

it publically and sometimes loud. That is who we are as Americans. We try to work things out, sometimes at a high volume. But just like two kids who are fighting on the playground in the fifth grade—remember those two kids that started a fight and their friends were watching them? Then, eventually, someone on the other side of the playground started yelling “fight,” and the crowd started forming. The Russians aren’t starting the fight. They aren’t even in the fight. They are the kids on the far side of the playground, trying to get more people to run to the fight. They are not starting the Twitter wars and the battles, but they look at where America is divided, issues like race. Their troll farms will try to find areas where we disagree, such as areas of race, and reach in and try to amplify the volume on that by repeating accusations and by trying to be even more hostile online. They are trying to stoke disunity in our Nation.

It is important that we know that every time you see something with a high number of hashtag counts that goes up, it is not always Americans who are pushing that up. Occasionally, it is an outside body trying to raise the volume and make a conflict look even bigger than it already is in America because they are into sowing discord. That is what they love to do. That is what the rest of the nations have seen them do. We should be very clear that the Russians are trying to continue to sow chaos into us.

They have reached into our election systems. In the previous couple of weeks, the FBI notified 21 different States that during the last election season, the Russians tried to interfere in their election process as a State. Now, that doesn’t mean they did interfere. That means they reached in and tested systems. That means they tried to go into voter databases to see if they could access a voter database to see who was registered to vote. They tried to get into a secretary of State’s office in a local State to see if they could figure out how they do their elections. That means they reached into systems in States to see what voting machines they used and if they tried to connect them in. They were trying to find out how they do elections, learn as much as they could about their process, and see how far they could get.

Through all of our work, we have yet to find a single vote that was changed. The Russians didn’t get into voting machines. They didn’t alter the election in any way, but they were constantly probing through multiple States to see what they could get access to.

Now, it is my belief that they are preparing for something else. They are trying to see what they could get access to in the last election to see if they could get back into it and do even more in the next election. We should be aware of that. We should be aware not only of their propaganda, but we should be aware that they are going

after our elections to see if they can find a way, at the end of the election, to make us doubt the outcomes.

What can we do about that? I will give you several ideas. One of them, I would say, is that we need to protect the primacy of States running the elections. There is absolutely no need for the Federal Government to go to States and take over their election process. It is a constitutional protection that those States have to be able to run their elections, but every State is also responsible to do it. Of the 21 States that I noted here that the Russians tried to engage in, they couldn’t get to a single voting machine. The States are already doing a good job, but they need help.

There is no reason the State of Oklahoma should have to work alone to be able to protect itself from the Russians trying to invade it in the cyber attack. They are going to need some allies to come along with them, but the States should still be able to run the system. There should be more sharing between the State and the Federal Government. There should be an opportunity for the Federal Government to be able to say to a State, earlier than 10 months after the election: Hey, you are being hacked. For the FBI to notify States a couple of weeks ago that they were hacked in the 2016 elections is a little late. When it is occurring, we need to have that engagement between State IT folks and Federal IT folks. We need to be able to have that conversation as it is ongoing so the State can take protective measures as it is occurring. We need to have that cooperation between States and the Federal Government. We need to be able to help States come up with ways they can audit their system after the election is over.

When every election occurs, you should be able to audit it and make sure the machines that were running the election actually were not hacked. You can verify that. In Oklahoma, we have optical scanners. You fill out a paper ballot. You run it through an optical scanner at the end of the election time, and they can count everything from the optical scanner. If there is any question, they can go back to the paper and actually do a hand count. We can literally audit our elections and their process. It is a safe system that we have set up in our State. Every State does it differently, but I would encourage every State to set up a system where they can audit their system.

We know this year that the Russians were trying to engage in our election. It could be someone else who could do it. Any number of groups could try to interfere in our process. It is basic common sense to say we should have a system of elections we can actually audit. Perhaps Russia, in the days ahead, hopes that our Nation will be more like theirs. We will not be.

We are the longest constitutional Republic in the world. We still need the world. We still put out our values about free speech, free press, freedom

of religion, and opportunities for individuals to actually engage and to have conflict with their own government and to be able to disagree publically on things. We still can disagree with each other. We need to be aware that they want to turn us into them. I would hope for the sake of the Russian people, in the days ahead, that they could be more like us.

Ronald Reagan told a story about a friend of his who had a conversation with a Cuban refugee fleeing from communism and oppression in Cuba in 1964. He said that his friend, this Cuban refugee, said:

If we lose freedom here, there is no place to escape to. This is the last stand on Earth.

We are still a role model for the rest of the world. As much conflict as we have with each other, we are still a role model. I have no issue disagreeing at times with people on this floor. We can have our disagreements, but I don’t want the Russians to interfere in our disagreements. They can keep their business over there. In the days ahead, we will continue to expose the things they are doing. So they can back off and go bug someone else because we are akin to what they are doing.

With that, I yield the floor.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The senior assistant legislative clerk proceeded to call the roll.

Mr. BROWN. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Ohio.

EQUIFAX BREACH

Mr. BROWN. Madam President, I say to the Presiding Officer—and the Senator who is about to become the Presiding Officer—I appreciated the work of you two together, in tandem, today for two nominees in front of the Agriculture Committee. I thank you.

(Mr. SASSE assumed the Chair.)

Mr. President, I rise to talk for a moment about a hearing yesterday, which the Presiding Officer sat through, too, with the outgoing CEO of Equifax. We know what happened with Equifax, yet we really don’t know entirely what happened. We know there was a breach of Equifax’s information, and 145 million Americans—more than half of the adult population in our country—had their data breached. Criminals will now have access to the data of far too many Americans.

I am hopeful because I and Senator CRAPO, the chairman of the committee, and others on the committee were pretty unhappy—not to speak for others, certainly, but we were pretty unhappy with Equifax’s performance yesterday because we didn’t get a lot of answers to a number of our questions.

When you think about what we do with medical language, with our personal medical information, we have laws to say that our personal medical information belongs to us. We, of

course, can share it with a hospital or a doctor or whomever we want, but our doctor can't share it with other doctors without our permission. Our hospital can't share it with other hospitals without our permission. But our personal financial data doesn't fall into those categories.

We know how this happens. Equifax is a company that many have rarely thought about. A lot of people have never thought much about it, and many have never really explored who they are. Equifax is a company in Atlanta. There are three data agencies like this. They get your data without your permission. They get it from a utility company or from a bank or from somebody else. They have two jobs: to collect your data and then to protect your data, your personal financial data.

This company—this CEO has been paid \$69 million over the last 3 years. The CEO we met with, who has retired, has been compensated very generously. Who knows if he will end up getting bonuses and golden parachutes and all? The American public has come to unfortunately expect that these CEOs will abuse the public trust.

Look at what happened at Wells Fargo, creating all kinds of accounts for people who didn't even want those accounts, who didn't even know they were having those accounts opened. And look at Equifax.

In far too many cases, these companies don't protect our information the way they have promised they would. It makes all of us, the 145 million, subject to some kind of criminal activity in all kinds of ways—to violate our privacy and to take advantage of us financially and all the identity theft and all the things that come with that.

If you were a student at Bowling Green State University who graduated and you miss a student loan payment after you have graduated, you get your credit dinged by Equifax. If you are a homeowner in Mansfield, OH, or in Ravenna, OH, and you miss a monthly payment or a couple of monthly payments, you get your credit dinged. You are held accountable by Equifax, but Equifax hasn't really been held accountable much by anyone.

The cynicism people in this country have toward our financial system, toward Wall Street—then we see Wells Fargo do what they have done; then we see Equifax do what they have done. It is time for Congress to push away these special interest groups that have far too much influence in this body.

The White House has not been helpful. The White House looks like a retreat for Goldman Sachs executives, with all the people around the President who do the bidding of Wall Street and protect far too many of these Wall Street firms and Wells Fargo and the Equifaxes of the world.

I am hopeful that we will sit down in a bipartisan way and begin to figure out what to do here. Maybe we do consider the protections we have for peo-

ple's medical records—we ought to have the same protection for their financial records. It simply makes sense, and I am hopeful we can come to a solution.

I yield the floor.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The senior assistant legislative clerk proceeded to call the roll.

Mr. MENENDEZ. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUERTO RICO RECOVERY EFFORT

Mr. MENENDEZ. Mr. President, I rise today, as I have on so many occasions, to give voice to the 3.5 million Americans who call Puerto Rico home. Their lives have been turned upside down by Hurricane Maria, and now more than ever, they desperately need to be heard. I invite my colleagues on both sides of the aisle to join me in amplifying the voices of millions of Puerto Ricans calling out for help and the millions here on the mainland who have yet to hear from their families.

Here on the floor with me today are aerial photos of the destruction caused by Hurricane Maria, the astounding damage I saw firsthand when I toured Puerto Rico by helicopter on Friday, pictures largely taken by me.

Take this collapsed bridge in the municipality of Utuado, situated in the central mountains of Puerto Rico. Every day, the 30,000 Americans who live in Utuado depend on these bridges to cross the beautiful rivers that run through it, but today those 30,000 Americans are secluded, waiting in the dark, and wondering when help will arrive.

Images like these have stayed with me from the moment I left Puerto Rico, and I share them today because the people of Puerto Rico need our collective voices and support to stop this humanitarian crisis from devolving into a full-blown American tragedy.

This is another example of some of the devastation of a large number of homes in a community.

If we hope to overcome the monumental challenges before us, we need a full grasp of the reality on the ground. I thought that is why President Trump went to Puerto Rico this week—to get a dose of reality. Instead, the President continued to feed on his own warped version of reality. The President told the people of Puerto Rico that they should be “very proud” that the death count was only “16 versus literally thousands of people” who died in “a real catastrophe like Katrina”—a real catastrophe like Katrina. And certainly that was a catastrophe, but this is no less real for the people of Puerto Rico. Yet, moments later, the AP reported that fatalities in Puerto Rico have tragically risen to 44. And while I pray it is not the case, I fear that it may be even worse, because we have secluded communities that still have not

gotten access, so we don't know what is happening there.

In short, the situation is perilous, and we don't have a moment to waste.

Like many, I had hoped that during his visit to Puerto Rico, the President would take the high road and set a new tone after his administration's woefully delayed and inadequate response to Hurricane Maria. Instead, the President took victim-blaming to a whole new level. He told emergency responders and local elected officials: “I hate to tell you, Puerto Rico, but you have thrown our budget a little out of whack.”

Well, Mr. President, perhaps we have to dial back the budget-bursting, trillion-dollar tax cuts you want to give to billionaire families like yours, because it is going to take more than paper towels to help the people of Puerto Rico.

In this country, we don't turn our backs on Americans in need. We don't complain about how much it costs to restore power to hospitals or rebuild roads in ruin that connect people to their government and essential services or get clean drinking water and food and medicine to the hungry and the frail. We are the United States of America, and we are there for each other, whether it is Texas after Harvey or Florida after Irma or New Jersey after Sandy or Puerto Rico after Maria.

If you heard the President speak earlier this week, you would heard that everything is going great and that he in particular is doing the greatest job any President has ever done in the history of the world. The administration will tell us that the majority of hospitals are open but leave out the fact that many are running on emergency generators at significantly reduced capacity. They will leave out how the shortages of ambulances and fuel and functional roads have made getting to the hospitals nearly impossible. Even if you do find a way there, the hospitals might not have the medicine, supplies, or doctors you need.

The administration will boast that it has set up 11 distribution points for food, water, and other necessities, but what good is a distribution center that takes hours to reach and is out of supplies before you get there?

They will brag about how half of the people have access to running water but neglect to say that in some rural areas in the north, barely over 13 percent of people have access to running water.

They will boast about all of the buildings being inspected—something that even the Governor of Puerto Rico questioned—but look at this image I took 5 days before the President landed. This is just 25 minutes outside of San Juan. Hurricane Maria destroyed many of the wooden homes that populate the island and weakened many of its immense structures, as the picture showed that we had up before. Here is an example of it. So you see that all of
