

Mr. MILLER of North Carolina. Madam Speaker, I rise today to honor the City of Greensboro's Bicentennial Celebration.

Since 1808, the citizens of Greensboro have been pioneers in manufacturing, education and civil rights for North Carolina, for the South and for the Nation. Greensboro has been and remains a leader in economic and cultural development within North Carolina.

Greensboro became the "Gate City" at the turn of the last century as North Carolina's rail trade and manufacturing center. Greensboro soon became a leader in North Carolina's textile industry. Henry Humphreys opened the State's first steam-powered cotton mill, and by the 1940s, Greensboro businesses were flourishing. Rayon weaving from Burlington Industries, denim from Cone Mills, and overalls from Blue Bell dominated world markets for their products. In the late 1980s, the Piedmont Triad International Airport again established Greensboro's place as a regional travel and transportation hub.

Greensboro's always been at the forefront of education in North Carolina. Greensboro College, the first State-chartered college for women opened its doors in 1833.

In 1837, Quakers founded the first educational school in the State, Greensboro's "New Garden Boarding School," today known as Guilford College, my wife's alma mater.

Greensboro Technical Community College has provided training and an adult education since 1958.

What began as Women's College, and is now the University of North Carolina at Greensboro, and North Carolina Agriculture and Technical College, A & T, is a historical black land grant institution, are leaders in university research, development and art.

With such a strong concentration of academic institutions, Greensboro has obviously developed a thriving cultural scene, particularly renowned for theater, for music and film. In the last few decades there's been an expanded public library system, a children's museum, work in historic preservation, including an effort to save the Woolworth's where the sit-in movement began, as well as the Greensboro Coliseum Complex, which is known for the arts, as well as for college basketball. It's frequently the host of the Atlantic Coast Conference's Men's Basketball Tournament.

Greensboro has also played an important role for racial equality. Greensboro was a stop on the Underground Railroad, as citizens, both black and white, helped slaves escape to the North.

In 1873, Greensboro founded Bennett College for Women to provide education for newly emancipated slaves.

On February 1, 1960, four North Carolina A & T students sat down at the Woolworth's white only lunch counter. Ezell Blair, now Jibreel Khazan, Franklin McCain, Joseph McNeil and

David Richmond remained seated until the store was closed, and returned the next day and the next day and the next day, joined each day by more and more who were protesting segregation. The "Greensboro Four" or the "A & T Four" inspired similar civil rights protests across the South. The sit-in protest that began in Greensboro was the moment the civil rights struggle became a movement.

Later, Greensboro's peaceful public school integration was a model for other communities all over the nation. And today, Greensboro celebrates a diverse population, with citizens from Southeast Asia, Eastern Europe, Latin America, as well as Africa.

In the tradition of the Underground Railroad, the tradition begun with Greensboro's participation in the Underground Railroad, Greensboro now welcome refugees from conflicts around the world, the Sudan, Liberia, Myanmar and on and on.

I am proud to honor the Bicentennial Celebrations of the City of Greensboro, and I'm honored to represent Greensboro in Congress.

#### TURN OUT THE LIGHTS—THE PARTY'S OVER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. POE) is recognized for 5 minutes.

Mr. POE. Madam Speaker, Congress passed an energy bill which should have been called the Anti-American non Energy Bill, because it punishes Americans for using energy, rather than finding new sources of affordable energy. But the bill does one thing, Madam Speaker, it controls the type of light bulbs that all Americans must use throughout our fruited plains.

Congress's energy bill bans incandescent light bulbs by 2014, and requires Americans to buy compact fluorescent bulbs. Those are called CFLs. Now we can say goodbye to Thomas Edison's incandescent bulb and his invention.

Madam Speaker, I have a Constitution here and, like most Members of Congress, I carry it with me. I've read it through and through, but I don't see anywhere in the U.S. Constitution that it gives the government the power to control the type of light bulbs used in Dime Box, Texas or any other place in the United States. Besides the lack of constitutional authority, let me discuss these light bulbs further.

Nothing in Congress seems to be easy, and that phrase is certainly true with these CFL light bulbs. These light bulbs contain mercury, so they have to be disposed of in a certain way. According to EPA rules, you're supposed to take them to a local recycling center. Thanks to Congress, nothing is easy.

If you throw them out at home, you're supposed to seal the bulb in two plastic bags and place them in the outside trash; otherwise, the bulb may break and pollute the landfill, of all things.

CFLs are made of glass, so they're fragile. If one breaks it or drops it, you have to follow simple rules, thanks to Congress. And according to the EPA, here's what do you if you break one of these light bulbs, and I quote. "Have people and pets leave the room, and don't let anyone walk through the area." We must evacuate the room, Madam Speaker.

I continue. "Open a window and leave the room for 15 minutes or more. Shut off the central heating and air conditioning system. Carefully scoop up glass fragments and powder using stiff paper or cardboard and place them in a glass jar with a metal lid." Obviously, that's readily available.

I continue. "Use sticky tape, such as duct tape, to pick up any remaining small glass fragments and powder." Of course we do have lots of duct tape in Texas, so that's no problem. But we're not through yet.

I continue to quote. "Wipe the area clean with a damp paper towel or disposable wet wipes and place them in the glass jar or plastic bag. Do not use a vacuum or a broom."

And, Madam Speaker, I ask unanimous consent to file this 3-page, single space requirements the EPA has made all Americans follow on disposing of one of these broken light bulbs.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. POE. If you break a light bulb in a high rise where the windows don't open, will the EPA light bulb police haul us off to jail because of improper disposal procedures?

If I dropped this light bulb, we would have to evacuate the House of Representatives, according to the EPA light bulb law. Have we gone a bit too far with this nonsense?

Thanks to Congress, we're making what is simple very difficult. And besides, these light bulbs, are expensive, and using them may fade photographs on the wall.

Now, Madam Speaker, I'm going to carefully remove one of these light bulbs from a box that contains all these warnings on the outside. And this is one of those CFL light bulbs that Congress is requiring all Americans to use by 2014.

There's more to the requirements of using these. It says here, and I quote, "these light bulbs may cause interference to radios, televisions, wireless telephones and remote controls." Now we're in trouble for Monday night football because we're going to have to turn out the lights so there's no interference with our TV.

We can also thank Congress for giving more money to China. This light bulb, it says right here, with all the warnings on it, is made in China. And Madam Speaker, they are only made in China. They're not made in the United States. We import every one of these things.

You know, over the past year we've seen Chinese pet food kill our dogs and

cats; Chinese lead paint is poisoning our children, and now Chinese light bulbs that contain mercury can be harmful to our health. Doesn't this bother anybody?

Meanwhile, gasoline nears \$4 a gallon, and Congress still has no energy plan except turn on these light bulbs.

□ 1945

Oh, I yearn for the day when America took care of Americans by developing our own abundant natural resources like coal and natural gas and crude oil to provide affordable energy to America. But those days have gone the way of Edison's incandescent light bulb. We might as well turn out the lights, the party's over.

And that's just the way it is.

#### WHAT TO DO IF A FLUORESCENT LIGHT BULB BREAKS

Compact fluorescent lights (CFLs) are lighting more homes than ever before, and EPA is encouraging Americans to use and recycle them safely. Carefully recycling CFLs prevents the release of mercury into the environment and allows for the reuse of glass, metals and other materials that make up fluorescent lights.

EPA is continually reviewing its clean-up and disposal recommendations for CFLs to ensure that the Agency presents the most up-to-date information for consumers and businesses. Maine's Department of Environmental Protection released a CFL breakage study report on February 25, 2008. EPA has conducted an initial review of this study and, as a result of this review, we have updated the CFL cleanup instructions below.

Pending the completion of a full review of the Maine study, EPA will determine whether additional changes to the cleanup recommendations are warranted. The agency plans to conduct its own study on CFLs after thorough review of the Maine study.

Fluorescent light bulbs contain a very small amount of mercury sealed within the glass tubing. EPA recommends the following clean-up and disposal guidelines:

#### *Before clean-up: ventilate the room*

1. Have people and pets leave the room, and don't let anyone walk through the breakage area on their way out.
2. Open a window and leave the room for 15 minutes or more.
3. Shut off the central forced-air heating/air conditioning system, if you have one.

#### *Clean-up steps for hard surfaces*

4. Carefully scoop up glass fragments and powder using stiff paper or cardboard and place them in a glass jar with metal lid (such as a canning jar) or in a sealed plastic bag.
5. Use sticky tape, such as duct tape, to pick up any remaining small glass fragments and powder.
6. Wipe the area clean with damp paper towels or disposable wet wipes and place them in the glass jar or plastic bag.
7. Do not use a vacuum or broom to clean up the broken bulb on hard surfaces.

#### *Clean-up steps for carpeting or rug*

4. Carefully pick up glass fragments and place them in a glass jar with metal lid (such as a canning jar) or in a sealed plastic bag.
5. Use sticky tape, such as duct tape, to pick up any remaining small glass fragments and powder.
6. If vacuuming is needed after all visible materials are removed, vacuum the area where the bulb was broken.
7. Remove the vacuum bag (or empty and wipe the canister), and put the bag or vacuum debris in a sealed plastic bag.

#### *Disposal of clean-up materials*

8. Immediately place all cleanup materials outside the building in a trash container or outdoor protected area for the next normal trash.

9. Wash your hands after disposing of the jars or plastic bags containing clean-up materials.

10. Check with your local or state government about disposal requirements in your specific area. Some states prohibit such trash disposal and require that broken and unbroken mercury-containing bulbs be taken to a local recycling center.

#### *Future cleaning of carpeting or rug: ventilate the room during and after vacuuming*

11. The next several times you vacuum, shut off the central forced-air heating/air conditioning system and open a window prior to vacuuming.

12. Keep the central heating/air conditioning system shut off and the window open for at least 15 minutes after vacuuming is completed.

### LET'S LEAVE NO VETERAN BEHIND

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from California (Ms. WOOLSEY) is recognized for 5 minutes.

Ms. WOOLSEY. Madam Speaker, the civil war in Iraq has devastated the colleges and the universities in that country. It is estimated that thousands of students and professors have been forced to flee the violence, cutting short their studies and their academic careers.

A humanitarian organization called the Iraqi Student Project is trying to help. It's working with 15 American universities to identify quality Iraqi students and provide them with a tuition-free education here in the United States. The project, which was created by two Americans based in the Middle East, is modeled on the Bosnian Student Project of the 1990s, a project that brought approximately 150 Bosnian students to American colleges.

This Friday, Madam Speaker, I will have the honor of delivering the commencement address at the graduation ceremonies for Dominican University's graduate students. I'm proud to say that Dominican University in my district is one of the institutions working with the Iraqi Student Project. Dominican anticipates admitting two Iraqi students in September and waiving their tuition. Upon graduation, it is hoped that the students will return to Iraq to help that devastated country rebuild.

In the coming days, this House will have the chance to show that we, too, have the right priorities. We will be considering the 21st Century GI Bill. This is a bipartisan proposal that would provide a college education to our brave troops when they return from the fighting in Iraq and Afghanistan.

After World War II, Madam Speaker, the GI Bill sent millions of veterans to college. Everyone agrees it was one of the best investments our country has ever made. It fueled the post-war eco-

nomie boom, vastly expanded our country's middle class, and made good of our Nation's solemn promise to care for our veterans.

But today, the GI Bill covers just half of the average cost of a college education. The proposed legislation would provide coverage for the full costs of going to a public university, and it would help with the cost of attending private university.

The need for this bill is great. It will help make the transition back to civilian life easier for our veterans and for their families. Many of those who have already returned home are unemployed or underemployed. They need a college education to help them succeed in the workplace, and our Nation, we need them to succeed to keep our economy strong.

But surprise, surprise. The administration doesn't share this view. Secretary of Defense Gates has expressed opposition to expanding education benefits. He has said that it would cause retention problems in the military because it would encourage troops to leave the service. I believe, Madam Speaker, that our troops have already done quite enough to help the military achieve its retention goals. Many of our troops have served two, three, and four tours of duty, and the number of troops who have been forced to stay in the service involuntarily through the Pentagon's Stop-Loss policies is actually rising in spite of the Army's promise to cut the number.

Our troops have done all that we have asked of them. They've done it again and again and again. It is true that the occupation of Iraq has stretched our military to the breaking point, but the solution to the problem is to end the occupation, not to ask our brave troops to give up their futures and not to ask them to give up a chance to get a college education.

The 21st Century GI Bill is the right thing to do for our veterans and the smart thing to do for our country. It's a win-win, and it has strong bipartisan support, and it will leave no veteran behind.

### END THE UNJUST IMPRISONMENT OF U.S. BORDER PATROL AGENTS COMPEAN AND RAMOS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. JONES) is recognized for 5 minutes.

Mr. JONES of North Carolina. Madam Speaker, today is day 482 of a terrible injustice in America. Two U.S. Border Patrol agents have been in Federal prison in solitary confinement since January 17 of 2007. Agents Compean and Ramos were convicted in March of 2006 for shooting an illegal alien drug smuggler from Mexico. The smuggler brought \$1 million worth of marijuana across our borders into Texas.

The prosecution's star witness, the illegal alien drug smuggler, recently
