

My bill will establish up to eight Nanoscience to Commercialization Institutes across the country, each focusing on a specific field of expertise including areas such as energy, electronics, agriculture, medical, textiles and transportation with the purpose of developing and bridging research to the marketplace.

My bill is aimed at narrowing this so-called "Valley of Death," by focusing on bringing research to commercialization. To reach this objective, my bill contains provisions requiring these institutes to partner with private sector entities with experience in micro- and nanotechnology and for each institute to develop and maintain business plans.

My bill will create additional avenues for entities that are engaged in micro- and nanotechnologies to develop research for application in commercial products and services that will ultimately contribute to sustained economic development, an improved quality of living and increased U.S. global competitiveness.

The competitive landscape of nanotechnology is global in nature. Other countries, such as Japan and China are making tremendous investments and advances in various specialties of nanotechnology to gain competitive advantages. It is critical the U.S. demonstrate its global leadership role by further advancing opportunities to advance micro- and nanotechnology to commercial applications.

The future of nanotechnology is a bright future and its potential boundless. The legislation that I am introducing today with Senator CANTWELL supports and encourages the advancement of this exciting technology. I urge my colleagues to support the Nanoscience to Commercialization Institutes Act of 2005.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:
