

are going to try to scare people in, they are going to tell Americans it is going to cost thousands of dollars a year. It just doesn't hold up to any economic analysis, an analysis by MIT, which by the way has been incorrectly cited by some of my colleagues here. We have a letter from the MIT professor that basically said the total cost to the U.S. economy averages out to about 18 cents a day for the investments that will be involved in changing this. The EPA studies that have looked at this have concluded it will be in the \$200 to \$300 range a year of investment that will create millions of clean energy jobs.

These investments we know succeed because we have confidence in American businesses and American workers and American scientists to create these new clean energy jobs; and when we give them the investment they need, they will produce what we need, which is new technology. And this bill will be the largest jump-start of American technology since the original Apollo project.

Now the Democratic members of the Commerce Committee went to the White House to meet with President Obama yesterday, or the day before, and we talked about this bill. We are shaping this bill in a way that is fair to every region and takes into consideration the needs of certain industries.

By the way, I will point out something that is very important in the bill. We want to make sure that jobs don't go overseas as a result of this bill. And if some electrical rates go up as a result of this, we don't want to see jobs in steel mills or cement plants or aluminum plants go overseas to places where electricity may be cheaper. So what we are doing is we have a provision that Congressman MIKE DOYLE of Pittsburgh and I have worked on which will give benefits, free permits, to the steel, aluminum, other energy intensive, trade sensitive businesses. They will get free permits. The reason we are doing this is so they will not have a disincentive for keeping those jobs in this country. We are designing this bill in a way that is sensitive to make sure we keep jobs in this country and this does not distort our job creation, and it is being carefully designed to achieve that.

What President Obama talked about, I just want to cite one thing he said. He said that Members of Congress come here for a reason, and that reason is to very rarely and infrequently have a chance to do something historic.

This is a truly historic moment for America. It is a moment where we have the opportunity to seize the destiny of this country, to create a clean energy future for the country, to reduce pollution, to increase our energy independence. And that only happens when men and women of good faith come together to find a consensus that will create clean energy jobs, will limit pollution, will require polluting industries to pay, and will in fact move this country with

a great, great leap forward in technology.

You don't do that by doing nothing. Doing nothing is not an action. We will be doing something historic in this bill, and I look forward to working with my colleagues to pass this clean energy American jobs bill. I look forward to the many ribbon cuttings that we are going to have as a result of this bill when these companies start up and start hiring Americans and start manufacturing the electric cars and wind turbines and solar cells and engineered geothermal and all of the things we are going to do to help create job creation in this country. That is a future worthy of this country. That is a bill worth passing. I look forward to it.
