

breast cancer or cervical cancer. Congress found that women responded in large numbers to efforts by government and others to encourage early diagnosis using mammography after the Breast and Cervical Cancer Mortality Prevention Act was enacted in 1990. However, in 1999 Congress recognized that because the screening did not provide coverage of treatment for women above the poverty level, the screening legislation had the tragic but unintended consequence of informing these women of a serious disease that demanded immediate treatment but leaving them without the means to seek that treatment. Later, Congress amended Title XIX of the Social Security Act to provide medical assistance for the women screened and found to have breast or cervical cancer under a Federally funded screening program.

In today's bill, I have endeavored to provide the same relief for men. This bill allows men, earning up to 250 percent of the poverty level, who are diagnosed with prostate cancer through a Federal screening program for prostate cancer, to qualify for treatment using Medicaid funds. The program would target men who are low-income, uninsured or underinsured men who, nevertheless, do not qualify for Medicaid and do not have private insurance.

Prostate cancer outranks breast cancer as the second most common occurring cancer in the U.S. and the second leading cause of cancer-related deaths. However, diagnosing this cancer is often less expensive, and unlike breast cancer, often does not require immediate treatment. Prostate cancer treatment does not require invasive surgery in many instances. Many prostate cases can be diagnosed with a simple Prostate-Specific Antigen (PSA) Test unlike the high technology mammography machines used to detect breast cancer. Many men are advised to wait and watch for the development of the disease before seeking treatment.

However the rate of cancer deaths coupled with available treatment is strong evidence that many lives could be saved at considerably less expense if early detection and treatment were more available. Although race is a factor, every man over the age of 50 is at risk of developing prostate cancer and should be screened. Veterans that have been exposed to Agent Orange also have a higher risk of developing prostate cancer. Many doctors recommend yearly screening for men over age 50, and some advise men who are at a higher risk for prostate cancer to begin screening at age 40 or 45. Many black men are at the highest risk of prostate cancer—it tends to start at younger ages and grows faster than in men of other races. Currently, Medicare provides coverage for an annual PSA test for all men age 50 and older but men still do not fall within existing requirements to receive Medicaid.

I urge my colleagues to join with me in establishing this program guaranteeing treatment for men diagnosed with prostate cancer. It will meet an immediate and pressing need in communities across the country, and across racial and class lines.

I urge all of my colleagues to support this bill.

PRAISING PEACE MEDIATOR  
BETTY BIGOMBE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 2007

Mr. RANGEL. Madam Speaker, I rise today to praise the work of Ms. Betty Bigombe who has worked tirelessly on the Northern Uganda's peace process for over two decades. Ms. Betty Bigombe's story was featured in the Washington Post on July 11, 2007 in an article entitled, "The Woman Behind Uganda's Peace Hopes."

Ms. Bigombe was the primary negotiator between Joseph Kony, the commander of the Lord's Resistance Army (LRA) and the Ugandan President Yoweri Museveni. Ms. Bigombe first started working on the northern Ugandan peace process in 1988 when Museveni appointed her as the minister of state for the north. Ms. Bigombe was called to action again on Feb. 21, 2004 after reading news dispatches of a massacre at a displacement camp in Barloonyo.

Ms. Bigombe contributed to the peace talks by meeting with Joseph Kony and his army and urged them to sign a peace agreement. While the peace talks in Northern Uganda are now being led by southern Sudanese mediators, Kampala officials and the LRA continue to regularly consult with Ms. Bigombe.

Ms. Bigombe has my deepest respect and admiration. She has put her life on the line and became the voice of nearly 2 million displaced Ugandans and 25,000 children who were kidnapped and forced to serve as soldiers and sex slaves. The road towards peace in Northern Uganda has taken personal sacrifice on the behalf of Ms. Bigombe. For instance, she has personally financed her operations while in Uganda and lived off grants. She found herself bankrupt in 2005 as a result. In addition, working on the peace process demanded time away from her family and loved ones and she often found herself missing birthdays and other celebrations. These are life moments that she simply cannot get back.

Ms. Bigombe and others like her should be celebrated for their bravery and contributions in bringing peace throughout the world.

COMMERCE, JUSTICE, SCIENCE,  
AND RELATED AGENCIES APPROPRIATIONS ACT, 2008

SPEECH OF

HON. ADAM B. SCHIFF

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 2007

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3093) making appropriations for the Departments of Commerce and Justice, and Science, and Related Agencies for the fiscal year ending September 30, 2008, and for other purposes:

Mr. SCHIFF. Mr. Chairman, this is an important bill that funds many crucial priorities for this Nation. I offer my congratulations to the gentleman from West Virginia, Mr. MOLLOHAN, for crafting a bill that balances important in-

vestments in law enforcement and economic development with the need to maintain our Nation's scientific and technological leadership.

Nowhere has Chairman MOLLOHAN shown more foresight and wisdom than in his decision to increase our national investment in NASA, which has been at the forefront of humanity's exploration of the cosmos for the past 39 years.

Earlier this year, I told NASA administrator Michael Griffin that I viewed the President's budget request for NASA as a floor and not a ceiling. That request, for \$17.3 billion, was \$1.4 billion below the congressionally authorized level and, in my view, shortchanged too much science on the one hand, while allowing no margin for error whatsoever in terms of human spaceflight.

This budget crunch at the space agency has been brewing for several years. To start, the costs resulting from Hurricane Katrina and the Space Shuttle Return-to Flight after the Columbia tragedy were never recouped by NASA. Second, several big-ticket and vital missions have exceeded cost estimates and, third, the addition of the Hubble Space Telescope servicing mission adds an additional funding burden to NASA.

At the same time, the FY 2007 Joint Resolution reduced NASA's human spaceflight program budget by \$670 million, the practical effect of which will be at least a 6-month delay in the launch of the new Orion and Ares I, a delay that will increase the 4 year "gap" in American human spaceflight capability and increase our reliance on the Russians to launch and recover crew for the International Space Station.

And, Mr. Chairman, even as we speak, the People's Republic of China is working hard to become a dominant space power—both in the civilian sector and in the military use of space.

This budget crunch has brought us to a point of reckoning. Congress and this Nation are going to need to make some decisions about the value of space to our national life. I know that there is broad and deep support for NASA and its mission and I also believe that we should begin to ramp up the NASA budget to make our push back to the Moon a reality, while continuing to answer the great fundamental questions about our own planet and our place in the cosmos.

It is the area of space science that most concerns me and where I think that Chairman MOLLOHAN has been especially responsive to the needs of America's scientific community. I have a special concern for space science as my colleague from California, Mr. DREIER, and I represent the Jet Propulsion Laboratory (JPL), which is the crown jewel of NASA's efforts to explore the solar system and the universe beyond.

One of the most exciting endeavors that NASA is engaged in is the search for the presence of planets around neighboring stars. NASA's search for planets and life beyond our solar system is having increasing and dramatic success with over 105 planets now discovered.

For years, JPL has been working on a planet hunter spacecraft and the Space Interferometry Mission program has successfully passed all its technological milestones and is thus ready for development. SIM is expected to examine 2000–3000 stars for planetary systems to fulfill a critical step in the search for Earth-like planets.

This mission has been supported by Congress in the last two years and by the Academy Decadal Astrophysics reports in 1990 and 2000. To this point NASA has spent approximately \$300 million on the program. Unfortunately, the President's 2008 budget request for NASA drastically scaled back funding for the program—essentially putting it on ice. Thankfully, Chairman MOLLOHAN has restored funding for SIM and directed NASA to proceed with development.

JPL has also been the epicenter of our efforts to explore Mars. The rovers Spirit and Opportunity have been exploring the Red Planet for the past 3½ years and next month the Mars Phoenix Lander will begin its journey to Mars. I am happy to report that the bill fully funds the Mars program, which allows for a new mission to be launched about every 2 years.

Finally, NASA does not currently have an outer planets mission in development and I am happy that the bill provides \$10 million to begin work on such a mission.

Mr. Chairman, I know that many of my colleagues have expressed support today for NASA and its mission and have elaborated at length on the technological and other spinoffs from the space program. I would like to urge all of you to remember another crucial spinoff from the space program—international goodwill.

The United States is not universally loved around the world at the moment. However, one area in which our prestige remains undiminished is in space exploration. The ESA, the Canadians, the Japanese, the Indians and many others want to partner with us. Our space program also continues to generate enormous interest and enthusiasm worldwide. In the first 2 months after Spirit and Opportunity landed on Mars in January 2004, JPL's rover website registered almost 9 billion hits from around the world. At a time when America needs ways to communicate with a growing and increasingly younger global audience, our space program is an important public diplomacy asset.

I thank the Chairman and urge my colleagues to support the bill.

TRIBUTE TO BLOUNT MEMORIAL  
HOSPITAL

**HON. JOHN J. DUNCAN, JR.**

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Friday, July 27, 2007*

Mr. DUNCAN. Madam Speaker, I rise today to honor a hospital that embodies the spirit, standard, and strength of the community it serves.

Blount Memorial Hospital in Maryville, Tennessee first opened its doors 60 years ago with 50 beds and 12 doctors. Now, with hundreds of beds and doctors and numerous outreach facilities, the hospital sets a new standard for community healthcare.

The citizens of Maryville are blessed to have at their disposal such quality care close to home. People of many other communities its size must often travel to bigger towns for full care, but this is not so in Blount County, Tennessee.

I am extremely honored to represent the fine men and women who work hard every

day to make Blount Memorial hospital a source of community pride.

The hospital's transformation into a premiere medical facility could not have occurred without the outstanding leadership of its long-time administrator. Joe Dawson has witnessed many milestones in his 22 years at Blount Memorial, and I am sure he will spearhead many more. I thank him for his leadership.

Madam Speaker, in closing, I would like to call to the attention of my colleagues and other readers of the RECORD the article from the Daily Times newspaper, which is reprinted below.

[From the Daily Times, July 25, 2007]

BMH TURNS 60

(By Jessica Stith)

With 50 beds and 12 physicians, Blount Memorial Hospital opened its doors to the community 60 years ago. Now, the hospital houses over 304 licensed beds, not including the 76 beds in their transitional care center or the 92 beds in MorningView Village, a senior community. The hospital currently employs more than 280 physicians on active and courtesy staffs.

On Tuesday, 24 American flags were unveiled down East Lamar Alexander Parkway in front of the hospital in celebration of the hospital's 60th anniversary and in honor of those who have died in the line of duty, those missing in action and those who served and continue to serve our Nation.

Past and present employees, board members, physicians, volunteers, hospital partners from the past and friends of the Blount Memorial Hospital family joined to celebrate and recall the history of the hospital.

Two proclamations were presented to the hospital—one from Blount County and the cities of Maryville and Alcoa and a second from the Tennessee House of Representatives.

Joe Dawson, who became the hospital's sixth administrator in 1985, opened the ceremony by welcoming guests in the birthday celebration of the hospital. "This is the actual first day (July 24) Blount Memorial took their first patient," Dawson said.

Dawson said the 24 honor flags would be displayed on patriotic holidays and the hospital's anniversary each year.

Robert Redwine, president of the hospital's board of directors, said this year's anniversary theme was, "Honoring the past. Ensuring the future." Redwine pointed out the rich history and milestones of the hospital. He said the need for the hospital arose in the early 1940s when ALCOA Inc.'s North Plant was built.

The hospital's "founding fathers," Judge George Roberts, Joe Gamble and A.D. Huddleston, were appointed to investigate the feasibility of building a publicly owned hospital in the county.

In 1945, the Federal Works Agency agreed to finance about 50 percent (\$200,000) of the \$400,000 needed to build it. The community raised \$200,000 that included a \$100,000 donation from ALCOA. The aluminum company's contribution included a day's pay given by every worker, Redwine said.

A 14-acre site was purchased, and Maryville College donated 0.675 acres of land in front of Walland Highway, where construction began.

On Blount Memorial's first day of operation, 40 patients were brought to the hospital by ambulance and six were admitted. The staff performed two operations, dealt with two emergencies and delivered a baby boy, Richard Brown.

Since that day, the hospital has grown significantly in its size and services offered. In the past 10 years, The Good Samaritan Clin-

ic, Blount Memorial Health Center at Tellico West in Vonore, Home Equipment Services office, MorningView Village, Transitional Care Center, Breast Health Center, Atrium Cafe and an outpatient diagnostic center at Springbrook have been opened—not to mention many additions and renovations.

Redwine thanked many partners and friends of the hospital for their continued support. "And of course we want to thank the community for your continued support," Redwine said.

"We are here to serve you." "Please remember this is your hospital. We want you to be proud of it, and we want you to use it."

Proclamations read:

Blount County Mayor Jerry Cunningham, Alcoa Mayor Don Mull and Maryville Vice Mayor Tom Taylor presented a joint proclamation to the hospital on behalf of the county and cities. The proclamation "declares July 24, 2007, as Blount Memorial Hospital's 60th Anniversary Day," and encourages the community to join the celebration.

State Rep. Doug Overbey and Rep. Joe McCord presented a proclamation to the hospital stating that the "General Assembly is privileged to recognize Blount Memorial Hospital for its countless contributions to the well-being of the citizens of Tennessee."

Senator and retired physician Raymond Finney spoke at the celebration about how he was glad to be "back home" as he was on staff at Blount Memorial Hospital for 33 years. He talked about the hospital's accomplishments and credited many of those to great leadership who have been there for years.

"One of the things that makes this hospital so good is capable people that stay put," Finney said. "I really appreciate what's been accomplished here. I know what is going on across the state in health care, and we have an exemplary hospital here."

Dawson said he expects the hospital to continue growing and believes the hospital will reach many more goals by its 70th anniversary. "We're very much a reflection of Blount County and the changes of Blount County," Dawson said.

In the next 5 to 10 years, Dawson said he expects the hospital will have new technology and said the hospital will be "reaching out into the community" more by building more primary care and outpatient facilities.

COMMERCE, JUSTICE, SCIENCE  
AND RELATED AGENCIES APPROPRIATIONS ACT, 2008

SPEECH OF

**HON. MARK UDALL**

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, July 25, 2007*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3093, making appropriations for the Departments of Commerce and Justice, and Science, and Related Agencies for the fiscal year ending September 30, 2008, and for other purposes:

Mr. UDALL of Colorado. Mr. Chairman, I rise today in support of this bill.

The bill includes funding for many important programs, and while I think some do deserve more funding than the bill provides, I recognize that the appropriators had a challenging task in shaping the bill because of budget constraints. Overall, I think the bill is a good one and I congratulate Chairmen OBEY and MOLLOHAN for making these difficult decisions in a very constructive manner.
