

The legislative clerk proceeded to call the roll.

Mr. HEINRICH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONGRESSIONAL REVIEW ACT RESOLUTION

Mr. HEINRICH. Mr. President, I am proud that the Senate voted to reject an effort to overturn commonsense protections to reduce methane waste. It was 3 years ago that satellite images from NASA revealed that there is a giant cloud of methane—about the size of the State of Delaware—sitting over the Four Corners region in Northwestern New Mexico and Southwestern Colorado.

Although evidence had shown that there was methane air pollution in the Four Corners as early as 2003, the image of NASA data is truly striking. This is a warning of a potentially major threat to public health for communities in the region.

The San Juan Basin in the Four Corners region has long been a leading producer of oil and natural gas. With the natural gas boom of the mid-2000s, production in the basin grew by leaps and bounds, and that created hundreds of new high-paying jobs and a major new domestic source of an important energy resource.

Unfortunately, amid all this growth, some producers developing natural gas on our public lands and on Tribal lands released harmful air pollution and wasted these publicly owned resources by allowing methane to leak into the air from faulty equipment and pipes, and even by burning off valuable natural gas in the process called flaring.

Following the discovery of the methane hotspot, researchers at NASA's Jet Propulsion Laboratory joined Caltech and University of Michigan scientists to conduct a detailed study into the cause of the methane cloud. Some producers claimed that the hotspot was caused primarily by natural seeps of gas from underground geologic formations and by gas venting out from an old coal mine in the region.

The NASA researchers, using instrumentation mounted on aircraft that flew close to the ground and throughout 1,200 square miles of airspace in the Four Corners region, identified leaks from natural gas wells as the major methane emitters contributing to the methane air pollution.

As greenhouse gas, methane has over 80 times the global warming potential as carbon dioxide over the short term. We have a moral obligation to reduce greenhouse gas emissions and to mitigate our contributions to climate change.

Even absent its consequences for climate change, methane leaks waste valuable energy resources, and they harm public health. When methane leaks from oil and gas wells, harmful carcinogens such as benzene leak into the air alongside it.

Because of the air pollution over the Four Corners region, the American

Lung Association gave San Juan County in New Mexico an F rating for ozone pollution in 2016. That means children suffer more asthma attacks and seniors have more difficulty breathing.

I want it to be clear that this is not a case of pitting development of our energy resources against human health. We have a golden opportunity to apply innovative, existing technologies to this problem, grow our economy, and improve air quality for the people of the Four Corners region. That is because minimizing the amount of methane that leaks, vents, or flares out of the oil and gas wells isn't just good for air quality, it is good for business and the bottom line.

When oil and gas companies modernize their equipment to reduce leaks, they are able to capture more gas that they can sell, as well as increase worker safety at their wells. When we capture more gas, that also means we see more royalties and revenues for States, Tribes, and local communities. By updating oil and natural gas production equipment and infrastructure to reduce wasted natural gas, we create new jobs for energy workers and manufacturers.

When we reduce wasteful leaks, it means that instead of having a giant methane cloud over the northwest corner of New Mexico and over the Navajo Nation—a major public health hazard—we put our publicly owned natural gas resources to beneficial use. That is the definition of a win-win situation.

I say all this because that is exactly what the Bureau of Land Management's methane waste prevention rule is designed to do. These commonsense and cost-effective protections in the rule were put in place to reduce harmful methane and benzene pollution and to ensure that oil and gas operations are using technological advances that minimize emissions and maximize the amount of natural gas we produce.

Between 2009 and 2015, the BLM estimates that oil and gas producers on our public and Tribal lands vented, flared, and leaked 462 billion cubic feet of methane. They wasted enough natural gas to supply over 6 million American households for a year. Instead of heating our homes or fueling powerplants, powering buses, that gas was leaked into the atmosphere, wasting millions of dollars of this limited resource.

It is estimated that the oil and gas industry wastes about \$100 million worth of natural gas every year. That also means \$6 million each year of lost State revenue, revenue that pays for schools, roads, and emergency services in New Mexico. That is quite a figure.

A recent report found that New Mexico taxpayers have lost out on over \$42 million of royalty revenues since the year 2009—\$42,728,949 to be exact. The BLM's methane waste prevention rule will help put a stop to this wasted resource.

While developing the rule, the BLM held public meetings, it held Tribal consultations, and it factored in feed-

back from over 300,000 comments submitted during the public comment period. The agency also coordinated with States like Colorado, Wyoming, and North Dakota that have already created similar protections to reduce methane leaking and flaring at the State level.

The BLM rule will have minimal costs for oil and gas producers, and, in fact, leak detections and repairs required by the rule will help companies make more money selling the gas that they save. Meanwhile, this rule will grow our economy by investing in innovative companies that have developed the technologies to minimize leaks and protect our public health. This rule should not have been controversial.

The overwhelming majority of my constituents in New Mexico support reducing wasted natural gas. A recent poll by Colorado College conducted after the election found that 74 percent of New Mexicans support the BLM's methane waste reduction rule.

I am proud that enough Senators shared that view and voted to reject an attempt to repeal this commonsense protection of public health, air quality, and responsible development of our natural resources. There is nothing conservative about making it easier to waste a precious public energy source.

We should be focused on reducing waste, capturing critical royalties for New Mexico communities, and putting our natural gas resources to beneficial use. This repeal effort of the methane rule would have represented a major step backward.

Today's vote was a major victory for responsible development of our natural gas resources and our Nation's decades-long commitment to protect the air we breathe. On behalf of my constituents and theirs, I want to say a special thank-you to all 51 Senators who supported our efforts today. Thank you very much.

Mr. President, I yield back the remainder of my time.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PETERS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FIRING OF JAMES COMEY

Mr. PETERS. Mr. President, I rise today to discuss President Trump's decision to fire FBI Director James Comey. During his campaign, then-Candidate Trump regularly talked about how he would be the law and order President. "Law and order" means different things to different people, but all of us should be able to agree that we cannot have law and order without the rule of law.

The rule of law is not a new or even uniquely American idea. It dates back to the Magna Carta of 1215. This document—a pact between King John of

England and his barons—established that the Nation's people have certain rights and that even the monarch is subject to the laws of the land. Centuries later, as we cast off the British monarchy, declared our independence, and established our own form of government, our Nation's founders enshrined the rule of law in our Constitution.

Our system of checks and balances was designed to hold all levels of the Federal Government accountable but especially the President. Without the rule of law, law and order becomes merely order imposed by an unaccountable government. We know what order without the rule of law looks like. Last century it looked like the regimes of the Axis Powers. Now it looks like North Korea, Egypt, the Philippines, and, yes, Russia. These are all nations led by strongmen whom our President has praised in some manner, strongmen who hold democratic institutions in contempt and exercise disproportionate control over their nations' military, government institutions, and the media.

While the press here in the United States remains independent, we have a President who has chosen to regularly do battle with what he derides as the "fake news media." He has even called our cherished, constitutionally protected free press "the enemy of the American people."

It is often said that the news is the "first rough draft of history." While the President can attempt to wage war with the news media, none of us can truly fight history. But here in the Senate, we can help shape it. History has its eyes on our Chamber now.

Some of my colleagues across the aisle have said they are "troubled" or "disappointed" by the President's decision to fire Director Comey, but it appears that many are taking a wait-and-see approach. They are taking a wait-and-see approach to Director Comey's firing. They are taking a wait-and-see approach to how the administration replaces him. They are taking a wait-and-see approach to the ongoing investigation into the Trump campaign's potential collusion with Russia. The problem here is that this administration won't let us see anything. The Trump administration is actively working to cover up everything that we, as the independent legislative branch, need to see to get to the bottom of the Trump campaign's potential collusion with Russia.

Director Comey was investigating this potential collusion at the time that he was fired, and it has been reported that Director Comey recently asked Deputy Attorney General Rod Rosenstein for an increase in money and personnel for this very investigation. Within a matter of days, the Deputy Attorney General wrote a memo recommending that President Trump fire Director Comey for actions he took last year. So was Director Comey fired on May 9, 2017, for his actions back in

2016? Are we to believe the President and the Attorney General were carefully weighing the merits of Director Comey's service since the inauguration, or was he fired because he was ramping up his investigation into Russian collusion? Let's not forget that this is the same collusion investigation from which Attorney General Sessions recused himself before recommending to the President that he fire Director Comey.

This is clearly a President who is more than happy to fire people, and he does so in a hasty fashion. Director Comey is not the first public servant to be fired while investigating this administration. In fact, he is in pretty good company. Acting Attorney General Sally Yates was fired while overseeing the collection of intelligence related to meetings between the Russian Ambassador and members of the Trump team. The U.S. attorney for the Southern District of New York was fired while investigating HHS Secretary Price's financial investments, in addition to leading a separate investigation into corrupt Russian businessmen and officials. One firing is an incident, two is a coincidence, but three is a pattern.

The past 4 months suggests that our President thinks he can simply tweet and fire his way out of this problem, while continuing to cozy up to the Russians. Earlier today, less than 24 hours after firing Director Comey, President Trump hosted the Russian Ambassador and the Foreign Minister in the Oval Office.

I am deeply concerned that the President is unable or unwilling to grasp what the underlying problem here actually is. When the President hears Members of Congress on both sides of the aisle discuss the Russian attack on our election and the very foundations of our democracy, he hears sour grapes stemming from people who would have liked the Republican primary or the general election to have ended differently. But let me be very clear: This is not about scoring political points. This is not about winning the news cycle or the back-and-forth on Twitter. This is not the newest iteration of partisan politics.

Now is the time for all of us to put country above party. Throughout our Nation's history, Senators have come together to tackle some of the Nation's most difficult problems. Our Union has survived other challenges, and I am confident we can navigate this together, but we need to know exactly what we are up against. This is about properly diagnosing and curing a possible Russian infection in the White House and inoculating our government and elections for the future. Firing your doctor won't take your illness away, and taking a wait-and-see approach won't do that either.

We need an independent special prosecutor to diagnose potential collusion between the Trump campaign and Russia. We cannot wait for the President to handpick a new FBI Director who

will owe his or her nomination for this unexpected job opening to the very people he or she will be charged with investigating.

Our democracy is resilient and our democracy is strong, but if we have a festering foreign infection that is left untreated, our democratic system will certainly weaken. We need a special prosecutor to either identify and address any malfeasance or issue this White House a clean bill of health.

Democracies are built on trust in civic institutions—a trust that has eroded in recent years, and I am deeply concerned that this erosion is accelerating. As Americans and as elected officials, we must come together and restore our constituents' trust in the Federal Government. We cannot just wait and see any longer. Now is the time for an independent special prosecutor.

Mr. President, I yield the floor.

I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. GARDNER). The clerk will call the roll. The bill clerk proceeded to call the roll.

Mrs. MURRAY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. KENNEDY). Without objection, it is so ordered.

Mrs. MURRAY. Mr. President, I ask unanimous consent to speak as in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

RUSSIA INVESTIGATION

Mrs. MURRAY. Mr. President, this is a critical moment in our Nation's history—a moment when partisanship should be set to the side, politics should be put on hold, and every Member of this Chamber should focus on what they can do to ensure the integrity of our justice system and the integrity of our executive branch. Nothing less is at stake, and none of us here should forget that.

For months, the questions surrounding President Trump's campaign's ties to Russia—what happened, who was involved, and why—have gone unanswered. The more information that comes out, the more suspicious it all looks. And the more that President Trump tries to douse the flame by firing the people looking at where the smoke is coming from, the more we are going to keep paying attention, because the bottom line is that there are so many questions—real questions, legitimate questions—that absolutely need to be answered.

Many of us have pushed for these answers. We have called for an independent investigation. We had hoped that President Trump would resist the urge to slow them down or stop them or cover anything up. But the time for the back-and-forth is over. The time for hoping is behind us, and the time for all of us to come together and speak with one voice for truth and against any kind of coverup is now.
