

Editor of the Ware River News. I am grateful for Mr. McCulloch's passion and commitment to politics and journalism.

As many of you know, a child's 1st birthday is a joyous occasion.

Therefore, it is only appropriate that I ask the House in joining me today in wishing Maggie Adele McCulloch a Happy Birthday.

HONORING MINNESOTA STAND DOWN

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 2000

Mr. VENTO. Mr. Speaker, I rise today to recognize and honor the tremendous success of the Minnesota Stand Down.

Since 1993, Minnesota Stand Down has set forth an excellent example of successful collaborative efforts with the National Guard and Reserve Units, homeless shelter programs, health care providers and other members of the community in order to help combat the growing problem of homeless veterans. With the help of hundreds of volunteers from over 150 different agencies and organizations, Minnesota Stand Down is truly a magical operation.

I have had the honor of attending and participating in numerous Stand Down events in Minnesota over the years. Each event gathered over 1,000 veterans in search of medical attention, shelter, food, legal assistance, transitional housing program assistance, showers and haircuts, clothing and meals. Most importantly, these special events provide companionship, camaraderie and mutual support.

In its eighth year, Minnesota Stand Down is designed to give homeless veterans a brief respite from life on the streets. In response to this growing problem, I have sponsored H.R. 566, The Stand Down Authorization Act. This important legislation would, in conjunction with the grassroots community, expand the VA's role in providing outreach assistance to homeless veterans. H.R. 566 has the strong support of over 100 bi-partisan cosponsors, the VA, the American Legion, the Veterans of Foreign Wars (VFW) and the Disabled American Vets (DAV). Stand Downs are not a solution to the problem of homelessness among veterans, but an opportunity to create an atmosphere and policy path conducive to bring about hope and long term solutions.

I would like to share with all Members an uplifting poem written by Kathy Lindboe, the daughter of Minnesota Stand Down coordinator, Bill Lindboe. It is my hope that this enlightening message will ignite our efforts in providing more resources towards our forgotten heroes . . . homeless veterans.

A LONELY MAN WALKS IN THE NIGHT

(By Kathy Lindboe)

A lonely man walks in the night, it is cold and quiet with no end in sight.

With looks of anger, looks of disgust, the strangers pass him.

They assume he must be another bum who deserves the street, never knowing his name, never knowing his feat.

That he fought for their freedom to walk on by,

that he fought for their country, he saw his friends die.

That he fought for tomorrow, he was shot in the chest, he fought for them all, for he loved them all best.

Now he talks to himself for some company. He keeps his head down, he doesn't want them to see, his unshaven face, his frostbitten ears, the fear in his eyes from the last 30 years.

He hides from the world, existing on pride. That for his country he lives, for this country, men died.

And his cry in the night, lingers on in his soul.

Another lonely man living, The war veterans role.

THE FED'S UNNECESSARY ASSAULT ON WAGES

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 2000

Mr. FRANK of Massachusetts. Mr. Speaker, I have become increasingly concerned that the relentless drive of the Federal Reserve to cut back on economic growth will lead to serious economic problems later this year. Federal Reserve officials have heretofore stressed that there is a time lag of many months between their decisions to raise interest rates and the effect those increases will have on the economy. We have recently had four Federal Reserve increases in interest rates, and by the Fed's own previous standards, only one of those could possibly have begun to have any economic impact, and that, barely so. For the Federal Reserve despite this to continue to raise interest rates threatens us with serious economic problems later in the year. I do not at this point believe that this will lead to a recession, although if the Fed continues to raise interest rates on a regular basis that will be the result. But what their actions will guarantee is a significant slow down in the growth of our economy. That is not only bad in itself, it will deprive our economy of the one factor that has served in recent years to alleviate the increasing trend towards exacerbating inequality that has accompanied overall prosperity for much of the past decade.

The justification for the Federal Reserve's action is of course that it is necessary to stave off inflation. This is a justification the Fed offers, despite what might appear to be the inconvenient fact that no inflation is in prospect. In a recent analysis, Jeff Faux of the Economic Policy Institute analyzes the Federal Reserve's argument, and delves into American economic history to show the fallacy of the Fed's approach.

Because of the importance of this topic to both the economic and social health of our country, and because of the cogency of Mr. Faux's analysis, I ask that it be printed here.

THE FED'S UNNECESSARY ASSAULT ON WAGES

(By Jeff Faux)

The Federal Reserve Board has raised its key interest rate a full percentage point since June 1999, and it has indicated that it will continue to raise rates until economic growth slows down.

It takes a while for interest rate changes to work their way through the economy. But sometime this year, the nation can expect to begin paying the costs. These costs will include: An increase in joblessness and a weak-

ening of the bargaining power of low- and middle-income families, whose wages—after being stagnant for most of the 1990s—have been rising in the last several years because of tight labor markets. Higher housing, consumer credit, and general borrowing costs. a worsening of the trade deficit, because raising interest rates will increase the near-term value of the dollar.

According to Fed Chairman Alan Greenspan, these costs are justified by the benefits of slower growth, which will: (1) prevent the current boom from "overheating," i.e., generating politically unacceptable levels of inflation that must then be brought down by engineering a deep recession, and (2) deflate the overpriced stock market, thereby preventing a future crash.

But the slowing of the economy is unnecessary. As Greenspan himself admitted in his February 17 semi-annual report to Congress, "inflation has remained largely contained." Moreover, the historical evidence for Greenspan's inflationary scenario is weak. As for an overpriced stock market, the Fed has other policy options with which to deflate it. These realities suggest that the Fed's intervention has been aimed more at preventing wage increases than at preventing inflation.

If anything, lowering, rather than raising, interest rates is a more appropriate monetary policy for the current condition of the economy.

NO INFLATION SIGNALS

There are no signs that the economy is approaching close enough to capacity to represent a serious inflationary threat. The latest data show that the January "core" inflation rate—consumer prices other than volatile energy and food prices—rose only 1.9% above the year before, compared with a 2.3% annual increase a year earlier.

Nor is there any evidence that production is threatening to outstrip capacity. The Federal Reserve's own numbers show the capacity utilization rate at 81.6%, substantially below the 85.4% reached in 1988-89, at the peak of the last business cycle.

The employment cost index—the statistic said to be most watched by the Fed economists—in the fourth quarter of 1999 was rising at an annual rate of 4.5%. But productivity was rising even faster—by 5%—leaving room in the economy for more noninflationary wage increases.

THE DISAPPEARING NAIRU

It is of course plausible that at some point spending could outgrow the economy's capacity to produce, causing prices to accelerate to unacceptable levels. Economists have labeled the unemployment rate below which this inflationary spiral would theoretically ignite as the NAIRU, or the non-accelerating-inflation rate of unemployment.

In the early 1990s, the conventional wisdom among economists, including most at the Federal Reserve, was that the unemployment rate could not go below 6% without triggering an accelerating rate of inflation. The few economists who pointed out that there was little empirical evidence to support this theory and that the economy could achieve noninflationary unemployment rates of 4% or even lower were derided by the profession and ignored by the business media. (The late William Vickery of Columbia University, a Nobel Prize winner, said in 1994 that a 2% unemployment rate was feasible.)

The unemployment rate has now been below 6% since September 1994, below 5% since June 1997, and below 4.5% since April 1998. As we have seen, core inflation has not only not accelerated, it remains dormant.

The experience has taught us that no one, not even Dr. Greenspan, can calculate the

NAIRU beforehand. Moreover, it has discredited the notion that low levels of unemployment will cause wages and prices to accelerate out of control. The NAIRU is revealed as useless as a guide to economic policy.

THE WRONG HISTORY LESSON

Still, the threat of the kind of runaway inflation that caused such economic and political havoc in the 1970s has been enough to stifle objections to the Fed's current strategy, even in an election year.

The inflationary terror with which Greenspan threatens us is a scenario in which rising demand in a peacetime economy bursts through the limits of capacity to set off a wage price spiral that feeds on itself, becomes politically unacceptable, and compels the government to bring it down by engineering a recession (reducing demand by reducing incomes). But, in fact, since 1914, when the U.S. began to measure consumer prices with a comprehensive index, a demand-driven peacetime economic boom has never generated the kind of inflation with which Greenspan frightens policy makers and the public.

A reasonable definition of "politically unacceptable" inflation is a condition in which rising consumer prices are used by the political opposition to successfully affect the outcome of elections. In this sense, price inflation was a significant national political issue on several 20th century occasions. One was the aftermath of World War I, when wartime inflation continued to increase through 1920. Prices rose 15% that year, and Republican Warren Harding, along with a GOP Congress, was elected on a platform of a "return to normalcy."

The next was 1946, when the end of World War II's price controls saw prices rise at a rate of 8.3% between 1945 and 1946. Rising meat prices were a particular sore spot with the voters, who elected a Republican Congress that November. Interestingly, prices rose at an annual rate of 11.3% over the next two years, but Democrat Harry Truman was still re-elected in 1948.

The next time that rising prices were a significant political issue was in the early 1970s. World oil prices were driven up by an oil-producing cartel, and a series of bad harvests in Russia and elsewhere caused global grain prices to rise as well. Price increases in these sectors then rippled through the U.S. economy. Between 1972 and 1980, consumer prices rose at an annual rate of 8.9%, and for three of those years the increases were in double digits. Political victims included Republican members of Congress decimated in the off-year election in 1974, President Gerald Ford in 1976, and President Jimmy Carter in 1980.

Thus, the general price increases that have reached politically troublesome levels have all involved several years of sustained inflation at rates that at some point reached double digits.

If we take a 5% increase in the consumer price index (CPI) as the point in which prices are moving toward this "politically unacceptable" range, we find that in no case since 1914 did price inflation reach even that level as a result of a peacetime economy growing beyond its capacity to produce. Every time the growth in the consumer price index reached 5%, the cause was exogenous to the domestic economy, i.e., war-related or energy and food price shocks emanating from outside U.S. borders.

Figure 4 shows the history of consumer price changes year-by-year since 1914. Working backward, the brief price spike in 1990 that put the CPI slightly over 5% was a result of a sharp, short run-up in oil prices during the Gulf War. As indicated above, the inflation of the 1970s was not a result of an overheated economy but was generated by

world oil and grain price shocks. Nor was the previous bout of inflation in the late 1960s ignited by an insufficiently vigilant Fed; the culprit was Lyndon Johnson's refusal to raise taxes to pay for the Vietnam War. The inflation episode before that was fueled by the Korean War. And, as indicated, the other two bouts of inflation were the products of the 20th century's world wars.

In other words, the memories of inflation that give political support to Greenspan's policy of raising interest rates reflect past experiences that are irrelevant to the present condition of the American economy. In fact, one cannot find in modern history the inflationary scenario from which Greenspan is presumably protecting us.

DAMPENING STOCK MARKET EXUBERANCE

Recently, the stock market has been deflating on its own. Still, given the widespread casino mentality that pervades the markets, it is not unreasonable to attempt to bring down values more in line with economic fundamentals, i.e., the growth of employment, incomes, and production.

But it is not reasonable to undercut those economic fundamentals in order to bring down a speculative bubble in the stock market. Instead, the Fed should be trying to achieve balance by contracting the stock market and letting the productive part of the economy expand, gradually substituting real for speculative value in share prices.

Much of the recent overvaluation of U.S. stock markets has been fueled by excessive credit. The share of "margin debt" to the capitalization of the stock market is now at or above the heights reached just before the 1987 market crash. The ratio of margin debt to the gross domestic product (GDP) is now double what it was at that time.

A number of market observers, including financier George Soros and Stanley Fischer, deputy director at the International Monetary Fund, have recently advocated that the Fed let air out of this credit boom by raising margin requirements. But Asian Greenspan has consistently refused. When asked about this at his confirmation hearing before the U.S. Senate Banking Committee, Greenspan said that he did not want to discriminate against individuals who were not wealthy enough to have other assets against which to borrow in order to play the stock market. Given that people who use margin leverage to buy stock are typically wealthy by any reasonable standard, this is a rather weak rationale for favoring higher interest rate policies whose costs will largely be felt by lower- and middle-income working people.

To the extent that Greenspan is concerned about irrational exuberance in the stock market, raising margin requirements should certainly be the weapon of choice.

WAGES—THE FED'S REAL TARGET

Given the absence of inflationary signals, the lack of historical precedent, and the Fed's disinclination to target the stock market bubble directly, it does not appear that preventing an outbreak of inflation—at least as most Americans would understand the term—is the root motivation behind the Fed's recent interest rate increases. Rather, it seems to be aiming at preventing wage increases.

The Fed's defenders would of course argue that that is exactly how one prevents "wage-price" spirals from taking off. But as economist Jamie Galbraith has pointed out, every episode of accelerating inflation since 1960, with the exception of the lifting of Vietnam-era price controls after Richard Nixon's reelection, were led by prices, not by wages.

The current effort to slow down the economy, therefore, appears to be targeted at weakening the bargaining position of labor vis-a-vis capital. Indeed, throughout this

economic expansion of the 1990, we have seen a shift of market incomes from wages to profits. This shift has been so pronounced that economist Jared Bernstein has calculated that, even if labor costs were to accelerate to rising 1% faster than productivity (as opposed to their current slower growth rate), it would take four years before wages and profits went back to their respective shares in the decade of the 1980s.

It is reasonable to ask the following: if the expansion of profits and the subsequent reallocation of income from labor to capital that occurred throughout the 1990s did not by itself raise inflationary concerns, why should a potential swing back to labor's favor?

The Fed is unlikely to enlighten us. But it is obvious that Federal Reserve Boards have historically considered themselves defenders of the interests of those who invest for a living as opposed to those who work for wages. This one is no exception.

Greenspan deserves some credit for not having cut off this current expansion when the unemployment rate reached what the conventional wisdom assumed were NAIRU limits. On the other hand, he has responded much faster to problems in financial markets than to problems in labor markets. Thus, he was quick to intervene in the economy in the case of the stock market crash of 1987, the Asia financial crisis of 1997, and the Long Term Capital Management debacle of 1998. But he was so slow to react to a rising unemployment rate in the early 1990s that he allowed the economy to fall into a recession.

Greenspan himself has said on several occasions that job insecurity has been a significant factor in limiting labor's earnings during the expansion and thus adding to profits and the profit expectations that have fueled the stock market. From this perspective, raising interest rates to raise the unemployment rate, as opposed to targeting margin requirements, insures that labor's share remains depressed even as the financial markets are forced to undergo a correction.

KEEPING THE EXPANSION GOING

The economic policy task now facing the United States is how to keep the current expansion alive by keeping it in balance, e.g., avoiding speculative markets, excessive debt, and high interest rates. This will require careful management by both the Federal Reserve and the administration.

First, at the very least, the Fed should not raise interest rates any further. In fact, the Fed should gradually begin lowering rates to keep probing the economy's limits and to allow the dollar to fall and to make U.S. goods more internationally competitive. If and when signs appear that the domestic economy is overheating and price inflation threatens, there will be plenty of time to raise interest rates (or taxes) to reduce the growth rate.

Second, at the same time, the Fed should use its authority to raise margin requirements. In addition, both the Fed and the Clinton Administration should move to reduce excessive stock market and consumer credit use. Bank regulators should discourage the growing issuance of unsound mortgage lending and home equity loans and impose stricter regulation of credit care companies.

Tightening credit in speculative markets while allowing the rest of the economy to grow will bring more balance to the economy. In particular, it would help to raise real incomes and at the same time help reduce consumer debt, providing more stability and staying power for the household sector that has been the sustaining force for growth over the past decade.

Third, neither the Fed nor the Administration should attempt to slow economic

growth if energy prices continue to rise. The lesson from the 1970s is that oil price cartels do not last. It helps that the U.S. economy is less energy intensive than it was in the 1970s and less vulnerable to energy price increases. The president's decision to increase subsidies to help low-income families to cope with temporarily higher heating oil prices was wise. If necessary, the Administration should use national oil reserves to counter any extraordinary short-term surge in prices that threatens to cut off economic growth.

This longest economic expansion in modern history has in the last few years finally begun to bring real income growth to low- and middle-income Americans. Maintaining that growth is essential for America's private sector to remain competitive and its public sector to have the revenues it needs to finance social investment.

The risk of jeopardizing these goals far outweighs any small risk of a sudden and historically unprecedented outbreak of demand-driven inflation.

H.R. —, THE NATIONAL FISH AND WILDLIFE FOUNDATION ESTABLISHMENT ACT AMENDMENTS OF 2000

HON. ENI F.H. FALEOMAVAEGA

OF AMERICAN SAMOA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 2000

Mr. FALEOMAVAEGA. Mr. Speaker, I rise today to introduce legislation to amend and reauthorize the National Fish and Wildlife Foundation Establishment Act.

Since its creation in 1984, the National Fish and Wildlife Foundation has been very successful in establishing public and private partnerships to conserve fish, wildlife, and plants using Federal funds matched by private donations. On average, the Foundation has brought in more than two private sector dollars for every Federal dollar appropriated. With these funds, the Foundation has financed more than 3,500 on-the-ground conservation projects throughout the United States and abroad. Together with partnerships and challenge grants, the Foundation has provided \$441 million for conservation projects. Their record is impressive.

To fund these projects, the Foundation has entered into partnerships with a wide range of State and local agencies, academic institutions, conservation groups, and businesses. In a time of diverse interests and an ever increasing strain on our natural resources, the ability to forge productive and workable partnerships between all sectors of society is of paramount importance. The Foundation possesses this ability, and makes unparalleled use of it to award grants in five major categories: conservation education, wetlands and private lands protection, neotropical migratory bird conservation, fisheries conservation and management, and wildlife and habitat management.

In the past, legislation to reauthorize the Foundation generated unnecessary and misguided criticism. Such criticism has been surprising considering the noncontroversial nature and mission of the Foundation and its solid history of bipartisan support in Congress. The National Fish and Wildlife Foundation represents one of Congress' finest conservation innovations, and embodies what we should

strive to achieve every day—the intelligent and economical conservation of our fish, wildlife and plants.

This legislation is very similar to legislation introduced by the late Senator JOHN CHAFEE and passed by the Senate by unanimous consent. It is strongly supported by the National Fish and Wildlife Foundation as well as both the Fish and Wildlife Service and the National Oceanic and Atmospheric Administration.

Mr. Speaker, in the interest of time, I will submit additional comments describing the legislation and explaining the changes it makes to existing law.

In closing, the National Fish and Wildlife Foundation is an important element in our national effort to build partnerships to conserve our common natural heritage. I urge my friends and colleagues on both sides of the aisle to support this bill.

OBJECTIVES OF LEGISLATION

This legislation makes several significant changes to the National Fish and Wildlife Foundation's (Foundation) establishment legislation. First, it expands board membership from the current number of 15 to 25. Second, the bill expands the Foundation's jurisdiction to include additional agencies within the Department of the Interior and the Department of Commerce to further the conservation and management of fish, wildlife, and plants and natural resources. Third, it authorizes annual appropriations through fiscal year 2006 to the Department of the Interior for \$30 million and to the Department of Commerce for \$10 million. The Foundation's current authorization expired on September 30, 1998.

SECTION-BY-SECTION ANALYSIS

Section 2 would amend the National Fish and Wildlife Foundation Establishment Act by providing authority for the Foundation to accept and administer private gifts of property in connection with the work of agencies within the Department of the Interior and the Department of Commerce. Under current law, the Foundation is only authorized to accept and administer private gifts of property in connection with the Fish and Wildlife Service and NOAA.

Section 3 would increase the Foundation's Board of Directors from 15 to 25 members, including the Director of the Fish and Wildlife Service and the Under Secretary of Commerce for Oceans and Atmosphere (Administrator of NOAA).

Section 4 would authorize the Foundation to have its principal offices in the greater Washington D.C. metropolitan area. This section would also establish conditions for the Foundation to acquire and convey property (dependent upon agency approval) and invest and deposit Federal funds. Section 4 would revise provisions relating to agency approval of acquisitions of property and of conveyances and grants. It also would set forth limitations relating to the Foundation's conveyances of real property and overhead expenditures.

Section 5 would authorize appropriations of \$40 million per year to implement the National Fish and Wildlife Foundation Establishment Act Amendments of 2000 through fiscal year 2006 of which \$30 million would go to the Department of the Interior and \$10 million would go to the Department of Commerce. This section would also authorize the Foundation to accept funds from a Federal agency under any other Federal law to further its conservation and management activities. In addition, it would prohibit grant recipients from using Federal appropriations under this Act to engage in activities relating to lobbying or litigation.

Section 6 would clarify that nothing within this Bill authorizes the Foundation to perform activities that are within the jurisdiction of the National Park Foundation by Public Law 90-209 (16 U.S.C. 19e et seq.).

HONORING THE CORLEONE SOCIETY [UNIONE SPORTIVA CORLEONE]

HON. ELIOT L. ENGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 2000

Mr. ENGEL. Mr. Speaker, today I recognize the members of the Corleone Society (Unione Sportiva Corleone) and their 25th Annual Dinner-Dance this week. I also take this opportunity to recognize Paolo Muratore and his 16 years of leadership as the President of the Corleone Society.

In 1973 a group of friends, originally from the Italian city of Corleone, met to celebrate a traditional holiday from their native town. During this event they decided to form the Corleone Society (Unione Sportiva Corleone) in order to extend their culture and traditions to the United States of America. The people of Corleone, a city of 15,000 inhabitants, have chosen a lion clutching a flaming heart as a symbol of their nobility and generosity. Since 1973 until today the members of the Corleone Society have contributed to the enrichment of our culture with the traditions and values of the city of Corleone in Sicily.

For 25 years the members of the Corleone Society have gathered together to celebrate their traditions and emphasize their commitment to noble causes. They award scholarships to support talented students in their educational endeavors. At the same time, they are dedicated to improving the health and welfare of children worldwide. The Corleone Society offers its patronage to orphanages and it sponsors sick children from abroad to receive medical treatment in the United States.

Mr. Speaker, I ask you and my colleagues to join me in expressing our gratitude for the indispensable services and contributions the Corleone Society has given to so many in the United States and around the world.

CENSUS DEBATE

HON. PAUL RYAN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 2000

Mr. RYAN of Wisconsin. Mr. Speaker, I'd like to express my shock and disappointment at the tenor and content of the Special Order that was coordinated by the Ranking Member of the Subcommittee on the Census last night.

But before I go on please everyone in America fill out your census forms and mail them in.

For months now Republicans and Democrats have been promoting the census. No political cheap shots, no debates over sampling. But after the Democrats ambush last night, it's time to take the gloves off.

As we all know, this is the most critical time for the census and for making sure that everyone participates. But the Democrats have obviously decided that promoting the census is
