### S. RES. 685

Whereas sickle cell disease is an inherited disorder that affects red blood cells leading to significant morbidity and mortality in nearly 80,000 people in the United States;

Whereas sickle cell disease causes blockage of small blood vessels which can lead to tissue damage resulting in severe pain, infection or stroke:

Whereas scientific breakthroughs over the past century have improved the lives of millions of people suffering from sickle cell disease;

Whereas scientific advances in treatment for sickle cell disease began with Dr. James B. Herrick, an attending physician at Presbyterian Hospital and professor of medicine at Rush Medical College in Chicago, Illinois, who discovered sickle cell disease and published the first recorded case in Western medical literature in November of 1910 in the journal Annals of Internal Medicine;

Whereas the hemoglobin mutation responsible for sickle cell disease was discovered by Linus Pauling in 1950;

Whereas penicillin was proven to be effective as a preventative strategy against pneumococcal infection in 1986, sparing patients with sickle cell disease from contracting this particularly dangerous infection:

Whereas in 1995, the National Heart, Lung, and Blood Institute reported the first effective drug treatment for adults with severe sickle cell disease;

Whereas the anticancer drug hydroxyurea was found to reduce the frequency of painful crises of sickle cell disease and patients taking the drug needed fewer blood transfusions;

Whereas in 1996, bone marrow transplantation was discovered to improve the course of sickle cell disease for select patients;

Whereas in 1997, blood transfusions were found to help prevent stroke in patients with sickle cell disease;

Whereas the introduction of pneumococcal vaccine in 2000 revolutionized the prevention of lethal infections in children and adults with sickle cell disease;

Whereas the first mouse model demonstrating the usefulness of genetic therapy for sickle cell disease was developed in 2001;

Whereas in 2007, scientists from the University of Alabama at Birmingham and the Massachusetts Institute of Technology developed an animal model for curing sickle cell disease:
