

agreement, the only problem is, their employee, the special trade representative, Charlene Barshefsky, does not seem to share their views.

When pressed in a press conference last week to expand upon what is the United States talking about here, they cannot be serious about putting labor protections into an international trade agreement, by God, then what would capital do? How could it run around the world looking for the most exploited sources of labor?

She said, quote, this is not a negotiating group. It is an analytic working group designed to draw upon the expertise of other multilateral institutions in order to answer a series of analytic points.

Now, that does not sound an awful lot like labor protections. It does not sound like it will get us to the point made by the previous gentleman from Ohio (Mr. KUCINICH), stopping trafficking in goods produced by forced child labor around the world. No, that is a little too far for the World Trade Organization, and if Ms. Barshefsky has her way, it will be too far for the United States of America to go. That is pathetic.

She goes on to say, the issue of sanctions is nowhere in this proposal and it is certainly not on the table, and then she goes on in another much longer quote I do not have time to give, to say that this analytical look at labor protections will lead everybody to the conclusion that the best way to bring up labor standards around the world is not to have any; sort of like the theory of the Republicans here in Congress. If we did not have a minimum wage the market would set one and it would be good for everybody.

Well, maybe not the people who earn the minimum wage or just above it, but it would be good for the employers.

The same thing with the World Trade Organization and Carlene Barshefsky. They want to say the market will bring about in the future some sort of labor protections without these horrible dictates.

In fact, they are undermining our own laws here in the United States with the World Trade Organization, a little secretive body of 3 people who are exempt from conflict of interest, exempt from public disclosure, make binding decisions on trade disputes.

The U.S. has lost a number of trade disputes on environmental issues over the last few years, but they have won one big one.

We are going to force the Europeans to take hormone-laced beef. By God, that is a big victory for the U.S. and we should have more of this. We do not want to reform this organization. We do not want transparency and doing away with conflict of interest rules. We do not want any system of juris prudence the American people can understand. We do not want to allow environmental groups or labor groups to intervene and mess up the decision-making process of the World Trade Organization.

We have a tremendous opportunity as the United States of America to lead, and maybe we have to get rid of Ms. Barshefsky to do that.

QUINCY LIBRARY GROUP AND FOREST HEALTH

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from California (Mr. HERGER) is recognized during morning hour debates for 5 minutes.

Mr. HERGER. Mr. Speaker, we have a forest health crisis in this country and the Clinton-Gore administration's current do-nothing policies are utterly failing to address it. A government report released in April states that approximately 39 million acres of our western national forests are at extremely high risk of catastrophic fire.

Alarming, this same report indicates that the Forest Service has failed to advance a cohesive strategy to treat this 39 million acres at risk, despite the fact that the window of opportunity for taking effective management action is only about 10 to 25 years before catastrophic wild fires become widespread.

Last year, Congress passed historic legislation that was intended to provide the Forest Service a tool with which to proactively address and combat this forest health crisis.

The bipartisan Herger-Feinstein Quincy Library Group Forest Recovery Act, which passed last Congress by an overwhelming margin of 429-to-1, mandated a project to manage our forests for health and safety, while providing for a responsible, ecologically sound level of harvesting to benefit local economies.

The Forest Service was assigned the responsibility of carrying out this specific plan, but made several last minute additions to the environmental analysis that have drastically tilted the bipartisan balance that this Congress struck in the law and the Quincy Group struck in its plan.

These changes, based on a combination of bad science and special interest politics, will prevent treatment on almost all of the 2½ million acres to be protected from catastrophic fire under the original plan. The decision was made behind closed doors, without public input.

Mr. Speaker, the Forest Service has taken it upon itself to circumvent a law that this Congress passed almost unanimously. The Quincy plan presented us with an opportunity to proactively prevent the very type of catastrophic forest and wildland fires that have ripped through 5 counties in my district in Northern California in the past 8 weeks, tragically taking two human lives.

These fires have also burned more than 250,000 acres of public and private property, destroyed more than 100 homes, eliminated thousands of acres of wildlife habitat and various species

of wildlife, and generated tons of smoke. In addition, the American taxpayers have paid close to \$100 million to fight these fires.

However, the Forest Service has rejected this plan and has scaled it back to the point that it is almost meaningless, perhaps hoping the fire risks will somehow go away, despite the fact that the risk of catastrophic fire across the West is increasing.

The agency proposes to lock up our choked, fire-prone forests and allow prescribed fires to achieve its so-called forest management goals, even though this policy causes serious air pollution and poses a very real risk that a burn will get out of control, as it has on a number of occasions.

To add to this outrage, Mr. Speaker, the administration recently proposed to lock up an additional 40 to 50 million more acres of national forests, preventing the very management strategies that our fire experts are telling us we absolutely must take.

This attempt to shut down access to the public's forest lands is too much about what special interest groups demand and too little of what their own elected government and science recommends.

This Clinton-Gore administration has needlessly put our lives and property at risk in a selfish attempt to create an environmental legacy. The reality of our forest health crisis is that more, not less, of our forests must be available for pursuing forest management strategies.

We must begin to take proactive steps before catastrophic fires become more widespread. The forest service and this administration have refused to respond and have neglected congressional attempts to address the crisis. They appear ready to serve special interest environmental politics until well after the election.

Regrettably, forest fires are not that patient.

Mr. Speaker, our forests and our communities are at risk and we intend to do everything possible to hold this administration accountable for its negligence.

A LIVABLE COMMUNITY IS ONE WHERE FAMILIES ARE SAFE, HEALTHY AND ECONOMICALLY SECURE

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Oregon (Mr. BLUMENAUER) is recognized during morning hour debates for 5 minutes.

Mr. BLUMENAUER. Mr. Speaker, a livable community is one where families are safe, healthy and economically secure. While much attention is given to the damage that unplanned growth can have to the physical environment, the physical blight, traffic congestion, loss of open space, wildlife habitat, it is clear that a community that is not livable can also have direct impacts on

the physical and psychological health of families as well.

Just this week, the South Coast Air Quality Management District in Southern California released a report documenting the danger to people breathing the toxic air that is concentrated near southern California's congested freeways. This danger has increased the risk of cancer. People today are increasingly concerned about the soaring rates of asthma among our children which clearly appears related to the toxins we are putting into the air.

Recently, there was an article that I found amusing in the Washington Post, about how some people really enjoy the real long commute. It helps them center themselves and prepare for a long day.

I suppose that may be true for some, but when the average American spends more than 50 work days a year trapped behind the wheel of a car, just getting to and from their occupation, and when we have lost 43 more hours in the last 5 years to commuting, there are direct implications. I would venture that for a much larger number the commute to work is not the highlight of their day.

The National Sleep Foundation has reported that the 158 hours added to the yearly work commutes since 1969 have been subtracted from the time many Americans sleep. Carol Rodriguez, director of the Institute of Stress Medicine in Norwalk, Connecticut, observed that people with lengthy commutes often exhibit signs of stress in the workplace.

Marriage and family counselors in the Bay Area see patients struggling with the increased demands and stress placed upon them from their longer work commutes. This struggle is manifesting itself in family problems and even divorce. It has been noted that divorce itself is no longer a reliever to the stress of long commutes and separation because often, after a family breaks up, the difficulties of two households in coordinating the needs of children and employment are usually greater in terms of time and miles driven to hold things together.

The job-related problems where employers increasingly, in congested communities, never seem to know when their employees are going to show up, seems tame by comparison.

One of the most interesting developments may be found in a report from the Center for Disease Control and prevention on increasing obesity rates in the United States. Rates have been increasing since 1991 all across America, but there was particular concern about an increase of over 101 percent in Georgia.

In 1991, when the study began, metropolitan Atlanta had one of the lowest obesity rates. What is the reason for the increase? Some blame the traditional southern diet, which it is true is often high in fat, but the South's diet is not that much different than the rest of the country today. In any case, it certainly does not explain why Georgia

has the worst problem than the rest of the South.

It is interesting that the researcher placed part of the blame on the problems that metropolitan Atlanta is facing as the community has become less and less livable. The skyrocketing obesity rates coincide exactly with the explosion of unplanned growth around metropolitan Atlanta which some claim is the highest growth rate in history.

Dr. William Deats, one of the study's co-authors, points out that the time in the car encourages not just more fast food, it eats into the time for exercise. Others have noticed that Atlanta's unplanned growth has shortchanged the opportunities for outdoor exercise. It is not a walkable community. Sidewalks do not lead anywhere and even if people had the time and a place to exercise, the increasingly bad air makes the benefits of exercise problematic.

It is important for us to reflect on why the political landscape is being influenced by the discussion of livable communities and why it is such a major issue. It seems at some level the American public understands that their health, both emotional and physical, of the family, the ability to be fit, reduce stress, adequate sleep and for the family to live together is one of the first casualties if a community is not livable.

I strongly urge my colleagues to join with me in making sure that this session of Congress does its job for the Federal Government to be a better partner in maintaining and enhancing the livability of American communities.

REPUBLICANS ARE NOT ISOLATIONISTS

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Nebraska (Mr. BEREUTER) is recognized during morning hour debates for 5 minutes.

Mr. BEREUTER. Mr. Speaker, I have not participated in morning hour before but sometimes we hear things in the news that just cause us to be so upset we come to the floor, and that is what I am doing here today.

President Clinton, Mr. Speaker, made an address to Georgetown University yesterday and some people say it was an extension of an olive branch to Republicans who he had labeled as isolationists and who he criticized for partisanship when the other body refused to approve a comprehensive test ban treaty.

I welcome his initiative but I would like to set the record straight here today and raise a few questions that relate to some of my Democratic colleagues, too.

I have tried to provide bipartisan leadership in the House Committee on International Relations. Indeed the gentleman from Nebraska (Mr. BARETT) and I come from the only state

legislative body that is nonpartisan, our State legislature of Nebraska, so I find the degree of partisanship here in the Congress to be very unusual and not productive. However, I would have to say this, Mr. Speaker, to the President, when national security advisors and secretaries of defense of both parties from past administrations are critical of the proposed treaty and suggest that it should not be ratified in its current form, then I think it is inappropriate for this administration and for this President to label any opponents of the treaty as isolationists.

This use of the isolationist label contributes further to something that the National Journal perpetrated a few weeks ago when their cover story suggested that Republicans, particularly those in the House of Representatives, were isolationists.

I have to say to my colleagues, that yes, there are people that I suppose could properly be labeled isolationists on the Republican side of the aisle and some whose actions I certainly do not approve of in terms of their impact on foreign policy, but I would have to say also, Mr. Speaker, to the President and to the Administration, that when it comes to isolationism, he may look to his own party, particularly in the House.

It is, after all, Democrats who were only willing to give 20 percent of their votes to fast track authority for trade agreements to their own President. This is the first President, since we began the process of fast-track, since President Ford, who has been denied fast track authority to negotiate bilateral and multilateral trade agreements. Only 20 percent of the members on the Democratic side of the aisle were willing to support that. At least 80 percent on the Republican side were willing to vote for fast-track authority for President Clinton by whip counts conducted by the two respective parties.

I would also say this goes on top of the fact that the major opposition to the Africa trade bill and to the Caribbean trade bill came from the Democratic side of the aisle; there were more votes on the Republican side of the aisle for fast-track in both Houses.

I also think it is important that we look at what happened last April, when Premier Zhu Rongji came here from the People's Republic of China with a commercially viable trade agreement for accession to the WTO. Everyone was shocked with the fact that this Administration rejected it. As I understand it, all of the President's primary substantive advisors suggested he should seize the moment and agree to what was a much more beneficial agreement from the United States point of view than we had expected. His political advisors said, no, do not do this, Mr. President.

Now, there are many suggestions that this is because of the relationship and controversy related to alleged Chinese campaign contributions to the
