

Meanwhile, reports indicate that so far the Punjab police has taken 1,222 Akali workers into custody. Of these 934 belong to Shiromani Akali Dal, 234 to Sarb Hind Shiromani Akali Dal, 50 to Shiromani Akali Dal (Amritsar) and one owes allegiance to Mr Ravi Inder Singh. The remaining three belong to the Mehta faction of the AISSF.

Of these, the maximum arrests of the Badal men were made in Sangrur (73), followed by Majitha (64), Tarn Taran (60) and Patiala (62). Rashmi Talwar and Ashok Sethi in their reports from Amritsar said the police in a pre-dawn swoop entered the Golden Temple complex on the pretext of searching all three serais—Guru Nanak Niwas, Guru Hargobind Niwas and Mata Ganga Niwas.

When the police arrived to get the three serais vacated to ensure implementation of the orders, among those evicted were 50 schoolchildren in the age group of six to eight years from Lucknow. The police parties which were headed by Mr Jagdish Khara and Mr R.S. Ghuman, both DSPs, had a verbal altercation with the SGPC workers who resisted the attempts of the raiding party to get the serais vacated. Mr Harbant Singh and Mr Ajaib Singh, Secretary of the SGPC, and personal assistant to the SGPC chief, respectively, refused to budge holding that the orders were not specific to the SGPC and "devotees" could not be evicted from a religious complex.

The SGPC Chief, Prof Kirpal Singh Badungar, who had to rush to Amritsar from Bathinda, after the police entry into the complex, assailed the government action maintaining that it was a direct attack on the most sacred Sikh shrine and the Congress Government was bent upon disturbing communal peace and harmony.

The police officials managed to get computer printouts of the names and addresses of 2,000 devotees staying in the serais.

Hundreds of policemen in top anti-combat gear laid a siege to the Golden Temple complex. The mounted police has also been deployed around the complex.

Talking to The Tribune over the cellphone, Capt Kanwaljit Singh said that that action of the police in the morning and again in the evening of searching serais and evicting yatrias was a serious "violation of the sanctity of the Golden Temple complex." The action of the government amounts to gross interference in the religious affairs of the Sikhs and could lead to serious complications besides disturbing communal harmony and peace in the state.

He said a number of SGPC members and dal workers had already managed to sneak into the complex.

Professor Badungar told newsmen that in case the police entered Teja Singh Samundari Hall on the day of the election meeting, the repercussions would be "drastic".

He said the government was gripped by a "fear psychosis" and its nervousness was evident from the desperate steps it was taking. He maintained that the national and international media would be permitted to cover the executive committee elections as he disapproved on any NDA observers to oversee the elections. No other SGPC employee would be allowed inside the meeting hall.

The SGPC chief said that non-bailable warrants issued against former SGPC chief Jagir Kaur by a Kapurthala court was an indication of the desperation of the state government.

Meanwhile, Mr. Sukhdev Singh Bhaur, General Secretary, SHSAD supported the orders issued by the District Magistrate but held that these orders should be applicable in case of "bad elements" and not the devotees.

The SHSAD was ready for a truce with Mr. Parkash Singh Badal provided he agreed to

apologize at Akal Takht and accepted Bhai Ranjit Singh as Jathedar of Akal Takht. He claimed that 50 SGPC members were strongly behind the SHSAD.

Senior Akali leader and close aide of Mr. Parkash Singh Badal, Capt Kanwaljit Singh claimed that the SAD has formulated its secret strategy to bring all 120 SGPC members to Teja Singh Samundri Hall on November 12 to elect the President and the executive committee. Talking to newsmen this evening at Bhai Gurdas Hall after managing to enter the city in disguise. He said the reign of terror unleashed by the Amarinder Singh government on Akali leaders and workers were trampling upon their democratic rights.

Capt Kanwaljit Singh said Mr. Badal, along with all 120 members, would land at Rajasansi Airport tomorrow for the SGPC general house election meeting. Party leaders and workers would ensure that all SGPC members manage to enter the Golden Temple complex on that day.

He claimed that the ex-parte disqualification of SGPC members by the SGJC was likely to be set aside by the Punjab and Haryana High Court tomorrow.

Discounting the rumors of a patch-up between Mr. Badal and Mr. Tohra, Capt Kanwaljit Singh said there was no scope for any compromise. The Badal candidate would win hands down, he asserted.

The arrival of the Jathedar of Akal Takht, Giani Joginder Singh Vedanti, here this evening has raised speculation about an appeal being made by him for a patch-up between the two Akali stalwarts to avoid a confrontation even as the Congress Government has queered the pitch with heavy deployment of the police around the complex.

#### SELECTIVE SERVICE VOLUNTEERS

##### HON. BOB SCHAFFER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 14, 2002

Mr. SCHAFFER. Mr. Speaker, I rise today to congratulate Mr. George C. Everet of Fort Collins, Colorado; Mr. Ralph L. Spellman of Yuma, Colorado; and Mr. Dale H. Shoemaker Sr. of La Junta, Colorado on their appointments to Selective Service Local Boards 006 and 024 in Greeley, Colorado, and 026 in Pueblo, Colorado respectively.

Local board members have the distinction of receiving an appointment by the Director of Selective Service in the name of President George W. Bush, and on the recommendation of Governor Bill Owens. Patriotic Americans, these board members serve their country by volunteering their time to assist the government in selecting men suitable for military service in the event of a draft. If a draft commences, these citizens would decide who would receive deferments, postponements, or exemption from military service based on the individual registrant's circumstances and beliefs.

The Selective Service System is America's defense manpower "insurance policy" in a still dangerous and uncertain world. The service performed by a Selective Service Board Member provides a vital link between the community and today's military. His hard work helps guarantee claims filed by young men for deferments and exemptions will receive fair and equitable consideration if a future crisis requires reinstatement of a draft.

Congratulations to these dedicated volunteers on their appointments. I urge the House

to join me in extending its thanks to the three men for their commitment to their country.

#### THE LAND OF THE PLENTY

##### HON. CONSTANCE A. MORELLA

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 14, 2002

Mrs. MORELLA. Mr. Speaker, those of you who were with us last evening recall that I mentioned that this month is the two-year anniversary of the report that came out called "The Land of Plenty." This was a report of the Congressional Commission on Advancement of Women, Minorities, and Persons with Disabilities in Science Engineering and Technology Development. It is legislation that I introduced a number of years ago, and like so much of what we know, you have to be tenacious and diligent and patient and persevere. The legislation established a commission that looked comprehensively at the challenge of under-representation in America's science and engineering workforce and the educational pathway that feeds into it. The commission called for the establishment of a public/private partnership to take America into acting to redress the stunning imbalance in America's technical talent pool. In their report to Congress, BEST presented their findings on September 26, 2002 at 8:15 a.m. in the Cannon Caucus Room, 345 Cannon House Office Building, Washington, D.C., Representatives CONNIE MORELLA and EDDIE BERNICE JOHNSON, BEST National Leadership Council Co-Chairs, presiding. (Following are edited comments. The full testimony is available at [www.bestworkforce.org](http://www.bestworkforce.org).)

#### BUILDING ENGINEERING AND SCIENCE TALENT

##### BLUE RIBBON PANELS, INTERIM PROGRESS

##### REPORT TO CONGRESS

September 26, 2002

Present: CONSTANCE A. MORELLA, (R-MD) National Leadership Council Co-Chair; EDDIE BERNICE JOHNSON, (D-TX) National Leadership Council Co-Chair, Allan Alson, superintendent, Evanston Township High School; Dan Arvizu, senior vice president, CH2M Hill; Earnestine R. Baker, Meyerhoff Program UMBC; Alfred Berkeley, vice chair, NASDAQ Stock Market, Inc.; Rita Colwell, director, National Science Foundation; Cinda-Sue Davis, director, WISE, University of Michigan; Marye Anne Fox, chancellor, North Carolina State University; Eugene Garcia, professor, Arizona State University; Shirley Malcom, head, Education Directorate, American Association for the Advancement of Science; Willie Pearson, Jr., professor, Georgia Institute of Technology; Anne Petersen, senior program director, W.K. Kellogg Foundation; Paula Rayman, professor, University of Massachusetts; Claibourne Smith, president, Delaware Foundation for Science and Math Education; Richard Tapia, professor, Rice University; Deborah Wince-Smith, president, Council on Competitiveness; also present, John Yochelson, BEST, testimony into RECORD: Shirley Ann Jackson, president, Rensselaer Polytechnic Institute.

##### PROCEEDINGS

MORELLA: Women, African-Americans, Hispanics, Native Americans, persons with disabilities make up two-thirds of our workforce but they hold only one-fourth of the jobs in science, engineering, and technology. We perceive this really as a vulnerability that threatens the living standards of all

Americans. BEST is the partnership recommended by the congressional commission. Since incorporating one year ago, BEST has assembled an extraordinary array of talent, talent to assess what's working across the whole continuum of workforce development, pre K-12, higher education in the workforce. These panels will report their findings and recommendations next spring. The benchmarks they identify and the insights they develop into what works, why it works, under what conditions it works, is going to be of very great interest to Congress and to the nation. BEST's national assessment will provide a foundation for action both at the national level as well as in communities across the country. Now the purpose of today's progress report is to let policymakers know how the work of BEST is going; and first, we're going to get a perspective on the framing of a national action agenda to meet the challenge of under-representations, and then we're going to hear from leaders involved in BEST's assessments of the workplace, higher education and pre K-12. The progress report will wrap up with a discussion of BEST's plans to spur action in the field through community engagement. I have the honor of chairing this segment and EDDIE BERNICE JOHNSON will lead the workforce discussion and then I'll return to moderate the other segments.

TESTIMONY OF SHIRLEY ANN JACKSON, PRESIDENT, RENSSELAER POLYTECHNIC INSTITUTE AS READ IN HER ABSENCE BY ANNE PETERSEN, SENIOR VICE PRESIDENT, THE KELLOGG FOUNDATION

PETERSEN: Thank you. It's a great privilege this morning to be stepping in for Dr. Shirley Ann Jackson. When Dr. Jackson was chair of the U.S. Nuclear Regulatory Commission, she instituted policies for that agency that were based on the assessment of risk to the nation's nuclear power plants and vulnerability to that risk. The process is termed probabilistic risk assessment. Looking squarely at the vulnerability to risk determines clearly what action must be taken to reduce the risk of a particular threat. This is what BEST is doing. The work that BEST has done this past year has revealed that the United States faces serious risk of losing its economic preeminence, security, and its well-being as a nation without peer. That risk is embedded in the fact that while there is a growing need for scientists, engineers and other technologically skilled workers, the United States is simply not producing enough of them. That leaves the United States reliant upon scientists and engineers from other nations, a situation that bears its own inherent risk and curtailments as we know. Most of the numbers are included in the BEST paper, "The Quiet Crisis" which we present to you today, and I understand you have the series of charts as well \* \* \*

TESTIMONY OF RITA COLWELL, DIRECTOR, NATIONAL SCIENCE FOUNDATION

COLWELL: Thank you. It is an honor to be part of today's panel on building the U.S. science, engineering and technology workforce by fully developing the nation's diverse human resources. The United States has become increasingly diverse in recent decades and will move steadily in the direction of greater diversity in the future. The Bureau of Labor Statistics projects, for the decade 1998-2008, that the general labor force growth rates of minorities will more than triple the overall growth rate. But, we're not making comparable progress in changing the composition of the science and engineering workforce. It looks the same as it has for generations. We need the talent of every worker in order to keep our nation competitive and prosperous now and in the future.

And in the post-9/11 world, we need to also focus more of our talent on homeland security. We live in a unique time in which every citizen must "count" for opportunities and must be "counted" for contributions to our society's well being. The well being of individuals and of the nation will depend on knowledge and skills in science, engineering and technology. How well we prepare our human resource in these areas will determine how well we are prepared as a nation in this new century \* \* \*

TESTIMONY OF ALFRED BERKELEY, VICE-CHAIRMAN, NASDAQ STOCK MARKET, INC.

MR. BERKELEY: Thank you, Chair MORELLA. I thank you for your persistence. I think persistence is a valuable, valuable attribute. We will not win this problem without staying focused and persistent. You might ask what does the stock market have to do with the education business? I will tell you: a constant theme of my conversations with the chief executive officers of the largest technology companies in the country both in information technology and biotech, is where are they going to get enough technically trained workers and that handful of brilliant scientists that make the difference in breakthroughs? I think that this audience should know that the technology community has been shaken to its foundation by the loss of U.S. supremacy in supercomputing. Japan now has supercomputers 30 times more powerful than ours having followed a technology path that we abandoned about ten years ago \* \* \* My goal this morning was to affirm to you that the business community is firmly interested in this endeavor and that we can bring substantial resources to bear on research-based solutions that are working and are proven to work \* \* \*

TESTIMONY OF WILLIE PEARSON, JR., GEORGIA INSTITUTE OF TECHNOLOGY

PEARSON: Now I will briefly discuss the objectives of the higher education panel. First, we wanted to have a comprehensive examination of the challenge of increasing both the quantity and quality of university graduates from under-represented groups in science, engineering and technology. Our second goal was to identify and critically analyze exemplars whose design principles merit adaptation and replication across the country. The third was to further develop policy recommendations discussed in "The Quiet Crisis" paper. Because higher education provides a strategic bridge between pre K-12 and the workplace, the panel has focused on measurable outcomes reinforced by the earlier discussions. As you can see, at each segment beyond the high school level the science and engineering talent gets smaller and smaller for the whole population in particular but especially for African Americans, Hispanics, and Native Americans \* \* \*

TESTIMONY OF MARYE ANNE FOX, CHANCELLOR, NORTH CAROLINA STATE UNIVERSITY

FOX: You know it's been over 50 years in which there's been an explicit compact between the research universities and the government of the United States that research universities would provide leadership in developing a workforce that is appropriate for the economic growth of this nation. That is research universities have pledge to create knowledge, to provide innovative leaders for developing the frontiers of science, for leading economic recovery and for providing a workforce that can sustain and create jobs and wealth for the United States. But over those 50 years, we've not had full participation as we've heard in the earlier discussions. If we go to K-12 to look at the roots for this difference in participation level, we're well aware of the digital divide which

is a challenge. But to think of the digital divide as something that is related only to computer availability minimizes the real problem \* \* \*

TESTIMONY OF RICHARD TAPIA, PROFESSOR, RICE UNIVERSITY

TAPIA: Thank you. My topic is university program leadership, producing women and under-represented minorities in science and engineering programs at research universities. I'll start with point one, everything i.e. success or failure depends on leadership, strong, forceful, respected, effective leadership. The second point, administration from top to bottom must support the activity. This is absolutely necessary to promote buy-in at the faculty level. If the administration doesn't support, then the faculty has a way out, extremely important to have the administration support but they don't do the activity, they support it. Success in promoting underrepresented minorities and women in science, engineering and mathematics, requires a champion. The champion must be a respected member of the faculty. The champion will serve as an advocate. We can't continue to have a two-tier or fragment our system. Minority-serving institutions do good jobs. Ph.D. producing at minority-serving institutions will not produce the scientific leaders of the community or the professional organizations. The outreach activity is not rewarded at research universities. Often this activity will jeopardize the university career of a young faculty member \* \* \*

TESTIMONY OF CINDA-SUE DAVIS, DIRECTOR, WOMEN IN SCIENCE AND ENGINEERING, UNIVERSITY OF MICHIGAN

DAVIS: Good morning. The University of Michigan Women in Science and Engineering Residence Program, called the WISE-RP, is a living-learning community for 120 first year women and 33 sophomore or junior level women interested in science, mathematics, and engineering. The primary purpose of the WISE-RP is to provide academic and personal support to undergraduate women, including historically underrepresented minority women, by providing an academically and socially supportive community. WISE-RP provides contiguous living arrangements in a mid-size coed residence hall of 500 students \* \* \*

TESTIMONY OF EARNESTINE BAKER, MEYERHOFF SCHOLARSHIP PROGRAM, UNIVERSITY OF MARYLAND, BALTIMORE CAMPUS

BAKER: The Meyerhoff Scholarship Program is designed to address the particular needs of African American students in science, mathematics, and engineering. Key components of the Program include: an in-depth screening process that seeks students genuinely committed to a postgraduate research-based degree and career; a comprehensive four-year scholarship package; a mandatory academic Summer Bridge program for incoming freshmen; study groups; community living and regular "Meyerhoff Family" Meetings; personalized advising and counseling; tutoring summer research internships with companies, federal agencies, and other research universities; mentoring; faculty involvement; administrative involvement; family involvement; community service; and extensive program evaluation. Eighty-eight percent of participants are pursuing post-graduate degrees primarily doctorates in science, mathematics, and engineering or medical/ doctorate degrees, at institutions ranging from Harvard, Stanford, Berkeley, Yale, Duke, Johns Hopkins and Oxford \* \* \*

TESTIMONY OF DAN ARVIZU, SENIOR VICE PRESIDENT, CH2M HILL

ARVIZU: It is established we have a serious problem. The questions before us are, what

can be done about it? and, who should do it? Our Panel's work addresses these questions from the perspective of the workplace. Let me start by stating the two core objectives of the Panel. Number one, we are to identify and distill the success factors and best practices that create a more inclusive workplace spanning the private sector, including industry and academe, as well as, government. This distillation will form the foundational asset base that can be accessed by BEST's proposed test-bed community programs as they get underway. Number two, we are to develop an action agenda that moves the country forward toward the adoption of these best practices. Although the work of the panel is not yet complete, I can report on some of our initial findings on success factors and provide some of our early thinking as we move into the recommendations phase of our work. First, and perhaps most important, is what we will call "transformational" leadership. Leaders who believe in and value diversity as a business imperative invest time and effort to change the future of their organizations. They drive this change deep into the culture and management of the organization and do not simply espouse it only in the top layer of management. Second, a commitment to skills development that translates diversity into enhanced performance is also an important success factor. Third, the development of enabling programs and policies to encourage and support a diverse workplace is extremely important \* \* \*

TESTIMONY OF PAULA RAYMAN, PROFESSOR,  
UNIVERSITY OF MASSACHUSETTS

RAYMAN: To build upon the rationale for diversity presented by my honored colleagues Dan Arvizu, and Dr. Shirley Jackson I will address the crisis we are facing in our nation's science and technology workplaces. We face a work world in the midst of an enormous change. Nothing is the same as it was 50 years ago or even 20 years ago. And more dramatic changes are anticipated over the coming decades. We face a crisis on three dimensions: Where will the new science jobs be? Who will fill the jobs? How the work will get done or, what is the changing nature of work? It is important to note that while we compete for science and technology workers within the context of a global economy, the diversity of our own nation's labor force provides a comparative advantage. Diversity is a key building block of economic competitiveness and scientific discovery and innovation. In addition to the change in skill sets, and demographics, the nature of work itself is undergoing significant transformation brought about by the changing business climate and technological advances. These changes include: companies organized so labor is a variable, not a fixed cost; a workforce built on the premise of teams that can be easily assembled and disassembled; a nimble workforce whereby workers hopscotch from job to job, even career to career, carrying their set of skills and abilities on their backs and desperately needing new policies in portability in health insurance, pension plans and other benefits \* \* \*

TESTIMONY OF CLAIBOURNE SMITH, PRESIDENT,  
DELAWARE FOUNDATION FOR SCIENCE AND  
MATH EDUCATION

SMITH: I believe business/industry/government and the great educational institutions of this country must take the lead in defining the strategies necessary to maintain our leadership position in the world. From the intense discussions of our workforce panel, we are entertaining a two-pronged agenda to: Drive change within organizations and to drive change externally among industry, academe, and government as employers to promote a diverse workforce. Let's look at an example that comes to mind which illus-

trates an approach utilized by my former colleagues at duPont. We established a set of principles that are still effective in increasing our company's diversity internally. These principles are: (1) Leadership must come from the top echelons of the organization. Managers must "walk the talk." An institution must have highly visible, fully involved, visionary leaders in order to make valuing diversity efforts a success. (2) Accountability for personal and organizational behavior must exist. A system must be in place to motivate behavior change and that means diversity performance must be linked to compensation and advancement. (3) Valuing diversity must be perceived as a critical part to the success of the organization i.e., a business imperative. (4) Education around this issue must not only raise awareness, but more importantly, develop skills needed to work in and manage a multicultural organization. (5) Finally, effective mentoring programs for women and underrepresented minorities must be developed and implemented \* \* \*

TESTIMONY OF SHIRLEY MALCOM, HEAD, EDUCATION DIRECTORATE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

MALCOM: When President Bush and the nation's governors met in Charlottesville in 1989, they established ambitious national education goals. These goals were affirmed and expanded upon by the Congress of the United States. The goals included that we would raise achievement levels in all academic fields and, even more ambitiously, that we would be first in the world in mathematics and science achievement by the year 2000. When in 1995, the results were announced from the Third International Mathematics and Science Study (TIMSS), there was good news and bad news about science and mathematics achievement of U.S. students when compared with the performance of students from other countries in the world. The results of TIMSS showed U.S. fourth grade students comparing quite favorably in their performance on tests of science, both scoring far above average and among the top tier of countries. Performance by fourth graders in mathematics was about at the average compared with other countries involved in TIMSS. When fourth grade students were tested in eighth grade in 1999, performance had fallen to the average levels in science and slipped in mathematics as well. The performance of 12th graders in science and mathematics was near the bottom. This underperformance by U.S. students was true even for our brightest and best performing students, such as those taking advanced placement courses in physics. The current structures provide neither equal chances nor a level playing field, and it is these circumstances that we must remedy if we are to maximally utilize the talents of all of our young people. These must include: Vigorous support for systemic reform efforts to improve the quality of the curriculum, teaching and support within our schools, with assurance that opportunities for study of science and mathematics will be extended to all students; specific interventions that allow students to explore STEM fields, such as through summer camps, research apprenticeships, after school science clubs, museum activities and media-reinforced learning opportunities; outreach to parents and communities to help them organize activities at home and in the community to support science, technology, engineering, and mathematics aspirations, to build demand for school reform, and to increase community-based opportunities for learning beyond school \* \* \*

TESTIMONY OF EUGENE GARCIA, PROFESSOR,  
ARIZONA STATE UNIVERSITY

GARCIA: Clearly, in this endeavor, we know the pathway to science and technology of the future begins in the Pre K-12 sector, if not earlier. So our efforts at BEST are to look very carefully at the beginning pathway or the beginning steps into science, technology and mathematics. Our students depend heavily on the public school system and other alternatives to move forward to those futures that we believe should be available to all children in this country. BEST has a particular way in which we are striving to open the doors to the world of science, technology and mathematics for all children. First, the membership of BEST feels that we need to understand what is now working for students in this arena—particularly with our target populations in mind. BEST is attending to the strict notion that we need to understand empirically "what works". We need to have good research-based information, solid evidence, and clear knowledge about which program make a difference for whom, how they make a difference, and what are the actual results. The reason we are so attached to this notion of having solid evidence for what works is that if anyone needs to move forward and invest resources, whether they be in the public or in the private sector, we must be able to inform them as to whether their investments will pay off. It is only fair to those individuals who implement programs or systemic efforts to change systems in response to this need, to assure them that all children will be served by their interventions and/or changes. Thus, we need the absolute superior evidence. Therefore, BEST, in lending the text to the context that Shirley has presented, needs to understand in this area of urgency, what BEST programs, and what BEST systemic changes really do work \* \* \*

TESTIMONY OF ALLAN ALSON, SUPERINTENDENT,  
EVANSTON TOWNSHIP HIGH SCHOOL

ALSON: I am in my eleventh year as Superintendent of Evanston Township High School in Evanston, Illinois. This large comprehensive high school with a national reputation for excellence has 3200 students and is quite diverse—racially, socioeconomically and linguistically. Student achievement, despite impressive gains, continues to reveal racial and class achievement disparities. Yet, we have made significant strides, for example, in boosting female and minority enrollment in Calculus and Advanced Placement Science courses. A little over three years ago I founded an organization known as the Minority Student Achievement Network. We are 15 urban-suburban districts devoted to discovering, developing and implementing strategies to eliminate the racial achievement gap. Our strategies include conferences where we learn directly from students and teachers, and research where teachers are directly engaged in studies with university professors. My professional experience has revealed the extensive gap in education between research and practice. Quite frankly, it is the rare exception when districts or schools are able to successfully bridge that gap. Practitioners generally receive very little training in the interpretation or use of research findings. In fact, research methodology that meets the highest standards of reliability and validity are quite often written in language that is unfamiliar to the teacher or administrator. Our worlds usually do not overlap sufficiently for us to make timely use of significant findings. Simply put, while it would be far preferable to examine our practice from the vantage of current research, the barriers of time, language and politics often interfere \* \* \*

TESTIMONY OF ANNE PETERSEN, SENIOR VICE  
PRESIDENT, KELLOGG FOUNDATION

PETERSEN: Thank you for this opportunity to speak with you on a topic about which I am most passionate—not only because I am a scientist but also because I have seen individuals, families and communities transformed by opportunity that for some, has been unavailable. The opportunity to gain an education and pursue a career in engineering or the sciences is still precious in our society. Today, more than ever, we must support the interests in science and technology for all with talent and energy, and especially those who have been underrepresented. I'm here today as a scientist who is senior vice president for programs of the W.K. Kellogg Foundation. In this role I've witnessed the kind of creative and energetic work that can open doors of opportunity for all—girls and boys, African Americans, Hispanics, and Native Americans, and those who are physically challenged. Engagement—real engagement—in which institutions of higher education and communities form lasting relationships that influence, shape, and promote success in both spheres is rare. More often we see evidence of unilateral outreach from colleges and universities rather than partnerships based on true mutual benefit mutual respect, and mutual accountability \* \* \*

TESTIMONY OF DEBORAH WINCE-SMITH,  
PRESIDENT, COUNCIL ON COMPETITIVENESS

WINCE-SMITH: In 1986 the United States was facing one of its most dire economic challenges since the end of World War II: the country slid from being the world's largest creditor to its largest debtor; its position as a global leader in technology and innovation was declining and American industries were losing market share to international competitors. We know that long-term U.S. productivity growth and a subsequent rising standard of living depends on our ability to increase U.S. innovative capacity. This top tier policy issue was the focus of two national innovation summits hosted by Council that convened the nation's top business, government, academic and labor leaders. A key impediment to increasing innovation is our workforce, which comes as no surprise to anyone in this room. Yet, even as demand for science and engineering talent grows, the number of science and technology degrees at the undergraduate and graduate degrees has remained flat or declined in every field outside the life sciences. Boosting the national talent pool in science and engineering requires that the S&E workforce mirror the population at large; we must be able to engage more women and minorities in math and science to sustain our innovation economy. The Council has acted on its commitment to raise the standard of living by initiating programs that encourage excellence in math and science and diversity in the science and technology pipelines—namely getsarter.org and BEST \* \* \*

PAT SCOTT RECEIVES MISSOURI  
COMMUNITY BETTERMENT PRO-  
GRAM LEADERSHIP AWARD

**HON. IKE SKELTON**

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 14, 2002*

Mr. SKELTON. Mr. Speaker, it has come to my attention that Lexington, MO, native Pat Scott received an Adult Leadership award at the Missouri Community Betterment (MCB) Conference awards banquet September 28, 2002. Adult Leadership awards are presented

to 10 outstanding leaders committed to community improvement.

Since 1964, Missourians who have dedicated their lives to community improvement have received acclaim through the MCB Program. This initiative, which is meant to spur economic growth and improve quality of life, has worked to empower communities with strengths that often go unnoticed.

Pat Scott, through her tireless community efforts, continues to make her friends, family and state very proud. I am certain that my colleagues will join me in wishing Pat all the best.

**HONORING CONGRESSMAN BOB  
CLEMENT**

**HON. JOHN S. TANNER**

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 14, 2002*

Mr. TANNER. Mr. Speaker, I would like to take this opportunity to honor our colleague, an outstanding statesman and my friend, Congressman BOB CLEMENT. I have known BOB for more than 30 years, having gone to school with him at the University of Tennessee.

He served his country with distinction in the United States Army and the Tennessee Air National Guard. He previously held positions as president of Cumberland University and TVA board director before being elected to represent Tennesseans as a member of the United States Congress.

BOB is a man of energy, intelligence and vision. I am certain that as he prepares to leave the House of Representatives, BOB will continue to serve his state and nation in a constructive capacity.

**THE LEGACY OF MARLA BENNETT**

**HON. BOB FILNER**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 14, 2002*

Mr. FILNER. Mr. Speaker, in a region that has been racked with violence and acts of terror, the vicious bombing that took place on July 31, 2002 at Hebrew University stands out as a particularly heinous crime. This is a university that prides itself on its diversity, especially its ability to integrate students and faculty regardless of their ethnic or religious background. It is the oldest university in Israel and has established itself as one of the outstanding universities in the world, one that has gained renown for the quality of its students, teachers and researchers.

I feel compelled to comment on this attack for many reasons, not the least of which is that it hit my community, my Congressional district and my friends so personally. The bomb that was detonated in Hebrew University's Frank Sinatra International Student Center cafeteria killed nine young people, including five Americans. Over eighty were injured.

Marla Bennett, of San Diego, California, was one of the Americans killed in this senseless assault. Marla was only 24 when her life was taken. She had graduated in 2000 at the top of her class with a B.A. in Political Science from the University of California at Berkeley. At the time of her death, she was studying for

her M.A. in Jewish Education at Hebrew University's Rothberg International School's Division of Graduate Studies. She was also jointly enrolled at the Pardes Institute for Jewish Studies. Her ambition was to be a teacher.

Marla was not new to Israel, nor even to the Hebrew University. She spent her junior year in college attending the Rothberg International School's One Year Program.

She had lived in Israel for a year, during which time she sent home frequent letters brimming with idealism, especially in her ardent belief in Israeli-Palestinian peace. Last May, she wrote that "At least if I am here I can take an active role in attempting to put back together all that has broken. I can volunteer in the homes of Israelis affected by terrorism, I can put food in collection baskets for Palestinian families."

Bennett, whose exams were over, had a flight back to San Diego that was scheduled to leave only hours after the time of the attack.

Marla Bennett symbolized the goals and objectives of the university she grew to love. She symbolized the striving for academic excellence as well as the search for cooperation and peace that has typified this university since it opened its doors in the mid-1920's.

The University's President, Menachem Magidor, summarized this when he wrote in a letter to the New York Times that this was "an attack on understanding, tolerance and the quest for peace. [It] is a crime not only against Israel or the Jewish people, it is a crime against the free and enlightened world."

In the wake of this tragedy, President Magidor asked "whether it still makes sense to strive for a peaceful society based on reason and understanding." He concluded that "the answer came to me clearly, and it is summarized by the Hebrew word 'davka'—'despite everything.' We must not let them kill our drive of peace."

In this spirit, it is important to stress that Hebrew University is continuing its fine academic traditions. Its researchers and scientists are continuing their cutting edge work on projects that are designed to benefit all peoples. It is not surprising that Hebrew University's scientists apply for and receive so many grants from American government agencies including USAID, NIST, NIH and DARPA. Many of these projects are done in cooperation with American universities and research centers.

Other Members of Congress have complimented the high quality of research done at Hebrew University and I join in their commendations.

Rather than go through a long litany of all of these projects, especially those that have an Israeli, Palestinian and American component, it might be useful to mention just one as typical of the ethos of this special university.

The Kuvim Center for the Study of Infectious and Tropical Diseases functions within the University's Medical School, which is a world class institution established over 75 years ago. The Kuvim Center has been a leader in infectious disease and parasitological research for over 30 years. Its researchers and physicians have published extensively in the professional literature and it has trained many active scientists in the field.

For a number of years, the Kuvim Center has collaborated with Al-Quds University Medical School on a variety of scientific and medical projects. Al-Quds, the pre-eminent university in the West Bank, is located in Abudies,
