

more low-cost, foreign guest workers instead of trying to attract and retain employees from an ample domestic labor pool of native and immigrant citizens and permanent residents. Guest workers currently make up two-thirds of all new IT hires, but employers are demanding further increases. If such lobbying efforts succeed, firms will have enough guest workers to last for at least 100 percent of their new hiring and can continue to legally substitute these younger workers for current employees holding down wages for both them and new hires. . . . the Census Bureau reports that only about one in four STEM bachelor's degree holders has a STEM job, and Microsoft plans to downsize by 18,000 workers over the next year.

Microsoft signed a letter to the President and Congress just a few months ago demanding more foreign workers in the same week they announced laying off 18,000 workers, and this is a pattern throughout the industry. They are lobbying for more and more while they are laying off workers.

Here is a statement our office obtained from a union representative at IBM:

On January 28, 2015, IBM embarked on another of its regular "resource actions" or job cuts at sites and divisions around the US. Although IBM won't say how many employees were notified that their employment was being terminated, the *Alliance@IBM* estimates the number at around 5,000.

I continue to read from their statement:

This has been almost a quarterly experience for IBM employees. One of the biggest drivers of the job cuts is off shoring and bringing in guest workers from other countries.

So they are laying off Americans and bringing in people from abroad.

The statement goes on to say:

The terminating of regular IBM U.S. employees while keeping H-1b visa or L1 visa workers on the payroll has been ongoing at IBM for years.

As one worker stated in an email to the *Alliance* just this past week:

"Received 'RA' notice (termination notice) yesterday. . . . I was told last October that I was being replaced by an IBM India Landed Resource. . . ."

That is a guest worker.

Another employee e-mailed:

"I would estimate that of the 20 people in my IBM department, at least 80% were immigrants on Visa's working on a so called government contract."

They were working on a government contract. They were bringing foreign workers.

And it goes on.

Here is an article in the Engineering Journal about IBM: "Massive Worldwide Layoff Underway At IBM."

Look, I am not saying a company can't lay off and be more efficient. The business market changes, and they are just not able to stay in business if they are paying people to do work that doesn't exist. I understand that.

What I am saying is that at the same time they are laying off people, they are demanding the right to bring in more foreign workers, further driving down wages.

Here is what this article says:

Project Chrome, a massive layoff that IBM is pretending is not a massive layoff, is

under way. First reported by Robert X. Cringely in Forbes, about 26 percent of the company's global workforce is being shown the door. At more than 100,000 people, that makes it the largest mass layoff at any U.S. corporation in at least 20 years.

So these groups have all come together in a lobbying group, Compete America, the Alliance for a Competitive Workforce. IBM is one of them. I think Hewlett-Packard laid off 12,000 not too long ago; they are part of it. Microsoft, laying off 18,000, is part of it—demanding more guest workers.

Cringely wrote that notices have started going out, and most of the hundred thousand-plus will likely be gone by the end of February.

How does it impact us? Does it impact Americans?

Alliance@IBM, the IBM employees' union, says it has so far collected reports of 5,000 jobs eliminated, including 250 in Boulder, Colo., 150 in Columbia, Missouri, and 202 in Dubuque, Iowa. Layoffs in Littleton, Mass., are reportedly "massive," but no specific numbers have been published.

Here is a story in *timesunion.com* about Governor Cuomo in New York. His program of IT work in New York is being outsourced by IBM.

. . . IBM has brought hundreds of workers from India to fill jobs in Albany for which—in theory—plenty of Americans are qualified.

Walt Disney World's information technology department laid off 500 workers, while Disney's profit margin has gone up and the stock price is rising.

We are going to be talking about this for some time. We need to ask ourselves: What is in the interest of American workers at a time when we are laying off large numbers of workers—skilled and unskilled? I have been talking about skilled.

Do we really need massive increases in foreign workers? Do we need to pass legislation that would double the number of guest workers that come into the country at this time? I think not.

I appreciate the opportunity to share these thoughts. I see my colleague.

I yield the floor.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. CARDIN. I ask unanimous consent to engage in a colloquy with Senator COLLINS not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

SMALL BREW ACT

Mr. CARDIN. Mr. President, I am very pleased that Senator COLLINS and I have introduced legislation known as the Small Brewer Reinvestment and Expanding Workforce Act, S. 375. The two of us have led the effort to try to help the craft brewing industry. The craft beer industry is composed of small businesses that have used their ingenuity to create beers that are becoming very, very popular.

It is interesting that when we developed the excise tax on beer, I don't think we thought of the craft beer in-

dustry at the time. The craft beer industry, as I said, generally consists of small businesses who are struggling to find capital in order to expand. The current law imposes an excise tax on the first 60,000 barrels at \$7 per barrel for breweries that produce 2 million or fewer barrels annually. The Small BREW Act would modify that, by increasing the threshold to 6 million barrels. Under the bill, brewers producing 6 million or few barrels each year would pay \$3.50 per barrel on the first 60,000 barrels, and \$16 per barrel on their annual production between 60,001 and 2 million barrels. So the Small BREW Act would reduce the amount they pay in federal excise taxes.

I wish to take a moment and then yield to my colleague to explain the rationale as to why we have introduced this legislation.

As I said a moment ago, when we imposed the excise tax on beer, I believe we thought about the big companies and that we wanted to have taxes on distilled spirits, wine, and beer as an excise tax.

When we take a look at the craft breweries, they are really burdened by this tax. They are creating jobs, they are creating a different product, and they are creating new markets for beer in this country. I wish to share some of these numbers because I think they are pretty impressive.

In 1989 there were 247 breweries in the entire United States. Today there are over 3,200 small and independent breweries and brew pubs in the United States that employ over 110,000 Americans. So this has been a real growth industry. Here are jobs that can't be outsourced, and they have created a better product, a better way of doing business. But the challenge is that they are really strapped for capital. It is not easy for them to invest in the type of equipment necessary to expand their capacity.

Brewers Association CEO Bob Pease said last month in testimony submitted to the House Ways and Means Committee:

America's small brewers are quintessentially small Main Street manufacturers. They typically employ 10 to 100 workers, and many began as home brewers before devoting themselves full time to the brewing industry.

I think that the No. 1 problem for craft brewers trying to expand their capacity is access to sufficient capital. An article in yesterday's *New York Times* entitled "Betting on the Growth of Microbreweries" quotes Brewers Association economist Dr. Bart Watson:

Brewery after brewery is looking for ways to grow because when you talk to these companies, the biggest constraint is capacity. They're selling beer as fast as they can make it.

I recently visited Heavy Seas Brewery in Baltimore. Now, I know this brewery quite well because I helped Hugh Sisson, the owner and CEO, tap the very first keg he produced in a micropub when he was doing this basically as a hobby. Well, he has expanded

his operations a couple of times now, and it wasn't easy to do this. He has invested a lot of money, and he has hired additional people, creating more jobs in Baltimore. Hugh hired 8 people in 2013, another 10 last year, and he expects to hire at least 6 more people this year. These are good jobs. But he needs the capital, and the relief provided by this act would allow him to be able to do this.

So Senator COLLINS and I wanted to bring attention to this legislation which provides some very modest relief from the excise taxes I mentioned earlier. It would reduce the \$7 per barrel on the first 60,000 barrels to \$3.50 and establish a new rate of \$16 per barrel after that up to 2 million barrels for breweries producing up to 6 million barrels annually.

It doesn't seem like much, but that would be the difference in making the investment to expand the microbrewery and hire another 6, 8 or 10 people or to start another brewery, to create the excitement in a community that comes with these brew pubs, which I think all of us would agree should not be subject to a special tax which prevents them from expanding.

This is an important business in my community. It is a growing business in Baltimore. It is a growing business around the country. I hope we all would want to help these small businesses.

In this Congress I have assumed a new role as the ranking Democrat on the Small Business and Entrepreneurship Committee. We are going to be looking for ways in which we can help small businesses in our country because we know that small businesses are the growth engine for innovation and change and good jobs.

So if we can help the microbreweries, if we can pass this legislation, we will help small businesses, and we will help economic growth in our communities.

I am pleased that Senator COLLINS and I are joined by 23 of our colleagues. Between all of us, 25 percent of the Senate has already cosponsored S. 375. We hope we will be able to find a way to move this legislation early this year so we can help economic growth.

In Maryland we are currently home to 43 craft breweries—up from 34 in 2013—and 24 more are in the planning stages. I have been to many of these craft breweries. I enjoy their product, but, more importantly, I enjoy their entrepreneurial spirit, which they have been able to show in a growth industry in our country and of which we all can be proud.

Mr. President, I yield the floor to Senator COLLINS.

The PRESIDING OFFICER. The Senator from Maine.

Ms. COLLINS. Mr. President, Maine and Maryland have in common not only delicious seafood but also fine craft beers.

I am delighted to join my friend and colleague Senator CARDIN in support of the legislation that we have intro-

duced, S. 375, the Small Brewer Reinvestment and Expanding Workforce Act, or Small BREW Act.

The title is more than just a clever acronym. It is a statement of what our bipartisan bill really is all about. This is a jobs bill, and those covered by the bill are small businesses, entrepreneurs who are taking risks and creating jobs in communities around the country.

We often talk in this Chamber about what we can do to help create the environment that encourages job creation. Our bill is one such practical means where we can spur the creation of new jobs as well as great products.

In Maine, we are proud to boast that our State is now home to more than 60 breweries that produce more than 200 different brands. Maine beer is shipped around the country and has developed a real following among connoisseurs who have come to appreciate its quality and craftsmanship. This, in turn, has led to new tourism opportunities as visitors are drawn to our State to sample our delicious Maine craft beers. As the craft beer industry grows, so too does demand for American-grown barley and hops and American-made brewing, bottling, canning, and other equipment. Beyond creating delicious beer, these breweries are creating jobs. That is the whole rationale behind the bill we have introduced.

In Maine alone, our craft breweries employ more than 1,400 people. That is an extraordinary number of jobs. As the Senator from Maryland has pointed out, these are jobs that are going to stay right here in America. They are not going to be outsourced. These are small businesses in our communities that are hiring people and making a difference.

Nationally small and independent brewers employ more than 110,000 full- and part-time employees, generating more than \$3 billion in wages and benefits, and pay more than \$2.3 billion in business, personal, and consumption taxes, according to the Brewers Association.

What could we do to encourage even more employment in this area? The answer is to reduce the Federal excise tax on small craft brewers, and that is exactly what our bill would do. It would free up capital so these small business owners can reinvest in their companies and create more jobs.

Under the current law, as Senator CARDIN has pointed out, these small businesses pay \$7 per barrel in Federal excise tax on the first 60,000 barrels they brew and \$18 per barrel on every barrel thereafter. The Small BREW Act would reduce these rates to \$3.50 on the first 60,000 barrels and \$16 for production between 60,000 and 2 million barrels. Thereafter, the rate would remain at \$18 per barrel.

We know from the economic analysis that has been done that such a change would have a significant positive economic impact. A June 2013 study prepared by a professor, then at Harvard's Kennedy School of Government, esti-

mated that our bill would increase economic activity by \$1 billion over 5 years, create more than 5,000 new jobs in the first year to 18 months after passage, and create approximately 400 new jobs annually thereafter.

Again, I want to repeat, this is a jobs bill, and I am proud to sponsor it with my friend Senator CARDIN. I am also delighted that we have the support of such a large number of colleagues on both sides of the aisle, including my colleague from Maine, Senator KING.

I urge all of our colleagues to take a look at this bill. If you want to do something that is concrete and we know will create more jobs for a growing industry that is carving out a niche in so many States across this Nation, then work with us to achieve passage of the Small BREW Act.

I thank the Presiding Officer.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. CARDIN. Mr. President, I thank Senator COLLINS not only for her leadership but for also pointing out something very important here: This is a jobs bill. The passage of this bill will create more jobs. We know that because we know that craft breweries are strapped for capital. Every dollar they save here will be reinvested and create more jobs because they don't have the capacity to meet the current demand for their beers. If they could produce more beer today, they would sell more beer, but they don't have the capital to make the investments.

Senator COLLINS is absolutely right when she says this is a jobs bill that will create more jobs.

It also creates a lot of indirect jobs. I was pleased Senator COLLINS pointed out that many of the ingredients the craft breweries use come from the community. They are helping local farmers and local industries grow, which are also generally small businesses. So as they grow, they help other small businesses grow.

One interesting fact is we are now starting to see an increase in craft beer exports. There is a real desire for our craft brews outside of the United States. It is a relatively new phenomenon, but exports grew by 49 percent in 2013. We exported 283,000 barrels in 2013, and I expect we will see those numbers greatly increase.

This chart shows some of the Maryland craft breweries. They are becoming well known outside of my State of Maryland. I already mentioned Heavy Seas, and Flying Dog is another brewery I had a chance to visit. There are many other breweries, including some with names that are synonymous with my State, such as Raven Beer, Ellicott Mills Brewing Company, Eastern Shore, and Antietam. These are companies and brand names that are now becoming better known because they are producing a great product and people really do like to encourage this type of industry.

I thank Senator COLLINS and our 23 cosponsors. I see Senator KING is on

the floor, and I thank the Senator for his help on this bill. I hope we will have an opportunity to show, in a bipartisan fashion, that we can pass legislation to help job growth here in the United States.

With that, I yield the floor to my colleague from Maine.

The PRESIDING OFFICER. The Senator from Maine.

Mr. KING. Mr. President, first I wish to associate myself with the comments of the Senator from Maryland and my senior colleague from Maine. I know this industry is growing in Maine. It is entrepreneurial, exciting, energetic, and they are adding jobs and only want to continue to grow.

I think this bill makes total sense. It is a way we can express support for the entrepreneurial and innovative growth of businesses in all of our States. I am delighted to be able to join and essentially add my encouragement and support to your work on this bill. Since it is a bipartisan bill, I hope we can move it through this body in a reasonably short period of time.

CYBER SECURITY

Mr. KING. Mr. President, there are two items I want to touch on today. One is bad news and the other is good news. This week we learned there was a data breach of 80 million people's records—300,000 in Maine—at Anthem. Fortunately the data breach did not include credit card numbers, but it did include Social Security numbers. This news comes about a month after Sony.

What is it going to take for this body, for this Congress, for this city, to act to protect us against these threats? We keep getting warning shots, and we keep ignoring them.

I am going to have to go home this weekend, and 300,000 people in Maine are going to say: What have you done to keep this from happening? Am I really going to be able to say: Well, it is complicated; we have four committees of jurisdiction and it is very difficult for us to make these decisions and it takes some time? That is not good enough.

The intelligence committee reported out a bill last July. We had a bill on the floor here in the fall. It is time for us to act. We keep getting warned, and we keep not doing anything.

I can't justify it. There is no excuse for us not taking steps—concrete steps—to protect this country against cyber attacks. They keep happening.

My regional representatives in Maine have surveyed both small businesses and health care facilities, and all of them either have been attacked or are concerned about attacks. Whether it is from a foreign country or whether it is from garden-variety criminals, the point is this is a major threat facing this country, and it is one we have within our power—we can't control it, but we can at least work together to try to prevent it and to minimize the damage. It is beyond time—way beyond

time—for us to take action on this subject.

I hope my colleagues on all the relevant committees can come together in the next several months—before the summer—to take action to deal with this problem. There is no excuse, particularly given the continuous warnings we are having, for not dealing with the issue of the cyber threat to this country.

This week it is Anthem. A few weeks ago it was Sony. What is going to happen when it is the gas pipeline system, when it is the financial system, when it is the New York Stock Exchange, when people's bank accounts disappear overnight? It is time for us to act, and it is time for us to act promptly.

MEDICAL RESEARCH

Mr. KING. Mr. President, I also come to the floor today with some good news. It comes as no surprise that our debates here in the Senate focus generally on challenges, such as the one I just outlined, that face the United States. After all, that is our task and it is our fundamental responsibility to identify our Nation's problems and work together to find solutions.

But too often—and I am sure everyone in this body realizes—the bad news gets more attention than the good news. The old saying is, bad news gets halfway around the world before good news gets its shoes tied. The problems we face should not, I believe, drown out the accomplishments of our citizens as we go about our work every day here in the United States.

I think we should take a little time every now and then to reflect on the great things that are happening all over America, and in my case in Maine. There are stories of perseverance, innovation, individual accomplishments, and community effort. It is in that spirit that I rise today with good news from my home State of Maine.

I will spend a few minutes talking about Dr. Ed Bilsky and the impressive work he and a dedicated team of scientists, physicians, and students have been doing at one of my favorite schools, the University of New England in Biddeford, ME, to better understand and treat chronic pain.

Dr. Bilsky was recently named a member of the Dana Alliance for Brain Initiatives, a group of neuroscientists who work together to advance public education about the progress and benefits of brain research and to provide information on the brain in a way that is understandable and accessible for those of us who don't have a Ph.D. in neuroscience.

His inclusion in this group is recognition of his terrific work to advance our understanding of chronic pain. It is also a reflection of the prominent role he and his colleagues are playing in a critical national effort to address this problem. Chronic pain—and that means pain that persists for days, weeks, and months at a time—can be absolutely

debilitating for people in Maine and around the country and is responsible for more than \$500 billion a year—\$1/2 trillion a year—in direct and indirect medical costs.

Periodically in my life I have experienced back pain, and when it persists for a period of time, it changes everything. It changes your mood, it changes your attitude, it changes your ability to get anything done, to focus on the work at hand. There are people in this country who are suffering—the estimate is 100 million people suffer chronic pain at some point in their lives. That is why the work done at the University of New England Center for the Study of Pain and Sensory Function, where Dr. Bilsky is one of the leaders, is so important.

This center is built around a core group of scientists, educators, health care professionals, whose research at the University of New England is focused on understanding the neurobiology of pain. How does it happen? How is it caused? What can we do about it?

Faculty and students work together to study the causes of chronic pain and apply this knowledge to preventing and better treating this very challenging and very prevalent condition. Projects include working to develop new kinds of nonopiod painkillers. That is a big deal because of all of the side effects and dangers of opioid painkillers which we are experiencing in our society. To develop nonopiod painkillers would be a tremendous boon to this country, those which don't have the side effects of opioids. They are also studying the genes and proteins that can turn acute pain into chronic pain and trying to find out the genetic and chromosomal basis of this terrible problem.

As with any success story, certain key events, people, and investments have made this research community what it is today. The recruitment of key faculty scientists, such as Dr. Bilsky and his codirector Dr. Ian Meng, in the early 2000s was pivotal to this effort. The addition of complementary research-driven faculty and administrators as well as the launch at the university of the Center for Excellence in the Neurosciences continue to move this project forward.

I should mention here the leadership of Daniel Ripich, the president of the University of New England, who is a true visionary and a great leader in the advancement of science and medicine as well as the mission of this great university.

The NIH took notice, awarding the university a 5-year, \$10 million grant in 2012 to create the Center for the Study of Pain and Sensory Function, focusing on the neurobiology of pain. As is often the case, that Federal investment in research, which I believe is one of the most important and valuable investments the Federal Government can make, has been critical to the growth of these research opportunities and projects and has helped to attract further Federal and private investment.
