

range, the narrow band of radiation between radio and infrared waves, a portion of the electromagnetic spectrum largely unexplored from the ground. Using the latest technology, the array will be able to probe the murky clouds of the Milky Way where stars are born, peer into the hearts of exploding galaxies, study cool faint objects of our own Solar System, and explore other great questions in astronomy, gaining insight into the processes and cataclysmic forces involved in the ultimate formation and evolution of stars, planets and galaxies.

Like the innovative Chandra X-ray Observatory, which is now sending back stunning images from space, essentially all of the Submillimeter Array's equipment was designed and prototyped at the Smithsonian Astrophysical Observatory's facilities in Cambridge, Massachusetts. And, just as the Smithsonian collaborates with NASA on the groundbreaking Chandra project, it collaborates with the Institute of Astronomy and Astrophysics of the Academia Sinica of Taiwan on the advanced SMA.

On September 29, 1999, by tracking and observing 230 gigahertz (230 billion cycles per second) of radiation from Mars, Venus, Saturn, and Jupiter, SMA scientists made their first test observation—thereby achieving the submillimeter equivalent of “first light”—and took a critical step in the ultimate success of this project. This is but yet another milestone in the history of the Smithsonian Astrophysical Observatory (SAO). Founded in 1890 by Secretary Samuel Langley as a center for “the new astronomy,” where one might study the physical nature of astronomical bodies as well as their positions and motions, SAO pioneered studies of the relationship between the solar and terrestrial phenomena. In the earliest days of the Space Age, SAO established and operated a worldwide network of satellite-tracking stations, including one on the island of Maui, and developed experiments for some of the first orbiting space observatories. Today, SAO, the Smithsonian unit with the largest budget, is headquartered—in a partnership with Harvard University—in Cambridge, Massachusetts. At that facility more than 300 scientists are engaged in a broad program of astronomy, astrophysics, and earth and space sciences supported by Federal appropriations, Smithsonian trust funds, Harvard University funds, and contracts and grants. In addition to the Submillimeter Array in Hawaii, SAO maintains a major data-gathering facility at the Whipple Observatory near Tucson, Arizona and operates the Oak Ridge Observatory in Massachusetts.

The legislation I am introducing today authorizes the Smithsonian to plan, design, construct, and equip approximately 16,000 square feet of laboratory, administrative, and support space at the base of Mauna Kea, replacing inadequate, temporary leased space. It further authorizes an appro-

priation of \$2,000,000 in fiscal year 2001 and \$2,500,000 in fiscal year 2002. This is a very modest investment to ensure the continuation of the scientific achievement and research excellence that have been a tradition at the Smithsonian Astrophysical Observatory for 110 years.

I urge the speedy passage of this legislation and ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2498

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. FACILITY AUTHORIZED.

The Board of Regents of the Smithsonian Institution is authorized to plan, design, construct, and equip laboratory, administrative, and support space to house base operations for the Smithsonian Astrophysical Observatory Submillimeter Array located on Mauna Kea at Hilo, Hawaii.

SEC. 2. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated to the Board of Regents of the Smithsonian Institution to carry out this Act, \$2,000,000 for fiscal year 2001, and \$2,500,000 for fiscal year 2002, which shall remain available until expended. •

• Mr. COCHRAN. Mr. President, I am pleased to join my colleague, the Senator from New York (Mr. MOYNIHAN) and fellow Smithsonian Institution Board Regent in introducing the legislation authorizing a permanent base facility structure at Hilo, Hawaii for the Smithsonian Astrophysical Observatory Submillimeter Array.

The Submillimeter Array is part of the world-class web of major data-gathering facilities of the Smithsonian Astrophysical Observatory. Other facilities are located in Arizona and its headquarters in Massachusetts. Together these facilities support some of the world's most advanced studies and discoveries in astronomy, astrophysics, earth and space science.

This legislation will authorize the planning, design, construction and outfitting of the necessary laboratory and other operational space for the array of radio telescope antennas installed atop the ancient volcano, Mauna Kea. Funding is authorized in the amount of \$2,000,000 for Fiscal Year 2001 and \$2,500,000 for Fiscal Year 2002. The new base station will replace a current system of rented, overcrowded space shared with astrophysical operations of other organizations and countries.

Mr. President, I am proud of the Smithsonian Astrophysical Observatory 110-year history and its reputation around the world. Its work and discoveries are considered to be some of the most significant of the Twentieth Century. From the first orbiting space observatories to the newest images of our galaxy, the Smithsonian Astrophysical Observatory has worked independently and collaborated with the National Aeronautics and Space Administration to explore and explain the wonders of the universe.

I hope the Senate will work quickly to pass this legislation so the work of the Submillimeter Array can proceed. •
