STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. TORRICELLI (for himself and Mr. CLELAND):

S. 2593. A bill to protect diverse and structurally complex areas of the seabed in the United States exclusive economic zone by establishing a maximum diameter size limit on rockhopper, roller, and all other ground gear used on bottom trawls; to the Committee on

Commerce, Science, and Transportation.

Mr. TORRICELLI. Mr. President, our oceans are one of America's most precious and valuable resources. For hundreds of millions of people, our coastal waters are a place of relaxation, recreation, and rejuvenation. The oceans are also a tremendous supply of fish and other seafood, many caught by commercial fishers and others by recreational sportsmen and hobbyists.

There is a growing concern, however, about protecting ocean habitat from the damaging effects of some types of commercial fishing gear. The manner in which these concerns are presently being handled by the National Marine Fishery Service has led to a great deal of confusion and litigation. Therefore, in an effort to protect important ocean substrates that are recognized as critical areas of marine habitat, I, with my colleague, Senator MAX CLELAND of Georgia, am introducing a bill today that takes a much more direct approach.

I have received many letters from constituents in my home State of New Jersey who are concerned about the use of "rock hopper" nets in the New York Bight area and elsewhere. They have chronicled the negative effects of this gear and the damage they see occurring as a result of its use. In response to their concerns I feel compelled to introduce in the Senate companion legislation to Congressman JOEL HEFLEY's Sea Bed Protection Act of 2002, which he introduced recently in the House. This bill will amend the Magnuson-Stevens Fishery Conservation Act by reining in the use of this damaging fishing gear.

Rock hopper nets are used in hard-bottom areas where naturally occurring vertical structures prevents the use of more conventional trawl gear. The rock hopper incorporates a series of rollers that act like the drum on the front of a steamroller. While operating, the rollers prevent the net from becoming entangled by guiding it up and over obstructions. While it is effective at catching fish, it is equally effective at damaging the sea floor where it is used.

It has been clearly documented that rock hopper nets kill clinging organisms and living corals, the very things that attracted the fish they were designed to catch in the first place. The heavy rollers and sweeps that guide the nets crush marine life and can even flatten bottom topography.

When a specific piece of equipment is demonstrated to be harmful to marine life or the marine environment, it is common sense to stop using it and find a more ecosystem-friendly method of harvesting fish for the market. It is folly to allow the continued use of fishing gear that has an uncontrollable level of bycatch of that is damaging to the very habitat necessary for the fish it catches to grow and reproduce. Rock hopper nets are clearly a threat to fragile habitats that are particularly important to a healthy marine ecosystem. The Sea Bed Protection Act
