we so often take our liberty for granted, we must renew our commitment to preserving the freedom of others.●

CARLSBAD CAVERNS NATIONAL PARK

● Mr. BINGAMAN. Mr. President, in December 1994, Congress received the National Cave and Karst Research Institute study from the National Park Service. The report studied the feasibility of creating a National Cave and Karst Research Institute in the vicinity of Carlsbad Caverns National Park, NM, as directed by Public Law 101-578. Today, I am here to introduce a bill which follows the guidelines of that report and which will establish the National Cave and Karst Research Institute in Carlsbad, NM.

While other Nations have recognized the importance of cave resource management information and have sponsored cave and karst research, the United States has failed, until recently, to appreciate or work to understand cave and karst systems and their

importance. As we approach the 21st century, the protection and management of our water resources has been identified as one of the major issues facing the world. In America, the majority of the Nation's fresh water is ground water—of which 25 percent is located in cave and karst regions.

Recent studies have also indicated that caves contain valuable information related to global climate change, waste disposal, ground water supply and contamination, petroleum recovery, and biomedical investigations. Caves provide a unique understanding of the historic events of humankind. Further they are considered sacred and have religious significance for American Indians and other Native Americans.

According to the Federal Cave Resources Protection Act, karst is defined as a landform characterized by sinkholes, caves, dry valleys, fluted rocks, enclosed depressions, underground streamways and spring resurgences. As a whole, 20 percent of the United States is karst. In fact, east of central Oklahoma, 40 percent of the country is karst. Our National Park System manages 58 units with caves and karst features, yet academic programs on these systems are virtually nonexistent. Most research is conducted with little or no funding and the resulting data is scattered and often hard to locate. The few cave and karst organizations and programs which do exist, have substantially different missions, locations and funding sources and there is no centralized program to analyze data or determine future research needs.

In 1988 Congress directed the Secretaries of the Interior and Agriculture to provide an inventory of caves on Federal lands and to provide for the management and dissemination of information about the caves. That directive has served only to make Federal land management agencies more aware of the need for a cave research program and a repository for cave and karst resources. In 1990, Congress further directed the Secretary of the Interior, through the Director of the National Park Service, to establish and administer a Cave Research Program and prepare a proposal for Congress on the feasibility of a centralized National Cave and Karst Research Institute.

The National Cave and Karst Research Institute Study Report to Congress was released in December 1994 and not only supports establishing the Institute, but lists several serious threats to continued uninformed management practices.

Threats such as: alterations in the surface water flow patterns in karst regions, alterations in or pollution of water infiltration routes, inappropriately placed toxic waste repositories and poorly managed or designed sewage systems and landfills. The findings of the report conclude that it is only through a better understanding of cave

resources that we can prevent detrimental impacts to America's natural resources and cave ecosystems.

The goals of the National Cave and Karst Research Institute, as outlined in the report, would be to further the science of speleology, to centralize speleological information, to further interdisciplinary cooperation in cave and karst research programs, and to promote environmentally sound, sustainable resource management practices. These goals would work hand in hand with the proposed objectives of the Institute to establish a comprehensive cave and karst library and information data base, to sponsor national and international cave and karst symposiums, to develop long term research studies, to produce cave-related educational publications and to develop cooperative agreements with all Federal agencies having cave management responsibilities.

The vicinity of Carlsbad Caverns National Park is ideal due to the community support which already exists for the establishment of the institute and the diverse cave and karst resources which are found throughout the region.

Carlsbad, NM, has grown from a small railroad stop on what is now the Santa Fe Railroad to a growing city with a population of over 170,000 in the tri-county area. It continues to attract new businesses, small manufacturers, retirees and research facilities, including the U.S. Department of Energy's Carlsbad area office. In addition, Carlsbad Caverns National Park attracts over 700,000 visitors per year.

The National Cave and Karst Research Institute would be jointly administered by the National Park Service and another public or private agency, organization, or institution as determined by the Secretary. The Carlsbad Department of Development [CDOD], after reviewing the National Cave and Karst Research Institute study report, has developed proposals to obtain financial support from available and supportive organizational resources, including personnel, facilities, equipment and volunteers. They further believe that they can obtain serious financial support from the private sector and would seek a matching grant from the State of New Mexico equal to the available Federal funds.

Carlsbad already has in place many of the needed cooperative institutions, facilities and volunteers that will work toward the success of the National Cave and Karst Institute. I strongly urge my colleagues to support this legislation to increase our understanding of cave and karst systems.●

ANNIVERSARY OF THE ARMENIAN GENOCIDE

● Mr. D'AMATO. Mr. President, I rise to call my colleagues' attention to the solemn anniversary of the Armenian genocide. In 1915, the Ottoman Turkish Government launched an extermination campaign against all Armenians

on its territory. The result of that gruesome policy was the death of about 1.5 million people, the destruction of a once flourishing community, and the scattering of the survivors around the globe.

Many Armenians came to America, where they have rebuilt their communities, prospered and become a vital part of the American body politic. They have nurtured our democracy, while maintaining their traditions and always remembering the circumstances that forced them from their homeland. Meanwhile, their brothers and sisters in Armenia endured communism and Joseph Stalin, but despite the different fates of these two communities, they remained stubbornly and proudly Armenian, even when contact between them was difficult.

In 1991, Armenia became an independent country and has worked hard to consolidate its independence since then. Today Armenia is a respected member of the international community, its progress toward democratization and economic well-being promoted by the worldwide Armenian Diaspora and by supportive governments, especially the United States.

Independence confers freedom, but not necessarily freedom from hardship. Apart from the devastating December 1988 earthquake, Armenia has also endured the consequences of the Nagorno-Karabakh conflict and the adversities caused by blockades imposed by neighboring Azerbaijan and Turkey. Happily, the Nagorno-Karabakh cease-fire has held since May 1994, offering grounds to hope that the conflict will be peacefully resolved in the foreseeable future. All the parties to this dispute must pursue its peaceful resolution through the OSCE process, and with active American involvement, bring about a lasting, stable peace.

In the spirit of reconciliation and looking ahead to Armenia's future, President Ter-Petrosyan said in Washington last year that "Armenia has no enemies." All of us who are friends of Armenia are working for precisely that future, for an Armenia without enemies, while remembering the victims of the Armenian Genocide.

Mr. President, in light of the fact that, for the first time since World War II, there are international tribunals investigating two current genocides, one in Bosnia and one in Rwanda, it is very important that all of us remember the first genocide of the 20th century, and dedicate ourselves to the proposition that there will be no new genocides in the future.●

81ST ANNIVERSARY OF THE ARMENIAN GENOCIDE

● Ms. MIKULSKI. Mr. President, 81 years ago today one of the most horrific events of our century began. On this day in 1915, hundreds of Armenian political and religious leaders were arrested, taken to the Turkish interior, and executed. This began a terrible

chapter of history—the Armenian genocide.

In the 8 years that followed, over a million Armenians were killed at the hands of the Ottoman authorities. Men, women, and children were brutally taken from their homes to be abused and killed in mass slayings. Others were rounded-up and marched for weeks through the Syrian desert where many more perished. Symbols of culture—churches, libraries, and towns—were razed.

On this, the 81st anniversary of the Armenian genocide, we must remember and we must speak out.

Many call this tragedy "the forgotten genocide". In our world of terror and continued upheaval it is essential that we never forget. We must remember our history and the lesson of the Armenian genocide. As Americans blessed with security and freedom, we must never let oppression and persecution pass without loud condemnation. By remembering the Armenian genocide, we renew our ongoing commitment to fight for human dignity and freedom throughout the world.

We must also honor the Armenians throughout the world who left their homes in tragedy. They have maintained their proud culture and traditions throughout the world. Their strength and perseverance is a triumph of the human spirit. We should specifically recognize those Armenians who fled from their homes and into our communities. Today we thank them for their invaluable contributions to our society.

Even today, the Armenian people are living under a unfair and unjust blockade preventing needed humanitarian aid. Last year, the Congress enacted the Humanitarian Aid Corridor Act that would prohibit U.S. aid to countries that prevent our humanitarian aid from reaching places in need. I was proud to support this act and see it signed into law.

Despite a long history of pain, persecution, and tragedy, the Armenian people have shown remarkable strength, pride, and resilience. We as Americans are proud of their contributions to our society. We will always remember their tragedy and we salute their achievements.●

HONORING THE VOLUNTEERS OF HOSPICE CARE, INC.

● Mr. LIEBERMAN. Mr. President, today I would like to recognize the volunteers of Hospice Care, Inc. in southwestern Fairfield County, CT. For 15 years Hospice Care has provided care and comfort to people with terminal illnesses. But beyond providing palliative care, Hospice is a program for individuals who are dealing with the emotional and spiritual changes that follow the diagnosis of a life-ending illness.

Hospice could not offer its many meaningful services without its volunteers; they are an integral part of Hospice. Together with professional staff,
