

majority of Americans, who tell pollsters they back expanded funding of embryonic stem cell research.

During the Fourth of July recess, many Senate Republicans struggled with the question of whether the new legislation should be brought to the floor as a substitute for the House-passed bill or as a competing bill—and if both were to come up, then how to vote on each. At least a handful of senators have hinted in recent days that they may transfer their vote to the new bill, Hill sources said—among them Hatch, Johnny Isakson (R-Ga.) and Kay Bailey Hutchison (R-Tex.).

The issue will get its first formal airings at a Senate subcommittee hearing Tuesday and at a Hill media event on Wednesday at which pro-research celebrities Michael J. Fox and Dana Reeve, widow of “Superman” star Christopher Reeve, will call for an immediate loosening of Bush’s policy.

Some supporters of the research say they would be happy if both bills passed. But for some of the more ardent advocates of an immediate expansion of the Bush policy, Bartlett’s alternative legislation is a diversion.

“Don’t stop embryonic stem cell research now, hoping there will be some other way to do it in the future,” Senator Tom Harkin (D-Iowa) said in an interview. “These alternative methods of deriving stem cells—we don’t know whether they’ll work. The one thing we do know how to do is derive embryonic stem cells.”

The new techniques fall into two major categories. In one, a single cell is removed from a days-old embryo created for fertility purposes and coaxed to become a self-replicating colony of stem cells, leaving the remainder of the embryo to develop normally.

The technique shows great promise, according to researchers at Advanced Cell Technology Inc. in Worcester, Mass., who pioneered it. But critics have raised the possibility that individual cells removed from such young embryos may have the biological potential to become embryos themselves, which would mean their destruction or cultivation as colonies could still raise ethical issues.

Bush’s Council on Bioethics also expressed concerns recently that such a technique may subtly harm an embryo, even if it does not kill it.

“You may get a human being, but you may not get the same human being,” said William B. Hurlbut, a Stanford professor and a council member. “You might find that late in life, there are some strange differences between those people and others.”

Hurlbut is the leading proponent of a different approach, which he calls altered nuclear transfer, or ANT. It involves the creation of an embryo—or what Hurlbut says is something akin to an embryo—that lacks a gene necessary for the development of a placenta. Because a placenta is required for an embryo to implant in a woman’s womb, the altered embryo would be genetically incapable of becoming a fetus or a baby. For many, that would obviate ethical concerns about destroying it to get its stem cells.

Researchers have tried the technique in mice with some success, but its usefulness as a source of human stem cells remains hypothetical. Some, such as Weissman, think the difficulties inherent in making such a system work are being overlooked by Hurlbut, who is a physician but not a research scientist.

“I’ve been telling Bill, ‘Why don’t you go work in a lab this summer? Why not see how easy or hard it really is?’” said Weissman. He said he has no problem with the funding of such research as long as it does not interfere with increased funding for existing programs of embryo research.

Practical or not, ANT has gained a quickly widening circle of support. The Roman

Catholic archbishop of San Francisco, William J. Levada, has written a letter to Bush assuring the president of his support.

But other conservative leaders have mixed views on whether it makes sense to pursue the new alternative therapies or to focus single-mindedly on defeating any expansion of the current policy.

“I have significant concerns about all the alternatives,” said David Prentice, senior fellow for life sciences at the Family Research Council, which he said does not yet have a formal position on the science.

Jessica Echard, executive director of the Eagle Forum, the public policy organization founded by Phyllis Schlafly, said her group opposes “middle ground” legislation that pursues alternative methods for producing embryonic stem cells.

“Most scientists will say it’s never enough,” she said. “We will be giving ground to more and more unethical research.”
