STATEMENTS ON INTRODUCED
BILLS AND JOINT RESOLUTIONS

By Mr. BOND:

S. 1705. A bill to amend the Public Health Service Act to provide for the establishment of a homeland security academic centers for public health preparedness network; to the Committee on Health, Education, Labor, and Pensions.

Mr. BOND. Mr. President, I rise today to introduce a bill I call the "The Homefront Medical Preparedness Act."

In the past century we have witnessed unprecedented advances in science, technology and medicine and have seen limitless potential to improve the human condition, cure disease, and advance human health in ways that were once unimaginable. Yet, at the same time we have seen some of these very advances have spawned new threats, threats that were simply inconceivable 100 years ago. The recent outbreaks of anthrax in Florida, New York City, and Washington, DC, coupled with the terrorist attack of September 11 have brought to light the compelling need to properly prepare our communities for the threat of bioterrorists attacks.

A strong public-health infrastructure is the best defense against any bioterrorism attack. As a Nation we remain highly vulnerable, not because we are unprepared, but because we are underprepared. The Department of Health and Human Services has made tremendous advances over the past few years. However, while significant progress has been made, there are still large gaps in our current approach. Our goal must be to eliminate these gaps and reduce the risk to our Nation and our communities. As a nation, we must prepare our communities, and improve our capacity to respond. Central to an effective response to a bioterrorist attack are detection, treatment and containment of a disease epidemic and our Nation's public-health system is on the front line in this effort.

The Nation's public health system is a complex network of people, systems, and organizations working at the local, State and national levels. The Nation is served by more than 3,000 county and city health departments, more than 3,000 local boards of health, 59 State and territorial-health departments, tribal-health departments more than 160,000 public and private laboratories. Current estimates suggest that the public-health workforce includes 500,000 professionals employed at the local, State and national levels. According to the Health Resource and Services Administration in 1989 only 44 percent of these 500,000 workers had formal, academic training in public health and those with graduate public health degrees were an even smaller fraction. As of 1997, 78 percent of local health departments executives did not have graduate degrees in public health.

Changes on the public health system have brought new demands on the workforce and identified a need for additional training and education. Many public-health workers do not have the

necessary skills and knowledge base to meet the needs of the emerging public-health system and public-health threats. These statistics highlight the critical need to provide these professionals with the most up-to-date training, technology, and tools necessary to meet the increasing demands and emerging needs.

An important first step has already been taken. The Centers for Disease Control has created Centers for Public Health Preparedness across the country. There are currently 14 centers total: 7 Academic Centers, 4 Speciality Centers, and 3 Local Exemplar Centers. The Academic Centers link schools of public health, State and local-health agencies and other academic and community health partners to foster individual preparedness on the front line. The Speciality Centers focus on a topic, professional discipline, core public-health competency, practice setting or application of learning technology. And finally, the Local Exemplar Centers develop advanced applications at the community level in three areas of key importance to preparedness for bioterrorism and other urgent health threats: integrated communications and information systems across multiple sectors; advanced operational readiness assessment; and comprehensive training and evaluation.

In Missouri we are fortunate to have not one, but two centers in St. Louis at St. Louis University School of Public Health: an Academic Center the Heartland Center for Public Health Preparedness as well as a Speciality Center The Center for the Study of Bioterrorism and Emerging Threats. The School of Public Health at St. Louis University has clearly been on the forefront of this issue. I was honored to have secured Federal appropriations dollars necessary for startup costs for the Center for the Study of Bioterrorism, the only specialty center with a primary focus on bioterrorism in the country. The center provides public-healthcare providers and healthcare facilities with the tools needed for preparedness, response, recovery, and mitigation of intentional or naturally occurring outbreaks. Under the leadership of Dr. Evans, the center has developed training curriculum that is being used nationwide to train healthcare providers and public-health departments. In fact, the center's training materials were used by the CDC to train emergency health personal, healthcare providers and other public-health workers in New York to respond to the September 11 attack.

But more can and must be done. Today I introduced legislation which will expand the national network of Centers of Public Health Preparedness by adding new centers across the country as well as funneling more valuable resources to existing centers to meet urgent, public-health training needs. This bill will authorize \$50 million and would instruct the Director of the Centers for Disease Control to establish a
