

job. He was asked to serve his country in a new capacity and brought with him a great sense of honor and duty. In this time of war, Jim has worked tirelessly to ensure that the VA meet the current needs of those veterans returning from Iraq and Afghanistan. Although there is great urgency in caring for our recently wounded service men and women, Jim has also understood the crucial need to continue to provide the utmost care for our veterans and warriors of past generations. Under his leadership, the VA has earned higher marks for medical services than the private health care industry for customer satisfaction, according to the American Customer Satisfaction Index, for the seventh consecutive year. He has helped to give all our veterans the care they deserve, as they have sacrificed so much for all of us.

I have personally worked with Jim for years. I would especially like to thank him for the instrumental role he played in reinvigorating the construction of a new VA hospital in Aurora on the Fitzsimons campus. Without his support, this project would not have progressed to the point it is at today. This hospital will prove to be a great asset for our veterans in Colorado, and Secretary Nicholson should be commended for his efforts.

As we celebrate the service of Secretary Nicholson, I had also like to take this opportunity to thank his family, notably his wife Suzanne, whose endless support is undoubtedly valued and is greatly appreciated. Jim Nicholson has served this country with honor and valor in many capacities. I will certainly miss Secretary Nicholson, and wish him and his family the best of luck in the future. I thank him for his exceptional service on behalf of all our veterans.

50TH ANNIVERSARY OF THE U.S. ARMY SPACE AND MISSILE DEFENSE COMMAND

Mr. SESSIONS. Mr. President, it is with great pleasure that I recognize the celebration of the 50th anniversary of the U.S. Army Space and Missile Defense Command, an organization that is headquartered in Huntsville, AL.

On this day, October 3, 1957, the Army activated the Redstone Anti-Missile Missile Systems Office. With a staff of 5 military and 19 civilians, this organization set the foundation of the Army's space and missile defense programs. From these beginnings, they have become an international organization of more than 2,000 military and civilians devoted to providing around-the-clock space and missile defense research and development and operational capabilities. I wish to express my congratulations to the Army community in northern Alabama for their splendid record of achievement in space and missile defense and to ask my colleagues to join me in saluting them for their contributions to the security of our Nation and her warfighters.

This organization and the U.S. Army have led the Nation in space and missile defense from the 1957 authorization to proceed with the Nike Zeus system to the deployed hit-to-kill national and theater missile defense systems today. Along the way, the Army's missile defense team has achieved a number of significant milestones: the first successful intercept of an intercontinental ballistic missile, ICBM, in 1962; the first deployed ballistic missile defense system in the United States in 1975; the first non-nuclear intercept of an ICBM in 1984; the first kinetic energy intercept of a tactical missile in 1987; and the first directed energy intercepts of rockets in flight in 1996. Their battle-tested products are currently deployed around the world defending our Nation, our service members, and our allies.

In 1957, missile defense brought a new facet to the Army's exploration of space in the 1950s. As missions changed, it remained constant. In the 1970s, the Army returned to space exploration with a precedent setting tactical exploration program. From the 1970s through Operation Desert Storm, the first space war, space has become an integral element of the warfighter's life. Since then, this organization has become the focal point for Army Space. They provide research and development to expand the possibilities provided by space. They have established a brigade of space soldiers dedicated to space superiority and the application of space technology. And today, space soldiers and technologies continue to provide battlefield communications, satellite imagery and analysis, three-dimensional visualization, guidance information, precise early warning of threat missiles, and a host of other space-based capabilities tailored for the warfighter.

Together with their Government and industry teammates, the future of space and missile defense rests in the hands of the men and women who work in this Army organization in Huntsville and Colorado Springs, as well as other locations throughout the world.

Mr. President, I salute Huntsville, the surrounding area, and the hard-working men and women of this great region of our country. Most importantly, I wish to extend a warm and hearty congratulations to the U.S. Army Space and Missile Defense Command team for a job well done, and best wishes for its continued success during the next 50 years and beyond. Secure the high ground.

NATIONAL PUBLIC LANDS DAY

Mr. CRAIG. Mr. President, this past Saturday was National Public Lands Day. On September 29, hundreds of thousands of citizens from across the country volunteered to give their time to improve our public lands. These volunteers cleared obstructed trails, picked up litter, planted trees, removed invasive species, and taught

young Cub Scouts and Girl Scouts about camping. I commend all volunteers for their commitment.

Now in its 14th year, National Public Lands Day has become the largest grassroots volunteer effort on behalf of our public parks, rivers, lakes, forests, rangelands, and beaches. Last year, an estimated \$11 million worth of labor intensive work was carried out, and this year it is expected that \$12 million of improvements were added to America's public lands.

On Wednesday, September 27, the front page of USA Today displayed a picture of Coeur d'Alene, ID, with a headline that read "No end in sight for Idaho's growth." The article went on to provide a breakdown of how Idaho's economy has remained strong despite the current slump in the housing market. It reads, "[An] ingredient in Idaho's boom has been the 'amenities business'—hiking, hunting, fishing, skiing, whitewater rafting—that attracts tourists and new residents, from billionaires to young outdoor enthusiasts."

Today Idaho is experiencing a new brand of tourists and a new brand of neighbors moving in down the street. These people are focused on the vigorous quest for a quality of life that includes the enjoyment of the outdoors. What ties the third generation Idahoan to a newcomer is an appreciation for the resources and the value that multiple uses contribute to our livelihoods and communities.

The USA Today article also points out that "[t]he federal government owns about two-thirds of the land in Idaho, mostly national forests. The state has 21 million acres of roadless wilderness, about the size of South Carolina and more than any state except Alaska." Public lands have much to offer and are very beneficial for Idaho.

There are a myriad of different resources that can be responsibly harvested or extracted from our public lands. From sustainably managed forests to livestock use to oil and geothermal potential, these lands hold the resources Americans rely on to achieve the standard of living that we have today.

Using the resources on our own public lands, as opposed to relying on foreign resources, affords us the opportunity to fund schools, highways, and national defense, all the while easing the financial burden on the taxpayers.

There are those, however, who would prefer to see land management agencies take more of a preservationist role, prohibiting access to our national forests, parks, beaches, and rangelands and leaving nature to run its course. This is not a value that many Idahoans hold, and neither do I.

We must actively manage our lands so that the recreational and resource benefit can be utilized by every American citizen. Under certain circumstances, active management includes limited access in specific areas;

however, we must be cautious not to be overly restrictive of public access to public lands. The same holds true for natural resource management. We cannot use a one-size-fits-all management style when there are so many differing opinions on how to best utilize our domestic natural resources.

In closing, I want to again say thank you to the volunteers for their tremendous efforts to ensure that the public lands we enjoy today will be enjoyed by many, for years to come.

ADDITIONAL STATEMENTS

(At the request of Mr. REID, the following statement was ordered to be printed in the RECORD.)

RETIREMENT OF RICK DIEGEL

• Mrs. CLINTON. Mr. President, I would like to take a moment to recognize the distinguished career of a man who has devoted his life to improving the welfare of working men and women.

Rick Diegel hails from Texas, where he worked as a journeyman wireman and foreman. He served his country in the U.S. Air Force from 1964 to 1968, and is a veteran of the Vietnam War. He also served three terms as the mayor pro-tem of the City of Ingleside, Texas, and was elected business manager of International Brotherhood of Electrical Workers Local 278 in Corpus Christie in 1977. He held this post until 1983, when he was appointed to the International Office of IBEW as the director of their Committee on Political Education. In 1998, he became director of the Political/Legislative Department, a position he has held to this day.

For nearly four decades, Rick has fought to improve the working and living standards for our Nation's workers. As director at the International Office, Rick spearheaded the modern political program of the union, and transformed the way that unions effect legislative change. He worked to get more IBEW members elected to office than any other union, and he established a full-time grassroots mobilization program at IBEW to give even a louder voice to workers' needs.

Throughout his career, Rick has been a forceful advocate for the approximately 750,000 members who work in a wide variety of fields, including utilities, construction, telecommunications, broadcasting, manufacturing, railroads and government. Rick has served as a powerful champion for the labor movement, not only because he was a skillful advocate on behalf of workers, but also because he encouraged workers to make their individual voices heard. Rick understood the importance of workers engaging in the political process to elect members who made workers' rights a priority.

Rick Diegel is a dear friend and an invaluable ally in the fight to support America's workers. He has left an in-

delible mark on the country he has served his entire life, and he has improved the lives of millions of workers. I wish him a retirement full of health and happiness.●

HONORING MICHAEL HOOFFSTETTER

• Mr. DOMENICI. Mr. President, I wish today to recognize a fellow New Mexican, Michael Hooffstetter, for his hard work and advocacy on behalf of individuals living with Parkinson's disease.

Michael is in Washington this week receiving a very prestigious award from the Parkinson's Action Network, the Milly Kondracke Award. The award's namesake was a well-known Parkinson's advocate who worked tirelessly to increase awareness of this disease and support Federal funding for research until her death in 2004. The award is presented annually to an advocate who demonstrates the incredible strength of spirit and commitment to advocacy that Milly demonstrated. I am very pleased that this year's recipient is Michael Hooffstetter.

Each of the last several years, Michael and others from New Mexico have come to Washington and met with me to discuss programs that help those suffering with Parkinson's disease. As the New Mexico State coordinator for the Parkinson's Action Network, Michael speaks candidly about his disease, the treatments he has undergone, and the effect it has had on him and his family. Michael's Air Force service has given him a special interest in the Department of Defense Neurotoxin Exposure Treatment and Research Program. I have always appreciated his honesty and insight and admire him for his advocacy.

Michael Hooffstetter has helped many people by dedicating his time and efforts through the Parkinson's Action Network. I congratulate him for this award.●

HABITAT FOR HUMANITY

• Mr. DOMENICI. Mr. President, I wish today to congratulate the New Mexico affiliates of Habitat for Humanity on the completion of their 500th house. This house was built for Frances Marquez and her daughter, 11-year-old Amanda Marquez in San Pedro, NM, which is located right outside of Espanola. The Espanola and Los Alamos affiliate of Habitat for Humanity gathered 100 people from Espanola Valley to volunteer on this project and bring a real sense of community to the Marquez family's new home.

This particular house was a very special project. It involved the community not only through the volunteers who built the house, but also through the suggestions of Northern New Mexico College surveying students who helped draft the plans for the house. Drafting instructor Jeff Toomey brought this project to his class in order to give them a real-world lesson on drafting

plans for a client. Thanks to their input, this house was specially designed to meet the needs of the Marquez family.

Habitat for Humanity is responsible for the creation and rehabilitation of over 150,000 homes since its 1976 inception. In my home State of New Mexico, there are 18 affiliates of Habitat for Humanity who have improved the lives of families and communities by striving to provide safe and affordable housing. As a Senator, I am always looking for ways to help New Mexico communities be the best that they can be, and thanks to organizations like Habitat for Humanity, this common goal can be accomplished.●

TRIBUTE TO GRACE PALEY

• Mr. SANDERS. Mr. President, I wish to acknowledge the recent passing of Grace Paley. Grace, who called Vermont her home, was a renowned and award-winning short story writer, a political activist, a wife and mother.

Although she spent much of each year in Thetford, VT, and we considered her an adopted Vermonter, her fiction was set in the apartments, streets and neighborhoods of New York City. Grace Paley was not attracted to the bright lights or famous personalities or glitter of New York; however, she was attracted to the quotidian lives and the interpersonal and ethical problems faced by people very like ourselves. As Grace once said, "I'm not writing a history of famous people, I am interested in a history of everyday life." She wrote about them in her two most noted collections of stories, "The Little Disturbances of Man" and "Enormous Changes at the Last Minute." And she wrote beautifully, and with great sensitivity to both the spoken language and to human relationships. Her work gathered enormous critical acclaim. She was one of the great short fiction writers of our age.

Her home in Thetford, VT, was not some weekend getaway, some means of unwinding from the hectic pace of life in the big city. For Grace, Thetford—and the State of Vermont—was a place where she could carry on her long-standing struggle for peace and for social justice. She was an active, a very active, presence in the local community. Whether it was through her long-standing commitment to bringing peace to the world or her many local readings of her fiction, Grace Paley was a presence in our lives—and a beloved local figure. She never sought the spotlight, but she did not shy away from it when she felt her cause was just. She lived her convictions and served as a model for generations of women, of Vermonters, of activists.

In recognition of her contributions to Vermont, Grace Paley was awarded the title of "Vermont State Poet" in 2003, a position that had been held previously by Robert Frost, among others. She was also awarded the title of "New York State Writer" by Mario Cuomo in
