(a) SHORT TITLE.—This section may be cited as the “Climate Change Education Act”.

(b) FINDINGS.—Congress finds that—

(1) carbon pollution is accumulating in the atmosphere, causing global temperatures to rise at a rate that poses a significant threat to the economy and security of the United States, to public health and welfare, and to the global environment;

(2) climate change is already impacting the United States with sea level rise, ocean acidification, and more frequent or intense extreme weather events such as heat waves, heavy rainfalls, droughts, floods, and wildfires;

(3) the scientific evidence for human-induced climate change is overwhelming and undeniable as demonstrated by statements from the National Academy of Sciences, the National Climate Assessment, and numerous other science professional organizations in the United States;

(4) the United States has a responsibility to children and future generations of the United States to address the harmful effects of climate change;

(5) providing clear information about climate change, in a variety of forms, can encourage individuals and communities to take action;

(6) the actions of a single nation cannot solve the climate crisis, so solutions that address both mitigation and adaptation must involve developed and developing nations around the world;

(7) investing in the development of innovative clean energy and energy efficiency technologies will—

(A) enhance the global leadership and competitiveness of the United States; and

(B) create and sustain short and long term job growth;

(8) implementation of measures that promote energy efficiency, conservation, renewable energy, and low-carbon fossil energy will greatly reduce human impact on the environment; and
