

percent in the last decade. In New York City itself, three of the top five immigrant groups are from the Caribbean: Dominican Republic (1st), Jamaica (3rd), Guyana (4th).

Though Caribbean New Yorkers may speak with different accents and languages, and have cultural practices unique to each, they all share a desire to succeed in this country. Their unbreakable work ethic and entrepreneurial spirit has provided a cornerstone for our city's growth and success for more than half a century.

This entrepreneurial spirit can be found throughout our city. One example is the story of Lowell Hawthorne, and the "Golden Krust" food franchise. The company, which specializes in making Jamaican patties, started 15 years ago in a small bakery in the Bronx, and has since expanded into a chain of 80 franchises throughout the New York area. The company now has plans to expand across the East Coast, before going nationwide. If Golden Krust stays with their plan the Jamaican patty may one day become as omnipresent in America as the hamburger, pizza, or taco. The entrepreneurial spirit of this community will only grow, as they become increasingly integrated into the socio-economic fabric of our city.

Another factor which binds the Caribbean community is their common concern for their home nations. The Caribbean continues to face many critical issues related to natural disasters, economic development, and HIV/AIDS. The U.S. Government has sought to assist in addressing this issue, but more is needed.

Several hurricanes and tropical storms hit nations across the Caribbean in the 2004 hurricane season causing billions of dollars in damage, and killing thousands.

I was joined by other members of the Congressional Black Caucus in urging the Bush Administration and Congress to maximize their Caribbean Hurricane relief effort. These disasters caused long-term damage to the agricultural and tourism sectors of the region, so it will continue to require our assistance moving forward. In addition, recent reports by U.S. government sources have predicted that the 2005 Hurricane season will likely be worse than 2004, so the U.S. must stand ready to adequately assist our neighbors in what promises to be a trying hurricane season.

We must also closely examine how our policies might hinder the region's recovery. One such hindrance is the Bush Administration's proposed Western Hemisphere Travel Initiative. The initiative, which will require all travelers to and from the Caribbean, and Bermuda to have a passport to enter or re-enter the United States, is being imposed on the Caribbean before other regions in the Hemisphere.

With a large percentage of U.S. visitors to the Caribbean not utilizing a passport when they travel, it can be expected that the new requirements will have a negative impact on Caribbean tourism, as many U.S. tourists may choose vacation options that entail less hassle.

In addition, the U.S. must continue to increase non-emergency assistance. Though U.S. assistance to the Caribbean has increased in recent years, it still lags behind the amounts given to the Caribbean during the 1980's. The Cold War is over, but the Caribbean still faces many threats to its development and security.

The growing impact of narco-trafficking is increasingly evident, and will continue unless

the U.S. continues to help the Caribbean in its development objectives. Equally important is the ability of the Caribbean to keep its borders secure in the post 9-11 environment. With these countries burdened by slow economic development, and annual crises arising from natural disasters, they will be increasingly hard pressed to invest in the border security measures which hold implications for them and United States.

The United States must also continue to help the Caribbean wage the war against HIV/AIDS, as the epidemic in the region continues to grow. Infection rates are among the highest outside of sub-Saharan Africa, and an estimated 430,000 people in the region are living with HIV. Many experts have predicted that this will significantly retard the economic and political growth of the region if it continues on its present course. Overall U.S. HIV assistance to the Caribbean is estimated at \$53 million for 2005, but this is largely due to the two Caribbean nations that are covered by the President's Emergency Plan for AIDS Relief (PEPFAR).

As such, more countries in the region, besides Haiti and Guyana, should be placed under the PEPFAR program. There has been activity in Congress to bring about this result, but legislation has yet been approved.

Again, I thank the organizers of the Caribbean NYC event; it not only illuminated the great strides that have been taken by the Caribbean Community in New York, but also the need for the U.S. to remain committed to assisting the Caribbean region—a region near to our shores and to our hearts.

HONORING AN INNOVATIVE COMPANY—HEMCON

HON. DAVID WU

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. WU. Mr. Speaker, I rise today to honor an innovative company in my Congressional district—HemCon.

Today, HemCon is being recognized by the U.S. Army Research, Development and Engineering Command for developing one of the 2004 "Top 10 Greatest Inventions." This is a prestigious accolade, and HemCon is deserving of this award.

Hemcon has developed a revolutionary bandage that has the potential to change medicine as we know it. More importantly, it has the potential to save countless lives. According to military physicians, 90 percent of soldiers killed in war die before they reach a medical facility, most often because of significant blood loss. Yet it is this exact situation that the military considers the main preventable cause of death in military action.

The HemCon bandage is revolutionary in that it can stop severe hemorrhaging based on the use of a natural product called chitosan, a substance found in the shells of shrimp, crab, and other crustaceans. This chitosan material has the ability to bond with red blood cells and form a clot that stops bleeding. In October 2002, based on the strength of this product, the HemCon Bandage was ushered through the FDA and it is the second fastest approval of a medical device granted by the Agency. It was approved in only 48 hours.

Today, the use of the HemCon Bandage is considered standard treatment for severe hemorrhaging, and it is being used by the military to save the lives of our brave men and women in Afghanistan and Iraq. It is also being used by first responders in emergency medical situations to control blood loss.

Jonathan Swift wrote, "Discovery consists of seeing what everybody has seen and thinking what nobody else has thought." Dr. Kenton Gregory and Dr. Bill Wiesmann are a testament to this statement. Through their research, they have taken a natural product that had been overlooked for too long and used it in a revolutionary new way. Because of their efforts, lives have already been saved.

I applaud, Dr. Gregory, Dr. Wiesmann, and the staff of HemCon for their work, and I congratulate them for this very deserving award.

CONGRATULATING THE 2005 NCAA MEN'S DIVISION I NATIONAL LACROSSE CHAMPIONS

HON. BENJAMIN L. CARDIN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. CARDIN. Mr. Speaker, I rise today to invite my colleagues to join me in congratulating the 2005 NCAA Men's Division I National Lacrosse Champions, the Johns Hopkins University Bluejays.

Johns Hopkins University is the cradle of college lacrosse. Their faculty, fans, alumni, students, coaches and players have waited since 1987 to regain their position as the premier lacrosse program in the country. For three out of the last four years, the Hopkins Bluejays have made it to the final four, but the championship has remained just out of reach.

Under the leadership of Coach Dave Pietramala, seniors on the team played all four years never losing a game on Homewood Field at Hopkins, and this year had a perfect season, 16-0.

Coach Pietramala also has the distinction of being the only coach to have won a national championship as a player and a coach. Coach Pietramala was a four time All-American defensive player on Hopkins' 1987 championship team.

Six members of the team are my constituents: Joe Benson, Benson Erwin, Kyle Harrison, Kevin Huntley, Nolan Matthews and Matt Pinto. All deserve congratulations for their contributions to the team. Kevin Huntley and Nolan Matthews, sons of former Hopkins' All-Americans and Joe Benson, brother of a Hopkins All-American will be returning to Homewood Field to carry on the winning tradition. Also returning will be Jesse Schwartzman, who was awarded most valuable player of the NCAA tournament when in the championship game his skill as goal keeper kept Hopkins in the game and eliminated threats by the Duke Blue Devils.

This year's graduates Kyle Harrison and Benson Erwin are best friends, great players and outstanding role models. This year, after being named a Tewaaron Award finalist for the past two years, Kyle, a three time All-American, won the Award given to the most outstanding male varsity collegiate lacrosse player in the nation. Benson was the unsung hero of the team. His work ethic and reliability

made him the man to turn to when hope seemed lost in the final seconds of the semifinal game. A young man of few words, Benson leads by example.

I ask my colleagues to join me in congratulating the Johns Hopkins University Men's 2005 Lacrosse Team for their outstanding achievements as players and students. I ask you to join in saying congratulations and "Go Blue."

PERSONAL EXPLANATION

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. HYDE. Mr. Speaker, on the evening of June 7, 2005, I was absent for several votes and regret missing them. Had I been present, I would have voted: Vote No. 228, Historical significance of Mexican holiday Cinco de Mayo, "yea;" Vote No. 229, Manifestation of anti-Semitism by UN member states, "yea."

HONORING PARTICIPANTS OF NATIONAL HISTORY DAY

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. UDALL of Colorado. Mr. Speaker, I rise today to honor the participants of the 2005 National History Day who will be in Washington DC June 16–19th. Specifically I would like to congratulate Filip Maksimovic, Alex Grossman, Mary Kate Quinn, Andrew Hastie, Megan Duffy, Natasha Steinmann, Connie Ge, Anika Megan McEwan, and all students from Colorado who competed in Colorado History Day and qualified to compete on the national level.

Students from grade 6 through 12 have been participating in National History Day for the past 25 years. In Colorado 4000 students produced dramatic performances, museum-style exhibits, multimedia documentaries or research papers all focusing on a central theme of Communication in History: The Key to Understanding. The program encourages students to take advantage of primary historical resources available to them. Students in this program learn how to analyze a variety of primary sources such as photographs, letters, diaries, magazines, maps, artifacts, sound recordings, and motion pictures. This significant academic exercise encourages intellectual growth while helping students to develop critical thinking and problem-solving skills that will help them manage and use information, now and in the future.

At the Colorado History Day State Competition on April 23, 2005, held at the University of Colorado at Boulder, 54 students qualified to represent Colorado at the National History Day competition at the University of Maryland, College Park. The projects from students in the 2nd Congressional District ranged from "Communication in Irish Step Dance," to "Communication through Hobo Code Signs during the Great Depression." These students represent excellence in their study of history and will be able to continue to utilize the skills

gained through their experience with National History Day into the future.

Mr. Speaker, I ask my colleagues to join me in commending Filip Maksimovic, Alex Grossman, Mary Kate Quinn, Andrew Hastie, Megan Duffy, Natasha Steinmann, Connie Ge, and Anika Megan McEwan for their achievements at the Colorado History Day and wish them good luck as they compete in the 2005 National History Day.

TRIBUTE TO ROCHE ON THE OCCASION OF THEIR 100TH ANNIVERSARY

HON. JAMES E. CLYBURN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. CLYBURN. Mr. Speaker, I rise today in honor of the 100th Anniversary of Roche, a true trailblazer in healthcare. Roche is a specialty care company employing over 10,000 people in the U.S. and 60,000 globally. I am pleased that Florence, South Carolina is home to Roche Carolina, Inc., which employs over 270 people, all of whom are dedicated to improving the quality of healthcare for millions of people,

For a century now, Roche has invested in advanced research and manufacturing techniques that have yielded breakthroughs in healthcare. Founded in Switzerland in 1896, Roche's roots in America are deep and strong, dating back to the opening of its New York office: in 1905. From its start in Manhattan, Roche has extended its reach to nine sites across the United States in South Carolina, New Jersey, Indiana, California and Colorado.

In Florence, the employees of Roche Carolina work in one of the most advanced pharmaceutical manufacturing facilities in the world. They produce a potent oral antiviral that is a promising weapon against the threat of pandemic influenza. In addition, it manufactures a novel oral medication for cancer patients—allowing them to be treated at home and greatly improving their quality of life. These are just two examples of their revolutionary therapies used to treat millions of people every day.

I also would like to applaud Roche Carolina for being such an active corporate citizen. In Florence, Roche Carolina has established a High Performance Partnership with Lester Elementary School through which their workers offer math tutoring to 4th grade students. Further, Roche Carolina has endowed a chemistry scholarship and initiated a student exchange program at Francis Marion University. These efforts help build the Florence community in ways that will resonate for years to come, and they set an example for us all.

I commend the people of Roche Carolina in Florence and Roche employees worldwide for their outstanding achievements, and wish them the very best on this special 100th Anniversary.

HONORING DEBORAH JIN AND LINDA CORDELL

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. UDALL of Colorado. Mr. Speaker, I rise today to recognize two women, Deborah Jin and Linda Cordell, from Boulder, Colorado, who were recently elected to the National Academy of Sciences.

Deborah Jin, a physicist at the National Institute of Standards and Technology and an associate adjunct professor in the Physics Department at the University of Colorado, is one of the youngest women elected to the National Academy of Sciences.

She came to Boulder as a postdoctoral student in 1995. In 2003 she won what is commonly called the "genius grant," a \$500,000 MacArthur Fellowship for her work with ultracold atoms. One of the three criteria for receiving this award is that the candidate show exceptional creativity. Dr. Jin's career is a testament to her creativity. In 2004, she and her team won an international race to create a fermionic condensate made from a tiny cluster of super-cold potassium atoms which is used to better understand super conductors.

Linda Cordell is the director of the University of Colorado Museum and a professor of archaeology at CU. Her research interests include the archaeology of Pueblo people in the southwest, specifically the agricultural and settlement strategies of ancestral Pueblo peoples of New Mexico. She also studies how large villages supported themselves in times of unpredictable precipitation.

Members of the National Academy of Sciences make up the most accomplished scientists in our country and election to the academy is one of the highest honors for any scientist. At a time when we are seeing fewer young people, particularly women, entering into the science disciplines, these scientists are taking their creativity and skill to inspire our youth.

Mr. Speaker, I ask my colleagues to join me in commending Deborah Jin and Linda Cordell for their achievements in science and offer congratulations on their new post as members of the National Academy of Sciences.

JERUSALEM DAY

HON. EDOLPHUS TOWNS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 2005

Mr. TOWNS. Mr. Speaker. I rise today to join the Jewish people in Jerusalem and throughout the world in celebration of Yom Yerushalayim, Jerusalem Day.

On June 7, 1967 the 28th of Iyar 5727, the Israel Defense Forces in the heat of the Six-Day War, unified the city of Jerusalem under Jewish control. At approximately 10 a.m. on that day, the earth shattering proclamation "The Temple Mount is ours, It is in our hands" reverberated in the hearts of Jews across the globe. The dream of once again being able to visit the Kotel, The Western Wall, and other previously inaccessible holy sites of Jerusalem, had become a reality. In the subsequent years to follow, Jewish people from
