

It is imperative that we find spending cuts to offset sequestration on the Department of Defense. Our military leaders have come to Congress on numerous occasions to explain the limitations the budget cuts are putting on our national security. It is legislative malpractice for this Congress to continue to put our Nation at greater risk. The President needs to come to this Congress with a proposal to offset sequestration in a responsible manner so the Department of Defense can be restored, our national security protected, and the community of Dayton, Ohio, no longer suffers the effects of sequestration.

SAFE CLIMATE CAUCUS

The SPEAKER pro tempore. The Chair recognizes the gentleman from New Jersey (Mr. HOLT) for 5 minutes.

Mr. HOLT. Madam Speaker, I rise today as a member of the Safe Climate Caucus to say that climate change is making extreme weather worse and costing us in lives and dollars.

Last week, Typhoon Haiyan, the strongest storm to make landfall in recorded history, struck the Philippines with sustained winds of almost 200 miles per hour. Thousands are reported dead and missing.

Haiyan, Sandy, Irene, Katrina, wildfires, floods, droughts.

If you flip a coin 20 times, it is possible that an honest coin will land on heads every time, but you should start to suspect that there is something wrong with that coin.

Sure, the recent extreme weather event might be coincidence, but as superstorms continue again and again, you should suspect that something is wrong with our climate. We should begin fixing our broken world, not be pretending that all is well.

This week marks the beginning of the 19th U.N. climate change conference in Warsaw, where representatives from more than 190 nations will be discussing climate change and how the world should be responding.

For international climate negotiations to succeed, the U.S. should take the lead, and leading internationally will require us to start here at home.

TIME IS RUNNING OUT FOR THE SIERRAS

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. MCCLINTOCK) for 5 minutes.

Mr. MCCLINTOCK. Madam Speaker, this summer the biggest fire in the history of the Sierra Nevada Mountains burned 400 square miles of forest land. The fire left behind an unprecedented swath of environmental devastation that threatens the loss of not only the affected forest land for generations but sets events in motion that could threaten the surrounding forests for many years to come.

The fire also left behind as much as a billion board feet of dead timber on

Federal land that could be sold to raise hundreds of millions of dollars, money that could then be used to replant and restore the devastated forests. In addition, processing that timber would help to revive the economy of the stricken region. But time is already running out. Within a year, the value of the timber rapidly declines as the wood is devoured by insects and rot. That's the problem: cumbersome environmental reviews and the litigation that inevitably follows will run out the clock on this valuable asset until it becomes worthless.

Indeed, it becomes worse than worthless—it becomes hazardous. Bark and wood-boring beetles are already moving in to feast on the dead and dying timber, and a population explosion of pestilence can be expected if those dead trees remain. The beetles won't confine themselves to the fire areas, posing a mortal threat to the surrounding forests in the years ahead.

By the time the normal bureaucratic reviews and lawsuits have run their course, what was once forest land will have already begun converting to brush land, and by the following year, reforestation will become infinitely more difficult and expensive.

Within 2 years, several feet of brush will have built up, and the smaller trees will begin toppling on this tinder. It is not possible to build a more perfect fire stack than that. Intense, second-generation fires will take advantage of this fuel, sterilizing the soil, eroding the landscape, fouling the watersheds, and threatening the surrounding forest for many years to come.

Without timely salvage and reforestation, we know the fate of the Sierras because we have seen the result of benign neglect after previous fires. The trees don't come back for many generations. Instead, thick brush takes over the land that was once shaded by towering forests. The brush quickly overwhelms any seedlings struggling to make a start. It replaces the diverse ecosystems supported by the forests with scrub brush.

For this reason, I have introduced H.R. 3188, which waives the time-consuming environmental review process and prevents the endless litigation that always follows. It authorizes Federal forest managers, following well-established environmental protocols for salvage, to sell the dead timber and to supervise its careful removal while there is still time.

The hundreds of millions of dollars raised can then be directed toward replanting the region before layers of brush choke off any chance of forest regrowth for generations to come. It is modeled on legislation authored by Democratic Senator Tom Daschle for salvaging dead and dying trees in the Black Hills National Forest, a measure credited with speeding the preservation and recovery of that forest.

This legislation has spawned lurid tales from the activist left of uncon-

trolled logging in the Sierras. Nothing could be further from the truth. This legislation vests full control of the salvage plans with Federal forest managers, not the logging companies. It leaves Federal foresters in charge of enforcing salvage plans that fully protect the environment.

The left wants a policy of benign neglect: let a quarter-million acres of destroyed timber rot in place, surrender the ravaged land to beetles, and watch contentedly as the forest ecosystem is replaced by scrub land. Yes, without human intervention the forests will eventually return, but not in the lifetimes of ourselves, our children, or our children's children.

If we want to stop the loss of this forest land and if we want to control the beetle infestation before it explodes out of control, the dead timber has to come out soon. If we take it out now, we can generate the funds necessary to suppress brush buildup, plant new seedlings, and restore these forests for the use and enjoyment of our children. If we wait for the normal bureaucratic reviews and delays, we will have lost these forests to the next several generations. That is a choice. Congress must make that choice now, or nature will make that choice for us.

HONORING PUERTO RICO'S MILITARY VETERANS

The SPEAKER pro tempore. The Chair recognizes the gentleman from Puerto Rico (Mr. PIERLUISI) for 5 minutes.

Mr. PIERLUISI. Madam Speaker, Monday was Veterans Day, when our Nation pays tribute to those who have served honorably in the Armed Forces. Today, I rise to express my gratitude to the soldiers, sailors, airmen, and marines from Puerto Rico, both those who are living and those who have left us.

Since World War I almost a century ago to Afghanistan today, American citizens from Puerto Rico have built a rich record of military service. If you visit any U.S. base, you will see warriors from Puerto Rico fighting to keep this Nation safe, strong, and free. They serve as officers and enlisted personnel; as special operators; in infantry, artillery, and armored units; as pilots and aviation technicians; in intelligence; on ships and submarines; in combat support positions; and in every military specialty.

In his book, "Puerto Rico's Future: A Time to Decide," former U.S. Attorney General Dick Thornburgh observed:

Historically, Puerto Rico has ranked alongside the top five States in terms of per capita military service.

□ 1015

In the forward to that book, former President George H.W. Bush noted:

This patriotic service and sacrifice of Americans from Puerto Rico touched me all the more deeply for the very fact they have served with such devotion, even while denied

a vote for the President and Members of Congress who determine when, where, and how they are asked to defend our freedoms.

As I address this Chamber, men and women from Puerto Rico are serving in harm's way in Afghanistan and other locations. Since the attacks of 9/11, island residents have deployed about 35,000 times in overseas contingency operations. Many have deployed on multiple occasions. Each time they go, they leave behind spouses, children, and parents. As veterans will tell you, military life requires enormous sacrifice from their loved ones, those quiet heroes who support our uniformed personnel who must live and work in their absence and who pray for their safe return. On Veterans Day, we honor not only those who fought, but their families, as well.

There is a frame on my office wall containing photographs of servicemembers from Puerto Rico that have fallen in the last 12 years. I often look at those photos, row after row of young faces, usually posing in their dress uniforms against the backdrop of the American flag. Those images make me sad, but they also give me strength. They inspire me to keep working for my people. They remind me what courage is and what sacrifice means. And they help me remember why representing Puerto Rico in Congress is the greatest honor I have ever known.

I have met many veterans from Puerto Rico. I have found that they value deeds over words. They expect their elected leaders to produce results, or at least to work tirelessly towards that end.

I am proud of the record we have compiled on behalf of veterans from Puerto Rico. We have obtained funding to renovate the VA hospital in San Juan, to improve existing clinics and build new clinics throughout the island, and to provide vehicles so that residents of our State veterans home can visit their families and travel to medical appointments. We also achieved Puerto Rico's inclusion in a Federal initiative to encourage the hiring of unemployed veterans.

And I am working to honor a military unit that perhaps best exemplifies the service that residents of Puerto Rico have rendered to this Nation. Congressman BILL POSEY of Florida and I have introduced legislation to award the Congressional Gold Medal to the 65th Infantry Regiment known as the Borinqueneers, a unit composed mostly of soldiers from Puerto Rico that overcame discrimination and won admiration for their performance in the Korean war. Our bill has nearly 160 bipartisan cosponsors, and there is a companion bill in the Senate that has also garnered strong support. I hope all my colleagues will join me in honoring this special group of veterans.

This Veterans Day, I renewed my commitment to fight for the men and women who have fought so valiantly for us, and I thank them from the bottom of my heart for their service. I do so again today.

COLLEGE STATION'S 75TH ANNIVERSARY

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. FLORES) for 5 minutes.

Mr. FLORES. Madam Speaker, I rise today to honor the 75th anniversary of the city of College Station, Texas.

College Station has been and is the home to tens of thousands of Texas families, students, businesses, and residents throughout the years, and I am proud to offer my congratulations on this milestone.

College Station was an unincorporated community for over 60 years before officially being incorporated as a city on October 19, 1938.

In 1869, the Houston and Texas Central Railway was built through the area; and in 1871, College Station was chosen as the location for what would eventually become one of the largest public universities in the Nation, Texas A&M University.

The city got its name because the A&M campus was the focal point of community development at the time. In 1877, the area was designated College Station, Texas, by the postal service, deriving its name from the train station located to the west of the campus. Since incorporation in 1938, College Station's population has grown to over 97,000 today. Over the past 75 years, College Station has served as a vibrant, supportive, and safe community for thousands of families.

Texas A&M University is still the city's main focal point and the largest employer in the city. The university is rich in tradition and history; and due to its supportive fan base, sporting events bring in hundreds of thousands of tourists each year.

College Station is also the home to the George Bush Presidential Library and Museum, one of the region's most popular tourist attractions.

College Station is a fast-growing city with a thriving economy. It has recently been recognized as one of the Nation's best places for businesses, jobs, families, and retirees. College Station prides itself on having the fifth lowest property tax rate among similar-sized communities in the State of Texas, and the city was recently ranked No. 5 nationally on Forbes' list of the best small places for businesses and careers.

College Station is among the safest, the most family-friendly places in Texas, maintaining one of the best safety ratings in the State. College Station has also been a community that comes together and shows support when needed, whether it was the collapse of the Aggie bonfire in 1999 or the loss of one of our constables in August of last year. Our community comes together in the midst of terrible adversities to support one another.

The residents and leadership of College Station work hard to make their city one of the best places in Texas to work, live, and maintain an enjoyable and fulfilling life. It is my honor to

represent the residents of this great city.

Madam Speaker, please join me in commemorating the city of College Station and its proud residents on their 75th anniversary.

Before I close, I ask that all Americans continue to pray for our country during these difficult times and for the military men and women and first responders who protect her. God bless the American people, and God bless College Station, Texas.

IN HONOR OF MARTYL LANGSDORF

The SPEAKER pro tempore. The Chair recognizes the gentleman from Illinois (Mr. FOSTER) for 5 minutes.

Mr. FOSTER. Madam Speaker, I rise today to honor Martyl Langsdorf, who created the image of the now iconic Doomsday Clock for the June 1947 cover of the bulletin of the Atomic Scientists.

The Bulletin was founded by a group of University of Chicago scientists who had worked on the Manhattan Project, including Martyl's husband, physicist Alexander Langsdorf.

Maryl's clock remains a singular reminder of the risks that we face from nuclear weapons and the effects of climate change.

A renowned landscape painter and longtime resident of Schaumburg, Illinois, Martyl died at the age of 96 on March 26, 2013, and will be remembered tomorrow at the Bulletin of the Atomic Scientists' Fifth Annual Doomsday Clock Symposium here in our Nation's Capital.

Fittingly titled "Communicating Catastrophe," the symposium will reflect Martyl's sensitivity to the urgency of existential threats and her brilliance in using art and design "to move past the numbness and create new ways of feeling, just as we tap science for new ways of knowing," in the words of Bulletin Executive Director Kennette Benedict.

Maryl's legacy continues as members of the Bulletin's science and security board annually assess the state of world affairs and use the hands of the clock to signal humanity's capacity to meet challenges of nuclear weapons and climate change.

World attention to the Doomsday Clock confirms the impact of what designer Michael Beirut, in a 2010 tribute to Martyl entitled "Designing the Unthinkable," called "the most powerful piece of information design of the 20th century."

Madam Speaker, I ask my colleagues to join me in honoring the late Martyl Langsdorf for raising the world's awareness about grave threats and also the Bulletin of Atomic Scientists for providing information and rational analysis that points to a safer world.

To close on a personal note, it was at one of Martyl Langsdorf's annual peony parties at her garden in Schaumburg, during a long conversation with wise old lawyer and Bulletin
