

us to distinguish between SUVs and light trucks and other vehicles. They are mostly used as passenger cars in the first place.

The base bill simply does not provide enough conservation: approximately 6 days of oil consumption over the next 9 years. There is a big difference between the average car and a 13-mile-per-gallon SUV. It is the equivalent of leaving a refrigerator door open for 6 years for the average year.

I would suggest that the opponents of this amendment are selling American industry short. There is no reason the American auto industry cannot keep pace with foreign competition. We should not drive Americans into their hands.

Mr. TAUZIN. Mr. Chairman, I yield 1 minute to the gentleman from Nebraska (Mr. TERRY), who deserves a great deal of credit for bringing the CAFE improvements in our bill forward.

Mr. TERRY. Mr. Chairman, I rise in strong opposition to this amendment.

This bill, our bill allows the Department of Transportation to explore many possible solutions for conservation, such as a weight-based system so we do not treat a Ford pickup truck like a Ford Fiesta; so that our farmers can do their hard work and our contractors can store their equipment in a vehicle a bit more substantial than the standard hatch-back.

By giving authority over fuel economy to the DOT, we allow more flexibility to deal with this complex issue with greater expertise.

We have heard about the NAS study which reaches dozens of conclusions, but yet this amendment relies on only one. If we were to take this report in its totality, we find that we should implement a weight-based system, which this amendment forbids, and we must not downweight our vehicles which, in essence, this amendment demands, and that we must continue to develop technology, which this amendment does

not encourage. And we must allow sufficient time for its implementation, which this amendment also does not do.

Mr. Chairman, I urge my colleagues to support H.R. 4 and Buy American. Vote against this amendment.

Mr. MARKEY. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the fuel economy standards in the United States are going down. In 1986, we peaked at about 26½ miles per gallon, and we have been going backwards ever since.

Now, if we have an energy crisis, should we not look at where we put two-thirds of all of the oil that we consume in the United States? It goes into gasoline tanks. If we want to do anything about an energy crisis, we have to look at gasoline tanks.

Now, our amendment just takes America back pretty much to where it was in 1986. This is not rocket science. This is auto mechanics. Every high school in America has a course on this.

Do not tell us this is going to cause some huge, unbearable burden to be imposed upon the auto industry. The burdens are upon the American people. We are importing too much oil.

The environmental consequences? Well, the President says he cannot comply with the Kyoto Treaty. Well, if we do not do anything about automobiles, we are not going to do anything about Kyoto. The American Lung Association says that there is a dramatic increase in lung disease, in asthma, especially among young children in this country. If we do not do anything about automobile emissions into our atmosphere, we are not doing anything about the American Lung Association's top agenda item.

So I say to my colleagues, we have a choice. All we are asking is that we improve by 1.3 miles per gallon the American auto fleet from where it was in 1986, and we give them until 2007, 21 years, to make that huge technological leap. We do not want to hear another

word about the energy crisis, about how you cannot comply with Kyoto, about how you care about all the additional health care consequences in the country, if you cannot find some way of dealing with what is obviously the major cause of most of the problems in the environment in our country.

Mr. DINGELL. Mr. Chairman, I yield the remainder of our time to the distinguished gentleman from Michigan (Mr. BONIOR), the minority whip and my good friend.

Mr. BONIOR. Mr. Chairman, I thank the gentleman for yielding me this time.

Mr. Chairman, the auto industry has helped build this Nation. It has provided economic opportunities for generations, including generations of my own family. I believe a strong, a vibrant, and a domestic auto industry will continue to be the key to our economic future.

For our prosperity to continue, we need to lead the way in using new technologies that protect our environment. Hybrid and cell-fuel-powered vehicles are the future, and the future will soon be upon us. Our domestic auto companies are moving in that direction, and they are moving in that direction with speed. Forward. General Motors, Daimler Chrysler, they all recognize that consumers want safe, fuel-efficient vehicles. They have announced that they will increase the average fuel economy in the sports utility by up to 25 percent over the next 5 years.

In the future, we will be talking about ways to store hydrogen and natural gas in our fuel cells, not increasing CAFE. The CAFE debate that we are having on this floor may very well be one of the last that we will have. The future is in these new technologies, in hydrogen fuel cells, in hybrids that will be coming on line in some of our automobiles within a year.
