

while CARA addresses the demand for drugs through prevention, education, treatment, and recovery, this legislation will help to cut the supply of drugs, help to cut off the flow of this poison into our communities. I think these two ideas go hand in hand. If you are one of the 92 Senators in this body, out of 100, who voted for CARA, I hope you will support this legislation too.

Our law enforcement and first responders are doing an amazing job. They are saving lives every single day, and they are to be commended, but they need some help. They deserve our best efforts to stop these dangerous drugs from entering into the country in the first place, and so do the hundreds of thousands of families in Ohio and around the country who have been affected by this epidemic of addiction. They deserve our help as well. They deserve a safer community. They deserve peace of mind. They deserve to know that we are doing all we can to try to keep these dangerous synthetic drugs out of our communities.

Just as I did with the CARA legislation, I urge my colleagues on both sides of the aisle to support this additional legislation. Frankly, 3½ years ago when we started putting together the CARA legislation, if this synthetic drug issue had been at the level it is today, I believe it would have been included in the CARA legislation. But we are now seeing this epidemic growing—heroin and prescription drugs, yes, but increasingly synthetic drugs, as we talked about this evening. It is time for us to be sure we are doing all we can to keep this poison out of our communities.

(b) **FINDINGS.**—Congress finds, based on an analysis sponsored by the Water Environment Federation and the WaterReuse Association of the nationwide impact of State revolving loan fund spending using the IMPLAN economic model developed by the Federal Government, that, in addition to the public health and environmental benefits, the Federal investment in safe drinking water and clean water provides the following benefits:

(1) Generation of significant Federal tax revenue, as evidenced by the following:

(A) Every dollar of a Federal capitalization grant returns \$0.21 to the general fund of the Treasury in the form of Federal taxes and,

when additional spending from the State revolving loan funds is considered to be the result of leveraging the Federal investment, every dollar of a Federal capitalization grant returns \$0.93 in Federal tax revenue.

(B) A combined \$34,700,000,000 in capitalization grants for the clean water and state drinking water state revolving loan funds described in subsection (a) over a period of 5 years would generate \$7,430,000,000 in Federal tax revenue and, when additional spending from the State revolving loan funds is considered to be the result of leveraging the Federal investment, the Federal investment will result in \$32,300,000,000 in Federal tax revenue during that 5-year period.

(2) An increase in employment, as evidenced by the following:

(A) Every \$1,000,000 in State revolving loan fund spending generates 16 ½ jobs.

(B) \$34,700,000,000 in Federal capitalization grants for State revolving loan funds over a period of 5 years would result in 506,000 jobs.

(3) An increase in economic output:

(A) Every \$1,000,000 in State revolving loan fund spending results in \$2,950,000 in output for the economy of the United States.

(B) \$34,700,000,000 in Federal capitalization grants for State revolving loan funds over a period of 5 years will generate \$102,700,000,000 in total economic output.

#### SEC. 7113. WATER SUPPLY COST SAVINGS.

(a) FINDINGS.—Congress finds that—

(1) the United States is facing a drinking water infrastructure funding crisis;

(2) the Environmental Protection Agency projects a shortfall of approximately \$384,000,000,000 in funding for drinking water infrastructure from 2015 to 2035 and this funding challenge is particularly acute in rural communities in the United States;

(3) there are approximately 52,000 community water systems in the United States, of which nearly 42,000 are small community water systems;

(4) the Drinking Water Needs Survey conducted by the Environmental Protection Agency in 2011 placed the shortfall in drinking water infrastructure funding for small communities, which consist of 3,300 or fewer persons, at \$64,500,000,000;

(5) small communities often cannot finance the construction and maintenance of drinking water systems because the cost per resident for the investment would be prohibitively expensive;

(6) drought conditions have placed significant strains on existing surface water supplies;

(7) many communities across the United States are considering the use of groundwater and community well systems to provide drinking water; and

(8) approximately 42,000,000 people in the United States receive drinking water from individual wells and millions more rely on community well systems for drinking water.

(b) SENSE OF THE SENATE.—It is the sense of the Senate that providing rural communities with the knowledge and resources necessary to fully use alternative drinking water systems, including wells and community well systems, can provide safe and affordable drinking water to millions of people in the United States.

(c) DRINKING WATER TECHNOLOGY CLEARINGHOUSE.—The Administrator and the Secretary of Agriculture shall—

(1) update existing programs of the Environmental Protection Agency and the Department of Agriculture designed to provide drinking water technical assistance to include information on cost-effective, innovative, and alternative drinking water delivery systems, including systems that are supported by wells; and

(2) disseminate information on the cost effectiveness of alternative drinking water delivery systems, including wells and well systems, to communities and not-for-profit organizations seeking Federal funding for drinking water systems serving 500 or fewer persons.

(d) WATER SYSTEM ASSESSMENT.—Notwithstanding any other provision of law, in any application for a grant or loan from the Federal Government or a State that is using Federal assistance for a drinking water system serving 500 or fewer persons, a unit of local government or not-for-profit organization shall self-certify that the unit of local government or organization has considered, as an alternative drinking water supply, drinking water delivery systems sourced by publicly owned—

(1) individual wells;

(2) shared wells; and

(3) community wells.

(e) REPORT TO CONGRESS.—Not later than 3 years after the date of enactment of this Act, the Administrator and the Secretary of Agriculture shall submit to Congress a report that describes—

(1) the use of innovative and alternative drinking water systems described in this section;

#### PART IV—DELAWARE RIVER BASIN CONSERVATION

**SEC. 7641. FINDINGS.**

Congress finds that—

(1) the Delaware River Basin is a national treasure of great cultural, environmental, ecological, and economic importance;

(2) the Basin contains over 12,500 square miles of land in the States of Delaware, New Jersey, New York, and Pennsylvania, including nearly 800 square miles of bay and more than 2,000 tributary rivers and streams;

(3) the Basin is home to more than 8,000,000 people who depend on the Delaware River and the Delaware Bay as an economic engine, a place of recreation, and a vital habitat for fish and wildlife;

(4) the Basin provides clean drinking water to more than 15,000,000 people, including New York City, which relies on the Basin for approximately half of the drinking water supply of the city, and Philadelphia, whose most significant threat to the drinking water supply of the city is loss of forests and other natural cover in the Upper Basin, according to a study conducted by the Philadelphia Water Department;

(5) the Basin contributes \$25,000,000,000 annually in economic activity, provides \$21,000,000,000 in ecosystem goods and services per year, and is directly or indirectly responsible for 600,000 jobs with \$10,000,000,000 in annual wages;

(6) almost 180 species of fish and wildlife are considered special status species in the Basin due to habitat loss and degradation, particularly sturgeon, eastern oyster, horseshoe crabs, and red knots, which have been identified as unique species in need of habitat improvement;

(7) the Basin provides habitat for over 200 resident and migrant fish species, includes significant recreational fisheries, and is an important source of eastern oyster, blue crab, and the largest population of the American horseshoe crab;

(8) the annual dockside value of commercial eastern oyster fishery landings for the Delaware Estuary is nearly \$4,000,000, making it the fourth most lucrative fishery in the Delaware River Basin watershed, and proven management strategies are available to increase oyster habitat, abundance, and harvest;

(9) the Delaware Bay has the second largest concentration of shorebirds in North America and is designated as one of the 4 most important shorebird migration sites in the world;

(10) the Basin, 50 percent of which is forested, also has over 700,000 acres of wetland,

more than 126,000 acres of which are recognized as internationally important, resulting in a landscape that provides essential ecosystem services, including recreation, commercial, and water quality benefits;

(11) much of the remaining exemplary natural landscape in the Basin is vulnerable to further degradation, as the Basin gains approximately 10 square miles of developed land annually, and with new development, urban watersheds are increasingly covered by impervious surfaces, amplifying the quantity of polluted runoff into rivers and streams;

(12) the Delaware River is the longest undammed river east of the Mississippi; a critical component of the National Wild and Scenic Rivers System in the Northeast, with more than 400 miles designated; home to one of the most heavily visited National Park units in the United States, the Delaware Water Gap National Recreation Area; and the location of 6 National Wildlife Refuges;

(13) the Delaware River supports an internationally renowned cold water fishery in more than 80 miles of its northern headwaters that attracts tens of thousands of visitors each year and generates over \$21,000,000 in annual revenue through tourism and recreational activities;

(14) management of water volume in the Basin is critical to flood mitigation and habitat for fish and wildlife, and following 3 major floods along the Delaware River since 2004, the Governors of the States of Delaware, New Jersey, New York, and Pennsylvania have called for natural flood damage reduction measures to combat the problem, including restoring the function of riparian corridors;

(15) the Delaware River Port Complex (including docking facilities in the States of Delaware, New Jersey, and Pennsylvania) is one of the largest freshwater ports in the world, the Port of Philadelphia handles the largest volume of international tonnage and 70 percent of the oil shipped to the East Coast, and the Port of Wilmington, a full-service deepwater port and marine terminal supporting more than 12,000 jobs, is the busiest terminal on the Delaware River, handling more than 400 vessels per year with an annual import/export cargo tonnage of more than 4,000,000 tons;

(16) the Delaware Estuary, where freshwater from the Delaware River mixes with saltwater from the Atlantic Ocean, is one of the largest and most complex of the 28 estuaries in the National Estuary Program, and the Partnership for the Delaware Estuary works to improve the environmental health of the Delaware Estuary;

(17) the Delaware River Basin Commission is a Federal-interstate compact government agency charged with overseeing a unified approach to managing the river system and implementing important water resources management projects and activities throughout the Basin that are in the national interest;

(18) restoration activities in the Basin are supported through several Federal and State agency programs, and funding for those important programs should continue and complement the establishment of the Delaware River Basin Restoration Program, which is intended to build on and help coordinate restoration and protection funding mechanisms at the Federal, State, regional, and local levels; and

(19) the existing and ongoing voluntary conservation efforts in the Delaware River Basin necessitate improved efficiency and cost effectiveness, as well as increased private-sector investments and coordination of Federal and non-Federal resources.

“(I) the State requests that the Administrator provide assistance in the performance of the enforcement action; or

“(II) after consideration of any other administrative or judicial enforcement action involving the coal combustion residual unit, the Administrator determines that an enforcement action is likely to be necessary to ensure that the coal combustion residual unit is operating in accordance with the criteria established under the permit program or other system of prior approval and conditions.

“(ii) NOTIFICATION.—In the case of an enforcement action by the Administrator under clause (i)(II), before issuing an order or commencing a civil action, the Administrator shall notify the State in which the coal combustion residual unit is located.
