SENATE RESOLUTION 454—RECOGNIZING THAT CARDIOVASCULAR DISEASE CONTINUES TO BE AN OVERWHELMING THREAT TO WOMEN'S HEALTH AND THE IMPORTANCE OF PROVIDING BASIC, PREVENTIVE HEART SCREENINGS TO WOMEN WHEREVER THEY SEEK PRIMARY CARE

Ms. MURKOWSKI (for herself, Ms. MIKULSKI, Ms. WARREN, and Ms. COLLINS) submitted the following resolution; which was considered and agreed to:

S. RES. 454

Whereas heart disease remains the leading cause of death for women in the United States, causing 1 in 4 female deaths and more female deaths than all forms of cancer combined;

Whereas since 1984, the number of women who have died from heart disease exceeds the number of men who have died from heart disease;

Whereas the rate of cardiovascular death is increasing by 1 percent each year among women ages 35 to 44;

Whereas heart disease claims the lives of nearly 422,000 women each year;

Whereas almost half of African American women have some form of cardiovascular disease, and African American women are more likely to die from heart disease than white women;

Whereas heart disease and stroke account for \$312,600,000,000 in health care expenditures and lost productivity annually;

Whereas only 54 percent of women recognize that heart disease is the leading cause of death for women, and almost ¾ of women who unexpectedly die of heart disease have no previous symptoms of disease;

Whereas many women, especially younger women, may not be aware of their risk for heart disease because they have never gotten a basic, preventive heart screening and have no symptoms;

Whereas studies show that nearly 1 in 5 women rely solely on their obstetrician and

gynecologist ("OB/GYN") for primary care, yet only 35 percent of women recall having even discussed heart disease with their OB/GYN;

Whereas early identification of cardiovascular disease risk factors such as high blood pressure, smoking, excessive weight and obesity, high cholesterol, and diabetes allows for more effective intervention and treatment, and can dramatically lower a woman's overall risk of heart disease and heart attack;

Whereas the burden of women's heart disease can be reduced in the United States by encouraging primary care providers to offer women basic, preventative heart disease screenings;

Whereas experts recommend and encourage that a basic, preventive heart screening be a routine part of a woman's visit to a primary care practitioner; and

Whereas once women understand their risk, they still need follow-up information, support, and incentives to maintain cardiovascular health and make the most informed decisions: Now, therefore, be it

Resolved, That the Senate—

(1) recognizes that, despite improved education and awareness, heart disease remains the number 1 killer of women in the United States;

(2) recognizes the importance of making basic, preventive cardiovascular screening available for women as recommended, so that all women can know the risks they face and what can be done to reduce them;

(3) recognizes that basic, preventive heart disease screenings are recommended to be a routine part of women's health care; and

(4) commits to improving the heart health of all women, tearing down the barriers that prevent women from getting screened for heart disease, ensuring women are provided with personalized lifestyle modification recommendations and support, and ensuring every woman has a healthy heart.
