STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. DODD (for himself and Mr. DEWINE):

S. 2663. A bill to amend the Public Health Service Act to establish grant programs to provide for education and outreach on newborn screening and coordinated followup care once newborn screening has been conducted, to reauthorize programs under part A of title XI of such Act, and for other purposes; to the Committee on Health, Education, Labor, and Pensions.

Mr. DODD. Mr. President, I am pleased today to join with my colleague Senator DEWINE to introduce legislation to protect the most vulnerable members of our society: newborn infants. Many people know the joy of parenthood. They also know the sense of worry about whether their kids are doing well, are feeling well, and are safe. Nothing is of greater importance than the health and well-being of our children.

Thanks to incredible advances in medical technology, it is now possible to test newborns for more than 50 genetic and metabolic disorders. Many of these disorders, if undetected, would lead to severe disability or death. However, babies that are properly diagnosed and treated can, in many cases, go on to live healthy lives. So newborn screening can literally save lives.

Frighteningly, the disorders that newborn screening tests for can come without warning. For most of these disorders, there is no medical history of the condition in the family, no way to predict the health of a baby based on the health of the parents. Although the disorders that are tested for are quite rare, there is a chance that any one newborn will be effected a sort of morbid lottery. In that sense, this is an issue that has a direct impact on the lives of every family.

Fortunately, some screening has become common practice in every State. Each year, over four million infants have blood taken from their heel to detect these disorders that could threaten their life and long-term health. As a result, about one in 4,000 babies is diagnosed with one of these disorders. That means that newborn screening could protect the health or save the life of approximately 1,000 newborns each year. That is 1,000 tragedies that can be averted families that can know the joy of a new infant rather than absolute heartbreak.

That is the good news. However, there is so much more to be done. For every baby saved, another two are estimated to be born with potentially detectable disorders that go undetected
