1216

Messrs. CONYERS, CLAY, TOWNS, Ms. EDDIE BERNICE JOHNSON of Texas, Messrs. GEJDENSON, HASTINGS of Florida, LEWIS of Georgia, MEEKS of New York, GEORGE MILLER of California, and Ms. KILPATRICK changed their vote from “yea” to “nay.”

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PEACE THROUGH NEGOTIATIONS ACT OF 2000

The SPEAKER pro tempore (Mr. WALDEN of Oregon). The unfinished business is the question of suspending the rules and passing the bill, H.R. 5272.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. GILMAN) that the House suspend the rules and pass the bill, H.R. 5272, as amended, on which the yeas and nays are ordered.

This is a 5-minute vote.

The vote was taken by electronic device, and there were—yeas 385, nays 27, answered “present” 4, not voting 17, as follows:

[Roll No. 497]

YEAS—385

Abercrombie	Bentsen	Brady (TX)
Ackerman	Bereuter	Brown (FL)

Jones (OH)	Paul	

1225

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

ANNOUNCEMENT BY THE SPEAKER
PRO TEMPORE

The SPEAKER pro tempore. Pursuant to the provisions of clause 8 of rule XX, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 6 of rule XX.

Any record votes, if postponed, will be taken after debate has concluded on all motions to suspend the rules.

NATIONAL INSTITUTE OF BIO-
MEDICAL IMAGING AND BIO-
ENGINEERING ESTABLISHMENT
ACT

Mr. BURR of North Carolina. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 1795) to amend the Public Health Service Act to establish the National Institute of Biomedical Imaging and Engineering, as amended.

The Clerk read as follows:

H.R. 1795

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "National Institute of Biomedical Imaging and Bioengineering Establishment Act".

SEC. 2. FINDINGS.

The Congress makes the following findings:

(1) Basic research in imaging, bioengineering, computer science, informatics, and related fields is critical to improving health care but is fundamentally different from the research in molec-

ular biology on which the current national research institutes at the National Institutes of Health ("NIH") are based. To ensure the development of new techniques and technologies for the 21st century, these disciplines therefore require an identity and research home at the NIH that is independent of the existing institute structure.

(2) Advances based on medical research promise new, more effective treatments for a wide variety of diseases, but the development of new, noninvasive imaging techniques for earlier detection and diagnosis of disease is essential to take full advantage of such new treatments and to promote the general improvement of health care.

(3) The development of advanced genetic and molecular imaging techniques is necessary to continue the current rapid pace of discovery in molecular biology.

(4) Advances in telemedicine, and teleradiology in particular, are increasingly important in the delivery of high quality, reliable medical care to rural citizens and other underserved populations. To fulfill the promise of telemedicine and related technologies fully, a structure is needed at the NIH to support basic research focused on the acquisition, transmission, processing, and optimal display of images.

(5) A number of Federal departments and agencies support imaging and engineering research with potential medical applications, but a central coordinating body, preferably housed at the NIH, is needed to coordinate these disparate efforts and facilitate the transfer of technologies with medical applications.

(6) Several breakthrough imaging technologies, including magnetic resonance imaging ("MRI") and computed tomography ("CT"), have been developed primarily abroad, in large part because of the absence of a home at the NIH for basic research in imaging and related fields. The establishment of a central focus for imaging and bioengineering research at the NIH would promote both scientific advance and U.S. economic development.

(7) At a time when a consensus exists to add significant resources to the NIH in coming years, it is appropriate to modernize the structure of the NIH to ensure that research dollars are expended more effectively and efficiently and that the fields of medical science that have contributed the most to the detection, diagnosis, and treatment of disease in recent years receive appropriate emphasis.

(8) The establishment of a National Institute of Biomedical Imaging and Bioengineering at the NIH would accelerate the development of new technologies with clinical and research applications, improve coordination and efficiency at the NIH and throughout the Federal government, reduce duplication and waste, lay the foundation for a new medical information age, promote economic development, and provide a structure to train the young researchers who will make the pathbreaking discoveries of the next century.

SEC. 3. ESTABLISHMENT OF NATIONAL INSTITUTE OF BIOMEDICAL IMAGING AND BIOENGINEERING.

(a) IN GENERAL.—Part C of title IV of the Public Health Service Act (42 U.S.C. 285 et seq.) is amended by adding at the end the following subpart:

"Subpart 18—National Institute of Biomedical Imaging and Bioengineering

"PURPOSE OF THE INSTITUTE

"SEC. 464z. (a) The general purpose of the National Institute of Biomedical Imaging and Bioengineering (in this section referred to as the 'Institute') is the conduct and support of research, training, the dissemination of health information, and other programs with respect to biomedical imaging, biomedical engineering, and associated technologies and modalities with biomedical applications (in this section referred to as 'biomedical imaging and bioengineering').

"(b)(1) The Director of the Institute, with the advice of the Institute's advisory council, shall establish a National Biomedical Imaging and Bioengineering Program (in this section referred to as the 'Program').

"(2) Activities under the Program shall include the following with respect to biomedical imaging and bioengineering:

"(A) Research into the development of new techniques and devices.

"(B) Related research in physics, engineering, mathematics, computer science, and other disciplines.

"(C) Technology assessments and outcomes studies to evaluate the effectiveness of biologics, materials, processes, devices, procedures, and informatics.

"(D) Research in screening for diseases and disorders.

"(E) The advancement of existing imaging and bioengineering modalities, including imaging, biomaterials, and informatics.

"(F) The development of target-specific agents to enhance images and to identify and delineate disease.

"(G) The development of advanced engineering and imaging technologies and techniques for research from the molecular and genetic to the whole organ and body levels.

"(H) The development of new techniques and devices for more effective interventional procedures (such as image-guided interventions).

"(3)(A) With respect to the Program, the Director of the Institute shall prepare and transmit to the Secretary and the Director of NIH a plan to initiate, expand, intensify, and coordinate activities of the Institute with respect to biomedical imaging and bioengineering. The plan shall include such comments and recommendations as the Director of the Institute determines appropriate. The Director of the Institute shall periodically review and revise the plan and shall transmit any revisions of the plan to the Secretary and the Director of NIH.

"(B) The plan under subparagraph (A) shall include the recommendations of the Director of the Institute with respect to the following:

"(i) Where appropriate, the consolidation of programs of the National Institutes of Health for the express purpose of enhancing support of activities regarding basic biomedical imaging and bioengineering research.

"(ii) The coordination of the activities of the Institute with related activities of the other agencies of the National Institutes of Health and with related activities of other Federal agencies.

"(c) The establishment under section 406 of an advisory council for the Institute is subject to the following:

"(1) The number of members appointed by the Secretary shall be 12.

"(2) Of such members—

"(A) 6 members shall be scientists, engineers, physicians, and other health professionals who represent disciplines in biomedical imaging and bioengineering and who are not officers or employees of the United States; and

"(B) 6 members shall be scientists, engineers, physicians, and other health professionals who represent other disciplines and are knowledgeable about the applications of biomedical imaging and bioengineering in medicine, and who are not officers or employees of the United States.

"(3) In addition to the ex officio members specified in section 406(b)(2), the ex officio members of the advisory council shall include the Director of the Centers for Disease Control and Prevention, the Director of the National Science Foundation, and the Director of the National Institute of Standards and Technology (or the designees of such officers).

"(d)(1) Subject to paragraph (2), for the purpose of carrying out this section:

"(A) For fiscal year 2001, there is authorized to be appropriated an amount equal to the amount obligated by the National Institutes of
