STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. REED (for himself and Mr. HELLER):

S. 3162. A bill to provide for the consideration of energy storage systems by electric utilities as part of a supply side resource process, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. REED. Mr. President, today, along with my colleague Senator HELLER, I am introducing the Storage Technology for Operational Readiness and Generating Energy Act, or STORAGE Act. I thank Senator HELLER for his work with me on this bipartisan bill.

The advent of energy storage capacity means unused energy from renewable sources can be made available for use when needed, rather than wasted.

As a result, advances in energy storage can help improve the reliability, resiliency, and flexibility of the grid, as well as reduce the potential for future rate increases for consumers.

To further encourage the research and development of energy storage, the legislation we are introducing authorizes the Secretary of Energy to coordinate efforts among various existing programs at the Department of Energy. By streamlining these energy storage research and development programs, we hope we will maximize efficiency of funds and expand this vital research. I am pleased that the Senate has already included an amendment I offered with Senator HELLER to add these provisions as part of the Energy Policy Modernization Act that we passed earlier this year.

Our bill also amends the Public Utility Regulatory Policies Act of 1978, or PURPA, to add energy storage systems to the list of strategies states should consider when developing their energy plan in an effort to promote energy conservation and greater use of domestic energy. The bill does not mandate the implementation of this or any technology. Rather it simply encourages states to analyze whether energy storage would provide benefits to the overall system. I look forward to working with Senator HELLER and our colleagues to also find a path forward for these provisions.

I urge our colleagues to join in supporting the STORAGE Act and taking commonsense steps to advance energy storage technology.

By Mr. ALEXANDER:

S. 3169. A bill to support basic energy research and eliminate the wind production tax credit; to the Committee on Finance.

Mr. ALEXANDER. Mr. President, I am here to talk about the importance of doubling funding for basic energy research and making \$8.1 billion available in the Federal budget to pay for it.

The United States does many things well, but one thing we do better than any other country in the world is innovation through basic research. I have been talking a lot this year about biomedical research. Dr. Francis Collins, the Director of the National Institutes of Health—which he calls the “National Institute of Hope”—tells me that in 10 years, researchers in our country may be rebuilding hearts from stem cells, giving patients an artificial pancreas which would help patients with diabetes, and there may be a vaccine for HIV/AIDS.

Just as remarkable are the opportunities available in clean energy research: lowering the cost of energy, cleaning up the air, improving health, reducing poverty, and helping us deal with climate change—not just in the United States, but all around the world.

Congress has been focused on doubling energy research since the 2007 America COMPETES Act that was

passed with overwhelming bipartisan support and signed into law by President Bush. America COMPETES grew out of a report called “Rising Above the Gathering Storm,” a report on American competitiveness, written by Norm Augustine, who was the committee’s chair. The report’s main recommendation was to increase energy research because of the benefits it would provide to our country and around the world.

Eight years ago, in a speech at Oak Ridge National Laboratory, I called for a project that would duplicate the urgency of the World War II Manhattan Project and put the United States on a path to clean energy innovation. I proposed seven “grand challenges”—No. 1, make plug-in electric vehicles commonplace; No. 2, find a way to capture and use carbon; No. 3, help solar become cost-competitive; No. 4, safely manage nuclear waste; No. 5, encourage cellulosic biofuels; No. 6, make new buildings green buildings; and No. 7, create energy from fusion.

In 8 years, energy researchers have made tremendous progress in these areas. For example, the price of solar panels has fallen over 80 percent since 2008. In some of the other challenges, we still have a long way to go. That is why we need to keep our focus on making energy research a priority. The biggest problem we have in funding basic energy research is how we pay for it.

Today I am introducing legislation that finds a way to pay for it by ending the 24-year-old wind production tax credit at the end of this year, rather than in 2019, as the law now says. Instead of slowly allowing the wind production tax credit to phase out, this bill would end it on January 1, 2017. Then Congress could use the \$8.1 billion in savings to increase the funding authorization for the Office of Science for the same kind of basic energy research that helped drive our natural gas boom and will provide the basis for the next generation of energy innovation that will mean cleaner, cheaper, and more reliable energy.

Research at the Office of Science benefits other Department of Energy programs, including advanced nuclear reactor research at the Office of Nuclear Energy and research on carbon-capture technology at ARPA-E, which was formed by the America COMPETES Act. Energy research through the Office of Science, nuclear and fossil energy programs, energy efficiency research, and ARPA-E have led to amazing new discoveries. If more funding is available, it could be used to make sure energy research is a priority.

Let’s not continue to give away this money to wind developers that have been using it to get rich over the last 24 years, often over the objections of communities, towns, and homeowners who don’t want their farmlands and mountain lands covered with 45-story turbines with blades as long as a football field.

It is obvious what Congress ought to do, and it is obvious how we ought to
