How To Find U.S. Statutes and U.S. Code Citations

[Revised Edition—1965]

This pamphlet contains typical legal references which require further citing. The official published volumes in which the citations may be found are shown alongside each reference—with suggestions as to the logical sequence to follow in using them. Additional finding aids, some especially useful in citing current legislation, also have been included. Examples are furnished at pertinent points and a list of references, with descriptions, is carried at the end.

This revised edition contains illustrations of principal finding aids and reflects the changes made in the new master table of statutes set out in the 1964 edition of the United States Code.

Price: 10 cents

Order from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402

FEDERAL REGISTER

Area Code 202 Phone 963-3261

Published daily, Tuesday through Saturday (no publication on Sundays, Mondays, or on the day after an official Federal holiday), by the Office of the Federal Register, National Archives and Records Service, General Services Administration (mail address National Archives Building, Washington, D.C. 20408), pursuant to the authority contained in the Federal Register Act, approved July 26, 1935 (49 Stat. 500, as amended; 44 U.S.C., ch. 8B), under regulations prescribed by the Administrative Committee of the Federal Register, approved by the President (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $1.50 per month or $15.00 per year, payable in advance. The charge for individual copies (minimum 15 cents) varies in proportion to the size of the issue. Remit check or money order, made payable to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The regulatory material appearing herein is keyed to the CODE OF FEDERAL REGULATIONS, which is published, under 50 titles, pursuant to section 11 of the Federal Register Act, as amended. The CODE OF FEDERAL REGULATIONS is sold by the Superintendent of Documents. Prices of books and pocket supplements are listed in the first FEDERAL REGISTER issue of each month.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER or the CODE OF FEDERAL REGULATIONS.

List of CFR Parts Affected

(Codification Guide)

The following numerical guide is a list of the parts of each title of the Code of Federal Regulations affected by documents published in today's issue. A cumulative list of parts affected, covering the current month to date appears at the end of each issue beginning with the second issue of the month.

A cumulative guide is published separately at the end of each month. The guide lists the parts and sections affected by documents published since January 1, 1965, and specifies how they are affected.

Title 7—AGRICULTURE

Chapter I—Consumer and Marketing Service (Standards, Inspections, Marketing Practices), Department of Agriculture

PART 53—LIVESTOCK, MEATS, PREPARED MEATS, AND MEAT PRODUCTS (GRADING, CERTIFICATION, AND STANDARDS)

Official U.S. Standards for Grades of Swine

On June 26, 1965, there was published in the FEDERAL REGISTER (30 F.R. 8225) in accordance with section 4 of the Administrative Procedure Act (5 U.S.C. 1003), a notice that the Consumer and Marketing Service of the Department of Agriculture, under the provisions of sections 203 and 205 of the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1622 and 1624), was considering amending the provisions of the official U.S. standards for swine in §§ 53.150 and 53.151 of Part 53, Title 7, Code of Federal Regulations, and promulgating official U.S. standards for grades of feeder pigs to appear in §§ 53.158 and 53.159 of that part.

Statement of considerations. A basic principle in the development of standards for livestock and meats in that standards for feeder animals should conform closely to those for slaughter animals and the resulting carcasses. In 1940 tentative standards for grades of feeder pigs were developed and published by this Department in USDA Circular No. 569, "Market Classes and Grades of Swine." Although these tentative standards were never promulgated as official standards, they have been used as the basis for Federal and Federal-State livestock market news reports on feeder pigs and thus are of major importance to the industry. These tentative standards, however, are no longer considered adequate in view of the standards for slaughter swine and pork carcasses which have been developed since 1940.

In recent years the number of feeder pigs graded and sold in special sales has increased substantially. In line with this change in feeder pig marketing, a number of States have inaugurated grading programs based on their own standards. This increased interest and activity in the grading and marketing of feeder pigs has emphasized the need for official U.S. standards for grades of feeder pigs that are closely coordinated with the standards for grades of slaughter barrows and gilts. Such standards applied on a uniform basis throughout the country could result in further improvements in production and marketing and make market reports more meaningful and useful.

After consideration of all material submitted pursuant to the notice of proposed rule making and other material available to the Department, it is evident that there is a need for the promulgation of official standards for grades of feeder pigs. Therefore, pursuant to the said authority cited above, the provisions of the official U.S. standards for swine in 7 CFR 53.150 and 53.151 are hereby amended and official U.S. standards for grades of feeder pigs are hereby promulgated to appear in 7 CFR 53.158 and 53.159, as specified below:

1. Section 53.150 of the U.S. standards for swine is amended to read as follows:

§ 53.150 Swine.

The official standards for swine developed by the U.S. Department of Agriculture provide for segregation first according to intended use—slaughter or feeder—then as to class, as determined by sex condition, and then as to grade, which is determined by the apparent relative excellence and desirability of the animal for a particular use. Differentiation between slaughter and feeder swine is based solely on their intended use rather than on specific identifiable characteristics of the swine. Slaughter swine are those which are intended for slaughter immediately or in the near future. Feeder swine are those which are intended for slaughter after a period of feeding.

2. Section 53.151 of the official U.S. standards for swine is amended to read as follows:

§ 53.151 Slaughter and feeder swine classes.

There are five classes of slaughter and feeder swine. Definitions of the respective classes are as follows:

(a) *Barrow.* A barrow is a male swine castrated when young and before development of the secondary physical characteristics of a boar.

(b) *Gilt.* A gilt is a young female swine that has not produced young and has not reached an advanced stage of pregnancy.

(c) *Sow.* A sow is a mature female swine that usually shows evidence of having reproduced or having reached an advanced stage of pregnancy.

(d) *Boar.* A boar is an uncastrated male swine.

(e) *Stag.* A stag is a male swine castrated after development or beginning of development of the secondary physical characteristics of a boar. Typical stags are somewhat coarse and lack balance—the head and shoulders are more fully developed than the hindquarter parts, bones and joints are large, the skin is thick and rough, and the hair is coarse.

3. New §§ 53.158 and 53.159 are promulgated to read, respectively:

§ 53.158 Application of standards for grades of feeder pigs.

(a) The grade of a feeder pig is determined by evaluating two general value-determining characteristics—its logical slaughter potential and its thriftiness.

(b) The logical slaughter potential of a thrifty feeder pig is its expected slaughter grade at a market weight of 220 pounds after a normal feeding period. In these feeder pig standards, logical slaughter potential is determined by a composite appraisal of the development of the muscular system and the skeletal system. Both of these factors have an important effect on the development of lean and fat as the animal grows and fattens, and therefore, on the expected slaughter and carcass grade.

(c) Thriftiness in a feeder pig is its apparent ability to gain weight rapidly and efficiently. Size for age, health, and other general indications of thriftiness are considered in appraising the thriftiness of feeder pigs.

(d) The standards provide for five grades of feeder pigs—U.S. No. 1, U.S. No. 2, U.S. No. 3, Medium, and Cull—corresponding in name to the five grades for slaughter swine and pork carcasses. The No. 1, No. 2, and No. 3 grades include all pigs which are thrifty. Differentiation between the No. 1, No. 2, and No. 3 grades is based entirely on differences in logical slaughter potential. Feeder pigs in the No. 1 grade have sufficient muscling and frame to reach a market weight of 220 pounds with near the minimum degree of finish required for the production of cuts with acceptable quality characteristics. Feeder pigs in the No. 2 and No. 3 grades usually have progressively less muscling and less frame and are expected to have progressively more finish when marketed at 220 pounds. The Medium and Cull grades include only pigs which lack thriftiness. Differentiation between these grades is based entirely on differences in degree of unthriftiness.

(e) Most feeder pigs are marketed when relatively young and before reaching a weight of 125 pounds. At this age, sex condition exerts little influence on the basic factors determining the feeder grade. Therefore, these standards are equally applicable for grading barrow, gilt, and boar pigs, although it is recognized that sex condition may influence the market price in some instances. It is assumed that boar pigs which are graded as feeder pigs will be castrated prior to developing the secondary physical characteristics of a boar. Sows, stags, and mature boars are seldom used as feeder animals, and these standards do not apply to those classes.

(f) Only one combination of muscling and skeletal characteristics is described in the standards for the No. 1, No. 2, and No. 3 grades. However, it should be recognized that pigs with thicker muscling and less frame or those with thinner muscling and greater frame than described in each of these grades also may be eligible for that grade. Since no attempt is made to describe the numerous combinations of characteristics that may qualify a feeder pig for a specific grade, making appropriate compensations for varying combinations of characteristics requires the use of sound judgment.

§ 53.159 Specifications for official United States standards for grades of feeder pigs.

(a) *U.S. No. 1.* Feeder pigs in this grade near the borderline of the U.S. No. 2 grade are slightly long in relation to width and have moderately thick muscling throughout. Thickness of muscling is particularly evident in moderately thick and full hams and shoulders. The back usually appears slightly full and well-rounded. They usually present a well-balanced, stylish appearance. Feeder pigs in this grade are expected to produce U.S. No. 1 grade carcasses when slaughtered at 220 pounds.

(b) *U.S. No. 2.* Feeder pigs in this grade near the borderline of U.S. No. 3 grade are slightly short in relation to width and have only slightly thick muscling throughout. The hams and shoulders are slightly thick and full and the back usually appears moderately full and thick. Feeder pigs in this grade are expected to produce U.S. No. 2 grade carcasses when slaughtered at 220 pounds.

(c) *U.S. No. 3.* Feeder pigs typical of the No. 3 grade are short and have rather thin muscling throughout. The hams are thin and rather flat, particularly in the lower parts toward the shanks. The back usually appears full and thick and the width at the topline usually is greater than at the underline. Feeder pigs in this grade are expected to produce U.S. No. 3 grade carcasses when slaughtered at 220 pounds.

(d) *Medium.* Feeder pigs in this grade near the borderline of the Cull grade usually are small for their age and appear unthrifty. They often have a rough, unkempt appearance indicating the effects of disease or poor care. The hams and shoulders usually are thin and flat and taper toward the shanks. The back is thin and lacks fullness. Pigs in this grade near the borderline of the U.S. No. 1, U.S. No. 2, and U.S. No. 3 grades are slightly small for their age and appear slightly unthrifty. It is recognized that Medium grade feeder pigs will produce No. 1, No. 2, or No. 3 grade carcasses when slaughtered at 220 pounds provided their unthrifty condition is corrected.

(e) *Cull.* Feeder pigs typical of this grade are very deficient in thriftiness and growthiness and often appear stunted or diseased. Hams and shoulders usually are very thin and flat and taper toward the shanks. They are narrow over the top and the back is thin and often slopes away from the center.

(Sec. 203, 60 Stat. 1087, as amended; sec. 205, 60 Stat. 1090, as amended; 7 U.S.C. 1622, 1624)

These standards embody slight changes from the proposals in the notice of rule making. These changes are made pursuant to comments received in connection with the notice and are made for purposes of clarity and uniformity of interpretation. It does not appear that further notice and other public procedure would make additional information available to the Department. These provisions should be made effective as soon as possible in order to be of maximum benefit to affected persons. Since most statistical reports are compiled on a yearly basis, more uniform and meaningful statistical reporting would be possible if these standards were in effect at the beginning of the calendar year. Therefore, under section 4 of the Administrative Procedure Act (5 U.S.C. 1003), it is found upon good cause that further public procedure with respect to the promulgated standards is impracticable and unnecessary and such standards may be made effective less than 30 days after publication in the FEDERAL REGISTER.

The foregoing provisions shall become effective January 1, 1966.

Done at Washington, D.C., this 27th day of December 1965.

G. R. GRANGE,
Deputy Administrator,
Marketing Services.

MISCELLANEOUS AMENDMENTS

Correction

In F.R. Doc. 65-13484, appearing at page 15571 of the issue for Friday, December 17, 1965, the following corrections are made:

1. In the second sentence of § 724.62 (a)(2), "paragraph (c)" should read "paragraph (q)".

2. Section 724.69(b)(8) should end with the words "in the base period" instead of with the words "is the base period".

3. Section 724.69(g)(1) should end with the words "lessee farm" instead of with the words "leasee farm".

Correction

In F.R. Doc. 65-13673, appearing at page 15795 of the issue for Wednesday, December 22, 1965, the following corrections are made in § 1427.1359(b):

1. In subparagraph (2), "staple of length" should read "staple length".
2. In subparagraph (3), "notes" should read "motes".

Title 9—ANIMALS AND ANIMAL PRODUCTS

Chapter I—Agricultural Research Service, Department of Agriculture

SUBCHAPTER C—INTERSTATE TRANSPORTATION OF ANIMALS AND POULTRY

PART 78—BRUCELLOSIS

Slaughtering Establishments

Pursuant to the provisions of sections 4, 5, and 13 of the Act of May 29, 1884, as amended, sections 1 and 2 of the Act of February 2, 1903, as amended, section 3 of the Act of March 3, 1905, as amended, and section 3 of the Act of July 2, 1962 (21 U.S.C. 111-113, 114a-1, 120, 121, 125, 134b), paragraph (b) of § 78.15 of the regulations in Part 78, Title 9, Code of Federal Regulations, restricting the interstate movement of domestic animals because of brucellosis, is hereby amended to read as follows:

§ 78.15 Slaughtering establishments.

* * * * *

(b) Notices containing lists of slaughtering establishments specifically approved for the purposes of § 78.5; paragraph (b) of § 78.12; and §§ 78.18 and 78.19 are published in the FEDERAL REGISTER. Information with respect to these slaughtering establishments may also be obtained from the Division and from the Federal Inspectors and State Inspectors.

(Secs. 4, 5, 23 Stat. 32, as amended, secs. 1, 2, 32 Stat. 791-792, as amended, sec. 3, 33 Stat. 1265, as amended, sec. 2, 65 Stat. 693; sec. 3, 76 Stat. 130; 21 U.S.C. 111-113, 114a-1, 120, 121, 125, 134b; 29 F.R. 16210, as amended; 9 CFR 78.16)

Effective date. The foregoing amendment shall become effective upon publication in the FEDERAL REGISTER.

This amendment clarifies the regulations in Part 78 by making specific reference in § 78.15(b) to the notices regarding specific approval of slaughtering establishments for the purposes of §§ 78.18 and 78.19 and should be made effective promptly in order to accomplish its purpose in the public interest. Accordingly, under section 4 of the Administrative Procedure Act (5 U.S.C. 1003), it is found upon good cause that notice and other public procedure with respect to the amendment are impracticable and contrary to the public interest, and good cause is found for making the amendment effective less than 30 days after publication in the FEDERAL REGISTER.

Done at Washington, D.C., this 27th day of December 1965.

E. P. REAGAN,
Acting Administrator,
Agricultural Research Service.

Title 31—MONEY AND FINANCE: TREASURY

Chapter II—Fiscal Service, Department of the Treasury

SUBCHAPTER A—BUREAU OF ACCOUNTS

PART 209—DRAWING OF CHECKS IN FAVOR OF FINANCIAL ORGANIZATIONS FOR THE CREDIT OF PERSONS' ACCOUNTS

On November 4, 1965, notice of proposed rule making regarding the adoption of regulations, pursuant to section 3620 of the Revised Statutes (31 U.S.C. 492), as amended by Public Law 89-145 (79 Stat. 582), to govern the drawing of checks in favor of financial organizations for the credit of persons' accounts was published in the FEDERAL REGISTER (30 F.R. 13955). The regulations proposed apply to checks in payment of (1) salaries or wages, and (2) other classes of recurring payments with specific approval of the Fiscal Assistant Secretary of the Treasury. After consideration of all such relevant matter as was presented by interested persons regarding the rules proposed, the regulations under section 3620 of the Revised Statutes, as amended by Public Law 89-145, are hereby adopted to read as follows:

Sec.

209.1 Authority.
209.2 Definitions.
209.3 Individual checks.
209.4 Composite checks.
209.5 Depositor account numbers.
209.6 Assignments prohibited.
209.7 Financial organization as agent.
209.8 Acquittance to United States.
209.9 Financial organization not Government depositary.
209.10 Procedural instructions.

AUTHORITY: The provisions of this Part 209 issued under R.S. 3620, as amended by Pub. L. 89-145; 31 U.S.C. 492, unless otherwise noted.

SOURCE: The provisions of this Part 209 appear at F.R. ———, December 30, 1965, unless otherwise noted, and are contained in Treasury Department Circular No. 1076, dated December 22, 1965.

§ 209.1 Authority.

This part is issued pursuant to section 3620 of the Revised Statutes (31 U.S.C. 492), as amended by Public Law 89-145 (79 Stat. 582). Public Law 89-145 further amended section 3620 of the Revised Statutes to provide additional methods of payment by permitting the heads of agencies to authorize disbursing officers to make certain payments by checks drawn in favor of financial organizations under certain conditions.

§ 209.2 Definitions.

As used in this part:

(a) "Agency" means any department, agency, independent establishment, board, office, commission or other establishment in the executive, legislative, or judicial branch of the Government, any wholly owned or controlled Government corporation, and the municipal government of the District of Columbia;

(b) "Financial organization" means any bank, savings bank, savings and loan association or similar institution, or Federal or State-chartered credit union.

§ 209.3 Individual checks.

(a) The head of an agency may authorize the appropriate disbursing officer to pay a person by sending to the financial organization designated by that person a check that is drawn in favor of that organization and for credit to the account of that person.

(b) The procedure set out in paragraph (a) of this section may be adopted only:

(1) If the person to whom payment is to be made provides the agency with a written request (on a form promulgated by the Treasury [1] or such agency-adapted form as may be approved by the Treasury for the purpose) which designates the financial organization and such financial organization, by endorsement thereon, states its willingness to act in this respect as agent of such person;

(2) For payments for credit to any account (single or joint) designated by the person to whom payment is to be made, the title of which includes the name of that person as stated on the check;

(3) If the head of the agency makes a determination that the interests of the Government, from the standpoint of economy or otherwise, and of the person to whom payment is to be made, will not be impaired;

(4) For payments of salaries or wages (including military or other pay and allowances) and, with the specific approval of the Fiscal Assistant Secretary of the Treasury, for other classes of recurring payments; and

(5) For agencies serviced by Treasury regional disbursing offices, after such consultation with the Bureau of Accounts as is necessary to coordinate the agency's operations with disbursing office requirements.

§ 209.4 Composite checks.

(a) Whenever, under the procedure set out in § 209.3, payments may be made by an agency on the same regularly recurring dates to two or more persons who designate the same financial organization, the head of the agency may, with the approval specified in paragraph (b) of this section or upon the determination specified in paragraph (c) of this section, as the case may be, authorize the appropriate disbursing officer to draw a single check for the total amount in favor of that organization for credit to the accounts of the several persons.

(b) An agency serviced by Treasury regional disbursing offices desiring to use the procedure set out in paragraph (a) of this section may, after consultation with the Bureau of Accounts regarding its requirements, submit through that Bureau a request for approval by the Fiscal Assistant Secretary of the Treasury. The request shall be accompanied by findings as to the effect of the procedure on the agency's costs. The approval of the Fiscal Assistant Secretary will be contingent on his determining that economy will result, considering the effect of the procedure on Government-wide costs for each application.

(c) An agency which does its own disbursing or disburses by delegation from the Treasury may use the procedure set out in paragraph (a) of this section if the head of the agency makes a determination that, in accordance with standards prescribed in regulations of the agency concurred in by the Fiscal Assistant Secretary of the Treasury, economy will result. Agency regulations shall provide for taking Government-wide costs into account for each application of the procedure, including costs of the agency's internal operations and other Government costs determined by the Treasury.

(d) An agency which uses the procedure set out in paragraph (a) of this section shall supply to the disbursing office, or arrange to have the disbursing office prepare, for forwarding to each financial organization with each check, a record which as a minimum states the name and location of the agency payrolling office; the name and address of the financial organization office to receive the check; the name and amount for each account to be credited; and the date and aggregate amount to be covered by the composite check.

§ 209.5 Depositor account numbers.

At the request of a financial organization to which checks are sent under the procedures set out in §§ 209.3 and 209.4, an agency shall, to the extent practicable, use depositor account numbers supplied by the financial organization as additional identification on individual checks or on the records accompanying composite checks. The United States shall not assume responsibility for the correctness of such account numbers and the name of the person to whom payment is to be made will govern the crediting of the account.

§ 209.6 Assignments prohibited.

The procedures set out in §§ 209.3 and 209.4 may not be used for allotting a part of a payment or for effectuating an assignment of a payment. Nothing in this part affects allotments of payments specifically authorized by other provisions of law and regulations thereunder.

§ 209.7 Financial organization as agent.

A financial organization which receives checks under the procedure set out in §§ 209.3 and 209.4 does so in each case as the agent of the person who has designated the financial organization to receive the check and credit his account. The death of that person revokes the authority of the financial organization to credit the amount to the account of that person. In the case of a check covering a payment to one person, the proceeds of which cannot be credited to the account because of death or any other reason, the financial organization shall promptly return the check to the issuing disbursing officer or remit its own check in an equal amount, with a statement in either case identifying the reason therefor and the person. In the case of a check covering payment to more than one person, a portion of which cannot be credited to an account because of death or for any other reason, the financial organization shall promptly remit to the agency responsible for making payment a check in an amount equal to that portion which could not be properly credited to the account, with a statement identifying the person and the reason for refund.

§ 209.8 Acquittance to the United States.

Payment by the United States of a check drawn in favor of and properly endorsed by the financial organization designated by a person to whom payment is to be made shall, if the check or the accompanying document properly specifies that person's name, constitute a full acquittance to the United States for the amount of such payment.

§ 209.9 Financial organization not Government depositary.

A financial organization to which a check is drawn under the procedure set out in §§ 209.3 and 209.4 does not thereby become a Government depositary and shall not advertise itself as one because of that fact.

§ 209.10 Procedural instructions.

Procedural instructions for the guidance of agencies in the implementation of these regulations, as needed, will be issued by the Commissioner of Accounts, including promulgation of applicable forms.

[SEAL] JOHN K. CARLOCK,
Fiscal Assistant Secretary.

[F.R. Doc. 65-14006; Filed, Dec. 29, 1965; 8:50 a.m.]

[1] Standard Form 1189 attached to Department Circular 1076, dated Dec. 22, 1965, filed as part of original document.

Title 32—NATIONAL DEFENSE

Chapter VI—Department of the Navy

SUBCHAPTER C—PERSONNEL

PART 719—NONJUDICIAL PUNISHMENT, NAVAL COURTS, AND CERTAIN FACT-FINDING BODIES

SUBCHAPTER E—CLAIMS

PART 750—NAVY GENERAL CLAIMS

PART 751—NAVY PERSONNEL CLAIMS

Miscellaneous Amendments

Scope and purpose. Parts 719, 750, and 751 are updated to conform to amendments to the Manual of the Judge Advocate General which will be distributed in due course to Navy and Marine Corps commands as Changes 15 and 16 to that manual.

1. Section 719.101 is amended by revising paragraph (f)(2) through the end of paragraph (f) and by revising paragraph (g) to read as follows:

§ 719.101 General provisions.

* * * * *

(f) *Appeals*—* * *

(2) *To whom made when officer who imposed the punishment is in a Navy chain of command.* Any appeal from nonjudicial punishment in accordance with paragraph 135, MCM 1951, shall, in the absence of specific direction to the contrary by an officer authorized to convene general courts-martial and superior in the chain of command to the officer who imposed the punishment, be forwarded to the area coordinator authorized to convene general courts-martial. When the cognizant area coordinator is not superior in rank or command to the officer who imposed the punishment, however, or when the punishment is imposed by a commanding officer who is an area coordinator, the appeal shall be forwarded to the officer authorized to convene general courts-martial and next superior to the officer who imposed the punishment in the chain of command.

(i) An immediate or delegated area coordinator may take action in lieu of an area coordinator if he is superior in rank or command to the officer who imposed the punishment and has authority to convene general courts-martial.

(ii) For mobile units, the area coordinator for the above purpose is the area coordinator most accessible to the unit at the time of forwarding of the appeal.

(3) *To whom made when officer who imposed the punishment is in the chain of command of the Commandant of the Marine Corps.* Any appeal from nonjudicial punishment in accordance with paragraph 135, MCM 1951, shall be made to the authority next superior in the chain of command to the officer who imposed the punishment, whether or not the superior authority is at the time of appeal in the chain of command of the person punished.

(4) *Appeal from nonjudicial punishment in multiservice commands under paragraph (a)(1) of this section.* An appeal from nonjudicial punishment imposed by a commanding officer designated pursuant to paragraph (a)(1) of this section shall be made to the Chief of Naval Operations or the Commandant of the Marine Corps, as appropriate.

(5) *Delegation of authority to act on appeals.* Such authority may be delegated in accordance with the provisions of paragraph (a)(4) of this section.

(6) *Reforwarding of appeal.* An officer who has delegated his nonjudicial punishment powers to a principal assistant under paragraph (a)(4) of this section may not act on appeal from punishment imposed by his delegate. In such cases and in other cases where it may be inappropriate for the officer designated by subparagraph (2) or (3) of this paragraph to act on the appeal, as where an identity may exist of persons or staff with the command which imposed the punishment, such fact may be noted in reforwarding the appeal to the next superior in the chain of command of the officer who imposed the punishment.

(7) *Procedures.* When the officer who imposed the punishment is not the offender's immediate commanding officer, the latter may forward the appeal direct to the officer who imposed the punishment for forwarding under subparagraph (2), (3) or (4) of this paragraph. Similarly, the action of the superior on appeal may be forwarded by the officer who imposed the punishment direct to the offender's commanding officer for delivery. Copies of the correspondence should be provided for any intermediate authorities in the chain of command. In any case where nonjudicial punishment is imposed on the basis of information contained in the record of a court of inquiry or factfinding body, a copy of the record, including the findings, opinions, and recommendations, together with copies of endorsements thereon, shall, except where the interests of national security may be adversely affected, be made available to the individual concerned for his examination in connection with the preparation of an appeal. In case of doubt, the matter shall be referred to the Judge Advocate General for advice.

(g) *Records of punishment*—(1) The records of nonjudicial punishment will be maintained and disposed of in accordance with paragraph 133c, MCM 1951, as amended, and implementing regulations contained in the Bureau of Naval Personnel Manual and the Marine Corps Personnel Manual. The forms used for the Unit Punishment Book are NAVPERS 2696 and NAVMC 10132PD.

(2) Effective July 1, 1965, section B of NAVJAG Form 425 (Rev. 4-65) will be prepared by general court-martial authorities for semiannual submission to the Judge Advocate General, Navy Department, Washington, D.C., 20350. NAVJAG Form 425A (5-63) is obsolete. The first semiannual report to be submitted on section B of NAVJAG Form 425 (Rev. 4-65) should cover the period July 1, 1965, to December 31, 1965. Supplies of this form are available in the Forms and Publications Segment of the Navy Supply System under Stock Number 0105-100-0302. A sample form is set forth in § 719.221.

* * * * *

2. Section 719.102 is amended by revising the next to last paragraph of paragraph (e)(4) and by revising paragraph (f)(3) to read as follows:

§ 719.102 Letters of censure.

* * * * *

(e) *Content of letter*—* * *

(4) *Notification of right to appeal and right to submit statement.* * * *

If, upon full consideration, you do not desire to avail yourself of this right to appeal, you are directed so to inform your commanding officer in writing. You are directed to reply without delay and to state therein the date of receipt of this communication, and the approximate time when either an appeal or notice of decision not to appeal may be expected. Any subsequent request for additional time shall contain adequate justification therefor.

* * * * *

(f) *Appeals.* * * *

(3) Appeals from a letter of admonition or reprimand imposed as nonjudicial punishment shall be forwarded as specified in § 719.101f.

* * * * *

3. Section 719.103 is amended by revising paragraph (a)(2), redesignating paragraph (b)(10) as (b)(11) and revising it, and adding a new (b)(10) to read as follows:

§ 719.103 Designation of additional convening authorities.

(a) *General courts-martial.* * * *

(2) The following officers are specifically designated as empowered to convene general courts-martial:

Chief of Naval Operations.
Commandant of the Marine Corps.
Commander, Service Group One.
Commander, Service Force, Sixth Fleet.
Commanders, Fleet Air Wings.
Commanders, Fleet Air Commands.

Head, Military Personnel Department, U.S. Naval Station, Treasure Island, San Francisco, Calif.
Head, Military Personnel Department, U.S. Naval Station, Norfolk, Va.

* * * * *

4. Section 719.107 is revised to read as follows:

§ 719.107 Superior competent authority defined.

(a) *Accuser in a Navy chain of command.* Whenever an accuser forwards charges pursuant to articles 22(b) and 23(b) of the Code, the "superior competent authority" as used in those articles is, in the absence of specific direction to the contrary by an officer authorized to convene general courts-martial and superior in the chain of command to such accuser, the area coordinator authorized to convene general or special courts-martial, as appropriate. For mobile units, the area coordinator for the above purpose is the area coordinator most accessible to the mobile unit at the time of forwarding of the charges. When the cognizant area coordinator is not superior in rank or command to the accuser, however, or when the accuser is an area coordinator, or if it is otherwise impossible or impracticable to forward the charges as specified above, they shall be forwarded to any superior officer exercising the appropriate court-martial jurisdiction (see par. 33i, MCM 1951). An immediate or delegated area coordinator may receive the charges in lieu of the area coordinator if he is authorized to convene the appropriate court-martial and is superior in rank or command to the accuser.

(b) *Accuser in the chain of command of the Commandant of the Marine Corps.* Whenever an accuser forwards charges pursuant to articles 22(b) and 23(b) of the Code, the "superior competent authority" as used in those articles is defined as any superior officer in the chain of command authorized to convene a special or general court-martial, as appropriate. If such an officer is not reasonably available, or if it is otherwise impossible or impracticable to so forward the charges, they shall be forwarded to any superior officer exercising the appropriate court-martial jurisdiction (see par. 33i, MCM 1951).

5. Section 719.111 is amended by revising the caption and by adding paragraphs (c) and (d) to read as follows:

§ 719.111 Preparation and forwarding of charges.

* * * * *

(c) *Forwarding of charges by an officer in a Navy chain of command—(1) General court-martial cases.* When a commanding officer, in taking action on charges, deems trial by general court-martial to be appropriate, but he is not authorized to convene such court or finds the convening of such court impracticable, the charges and necessary allied papers will, in the absence of specific direction to the contrary by an officer authorized to convene general courts-martial and superior in the chain of command to such commanding officer, be forwarded to the area coordinator actively exercising general court-martial jurisdiction. For mobile units, the area coordinator for the above purposes is such area coordinator most accessible to the mobile unit at the time of forwarding of the charges. See § 719.107 for additional provisions in cases in which the forwarding officer is an accuser. An immediate or delegated area coordinator may receive the charges in lieu of the area coordinator if he is actively exercising general court-martial jurisdiction.

(2) *Special and summary court-martial cases.* When an officer in command or in charge, in taking action on charges, deems trial by special or summary court-martial to be appropriate, but he is not authorized to convene such courts-martial, the charges and necessary allied papers will be forwarded to the superior in the chain of command authorized to convene the type of court-martial deemed appropriate unless an officer authorized to convene general courts-martial and superior in the chain of command to such officer in command or charge, on the basis of a local arrangement with the area coordinator, has directed that such cases be forwarded to the area coordinator. For mobile units, the area coordinator for the above purposes is the area coordinator most accessible to the mobile unit at the time of forwarding of the charges. See § 719.107 for additional provisions in cases in which the forwarding officer is an accuser. Subject to the terms of the local arrangement, forwarding to the area coordinator may also be resorted to even though the immediate or superior commanding officer of the accused is authorized to convene the type of court-martial deemed appropriate but finds such action impracticable. An immediate or delegated area coordinator may receive the charges in lieu of the area coordinator if he is authorized to convene the type of court-martial deemed appropriate.

(d) *Forwarding of charges by an officer in the chain of command of the Commandant of the Marine Corps.* When a commander, in taking action on charges, deems trial by general, special or summary court-martial to be appropriate, but he is not empowered to convene a court as deemed appropriate for the trial of the case, the officer will forward the charges and necessary allied papers through the chain of command to an officer exercising the kind of court-martial jurisdiction deemed appropriate. See paragraphs 32f and 33i, MCM 1951; see also § 719.107 for additional provisions in cases in which the forwarding officer is an accuser.

6. Section 719.114 is amended by revising paragraph (a)(6) to read as follows:

§ 719.114 Preparation of records of trial.

(a) *General and special courts-martial.* * * *

(6) *Court-Martial Chronology/Prisoner Data Form, NAVJAG 420 (Rev. 5–65).* As provided in §§ 719.121a(a) and 719.226, this form will be prefixed to the originals of all records of trial by general court-martial and all records of trial by special court-martial which include a bad conduct discharge.

* * * * *

7. Section 719.118 is amended by revising paragraph (a)(4) to read as follows:

§ 719.118 Promulgating orders.

(a) *General and special courts-martial—* * * *

(4) *Form.* The form of a promulgating order is prescribed in appendix 15, MCM 1951. In copying and including the action of the convening authority in the promulgating order, any synopsis of the accused's record and/or circumstances of the offense contained in the convening authority's action pursuant to § 719.117(c) and/or § 719.117(f) shall also be copied and included in the promulgating order. The order shall be subscribed by the officer issuing the order or by a subordinate officer designated by him. In either case the name, grade, and title of the subscribing officer, including his organization or unit, shall be given. Where a subordinate officer signs by direction, his name, title, and organization shall be followed by the words: "By direction of (name, grade, title, and organization of issuing officer)." Duplicate originals of promulgating orders are copies personally subscribed by the officer who subscribed the original. Certified copies of promulgating orders are copies bearing the statement: "Certified to be a true copy," over the signature, grade and title of an officer.

* * * * *

8. Section 719.119 is amended by revising paragraphs (a)(2) and (b)(2) to read as follows:

§ 719.119 Review of summary and special courts-martial.

(a) *Summary courts-martial and special courts-martial not involving a bad conduct discharge—* * * *

(2) *Selection of supervisory authorities.* (i) It is the policy of the Department of the Navy that review of cases pursuant to paragraph 94a(2), MCM 1951, will be accomplished in the field, unless compelling reasons exist for forwarding the record or records to the Judge Advocate General for review.

(*a*) For commands in a Navy chain of command, review pursuant to paragraph 94a(2), MCM 1951, will be accomplished, if practicable, and in the absence of specific direction to the contrary by an officer authorized to convene general courts-martial and superior in the chain of command to the convening authority, by the area coordinator authorized to convene general courts-martial. For mobile units, the area coordinator for this purpose is the area coordinator most accessible to the mobile unit at the time of forwarding of the record. An immediate or delegated area coordinator may take action in lieu of an

area coordinator if he has authority to convene general courts-martial.

(b) For commands in the chain of command of the Commandant of the Marine Corps, review pursuant to paragraph 94a(2), MCM 1951, will be accomplished within the chain of command if practicable.

If such accomplishment of the review is found not practicable, any officer having supervisory authority in the field may be requested to accept records of such cases and to act thereon pursuant to paragraph 94a(2), MCM 1951. Only if all reasonably available officers having supervisory authority in the field find it impracticable to grant such request will the records in such cases be forwarded to the Judge Advocate General for review. If so forwarded to the Judge Advocate General, they shall be accompanied by a letter stating the reasons why supervisory authority action was not accomplished in the field.

(ii) When an officer exercising general court-martial jurisdiction is the convening authority of a summary court-martial or a special court-martial not involving a bad conduct discharge, his action thereon will be as convening authority only.

(a) At activities in a Navy chain of command, the record should then be forwarded, in the absence of specific direction to the contrary by a superior in the chain of command, to the area coordinator if superior in rank or command to the convening authority and authorized to convene general courts-martial; otherwise the record should be forwarded to any appropriate superior officer authorized to convene general courts-martial, or, if no such superior officer has a law specialist available, the record shall be forwarded to the Judge Advocate General for review. (For mobile units, the area coordinator for this purpose is the area coordinator most accessible to the mobile unit at the time of forwarding of the record.)

(b) At activities in the chain of command of the Commandant of the Marine Corps, the record should then be forwarded to an appropriate superior officer exercising general court-martial jurisdiction or, if no such superior officer has a law specialist available, the record shall be forwarded to the Judge Advocate General for review.

In all cases, the action of the convening authority in forwarding the record for supervisory review shall identify the officer to whom the record is forwarded by stating his official title, such as "The record of trial is forwarded to the Commandant, First Naval District, for action under article 65(c), Uniform Code of Military Justice."

* * * * *

(b) *Special courts-martial involving a bad conduct discharge*— * * *

(2) *Action by reviewing authority (officer exercising general court-martial jurisdiction).* In special court-martial cases where the sentence as approved by the convening authority who is not an officer exercising general court-martial jurisdiction includes a bad conduct discharge, review will be accomplished in accordance with paragraph 94a(3), MCM 1951.

(i) For activities in a Navy chain of command, and in the absence of specific direction to the contrary by an officer authorized to convene general courts-martial and superior in the chain of command to the convening authority, review will be accomplished by the area coordinator authorized to convene general courts-martial. For mobile units, the area coordinator for this purpose is the area coordinator most accessible to the mobile unit at the time of forwarding of the record. An immediate or delegated area coordinator may take action in lieu of an area coordinator if he has authority to convene general courts-martial. As indicated in this subdivision, a superior officer in the chain of command authorized to convene general courts-martial may direct otherwise; he may, e.g., direct that the records be forwarded to him for review.

(ii) For activities in the chain of command of the Commandant of the Marine Corps, review will be accomplished by the officer ordinarily exercising general court-martial jurisdiction over the command.

In the event review by any of the officers indicated in the foregoing part of this subparagraph is impracticable—for instance, because of the absence or lack of a staff legal officer—any other officer authorized to convene general courts-martial may be requested to accept records of trial for review. Only if all reasonably available officers exercising general court-martial jurisdiction find it impracticable to grant such request will the records be forwarded direct to the Judge Advocate General for review by a board of review. If so forwarded, they shall be accompanied by a letter stating the reasons why review under article 65(b) of the Code was not accomplished in the field.

* * * * *

9. Section 719.121a is added to read as follows:

§ 719.121a Preparation of court-martial statistical forms.

(a) *General court-martial cases and special court-martial cases involving a bad conduct discharge.* Effective January 1, 1966, all convening authorities and supervisory authorities, as appropriate, shall complete NAVJAG Form 420 (Rev. 5–65) during the review of all trials of general courts-martial and all trials of special courts-martial involving a bad conduct discharge. The form will be prefixed to the original records of trial. NAVJAG Form 420 (6–58) is obsolete. Supplies of NAVJAG Form 420 (Rev. 5–65) are available in the Forms and Publications Segment of the Navy Supply System under Stock Number 0105–100–0201. A form containing sample entries and the Punitive Article Identification Code to be used in completing the form are set forth in § 719.226.

(b) *Non-bad conduct discharge special courts-martial and summary courts-martial.* Effective July 1, 1965, section A of NAVJAG Form 425 (Rev. 4–65) will be prepared by each supervisory authority for semiannual submission to the Judge Advocate General, Navy Department, Washington, D.C., 20350. NAVJAG Form 425 (Rev. 1–60) is obsolete. The first semiannual report to be submitted on section A of NAVJAG Form 425 (Rev. 4–65) should cover the period July 1, 1965, to December 31, 1965. Supplies of NAVJAG Form 425 (Rev. 4–65) are available in the Forms and Publications Segment of the Navy Supply System under Stock Number 0105–100–0302. A sample form is set forth in § 719.227.

10. Section 719.122 is amended by revising paragraph (b) to read as follows:

§ 719.122 Remission and suspension.

* * * * *

(b) *Probationary period.* All suspensions shall be of the conditional-remission type and shall be for a definite period of time. If the suspension is effected by the convening authority or an officer exercising general court-martial jurisdiction over the command to which the accused is attached and is for a period in excess of 6 months, or, in cases involving confinement, in excess of 6 months beyond the time of release from confinement, see § 719.117(b) or § 719.120(a), as appropriate. The running of the period of suspension of a sentence is interrupted either by the unauthorized (and unexcused) absence of the probationer or by commencement of proceedings to vacate suspension of the sentence. The running of the period of suspension of a sentence resumes (1) as of the date the probationer's unauthorized (and unexcused) absence ends or (2) as of the initial date of the interruption if proceedings to vacate suspension of the sentence are concluded without vacation of the suspension. For instructions concerning voluntary extension of enlistment for the purpose of serving probation, see SECNAV Instruction 5815.3 and revisions thereto.

* * * * *

11. Section 719.134 is revised to read as follows:

§ 719.134 Court-martial forms.

(a) *List.* The forms listed in this paragraph are used in courts-martial by the naval service:

STD 1156	Public Voucher for Fees and Mileage of Witnesses.
STD 1157	Claim for Fees and Mileage of Witness.
DD 453	Subpoena for Civilian Witness.
DD 454	Warrant of Attachment.
DD 455	Report of Proceedings To Vacate Suspension.
DD 456	Interrogatories and Depositions.
DD 457	Investigating Officer's Report.
DD 458	Charge Sheet.
DD 490	Verbatim Record of Trial.
DD 491	Summarized Record of Trial.
DD 494	Court-Martial Data Sheet. (Optional.)
NAVJAG 420	Court-Martial Chronology/Prisoner Data.
NAVJAG 425	Statistical Report on Non-Board of Review and Article 15 Cases.

(b) *How to obtain forms.* The forms designated in paragraph (a) of this section are available from the Forms and Publications Segment of the Navy Supply System as Cognizance Symbol "I" material and may be obtained in accordance with the instructions contained in Navy Stock List of Forms and Publications, section 1, NAVSANDA Publication 2002. Marine Corps activities will requisition forms in accordance with instructions contained in the current edition of Marine Corps Order 4235.11, Subj.: Procedures incident to supply of blank forms and general officer stationery items.

(c) *Forms prescribed by MCM 1951.* Where forms are prescribed by the Manual for Courts-Martial, United States, 1951, but are not included in the listing in paragraph (a) of this section, convening authorities should improvise as necessary, using the manual and appendixes thereto as guides.

12. Section 719.139 is amended by revising paragraphs (a)(1)(ii) and (iii) and adding a new paragraph (a)(1)(iv) to read as follows:

§ 719.139 Authority to administer oaths and to act as notary.

(a) *Authority under article 136(a)(7) and (b)(6).* * * *

(1) * * *

(ii) Officers of the grade of Lieutenant Commander or Major, and above;

(iii) Executive Officers of the Navy and Marine Corps; and

(iv) Administrative Officers of Marine Corps Aviation Squadrons.

* * * * *

13. Section 719.157 is amended by designating the text of paragraph (b) as subparagraph (1) and by adding subparagraph (2) to read as follows:

§ 719.157 Rights of a party.

* * * * *

(b) *Right to counsel.* * * *

(2) When directing that an investigation be conducted, and the medical officer states that the member involved as a party is incompetent due to his injuries and will remain so for at least 60 days, the convening authority will insure that a qualified lawyer counsel is appointed to represent the party during the proceedings of the investigation and duly exercise all the rights of the party, as though he were present.

* * * * *

14. Section 719.221 is inserted to read as follows:

§ 719.221 Form for report on article 15 cases (see § 719.101(g)(2)).

NOTE: The report will be prepared as section B of NAVJAG Form 425 (Rev. 4-65). NAVJAG Form 425 filed as part of the original document.

15. Section 719.226 is inserted to read as follows:

§ 719.226 Form for court-martial chronology/prisoner data and punitive article identification code (see § 719.121a(a)).

NOTE: NAVJAG Form 420 (Rev. 5-65) and Punitive Article Identification Code filed as part of the original document.

16. Section 719.227 is inserted to read as follows:

§ 719.227 Form for statistical report on nonboard of review cases (see § 719.121a(b)).

NOTE: The form is section A of NAVJAG Form 425 (Rev. 4-65); section B of the form (relating to article 15 cases) is prescribed by § 719.221 and explained in § 719.101(g)(2). NAVJAG Form 425 filed as part of the original document.

17. Section 750.41 is amended by revising paragraphs (a)(8) and (b)(8) to read as follows:

§ 750.41 Approval of claims.

(a) *Federal tort claims.* * * *

(8) The commandant or the district legal officer of the naval district within which the claims arose or, if the claims arose in Guam, Commander, Naval Forces, Marianas, or his staff legal officer, if no claim arising from the accident or incident exceeds $1,000 and there are no known possible claims in any amount for either personal injury or death as a result of the accident or incident. One copy of the approval and one copy of the voucher shall be forwarded to the Judge Advocate General without a letter of transmittal.

* * * * *

(b) *Military Claims Act cases.* * * *

(8) The commandant or the district legal officer of the naval district within which the claims arose or, if the claims arose in Guam, Commander, Naval Forces, Marianas, or his staff legal officer, if no claim arising from the accident or incident exceeds $1,000 and there are no known possible claims in any amount for either personal injury or death as a result of the accident or incident.

* * * * *

18. Part 751 is amended by adding the following note below the "Authority" note:

NOTE: Part 751 is under revision to conform to the act of Sept. 15, 1965 (Pub. L. 89-185, 79 Stat. 789), which increases the maximum settlement authority from $6,500 to $10,000.

(R.S. 161, secs. 2671-2680, 62 Stat. 982-984, secs. 801-940, 2732, 2733, 5031, 70A Stat. 36-78, 152, 153, 278, E.O. 10214 (3 CFR 1949-53 Comp., p. 408), as amended; 5 U.S.C. 22, 10 U.S.C. 801-940, 2732, 2733, 5031, 28 U.S.C. 2671-2680)

By direction of the Secretary of the Navy.

[SEAL] WILFRED HEARN,
Rear Admiral, U.S. Navy, Judge Advocate General of the Navy.

DECEMBER 27, 1965.

[F.R. Doc. 65-13930; Filed, Dec. 29, 1965; 8:48 a.m.]

Chapter VII—Department of the Air Force

SUBCHAPTER W—AIR FORCE PROCUREMENT INSTRUCTION

MISCELLANEOUS REVISIONS TO SUBCHAPTER

Subpart W is amended as follows:

PART 1013—GOVERNMENT PROPERTY

Subpart D—Industrial Facilities

1. In § 1013.402-50 many of the references have been changed. The affected paragraphs are set forth as follows:

§ 1013.402-50 Provisions applicable to procurement contracts.

(a) *Facilities provided under cost-type procurement contracts.* (1) Where existing facilities are to be furnished under the terms of a cost-type procurement contract, no separate clauses covering such facilities are required other than the Government-furnished property clause set forth in §§ 13.703 or 13.707 of this title, whichever is applicable. The items of facilities will be listed or specified in the Schedule as Government-furnished property.

(2) Where the acquisition or fabrication of facilities is authorized in a cost-type contract, in addition to inserting the Government Property clause of §§ 13.703 or 13.707 of this title, the following clause will be set forth in the Schedule. The facilities authorized will be listed following the clause, together with the estimated cost of each set forth and the total estimated cost of all such facilities:

FACILITIES ACQUIRED OR FABRICATED

* * * * *

(b) *Facilities provided under fixed-price procurement contracts.* (1) Where existing facilities are to be furnished under the terms of a fixed-price contract, no separate clauses covering such facilities are required other than the Government-furnished property clause as set forth in §§ 13.702 or 13.706 of this title, whichever is applicable. The items of facilities will be listed or specified in the Schedule as Government-furnished property.

(2) Where the acquisition or fabrication of facilities is authorized in a fixed-price contract:

(i) The General Provisions of the contract will be designated "Section I", and in addition to inserting the Government-furnished property clause of §§ 13.702 or 13.706 of this title, the following clause will be set forth in the Schedule. The facilities authorized will be listed following the clause together with the estimated cost of each set forth and the maximum (total) cost of all such facilities:

FACILITIES ACQUIRED OR FABRICATED

• • • • •

(ii) • • •

GENERAL PROVISIONS, SECTION II APPLICABLE ONLY TO FACILITIES ACQUIRED OR FABRICATED

• • • • •

d. • • •

II-2 Overtime and Wage Compensation: Insert the clause set forth in § 1012.102-3(d) of this subchapter.

II-3 Subcontracts: Insert the clause set forth in § 7.702-33 of this title.

• • • • •

(c) [Deleted]

(d) *Patent rights clause.* If the contract does not contain the Patent Rights clause, § 9.107-5 of this title, and the facilities authorized involve research or development in design, manufacture, or modification, (1) if under the circumstances set forth in paragraph (a)(2) of this section the clause will be added and made applicable only to the facilities, or (2) if under the circumstances set forth in paragraph (b)(2) of this section, the clause will be added to General Provisions, section II.

(e) *Facilities involving construction.* If the facilities being authorized involve construction, as defined in § 12.402 of this title, and the labor clauses required for construction contracts are not otherwise included in the contract, the clause set forth in § 7.705-5 of this title will be added: (1) If under the circumstances set forth in paragraph (a)(2) of this section, and made applicable only to the facilities being constructed, or (2) if under the circumstances set forth in paragraph (b)(2) of this section, to General Provisions, section II. Any providing of nonseverable facilities not located on Government controlled land will require compliance with § 13.307 of this title and § 1013.406.

• • • • •

2. Section 1013.403 is set forth to amend the reference, as follows:

§ 1013.403 Single facilities contract.

Determination of impracticability under § 13.303(c) of this title covering the issuance of facilities contract and lease agreements will be made by the contracting officer of the office issuing the contract or lease Prior to making such determinations the contracting officer will obtain the coordination of MCPK for the proposed action. For this purpose separate divicions of a single corporation will be deemed to be separate contractors if such divisions are normally represented by separate business offices for the purpose of contract negotiation and administration.

§ 1013.408 [Amended]

3. In § 1013.408 the reference in the introductory material is amended to read: "§ 13.101-8" and paragraph (c) is deleted.

4. In § 1013.412, paragraph (b)(4) is set forth to amend the references, as follows:

§ 1013.412 Unusable or unneeded facilities.

• • • • •

(b) • • •

(4) Should Government work materialize, rentals may or may not be charged according to the provisions of § 1013.407. If the contractor desires to make commercial use of this property, rentals will be charged according to §§ 13.404 and 7.702-12 of this title and § 1013.601.

• • • • •

Subpart E—Contract Clauses

1. Sections 1013.502 and 1013.503 are set forth to show amended references, as follows:

§ 1013.502 Government-furnished property clause for fixed-price contracts.

Whenever contracts fall within the purview of paragraph B-102.50(c), § 1030.2 of this subchapter, and government-owned parts and materials are furnished, the following will be added to the end of the third sentence of paragraph (c) of the clause in § 13.702 of this title: "except that with respect to Government property shipped the Contractor will not be required to maintain the property records prescribed by the Manual."

(a) With respect to the first sentence of paragraph (a) of the Government property clause in § 13.702 of this title, it will be the responsibility of the procuring contracting officer to specifically list the government-furnished property in a schedule, or identify the specifications or appendices wherein such information is set forth.

§ 1013.503 Government-property clause for cost-reimbursement type contracts.

Whenever contracts fall within the purview of § 1030.2B-102.50(c), of this subchapter, and Government-owned parts and materials are furnished, the following will be added to the end of the second sentence of paragraph (c) of the clause set forth in § 13.703 of this title: except that with respect to Government property shipped the Contractor will not be required to maintain the property records prescribed by the Manual.

2. Those portions of §§ 1013.504 and 1013.553 affected by reference changes are set forth as follows:

§ 1013.504 Special tooling clause for fixed-price contracts.

(a) • • •

(1) through (3) • • •

(b) • • •

SPECIAL TOOLING

(a) Same as ASPR 13-704(a) (32 CFR 13.704(a)).

(b) Same as ASPR 13-704(b) (32 CFR 13.704(b)).

(c) Same as ASPR 13-704(c) (32 CFR 13.704(c)).

(d) Same as ASPR 13-704(d) (32 CFR 13.704(d)).

(e) Same as ASPR 13-704(e) (32 CFR 13.704(e)).

• • • • •

(g) Same as ASPR 13-704(g) (32 CFR 13.704(g)).

(h) Same as ASPR 13-704(h) (32 CFR 13.704(h)).

(i) Same as ASPR 13.704(i) (32 CFR 13.704(i)).

(j) Same as ASPR 13-704(j) (32 CFR 13.704(j)).

(k) [Deleted]

(l) • • •

(c) Contracts which contain the clause provided by § 13.704 of this title may be amended in the above manner to provide that title to the tooling will vest in the Government immediately, when it is deemed necessary for administrative reasons to establish the Government as owner of the tooling, prior to the occurrence of any of the events set forth in § 13.704 of this title.

(d) The use of special tooling for the performance of other follow-on Government contracts or subcontracts under Government contracts will be subject to the following procedures:

(1) When the administrative contracting officer approves the use of the special tooling in connection with other Government contracts or related subcontracts, a reference to such approval will be incorporated in each other contract or subcontract involved. No further action will be necessary so long as the contract under which the special tooling was originally acquired or fabricated remains active.

(2) When it becomes evident that the contract under which the special tooling was originally acquired or fabricated is to be completed or terminated, and the special tooling is needed for the performance of follow-on contracts, at least one of which contains the clause in § 13.704 of this title, that contract, or if there are more than one follow-on contracts with the clause in § 13.704 of this title, the one with the longest life expectancy, will be amended by the incorporation of the following clause, and a reference thereto will be made in the original authorizing contract:

The special tooling acquired or fabricated pursuant to the terms of contract No. (original contract) is hereby and hereafter to be considered as acquired pursuant to the clause of this contract entitled "Special Tooling" and henceforth subject to the terms and conditions thereof.

If such follow-on contract contains the clause in paragraph (b) of this section, the above provisions will be included in such contract. However, the above provision will not be inserted in the follow-on contract containing the clause in § 13.704 of this title, where the tooling was acquired or fabricated (or considered to be acquired) under a contract containing the clause in paragraph (b) of this section.

(3) In long term programs, it may be necessary to repeat the procedure in subparagraphs (1) and (2) of this paragraph, in order to pass the Government's rights to the special tooling down through the succeeding contracts as each preceding authorizing contract expires. By such procedure, and so long as at

least one fixed-price contract (with the clause in § 13.704 of this title or paragraph (b) of this section, as appropriate), is in active status, the Government's rights to the special tooling are considered to remain unprejudiced and without necessity of exercising the right of option in each transaction. Therefore, each preceding "authorizing" contract may be retired as it expires. However, if a point is reached where the special tooling continues to be needed by the contractor, but the remaining contracts are not fixed-price with the clause in § 13.704 of this title, or paragraph (b) of this section (for example, CPFF, etc.), the administrative contracting officer will exercise the Government's right of option and take title (if the clause in § 13.704 of this title was the last in effect with respect to the tooling). Thereafter, the special tooling will be retained as Government-furnished property for use in connection with the remaining requiring contracts.

§ 1013.553 Special nuclear material.

When special nuclear materials or instruments incorporating special nuclear material are furnished to a contractor as Government property, the following clause will be incorporated in the contract, in addition to the clause prescribed by §§ 13.702, 13.703, 13.706, or 13.707 of this title:

* * * * *

Subpart F—Use of Government-Owned Industrial Facilities on Work Other Than for a Military Department

1. Sections 1013.601–1 through 1013.601–3, and 1013.601–50(a)(5) are set forth to amend the reference, as follows:

§ 1013.601–1 General.

See § 7.702–12 of this title.

§ 1013.601–2 Rental rates.

(a) and (b). See § 7.702–12 of this title. For portable tools and automotive equipment, rental charges will normally be computed at 25 percent per year based on acquisition cost.

(c) See § 7.702–12 of this title. Rental payments (checks) received by contracting officers under facilities contracts will be forwarded for deposit to the appropriate accounting and finance office within 24 hours of receipt. At the time of transmittal, or as soon thereafter as possible, the contracting officer will certify the correctness of the amount of payment and forward such certification to the accounting and finance officer.

§ 1013.601–3 Exceptions.

(a) See § 7.702–12 of this title.

(b) In negotiations which include real property to be used for commercial purposes, rental charges will normally be computed at the following annual rental rates, based on acquisition costs:

(1) For land and land preparation, 5 percent per annum.

(2) For buildings, building installations, and land installations, 8 percent per annum.

(c) See § 7.702–12 of this title. Equipment items of unusual size or performance characteristics may be negotiated and the exception conditions identified in submittal of proposed lease according to § 1013.601–50.

(d)–(e) See § 7.702–12 of this title.

§ 1013.601–50 Procedure.

* * * * *

(a) * * *

(5) Financial or other consideration that will be given to the Government for use of the production equipment. If the contractor is to maintain Government-owned equipment in a nonuse status as all or part of the consideration, give the number of units, general description, including acquisition cost, and total weight (in tons). See § 7.702–12 of this title.

* * * * *

2. Section 1013.608–50 is set forth for editorial changes only, regarding paragraph designations, as follows:

§ 1013.608–50 Delegations of authority.

The commanders, AFLC and AFSC, have been delegated the authority to: Control Government-owned industrial property, including the correction and adjustment of deficiencies and irregularities regarding the administration of such property; grant deviations, in individual cases, from established policy with respect to record requirements on such property; appoint property administrators; and authorize multicontract cost and material control systems. This delegation does not include authority to act on policy matters relating to furnishing Government-owned industrial property and the control thereof, except as specifically stated.

(a) The Commander, AFLC, has vested the authority contained in this section in the Director and Deputy Director of Procurement and Production, Hq AFLC. The Director of Procurement and Production, Hq AFLC, has further delegated authority to (1) Control Government-owned industrial property, including the correction and adjustment of deficiencies and irregularities regarding the administration of such property, (2) grant exceptions, in individual instances, according to § 1030.2, paragraph B–301 of this subchapter, with respect to the policy that contractor's records will be designated and used as official contract records, and (3) appoint property administrators, to the following, subject to limitations set forth herein:

(i) Commanders and vice commanders of major air commands (AFSC and OAR with respect to base procurement only) with power of redelegation limited to the level of a staff officer responsible for procurement within command headquarters and within the headquarters of the first echelon of command immediately subordinate to a major command (numbered Air Force Hq Transport Air Forces and Aeronautical Chart and Information Center or comparable level).

(ii) Commanders and deputy commanders of AFLC field procurement activities with power of redelegation limited to that authority cited in subparagraph (2) of this paragraph to the staff officer responsible for procurement matters, provided such officer is not below the level of the director of procurement and production at the air materiel area level, or equivalent organization. Authority contained in subparagraphs (1) and (3) of this paragraph is not subject to further redelegation.

(iii) Commanders and deputy commanders of air procurement regions (AFRE and APRFE) with power of redelegation limited to a staff officer responsible for procurement or contract administration.

(b) The Commander, AFSC, has vested the authority contained in this section in the Deputy Chief of Staff, Associate Deputy Chief of Staff and Assistant Deputy Chief of Staff, Procurement and Production, Hq AFSC, with power of redelegation. The Deputy Chief of Staff, Procurement and Production, Hq AFSC, has delegated authority to (1) control Government-owned industrial property, including the correction and adjustment of deficiencies and irregularities regarding the administration of such property, (2) grant exceptions, in individual instances according to § 1030.2, paragraph B–301 of this subchapter, with respect to the policy that contractor's records be designated and used as official contract records, and (3) appoint property administrators to the following:

(i) Commander, Office of Aerospace Research, with power of redelegation limited to the level of the staff officer responsible for procurement within the headquarters of the first echelon of command immediately subordinate to OAR.

(ii) Commanders and deputy commanders of AFSC divisions.

(iii) Commanders and deputy commanders of contract management regions or the AF contract management division with power of redelegation limited to chiefs, contract management districts, test site offices, and AF plant representatives.

(iv) Commanders and deputy commanders of AFSC centers.

(c) Staff supervision and technical direction over the first two authorities in the introductory paragraph of this section, will be exercised by the following:

(1) The Field Operations Branch (MCPKF), Hq AFLC, which will exercise staff supervision and technical direction over the control of Government-owned industrial property for all elements of the Air Force, except AFSC and OAR. MCPKF's responsibility relative to AFSC and OAR in this area is limited to base procurement only. MCPK is authorized to grant deviations from established policy in regard to record requirements and authorize multicontract cost and material control systems (AFSC and OAR with respect to base procurement only).

(2) The Property and Plant Clearance Division (SCKAP), Hq AFSC, which will

exercise staff supervision and technical direction over the control of Government-owned industrial property within AFSC and OAR other than base procurement. SCKAP is authorized to grant deviations from established policy in regard to records requirements and authorize multicontract cost and material control systems for AFSC and OAR other than base procurement.

(d) The granting of deviations (i.e., waiver of further accounting and auditing requirements) is limited to instances where: (1) The contract(s) involved have been completed and final payment made, (2) reconstruction of the property records in technical compliance with § 30.2, appendix B and § 30.3, appendix C of this title would serve no constructive purpose, and (3) it is determined, after investigation and documentation of the inadequacies, that waiver of further accounting and auditing action would be in the best interest of the Government.

Subpart X—Facility Expansion Procedure

§ 1013.2402 [Deleted]

1. Section 1013.2402 is deleted.

§ 1013.2406 [Amended]

2. In § 1013.2406, the first two references: "§ 13.402" and "§ 13.101–6" are amended to read "§ 13.303" and "§ 13.-101–8" respectively.

§ 1013.2406–1 [Amended]

3. In § 1013.2406–1, the reference "§ 13.406" in Schedule II is amended to read "§ 13.307"; and in paragraph (c) of Schedule III, the reference "§ 1013.102–3 (k)(7)" in columns 2 and 3 is amended to read "§ 1013.102–3(a)(7)."

Subpart GG—Providing Vehicles to AF Contractors

1. In § 1013.3300, the introductory material is revised to read as follows:

§ 1013.3300 Scope of subpart.

This subpart establishes policies, assigns responsibilities, and prescribes procedures within limitations under § 13.301 of this title for the purpose of:

* * * * *

2. Section 1013.3301(a) is set forth to delete the reference, as follows:

§ 1013.3301 Definition.

(a) Industrial vehicular equipment is that plant equipment that has a direct application and is justified as necessary in support of the manufacture or production of the end item, or is used in actual test programs or in research leading to the development of items that will be produced for the Air Force.

* * * * *

3. In § 1013.3303 the reference in paragraph (b) is revised and in § 1013.3306 the last sentence is revised. These sections now read as follows:

§ 1013.3303 Lease and bailment.

(a) For Leasing see § 1013.3003–5(b).
(b) For Bailment see § 1013.608–51(c)(6).

§ 1013.3306 Maintenance.

When industrial vehicular equipment and/or commercial type vehicles are provided to a contractor, the contracting officer will insert in the contract a provision requiring the contractor to maintain and repair such Government-owned equipment, including normal parts replacement. See § 7.702–14 of this title for guidance.

Subpart HH—Excess Plant Equipment

In § 1013.3402 paragraphs (a) and (c) are set forth to correct the references, as follows:

§ 1013.3402 General conditions.

(a) When items of plant equipment of types not controlled under reserve inventory procedures (supporting plant equipment), must be provided to contractors according to § 1013.102–3, excess Government property will be used to satisfy the requirement whenever possible.

* * * * *

(c) Supporting plant equipment will be provided to an AF contractor only when each item is specifically identified and authorized for acquisition under its facilities contract or lease. In the absence of a facilities contract or lease, the equipment may be covered by the supply or service contract according to § 13.303 of this title. The buyer for the supply or service contract will secure the coordination and approval of a contracting officer from industrial facilities activity of the cognizant AFSC division prior to authorizing the acquisition of supporting equipment through a supply or service contract.

* * * * *

PART 1014—INSPECTION AND ACCEPTANCE

Subpart A—Inspection

§ 1014.105 [Amended]

In § 1014.105, the reference "§ 1001.-1302" is amended to read "§ 1001.1305."

PART 1016—PROCUREMENT FORMS

Subpart B—Forms for Negotiated Procurement

§ 1016.200 [Deleted]

Section 1016.200 is deleted.

Subpart H—Miscellaneous Forms

Section 1016.814–1 is revised to read as follows:

§ 1016.814–1 Architect-Engineer Experience Data (DD Form 1071).

See AFR 85–8 (Selecting Architect-Engineers for Professional Services by Negotiated Contracts).

PART 1017—EXTRAORDINARY CONTRACTUAL ACTIONS TO FACILITATE THE NATIONAL DEFENSE

Subpart B—Requests for Contractual Adjustment

§ 1017.202 [Deleted]

Section 1017.202 is deleted.

PART 1030—APPENDIXES TO AIR FORCE PROCUREMENT INSTRUCTION

§ 1030.2 [Amended]

In § 1030.2, Appendix B—Manual for control of Government property in possession of contractors:

1. In B–207, the text is deleted.

2. In B–301(a), the first reference is amended. B–301(a) now reads as follows:

PART III—RECORDS TO BE MAINTAINED

B–301 *General.*

(a) The authority to grant exceptions to the policy that the contractor's records will be designated and used as the official contract records has been delegated as set forth in § 1013.608–50 of this subchapter. Such exceptions, however, may be authorized, in writing, only in unusual circumstances. Class or group exceptions are not authorized. Each exception authorized must relate to a specific contract, a specific invitation for bid, or specific request for proposals, and must be covered by inclusion of the Property Records clause in § 1013.552 of this subchapter, in the contract.

(1) * * *

* * * * *

§ 1030.3 [Amended]

In § 1030.3, Appendix C—Manual for control of Government property in possession of nonprofit research and development contractors:

1. C–200 is revised to read as follows:

PART II—GOVERNMENT ADMINISTRATIVE PROVISIONS

C–200 *Scope of part.*

See § 1013.608 of this subchapter regarding delegations of authority with respect to the control of Government-owned industrial property, etc.

2. C–207.1(a) is set forth to amend the first reference, as follows:

C–207.1 *General policy.*

(a) The authority to grant exceptions to the policy that the contractor's records will be designated and used as the official contract records has been delegated as set forth in § 1013.608–50 of this subchapter. Such exceptions, however, may be authorized, in writing, only in unusual circumstances. Class or group exceptions are not authorized. Each exception authorized must relate to a specific contract, invitation for bid, or request for proposals and must be covered by inclusion in the contract of the Property Records clause in § 1013.552 of this chapter.

* * * * *

3. In C–213.1, paragraph (m), through its subdivision (iv) is deleted.

§ 1030.5 [Amended]

In § 1030.5, Appendix E—Contract Financing:

E–212.50 is set forth to delete the second reference, as follows:

PART II—BASIC POLICIES

E–212.50 *Facility capability report.* The FCR system (see Subpart I, Part 1 of this title) provides the services of personnel qualified and competent to evaluate credit and financial problems prior to or contemporaneously with contract awards.

E–910 is set forth to amend the second reference as follows:

PART IX—ASSIGNMENT OF CLAIMS ARISING UNDER GOVERNMENT CONTRACTS

E–910 *Transfers of business and corporate mergers.* Transfers of an entire business, corporate mergers, and assignments by operation of law, each of which may effect the assignment of claims under a contract, are not prohibited by the Federal statutes and hence do not depend upon the Assignment of Claims Act of 1940 for their validity. (See § 16.505 and Subpart P, Part 1 of this title.) However, in the case of transfers of a business or corporate mergers, notices of assignment of claims under the contract made by the transferee or successor corporation will not be acknowledged until a supplemental agreement has been executed, substituting the transferee or successor corporation as the contractor with the Government. Similarly, before acknowledging assignments made by transferees by operation of law, the contracting officer will require the submission of a certified copy of the document evidencing the transfer by operation of law.

PART 1053—CONTRACTS; GENERAL

Subpart D—Administrative Requirements

In § 1053.404–2(b) the reference is amended. Paragraph (b) now reads as follows:

§ 1053.404–2 Definitions.

* * * * *

(b) *Contract Management District (CMD).* A component of a contract management region (CMR). It is responsible for surveillance of contractors within an assigned geographical area, excluding contractors referred to in AFP1 1053.404–6(c) * and contractors within a DCASR. The functions, under the responsibility of a CMD, include administration of contracts, industrial property, production and industrial resources analysis, product quality and reliability assurance, industrial security, and accounting and disbursing.

[AFP1 § 1053.404–6(c) filed with document]

* * * * *

PART 1054—CONTRACT ADMINISTRATION

Subpart A—Administration of AF Contracts by Contracting Officers

Section 1054.104 (h) and (n) are revised to read as follows:

§ 1054.104 Matters of contract administration to be handled by Administrative Contracting Officers.

* * * * *

(h) Take administrative action relating to variation in quantities as set forth in § 1001.325 of this subchapter.

* * * * *

(n) Report all litigation involving a CPFF contractor to the Office of the Judge Advocate General, Hq USAF, as required by Part 844, Subchapter D of this chapter. Confer with his staff judge advocate as required.

* * * * *

Subpart K—Reporting Contractors Involved in Bankruptcy, Receivership, Assignment for the Benefit of Creditors, Other Types of Insolvency Proceedings and Probate Proceedings

Section 1054.1102(b) is set forth to amend the reference, as follows:

§ 1054.1102 Reporting institution of bankruptcy, receivership, insolvency, and probate proceedings.

* * * * *

(b) If a contracting officer is informed or is aware of the institution of bankruptcy, receivership, assignment for the benefit of creditors or other type of insolvency proceedings or probate proceedings involving an AF contractor, he will immediately send notice by electrically transmitted message of such proceedings directly to the Contract Financing Division, Directorate of Accounting and Finance, Hq USAF, and to Chief, Tax and Litigation Division, Office of The Judge Advocate General, Hq USAF, Washington, D.C. The notice will include the name of the contractor, address, type of proceedings, court in which proceedings are held, and contracts held by the contractor (see Part 844, Subchapter D of this chapter). If information of such proceedings is first received by the accounting and finance office, that office will submit the information directly to the Contract Financing Division, Directorate of Accounting and Finance, and to Chief, Tax and Litigation Division, Office of The Judge Advocate General. A copy of the notice will be forwarded to the contracting officer, accounting and finance office whose funds are cited in the contract, or the accounting and finance office cited to make payment, as appropriate.

Subpart O—Preparation and Issuance of Shipping Instructions

In § 1054.1502, paragraph (b) (2) is revised to read as follows:

§ 1054.1502 Application.

* * * * *

(b) * * *

(2) Shipping instructions for base procurement as defined in § 1001.201–55 of this subchapter.

* * * * *

PART 1059—AIRCRAFT AND GFAE PROCUREMENT

Subpart B—Use of Production Aircraft in Emergency and Control of Test/Acceptance and Demonstration Flights

In § 1059.202, paragraph (d) (2) is revised to read as follows:

§ 1059.202 Control of test/acceptance and demonstration flights.

* * * * *

(d) * * *

(2) Demonstration flights will be performed according to provisions of AFR 60–6 (Participation in Goodwill Flights, Aerial Reviews and Weapons Demonstrations).

By order of the Secretary of the Air Force.

FREDERICK A. RYKER,
Lieutenant Colonel, U.S. Air Force, Chief, Special Activities Group, Office of The Judge Advocate General.

[F.R. Doc. 65–13994; Filed, Dec. 29, 1965; 8:50 a.m.]

Title 21—FOOD AND DRUGS

Chapter I—Food and Drug Administration, Department of Health, Education, and Welfare

SUBCHAPTER B—FOOD AND FOOD PRODUCTS

PART 121—FOOD ADDITIVES

Subpart D—Food Additives Permitted in Food for Human Consumption

MEDROXYPROGESTERONE ACETATE

Correction

In F.R. Doc. 65–13727, appearing at page 16063 of the issue for Friday, December 24, 1965, the equation appearing at the end of § 121.1187 should read as follows:

$$1 \text{ part per million of medroxyprogesterone acetate} = \frac{A \text{ sample solution}}{A \text{ standard solution}} \times \frac{100}{\text{weight sample}}$$

Title 33—NAVIGATION AND NAVIGABLE WATERS

Chapter II—Corps of Engineers, Department of the Army

PART 204—DANGER ZONE REGULATIONS

Gulf of Mexico, Fla.

Pursuant to the provisions of section 7 of the River and Harbor Act of August 8, 1917 (40 Stat. 266; 33 U.S.C. —), § 204.120 governing the use and navigation of danger zones in the Gulf of Mexico, Fla., is hereby amended redesignating the boundaries of Area No. 1 and

prescribing new firing periods, revising paragraphs (a)(1) and (b)(1), effective 30 days after publication in the FEDERAL REGISTER as follows:

§ 204.120 Gulf of Mexico, southeast of St. Andrew Bay East Entrance, Small Arms Firing Range, Tyndall Air Force Base, Fla.

(a) *The danger zones.*—(1) *Area No. 1.* The waters of the Gulf of Mexico, southeast of St. Andrew Bay East Entrance within a rectangular area beginning at a point on shore at latitude 30°04'32", longitude 85°37'07"; thence to latitude 30°03'47", longitude 85°37'58"; thence to latitude 30°03'19", longitude 85°37'00"; thence to a point on shore at latitude 30°04'13", longitude 85°36'47"; thence along the shoreline to the point of beginning.

* * * * *

(b) *The regulations.* (1) No vessel or other craft shall enter or remain in the areas during periods of firing. Area No. 1 will be used for firing practice between 6:30 a.m. and 5:00 p.m., as scheduled, Monday through Friday, with possibly some sporadic firings on Saturdays and Sundays. A 10' x 18' red flag will be displayed on a pole at the shoreline whenever firing is in progress.

* * * * *

(Regs., Dec. 10, 1965, 1507-32; Gulf of Mexico, Fla.-ENGCW-ON; sec. 7, 40 Stat. 266; 33 U.S.C. 1)

J. C. LAMBERT,
Major General, U.S. Army,
The Adjutant General.

Title 47—TELECOMMUNICATION

Chapter I—Federal Communications Commission

[FCC 65-1136]

PART 87—AVIATION SERVICES

Exempt Radionavigation Land Test Stations From Log Requirements

At a session of the Federal Communications Commission held at its offices in Washington, D.C., on the 22d day of December 1965;

The Commission having under consideration amendment of § 87.99 to exempt licensees of radionavigation land test stations (MTF) from log keeping for this class of station; and,

It appearing, that radionavigation land test stations operate on very low power, are not used for communications and are used solely for testing of radionavigation equipment; and,

It further appearing, that from information obtained at a recent meeting of the Aerospace Flight Test Radio Coordinating Council held in Atlanta, Ga., the keeping of a log for such a station will not provide the Commission with any information that will materially assist it in administering the service; and,

It further appearing, that an exemption from this requirement will relieve licensees of an unnecessary administrative burden; and,

It further appearing, that in view of the foregoing, the public interest, convenience, and necessity would be served by amending Part 87—Aviation Services, to exempt radionavigation land test stations from the log requirements of § 87.99; and,

It further appearing, that the amendment adopted herein removes an unnecessary administrative burden from licensees of radionavigation land test stations and the public interest would be served by the expeditious removal of this requirement hence the prior notice, procedure, and effective date provisions of section 4 of the Administrative Procedure Act are impracticable; and,

It further appearing, that authority for the rules herein adopted is contained in sections 4(i), 303 (j) and (r) of the Communications Act of 1934, as amended.

It is ordered, That Part 87 of the Commission's rules is amended as set forth in the Appendix below, effective January 4, 1966.

(Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interprets or applies sec. 303, 48 Stat. 1082, as amended; 47 U.S.C. 303)

NOTE: Rules changes herein will be covered by T.S. V(64)-9.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,[1]
[SEAL] BEN F. WAPLE,
Secretary.

[1] Commissioner Wadsworth absent.

1. Section 87.99(a) is amended to read as follows:

§ 87.99 Information required in station logs.

(a) Except for radionavigation land test station (MTF), all stations at fixed locations shall maintain logs showing hours of operation, frequencies used, station with which communication was held, and hours of duty and signature of the operator(s) on duty.

* * * * *

[F.R. Doc. 65-13942; Filed, Dec. 29, 1965; 8:49 a.m.]

Title 50—WILDLIFE AND FISHERIES

Chapter I—Bureau of Sport Fisheries and Wildlife, Fish and Wildlife Service, Department of the Interior

PART 32—HUNTING

Tennessee National Wildlife Refuge, Tenn.

The following special regulation is issued and is effective on date of publication in the FEDERAL REGISTER.

§ 32.22 Special regulations; upland game; for individual wildlife refuge areas.

TENNESSEE

TENNESSEE NATIONAL WILDLIFE REFUGE

Public hunting of rabbits and quail on the Tennessee National Wildlife Refuge, Tenn., is permitted only on the areas designated by signs as open to hunting. These open areas, comprising 1,500 acres, are delineated on a map available at the refuge headquarters and from the Regional Director, Bureau of Sport Fisheries and Wildlife, 809 Peachtree-Seventh Building, Atlanta, Ga., 30323. Hunting shall be in accordance with all applicable State regulations governing the hunting of rabbits and quail subject to the following special conditions:

(1) The open season on the refuge extends from January 27 through February 5, 1966.

(2) The use of dogs is not permitted.

(3) Camping on the area is not permitted.

(4) Bobcats, gray foxs, woodchucks, and crows may be taken.

(5) Hunters may enter public hunting area 1 hour before sunrise and must be out by 1 hour after sunset.

(6) Hunters shall wear red, orange, or yellow as part of their field dress.

(7) A Federal permit is not required to enter the public hunting area.

The provisions of this special regulation supplement the regulations which govern hunting on wildlife refuge areas generally which are set forth in Title 50, Code of Federal Regulations, Part 32, and are effective through February 5, 1966.

WALTER A. GRESH,
Regional Director, Bureau of Sport Fisheries and Wildlife.

[F.R. Doc. 65-13915; Filed, Dec. 29, 1965; 8:46 a.m.]

Proposed Rule Making

DEPARTMENT OF AGRICULTURE

Consumer and Marketing Service

[7 CFR Part 1006]

[Docket No. AO-356]

MILK IN NORTHEAST-CENTRAL FLORIDA MARKETING AREA

Supplemental Notice of Hearing on Proposed Marketing Agreement and Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), notice was issued December 22, 1965, giving notice of a public hearing to be held at the Thunderbird Motor Hotel, 5865 Expressway, Jacksonville, Fla., beginning at 10 a.m., e.s.t., on January 19, 1966, and at the Robert Meyer Motor Inn, 151 East Washington Street, Orlando, Fla., beginning at 10 a.m., e.s.t., on January 24, 1966, with respect to a proposed marketing agreement and order, regulating the handling of milk in the Northeast-Central Florida marketing area.

Supplemental notice is hereby given with respect to proposals to be considered at such hearing.

The proposals, set forth below, have not received the approval of the Secretary of Agriculture.

Proposed by Sunshine State Dairymen's Cooperative and Chipola Dairy Cooperative:

Proposal No. 7. The proposed order submitted for hearing by the Dairy Farmers Mutual and Northeast Florida Milk Producers Association be amended to provide that the area to be covered by said marketing order be amended so that said area is described as follows:

North and Central Florida Milk Marketing Area comprised of the following counties, all in the State of Florida: Alachua, Baker, Bay, Bradford, Brevard, Calhoun, Citrus, Clay, Columbia, Duval, Flagler, Gadsden, Gilchrist, Gulf, Hamilton, Holmes, Indian River, Jackson, Jefferson, Lafayette, Lake, Leon, Levy, Liberty, Madison, Marion, Nassau, Orange, Osceola, Putnam, St. John, Seminole, Sumter, Suwannee, Taylor, Union, Volusia, Wakulla and Washington.

Proposed by The Southland Corporation:

Proposal No. 8. We wish to propose the same counties for the tentative Northeast-Central Florida Marketing Area proposed by the proponent cooperative associations, all in the State of Florida: Alachua, Baker, Bradford, Brevard, Citrus, Clay, Columbia, Duval, Flagler, Gilchrist, Hamilton, Indian River, Lake, Levy, Marion, Nassau, Orange, Osceola, Putnam, St. John, Seminole, Sumter, Suwannee, Union, and Volusia. In addition, we wish to propose the following counties, all in the State of Florida: Bay, Calhoun, Dixie, Franklin, Gadsden, Gulf, Jackson, Jefferson, Lafayette, Leon, Liberty, Madison, Taylor, Wakulla and Washington.

Proposed by Foremost Dairies of the South, division of Home Town Foods, Inc.:

Proposal No. 9.

§ 1006.6 Northeast-Central Florida Marketing Area.

"The Northeast-Central Florida Marketing Area" hereinafter called the "Marketing Area" means all the territory geographically included within the boundaries of the following counties, all in the State of Florida, including all waterfront facilities connected therewith and all territory wholly or partly therein occupied by Government (Municipal, State, or Federal) reservations, installations, institutions, or other similar establishments.

Alachua.	Lafayette.
Baker.	Lake.
Bay.	Leon.
Bradford.	Levy.
Brevard.	Liberty.
Calhoun.	Madison.
Citrus.	Marion.
Clay.	Nassau.
Columbia.	Orange.
Dixie.	Osceola.
Duval.	Putnam.
Flagler.	St. Johns.
Franklin.	Seminole.
Gadsden.	Sumter.
Gilchrist.	Suwanee.
Gulf.	Union.
Hamilton.	Taylor.
Holmes.	Volusia.
Indian River.	Wakulla.
Jefferson.	Washington.

Copies of this notice may be procured from the Hearing Clerk, Room 112-A, Administration Building, U.S. Department of Agriculture, Washington, D.C., 20250, or may be there inspected.

Signed at Washington, D.C., on December 27, 1965.

ROY W. LENNARTSON,
Acting Administrator.

[7 CFR Part 1102]

[Docket No. AO-237-A12]

MILK IN FORT SMITH, ARK., MARKETING AREA

Decision on Proposed Amendments to Tentative Marketing Agreement and to Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure, governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held at Fort Smith, Ark., on December 21, 1965, pursuant to notice thereof issued on December 14, 1965 (30 F.R. 15591).

The material issues on the record of the hearing related to:

1. Class I price.

2. Whether an emergency exists which warrants the omission of a recommended decision and the opportunity for interested persons to file exceptions thereto and the immediate issuance of a final decision.

Findings and conclusions. The following findings and conclusions on the material issues are based on evidence presented at the hearing and the record thereof:

1. *Class I price in the Fort Smith, Ark., marketing area.* The supply-demand adjustment in the Fort Smith, Ark., order should be plus 25 cents from the effective date of amendment and for each month through June 30, 1966.

The amount of the supply-demand adjustment should be plus 25 cents through June 1966 to provide a continuation of the usual relationship of Fort Smith order Class I prices with the Central Arkansas order Class I prices. A similar modification of the Central Arkansas order supply-demand adjustment was made effective December 17, 1965. During 1965 the amount of the adjustment has varied from plus 18 cents to plus 36 cents, the latter being the adjustment in December.

This modification of Class I pricing was requested on the record by the Central Arkansas Milk Producers Association whose membership on this market comprises the total supply for the market. The total number of producers on the market varies from about 125 to 150, and many of them from time to time also supply milk to the Central Arkansas market. There was no opposing testimony to the requested price change.

While producers in this market requested the same modification be applied to the Fort Smith supply-demand adjustment as under the Central Arkansas order and during the same period, they did not request that the prices be identical each month in the two orders. Because of the difference in the Class I price differentials, the Fort Smith Class I price, modified as proposed, would be 6 cents per hundredweight lower than the Central Arkansas prices in the months of January and February 1966, 35 cents higher in the month of March and 5 cents lower in the months of April, May and June. This, however, is the usual relationship of the Class I prices of these two markets, since price formula factors other than the Class I differentials,

namely the supply-demand adjustment and basic formula price, are the same in the two orders. Producers' representative held that such pattern of relationship to the Central Arkansas prices in these months was proper.

The Fort Smith marketing area is served by two handlers fully regulated under this order. There is route distribution in the marketing area also by handlers regulated by the Central Arkansas, Ozarks, and Oklahoma Metropolitan orders. Fort Smith handlers have route disposition in the Ozarks and Central Arkansas marketing areas. The proposed amendment would tend to stabilize intermarket price relationships with such other markets during the designated period.

In view of the close relationship of the Fort Smith market to the Central Arkansas market where a similar amendment was recently effected, it is necessary that this amendment to this order be made effective as soon as possible to forestall development of disorderly marketing conditions.

The order modification herein proposed should be made effective at the earliest possible date. If the effective date is not the first day of a month, thus resulting in different Class I prices for the two portions of the month, handlers may elect a separate accounting period for each such portion of the month, or may elect to pay for Class I milk received during the entire month at an average price calculated by prorating the two Class I prices according to the number of days of the month each price applies. There would probably be little difference in returns to producers under either option. A handler should indicate the option he selects at the time he files his report for the month.

2. *Emergency action.* The due and timely execution of the function of the Secretary under the Act imperatively and unavoidably requires the omission of a recommended decision and opportunity for exceptions thereto, on the above issue.

The conditions in this market are such that it is urgent that remedial action be taken as soon as possible. Any delay in informing interested parties of the conclusions reached will tend to make ineffective the relief sought. The time necessarily involved in the preparation, filing and publication of a recommended decision and filing of exceptions thereto would in this instance contribute to the threat of disorderly marketing conditions.

The notice of hearing stated that consideration would be given to the economic and emergency marketing conditions relating to the proposed amendments. Action under the procedure described above was requested by proponent and a handler at the hearing.

It is therefore found that good cause exists for omission of the recommended decision and the opportunity for filing exceptions thereto.

No briefs were filed by interested parties.

General findings. The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) The tentative marketing agreement and the order as hereby proposed to be amended, and all of the terms and conditions thereof will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The tentative marketing agreement and the order, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

Marketing agreement and order. Annexed hereto and made a part hereof are two documents entitled, respectively, "Marketing Agreement Regulating the Handling of Milk in the Fort Smith, Ark., Marketing Area," and "Order Amending the Order, Regulating the Handling of Milk in the Fort Smith, Ark., Marketing Area," which have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

It is hereby ordered, That all of this decision, except the attached marketing agreement, be published in the FEDERAL REGISTER. The regulatory provisions of said marketing agreement are identical with those contained in the order, as hereby proposed to be amended by the attached order which will be published with this decision.

Determination of representative period. The month of October 1965 is hereby determined to be the representative period for the purpose of ascertaining whether the issuance of the attached order, as amended and as hereby proposed to be amended, regulating the handling of milk in the Fort Smith, Ark., marketing area is approved or favored by producers, as defined under the terms of the order, as amended and as hereby proposed to be amended, and who, during such representative period were engaged in the production of milk for sale within the aforesaid marketing area.

Signed at Washington, D.C., on December 23, 1965.

GEORGE L. MEHREN,
Assistant Secretary.

Order[1] Amending the Order Regulating the Handling of Milk in the Fort Smith, Ark., Marketing Area

§ 1102.0 Findings and determinations.

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Fort Smith, Ark., marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

Order relative to handling. It is therefore ordered, that on and after the effective date hereof the handling of milk in the Fort Smith, Ark., marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended and as hereby further amended, as follows:

In § 1102.51(a) the introductory text of subparagraph (3) is revised to read as follows:

§ 1102.51 Class prices.

* * * * * * *

(a) *Class I milk.* * * *

(3) For a "minus deviation percentage" the Class I price shall be increased

[1] This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.

and for a "plus deviation percentage" the Class I price shall be decreased as follows: *Provided*, That the adjustment shall be plus 25 cents for each month from the effective date of this order through June 30, 1966:

* * * * *

FEDERAL COMMUNICATIONS COMMISSION

[47 CFR Part 73]

[Docket No. 14229]

UHF TELEVISION CHANNELS

Fostering Expanded Use; Order Further Extending Time for Filing Comments

1. The National Association of Educational Broadcasters (NAEB) has filed a petition requesting that the time for filing comments on the further notice of proposed rule making in the above-captioned proceeding be extended from December 15, 1965, to January 17, 1966, and for reply comments from January 5, 1966, to February 7, 1966.

2. NAEB desires additional time so that it can examine the new revised UHF assignment plan before submitting its comments with respect to the proposed new low-power community television service on Channels 70 to 83.

3. The Commission wishes to have all pertinent comments with respect to this proposal before reaching a final decision. The desire of NAEB to relate the UHF assignment table to the various aspects of the proposed new service appears reasonable. The revised UHF plan has not yet been issued.

4. *Accordingly, it is ordered*, This 22d day of December 1965, that the request of the National Association of Educational Broadcasters is granted and the time for filing comments is extended from December 15, 1965, to January 17, 1966, and the time for filing replies thereto is extended from January 5, 1966, to February 7, 1966.

5. This action is taken pursuant to the authority contained in section 4(i), 5(d)(1), and 303(r) of the Communications Act of 1934, as amended, and § 0.281(d)(8) of the Commission rules.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
Secretary.

[47 CFR Part 91]

[Docket No. 16386, FCC 65-1139]

FOREST PRODUCTS RADIO SERVICE

Notice of Proposed Rule Making

1. Notice is hereby given of proposed rule making in the above-entitled matter.

2. The Commission has under consideration a petition for rule making (RM-689) filed on November 27, 1964, by Forest Industries Radio Communications (FIRC). FIRC has requested certain amendments to the eligibility provisions of the Forest Products Radio Service, § 91.351. The amendments FIRC as requested are basically two in number. The first of these relates to the dual eligibility of certain persons in both the Forest Products and Manufacturers Radio Services; and the second concerns eligibility of persons who perform specialized transportation functions, such as log hauling, for licensees in the Forest Products Radio Service.

3. Many persons are engaged in activities that constitute dual eligibility, that is, eligibility in both the Forest Products and Manufacturers Radio Services. Indeed, many persons are licensed in both Services and use one set of radio facilities for their logging and other woods operations and another set of facilities for their woods products manufacturing activities. Because of the integrated operational characteristics of these raw products gathering and subsequent manufacturing activities, FIRC has requested that, any person engaged in the manufacture of lumber, plywood, etc., products, and who is also engaged in tree logging, tree farming, or related woods operations, and therefore eligible in the Forest Products Radio Service, be allowed to be authorized to operate all of his radio facilities in the Forest Products Radio Service—on frequencies available to that Service. This amendment, according to FIRC, would enable persons to employ one set of radio facilities for all of their eligible activities and conduce to more efficient and safer day-to-day operations.

4. The second amendment requested by FIRC would accommodate those persons who perform specialized transporting functions for the forest products industry. Under our present rules, persons whose primary business activity is transportation—including the transporting or hauling of logs—must look to the Motor Carrier Radio Service for eligibility and frequency selection. However, as many persons are engaged in transporting activities, on a contract basis solely for the forest products industry; and as this hauling or transporting function is integral, if not essential, to the whole woods-to-mills process, FIRC believes that an eligibility category for log, pulp, etc. haulers should be established in the Forest Products Radio Service.

5. A second category of haulers are those whose activities in association with persons in the forest products industry are on a part-time or as-available basis. These transporters, in short, do not engage in transportation activities that are confined solely or exclusively to the forest products industry. When, however, these persons' vehicles are used in connection with forest products industry activities it is essential, according to FIRC, that these vehicles be able to communicate with the Forest Products Radio Service licensee or licensees to whom their services have been contracted. To establish this necessary communications link, the FIRC requests an amendment to the Forest Products Radio Service rules which would enable a licensee to install radios in the vehicles of the person or persons employed by him.

6. The Commission is persuaded, on the basis of the information brought to its attention by FIRC, that amendments to the rules, along the lines suggested by FIRC, should be considered. In this proceeding, amendments to § 91.351 are proposed which encompass solutions to the problems discussed above in paragraph 3 relating to dual eligibility, and in paragraph 4 concerning prime eligibility for persons who are engaged in hauling activities solely for the forest products industry. With respect to those persons who perform certain specialized hauling functions on a part-time or nonexclusive basis; however, the Commission is not disposed to consider this problem in the narrow context of a simple amendment to the Forest Products Radio Service Rules. On the basis of the Commission's experience in administering other of the Land Mobile Radio Services, we have found that the problem posed by FIRC with reference to persons working under contract to a licensee—and in need of integrated mobile communications facilities—is not unique to the Forest Products Radio Service. In a collateral rule making proceeding in Docket No. 16387, adopted simultaneously with the instant one, we are proposing rules amendments which are applicable to all of the Industrial Radio Services, including the Forest Products Radio Service, which provide, in substance, that a licensee of a base station may install mobile units licensed to him in the vehicles of other persons furnishing to the licensee, under contract, a facility or service within the purview of the eligible activities that govern entry into the particular service. FIRC's attention is specifically directed to the referenced proceeding.

7. The proposed amendments of the rules are contained in the appendix; and

are issued pursuant to authority contained in sections 4(i) and 303 of the Communications Act of 1934, as amended.

8. Pursuant to applicable procedures set forth in § 1.415 of the Commission's rules, interested persons may file comments on or before February 7, 1966, and reply comments on or before March 1, 1966. All relevant and timely comments and reply comments will be considered by the Commission before final action is taken in this proceeding. In reaching its decision in this proceeding the Commission may also take into account other relevant information before it, in addition to the specific comments invited by this notice.

9. In accordance with the provisions of § 1.419 of the Commission's rules, an original and 14 copies of all statements, briefs or comments filed shall be furnished the Commission.

Adopted: December 22, 1965.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,[1]
[SEAL] BEN F. WAPLE,
Secretary.

Section 91.351 is amended as follows:

§ 91.351 Eligibility.

The following persons are eligible to hold authorizations to operate radio stations in the Forest Products Radio Service:

(a) A person who is engaged in tree logging, tree farming, or related woods operations including related hauling activities, if the hauling activities are performed under contract to, and exclusively for, persons engaged in woods operations.

(b) A person directly engaged in manufacturing lumber, plywood, hardboard, or pulp and paper products from wood fiber, if such person is otherwise eligible in this Service under the provisions of paragraph (a) of this section.

(c) A subsidiary corporation proposing to furnish a nonprofit radiocommunication service to its parent corporation or to another subsidiary of the same parent where the party to be served is engaged in any of the activities set forth in paragraph (a) or (b) of this section.

(d) A nonprofit corporation or association, organized for the purpose of furnishing a radiocommunication service solely to persons who are actually engaged in one or more of the activities set forth in paragraph (a) or (b) of this section. Such a corporation or association shall render service only on a nonprofit cost-sharing basis, said costs to be prorated on an equitable basis among all persons to whom service is rendered. Records which reflect this cost-sharing nonprofit basis shall be maintained and held available for inspection by Commission representatives. Each person licensed under the provisions of this paragraph shall obtain prior approval from the Commission for each person who proposes to participate in the licensee's service.

[1] Commissioner Wadsworth absent.

[47 CFR Part 91]

[Docket No. 16387; FCC 65-1140]

PERSONS PROVIDING CERTAIN CONTRACTUAL SERVICES TO LICENSEE

Permitted To Install Mobile Units in Vehicles

1. Notice of proposed rule making in the above-entitled matter is hereby given.

2. Many licensees in the Industrial Radio Services conduct their day-to-day business activities in conjunction with subcontractors and/or persons who provide specialized services or facilities to the licensees under contract. Very often, these subcontractors and other persons do not have radio equipped vehicles, or, if their vehicles are so equipped, they may be licensed in a radio service other than the one in which the person for whom they are to work is licensed. In many cases, the need for communications, particularly with reference to dispatching and routing, between the parties, is critical to safety and timely and efficient operational or business practices.

3. The purpose of this proceeding is to amend our Industrial Radio Services Rules to the extent that, a base station licensee who employs subcontractors and other persons rendering specialized services or facilities, may be allowed to install mobile transmitters licensed to him in the vehicles of the subcontractors and/or others employed by him. The use to be made of the licensed transmitters installed in another person's vehicles would have to be strictly confined to the licensee's activities that constituted eligibility for him in the Radio Service in which he operates.

4. A licensee would be required to maintain exclusive control over the operation of the stations. A written agreement between the licensee and the persons in whose vehicles transmitters are to be installed shall verify the fact that the licensee has the sole right of control of the mobile units, that the vehicle operators shall operate the radio units subject to the orders and instructions of the base station operator and that the licensee shall at all times have such access to and control of the mobile equipment as will enable him to carry out his responsibilities under his license.

5. This proposal is responsive to certain relief requested in a petition for rule making filed by Forest Industries Radio Communications (IRC) on November 27, 1964 (RM-689).[1]

6. Authority for the adoption of the amendments proposed herein is contained in sections 4(i) and 303 of the Communications Act of 1934, as amended.

7. Pursuant to applicable procedures set out in § 1.415 of the Commission's rules, interested persons may file comments on or before February 7, 1966, and reply comments on or before March 1, 1966. All relevant and timely comments and reply comments will be considered by the Commission before final action is taken in this proceeding. In reaching its decision in this proceeding, the Commission may also take into account other relevant information before it, in addition to the specific comments invited by this notice.

8. In accordance with the provisions of § 1.419(b) of the rules, an original and 14 copies of all comments, replies, pleadings, briefs, and other documents shall be furnished the Commission.

Adopted: December 22, 1965.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,[2]
[SEAL] BEN F. WAPLE,
Secretary.

Section 91.6 is amended by adding a new paragraph (d) as follows:

§ 91.6 Cooperative arrangements.

* * * * *

(d) A licensee may install mobile units licensed to him in the vehicles of persons furnishing to the licensee, under contract, a facility or service directly related to the activities that constituted eligibility for the station licensee in the service in which he is authorized. The licensee shall maintain exclusive control over the operation of the units. In order to maintain such control, each person in whose vehicles the mobile units of the licensee are proposed to be installed shall enter into a written agreement verifying that the licensee has the sole right of control of the mobile radio units, that the vehicle operators shall operate the radio units subject to the orders and instructions of the base station operator and that the licensee shall at all times have such access to and control of the mobile equipment as will enable him to carry out his responsibilities under his license. A copy of the agreement with vehicle owners required hereby shall be kept with the station records.

[F.R. Doc. 65-13945; Filed, Dec. 29, 1965; 8:49 a.m.]

[1] Other relief requested by FIRC in its Nov. 27, 1964, petition is considered in Docket No. 16386, dated December 22, 1965.

[2] Commissioner Wadsworth absent.

Notices

DEPARTMENT OF THE TREASURY

Bureau of Customs

[Antidumping—AA 643.3-m]

WALL TILE FROM JAPAN

Antidumping Proceeding Notice

DECEMBER 27, 1965.

On December 9, 1965, the Commissioner of Customs received information in proper form pursuant to the provisions of § 14.6(b) of the Customs Regulations indicating a possibility that ceramic glazed wall tile imported from Japan is being, or likely to be, sold at less than fair value within the meaning of the Antidumping Act, 1921, as amended.

Ordinarily, merchandise is considered to be sold at less than fair value when the net, f.o.b. factory price for exportation to the United States is less than the net, f.o.b. factory price to purchasers in the home market, or, where appropriate, to purchasers in other countries, after due allowance is made, for differences in quantity and circumstances of sale.

A summary of the information received is as follows: Extensive information and documentation indicates that the price for exportation to the United States is less than the price of comparable tile to purchasers in the home market, after appropriate adjustment for estimated differences in the merchandise, and circumstances of sale.

In order to establish the validity of the information, the Bureau of Customs is instituting an inquiry pursuant to the provisions of § 14.6(d) (1)(ii), (2), and (3) of the Customs Regulations.

The information was submitted by Howrey, Simon, Baker & Murchison, Washington, D.C., on behalf of the Ceramic Tile Manufacturers of the United States.

This notice is published pursuant to § 14.6(d)(1)(i) of the Customs Regulations (CFR 14.6(d)(1)(i)).

[Sacramento 080090]

CALIFORNIA

Notice of Proposed Withdrawal and Reservation of Lands

DECEMBER 17, 1965.

On December 6, 1965, the Department of the Army, Portland District, Corps of Engineers, filed application Sacramento 080090 for the withdrawal of the lands described below in connection with the planning studies for the Applegate Reservoir Project on the upper Ap-

plegate River, a tributary of the Rogue River, in Jackson County, Oreg., including flowage which could extend into Siskiyou County, Calif.

The purpose for which the withdrawal is requested is for use of the lands in connection with construction, operation, and maintenance of the project. The withdrawal is requested from all forms of appropriation under the public land laws, subject to valid existing rights, including the mining laws and mineral leasing laws.

For a period of 30 days from the date of publication of this notice, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal may present their views in writing to the undersigned officer of the Bureau of Land Management, Department of the Interior, Room 4201, U.S. Courthouse and Federal Building, 650 Capitol Mall, Sacramento, Calif., 95814.

The Department's regulation (43 CFR 2311.1–3(c)) provide that the authorized officer of the Bureau of Land Management will undertake such investigations as are necessary to determine the existing and potential demand for the lands and their resources. He will also undertake negotiations with the applicant agency with the view of adjusting the application to reduce the area to the minimum essential to meet the applicant's needs, to provide for the maximum concurrent utilization of the lands for purposes other than the applicant's, to eliminate lands needed for purposes more essential than the applicant's, and to reach agreement on the concurrent management of the lands and their resources.

The authorized officer will also prepare a report for consideration by the Secretary of the Interior who will determine whether or not the lands will be withdrawn as requested by the applicant agency.

The determination of the Secretary on the application will be published in the FEDERAL REGISTER. A separate notice will be sent to each interested party of record.

If circumstances warrant, a public hearing will be held at a convenient time and place, which will be announced.

MOUNT DIABLO MERIDIAN

ROGUE RIVER NATIONAL FOREST

T. 48 N., R. 11 W.,
Sec. 17, lots 2, 3, and 4, S½SW¼ and SW¼SE¼;
Sec. 18, lot 1 and SE¼SE¼;
Sec. 20, NW¼NE¼ and NE¼NW¼.

The area described above aggregates approximately 373.52 acres.

R. J. LITTEN,
Chief, Lands Adjudication Section, Sacramento Land Office.

IDAHO

Notice of Filing of Idaho Protraction Diagrams

DECEMBER 21, 1965.

Notice is hereby given that effective at and after 10:00 a.m., on January 25, 1966, the following protraction diagrams are officially filed of record in the Idaho Land Office, Room 327, Federal Building, Boise, Idaho, 83701, and are available to the public as a matter of information only. In accordance with Title 43, Code of Federal Regulations, these protractions will become the basic record for describing the land for all authorized uses. Until this date and time the diagrams have been placed in open file and are available to the public for information only.

IDAHO PROTRACTION DIAGRAMS

Nos. 85, 93, 94

BOISE MERIDIAN

Approved November 8, 1965

No. 93

Ts. 5 and 6 N., Rs. 20, 21 and 22 E.

BOISE MERIDIAN

Approved November 15, 1965

No. 85

T. 7 N., Rs. 17, 18 and 19 E.
T. 8 N., Rs. 18 and 19 E.

No. 94

T. 5 N., Rs. 17 and 19 E.
T. 6 N., Rs. 17, 18 and 19 E.

Copies of these diagrams are for sale at one dollar ($1.00) each by the Cadastral Engineering Office, Bureau of Land Management, Post Office Box 2237, Boise, Idaho, 83701.

EUGENE E. BABIN,
Acting Manager, Land Office, Boise, Idaho.

IDAHO

Notice of Filing of Plat of Survey

DECEMBER 21, 1965.

1. Plats of survey of the following described land, accepted December 9, 1965, will be officially filed in the Land Office, Boise, Idaho, effective at 10 a.m., on January 25, 1966.

BOISE MERIDIAN, IDAHO

T. 2 N., R. 37 E.,
Sec. 12, lots 9 to 15 inclusive;
Sec. 13, lots 9 to 213 inclusive;
Sec. 24, lot 8;
Sec. 25, lots 8 to 19 inclusive;
Sec. 35, lots 8 and 9.

The areas described aggregate 187.94 acres.

2. The lands include an island in the Snake River and other lands along the river which were omitted from the previous survey.

3. The lands are subject to the provisions of the Act of May 31, 1962 (76 Stat. 89). Before sale of any of the lands described herein can be made, a notice in accordance with the regulations in 43 CFR 2214.6–1 must be published in the FEDERAL REGISTER. Inquiries concerning the lands should be addressed to the Manager, Idaho Land Office, Post Office Box 2237, Boise, Idaho, 83701.

EUGENE E. BABIN,
Acting Manager, Land Office, Boise, Idaho.

[Oregon 017362]

OREGON

Notice of Proposed Withdrawal and Reservation of Land

DECEMBER 21, 1965.

The Forest Service, U.S. Department of Agriculture, has filed an application, Serial Number Oregon 017362 for the withdrawal of the lands described below, from all forms of appropriation under the mining laws (Chap. 2, 30 U.S.C.) but not from leasing under the mineral leasing laws.

The applicant desires to use the land for an existing recreation area complex.

For a period of 30 days from the date of publication of this notice, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal may present their views in writing to the undersigned officer of the Bureau of Land Management, Department of the Interior, 710 Northeast Holladay, Portland, Oreg., 97232.

The authorized officer of the Bureau of Land Management will undertake such investigations as are necessary to determine the existing and potential demand for the lands and their resources. He will also undertake negotiations with the applicant agency with the view of adjusting the application to reduce the area to the minimum essential to meet the applicant's needs, to provide for the maximum concurrent utilization of the lands for purposes other than the applicant's, to eliminate lands needed for purposes more essential than the applicant's, and to reach agreement on the concurrent management of the lands and their resources.

He will also prepare a report for consideration by the Secretary of the Interior who will determine whether or not the lands will be withdrawn as requested by the Forest Service.

The determination of the Secretary on the application will be published in the FEDERAL REGISTER. A separate notice will be sent to each interested party of record.

If circumstances warrant it, a public hearing will be held at a convenient time and place, which will be announced.

The lands involved in the application are:

OREGON

WILLAMETTE MERIDIAN

WILLAMETTE NATIONAL FOREST

Breitenbush Hot Springs Recreation Area

T. 9 S., R. 7 E.,
Sec. 19, Unsurveyed, S½NE¼NE¼, NE¼SW¼NE¼, S½SW¼NE¼, SE¼NE¼, SE¼SE¼NW¼, NE¼NE¼SW¼, N½NW¼SE¼;

[Oregon 017358]

OREGON

Notice of Proposed Withdrawal and Reservation of Land

DECEMBER 22, 1965.

The Bureau of Land Management, U.S. Department of the Interior, has filed an application, Serial No. Oregon 017358 for the withdrawal of the lands described below, from all forms of appropriation under the public land laws, including the mining but not the mineral leasing laws, or disposal of materials under the Act of July 31, 1947 (61 Stat. 681; 30 U.S.C. 601-604), as amended, or forest products under the Act of August 28, 1937 (50 Stat. 874; 43 U.S.C. 1181a), subject to valid existing rights.

The applicant desires the land for protection of a site containing hard rock deposits to be used for repair and construction of Governmental and private roads.

For a period of 30 days from the date of publication of this notice, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal, may present their views in writing to the undersigned officer of the Bureau of Land Management, Department of the Interior, 710 Northeast Holladay, Portland, Oreg., 97232.

The authorized officer of the Bureau of Land Management will prepare a report for consideration by the Secretary of the Interior who will determine whether or not the lands will be withdrawn as requested by the Bureau of Land Management.

The determination of the Secretary on the application will be published in the FEDERAL REGISTER. A separate notice will be sent to each interested party of record.

If circumstances warrant it, a public hearing will be held at a convenient time and place, which will be announced.

The lands involved in the application are:

OREGON

WILLAMETTE MERIDIAN

T. 27 S., R. 12 W.,
Sec. 3, lots 1 and 2, S½NE¼ and SE¼.

The area described contains 321.45 acres.

D. B. LEIGHTNER,
Acting Land Office Manager.

[Oregon 017357]

OREGON

Notice of Proposed Withdrawal and Reservation of Land

DECEMBER 21, 1965.

The Bureau of Land Management, U.S. Department of the Interior, has filed an application, Serial Number Oregon 017357 for the withdrawal of the lands described below, from all forms of appropriation under the public land laws, including the mining laws (Chap. 2, 30 U.S.C.) but not including the mineral leasing laws or disposal of materials under the Act of July 31, 1947 (61 Stat. 681; 30 U.S.C. 601-604), as amended.

The applicant desires the land for preservation of antiquity values, and after exploration is completed, the land will be developed and used for public outdoor recreation.

For a period of 30 days from the date of publication of this notice, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal may present their views in writing to the undersigned officer of the Bureau of Land Management, Department of the Interior, 710 Northeast Holladay, Portland, Oreg., 97232.

The authorized officer of the Bureau of Land Management will prepare a report for consideration by the Secretary of the Interior who will determine whether or not the lands will be withdrawn as requested by the Bureau of Land Management.

The determination of the Secretary on the application will be published in the FEDERAL REGISTER. A separate notice will be sent to each interested party of record.

If circumstances warrant it, a public hearing will be held at a convenient time and place, which will be announced.

The lands involved in the application are:

Office of the Secretary

CLOVERDALE RANCHERIA, CALIF.

Termination of Federal Supervision Over Property and Individual Members Thereof

Notice is hereby given that the Indians and the dependent members of their immediate families named below are no longer entitled to any of the services performed by the United States for Indians because of their status as Indians; that all statutes of the United States which affect Indians because of their status as Indians shall be inapplicable to them, and the laws of the several States shall apply to them in the same manner as they apply to other citizens within their jurisdiction. Title to the land on the Cloverdale Rancheria has passed from the U.S. Government under the distribution plan approved August 13, 1959, for the rancheria.

Cloverdale Rancheria, described as follows: All these certain lots, pieces or parcels of land, situate, lying and being in the township of Cloverdale, county of Sonoma, State of California, and bounded and particularly described as follows; to with: Beginning at a point in the center of the main public road leading from Cloverdale to Healdsburg and at the northwesterly corner of the land formerly owned by Louis Bee, which is an iron pipe two (2) inches in diameter, two (2) feet long, driven below the surface of the ground, from which a fir tree five (5) feet in diameter marked "R.M.," and known as station 8 on the Musalacon Grant line bears south 47° W., 39.38 chains distant; thence N. 47°40' E., along the northerly line of the land formerly owned by Louis Bee, 49.25 chains; thence north 59°15' W., 6.07½ chains to the southerly line of the land of Helena M. Woolsey, thence S. 47°28' W., along the southerly line of the land of Helena M. Woolsey, 46.68 chains to the center line of the hereinbefore mentioned public road; thence S. 34°15' E., along the center line of said road 5.71 chains to the place of beginning, containing 27.50 acres.

Name	Birth date	Address
Ernest Buck	5- 9-1909	28640 Redwood Highway, 101 South, Cloverdale, Calif.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

MEAT IMPORT LIMITATIONS

1966 Estimates

P.L. 88-482, approved August 22, 1964 (hereinafter referred to as the Act), provides for limiting the quantity of fresh, chilled, or frozen cattle meat (TSUS 106.10) and fresh, chilled, or frozen meat of goats and sheep, except lamb (TSUS 106.20), which may be imported into the United States in any calendar year. Such limitations are to be imposed when it is estimated by the Secretary of Agriculture that imports of such articles, in the absence of limitations during such calendar year, would equal or exceed 110 percent of the estimated quantity of such articles prescribed by section 2(a) of the Act.

In accordance with the requirements of the Act, the following calendar year 1966 estimates are published:

1. The estimated aggregate quantity of such articles which would, in the absence of limitations under the Act, be imported during calendar year 1966 is 700 million pounds.

2. The estimated quantity of such articles prescribed by section 2(a) of the Act during the calendar year 1966 is 890.1 million pounds.

Since the estimated quantity of imports does not equal or exceed 110 percent of the estimated quantity prescribed by section 2(a) of the Act, no limitations for the calendar year 1966 on the importation of fresh, chilled, or frozen cattle meat (TSUS 106.10) and fresh, chilled, or frozen meat of goats and sheep, except lamb (TSUS 106.20), are authorized to be imposed pursuant to P.L. 88-482 at this time.

Done at Washington, D.C., this 27th day of December 1965.

ORVILLE L. FREEMAN,
Secretary.

[F.R. Doc. 65-13941; Filed, Dec. 29, 1965; 8:49 a.m.]

ATOMIC ENERGY COMMISSION

[Docket No. 27-40]

ATOMIC DISPOSAL CO., INC.

Notice of Issuance of Byproduct and Source Material License

Please take notice that no request for a hearing or petition for leave to intervene has been filed following publication of the notice of proposed issuance of byproduct and source material license. The Atomic Energy Commission has this date issued license No. 12-11286-1. The license is in the form set forth in the notice of proposed issuance published in the FEDERAL REGISTER on October 20, 1965, 30 F.R. 13335.

Dated at Bethesda, Md., December 22, 1965.

For the Atomic Energy Commission.

J. A. MCBRIDE,
Director,
Division of Materials Licensing.

[License No. 12-11286-1]

The Atomic Energy Commission having found that:

A. The applicant's equipment, facilities, and procedures are adequate to protect health and minimize danger to life or property.

B. The applicant is qualified by training and experience to conduct the proposed operations in such manner as to protect health and minimize danger to life or property.

C. The application, dated December 23, 1964, and amendments thereto, dated February 18, 1965; April 20, 1965; July 15, 1965; August 16, 1965; and undated document, received August 30, 1965, comply with the requirements of the Atomic Energy Act of 1954, as amended, and Title 10, Code of Federal Regulations, Chapter I, and is for a purpose authorized by that act, and

D. The issuance of the license will not be inimical to the common defense and security or to the health and safety of the public.

License No. 12-11286-1 is hereby issued to read as follows:

Pursuant to the Atomic Energy Act of 1954, as amended, 10 CFR Part 30, "Rules of General Applicability to Licensing of Byproduct Material," 10 CFR Part 40, "Licensing of Source Material," and in reliance upon the statements and representations contained in the application, dated December 23, 1964, and amendments thereto, dated February 18, 1965; April 20, 1965; July 15, 1965; August 16, 1965; and undated document, received August 30, 1965, a license is hereby issued to receive at customers' facilities or at a facility located at 21621 Oak Street, Matteson, Ill., transport to and store at a facility located at 21621 Oak Street, Matteson, Ill., waste byproduct and source material, and to dispose of these materials by transfer to authorized land burial sites.

This license shall be deemed to contain the conditions specified in section 183 of the Atomic Energy Act of 1954, as amended, and is subject to the provisions of 10 CFR Part 20, "Standards for Protection Against Radiation," all other applicable rules, regulations, orders of the Atomic Energy Commission now or hereafter in effect, and to the following conditions:

1. The licensee shall not possess at any one time more than:

A. 1,000 curies of Hydrogen 3;

B. 1,000 curies of other byproduct material;

C. 15,000 pounds of source material.

2. Operations shall be conducted by Carl J. Collica. Operations may be conducted by Thomas Philip, James Winans, and/or Frank Pastorelle upon completion of the training program described in the application.

3. The transportation of AEC-licensed material shall be subject to the applicable regulations of the Interstate Commerce Commission, U.S. Coast Guard and other agencies of the United States having appropriate jurisdiction, and where such regulations are not applicable shall be in accordance with the following requirements except as specifically provided by the Atomic Energy Commission:

A. *Outside shipping containers.* (1) The containers shall meet any one of the following specifications described in Appendix A attached hereto:

a. Specification 15A, 15B, 12B, 6A, 6B, 17C, 17H, 19A, or 19B for the containment of radioactivity in amounts not in excess of 2.7 curies; except polonium, 2 curies; or

b. Specification 55 for containment of solid cobalt 60, cesium 137, iridium 192, or gold 198 in amounts not in excess of 300 curies.

(2) There shall be no radioactive contamination on any exterior surface of the container in excess of 500 d/m/100 sq. cm. alpha and 0.1 mrem/hr beta-gamma radiation.

(3) The smallest dimension of the container shall not be less than 4 inches.

(4) The radiation level at any accessible surface of the container shall not exceed 200 mrem/hr.

(5) At one meter from any point on the radioactive source the radiation level shall not exceed 10 mrem/hr.

(6) Containers which contain radioactive material emitting only alpha and/or beta radiation shall contain sufficient shielding to prevent the escape of primary corpuscular radiation to the exterior surface so that it does not exceed 10 mrem/24 hours at any time during transportation.

B. *Inside containers.* (1) Solid and gaseous radioactive materials shall be packed in suitable inside containers designed to prevent rupture and leakage under conditions incident to transportation.

(2) Liquid radioactive materials must be packed in sealed glass, earthenware, or other suitable containers. The container must be surrounded on all sides by an absorbent material sufficient to absorb the entire liquid contents and be of such nature that its efficiency will not be impaired by chemical reactions with the contents. Where shielding is required the absorbent material must be placed within the shield. If the inside container meets the Specification 2R in Appendix A the absorbent material is not required.

(3) Materials containing radioisotopes of plutonium, americium, polonium, or curium, or the isotope strontium 90, in quantities in excess of 100 microcuries, must be packed in containers which meet Specification 2R in Appendix A.

C. *Shielding.* Inside containers must be completely surrounded with sufficient shielding to meet the requirements of subparagraphs A(4), A(5), and A(6) of this condition. The shield must be so designed that it will not open or break under conditions incident to transportation.

D. *Labeling.* Each outside container label required under § 20.203(f) of 10 CFR Part 20 shall bear the following information:

(1) Total activity in millicuries, or in the case of source and special nuclear material, the total weight;

(2) principal radioisotope;

(3) radiation level at the surface of the container and at one meter from the source; and

(4) the name and address of the licensee.

E. Each vehicle in which licensed material is transported shall be marked or placarded on each side and the rear with lettering at least 3 inches high as follows: "DANGEROUS—RADIOACTIVE MATERIAL."

F. *Accidents.* In the event of an accident involving any vehicle transporting licensed material, immediate steps shall be taken to prevent radioactive exposure of persons and to control contamination.

G. *Exemptions.* Specific approval must be obtained from the Atomic Energy Commission for modification of, or exemption from, the requirements of this license condition. Requests for such approval should be directed to the Chief, Isotopes Branch, Division of Materials Licensing, Atomic Energy Commission, and should contain sufficient information to support such a request.

4. The licensee shall store byproduct and source material only at its facility located at 21621 Oak Street, Matteson, Ill.

5. The licensee shall not open packages containing byproduct and source material.

6. Except as specifically provided otherwise by this license, the licensee shall receive, transport, store, and dispose of byproduct and source material in accordance with the procedures and limitations contained in the application, dated December 23, 1964, and amendments thereto, dated February 18, 1965; April 20, 1965; July 15, 1965; August 16, 1965; and undated document, received August 30, 1965.

This license shall be effective on the date issued and shall expire 2 years from the last day of the month in which this license is issued.

Dated at Bethesda, Md., December 22, 1965.

For the Atomic Energy Commission.

J. A. McBride,
Director,
Division of Materials Licensing.

[F.R. Doc. 65-13893; Filed, Dec. 29, 1965; 8:45 a.m.]

[Docket No. 50-227]

GENERAL DYNAMICS CORP.

Notice of Issuance of Construction Permit Amendment

Please take notice that the Atomic Energy Commission has issued, effective as of the date of issuance, Amendment No. 1 to Construction Permit No. CPRR-89 which authorizes General Dynamics Corp. to construct the Torrey Pines TRIGA Mark III nuclear reactor located at Torrey Pines Mesa, Calif. The amendment authorizes the insertion into the reactor for testing purposes of four control rods having fueled followers and one instrumented fuel element as described in the application amendment dated December 17, 1965.

Within fifteen (15) days from the date of publication of this notice in the Federal Register, the applicant may file a request for a hearing and any person whose interest may be affected by this proceeding may file a petition for leave to intervene. Requests for a hearing and petitions to intervene shall be filed in accordance with the Commission's regulation (10 CFR Part 2). If a request for a hearing or a petition for leave to intervene is filed within the time prescribed in this notice, the Commission will issue a notice of hearing or an appropriate order.

For further details with respect to this amendment, see (1) the licensee's application for amendment dated December 17, 1965, and (2) the Safety Evaluation prepared by the Test and Power Reactor Safety Branch of the Division of Reactor Licensing, all of which are available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. A copy of item (2) above may be obtained at the Commission's Public Document Room or upon request addressed to the Atomic Energy Commission, Washington, D.C., 20545, Attention: Director, Division of Reactor Licensing.

Dated at Bethesda, Md., this 21st day of December 1965.

For the Atomic Energy Commission.

R. L. Doan,
Director,
Division of Reactor Licensing.

Amendment to Construction Permit

[Construction Permit No. CPRR-89; Amdt. 1]

The Commission has found that:

(1) The application for amendment complies with the requirements of the Atomic Energy Act of 1954, as amended, and the Commission's regulations set forth in Title 10, Chapter I, CFR;

(2) Testing of the reactor components in accordance with the permit, as amended, will not be inimical to the common defense and security or to the health and safety of the public.

(3) Prior public notice of proposed issuance of the amendment is not required since the amendment does not involve significant hazards considerations different from those previously evaluated.

Construction Permit No. CPRR-89, issued to General Dynamics Corp., is amended by adding a new subparagraph C. to paragraph 3. as follows:

"C. General Dynamics Corp. is authorized in the construction of the facility to insert into the reactor for testing purposes four control rods having fueled followers and one instrumented fuel element."

This amendment is effective as of the date of issuance.

Date of issuance: December 21, 1965.

For the Atomic Energy Commission.

Director,
Division of Reactor Licensing.

CIVIL AERONAUTICS BOARD

[Docket No. 16236; Order E-23023]

INTERNATIONAL AIR TRANSPORT ASSOCIATION

Order Relating to Specific Commodity Rates

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 22d day of December 1965.

Agreements have been filed with the Board, pursuant to section 412(a) of the Federal Aviation Act of 1958 (the Act) and Part 261 of the Board's Economic Regulations, between various air carriers, foreign air carriers, and other carriers, embodied in the resolutions of Traffic Conference 1 and Joint Conferences 3-1 and 1-2-3 of the International Air Transport Association (IATA), and adopted pursuant to the provisions of Resolution 590 dealing with specific commodity rates.

The agreements, adopted pursuant to unprotested notices to the carriers and promulgated in IATA letters, dated December 9 and 10, 1965,[1] as set forth in the attachment hereto name additional specific commodity rates for existing commodity descriptions. The agreements reflect reductions in rates ranging from 25.0 to 58.9 percent of the otherwise applicable rates and are consistent with the present specific commodity rates within the applicable areas.

The Board, acting pursuant to sections 102, 204(a), and 412 of the Act, does not find the subject agreements to be adverse to the public interest or in violation of the Act, provided that approval thereof is conditioned as hereinafter ordered.

Accordingly, it is ordered, That Agreement CAB 18169, R-38 and Agreement CAB 18504, R-7 and R-8, be approved, provided that approval shall not constitute approval of the specific commodity descriptions contained therein for purposes of tariff publication.

Any air carrier party to the agreement, or any interested person, may, within 15 days from the date of service of this order, submit statements in writing containing reasons deemed appropriate, together with supporting data, in support of or in opposition to the Board's action herein. An original and 19 copies of the statements should be filed with the Board's Docket Section. The Board may, upon consideration of any such statements filed, modify or rescind its action herein by subsequent order.

This order will be published in the Federal Register.

By the Civil Aeronautics Board.

[SEAL] Harold R. Sanderson,
Secretary.

[1] Received in the Board Dec. 13, 1965.

Agreement CAB 18169, R-38, IATA Letter, dated December 10, 1965, Commodity Item 9008—Costume Jewelry, Articles de Paris, Ornaments, and parts thereof, N.E.S., excluding Original Works of Art, Antiques, Watches and Clocks, 183 cents per kg., minimum weight 300 kgs. Bombay to New York.

Agreement CAB 18504, R-7, IATA Letter, dated December 9, 1965, Commodity Item 0300—Fish and Seafood, N.E.S., 22 cents per kg., minimum weight 500 kgs. Port au Prince to New York.

Agreement CAB 18504, R-8, IATA Letter, dated December 9, 1965, Commodity Item 1421—Cut Flowers, including Mimosa, 30 cents per kg., minimum weight 100 kgs. Bogota to San Juan.

[F.R. Doc. 65-13933; Filed, Dec. 29, 1965; 8:48 a.m.]

FEDERAL COMMUNICATIONS COMMISSION

[Docket No. 15752 etc.; FCC 65-1154]

CHARLES W. JOBBINS ET AL.

Memorandum Opinion and Order Amending Issues

In re applications of Charles W. Jobbins, Costa Mesa-Newport Beach, Calif., Docket No. 15752, File No. BP-16157; et al.; Docket Nos. 15754, 15755, 15756, 15757, 15758, 15759, 15760, 15762, 15763, 15764, 15765, 15766; for construction permits.

1. This proceeding now involves 13 applications for new standard broadcast stations to operate on 1110 kilocycles, which is the frequency formerly used by Station KRLA in Pasadena, Calif. Seven of these applications, Goodson-Todman Broadcasting, Bible Institute of Los Angeles, Crown City Broadcasting, Pasadena Community Station, Voice in Pasadena, Western Broadcasting, and Pasadena Broadcasting Co., propose to operate a class II station with 50,000 watts until local sunset and 10,000 watts thereafter, using directional antennas, at Pasadena. Two other applicants, California Regional Broadcasting and Storer Broadcasting, propose fulltime operation with 50,000 watts and directional antennas at Pasadena. Orange Radio and Pacific Fine Music, applicants for Fullerton and Whittier, Calif., respectively, also propose directional operation with 50,000 watts until sunset and with 10,000 watts at night. Charles W. Jobbins proposes daytime only, nondirectional operation with 1,000 watts at Costa Mesa-Newport Beach, Calif., and Topanga Malibu Broadcasting proposes fulltime, directional operation with 500 watts at Topanga, Calif. Each of the specified station locations is within, or very near, the Los Angeles-Long Beach urbanized area as delineated by the Bureau of the Census in the 1960 census of population.

2. In considering a petition to enlarge the issues in this proceeding, the Review Board concluded (FCC 65R-185, released May 24, 1965) that separate community and 10 percent rule issues should be added to determine whether the Orange Radio and Pacific Fine Music proposals are intended to serve their specified communities or the surrounding area. Orange Radio thereafter filed an application for review of the Board's action. Because this proceeding involved important policy questions similar to those in two other proceedings, the Commission by order (FCC 65-592, released July 9, 1965), granted the application for review and the parties were permitted to file briefs and to present arguments before the Commission, en banc, on October 8, 1965. The briefs and arguments of the parties in this proceeding have provided valuable assistance in clarifying the standards that should be applied to determine which application would better serve the public interest when one or more of the proposed stations is to be located in a suburban community and would serve adjacent metropolitan areas.

3. Our examination of these applications reveals that each of the applicants proposes 5 mv/m daytime service within the geographic boundaries of at least one other community of over 50,000 persons and with a population at least twice as large as that of the applicant's specified location. Accordingly, we are persuaded, for the reasons stated in our policy statement (FCC 65-1153), adopted December 22, 1965, that a determination should be made in this proceeding whether each of these suburban proposals will realistically serve its own specified station location or some other larger community. We shall therefore revise the issues in this proceeding so that, in addition to the usual 307(b) evidence concerning the independence of a suburban community from its central city, the parties may fully explore all matters relating to the need for each of these proposals. Thus, each of the applicants will be expected to show the extent to which he has ascertained that his specified station location has separate and distinct programming needs, the extent to which these needs are not being met by existing standard broadcast stations, and the extent to which his program proposals will meet these needs. Additionally, each of the applicants will be expected to adduce evidence as to whether the projected sources of advertising revenues from within his specified station location are adequate to support his proposal as compared with his projected sources from all other areas.

4. An applicant who fails to establish that he will realistically serve his specified station location under the programming and revenues issue will be deemed to propose to serve the most populous community whose geographic boundaries are penetrated by his 5 mv/m daytime contour, unless the evidence establishes that he will realistically serve a third community whose boundaries are also penetrated by his 5 mv/m daytime contour.[1] Accordingly, an issue will also be added to determine whether those applicants meet all of the technical provisions of our rules for a station assigned to the appropriate larger community. Insofar as the "10 percent rule" applies to the applications in this proceeding and to others filed prior to the revision of our AM rules on August 13, 1964, we are persuaded that the applicants should also be required to show either that their proposals will comply with the "10 percent rule" or that they are entitled to a waiver of the "10 percent rule." Thus, an applicant who would comply with the "10 percent rule" if his proposal is deemed to be one for his specified station location, but whose proposal is determined to be one for some other community, will also be required to establish that his proposal for that latter community complies with the "10 percent rule" or that he is entitled to waiver of the "10 percent rule." Finally, the burden of proof with respect to these additional issues will be upon the individual applicants in each instance.

Accordingly, it is ordered, This 22d day of December 1965, that the first three issues added to this proceeding by the Review Board's Memorandum Opinion and Order, FCC 65R-185, released May 24, 1965, are hereby revised, and that the issues in this proceeding are hereby enlarged as follows:

(a) To determine whether each of the proposals will realistically provide a local transmission facility for its specified station location or for another larger community, in light of all of the relevant evidence, including, but not necessarily limited to, the showing with respect to:

(1) The extent to which each specified station location has been ascertained by each applicant to have separate and distinct programming needs;

(2) The extent to which the needs of each specified station location are being met by existing standard broadcast stations;

(3) The extent to which each applicant's program proposal will meet the specific unsatisfied programming needs of his specified station location; and

(4) The extent to which the projected sources of each applicant's advertising revenues within his specified station location are adequate to support his proposal, as compared with his projected sources from all other areas.

(b) To determine, in the event that it is concluded pursuant to the foregoing issue (a) that one or more of the proposals will not realistically provide a local transmission service for its specified station location, whether each such proposal meets all of the technical provisions of the rules, including §§ 73.30, 73.31 and 73.188(b) (1) and (2), for standard broadcast stations assigned to the most populous community for which it is determined that the proposal will realistically provide a local transmission service.

(c) To determine, in the event that it is concluded pursuant to the foregoing issue (a) that Orange Radio, Inc., Pacific Fine Music, Inc., or Topanga Malibu Broadcasting Co. will not realistically provide a local transmission service for its specified station location, whether the most populous community for which

[1] See paragraph 11 and especially footnote 1 appended thereto of our policy statement, supra, for the effect of such service to a third community.

it is determined that each of these three applicants will provide a realistic local transmission service, has any standard broadcast nighttime facility, or whether the interference which would be received by each of these three applicants would affect more than 10 percent of the population within its normally protected primary service area in contravention of § 73.28(d)(3) of the rules, and, if so, whether circumstances exist which would warrant a waiver of that section of the rules.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
Secretary.

[F.R. Doc. 65-13946; Filed, Dec. 29, 1965; 8:49 a.m.]

[Docket Nos. 14755-14757; FCC 65-1156]

JUPITER ASSOCIATES, INC., ET AL.

Memorandum Opinion and Order Amending Issues

In re applications of Jupiter Associates, Inc., Matawan, N.J., Docket No. 14755, File No. BP-14178; William S. Halpern and Louis N. Seltzer d/b as Somerset County Broadcasting Co., Somerville, N.J., Docket No. 14756, File No. BP-14234; Radio Elizabeth, Inc., Elizabeth, N.J., Docket No. 14757, File No. BP-14812; for construction permits.

1. This proceeding involves the mutually exclusive applications for construction permits to operate new class II standard broadcast stations, daytime only, on 1530 kilocycles, of (a) Jupiter Associates, Inc. (hereinafter Jupiter), which proposes directional operation with 500 watts of power at Matawan, N.J.; (b) William S. Halpern and Louis N. Seltzer, d/b as Somerset County Broadcasting Company (hereinafter Somerset), which proposes directional operation with 1000 watts of power at Somerville, N.J.; and (c) Radio Elizabeth, Inc. (hereinafter Radio), which proposes nondirectional operation with 500 watts of power at Elizabeth, N.J. Each of the specified station locations is within, or very near, the New York-Northeastern New Jersey urbanized area as delineated by the Bureau of the Census in the 1960 census of population.

2. Both the Hearing Examiner's Initial Decision and the Review Board's Decision would have granted Radio's application. Applications for review of the Board's Decision were filed by Jupiter and Somerset. Because this proceeding involved important policy questions similar to those in two other proceedings, by our Order (FCC 65-591), released July 9, 1965, we granted the applications for review and permitted the parties to file briefs and to present arguments before the Commission, en banc, on October 8, 1965. The briefs and arguments of the parties in this proceeding have provided valuable assistance in clarifying the standards that should be applied to determine which application would better serve the public interest when one or more of the proposed stations is to be located in a suburban community and would serve adjacent metropolitan areas.

3. Our examination of these applications reveals that Jupiter and Radio propose 5 mv/m daytime service within the geographic boundaries of at least one other community of over 50,000 persons and with a population at least twice as large as that of the applicants' specified station locations. Accordingly, we are persuaded for the reasons stated in our Policy Statement (FCC 65-1153), adopted December 22, 1965, that a determination should be made in this proceeding whether each of these two suburban proposals will realistically serve its own specified station location or some other larger community. We shall therefore revise the issues in this proceeding so that, in addition to the usual 307(b) evidence concerning the independence of a suburban community from its central city (much of which has already been adduced), the parties may fully explore all matters relating to the need for each of these proposals. Thus, each of these two applicants will be expected to show the extent to which it has ascertained that its specified station location has separate and distinct programming needs, the extent to which these needs are not being met by existing standard broadcast stations, and the extent to which its program proposals will meet those needs. Additionally, each of these two applicants will be expected to adduce evidence as to whether the projected sources of advertising revenues from within its specified station location are adequate to support its proposal as compared with its projected sources from all other areas. Since Somerset's proposal does not fall within our test, we will not enlarge the issues in this proceeding with respect to its application.

4. An applicant who fails to establish that it will realistically serve its specified station location under the programming and revenues issue will be deemed to propose to serve the most populous community whose geographic boundaries are penetrated by its 5 mv/m daytime contour, unless the evidence establishes that it will realistically serve a third community which also receives the requisite coverage.[1] Accordingly, an issue will also be added to determine whether these two applicants meet all of the technical provisions of our rules, including §§ 73.30, 73.31, and 73.188(b) (1) and (2), for a station assigned to the appropriate larger community. Finally, the burden of proof with respect to these additional issues will be upon the individual applicants in each instance.

Accordingly, It Is Ordered, This 22d day of December 1965, that this proceeding is remanded to Hearing Examiner Jay A. Kyle for further hearing and for preparation of a Supplemental Initial Decision consistent with this Memorandum Opinion and Order; and

It Is Further Ordered, That the issues in this proceeding are hereby enlarged as follows:

(a) To determine whether each of the proposals of Jupiter Associates, Inc., and Radio Elizabeth, Inc., will realistically provide a local transmission facility for its specified station location or for another larger community, in light of all of the relevant evidence, including, but not necessarily limited to, the showing with respect to:

(1) The extent to which each specified station location has been ascertained by each of the two applicants to have separate and distinct programming needs;

(2) The extent to which the needs of each specified station location are being met by existing standard broadcast stations;

(3) The extent to which each applicant's program proposal will meet the specific, unsatisfied programming needs of its specified station location; and

(4) The extent to which the projected sources of each applicant's advertising revenues within its specified station location are adequate to support its proposal, as compared with its projected sources from all other areas.

(b) To determine, in the event that it is concluded pursuant to the foregoing issue (a) that one or both of the proposals will not realistically provide a local transmission service for its specified station location, whether each such proposal meets all of the technical provisions of the rules, including §§ 73.30, 73.31 and 73.188(b) (1) and (2), for standard broadcast stations assigned to the most populous community for which it is determined that the proposal will realistically provide a local transmission service.

Released: December 27, 1965.

FEDERAL COMMUNICATIONS COMMISSION,[2]
[SEAL] BEN F. WAPLE,
Secretary.

[F.R. Doc. 65-13947; Filed, Dec. 29, 1965; 8:49 a.m.]

[Docket Nos. 14082, 14088; FCC 65-1155]

MONROEVILLE BROADCASTING CO. AND MINERS BROADCASTING SERVICE, INC. (WMBA)

Memorandum Opinion and Order Amending Issues

In re applications of Monroeville Broadcasting Co., Monroeville, Pa., Docket No. 14082, File No. BP-13840; Miners Broadcasting Service, Inc. (WMBA), Ambridge-Aliquippa, Pa., Docket No. 14088, File No. BP-13855; for construction permits.

1. This proceeding involves the mutually exclusive applications of: (a) Monroeville Broadcasting Co. (hereinafter Monroeville) for a construction permit

[1] See paragraph 11 and especially footnote 1 appended thereto of our policy statement, supra, for the effect of such service to a third community.

[2] Commissioner Cox not participating.

to operate a new class II standard broadcast station on 1510 kilocycles with 250 watts of power, daytime only, utilizing a nondirectional antenna at Monroeville, Pa.; and (b) Miners Broadcasting Service, Inc. (hereinafter WMBA), which presently operates a class III standard broadcast station, daytime only, on 1460 kilocycles, with 500 watts of power, utilizing a directional antenna at Ambridge, Pa., for a construction permit to operate a class II standard broadcast station, daytime only, on 1510 kilocycles, with 10,000 watts of power, utilizing a directional antenna, with dual-city identification at Ambridge-Aliquippa, Pa. Each of the specified station locations is within the Pittsburgh urbanized area as delineated by the Bureau of the Census in the 1960 census of population. After our decision, in which we granted Monroeville's application and denied the competing application of Miners, the U.S. Court of Appeals for the District of Columbia Circuit remanded this case for further proceedings, Miners Broadcasting Service, Inc. v. Federal Communications Commission, 349 F. 2d 199, 5 R.R. 2d 2086 (1965).

2. The decision of the Court of Appeals stated that we should establish or clarify the standards used to distinguish between two suburban applicants, both of which propose to serve some parts of their central city and urbanized area. In accordance with that opinion, by our Memorandum Opinion and Order, 1 F.C.C. 2d 319, 5 R.R. 2d 547 (1965), the parties in this proceeding were permitted to file briefs and to present arguments before the Commission, en banc, on October 8, 1965. The briefs and arguments by these parties have provided valuable assistance in clarifying the standards that should be applied to determine which application would better serve the public interest when one or more of the proposed stations is to be located in a suburban community and would serve adjacent metropolitan areas.

3. Our examination of these applications reveals that each of the applicants proposes 5 mv/m daytime service within the geographic boundaries of at least one other community of over 50,000 persons and with a population at least twice as large as that of the applicant's specified station location. Accordingly, we are persuaded for the reasons stated in our Policy Statement (FCC 65–1153), adopted December 22, 1965, that a determination should be made in this proceeding whether each of these suburban proposals will realistically serve its own specified station location or some other larger community. We shall therefore revise the issues in this proceeding so that, in addition to the usual 307(b) evidence concerning the independence of a suburban community from its central city (much of which has already been adduced), the parties may fully explore all matters relating to the need for each of these proposals. Thus, each of the applicants will be expected to show the extent to which it has ascertained that its specified station location has separate and distinct programing needs, the extent to which these needs are not being met by existing standard broadcast stations, and the extent to which its program proposals will meet these needs. Additionally, each of the applicants will be expected to adduce evidence as to whether the projected sources of advertising revenues from within its specified station location are adequate to support its proposal as compared with its projected sources from all other areas.

4. An applicant who fails to establish that it will realistically serve its specified station location under the programing and revenues issue will be deemed to propose to serve the most populous community whose geographic boundaries are penetrated by its 5 mv/m daytime contour, unless the evidence establishes that it will realistically serve a third community whose boundaries are also penetrated by its 5 mv/m daytime contour.[1] Accordingly, an issue will also be added to determine whether those applicants meet all of the technical provisions of our rules, including §§ 73.30, 73.31, and 73.188(b) (1) and (2), for a station assigned to the appropriate larger community. Finally, the burden of proof with respect to these additional issues will be upon the individual applicants in each instance.

Accordingly, it is ordered, This 22d day of December 1965, that this proceeding is remanded to Hearing Examiner Charles J. Frederick for further hearing and for preparation of a Supplemental Initial Decision consistent with this Memorandum Opinion and Order; and

It is further ordered, That the issues in this proceeding are hereby enlarged as follows:

(a) To determine whether each of the proposals will realistically provide a local transmission facility for its specified station location or for another larger community, in light of all of the relevant evidence, including, but not necessarily limited to, the showing with respect to:

(1) The extent to which each specified station location has been ascertained by each applicant to have separate and distinct programing needs;

(2) The extent to which the needs of each specified station location are being met by existing standard broadcast stations;

(3) The extent to which each applicant's program proposal will meet the specific, unsatisfied programing needs of its specified station location; and

(4) The extent to which the projected sources of each applicant's advertising revenues within its specified station location are adequate to support its proposal, as compared with his projected sources from all other areas.

(b) To determine, in the event that it is concluded pursuant to the foregoing issue (a) that one or both of the proposals will not realistically provide a local transmission service for its specified station location, whether each such proposal meets all of the technical provisions of the rules, including §§ 73.30, 73.31, and 73.188(b) (1) and (2), for standard broadcast stations assigned to the most populous community for which it is determined that the proposal will realistically provide a local transmission service.

Released: December 27, 1965.

FEDERAL MARITIME COMMISSION

[Docket No. 65–52]

JAPAN-ATLANTIC AND GULF FREIGHT CONFERENCE AND TRANS-PACIFIC FREIGHT CONFERENCE OF JAPAN

Modification of Dual Rate Contract; Order of Investigation and Hearing

The Commission has before it the application of the Japan-Atlantic and Gulf Freight Conference and the Trans-Pacific Freight Conference of Japan for permission to change certain provisions of its form of dual rate contract as approved under Dockets 1078 and 1080.

In order to determine whether the contract as changed should be approved, disapproved, or modified in accordance with the general standards of section 14(b) and the express requirements of section 14(b) (1) through (9):

It is ordered, That pursuant to sections 14(b) and 22 of the Shipping Act, 1916, as amended, an investigation and hearing be instituted to determine whether conditions in these trades are now such as to necessitate a departure from the contract language which was approved under Dockets 1078 and 1080; and, if so, as to whether the use of the contracts as modified will be detrimental to the commerce of the United States, contrary to the public interest, or unjustly discriminatory or unfair as between shippers, exporters, importers or ports or between exporters from the United States and their foreign competitors, and as to whether this contract should be approved, disapproved or modified pursuant to section 14(b) of the Shipping Act, 1916;

It is further ordered, That the Japan-Atlantic and Gulf Freight Conference, and the Trans-Pacific Freight Conference of Japan, and their member lines, listed in appendixes A and B, respectively, set forth below, be made respondents in this proceeding;

It is further ordered, That this matter be assigned for hearing before an Examiner of the Commission's Office of Hearing Examiners at a date and place to be hereafter determined and announced by the Presiding Examiner;

It is further ordered, That any persons, other than respondents, having any interest in this proceeding, shall file a petition for leave to intervene with the Secretary, Federal Maritime Commission, Washington, D.C., 20573, on or before January 13, 1966, with copy to respondents.

It is further ordered, That this order and notice of hearing be published in the FEDERAL REGISTER, that a copy of such order be served upon respondents and that all future notices, orders and decisions issued in this proceeding, including the time and place of hearing and prehearing conference, be mailed directly to each party of record.

By the Commission.

[SEAL] THOMAS LISI, *Secretary.*

FEDERAL POWER COMMISSION

[Docket No. RI66-211]

ASHLAND OIL & REFINING CO.

Order Providing for Hearing on and Suspension of Proposed Change in Rate

DECEMBER 23, 1965.

On November 26, 1965, Ashland Oil & Refining Co. (Ashland),[1] tendered for filing a proposed change in its presently effective rate schedule for sales of natural gas subject to the jurisdiction of the Commission. The proposed change, which constitutes an increased rate and charge, is contained in the following designated filing:

Description: Notice of change, dated November 22, 1965.[2]
Purchaser and producing area: Consolidated Gas Supply Corp. (Virginia Field; Buchanan, Russell, and Tazewell Counties, Va., and McDowell County, W. Va.; and Logan-Wyoming Field, Logan and Wyoming Counties, W. Va.).
Rate schedule designation: Supplement No. 20 to Ashland's FPC Gas Rate Schedule No. 113.
Effective date: December 27, 1965.[3]
Amount of annual increase: $328,800.
Pressure Base: 15.325 p.s.i.a.
Effective Rate: 27.74 cents per Mcf.[4]
Proposed Rate: 31.85 cents per Mcf.[5][6]

The contract for Ashland's sale provides for a base rate of 25.0 cents per Mcf plus an adjustment equal to one-half of any increase in average rate received by Consolidated Gas Supply Corp. (Consolidated) for all sales during the 1-year period following the effective dates of any rate increases filed by Consolidated with the Federal Power Commission or the West Virginia Public Service Commission. Ashland's proposed increase is based on four rate increases filed with this Commission by Consolidated in Docket Nos. G-5474, G-12454, G-17220, and RP61-14. A rate settlement of these proceedings was approved by the Commission's order issued December 7, 1962. The present net effect of these settled rates of Consolidated raises its overall average rate a total of 13.7 cents per Mcf.

Ashland's proposed rate of 31.85 cents per Mcf exceeds the West Virginia area ceilings of 25.0 cents per Mcf for increased rates and 28.0 cents per Mcf for initial service, which are also used as informal ceiling rates for Virginia. The latter area is not covered by the Commission's Statement of General Policy No. 61-1, as amended. Since the proposed rate of 31.85 cents per Mcf is the highest increased rate filed in West Virginia and Virginia, and exceeds the above-mentioned ceilings, we believe it should be suspended for 5 months as hereinafter ordered.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 20 to Ashland's FPC Gas Rate Schedule No. 113 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly sections 4 and 15 thereof, the Commission's rules of practice and procedure, and the regulations under the Natural Gas Act (18 CFR Ch. I), a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge

[1] Address is: Post Office Box 1503, Houston, Tex., 77001, Attention: J. Paul Fly, Esquire.
[2] Includes letter dated May 17, 1965, showing the dates of Consolidated's rate increases, and letter dated Oct. 25, 1965, in which Consolidated sets out the rate which Ashland is currently entitled to collect under the terms of its contract.
[3] The stated effective date is the effective date proposed by Respondent.
[4] June 7, 1954, rate.
[5] Revenue-sharing rate increase.
[6] Base rate of 25.0 cents per Mcf plus 50 percent of increases in rate received by Consolidated for all gas it sold during year ending Apr. 30, 1965.

contained in Supplement No. 20 to Ashland's FPC Gas Rate Schedule No. 113.

(B) Pending such hearing and decision thereon, Supplement No. 20 to Ashland's FPC Gas Rate Schedule No. 113 is hereby suspended and the use thereof deferred until May 27, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 9, 1966.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE, *Secretary.*

[F.R. Doc. 65-13897; Filed, Dec. 29, 1965; 8:45 a.m.]

[Docket No. RI66-206 etc.]

ASSOCIATED OIL & GAS CO. ET AL.

Order Providing for Hearings on and Suspension of Proposed Changes in Rates [1]

DECEMBER 21, 1965.

Associated Oil & Gas Co. (Operator), et al., and other respondents listed herein, Docket Nos. RI66-206, et al.

The Respondents named herein have filed proposed increased rates and charges of currently effective rate schedules for sales of natural gas under Commission jurisdiction, as set forth in Appendix A below.

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon hearings regarding the lawfulness of the proposed changes, and that the supplements herein be suspended and their use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the Regulations pertaining thereto (18 CFR Ch. I), and the Commission's rules of practice and procedure, public hearings shall be held concerning the lawfulness of the proposed changes.

(B) Pending hearings and decisions thereon, the rate supplements herein are suspended and their use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act.

(C) Until otherwise ordered by the Commission, neither the suspended supplements, nor the rate schedules sought to be altered, shall be changed until disposition of these proceedings or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 10, 1966.

By the Commission.

JOSEPH H. GUTRIDE, *Secretary.*

RI66-206	Associated Oil & Gas Co. (Operator), et al., 3703 Yoakum Blvd., Houston, Tex., 77006.	9	2	Tennessee Gas Transmission Co. (New Taiton Field, Wharton County, Tex.) (R.R. District No. 3).	$1,200	11-26-65	[2] 1-1-66	6-1-66	13.5	[3] [4] 14.5	
RI66-207	Helmerich & Payne, Inc. (Operator), et al., Utica at 21st, Tulsa, Okla., 74114.	34	3	Michigan Wisconsin Pipe Line Co. (Laverne Field, Beaver County, Okla.) (Panhandle Area).	[5] 2,657	11-24-65	[6] 12-25-65	5-25-66	[5] 17.0	[3] [5] [7] 20.43	
RI66-208	The Shamrock Oil & Gas Corp., Post Office Box 631, Amarillo, Tex., 79105.	32	4	Panhandle Eastern Pipe Line Co. (McKee Plant, Moore County, Tex.) (R.R. District No. 10).	364,500	11-29-65	[2] 1-1-66	6-1-66	[8] [10] 12.0	[3] [4] [10] 13.5	RI64-342.

[1] The stated effective date is the effective date requested by Respondent.
[2] Periodic rate increase.
[3] Pressure base is 14.65 p.s.i.a.
[4] Includes amount attributable to upward B.t.u. adjustment.
[5] Subject to upward B.t.u. adjustment based on 1/100 cent per Mcf for each additional B.t.u. per cubic foot in excess of 1,000 B.t.u. to a maximum of 1,200 B.t.u. per cubic foot.
[6] Includes base rate of 19.5 cents per Mcf plus upward B.t.u. adjustment for gas containing 1093 B.t.u.'s per cubic foot as shown in filing.
[7] Filing erroneously shows present effective rate of 17.0 cents per Mcf subject to upward B.t.u. adjustment. However, the present effective rate under the rate schedule is the permanently certificated rate, which is 17.0 cents per Mcf.
[8] Includes 1.0 cent per Mcf compression charge paid by buyer to seller.
[10] Subject to downward B.t.u. adjustment.

All of the producers' proposed increased rates and charges exceed the applicable area price levels for increased rates as set forth in the Commission's Statement of General Policy No. 61-1, as amended (18 CFR, Chapter I, Part 2, Section 2.56).

[Docket No. CP66-190]

CITY OF CORYDON, KY., AND TEXAS GAS TRANSMISSION CORP.

Notice of Application

DECEMBER 22, 1965.

Take notice that on December 13, 1965, the City of Corydon, Ky. (Applicant), 215 First Street, Henderson, Ky., filed in Docket No. CP66-190 an application pursuant to section 7(a) of the National Gas Act for an order of the Commission directing Texas Gas Transmission Corp. (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in Applicant, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The application states that Applicant is located approximately seven miles from Henderson, the county seat of Henderson County, Ky., and that Henderson is on the southern bank of the Ohio River approximately 8 miles south of Evansville, Ind. Applicant's present population is stated to be 800 and the county is stated to have an estimated 35,000 inhabitants.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	28,825	35,421	39,390
Peak day (Mcf)	369	455	512

Applicant proposes to construct and operate a natural gas distribution system consisting of approximately 38,480 feet of 4-inch steel pipe and 33,200 feet of 2-inch pipe together with appurtenant measuring and regulating facilities at a total estimated cost of $215,000, which cost will be financed through the issuance by Applicant of gas revenue bonds.

[1] Does not consolidate for hearing or dispose of the several matters herein.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 7, 1966.

JOSEPH H. GUTRIDE,
Secretary.

[F.R. Doc. 65-13899; Filed, Dec. 29, 1965; 8:45 a.m.]

[Docket No. RI66-209]

KERR-McGEE CORP. ET AL.

Order Providing for Hearing on and Suspension of Proposed Change in Rate, and Allowing Rate Change To Become Effective Subject to Refund

DECEMBER 21, 1965.

Respondent named herein has filed a proposed change in rate and charge of a currently effective rate schedule for the sale of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that the supplement herein be suspended and its use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR ch. I), and the Commission's rules of practice and procedure, a public hearing shall be held concerning the lawfulness of the proposed change.

(B) Pending hearing and decision thereon, the rate supplement herein is suspended and its use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act: *Provided, however,* That the supplement to the rate schedule filed by Respondent shall become effective subject to refund on the date and in the manner herein prescribed if within 20 days from the date of the issuance of this order Respondent shall execute and file under its above-designated docket number with the Secretary of the Commission its agreement and undertaking to comply with the refunding and reporting procedure required by the Natural Gas Act and § 154.102 of the regulations thereunder, accompanied by a certificate showing service of a copy thereof upon the purchaser under the rate schedule involved. Unless Respondent is advised to the contrary within 15 days after the filing of its agreement and undertaking, such agreement and undertaking shall be deemed to have been accepted.

(C) Until otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37 (f)) on or before February 10, 1966.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE,
Secretary.

APPENDIX A

Docket No.	Respondent	Rate schedule No.	Supplement No.	Purchaser and producing area	Amount of annual increase	Date filing tendered	Effective date unless suspended	Date suspended until—	Cents per Mcf: Rate in effect	Cents per Mcf: Proposed increased rate	Rate in effect subject to refund in docket Nos.
RI66-209	Kerr-McGee Corp. (Operator), et al., Kerr-McGee Bldg., Oklahoma City, Okla., 73102.	[1] 78	2	Southern Natural Gas Co. (Lake La Rose Field, St. Martin Parish, La.) (South Louisiana).	$98,531	11-29-65	[2] 1-1-66	[3] 1-2-66	[4] 13.3	[5] [6] 21.25	

[1] Contract executed after Sept. 28, 1960, the date of issuance of General Policy Statement No. 61-1.
[2] The stated effective date is the effective date requested by Respondent.
[3] The suspension period is limited to 1 day.
[4] Periodic rate increase.
[5] Pressure base is 15.025 psia.
[6] Subject to a downward B.t.u. price adjustment.

Kerr-McGee Corp. (Operator), et al., (Kerr-McGee) claims that their proposed 21.25 cents per Mcf rate is in reality an initial rate and should be accepted without suspension. It is also claimed that the presently effective rate of 13.3 cents per Mcf was an interim price to hold until January 1, 1966, and that such price was agreed to because of the distress nature of this sale at the time the contract was executed on February 28, 1963. Since the contract was executed subsequent to February 28, 1960, the date of issuance of the General Policy Statement No. 61-1, as amended, and the proposed increased rate is above the applicable area ceiling for increased rates but below the initial service ceiling for the area involved, we are suspending Kerr-McGee's proposed rate increase for 1 day from January 1, 1966, the proposed effective date.

[F.R. Doc. 65-13900; Filed, Dec. 29, 1965; 8:45 a.m.]

[Docket No. E-7262]

OTTER TAIL POWER CO.

Order Providing for Hearing and Suspension of Notice of Cancellation of Filed Rate Schedules

DECEMBER 22, 1965.

This order directs a hearing to determine the lawfulness of a notice of cancellation by Otter Tail Power Co. (Otter Tail), of certain filed rate schedules of the Company pursuant to which Otter Tail provides electric service to the Minnesota Valley Cooperative Light & Power Association (Cooperative). Pending conclusion of that hearing and the Commission's decision, this order suspends the operation and effectiveness of the proffered notice of cancellation until May 23, 1966.

Otter Tail's notice of cancellation, tendered for filing with the Commission on November 22, 1965, pursuant to Part 35.15 of the Commission's Regulations under the Federal Power Act, has been designated in the files of the Commission as Supplement No. 2 to Otter Tail's Rate Schedule FPC No. 104. Rate Schedule FPC No. 104 and Supplement No. 1 thereto embody the terms and provisions of a transmission agreement between Otter Tail and Cooperative pursuant to which the Cooperative receives power as a preference customer of the Bureau of Reclamation; and they provide that Otter Tail shall furnish standby or firming services. Additionally, the agreements provide for the use by Otter Tail of certain of Cooperative's 69 kv transmission facilities used by the Company in providing electric service to the city of Madison, Minn. During the calendar year 1964, Otter Tail delivered a total of 15,303,672 kilowatt hours to the Cooperative at two delivery points, 69 kv at Madison, Minn., and 41.6 kv at Canby, Minn.

Otter Tail, incorporated under the laws of the State of Minnesota, is engaged in the generation, transmission, distribution, and sale of electric energy in the States of Minnesota, North Dakota, and South Dakota. Its principal business office is at Fergus Falls, Minn. Cooperative, incorporated under the laws of the State of Minnesota, is engaged in the transmission, distribution, and sale of electric energy in the State of Minnesota and maintains its principal place of business at Montevideo, Minn.

Otter Tail, a participant in certain interchange or wheeling arrangements with the Bureau of Reclamation, U.S. Department of the Interior, and Northern States Power Co. (Northern States), delivers power and energy to Cooperative at the aforementioned delivery points essentially for the account of Northern States Power Co. Northern States serves six other delivery points of the Cooperative as a preference customer of the Bureau of Reclamation, but is without direct connections with the Cooperative at Madison and Canby. The underly-

ing contractual arrangements between Northern States and Otter Tail for such services are reflected in the former Company's Rate Schedule FPC No. 95 as supplemented, and the latter Company's Rate Schedule FPC No. 94, as supplemented.

Otter Tail receives 2 mills per kilowatt hour from Northern States for power and energy supplied to Cooperative. Additionally, the Company receives 1½ mills per kilowatt hour delivered to Cooperative for standby or firming service to the latter.

Under Rate Schedule FPC No. 104, Otter Tail undertakes to compensate Cooperative at the rate of $7,000 annually, effective November 1, 1965, for use of the latter's facilities in providing service to the city of Madison, the first payment to be made November 1, 1966.

Information available to the Commission indicates that Cooperative will become a direct service customer of the Bureau of Reclamation at the Madison and Canby points effective June 30, 1966, upon completion of certain facilities. However, until then, those portions of Cooperative's electric system are dependent for electric supply upon service from Otter Tail.

On December 16, 1965, Otter Tail advised the Commission of its undertaking to continue service to Cooperative on a month-to-month basis, upon certain terms and conditions which apparently were not communicated to the Cooperative. By letter dated December 10, 1965, Cooperative, through its counsel, objected to Otter Tail's proposed notice of cancellation and cessation of service.

The Commission finds:

In view of the foregoing, it is necessary and appropriate for purposes of the Federal Power Act, that the Commission pursuant to authority under the Act, particularly sections 205, 206, 308, and 309 thereof, enter upon a hearing concerning the lawfulness of Otter Tail's Rate Schedule FPC No. 104 and Supplement Nos. 1 and 2 thereto; and that the operation or effectiveness of Supplement No. 2 to Otter Tail's Rate Schedule FPC No. 104 be suspended, and the use thereof deferred all as hereafter provided.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of Otter Tail's rate schedules as referred to in the finding above; that hearing to be convened January 24, 1966, e.s.t., in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C.

(B) Pending such hearing and decision thereon, the operation or effectiveness under the Federal Power Act of Supplement No. 2 to Otter Tail's Rate Schedule FPC No. 104 is suspended and the use thereof deferred until May 23, 1966. On that date, the proffered rate schedule shall take effect in the manner prescribed by the Federal Power Act, unless this proceeding has been disposed of prior thereto.

(C) During the period of suspension, Otter Tail's Rate Schedule FPC No. 104 and Supplement No. 1 thereto, now on file with the Commission, shall remain and continue in effect.

(D) Unless otherwise ordered by the Commission, Otter Tail shall not change the terms and provisions of its supplemental rate schedule as referred to in paragraph (B) above or those of its rate schedule and supplement thereto on file with the Commission as referred to in paragraph (C) above, until this proceeding has been disposed of or until the period of suspension has expired.

(E) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's rules of practice and procedure (18 CFR 1.8 and 1.37) on or before January 13, 1966.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE, *Secretary.*

[Docket No. RI66-205]

PANO TECH EXPLORATION CORP.

Order Providing for Hearing on and Suspension of Proposed Change in Rate, and Allowing Rate Change To Become Effective Subject to Refund

DECEMBER 21, 1965.

Respondent named herein has filed a proposed change in rate and charge of a currently effective rate schedule for the sale of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that the supplement herein be suspended and its use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR Ch. I), and the Commission's rules of practice and procedure, a public hearing shall be held concerning the lawfulness of the proposed change.

(B) Pending hearing and decision thereon, the rate supplement herein is suspended and its use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act: *Provided, however,* That the supplement to the rate schedule filed by Respondent shall become effective subject to refund on the date and in the manner herein prescribed if within 20 days from the date of the issuance of this order Respondent shall execute and file under its above-designated docket number with the Secretary of the Commission its agreement and undertaking to comply with the refunding and reporting procedure required by the Natural Gas Act and section 154.102 of the regulations thereunder, accompanied by a certificate showing service of a copy thereof upon the purchaser under the rate schedule involved. Unless Respondent is advised to the contrary within 15 days after the filing of its agreement and undertaking, such agreement and undertaking shall be deemed to have been accepted.

(C) Until otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 10, 1966.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE, *Secretary.*

APPENDIX A

Docket No.	Respondent	Rate schedule No.	Supplement No.	Purchaser and producing area	Amount of annual increase	Date filing tendered	Effective date unless suspended	Date suspended until—	Cents per Mcf: Rate in effect	Cents per Mcf: Proposed increased rate	Rate in effect subject to refund in docket Nos.
RI66-205	Pano Tech Exploration Corp., 906 C & I Bldg., Houston, Tex.	[1] 1	1	Southern Natural Gas Co. (La Rose Area, St. Martin Parish, La.) (South Louisiana).	$286,200	11-22-65	[2] 1-1-66	[3] 1-2-66	13.3	[4] [5] 21.25	

[1] Contract dated after Sept. 28, 1960, the date of issuance of General Policy Statement No. 61-1.
[2] The stated effective date is the effective date requested by Respondent.
[3] The suspension period is limited to 1 day.
[4] Periodic rate increase.
[5] Pressure base is 15.025 p.s.i.a.

Pano Tech Exploration Corp. (Pano Tech) claims that its proposed rate increase, while technically a "stated periodic increase", is in reality an "initial rate". It claims Southern Natural Gas Co. was oversupplied and in a "take-or-pay" situation at the date of the contract (February 21, 1963) and did not need Pano Tech's gas, but to accommodate Pano Tech, Southern Natural Gas Co. agreed to take for the interim period (date of initial delivery on July 5, 1963 to January 1, 1966) this gas at a distress price of 13.3 cents per Mcf. Since the contract was executed subsequent to September 28, 1960, the date of issuance of the General Policy Statement No. 61-1, as amended, and the proposed increased rate is above the applicable area ceiling for increased rates but below the initial service ceiling for the area involved, we are suspending Pano Tech's proposed rate increase for one day from January 1, 1966, the proposed effective date.

[F.R. Doc. 65-13903; Filed, Dec. 29, 1965; 8:45 a.m.]

[Docket No. RI66-210]

SHELL OIL CO.

Order Providing for Hearing on and Suspension of Proposed Change in Rate, and Allowing Rate Change To Become Effective Subject to Refund

DECEMBER 21, 1965.

Respondent named herein has filed a proposed change in rate and charge of a currently effective rate schedule for the sale of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that the supplement herein be suspended and its use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR Ch. I), and the Commission's rules of practice and procedure, a public hearing shall be held concerning the lawfulness of the proposed change.

(B) Pending hearing and decision thereon, the rate supplement herein is suspended and its use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act: *Provided, however,* That the supplement to the rate schedule filed by Respondent shall become effective subject to refund on the date and in the manner herein prescribed if within 20 days from the date of the issuance of this order Respondent shall execute and file under its above-designated docket number with the Secretary of the Commission its agreement and undertaking to comply with the refunding and reporting procedure required by the Natural Gas Act and section 154.102 of the regulations thereunder, accompanied by a certificate showing service of a copy thereof upon the purchaser under the rate schedule involved. Unless Respondent is advised to the contrary within 15 days after the filing of its agreement and undertaking, such agreement and undertaking shall be deemed to have been accepted.

(C) Until otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 10, 1966.

By the Commission.

[1] Contractually provided effective date.
[2] The suspension period is limited to 1 day.
[3] "Fractured" rate increase.
[4] Pressure base is 14.65 p.s.i.a.
[5] Less processing cost of 3.3 cents per Mcf for gas remaining after processing for removal of carbon dioxide diluent (processing cost shall not exceed 4.5 cents per Mcf in any event).
[6] Initial rate.

Shell Oil Co. (Shell) a producer-respondent in the Permian Basin Opinion No. 468, proposes a "fractured" rate increase from 16.0 cents to 16.5 cents per Mcf, amounting to $2,190 annually, for a sale of gas-well gas to El Paso Natural Gas Co. in the Permian Basin Area of Texas. Payment is based upon residue volumes remaining after processing and the proposed rate is equal to the applicable ceiling prescribed by Commission Opinion No. 468.

The contract covering the subject sale contains quality standards which do not conform to the standards prescribed in Opinion No. 468, as amended. The contract provides for a maximum diluent content (nitrogen, hydrogen sulphide, organic sulphur, and carbon dioxide) not in excess of 60 percent by volume. The principal impurity is carbon dioxide and the contract provides for a maximum deduction of 4.5 cents per Mcf from the contract rate for removal of the diluent content. The producer indicates in its rate increase filing that the processing cost for the removal of the CO_2 is 3.3 cents per Mcf. As for delivery pressure, the contract provides for delivery at the natural well flowing pressure, with the buyer having the right to operate its gathering system at pressures not to exceed 1000 p.s.i.g. Opinion No. 468, as modified by Opinion No. 468-A, prescribes a minimum delivery pressure of 500 p.s.i.g. The contract contains no B.t.u. adjustment provisions.

Although Shell's increased rate of 16.5 cents per Mcf is equal to the area base rate prescribed in Opinion Nos. 468 and 468-A, it may require adjustment for less than pipeline quality gas. Under the circumstances, we believe that Shell's proposed increase from 16.0 cents to 16.5 cents per Mcf should be suspended for 1 day from January 1, 1966, the proposed effective date.

Shell shall file with the Commission as a condition of this order within 60 days of the date of issuance of this order a statement setting forth either that the residue gas sold under the subject rate schedule accords with all pipeline quality standards established in Opinion Nos. 468 and 468-A, or in which respects the residue gas deviates from such standards; the agreed cost to the purchaser to bring it to the pipeline quality standards established there with respect to each quality deviation; any upward or downward B.t.u. adjustment; and the resulting applicable area rate for the gas. Such statement shall be signed by both the seller and the purchaser. If the seller and the purchaser are unable to agree upon any or all of the particulars entering into the computation of the applicable area rate, the seller shall file the statement herein required which shall indicate the absence of agreement and supply the information required to compute the applicable area rate as well as the contentions of the parties with respect to the quality and amount of the adjustment for any item in dispute. The purchaser may file a separate statement setting forth its views within the period herein provided.

[Docket No. RI66-196]

SOUTHDOWN, INC.

Order Permitting Rate Filing, Providing for Hearing on and Suspension of Proposed Change in Rate

DECEMBER 21, 1965.

On October 18, 1965,[1] Southdown, Inc. (Southdown)[2] tendered for filing a proposed change in its presently effective

[1] Filing completed Nov. 10, 1965.
[2] Address is Post Office Box 52378, New Orleans, La.

rate schedule for sales of natural gas subject to the jurisdiction of the Commission. The proposed change, which constitutes an increased rate and charge, is contained in the following designated filing:

Description: Notice of change, dated October 14, 1965.[2]
Purchaser and producing area: United Gas Pipe Line Co. (Hollywood Field, Terrebonne Parish, La.) (South Louisiana).
Rate schedule designation: Supplement No. 5 to Southdown's FPC Gas Rate Schedule No. 1.
Effective date: January 1, 1966.[4]
Amount of annual increase: $3,300.
Effective rate: 21.25 cents per Mcf.[5][6]
Proposed rate: 22.8917 cents per Mcf.[5][7]
Pressure base: 15.025 p.s.i.a.

Southdown has submitted a notice of change in rate proposing an increase from 21.25 cents to 22.8917 cents per Mcf, for gas sold under its FPC Gas Rate Schedule No. 1 to United Gas Pipe Line Co. from the Hollywood Field, Terrebonne Parish, South Louisiana. The proposed 1.6417 cents per Mcf increase, amounting to $3,300 annually, is from a conditioned initial rate, being the initial service ceiling for the area, to a redetermined rate which was attained by averaging the highest prices paid by three different purchasers for gas for resale in interstate commerce, other than United, for gas produced from the area specified in the contract involved.[8]

The proposed rate of 22.8917 cents per Mcf exceeds the area increased ceiling level of 14.0 cents per Mcf as set forth in the Commission's Statement of General Policy No. 61–1, as amended, and should be suspended as hereinafter ordered.

The proposed changed rate and charge may be just, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 5 to Southdown's FPC Gas Rate Schedule No. 1 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly sections 4 and 15 thereof, the Commission's rules of practice and procedure, and the regulations under the Natural Gas Act (18 CFR Ch. 1) a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in supplement No. 5 to Southdown's FPC Gas Rate Schedule No. 1.

(B) Pending such hearing and decision thereon, Supplement No. 5 to Southdown's FPC Gas Rate Schedule No. 1 is hereby suspended and the use thereof deferred until June 1, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37 (f)) on or before February 10, 1966.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE, *Secretary.*

[F.R. Doc. 65–13905; Filed, Dec. 29, 1965; 8:46 a.m.]

[2] Includes Letter Agreement dated Sept. 7, 1965, providing for the redetermined rate for 5-year period commencing Jan. 1, 1966.
[4] The stated effective date is the effective date proposed by Respondent.
[5] Includes 1.75 cents per Mcf tax reimbursement.
[6] Conditioned initial rate provided in the temporary certificate issued in Docket No. CI62–551 in lieu of contractually provided initial price of 22.25 cents per Mcf.
[7] Redetermined rate increase.
[8] The prices utilized are not in issue in suspension or certificate proceedings.

[Docket No. CP66–192]

TRUNKLINE GAS CO.

Notice of Application

DECEMBER 22, 1965.

Take notice that on December 15, 1965, Trunkline Gas Co. (Applicant), Post Office Box 1642, Houston, Tex., 77001, filed in Docket No. CP66–192 a "budget-type" application pursuant to section 7 (c) of the Natural Gas Act, as implemented by § 157.7(b) of the regulations under the Act, for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant seeks authorization to construct during the calendar year 1966 and operate miscellaneous field facilities including field compressors, dehydration units, meter and regulator equipment and gathering lines to facilitate the taking by Applicant of natural gas into its certificated main pipeline system which is or may become available from time to time in the general area of its system or which is or may become available due to expansion, development or production of existing sources of supply during the calendar year 1966.

Total estimated cost of Applicant's proposed construction is not to exceed $2,500,000, with no single project expenditure to exceed $500,000, which cost will be financed with current working funds.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (157.10) on or before January 12, 1966.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE, *Secretary.*

[Docket No. CP66–193]

UNION GAS SYSTEM, INC., AND CITIES SERVICE GAS CO.

Notice of Application

DECEMBER 23, 1965.

Take notice that on December 16, 1965, Union Gas System, Inc. (Applicant), P.O. Box 347, Independence, Kans., 67301, filed in Docket No. CP66–193 an application pursuant to section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Co. (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Smith-North Area, Leavenworth County, Kans., all as more fully set forth in the application which is on file with the Commission and open to public inspection.

By the instant application, Applicant seeks the sale and delivery by Respondent to Applicant of up to 64 Mcf of natural gas per day at an interconnection of Applicant's proposed lateral pipeline with Respondent's 26-inch transmission line in eastern Leavenworth County, Kans. Specifically, Applicant proposes to construct, own, and operate a natural gas distribution system in the community known as the Smith-North Area in Leavenworth County, Kans. Applicant also proposes to construct, own, and operate pipeline facilities consisting of 1.66 miles of 2-inch I.D. pipeline and 0.40 mile of 1¼-inch I.D. pipeline extending south and east from the proposed point of interconnection. The community proposed to be served has an estimated population of approximately 65 with 20 residences and 1 public school.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial

3-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	4,538	5,206	5,540
Peak day (Mcf)	51	60	64

Total estimated cost of Applicant's proposed distribution system and lateral pipeline facilities is $14,690, which cost will be financed from funds on hand.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1966.

JOSEPH H. GUTRIDE,
Secretary.

[Docket No. CP66-191]

UNITED GAS PIPE LINE CO.

Notice of Application

DECEMBER 21, 1965.

Take notice that on December 13, 1965, United Gas Pipe Line Co. (Applicant), Post Office Box 1407, Shreveport, La., 71102, filed in Docket No. CP66-191 an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas transportation service now being rendered to Tennessee Gas Transmission Co. (Tennessee) and for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The application states that the transportation service provided by Applicant for Tennessee between the Carthage Field, Panola County, Tex., and West Monroe, La., was commenced on January 22, 1946, and that by letter dated January 20, 1965, Tennessee has advised Applicant that it does not elect to extend the term of the existing transportation agreement between the parties dated January 15, 1945, but would allow same to expire on January 22, 1966, by its own terms.

The facilities and service involved in the instant application were authorized by orders of the Commission issued on July 5, 1945, in Docket No. G-622 (as modified and amended on November 9, 1945, and June 23, 1948), and December 22, 1949, in Docket No. G-1252, 4 FPC 307 and 8 FPC 584, respectively.

Applicant proposes, after the termination of the aforementioned transportation agreement, to utilize its 20-inch Carthage-Longview and 18-inch Champlin Oil & Refining Co. lines by the operation of tie-over facilities between said lines. Specifically, Applicant proposes to construct a tie-over line 20 feet long and 10 inches in diameter with appurtenant facilities from the 20-inch Carthage-Longview line to the 18-inch Champlin Oil & Refining Co. line located in Panola County, Tex.

Total estimated cost of Applicant's proposed construction is $5,668, which cost will be financed from current working funds.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (157.10) on or before January 10, 1966.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate and permission and approval for the proposed abandonment are required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
Secretary.

FEDERAL RESERVE SYSTEM

FIDELITY BANK

Order Approving Merger of Banks

In the matter of the application of Fidelity Bank for approval of merger with South Bay Bank.

There has come before the Board of Governors, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by Fidelity Bank, Beverly Hills, Calif., a State member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and South Bay Bank, Manhattan Beach, Calif., under the charter and title of the former. As an incident to the merger, the sole office of South Bay Bank would become a branch of the resulting bank. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Attorney General on the competitive factors involved in the proposed merger,

It is hereby ordered, For the reasons set forth in the Board's Statement[1] of this date, that said application be and hereby is approved.

It is further ordered, That the said merger may be consummated at any time within, but not later than, 3 months after the date of this order, the Board having determined, pursuant to its rules of procedure (12 CFR 262.2(f)(5)), that the public interest would be served by waiver of the requirement that the transaction not be consummated with 7 calendar days after the date of this order.

Dated at Washington, D.C., this 22d day of December 1965.

By order of the Board of Governors.[2]

[SEAL] MERRITT SHERMAN,
Secretary.

OTTO BREMER CO.

Notice of Request for Determination and Order for Hearing

Notice is hereby given that request has been made to the Board of Governors of the Federal Reserve System, pursuant to section 4(c)(6) of the Bank Holding Company Act of 1956 (12 U.S.C. 1843(c)(6)) and § 222.5(b) of the Board's Regulation Y (12 CFR 222.5(b)), by The Otto Bremer Co., St. Paul, Minn., a bank holding company, for a determination that the activities planned to be undertaken by its proposed subsidiaries, The Farmers Agricultural Credit Co., Inc., The Farmers Insurance Agency, Inc., American Insurance Agency, Inc., and The International State Agency, are of the kind described in the aforementioned sections of the Act and the Regulation so as to make it unnecessary

[1] Filed as part of the original document. Copies available upon request to the Board of Governors of the Federal Reserve System, Washington, D.C., 20551, or to the Federal Reserve Bank of San Francisco.

[2] Voting for this action: Vice Chairman Balderston, and Governors Robertson, Shepardson, Mitchell, Daane, and Maisel. Absent and not voting: Chairman Martin.

for the prohibitions of section 4 of the Act with respect to shares in nonbanking organizations to apply in order to carry out the purposes of the Act.

Inasmuch as section 4(c)(6) of the Act requires that any determination pursuant thereto be made by the Board after due notice and hearing and on the basis of the record made at such hearing.

It is hereby ordered, That pursuant to section 4(c)(6) of the Bank Holding Company Act and in accordance with §§ 222.5(b) and 222.7(a) of the Board's Regulation Y (12 CFR 222.5(b), 222.7(a)), promulgated under the Bank Holding Company Act, a hearing with respect to this matter be held commencing on January 20, 1966, at 10 a.m. at the offices of the Federal Reserve Bank of Minneapolis, Minneapolis, Minn., before a hearing examiner selected by the Civil Service Commission, pursuant to section 11 of the Administrative Procedure Act, such hearing to be conducted according to the rules of practice for formal hearings of the Board of Governors of the Federal Reserve System (12 CFR Part 263). The right is reserved to the Board or such hearing examiner to designate any other date or place for such hearing or any part thereof which may be determined to be necessary or appropriate for the convenience of the parties. The Board's rules of practice for formal hearings provide, in part, that "All such hearings shall be private and shall be attended only by parties and their representatives or counsel, representatives of the Board, witnesses, and other persons having an official interest in the proceedings: *Provided, however*, That, on written request by a party or representatives of the Board, or on the Board's own motion, the Board, unless prohibited by law, may permit other persons to attend or may order the hearing to be public."

Any person desiring to give testimony in this proceeding should file with the Secretary of the Board, directly or through the Federal Reserve Bank of Minneapolis, on or before January 14, 1966, a written request containing a statement of the nature of the petitioner's interest in the proceeding, and a summary of the matters concerning which said petitioner wishes to give testimony. Such request will be presented to the designated hearing examiner for his determination. Persons submitting timely request will be notified of the hearing examiner's decision.

Dated at Washington, D.C., this 22d day of December 1965.

By order of the Board of Governors.

VIRGINIA COMMONWEALTH CORP.

Order Approving Application Under Bank Holding Company Act

In the matter of the application of Virginia Commonwealth Corp., Richmond, Va., for approval of the acquisition of voting shares of the Peoples Bank of Stafford, Falmouth, Va.

There has come before the Board of Governors, pursuant to section 3(a)(2) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a)(2)) and § 222.4(a)(2) of Federal Reserve Regulation Y (12 CFR 222.4(a)(2)), an application by Virginia Commonwealth Corp., Richmond, Va., a registered bank holding company, for the Board's prior approval of the acquisition of more than 80 percent of the outstanding voting shares of the Peoples Bank of Stafford, Falmouth, Va.

As required by section 3(b) of the Act, notice of receipt of the application was given to, and views and recommendation requested of, the Commissioner of Banking of the Commonwealth of Virginia. The Commissioner expressed no objection to approval of the application.

Notice of receipt of the application was published in the FEDERAL REGISTER on July 7, 1965 (30 F.R. 8599), providing an opportunity for interested persons to submit comments and views with respect to the proposed acquisition. The time for filing such comments and views has expired, and all those received have been considered by the Board.

It is hereby ordered, For the reasons set forth in the Board's Statement[1] of this date, that said application be and hereby is approved, provided that the acquisition so approved shall not be consummated (a) within 7 calendar days after the date of this order or (b) later than 3 months after said date.

Dated at Washington, D.C., this 22d day of December 1965.

By order of the Board of Governors.[2]

SECURITIES AND EXCHANGE COMMISSION

[812-1860]

EATON & HOWARD BALANCED FUND

Filing of Application for Order Exempting Sale by Open-End Company of Its Shares

DECEMBER 23, 1965.

Notice is hereby given that Eaton & Howard Balanced Fund ("applicant"), 24 Federal Street, Boston, Mass., 02110, which is registered under the Investment Company Act of 1940 ("Act") as an open-end diversified investment company, has filed an application pursuant to section 6(c) of the Act for an order of the Commission exempting from the provisions of section 22(d) of the Act the proposed issuance of its shares at net asset value to Algonquin Investment Co. ("Algonquin") in exchange for substantially all of the assets of Algonquin. An exemptive order is requested since the proposed sale of applicant's shares is to be made at a price other than at the public offering price, which normally includes a sales charge in addition to the net asset value which applicant receives from the principal underwriter through whom such public offering is made. All interested persons are referred to the application on file with the Commission for a statement of the representations therein which are summarized below.

Algonquin, a corporation organized under the laws of Missouri, is a personal holding company whose shares are owned by two individuals and two trusts. Pursuant to an Agreement and Plan of Reorganization, applicant will acquire substantially all of the assets of Algonquin in exchange for stock of applicant which will thereafter be distributed to shareholders of Algonquin in liquidation. Neither Algonquin nor any of the shareholders thereof has any present intention of redeeming the shares of applicant which they will acquire.

The application and the exhibits annexed thereto indicate that the number of shares of applicant's stock to be delivered to Algonquin will be determined by dividing the net asset value per share of applicant into the aggregate value of the net assets of Algonquin, as adjusted. The proposed adjustment, which is described in the application, is designed to compensate applicant for potential federal income taxes which would become payable upon realization of the appreciation in the value of the securities of Algonquin to the extent that any such appreciation may proportionately exceed the appreciation in the value of the securities of applicant.

As of September 30, 1965, the net assets of applicant amounted to $228,177,893, of which $96,824,194 or 42.4 percent represented unrealized appreciation, and the net assets of Algonquin amounted to $4,618,294, of which $2,061,447 or 44.6 percent represented unrealized appreciation. Applicant presently intends to sell, subsequent to acquisition, approximately 10 percent of the assets of Algonquin to be acquired. Applicant's per share asset value as of September 30, 1965, was equal to $13.27 and if the exchange had been consummated that day, 347,824 shares would have been delivered to Algonquin after the adjustment in the valuation of Algonquin's net assets.

Notice is further given that any interested person may, not later than January 12, 1966, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary,

[1] Filed as part of the original document. Copies available upon request to the Board of Governors of the Federal Reserve System, Washington, D.C., 20551, or to the Federal Reserve Bank of Richmond.

[2] Voting for this action: Unanimous, with all members present.

Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (airmail if the person being served is located more than 500 miles from the point of mailing) upon applicant at the address stated above. Proof of such service (by affidavit or in case of an attorney at law by certificate) shall be filed contemporaneously with the request. At any time after said date, as provided by Rule 0-5 of the rules and regulations promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application shall be issued upon request or upon the Commission's own motion.

For the Commission (pursuant to delegated authority).

[SEAL] NELLYE A. THORSEN, *Assistant Secretary.*

[F.R. Doc. 65-13926; Filed, Dec. 29, 1965; 8:47 a.m.]

DEPARTMENT OF LABOR

Wage and Hour Division

CERTIFICATES AUTHORIZING EMPLOYMENT OF LEARNERS AT SPECIAL MINIMUM RATES

Notice is hereby given that pursuant to section 14 of the Fair Labor Standards Act of 1938 (52 Stat. 1060, as amended, 29 U.S.C. 201 et seq.), and Administrative Order 579 (28 F.R. 11524) the firms listed in this notice have been issued special certificates authorizing the employment of learners at hourly wage rates lower than the minimum wage rates otherwise applicable under section 6 of the act. The effective and expiration dates, occupations, wage rates, number or proportion of learners and learning periods, for certificates issued under general learner regulations (29 CFR 522.1 to 522.9), and the principal product manufactured by the employer are as indicated below. Conditions provided in certificates issued under the supplemental industry regulations cited in the captions below are as established in those regulations.

Apparel Industry Learner Regulations (29 CFR 522.1 to 522.9, as amended, and 29 CFR 522.20 to 522.25, as amended).

The following learner certificates were issued authorizing the employment of 10 percent of the total number of factory production workers for normal labor turnover purposes. The effective and expiration dates are indicated.

Alabama Textile Products Corp., Andalusia, Ala.; effective 12-1-65 to 11-30-66 (men's dress shirts and work pants).

Alabama Textile Products Corp., Troy, Ala.; effective 12-1-65 to 11-30-66 (men's dress shirts).

The Andala Co., Andalusia, Ala.; effective 12-1-65 to 11-30-66 (men's work shirts and work pants).

Bestform Foundations of Windber, Inc., Stockholm Avenue, Windber, Pa.; effective 12-9-65 to 12-8-66 (brassieres and girdles).

Byrds Manufacturing Corp., Albany, Ky.; effective 11-29-65 to 11-28-66 (ladies' shirts).

Byrds Manufacturing Corp., Byrdstown, Tenn.; effective 11-29-65 to 11-28-66 (ladies' shirts).

Cowden-Lancaster Co., 112 Hamilton Avenue, Lancaster, Ky.; effective 11-28-65 to 11-27-66 (overalls and dungarees).

Regulations Applicable to the Employment of Learners (29 CFR 522.1 to 522.9, as amended).

The following learner certificates were issued in Puerto Rico to the companies hereinafter named. The effective and expiration dates, learner rates, occupations, learning periods, and the number of learners authorized to be employed, are indicated.

Eleven Eleven Corp., Km. 2, Carretera No. 174, Apartado 817, Bayamon, P.R.; effective 11-1-65 to 10-31-66; 10 learners for normal labor turnover purposes in the occupations of: (1) Looping, for a learning period of 960 hours at the rates of 69 cents an hour for the first 480 hours and 76 cents an hour for the remaining 480 hours; (2) pairing, for a learning period of 360 hours at the rate of 69 cents an hour; and (3) knitting, seaming, examining, preboarding and boarding, each for a learning period of 240 hours at the rate of 69 cents an hour (men's and children's hosiery).

Four Stars Industries, Inc., Road, No. 132, Km. 12.1, Post Office Box 98, Penuelas, P.R.; effective 11-1-65 to 4-30-66; 37 learners for plant expansion purposes in the occupations of: (1) Sewing machine operating, final pressing, each for a learning period of 320 hours at the rate of 75 cents an hour; and (2) turners, for a learning period of 160 hours at the rate of 75 cents an hour (ties).

Juncos Sport Co., Inc., Avenida Munoz Rivera, Apartado A, Juncos, P.R.; effective 11-8-65 to 5-7-66; 20 learners for plant expansion purposes in the occupation of handsewing of baseballs and softballs, for a learning period of 320 hours at the rate of 68 cents an hour for the first 160 hours and 78 cents an hour for the remaining 160 hours (baseballs and soft balls).

Each learner certificate has been issued upon the representations of the employer which, among other things, were that employment of learners at special minimum rates is necessary in order to prevent curtailment of opportunities for employment, and that experienced workers for the learner occupations are not available. Any person aggrieved by the issuance of any of these certificates may seek a review or reconsideration thereof within 15 days after publication of this notice in the FEDERAL REGISTER pursuant to the provisions of 29 CFR 522.9. The certificates may be annulled or withdrawn, as indicated therein, in the manner provided in 29 CFR Part 528.

Signed at Washington, D.C., this 10th day of December 1965.

ROBERT G. GRONEWALD,
Authorized Representative of the Administrator.

Title 46—SHIPPING

Chapter I—Coast Guard, Department of the Treasury

[CGFR 65-50]

REPUBLICATION OF VESSEL INSPECTION REGULATIONS

The Vessel Inspection Regulations in 46 CFR Parts 1 through 145 are republished in their entirety in order to permit an editing of material for the purpose of obtaining uniformity in spelling of words; correction of names, addresses, and cross references; updating of procedures, etc. This republication of the regulations does not alter or change the requirements previously published in the FEDERAL REGISTER. This publication will permit the use of a single source for these regulations rather than numerous sources to show the amendments and changes made since 1938.

The changes in procedures, which are not subject to rulemaking procedures under the Administrative Procedure Act, which have been included in this document are as follows:

a. Penalty processing procedure, 46 CFR 2.50-20 (b) through (f).

b. Mailing of notices or decisions and orders by certified mail in suspension and revocation of proceedings, 46 CFR 137.05-25(b), 137.15-15(a), 137.15-20(b), and 137.20-175(c).

c. Editorial corrections of text previously published were made in 46 CFR 2.20-5(c), 10.20-1, 12.02-15, 12.15-9(c), 25.30-10(e), 30.10-22, 31.10-5(a)(1), 31.10-25, 31.30-1(b), Table 31.10-18(b), 32.25-1(b), 35.20-1(b), 66.01-1, Table 71.25-20(a)(1), 76.50-5(e), 78.05-1, Table 91.25-20(a)(1) and 95.50-5(e).

It is ordered, That the rules and regulations in 46 CFR Parts 1 through 145, reprinted as set forth below, shall be deemed to be the requirements which have a future force and effect on and after January 1, 1966.

Dated: December 20, 1965.

W. D. SHIELDS,
Vice Admiral, U.S. Coast Guard,
Acting Commandant.

Subchapter A—Procedures Applicable to the Public

Part
1 Organization, general course and methods governing marine safety functions.
2 Vessel inspections.
3 Merchant marine personnel.
4 Investigations and hearings.

Subchapter B—Merchant Marine Officers and Seamen

10 Licensing of officers and motorboat operators and registration of staff officers.
12 Certification of seamen.
14 Shipment and discharge of seamen.
15 Allotments of seamen.
16 United States shipping commissioners.

Subchapter C—Uninspected Vessels

24 General provisions.
25 Requirements.
26 Operations.

Subchapter D—Tank Vessels

30 General provisions.
31 Inspection and certification.
32 Special equipment, machinery, and hull requirements.
33 Lifesaving appliances.
34 Firefighting equipment.
35 Operations.
36 Elevated temperature cargoes.
38 Liquefied flammable gases.
39 Flammable or combustible liquids having lethal characteristics.
40 Special construction, arrangement, and other provisions for carrying certain flammable or combustible dangerous cargoes in bulk.

Subchapter E—Load Lines

43 Foreign or coastwise voyage.
44 Variance for steam colliers, barges, and self-propelled barges (when engaged in special services on coastwise and inter-island voyages).
45 Merchant vessels when engaged in a voyage on the Great Lakes.
46 Subdivision load lines for passenger vessels.

Subchapter F—Marine Engineering

50 General provisions.
51 Materials.
52 Construction.
53 Low-pressure heating boilers.
54 Unfired pressure vessels.
55 Piping systems and appurtenances.
56 Arc welding, gas welding, and brazing.
57 Main and auxiliary machinery.
58 Repairs to boilers, unfired pressure vessels and appurtenances.
59 Independent internal combustion engine fuel tanks.
61 Installations, tests, inspections, markings, and official forms.

Subchapter G—Marine Engineering Installations Contracted for Prior to July 1, 1935

66 General.
67 Construction.
68 Piping systems.
69 Installations, tests, inspections, and repairs.

Subchapter H—Passenger Vessels

70 General provisions.
71 Inspection and certification.
72 Construction and arrangement.
73 Watertight subdivision.
74 Stability.
75 Lifesaving equipment.
76 Fire protection equipment.
77 Vessels control and miscellaneous systems and equipment.
78 Operations.

Subchapter I—Cargo and Miscellaneous Vessels

90 General provisions.
91 Inspection and certification.
92 Construction and arrangement.
93 Stability.
94 Lifesaving equipment.
95 Fire protection equipment.
96 Vessel control and miscellaneous systems and equipment.
97 Operations.
98 Special construction, arrangement, and provisions for certain dangerous cargoes in bulk.

Subchapter J—Electrical Engineering

110 General provisions.
111 Electrical system; general requirements.
112 Emergency lighting and power system.
113 Communication and alarm systems and equipment.

Subchapter K—Marine Investigations and Suspension and Revocation Proceedings

136 Marine investigation regulations.
137 Suspension and revocation proceedings.

Subchapter L—Overtime Services

143 Extra compensation for overtime services.

Subchapter M—Bulk Grain Cargoes

Part
144 Loading and stowage of grain cargoes.

SUBCHAPTER A—PROCEDURES APPLICABLE TO THE PUBLIC

PART 1—ORGANIZATION, GENERAL COURSE AND METHODS GOVERNING MARINE SAFETY FUNCTIONS

Sec.
1.01 Organization.
1.05 Organization; districts.
1.10 Suspension and revocation proceedings.
1.15 Field examiners.
1.20 General flow of functions.
1.25 Judicial review.

AUTHORITY: The provisions of this Part 1 issued under sec. 633, 63 Stat. 545, R.S. 4405, as amended, and 4462, as amended, 14 U.S.C. 633, 46 U.S.C. 375, 416. Interpret or apply R.S. 4450, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 1-12, 60 Stat. 237-244, secs. 1, 2, 68 Stat. 484, sec. 3, 68 Stat. 675, sec. 3, 70 Stat. 152; 46 U.S.C. 239, 367, 239a, 239b, 390b, 5 U.S.C. 1001-1011, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-9, August 3, 1954, 19 F.R. 5195; 167-14, November 26, 1954, 19 F.R. 8026; 167-17, June 29, 1955, 20 F.R. 4976; 167-20, June 18, 1956, 21 F.R. 4894.

§ 1.01 Organization.

(a) The Commandant is the head of the agency and exercises overall direction over the policy and administration of the Coast Guard.

(b) To carry out the regulatory and enforcement aspects of marine safety, the staff officers designated in this paragraph are assigned to the Commandant. The chain of military command is from the Commandant directly to the District Commanders. The staff officers at Headquarters act only on the basis of the Commandant's authority and by his direction.

(1) The Chief, Office of Merchant Marine Safety, under the general direction of the Commandant directs, supervises, and coordinates the activities of the Chief, Merchant Marine Technical Division, Chief, Merchant Vessel Inspection Division, and Chief, Merchant Vessel Personnel Division, located at Headquarters; supervises through the District Commanders the administration of the Merchant Marine Safety Divisions of District Offices and Officers in Charge, Marine Inspection; and exercises technical control over the Merchant Marine Details in foreign ports.

(i) The Chief, Merchant Marine Technical Division, at Headquarters, under the direction of the Chief, Office of Merchant Marine Safety, passes on plans and specifications for the construction or alteration of merchant vessels, conducts or reviews stability tests on merchant vessels, examines equipment and devices submitted to Headquarters, supervises the load lines assigned by classification societies, and otherwise provides technical assistance with respect to enforcing and improving merchant marine materiel standards.

(ii) The Chief, Merchant Vessel Inspection Division, at Headquarters, under the direction of the Chief, Office of Merchant Marine Safety, administers

the inspection program for merchant vessels and the program of enforcing and improving merchant marine materiél and operational safety standards, and reviews and maintains records of marine casualties other than recreational boating accidents.

(iii) The Chief, Merchant Vessel Personnel Division, at Headquarters, under the direction of the Chief, Office of Merchant Marine Safety, administers the program for the enforcement and development of prescribed merchant marine personnel standards, including but not limited to the licensing, certificating, shipment and discharge of seamen, and the investigation and institution of proceedings looking to suspension and revocation under Title 46, U.S. Code, sections 239 and 239b, of licenses, certificates, and documents held by persons.

(2) The Chief, Office of Operations, under the general direction of the Commandant, directs, supervises, and coordinates the activities of the Chief, Recreational Boating Safety Division, located at Headquarters; and supervises through the District Commanders the administration of the recreational boating safety program.

(i) The Chief, Recreational Boating Safety Division, at Headquarters, under the direction of the Chief, Office of Operations, administers the enforcement program applicable to uninspected vessels used for recreational purposes and the imposition and collection of penalties in connection therewith; supervises the Federal numbering of undocumented vessels; reviews applications for approval of State numbering systems as required by Title 46, U.S. Code, section 527a; maintains liaison with Federal and State agencies having related interest; develops and coordinates arrangements with State Governments for cooperation in the enforcement of State and Federal laws relating to recreational boating; administers the boating accident report program and compiles, analyzes and publishes the data thus obtained, together with recommendations for the enhancement of boating safety; and reviews and maintains records of recreational boating accidents.

(3) The Chief Counsel of the Coast Guard at Headquarters, under the general direction and supervision of the General Counsel, Department of the Treasury, and the Commandant, considers cases involving alleged violations of navigation and vessel inspection laws or regulations prescribed thereunder and published in this chapter or in 33 CFR Chapter I, and reviews appeals to the Commandant from statutory monetary penalties assessed therefor. Upon completion of such a review, the Chief Counsel prepares a proposed action for the Commandant's consideration or, in appropriate cases, he takes final action on behalf of, and as directed by, the Commandant.

§ 1.05 Organization; districts.

(a) To assist the District Commander in carrying out the regulatory and enforcement aspects of marine safety in the Coast Guard Districts, there is assigned to each District Commander a staff officer designated as Chief, Merchant Marine Safety Division. The chain of military command is from the District Commander to each Officer in Charge, Marine Inspection, in his district. The Chief, Merchant Marine Safety Division, is a staff officer assigned to the District Commander and acts only on the basis of the authority of the District Commander and by his direction.

(1) The Chiefs, Merchant Marine Safety Division, in the District Offices, under the supervision of their respective District Commanders, direct the activities in their districts relative to vessel, factory and shipyard inspections; reports and investigations of marine casualties and accidents; processing of violations of navigation and vessel inspection laws; the licensing, certificating, shipment and discharge of seamen; the investigation and institution of proceedings looking to suspension and revocation under Title 46, U.S. Code, sections 239 and 239b, of licenses, certificates, and documents held by persons; and all other marine safety regulatory activities except those functions related to recreational boating when under the supervision of the Chiefs, Operations Division, in the District Offices.

(2) Unless otherwise provided for, the Chiefs, Operations Division, in the District Offices, under the supervision of their respective District Commanders, direct the activities in their districts relative to administration of the law enforcement program applicable to uninspected vessels used for recreational purposes and the imposition and collection of penalties in connection therewith; maintain liaison with Federal and State agencies having related interests; develop and coordinate agreements and arrangements with Federal and State agencies for cooperation in the enforcement of State and Federal laws related to recreational boating; and review investigative reports of recreational boating accidents.

(b) The Officers in Charge, Marine Inspection, in the Coast Guard districts, under the supervision of their respective District Commanders, are in charge of marine inspection offices located in various ports and have command responsibility within assigned marine inspection zones for the performance of duties with respect to the inspection, enforcement, and administration of navigation and vessel inspection laws, rules, and regulations governing marine safety. The Officer in Charge, Marine Inspection, has been designated and delegated to give immediate direction to Coast Guard activities relating to marine safety functions consisting of inspection of vessels in order to determine that they comply with the applicable laws, rules, and regulations relating to construction, equipment, manning, and operation, and to be satisfied that such vessels are in seaworthy condition for the services in which such vessels are to be operated; shipyard inspections; factory inspections of materials and equipment for vessels; the licensing, certificating, shipment and discharge of seamen; investigations of marine casualties and accidents; investigations of violations of law; negligence, misconduct, unskillfulness, incompetence or misbehavior of persons holding licenses, certificates, or documents issued by the Coast Guard; initiations of actions seeking suspension or revocation under Title 46, U.S. Code, sections 239 and 239b of licenses, certificates and documents held by persons, and presentation of cases at hearings before examiners; and the enforcement of navigation, vessel inspection and seamen laws in general.

(c) For descriptions of Coast Guard districts and marine inspection zones see 33 CFR Part 3.

§ 1.10 Suspension and revocation proceedings.

(a) The Commandant is the final and sole authority for action on appeals or reviews of suspension and revocation proceedings. The Commandant has not delegated the authority to make final decisions on appeals.

(b) To assist the Commandant in the general supervision of the hearing, appeal, and review functions with respect to proceedings looking to suspension and revocation of licenses, certificates, and documents (held by persons) under Title 46, U.S. Code, sections 239 and 239b, there is assigned to the Commandant's Staff a Chief Examiner who is an examiner appointed under the Administrative Procedure Act (5 U.S.C. 1001–1011).

(1) The Chief Examiner at Headquarters, under the general direction and supervision of the Commandant, is assigned the following duties:

(i) Acts as an adviser and as a special assistant to the Commandant in matters concerning hearings conducted pursuant to Title 46, U.S. Code, sections 239 and 239b;

(ii) Trains new examiners and coordinates the activities of all examiners;

(iii) Conducts hearings under Title 46, U.S. Code, sections 239 and 239b; and

(iv) Makes appropriate recommendations to the Chief Counsel for the latter's consideration in the preparation of the final actions by the Commandant with respect to appeals or in cases reviewed on the Commandant's motion under Subpart 137.35 in Part 137 of this chapter.

(c) The Chief Counsel of the Coast Guard at Headquarters, under the general direction and supervision of the General Counsel, Department of the Treasury, and of the Commandant, acts as an adviser and as a special assistant to the Commandant in all matters having legal implications.

(1) The Chief Counsel prepares a proposed decision for the Commandant's consideration in cases of appeal or review in suspension and revocation proceedings.

§ 1.15 Field examiners.

(a) The hearings conducted under Title 46, U.S. Code, sections 239 and 239b, are presided over by examiners. These examiners are located in various ports and are under the exclusive ad-

ministrative control of the Commandant.

(b) The examiners are appointed under the provisions of the Administrative Procedure Act (5 U.S.C. 1001–1011) and are civilian employees of the Coast Guard.

§ 1.20 General flow of functions.

(a) As indicated in 33 CFR 1.01–20, the Officer in Charge, Marine Inspection, is deemed to have final authority subject to the rights of appeal set forth in § 2.01–70 of this subchapter with respect to the functions described in § 1.05(b).

(b) The general course and method by which the functions (other than those dealing with suspension or revocation of licenses, certificates, or documents described in paragraph (c) of this section) concerning marine safety activities are channeled begins with the Officer in Charge, Marine Inspection, at the local Marine Inspection Office. From this officer the course is to the Chief, Merchant Marine Safety Division, on the staff of the District Commander and then to the District Commander. From the District Commander the course is to the Chief of one of the three divisions within the Office of Merchant Marine Safety at Headquarters. In most administrative cases the channel ends at this point. However, on matters of policy or appeals the course is through one of these divisions to the Chief, Office of Merchant Marine Safety, and then to the Commandant, whose decisions are final.

(c) In proceedings involving the suspension or revocation of a Coast Guard license, certificate or document issued to an individual, the course and method by which such proceedings are channeled are as follows:

(1) In the United States, the Commonwealth of Puerto Rico, Territory of Guam, the Virgin Islands, and other possessions, the proceedings are initiated by the preferment of charges and specifications against the holder of the Coast Guard license, certificate or document. A Coast Guard Investigating Officer under the supervision of an Officer in Charge, Marine Inspection, or an Officer in Charge, Marine Inspection, causes the charges and specifications to be served on the person described therein (person charged) who is a holder of a Coast Guard license, certificate or document. At a hearing the Coast Guard submits evidence to support the charges and specifications, while the person charged may submit evidence in rebuttal or mitigation. The examiner renders a decision on the basis of the evidence adduced at the hearing and the law. The examiner's decision is given to the person charged.

(i) In every case the file containing the charges and specifications and examiner's decision is forwarded by the Officer in Charge, Marine Inspection, to the District Commander, and thence to the Commandant.

(ii) In a case where an appeal is made by the person charged, the notice of appeal is filed with the District Commander of the Coast Guard District in which the hearing was held. The District Commander submits a complete transcript of the record with the notice of appeal to the Commandant.

(2) In the event an examiner is assigned to a foreign port, proceedings are initiated by the preferment of charges and specifications against the holder of a Coast Guard license certificate or document. This is usually initiated by a merchant marine detail officer (investigating officer) who causes the charges and specifications to be served on the person described therein (person charged) who is the holder of a Coast Guard license, certificate or document. At a hearing, the Coast Guard presents evidence to prove the charges and specifications, while the person charged submits evidence of denial or mitigation. The examiner then renders a decision on the basis of the evidence adduced at the hearing and the law. In each case the examiner's decision is given to the person charged. The file containing the charges and specifications and examiner's decision is forwarded by the merchant marine detail officer to the Commandant. An appeal from such an examiner's decision is filed with the District Commander in the District in which such person first arrives in the United States. The District Commander transmits the notice of appeal to the Commandant.

(3) In a foreign port where no examiner has been assigned, no proceedings are initiated by the Coast Guard. In a case originating in a foreign port where a merchant marine detail officer is assigned, such officer investigates the matter to the extent possible and then refers the case to the Officer in Charge, Marine Inspection, having jurisdiction over the vessel's first port of arrival in the United States, or its Territories, or if the person leaves the vessel, then to the Officer in Charge, Marine Inspection, having jurisdiction at such person's first port of arrival in the United States, or its Territories or to the Commandant. The Officer in Charge, Marine Inspection, investigates the case and determines whether or not proceedings are to be initiated against the holder of a Coast Guard license, certificate, or document.

(d) In the performance of their duties, all Coast Guard examiners are bound by law and the regulations in this chapter or in 33 CFR Chapter I. For publicizing statements of policy, clarification of points or procedure, and general administrative instructions, the Commandant may, from time to time, issue instructions via a series designated as "Hearing Examiners' Circulars." A complete file of these instructions is available for reading purposes during normal working hours at Headquarters, each district office, and each Marine Inspection Office.

§ 1.25 Judicial review.

(a) Nothing in this chapter shall be construed to prohibit any party from seeking judicial review of any Commandant's decision or action taken pursuant to the regulations in this part or Part 137 of this chapter with respect to suspension and revocation proceedings arising under Title 46, U.S. Code, sections 239 and 239b.

(b) In the absence of an appeal to, or review by, the Commandant from the decision of the examiner in a suspension and revocation proceeding, such decision of the examiner shall be final and binding on the person charged for all purposes as of the effective date of the decision.

PART 2—VESSEL INSPECTIONS

Subpart 2.01—Inspecting and Certificating of Vessels

Sec.

2.01–1 Applications for inspections.
2.01–5 Certificate of inspection.
2.01–7 Classes of vessels (including motorboats) examined or inspected and certificated.
2.01–8 Application of regulations to vessels or tankships on an international voyage.
2.01–10 Inspection requirements—domestic vessels.
2.01–13 Inspection requirements—foreign vessels.
2.01–15 Vessel repairs.
2.01–20 Revocation of certificates of inspection.
2.01–25 International Convention for Safety of Life at Sea, 1960.
2.01–40 Passengers or persons in addition to crew on cargo or tank vessels.
2.01–45 Excursion permit.
2.01–50 Persons other than crew on towing, oyster, or fishing steam vessels.
2.01–60 Overtime compensation.
2.01–70 Appeals.
2.01–80 Vessel inspections in Alaska.

Subpart 2.20—Reports and Forms

2.20–1 Forms.
2.20–5 Rules of the Road pamphlets.
2.20–40 Chief engineer's reports.
2.20–50 Repairs or alterations in lifesaving or fire prevention equipment.
2.20–60 Reports of casualties and accidents.

Subpart 2.45—Waivers of Navigation and Vessel Inspection Laws

2.45–1 Authority for and limitations on issuance.
2.45–5 Policy.
2.45–10 Waivers issued.
2.45–15 Specific individual waivers.
2.45–20 General waivers.

Subpart 2.50—Assessment, Mitigation or Remission of Penalties

2.50–1 Delegation of authority.
2.50–5 Statutes providing for assessment, mitigation or remission of civil penalties.
2.50–10 Reports of violations of laws or regulations and instituting civil penalty proceedings generally.
2.50–15 Transfer of civil penalty cases from one District Commander to another.
2.50–20 Civil penalties.
2.50–25 Criminal penalties.
2.50–30 Civil and criminal penalties.
2.50–35 Procedure for payment of civil penalty for violation of law or regulation.
2.50–40 Specific types of violations reported.

Subpart 2.75—Approvals of Safety Equipment, Materials and Installations, and Qualifications for Construction Personnel

2.75–1 Approvals.
2.75–5 Certificates of approval.
2.75–10 Procedures for obtaining approvals.
2.75–15 Requirements and tests.

Sec.
2.75-20 Affidavits or certifications.
2.75-25 Portable fire extinguishers.
2.75-30 Special purpose water safety buoyant devices.
2.75-40 Suspension of approval.
2.75-50 Withdrawals or terminations of approvals.
2.75-60 Certification of ship's stores and supplies.
2.75-70 Welders.

Subpart 2.85—Load Lines

2.85-1 Assignment of load lines.

Subpart 2.90—Plans, Drawings or Blueprints

2.90-1 General requirements.

Subpart 2.95—Retention of Records by the Public

2.95-1 Certificates or documents issued by Coast Guard.
2.95-5 Certificates or documents issued by others.
2.95-10 Equipment or material required to be approved.

AUTHORITY: The provisions of this Part 2 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret sec. 3, 60 Stat. 238, 5 U.S.C. 1002. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 2.01—Inspecting and Certificating of Vessels

AUTHORITY: The provisions of this Subpart 2.01 interpret or apply under R.S. 4421, as amended, 4453, as amended; 46 U.S.C. 399, 435; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 167-14, November 26, 1954, 19 F.R. 8026; 167-20, June 18, 1956, 21 F.R. 4894; CGFR 56-28, July 24, 1956, 21 F.R. 5659; 167-38, October 26, 1959, 24 F.R. 8857, unless otherwise noted.

§ 2.01-1 Applications for inspections.

(a) *Application forms.* (1) Applications for the inspections of vessels required to be inspected by the Coast Guard by 46 U.S.C. 362, 363, 367, 390a, 391, 391a, 392, 395, 404, 405, 526, 1333, or 50 U.S.C. 198, shall be made by the master, owner or agent on the following Coast Guard forms which are obtainable from the Officer in Charge, Marine Inspection, at any local Marine Inspection Office, U.S. Coast Guard.

(i) CG-3752—Application for Inspection of U.S. Vessel.

(ii) CG-986—Application for Inspection of Foreign Vessel.

(2) These applications require information on name and type of vessel, nature of employment and route in which to be operated, and place where and date when the vessel may be inspected.

(b) *To whom submitted.* The completed form shall be submitted to the Officer in Charge, Marine Inspection, in the Marine Inspection Office located in, or nearest, the port at which the inspection is to be made. The applicant will be advised in writing of the time when the inspection will be made.

(c) *New vessels.* Applications for inspection of new vessels shall be preceded by the submission of applicable drawings or prints in accordance with the specific requirements in Subchapters D (Tank Vessels), E (Load Lines), F (Marine Engineering), H (Passenger Vessels), I (Cargo and Miscellaneous Vessels), J (Electrical Engineering), and/or T (Small Passenger Vessels) of this chapter applicable to that particular type of vessel and/or type of service in which the vessel is proposed to be operated.

(d) *Foreign-built vessels.* (1) Those foreign-built vessels which are specifically authorized by public or private laws to engage in the coastwise trade, and those foreign-built vessels which are documented to engage in the foreign trade shall be inspected and certificated as required by law and/or the regulations in this chapter which are applicable to their class and employment.

(2) Under certain circumstances as described in law (see 46 U.S.C. 11, 13, 289, 292, 316, 808, 883, or other laws), certain foreign-built vessels are not permitted to engage in the United States coastwise trade (domestic trade) unless specifically authorized by law. Therefore, when foreign-built vessels are intended for use in the coastwise trade as defined by the Bureau of Customs, such vessels will not be inspected and certificated unless specifically authorized by law to engage in the coastwise trade.

§ 2.01-5 Certificate of inspection.

(a) *Issuance of certificates.* Upon completion of the inspection of a vessel and on condition that the vessel and her equipment are approved by the inspectors, a certificate on one or more of the following Coast Guard forms will be issued by the Officer in Charge, Marine Inspection:

(1) CG-841—Certificate of Inspection.

(2) CG-854—Temporary Certificate of Inspection.

(3) CG-989—Certificate of Examination for Foreign Passenger Vessel.

(4) CG-3463—Certificate for Foreign Vessel to Carry Persons in Addition to Crew.

(5) CG-3753—Certificate of Inspection (for small passenger vessel).

(b) *Vessels issued certificates.* (1) All domestic vessels shall be issued a Temporary Certificate of Inspection (CG-854) and a Certificate of Inspection (CG-841) or Certificate of Inspection (for small passenger vessel) (CG-3753).

(2) Foreign passenger vessels of countries signatory to the International Convention for the Safety of Life at Sea, 1948, shall be issued a Certificate of Examination for Foreign Passenger Vessel (CG-989).

(3) Foreign passenger vessels of countries which are nonsignatory to the International Convention for the Safety of Life at Sea, 1960, shall be issued a Temporary Certificate of Inspection (CG-854) and a Certificate of Inspection (CG-841).

(4) All foreign freight vessels carrying 12 or less passengers shall be issued a Certificate for Foreign Vessels to Carry Persons In Addition to Crew (CG-3463).

(c) *Description of certificates.* The certificate of inspection issued to a vessel will describe the vessel, the route which she may travel, the minimum manning requirements, the safety equipment and appliances required to be carried on board, the total number of persons which may be carried, and the names of the operators and the owners. The period for which a certificate of inspection is valid is stated on the certificate. The certificate may be renewed by making application for inspection as provided for in § 2.01-1.

(d) *Amending certificates.* Where by reason of a change in the character of a vessel or in her route, equipment, etc., the vessel will not comply with the requirements of the certificate of inspection previously issued, a certificate amending such certificate may be issued at the discretion of the Officer in Charge, Marine Inspection, to whom request is made, on Coast Guard Form CG-858—Certificate of Inspection Amendment.

§ 2.01-7 Classes of vessels (including motorboats) examined or inspected and certificated.

(a) The regulations in this chapter concerning inspecting and certificating vessels are applicable to vessels (including motorboats) as indicated in the following table 2.01-7(a):

TABLE 2.01-7(a)

Method of propulsion	Size or other limitations [1]	Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations [1]			
		Vessels inspected and certificated under Subchapter D—Tank Vessels [2]	Vessels inspected and certificated under either Subchapter H—Passenger Vessels [2 3 4] or Subchapter T—Small Passenger Vessels [2 3 4]	Vessels inspected and certificated under Subchapter I—Cargo and Miscellaneous Vessels [2 4]	Vessels subject to provisions of Subchapter C—Uninspected Vessels [2 4 6]
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Steam	Vessels not over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	All tugboats and towboats.	All vessels except those covered by columns 3, 4, and 5.[8]
	Vessels over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.[8]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels of not over 15 gross tons which carry more than 6 passengers.[7] 3. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew. c. Towing and fishing vessels, in other than ocean and coastwise service, may carry persons on the legitimate business of the vessel, in addition to crew, but not to exceed one for each net ton of the vessel.	All vessels except those covered by columns 3 and 4.	None.
Motor	Vessels of not over 15 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All vessels except those covered by columns 3, 4, and 5.
	Vessels over 15 gross tons except seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[8]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels not over 65 feet in length which carry more than 6 passengers.[7] 3. All other vessels of over 65 feet in length carrying passengers for hire except documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels carrying freight for hire except those covered by columns 3 and 4.	All vessels except those covered by columns 3, 4, and 5.
	Seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[8]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels except those covered by columns 3 and 4, and those engaged in the fishing, oystering, clamming, crabbing, or any other branch of the fishery, kelp, or sponge industry.	All vessels except those covered by columns 3, 4, and 5.
Sail	Vessels not over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
	Vessels over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire...	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
Nonself-propelled	Vessels not over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.
	Vessels over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire...	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.

[1] Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression "means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline."

[2] Subchapters E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes) of this chapter may also be applicable under certain conditions.

[3] Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of Part 167 of Subchapter R (Nautical Schools) of this chapter. Civilian nautical schoolships, as defined by 46 U.S.C. 1331, shall meet the requirements of Subchapter H (Passenger Vessels) and Part 168 of Subchapter R (Nautical Schools) of this chapter.

[4] Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons or more. Subchapter T (Small Passenger Vessels) of this chapter covers only those vessels of less than 100 gross tons.

[5] Vessels covered by Subchapters H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not for the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of Subchapter D (Tank Vessels) in addition to the requirements of Subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

[6] Any vessel on an international voyage is subject to the requirements of the International Convention for Safety of Life at Sea, 1960.

[7] The meaning of the term "passenger" is as defined in the Act of May 10, 1956 (sec. 1, 70 Stat. 151; 46 U.S.C. 390).

[8] Boilers and machinery are subject to examination on vessels over 40 feet in length.

(b) The specific application of regulations concerning inspecting and certificating vessels is set forth in the specific subchapter governing a particular class of vessels.

(1) For passenger vessels see Part 70 of Subchapter H (Passenger Vessels) of this chapter.

(2) For cargo and miscellaneous vessels see Part 90 of Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(3) For tank vessels see Part 30 of Subchapter D (Tank Vessels) of this chapter.

(4) For small passenger vessels see Part 175 of Subchapter T (Small Passenger Vessels) of this chapter.

(5) For uninspected vessels see Part 24 of Subchapter C (Uninspected Vessels) of this chapter.

§ 2.01–8 Application of regulations to vessels or tankships on an international voyage.

(a) Where, in various places or portions of this chapter, requirements are stipulated specifically for "vessels on an international voyage" or "tankships on an international voyage," it is intended that these requirements apply only to vessels or tankships, as applicable, which are subject to the International Convention for Safety of Life at Sea, 1960.

(b) For details regarding application of Convention requirements to tankships, see § 30.01–6 of this chapter; to passenger vessels, see § 70.05–10 of this chapter; to cargo ships other than tankships, see § 90.05–10 of this chapter; and to small passenger vessels, see § 176.35–1 of this chapter. (E.O. 11239, 30 F.R. 9671, 3 CFR, 1965 Supp.).

§ 2.01–10 Inspection requirements—domestic vessels.

(a) If during the inspection of a vessel made at the request of the master, owner, or agent, the vessel or her equipment is found not to conform to the requirements of law or regulations in this chapter, the requirements which must be met will be listed on Form CG–835, Notice of Merchant Marine Inspection Requirements, and given to the master of the vessel.

(b) The Coast Guard on its own initiative may examine or inspect or reinspect at anytime any vessel subject to Title 52 of the Revised Statutes (R.S. 4399–4500; 46 U.S.C. 170, 214–240, 361–498), and acts amendatory thereof or supplemental thereto. If during such examination, inspection, or reinspection, any failure to comply with any applicable requirement of law and/or applicable regulations in this chapter, or any defects or imperfections become apparent tending to render the navigation of the vessel unsafe, or that repairs have become necessary, the Coast Guard will so notify the master and state what is required.

§ 2.01–13 Inspection requirements—foreign vessels.

(a) Foreign vessels registered in countries which are parties to the effective International Convention for Safety of Life at Sea are normally subject to the examination provided for in Chapter I of that Convention. However, in the case of any vessel involving novel features of design or construction, upon which that Convention is silent or which involve potential unusual operating risks, a more extensive inspection may be required when considered necessary to safeguard the life or property in United States' ports where such vessel may enter. In such a case, pertinent plans and/or calculations may be required to be submitted sufficiently in advance to permit evaluation before inspection.

(b) Foreign vessels registered in countries which are not parties to the effective International Convention for Safety of Life at Sea, or foreign vessels registered in countries which are parties to the effective Convention but which vessels are exempted from part or all of the Convention, may under conditions specified in applicable inspection laws be subject to inspection and certification as specified in regulations governing specific categories of vessels.

(c) For details concerning application of regulations to foreign vessels, see Part 30 in Subchapter D (Tank Vessels), Part 70 in Subchapter H (Passenger Vessels), Part 90 in Subchapter I (Cargo and Miscellaneous Vessels), § 146.02–2 in Subchapter N (Dangerous Cargoes), and Part 175 in Subchapter T (Small Passenger Vessels) of this chapter.

(R.S. 4400, as amended, 4417a, as amended, 4472, as amended, sec. 26, 41 Stat. 998, as amended, sec. 3, 70 Stat. 152; 46 U.S.C. 362, 391a, 170, 882, 390b)

§ 2.01–15 Vessel repairs.

(a) The procedures to be followed in notifying the Coast Guard about vessel repairs varies according to the type of vessel and service in which engaged. Additional requirements for repairs of certain equipment and installations are in Subchapters E (Load Lines), F (Marine Engineering), and/or J (Electrical Engineering) of this chapter. The requirements by types of vessels are as follows:

(1) Tank vessels—Parts 31 and 35 of Subchapter D (Tank Vessels) of this chapter.

(2) Passenger vessels—Part 71 of Subchapter H (Passenger Vessels) of this chapter.

(3) Cargo and miscellaneous vessels—Part 91 of Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(4) Small passenger vessels—Part 176 of Subchapter T (Small Passenger Vessels) of this chapter.

(5) Public nautical schoolships—Subpart 167.30 of Subchapter R (Nautical Schools) of this chapter.

(b) If repairs to a vessel are necessary, such vessel may be permitted to proceed to another port for repairs, if in the opinion of the inspector it can be done with safety. The permit is granted by the Officer in Charge, Marine Inspection, upon request in writing by the master or owner of the vessel and is issued on Coast Guard Form 948, Permit To Proceed to Another Port for Repairs. No repairs or alterations affecting safety of a vessel or her machinery shall be made unless applicable requirements in Subchapters D (Tank Vessels), E (Load Lines), F (Marine Engineering), H (Passenger Vessels), I (Cargo and Miscellaneous Vessels) and/or J (Electrical Engineering) of this chapter are met.

§ 2.01–20 Revocation of certificates of inspection.

(a) Under the authority of 46 U.S.C. 391, 391a, or 435 the certificates of inspection referred to in § 2.01–5 may be revoked if the vessel is found at a reinspection not to comply with the terms of the vessel's certificate of inspection.

(b) Under the authority of 46 U.S.C. 390c(c) the certificates of inspection referred to in § 2.01–5 for a small passenger vessel may be revoked or suspended if such a vessel is found not to comply with the terms of the vessel's certificate of inspection when carrying more than 6 passengers.

§ 2.01–25 International Convention for Safety of Life at Sea, 1960.

(a) *Certificates required.* (1) The International Convention for Safety of Life at Sea, 1960, requires one or more of the following certificates to be carried on board certain passenger, cargo or tankships engaged in international voyages:

(i) Passenger Ship Safety Certificate.

(ii) Cargo Ship Safety Construction Certificate.

(iii) Cargo Ship Safety Equipment Certificate.

(iv) Cargo Ship Safety Radiotelephony Certificate.

(v) Cargo Ship Radiotelegraphy Certificate.

(vi) Exemption Certificate.

(vii) Nuclear Passenger Ship Safety Certificate.

(viii) Nuclear Cargo Ship Safety Certificate.

(2) The U.S. Coast Guard will issue through the Officer in Charge, Marine Inspection, the following certificates after performing an inspection of the vessel and determining the vessel meets applicable requirements:

(i) Passenger Ship Safety Certificate.

(ii) Cargo Ship Safety Construction Certificate except when issued to cargo ships by American Bureau of Shipping at the option of the owner or agent.

(iii) Cargo Ship Safety Equipment Certificate.

(iv) Exemption Certificate.

(v) Nuclear Passenger Ship Safety Certificate.

(vi) Nuclear Cargo Ship Safety Certificate.

(3) When authorized by the Commandant, U.S. Coast Guard, the American Bureau of Shipping may issue to cargo and tankships which it classes the Cargo Ship Safety Construction Certificate.

(4) The Federal Communications Commission will issue the following certificates:

(i) Cargo Ship Safety Radiotelephony Certificate.

(ii) Cargo Ship Radiotelegraphy Certificate.

(iii) Exemption Certificate.

(b) *Applications.* (1) The application for inspection and issuance of a cer-

tificate or certificates is made on the appropriate form listed in § 2.01–1, or by letter, to the Officer in Charge, Marine Inspection, in or nearest the port at which the inspection is to be made and shall be signed by the master or agent of the vessel. The certificates previously issued are surrendered at the time the inspection is performed. Further details are set forth in Subchapter H (Passenger Vessels), Subchapter T (Small Passenger Vessels), Subchapter D (Tank Vessels) and Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(2) The application for the inspection of a vessel other than a passenger vessel concerning the issuance of a Cargo Ship Safety Radiotelephony Certificate or a Cargo Ship Safety Radiotelegraphy Certificate is made by formal application on FCC Form 801 to the local office of the Federal Communications Commission.

(c) *Certificates issued.* (1) If a vessel meets the applicable requirements of the Convention, it shall be issued appropriate certificates listed in paragraph (a) of this section. These certificates describe the vessel and state the vessel is in compliance with the applicable requirements of the Convention.

(2) A Convention certificate may be withdrawn, revoked or suspended at any time when it is determined the vessel is no longer in compliance with applicable requirements. (See § 2.01–70 for appeal procedures.)

(d) *CG–969—Notice of Receipt of Application for Passenger Ship Safety Certificate.* (1) The Passenger Ship Safety Certificate is issued by the Commandant after determining all applicable requirements of the Convention have been met. In the event the completion of the certification of any passenger vessel cannot be effected prior to the sailing of the passenger ship on a foreign voyage, or in any case where the Passenger Ship Safety Certificate is not received from the Commandant before the ship sails on a foreign voyage, the Officer in Charge, Marine Inspection, will issue a completed Form CG–969, describing the passenger ship and certifying that an application for a Passenger Ship Safety Certificate is being processed, and that in his opinion the vessel meets applicable requirements of the Convention administered by the Coast Guard.

(2) The completed Form CG–969 may be exhibited in explanation of the failure of the passenger ship to have on board a current Passenger Ship Safety Certificate. This completed Form CG–969 may be accepted as prima facie evidence that the passenger ship described therein is in compliance with the applicable requirements of the Convention.

(e) *Exempted vessel.* (1) A vessel may be exempted by the Commandant from complying with certain requirements of the Convention under his administration upon request made in writing to him and transmitted via the Officer in Charge, Marine Inspection. In such case the exemptions are stated in the Exemption Certificate, which is issued by the Commandant through the appropriate Officer in Charge, Marine Inspection.

(2) The Exemption Certificate which modifies the Cargo Ship Safety Radiotelephony Certificate or the Cargo Ship Safety Radiotelegraphy Certificate is issued by the Federal Communications Commission.

(f) *Posting certificates.* The Convention certificates issued to a vessel shall be posted in a prominent and accessible place on the vessel in a manner similar to that for certificates of inspection.

(g) *Foreign flag vessels.* At the request of the government of a country in which is registered a vessel engaged in an international voyage, such a vessel may be issued the applicable certificate or certificates listed in paragraph (a) of this section. The certificate will be issued only after inspection has been made by the issuing agency, providing the vessel is found to comply with the requirements of the Convention.

§ 2.01–40 Passengers or persons in addition to crew on cargo or tank vessels.

(a) Under authority of 46 U.S.C. 882 a cargo vessel or a tank vessel documented under the laws of the United States and subject to inspection under applicable regulations in Subchapter D (Tank Vessels) or Subchapter I (Cargo and Miscellaneous Vessels) of this chapter may be allowed by its certificate of inspection to carry not to exceed 16 persons in addition to the crew: *Provided,* That such vessel subject to the applicable provisions of the effective International Convention for Safety of Life at Sea may carry not to exceed 12 persons in addition to the crew.

(b) The application for permission to carry persons in addition to the crew may be included in the application described in § 2.01–1. If granted it is endorsed on the certificate of inspection.

§ 2.01–45 Excursion permit.

(a) Under authority of 46 U.S.C. 453 a passenger vessel may be permitted to engage in excursions and carry additional numbers of passengers. For details see Part 71 of Subchapter H (Passenger Vessels) of this chapter.

(b) The application for an excursion permit is made by the master, owner, or agent of the vessel to the Officer in Charge, Marine Inspection, on Coast Guard Form CG–950, Application for Excursion Permit. If, after inspection, permission is granted, it is given on Coast Guard Form CG–949, Permission to Carry Excursion Party. The permit describes the vessel, the route over which and the period during which the excursions may be made, and the safety equipment required for the additional persons indicated.

§ 2.01–50 Persons other than crew on towing, oyster, or fishing steam vessels.

(a) Under authority of 46 U.S.C. 458 a steam vessel engaged in towing, oyster dredging and planting, and fishing may be permitted to carry persons in addition to its crew.

(b) The application for a permit to carry such persons may be included in the application described in § 2.01–1. If granted it is endorsed on the certificate of inspection.

§ 2.01–60 Overtime compensation.

(a) *General.* Extra compensation for overtime services performed by inspectors of vessels and their assistants, shipping commissioners and their deputies and assistants who may be required to remain on duty between the hours of 5:00 p. m. and 8:00 a. m. or on Sundays or holidays to perform services in connection with the inspection of vessels or their equipment, supplying or signing on or discharging crews of vessels is authorized by 46 U. S. C. 382b and regulations in Part 143 of this chapter, together with the method of computing such extra compensation.

(b) *Application and certification of time.* Application for the performance of such overtime services and certification of services performed is made by the master, owner, or agent of a vessel to the Officer in Charge, Marine Inspection, on Form CG–830, Application for and Certificate of Overtime Service.

(c) *Collection.* The bill for the collection of the overtime compensation is submitted by the Officer in Charge, Marine Inspection to the master, owner, or agent on whose vessel overtime services are performed on Form CG–832, Bill for Collection Overtime Services. Payment is made to the Collector of Customs of the port designated.

§ 2.01–70 Appeals.

(a) *General.* Any person aggrieved by any decision or action of the Officer in Charge, Marine Inspection, may appeal therefrom to the Coast Guard District Commander of the district in which the action or decision was made. A further appeal may be made to the Commandant, U.S. Coast Guard, from the decision of the District Commander.

(b) *Time limits.* (1) Appeals from decisions of the inspectors or the Officer in Charge, Marine Inspection, to the Coast Guard District Commander, shall be made in writing within 30 days after the decisions or actions appealed from shall have been rendered or taken. Such appeals shall set forth the requirements appealed from and the reasons why the decision or action should be set aside or revised.

(2) Appeals from the decisions of the Coast Guard District Commander to the Commandant shall be made in writing within 30 days after the decisions appealed from shall have been rendered.

(c) *Decision on appeals.* Pending the determination of the appeal, the decision of the Officer in Charge, Marine Inspection, shall remain in effect. The decision of the Commandant is final.

(R.S. 4417, as amended, 4463, as amended, secs. 1, 2, 49 Stat. 1544, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675, sec. 8, 75 Stat. 403; 46 U.S.C. 391, 435, 222, 367, 390b, 50 U.S.C. 198, 33 U.S.C. 1007)

§ 2.01–80 Vessel inspections in Alaska.

(a) The waters of southeastern Alaska inside of the general trend of the shore from Cape Spencer, southeasterly to Cape Muzon, and thence easterly to Sitklan Island, shall be considered as

bays, sounds, and lakes other than the Great Lakes, for the purpose of administering the vessel inspection laws and applicable regulations in this chapter.

Subpart 2.20—Reports and Forms

AUTHORITY: The provisions of this Subpart 2.20 interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, 30 F.R. 9671; 3 CFR 1965 Supp., unless otherwise noted.

§ 2.20–1 Forms.

(a) *Posting.* Statutes and regulations require that certain forms be posted on vessels referred to in the statutes and regulations. The titles of the forms indicate the contents of the forms. They may be obtained from any Officer in Charge, Marine Inspection. The Coast Guard forms and the statutes or regulations which require that they be posted are listed in this section.

(b) *CG–809.* This form "Station Bills, Drills, and Reports of Masters" is required by §§ 35.10–5, 78.17–50(f), and 97.15–35(d) of this chapter.

(c) *CG–811.* This placard "Lifesaving Signals and Breeches Buoy Instructions" is required by §§ 35.12–5, 78.53–5, 97.43–5, and 167.65–50 of this chapter.

(d) *CG–3256.* This form "Atomic Attack Instructions for Merchant Vessels in Port" is required by 33 CFR 122.10.

(e) *CG–807.* This form "Pilot Rules for the Great Lakes and Their Connecting and Tributary Waters" is required by 33 U.S.C. 243 and 33 CFR 90.15.

§ 2.20–5 Rules of the Road pamphlets.

(a) *Required to be carried aboard.* Statutes and regulations require that current editions of applicable Coast Guard pamphlets containing Rules of the Road shall, where practicable, be carried on board and maintained for ready reference on all vessels and craft over 65 feet in length while navigating within the certain waters as described in law or regulation. The titles indicate the waters on which generally applicable. These pamphlets may be obtained from any Marine Inspection Office. The Coast Guard pamphlet identification numbers and the statutes or regulations which require that they be carried on board certain vessels or craft over 65 feet in length are described in succeeding paragraphs in this section.

(b) *CG–169.* This pamphlet "Rules of the Road—International—Inland" is required by 33 U.S.C. 157 and 33 CFR 80.13(b) to be carried and available for ready reference, where practicable, on vessels navigating the harbors, rivers, and inland waters of the United States except the Great Lakes and their connecting and tributary waters as far east as Montreal, the Red River of the North, the Mississippi River and its tributaries above Huey P. Long Bridge, and that part of the Atchafalaya River above its junction with the Plaquemine-Morgan City alternate waterway.

(c) *CG–172.* Two copies of this pamphlet "Rules of the Road—Great Lakes" are required by 33 CFR 90.15(b) to be kept on board vessels navigating the Great Lakes and their connecting and tributary waters.

(d) *CG–184.* This pamphlet "Rules of the Road—Western Rivers" is required by 33 U.S.C. 353 and 33 CFR 95.23 to be carried and available for ready reference, where practicable, on vessels navigating the Red River of the North, the Mississippi River and its tributaries above Huey P. Long Bridge, and that part of the Atchafalaya River above its junction with the Plaquemine-Morgan City alternate waterway.

§ 2.20–40 Chief engineer's reports.

(a) Repairs to boilers and pressure vessels. The chief engineer is required to report any repairs to boilers or unfired pressure vessels in accordance with §§ 33.25–5, 78.33–1, and 97.30–1 of this chapter.

(b) The chief engineer of any vessel is required to report any accident to a boiler, unfired pressure vessel, or machinery tending to render the further use of the item unsafe until repairs are made by §§ 35.25–5, 78.33–5, and 97.30–5 of this chapter.

(c) The Chief Engineer shall report the renewal of fusible plugs in boilers by letter to the Officer in Charge, Marine Inspection, who issued the certificate of inspection when such fusible plugs are renewed at other than the inspection for certification and there is no marine inspector in attendance at the renewal. See §§ 52.70–40(j)(2) and 67.50–20(c)(2) of this chapter for the content of the letter.

§ 2.20–50 Repairs or alterations in lifesaving or fire prevention equipment.

No repairs or alterations shall be made to any lifesaving or fire-detecting or fire-extinguishing equipment except in an emergency without advance notice to the Officer in Charge, Marine Inspection. See §§ 33.01–20, 34.01–5, 78.33–10, and 97.30–10 of this chapter.

§ 2.20–60 Reports of casualties and accidents.

(a) *General.* Reports of casualties or accidents occurring on or to vessels are required by Title 33, U.S. Code, section 361, or Title 46, U.S. Code, subsection 526*l*(c), and the regulations supplementary thereto in Subparts 35.15, 78.07, 97.07, and 136.05, and § 167.65–65 of this chapter, precedent to an investigation under Title 46, U.S. Code, section 239. A written notice is required from the master, owner, agent, or operator of a vessel to the Officer in Charge, Marine Inspection, at or nearest the port where the casualty or accident occurred as soon as possible after the casualty or accident. A report is required whenever any vessel is involved in a casualty or accident involving loss of life, material loss of property, serious injury to any person, damage affecting the seaworthiness or efficiency of a vessel, stranding or grounding. Whenever a vessel collides with an aid to navigation the officer in charge shall report such collision to the nearest Officer in Charge, Marine Inspection; however, no report on Form CG–2692 is required unless it is a reportable marine casualty for other reasons.

(b) *Personal accidents.* The officer in charge of a vessel reports personal accidents on Form CG–924E (Report of Personal Injury or Loss of Life) whenever there is a loss of life on board a vessel or an accident occurs to passengers, members of the crew, and other persons who may be injured on board a vessel and incapacitated for a period in excess of 72 hours. This Form CG–924E should not be submitted if the accident involves a vessel numbered under the Federal Boating Act of 1958 when the Form CG–3865 (Boating Accident Report) should be submitted. If filed without delay, the Form CG–924E may also provide the notice required by other regulations in this chapter.

(c) *Vessel casualties.* The officer in charge of a vessel reports on Form CG–2692 (Report of Vessel Casualty or Accident) when accidents or casualties involve damage affecting seaworthiness of a vessel, stranding or grounding, or material property damage in excess of $1,500. This Form CG–2692 should not be submitted if the accident involves a vessel numbered under the Federal Boating Act of 1958 when the Form CG–3865 (Boating Accident Report) should be submitted. If filed without delay, the Form CG–2692 may also provide the notice required by other regulations in this chapter. If a vessel casualty occurs which involves loss of life, the officer in charge of a vessel shall submit with complete Form CG–2692 a separate completed Form CG–924E for each person killed or injured.

(d) *Information required.* The written notice, as well as the reports, require a description of the vessel or vessels involved, names of owner and master, location, nature and probable cause of casualty or accident, the nature and extent of injury to persons, and the damage to property. The Forms CG–924E and CG–2692 may be obtained from any local marine inspection office.

(e) *Casualty involving aids to navigation.* The officer in charge of a vessel which collides with a lightship, buoy, or other aid to navigation under the jurisdiction of the Coast Guard, or is connected with any such collision is required to report the casualty or accident to the nearest Officer in Charge, Marine Inspection. See §§ 35.15–1, 78.07–20, 97.07–20, and 136.05–20 of this chapter.

(R.S. 4450, as amended, secs. 13, 17, 54 Stat. 166, as amended, sec. 10, 18 Stat. 128, as amended; 46 U.S.C. 239, 526*l*(c), 526p, 33 U.S.C. 361)

CROSS REFERENCE: For investigations or hearings on marine casualties see Parts 4, 136, and 137 of this chapter.

Subpart 2.45—Waivers of Navigation and Vessel Inspection Laws

AUTHORITY: The provisions of this Subpart 2.45 issued under secs. 1, 2, 64 Stat. 1120; 46 U.S.C., note preceding section 1. Treasury Department Order CGFR 51–1, Jan. 23, 1951, 16 F.R. 731.

§ 2.45–1 Authority for and limitations on issuance.

Compliance with certain of the navigation and vessel inspection laws may be waived by the Commandant under authority of the act of December 27, 1950 (Public Law 50–891, secs. 1, 2, 64 Stat. 1120; 46 U.S.C., note preceding section 1), and the delegation of waiver authority contained in Department of the Treasury Order CGFR 51–1, dated January 23, 1951 (16 F.R. 731), in any case where such waiver is deemed necessary in the interest of national defense.

§ 2.45–5 Policy.

(a) It is the policy of the Coast Guard, in the current administration of the laws and regulations relating to navigation and vessel inspection, to further the interests of national defense by simplifying the procedure involved therein, eliminating all causes of delay in the sailing of vessels, and by bringing about a proper balance between the factors of safety at sea and the national defense. While it is not the policy of the Coast Guard to countenance willful violations of the laws and regulations or negligence in meeting the requirements thereof, neither is it contemplated that masters who exercise all reasonable efforts to comply with the requirements in effect be cited for violations on technical grounds.

§ 2.45–10 Waivers issued.

(a) The waivers having general applicability are published in Part 154 of this chapter, as well as in 33 CFR Part 19.

§ 2.45–15 Specific individual waivers.

(a) Applications for waivers affecting only one vessel in any one order under the provisions of § 154.01 of this chapter are made on Form CG–2633, Application for Waiver Order. The application shall state the name of the vessel, her employment, the requirements of law or regulations, waiver of which is requested, the reasons why waiver is necessary, and shall be signed by the master, owner, or agent of the vessel, or by the representative of any interested Government agency. The application shall be made to the Coast Guard District Commander or to his designated representative at the port or place where the vessel is located. In any port or place of the Canal Zone or in any foreign port or place the application shall be made to the designated representative of the Commandant at such port or place or if the Coast Guard has not established facilities in such port or place to the nearest designated representative of the Commandant at a port or place where such facilities have been established.

(b) If the request is granted, the waiver order will describe the vessel, the requirements of law or regulations waived, the conditions to which the waiver is subject, and the period of time for which the waiver is effective.

§ 2.45–20 General waivers.

(a) Applications for waivers having general applicability should be addressed to the Commandant (M), U.S. Coast Guard, Washington, D.C., 20226.

(b) Only the Commandant is authorized to issue general waivers which affect more than one vessel in one order.

Subpart 2.50—Assessment, Mitigation or Remission of Penalties

AUTHORITY: The provisions of this Subpart 2.50 interpret or apply R.S. 5294, as amended, sec. 26, 23 Stat. 59, as amended; 46 U.S.C. 7, 8.

§ 2.50–1 Delegation of authority.

(a) By virtue of the authority vested in the Secretary of the Treasury by Reorganization Plan No. 26 of 1950 (15 F.R. 4935), and by 14 U.S.C. 631, the Secretary transferred to the Commandant, U.S. Coast Guard, the functions vested in him under the navigation and vessel inspection statutes and amendments thereto (see § 2.50–40), by Treasury Department Order 120, dated July 31, 1950 (15 F.R. 6521), and subsequent Orders 167–14, dated November 26, 1954 (19 F.R. 8026), 167–20, dated June 18, 1956 (21 F.R. 4894), CGFR 56–28, dated July 24, 1956 (21 F.R. 5659), 167–32, dated September 23, 1958 (23 F.R. 7605), 167–33, dated September 23, 1958 (23 F.R. 7592), 167–38, dated October 26, 1959 (24 F.R. 8857), 167–44, dated October 18, 1960 (25 F.R. 10106), 167–45, dated June 16, 1961 (26 F.R. 5585), 167–46, dated November 6, 1961 (26 F.R. 10609), 167–48, dated October 19, 1962 (27 F.R. 10504), 167–58, dated January 29, 1964 (29 F.R. 2314), 167–64, dated December 7, 1964 (29 F.R. 17123), and 167–66, dated September 8, 1965 (30 F.R. 11735).

(b) Pursuant to granted authority from the Secretary, the Commandant may make provision for the performance of assigned functions by subordinates in the Coast Guard. Accordingly, the Commandant hereby authorizes each District Commander in his assigned district to administer certain statutes in accordance with procedures set forth in this subpart. The District Commander may further delegate such authority as he deems proper, not inconsistent with the provisions of this subpart, to his Chief of Staff, Chief, Merchant Marine Safety Division, or Chief, Operations Division, or any or all of them.

§ 2.50–5 Statutes providing for assessment, mitigation or remission of civil penalties.

(a) The general statutes authorizing the Coast Guard to assess, mitigate or remit civil penalties are sections 7 and 8 of Title 46, U.S. Code.

(b) Certain other specific statutes contain authority to assess, mitigate or remit civil penalties. (For examples, see sections 85g, 88g, 369, 457, 526p, and 527e of Title 46, U.S. Code.)

§ 2.50–10 Reports of violations of laws or regulations and instituting civil penalty proceedings generally.

(a)(1) Violations of the navigation and vessel inspection laws and regulations applicable thereto, more fully described in § 2.50–40, administered and enforced by the Coast Guard, are reported by Coast Guard personnel detecting them to the District Commander of the district in which the violations occurred. When practicable, the alleged offender shall be informed of the nature of the apparent violation at the time it is detected by any Coast Guard officer. In all other instances, he shall be so informed upon the completion of any proceeding or investigation which indicates that a violation has occurred. An appropriate form prescribed by the Commandant or a letter will be used to notify the alleged offender of the nature of the violation and to advise him relative to the administrative procedure employed in conducting civil penalty cases. The notification shall advise the alleged offender to reply within 15 days or such longer period as the District Commander may in his discretion allow in order that his statement may be considered by the District Commander. The District Commander is hereby authorized to determine whether there has been a violation of any of the pertinent laws or regulations. In the event of a violation for which a criminal sanction is not deemed to be appropriate, the District Commander shall determine whether to invoke the statutory civil penalty. He may thereafter mitigate or remit an assessed civil penalty upon receipt from the offender of a petition for relief therefrom. If after consideration of the petition for relief, the District Commander decides that no violation occurred, or that the person cited did not commit the violation, the penalty case shall be closed and that person notified of that action. Where no such petition is received, or where an offense has been established and the offender denies that he committed the violation, the District Commander shall take no mitigation or remission action but shall demand payment of the full penalty. Where demand for payment of the penalty is made and the penalty amount is not paid, the District Commander shall refer the case to the United States Attorney for collection. The civil penalty procedure is more fully described in § 2.50–20.

(2) If a report of boarding or an investigation report submitted by a Coast Guard officer or investigative body discloses evidence of violation of a Federal criminal statute, the District Commander in accordance with § 2.50–25 shall refer the findings to the United States Attorney for appropriate action.

(b) (1) The District Commander may by specific order in writing delegate to his Chief of Staff, Chief, Merchant Marine Safety Division, and/or Chief, Operations Division, the authority to determine whether to invoke the statutory civil penalty and, upon receipt from the offender of a petition for relief from a penalty so invoked, whether to mitigate or to remit the penalty, as he may deem proper. The order shall prescribe the types of cases which the designated officer may initiate and process to the same extent permitted the District Commander by this subpart, and those types of cases which that officer may initiate and process to a lesser extent. With respect to the latter category of cases, the District Commander's order shall set forth in detail the limits of the authority delegated to the designated officer.

(2) The term "District Commander", as hereinafter used in this subpart to designate the officer authorized to assess, mitigate or remit penalties, shall also include the terms "Chief of Staff" or "Chief, Merchant Marine Safety Division," or "Chief, Operations Division," as appropriate, if such officer has been delegated authority to perform such functions.

§ 2.50–15 Transfer of civil penalty cases from one District Commander to another.

(a) Ordinarily the District Commander having jurisdiction over the situs of a violation of the navigation or vessel inspection laws will initiate civil penalty proceedings. Having assumed jurisdiction in a given case by initiating an investigation or other proceedings to determine fault, the District Commander may transfer that jurisdiction to another District Commander where convenience or necessity requires: *Provided*, That the rights of the alleged offender are not prejudiced thereby.

(b) The District Commander transferring jurisdiction will forward all records applicable to the case direct to the District Commander assuming jurisdiction.

§ 2.50–20 Civil penalties.

(a) (1) Violations of Title 46, U.S. Code, sections 526 to 526u (Motorboat Act of April 25, 1940, as amended), or Title 46, U.S. Code, sections 527 to 527h (Federal Boating Act of 1958), or implementing regulations in this chapter prescribed under these laws, when observed by Coast Guard law enforcement officers, will be brought to the attention of the alleged offender upon the issuance of Form CG–4100, "Report of Boarding and Notice of Violation."

(2) Violations of other navigation and vessel inspection laws, or regulations prescribed thereunder in this chapter or in 33 CFR Chapter I, will be brought to the attention of the alleged offender by appropriate form prescribed by the Commandant or by letter.

(b) If it is decided that a violation of a navigation or a vessel inspection law has occurred, a determination will be made whether to invoke no penalty at all and close the case, or whether to invoke the full statutory penalty. In the latter event, notice of the decision shall be given to the offender by appropriate form prescribed by the Commandant or by letter. The offender may thereupon petition for relief and the District Commander or his delegatee may mitigate the penalty or remit it in full, except as the latter action is limited by paragraph (f) of this section. When no penalty is invoked or the penalty is remitted, no further action by the offender will be necessary. When the penalty is mitigated, such mitigation will be made conditional upon payment within 15 days of the notice, or within such other longer period of time as the District Commander, in his discretion, may allow.

(c) If a statutory civil penalty for any violation of law or regulation is invoked by the District Commander or his delegatee, the offender will be informed of his right to apply for relief within 15 days, or such longer period as the District Commander, in his discretion, may allow. The offender may, if he desires, appear in person before the District Commander or his designated representative. If the offender does not apply for relief but instead maintains that he is innocent of the violation(s) charged, and the District Commander, upon review, concludes that invocation of the penalty was proper and the offender persists in his position, no remission or mitigation action will be taken. On the other hand, should the offender submit his case to the District Commander on a *nolo contendere* basis, that is, by neither admitting nor denying his innocence, relief may be granted as the circumstances may warrant.

(d) (1) Upon notification to the offender of the decision of the District Commander, or his delegatee, the offender will be given instructions for making an appeal to the Commandant from the actions of the District Commander. Any such appeal shall be submitted to the Commandant through the District Commander within 15 days of the date of notification by the District Commander, or such longer period of time as the District Commander, in his discretion, may allow.

(2) In the event that there is an appeal from the decision of the Chief of Staff, the Chief, Merchant Marine Safety Division, or the Chief, Operations Division, acting under delegated authority, the District Commander shall review the case. Should the District Commander determine that the assessment of the penalty was not warranted, the case shall be closed and notification thereof given to the appellant. Those cases which, upon review by the District Commander, are determined to be properly instituted and administered in accordance with the regulations in this subpart and for which remission of the penalty is not considered justified shall be forwarded to the Commandant with the District Commander's recommendation.

(e) Should the alleged offender require additional time to present matters favorable to his case at any stage of these penalty proceedings, a request for additional time shall be addressed to the District Commander who may grant a reasonable extension of time where proper justification is shown.

(f) Under the following circumstances the District Commander shall forward cases involving violations of the navigation and vessel inspection laws to the United States Attorney with the recommendation that action be taken to collect the full statutory penalty:

(1) When, within the prescribed time, the offender does not explain the violation, appeal for mitigation or remission, or otherwise respond to letters or form inquiries from the District Commander; or,

(2) When, having responded to such inquiries, the offender fails or refuses to pay the statutory or mitigated penalty, or to appeal to the Commandant, within the time prescribed; or,

(3) When the offender denies that the violation(s) was committed by him, the District Commander, upon review, disagrees and the offender thereafter fails to respond to the demand, appeal to the Commandant, or to remit payment of the full penalty within the time prescribed (see § 2.50–10(a)(1)); or,

(4) When the offender fails to pay within the prescribed time the penalty as determined by the Commandant after consideration of the offender's appeal from the action of the District Commander.

§ 2.50–25 Criminal penalties.

(a) Prosecution in the Federal courts for violations of those laws or regulations enforced by the Coast Guard which provide, upon conviction, for punishment by fine or imprisonment is a matter finally determined by the Department of Justice. This final determination consists of deciding whether and under what conditions to prosecute or to abandon prosecution.

(b) Except in those cases where the approval of the Commandant is required, the District Commander is hereby authorized to determine whether or not a violation of a statute carrying a criminal penalty is one which would justify referral of the case to the United States Attorney. The Commandant's approval is required in the following cases where evidence of a criminal offense is disclosed:

(1) Marine casualties or motorboat accidents resulting in death.

(2) Marine Boards (Part 136 of this chapter).

(3) Violations of port security regulations (33 CFR Parts 6, 121 to 126, inclusive).

(c) The District Commander will identify the laws or regulations which were violated and make specific recommendations concerning the proceedings to be instituted by the United States Attorney in every case.

(d) Referral of a case to the United States Attorney for prosecution terminates the Coast Guard's authority with respect to the criminal aspects of a violation.

§ 2.50–30 Civil and criminal penalties.

(a) If a violation of law or regulation carries both a civil and a criminal penalty, the District Commander is hereby authorized to determine whether to initiate civil penalty proceedings, in which case the procedure outlined in § 2.50–20 will be followed, or whether to refer the case to the United States Attorney for prosecution in accordance with § 2.50–25, which outlines the appropriate procedure for handling criminal cases.

(b) When the United States Attorney declines to institute criminal proceedings, the District Commander shall decide whether to initiate civil penalty proceedings or to close the case, whereupon the alleged violator shall be notified regarding that decision.

§ 2.50–35 Procedure for payment of civil penalty for violation of law or regulation.

(a) The payment must be by postal money order or check payable to the order of the U.S. Coast Guard when mailed to the District Commander, attention of the Collection Clerk. If the payment is made in person at the Office of the District Commander, the payment may be in cash or by postal money order or check payable to the order of the U.S. Coast Guard.

(b) The payment of any penalty is acknowledged on Coast Guard Form CG–2688 (Collection Receipt).

(c) If the penalty paid is determined by the Commandant to have been improperly or excessively imposed, and the money has already been covered into the United States Treasury, the payor will be notified and requested to submit an application for a refund on Form CG–1086, "Claim for Navigation Fine Exacted in Excess or in Error," which should be mailed to the appropriate District Commander for transmission to the Commandant. Such application must be made by the payor within one year of the date of payment of the penalty. If the penalty paid is determined by the Commandant to have been improperly or excessively imposed and the money has not been covered into the United States Treasury, the Coast Guard will notify the payor and upon application will refund the penalty or that portion considered to be in excess of the proper amount.

§ 2.50–40 Specific types of violations reported.

(a) *General.* The procedures in this subpart apply to detected violations of navigation and vessel inspection statutes and the regulations issued pursuant thereto which provide for the imposition of civil penalties. These procedures do not apply to penalties set forth in Title 14, U.S. Code.

(b) *Inspection laws.* The vessel inspection laws in Title 46, U.S. Code, and implementing regulations in this chapter (unless otherwise provided in specific statutes) which invoke civil penalties for violations of those laws and regulations are set forth in sections 497 and 498 of Title 46, U.S. Code.

(c) *Numbering of undocumented vessels.* The penalty for violations of the Federal Boating Act and implementing regulations in Parts 170–173 of this chapter is in section 527e of Title 46, U.S. Code.

(d) *Motorboats.* The penalties for violations of the Act of April 25, 1940, as amended (46 U.S.C. 526–526u) and the implementing regulations in subchapter C of this chapter are in section 526o of Title 46, U.S. Code.

(e) *Marine regattas or parades.* The penalty for violating the act of April 28, 1908, as amended, and applicable regulations in 33 CFR Part 100 is in section 457 of Title 46, U.S. Code.

(f) *Reckless or negligent operation.* The civil penalty for violating the reckless and negligent operation provisions of the act of April 25, 1940 (46 U.S.C. 526*l*(a)) and the regulations in this chapter (Part 26) is applicable to the operation of all vessels and is in section 526o of Title 46, U.S. Code.

(g) *Rules of the road.* The penalties for violating applicable rules of the road and implementing regulations in 33 CFR Parts 80 to 96, inclusive, are in sections 158, 159, 244, 354, and 355 of Title 33, U.S. Code.

(h) *Load lines.* The penalties for violations of the Load Line Acts and the implementing regulations in parts 43 to 46 of this chapter are in sections 85g and 88g of Title 46, U.S. Code.

(i) *Great Lakes pilotage.* The civil penalty for violations of the Great Lakes Pilotage Act of 1960 is in section 216e of Title 46, U.S. Code.

(j) *Manning or employment of seamen.* The laws governing shipping of seamen or manning of certain vessels in Title 46, U.S. Code, and implementing regulations in this chapter in specific statutes invoke civil penalties for certain violations of those laws and regulations. (For example, see sections 562, 567, 568, 571, 575, 623, 641, 642, 643, and 672 of Title 46, U.S. Code.)

(k) *Dangerous Cargo Act and regulations.* The penalties for violations of the Dangerous Cargo Act and the implementing regulations in Parts 146 and 147 of this chapter are in subsection (14) of section 170 of Title 46, U.S. Code.

Subpart 2.75—Approvals of Safety Equipment, Materials and Installations, and Qualifications for Construction Personnel

AUTHORITY: The provisions of this Subpart 2.75 interpret or apply R.S. 4488, as amended, 4491, as amended, secs. 1, 2, 49 Stat. 1544, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 4(e), 67 Stat. 462, sec. 3, 68 Stat. 675, sec. 8, 75 Stat. 403; 46 U.S.C. 481, 489, 367, 526p, 1333, 390b, 43 U.S.C. 1333(e), 50 U.S.C. 198, 33 U.S.C. 1007. Treasury Department Orders 167–14, November 26, 1954, 19 F.R. 8026; 167–15, January 3, 1955, 20 F.R. 840; 167–20, June 18, 1956, 21 F.R. 4894; CGFR 56–28, July 24, 1956, 21 F.R. 5659; 167–38, October 26, 1959, 24 F.R. 8857; 167–46, November 6, 1961, 26 F.R. 10609. Additional authority is cited in parentheses following the sections affected.

§ 2.75–1 Approvals.

(a) Certain navigation and vessel inspection laws, or regulations in this chapter or in 33 CFR Chapter I, require the Commandant's approval before specific types of safety equipment, materials, or installations may be installed or used on vessels subject to Coast Guard inspection, or on other described vessels, motorboats, artificial islands, and fixed structures.

(b) The Commandant's approvals are issued to persons, partnerships, companies, or corporations who offer for sale specific items of safety equipment, materials, or installations, or intend them for their own or others' use. These approvals are intended to provide a control over the quality of such approved items. The Commandant's approvals apply only to those items constructed or installed in accordance with applicable requirements, and the details as described in the documents granting specific approval. If a specific item when manufactured does not comply with these details, then it is not considered to be approved and the approval issued does not apply to such modified item. For example, if an item is manufactured with changes in design or material not previously approved, the approval does not apply to such modified item. The failure to comply with applicable requirements and details specified in the approval subjects the holder to immediate suspension of approval as described in § 2.75–40, and if necessary, to a public hearing seeking withdrawal of approval and removal of all such items from use or installation as provided in § 2.75–50.

(c) The Commandant's approvals are issued to qualified holders in the form of certificates of approval (Form CGHQ–10030), by appropriate description and identification in documents filed with the Office of the Federal Register and published in the FEDERAL REGISTER, or by letters, or by appropriate markings on drawings, plans, etc. Under the direction of the Commandant and the Chief, Office Merchant Marine Safety, the Chief, Merchant Marine Technical Division, is hereby delegated the authority to exercise the necessary actions relating to the granting, suspension, cancellation or revocation of approvals for specific items of safety equipment, materials, or installations required by law or regulation in this Chapter or in 33 CFR Chapter I to have the Commandant's approval. The authority hereby delegated to the Chief, Merchant Marine Technical Division, may be further delegated by him in the case of suspensions.

(d) The approvals granted to holders qualifying under the regulations in this chapter or in specifications, copies of which may be obtained from the Commandant (MMT), and to which official Coast Guard numbers are assigned, will be in the form of certificates of approval. Unless specifically provided otherwise, the approval shall be valid for a period of five years from the date on the certificate of approval, but subject to suspension and/or cancellation if it is found the item offered, sold, or used as Coast Guard approved differs in any detail from the item as described in the certificate of approval and referenced material.

(e) A specific Commandant's approval granted to anyone, which is described in a certificate of approval, or a letter, or marked plans, etc., cannot be transferred to another without a specific prior authorization from the Commandant. Such a transfer without the Commandant's authorization normally terminates such approval.

(f) From time to time, appropriate notices of actions taken regarding approvals will be published in the FEDERAL REGISTER. For the information of users of approved items, a listing by names of holders of current approvals by specific items is published in a Coast Guard pamphlet CG–190, Equipment Lists.

§ 2.75–5 Certificates of approval.

(a) The Chief, Merchant Marine Technical Division, will issue a certificate of approval to the manufacturer or party

named therein and certify that such manufacturer or party has submitted satisfactory evidence that the item described therein complies with the applicable laws and regulations, which are outlined on the reverse side of the certificate.

(b) The approval shall be in effect for a period of five years from the date on the certificate of approval unless sooner canceled or suspended by proper authority, or otherwise specifically stated in the certificate.

§ 2.75–10 Procedures for obtaining approvals.

(a) The procedural requirements for obtaining approvals of items covered by specifications and bearing official Coast Guard approval numbers are set forth in Parts 160 to 164, inclusive, of this chapter. For other items the procedural requirements are usually those described in the regulations governing such items.

(b) Applications for approvals are usually in letter form and should be addressed to the Commandant (MMT), United States Coast Guard, Washington, D.C., 20226. Correspondence pertaining to a particular item required to be approved should be mailed to the Commander of the Coast Guard district in which the manufacturer's plant or factory is located. When plans, drawings, test data, etc., are required to be submitted by the manufacturer, it is desired that the application identify the material being transmitted with the application.

§ 2.75–15 Requirements and tests.

(a) Approved items described in certificates of approval are usually required to meet specific requirements and/or tests, prior to obtaining the approval. Additional factory tests to determine that proper uniformity and quality controls are followed during the manufacture of the specific items may be required. These requirements governing the manufacturer in particular are set forth in the regulations in this chapter or in specifications, copies of which may be obtained from the Commandant (MMT). If the requirements are met, a certificate of approval will be issued.

(b) When the specific item described in an application, together with accompanying drawings, plans, etc., does not meet applicable requirements or fails to meet specified tests, the applicant will be notified accordingly. The Coast Guard may suggest changes in order for the item to qualify and permit the issuance of an approval.

(c) For items not covered by specification requirements in Parts 160 to 164, inclusive (Subchapter Q—Specifications) of this chapter, the requirements in the navigation and vessel inspection laws, and applicable regulations in this chapter or in 33 CFR Chapter I apply and shall be met before approvals may be issued.

§ 2.75–20 Affidavits or certifications.

(a) In the manufacture of certain items of equipment, appliances, etc., or in their installation, affidavits or certifications are required to be submitted to the Coast Guard stating that materials and/or construction used with respect thereto will comply with the applicable navigation and vessel inspection laws and regulations in this chapter or in 33 CFR Chapter I.

(b) For requirements regarding marine engineering materials or appliances, see Subpart 61.45 of Subchapter F (Marine Engineering) of this chapter.

§ 2.75–25 Portable fire extinguishers.

(a) The portable fire extinguishers listed and labeled as "marine type" by a recognized laboratory, as provided in Subpart 162.028 of Part 162 of Subchapter Q (Specifications) of this chapter, will be accepted as approved for use on merchant vessels, motorboats, etc., whenever required by the regulations in this chapter, and for use on artificial islands and fixed structures on the Outer Continental Shelf whenever required by the regulations in 33 CFR Parts 140 to 146, inclusive.

(b) The procedures for manufacturers to follow and the requirements governing portable fire extinguishers to qualify being listed and labeled as "marine type" by a recognized laboratory are set forth in Subpart 162.028 of Part 162 of Subchapter Q (Specifications) of this chapter.

(c) The procedures for a laboratory to qualify as a "recognized laboratory" and to be listed in § 162.028–5 of Subchapter Q (Specifications) of this chapter are as follows:

(1) The laboratory shall submit an informal application in writing on its usual letterhead paper to the Commandant (MMT), United States Coast Guard, Washington, D.C., 20226, requesting recognition and listing, as a recognized laboratory.

(2) Accompanying the informal application, as identified enclosures, shall be:

(i) A certification that it is a laboratory which has been and is regularly engaged in the examination, testing, and evaluation of portable fire extinguishers.

(ii) A certification that it has an established factory inspection, listing, and labeling program, together with a complete description of it and how it works.

(iii) A description of its facilities used in the examination, testing, and evaluation of portable fire extinguishers, together with its name (if different from that of submitter), and location (city, street, and state).

(iv) A list of the names and home and office addresses of its principal officers and its managing directors (if any).

(v) A description of its special standards for listing and labeling portable fire extinguishers as "marine type," as contemplated by the specification in Subpart 162.028 of Part 162 of Subchapter Q (Specifications) of this chapter.

(3) If the Commandant finds that a laboratory qualifies as a "recognized laboratory," and it is subject to Coast Guard jurisdiction, the approval and listing will be published in the FEDERAL REGISTER and will be in effect until suspended, canceled or terminated by proper authority. The failure of a recognized laboratory to maintain its established factory inspection, listing and labeling program as approved by the Commandant shall be cause for terminating a listing as a "recognized laboratory."

(Interpret or apply R.S. 4417a, as amended, 4426, as amended, sec. 1, 2, 49 Stat. 1545, as amended, sec. 8, 54 Stat. 165, as amended; 46 U.S.C. 391a, 404, 526g)

§ 2.75–30 Special purpose water safety buoyant devices.

(a) The special purpose water safety buoyant devices listed and bearing the combination "Laboratory/USCG" labels issued by a recognized laboratory, as provided in Subpart 160.064 of Part 160 of Subchapter Q (Specifications) of this chapter, will be accepted as approved for the designated use on all motorboats and small passenger vessels, and for general use on motorboats of Classes A, 1, or 2 not carrying passengers for hire, whenever so provided by the regulations in this chapter.

(b) The procedures for manufacturers to follow and the requirements governing special purpose water safety buoyant devices to qualify for being listed and labeled with the combination "Laboratory/USCG" labels are set forth in Subpart 160.064 of Part 160 of Subchapter Q (Specifications) of this chapter.

(c) The procedures for a laboratory to qualify as a "recognized laboratory" and to be listed in § 160.064–5 of Subchapter Q (Specifications) of this chapter are as follows:

(1) The laboratory shall submit an informal application in writing on its usual letterhead paper to the Commandant (MMT), United States Coast Guard, Washington, D.C., 20226, requesting recognition and listing as a recognized laboratory.

(2) Accompanying the informal application, as identified enclosures, shall be:

(i) A certification that it has been exempted from federal income tax under section 501(c)(3) of the Internal Revenue Code of 1954 as an organization organized and operated exclusively for testing for public safety.

(ii) A certification that it has an established factory inspection, listing, and labeling program together with a complete description of it and how it works.

(iii) A description of the facilities used in the examination, testing, and evaluation of special purpose water safety buoyant devices, together with the name of the facilities (if different from that of the submitter), and location (city, street, and state).

(iv) A list of names and home and office addresses of its principal officers, and the managing directors (if any).

(v) Copies of its special standards for listing and labeling special purpose water safety buoyant devices using the combination "Laboratory/USCG" label, as contemplated by 46 CFR Subpart 160.064 of Part 160 of Subchapter Q (Specifications) of this chapter.

(3) If the Commandant finds that a laboratory qualifies as a "recognized laboratory", and it is subject to Coast Guard jurisdiction, the approval and list-

ing will be published in the FEDERAL REGISTER and will be in effect until suspended, canceled or terminated by proper authority. The failure of a recognized laboratory to maintain its established factory inspection, listing and labeling program as approved by the Commandant shall be cause for terminating a listing as a "recognized laboratory".

(R.S. 4426, as amended, sec. 6, 54 Stat. 164, as amended; 46 U.S.C. 404, 526e)

§ 2.75–40 Suspension of approval.

(a) Whenever it is determined that a specific item is not in compliance with the applicable laws, rules, and regulations, and the requirements specified in the approval issued by the Coast Guard, the District Commander or the Officer in Charge, Marine Inspection, will immediately notify the holder of the approval wherein the specific item fails to meet applicable requirements. If the defects, deficiencies or variations in the item are deemed important, such officer is authorized and may immediately suspend the approval, may require the holder to surrender the certificate of approval (if any), and may direct the holder to cease claiming the defective items are Coast Guard approved, pending a final decision from the Commandant in the matter.

(b) The procedures for appealing the temporary suspension shall be those described in § 2.01–70.

§ 2.75–50 Withdrawals or terminations of approvals.

(a) Approvals may be withdrawn if items are found not to be in compliance with the conditions of approval or if necessary by reason of changes in regulations. Notice will be given to the manufacturer who is given an opportunity to present his case at a public hearing of the Merchant Marine Council. (See 33 CFR 1.05–1, 1.05–10).

(b) Approvals of equipment are terminated when the manufacturer is no longer in business, or when the item is no longer being manufactured, or when the approval expires.

§ 2.75–60 Certification of ship's stores and supplies.

(a) Ship's stores and supplies of a dangerous nature, as defined in §§ 147.02–1 and 147.02–2 of Subchapter N (Dangerous Cargoes) of this chapter, shall not be used on board vessels, domestic or foreign, on the navigable waters of the United States, including its territories and possessions (see 33 CFR Part 2), unless they have been certified for such use by the Coast Guard.

(b) The procedure for obtaining certification of ship's stores and supplies are in §§ 147.03–1 to 147.03–10, inclusive, of Subchapter N (Dangerous Cargoes) of this chapter.

(c) The ship's stores and supplies of a dangerous nature which do not require a certification are described in §§ 147.03–1 and 147.03–11 of Subchapter N (Dangerous Cargoes) of this chapter.

(R.S. 4472, as amended; 46 U.S.C. 170)

§ 2.75–70 Welders.

(a) Welders are required to pass tests before being permitted to make welds subject to inspection by the Coast Guard. Description of the tests is contained in Part 56 of this chapter.

(R.S. 4417, as amended, 4418, as amended, 4429, as amended; 46 U.S.C. 391a, 392, 407)

Subpart 2.85—Load Lines

§ 2.85–1 Assignment of load lines.

(a) Vessels listed in 46 U.S.C. 85, 88, and 88a are required by those laws to have load lines assigned.

(b) The procedures for the assignment of load lines, the issuance of Load Line Certificates, the annual inspections required, the causes for cancellation of certificates, and the forms of those certificates are contained in Parts 43–45 of Subchapter E (Load Lines) of this chapter.

(Sec. 2, 45 Stat. 1493, as amended, sec. 2, 49 Stat. 888, as amended; 46 U.S.C. 85a, 88a)

Subpart 2.90—Plans, Drawings or Blueprints

§ 2.90–1 General requirements.

(a) Drawings, blueprints or plans showing the details of construction of vessels subject to inspection or installations thereon are required to be submitted for approval in accordance with applicable regulations in this chapter, information as to which may be obtained at any local Marine Inspection Office.

(b) The requirements for passenger vessel construction are in Parts 43–46, 70–78, of this chapter.

(c) The requirements for tank vessel construction are in Parts 30–39, 43–45, of this chapter.

(d) The requirements for cargo and miscellaneous vessel construction are in Parts 43–45, 90–97, of this chapter.

(e) The requirements for marine engineering installations or equipment are in Parts 50–69 of this chapter.

(f) The requirements for electrical engineering installations or equipment are in Parts 110–113 of this chapter.

(g) The requirements for items to be manufactured under specific approval by the Commandant are in Parts 160–164 of this chapter.

(Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198. E.O. 11239, 30 F.R. 9671; 3 CFR 1965 Supp.)

Subpart 2.95—Retention of Records by the Public

AUTHORITY: The provisions of this Subpart 2.95 also interpret or apply sec. 4, 67 Stat. 462, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 43 U.S.C. 1333(e), 46 U.S.C. 390b, 50 U.S.C. 198. Treasury Department Orders 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–15, Jan. 3, 1955, 20 F.R. 840; 167–20, June 18, 1956, 21 F.R. 4894.

§ 2.95–1 Certificates or documents issued by Coast Guard.

(a) Certificates or documents issued to the public, as required by laws, rules, or regulations, shall be retained for the applicable period of time, as follows:

(1) If the certificate or document specifies a definite period of time for which it is valid, it shall be retained for so long as it is valid unless it is required to be surrendered; or,

(2) If the certificate or document does not specify a definite period of time for which it is valid, it shall be retained for that period of time such certificate or document is required for operation of the vessel; or,

(3) If the certificate or document is evidence of a person's qualifications, it shall be retained for so long as it is valid unless it is required to be surrendered.

(b) Nothing in this section shall be construed as preventing the Coast Guard from canceling, suspending, or withdrawing any certificate or document issued at any time.

§ 2.95–5 Certificates or documents issued by others.

(a) Certificates or documents issued by other public agencies or private organizations, which are accepted as prima facie evidence of compliance with requirements administered by the Coast Guard, shall be retained for the applicable period of time as follows:

(1) If the certificate or document specifies a definite period of time for which it is valid, it shall be retained for so long as it is valid unless it is required to be surrendered; or,

(2) If the certificate or document does not specify a definite period of time for which it is valid, it shall be retained for the period of time such certificate or document is required for operation of the vessel; or,

(3) If the certificate or document is evidence of a person's qualifications, it shall be retained for so long as it is valid unless it is required to be surrendered.

§ 2.95–10 Equipment or material required to be approved.

(a) The manufacturer of any equipment or material, which must also be approved by or found satisfactory for use by the Commandant, shall keep the required drawings, plans, blueprints, specifications, production models (if any), qualification tests, and related correspondence containing evidence that the Coast Guard has found such equipment or material satisfactory, during the period of time the approval or listing is valid. (Most of the specifications containing detailed descriptions of records required to be retained by the public are in Parts 160 to 164, inclusive in Subchapter Q (Specifications) of this chapter.

PART 3—MERCHANT MARINE PERSONNEL

Subpart 3.01—Licenses and Documents

Sec.
3.01–1 Applications for licenses or documents.
3.01–75 Appeals.

Subpart 3.10—Disclosure of Information Regarding Shipment and Discharge of Merchant Mariners

3.10–1 General.
3.10–5 Applications.

Sec.
3.10–10 Designation of representatives.
3.10–15 Shipping articles.
3.10–20 Copies of shipping articles.
3.10–25 Official logbooks.
3.10–30 Copies of logbook entries.
3.10–35 Costs.

Subpart 3.13—Shipment and Discharge of Seamen

3.13–1 Signing-on and discharging seamen.
3.13–10 Shipping articles.
3.13–15 Forecastle card.
3.13–30 Allotments.
3.13–35 Logbooks.
3.13–40 Discharges.
3.13–45 Seamen not shipped or discharged before shipping commissioners.
3.13–50 Service record.

Subpart 3.15—Arbitration by Shipping Commissioners

3.15–1 Arbitration.
3.15–5 Mutual releases.

Subpart 3.19—Effects of Deceased or Deserting Seamen

3.19–1 Accounts of wages and effects.
3.19–5 Kinsman's petition.

CROSS REFERENCE: For Coast Guard jurisdiction, see 33 CFR Part 1.

Subpart 3.01—Licenses and Documents

AUTHORITY: The provisions of this Subpart 3.01 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply sec. 7, 49 Stat. 1936, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 689, 390b, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20 June 18, 1956, 21 F.R. 4894.

§ 3.01–1 Applications for licenses or documents.

Applications for licenses, extension of routes, or documents required for officers or seamen by 46 U.S.C. 214, 224, 226, 228, 229, 229b, 230–237, 243, 367, 391a, 404, 405, 526f, 1333, 672, 643, 481, or 50 U.S.C. 198 and the regulations in Parts 10 and 12 of this chapter as a prerequisite for employment shall be made on one of the following Coast Guard forms which are obtainable from the Officer in Charge, Marine Inspection, at any local marine inspection office: CG 866, License application; CG–719, Seaman's certificate application. The procedures for obtaining the licenses or documents, renewals, if necessary, or duplicates, if lost; the qualifications; and examinations necessary, are all set forth in Parts 10 and 12 of this chapter, together with Coast Guard numbers and titles of forms used, obtainable from any marine inspection office.

§ 3.01–75 Appeals.

(a) *General.* Any person aggrieved by any decision or action of the Officer in Charge, Marine Inspection, may appeal therefrom to the Coast Guard District Commander of the district in which the action or decision was made. A further appeal may be made to the Commandant, U.S. Coast Guard, from the decision of the District Commander.

(b) *Time limits.* (1) Appeals from decisions of the inspectors or the Officer in Charge, Marine Inspection, to the Coast Guard District Commander, shall be made in writing within 30 days after the decisions or actions appealed from shall have been rendered or taken. Such appeals shall set forth the requirements appealed from and the reasons why the decision or action should be set aside or revised.

(2) Appeals from the decisions of the Coast Guard District Commander to the Commandant shall be made in writing within 30 days after the decisions appealed from shall have been rendered.

(c) *Decision on appeals.* Pending the determination of the appeal, the decision of the Officer in Charge, Marine Inspection, shall remain in effect. The decision of the Commandant is final.

Subpart 3.10—Disclosure of Information Regarding Shipment and Discharge of Merchant Mariners

AUTHORITY: The provisions of this Subpart 3.10 issued under R.S. 4405, as amended, 4462, as amended, sec. 7, 49 Stat. 1936, as amended; 46 U.S.C. 375, 416, 689. Interpret or apply R.S. 4448, as amended, 4551, as amended, secs. 1, 2, 49 Stat. 1544, as amended, sec. 3, 70 Stat. 152, sec. 3, 60 Stat. 238, sec. 3, 68 Stat. 675; 46 U.S.C. 234, 643, 367, 390b, 5 U.S.C. 1002, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894.

§ 3.10–1 General.

(a) Upon oral or written inquiry to the Coast Guard, information will be released as to the dates and ports of the commencement and termination of all voyages by merchant vessels for which shipping articles are signed before shipping commissioners. The inquiry should be addressed to the Officer in Charge, Marine Inspection, who has custody over such records.

(b) Other information contained in shipping articles or logbooks covering voyages of merchant vessels which are required to be kept by the Coast Guard will be released only to the extent and under the conditions provided in this subpart.

§ 3.10–5 Applications.

(a) *Form.* The applications for access to and release of information may be made orally except when the regulations in this subpart require a written application for such record. When a written application is required the application should be addressed to the Officer in Charge, Marine Inspection, or to the person designated as having authority to grant access to or release of information from such records. The written application shall be executed by the parties desiring the information or by any person designated to represent such party as described in § 3.10–10.

(b) *Contents.* The application shall:

(1) Clearly state or describe the information desired;

(2) Identify the applicant, and if the applicant is a representative of another, specify the nature of the representation and attach proof of designation when required;

(3) Set forth the interest of the applicant in the subject matter;

(4) The purpose for which the information is desired; and

(5) Whether or not the information or record sought is intended for use in prosecuting a claim against the United States.

§ 3.10–10 Designation of representatives.

(a) In any case when access to or release of information from any record is permitted to any party by this subpart, the permission shall extend, when such party is deceased or incompetent, to an executor, administrator, heir, guardian, trustee, or legal representative of such party: *Provided*, That the relationship is established by production of satisfactory documentary evidence.

(b) When access to or release of information from any record is sought by one acting as agent or attorney on behalf of any party recognized by regulations in this chapter, the representation as agent or attorney shall be established by the filing with the Officer in Charge, Marine Inspection, documentary proof of such representation. This proof may be in one of the following forms:

(1) A statement of authority in the handwriting of and signed by the party represented; or,

(2) A notarized statement of authority signed by the party represented; or,

(3) A copy of a contract of retainer signed by the party represented.

(c) This authorization shall contain a statement of the specific matters in in which representation is authorized.

§ 3.10–15 Shipping articles.

(a) Upon oral or written inquiry, access to and release of information from shipping articles may be had by:

(1) The master, owner, charterer, or operator, or an agent of the owner, charterer, or operator, of the vessel for voyage(s) covered by the shipping articles.

(2) Any officer of the United States Government acting in the course of his official duty.

(3) Any officer of a State, Territory, or Possession, or any political subdivision thereof, or the District of Columbia, acting in the course of his official duty.

(b) Upon oral or written inquiry, access to and release of information with respect to general provisions in the shipping articles and specific entries therein pertaining to a crewmember may be had by such crewmember for voyage(s) covered by the shipping articles.

(c) In any case of personal injury, illness, or death of any member of the crew, a crewmember or his authorized representative, upon written application, may examine the shipping articles and may make excerpts of such entries therein pertaining to such party. In addition, when the written application identifies certain crewmembers who may have personal knowledge of such injury, illness, or death by names, nicknames, or ratings, excerpts may be made with respect to their names and addresses, "Z" or "BK" numbers, ratings, and names and addresses of their next of kin.

§ 3.10–20 Copies of shipping articles.

(a) For any party allowed to have access to and release of information from shipping articles by § 3.10–15(a), certified copies may be furnished upon request.

(b) For any party allowed to make excerpts from shipping articles by § 3.10–15 (b), certified copies of such excerpts may be furnished upon request.

§ 3.10–25 Official logbooks.

(a) Upon oral or written inquiry, access to and release of information from official logbooks may be had by:

(1) The master, owner, charterer, or operator, or an agent of the owner, charterer, or operator, of the vessel for the voyage(s) covered by the official logbook.

(2) Any officer of the United States Government acting in the course of his official duty.

(3) Any officer of a State, territory, or possession, or any political subdivision thereof, or the District of Columbia, acting in the course of his official duty.

(b) Upon written application, the examination of official logbooks may be permitted to the following:

(1) Any member of the crew for voyage(s) covered by the official logbook.

(2) Any passenger transported or any owner of cargo shipped on voyage(s) covered by the official logbook.

(3) Any underwriter of the vessel or its cargo for voyage(s) covered by the official logbook.

(4) Any representative of any party described in this paragraph when authorized in accordance with § 3.10–10.

(c) Excerpts may be made by parties described in paragraph (b) of this section of such entries in the official logbook which pertain to the party making the application. In addition, when the application states in general terms the information desired, excerpts may be made of these entries in the official logbook which are demonstrated to the custodian as being relevant and material to the interest of the party as stated in the application.

§ 3.10–30 Copies of logbook entries.

(a) For any party allowed to have access to and release of information or to make excerpts of certain entries from official logbooks by § 3.10–25, certified copies of such entries may be furnished upon request.

§ 3.10–35 Costs.

The access to and release of information, as authorized in this subpart, shall be subject to the payment of costs. (See 33 CFR 1.25)

Subpart 3.13—Shipment and Discharge of Seamen

AUTHORITY: The provisions of this Subpart 3.13 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply sec. 7, 49 Stat. 1936, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 689, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026.

§ 3.13–1 Signing-on and discharging seamen.

The master of any merchant vessel of 75 tons or upward, engaged in the intercoastal trade or of any vessel bound from a port in the United States to any foreign port, other than vessels engaged in trade between the United States and the British North American possessions or the West Indies, or the Republic of Mexico, is required to enter into an agreement with each member of the crew who shall be discharged under the agreement and receive wages in the presence of a shipping commissioner in accordance with 46 U.S.C. 564. Where the complete crew has been signed on in the presence of a shipping commissioner and the later shipment of other seamen becomes necessary because of desertion or casualty, the master may sign on such replacements without the presence of a shipping commissioner but he is required to report the transaction immediately upon arrival at first port of call to the United States consul at or nearest such port, or in the Panama Canal Zone to the shipping commissioners or deputy shipping commissioners there. Shipping commissioners may, at the request of the master or owner of a vessel, ship and discharge all or part of the crew of a vessel engaged in the coastwise trade, or trade between the United States and the Dominion of Canada, or Newfoundland, or the West Indies, or Mexico, in accordance with 46 U. S. C. 646.

§ 3.13–10 Shipping articles.

For the signing-on and discharging of seamen in accordance with 46 U.S.C. 564, 565, 566, and 713, and the regulations in Part 14 of this chapter, the shipping commissioners furnish Forms CG–705, CG–705A, and CG–705B, Shipping articles, same except for size, to record the agreement entered into between the master and crew of a vessel. Copies of these forms are obtainable upon request from shipping commissioners or Officers in Charge, Marine Inspection, at marine inspection offices, U.S. Coast Guard. It is the duty of shipping commisioners to see that each officer signing on is in possession of a continuous discharge book, certificate of identification, or United States merchant mariner's document, and a license; and that each signing on in an unlicensed capacity is in possession of a continuous discharge book or a certificate of identification and a certificate of service or certificate of efficiency or a United States merchant mariner's document representing such certificates. The shipping articles are prepared in quadruplicate, original and duplicate retained by the master pending completion of voyage, the triplicate retained by shipping commissioner, and quadruplicate forwarded to Commandant, U. S. Coast Guard. After the members of the crew are signed on the shipping commissioner prepares Form CG–708, Shipping of Seamen, certifying that the crew members knew and willingly signed the shipping articles, which is attached to the shipping articles. When the voyage or period of time covered by the shipping articles is completed, the members of the crew are discharged and the wages paid in the presence of the shipping commissioner, if required by law, and proper entries made in the shipping articles.

§ 3.13–15 Forecastle card.

At the commencement of every voyage or engagement the master is required to post certain excerpts from the shipping articles in such part of the vessel as to be accessible to the crew in accordance with 46 U. S. C. 577. The Forecastle Card, Form CG–704, is obtainable from shipping commissioners or Officer in Charge, Marine Inspection, U. S. Coast Guard.

§ 3.13–30 Allotments.

A merchant mariner desiring to make an allotment of his wages, in accordance with the regulations in Part 15 of this chapter, fills out Form CG–722, Seaman's Allotment Note, furnished by the shipping commissioner at the time he signs the shipping articles, or copies may be obtained upon request from shipping commissioners in the United States ports, or from United States consular officers in foreign ports. If the allotment complies with the law, it is approved. No appeals are permitted.

§ 3.13–35 Logbooks.

Every vessel of 75 tons or upward, engaged in the intercoastal trade, or any vessel bound from a port in the United States to any foreign port, other than in the British North American possessions, shall have an official logbook and every master of such vessel shall make or have entries made therein regarding matters required by 46 U.S.C. 201, 202, 203, 701, 702, and 85. One or more copies of the official logbook, Coast Guard Form CG–706–B or 706–C, depending upon the number of persons employed as crew, is furnished the master of a vessel at the time the crew is signed on before a shipping commissioner; or copies of the official logbook are obtainable upon request from the Officer in Charge, Marine Inspection. After the official logbooks have served their purpose they are filed with the shipping commissioner or Officer in Charge, Marine Inspection.

§ 3.13–40 Discharges.

When a master of a vessel in accordance with Part 14 of this chapter discharges a merchant seaman and makes entries in the seaman's continuous discharge book, he will fill out Form CG–718E, Record of Entry in Continuous Discharge Book, which is forwarded to the Commandant, United States Coast Guard. The Form CG–718E is obtainable from shipping commissioners, collectors of customs and deputy collectors of customs acting as shipping commissioners or Officers in Charge, Marine Inspection. When a seaman holds a certificate of identification, a certificate of discharge, Form CG–718A, is issued and approved by a shipping commissioner or master as evidence of service performed. This form may be obtained upon request from shipping commissioners, collectors of customs or deputy

collectors of customs acting as shipping commissioners or Officers in Charge, Marine Inspection.

§ 3.13–45 Seamen not shipped or discharged before shipping commissioners.

Masters of certain vessels are required to report on ship personnel not shipped or discharged before a shipping commissioner. The Form CG–735 (T) has been prepared and must be used by the masters in accordance with Part 14 of this chapter. The form may be obtained upon request from shipping commissioners, collectors or deputy collectors of customs acting as shipping commissioners, or Officers in Charge, Marine Inspection. When voyage is completed, it must be delivered to nearest marine inspection office for transmission to Headquarters.

§ 3.13–50 Service record.

A merchant mariner upon discharge in accordance with the requirements of Part 14 of this chapter has recorded in his continuous discharge book entries regarding his service. When the merchant mariner requests in person or writing for a record of sea service shown in a surrendered continuous discharge book, the Officer in Charge, Marine Inspection, or other issuing officer will prepare in duplicate Form CG–723, Certificate of Seamen's Service, and will deliver the original to the seaman and send the duplicate to Commandant, U.S. Coast Guard.

Subpart 3.15—Arbitration by Shipping Commissioners

AUTHORITY: The provisions of this Subpart 3.15 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply sec. 7, 49 Stat. 1936, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 689, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026.

§ 3.15–1 Arbitration.

The Form CG–717, Agreement as to Arbitration, is used by seamen, master, consignees, agents or owners of vessels in submitting matters to shipping commissioners. This form is obtainable from shipping commissioners or collectors of customs or deputy collectors of customs acting as shipping commissioners. One copy of the form is made and this copy is retained by the shipping commissioner who acts on the matters submitted and his decision is final. No appeals are allowed.

§ 3.15–5 Mutual releases.

The Form CG–713A, Mutual Release, is used by masters and seamen to effect settlement of claims for wages in cases of seamen signed off prior to completion of a voyage. This form may be obtained from shipping commissioners or collectors of customs or deputy collectors of customs acting as shipping commissioners. One copy is prepared and retained by the shipping commissioner who acts on the matters involved and his decision is final. A certificate of mutual release, Form CG–739, is prepared by the shipping commissioner or person acting as shipping commissioner, signed by the seaman when given to him by the shipping commissioner, and is used by the seaman not present at sign-off of vessel's crew as evidence that he has signed a mutual release. This form is prepared in duplicate from information in shipping articles and official logbook.

Subpart 3.19—Effects of Deceased or Deserting Seamen

AUTHORITY: The provisions of this Subpart 3.19 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply sec. 7, 49 Stat. 1936, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 689, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026.

§ 3.19–1 Accounts of wages and effects.

The masters of certain United States vessels in the cases of deceased or deserting seamen have to prepare Form CG–1517, Account of Wages and Effects of Deceased or Deserting Seamen, for use in disposition of the wages and effects of such seamen. The forms may be obtained upon request from shipping commissioners, collectors or deputy collectors of customs acting as shipping commissioners, or Officers in Charge, Marine Inspection. Four copies are prepared and submitted to the shipping commissioner for transmission to the District Court. The shipping commissioner upon examination of information on the form, may approve or disapprove the account after reviewing the vessel's official logbook. No appeal is permitted. The seamen's next of kin is informed of the action taken.

§ 3.19–5 Kinsman's petition.

The next of kin of a deceased seaman has to petition the District Court of the United States for the wages and effects of the deceased seaman on Form CG–726, Kinsman's petition for wages and effects of deceased seaman. This form may be obtained upon request from shipping commissioners, collectors or deputy collectors of customs acting as shipping commissioners, or Officers in Charge, Marine Inspection. One copy of the form is presented by the next of kin to the United States District Court who acts upon the petition and either approves or disapproves the petition.

PART 4—INVESTIGATIONS AND HEARINGS

Subpart 4.01—Casualties and Accidents

Sec.
4.01–1 Reports.
4.01–5 Investigation.

AUTHORITY: The provisions of this Part 4 issued under secs. 2, 633, 63 Stat. 496, 545; 14 U.S.C. 2, 633. Interpret or apply R.S. 4450, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 239, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–17, June 29, 1955, 20 F.R. 4976.

CROSS REFERENCE: For Coast Guard jurisdiction, see 33 CFR Part 1.

§ 4.01–1 Reports.

(a) Regulations regarding reports of marine casualties and accidents are in Part 136 of this chapter.

(b) Regulations regarding reports of boating accidents under the Federal Boating Act of 1958 are in Part 173 of this chapter.

§ 4.01–5 Investigation.

(a) Regulations for casualty and accident investigation procedures are contained in Part 136 of this chapter.

SUBCHAPTER B—MERCHANT MARINE OFFICERS AND SEAMEN

PART 10—LICENSING OF OFFICERS AND MOTORBOAT OPERATORS AND REGISTRATION OF STAFF OFFICERS

Subpart 10.01—General

Sec.
10.01–1 Purpose of regulations.
10.01–5 Authority for regulations.

Subpart 10.02—General Requirements for All Deck and Engineer Officers' Licenses

10.02–1 Issuance of licenses.
10.02–3 Original license defined.
10.02–5 Requirements for original licenses.
10.02–7 Requirements for raise of grade of license.
10.02–9 Requirements for renewal of license.
10.02–13 Sea service as a member of the Armed Forces of the United States and on vessels owned by the United States as qualifying experience.
10.02–15 Lifting of limitations.
10.02–19 Reexaminations and refusal of licenses.
10.02–21 Laws, general rules and regulations, and Rules of the Road to be furnished licensed officers.
10.02–23 Issuance of duplicate license.
10.02–25 Parting with license.
10.02–29 Suspension and revocation of licenses.
10.02–33 Right of appeal.

Subpart 10.05—Professional Requirements for Deck Officers' Licenses (Inspected Vessels)

10.05–1 Ocean licenses qualifying for all waters.
10.05–3 Master of ocean steam or motor vessels.
10.05–5 Master of coastwise steam or motor vessels.
10.05–7 Master of ocean or coastwise sail vessels.
10.05–9 Master of ocean or coastwise steam or motor yachts.
10.05–11 Master, mate, or pilot of steam or motor vessels operating under special conditions.
10.05–13 Master of Great Lakes steam and motor vessels.
10.05–15 Master of bays, sounds, and lakes other than the Great Lakes, steam and motor vessels.
10.05–17 Master of river steam or motor vessels.
10.05–19 Master of ferry steam or motor vessels.
10.05–21 Master or pilot of steam yachts.
10.05–23 Master of passenger barges.
10.05–25 Chief mate of ocean steam or motor vessels.

Sec.
10.05-27 Chief mate of coastwise steam or motor vessels.
10.05-28 Mate of motor vessels engaged in offshore mineral and oil industries.
10.05-29 Second mate of ocean steam or motor vessels.
10.05-31 Second mate of coastwise steam or motor vessels.
10.05-33 Third mate of ocean steam or motor vessels.
10.05-35 Third mate of coastwise steam or motor vessels.
10.05-37 Mate of inland or river steam or motor vessels.
10.05-39 Pilot.
10.05-41 Pilot of tank vessels of not more than 150 gross tons.
10.05-42 Endorsement of master's or mate's license as pilot or extension of pilot's route.
10.05-43 Examination for license as pilot.
10.05-45 Examination for license as deck officer of ocean or coastwise steam, motor or sail vessels.
10.05-46 Radar observer.
10.05-47 Examination for license as master of Great Lakes steam and motor vessels.
10.05-49 Examination for license as master of bays, sounds, and lakes other than the Great Lakes steam and motor vessels.
10.05-51 Examination for license as master of river steam or motor vessels.
10.05-53 Examination for license as master of ferry steam or motor vessels.
10.05-55 Examination for license as master or pilot of yachts on the Great Lakes, other lakes, bays, and sounds, or rivers.
10.05-57 Examination for license as master of passenger barges on the Great Lakes, other lakes, bays, and sounds, or rivers.
10.05-59 Examination for License as mate of inland or river steam or motor vessels.
10.05-61 Evaluation of experience not listed.

Subpart 10.10—Professional Requirements for Engineer Officers' Licenses (Inspected Vessels)

10.10-1 No restriction as to waters on engineer's licenses.
10.10-3 Grade and type of engineer licenses issued and limitations placed thereon.
10.10-4 Examination for license as engineer officer of steam or motor vessels.
10.10-5 Removal of restriction as to waters on an engineer's license.
10.10-6 Raising and removing horsepower limitations.
10.10-7 Conversion of licenses from gross tonnage to horsepower limitations upon renewal.
10.10-9 Chief engineer; steam vessels.
10.10-11 Chief engineer; motor vessels.
10.10-13 First assistant engineer; steam vessels.
10.10-15 First assistant engineer; motor vessels.
10.10-17 Second assistant engineer; steam vessels.
10.10-19 Second assistant engineer; motor vessels.
10.10-21 Third assistant engineer; steam vessels.
10.10-23 Third assistant engineer; motor vessels.
10.10-25 Engineers of motor vessels operating in Puerto Rican and Hawaiian waters.
10.10-27 Service as engineroom watch electrician or refrigeration watch engineer.
10.10-29 Evaluation of experience not listed.

Subpart 10.13—Licensing of Radio Officers

Sec.
10.13-1 Applicability of laws.
10.13-3 Definitions.
10.13-5 General provisions respecting all licenses issued.
10.13-7 Citizenship and age requirements for all licenses issued.
10.13-9 Evidence of professional competence for all licenses issued.
10.13-13 General requirements for original licenses.
10.13-15 Physical examinations for original licenses.
10.13-17 Character check and references required for original licenses.
10.13-19 Applicants furnishing additional information.
10.13-21 General requirements for renewal of license.
10.13-23 Physical requirements for renewal.
10.13-25 Issuance of duplicate license.
10.13-27 Parting with or altering license.
10.13-29 Suspension and revocation of licenses.
10.13-33 Right of appeal.

Subpart 10.15—Licensing of Officers for Uninspected Vessels

10.15-1 Applicability of laws.
10.15-3 Vessels to which regulations apply.
10.15-5 Licenses issued and general provisions.
10.15-7 Related authority of licenses for inspected vessels.
10.15-9 Sea service as member of the armed forces of the United States as qualifying.
10.15-11 Lifting of limitations.
10.15-13 Citizenship and age requirements.
10.15-15 Reexaminations and refusal of licenses.
10.15-17 Issuance of duplicate licenses.
10.15-19 Suspension and revocation of licenses.
10.15-21 Laws, general rules and regulations, and Rules of the Road to be furnished licensed officers.
10.15-25 Application and experience required for original or raise of grade of licenses.
10.15-27 Physical examination required for original and raise of grade of licenses.
10.15-29 Professional requirements for original and raise of grade of licenses.
10.15-31 Examination requirements for licenses.
10.15-33 Requirements for renewal of licenses.

Subpart 10.20—Motorboat Operators Licenses

10.20-1 General application.
10.20-3 General requirements.
10.20-5 Professional examinations.
10.20-7 Physical examination requirements.
10.20-9 Requirements for renewal.
10.20-11 Issuance of duplicate license.
10.20-13 Suspension or revocation of license.

Subpart 10.25—Registration of Staff Officers

10.25-1 Application of regulations.
10.25-3 Grades of certificates issued.
10.25-5 Staff department defined.
10.25-7 General requirements.
10.25-9 Experience requirements.

AUTHORITY: The provisions of this Part 10 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 10.01—General

§ 10.01-1 Purpose of regulations.

(a) The purpose of the regulations in this part is to provide a comprehensive and adequate means of determining the qualifications an applicant must possess in order to be eligible for a license as deck or engineer or radio officer on merchant vessels, or a license to operate motorboats or for a certificate of registry as staff officer.

§ 10.01-5 Authority for regulations.

(a) *General.* The authority to prescribe regulations generally is set forth in Title 46, U.S. Code, sections 375 and 416, as well as in certain other provisions in Title 46, U.S. Code, sections 170, 214, 215, 222, 224, 224a, 226, 228, 229, 230-234, 239, 240, 361, 362, 364, 372, 381, 391, 391a, 392, 393, 399, 400, 402-414, 435, 436, 451-453, 460, 461, 462, 464, 467, 470-482, and 489-498, and acts amendatory thereof or supplemental thereto. Under the provisions of Title 46, U.S. Code, section 372, the Commandant, United States Coast Guard, superintends the administration of the vessel inspection laws and is required to produce a correct and uniform administration of the inspection laws, rules and regulations.

(b) *Deck and engineer officers' licenses.* The regulations regarding requirements for deck and engineer officers' licenses interpret or apply Title 46, U.S. Code, sections 214, 224, 224a, 225, 226, 228, 229, 230, 231, 233, 237, 367, 391a, 404, 405, 672a, and 1132, and Title 50, U.S. Code, section 198. The regulations regarding requirements for deck and engineer officers' licenses for officers on vessels subject to the Officers' Competency Certificates Convention, 1936, interpret or apply Title 46, U.S. Code, section 224a.

(c) *Radio officers.* The regulations regarding the licensing of radio officers interpret or apply Title 46, U.S. Code, sections 229a-229h.

(d) *Motorboat operators' licenses.* The regulations regarding the licensing of motorboat operators interpret or apply Title 46, U.S. Code, sections 526f and 526p.

(e) *Staff officers.* The regulations regarding the registration of staff officers interpret or apply Title 46, U.S. Code, section 247.

(f) *Operators' and ocean operators' licenses.* The regulations regarding the operators' and ocean operators' licenses interpret or apply Title 46, U.S. Code, section 390b.

Subpart 10.02—General Requirements for All Deck and Engineer Officers' Licenses

AUTHORITY: The provisions of this Subpart 10.02 interpret or apply R.S. 4417a, as amended, 4426, as amended, 4427, as amended, 4438, as amended, 4438a, as amended, 4439, as amended, 4440, as amended, 4441, as amended, 4442, as amended, 4443, as amended, 4445, as amended, sec. 2, 29 Stat. 188, as amended, sec. 1, 34 Stat. 1411, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 3, 70 Stat. 152, and sec. 3, 68 Stat. 675; 46 U.S.C. 391a, 404, 405, 224, 224a, 226, 228, 229, 214, 230, 231,

225, 237, 367, 390b, 50 U.S.C. 198. Treasury Department Orders 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-20, June 18, 1956, 21 F.R. 4894, unless otherwise noted.

§ 10.02-1 Issuance of licenses.

(a) Applicants for licenses are charged with the duty of establishing to the satisfaction of the Coast Guard that they possess all of the qualifications necessary, such as age, experience, character and citizenship, before they shall be entitled to be issued licenses. Until an applicant meets this mandatory requirement, he is not entitled to be licensed to serve as an officer on a vessel of the United States. No person who has been convicted by court-martial of desertion or treason in time of war, or has lost his nationality for any of the other reasons listed in 8 U.S.C. 1481, is eligible for a license. Neither is a person eligible for a license, who has been convicted by a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States, within ten years prior to the date of filing the application; or who, unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(b) After application to an Officer in Charge, Marine Inspection, any person who is found qualified under the requirements set forth in this subchapter shall be issued an appropriate license valid for a term of five (5) years. In appropriate cases a limitation commensurate with the experience of the applicant shall be placed upon the license.

(c) Every person to whom a license is issued shall place his signature and left thumb print thereon, and upon any sheets attached for additional indorsements.

(d) Every person who receives a license shall make oath before an Officer in Charge, Marine Inspection, or commissioned officer of the Coast Guard authorized to administer oaths under 10 U.S.C. 936 or 14 U.S.C. 636, to be recorded upon his official file, that he will faithfullly and honestly, according to his best skill and judgment, without concealment or reservation, perform all the duties required of him by law and obey all lawful orders of his superior officers.

(Sec. 2, 68 Stat. 484; 46 U.S.C. 239b, Treasury Department Order 167-9, August 3, 1954, 19 F.R. 5195)

§ 10.02-3 Original license defined.

The first license issued to any person by the Coast Guard shall be considered an original license, when the United States records show no previous issue to such person.

§ 10.02-5 Requirements for original licenses.

(a) *General.* Before an original license is issued to any person to act in a licensed capacity on inspected vessels of the United States, he shall personally appear before an Officer in Charge, Marine Inspection and present satisfactory documentary evidence of his eligibility in respect to the requirements of this section.

(b) *Minimum age.* Any person who has attained the age of 21 years and is qualified in all other respects shall be eligible for a license except that a license as third mate, third assistant engineer or second class pilot may be granted an applicant who has reached the age of 19 years and who is qualified in all other respects, but no such license may be raised in grade before the holder thereof shall have reached the age of 21 years.

(c) *Citizenship.* No license shall be issued to any person who is not a citizen of the United States, either native-born or fully naturalized. The Officer in Charge, Marine Inspection must be satisfied as to the bona fides of all evidence of citizenship presented, and may reject any evidence that he has reason to believe is not authentic. Acceptable evidence of citizenship is described below in the order of its desirability, except that the first six (6) acceptable methods will be assigned equal weight:

(1) Birth certificate or certified copy.

(2) Certificate of Naturalization.

(3) Baptismal certificate or parish record recorded within one year after birth.

(4) Statement of a practicing physician certifying that he attended the birth and that he has a record in his possession showing the date on which it occurred.

(5) State Department passport.

(6) A commission in the United States Navy, Marine Corps, Coast Guard, either regular or reserve; or satisfactory documentary evidence of having been commissioned in one of these services subsequent to January 1, 1936, provided such commission or evidence shows the holder to be a citizen.

(7) A continuous discharge book, certificate of identification, or merchant mariner's document issued by the Coast Guard or by the former Bureau of Marine Inspection and Navigation which shows the holder as an American citizen, provided the records indicate that the holder of such continuous discharge book, certificate of identification, or merchant mariner's document produced satisfactory evidence of his citizenship at the time of the issuance of the same.

(8) Delayed certificate of birth. If an applicant claiming to be a citizen of the United States submits a delayed certificate of birth issued under a State's seal, it may be accepted as prima facie evidence of citizenship in the absence of any collateral facts indicating fraud in its procurement.

(9) For persons deriving citizenship through naturalization of their parents, or for persons born outside the United States who claim to be United States citizens by virtue of their parents having been United States citizens at the time of such birth, a Certificate of Citizenship issued by the United States Immigration and Naturalization Service is acceptable as documentary evidence of citizenship.

(10) If none of the requirements set forth in subparagraphs (1) through (9) of this paragraph can be met by the applicant, he should make a statement to that effect, and in an attempt to establish citizenship, he may submit for consideration data of the following character:

(i) Report of the Census Bureau showing the earliest record of age or birth available. Request for such information should be addressed to the Director of the Census, Washington, D.C., 20233. In making such request, definite information must be furnished the Census Bureau as to the place when the first census was taken after birth of the applicant, giving the name of the street and number of the house, or the names of the cross streets between which the house was located if residing in a city; or the name of the town, township, precinct, magisterial district, militia district, beat or election district if residing in the country; also the names of parents, or the names of other persons with whom residing on the date specified.

NOTE: A census was taken in the following years: June 1, 1860, 1870, 1880, and 1900; April 15, 1910; January 1, 1920; April 1, 1930; April, 1940, April, 1950 and April, 1960. (Records for 1890 are not available.)

(ii) Affidavits of parents, or relatives; or affidavits by two or more responsible citizens of the United States, stating citizenship; school records; immigration records; or insurance policies.

(d) *Written application.* The Officer in Charge, Marine Inspection shall require all applicants for original license to make written application upon Coast Guard Form CG-866.

(e) *Physical examination.* (1) All applicants for an original license shall be required to pass a physical examination given by a medical officer of the United States Public Health Service and present a certificate executed by this Public Health Service Officer to the Officer in Charge, Marine Inspection. This certificate shall attest to the applicant's acuity of vision, color sense, and general physical condition. In exceptional cases where an applicant would be put to great inconvenience or expense to appear before a medical officer of the United States Public Health Service, the physical examination and certification may be made by another reputable physician.

(2) Epilepsy, insanity, senility, acute venereal disease or neurosyphilis, badly impaired hearing, or other defect that would render the applicant incompetent to perform the ordinary duties of an officer at sea are causes for certification as incompetent.

(3) For an original license as master, mate or pilot, the applicant must have either with or without glasses, at least 20/20 vision in one eye and at least 20/40 in the other. The applicant who wears glasses, however, must also be able to pass a test without glasses of at least 20/40 in one eye and at least 20/70 in the other. The color sense will be tested by means of a pseudo-isochromatic plate test, but any applicant who fails this test will be eligible if he can pass the "Williams" lantern test or equivalent.

(4) Applicants for original engineers' licenses shall be examined only as to their ability to distinguish the colors

red, blue, green, and yellow. No applicant for original license as engineer shall be disqualified for failure to distinguish colors if any of his required experience is served prior to May 1, 1947.

(5) For original license as engineer the applicant must have, either with or without glasses, at least 20/30 vision in one eye and at least 20/50 in the other. The applicant who wears glasses, however, must also be able to pass a test without glasses of at least 20/50 in one eye and at least 20/70 in the other.

(6) Persons serving or intending to serve in the Merchant Marine Service are recommended to take the earliest opportunity of ascertaining, through examination by an ophthalmic surgeon, whether their vision, and color vision where required, is such as to qualify them for service in that profession.

(7) Where an applicant is not possessed of the vision, hearing, or general physical condition necessary, the Officer in Charge, Marine Inspection, after consultation with the Public Health Service physician or other examining physician, may make recommendation to the Commandant for an exception to these requirements, if in his opinion, extenuating circumstances warrant special consideration. Any requests for a decision by the Commandant must be accompanied by all pertinent correspondence, records, and reports. In this connection recommendations from agencies of the Federal Government operating Government vessels, as well as owners and operators of private vessels, made in behalf of their employees, will be given full consideration in arriving at a decision.

(f) *First Aid Certificate.* No candidate for original license shall be examined until he presents a certificate from the United States Public Health Service that he has passed a satisfactory examination based on the contents of "The Ship's Medicine Chest and First Aid at Sea," or other manual arranged for the purpose and having the approval of the United States Public Health Service.

(g) *Experience or training.* (1) All applicants for original licenses shall present to the Officer in Charge, Marine Inspection, letters, discharges, or other official documents certifying the amount and character of their experience and the names of the vessels on which acquired. The Officer in Charge, Marine Inspection, must be satisfied as to the bona fides of all evidence of experience or training presented and may reject any evidence that he has reason to believe is not authentic or which does not sufficiently outline the amount, type and character of service. Coast Guard issued "certificates of seaman's service" and "certificates of discharge" shall be returned to the applicant. The Officer in Charge, Marine Inspection, shall make entry on the application that service represented by these documents has been verified. All other documentary evidence of service or authentic copies thereof shall be filed with the application. No license shall be considered as satisfactory evidence of any qualifying experience required by this paragraph.

(2) No original license shall be issued to any person unless 25 percent of the required experience has been obtained within the 3 years immediately preceding the date of application. Service in the armed forces of the United States shall not be counted in computing the 3 years.

(3) No original license shall be issued to any naturalized citizen on less experience in any grade or capacity than would have been required of a citizen of the United States by birth.

(4) Experience and service acquired on foreign vessels is creditable for establishing eligibility for an original license, subject to evaluation by the Commandant to determine that it is a fair and reasonable equivalent to service acquired on merchant vessels of the United States, with respect to grade, tonnage, horsepower, waters and operating conditions. An applicant who has obtained his qualifying experience on foreign vessels is required to submit satisfactory documentary evidence of such service in the forms prescribed by subparagraph (1) of this paragraph, which certify the amount, character and scope of his service in these respects.

(5) No applicant for a license, who is a naturalized citizen, and who has obtained his experience on foreign vessels, shall be given a grade of license higher than that upon which he has actually served while acting under the authority of a foreign license.

(6) Experience in towed barges fitted with sails and rigging is not considered as sail vessel time.

(h) *Professional examination.* (1) When the amount and character of an applicant's experience is found to be satisfactory and he is eligible in all other respects, the applicant shall be examined in writing by the Officer in Charge, Marine Inspection: *Provided, however,* That upon navigable waters of the United States newly opened to navigation, and where the only pilots obtainable are illiterate Indians or other natives, the fact that such persons can neither read nor write shall not be considered a bar to such Indians or other natives receiving licenses as pilots if they are otherwise qualified therefor.

(2) When the license application of any person has been approved, the Officer in Charge, Marine Inspection, shall give the applicant the required examination as soon as practicable. If applicants for license cannot be examined without material delay by the Officer in Charge, Marine Inspection, of the district in which the application is made, said Officer in Charge, Marine Inspection, shall endeavor, through the Coast Guard District Commander, to arrange for such examination by some other Officer in Charge, Marine Inspection.

(i) *Character check and references.* (1) The Officer in Charge, Marine Inspection, shall require each applicant for an original license to have the written endorsement of the master and that of two other licensed officers of a vessel on which he has served. For a license as engineer or as pilot at least one of the other endorsers shall be the chief engineer or licensed pilot, respectively, of a vessel on which the applicant has served. Where no sea service is required for a license, the applicant may have the endorsement of three reputable persons to whom he is known.

(2) Fingerprint records on FBI Form "Applicant" shall be submitted to the Commandant on each applicant at the same time application for license is made. The application of any person may be rejected by the District Commander or his authorized representative when derogatory information has been brought to his attention which indicates that the applicant's habits of life and character are such as to warrant the belief that he cannot be entrusted with the duties and responsibilities of the station for which he made application. In the event that an applicant is rejected he shall be advised that he may submit a request to the Commandant for a review of his case. No examination shall be given or temporary permit issued in this type case pending the Commandant's authorization.

(3) The fact that an applicant for an original license is on probation as a result of action under R. S. 4450, as amended (46 U. S. C. 239), does not itself make such an applicant ineligible, provided he meets all the requirements for such original license. However, an original license issued under those circumstances will be subject to the same probationary conditions as were imposed against the seaman's certificates or licenses in proceedings under R. S. 4450, as amended. Any such applicant must file an application for license in the usual manner, and the offense for which he was placed on probation will be considered on the merits of the case in determining his fitness to hold the license applied for. Nothing in the regulations in this subchapter, however, shall be construed to permit an applicant to be examined for an original license during any period when a suspension without probation or a revocation imposed pursuant to R. S. 4450, as amended, is effective against his license or certificate.

(Sec. 5, 49 Stat. 1935, as amended, sec. 302, 49 Stat. 1992, as amended; 46 U.S.C. 672a, 1132)

§ 10.02–7 Requirements for raise of grade of license.

(a) *General.* Before any person is issued a license for raise of grade to act on inspected vessels of the United States, he shall personally appear before an Officer in Charge, Marine Inspection, and present satisfactory documentary evidence of his eligibility in respect to the requirements contained herein.

(b) *Surrendering old license.* Upon the issuance of a new license or raise in grade, the applicant shall surrender the old license to the Officer in Charge, Marine Inspection.

(c) *Age requirement.* No license may be raised in grade before the holder thereof shall have reached the age of 21 years.

(d) *Written application.* The Officer in Charge, Marine Inspection, shall, before granting raise of grade of license, require the applicant to make written application upon the Coast Guard Form CG–866.

(e) *Physical requirements.* (1) No license as master, mate, or pilot shall be raised in grade except upon the official certificate of a medical officer of the United States Public Health Service that the color sense of the applicant is normal. Applications for raise in grade of engineer's licenses shall not be subjected to such examination. In exceptional cases where an applicant would be put to great inconvenience or expense to appear before a medical officer of the United States Public Health Service, the physical examination and certification may be made by another reputable physician. The color sense will be tested by means of a pseudoisochromatic plate test, but any applicant who fails this test will be eligible if he can pass the "Williams" lantern test or equivalent. A person failing the pseudoisochromatic plate test shall, if the Public Health Station at which he is undergoing test is not equipped with a lantern, pay his own expenses to journey to such station as is equipped with same.

(2) In the event it is found that an applicant for raise of grade of license obviously suffers from some physical or mental infirmity to a degree that, in the opinion of the Officer in Charge, Marine Inspection, would render him incompetent to perform the ordinary duties of an officer at sea, he shall be required to undergo an examination by a medical officer of the Public Health Service to determine his competency in such respects. Nothing herein contained shall debar an applicant who has lost the sight of one eye from securing a raise of grade of his license: *Provided*, He is qualified in all other respects: *And provided*, That his vision in his one eye passes the test required for the better eye of an applicant possessed of both eyes. If the applicant subsequently produces a certificate from the Public Health Service to the effect that his condition has improved to a satisfactory degree, or is normal, he shall be qualified in this respect.

(f) *Experience or training.* (1) Applicants for raise of grade of licenses are charged with establishing to the satisfaction of the Coast Guard that they possess all of the qualifications necessary, such as age, experience, character, and citizenship before they are entitled to a raise of grade of license.

(2) Applicants for raise of grade of license shall present to the Officer in Charge, Marine Inspection, letters, discharges, or other official documents certifying to the amount and character of their experience and the names of the vessels on which acquired. Coast Guard issued "certificates of seaman's service" and "certificates of discharge" shall be returned to the applicant. The Officer in Charge, Marine Inspection, shall make entry on the application that service represented by these documents has been verified. All other documentary evidence of service or authentic copies thereof shall be filed with the application.

(3) No raise of grade of license shall be granted to any applicant unless 25 percent of the required sea service shall have been served within 3 years immediately preceding the date of application. Service in the armed forces of the United States shall not be counted in computing the 3 years.

(4) No sea service acquired prior to the issuance of the license held shall be accepted as any part of the service required for raise in grade.

(5) No license for raise of grade shall be issued to any naturalized citizen on less experience in any grade than would have been required of a citizen of the United States by birth.

(6) Experience and service acquired on foreign vessels while holding a valid U. S. Merchant Marine Officer's license is creditable for establishing eligibility for a raise in grade, subject to evaluation by the Commandant to determine that it is a fair and reasonable equivalent to service acquired on merchant vessels of the United States, with respect to grade, tonnage, horsepower, waters and operating conditions. An applicant who has obtained his qualifying experience on foreign vessels is required to submit satisfactory documentary evidence of such service in the forms prescribed by subparagraph (2) of this paragraph which certify the amount, character and scope of his service in these respects.

(7) The fact that an applicant for a raise in grade of license is on probation as a result of action under R. S. 4450, as amended (46 U. S. C. 239), does not itself make such an applicant ineligible, provided he meets all the requirements for such raise in grade. However, a raise in grade of license issued under these circumstances will be subject to the same probationary conditions as were imposed against the seaman's certificates or licenses in proceedings under R. S. 4450, as amended. Any such applicant must file an application for license in the usual manner, and the offense for which he was placed on probation will be considered on the merits of the case in determining his fitness to hold the license applied for. Nothing in the regulations in this part, however, shall be construed to permit an applicant to be examined for a raise in grade of license during any period when a suspension without probation or a revocation imposed pursuant to R. S. 4450, as amended, is effective against his license or certificate.

(g) *Professional examination.* (1) When the amount and character of an applicant's experience for raise of grade is found to be satisfactory and he is eligible in all other respects, he shall be examined in writing by an Officer in Charge, Marine Inspection: *Provided, however*, That upon waters of the United States newly opened to navigation, and where the only pilots obtainable are illiterate Indians or other natives, the fact that such persons can neither read nor write shall not be considered a bar to such Indians or other natives receiving a raise in grade of license as pilot if they are otherwise qualified therefor.

(Interpret or apply R.S. 4447, as amended, sec. 5, 49 Stat. 1935, as amended, sec. 302, 49 Stat. 1992, as amended, 46 U.S.C. 233, 672a, 1132)

§ 10.02–9 Requirements for renewal of license.

(a) *Duty of applicants.* Applicants for renewals of licenses are charged with the duty of establishing to the satisfaction of the Coast Guard that they possess all of the qualifications necessary before they shall be issued a renewal of license.

(1) *Written application.* The Officer in Charge, Marine Inspection, shall, before granting renewal of a license, require the applicant to make written application on Coast Guard Form CG–3479.

(b) *Application for renewal.* The applicant for renewal shall appear in person before an Officer in Charge, Marine Inspection, except as provided in paragraph (g) of this section.

(c) *Fitness.* No license shall be renewed if title has been forfeited or facts which would render a renewal improper have come to the attention of the Coast Guard.

(d) *Period of grace.* (1) A license shall be renewed within 12 months after the date of expiration as shown on the license held, except when applicant's license has expired beyond the 12 month period of grace during the time of the holder's service with the Armed Forces or the Merchant Marine and there was no reasonable opportunity for renewal. The period of such service following the date of expiration as shown on the license shall be added to the 12 month period of grace.

(2) No license shall be renewed more than 90 days in advance of the date of expiration thereof, unless there are extraordinary circumstances that justify a renewal beforehand, in which case the reasons therefor must appear in detail upon the records of the Officer in Charge, Marine Inspection, renewing the license.

(e) *Masters', mates', or pilots' licenses.* (1) Every Officer in Charge, Marine Inspection, shall, before renewing an existing license to a master, mate, or pilot who has served under the authority of his license within the three years next preceding the date of application for renewal, or who has been employed in a position closely related to the operation of vessels during the same three year period, require that such licensed officer present an affidavit that he has read within the three months next preceding the date of application the Rules of the Road applicable to the waters for which he is licensed and demonstrate his knowledge of the application of the Rules of the Road.

(2) Every Officer in Charge, Marine Inspection, shall, before renewing an existing license to a master, mate, or pilot who has not served under the authority of his license within the three years next preceding the date of application for renewal, or who has not been employed in a position closely related to the operation of vessels during the same three year period, satisfy himself that such licensed officer is thoroughly familiar with the Rules of the Road applicable to the waters for which he is licensed. A written examination may be required for this purpose, or the applicant may be examined orally and a summary of the oral examination placed in the officer's

license file. In the event a candidate fails the examination, the provisions of § 10.02–19 shall apply, except in the event of subsequent failures the applicant may be re-examined after a lapse of one month from the date of the last failure.

(f) *Physical requirements.* (1) No license as master, mate, or pilot shall be renewed except upon the official certificate of a medical officer of the United States Public Health Service that the color sense of the applicant is normal. Applicants for renewal of license as engineer shall not be subject to examination as to ability to distinguish colors.

(2) The color sense will be tested by means of a pseudo-isochromatic plate test, but any applicant who fails this test will be eligible if he can pass the "Williams" lantern test or equivalent. A person failing the pseudoisochromatic plate test shall, if the Public Health Service Station at which he is undergoing test is not equipped with a lantern, pay his own expenses to travel to such station as is equipped with same.

(3) In the event an applicant for renewal of license as master, mate, or pilot is pronounced color blind, the Officer in Charge, Marine Inspection, may grant him a license limited to service during daylight only.

(4) In the event it is found that an applicant for renewal of license obviously suffers from some physical or mental infirmity to a degree that, in the opinion of the Officer in Charge, Marine Inspection, would render him incompetent to perform the ordinary duties of an officer at sea, the applicant shall be required to undergo an examination by a medical officer of the Public Health Service to determine his competency. If the applicant subsequently produces a certificate from the Public Health Service to the effect that his condition has improved to a satisfactory degree, or is normal, he shall be qualified in this respect.

(5) Nothing contained in this section shall debar an applicant who has lost the sight of one eye from securing a renewal of his license, provided he is qualified in all other respects, and the vision in his one eye passes the test required for the better eye of an applicant possessed of both eyes.

(6) In exceptional cases where an applicant would be put to great inconvenience or expense to appear before a medical officer of the United States Public Health Service, the physical examination or certification may be made by another reputable physician.

(g) *Renewal by mail.* Where an applicant for renewal would be put to great inconvenience or expense to appear in person before an Officer in Charge, Marine Inspection, or is engaged in a service that necessitates his continuous absence from the United States, his existing license may be renewed by forwarding the following documents to the Officer in Charge, Marine Inspection, of the office which issued the license to be renewed:

(1) A letter of transmittal indicating reasons for not appearing in person and stating to the best of his knowledge no physical incapacity exists, together with a properly executed application on Coast Guard Form CG–3479;

(2) The oath of office on the form prescribed by the Coast Guard which has been duly executed before a person authorized to administer oaths;

(3) The license to be renewed; and,

(4) In the case of the renewal of a master's, mate's, or pilot's license:

(i) Certification by a United States Public Health Service Medical Officer or other reputable physician that color sense is normal; and,

(ii) Documentary evidence of service under authority of license within the three years next preceding the date of application or evidence of employment in a position closely related to the operation of vessels within the same three year period, together with an affidavit that the applicant has read within the three months next preceding the date of application the Rules of the Road applicable to the waters for which he is licensed and demonstration of his knowledge of the application of the Rules of the Road.

(h) *Reissue of expired license.* (1) Whenever an applicant shall apply for renewal of his license for the same grade, after 12 months after date of its expiration, he shall be required to pass an examination for the same grade of license, of such length and scope as will, in the judgment of the Officer in Charge, Marine Inspection, be sufficient to demonstrate adequately the continued professional knowledge of the examinee, except no professional examination will be required provided the license expired during the time of the holder's service with the armed forces or the merchant marine, and there was no reasonable opportunity for renewal. The Officer in Charge, Marine Inspection may require a written examination for this purpose.

(2) The renewed license shall receive the next higher number of issue of present grade and for the number of issue of all grades.

(R.S. 4447, as amended, 46 U.S.C. 233, sec. 5, 49 Stat. 1935, sec. 302, 49 Stat. 1992; 46 U.S.C. 672a, 1132)

§ 10.02–13 Sea service as a member of the Armed Forces of the United States and on vessels owned by the United States as qualifying experience.

(a) Sea service as a member of the Armed Forces of the United States will be accepted as qualifying experience for an original, raise of grade, or extension of route of license. Such service will be subject to evaluation by the Commandant to determine its equivalence to sea service required on merchant vessels and to determine the appropriate grade, class, and limit of license for which the applicant is eligible. The regulations governing the licensing of merchant marine personnel which are in effect on the date an applicant presents himself for examination shall be applicable in all cases.

(b) When any person who has served in a civilian capacity as commanding officer, master, mate, engineer, or pilot, etc., of any vessel owned and operated by the United States, in any service, in which a license as master, mate, engineer, or pilot was not required at the time of such service applies for an examination for license, the Officer in Charge, Marine Inspection, shall forward the application, together with his comments, to the Commandant for evaluation.

§ 10.02–15 Lifting of limitations.

(a) If any Officer in Charge, Marine Inspection, is satisfied by the documentary evidence submitted that an applicant is entitled by experience and knowledge to an increase in the scope of his license, he may change any limitations which he may have previously placed upon the license.

(b) No Officer in Charge, Marine Inspection, may change on any license a limitation which he did not place thereon before full information regarding the reason for the limitation is obtained from the Officer in Charge, Marine Inspection, responsible for the same and the applicant has made up any deficiency in the experience required.

(c) No limitation on any license may be changed before the applicant has made up any deficiency in the experience prescribed for the license desired and passed the necessary examination.

§ 10.02–19 Reexaminations and refusal of licenses.

(a) Any applicant for license or indorsement who has been duly examined and refused may come before the same Officer in Charge, Marine Inspection, for reexamination at any time thereafter that may be fixed by such Officer in Charge, Marine Inspection, but such time shall not be less than 1 month from the date of his last failure. In the case of another failure, he will not be reexamined until after a lapse of at least 6 months from date of last failure.

(b) A candidate who has been duly examined and refused a license by an Officer in Charge, Marine Inspection, shall not be examined by any other Officer in Charge, Marine Inspection, until 1 year has elapsed from the date of the last refusal without the sanction of the Officer in Charge, Marine Inspection, that refused the applicant.

(c) If the Officers in Charge, Marine Inspection, refuse to grant an applicant the license applied for, they shall furnish him a statement setting forth the cause of their refusal.

§ 10.02–21 Laws, general rules and regulations, and Rules of the Road to be furnished licensed officers.

(a) Every master, mate, pilot, and engineer of vessels, when receiving an original license, a renewed license, or a raise of grade of license, shall be furnished at his request with a copy of the "Laws Governing Marine Inspection" and a copy of each of the "Rules and Regulations for Vessel Inspection" distributed by the Coast Guard pertinent to the license issued.

(b) Every master, mate, and pilot of vessels and motorboat operator, when receiving an original license, a renewed license, or a raise of grade of license,

shall be furnished at his request with a copy of the "Rules of the Road" applicable to the waters for which his license has been issued.

§ 10.02–23 Issuance of duplicate license.

(a) Whenever a person to whom a license has been issued loses his license, he shall report such loss to an Officer in Charge, Marine Inspection, who shall issue a duplicate license after receiving from such person a properly executed affidavit giving satisfactory evidence of such loss, and a record of the license from the Marine Inspection Office where it was issued. Such license shall be issued as a duplicate by the addition of the following typewritten indorsement, "This license replaces License Number ____ issued at _____ on the above date," as well as the port and date of the duplicate issue. The duplicate license, issued for the unexpired term, shall have the same force and effect as the lost license.

(b) When a person reports the loss of his license, or when it is discovered that any license or license form has been stolen from a Marine Inspection Office or when such lost or stolen licenses are recovered, the Officer in Charge, Marine Inspection, shall immediately report the loss, theft, or recovery to the Commandant giving a description of the license and all facts incident to its loss, theft, or recovery.

§ 10.02–25 Parting with license.

If the holder of any license granted to a master, mate, engineer, or pilot, voluntarily parts with it or places it beyond his personal control by pledging or depositing it with any other person for any purpose, he may be proceeded against in accordance with the provisions of R. S. 4450, as amended, looking to a suspension or revocation of his license.

§ 10.02–29 Suspension and revocation of licenses.

(a) When the license of any master, mate, engineer, or pilot is revoked such license expires with such revocation and any license of the same type subsequently granted to such person shall be considered in the light of an original license except as to number of issue.

(b) No person whose license has been suspended or revoked shall be issued another license except upon approval of the Commandant.

(c) When a license which is about to expire is suspended, the renewal of such license may be withheld until the expiration of the period of suspension.

(R.S. 4450, as amended, sec. 2, 68 Stat. 484; 46 U.S.C. 239, 239b. Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

§ 10.02–33 Right of appeal.

Whenever any person directly interested in or affected by any decision or action of any Officer in Charge, Marine Inspection, shall feel aggrieved by such decision or action with respect to the issuance of a license or a certificate, he may appeal therefrom to the District Coast Guard Commander having jurisdiction. A like appeal shall be allowed from any decision or action of the District Coast Guard Commander to the Commandant, whose action shall be final. Such appeals shall be made in writing within 30 days after the date of decision or action appealed from. Pending the determination of the appeal the decision of the Officer in Charge, Marine Inspection, shall remain in effect.

Subpart 10.05—Professional Requirments for Deck Officers' Licenses (Inspected Vessels)

AUTHORITY: The provisions of this Subpart 10.05 interpret or apply R.S. 4417a, as amended, 4426, as amended, 4427, as amended, 4438, as amended, 4438a, as amended, 4439, as amended, 4440, as amended, 4442, as amended, 4443, as amended, 4445, as amended, sec. 1, 34 Stat. 1411, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 3, 70 Stat. 152, and sec. 3, 68 Stat. 675; 46 U.S.C. 391a, 404, 405, 224, 224a, 226, 228, 214, 230, 231, 233, 225, 237, 367, 390b, 50 U.S.C. 198. Treasury Department Order 167–14, November 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894, unless otherwise noted.

§ 10.05–1 Ocean licenses qualifying for all waters.

Any license issued for service as master or mate on ocean vessels shall qualify the licensee to serve in the same grade on any waters subject to the limitations of the license and without additional indorsement other than for pilot routes as may be required on the particular waters.

§ 10.05–3 Master of ocean steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as master of ocean steam or motor vessels is:

(1) One year's service as chief mate of ocean steam or motor vessels of 1,000 gross tons or over; or,

(2) One year's service as chief mate of coastwise steam or motor vessels of 2,000 gross tons or over; or,

(3) Two years' service as second mate of ocean steam or motor vessels of 1,000 gross tons or over while holding a license as chief mate of such vessels; or,

(4) Two years' service as second mate of coastwise steam or motor vessels of 2,000 gross tons or over while holding a license as chief mate of such vessels; or,

(5) One year's service as master of coastwise steam or motor vessels of 2,000 gross tons or over; or,

(6) Two years' service as master of ocean or coastwise sail vessels of 700 gross tons or over, for license as master of freight or towing steam or motor vessels of not more than 3,000 gross tons; or,

(7) Three years' service as master of steam or motor vessels of 4,000 gross tons or over, except ferry vessels, on the Great Lakes, together with 1 year's service as second mate of ocean steam or motor vessels of 1,000 gross tons or over; or,

(8) Two years' service as licensed master of ocean or coastwise steam or motor vessels, or as licensed ocean operator of inspected, mechanically propelled passenger-carrying vessels operating on limited ocean or coastwise routes, for a license as master of ocean steam or motor passenger vessels not to exceed 300 gross tons.

§ 10.05–5 Master of coastwise steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as master of coastwise steam or motor vessels is:

(1) One year's service as chief mate of ocean or coastwise steam or motor vessels; or,

(2) Two years' service as second mate of ocean or coastwise steam or motor vessels while holding a license as chief mate of ocean or coastwise steam or motor vessels; or,

(3) Two years' service as master of Great Lakes or lake, bay or sound steam or motor vessels of 500 gross tons or over, except ferry vessels, together with 6 months' service as chief mate or 12 months' service as second mate of ocean or coastwise steam or motor vessels, while holding license as master of such Great Lakes or lake, bay or sound vessels; or,

(4) Five years' service on ocean or coastwise sail vessels of 200 gross tons or over, 2 years of which service shall have been as master of such vessels, for license as master of coastwise freight and towing vessels of not over 750 gross tons; or,

(5) One year's service as a licensed master of ocean or coastwise sail vessels of 700 gross tons or over for a lisense as master of coastwise freight or towing vessels of not more than 3,000 gross tons; or,

(6) Two years' service as master or first-class pilot of Great Lakes or lake, bay or sound towing steam or motor vessels of 150 gross tons or over, for license as master of coastwise towing vessels of 750 gross tons or under; or,

(7) Two years' service as master of steam vessels of 1,000 gross tons or over, except ferry vessels, on the Great Lakes and other lakes, bays, or sounds, for license as master of coastwise vessels on routes not exceeding 300 miles; or,

(8) Two years' service as a licensed master of steam or motor vessels of 250 gross tons or over, engaged in the ocean or coastwise fisheries, for license as master of coastwise freight or towing vessels of not more than 750 gross tons; or,

(9) One year's service as licensed master of ocean or coastwise steam or motor vessels, or as licensed ocean operator of inspected, mechanically propelled passenger-carrying vessels operating on limited ocean or coastwise routes, for a license as master of coastwise steam or motor passenger vessels, not to exceed 300 gross tons and limited to the Atlantic, Gulf of Mexico or Pacific Coast of the United States, according to the documented qualifying experience of the applicant.

(b) The minimum service required to qualify an applicant for a license as master of motor vessels of not more than 300 gross tons, operated in connection with the offshore mineral and oil industries, limited to a stated distance offshore on the continental shelf of the Atlantic, Gulf or Pacific Coast of the United States, as determined by the Commander of the District in which the license is issued, is:

(1) One year as a licensed mate of mineral or oil industry vessels; or,

(2) One year as a licensed master or first-class pilot of inland steam or motor vessels, plus 1 year in the deck department of coastwise vessels or mineral or oil industry vessels; or,

(3) Two years' service as a licensed master of ocean or coastwise uninspected vessels; or,

(4) Three years' service in the deck department of ocean or coastwise vessels of which at least one year shall have been as master or person in charge of vessels of at least 50 gross tons. If the required service as master or person in charge has been on vessels of more than 15 and less than 50 gross tons, the service may be accepted as qualifying experience for a license as master of vessels of not more than 100 gross tons.

§ 10.05–7 Master of ocean or coastwise sail vessels.

(a) The minimum service required for a license as master of ocean or coastwise sail vessels of 100 gross tons and over is listed in this paragraph. In order to be eligible for an unlimited license, an applicant must have acquired all of his qualifying service on vessels of 500 gross tons or over.

(1) One year's service as a licensed master of ocean or coastwise uninspected sail vessels; or,

(2) Two years' service as master of ocean or coastwise sail vessels of 100 gross tons or over; or,

(3) One year's service as a licensed master of ocean or coastwise auxiliary sail vessels; or,

(4) Two years' service as a licensed mate of ocean or coastwise uninspected sail vessels; or,

(5) Two years' service as a licensed ocean operator of ocean or coastwise sail vessels carrying passengers; or,

(6) Five years' service in the deck department of ocean or coastwise sail vessels, of which at least 1 year shall have been as mate.

(b) An applicant who submits satisfactory documentary evidence that he has served as master of ocean or coastwise sail vessels of 100 gross tons or over for a period of at least 1 year, prior to June 1, 1958, shall be eligible without professional examination for a license as master of ocean or coastwise sail vessels of 100 to 700 gross tons, commensurate with his experience: *Provided*, That such applicant for a license under the provisions of this paragraph shall fulfill all requirements, other than professional examination, for an original license, including citizenship, physical examination, character and U. S. Public Health Service First Aid Certificate: *And provided further*, That 6 months of the required 1 year of experience shall have been within the 3 years immediately preceding the date of application. Application for the issuance of licenses under the provisions of this paragraph must be filed within a period of 1 year after June 1, 1958. However, if the applicant can show that because of active military service, he was unable to obtain 6 months' service within the past 3 years or to file application within the 1 year period provided, the actual time spent in military service shall not be counted in computing either the 3-year period or the 1-year period specified in this paragraph.

§ 10.05–9 Master of ocean or coastwise steam or motor yachts.

The minimum service required to qualify an applicant for license as master of ocean or coastwise steam or motor yachts requiring licensed officers is 3 years' service in the deck department on ocean or coastwise steam, motor, or sailing yachts, of over 100 gross tons.

§ 10.05–11 Master, mate, or pilot of steam or motor vessels operating under special conditions.

(a) This section shall apply to every applicant for a license as master, mate, or pilot of steam pilotboats or seagoing motor pilotboats of 300 gross tons or over; or of steam vessels navigating the waters of the whaling grounds in the Alaskan Seas; or of steam vessels engaged exclusively in the business of whale fishing; or of steam vessels engaged in the Atlantic, Pacific, or Gulf Coast fisheries; or of steam or sail vessels navigating exclusively between ports in the Hawaiian Islands; or of steam or sail vessels or seagoing motor vessels of 300 gross tons or over navigating exclusively between ports of the Island of Puerto Rico.

(b) For original license as master, at least 3 years' experience in the deck department of such vessels is required.

(c) For original license as mate, at least 2 years' experience in the deck department of such vessels is required.

(d) Any person who has had at least 5 years' experience on sail vessels licensed in the fisheries of the United States, 2 years of which have been as master or mate of such sailing vessels, shall be eligible for a license as master or mate of steam fishing vessels to be employed exclusively in the Atlantic, Pacific, and Gulf coast fisheries.

(e) Any applicant for original license who has had 3 years' experience in the deck department on steam or motor pilot boats or who has had 2 years' experience in the deck department on steam or motor pilot boats and 1 year's experience on sail pilot boats, shall be eligible for license as mate of steam or motor pilot boats of 300 gross tons or over.

(f) Any master's or mate's license issued under this section may be endorsed as pilot on such inland waters on the coasts stated in his license as the appropriate Officer in Charge, Marine Inspection, may find the holder qualified to act on as pilot.

(g) An applicant for a master's license of seagoing vessels propelled by internal combustion engines, navigating exclusively between ports in the Hawaiian Islands, shall submit with his application statements duly executed and certified by reputable citizens qualified to judge the character, trustworthiness, and ability of the applicant.

(h) The Officer in Charge, Marine Inspection, shall make a diligent inquiry as to the applicant's character and merits, and if satisfied by the oral examination or practical demonstration and the proof of requisite knowledge and skill offered, the Officer in Charge, Marine Inspection, shall issue the license. No certificate from the United States Public Health Service based upon the subject of ship sanitation and first aid shall be required of such an applicant.

§ 10.05–13 Master of Great Lakes steam and motor vessels.

(a) The minimum service required to qualify an applicant for a license as master is listed in this paragraph. In order to be eligible for an unlimited license, an applicant must have acquired his service on vessels of 4,000 gross tons or over, except as specified in this section.

(1) One year's service as first class pilot while acting in the capacity of first mate on Great Lakes steam or motor vessels; or,

(2) Two years' service as first class pilot while acting in the capacity of second mate on Great Lakes steam or motor vessels; or,

(3) Four years' service as first class pilot on Great Lakes steam or motor vessels, one year of which shall have been while acting in the capacity of second mate; or,

(4) One year's service as master of Great Lakes steam or motor vessels of 150 gross tons or under while acting under the authority of a first class pilot's license, for a license as master of Great Lakes steam and motor vessels of not over 1,000 gross tons; or,

(5) One year's service as master and/or first class pilot on lakes, bays and sounds steam or motor towing vessels, together with 1 year of service as first class pilot on Great Lakes vessels of over 100 gross tons, for a license as master of Great Lakes towing vessels of not over 750 gross tons.

§ 10.05–15 Master of bays, sounds, and lakes other than the Great Lakes, steam and motor vessels.

(a) The minimum service required to qualify an applicant for license as master of steam and motor vessels on bays, sounds and lakes other than the Great Lakes is:

(1) One year's service as first-class pilot of steam and motor vessels on bays, sounds and lakes other than the Great Lakes; or,

(2) One year's service as mate of steam and motor vessels on bays, sounds and lakes other than the Great Lakes; or,

(3) One year's service as master of steam or motor vessels of 150 gross tons or under on bays, sounds and lakes other than the Great Lakes, while acting under the authority of a first-class pilot's license, for a license as master of bays, sounds and lakes other than the Great Lakes, steam or motor vessels of a tonnage commensurate with the experience of the applicant, but of not more than 500 gross tons; or,

(4) Two years' service in the deck department of steam or motor vessels on bays, sounds and lakes other than the Great Lakes, while holding a license as first-class pilot for bays, sounds and lakes other than the Great Lakes, as quartermaster or wheelsman for a license as master of steam and motor freight and towing vessels on bays, sounds and lakes other than the Great Lakes, limited to a gross tonnage commensurate with the experience of the applicant, but not more than 500 gross tons.

§ 10.05–17 Master of river steam or motor vessels.

The minimum service required to qualify an applicant for a license as master of steam or motor vessels navigating rivers exclusively is at least 3 years' service in the deck department of steam or motor vessels: *Provided*, That, 1 year of such service shall have been as licensed mate or pilot of steam or motor vessels, and, 1 year shall have been on river steam or motor vessels.

§ 10.05–19 Master of ferry steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as master of ferry steam or motor vessels on either the Great Lakes, other lakes, bays, and sounds, or rivers is:

(1) One year's service as first-class pilot; or,

(2) Two years' service as wheelsman or quartermaster while holding a first-class pilot's license; or,

(3) Two years' service in charge of a steam or motor vessel of 150 gross tons or under while acting under the authority of a pilot's license.

§ 10.05–21 Master or pilot of steam yachts.

The minimum service required to qualify an applicant for license as master or pilot of steam yachts on either the Great Lakes, other lakes, bays, and sounds, or rivers is 3 years' service in the deck department on board Great Lakes, other lakes, bays, and sounds, or river steam, motor, or sailing yachts.

§ 10.05–23 Master of passenger barges.

The minimum service required to qualify an applicant for license as master of barges carrying passengers on either the Great Lakes, other lakes, bays, and sounds, or rivers is 3 years' service in the deck department of such vessels.

§ 10.05–25 Chief mate of ocean steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as chief mate of ocean steam or motor vessels is:

(1) One year's service as second mate of ocean steam or motor vessels of 1,000 gross tons or over; or,

(2) One year's service as second mate of coastwise steam or motor vessels of 2,000 gross tons or over; or,

(3) Two years' service as officer in charge of a deck watch on ocean steam or motor vessels of 1,000 gross tons or over while holding a license as second mate of such vessels; or,

(4) Two years' service as officer in charge of a deck watch on coastwise steam or motor vessels of 2,000 gross tons or over while holding a license as second mate of such vessels; or,

(5) Two years' service as master of Great Lakes or other lakes, bay, or sound steam or motor vessels of 1,000 gross tons or over except ferry vessels, together with 1 year's service as officer in charge of a deck watch on ocean steam or motor vessels of 1,000 gross tons or over, or together with 1 year of such service on coastwise steam or motor vessels of 2,000 gross tons or over; or,

(6) Five years' service in the deck department of ocean or coastwise sail vessels of 200 gross tons or over, 2 years of such service shall have been as master of such vessels, for license as chief mate of ocean freight or towing vessels of not more than 3,000 gross tons; or,

(7) One year's service as master of any class of ocean steam or motor vessels of more than 250 gross tons for license as chief mate of ocean freight or towing vessels of not more than 1,500 gross tons; or,

(8) One year's service as mate of inspected ocean or coastwise vessels while holding an unlimited license as 3rd mate of ocean steam or motor vessels for a license as chief mate of ocean vessels of less than 1600 gross tons.

§ 10.05–27 Chief mate of coastwise steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as chief mate of coastwise steam or motor vessels is:

(1) One year's service as second mate of ocean or coastwise steam or motor vessels of 1,000 gross tons or over; or,

(2) Two years' service as officer in charge of a deck watch on ocean or coastwise steam or motor vessels of 1,000 gross tons or over while holding license as second mate of ocean or coastwise steam or motor vessels; or,

(3) One year's service as master or first-class pilot of Great Lakes or other lakes, bay, or sound steam or motor vessels of 500 gross tons or over, except ferry vessels, together with 1 year's service as officer in charge of a deck watch on ocean or coastwise steam or motor vessels of 1,000 gross tons or over, while holding license as such master or first-class pilot; or,

(4) Two years' service as master or first-class pilot of Great Lakes or other lakes, bay, or sound towing vessels for license as chief mate of coastwise towing vessels of 750 gross tons or under; or,

(5) One year's service as a licensed master or 2 years' service as a licensed mate on ocean or coastwise steam or motor vessels of 250 gross tons or over engaged in the ocean or coastwise fisheries, for license as chief mate of coastwise freight or towing vessels of 1,000 gross tons or under; or,

(6) Five years' service in the deck department of any ocean or coastwise sail vessel of 100 gross tons or over, 2 years of such service shall have been as master of such vessels, for license as chief mate of freight or towing vessels of 1,000 gross tons or under; or,

(7) Two years' service as first-class pilot, or 2 years' combined service as master and first-class pilot of steam or motor vessels of 1,000 gross tons or over, except ferry vessels, on the Great Lakes and other lakes, bays, and sounds, for license as chief mate of coastwise vessels on routes not exceeding 300 miles; or,

(8) Three years' service in the deck department of ocean or coastwise steam or motor vessels for license as chief mate of coastwise steam or motor vessels of not more than 500 gross tons.

§ 10.05–28 Mate of motor vessels engaged in offshore mineral and oil industries.

(a) The minimum service required to qualify an applicant for a license as mate of motor vessels of not more than 300 gross tons, operated in connection with the offshore mineral and oil industries, limited to a stated distance offshore on the continental shelf of the Atlantic, Gulf or Pacific Coast of the United States, as determined by the Commander of the District in which the license is issued, is:

(1) Two years' service as a licensed officer in charge of a deck watch on mineral or oil industry vessels, or

(2) One year's service as master or first-class pilot of inland steam or motor vessels plus six months in the deck department of coastwise vessels or mineral or oil industry vessels, or

(3) One year's service as a licensed master or two years' service as a licensed mate of ocean or coastwise uninspected vessels, or

(4) Three years' service in the deck department of ocean or coastwise steam or motor vessels, including mineral and oil industry vessels.

§ 10.05–29 Second mate of ocean steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as second mate of ocean steam or motor vessels is listed in this paragraph. In order to be eligible for an unlimited ocean license, an applicant must have obtained his service on ocean or coastwise vessels of 1,000 gross tons or over.

(1) One year's service as officer in charge of a deck watch on ocean or coastwise steam or motor vessels while holding a license as third mate; or,

(2) Six months' service as second mate of coastwise steam or motor vessels; or,

(3) Five years' service in the deck department of ocean or coastwise steam or motor vessels of 1,000 gross tons or over, 2 years of which shall have been as boatswain or quartermaster while holding a certificate as able seaman; or,

(4) One year's service as first-class pilot of steam or motor vessels of 4,000 gross tons or over, except ferry vessels, on the Great Lakes or other lakes, bays, or sounds, together with 6 months' service in the deck department of ocean steam or motor vessels of 1,000 gross tons or over, while holding a license as such first-class pilot; or,

(5) Two years' service as assistant (junior officer of the watch) to the officer in charge of the watch on ocean steam or motor vessels, while holding a license as third mate of such vessels; or,

(6) Four years' service in the deck department of ocean or coastwise sail vessels of 200 gross tons or over, 1 year of such service shall have been as second mate of such sail vessels.

§ 10.05–31 Second mate of coastwise steam or motor vessels.

(a) The minimum service required to qualify an applicant for license as second mate of coastwise steam or motor vessels is:

(1) One year's service as officer in charge of a deck watch on ocean or coastwise steam or motor vessels while holding a license as third mate; or,

(2) Five years' service in the deck department of ocean or coastwise steam or motor vessels, 2 years of which shall have been as boatswain or quartermaster; or,

(3) One year's service as first-class pilot of steam or motor vessels of 2,500 gross tons or over, except ferry vessels, on the Great Lakes or other lakes, bays, or sounds, together with 6 months' service in the deck department of ocean or coastwise steam or motor vessels of 1,000 gross tons or over, while holding a license as such first-class pilot; or,

(4) Two years' service as assistant (junior officer of the watch) to the officer in charge of the watch on ocean steam or motor vessels, while holding a license as third mate of such vessels; or,

(5) One year's service as a licensed mate on ocean or coastwise steam or motor vessels of 150 gross tons or over engaged in the fisheries, for license as second mate of towing vessels.

§ 10.05–33 Third mate of ocean steam or motor vessels.

(a) The minimum service or training required to qualify an applicant for license as third mate of ocean steam or motor vessels is listed in this paragraph. In order to be eligible for an unlimited ocean license, an applicant must have obtained his service on ocean or coastwise vessels of 1,000 gross tons or over.

(1) Three years' service in the deck department of ocean or coastwise steam or motor vessels, 6 months of which shall have been as able seaman, boatswain, or quartermaster while holding a certificate as able seaman; or,

(2) Six months' service as third mate of coastwise steam or motor vessels; or,

(3) Graduation from:

(i) The U. S. Merchant Marine Academy (deck);

(ii) The deck class of a nautical schoolship approved by and conducted under rules prescribed by the Commandant and listed in Part 166 of Subchapter R (Nautical Schools) of this chapter;

(iii) The U. S. Naval Academy; or,

(iv) The U. S. Coast Guard Academy; or,

(4) Satisfactory completion of the prescribed course (deck) at a U. S. Maritime Service or other Government operated training school, approved by the Commandant, may be accepted as the equivalent of sea service up to a maximum of 4 months: *Provided*, The applicant has obtained the additional qualifying experience prior to enrollment; or,

(5) One year's service as second-class pilot of steam or motor vessels of 4,000 gross tons or over, except ferry vessels, on the Great Lakes or other lakes, bays, or sounds, together with 6 months' service in the deck department of ocean steam or motor vessels of 1,000 gross tons or over, while holding a license as such second-class pilot; or,

(6) Three years' service in the deck department of steam or motor vessels on the Great Lakes, other lakes, bays, or sounds, or rivers, together with 1 year's service in the deck department of ocean steam or motor vessels, 6 months of which shall have been as able seaman, boastwain, or quartermaster while holding a certificate as able seaman; or,

(7) Three years' service in the deck department of steam or motor vessels of 100 gross tons or over engaged in the ocean or coastwise fisheries, together with 6 months' service as able seaman, boatswain, or quartermaster on ocean steam or motor vessels, while holding a certificate as able seaman.

§ 10.05–35 Third mate of coastwise steam or motor vessels.

(a) The minimum service or training required to qualify an applicant for license as third mate of coastwise steam or motor vessels is:

(1) Three years' service in the deck department of ocean or coastwise steam or motor vessels, 6 months of which shall have been as able seaman; or,

(2) One year's service as second-class pilot of steam or motor vessels of 2,500 gross tons or over, except ferry vessels, on the Great Lakes or other lakes, bays, or sounds, together with 6 months' service in the deck department of ocean or coastwise steam or motor vessels of 1,000 gross tons or over, while holding a license as such second-class pilot; or,

(3) Two years' service in the deck department of steam or motor vessels on the Great Lakes or other lakes, bays, or sounds, together with 2 years' service in the deck department of ocean or coastwise steam or motor vessels, 6 months of which shall have been as able seaman; or,

(4) Two years' service in the deck department of steam or motor vessels of 100 gross tons or over engaged in the ocean or coastwise fisheries, or any sail vessel of 100 gross tons or over, together with 1 year's service in the deck department of ocean or coastwise steam or motor vessels, 6 months of which shall have been as able seaman; or,

(5) Three years' service in the deck department of ocean or coastwise steam, motor, or sail vessels of less than 100 gross tons, together with 1 year's service in the deck department of ocean or coastwise steam or motor vessels, 6 months of which shall have been as able seaman.

§ 10.05–37 Mate of inland or river steam or motor vessels.

The minimum service required to qualify an applicant for license as mate of Great Lakes, other lakes, bays, or sounds, or river steam or motor vessels is at least 2 years' service in the deck department of steam, motor, or sail vessels, or barge consorts, 6 months of which service shall have been on steam or motor vessels.

§ 10.05–39 Pilot.

(a) *General.* An applicant for an original license as pilot may be given credit for experience on motor vessels of a class not subject to inspection by the Coast Guard and not required to carry a licensed master or a licensed pilot.

(1) An applicant for an original pilot's license, endorsement as pilot or an extension of pilot's route shall furnish discharges, letters or other satisfactory documentary evidence, certifying to the names of the vessels, the periods of service, the dates and number of round trips made and the capacity in which the applicant served. Photostatic copies of such letters and documents may be accepted for filing with the application.

(b) *Professional requirements.* The minimum service required to qualify an applicant for license as pilot is:

(1) Three years' service in the deck department of ocean, coastwise, Great Lakes or bays, sounds and lakes, other than the Great Lakes, steam or motor vessels, of which 18 months shall have been as able seaman, or service in a capacity at least the equivalent of able seaman. Of the 18 months as able seaman, or equivalent capacity, at least 1 year shall have been on vessels operating on the waters of the class for which pilotage is desired in the capacity of quartermaster, wheelsman, able seaman or equivalent capacity, who stands regular watches at the wheel or in the pilothouse as part of his routine duties; and,

(i) 25 percent of such service shall have been obtained within the three years immediately preceding the date of application; and,

(ii) The required service shall include a minimum number of round trips over the route for which the applicant seeks license as pilot, as may be fixed by the Officer in Charge, Marine Inspection, having jurisdiction (experience on motorboats as defined by statutes may be accepted by the Officer in Charge, Marine Inspection, for license or endorsement as pilot, but such licenses or endorsements shall be limited to a gross tonnage commensurate with such experience, irrespective of any other license or endorsement held by the applicant); and

(iii) One of the required number of round trips shall have been made over the route within the 6 months immediately preceding the date of application; or,

(2) Three years' service in the deck department of any vessel of which at least 1 year shall have been on vessels operating on the waters of rivers while serving in the capacity of quartermaster, wheelsman or deckhand who stands watches at the wheel as part of his routine duties, for license as pilot of river routes. The provisions in subparagraph (1) (i) through (iii) of this paragraph are applicable to this subparagraph.

(3) Two years' service in the deck department of steam or motor vessels navigating canals and small lakes, such as the New York State Barge Canal and Seneca and Cayuga Lakes in the State of New York, 1 year of which shall have been within the 2 years immediately preceding the date of application, for license as pilot of steam and motor vessels of limited tonnage for the waters and/or routes on which the qualifying service was acquired.

(c) *Limitations.* The Officer in Charge, Marine Inspection, issuing a license or endorsement as pilot, shall impose suitable limitations commensurate with the past experience of the applicant, with respect to class of vessels for which valid, tonnage, route and waters.

§ 10.05–41 Pilot of tank vessels of not more than 150 gross tons.

All propelled tank vessels, regardless of length or tonnage, shall be under the command of a person duly licensed and since propelled vessels of less than 150 gross tons may be in command of a licensed pilot, the license of a candidate who successfully passes an examination for this purpose shall be endorsed as follows: "Pilot for tank vessels not more than _____ gross tons on the waters of _____" (the maximum to be inserted is not to exceed 150 gross tons and the waters covered as may be designated by the Officer in Charge, Marine Inspection).

§ 10.05–42 Endorsement of master's or mate's license as pilot or extension of pilot's route.

(a) A master or mate applying for endorsement of his license to act as pilot or a licensed pilot applying for an extension of route, shall make written application on Coast Guard Form CG–866, with documentary evidence of experience acquired by a minimum number of round trips over the particular route or waters for which endorsement or extension of route is desired, as may be required by the Officer in Charge, Marine Inspection, having jurisdiction. One of the required number of round trips shall have been made within the 6 months immediately preceding the date of application. If the applicant is found qualified by experience and written examination as hereafter provided, the endorsement as pilot or extension of route shall be endorsed on his license: *Provided, however,* That upon waters of the United States newly opened to navigation, and where the only pilots obtainable are illiterate Indians or other natives, the fact that such persons can neither read nor write shall not be considered a bar to such Indians or other natives receiving extensions of route of licenses as pilots if they are otherwise qualified.

(b) The holder of a license as master or mate of ocean or coastwise vessels who has had recent satisfactory service under the authority of his license is eligible for examination for endorsement as pilot on any waters upon completing the number of round trips over the route required for his grade of license by the Officer in Charge, Marine Inspection, having jurisdiction, while serving in the capacity of quartermaster, wheelsman or able seaman who stands regular watches at the wheel as part of his routine duties. Experience as an observer, properly certified by the master and/or pilot of the vessel is also acceptable in such cases. An endorsement as pilot granted under these provisions shall be limited to the tonnage and class of vessels for which the holder's license as master or mate is valid except as provided in § 10.05–39(b) (1) (ii).

(c) When an application is made to any Officer in Charge, Marine Inspection, for an extension of route which is outside his jurisdiction he shall request the Officer in Charge, Marine Inspection, having jurisdiction to forward the necessary examination material for examining the applicant. The complete examination file of the applicant shall be returned to the Officer in Charge, Marine Inspection, having jurisdiction, who, if satisfied that the applicant is qualified and capable, shall grant the authority and advise the other Officer in Charge, Marine Inspection, to endorse the license accordingly.

§ 10.05–43 Examination for license as pilot.

(a) An applicant for an original license as pilot or initial endorsement of master's or mate's license as pilot shall be required to pass a satisfactory examination as to his knowledge of the subjects listed in this paragraph:

(1) Rules of the Road.
(2) Inland rules, applicable to route.
(3) Local knowledge of winds, weather, tides, current, etc.
(4) Chart navigation.
(5) Aids to navigation.
(6) Ship handling.
(7) Chart sketch of the route and waters applied for, showing courses, distances, shoals, aids to navigation, depths of water, and other important features of the route.
(8) General: Such further examination as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

(b) An applicant for extension of pilot's route shall be examined on the subjects in subparagraphs (1), (2), (7), and (8) in paragraph (a) of this section only.

§ 10.05–45 Examination for license as deck officer of ocean or coastwise steam, motor or sail vessels.

(a) An applicant for license as deck officer of either ocean or coastwise steam and motor vessels, or sail vessels of 100 gross tons or over, or master of steam and motor yachts, shall pass a satisfactory written examination as to his knowledge of the subjects listed in paragraph (b) of this section. However, if the license to be issued is limited on its face in a manner that would make any of the specific subjects unnecessary or superfluous, the examination should be amended accordingly. Examinations for licenses not incorporated in Table 10.05–45 (b) shall be of suitable scope and character to determine the applicant's proficiency.

(b) List of subjects required:

TABLE 10.05-45 (b)—SUBJECTS FOR DECK OFFICERS OF OCEAN OR COASTWISE STEAM OR MOTOR VESSELS

Subjects	Master				Chief mate		Second mate		Third mate		Mate—Limited mineral and oil industry
	Ocean	Coastwise	Yachts	Limited mineral and oil industry	Ocean	Coastwise	Ocean	Coastwise	Ocean	Coastwise	
1. Latitude by Polaris	X	X			X		X				
2. Latitude by meridian altitude method							Sun or star.	Sun	Sun	Sun	
3. Fix or running fix	Any body	Sun or star.	Any body		Any body	Sun or star.	do	do	do		
4. Star identification (any method)	X	X	X		X	X	X				
5. Chart navigation	X	X	X	X	X	X	X	X	X	X	X
6. Compass deviation	Any body	Sun or star.	Sun		Sun or star.	Sun or star.	Sun or star.	Sun	Sun	Sun	
8. Middle latitude sailing			X					X	X		
9. Mercator sailing	X	X	X			X	X				
10. Great Circle sailing	X										
11. Piloting	X	X	X	X	X	X	X	X	X	X	X
12. Aids to navigation	X	X	X	X	X	X	X	X	X	X	X
13. Speed by revolutions	X	X			X						
14. Fuel conservation	X										
15. Instruments and accessories	X	X	X	X	X	X	X	X	X	X	X
16. Magnetism, deviation and compass compensation	X	X	X	[1] X	X						
17. Chart construction	X	X									
18. Tides and currents	X	X		X	X	X	X	X	X	X	X
19. Ocean winds, weather and currents	X	X	X		X		X		X		
20. Nautical astronomy and navigation definitions	X					X	X		X		[3] X
21. International and inland rules of the road	X	X	X	X	X	X	X	X	X	X	X
22. Signaling by international code flags and flashing light; lifesaving, storm and special signals.	X	X		[2] X	X	X	X	X	X	X	[2] X
23. Stability and ship construction	X	X		X	X	X					
24. Seamanship	X	X	X	X	X	X	X	X	X	X	X
25. Cargo stowage and handling		X		X	X	X	X	X	X		X
26. Change in draft due to density		X			X						
27. Determination of area and volume						X	X				
28. Lifesaving apparatus and firefighting equipment	X	X	X	X	X	X	X	X	X	X	X
29. Ship sanitation	X	X			X						
30. Rules and regulations for inspection of merchant vessels.	X	X	X	X	X	X	X	X	X	X	X
31. Laws governing marine inspection	X	X		X	X	X					
32. Ship's business	X	X		X							
33. Such further examination of a nonmathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.	X	X	X	X	X	X	X	X	X	X	X

[1] Practical use of the magnetic compass. [2] Lifesaving, storm and special signals. [3] Navigation definitions only.

(c) (1) Each applicant for an ocean or coastwise deck license, whether original or raise of grade, shall be required to pass practical tests in signalling. The examination in signalling will consist of an examination in the international flag code and Morse flashing. Candidates will be examined in Morse flashing in groups where practicable.

(2) Candidates shall be able to read a signal at sight, so far as to name the flags composing the hoist; know the use of the code pennant, numeral and substitute pennants, the meaning of all the single letter signals and the flags used to indicate the quarantine signals; be required to signal some word or words not included in the vocabulary of the code; and have a good knowledge of the distress signals. Candidates will be required to attain a speed of six words a minute in Morse flashing. The average length of a word is to be five letters. Candidates who wish to prove their higher proficiency may request to be tested at a minimum speed of ten words a minute in Morse flashing. Such candidates, if successful, will have the results of their examination reported on their official files.

(3) A candidate for license who fails in signalling, but passes in every other subject, will be considered to have failed the examination and shall be so reported; but he may at any time within the six months following his first attempt be reexamined in signalling only, and if he then passes he will be granted a license.

§ 10.05-46 Radar observer.

(a) Every applicant for an original license, raise of grade, or increase in scope of license for service on ocean, coastwise, or Great Lakes vessels of 300 gross tons and over shall be required to demonstrate, by professional examination, his qualifications as a "radar observer."

(b) Applicants for licenses specified in paragraph (a) of this section shall be examined on the following aspects of the proper operation and utilization of marine radar equipment:

(1) Fundamentals of radar:

(i) How radar works.

(ii) Factors affecting the performance and accuracy of marine radar.

(iii) Description of the purpose and functions of the main components that comprise a typical marine radar installation.

(2) Operation and use of radar:

(i) The purpose and adjustment of controls.

(ii) The detection of malfunctioning, false and indirect echoes and other radar phenomena.

(iii) The effect of sea return and weather.

(iv) The limitations of radar resulting from design factors.

(v) Precautions to be observed in performing simple maintenance of radar equipment.

(vi) Range and bearing measurement.

(vii) Effect of size, shape, and composition of ship targets on echo.

(3) Interpretation and analysis of radar information:

(i) Determining the course and speed of another vessel.

(ii) Determining the time and distance of closest point of approach of a crossing, meeting, overtaking or overtaken vessel.

(iii) Detecting changes of course and/or speed of another vessel after its initial course and speed have been established.

(iv) Factors to consider when determining change in course and/or speed of own vessel to prevent collision on the basis of radar observation of another vessel or vessels.

(4) Plotting (any method that is graphically correct may be used):

(i) The principles and methods of plotting relative and true motion.

(ii) Practical plotting problems.

(c) An applicant for a license who fails the "radar observer" examination but passes in every other subject will be considered as having failed the license examination, but he may at any time within 6 months of his failure be reexamined in the "radar observer" subject only; and, if he then passes, he may be granted a license.

(d) A certificate of successful completion of a course of instruction of a Maritime Administration or other Government operated school, approved by the Commandant, is acceptable evidence of the holder's qualification as "radar observer" without the examination specified in paragraph (b) of this section.

(1) The "Radar Observer Schools" listed in this subparagraph are approved. The approval for a particular school shall be effective for all certificates issued on or after the date of the first class held, as set forth in this subparagraph, and will continue in effect until this ap-

proval is suspended, canceled, or modified by proper authority.

(i) Maritime Administration Radar Observer School, c/o Atlantic Coast Director, 45 Broadway, New York, N.Y., 10004. Physical location: 45 Broadway, New York, N.Y., 10004. First class held: November 18, 1957.

(ii) Maritime Administration Radar Observer School, c/o Pacific Coast Director, U.S. Department of Commerce, Maritime Administration, A50 Golden Gate Ave., Box 36073, San Francisco, Calif., 94102. Physical Location: Fort Mason, San Francisco Army Terminal. First class held: March 3, 1958.

(iii) Maritime Administration Radar Observer School, c/o Gulf Coast Director, Masonic Temple Building, 333 St. Charles Street, New Orleans, La., 70100. Physical location, New Orleans Army Terminal. First class held: July 14, 1958.

(2) The course of instruction in the proper operation and utilization of marine radar equipment is approved as given at the U.S. Merchant Marine Academy, Kings Point, N.Y., 11754. This approval shall be effective for all certificates issued to the deck cadets of the U.S. Merchant Marine Academy and attesting to the successful completion of the course in the proper operation and utilization of marine radar equipment on or after July 17, 1959, and will continue in effect until this approval is suspended, canceled, or modified by proper authority.

(3) The course of instruction in the proper operation and utilization of marine radar equipment is approved as given at the U.S. Army Transportation School, Fort Eustis, Va., 24437. This approval shall be effective for all certificates issued to men attesting to the successful completion of the course in the proper operation and utilization of marine radar equipment on or after June 6, 1960, and will continue in effect until this approval is suspended, canceled, or modified by proper authority.

(4) The course of instruction in the proper operation and utilization of marine radar equipment is approved as given at the State University of New York, Maritime College, Fort Schuyler, New York, N.Y., 10065. This approval shall be effective for all certificates issued to the deck cadets of the New York Maritime College which attest to the successful completion of the course in the proper operation and utilization of marine radar equipment on or after November 17, 1960, and will continue in effect until this approval is suspended, cancelled or modified by proper authority.

(5) The course of instruction in the proper operation and utilization of marine radar equipment is approved as given at the Maine Maritime Academy, Castine, Maine, 04421. This approval shall be effective for all certificates issued to the deck cadets of the Maine Maritime Academy which attest to the successful completion of the course of instruction in the proper operation and utilization of marine radar equipment on or after July 2, 1963, and will continue in effect until this approval is suspended, canceled, or modified by the proper authority.

(Sec. 3, 54 Stat. 341, as amended, sec. 2, 68 Stat. 484; 46 U.S.C. 1333, 239b)

§ 10.05–47 Examination for license as master of Great Lakes steam and motor vessels.

(a) An applicant for license as master of Great Lakes steam or motor vessels shall be required to pass a satisfactory examination as to his knowledge of the subjects listed in this paragraph:

(1) Rules of the Road.
(2) Deviation by azimuth of the sun.
(3) Deviation by azimuth of Polaris.
(4) Construction of a deviation table by any method:
(i) Azimuth of sun or Polaris.
(ii) Equidistant bearings of a fixed object.
(iii) Ranges.
(iv) Comparison with a gyro or magnetic compass whose deviation is known.
(5) Distance off by bearings and run.
(6) Distance off by distance-finding stations.
(7) Distance off by visibility of lights.
(8) Speed by revolutions and by observation.
(9) Instruments and accessories used in navigation.
(10) Magnetism, deviation, and compass compensation.
(11) Chart navigation and piloting.
(12) Aids to navigation.
(13) Winds and weather.
(14) Signals; storm, wreck, distress, and special.
(15) Stability and ship construction.
(16) Cargo stowage and handling.
(17) Seamanship.
(18) Temporary repairs to hull and equipment.
(19) Drills and lifesaving apparatus.
(20) Ship sanitation; Rules and Regulations for Vessel Inspection, and Navigation Laws of the United States.
(21) Ship's business.
(22) General.
(23) Practical chart work.
(24) Such further examination of a nonmathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

§ 10.05–49 Examination for license as master of bays, sounds, and lakes other than the Great Lakes steam and motor vessels.

(a) An applicant for license as master of bays, sounds, and lakes other than the Great Lakes steam or motor vessels shall be required to pass a satisfactory examination as to his knowledge of the subjects listed in this paragraph:

(1) Rules of the Road applicable to the waters desired.
(2) Distance off by bearings and run.
(3) Speed by revolutions and by observation of landmarks.
(4) Chart navigation and piloting.
(5) Aids to navigation.
(6) Winds, weather, and current.
(7) Signals; storm, wreck, distress, and special.
(8) Stability and ship construction.
(9) Cargo stowage and handling.
(10) Seamanship.
(11) Temporary repairs to hull and equipment.
(12) Drills and lifesaving apparatus.
(13) Ship sanitation; Rules and Regulations for Vessel Inspection, and Navigation Laws of the United States.
(14) Ship's business.
(15) General.
(16) Practical chart work.
(17) Such further examination of a nonmathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

§ 10.05–51 Examination for license as master of river steam or motor vessels.

(a) An applicant for license as master of river steam or motor vessels shall be required to pass a satisfactory examination as to his knowledge of the subjects listed in this paragraph:

(1) Rules of the Road.
(2) Shiphandling and navigation of river vessels.
(3) Instruments and accessories.
(4) Aids to navigation.
(5) Seamanship.
(6) Ship construction.
(7) Cargo stowage and handling.
(8) Temporary repairs to hull and equipment.
(9) Drills; lifesaving and firefighting equipment and procedures.
(10) Rules and regulations for vessel inspection and navigation laws of the United States; ship sanitation.
(11) Mathematics.
(12) General.
(13) Such further examination of a nonmathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

§ 10.05–53 Examination for license as master of ferry steam or motor vessels.

An applicant for license as master of ferry steam or motor vessels on either the Great Lakes, other lakes, bays, and sounds, or rivers shall be required to pass satisfactorily an examination of such length and scope as will satisfy the Officer in Charge, Marine Inspection, that the applicant is capable of handling and navigating such vessels.

§ 10.05–55 Examination for license as master or pilot of yachts on the Great Lakes, other lakes, bays, and sounds, or rivers.

An applicant for license as master or pilot of yachts on either the Great Lakes, other lakes, bays, and sounds, or rivers, shall be required to pass a satisfactory examination as to his knowledge in handling such vessels, and his familiarity with the lights, lighthouses, channels, buoys, obstructions, courses, and distances between certain points in the waters for which he makes application for license. He shall also be examined regarding his knowledge of the Rules of the Road for such waters, the running and anchor lights, fog signals, the use of the lead, signal bells between engine-room and pilothouse, the General Rules

and Regulations for Vessel Inspection, and such further examination of a non-mathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

§ 10.05–57 Examination for license as master of passenger barges on the Great Lakes, other lakes, bays, and sounds, or rivers.

An applicant for license as master of passenger barges on the Great Lakes, other lakes, bays, and sounds, or rivers shall be required to pass satisfactorily an examination of such length and scope as will satisfy the Officer in Charge, Marine Inspection, that the applicant is capable of handling the class of vessel for which he desires a license.

§ 10.05–59 Examination for license as mate of inland or river steam or motor vessels.

An applicant for license as mate of inland or river steam or motor vessels shall be required to pass a satisfactory examination as to his knowledge, experience, and skill in stowage and cargo handling, the operation and handling of fire apparatus, the launching and handling of lifeboats, his knowledge of life preservers and the method of adjusting them, his ability to manage the crew and direct and advise the passengers in case of emergency, his general familiarity with his duties in maintaining discipline and protecting the passengers, and such further examination of a non-mathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency.

§ 10.05–61 Evaluation of experience not listed.

When an applicant presents evidence of service or experience which does not meet the specific requirements of the regulations in this part, but which in the opinion of the Officer in Charge, Marine Inspection, is a reasonable equivalent thereto, the application for license with supporting data shall be submitted to the Commandant for evaluation, together with the recommendation of the Officer in Charge, Marine Inspection.

Subpart 10.10—Professional Requirements for Engineer Officers' Licenses (Inspected Vessels)

AUTHORITY: The provisions of this Subpart 10.10 interpret or apply R.S. 4417a, as amended, 4426, as amended, 4427, as amended, 4438, as amended, 4438a, as amended, 4441, as amended, 4443, as amended, 4445, as amended, 4447, as amended, sec. 2, 29 Stat. 188, as amended, sec. 1, 34 Stat. 1411, as amended, secs. 1, 2, 1544, 1545, as amended, sec. 3, 70 Stat. 152, and sec. 3, 68 Stat. 675; 46 U.S.C. 381a, 404, 405, 224, 224a, 229, 230, 231, 233, 225, 237, 367, 390b, 50 U.S.C. 198. Treasury Department Orders 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894.

§ 10.10–1 No restriction as to waters on engineer's licenses.

(a) Except as otherwise specified in this part no engineer's license issued shall be restricted as to the waters upon which the engineer may serve, except that such restrictions on any license, when presented for renewal, shall not be changed without the licensee's consent.

(b) The holder of an engineer's license which is restricted as to waters may serve in the capacity and within the limitations in the license upon other waters without special endorsement as follows:

(1) *"Ocean."* This includes coastwise waters; Great Lakes; bays, sounds, and lakes other than the Great Lakes; and rivers.

(2) *"Coastwise."* This includes the Great Lakes; bays, sounds, and lakes other than the Great Lakes; and rivers.

(3) *"Great Lakes."* This includes bays, sounds, and lakes other than the Great Lakes, and rivers.

(4) *"Bays, sounds, and lakes other than the Great Lakes."* This includes rivers.

(5) *"Inland waters."* This includes the Great Lakes; bays, sounds, and lakes other than the Great Lakes; and rivers.

(6) *"Rivers."* This does not include any other type of waters.

§ 10.10–3 Grade and type of engineer licenses issued and limitations placed thereon.

(a) Licenses in the grades of chief engineer, first assistant engineer, second assistant engineer, and third assistant engineer authorizing service on steam vessels or on motor vessels or on steam and motor vessels, shall be issued to applicants who qualify therefor.

(b) Engineer's licenses of all grades and types may be subject to such horsepower limitation as the Officer in Charge, Marine Inspection, shall deem appropriate. The horsepower limitations to be placed on a license shall be based on the applicant's qualifying experience; however, in no case shall an applicant's license be limited to a lower horsepower than the highest horsepower on which 25 percent or more of his experience was obtained. The applicant whose qualifying service has all been on Coast Guard inspected vessels of 4,000 horsepower or over shall be considered eligible for an engineer's license of unlimited horsepower.

§ 10.10–4 Examination for license as engineer officer of steam or motor vessels.

(a) An applicant for license as engineer officer of either steam or motor vessels shall pass a satisfactory written examination as to his knowledge of the subjects listed in paragraph (b) of this section. However, if the license to be issued is limited on its face in a manner that would make any of the specific subjects unnecessary or superfluous, the examination shall be amended accordingly. Examinations for any license not incorporated in Table 10.10–4(b) shall be of suitable scope and character to determine the applicant's proficiency.

(b) List of subjects required:

TABLE 10.10–4(b)—SUBJECTS FOR ENGINEER OFFICERS' LICENSES OF STEAM OR MOTOR VESSELS

Subjects	Steam				Motor			
	Chief engineer		Assistant engineer		Chief engineer		Assistant engineer	
	Over 2,000 hp	2,000 hp and less	Over 2,000 hp	2,000 hp and less	Over 2,000 hp	2,000 hp and less	Over 2,000 hp	2,000 hp and less
General

Engineering Safety								
71. Fire prevention	X	X	X	X	X	X	X	X
72. Fire equipment	X	X	X	X	X	X	X	X
73. Fire fighting	X	X	X	X	X	X	X	X
74. Respiratory apparatus and emergency equipment	X	X	X	X	X	X	X	X
75. Casualty and damage control	X	X	X	X	X	X	X	X
76. Rules and regulations	X	X	X	X	X	X	X	X
77. Safe handling of inflammable and combustible liquids	X	X	X	X	X	X	X	X

[1] Each candidate will receive a minimum of four mathematical questions which shall be graded with the "general" subject, however, a minimum grade of 70 percent shall be required for mathematics.
[2] A candidate for license limited to towing or ferry vessels shall not be examined in this subject.

(c) Each applicant for an original or raise in grade of license as engineer of steam vessels of over 2,000 horsepower shall be required to demonstrate his ability to analyze boiler water. When conditions permit, the test shall be performed by chemical analysis of a water sample.

§ 10.10–5 Removal of restriction as to waters on an engineer's license.

Upon renewal or at his request, any engineer who holds a license restricted as to waters shall be allowed the choice of accepting a limitation as to horsepower in lieu of the restriction as to waters. The horsepower limitation shall be determined by the Officer in Charge, Marine Inspection, in accordance with the applicant's experience. The licensee shall be required to agree in writing to such conditions of renewal before the issuance of the license requested.

§ 10.10–6 Raising and removing horsepower limitations.

(a) Applications for a change in horsepower limitation shall be accompanied by a letter of recommendation from the vessel owner, operator or chief engineer.

(b) Notwithstanding the provisions of § 10.02–15(c) of this part, changes in horsepower limitations based on service required by paragraph (c) of this section may be granted without further written examination providing the Officer in Charge, Marine Inspection, in whose office the applicant's previously written examination is filed, considers said examination is satisfactory for the higher license.

(c) The following service on vessels of 4,000 horsepower or over will be considered qualifying, insofar as service is concerned, for the raising or removing of horsepower limitations placed on engineer licenses:

(1) Twelve months' service in the highest grade licensed: removal of all horsepower limitations.

(2) Six months' service in any licensed capacity other than the highest grade for which licensed: removal of all horsepower limitations for the grade in which service is performed and raise the next higher grade license to the horsepower of the vessel on which service was performed.

(3) Twelve months' service as oiler or Junior Engineer holding a license as Third Assistant Engineer: removal of all horsepower limitations on Third Assistant Engineer's license.

(4) Six months' service as oiler or Junior Engineer holding a license as Second Assistant Engineer: removal of all horsepower limitations on Third Assistant Engineer's license.

§ 10.10–7 Conversion of licenses from gross tonnage to horsepower limitations upon renewal.

(a) Steam or motor engineer's licenses issued for any gross tons on specified waters shall be converted to any horsepower for the same waters, when renewed by an Officer in Charge, Marine Inspection.

(b) Upon renewal of any engineer's license which is limited as to gross tonnage the tonnage shall be converted to horsepower on the new license in the ratio of 3 to 4 (i. e.: 750 gross tons to 1,000 horsepower), except in those cases where an applicant has obtained experience on vessels of greater horsepower than the above ratio would entitle him. In such cases a license of greater horsepower commensurate with the experience obtained may be issued.

§ 10.10–9 Chief engineer; steam vessels.

(a) The minimum service required to qualify an applicant for license as chief engineer of steam vessels is:

(1) One year's service as first assistant engineer of steam vessels; or,

(2) Two years' service as second assistant or junior first assistant engineer in charge of a watch on steam vessels while holding a license as first assistant engineer of steam vessels; or,

(3) While holding a license as chief engineer of motor vessels, either:

(i) Six months' service as first assistant engineer of steam vessels;

(ii) Six months' service as observer chief engineer on steam vessels; or,

(iii) One year's service as oiler, watertender, or junior engineer of steam vessels.

§ 10.10–11 Chief engineer; motor vessels.

(a) The minimum service required to qualify an applicant for license as chief engineer of motor vessels is:

(1) One year's service as first assistant engineer of motor vessels; or,

(2) Two years' service as second assistant or junior first assistant engineer in charge of a watch on motor vessels while holding a license as first assistant engineer of motor vessels; or,

(3) While holding a license as chief engineer of steam vessels, either:

(i) Three months' service as first assistant engineer of motor vessels;

(ii) Three months' service as observer chief engineer on motor vessels; or,

(iii) Six months' service as oiler or junior engineer of motor vessels.

§ 10.10–13 First assistant engineer; steam vessels.

(a) The minimum service required to qualify an applicant for license as first assistant engineer of steam vessels is:

(1) One year's service as second assistant engineer of steam vessels; or,

(2) Two years' service as third assistant or junior second assistant engineer in charge of a watch on steam vessels, while holding a license as second assistant engineer of steam vessels; or,

(3) While holding a license as first assistant engineer of motor vessels, either:

(i) Six months' service as second assistant engineer of steam vessels;

(ii) Six months' service as observer first assistant engineer on steam vessels; or,

(iii) One year's service as oiler, watertender, or junior engineer of steam vessels; or,

(4) Three years' service as oiler, watertender, or fireman on steam vessels for a license as first assistant engineer of steam towing or ferry vessels of not more than 2,000 horsepower; or,

(5) While holding a license as third assistant engineer of steam vessels of any horsepower, three months' service as third assistant engineer or observer first assistant engineer on steam vessels for a license as first assistant engineer of steam towing or ferry vessels of not over 2,000 horsepower; or,

(6) Three years' service as oiler, watertender or fireman on steam vessels for a license as first assistant engineer of steam vessels of not more than 1,000 horsepower.

§ 10.10–15 First assistant engineer; motor vessels.

(a) The minimum service required to qualify an applicant for license as first assistant engineer of motor vessels is:

(1) One year's service as second assistant engineer of motor vessels; or,

(2) Two years' service as third assistant engineer or junior second assistant engineer in charge of a watch on motor vessels, while holding a license as second assistant engineer of motor vessels; or,

(3) While holding a license as first assistant engineer of steam vessels, either:

(i) Three months' service as second assistant engineer of motor vessels;

(ii) Three months' service as observer first assistant engineer on motor vessels; or,

(iii) Six months' services as oiler or junior engineer of motor vessels; or,

(4) Three years' service as oiler or fireman on motor vessels for a license as first assistant engineer of motor towing or ferry vessels of not more than 2,000 horsepower; or,

(5) While holding a license as third assistant engineer of motor vessels of any horsepower, three months' service as third assistant engineer or observer first assistant engineer on motor vessels for a license as first assistant engineer of motor towing or ferry vessels of not over 2,000 horsepower; or,

(6) Three years' service as oiler or fireman on motor vessels for a license as first assistant engineer of motor vessels of not more than 1,000 horsepower .

§ 10.10–17 Second assistant engineer; steam vessels.

(a) The minimum service required to qualify an applicant for license as second assistant engineer of steam vessels is:

(1) One year's service as engineer in charge of a watch, while holding a license as third assistant engineer of steam vessels; or,

(2) Two years' service as assistant engineer to the engineer in charge of a watch, while holding a license as third assistant engineer of steam vessels; or,

(3) Five years' service in the engine department of steam or motor vessels, 1 year of this required service may have been on motor vessels; 4 years and 6 months of which must have been as a qualified member of the engine department, 2 years and 6 months of which must have been as fireman, oiler, watertender, or junior engineer on steam vessels; or,

(4) While holding a license as second assistant engineer of motor vessels, either:

(i) Six months' service as third assistant engineer of steam vessels;

(ii) Six months' service as an observer second assistant engineer on steam vessels; or,

(iii) One year's service as oiler, watertender, or junior engineer of steam vessels.

§ 10.10–19 Second assistant engineer; motor vessels.

(a) The minimum service required to qualify an applicant for license as second assistant engineer of motor vessels is:

(1) One year's service as engineer in charge of a watch, while holding a license as third assistant engineer of motor vessels; or,

(2) Two years' service as assistant engineer to the engineer in charge of a watch, while holding a license as third assistant engineer of motor vessels; or,

(3) Five years' service in the engine department of motor or steam vessels, 1 year of this required service may have been on steam vessels; 4 years and 6 months of which must have been as a qualified member of the engine department, 2 years and 6 months of which must have been as oiler or junior engineer on motor vessels; or,

(4) While holding a license as second assistant engineer of steam vessels, either:

(i) Three months' service as third assistant engineer of motor vessels;

(ii) Three months' service as observer second assistant engineer on motor vessels; or,

(iii) Six months' service as oiler or junior engineer of motor vessels.

§ 10.10–21 Third assistant engineer; steam vessels.

(a) The minimum service required to qualify an applicant for license as third assistant engineer of steam vessels is:

(1) Three years' service in the engine department of steam or motor vessels, one-third of this required service may have been on motor vessels; 2 years and 6 months of which must have been as a qualified member of the engine department, 1 year and 6 months of which must have been as fireman, oiler, watertender or junior engineer on steam vessels; or,

(2) Three years' service as an apprentice to the machinist trade engaged in the construction or repair of marine, locomotive, or stationary engines together with 1 year's service in the engine department of steam vessels as oiler, watertender, or junior engineer, one-third of such service may have been on motor vessels; or,

(3) Graduation from:

(i) The U. S. Merchant Marine Academy (engineering);

(ii) The engineering class of a nautical schoolship approved by and conducted under rules prescribed by the Commandant and listed in Part 166 of Subchapter R (Nautical Schools) of this chapter;

(iii) The U. S. Naval Academy; or,

(iv) The U. S. Coast Guard Academy; or,

(4) Satisfactory completion of the prescribed course (engineering) at a U. S. Maritime Service or other Government operated training school approved by the Commandant may be accepted as the equivalent of sea service up to a maximum of four months, provided the applicant has obtained the additional qualifying experience prior to enrollment; or,

(5) Graduation from the marine engineering course of a duly recognized school of technology together with 3 months' service in the engine department of steam vessels, one-third of such service may have been on motor vessels; or,

(6) Graduation from the mechanical or electrical engineering course of a duly recognized school of technology together with 6 months' service in the engine department of steam vessels, one-third of such service may have been on motor vessels; or,

(7) One year's service as oiler, watertender, or junior engineer on steam vessels while holding a license as third assistant engineer of motor vessels.

§ 10.10–23 Third assistant engineer; motor vessels.

(a) The minimum service required to qualify an applicant for license as third assistant engineer of motor vessels is:

(1) Three years' service in the engine department of motor or steam vessels, one-third of this required service may have been on steam vessels; 2 years and 6 months of which must have been as a qualified member of the engine department, 1 year and 6 months of which must have been as oiler or junior engineer on motor vessels; or,

(2) Three years' service as an apprentice to the machinist trade engaged in the construction or repair of marine, locomotive, or stationary engines together with 1 year's service in the engine department of motor vessels as oiler or junior engineer, one-third of such service may have been on steam vessels; or,

(3) Graduation from:

(i) The U. S. Merchant Marine Academy (engineering);

(ii) The engineering class of a nautical schoolship approved by and con-

ducted under rules prescribed by the Commandant and listed in Part 166 of Subchapter R (Nautical Schools) of this chapter;

(iii) The U. S. Naval Academy; or,

(iv) The U. S. Coast Guard Academy; or

(4) Satisfactory completion of the prescribed course (engineering) at a U. S. Maritime Service or other Government operated training school approved by the Commandant may be accepted as the equivalent of sea service up to a maximum of 4 months, provided the applicant has obtained the additional qualifying experience prior to enrollment; or,

(5) Graduation from the marine engineering course of a duly recognized school of technology together with 3 months' service in the engine department of motor vessels, one-third of such service may have been on steam vessels; or,

(6) Graduation from the mechanical or electrical engineering course of a duly recognized school of technology together with 6 months' service in the engine department of motor vessels, one-third of such service may have been on steam vessels; or,

(7) Six months' service as oiler or junior engineer on motor vessels while holding a license as third assistant engineer of steam vessels.

§ 10.10–25 Engineers of motor vessels operating in Puerto Rican and Hawaiian waters.

(a) An applicant for an engineer's license of seagoing vessels propelled by internal combustion engines navigating exclusively between ports in the Hawaiian Islands, or navigating exclusively between ports of the Island of Puerto Rico and/or the Virgin Islands, shall submit with his application statements duly executed and certified by reputable citizens qualified to judge the character and ability of the applicant. The Officer in Charge, Marine Inspection, shall make a diligent inquiry as to the applicant's character and merits and, if satisfied by the oral examination or practical demonstration, and the proof of requisite knowledge and skill offered, the Officer in Charge, Marine Inspection, shall issue the license. No certificate from the United States Public Health Service based upon the subject of ship sanitation and first aid shall be required of such applicant.

(b) An applicant for an engineer's license of motor vessels operating exclusively in Puerto Rican waters or exclusively in Hawaiian waters shall present evidence of a minimum of 3 years' service on such vessels.

§ 10.10–27 Service as engineroom watch electrician or refrigeration watch engineer.

An applicant for a raise of grade of engineer's license for steam or motor vessels may substitute service as engineroom watch electrician on electric drive steam or motor vessels or refrigeration watch engineer for other service required. The service shall be accepted on the basis of 2 months' service as watch electrician or refrigeration watch engineer to count as 1 month of required service. Such service shall not be substituted for more than one-half the service required on a license. This service as engineroom watch electrician or refrigeration watch engineer must have been acquired while the applicant was holding the license which is to be raised in grade.

§ 10.10–29 Evaluation of experience not listed.

When an applicant presents evidence of service or experience which does not meet the specific requirements of the regulations in this part, but which in the opinion of the Officer in Charge, Marine Inspection, is a reasonable equivalent thereto, the application for license with supporting data shall be submitted to the Commandant for evaluation, together with the recommendation of the Officer in Charge, Marine Inspection.

Subpart 10.13—Licensing of Radio Officers

AUTHORITY: The provisions of this Subpart 10.13 interpret or apply secs. 1–8, 62 Stat. 232–234; 46 U.S.C. 229a–229h. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521. Other statutory provisions interpreted or applied are cited to text in parentheses.

§ 10.13–1 Applicability of laws.

(a) The provisions of Title 46, U.S. Code, sections 229a to 229h provide that radiotelegraph operators shall be licensed officers.

(b) The regulations in this subpart implement the provisions in Title 46, U.S. Code, sections 229a to 229h, and provide for the issuance to qualified applicants of licenses as radio officers subject to all of the conditions provided in law.

§ 10.13–3 Definitions.

(a) *License.* Where the word "license" appears throughout this subpart it shall be construed as meaning a license issued by the Coast Guard, unless indicated otherwise.

(b) *Original license.* The first license issued to a radiotelegraph operator by the Coast Guard shall be considered an original license, when the records of the Coast Guard show no previous issue to such person.

§ 10.13–5 General provisions respecting all licenses issued.

(a) Applicants for licenses, issued in accordance with this subpart, are charged with the duty of establishing to the satisfaction of the Coast Guard that they possess all of the qualifications necessary, such as, age, experience, character and citizenship, before they shall be entitled to be issued licenses. Until an applicant meets this mandatory requirement, he is not entitled to be licensed to serve as an officer on a vessel of the United States. No person who has been convicted by court-martial of desertion or treason in time of war, or has lost his nationality for any of the other reasons listed in 8 U.S.C. 1481, is eligible for a license. Neither is a person eligible for a license, who has been convicted by a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States, within ten years prior to the date of filing the application; or who, unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(b) After application to an Officer in Charge, Marine Inspection, any person who is found qualified under the requirements set forth in this subpart shall be issued an appropriate license valid for a term of five (5) years, provided he continues to hold a valid first- or second-class radiotelegraph operator's license issued by the Federal Communications Commission.

(c) Every person to whom a license is issued shall place his signature and left thumbprint thereon.

(d) Every person who receives a license shall make oath before an Officer in Charge, Marine Inspection, or commissioned officer of the Coast Guard authorized to administer oaths under 10 U.S.C. 936 or 14 U.S.C. 636, to be recorded upon his official file, that he will faithfully and honestly, according to his best skill and judgment, without concealment or reservation, perform all the duties required of him by law.

(Sec. 2, 64 Stat. 464; 46 U.S.C. 239b. Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

§ 10.13–7 Citizenship and age requirements for all licenses issued.

(a) No license shall be issued to any person who is not a United States citizen. An applicant claiming to be a citizen of the United States shall furnish documentary evidence of his citizenship. Acceptable evidence of citizenship is described in § 10.02–5.

(b) Any citizen who has attained the age of 19 years and is qualified in all other respects shall be eligible for a license.

§ 10.13–9 Evidence of professional competence for all licenses issued.

Each applicant for a license must present to the Officer in Charge, Marine Inspection, at the time of making application his currently valid first- or second-class radiotelegraph operator's license issued by the Federal Communications Commission.

§ 10.13–13 General requirements for original licenses.

(a) *First aid certificate.* No candidate for original license shall be qualified until he presents a certificate from the United States Public Health Service that he has passed a satisfactory examination based on the contents of "The Ship's Medicine Chest and First Aid at Sea," or other manual arranged for the purpose and having the approval of the United States Public Health Service.

(b) *Written application.* (1) The Officers in Charge, Marine Inspection, shall require all applicants for original licenses to make written applications upon Coast Guard Form CG–866.

(2) This application shall be submitted in duplicate. The applicant shall also furnish two unmounted, dull finish photographs, 2 inches by 1½

inches, of passport type taken within 1 year of the date of application. Photographs shall show the full face, at least 1 inch in height, with the head uncovered, and shall be a satisfactory likeness of the applicant. The issuing officer shall affix a photograph to each of the applications and impress his official seal partly over the photograph, after the applicant has in his presence signed the applications.

(3) The applicant shall place his left thumbprint on each of the applications.

(4) The applicant shall enter on the application form the number, class, and date of issuance of his currently valid Federal Communications Commission license.

(5) The applicant shall make and subscribe to an oath or affirmation, before the issuing officer, to the truth of all the statements set forth in his application. Any applicant who shall make or subscribe to any oath or affirmation on the application form and knowing the same to be false shall be deemed guilty of perjury.

(c) *Evidence of employment.* Applicants for licenses must present to the Officers in Charge, Marine Inspection, at the time of making application evidence that they are going to sea or expect to go to sea. This evidence shall be in the form of one of the following and shall be entered on the application form:

(1) A currently valid certificate of service as radio operator or merchant mariner's document endorsed as radio operator.

(2) One or more certificates of discharge showing service as radio operator on a merchant vessel. Evidence of service on United States Government vessels or foreign vessels is acceptable.

(3) An applicant for a license who has not served as radio operator aboard a vessel must present satisfactory proof that he has a commitment of employment as a radio operator on a United States merchant vessel. This proof shall be in the form of a letter and shall be signed by a responsible official of the vessel, agent, owner, operator, or organization concerned with manning vessels.

(d) *Surrender of certificate of service.* Upon the issuance of a license the certificate of service as radio operator or merchant mariner's document endorsed as radio operator held by the licensee shall be surrendered to the issuing officer.

§ 10.13–15 Physical examinations for original licenses.

(a) All applicants for original licenses shall be required to pass physical examinations given by a medical officer of the United States Public Health Service and present certificates executed by this Public Health Service Officer to the Officers in Charge, Marine Inspection. This certificate shall attest to the applicant's acuity of vision and general physical condition.

(b) Epilepsy, insanity, senility, acute venereal disease or neurosyphilis, badly impaired hearing, or other defect that would render the applicant incompetent to perform the ordinary duties of a radio officer at sea are causes for certification as incompetent.

(c) For original license the applicant must have, either with or without glasses, at least 20/30 vision in one eye and at least 20/50 in the other. The applicant who wears glasses, however, must also be able to pass a test without glasses of at least 20/50 in one eye and at least 20/70 in the other. Any applicant for original license who is possessed of monocular vision and who has served as a radio operator on merchant vessels of the United States while possessed of such vision may be issued a license if eligible in all other respects. Vision of at least 20/30 without glasses in the remaining eye shall be required in all such cases.

(d) Where an applicant is not possessed of the vision, hearing, and general physical condition considered necessary, the Officer in Charge, Marine Inspection, after consultation with the Public Health Service physician, shall make a recommendation to the Commandant for an exception to these requirements if, in their opinion, extenuating circumstances warrant special consideration. Any request for a decision by the Commandant must be accompanied by all pertinent correspondence, records, and reports. Special consideration will be given to an applicant who has served satisfactorily at sea as a radio operator even though he is possessed of physical defects which would be cause for rejection of an applicant with no sea service. Recommendations from interested parties having knowledge of the applicant's qualifications will be given full consideration in arriving at a decision.

§ 10.13–17 Character check and references required for original licenses.

(a) In those cases where an applicant for an original license has served at sea as a radio operator, the Officer in Charge, Marine Inspection, shall require such applicant to have written endorsements of a master of a vessel on which he has served, together with those of two other licensed officers. Upon a showing that the written endorsements required above cannot be obtained without undue delay or hardship, the Officer in Charge, Marine Inspection, may accept in lieu of these endorsements those from officials of the steamship company or other employers of the applicant. Letters of recommendation attesting to the applicant's character, etc., from former employers of the applicant may be accepted in lieu of the endorsements, but such letters must be filed with the application. Where no sea service has been obtained, the applicant shall have the written endorsements of three reputable persons to whom he is well-known.

(b) Fingerprint records of each applicant shall be made on FBI Form "Applicant." This record shall be submitted to the Commandant together with the application for license.

(c) Every application for an original license shall be approved by the Commandant. No license shall be issued or temporary permit granted pending the Commandant's authorization.

(d) (1) The application of any person may be rejected by the Commandant when derogatory information has been brought to his attention which indicates that the applicant's character and habits of life are such as to authorize the belief that he is not a suitable and safe person to be entrusted with the duties of radiotelegraph operator on any vessel.

(2) Applications will be rejected and the issuance of licenses refused to persons in the following categories:

(i) Those who have been convicted in the courts of offenses such as: Crimes of violence on shipboard and in certain instances ashore; sabotage; possession, use, or sale of narcotics; smuggling of aliens into the United States; malicious destruction of ship's property; serious cases of theft of ship's property or stores; and offenses of an infamous character.

(ii) Those who have been disapproved for service as radio operator aboard merchant vessels of the United States in time of war.

(iii) Those who have been issued a dishonorable discharge from any of the armed services of the United States.

(3) Where an application for a license is rejected by the Commandant under the provisions of this section, the application will be reconsidered upon written request of the applicant, provided he can produce additional evidence of satisfactory character and habits over a reasonable period of time immediately prior to the date of request for reconsideration. This evidence may consist of certificates showing satisfactory service in any of the armed forces of the United States; or letters from employers, from persons having direct and personal knowledge of the applicant, or from reputable institutions. The letters should indicate familiarity of the writer with the applicant, approximate dates of employment (if any), and other pertinent statements indicating the writer's belief about the applicant's character and habits.

(4) The fact that an applicant for an original license is on probation as a result of action under R. S. 4450, as amended (46 U.S.C. 239), does not itself make such an applicant ineligible, provided he meets all the requirements for such original license. However, any original license issued under those circumstances will be subject to the same probationary conditions as were imposed against the seaman's certificates or licenses in proceedings under R. S. 4450, as amended. Any such applicant must file an application for license in the usual manner, and the offense for which he was placed on probation will be considered on the merits of the case in determining his fitness to hold the license applied for.

(5) Nothing in this subpart shall be construed to permit the issuance of an original license during any period when a suspension without probation or a revocation imposed pursuant to R. S. 4450, as amended, is effective against any document held by him.

§ 10.13–19 Applicants furnishing additional information.

(a) In the course of the investigation into an applicant's qualifications (such as age, physical condition, experience, citizenship, character, and habits of

life), the Commandant may require the applicant to furnish such additional information to the Coast Guard as the Commandant deems pertinent and necessary for a determination as to whether or not the applicant is a suitable and safe person to be entrusted with the powers and duties of a radiotelegraph operator on any vessel as contemplated by the act of May 12, 1948, as amended (46 U.S.C. 220a–229h).

(b) The failure or refusal of an applicant to furnish the additional information requested by the Commandant under this section may be grounds for the Commandant's rejection of the application. However, no application will be rejected on the grounds of failure or refusal of the applicant to furnish such information unless and until the applicant shall first be afforded, before an officer of the Coast Guard, a further opportunity to furnish the requested information or to satisfactorily explain his failure or refusal to furnish such information.

§ 10.13–21 General requirements for renewal of license.

(a) *Establishing eligibility.* Applicants for renewals of licenses are charged with the duty of establishing to the satisfaction of the Coast Guard that they possess all of the qualifications necessary before they shall be issued a renewal of license.

(1) *Written application.* The Officer in Charge, Marine Inspection, shall, before granting renewal of license, require the applicant to make written application on Coast Guard Form CG–3479.

(b) *Application for renewal.* The applicant for renewal shall appear in person before an Officer in Charge, Marine Inspection, except where the applicant would be put to great inconvenience or expense to appear in person or is engaged in a service that necessitates his continuous absence from the United States. In such cases the license may be renewed by forwarding the following documents to the Officer in Charge, Marine Inspection, of the office which issued the license to be renewed:

(1) A letter of transmittal indicating reasons for not appearing in person and stating that to the best of his knowledge no physical incapacity exists, together with properly executed application on Coast Guard Form CG–3479.

(2) The oath of office on the form prescribed by the Coast Guard which has been duly executed before a person authorized to administer oaths.

(3) The license to be renewed.

(4) The currently valid license as first- or second-class radiotelegraph operator issued by the Federal Communications Commission. (This license will be sighted and returned to the applicant.)

(c) *Fitness.* No license shall be renewed if title has been permanently relinquished or facts which would render a renewal improper have come to the attention of the Coast Guard.

(d) *Period of grace.* (1) Licenses shall be renewed within 12 months after the date of expiration as shown on the license held. During this 12-month period of grace, the license is not valid.

(2) No license shall be renewed more than 90 days in advance of the date of expiration thereof, unless there are extraordinary circumstances that justify a renewal beforehand, in which case the reasons therefor must appear in detail upon the records of the Officer in Charge, Marine Inspection, renewing the license.

(e) *Surrender of expiring license.* An applicant for renewal shall surrender his license which is being renewed upon issuance of the new license.

(Sec. 2, 64 Stat. 484, 46 U.S.C. 239b; Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

§ 10.13–23 Physical requirements for renewal.

(a) In the event it is found that an applicant for renewal of license obviously suffers from some physical or mental infirmity to a degree that, in the opinion of the Officer in Charge, Marine Inspection, would render him incompetent to perform the ordinary duties of a radio officer at sea, the applicant shall be required to undergo an examination by a medical officer of the Public Health Service to determine his competency. If the applicant subsequently produces a certificate from the Public Health Service to the effect that his condition has improved to a satisfactory degree, or is normal, he shall be qualified in this respect.

(b) Nothing contained in this section shall debar an applicant who has lost the sight of one eye since obtaining his original license from securing a renewal of his license, provided he is qualified in all other respects, and the vision in his one eye passes the test required for the better eye of an applicant possessed of both eyes.

(c) In exceptional cases where an applicant would be put to great inconvenience or expense to appear before a medical officer of the United States Public Health Service, the physical examination or certification may be made by another reputable physician.

(d) Whenever an applicant shall apply for renewal of his license after 12 months after the date of its expiration, he shall be required to pass the physical examination required of an applicant for an original license.

§ 10.13–25 Issuance of duplicate license.

(a) Whenever a person to whom a license has been issued loses his license, he shall report such loss to an Officer in Charge, Marine Inspection, who shall issue a duplicate license after receiving from such person a properly executed affidavit giving satisfactory evidence of such loss, and a record of the license from the Marine Inspection Office where it was issued. Such license shall be issued as a duplicate by the addition of the following typewritten endorsement, "This license replaces License No. ------ issued at ------ on the above date," as well as the port and date of the duplicate issue.

(b) The duplicate license, issued for the unexpired term, shall have the same force and effect as the lost license.

(c) When a person reports the loss of his license, or when it is discovered that any license or license form has been stolen from a Marine Inspection Office or when such lost or stolen licenses are recovered, the Officer in Charge, Marine Inspection, shall immediately report the loss, theft, or recovery to the Commandant giving a description of the license and all facts incident to its loss, theft, or recovery.

§ 10.13–27 Parting with or altering license.

(a) If the holder of any license voluntarily parts with it or places it beyond his personal control by pledging or depositing it with any other person for any purpose, he may be proceeded against in accordance with the provisions of R.S. 4450, as amended (46 U.S.C. 239), looking to a suspension or revocation of his license.

(b) The holder of any license issued pursuant to the regulations in this subpart who shall change, by addition, interpolation, or erasure of any kind any license shall be subject to all the penalties provided by law; and any license so changed is null and void and without force and effect.

§ 10.13–29 Suspension and revocation of licenses.

(a) Licenses issued pursuant to this subpart shall be subject to suspension or revocation on the same ground and in the same manner and with like procedure as is provided in the case of suspension or revocation of licenses under the provisions of R. S. 4450, as amended (46 U.S.C. 239).

(b) Whenever a license is revoked such license expires with such revocation and any license subsequently granted to such person shall be considered in the light of an original license except as to number of issue.

(c) No person whose license has been suspended or revoked shall be issued another license except upon approval of the Commandant.

(d) When a license which is about to expire is suspended, the renewal of such license may be withheld until the expiration of the period of suspension.

(e) When the license issued by the Federal Communications Commission upon which the license issued pursuant to this subpart is predicated is suspended or revoked, such suspension or revocation shall operate as a suspension or revocation of the license issued under this subpart. No formal proceedings shall be required in such cases.

§ 10.13–33 Right of appeal.

Whenever any person directly interested in or affected by any decision or action of any Officer in Charge, Marine Inspection, shall feel aggrieved by such decision or action with respect to the issuance of a license, he may appeal therefrom to the District Coast Guard Commander having jurisdiction. A like appeal shall be allowed from any decision or action of the District Coast Guard Commander to the Commandant, whose action shall be final. Such appeals shall be made in writing within 30 days after

the date of decision or action appealed from. Pending the determination of the appeal, the decision of the Officer in Charge, Marine Inspection, shall remain in effect.

Subpart 10.15—Licensing of Officers for Uninspected Vessels

AUTHORITY: The provisions of this Subpart 10.15 interpret or apply R.S. 4438a, as amended; 46 U.S.C. 224a. Other statutory provisions interpreted or applied are cited to text in parentheses.

§ 10.15–1 Applicability of laws.

(a) All the provisions of Title 46, U.S. Code, sections 221, 224, 225, 226, 227, 228, 229, 231, 232, 233, 234, 235, 237, 239, 239b, 240, 372, 375, and 672a which refer to the issuance, duration, renewal, suspension or revocation of licenses of masters, mates, chief engineers and assistant engineers shall be applicable to all uninspected vessels to which the Officers' Competency Certificates Convention, 1936, and Title 46, U.S. Code, section 224a, making effective the provisions of the Convention apply.

§ 10.15–3 Vessels to which regulations apply.

(a) The regulations in this subpart shall apply to masters, chief engineers and watch officers, deck and engineer, on all uninspected vessels, however propelled, navigating the high seas, which are registered, enrolled and licensed, or licensed under the laws of the United States whether permanently, temporarily, or provisionally, including yachts, enrolled and licensed, with the exception of:

(1) Ships of war;

(2) Government vessels, or vessels in the service of a public authority, which are not engaged in trade;

(3) Wooden ships of primitive build, such as dhows and junks;

(4) Unrigged vessels;

(5) All vessels of less than 200 gross tons.

§ 10.15–5 Licenses issued and general provisions.

(a) Licenses to officers on uninspected vessels will be issued as follows:

(1) License as master, motor or sail;

(2) License as mate, motor or sail;

(3) License as chief engineer, motor; or,

(4) License as assistant engineer, motor.

(b) Licenses to officers of uninspected vessels shall be limited on their face to uninspected vessels, and shall be issued on the Coast Guard Form CG–2849.

(c) Licenses as master and mate shall be issued for appropriate route (ocean or coastwise) and with tonnage limitations commensurate with the experience of the applicant.

(d) (1) Licenses to chief engineer and assistant engineer shall be issued with appropriate horsepower limitations commensurate with the experience of the applicant.

(2) The regulations in § 10.10–15 shall govern the conversion of engineers' licenses from gross tonnage to horsepower limitations upon renewal.

(e) Every person to whom a license is issued shall place his signature and left thumbprint thereon, and upon any sheets attached for additional endorsements.

(f) Every master, mate, or engineer who receives a license shall make oath before an Officer in Charge, Marine Inspection, or commissioned officer of the Coast Guard authorized to administer oaths under 10 U.S.C. 936 or 14 U.S.C. 636, to be recorded upon his official file, that he will faithfully and honestly, according to his best skill and judgment, without concealment or reservation, perform all the duties required of him by law and obey all lawful orders of his superior officers.

§ 10.15–7 Related authority of licenses for inspected vessels.

A license to act as master, mate, or engineer of inspected vessels will in all cases entitle the holder to act under the limitations of his license on uninspected vessels.

§ 10.15–9 Sea service as member of the armed forces of the United States as qualifying.

Sea service as a member of the armed forces of the United States will be accepted as qualifying experience for an original or raise in grade of license. Such service will be subject to evaluation to the sea service otherwise required, and to determine the appropriate grade, class, and limit of license for which the applicant is eligible. The applicant may be permitted to omit the examination for the lower grade of license if his experience is of such character as to qualify him for the higher grade of license.

§ 10.15–11 Lifting of limitations.

Section 10.02–15 shall govern the lifting of limitations on licenses to officers of uninspected vessels.

§ 10.15–13 Citizenship and age requirements.

(a) No license shall be issued to any person who is not a United States citizen. An applicant claiming to be a citizen of the United States shall furnish documentary evidence of his citizenship. Acceptable evidence of citizenship is described in §10.02–5.

(b) Any citizen who has attained the age of 21 years and is qualified in all other respects shall be eligible for a license: *Provided*, That a license as mate or assistant engineer may be granted to applicants who have reached the age of 19 years and are qualified in all other respects, but no such license may be raised in grade before the holder thereof shall have reached the age of 21 years.

§ 10.15–15 Reexaminations and refusal of licenses.

Section 10.02–19 shall govern the reexaminations and refusal of licenses to officers of uninspected vessels.

§ 10.15–17 Issuance of duplicate licenses.

Section 10.02–23 shall govern the issuance of duplicate licenses to officers of uninspected vessels.

§ 10.15–19 Suspension and revocation of licenses.

Licenses as master, mate, or engineer of uninspected vessels shall be subject to suspension or revocation on the same ground and in the same manner and with like procedure as is provided in the case of suspension or revocation of licenses under the provisions of R.S. 4450, as amended (46 U.S.C. 239).

§ 10.15–21 Laws, general rules and regulations, and Rules of the Road to be furnished licensed officers.

(a) Every master, mate, or engineer, when receiving an original license, a renewed license, or a raise of grade of license, shall be furnished at his request with a copy of the "Laws Governing Marine Inspection" and a copy of the "Rules and Regulations for Vessel Inspection" distributed by the Coast Guard pertinent to the license issued.

(b) In addition, every master and mate shall be furnished at his request with a copy of the "Rules of the Road" applicable to the waters for which his license has been issued.

§ 10.15–25 Application and experience required for original or raise of grade of licenses.

(a) Applicants for original or raise of grade of licenses are charged with the duty of establishing to the satisfaction of the Coast Guard that they possess all the qualifications necessary, such as age, experience, character and citizenship, before they shall be entitled to be issued such license. Until an applicant meets this mandatory requirement, he is not entitled to be licensed. No person who has been convicted by court-martial of desertion or treason in time of war, or has lost his nationality for any of the other reasons listed in 8 U.S.C. 1481, is eligible for a license. Neither is a person eligible for a license, who has been convicted by a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States, within ten years prior to the date of filing the application; or who unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(b) Before an applicant for original license (as defined by § 10.02–3) as master, mate, or engineer, or raise of grade of any license may be licensed, the applicant shall make application upon Coast Guard Form CG–866 and shall present it in person to an Officer in Charge, Marine Inspection. An applicant shall also present discharges and testimonial letters to the Officer in Charge, Marine Inspection, from the masters or chief engineers under whom he has served, or from the owners in the case of applicants who have already served as master or chief engineer, certifying to the name of the vessel, and the amount and character of his experience, and to his ability, character, and habits of life. Photostatic copies of those documents may be accepted for filing with the application.

(c) (1) Fingerprint records on FBI Form "Applicant" shall be submitted to

the Commandant on each application for original license at the same time application is made.

(2) The application of any person may be rejected by the Officer in Charge, Marine Inspection, when derogatory information has been brought to his attention which indicates that the applicant's habits of life and character are such as to warrant the belief that he cannot be entrusted with the duties and responsibilities of the station for which he made application. In the event that an applicant is rejected he will be advised that he may submit a request to the Commandant for a review of his case. No examination shall be given or temporary permit issued in the type case pending the Commandant's authorization.

(3) Nothing in this part shall be construed to permit an applicant to be examined for an original license or a raise in grade of license during any period when a suspension without probation or a revocation imposed pursuant to R. S. 4450, as amended, is effective against his license or certificate.

(d) No original license or raise of grade shall be issued to any applicant unless at least 1 year of his qualifying service shall have been obtained within the 3 years next preceding his application for examination.

(e) Applicants will be informed as soon as possible whether their applications have been accepted or not, and when the application of any person for a license has been approved the applicant shall be given the required examination as soon as practicable.

(f) Licensed officers entitled to raise of grade shall have issued to them new licenses for the grade for which they are found qualified. The license which is raised in grade shall be surrendered to the Officer in Charge, Marine Inspection.

(g) Except for applicants for licenses as masters, mates, chief engineers, and assistant engineers of fishing vessels, certificates from the Public Health Service attesting to the applicant's knowledge of ship sanitation and first aid will be required before the candidates are eligible for original licenses.

(Sec. 2, 64 Stat. 484; 46 U.S.C. 239b. Treasury Department Order 167-9, August 3, 1954, 19 F.R. 5195)

§ 10.15-27 Physical examination required for original and raise of grade of licenses.

Sections 10.02-5 and 10.02-7 governing the physical examination requirements for applicants for original and raise of grade of licenses for inspected vessels shall apply to applicants for original and raise of grade of licenses for uninspected vessels for the same types of licenses.

§ 10.15-29 Professional requirements for original and raise of grade of licenses.

(a) For license as master or chief engineer, a candidate must have served 4 years at sea, on deck or in the engine room, respectively, of which 1 year must have been as licensed mate or assistant engineer, respectively, except as otherwise provided in the regulations in this subpart.

(b) For license as mate or assistant engineer, a candidate must have served 3 years at sea, on deck or in the engineroom, respectively.

(c) For a license as assistant or chief engineer of motor vessels, two-thirds of the required service must have been served on motor vessels.

(d) It is not required that an applicant must have obtained his experience on United States vessels. Experience on foreign vessels will be given due credit.

(e) Experience in towed barges fitted with sails and rigging is not considered as sail vessel time.

(f) When an applicant presents evidence of service or experience which does not meet the specific requirements of the regulations in this part, but which in the opinion of the Officer in Charge, Marine Inspection, is a reasonable equivalent thereto, the application for license with supporting data shall be submitted to the Commandant for evaluation, together with the recommendation of the Officer in Charge, Marine Inspection.

§ 10.15-31 Examination requirements for licenses.

(a) *General.* The examinations given by the Coast Guard will be practical, not theoretical. They will be written, where possible, and if an oral examination is necessary, it shall be taken down in writing. The examination for licenses limited to fishing vessels shall be oral only.

(b) *Master.* Candidates for license as master will, in addition to the subjects given in the examination for mate, be required to understand and give satisfactory explanations of:

(1) Navigation, including:

(i) Latitude by altitude of Polaris.

(ii) Elementary questions on compass deviation.

(2) Rudimentary seamanship, including:

(i) Meteorology, use and reading of weather bulletins.

(ii) Getting underway.

(iii) Tending vessel at anchor; mooring and unmooring.

(iv) Keeping a ship's head to sea in heavy weather with engines broken down.

(v) How to rig a jury rudder.

(vi) Action to be taken in the event of springing a leak.

(vii) Cast of lead in heavy weather.

(c) *Mate.* Candidates for license as mate will be required to understand and give satisfactory explanations of:

(1) Navigation, including:

(i) Variation, deviation of the compass, and simple methods of determining the deviation by the means of ranges, and by bearings of the sun.

(ii) Use of a chart and the meaning of the various signs and abbreviations thereon; method of determining and laying off compass courses and distances on a chart, and allowing for set and drift; fixing the ship's position by cross bearings of two objects; or by two bearings of the same object.

(iii) The traverse tables and a day's work in its simplest form.

(iv) Determining of latitude by meridian altitude of the sun.

(v) Longitude by position line or by time sight of the sun.

(vi) The use and adjustments of the sextant.

(vii) The use and reading of the aneroid barometer.

(2) Rudimentary seamanship, including:

(i) The use and construction of a sea anchor.

(ii) The marking and use of the lead line.

(iii) Man reported overboard.

(iv) Handling of a vessel's boat in heavy weather.

(v) Elementary first aid.

(3) The Rules to Prevent Collisions of Vessels including both the International Rules and the Pilot Rules for Inland Waters. Particular attention will be given to the steering and sailing rules, although inability to repeat them verbatim will not entail failure: *Provided,* That the candidate understands their full significance, content, and practical application. Models will be used to test the candidate's judgment and ability to act correctly and promptly.

(4) Distress signals and use of line-throwing apparatus.

(5) Buoyage system and aids to navigation.

(6) Precautions to be taken against fire, explosions from oil or gas, and spontaneous combustion. Methods of dealing with fire and use of fire extinguishers, handling of vessels after fire is discovered.

(7) Candidates for a sailing ship license will also be asked questions on the taking in and setting of fore and aft sail, and applicable questions relating to the handling of a sail vessel.

(d) *Chief engineer.* A candidate for license as chief engineer, motor, will be required to have an advanced and more complete knowledge of the subjects and problems than required for the examination for an assistant engineer.

(e) *Assistant engineer.* A candidate for license as assistant engineer, motor, will be required to understand and give satisfactory explanations of:

(1) The various codes of signals used between the bridge and engineroom for working the engine.

(2) The fundamentals of oil, gas, or other internal combustion engines, and also the auxiliary machinery in use on board ship; and to show a practical knowledge of upkeep of, operation of, and repairs to same.

(3) The use of the various gauges, meters, and instruments.

(4) Treatment of a hot bearing and avoidance of same.

(5) The use of fire-extinguishing apparatus; precautions to be taken against fire or explosions from oil or gas, precautions to be taken against the formation of explosive gases in oil tanks, bilges, or other unventilated spaces, causes of spontaneous combustion; safe carriage of fuels, and storage of lubricating oils; and methods of dealing with fire.

(6) Properties of the various oils, etc., generally used in internal combustion engines.

§ 10.15–33 Requirements for renewal of licenses.

Section 10.02–9 shall govern the renewal of licenses to officers of uninspected vessels.

Subpart 10.20—Motorboat Operators' Licenses

AUTHORITY: The provisions of this Subpart 10.20 interpret or apply secs. 7, 17, 54 Stat. 165, as amended, 166, as amended; 46 U.S.C. 526f, 526p. Treasury Department Order 167–20, June 18, 1956, 21 F.R. 4894, unless otherwise noted.

§ 10.20–1 General application.

(a) The regulations in this subpart apply to all applicants for license to operate motorboats, or other vessels of fifteen gross tons or less propelled by machinery other than steam, while carrying six or less passengers for hire.

§ 10.20–3 General requirements.

(a) Any person who has attained the age of 18 years and is qualified in all other respects, shall be considered eligible for a motorboat operator's license and may be examined by the Coast Guard.

(1) An applicant for a license as a motorboat operator shall submit satisfactory documentary evidence of at least one year's experience in the operation of motorboats.

(2) An applicant for a motorboat operator's license must demonstrate his ability to speak, read and understand English as found in the Rules of the Road, aids to navigation publications, emergency equipment instructions and machinery instructions.

(3) An applicant for a motorboat operator's license to operate motorboats, or other vessels of fifteen gross tons or less propelled by machinery other than steam, on the navigable waters of the United States in the vicinity of Puerto Rico, who speaks Spanish only, will be issued a license restricted to those waters.

(b) (1) Fingerprint records on FBI Form "Applicant" shall be submitted to the Commandant on each applicant at the same time application is made for original license.

(2) The application of any person may be rejected by the Officer in Charge, Marine Inspection, when derogatory information has been brought to his attention which indicates that the applicant's habits of life and character are such as to warrant the belief that he cannot be entrusted with the duties and responsibilities of the station for which he made application. In the event that an applicant is rejected he will be advised that he may submit a request to the Commandant for a review of his case.

(3) No examination shall be given or temporary permit issued in the case pending the Commandant's authorization.

(4) No person shall be eligible for a motorboat operator's license, who has been convicted by a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States, within ten years prior to date of filing the application; or who, unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(c) An applicant for a license as an operator shall submit an application on Coast Guard Form CG–866 to the Officer in Charge, Marine Inspection. If the applicant's capacity, knowledge, experience, character and habits of life are such as to warrant entrusting him with the duties and responsibilities involved in the operation and navigation of motorboats, or other vessels of fifteen gross tons or less propelled by machinery other than steam, carrying passengers for hire, a license authorizing him to discharge such duties on any such motorboats or vessels for a term of five years shall be issued to him.

(d) Every person to whom a license is issued shall place his signature and left thumb print thereon.

(e) An Officer in Charge, Marine Inspection, may place restriction or limitation upon a license as motorboat operator. Such limitation shall be commensurate with the qualifications of the applicant.

(Sec. 2, 68 Stat. 484; 46 U.S.C. 239b. Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

§ 10.20–5 Professional examinations.

(a) The applicant shall be examined orally concerning his fitness to hold a license as motorboat operator.

(b) (1) The examination will consist of questions on the following:

(i) Regulations governing motorboats, and other vessels of fifteen gross tons or less propelled by machinery other than steam, and the collision regulations applicable to the waters over which the applicant operates.

(ii) Fire protection and extinguishment.

(iii) Lifesaving equipment.

(iv) The operation of propelling machinery, and, particularly, the safe and proper handling of gasoline motors.

(v) The proper method of operating and navigating motorboats, and other vessels of fifteen gross tons or less propelled by machinery other than steam, carrying passengers.

(vi) Simple firstaid.

(2) Although applicants will be examined only in the collision regulations applicable to the waters upon which they are operating, it will be incumbent upon them, should they at any time operate on waters for which the collision regulations differ, to familiarize themselves with the appropriate rules.

(c) If the applicant has operated motorboats under the license issued under the act of June 9, 1910, he shall be held to possess the required experience but must qualify in all other respects.

§ 10.20–7 Physical examination requirements.

(a) (1) An applicant shall be examined by a United States Public Health Service Medical Officer or other reputable physician to determine whether he is physically fit to perform the duties required of him and shall include the eyesight, hearing, and physical condition. Epilepsy, insanity, senility, acute venereal disease, neurosyphilis, or badly impaired hearing, eyesight, or color blindness are causes for rejection.

(2) For an original license the applicant must have, either with or without glasses, at least 20/20 vision in one eye and at least 20/40 in the other. Any applicant who wears glasses, however, must also be able to pass a test without glasses of at least 20/40 in one eye and at least 20/70 in the other. The color sense will be tested by means of a pseudo-isochromatic plate test, but any applicant who fails this test will be eligible if he can pass the "Williams" lantern test or equivalent, but if found color blind no license will be issued except in a case where the applicant shows he has operated motorboats for many years and has particular qualifications, which in the judgment of the Officer in Charge, Marine Inspection, qualifies him to operate a motorboat in daylight only and so restricts the license.

(3) For a renewal of a motorboat operator's license an examination may be required in addition to a certificate of satisfactory color sense. Nothing herein shall debar an applicant who has lost the sight of one eye while holding a license from renewing such license if he is qualified in all other respects and the vision in his one eye passes the test required for the better eye of an applicant possessed of both eyes. If an applicant for a renewal of license is pronounced color blind, the Officer in Charge, Marine Inspection, may grant him a license limited to service during daylight only.

(4) Where an applicant is not possessed of the vision, hearing, or general physical condition necessary, the Officer in Charge, Marine Inspection, after consultation with the Public Health Service physician or other examining physician, may make recommendation to the Commandant for an exception to these requirements, if in his opinion, extenuating circumstances warrant special consideration. Any requests for a decision by the Commandant must be accompanied by all pertinent correspondence, records, and reports. In this connection recommendations from agencies of the Federal Government operating Government vessels, as well as owners and operators of private vessels, made in behalf of their employees, will be given full consideration in arriving at a decision.

(b) An applicant who has operated a motorboat carrying passengers for hire under authority of a license issued prior to April 25, 1941, may be issued an operator's license without further physical examination unless the Officer in Charge, Marine Inspection, considers that such examination is necessary in view of apparent disabilities.

§ 10.20–9 Requirements for renewal.

(a) An operator's license may be renewed by application to an Officer in Charge, Marine Inspection. The pres-

entation of the license to be renewed, together with satisfactory certificate of color sense, shall be considered sufficient evidence upon which to renew a license; unless facts shall have come to the knowledge of the Officer in Charge, Marine Inspection, which would render a renewal improper in the case of a particular applicant.

(1) *Written application.* The Officer in Charge, Marine Inspection, shall, before granting renewal of license, require the applicant to make written application on Coast Guard Form CG–3479.

(b) No license shall be renewed more than 90 days in advance of the date of the expiration thereof, unless there are extraordinary circumstances that shall justify a renewal beforehand in which case the reasons therefor must appear in detail upon the records of the Officer in Charge, Marine Inspection, renewing the license.

(c) Whenever an operator shall apply for renewal of his license more than 1 year after the date of its expiration, he shall be required to pass a professional and physical examination of such length and scope as may be required by the Officer in Charge, Marine Inspection, to determine the applicant's continued qualifications.

(d) Where an applicant for renewal would be put to great inconvenience or expense to appear in person before an Officer in Charge, Marine Inspection, the license may be renewed by forwarding the documents required by the regulations in paragraph (a) of this section to the Officer in Charge, Marine Inspection, who issued the license to be renewed.

(Sec. 2, 68 Stat. 484; 46 U.S.C. 239b. Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

§ 10.20–11 Issuance of duplicate license.

Section 10.02–23 shall govern the issuance of duplicate motorboat operators' licenses.

§ 10.20–13 Suspension or revocation of license.

Motorboat operators' licenses shall be subject to suspension or revocation on the same grounds and with like procedure as is provided in the case of suspension or revocation of licenses under the provisions of R. S. 4450, as amended (46 U. S. C. 239).

Subpart 10.25—Registration of Staff Officers

AUTHORITY: The provisions of this Subpart 10.25 interpret or apply sec. 7, 53 Stat. 1147, as amended; 46 U.S.C. 247, unless otherwise noted.

§ 10.25–1 Application of regulations.

This subpart shall govern the registration of staff officers for employment on every vessel registered, enrolled, or licensed under the laws of the United States which employs a staff officer, except vessels navigating on bays, sounds, rivers, inland waterways, and lakes other than the Great Lakes, passenger ferries and car ferries navigating on the Great Lakes, fishing vessels, whaling vessels, and yachts.

§ 10.25–3 Grades of certificates issued.

Staff Officers shall be registered in the following grades:

(a) Chief purser.
(b) Purser.
(c) Senior assistant purser.
(d) Junior assistant purser.
(e) Surgeon.
(f) Professional nurse.

(Sec. 1, 53 Stat. 1145; 46 U.S.C. 242)

§ 10.25–5 Staff department defined.

(a) The staff department shall consist of officers registered under the provisions of this subpart, pursers' clerks, and such persons as may be assigned to the senior registered surgeon.

(b) The staff department shall be a separate and independent department composed of a medical division and a purser's division. The medical division shall be under the charge of the senior registered surgeon who shall be responsible solely to the master or, in the absence of the master, to the officer in charge of the vessel.

§ 10.25–7 General requirements.

(a) The applicant for a certificate of registry shall make a written application on Coast Guard Form 866 in duplicate. This application shall be made to an appropriate Officer in Charge, Marine Inspection, having jurisdiction over a seaport or a Great Lakes port.

(b) The first certificate of registry issued to any person shall be considered an original certificate of registry.

(c) An applicant for certificate of registry must be a citizen of the United States and shall submit satisfactory evidence of citizenship. Acceptable evidence of citizenship is set forth in § 10.02–5.

(d) An applicant for registry and a certificate of registry as staff officer shall not be required to take an examination, but he shall be required to submit with his application satisfactory proof of his good character and of his prior service, including at least two letters of recommendation from present or former employers. No person shall be eligible for a certificate of registry, who has been convicted by a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States, within ten years prior to the date of filing the application; or who, unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(e) (1) Fingerprint records on FBI Form "Applicant" shall be submitted to the Commandant on each applicant at the same time application is made.

(2) The application of any person may be rejected by the Officer in Charge, Marine Inspection, when derogatory information has been brought to his attention which indicates that the applicant's habits of life and character are such as to warrant the belief that he cannot be entrusted with the duties and responsibilities of the station for which he made application. In the event that an applicant is rejected he will be advised that he may submit a request to the Commandant for a review of his case.

(3) No temporary permit shall be issued in a case where the Commandant's review is pending.

(f) No original certificate of registry will be issued to any applicant unless the applicant presents evidence of commitment of employment as a member of the crew of a United States merchant vessel in a capacity covered by such certificate.

(g) (1) An applicant for registry and a certificate of registry as staff officer shall be in possession of a continuous discharge book or certificate of identification or merchant mariner's document issued as a certificate of identification and shall appear in person before an Officer in Charge, Marine Inspection.

(2) The applicant shall furnish two unmounted, dull finish photographs, 2 inches by 1½ inches, of passport type taken within 1 year of the application. Photographs shall show the full face, at least 1 inch in height, with the head uncovered, and shall be a satisfactory likeness of the applicant. The issuing officer shall affix a photograph to each of the applications and impress his official seal partly over the photograph, after the applicant has in his presence signed the application.

(3) The applicant shall place his fingerprints on each of the applications and his left thumb print on the back of the certificate of registry as staff officer.

(4) A staff officer shall not be required to hold any other certificate of service or efficiency as a condition of service in such capacity on vessels.

(h) An Officer in Charge, Marine Inspection, shall issue a certificate of registry as staff officer to an applicant who has qualified for such certificate and who has made oath or affirmation before him, or a commissioned officer of the Coast Guard authorized to administer oaths under 10 U.S.C. 936 or 14 U.S.C. 636, that he will faithfully and honestly perform all the duties of his office required of him by law.

(i) Endorsements for a higher grade shall not be made on certificates of registry. An applicant for a higher grade in the staff department shall make application in the same manner as for an original certificate of registry and shall surrender his certificate upon issuance of the new certificate of registry. A person in possession of a certificate of registry as staff officer may serve in a lower grade than that for which he is registered.

(j) Certificates of registry issued to staff officers shall be suspended or revoked in the same manner and with like procedure as is provided in the case of suspension or revocation of licenses of officers under the provisions of R. S. 4450, as amended (46 U. S. C. 239).

(k) No person whose certificate of registry is under suspension or revoked shall be issued another certificate of registry except upon approval of the Commandant. If an applicant for a certificate of registry is currently suffering the suspension or revocation of a license or certificate of service, the certificate of registry for which he applies shall not be issued except upon approval of the Commandant.

(l) Any person whose certificate of registry has been stolen, lost or destroyed shall report that fact to an Officer in Charge, Marine Inspection, as soon as possible, and if a duplicate certificate is desired, a properly executed application on Coast Guard Form CG–719–E, giving satisfactory evidence of such loss shall be furnished an Officer in Charge, Marine Inspection, along with one photograph as required in the case of an application for an original certificate. The Officer in Charge, Marine Inspection, shall transmit the application and photograph to Coast Guard Headquarters, and the Commandant shall cause to be prepared a certificate which will be similar to the former certificate, bear the same book or identification number as the former certificate and will be marked "Duplicate."

(m) Whenever a certificate of registry is reported to an Officer in Charge, Marine Inspection, as having been stolen, lost, or destroyed, the Officer in Charge, Marine Inspection, shall immediately report the fact by letter to the Commandant giving all the facts incident to its loss or destruction. By the same procedure, he shall report the recovery of any certificate of registry, together with all facts incident to its recovery, and shall forward the recovered certificate to the Commandant.

(n) Staff officers who are members of the Naval Reserve Corps, shall wear on their uniforms such special distinguishing insignia as may be approved by the Secretary of the Navy.

(o) The uniform stripes, decorations, or other insignia shall be of gold braid or woven gold or silver material, and no member of the ship's crew other than such staff officers shall be allowed to wear any uniform with such staff officers' identifying insignia.

(Sec. 2, 68 Stat. 484; 46 U.S.C. 239b. Treasury Department Order 167–9, August 3, 1954, 19 F.R. 5195)

CROSS REFERENCE: See 33 CFR 1.25–65 for the fee for a duplicate certificate of registry as staff officer.

§ 10.25–9 Experience requirements.

(a) The applicant for registry and a certificate of registry as staff officer shall submit evidence of experience as follows:

(1) *Chief purser.* Two years' service aboard vessels performing duties relating to work in the purser's office.

(2) *Surgeon.* A valid license as physician and surgeon issued under the authority of a State or Territory of the United States, the Commonwealth of Puerto Rico, or the District of Columbia.

(3) *Purser.* One year's service aboard vessels performing duties relating to work in the purser's office.

(4) *Senior assistant purser.* Six months' service aboard vessels performing duties relating to work in purser's office.

(5) *Junior assistant purser.* Previous experience not required.

(6) *Professional nurse.* A valid license as a registered nurse issued under authority of a State or Territory of the United States, the Commonwealth of Puerto Rico, or the District of Columbia.

(b) Employment on shore in connection with ship's business may be accepted in lieu of service aboard vessels. Such shore employment shall be accepted in the ratio of 2 months' shore service to count as 1 month's service aboard vessels.

(c) In computing the length of service required of an applicant, service of 1 season on vessels on the Great Lakes shall be counted as service of 1 year.

(d) In the event an applicant presents other special qualifications which, in the opinion of the Officer in Charge, Marine Inspection, fit him for the duties of a staff officer, other than surgeon, the Officer in Charge, Marine Inspection, shall forward full details and description of such qualifications to Coast Guard Headquarters for the decision of the Commandant prior to the registry and issuance of certificate of registry.

(Sec. 2, 53 Stat. 1146; 46 U.S.C. 243)

12.02–15 Oath requirement.
12.02–17 Rules for the preparation and issuance of documents.
12.02–19 Suspension or revocation of documents.
12.02–21 Issuance of documents after revocation.
12.02–23 Issuance of duplicate documents.

Subpart 12.05—Able Seamen

12.05–1 Certification required.
12.05–3 General requirements.
12.05–5 Physical requirements.
12.05–7 Service or training requirements.
12.05–9 Examination and demonstration of ability.
12.05–11 General provisions respecting merchant mariner's documents endorsed as able seaman.

Subpart 12.10—Lifeboatman

12.10–1 Certification required.
12.10–3 Service or training requirements.
12.10–5 Examination and demonstration of ability.
12.10–7 General provisions respecting merchant mariner's documents endorsed as lifeboatman.

Subpart 12.15—Qualified Member of the Engine Department

12.15–1 Certification required.
12.15–3 General requirements.
12.15–5 Physical requirements.
12.15–7 Service or training requirements.
12.15–9 Examination requirements.
12.15–11 General provisions respecting merchant mariner's documents endorsed as qualified member of the engine department.

Subpart 12.20—Tankerman

Sec.
12.20–1 General requirements.
12.20–3 Physical requirements.
12.20–5 Examination requirements.

Subpart 12.25—Certificates of Service for Ratings Other Than Able Seaman or Qualified Member of the Engine Department

12.25–1 Certification required.
12.25–5 Commitment of employment.
12.25–10 General requirements.
12.25–20 Food handler.
12.25–25 Members of Merchant Marine Cadet Corps.
12.25–30 Student observers.

AUTHORITY: The provisions of this Part 12 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4417a, as amended, 4488, as amended, 4551, as amended, sec. 13, 38 Stat. 1169, as amended, secs. 1, 2, 7, 49 Stat. 1544, 1545, as amended, 1936, as amended, sec. 3, 54 Stat. 347, as amended, secs. 2, 3, 68 Stat. 484, 675; 46 U.S.C. 391a, 481, 643, 672, 367, 689, 1333, 239b, 50 U.S.C. 198. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–9, Aug. 3, 1954, 19 F.R. 5195; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–38, Oct. 26, 1959, 24 F.R. 8857, unless otherwise noted.

Subpart 12.01—General

§ 12.01–1 Purpose of regulations.

(a) The purpose of the regulations in this part is to provide a comprehensive and adequate means of determining the identity or the qualifications an applicant must possess in order to be eligible for certification to serve on merchant vessels of the United States.

§ 12.01–5 Authority for regulations.

(a) *General.* The authority to prescribe regulations generally is set forth in R. S. 4405 and 4462, as amended (46 U. S. C. 375, 416), and sec. 7 of the act of June 25, 1936, as amended (49 Stat. 1936; 46 U. S. C. 689), as well as in other provisions of Titles 52 and 53 of the Revised Statutes and acts amendatory thereof or supplemental thereto. Under the provisions of R. S. 4403, as amended (46 U. S. C. 372), the Commandant, United States Coast Guard, superintends the administration of the vessel inspection laws and is required to produce a correct and uniform administration of the inspection laws, rules, and regulations. Under the provisions of section 2 of the act of July 5, 1885 (23 Stat. 118, 46 U. S. C. 2), the Commandant, United States Coast Guard, and the Commissioner of Customs, Bureau of Customs, have general superintendence of the commercial marine and merchant seamen of the United States, so far as vessels and seamen are not, under the existing laws, subject to the supervision of any other officer of the Government.

(b) *Certification of seamen.* The regulations regarding requirements for certification of seamen interpret or apply R. S. 4551, as amended, sec. 13, 38 Stat. 1169, as amended by sec. 1, 49 Stat. 1930, and secs. 1, 2, 50 Stat. 199, and modified by 52 Stat. 753, 55 Stat. 579, and 55 Stat. 732; and sec. 3, 68 Stat. 675; 46 U. S. C. 643, 672, 672b, 672–1, 672–2, 50 U. S. C. 198.

(c) *Lifeboatman.* The regulations regarding lifeboatman interpret or apply R. S. 4417a and 4488, as amended

(46 U. S. C. 391a, 481), and sec. 3, 68 Stat. 675 (50 U.S.C. 198).

(d) *Tankerman.* The regulations regarding tankerman interpret or apply R. S. 4417a, as amended (46 U. S. C. 391a), and sec. 3, 68 Stat. 675 (50 U.S.C. 198).

Subpart 12.02—General Requirements for Certification

§ 12.02–3 Where documents are issued.

(a) Certificates of identification, certificates of service, certificates of efficiency, and continuous discharge books are issued to applicants qualifying therefor at any Marine Inspection Office of the Coast Guard during usual business hours.

(b) (1) Coast Guard Merchant Marine Details abroad are authorized to conduct examinations for up-grading of seamen, but are not prepared to conduct the physical examination where required. Merchant Marine Details will therefore not issue regular certificates, but temporary permits in lieu thereof. Merchant Marine Details will instruct the recipient of each temporary permit to present it to the Officer in Charge, Marine Inspection, upon arrival in the first port in the United States in which a Marine Inspection Office is located in order to exchange it for a permanent certificate.

(2) The temporary permit shall be accepted in a Marine Inspection Office as proof that the bearer has complied with the rules and regulations governing the issuance of certificates, except as noted in the body of the temporary permit. The requirements noted in the exceptions will be complied with as in the case of other applicants.

(3) The written examinations are forwarded to the Commandant by Merchant Marine Details, and any Marine Inspection Office at which an applicant with a temporary permit appears may request and obtain the examination in the case from the Commandant. Any Marine Inspection Office which doubts the propriety of issuing a permanent certificate in lieu of a temporary permit which has been issued by a foreign Merchant Marine Detail shall inform the Commandant fully as to the circumstances.

§ 12.02–4 Basis for denial of documents.

No certificate of identification, certificate of service, certificate of efficiency nor continuous discharge book shall be issued to any person who, within ten years prior to the date of filing the application, has been convicted in a court of record of a violation of the narcotic drug laws of the United States, the District of Columbia, or any State or Territory of the United States; or who, unless he furnishes satisfactory evidence that he is cured, has ever been the user of or addicted to the use of a narcotic drug.

(Sec. 1, 68 Stat. 484; 46 U. S. C. 239a)

§ 12.02–5 Form in which documents are issued.

(a) Every certificate of service, certificate of efficiency, or certificate of identification issued or reissued after November 1, 1945, shall be in the form of a merchant mariner's document, Coast Guard Form CG–2838, and wherever such certificates are mentioned in this part they shall be deemed to include merchant mariner's documents representing such certificates.

(b) Continuous discharge books are issued on Coast Guard Form CG–719.

§ 12.02–7 When documents are required.

(a) Every seaman employed on any merchant vessel of the United States of 100 gross tons or upward, except vessels employed exclusively in trade on the navigable rivers of the United States, shall be issued, at the option of the seaman, a continuous discharge book, a certificate of identification, or merchant mariner's document representing such certificate of identification, which shall be retained by him. This book or certificate of identification or merchant mariner's document will bear a number, and this same number shall be shown on all certificates of service or efficiency issued to the holder of the book or certificate or document. Provisions of this section are not applicable to unrigged vessels except seagoing barges and certain tank barges.

(b) Every seaman, as referred to in paragraph (a) of this section, shall produce a continuous discharge book or certificate of identification or merchant mariner's document representing such a certificate to the United States shipping commissioner before signing Articles of Agreement, and where the seaman is not signed on before a shipping commissioner, one of these documents shall be exhibited to the master of the vessel at the time of his employment. Seamen who do not possess one of these documents may be employed at a foreign port or place.

(c) (1) Every person employed on any merchant vessel of the United States of 100 gross tons and upward, except those navigating rivers exclusively and the smaller inland lakes, below the rank of licensed officer and registered staff officer, shall possess a valid certificate of service, or merchant mariner's document representing such certificate, issued by an Officer in Charge, Marine Inspection.

(2) No certificate of service or efficiency is required of any person below the rank of licensed officer employed on any unrigged vessel except seagoing barges and certain tank barges.

(3) No certificate of service or efficiency is required of any person below the rank of licensed officer employed on any sail vessel of less than 500 net tons while not carrying passengers for hire and while not operating outside the line dividing inland waters from the high seas, as defined in section 2 of the act of February 19, 1895, as amended (33 U.S.C. 151) and in 33 CFR Part 82.

§ 12.02–9 Application for documents.

(a) An applicant for a certificate of service, certificate of efficiency, certificate of identification, continuous discharge book, or merchant mariner's document, shall make written application, in duplicate, on Coast Guard Form CG–719–b and shall appear in person before an Officer in Charge, Marine Inspection, or other person authorized to issue documents. The placing of fingerprints on the application shall be optional with the seaman. This application may be for the certificates or the rating endorsement for which the seaman believes he is qualified. In the case of a seaman applying for his first certificate, other than certificate of identification, the application shall include a request for either a continuous discharge book or a merchant mariner's document representing a certificate of identification, at the option of the applicant.

(b) (1) When the application is submitted for a certificate of identification, certificate of service, certificate of efficiency, merchant mariner's document, or any combination thereof, or a continuous discharge book, the seaman shall furnish three unmounted dull finish photographs of passport type (2 inches by 1½ inches) taken within one year and showing the full face at least one inch in height with head uncovered.

(2) When the application requests a continuous discharge book in addition to a certificate of service or certificate of efficiency or merchant mariner's document one additional photograph shall be furnished.

(c) An applicant for a document where sea service is required shall produce with his application discharges or other documentary evidence of his service, indicating the name of the vessels and dates on which he has had service, in what capacity, and on what waters.

(d) If the applicant possesses a continuous discharge book, certificate of identification, or merchant mariner's document representing such certificate, it shall be exhibited at the time of making application for any other document.

§ 12.02–10 Applications for documents from aliens.

(a) No application from an alien for a certificate of service, certificate of efficiency, certificate of identification, continuous discharge book, or merchant mariner's document shall be accepted unless the alien presents acceptable documentary evidence from the United States Immigration and Naturalization Service that he is lawfully admitted to the United States for permanent residence.

(b) This evidence may be in the form of an alien registration receipt card issued by the Immigration and Naturalization Service bearing the certification that the alien was admitted to the United States as an immigrant, or a declaration of intention to become a citizen of the United States issued by a naturalization court.

§ 12.02–11 General provisions respecting merchant mariner's documents.

(a) As provided in § 12.02–5, every certificate of service, certificate of efficiency, or certificate of identification issued or reissued shall be in the form of a merchant mariner's document, Coast Guard Form CG–2838.

(b) Any licensed officer or unlicensed seaman currently holding, in a valid status, any of the documents listed in paragraph (a) of this section may, upon request and without examination, be issued a merchant mariner's document.

(c) A merchant mariner's document shall be a certificate of service authorizing the holder to serve in any rating endorsed thereon, or in any lower rating in the same department, or in any rating covered by a general endorsement thereon.

(d) (1) A merchant mariner's document issued to a licensed deck officer will be endorsed for, "any unlicensed rating in the deck department except able seaman," and will be a certificate of service authorizing the holder to serve in any unlicensed capacity in the deck department except able seaman without being required to present his license. If a licensed deck officer qualifies as able seaman the merchant mariner's document will be endorsed, "any unlicensed rating in the deck department including able seaman," and such endorsement will be deemed to include a certificate of efficiency as lifeboatman.

(2) A merchant mariner's document issued to an engineer officer licensed for inspected vessels of over 2,000 horsepower will be endorsed for "any unlicensed rating in the engine department," and will be a certificate of service authorizing the holder to serve in any unlicensed capacity in the engine department without being required to present his license. If a licensed engineer qualifies as a lifeboatman, the further endorsement, "lifeboatman," will be placed on the merchant mariner's document.

(3) A merchant mariner's document issued to a licensed radio officer will be endorsed as follows: "See License as Radio Officer." If a licensed radio officer qualifies as lifeboatman, the further endorsement, "Lifeboatman," will be placed on the merchant mariner's document. Qualifications for other ratings for which a radio officer is eligible may also be endorsed on the document.

(e) (1) A merchant mariner's document issued to a staff officer will be endorsed as follows: "See Certificate of Registry." The holder of a certificate of registry as chief purser, purser, senior assistant purser, or junior assistant purser may also serve in any capacity in the staff department not requiring a certificate of registry without obtaining an additional endorsement on his merchant mariner's document.

(2) The authorized holder of any valid merchant mariner's document, however endorsed, may serve in any capacity in the staff department of a vessel, except in those capacities requiring registered staff officers: *Provided*, That whenever such service includes the handling of food no person may be so employed unless his document bears the food handler's endorsement "(F.H.)."

(f) A merchant mariner's document endorsed as able seaman or as lifeboatman shall be a certificate of efficiency as lifeboatman.

(g) Every merchant mariner's document shall be a certificate of identification unless the holder also holds a continuous discharge book. The holder of a certificate of identification in the form issued before November 1, 1945, shall surrender that certificate before he is issued a merchant mariner's document.

§ 12.02–13 Citizenship requirements.

(a) Any person making application for a continuous discharge book or a certificate of identification or a merchant mariner's document representing a certificate of identification and claiming to be a citizen of the United States shall present acceptable evidence of such citizenship at the time of making application. No original document shall be issued to any person claiming to be a citizen of the United States until such citizenship is established by acceptable evidence.

(b) Any person who has been issued a continuous discharge book or certificate of identification or merchant mariner's document showing question marks prior to the effective date of this section may at any time produce additional evidence of citizenship to a shipping commissioner or Officer in Charge, Marine Inspection. If the additional evidence produced satisfies the shipping commissioner or the Officer in Charge, Marine Inspection, to whom it is presented that the same is acceptable evidence of the citizenship of the person, such official may draw lines through the question marks and note the citizenship of the person in the space provided therefor, attesting the change, or reissue the certificate or document. Whenever such changes are made the official making the change shall immediately thereafter notify the Commandant.

(c) Acceptable evidence of citizenship is set forth in § 10.02–5 of this subchapter.

§ 12.02–14 Nationality of aliens.

(a) Any alien making application for a continuous discharge book or certificate of identification or merchant mariner's document representing a certificate of identification shall present acceptable evidence of nationality at the time of making application. No original document shall be issued to any alien until nationality is established by acceptable evidence.

(b) Any document of an official character showing the country of which the alien is a citizen or subject may be accepted as acceptable evidence of an alien's nationality. The following are examples of such a document:

(1) Declaration of intention to become a citizen of the United States made by the alien after 1929.

(2) A travel document in the nature of a passport issued by the government of the country of which the alien is a citizen or subject.

(3) A certificate issued by the consular representative of the country of which the alien is a citizen or subject.

(c) Should any doubt arise as to whether or not the document presented may be considered as acceptable evidence of the alien's nationality, the matter shall be referred to the Commandant for decision.

§ 12.02–15 Oath requirement.

An applicant for a certificate of service for any rating shall take oath before an Officer in Charge, Marine Inspection, or other official authorized to give such oath, or a commissioned officer of the Coast Guard authorized to administer oaths under 10 U.S.C. 936 or 14 U.S.C. 636, that he will faithfully and honestly perform all the duties required of him by law and carry out all lawful orders of his superior officers on shipboard.

§ 12.02–17 Rules for the preparation and issuance of documents.

(a) Upon application of any person for a certificate of service or efficiency, or merchant mariner's document, any required examination will be given as soon as practicable.

(b) Upon satisfactory completion of any required examination the Officer in Charge, Marine Inspection, shall issue the appropriate document to the applicant.

(c) Before the delivery of the document the seaman shall affix his signature on the document and shall impress his left thumbprint on the back of the document. When the seaman has no left thumb, the imprint of the right thumb may be used and that fact noted.

(d) A seaman's Social Security number may be endorsed on his document only by the Officer in Charge, Marine Inspection, or the officer or person designated for the purpose of issuing documents, including Shipping Commissioners and Collectors of Customs acting as Shipping Commissioners.

(e) Whenever a certificate or document of any type issued to seamen is reported to an Officer in Charge, Marine Inspection, as having been stolen, lost, or destroyed, the Officer in Charge, Marine Inspection, shall immediately report the fact by letter to the Commandant, giving all the facts incident to its loss or destruction. By the same procedure, he shall report the recovery of any document together with all facts incident to its recovery, and shall forward the recovered document to the Commandant.

(f) An applicant for a certificate of service or of efficiency who has been duly examined and refused a certificate by an Officer in Charge, Marine Inspection, will not be permitted to make application for reexamination until 30 days have elapsed.

§ 12.02–19 Suspension or revocation of documents.

Any certificate of service or of efficiency or merchant mariner's document representing such certificate(s) is subject to suspension or revocation on the same grounds and in the same manner and with like procedure as is provided in the case of suspension or revocation of licenses of officers under the provisions of R.S. 4450, as amended (46 U.S.C. 239).

§ 12.02–21 Issuance of documents after revocation.

(a) An applicant who has had a certificate or other document revoked and who is applying for certification in the same or any other rating shall state in his application the date of revocation

and number or type of the document revoked.

(b) No applicant who has had a certificate or other document revoked will be certificated in the same or any other rating except upon approval of the Commandant.

§ 12.02–23 Issuance of duplicate documents.

(a) If a seaman loses his continuous discharge book, certificate of identification, or merchant mariner's document representing a certificate of identification, or certificate of discharge by shipwreck or other casualty, he shall be supplied with a reissue of such documents free of charge. The phrase "or other casualty" as used in this section is interpreted to mean any damage to a ship caused by collision, explosion, tornado, wreck or flooding of the ship, such as a tidal wave or a grounding of the ship on a sand bar, or a beaching of the ship on a shore or by fire or other causes in a category with these mentioned.

(b) If a seaman loses his continuous discharge book, or merchant mariner's document representing a certificate of identification, or certificate of discharge, otherwise than by shipwreck or other casualty, he will be required to pay for a reissue or a duplicate at an amount equal to the cost of such document or certificate to the Government as prescribed in 33 CFR 1.25–65.

(c) The seaman shall be required to pay for the reissue document (if payment is required) at the time of the issuance of such document to him and in the event the lost document is found he shall be required to surrender same to the Shipping Commissioner, Collector or Deputy Collector of Customs, or the Officer in Charge, Marine Inspection. If the seaman requests a certificate of identification in lieu of a lost book, or vice versa, he shall be required to pay for the reissue of the lost document at the time of its issuance (if payment is required). When the reissue of the document is issued to him, he may then exchange the same in accordance with the regular procedure.

(d) A seaman shall be required to furnish one properly executed application on Coast Guard Form CG–719–E, giving satisfactory evidence of the loss of his documents to the Officer in Charge, Marine Inspection, Shipping Commissioner, Collector of Customs, Deputy Collector of Customs, or other authorized person. The application shall be accompanied by one photograph for each reissue of document requested, except no photograph is required for a reissue certificate of discharge. The application and necessary photographs shall be forwarded by the official receiving them to Coast Guard Headquarters and the Commandant will cause to be prepared a duplicate of lost document requested. The duplicate document will be prepared from available records at Coast Guard Headquarters and returned for issuance to the office which forwarded the application. The reissued document will be marked "duplicate," and will bear the same number as the original book or certificate of identification with the addition of the suffix "D–1" on the first reissue, "D–2" on the second reissue, "D–3" on the third reissue, etc.; such suffix shall then become part of the serial number and shall be recorded in all subsequent records.

(e) Any person whose certificate of service or efficiency has been stolen, lost or destroyed, shall report that fact to an Officer in Charge, Marine Inspection, as soon as possible.

(f) No application from an alien for a duplicate of a certificate of service, certificate of efficiency, certificate of identification, continuous discharge book, or merchant mariner's document shall be accepted unless the alien complies with the requirements of § 12.02–10 with respect to proof that he is lawfully admitted to the United States for permanent residence.

(Sec. 5, 49 Stat. 1935, as amended, sec. 1, 52 Stat. 753, as amended, 55 Stat. 579; 46 U.S.C. 672a, 672b, 672–1, 672–2)

Subpart 12.05—Able Seamen

§ 12.05–1 Certification required.

(a) Every person employed in a rating as able seaman on any United States vessel requiring certificated able seamen, before signing articles of agreement, shall present to the Shipping Commissioner, United States Collector or Deputy Collector of Customs, or master, his certificate as able seaman or his merchant mariner's document endorsed as able seaman.

(b) No certificate as able seaman is required of any person employed on any unrigged vessel except seagoing barges, nor on any tug or towboat on the bays and sounds connected directly with the seas.

(c) No certificate as able seaman is required of any person employed on any sail vessel of less than 500 net tons while not carrying passengers for hire and while not operating outside the line dividing inland waters from the high seas.

§ 12.05–3 General requirements.

(a) To qualify for certification as able seaman an applicant shall be:

(1) At least 19 years of age;

(2) Pass the prescribed physical examination;

(3) Meet the sea service or training requirements set forth in this part;

(4) Satisfactorily pass an examination demonstrating his ability as an able seaman and lifeboatman; and

(5) Be able to speak and understand the English language as would be required in the rating of able seaman and in an emergency aboard ship.

§ 12.05–5 Physical requirements.

(a) All applicants for a certificate of service as able seaman shall be required to pass a physical examination given by a medical officer of the United States Public Health Service and present to the Officer in Charge, Marine Inspection, a certificate executed by the Public Health Service Officer. Such certificate shall attest to the applicant's acuity of vision, color sense, hearing, and general physical condition. In exceptional cases where an applicant would be put to great inconvenience or expense to appear before a medical officer of the United States Public Health Service, the physical examination and certification may be made by any other reputable physician.

(b) The medical examination for an able seaman is the same as for an original license as a deck officer as set forth in § 10.02–5 of this subchapter. If the applicant is in possession of an unexpired deck license, the Officer in Charge, Marine Inspection, may waive the requirement for a physical examination.

§ 12.05–7 Service or training requirements.

(a) The minimum service or training required to qualify an applicant for certification and the various endorsements as able seaman is listed in this paragraph:

(1) *High seas and inland waters*—(i) *"Any waters—unlimited."* Three years' service on deck in vessels of 100 gross tons or over operating on ocean or coastwise routes or on the Great Lakes.

(ii) *"Any waters—unlimited."* The period of time spent by an applicant successfully completing a course of able seaman's training in a training school approved by the Commandant may be accepted as the equivalent of sea service up to a maximum of 1 year of the 3 years required in subdivision (i) of this subparagraph.

(iii) *"Any waters—unlimited."* Satisfactory completion of 18 months' training in a seagoing training ship approved by the Commandant.

(iv) *"Any waters—12 months."* 12 months' service on deck in vessels of 100 gross tons or over operating on ocean or coastwise routes or on the Great Lakes. (Holders of certification under this provision are limited to one-fourth of the number of able seamen required by law to be employed on a vessel.)

(v) *"Any waters—12 months."* Satisfactory completion of a course of training at a U. S. Maritime Service Training Station of at least 9 months, 6 months of which shall have been served aboard a seagoing training vessel. (Holders of certification under this provision are limited to one-fourth of the number of able seamen required by law to be employed on a vessel.)

(2) *Great Lakes and inland waters*—(i) *"Great Lakes—18 months' service."* 18 months' service on deck in vessels of 100 gross tons or over operating on ocean or coastwise routes, or on the Great Lakes, smaller lakes, bays, or sounds. (Holders of certification under this provision may comprise the required number of able seamen on vessels on the Great Lakes and on the smaller lakes, bays, and sounds.) If the seaman possesses the requisite service for certification under subparagraph (1)(iv) of this paragraph, there shall be added "any waters—12 months."

(3) *Tugs and towboats*—(i) *"Tugs and towboats—any waters."* 18 months' service on deck in vessels operating on ocean or coastwise routes, or on the Great Lakes, or on the bays and sounds connected directly with the seas.

(4) *Bays and sounds*—(i) *"Bays and sounds—12 months, vessels 500 gross*

tons or under not carrying passengers." 12 months' service on deck in vessels operating on ocean or coastwise routes, or on the Great Lakes, or on the bays and sounds connected directly with the seas.

(5) *Barges*—(i) *"Seagoing barges—12 months."* 12 months' service on deck in vessels operating on ocean or coastwise routes, or on the Great Lakes, or on the bays and sounds connected directly with the seas.

§ 12.05–9 Examination and demonstration of ability.

(a) Before an applicant is certified as able seaman, he shall prove to the satisfaction of the Coast Guard by oral or written examination and by actual demonstration, his knowledge of seamanship and his ability to carry out effectively all the duties that may be required of an able seaman, including those of a lifeboatman. He shall demonstrate that:

(1) He has been trained in all the operations connected with the launching of lifeboats and liferafts and the use of oars and sail;

(2) He is acquainted with the practical handling of the boats themselves; and

(3) He is capable of taking command of a boat's crew.

(b) The oral or written examination shall be conducted only in the English language and shall consist of questions regarding:

(1) Lifeboats and liferafts, the names of their essential parts, and a description of the required equipment;

(2) The clearing away, swinging out, and lowering of lifeboats and liferafts, the handling of lifeboats under oars and sails, including questions relative to the proper handling of a boat in a heavy sea;

(3) The operation and functions of commonly used types of davits;

(4) The applicant's knowledge of nautical terms; boxing the compass, either by degrees or points according to his experience; running lights, passing signals, and fog signals for vessels on the high seas, in inland waters, or on the Great Lakes depending upon the waters on which the applicant has had service; and distress signals; and,

(5) The applicant's knowledge of commands in handling the wheel by obeying orders passed to him as "wheelsman," and knowledge of the use of engineroom telegraph or bell-pull signals.

(c) In the actual demonstration, the applicant shall show his ability by taking command of a boat and directing the operation of clearing away, swinging out, lowering the boat into the water, and acting as coxswain in charge of the boat under oars. He shall demonstrate his ability to row by actually pulling an oar in the boat. He shall also demonstrate knowledge of the principal knots, bends, splices, and hitches in common use by actually making them.

(d) Any person who is in valid possession of a certificate as able seaman endorsed, "any waters—12 months" and who can produce documentary evidence of sufficient service to qualify for a certificate as able seaman endorsed, "any waters—unlimited," may be issued a new document bearing this endorsement without additional professional examination. The applicant shall surrender for cancellation the document bearing the limited endorsement. No physical examination will be required at the time of this exchange unless it is found that the applicant obviously suffers from some physical or mental infirmity to a degree that in the opinion of the Officer in Charge, Marine Inspection, would render him incompetent to perform the usual duties of an able seaman at sea. If such condition is believed to exist, the applicant shall be required to undergo an examination by a medical officer of the Public Health Service to determine his competency.

§ 12.05–11 General provisions respecting merchant mariner's documents endorsed as able seaman.

(a) The holder of a merchant mariner's document endorsed for the rating of able seaman may serve in any unlicensed rating in the deck department without obtaining an additional endorsement.

(b) A merchant mariner's document endorsed as able seaman will also be considered a certificate of efficiency as lifeboatman without further endorsement.

(c) This type of document will describe clearly the type of able seaman certificate which it represents, e. g.: able seaman—any waters; able seaman—any waters, 12 months; able seaman—Great Lakes, 18 months; able seaman—on freight vessels 500 gross tons or less on bays or sounds, and on tugs, towboats, and barges on any waters.

Subpart 12.10—Lifeboatman

§ 12.10–1 Certification required.

Every person employed in a rating as lifeboatman on any United States vessel requiring certificated lifeboatmen shall produce a certificate as lifeboatman or merchant mariner's document endorsed as lifeboatman or able seaman to the shipping commissioner, United States collector or deputy collector of customs, or master before signing articles of agreement. No certificate of efficiency as lifeboatman is required of any person employed on any unrigged vessel, except on a seagoing barge and on a tank barge navigating waters other than rivers and/or canals.

§ 12.10–3 Service or training requirements.

(a) An applicant to be eligible for certification as lifeboatman must meet one of the following requirements:

(1) At least 1 year's sea service in the deck department, or at least 2 years' sea service in the other departments of ocean, coastwise, Great Lakes, and other lakes, bays, or sounds vessels.

(2) Graduation from a schoolship approved by and conducted under rules prescribed by the Commandant.

(3) Satisfactory completion of basic training by a Cadet of the United States Merchant Marine Cadet Corps.

(4) Satisfactory completion of 3 years' training at the U. S. Naval Academy or the U. S. Coast Guard Academy including two training cruises.

(5) Satisfactory completion of a course of training approved by the Commandant, and served aboard a training vessel.

(6) Successful completion of a training course approved by the Commandant, such course to include a minimum of 30 hours' actual lifeboat training: *Provided*, That the applicant produces evidence of having served a minimum of 3 months at sea aboard ocean or coastwise vessels.

(b) An applicant, to be eligible for certification as lifeboatman, shall be able to speak and understand the English language as would be required in the rating of lifeboatman and in an emergency aboard ship.

§ 12.10–5 Examination and demonstration of ability.

(a) Before a lifeboatman's certificate may be granted, the applicant must prove to the satisfaction of the Coast Guard by oral or written examination and by actual demonstration that:

(1) He has been trained in all the operations connected with the launching of lifeboats and liferafts and the use of oars and sails;

(2) He is acquainted with the practical handling of boats themselves; and,

(3) He is capable of taking command of a boat's crew.

(b) The oral or written examination shall be conducted only in the English language and shall consist of questions regarding:

(1) Lifeboats and liferafts, the names of their essential parts, and a description of the required equipment;

(2) The clearing away, swinging out, and lowering of lifeboats and liferafts, the handling of lifeboats under oars and sails, including questions relative to the proper handling of a boat in a heavy sea; and,

(3) The operation and functions of commonly used types of davits.

(c) The practical examination shall consist of a demonstration of the applicant's ability to carry out the orders incident to launching lifeboats, and the use of the boat's sail, and to row.

(Sec. 1, 52 Stat. 753, as amended, 55 Stat. 579; 46 U. S. C. 672b, 672–1, 672–2)

§ 12.10–7 General provisions respecting merchant mariner's documents endorsed as lifeboatman.

A merchant mariner's document endorsed as able seaman shall be considered as the equivalent of a certificate as lifeboatman or an endorsement as lifeboatman and it shall be accepted as a certificate as lifeboatman wherever required by law or regulation.

Subpart 12.15—Qualified Member of the Engine Department

§ 12.15–1 Certification required.

(a) Every person employed in a rating as qualified member of the engine department on any United States vessel requiring certificated qualified members of the engine department shall produce a certificate as qualified member of the engine department to the shipping commissioner, United States Collector or Deputy

Collector of Customs, or master before signing articles of agreement.

(b) No certificate as qualified member of the engine department is required of any person employed on any unrigged vessel, except seagoing barges.

§ 12.15–3 General requirements.

(a) A qualified member of the engine department is any person below the rating of licensed officer and above the rating of coal passer or wiper, who holds a certificate of service as such qualified member of the engine department issued by the Coast Guard or predecessor authority.

(b) For purposes of administering this part the rating of "assistant electrician" is considered a rating not above that of coal passer or wiper, but equal thereto.

(c) An applicant, to be eligible for certification as qualified member of the engine department, shall be able to speak and understand the English language as would be required in the rating of qualified member of the engine department and in an emergency aboard ship.

§ 12.15–5 Physical requirements.

(a) An applicant for a certificate of service as a qualified member of the engine department shall present a certificate of a medical officer of the United States Public Health Service, or other reputable physician attesting that his eyesight, hearing, and physical condition are such that he can perform the duties required of a qualified member of the engine department.

(b) The medical examination for qualified member of the engine department is the same as for an original license as engineer, as set forth in § 10.02–5 of this subchapter. If the applicant is in possession of an unexpired license, the Officer in Charge, Marine Inspection, may waive the requirement for a physical examination.

(c) An applicant holding a certificate of service for a particular rating as qualified member of the engine department and desiring certification for another rating covered by this same form of certificate may qualify therefor without a physical examination unless the Officer in Charge, Marine Inspection, finds that the applicant obviously suffers from some physical or mental infirmity to a degree that would render him incompetent to perform the ordinary duties of a qualified member of the engine department. In this event the applicant shall be required to undergo an examination to determine his competency.

§ 12.15–7 Service or training requirements.

(a) An applicant for a certificate of service as qualified member of the engine department shall furnish the Coast Guard proof that he possesses one of the following requirements of training or service:

(1) Six months' service at sea in a rating at least equal to that of coal passer or wiper in the engine department of vessels required to have such certificated men, or in the engine department of tugs or towboats operating on the high seas or Great Lakes, or on the bays or sounds directly connected with the seas; or,

(2) Graduation from a schoolship approved by and conducted under rules prescribed by the Commandant; or,

(3) Satisfactory completion of a course of training approved by the Commandant, and served aboard a training vessel; or,

(4) Graduation from the U. S. Naval Academy or the U. S. Coast Guard Academy.

§ 12.15–9 Examination requirements.

(a) Applicants for certification as qualified members of the engine department in the ratings of oiler, watertender, fireman, deck engineer, refrigerator engineer, junior engineer, electrician, and machinist shall be examined orally or in writing and only in the English language on the subjects listed in paragraph (b) of this section. The applicant's general knowledge of the subjects must be sufficient to satisfy the examiner that he is qualified to perform the duties of the rating for which he makes application.

(b) List of subjects required:

TABLE 12.15-9 (b)—SUBJECTS FOR QUALIFIED MEMBERS OF ENGINE DEPARTMENT

Subjects	Machinist	Refrigerating engineer	Fireman	Watertender	Oiler	Electrician	Junior engineer	Deck engineer
1. Application, maintenance, and use of hand tools and measuring instruments	X	X	X	X	X	X	X	X
2. Uses of babbitt, copper, brass, steel, and other metals	X	X		X	X	X	X	X
3. Methods of measuring pipe, pipe fittings, sheet metal, machine bolts and nuts, packing, etc	X	X		X	X	X	X	X
4. Operation and maintenance of mechanical remote control equipment	X			X	X	X	X	X
5. Precautions to be taken for the prevention of fire and the proper use of firefighting equipment	X	X	X	X	X	X	X	X
6. Principles of mechanical refrigeration; and functions, operation, and maintenance of various machines and parts of the systems		X			X		X	
7. Knowledge of piping systems as used in ammonia, freon, and CO_2, including testing for leaks, operation of bypasses, and making up of joints		X					X	
8. Safety precautions to be observed in the operation of various refrigerating systems, including storage of refrigerants, and the use of gas masks and firefighting equipment	X	X		X	X	X	X	X
9. Combustion of fuels, proper temperature, pressures, and atomization			X	X	X		X	
10. Operation of the fuel oil system on oil burning boilers, including the transfer and storage of fuel oil			X	X	X		X	X
11. Hazards involved and the precautions taken against accumulation of oil in furnaces, bilges, floorplates, and tank tops; flarebacks, leaks in fuel oil heaters, clogged strainers and burner tips	X	X	X	X	X	X	X	
12. Precautions necessary when filling empty boilers, starting up the fuel oil burning system, and raising steam from a cold boiler			X	X	X		X	
13. The function, operation, and maintenance of the various engineroom auxiliaries	X	X		X	X	X	X	
14. Proper operation of the various types of lubricating systems	X	X		X	X	X	X	X
15. Safety precautions to be observed in connection with the operation of engineroom auxiliaries, electrical machinery, and switchboard equipment	X	X		X	X	X	X	X
16. The function, operation, and maintenance of the bilge, ballast, fire, freshwater, sanitary, and lubricating systems	X	X		X	X		X	X
17. Proper care of spare machine parts and idle equipment	X	X		X	X	X	X	X
18. The procedure in preparing a turbine, reciprocating, or Diesel engine for standby; also the procedure in securing				X	X		X	
19. Operation and maintenance of the equipment necessary for the supply of water to boilers, the dangers of high and low water and remedial action			X	X	X		X	
20. Operation, location, and maintenance of the various boiler fittings and accessories	X		X	X	X		X	
21. The practical application and solution of basic electrical calculations, (Ohm's law, power formula, etc.)						X	X	X
22. Electrical wiring circuits of the various two-wire and three-wire D. C. systems and the various single-phase and polyphase A. C. systems						X	X	X
23. Application and characteristics of parallel and series circuits						X	X	X
24. Application and maintenance of electrical meters and instruments						X	X	X
25. The maintenance and installation of lighting and power wiring involving testing for, locating and correcting grounds, short circuits and open circuits, and making splices						X	X	X
26. The operation and maintenance of the various types of generators and motors, both A. C. and D. C.						X	X	X
27. Operation, installation, and maintenance of the various types of electrical controls and safety devices						X	X	X
28. Testing and maintenance of special electrical equipment such as telegraphs, telephones, alarm systems, fire-detecting systems, and rudder angle indicators						X	X	
29. Rules and Regulations and requirements for installation, repair, and maintenance of electrical wiring and equipment installed aboard ships						X	X	X
30. Such further examination of a nonmathematical character as the Officer in Charge, Marine Inspection, may consider necessary to establish the applicant's proficiency	X	X	X	X	X	X	X	X

(c) Applicants for certification as qualified member of the engine department in ratings other than those indicated in table 12.15-9 (b) shall, by written or oral examination, demonstrate sufficient general knowledge of the subjects peculiar to the rating applied for to satisfy the Officer in Charge, Marine Inspection, that they are qualified to perform the duties of the rating.

§ 12.15-11 General provisions respecting merchant mariner's documents endorsed as qualified member of the engine department.

The holder of a merchant mariner's document endorsed with one or more qualified member of the engine department ratings may serve in any unqualified rating in the engine department without obtaining an additional endorsement. This does not mean that an endorsement of one qualified member of the engine department rating authorizes the holder to serve in all qualified member of the engine department ratings. Each qualified member of the engine department rating for which a holder of a merchant mariner's document is qualified must be endorsed separately. When, however, the applicant qualifies for all ratings covered by a certificate as a qualified member of the engine department, the certification may read "QMED—any rating." The ratings are as follows:

(a) Refrigerating engineer.
(b) Oiler.
(c) Watertender.
(d) Fireman.
(e) Deck engineer.
(f) Junior engineer.
(g) Electrician.
(h) Boilermaker.
(i) Machinist.
(j) Pumpman.

Subpart 12.20—Tankerman

§ 12.20-1 General requirements.

(a) Any applicant for a certificate as tankerman who is not licensed as master, mate, pilot or engineer, shall be eligible for certification after he has furnished satisfactory documentary evidence to the Coast Guard that he is trained in, and capable of performing efficiently the necessary operations on tank vessels which relate to the handling of cargo.

(b) Applicants qualifying for certification as tankerman shall be issued a merchant mariner's document endorsed with the rating of tankerman and the kinds or grades of liquid cargo the holder is qualified to handle.

(c) A currently valid license as master, mate, pilot or engineer shall be considered as a certificate as tankerman and the holder may serve as tankerman upon inspected vessels of the United States required to have such certificated tankerman without having a separate certificate as tankerman.

(d) An applicant, to be eligible for certification as tankerman, shall be able to speak and understand the English language as would be required in the rating of tankerman and in an emergency aboard ship.

§ 12.20-3 Physical requirements.

(a) Applicant for certification as tankerman shall present a certificate of a medical officer of the United States Public Health Service, or other reputable physician, attesting that his eyesight, hearing, and physical condition are such that he can perform the duties required of a tankerman.

(b) The medical examination is the same as for an original license as engineer, except that the applicant will be given a color vision test required for a licensed deck officer as set forth in § 10.02-5 of this subchapter.

§ 12.20-5 Examination requirements.

Any applicant for certification as tankerman must prove to the satisfaction of the Coast Guard by an oral or written examination conducted only in the English language that he is familiar with the general arrangement of cargo tanks, suction and discharge pipelines and valves, cargo pumps and cargo hose, and has been properly trained in the actual operation of cargo pumps, all other operations connected with the loading and discharging of cargo, and the use of fire-extinguishing equipment.

Subpart 12.25—Certificates of Service for Ratings Other Than Able Seaman or Qualified Member of the Engine Department

§ 12.25-1 Certification required.

(a) Every person employed in a rating other than able seaman or qualified member of the engine department of United States merchant vessels requiring such certificated persons shall produce an appropriate certificate of service or merchant mariner's document to the shipping commissioner, United States Collector or Deputy Collector of Customs, or master, before signing articles of agreement.

(b) No certificate of service shall be required of any person employed on any unrigged vessel, except seagoing barges, or on any sail vessel of less than 500 net tons while not carrying passengers for hire and while not operating outside the line dividing inland waters from the high seas, as defined in section 2 of the act of February 19, 1895, as amended (33 U.S.C. 151) and in 33 CFR Part 82.

§ 12.25-5 Commitment of employment.

(a) An applicant for an original merchant mariner's document endorsed for service in ratings for which no professional examination is required shall produce satisfactory proof that he has a commitment of employment as a member of the crew of a United States merchant vessel.

(b) A transcript of sea service in the U.S. Navy, U.S. Coast Guard, U.S. Military Sea Transportation Service, or U.S. Army Transportation Corps shall be accepted in lieu of a letter of commitment.

§ 12.25-10 General requirements.

(a) Merchant mariner's documents shall be issued without professional examination to applicants for certificates of service as endorsements on merchant mariner's documents in capacities other than able seaman, lifeboatman, tankerman or qualified member of the engine department and shall be endorsed for one or more ratings. For example, "ordinary seaman"—"wiper"—"steward's document (F.H.)." Holders of documents endorsed for service as "ordinary seaman" may serve in any unqualified rating in the deck department. Holders of documents endorsed for service as "wiper" may serve in any unqualified rating in the engine department. Documents endorsed for "steward's department (F.H.)" will authorize the holder's service in any capacity in the steward's department. (See § 12.02-11(e)(2) for unqualified ratings in the staff department.)

(b) When the holder of a merchant mariner's document has qualified as a food handler, the endorsement of his rating will be followed by the further indorsement "(F.H.)."

§ 12.25-20 Food handler.

No applicant for a rating authorizing the handling of food will be certificated unless he produces a certificate from a medical officer of the United States Public Health Service, or other reputable physician stating that the applicant is free from communicable disease.

§ 12.25-25 Members of Merchant Marine Cadet Corps.

No ratings other than cadet (deck) or cadet (engine) as appropriate, and lifeboatman shall be shown on a merchant mariner's document issued to a member of the U.S. Merchant Marine Cadet Corps. The merchant mariner's document shall also be stamped "Valid only while cadet in the U.S. Maritime Administration training program." The merchant mariner's document thus prepared shall be surrendered upon the holder being certified in any other rating or being issued a license and the rating of cadet (deck) or cadet (engine) shall be omitted from any new merchant mariner's document issued.

(Sec. 1, 52 Stat. 753, as amended, 55 Stat. 579; 46 U.S.C. 672b, 672-1, 672-2)

§ 12.25-30 Student observers.

Students in technical schools who are enrolled in courses in marine management and ship operations who present a letter or other documentary evidence that they are so enrolled shall be issued a merchant mariner's document as "student observers—any department" and may be signed on ships as such. Students holding these documents or certificates will not take the place of any of the crew, or fill any of the regular ratings.

PART 14—SHIPMENT AND DISCHARGE OF SEAMEN

Subpart 14.01—General

Sec.
14.01-1 Employment of seamen whose citizenship has not been established.
14.01-10 Reporting loss or recovery of continuous discharge book, certificate of identification, or certificate of discharge.

Subpart 14.05—Shipping Articles

Sec.
14.05-1 Preparation and number of copies of shipping articles.
14.05-3 Certification of shipping articles.
14.05-5 Paying off seamen during voyage.
14.05-10 Completing entries in shipping articles at completion of voyage.
14.05-15 Production of documents by seamen signing shipping articles.
14.05-20 Master reporting shipping and discharging of seamen on Form CG-735-T.

Subpart 14.10—Discharging Seamen

14.10-1 Entries in Continuous Discharge Book.
14.10-5 Entries in Certificate of Discharge to Merchant Seamen.
14.10-10 Discharging a seaman in a foreign port.
14.10-15 Certificate of discharge issued pending issuance of duplicate continuous discharge book.
14.10-20 Discharge of seamen in special cases.

AUTHORITY: The provisions of this Part 14 are issued under R.S. 4551, as amended, sec. 13, 38 Stat. 1169, as amended, sec. 7, 49 Stat. 1936, as amended; 46 U.S.C. 643, 672, 689, Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 14.01—General

§ 14.01-1 Employment of seamen whose citizenship has not been established.

Seamen whose continuous discharge books, certificates of identification or merchant mariner's documents show question marks with reference to place of birth and/or citizenship shall not be considered as citizens of the United States in computing the number of citizens required by statute to be employed in the crew of a vessel.

§ 14.01-10 Reporting loss or recovery of continuous discharge book, certificate of identification, or certificate of discharge.

Wherever a continuous discharge book, certificate of identification, or certificate of discharge is reported to a shipping commissioner, Collector of Customs, or an Officer in Charge, Marine Inspection, as having been stolen, lost, or destroyed, the shipping commissioner, collector of customs, or Officer in Charge, Marine Inspection, shall immediately report the fact by letter to the Commandant, giving all the facts incident to its loss or destruction. By the same procedure, he shall report the recovery of a continuous discharge book, certificate of identification, or certificate of discharge with all the facts incident to its recovery, and shall forward the recovered book, certificate of identification, or certificate of discharge to the Commandant.

Subpart 14.05—Shipping Articles

§ 14.05-1 Preparation and number of copies of shipping articles.

Shipping articles shall be made out in quadruplicate by carbon process. When the signing on of the crew has been completed the triplicate and quadruplicate copies shall be removed from the pad by the shipping commissioner, who will retain the triplicate copy and forward the quadruplicate copy to Commandant (MVP), Coast Guard Headquarters, Washington, D.C., 20226, "Attention Merchant Vessel Personnel Records and Welfare Section." The original and duplicate copies of the articles remaining in the pad shall be given to the master who shall enter therein any changes made in the crew during the voyage.

§ 14.05-3 Certification of shipping articles.

For every vessel bound on any foreign voyage required to have shipping articles, it shall be the duty of the owners of such vessel to obtain from the shipping commissioner or the person performing duties of a shipping commissioner a statement showing that the duplicate copy of the shipping articles is a true and certified copy as required by R. S. 4575, as amended (46 U. S. C. 676).

(Interprets or applies R. S. 4575, as amended; 46 U.S.C. 676)

§ 14.05-5 Paying off seamen during voyage.

In case of the paying off of any members of the crew during the voyage, they shall be required to sign the mutual release on both the original and the duplicate of the articles whether discharged before a shipping commissioner in an American port or before an American consul in a foreign port.

§ 14.05-10 Completing entries in shipping articles at completion of voyage.

(a) At the completion of the voyage, when the crew is paid off, the mutual release on both the original and the duplicate of the articles must be signed by all members of the crew; and the original copy, together with the white copy of every certificate of discharge, Form CG-718A rev., given during the voyage or a record of entry, Form CG-718E, of every entry made in a continuous discharge book during the voyage, shall be forwarded to the Commandant (MVP), Coast Guard Headquarters, Washington, D.C., 20226. The duplicate copy shall be retained by the shipping commissioner.

(b) All columns on the shipping articles shall be properly filled in and the certifications on the back properly signed.

(c) All entries made in the continuous discharge books during the voyage, and the entries made in all certificates of discharge issued during the voyage to seamen holding certificates of identification shall be shown on the ship's articles.

§ 14.05-15 Production of documents by seamen signing shipping articles.

Every seaman shall be required, when signing articles, to produce his continuous discharge book or certificate of identification, as well as his license, certificate of registry, or certificate of service, in order that the serial numbers may be entered on the articles.

§ 14.05-20 Master reporting shipping and discharging of seamen on Form CG-735-T.

(a) The master of every merchant vessel of the United States of the burden of one hundred gross tons or upward, except vessels employed exclusively in trade on the navigable rivers of the United States, fishing and whaling vessels, yachts, ferries and tugs used in ferry operations if such ferries and tugs are employed exclusively in trade on the Great Lakes, lakes (other than the Great Lakes), bays, sounds, bayous, canals, and harbors, and are not engaged on international voyages, and unrigged vessels other than seagoing barges, shall report the employment, discharge, or termination of the services of every seaman not shipped or discharged before a shipping commissioner, or a Collector or Deputy Collector of Customs acting as shipping commissioner on Coast Guard Form CG-735-T in the manner provided in this section.

(b) When a vessel is sailing on a voyage which will extend to the ocean or to the Gulf of Mexico and when coastwise Shipping Articles are opened or when the vessel is departing on a coastwise voyage for which Shipping Articles are not required the master shall, immediately prior to sailing, submit to the Officer in Charge, Marine Inspection, a Form CG-735-T listing the names, as well as the other data required by the form with the exception of the date and place of discharge, of the master and of each member of the crew. Thereafter, at each domestic port visited on the voyage, the master shall, prior to departure, submit to the Officer in Charge, Marine Inspection, a supplementary report on Form CG-735-T listing the name, as well as the other data required by the form, of each seaman engaged or discharged or whose services were otherwise terminated since the previous submission of the form. When coastwise Shipping Articles are completed or when a voyage on which Shipping Articles are not required is completed, the master shall submit to the Officer in Charge, Marine Inspection, a Form CG-735-T listing the names, as well as the other data required by the form, of the master and of each member of the crew on board at the time of the completion of the voyage.

(c) When a vessel is employed exclusively in trade on bays or sounds, the master shall submit a Form CG-735-T, on the last day of each calendar month, listing the name, as well as the other data required by the form—including the dates and places of engagement and discharge, of each seaman employed, discharged, or whose services were otherwise terminated during the calendar month. This form shall be forwarded by the master directly to Commandant (MVP), Coast Guard Headquarters, Washington, D.C., 20226.

(d) When a vessel is employed exclusively in trade on the Great Lakes, the master shall submit Form CG-735-T at the commencement of the season, or when the vessel is put into service, listing the names, as well as other information required by the form, with the exception of date and place of discharge, of each member of the crew. Thereafter, at the end of each calendar month, the master shall submit a supplementary report on Form CG-735-T listing the names, as

well as other information required by the form, of (1) each seaman whose employment was terminated during the month and who was not reengaged on the vessel's next trip, and (2) each seaman engaged during the month who was not also employed on the vessel in the same capacity on her last trip preceding the engagement. At the close of the season, or when the vessel is withdrawn from service, the master shall submit a final report on Form CG–735–T listing the names, as well as other information required by the form, of each seaman who has not been previously reported as discharged.

(e) Every discharge entry made on a Form CG–735–T shall agree exactly with the corresponding entry made in a continuous discharge book or on the certificate of discharge issued to a seaman and a record of entry (Form CG–718–E) or a white copy of a certificate of discharge (Form CG–718–A, Revised) supporting each discharge shall be attached to any Form CG–735–T on which discharges are reported.

(f) Any master who fails to comply with the requirements of this section is subject to a penalty of $500.

Subpart 14.10—Discharging Seamen

§ 14.10–1 Entries in Continuous Discharge Book.

(a) Upon the discharge of any seaman and payment of his wages, the shipping commissioner or Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, shall enter in the Continuous Discharge Book (Form CG–719) of such seaman, if the seaman carries such a book, the name and official number of the vessel together with the name of the employer, the nature of the voyage (foreign, intercoastal, or coastwise (including Great Lakes)), the class to which the vessel belongs (steam, motor, sail, or barge), the date and place of the shipment and of the discharge of such seaman, the rating (capacity in which employed) then held by such seaman, and the signature of the person making such entries and nothing more.

(b) In cases where the law does not require the seaman to be shipped and discharged before a shipping commissioner, the master of the vessel shall make the required entries in the Continuous Discharge Book.

(c) The person making the required entries in the Continuous Discharge Book shall also prepare a "Record of Entry in Continuous Discharge Book" (Form CG–718E). The required entries include those described in paragraph (a) of this section, the full name and citizenship of the seaman, and the serial number of his Continuous Discharge Book.

(d) The completed Form CG–718E shall be signed by the seaman in whose Continuous Discharge Book the original entry was made and by the person making the entry in the Continuous Discharge Book. In cases where the record of entry is signed by a shipping commissioner, or a Collector or Deputy Collector of Customs, the master is not required to sign the record of entry, but his name must be shown on the completed Form CG–718E.

(e) All entries in the Continuous Discharge Book (Form CG–719) shall be made in black ink. All entries on the completed Form CG–718E shall be made with a typewriter or an indelible pencil to insure legible copies.

(f) The original copy of completed Form CG–718E shall be for the Commandant's records. The duplicate copy of completed Form CG–718E will be retained by the shipping commissioner, Collector or Deputy Collector of Customs, or master issuing such record of entry. (See §§ 14.05–10 and 14.05–20 for instructions governing submission to the Commandant.)

§ 14.10–5 Entries in Certificate of Discharge to Merchant Seaman.

(a) Upon the discharge of any seaman who holds a merchant mariner's document or a certificate of identification issued by the Coast Guard or predecessor authority, and payment of his wages, the shipping commissioner, or the Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, shall issue to the seaman a "Certificate of Discharge to Merchant Seaman" (Form CG–718A) and shall complete the required entries on this certificate showing the full name and citizenship of the seaman to whom it is issued, the serial number of his merchant mariner's document or certificate of identification, the name and official number of the vessel together with the name of the employer, the nature of the voyage (foreign, intercoastal, or coastwise (including Great Lakes)), the class to which the vessel belongs (steam, motor, sail, or barge), the date and place of the shipment and of the discharge of such seaman, and the rating (capacity in which employed) then held by such seaman.

(b) In cases where the law does not require the seaman to be shipped and discharged before a shipping commissioner, the master of the vessel shall issue the Certificate of Discharge to Merchant Seaman (Form CG–718A) and shall complete the required entries therein.

(c) The completed Form CG–718A shall be signed by the seaman to whom it is issued and by the master of the vessel. When the seaman is required to be discharged before a shipping commissioner, or a Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, the shipping Commissioner or Collector or Deputy Collector of Customs shall witness the signatures of the seaman and the master. The signatures shall be made with an indelible pencil and before the issuance of the original copy to the seaman.

(d) All entries on Certificates of Discharge to Merchant Seaman (Form CG–718A) shall be made with a typewriter or with an indelible pencil to insure legible copies.

(e) The original completed Form CG–718A shall be issued to the seaman who signs the certificate. The duplicate copy of the completed Form CG–718A will be retained by the shipping commissioner, Collector or Deputy Collector of Customs, or the master issuing such discharge. The white copy of completed Form CG–718A shall be for the Commandant's records. (See §§ 14.05–10 and 14.05–20 for instructions governing submission to the Commandant.)

§ 14.10–10 Discharging a seaman in a foreign port.

(a) Upon the discharge of any seaman in a foreign port the master shall make the proper entries in the continuous discharge book and on the ship's articles, and such entries shall be attested to by the consular officer, and Form CG–718E shall be completed in accordance with § 14.10–1. If the seaman possesses a certificate of identification, the master of the vessel shall issue to the seaman a certificate of discharge on Form CG–718A rev., and make the required entries therein which shall be attested by the consular officer. If the seaman has lost his continuous discharge book or certificate of identification, the master shall furnish him with a certificate of discharge (Form CG–718A rev.), attested to by the consular officer and note this fact on the articles.

(b) The white copy of any discharge Form CG–718A rev., given out in this manner or the original of the record of entry, Form CG–718E, shall be retained by the master until the articles covering that voyage are closed, at which time, if the crew is discharged before a shipping commissioner, or before a Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, it shall be delivered to that officer and forwarded by him to the Commandant, as prescribed in §§ 14.05–10 and 14.05–20; if the crew is not discharged before such officer, it shall be forwarded to the Commandant by the master as prescribed in §§ 14.05–10 and 14.05–20.

§ 14.10–15 Certificate of discharge issued pending issuance of duplicate continuous discharge book.

Pending the issuance of a duplicate of the continuous discharge book, the shipping commissioner, or Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, may furnish the seaman with a certificate of discharge (Form CG–718A rev.), at the completion of the voyage, and this fact shall be noted on the articles. The white copy of such discharge shall be forwarded to the Commandant, as prescribed in §§ 14.05–10 and 14.05–20.

§ 14.10–20 Discharge of seamen in special cases.

(a) Section 16 of the act of December 21, 1898 (30 Stat. 759), amended in part R. S. 4581 (46 U.S.C. 683), relating to the discharge of seamen by consuls, to read:

If a seaman is discharged on account of injury or illness, incapacitating him for service, the expenses of his maintenance and return to the United States shall be paid from the fund for the maintenance and transportation of destitute American seamen.

(b) Section 19 of the Seamen's Act of March 4, 1915 (38 Stat. 1185; 46 U. S. C. 683), adds to these words the following:

Provided, That at the discretion of the Commandant of the Coast Guard and under such regulations as he may prescribe, if any seaman incapacitated from service by injury or illness is on board a vessel so situated that a prompt discharge requiring the personal appearance of the master of the vessel before an American consul or consular agent is impracticable, such seaman may be sent to a consul or consular agent, who shall care for him and defray the cost of his maintenance and transportation, as provided in this paragraph.

(c) The personal appearance of the master of the vessel before an American consul or consular agent to consent to the discharge of a seaman who has been incapacitated by injury or illness may be waived by the consul under the following conditions:

(1) When the condition of the injured or ill seaman is such that prompt medical attendance is necessary and cannot be furnished on shipboard, and

(2) When the master cannot proceed with the seaman to the consul without risk to the crew, the vessel, or the cargo.

(d) When the master cannot appear before the consul in person he will address to the consul in writing a full statement of the facts which render necessary the discharge of the seaman, together with a statement of the reasons why he himself is unable to appear before the consul. The statement should cover the usual particulars set forth in a discharge and should be accompanied with an account of the wages due and with the necessary funds to meet such wages, or (if the cash be not available) with an order on the owner for the amount due.

(e) If the consul shall deem the statement satisfactory, he may discharge the seaman as directed in R. S. 4581, as amended by section 16 of the act of December 21, 1898, and section 19 of the act of March 4, 1915, as if the master were present, attaching to the discharge and to his relief account a copy of the statement submitted by the master.

(f) If the consul shall deem the statement unsatisfactory, he will decline to grant the discharge and direct that the seaman be returned to the vessel at its expense.

PART 15—ALLOTMENTS OF SEAMEN

Subpart 15.01—General

Sec.
15.01–1 Persons by and to whom allotments may be made.
15.01–5 Seaman may make more than one allotment.

Subpart 15.05—Procedures Covering Allotments

15.05–1 Allotments to be in writing.
15.05–5 Execution of allotments.
15.05–10 Effective date of allotment.
15.05–15 Cancellation of allotment.

Subpart 15.10—Computing Allotments

15.10–1 Wages upon which allotments may be based.
15.10–5 Limitation on amount of allotment.

Subpart 15.15—Payment and Accounting Required

Sec.
15.15–1 Time of payment of allotments.
15.15–5 Payment of allotments.
15.15–10 Accounting for payment.

AUTHORITY: The provisions of this Part 15 issued under 23 Stat. 55, as amended; 46 U.S.C. 599. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521.

Subpart 15.01—General

§ 15.01–1 Persons by and to whom allotments may be made.

(a) Any seaman employed on any vessel (except seamen employed on fishing or whaling vessels or yachts), may stipulate in his shipping agreement for an allotment of a portion of the wages for which he is signed on (see § 15.10–5) to his grandparents, parents, wife, sister, or children; to an agency duly designated by the Secretary of the Treasury for the handling of applications for United States Savings Bonds, for the purpose of purchasing such bonds for the seaman; or for deposits to be made in an account for savings or investment opened by him and maintained in his name, either at a savings bank or a United States Postal Savings Depository, or a savings institution in which such accounts are insured by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation.

(b) Allotments for the purchase of United States Savings Bonds shall be in an amount corresponding exactly to the issue price of such bonds. The bank or other issuing agency will forward the bonds by mail to the address designated by the seaman, but only within the United States, its territories and insular possessions and the Canal Zone.

(c) The term "savings bank" includes any bank, savings bank, or trust company wherein a savings department is maintained; or any Federal Credit Union organized in accordance with the provisions of the Federal Credit Union Act (48 Stat. 1216, 12 U. S. C. 1751–1771); or any credit union organized under substantially similar laws of any State or the District of Columbia, which is approved by the Commandant of the Coast Guard.

(d) No allotments may be drawn in favor of a joint tenant in a savings account unless such joint tenant is a grandparent, parent, wife, sister, or child of the seaman making the allotment.

(e) Before allotments to savings institutions other than savings banks, as defined in paragraph (c) of this section may be accepted, the seaman shall present satisfactory evidence that the accounts in the particular institution are insured by either the Federal Deposit Insurance Corporation or the Federal Savings and Loan Association.

(f) Allotments by masters of vessels are not authorized and should not be approved.

§ 15.01–5 Seaman may make more than one allotment.

Any seaman may stipulate in his articles of agreement for the payment of allotments to any or all of the persons or organizations enumerated in § 15.01–1: *Provided*, That the total amount of such allotments does not exceed the maximum amount permitted under § 15.10–5.

Subpart 15.05—Procedures Covering Allotments

§ 15.05–1 Allotments to be in writing.

All allotments executed by any seaman shall be in writing in triplicate on Form CG–722 and shall be approved by a shipping commissioner or deputy shipping commissioner, or Collector or Deputy Collector of Customs at ports where no shipping commissioner has been appointed, or consular officer of the United States.

§ 15.05–5 Execution of allotments.

All allotments shall be executed in triplicate on Form CG–722 by the seaman making the same and after the allotments are approved shall be distributed by the shipping commissioner, deputy shipping commissioner, Collector of Customs, Deputy Collector of Customs, or consular officer in the following manner:

(a) The original shall be sent to the seaman's employer.

(b) The duplicate shall be sent to the person or bank or institution in whose favor the allotment is drawn; and

(c) The triplicate shall be retained in the file of the official who approves the allotment.

§ 15.05–10 Effective date of allotment.

All allotments shall be effective as of the date when the wages of the seamen commence on the articles of agreement.

§ 15.05–15 Cancellation of allotment.

Whenever a seaman, before the expiration of the allotment period, severs his contractual relationship with the vessel upon which he was employed, the master of such vessel should notify the employer of the seaman, by the quickest means of communication available, of this fact. Upon the receipt of such information, the employer should notify the person in whose favor the allotment is drawn.

Subpart 15.10—Computing Allotments

§ 15.10–1 Wages upon which allotments may be based.

Allotments may be made by seamen only upon the amount of the wages for which they are signed on.

§ 15.10–5 Limitation on amount of allotment.

No allotment which calls for the payment of more than 90 percent of the wages upon which an allotment may be based (see § 15.10–1), after allowing for a deduction to cover the Federal withholding tax, shall be approved.

Subpart 15.15—Payment and Accounting Required

§ 15.15–1 Time of payment of allotments.

Allotments may stipulate that the payments may be made for a specified period of time or they may stipulate

that the payments be continued for the voyage of the vessel. No allotment which requires the employer of the seaman to commence payments under the same before fifteen days from the date of the allotment shall be authorized. Allotments can be made for semimonthly, monthly, or bimonthly payments.

§ 15.15–5 Payment of allotments.

The employer of the seaman shall make payments of the amount or amounts allotted by cash, check, or money order. All such payments shall be made in sufficient time to insure the receipt of the remittance at the time and place specified in the allotment.

§ 15.15–10 Accounting for payment.

The employer of the seaman shall produce evidence of the payment of all allotments listed in a vessel's articles of agreement to the shipping commissioner supervising the payment of the wages of the crew, unless this requirement is waived by any or all of the allotters.

PART 16—UNITED STATES SHIPPING COMMISSIONERS

Sec.
16.01 Shipping commissioners designated as enforcement officers.
16.05 Acceptance of unclaimed wages.
16.10 Payment of deceased or deserting seamen's wages.

AUTHORITY: The provisions of this Part 16 issued under sec. 7, 49 Stat. 1936, as amended; 46 U.S.C. 689. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521.

§ 16.01 Shipping commissioners designated as enforcement officers.

(a) Section 7 of the act of June 25, 1936, as amended (49 Stat. 1936, 46 U.S.C. 689), makes it the duty of the Commandant, U.S. Coast Guard, to enforce the provisions of the above act through Collectors of Customs and other Government officers acting under the direction of the Coast Guard, and to make such rules and regulations as he may deem necessary to carry out the provisions of the said act.

(b) In order to enforce more effectually compliance with the provisions of this act, persons or officials performing United States shipping commissioners duties are hereby designated as enforcement officers for carrying out the provisions of the act.

§ 16.05 Acceptance of unclaimed wages.

(a) Shipping commissioners or employees shall not accept unclaimed wages of seamen except in the form of checks or duly recognized money orders. In cases where the advisability of accepting the personal check of a master is doubtful, a money order must be provided.

(b) Every effort should be made to discourage the leaving of unclaimed wages with shipping commissioners. The acceptance of these wages is outside of the duties of shipping commissioners and they are personally responsible therefor.

§ 16.10 Payment of deceased or deserting seamen's wages.

In the case of deceased or deserting seamen's wages, such wages must be paid in the form of a check or duly recognized money order, unless such payment is made direct to the shipping commissioner. In cases where the advisability of accepting the personal check of a master is doubtful, the payment must be made by money order or direct to the shipping commissioner in cash.

SUBCHAPTER C—UNINSPECTED VESSELS

PART 24—GENERAL PROVISIONS

Subpart 24.01—Authority and Purpose

Sec.
24.01–1 Purpose of regulations.
24.01–5 Assignment of functions.
24.01–10 Authority for regulations.

Subpart 24.05—Application

24.05–1 Vessels subject to the requirements of this subchapter.
24.05–5 Specific application noted in text.

Subpart 24.10—Definition of Terms Used in This Subchapter

24.10–1 Approved.
24.10–3 Carrying passengers for hire.
24.10–5 Carrying freight for hire.
24.10–7 Commandant.
24.10–9 Coast Guard District Commander.
24.10–11 Headquarters.
24.10–13 International voyage.
24.10–15 Marine inspector or inspector.
24.10–17 Motorboat.
24.10–19 Motor vessel.
24.10–21 Officer in Charge, Marine Inspection.
24.10–23 Passenger.
24.10–25 Rules of the Road.
24.10–27 Vessel.

Subpart 24.15—Equivalents

24.15–1 Conditions under which equivalents may be used.
24.15–5 Canadian pleasure craft temporarily using navigable waters of the United States.

Subpart 24.20—General Marine Engineering Requirements

24.20–1 Marine engineering details.

AUTHORITY: The provisions of this Part 24 are issued under R.S. 4405, as amended, 4462, as amended, sec. 17, 54 Stat. 166, as amended; 46 U.S.C. 375, 416, 526p. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 24.01—Authority and Purpose

§ 24.01–1 Purpose of regulations.

(a) The purpose of the regulations in this subchapter is to set forth uniform minimum requirements for motorboats, certain motor vessels, and barges carrying passengers when towed by motorboats or motor vessels in accordance with the intent of the Motorboat Act of April 25, 1940, as amended (54 Stat. 163–167; 46 U.S.C. 526–526t). The regulations are necessary to carry out the provisions of the Motorboat Act of April 25, 1940, and such regulations have the force of law.

§ 24.01–5 Assignment of functions.

(a) By Reorganization Plan No. 3 of 1946, effective July 16, 1946 (3 CFR, 1946 Supp), the marine inspection functions of the former Bureau of Marine Inspection and Navigation and its officers and employees were transferred to the Commandant, United States Coast Guard. By Reorganization Plan No. 26 of 1950, effective July 31, 1950 (15 F. R. 4935, 3 CFR, 1950 Supp., p. 178, 5 U. S. C. Note under 241), the functions formerly vested in the Commandant, United States Coast Guard, were transferred to the Secretary of the Treasury with certain specified exceptions. The Secretary of the Treasury by a order dated July 31, 1950 (15 F. R. 6521), delegated to the Commandant the functions formerly performed by him under Reorganization Plan No. 3 of 1946.

§ 24.01–10 Authority for regulations.

(a) *General.* (1) The authority to prescribe regulations generally is set forth in R. S. 4405 and 4462, as amended, and in section 17 of the Motorboat Act of April 25, 1940, as amended (46 U. S. C. 375, 416, 526p).

(b) *Lifesaving appliances.* (1) The regulations regarding lifesaving appliances interpret or apply section 6 of the Motorboat Act of April 25, 1940, as amended (46 U. S. C. 526e).

(c) *Fire protection equipment.* (1) The regulations regarding fire protection equipment interpret or apply section 8 of the Motorboat Act of April 25, 1940, as amended (46 U. S. C. 526g).

(d) *Flame arresters.* (1) The regulations regarding flame arresters interpret or apply section 10 of the Motorboat Act of April 25, 1940, as amended (46 U. S. C. 526i).

(e) *Ventilation of bilges.* (1) The regulations regarding ventilation of bilges interpret or apply section 11 of the Motorboat Act of April 25, 1940, as amended (46 U. S. C. 526j).

Subpart 24.05—Application

§ 24.05–1 Vessels subject to the requirements of this subchapter.

(a) This subchapter shall be applicable to all vessels indicated in Column 6 of Table 24.05–1 (a), and shall apply to all such United States flag vessels, and to all such foreign vessels, except as follows:

(1) Any vessel operating exclusively on inland waters which are not navigable waters of the United States.

(2) Any vessel while laid up and dismantled and out of commission.

(3) With the exception of vessels of the U. S. Maritime Administration, any vessel with title vested in the United States and which is used for public purposes.

TABLE 24.05-1(a)

Method of propulsion	Size or other limitations [1]	Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations [2]			
		Vessels inspected and certificated under Subchapter D—Tank Vessels [3]	Vessels inspected and certificated under either Subchapter H—Passenger Vessels [3 4 5] or Subchapter T—Small Passenger Vessels [3 5 6]	Vessels inspected and certificated under Subchapter I—Cargo and Miscellaneous Vessels [3 5]	Vessels subject to provisions of Subchapter C—Uninspected Vessels [3 5 8]
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Steam	Vessels not over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	All tugboats and towboats.	All vessels except those covered by columns 3, 4, and 5.[8]
	Vessels over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.[4]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels of not over 15 gross tons which carry more than 6 passengers.[7] 3. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew. c. Towing and fishing vessels, in other than ocean and coastwise service, may carry persons on the legitimate business of the vessel, in addition to crew, but not to exceed one for each net ton of the vessel.	All vessels except those covered by columns 3 and 4.	None.
Motor	Vessels of not over 15 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All vessels except those covered by columns 3, 4, and 5.
	Vessels over 15 gross tons except seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[4]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels not over 65 feet in length which carry more than 6 passengers.[7] 3. All other vessels of over 65 feet in length carrying passengers for hire except documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels carrying freight for hire except those covered by columns 3 and 4.	All vessels except those covered by columns 3, 4, and 5.
	Seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[4]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels except those covered by columns 3 and 4, and those engaged in the fishing, oystering, clamming, crabbing, or any other branch of the fishery, kelp, or sponge industry.	All vessels except those covered by columns 3, 4, and 5.
Sail	Vessels not over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
	Vessels over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire.	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
Nonself-propelled	Vessels not over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.
	Vessels over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.

[1] Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression "means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline."

[2] Subchapters E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes) of this chapter may also be applicable under certain conditions.

[3] Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of Part 167 of Subchapter R (Nautical Schools) of this chapter. Civilian nautical schoolships, as defined by 46 U.S.C. 1331, shall meet the requirements of Subchapter H (Passenger Vessels) and Part 168 of Subchapter R (Nautical Schools) of this chapter.

[4] Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons or more. Subchapter T (Small Passenger Vessels) of this chapter covers only those vessels of less than 100 gross tons.

[5] Vessels covered by Subchapters H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not for the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of Subchapter D (Tank Vessels) in addition to the requirements of Subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

[6] Any vessel on an ternational voyage is subject to the requirements of the International Convention for Safety of Life at Sea, 1960.

[7] The meaning of the term "passenger" is as defined in the Act of May 10, 1956 (sec. 1, 70 Stat. 151; 46 U.S.C. 390).

[8] Boilers and machinery are subject to examination on vessels over 40 feet in length.

§ 24.05–5 Specific application noted in text.

(a) At the beginning of the various parts, subparts, and sections, a more specific application is generally given for the particular portion of the text involved. This application sets forth the types, sizes, or services of vessels to which the text pertains, and in many cases limits the application of the text to vessels contracted for before or after a specific date. As used in this subchapter, the term "vessels contracted for" includes not only the contracting for the construction of a vessel, but also the contracting for a material alteration to a vessel, the contracting for the conversion of a vessel to a passenger vessel, and the changing of service or route of a vessel if such change increases or modifies the general requirements for the vessel or increases the hazards to which it might be subjected.

Subpart 24.10—Definition of Terms Used in This Subchapter

§ 24.10–1 Approved.

This term means approved by the Commandant unless otherwise stated.

§ 24.10–3 Carrying passengers for hire.

The carriage of any person or persons by a vessel for a valuable consideration, whether directly or indirectly flowing to the owner, charterer, operator, agent or any other person interested in the vessel.

§ 24.10–5 Carrying freight for hire.

The carriage of any goods, wares, or merchandise or any other freight for a valuable consideration, whether directly or indirectly flowing to the owner, charterer, operator, agent, or any other person interested in the vessel.

§ 24.10–7 Commandant.

This term means the Commandant of the Coast Guard.

§ 24.10–9 Coast Guard District Commander.

This term means an officer of the Coast Guard designated as such by the Commandant to command all Coast Guard activities within his district, which include the inspection, enforcement, and administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 24.10–11 Headquarters.

This term means the Office of the Commandant, Washington, D.C.

§ 24.10–13 International voyage.

(a) The term "international voyage," as used in this subchapter, shall have the same meaning as that contained in Regulation 2(d), Chapter I, of the International Convention for Safety of Life at Sea, 1960; i.e., " 'International voyage' means a voyage from a country to which the present Convention applies to a port outside such country, or conversely; and for this purpose every territory for the international relations of which a Contracting Government is responsible or for which the United Nations is the administering authority is regarded as a separate country."

(b) The International Convention for Safety of Life at Sea, 1960, does not apply to vessels "solely navigating the Great Lakes of North America and the River St. Lawrence as far east as a straight line drawn from Cap de Rosiers to West Point, Anticosti Island and, on the north side of Anticosti Island, the 63d Meridian." Accordingly, such vessels shall not be considered as being on an "international voyage" for the purpose of this subchapter.

(c) For the purposes of this subchapter the term "territory" as used in paragraph (a) of this section shall be considered to include the Commonwealth of Puerto Rico, the Canal Zone, all possessions of the United States, and all lands held by the United States under a protectorate or mandate.

(d) Although voyages between the continental United States and Hawaii or Alaska, and voyages between Hawaii and Alaska are not "international voyages" under the provisions of the International Convention for Safety of Life at Sea, 1960, such voyages are similar in nature and shall be considered as "international voyages" and subject to the same requirements for the purposes of this subchapter.

(E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp.)

§ 24.10–15 Marine inspector or inspector.

These terms mean any person from civilian or military branch of the Coast Guard assigned under the superintendence and direction of an Officer in Charge, Marine Inspection, or any other person as may be designated for the performance of duties with respect to the inspection, enforcement, and administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 24.10–17 Motorboat.

(a) This term means any vessel indicated in column 6 of Table 24.05–1(a), 65 feet in length or less which is propelled by machinery (including steam). The length shall be measured from end to end over the deck excluding sheer. This term includes a boat temporarily or permanently equipped with a detachable motor and any such boat when so propelled is subject to the applicable provisions of the act of April 25, 1940, as amended (46 U.S.C. 526–526u), and the regulations promulgated thereunder. For the purpose of this subchapter, motorboats are included under the term "vessel" unless specifically noted otherwise. The various classes of motorboats are as follows:

Class A—Any motorboat less than 16 feet in length.

Class 1—Any motorboat 16 feet or over and less than 26 feet in length.

Class 2—Any motorboat 26 feet or over and less than 40 feet in length.

Class 3—Any motorboat 40 feet or over and not more than 65 feet in length.

(b) The expression "length shall be measured from end to end over the deck excluding sheer" means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline. Bow sprits, bumpkins, rudders, outboard motor brackets, and similar fittings or attachments, are not to be included in the measurement. Length shall be stated in feet and inches.

§ 24.10–19 Motor vessel.

This term means any vessel more than 65 feet in length, which is propelled by machinery other than steam.

§ 24.10–21 Officer in Charge, Marine Inspection.

This term means any person from the civilian or military branch of the Coast Guard designated as such by the Commandant and who, under the superintendence and direction of the Coast Guard District Commander, is in charge of an inspection zone for the performance of duties with respect to the inspections, enforcement, and administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 24.10–23 Passenger.

A passenger is every person, other than the master and the members of the crew or other persons employed or engaged in any capacity on board a vessel in the business of that vessel. In the case of a vessel on an international voyage a child under one year of age is not counted as a passenger.

§ 24.10–25 Rules of the Road.

(a) The term "Rules of the Road" means the statutory and regulatory rules governing navigation of vessels. These rules are also published by the Coast Guard in pamphlet form as follows:

(1) Rules of the Road—International—Inland (CG–169).

(2) Rules of the Road—Great Lakes (CG–172).

(3) Rules of the Road—Western Rivers (CG–184).

(b) The current editions of the "Rules of the Road" pamphlets may be obtained from any Marine Inspection Office.

§ 24.10–27 Vessel.

Where the word "vessel" is used in this subchapter, it shall be considered to include all vessels indicated in Column 6 of Table 24.05–1(a), except as otherwise noted in this subpart.

Subpart 24.15—Equivalents

§ 24.15–1 Conditions under which equivalents may be used.

(a) Where in this subchapter it is provided that a particular fitting, material, appliance, apparatus, or equipment, or type thereof, shall be fitted or carried in a vessel, or that any particular provision shall be made or arrangement shall be adopted, the Commandant may accept in substitution therefor any other fitting,

material, apparatus, or equipment, or type thereof, or any other arrangement: *Provided*, That he shall have been satisfied by suitable trials that the fitting, material, appliance, apparatus, or equipment, or type thereof, or the provision or arrangement is at least as effective as that specified in this subchapter.

(b) In any case where it is shown to the satisfaction of the Commandant that the use of any particular equipment, apparatus, or arrangement not specifically required by law is unreasonable or impracticable, the Commandant may permit the use of alternate equipment, apparatus, or arrangement to such an extent and upon such conditions as will insure to his satisfaction, a degree of safety consistent with the minimum standards set forth in this subchapter.

§ 24.15–5 Canadian pleasure craft temporarily using navigable waters of the United States.

(a) Uninspected Canadian pleasure craft (uninspected vessels) temporarily using navigable waters of the United States may carry in lieu of the equipment required by the Motorboat Act of 1940 (46 U.S.C. 526–526u) and the regulations in this subchapter, the equipment as required by the laws of the Dominion of Canada and the regulations of the Department of Transport, Ottawa, Canada.

(Sec. 7, 72 Stat. 1757; 46 U.S.C. 527d. Treasury Department Order 167–32, September 23, 1958, 23 F.R. 7605)

Subpart 24.20—General Marine Engineering Requirements

§ 24.20–1 Marine engineering details.

(a) All marine engineering details relative to the design, construction, and testing of boilers and machinery on steam-propelled motorboats of over 40 feet in length will be found in Subchapter F (Marine Engineering) of this chapter.

(R.S. 4418, as amended; 46 U.S.C. 392. Treasury Department Order CGFR 56–28, July 24, 1956, 21 F.R. 5659)

PART 25—REQUIREMENTS

Subpart 25.01—Application

Sec.
25.01–1 Applicable to all vessels.

Subpart 25.05—Navigation Lights and Shapes

25.05–1 Vessels other than motorboats.
25.05–5 Motorboats.

Subpart 25.10—Whistles

25.10–1 Vessels other than sailing vessels, barges, and motorboats.
25.10–5 Motorboats operating on the high seas.
25.10–10 Motorboats operating on the navigable waters of the United States.

Subpart 25.15—Foghorns

25.15–1 Vessels other than motorboats.
25.15–5 Motorboats.

Subpart 25.20—Fog Sound Signal Devices

25.20–1 Vessels other than motorboats.
25.20–5 Motorboats operating on the high seas.
25.20–10 Motorboats operating on the navigable waters of the United States.

Subpart 25.25—Life Preservers and Other Lifesaving Equipment

25.25–1 Application.
25.25–5 General provisions.
25.25–10 Life preservers and other lifesaving equipment required.
25.25–15 Storage.
25.25–20 Condition.
25.25–90 Vessels contracted for prior to November 19, 1952.

Subpart 25.30—Fire Extinguishing Equipment

25.30–1 Application.
25.30–5 General provisions.
25.30–10 Hand portable fire extinguishers and semiportable fire extinguishing systems.
25.30–15 Fixed fire extinguishing systems.
25.30–20 Fire extinguishing equipment required.
25.30–90 Vessels contracted for prior to November 19, 1952.

Subpart 25.35—Backfire Flame Control

25.35–1 Requirements.

Subpart 25.40—Ventilation

25.40–1 Tanks and engine spaces.

Subpart 25.45—Liquefied Petroleum Gas

25.45–1 Prohibited on vessels carrying passengers for hire.

AUTHORITY: The provisions of this Part 25 are issued under R.S. 4405, as amended, 4462, as amended, sec. 17, 54 Stat. 166, as amended; 46 U.S.C. 375, 416, 526p. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 25.01—Application

§ 25.01–1 Applicable to all vessels.

(a) The provisions of this part shall apply to all vessels except as specifically noted.

Subpart 25.05—Navigation Lights and Shapes

§ 25.05–1 Vessels other than motorboats.

(a) All vessels other than motorboats shall be equipped with navigation lights and shapes as prescribed by law and regulation.

§ 25.05–5 Motorboats.

(a) All motorboats shall be equipped with navigation lights and shapes as prescribed by law and regulation.

Subpart 25.10—Whistles

§ 25.10–1 Vessels other than sailing vessels, barges, and motorboats.

(a) All vessels other than sailing vessels, barges, and motorboats shall be equipped with an efficient whistle or similar appliance to give the necessary whistle signals required by the Rules of the Road applicable to the waters on which the vessel is navigated.

§ 25.10–5 Motorboats operating on the high seas.

(a) All motorboats operating on the high seas outside the navigable waters of the United States shall meet the requirements for whistles or similar appliances prescribed by § 25.10–1 for vessels other than motorboats.

§ 25.10–10 Motorboats operating on the navigable waters of the United States.

(a) Motorboats operating on the navigable waters of the United States shall be provided with an efficient whistle or other sound producing mechanical device as set forth in Table 25.10–10(a), except:

(1) Commercial fishing motorboats may carry any device specified in Table 25.10–10 (a).

(2) Motorboats engaged in a race which has been previously arranged or announced, or while engaged in such navigation as is incidental to the tuning up of the motorboat and engines for the race, need not carry the devices required by Table 25.10–10 (a).

TABLE 25.10–10 (a)

Class of motorboat	Type of device
A	None.
1	Mouth, hand, or power operated, capable of producing a blast of 2 seconds or more duration, and audible for at least one-half mile.
2	Hand or power operated, capable of producing a blast of 2 seconds or more duration, and audible for a distance of at least 1 mile.
3	Power operated, capable of producing a blast of 2 seconds or more duration, and audible for a distance of at least 1 mile.

Subpart 25.15—Foghorns

§ 25.15–1 Vessels other than motorboats.

(a) All vessels other than motorboats shall be equipped with an efficient foghorn as prescribed by the Rules of the Road applicable to the waters on which the vessel is navigated. On vessels in ocean or coastwise service, the foghorn shall be sounded by mechanical means.

§ 25.15–5 Motorboats.

(a) All motorboats operating on the high seas outside the navigable waters of the United States shall meet the requirements for fog horns prescribed by § 25.15–1 for vessels other than motorboats.

Subpart 25.20—Fog Sound Signal Devices

§ 25.20–1 Vessels other than motorboats.

(a) All vessels other than motorboats shall be provided with fog bells as prescribed by the Rules of the Road applicable to the waters on which the vessel is operated.

(b) All vessels of more than 350 feet in length shall be provided with a fog gong which will produce a sound easily distinguishable from the sound of the bell required by paragraph (a) of this section, and shall have a range of audibility approximating that of the bell. Vessels operating exclusively on the Great Lakes and the inland waters of the United States shall be exempt from this section.

§ 25.20–5 Motorboats operating on the high seas.

(a) All motorboats operating on the high seas outside the navigable waters of the United States shall meet the requirements for fog bells prescribed by § 25.20–1 for vessels other than motorboats.

§ 25.20–10 Motorboats operating on the navigable waters of the United States.

(a) When operating on the navigable waters of the United States, motorboats of Classes A and 1 are not required to carry fog bells. However, motorboats of Classes 2 and 3 operating on the navigable waters of the United States shall be provided with an efficient fog bell, except:

(1) Motorboats engaged in a race which has been previously arranged or announced, or while engaged in such navigation as is incidental to the tuning up of the motorboat and engines for the race, need not carry the fog bell required by this section.

Subpart 25.25—Life Preservers and Other Lifesaving Equipment

§ 25.25–1 Application.

(a) The provisions of this subpart, with the exception of § 25.25–90, shall apply to all vessels contracted for on or after November 19, 1952. Vessels contracted for prior to that date shall meet the requirements of § 25.25–90.

§ 25.25–5 General provisions.

(a) Where equipment in this subpart is required to be of an approved type, such equipment requires the specific approval of the Commandant. Such approvals are published in the FEDERAL REGISTER, and in addition, are contained in Coast Guard publication CG–190, "Equipment Lists."

(b) Specifications for items of equipment required in this subpart have been promulgated and are contained in Subchapter Q (Specifications) of this chapter. The markings specified for a specific item of approved equipment by that subchapter shall be attached to or imprinted on the equipment as prescribed in the specifications, and the information required in such markings shall be legible in order for such item to be accepted as equipment of an approved type required by this subchapter.

(c) All life preservers shall be of an approved type, constructed in accordance with the applicable provisions of Subpart 160.002, 160.005 or 160.055 of Subchapter Q (Specifications) of this chapter.

(1) All kapok and fibrous glass life preservers which do not have plastic-covered pad inserts as required by Subparts 160.002 and 160.005 shall not be acceptable as equipment required by this subchapter.

(2) Cork and balsa wood life preservers, constructed in accordance with the applicable provisions of Subpart 160.003 or 160.004 and manufactured as approved life preservers prior to July 1, 1965, may be accepted as new or replacement equipment required by this subchapter providing such life preservers are serviceable and in good condition.

(d) All wood floats shall be of a type constructed in accordance with Subpart 160.039 of Subchapter Q (Specifications) of this chapter.

(e) All buoyant cushions shall be of an approved type, constructed in accordance with the applicable provisions of Subpart 160.048 or 160.049 of Subchapter Q (Specifications) of this chapter.

(1) All kapok and fibrous glass buoyant cushions which do not have plastic-covered pad inserts as required by Subpart 160.048 shall not be acceptable as equipment required by this subchapter.

(f) All ring life buoys shall be of an approved type, constructed in accordance with Subpart 160.009 or 160.050 of Subchapter Q (Specifications) of this chapter.

(g) All buoyant vests shall be of an approved type constructed in accordance with Subpart 160.047 or 160.052 of Subchapter Q (Specifications) of this chapter.

(h) Special purpose water safety buoyant devices (such as water ski vests, hunters buoyant jackets, etc.), in order to be of approved type, shall be constructed, listed and labeled in accordance with Subpart 160.064 of Subchapter Q (Specifications) of this chapter.

(Sec. 6, 54 Stat. 164, as amended; 46 U.S.C. 526e)

§ 25.25–10 Life preservers and other lifesaving equipment required.

(a) All motor vessels shall be provided with an approved life preserver for each person on board. Motor vessels carrying passengers for hire shall be provided with an approved adult type life preserver for each person carried, and, in addition, unless the service is such that children are never carried, there shall be provided a number of approved life preservers suitable for children equal to at least 10 percent of the total number of persons carried.

(b) All motorboats shall carry lifesaving equipment as follows:

(1) Motorboats which carry passengers for hire shall be provided with an approved adult type life preserver for each person carried. In addition, unless the service is such that children are never carried, there shall be provided a number of approved life preservers suitable for children equal to at least 10 percent of the total number of persons carried. Such motorboats may carry special purpose water safety buoyant devices of approved type as excess equipment.

(2) Motorboats of Class 3 not carrying passengers for hire shall carry an approved life preserver or ring life buoy for each person on board. Such motorboats may carry special purpose water safety buoyant devices of approved type as excess equipment.

(3) Commercial fishing motorboats of Class 3 shall carry an approved life preserver, ring life buoy, or wood float for each person on board.

(4) Commercial fishing motorboats of Class A, 1, or 2 shall carry an approved life preserver, ring life buoy, buoyant vest, buoyant cushion, or wood float for each person on board.

(5) All other motorboats not otherwise specifically provided for shall carry an approved life preserver, ring life buoy, buoyant vest, special purpose water safety buoyant device, or buoyant cushion for each person on board.

(c) All barges carrying passengers for hire shall be provided with an approved adult type life preserver for each person carried, and in addition, unless the service is such that children are never carried, there shall be provided a number of approved life preservers suitable for children equal to at least 10 percent of the total number of persons carried when such barges are regularly operated with motorboats or motor vessels or steam vessels.

§ 25.25–15 Storage.

(a) The lifesaving equipment on all vessels shall be so placed as to be readily accessible.

§ 25.25–20 Condition.

(a) The lifesaving equipment required by this subpart shall be in good and serviceable condition.

§ 25.25–90 Vessels contracted for prior to November 19, 1952.

(a) Vessels contracted for prior to November 19, 1952, shall meet the applicable provisions of §§ 25.25–5 through 25.25–15 insofar as the number of items of equipment and the method of stowage are concerned.

(b) Existing items of equipment, previously approved, but not meeting the applicable specifications may be continued in service so long as they are serviceable and in good condition, except that:

(1) All kapok and fibrous glass life preservers which do not have plastic-covered pad inserts as required by Subparts 160.002 and 160.005 shall not be acceptable as equipment required by this subchapter.

(2) All kapok and fibrous glass buoyant cushions which do not have plastic-covered pad inserts as required by Subpart 160.048 shall not be acceptable as equipment required by this subchapter.

(c) All new installations and replacements shall meet the applicable requirements or specifications as described in §§ 25.25–5 through 25.25–15.

Subpart 25.30—Fire Extinguishing Equipment

§ 25.30–1 Application.

(a) The provisions of this subpart, with the exception of § 25.30–90, shall apply to all vessels contracted for on or after November 19, 1952. Vessels contracted for prior to that date shall meet the requirements of § 25.30–90.

§ 25.30–5 General provisions.

(a) Where equipment in this subpart is required to be of an approved type, such equipment requires the specific approval of the Commandant. Such approvals are published in the FEDERAL REGISTER, and in addition, are contained in Coast Guard publication CG–190, "Equipment Lists."

(b) All hand portable fire extinguishers, semiportable fire extinguishing systems, and fixed fire extinguishing systems shall be of an approved type.

§ 25.30–10 Hand portable fire extinguishers and semiportable fire extinguishing systems.

(a) Hand portable fire extinguishers and semiportable fire extinguishing systems are classified by a combination letter and number symbol. The letter indicating the type of fire which the unit could be expected to extinguish, and the number indicating the relative size of the unit.

(b) For the purpose of this subchapter, all required hand portable fire extinguishers and semiportable fire extinguishing systems are of the "B" type; i.e., suitable for extinguishing fires involving flammable liquids, greases, etc.

(c) The number designations for size will start with "I" for the smallest to "V" for the largest. For the purpose of this subchapter, only sizes I through III will be considered. Sizes I and II are considered hand portable fire extinguishers and sizes III, IV, and V are considered semiportable fire extinguishing systems which shall be fitted with suitable hose and nozzle or other practicable means so that all portions of the space concerned may be covered. Examples of size graduations for some of the typical hand portable fire extinguishers and semiportable fire extinguishing systems are set forth in Table 25.30–10 (c).

TABLE 25.30–10 (c)

Classification		Foam, gallons	Carbon dioxide, pounds	Dry chemical, pounds
Type	Size			
B	I	1¼	4	2
B	II	2½	15	10
B	III	12	35	20

(d) All hand portable fire extinguishers and semiportable fire extinguishing systems shall have permanently attached thereto a metallic name plate giving the name of the item, the rated capacity in gallons, quarts, or pounds, the name and address of the person or firm for whom approved, and the identifying mark of the actual manufacturer.

(e) Vaporizing-liquid type fire extinguishers containing carbon tetrachloride or chlorobromomethane or other toxic vaporizing liquids shall not be acceptable as equipment required by this subchapter.

(f) Hand portable or semiportable extinguishers which are required on their name plates to be protected from freezing shall not be located where freezing temperatures may be expected.

§ 25.30–15 Fixed fire extinguishing systems.

(a) When a fixed fire extinguishing system is installed, it shall be of an approved carbon dioxide type, designed and installed in agreement with the applicable provisions of Subpart 76.15 of Subchapter H (Passenger Vessels) of this chapter.

§ 25.30–20 Fire extinguishing equipment required.

(a) *Motorboats.* (1) All motorboats shall carry at least the minimum number of hand portable fire extinguishers set forth in Table 25.30–20(a)(1), except that motorboats less than 26 feet in length, propelled by outboard motors and not carrying passengers for hire, need not carry such portable fire extinguishers if the construction of such motorboats will not permit the entrapment of explosive or flammable gases or vapors.

TABLE 25.30–20(a)(1)

Class of motorboat	Length, feet	Minimum number of B–I hand portable fire extinguishers required [1]	
		No fixed fire extinguishing system in machinery space	Fixed fire extinguishing system in machinery space
A	Under 16	1	0
1	16 and over, but under 26	1	0
2	26 and over, but under 40	2	1
3	40 and over, but not over 65.	3	2

[1] One B–II hand portable fire extinguisher may be substituted for two B–I hand portable fire extinguishers.

(2) The intent of this regulation is illustrated in Figure 25.30–20(a1) where fire extinguishers are required if any one or more of the specified conditions exist, and in Figure 25.30–20(a2) where specified conditions do not, in themselves, require that fire extinguishers be carried.

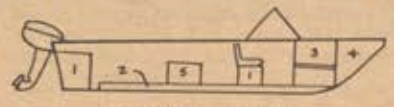

FIGURE 25.30–20(a1)

Fire extinguishers are required if any one or more of the following conditions exist (numbers identifying conditions are the same as those placed in Figure 25.30–20(a1):

1. Closed compartment under thwarts and seats wherein portable fuel tanks may be stored.
2. Double bottoms not sealed to the hull or which are not completely filled with flotation material.
3. Closed living spaces.
4. Closed stowage compartments in which combustible or flammable materials are stowed.
5. Permanently installed fuel tanks.

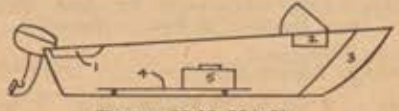

FIGURE 25.30–20(a2).

The following conditions do not, in themselves, require that fire extinguishers be carried (numbers identifying conditions are the same as those placed in Figure 25.30–20(a2):

1. Bait wells.
2. Glove compartments.
3. Buoyant flotation material.
4. Open slatted flooring.
5. Ice chests.

(b) *Motor vessels.* (1) All motor vessels shall carry at least the minimum number of hand portable fire extinguishers set forth in Table 25.30–20 (b) (1).

TABLE 25.30–20 (b) (1)

Gross tonnage		Minimum number of B–II hand portable fire extinguishers
Over	Not over	
----	50	1
50	100	2
100	500	3
500	1,000	6
1,000	----	8

(2) In addition to the hand portable fire extinguishers required by Subparagraph (1) of this paragraph, the following fire-extinguishing equipment shall be fitted in the machinery space:

(i) One Type B–II hand portable fire extinguisher shall be carried for each 1,000 B. H. P. of the main engines or fraction thereof. However, not more than 6 such extinguishers need be carried.

(ii) On motor vessels of over 300 gross tons, either one Type B–III semiportable fire-extinguishing system shall be fitted, or alternatively, a fixed fire-extinguishing system shall be fitted in the machinery space.

(c) *Barges carrying passengers.* (1) Every barge of 65 feet in length or less while carrying passengers when towed or pushed by a motorboat, motor vessel, or steam vessel shall be fitted with hand portable fire extinguishers as required by Table 25.30–20(a)(1), depending upon the length of the barge.

(2) Every barge of over 65 feet in length while carrying passengers when towed or pushed by a motorboat, motor vessel, or steam vessel shall be fitted with hand portable fire extinguishers as required by Table 25.30–20(b)(1), depending upon the gross tonnage of the barge.

§ 25.30–90 Vessels contracted for prior to November 19, 1952.

(a) Vessels contracted for prior to November 19, 1952, shall meet the applicable provisions of §§ 25.30–5 through 25.30–20 insofar as the number and general type of equipment is concerned. Existing items of equipment and installations previously approved but not meeting the applicable requirements for type approval may be continued in service so long as they are in good condition. All new installations and replacements shall meet the requirements of §§ 25.30–5 through 25.30–20.

Subpart 25.35—Backfire Flame Control

§ 25.35–1 Requirements.

(a) Every gasoline engine installed in a motorboat or motor vessel after April 25, 1940, except outboard motors, shall be equipped with an acceptable means of backfire flame control.

(b) Installations made before November 19, 1952, need not meet the detailed requirements of this subpart and may be continued in use as long as they are serviceable and in good condition. Replacements shall meet the applicable conditions in this section.

(c) Installations consisting of backfire flame arresters bearing basic Approval No. 162.015 may be continued in use as long as they are serviceable and in good condition. Replacements shall meet the applicable conditions in this section.

(d) Installations consisting of engine air and fuel induction system and given a basic Approval No. 162.015 may be continued in use as long as they are serviceable and in good condition. Replacements shall meet the applicable conditions in this section.

(e) The following are acceptable means of backfire flame control for gasoline engines:

(1) A backfire flame arrester constructed in accordance with the specification regulations contained in Subpart 162.041 of Subchapter Q (Specifications) of this chapter and it shall be specifically approved by the Commandant. The flame arrester shall be suitably secured to the air intake with flametight connection.

(2) An engine air and fuel induction system which provides adequate protection from propagation of backfire flame to the atmosphere equivalent to that provided by an approved backfire flame arrester. A gasoline engine utilizing an air and fuel induction system, and operated without an approved backfire flame arrester shall have such installation tested and labeled in accordance with the specifications contained in Subpart 162.042 of Subchapter Q (Specifications) of this chapter and such system shall be specifically approved by the Commandant.

(3) Any attachment to the carburetor or location of the engine air induction system by means of which flames caused by engine backfire will be dispersed to the atmosphere outside the vessel in such a manner that the flames will not endanger the vessel, persons on board, or nearby vessels and structures. All attachments shall be of metallic construction with flametight connections and firmly secured to withstand vibration, shock, and engine backfire. Such installations do not require formal approval and labeling, but will be accepted by Coast Guard law enforcement officers on the basis of compliance with this subpart.

(4) Where manufacturers wish to produce vessels having an integrated engine-vessel design, a pre-market approval of an engine air induction system is available. Such an installation shall be tested and labeled in accordance with the specifications contained in Subpart 162.043 of Subchapter Q (Specifications) of this chapter and such system shall be specifically approved by the Commandant.

(Interpret or apply sec. 10, 54 Stat. 165, as amended, 46 U.S.C. 526i)

Subpart 25.40—Ventilation

§ 25.40–1 Tanks and engine spaces.

(a) All motorboats or motor vessels, except open boats, the construction or decking over of which is commenced after April 25, 1940, and which use fuel having a flashpoint of 110° F. or less, shall have at least 2 ventilator ducts, fitted with cowls or their equivalent, for the efficient removal of explosive or flammable gases from the bilges of every engine and fuel tank compartment. There shall be at least one exhaust duct installed so as to extend from the open atmosphere to the lower portion of the bilge and at least one intake duct installed so as to extend to a point at least midway to the bilge or at least below the level of the carburetor air intake. The cowls shall be located and trimmed for maximum effectiveness and in such a manner so as to prevent displaced fumes from being recirculated.

(b) As used in this section, the term "open boats" means those motorboats or motor vessels with all engine and fuel tank compartments, and other spaces to which explosive or flammable gases and vapors from these compartments may flow, open to the atmosphere and so arranged as to prevent the entrapment of such gases and vapors within the vessel.

(c) Where alterations are needed for existing motorboats or motor vessels to comply with the requirements in this section, such alterations shall be accomplished as soon as practicable but in any case shall be completed by June 1, 1966.

(Sec. 11, 54 Stat. 165, as amended; 46 U.S.C. 526j)

Subpart 25.45—Liquefied Petroleum Gas

§ 25.45–1 Prohibited on vessels carrying passengers for hire.

(a) On vessels carrying passengers for hire, the use of liquefied petroleum gases and certain flammable liquids for cooking, heating, or lighting is prohibited by Parts 146 and 147 of Subchapter N (Dangerous Cargoes) of this chapter.

(R.S. 4472, as amended; 46 U.S.C. 170)

PART 26—OPERATIONS

Subpart 26.01—Application

Sec.
26.01–1 Applicable to all vessels.

Subpart 26.03—Special Operating Requirements

26.03–1 Reckless or negligent operation prohibited by law.
26.03–5 Action required after accident.

Subpart 26.05—Penalties

26.05–1 General.
26.05–5 Reckless operation.

Subpart 26.10—Assessment, Collection, Mitigation, Remission of Fines or Penalties

26.10–1 General.
26.10–5 Procedures.

Subpart 26.15—Boarding

26.15–1 May board at any time.

Subpart 26.20—Exhibition of Motorboat Operator's License

26.20–1 Must be available.

Subpart 26.25—Crew Requirements

26.25–1 Licensed personnel.
26.25–5 Manning.

AUTHORITY: The provisions of this Part 26 are issued under R.S. 4405, as amended, 4462, as amended, sec. 17, 54 Stat. 166, as amended; 46 U.S.C. 375, 416, 526p. Treasury Department Order 120, July 31, 1950, 15 F.R. 6521, unless otherwise noted.

Subpart 26.01—Application

§ 26.01–1 Applicable to all vessels.

(a) The provisions of this part shall apply to all vessels except as specifically noted.

Subpart 26.03—Special Operating Requirements

§ 26.03–1 Reckless or negligent operation prohibited by law.

Subsection 13 (a) of the Act of April 25, 1940, as amended (46 U.S.C. 526l), reads as follows:

No person shall operate any motorboat or any vessel in a reckless or negligent manner so as to endanger the life, limb, or property of any person. To "operate" means to navigate or otherwise use a motorboat or a vessel.

§ 26.03–5 Action required after accident.

(a) Whenever an undocumented vessel is involved in a collision, accident, or other casualty, the operator shall:

(1) Comply with requirements in subsection 13(b) of the Act of April 25, 1940, as amended (46 U. S. C. 526l), which reads as follows:

In the case of collision, accident, or other casualty involving a motorboat or other vessel subject to this Act, it shall be the duty of the operator, if and so far as he can do so without serious danger to his own vessel, or persons aboard, to render such assistance as may be practicable and necessary to other persons affected by the collision, accident, or other casualty in order to save them from danger caused by the collision, accident, or casualty. He shall also give his name, address, and identification of his vessel to any person injured and to the owner of any property damaged. The duties imposed by this subsection shall be in addition to any duties otherwise provided by law.

(b) See Subpart 173.01 of Part 173 of Subchapter S (Numbering of Undocumented Vessels, Statistics on Numbering, and "Boating Accident Reports" and Accident Statistics) of this chapter for requirements governing "boating accident reports."

Subpart 26.05—Penalties

§ 26.05–1 General.

(a) If any motorboat or motor vessel subject to any of the provisions of the Act of April 25, 1940, as amended (54 Stat. 163–167, as amended; 46 U.S.C. 526–526u), is operated or navigated in violation of said Act or any of the applicable regulations in this chapter, the owner or operator, either one or both of them, is subject to the penalty in section 16, as amended (46 U.S.C 526o), which reads as follows:

If any motorboat or vessel subject to any of the provisions of this Act is operated or navigated in violation of this Act or any regulation issued thereunder, the owner or operator, either one or both of them, shall, in addition to any other penalty prescribed by law, be liable to a penalty of $100: *Provided*, That in the case of motorboats or vessels subject to the provisions of this Act carrying passengers for hire, a penalty of $200 shall be imposed on the owner or operator, either one or both of them, thereof for any violation of section 6, 7, or 8 of this Act or of

any regulations pertaining thereto. For any penalty incurred under this section the motorboat or vessel shall be held liable and may be proceeded against by way of libel in the district court of any district in which said motorboat or vessel may be found.

§ 26.05–5 Reckless operation.

(a) Any person who shall operate a motorboat or any vessel in a reckless or negligent manner is subject to the following penalty:

SEC. 14. Any person who shall operate any motorboat or any vessel in a reckless or negligent manner so as to endanger the life, limb, or property of any person shall be deemed guilty of a misdemeanor and on conviction thereof by any court of competent jurisdiction shall be punished by a fine not exceeding $2,000, or by imprisonment for a term of not exceeding one year, or by both such fine and imprisonment, at the discretion of the court. (Apr. 25, 1940, sec. 14; 54 Stat. 166; 46 U.S.C. 526m.)

Subpart 26.10—Assessment, Collection, Mitigation, Remission of Fines or Penalties

§ 26.10–1 General.

(a) The assessment, collection, mitigation, and remission of any fine, penalty, or forfeiture incurred under the Act of April 25, 1940, as amended, are authorized by section 17 (46 U.S.C. 526p), which reads in part as follows:

* * * The Commandant of the Coast Guard or any officer of the Coast Guard authorized by the Commandant may, upon application therefor, remit or mitigate any fine, penalty or forfeiture incurred under this Act or any regulations thereunder relating to motorboats or vessels, except the penalties provided in section 14 hereunder. * * *

(b) The assessment, collection, mitigation, and remission of penalties incurred under the Federal Boating Act of 1958 are authorized by subsection 8(b) (46 U.S.C. 527e), which reads as follows:

The Secretary may assess and collect any penalty incurred under this Act or any regulations prescribed pursuant to section 7 of this Act. The Secretary may, in his discretion, remit or mitigate any penalty imposed under this section, or discontinue prosecution therefor on such terms as he may deem proper.

§ 26.10–5 Procedures.

(a) Violations or maritime safety, navigation and vessel inspection laws, as well as rules and regulations prescribed thereunder, administered and enforced by the Coast Guard are reported by Coast Guard personnel detecting such violations to the Commander of the Coast Guard district in which the alleged violations occurred. The alleged offender will be informed of the nature of the violation.

(b) The procedures for the assessment, collection, remission, or mitigation are set forth in §§ 2.50–1 to 2.50–40 of Subchapter A (Procedures Applicable to the Public) of this chapter.

Subpart 26.15—Boarding

§ 26.15–1 May board at any time.

(a) In addition to any other authority provided by law, the boarding of vessels is authorized by subsection 8(c) of the Federal Boating Act of 1958 (46 U.S.C. 527e(c)), which reads as follows:

Commissioned, warrant, and petty officers of the Coast Guard may board any vessel required to be numbered under this Act at any time such vessel is found upon the navigable waters of the United States, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and the District of Columbia, or on the high seas, address inquiries to those on board, require appropriate proof of identification therefrom, examine the certificate of number issued under this Act, or in the absence of such certificate require appropriate proof of identification of the owner of the vessel, and, in addition, examine such vessel for compliance with this Act, the Act of April 25, 1940, as amended, and the applicable rules of the road.

(b) To facilitate the boarding of vessels by the commissioned, warrant, and petty officers of the Coast Guard in the exercise of their authority, every vessel subject to the Federal Boating Act of 1958, or the Act of April 25, 1940, as amended (46 U.S.C. 526–526u), if under way and upon being hailed by a Coast Guard vessel or patrol boat, shall stop immediately and lay to, or shall maneuver in such a way as to permit the boarding officer to come aboard. Failure to stop to permit a boarding officer to board a vessel or refusal to comply will subject the operator or owner to penalties provided in these laws.

(c) Coast Guard boarding vessels will be identified by the display of the Coast Guard ensign as a symbol of authority and the Coast Guard personnel will be dressed in Coast Guard uniform. The Coast Guard boarding officer upon boarding a vessel will identify himself to the master, owner, or operator and explain his mission.

(Interpret or apply sec. 7, 72 Stat. 1757; 46 U.S.C. 527d. Treasury Department Order 167–32, Sept. 23, 1958, 23 F.R. 7605)

Subpart 26.20—Exhibition of Motorboat Operator's License

§ 26.20–1 Must be available.

(a) Any person to whom a license as a motorboat operator has been issued shall have such license in his possession and available for immediate production to any Coast Guard boarding officer at all times during which any vessel which he is operating is carrying passengers for hire.

(Sec. 7, 54 Stat. 165, as amended; 46 U.S.C. 526f. Treasury Department Order 167–20, June 18, 1956, 21 F.R. 4894)

Subpart 26.25—Crew Requirements

§ 26.25–1 Licensed personnel.

(a) Every motorboat, as defined by the Act of April 25, 1940, as amended (46 U.S.C. 526), and any other vessel of fifteen gross tons or less propelled by machinery other than steam, while carrying passengers for hire, shall be operated or navigated by a person duly licensed for such service by the Coast Guard. This licensed operator shall be in charge of such motorboat or vessel, regardless of whether or not the passengers carried for hire are on such motorboat or vessel or are carried on a nonself-propelled vessel being towed or pushed by such motorboat or vessel. See § 157.30–30 of Subchapter P (Manning of Vessels) for special provisions with regard to use of superior licenses for motorboat operator's license.

(b) Certain uninspected vessels of 200 gross tons and upward are required to carry licensed officers. For details of these provisions see Subchapter P (Manning of Vessels) of this chapter, and the applicable law.

§ 26.25–5 Manning.

(a) Certain provisions with regard to requirements for able seamen, division of crew into watches, and citizenship of crew which are contained in various navigation and vessel inspection laws may apply to uninspected vessels operating on ocean, coastwise or Great Lakes waters. For details of these provisions see Subchapter P (Manning of Vessels) of this chapter and the applicable law.

SUBCHAPTER D—TANK VESSELS

PART 30—GENERAL PROVISIONS

Subpart 30.01—Administration

Sec.

30.01–1 Basis and purpose of regulations—TB/ALL.
30.01–5 Application of regulations—TB/ALL.
30.01–6 Application of regulations to tankships on an international voyage—T/ALL.
30.01–7 Ocean or unlimited coastwise vessels on inland and Great Lakes Routes—TB/OC.
30.01–10 Application of regulations governing alterations or repairs—TB/ALL.
30.01–15 Effective date of regulations—TB/ALL.
30.01–20 Portable containers—interpretive rulings—TB/ALL.

Subpart 30.10—Definitions

30.10–1 Definition of terms—TB/ALL.
30.10–3 Approved—TB/ALL.
30.10–5 Cargo—TB/ALL.
30.10–7 Certificated—TB/ALL.
30.10–9 Classification requirements—TB/ALL.
30.10–11 Coastwise—TB/C.
30.10–13 Cofferdam—TB/ALL.
30.10–15 Combustible liquid—TB/ALL.
30.10–17 Commandant—TB/ALL.
30.10–19 Coast Guard District Commander—TB/ALL.
30.10–21 Flammable or inflammable—TB/ALL.
30.10–22 Flammable liquid—TB/ALL.
30.10–23 Flame arrester—TB/ALL.
30.10–25 Flame screen—TB/ALL.
30.10–27 Flashpoint—TB/ALL.
30.10–29 Gas free—TB/ALL.
30.10–31 General rules and regulations—TB/ALL.
30.10–33 Great Lakes—TB/L.
30.10–35 Headquarters—TB/ALL.
30.10–36 International voyage—TB/ALL.
30.10–39 Liquefied flammable gas—TB/ALL.
30.10–41 Lakes, bays, and sounds—TB/B.
30.10–43 Marine inspector or inspector—TB/ALL.
30.10–44 Nuclear vessel—TB/ALL.
30.10–45 Ocean—TB/O.
30.10–47 Officer in Charge, Marine Inspection—TB/ALL.
30.10–49 Permit—TB/ALL.

Sec.
30.10-55 Pressure vacuum relief valve—TB/ALL.
30.10-57 Recognized classification society—TB/ALL.
30.10-59 Reid vapor pressure—TB/ALL.
30.10-61 Rivers—TB/R.
30.10-62 Rules of the Road—TB/ALL.
30.10-63 Spark arrester—TB/ALL.
30.10-65 Tank barge—B/ALL.
30.10-67 Tankship—T/ALL.
30.10-69 Tank vessel—TB/ALL.
30.10-71 Tankerman—TB/ALL.

Subpart 30.15—Equivalents

30.15-1 Conditions under which equivalents may be used—TB/ALL.

Subpart 30.20—Enforcement and Rights of Appeal

30.20-1 Enforcement—TB/ALL.
30.20-10 Penalties for violations of tank vessel regulations—TB/ALL.
30.20-50 Right of appeal—TB/ALL.

AUTHORITY: The provisions of this Part 30 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026, unless otherwise noted.

Subpart 30.01—Administration

§ 30.01-1 Basis and purpose of regulations—TB/ALL.

By virtue of authority vested in the Commandant of the Coast Guard by Treasury Department Order No. 120, dated July 31, 1950 (15 F.R. 6521), and in accordance with R.S. 4405 and 4417a, as amended, and sec. 3(c) of the Act of August 9, 1954 (46 U. S. C. 375, 391a, 50 U. S. C. 198), the rules and regulations in this subchapter are prescribed for all tank vessels in accordance with the intent of the various statutes and to obtain their correct and uniform administration.

§ 30.01-5 Application of regulations—TB/ALL.

(a) The regulations in this subchapter contain requirements for materials, design construction, inspection, manning, and operation of tank vessels, including handling and stowage of cargo and duties of officers and crew. However, vessels certificated as passenger, cargo or miscellaneous vessels, where the principal purpose or use of the vessel is not for the carriage of flammable or combustible liquid cargo in bulk, may be granted a permit to carry limited quantities of flammable or combustible liquid cargo in bulk in the grades indicated:

(1) Passenger vessels:

(i) Grade E in integral tanks or in approved portable containers of the type described in Subpart 98.35 in Part 98 of Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(ii) Grade D in portable containers in accordance with Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

(2) Cargo vessels:

(i) Grades D and E in integral tanks or in approved portable containers in accordance with Subpart 98.35 in Part 98 of Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(ii) Grades A and lower in portable containers in accordance with Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

(3) Miscellaneous vessels, such as cable, salvage, pile driving, and oil drilling rig vessels:

(i) Grades B and lower in fixed independent or integral tanks when specially authorized by the Commandant.

(b) The requirements of this subchapter are divided into parts as follows:

(1) Inspection and certification.
(2) Special equipment, machinery, and hull requirements.
(3) Lifesaving appliances.
(4) Firefighting equipment.
(5) Operations.
(6) Elevated temperature cargoes.
(7) Liquefied flammable gases.
(8) Flammable or combustible liquids having lethal characteristics.
(9) Special construction, arrangement, and other provisions for carrying certain flammable or combustible dangerous cargoes in bulk.

(c) The vessels and services to which each regulation applies are indicated by letters in the heading of the section or paragraph. The first letter or two letters indicate the type of vessel and the letter or letters following the oblique line indicate the waters in which such vessels may operate. These letters are described as follows:

(1) "T" signifies a tankship.
(2) "B" signifies a tank barge when it precedes an oblique line; or it signifies service on bays, sounds, and lakes other than the Great Lakes when it follows an oblique line.
(3) "ALL" signifies service on all waters.
(4) "O" signifies service on ocean waters.
(5) "C" signifies services on coastwise waters.
(6) "L" signifies service on Great Lakes' waters.
(7) "R" signifies service on river waters.

(d) This subchapter shall be applicable to all United States flag vessels indicated in Column 3 of Table 30.01-5(d), except as follows:

(1) Any vessel operating exclusively on inland waters which are not navigable waters of the United States.
(2) Any vessel while laid up and dismantled and out of commission.
(3) With the exception of vessels of the U. S. Maritime Administration, any vessel with title vested in the United States and which is used for public purposes.

TABLE 30.01-5(d)

Method of propulsion	Size or other limitations [1]	Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations [1]			
		Vessels inspected and certificated under Subchapter D—Tank Vessels [2]	Vessels inspected and certificated under either Subchapter H—Passenger Vessels [2 3 4] or Subchapter T—Small Passenger Vessels [2 3 4]	Vessels inspected and certificated under Subchapter I—Cargo and Miscellaneous Vessels [2 4]	Vessels subject to provisions of Subchapter C—Uninspected Vessels [2 3 4]
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Steam	Vessels not over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	All tugboats and towboats.	All vessels except those covered by columns 3, 4 and 5.[8]
	Vessels over 65 feet in length.	All vessels carrying combustible or flammable liquid cargo in bulk.[5]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels of not over 15 gross tons which carry more than 6 passengers.[7] 3. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew. c. Towing and fishing vessels, in other than ocean and coastwise service, may carry persons on the legitimate business of the vessel, in addition to crew, but not to exceed one for each net ton of the vessel.	All vessels except those covered by columns 3 and 4.	None.

See footnotes at end of table.

TABLE 30.01-5(d)—Continued

Method of propulsion	Size or other limitations [1]	Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations [1]			
		Vessels inspected and certificated under Subchapter D—Tank Vessels [2]	Vessels inspected and certificated under either Subchapter H—Passenger Vessels [2] [3] [4] or Subchapter T—Small Passenger Vessels [2] [4]	Vessels inspected and certificated under Subchapter I—Cargo and Miscellaneous Vessels [2] [5]	Vessels subject to provisions of Subchapter C—Uninspected Vessels [2] [6]
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Motor	Vessels of not over 15 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All vessels except those covered by columns 3, 4, and 5.
	Vessels over 15 gross tons except seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[8]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All vessels not over 65 feet in length which carry more than 6 passengers.[7] 3. All other vessels of over 65 feet in length carrying passengers for hire except documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels carrying freight for hire except those covered by columns 3 and 4.	All vessels except those covered by columns 3, 4, and 5.
	Seagoing motor vessels of 300 gross tons and over.	All vessels carrying combustible or flammable liquid cargo in bulk.[8]	1. All vessels carrying more than 12 passengers on an international voyage, except yachts. 2. All other vessels carrying passengers, except: a. Yachts. b. Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew.	All vessels except those covered by columns 3 and 4, and those engaged in the fishing, oystering, clamming, crabbing, or any other branch of the fishery, kelp, or sponge industry.	All vessels except those covered by columns 3, 4, and 5.
Sail	Vessels not over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
	Vessels over 700 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire.	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	None.
Nonself-propelled	Vessels not over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying more than 6 passengers.[7]	Those vessels carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.
	Vessels over 100 gross tons.	All vessels carrying combustible or flammable liquid cargo in bulk.	All vessels carrying passengers for hire.	All seagoing barges except those covered by columns 3 and 4; and those inland barges carrying dangerous cargoes when required by 46 CFR Part 98 or 146.	All barges carrying passengers except those covered by column 4.

[1] Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression "means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline."

[2] Subchapters E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes), of this chapter may also be applicable under certain conditions.

[3] Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of Part 167 of Subchapter R (Nautical Schools) of this chapter. Civilian nautical schoolships, as defined by 46 U.S.C. 1331, shall meet the requirements of Subchapter H (Passenger Vessels) and Part 168 of Subchapter R (Nautical Schools) of this chapter.

[4] Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons or more. Subchapter T (Small Passenger Vessels) of this chapter covers only those vessels of less than 100 gross tons.

[5] Vessels covered by Subchapters H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not for the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of Subchapter D (Tank Vessels) in addition to the requirements of Subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

[6] Any vessel on an international voyage is subject to the requirements of the International Convention for Safety of Life at Sea, 1960.

[7] The meaning of the term "passenger" is as defined in the Act of May 10, 1956 (sec. 1, 70 Stat. 151; 46 U.S.C. 390).

[8] Boilers and machinery are subject to examination on vessels over 40 feet in length.

(e) This subchapter shall be applicable to all foreign flag vessels carrying combustible or flammable liquid cargo in bulk while in the navigable waters over which the United States has jurisdiction, except that:

(1) A vessel of a foreign nation signatory to the International Convention for Safety Of Life At Sea, 1960, which has on board a current valid Safety Equipment Certificate; or a vessel of a foreign nation having inspection laws approximating those of the United States, together with reciprocal inspection arrangements with the United States and which has on board a current valid Certificate of Inspection issued by its government under such arrangements; in either case, shall be subject only to the requirements of § 35.01-1 of Subpart 35.01, and the safety and cargo handling requirements in Subparts 35.30 and 35.35.

(f) Notwithstanding the exceptions previously noted in paragraph (e) of this section, foreign vessels of novel design or construction, or whose operation involves potential unusual risks, shall be subject to inspection to the extent necessary to safeguard life and property in United States ports, as further provided by § 2.01-13 of Subchapter A (Procedures applicable to the Public) of this chapter.

§ 30.01-6 Application of regulations to tankships on an international voyage—T/ALL.

(a) Where, in various places or portions of this subchapter, requirements are stipulated specifically for "tankships on an international voyage," it is intended that these requirements apply only to tankships subject to the International Convention for Safety of Life at Sea, 1960, which are mechanically propelled tankships of 500 gross tons and over on an international voyage, as defined in § 30.10-36.

(b) In accordance with Regulation 4, Chapter I (General Provisions), of the International Convention for Safety of Life at Sea, 1960, a tankship which is not normally engaged on an international voyage but which in exceptional circumstances, is required to undertake a single international voyage, may be exempted by the Commandant from any of the requirements of the regulations of this Convention: *Provided*, That it complies with safety requirements which are

adequate, in his opinion, for the voyage which is to be undertaken.

(c) In accordance with Regulation 1(c), Chapter II (Construction), of the International Convention for Safety of Life at Sea, 1960, the Commandant may, if he considers that the sheltered nature and conditions of the voyage are such as to render the application of any specific requirements of Chapter II of this Convention unreasonable or unnecessary, exempt from those requirements individual tankships or classes of tankships, which in the course of their voyage do not proceed more than 20 miles from the nearest land.

(d) In accordance with Regulation 3(a), Chapter III (Lifesaving Appliances, etc.), of the International Convention for Safety of Life at Sea, 1960, the Commandant, if he considers that the sheltered nature and conditions of the voyage are such as to render the application of the full requirements of Chapter III of this Convention unreasonable or unnecessary, may to that extent exempt from the requirements of Chapter III individual tankships or classes of tankships which, in the course of their voyage, do not go more than 20 miles from the nearest land.

§ 30.01–7 Ocean or unlimited coastwise vessels on inland and Great Lakes Routes—TB/OC.

(a) Vessels inspected and certificated for ocean or unlimited coastwise routes shall be considered suitable for navigation insofar as the provisions of this subchapter are concerned on any inland route, including the Great Lakes.

§ 30.01–10 Application of regulations governing alterations or repairs—TB/ALL.

When major alterations or major repairs of tank vessels become necessary the work shall be done under the direction of the Officer in Charge, Marine Inspection, and shall be in accordance with the regulations in effect for new construction insofar as possible. When minor alterations or minor repairs of tank vessels become necessary such work shall be under the direction of the Officer in Charge, Marine Inspection, and shall be in accordance with the regulations in effect at the time the vessel was contracted for or built, or in accordance with the regulations in effect for new construction insofar as possible.

§ 30.01–15 Effective date of regulations—TB/ALL.

(a) The regulations in this subchapter are effective on and after November 10, 1936: *Provided*, That amendments, revisions, or additions shall become effective ninety (90) days after the date of publication in the FEDERAL REGISTER unless the Commandant shall fix a different time.

(b) The regulations in this subchapter are not retroactive in effect unless specifically made so at the time the regulations are issued. Changes in specification requirements of articles of equipment, or materials used in construction of tank vessels, shall not apply to such items which have been passed as satisfactory until replacement shall become necessary, unless a specific finding is made that such equipment or material used is unsafe or hazardous and has to be removed from tank vessels.

§ 30.01–20 Portable containers—interpretive rulings—TB/ALL.

(a) The phrase "drums, barrels, or other packages," as used in R.S. 4417a, as amended (46 U.S.C. 391a), and in R.S. 4472, as amended (46 U.S.C. 170), is interpreted to mean portable containers having a maximum capacity of 110 U.S. gallons and ICC specification cylinders having a water capacity of not more than 1,000 pounds, which are actually loaded and discharged from vessels with their contents intact.

(b) The phrase "inflammable or combustible liquid cargo in bulk" as used in R.S. 4417a, as amended (46 U.S.C. 391a), and in R.S. 4472, as amended (46 U.S.C. 170), is interpreted to include such cargo in portable containers of a capacity of more than 110 U.S. gallons.

(c) The phrase "liquid cargo" as used in R.S. 4417a, as amended (46 U.S.C. 391a), is interpreted to mean flammable or combustible liquids.

(Interpret or apply R.S. 4472, as amended; 46 U.S.C. 170)

Subpart 30.10—Definitions

§ 30.10–1 Definition of terms—TB/ALL.

Certain terms used in the regulations in this subchapter are defined in this subpart.

§ 30.10–3 Approved—TB/ALL.

The term "approved" means approved by the Commandant unless otherwise stated.

§ 30.10–5 Cargo—TB/ALL.

The term "cargo" means combustible liquid, flammable liquid, or liquefied flammable gas unless otherwise stated.

§ 30.10–7 Certificated—TB/ALL.

The term "certificated" when applied to tank vessels refers to a vessel covered by a certificate of inspection issued by the Coast Guard; when applied to men employed on tank vessels, the term refers to a certificate of ability issued by the Coast Guard.

§ 30.10–9 Classification requirements—TB/ALL.

The term "classification requirements" means applicable rules and supplementary requirements of the American Bureau of Shipping, or other recognized classification society.

§ 30.10–11 Coastwise—TB/C.

Under this designation shall be included all tank vessels normally navigating the waters of any ocean or the Gulf of Mexico 20 nautical miles or less offshore.

§ 30.10–13 Cofferdam—TB/ALL.

The term "cofferdam" means a void or empty space separating two or more compartments for the purpose of isolation or to prevent the contents of one compartment from entering another in the event of the failure of the walls of one to retain their tightness.

§ 30.10–15 Combustible liquid—TB/ALL.

The term "combustible liquid" means any liquid having a flashpoint above 80° F. (as determined from an open-cup tester, as used for test of burning oils). Combustible liquids having lethal qualities are those having the characteristics of class "B" or "C" poisons as defined in §§ 146.25–10 and 146.25–15 of Subchapter N (Dangerous Cargoes) of this chapter. In the regulations of this subchapter, combustible liquids are referred to by grades, as follows:

(a) *Grade D.* Any combustible liquid having a flashpoint below 150° F. and above 80° F.

(b) *Grade E.* Any combustible liquid having a flashpoint of 150° F. or above.

§ 30.10–17 Commandant—TB/ALL.

The term "Commandant" means the Commandant of the Coast Guard.

§ 30.10–19 Coast Guard District Commander—TB/ALL.

The term "Coast Guard District Commander" means an officer of the Coast Guard designated as such by the Commandant to command all Coast Guard activities within his district which include the enforcement and administration of Title 52, R.S., acts amendatory thereof or supplemental thereto, rules and regulations thereunder and the inspections required thereby.

§ 30.10–21 Flammable or inflammable—TB/ALL.

The words "flammable" and "inflammable" are interchangeable or synonymous terms for the purpose of the regulations in this subchapter.

§ 30.10–22 Flammable liquid—TB/ALL.

The term "flammable liquid" means any liquid which gives off flammable vapors (as determined by flashpoint from an open-cup tester, as used for test of burning oils) at or below a temperature of 80° F. Flammable liquids having lethal qualities are those having the characteristics of class "B" or "C" poisons as defined in §§ 146.25–10 and 146.25–15, of Subchapter N (Dangerous Cargoes) of this chapter. Flammable liquids are referred to by grades as follows:

(a) *Grade A.* Any flammable liquid having a Reid[1] vapor pressure of 14 pounds or more.

(b) *Grade B.* Any flammable liquid having a Reid vapor pressure under 14 pounds and over 8½ pounds.

(c) *Grade C.* Any flammable liquid having a Reid[1] vapor pressure of 8½ pounds or less and a flashpoint of 80° F. or below.

[1] American Society for Testing Materials Standard D–323 (most recent revision), Method of Test for Vapor Pressure of Petroleum Products (Reid Method).

§ 30.10–23 Flame arrester—TB/ALL.

The term "flame arrester" means any device or assembly of a cellular, tubular, pressure, or other type used for preventing the passage of flames into enclosed spaces.

§ 30.10–25 Flame screen—TB/ALL.

The term "flame screen" means a fitted single screen of corrosion-resistant wire of at least 30 by 30 mesh, or two fitted screens, both of corrosion-resistant wire, of at least 20 by 20 mesh, spaced not less than ½ inch or more than 1½ inches apart.

§ 30.10–27 Flashpoint—TB/ALL.

The term "flashpoint" indicates the temperature in degrees Fahrenheit at which a liquid gives off a flammable vapor when heated in an open-cup tester. For the purpose of the regulations in this subchapter, flashpoints determined by other testing methods will be equivalent to those determined with an open-cup tester, as follows:

TABLE 30.10-27—EQUIVALENT FLASHPOINTS

Open-cup tester	Tag closed-cup tester (A. S. T. M.)	Pensky-Martens closed tester (A. S. T. M.)
°F.	°F.	°F.
80	75	----------
150	----------	140

§ 30.10–29 Gas free—TB/ALL.

The term "gas free" means free from dangerous concentrations of flammable or toxic gases.

§ 30.10–31 General rules and regulations—TB/ALL.

The term "general rules and regulations" means the requirements contained in this chapter.

§ 30.10–33 Great Lakes—TB/L.

Under this designation shall be included all tank vessels navigating the Great Lakes.

§ 30.10–35 Headquarters—TB/ALL.

The term "Headquarters" means the Office of the Commandant, U.S. Coast Guard, Washington, D.C., 20226.

§ 30.10–36 International voyage—TB/ALL.

(a) The term "international voyage," as used in this subchapter, shall have the same meaning as that contained in Regulation 2(d), Chapter I, of the International Convention for Safety of Life at Sea, 1960; i.e., " 'International voyage' means a voyage from a country to which the present Convention applies to a port outside such country, or conversely; and for this purpose every territory for the international relations of which a Contracting Government is responsible or for which the United Nations is the administering authority is regarded as a separate country."

(b) The International Convention for Safety of Life at Sea, 1960, does not apply to tank vessels "solely navigating the Great Lakes of North America and the River St. Lawrence as far east as a straight line drawn from Cap de Rosiers to West Point, Anticosti Island and, on the north side of Anticosti Island, the 63d Meridian." Accordingly, such tank vessels shall not be considered as being on an "international voyage" for the purposes of this subchapter.

(c) For the purposes of this subchapter the term "territory" as used in paragraph (a) of this section shall be considered to include the Commonwealth of Puerto Rico, the Canal Zone, all possessions of the United States, and all lands held by the United States under a protectorate or mandate.

(d) Although voyages between the continental United States and Hawaii or Alaska, and voyages between Hawaii and Alaska are not "international voyages" under the provisions of the International Convention for Safety of Life at Sea, 1960, such voyages are similar in nature and shall be considered as "international voyages" and subject to the same requirements for the purposes of this subchapter.

§ 30.10–39 Liquefied flammable gas—TB/ALL.

The term "liquefied flammable gas" means any flammable gas having a Reid vapor pressure exceeding 40 pounds which has been compressed and liquefied for the purpose of transportation.

§ 30.10–41 Lakes, bays, and sounds—TB/B.

Under this designation shall be included all tank vessels navigating the waters of any of the lakes, bays, or sounds other than the waters of the Great Lakes.

§ 30.10–43 Marine inspector or inspector—TB/ALL.

The terms "marine inspector" or "inspector" mean any person from the civilian or military branch of the Coast Guard assigned under the superintendence and direction of an Officer in Charge, Marine Inspection, or any other person as may be designated for the performance of duties with respect to the enforcement and administration of Title 52, R.S., acts amendatory thereof or supplemental thereto, rules and regulations thereunder, and the inspections required thereby.

§ 30.10–44 Nuclear vessel—TB/ALL.

A nuclear vessel is a vessel provided with a nuclear powerplant for propulsion or any other purpose, or any vessel handling or processing substantial amounts of radioactive material other than as cargo.

§ 30.10–45 Ocean—TB/O.

Under this designation shall be included all tank vessels normally navigating the waters of any ocean or the Gulf of Mexico more than 20 nautical miles offshore.

§ 30.10–47 Officer in Charge, Marine Inspection—TB/ALL.

The term "Officer in Charge, Marine Inspection," means any person from the civilian or military branch of the Coast Guard designated as such by the Commandant and who under the superintendence and direction of the Coast Guard District Commander is in charge of an inspection zone for the performance of duties with respect to the enforcement and administration of Title 52, R.S., acts amendatory thereof or supplemental thereto, rules and regulations thereunder and the inspections required thereby.

§ 30.10–49 Permit—TB/ALL.

The term "permit" refers to endorsement on the certificate of inspection, authorizing the presence on board of liquid flammable or combustible cargoes in bulk, issued by an Officer in Charge, Marine Inspection, for a tank vessel which is found to be in substantial compliance with the regulations in this subchapter.

§ 30.10–55 Pressure vacuum relief valve—TB/ALL.

The term "pressure vacuum relief valve" means any device or assembly of a mechanical, liquid, weight, or other type used for the automatic regulation of pressure or vacuum in enclosed places.

§ 30.10–57 Recognized classification society—TB/ALL.

The term "recognized classification society" means the American Bureau of Shipping or other classification society recognized by the Commandant.

§ 30.10–59 Reid vapor pressure—TB/ALL.

The term "Reid vapor pressure" means the vapor pressure of a liquid at a temperature of 100° F., expressed in pounds per square inch absolute, as determined by the "Reid Method" as described in the American Society for Testing Materials Standard D–323 (most recent revision), Method of Test for Vapor Pressure of Petroleum Products. This Standard is available at Headquarters for reading purposes or it may be purchased from the Society at 1916 Race Street, Philadelphia, Pa., 19103.

§ 30.10–61 Rivers—TB/R.

Under this designation shall be included all tank vessels whose navigation is restricted to rivers and/or to canals, exclusively.

§ 30.10–62 Rules of the Road—TB/ALL.

(a) The term "Rules of the Road" means the statutory and regulatory rules governing navigation of vessels. These rules are also published by the Coast Guard in pamphlet form as follows:

(1) Rules of the Road—International—Inland (CG–169).

(2) Rules of the Road—Great Lakes (CG–172).

(3) Rules of the Road—Western Rivers (CG–184).

(b) The current editions of the "Rules of the Road" pamphlets may be obtained from any Marine Inspection Office.

§ 30.10–63 Spark arrester—TB/ALL.

The term "spark arrester" means any device, assembly, or method of a mechanical, centrifugal, cooling, or other type

and of a size suitable for the retention or quenching of sparks in exhaust pipes from internal combustion engines.

§ 30.10–65 Tank barge—B/ALL.

The term "tank barge" means any tank vessel not equipped with means of self-propulsion.

§ 30.10–67 Tankship—T/ALL.

The term "tankship" means any tank vessel propelled by power or sail.

§ 30.10–69 Tank vessel—TB/ALL.

The term "tank vessel" means any vessel especially constructed or converted to carry liquid bulk cargo in tanks.

§ 30.10–71 Tankerman—TB/ALL.

The term "tankerman" means any person holding a certificate issued by the Coast Guard attesting to his competency in the handling of flammable or combustible liquid cargo in bulk or is any person holding a valid license as master, mate, pilot, or engineer.

Subpart 30.15—Equivalents

§ 30.15–1 Conditions under which equivalents may be used—TB/ALL.

(a) Where in this subchapter it is provided that a particular fitting, material, appliance, apparatus, or equipment, or type thereof, shall be fitted or carried in a vessel, or that any particular provision shall be made or arrangement shall be adopted, the Commandant may accept in substitution therefor any other fitting, material, apparatus, or equipment, or type thereof, or any other arrangement: *Provided*, That he shall have been satisfied by suitable trials that the fitting, material, appliance, apparatus, or equipment, or type thereof, or the provision or arrangement is at least as effective as that specified in this subchapter.

(b) In any case where it is shown to the satisfaction of the Commandant that the use of any particular equipment, apparatus, or arrangement not specifically required by law is unreasonable or impracticable, the Commandant may permit the use of alternate equipment, apparatus, or arrangement to such an extent and upon such conditions as will insure, to his satisfaction, a degree of safety consistent with the minimum standards set forth in this subchapter.

Subpart 30.20—Enforcement and Rights of Appeal

§ 30.20–1 Enforcement—TB/ALL.

The Officer in Charge, Marine Inspection, under the superintendence of the Coast Guard District Commander, is responsible for the performance of duties within his jurisdiction with respect to the enforcement and administration of Title 52, R. S., acts amendatory thereof or supplemental thereto, rules and regulations thereunder, and the inspections required thereby.

§ 30.20–10 Penalties for violations of tank vessel regulations—TB/ALL.

(a) The provisions of R.S. 4417a, as amended (46 U.S.C. 391a) provide the following penalty:

(7) The owner, master, or person in charge of any vessel subject to the provisions in this section, or any or all of them, who shall violate the provisions of this section, or of the rules and regulations established hereunder, shall be subject to a fine of not more than $1,000 or imprisonment for not more than one year, or both such fine and penalty.

(b) Certificates of inspection for tank vessels may also be revoked or suspended by the Coast Guard where such process is authorized by law. This may occur if the vessel does not meet the requirements of law or regulations in this chapter or if there is a failure to maintain the safety requirements requisite to the issuance of a certificate of inspection.

§ 30.20–50 Right of appeal—TB/ALL.

Whenever any person directly interested in or affected by any decision or action of any Officer in Charge, Marine Inspection, shall feel aggrieved by such decision or action, he may appeal therefrom to the Coast Guard District Commander having jurisdiction and a like appeal shall be allowed from any decision or action of the Coast Guard District Commander to the Commandant, whose decision shall be final: *Provided, however*, That application for such reexamination of the case by a Coast Guard District Commander or by the Commandant shall be made within 30 days after the decision or action appealed from shall have been rendered or taken.

(R.S. 4453, as amended; 46 U.S.C. 435)

PART 31—INSPECTION AND CERTIFICATION

Subpart 31.01—General

Sec.
- 31.01–1 Inspections required—TB/ALL.
- 31.01–5 Scope of initial inspection—TB/ALL.
- 31.01–10 Authority of marine inspectors—TB/ALL.
- 31.01–15 Application for inspection—TB/ALL.
- 31.01–20 Application for inspection of new tank vessel or conversion of a vessel to a tank vessel—TB/ALL.

Subpart 31.05—Certificates of Inspection

- 31.05–1 Issuance of certificate of inspection—TB/ALL.
- 31.05–5 Posting the certificate of inspection—TB/ALL.
- 31.05–10 Period covered by certificate of inspection—TB/ALL.
- 31.05–15 Certificate of inspection; terms; endorsements—TB/ALL.

Subpart 31.10—Inspections

- 31.10–1 Recognized classification society—TB/ALL.
- 31.10–5 Inspection of new tank vessels—TB/ALL.
- 31.10–10 Vessels converted to tank vessels—TB/ALL.
- 31.10–15 Inspection for certification—TB/ALL.
- 31.10–16 Inspection and certification of cargo gear—TB/ALL.
- 31.10–17 Reinspection—TB/ALL.
- 31.10–18 Firefighting equipment: General—TB/ALL.
- 31.10–19 All firefighting equipment may be tested—TB/ALL.
- 31.10–20 Drydocking or hauling out—TB/ALL.

Sec.
- 31.10–23 Examination of tail shaft—T/OC.
- 31.10–25 Inspection covering repairs and alterations involving safety—TB/ALL.
- 31.10–30 Stability requirements—TB/ALL.
- 31.10–35 Permit to proceed to another port for repair—TB/ALL.
- 31.10–40 Inspection during trial trip—T/ALL.
- 31.10–45 Inspection of crew accommodations—TB/ALL.
- 31.10–50 Inspection of bilges—TB/ALL.

Subpart 31.15—Manning of Tank Vessels

- 31.15–1 Licensed officers and crews—TB/ALL.
- 31.15–5 Tank barges—B/ALL
- 31.15–6 Tank barges carrying bulk cargoes having dangerous characteristics in addition to flammability or combustibility—B/ALL.
- 31.15–10 Towing vessels may carry persons in addition to crew—B/LBR.

Subpart 31.20—Waters Operated Over

- 31.20–1 Waters—TB/ALL.

Subpart 31.25—Load Lines

- 31.25–1 Load lines required—TB/OCL.

Subpart 31.30—Marine Engineering

- 31.30–1 Marine engineering regulations and material specifications—TB/ALL.

Subpart 31.35—Electrical Engineering

- 31.35–1 Electrical installations, lighting and power equipment, batteries, etc.—TB/ALL.
- 31.35–5 Communications; alarm systems, telephone and voice tube systems, engine telegraph systems, etc.—TB/ALL.

Subpart 31.37—Inspection of Cargo Gear

- 31.37–1 When made—TB/ALL.
- 31.37–3 Definitions of terms and words used in this subpart—TB/ALL.
- 31.37–5 Tests and examinations of shipboard cargo gear—TB/ALL.
- 31.37–15 Cargo gear plans required when plans are not approved by a classification society—TB/ALL.
- 31.37–20 Cargo gear plans approved by a classification society—TB/ALL.
- 31.37–25 Factors of safety—TB/ALL.
- 31.37–30 Loose gear certificates and tests—TB/ALL.
- 31.37–35 Test and certification of wire rope—TB/ALL.
- 31.37–40 Proof test of cargo gear as a unit—TB/ALL.
- 31.37–45 Marking of booms and cranes—TB/ALL.
- 31.37–50 Use of wire rope and chains—TB/ALL.
- 31.37–55 Annealing—TB/ALL.
- 31.37–60 Additions to gear—TB/ALL.
- 31.37–65 Alterations, renewals, or repairs of cargo gear—TB/ALL.
- 31.37–70 Responsibility of ship's officer for inspection of cargo gear—TB/ALL.
- 31.37–75 Records regarding cargo gear—TB/ALL.
- 31.37–80 Advance notice that cargo gear testing is desired—TB/ALL.
- 31.37–85 Responsibility for conducting required tests and examinations—TB/ALL.

Subpart 31.40—Certificates Under International Convention for Safety of Life at Sea, 1960

- 31.40–1 Application—T/ALL.
- 31.40–5 Cargo Ship Safety Construction Certificate—T/ALL.

Sec.
31.40-10 Cargo Ship Safety Equipment Certificate—T/ALL.
31.40-15 Cargo Ship Safety Radiotelegraphy Certificate—T/ALL.
31.40-20 Cargo Ship Safety Radiotelephony Certificate—T/ALL.
31.40-25 Exemption Certificate—T/ALL.
31.40-30 Nuclear Cargo Ship Safety Certificate—T/ALL.
31.40-35 Posting of Convention certificates—T/ALL.
31.40-40 Duration of Convention certificates—T/ALL.
31.40-45 American Bureau of Shipping—T/ALL.

AUTHORITY: The provisions of this Part 31 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026, unless otherwise noted.

Subpart 31.01—General

§ 31.01-1 Inspections required—TB/ALL.

(a) Every tank vessel subject to the regulations in this subchapter shall be inspected biennially, or annually, or oftener, if necessary, by the Coast Guard to see that the hull, boilers, machinery, equipment, apparatus for storage, and appliances of the vessel comply with the marine inspection laws, and the regulations in this subchapter, and Subchapter E (Load Lines), Subchapter F (Marine Engineering), Subchapter J (Electrical Engineering), and Subchapter Q (Specifications) of this chapter where applicable.

(b) Tank vessels while laid up and dismantled and out of commission are exempt from any or all inspections required by law or regulations in this subchapter.

(c) For inspection and tests of tanks containing certain dangerous cargoes in bulk, see Part 98 of Subchapter I (Cargo and Miscellaneous Vessels) of this chapter.

(R.S. 4418, as amended, 4433, as amended, 4472, as amended, 4488, as amended; 46 U.S.C. 392, 411, 170, 481. Treasury Department Orders CGFR 56-28, July 24, 1956, 21 F.R. 5659; 167-38, Oct. 26, 1959, 24 F.R. 8857)

§ 31.01-5 Scope of initial inspection—TB/ALL.

(a) The initial inspection, which may consist of a series of inspections during the construction of a vessel, shall include a complete inspection of the structure, machinery, and equipment, including the outside of the vessel's bottom, and the inside and outside of the boilers. The inspection shall be such as to insure that the arrangements, materials, and scantlings of the structure, boilers and other pressure vessels and their appurtenances, piping, main and auxiliary machinery, electrical installations, lifesaving appliances, fire-detecting and extinguishing equipment, pilot ladders and other equipment fully comply with the applicable regulations for such vessel and are in accordance with approved plans, and that the radio installations, including fixed and portable radios for lifeboats, are in accordance with the requirements of the Federal Communications Commission. The inspection shall also be such as to insure that the workmanship of all parts of the vessel and its equipment is in all respects satisfactory and that the vessel is provided with lights, means of making sound signals and distress signals as required by applicable regulations and the applicable Rules of the Road.

(b) For nuclear vessels, the foregoing inspection shall be made except insofar as they may be limited by the presence of radiation. In addition, the inspection shall include any special requirements of the vessel's "Safety Assessment."

§ 31.01-10 Authority of marine inspectors—TB/ALL.

Inspectors may at any time lawfully inspect any tank vessel.

§ 31.01-15 Application for inspection—TB/ALL.

(a) Application in writing for the inspection incident to the issuance or reissuance of a certificate of inspection to every tank vessel required to be inspected by law and the regulations in this subchapter shall be made by the master, owner, or agent to the Officer in Charge, Marine Inspection, at any local marine inspection office, U.S. Coast Guard, where the vessel may be operated.

(b) The application should be on Form CG-3752, Application for Inspection of U.S. Vessel, which requires information on name and type of vessel, nature of employment and route in which to be operated, grade or type of cargo to be carried, place where and date when the vessel may be inspected, and that no other application has been made to any Officer in Charge, Marine Inspection, since the issuance of the last valid certificate of inspection.

§ 31.01-20 Application for inspection of new tank vessel or conversion of a vessel to a tank vessel—TB/ALL.

Prior to the commencement of the construction of any new tank vessel, or prior to the commencement of the conversion of any vessel to a tank vessel, application for the approval of contract plans and specifications and for a certificate of inspection shall be made in writing to the Coast Guard and no such construction or conversion shall be proceeded with until such approval is granted. (See § 31.10-1.)

Subpart 31.05—Certificates of Inspection

§ 31.05-1 Issuance of certificate of inspection—TB/ALL.

(a) When a tank vessel is found to comply with law and the regulations in this subchapter, and Subchapter E (Load Lines), Subchapter F (Marine Engineering), Subchapter J (Electrical Engineering), and Subchapter Q (Specifications) of this chapter, a certificate of inspection shall be issued to it, or to its owners, by the Officer in Charge, Marine Inspection.

(b) Certificates of inspection for tank vessels shall be similar in form to certificates issued to other cargo vessels, and in addition to the manning requirements and waters over which they may be operated, they shall be appropriately endorsed "Inspected and approved for the carriage of flammable or combustible liquids of Grade A, B, C, D, or E" (as the case may be), and such endorsement shall serve as a permit for such vessel to operate. The endorsement for the carriage of liquefied flammable gases is set forth in § 38.01-5 of this subchapter. The endorsement for the carriage of Class "B" or "C" poisonous liquids is set forth in § 39.01-5 of this subchapter.

(c) The certificate of inspection shall be delivered to the master or owner of the tank vessel to which it relates.

§ 31.05-5 Posting the certificate of inspection—TB/ALL.

The certificate of inspection shall be framed under glass and posted in a conspicuous part of the vessel, except that where it is not practicable to so expose the certificate of inspection it shall be carried in the vessel in such manner as authorized by the Officer in Charge, Marine Inspection.

§ 31.05-10 Period covered by certificate of inspection—TB/ALL.

(a) Certificates of inspection will be issued for periods of either 1 or 2 years. For nuclear vessels, the period of validity shall be 1 year.

(b) Application may be made by the master, owner, or agent for inspection and issuance of a new certificate of inspection at any time during the period of validity of the current certificate. (See §§ 31.01-15 and 31.01-20.)

§ 31.05-15 Certificate of inspection; terms; endorsements—TB/ALL.

The terms, endorsements and conditions set forth on a certificate of inspection shall have the same force and effect as the regulations contained in this subchapter.

Subpart 31.10—Inspections

§ 31.10-1 Recognized classification society—TB/ALL.

(a) In the inspection of hulls, boilers, and machinery, the current standards established by the American Bureau of Shipping and designated "Rules for Building and Classing Steel Vessels" respecting material and construction of hulls, boilers, and machinery, except as otherwise provided for by law and regulations in this chapter, shall be accepted as standard by the Coast Guard.

(b) The current standards established by the American Bureau of Shipping in effect at the time of construction of the vessel, or otherwise as applicable, shall be used. The book "Rules for Building and Classing Steel Vessels" is usually published annually and may be purchased from the American Bureau of Shipping, 45 Broad Street, New York, N.Y., 10004. These standards may be also examined at the office of the Commandant (M), U. S. Coast Guard, Washington, D.C., 20236, or at the office of any Coast Guard District Commander or Officer in Charge, Marine Inspection.

(c) The approved plans and certificate of the American Bureau of Shipping, or other recognized classification society for classed vessels, may be accepted by the Coast Guard as evidence of the structural efficiency of the hull and reliability of machinery of vessels subject to the regulations in this subchapter, except as otherwise provided for by laws and regulations in this chapter.

§ 31.10–5 Inspection of new tank vessels—TB/ALL.

(a) *Plans.* Triplicate copies of contract plans and specifications shall be forwarded to the Officer in Charge, Marine Inspection, in whose district the construction will take place, for submission to Headquarters for approval, but if the tank vessel is to be classed, such plans and specifications shall first be approved by a recognized classification society. If the plans and specifications are found to be in substantial agreement with the regulations in this chapter, they shall be approved, properly stamped and dated and distributed as follows: one set to owner or builder; one set to Officer in Charge, Marine Inspection, of the district in which the vessel is to be built; and one set shall be retained at Headquarters. If such plans and specifications are not approved, Headquarters shall notify the owner or builder promptly wherein they fail to comply with the regulations in this chapter. For list of electrical plans see § 111.05–5 of Subchapter J (Electrical Engineering) of this chapter.

(1) The plans and specifications shall include the arrangement of the cargo gear. The principal details of the gear and the safe working load for each component part shall be shown. (See § 31.10–16 and Subpart 31.37 for applicable requirements.)

(b) *Inspection.* During construction, and upon completion of each tank vessel, it shall be inspected by the Officer in Charge, Marine Inspection, to determine whether it has been built in accordance with the approved plans and specifications, and, if so, a certificate of inspection endorsed as a permit for the carriage of flammable or combustible liquids in bulk for the proper grade or grades of cargo shall be issued to the vessel or its owner.

(c) *Certificate of class may be accepted.* In the event such tank vessel is classed by the American Bureau of Shipping or other recognized classification society, the approved plans and certificates of such society may be accepted by the Coast Guard as evidence of the structural efficiency of the hull and reliability of machinery, except as otherwise provided for by law and the rules and regulations in this subchapter.

§ 31.10–10 Vessels converted to tank vessels—TB/ALL.

The procedure for the inpection of vessels converted to tank vessels shall conform to the inspection for new tank vessels as called for in § 31.10–5(b), and such vessels shall comply with the requirements of inspections for converted vessels as set forth in the regulations in this subchapter.

§ 31.10–15 Inspection for certification—TB/ALL.

(a) The Officer in Charge, Marine Inspection, shall once in every 2 years, at least, and in the case of nuclear vessels, at least once every year carefully inspect such tank vessel within his jurisdiction and shall satisfy himself that every such vessel so inspected is of a structure suitable for the carriage of flammable and/or combustible liquids in bulk and for the proper grade or grades of such cargo in the service in which she is employed. If the Officer in Charge, Marine Inspection, deems it expedient, he may direct the vessel to be put in motion, and may adopt any other suitable means to test her sufficiency and that of her equipment.

(b) The inspection for certification shall include an inspection of the structure, boilers, and other pressure vessels, machinery and equipment. The inspection shall be such as to insure that the vessel, as regards the structure, boilers and other pressure vessels and their appurtenances, piping, main and auxiliary machinery, electrical installations, lifesaving appliances, fire-detecting and extinguishing equipment, pilot ladders, and other equipment is in satisfactory condition and fit for the service for which it is intended, and that it complies with the applicable regulations for such vessels, and that the radio installations, including fixed and portable radios for lifeboats, are in compliance with the requirements of the Federal Communications Commission. The lights and means of making sound signals and the distress signals carried by the vessel shall also be subject to the above mentioned inspection for certification for the purpose of insuring that they comply with the requirements of the applicable regulations and of the applicable Rules of the Road.

(c) For nuclear vessels, the foregoing inspections shall be made except insofar as they may be limited by the presence of radiation. In addition, the inspection shall include any special requirements of the vessel's "Safety Assessment."

§ 31.10–16 Inspection and certification of cargo gear—TB/ALL.

(a) An inspection of the cargo gear shall be required. The inspection may consist of tests and examinations to determine the condition and suitability of the cargo gear. Current valid certificates and registers of cargo gear, issued by recognized nonprofit organizations or associations approved by the Commandant may be accepted as prima facie evidence of the condition and suitability of the cargo gear. Cargo gear certificates and registers will not be issued by the Coast Guard.

(b) Every acceptable cargo gear certificate and/or register shall be properly executed by a person authorized to do so and shall:

(1) Certify as to the tests and examinations conducted;

(2) Show the dates on which the tests and examinations were conducted; and

(3) Indicate that the cargo gear therein described complies with standards equal to or exceeding those set forth in Subpart 31.37.

(c) Competent persons for the purposes of this section and Subpart 31.37 are:

(1) Coast Guard marine inspectors;

(2) Surveyors of the organizations or associations approved by the Commandant;

(3) Such other persons as are authorized by the regulations in Subpart 31.37 as may be required; and,

(4) Responsible officials or employees of the testing laboratories, companies, or organizations who conduct tests of pieces of loose cargo gear, wire rope, or the annealing of gear as may be required.

(d) The registers issued in connection with cargo gear certification must have all required entries fully completed as of the dates indicated, shall be kept current, and shall include the following:

(1) A register of the cargo handling machinery and the gear accessory thereto carried on the vessel named therein;

(2) Certification of the testing and examination of winches, derricks, and their accessory gear;

(3) Certification of the testing and examination of cranes, hoists, and their accessory gear;

(4) Certification of the testing and examination of chains, rings, hooks, shackles, swivels, and blocks;

(5) Certification of the testing and examination of wire rope;

(6) Certification of the heat treatment of chains, rings, hooks, shackles, and swivels which require such treatment; and,

(7) Certification of the annual thorough examinations of gear not required to be periodically heat treated.

(e) It is the responsibility of the master to have a ship's officer inspect cargo gear when required by Subpart 31.37. For those inspected vessels which do not have valid cargo gear certificates and registers as provided by this section, such vessels will be required to have their shipboard cargo gear undergo tests and inspections in accordance with the provisions of Subpart 31.37.

§ 31.10–17 Reinspection—TB/ALL.

(a) At least one reinspection shall be made on each vessel holding a certificate of inspection valid for two years. This reinspection will be made, where possible, between the tenth and fourteenth month of the period for which the certificate is valid. No written application for reinspection will be required.

(b) The inspector shall examine all accessible parts of the vessel's hull, machinery, and equipment to be assured that it is in a satisfactory condition.

(c) In general, the scope of the reinspection shall be the same as for the inspection for certification, but will be in less detail unless it is determined that a major change has occurred since the last inspection.

(d) Nothing in this subpart shall be construed as limiting the inspector from making such tests or inspections as he deems necessary to be assured of the seaworthiness of the vessel.

(e) If the reinspection reveals deficiencies in the maintenance as called for by the regulations in this subchapter, such necessary repairs or improvements shall be made as may be ordered.

§ 31.10-18 Firefighting equipment: General—TB/ALL.

(a) It shall be the duty of the owner, master, or person in charge of a tank vessel to require and have performed at least once in every 12 months, the tests and inspections of all hand portable fire extinguishers, semiportable fire extinguishing systems, and fixed fire extinguishing systems on board, as described in paragraphs (b), (c), and (d) of this section. The owner, master, or person in charge shall keep records of such tests and inspections showing the dates when performed, the number and/or other identification of each unit tested and inspected, and the name(s) of the person(s) and/or company conducting the tests and inspections. Such records shall be made available to the marine inspector upon request and shall be kept for the period of validity of the vessel's current certificate of inspection. Where practicable, these records should be kept in or with the vessel's logbook. The conduct of these tests and inspections does not relieve the owner, master, or person in charge of his responsibility to maintain this firefighting equipment in proper condition at all times.

(b) The following tests and inspections of portable fire extinguishing equipment shall be made:

TABLE 31.10-18(b)

Type unit	Test
Soda acid	Discharge. Clean hose and inside of extinguisher thoroughly. Recharge.
Foam	Discharge. Clean hose and inside of extinguisher thoroughly. Recharge.
Pump tank (water or antifreeze).	Discharge. Clean hose and inside of extinguisher thoroughly. Recharge with clean water or antifreeze.
Cartridge operated (water, antifreeze or loaded stream).	Examine pressure cartridge and replace if end is punctured or if cartridge is otherwise determined to have leaked or to be in unsuitable condition. Remove liquid, clean hose and inside of extinguisher thoroughly. Recharge with clean water, solution, or antifreeze. Insert charged cartridge.
Stored pressure (water, antifreeze or loaded stream).	See that pressure gage is in operating range. If not, or if seal is broken, weigh or otherwise determine that full charge is in extinguisher. Recharge if pressure is low or if extinguishing agent is needed.
Carbon dioxide	Weigh cylinders. Recharge if weight loss exceeds 10 percent of weight of charge. Inspect hose and nozzle to be sure they are clear.[1]
Dry chemical (cartridge-operated type).	Examine pressure cartridge and replace if end is punctured or if cartridge is otherwise determined to have leaked or to be in unsuitable condition. Inspect hose and nozzle to see if they are clear. Insert charged cartridge. Be sure dry chemical is freeflowing (not caked) and chamber contains full charge.
Dry chemical (stored pressure type).	See that pressure gage is in operating range. If not, or if seal is broken, weigh or otherwise determine that full charge of dry chemical is in extinguisher. Recharge if pressure is low or if dry chemical is needed.

See footnote at end of table.

TABLE 31.10-18(b)—Continued

Type unit	Test
Vaporizing liquid[2] (pump type).	Pump a few strokes into clean pail and replace liquid. Keep water out of extinguisher or liquid. Keep extinguisher completely full of liquid.
Vaporizing liquid[2] (stored pressure type).	See that pressure gage is in operating range. Weigh or check liquid level to determine that full charge of liquid is in extinguisher. Recharge if pressure is low or if liquid is needed.

[1] Cylinders shall be tested and marked in accordance with the regulations of the Interstate Commerce Commission, as noted in § 147.04-1 of Subchapter N (Dangerous Cargoes) of this chapter.

[2] Vaporizing-liquid type fire extinguishers containing carbon tetrachloride or chlorobromomethane or other toxic vaporizing liquids shall be removed from all vessels.

(c) The following tests and inspections of fixed fire extinguishing equipment shall be made:

TABLE 31.10-18(c)

Type system	Test
Foam	Systems utilizing a soda solution shall have such solution replaced. In all cases, ascertain that powder is not caked.
Carbon dioxide	Weigh cylinders. Recharge if weight loss exceeds 10 percent of weight of charge.[1]

[1] Cylinders shall be tested and marked in accordance with the regulations of the Interstate Commerce Commission, as noted in § 147.04-1 of Subchapter N (Dangerous Cargoes) of this chapter.

(d) Deck foam systems shall be tested biennially by discharging foam for approximately 15 seconds from any nozzle designated by the marine inspector. It shall not be required to deliver foam from all foam outlets, but all lines and nozzles shall be tested with water to prove them to be clear of obstruction. Prior to the biennial inspection of deck foam systems utilizing a mechanical foam system, a representative sample of the foam liquid shall be submitted to the manufacturer who will issue a certificate indicating gravity, pH, percentage of water dilution and solid content.

(e) At each inspection for certification and at such other times as considered necessary, the inspector shall determine that all fire extinguishing equipment is in suitable condition and that the tests and inspections required by paragraphs (b) through (i) of this section have been conducted. In addition, the marine inspector may require such tests as are considered necessary to determine the condition of the equipment.

(f) On all fire extinguishing systems, all the piping, controls, valves, and alarms shall be checked by the marine inspector to ascertain that the system is in good operating condition.

(g) The fire main system shall be operated and the pressure checked at the most remote and highest outlets by the marine inspector. All fire hose shall be subjected to a test pressure equivalent to the maximum pressure to which they may be subjected in service, but not less than 100 p.s.i. The marine inspector shall check that the hose couplings are securely fastened in accordance with the regulations of this subchapter.

(h) At each inspection for certification and at such other times as considered necessary, all carbon dioxide cylinders for fixed, semiportable, and portable systems shall be examined and replaced if any corrosion is found. They shall also be checked by weighing to determine their contents, and if found to be more than 10 percent under the required contents of carbon dioxide, they shall be recharged.

(i) Steam smothering lines shall be tested with at least 50 pounds per square inch of air pressure or by blowing steam through the lines at the working pressure and a survey made for detecting corrosion and defects using hammer test or such other means as may be necessary.

§ 31.10-19 All firefighting equipment may be tested—TB/ALL.

(a) During the inspection of firefighting equipment, the Officer in Charge, Marine Inspection, may require fire apparatus to be tested, and used, except as provided under §§ 31.10-18(h) and 34.15-90(a) of this subchapter.

§ 31.10-20 Drydocking or hauling out—TB/ALL.

(a) Except for extensions as authorized by the Commandant, each steel hull tank vessel shall be placed in a drydock or on a slipway or hauled out for examination within the periods set forth in this paragraph, depending upon the service.

(1) Each tank vessel shall be drydocked or hauled out at intervals not to exceed 18 months if it operates in salt water an aggregate of more than 9 months in the 18-month period since it was last drydocked or hauled out.

(2) Each tank vessel shall be drydocked or hauled out at intervals not to exceed 36 months if it operates in salt water an aggregate of more than 3 months but not more than 6 months in each 12-month period since it was last drydocked or hauled out. When a tank vessel exceeds this aggregate amount of service in salt water in any 12-month period since it was last drydocked or hauled out, it shall be drydocked or hauled out within 6 months after the end of that period or within the 36-month interval, whichever is earlier.

(3) Each tank vessel shall be drydocked or hauled out at intervals of 48 months if it operates in salt water an aggregate of more than one month but not more than 3 months in each 12-month period since it was last drydocked or hauled out.

(4) Each tank vessel shall be drydocked or hauled out at intervals not to exceed 60 months if it operates in salt water an aggregate not exceeding one month in each 12-month period since it was last drydocked or hauled out.

(5) Tank barges used in fresh water service exclusively need not be drydocked or hauled out during the first 60-month interval after date of build, but shall be drydocked or hauled out between that time and the end of the 120th month after date of build, and at least once in each 60-month interval thereafter.

(b) Each wood hull tank vessel shall be placed in drydock or on a slipway or hauled out for examination at intervals not to exceed 48 months.

(c) Each tank vessel, irrespective of service which has not complied with these drydocking requirements, either because it was on voyage or was tied up, shall be drydocked or hauled out upon the completion of such voyage or before being placed in service.

(d) Whenever any tank vessel is placed in drydock or on a slipway or hauled out for repairs it shall be the duty of the master, owner, or agent to report the same, together with the nature of any repairs or alterations contemplated, to the Officer in Charge, Marine Inspection, of that zone, and if the condition or age of the vessel, in the judgment of the inspectors, renders an examination necessary, a thorough inspection shall be made by them to determine what is necessary to make such vessel seaworthy and come within the provisions of the regulations in this subchapter.

(e) Sea chests, sea valves, sea strainers and bilge injection valves shall be examined at the time of the drydockings required by paragraphs (a), (b), and (c) of this section and shall be opened up for internal examination when deemed necessary by the Officer in Charge, Marine Inspection.

§ 31.10–23 Examination of tail shaft—T/OC.

The outboard shaft or shafts on every ocean or coastwise tankship shall be drawn for examination once at least in every 3 years: *Provided*, That if the circumstances warrant it, the Coast Guard District Commander may extend this time to the next regular drydocking period, not to exceed 4 months: *And provided further*, That when it is shown that a vessel has had a long period of lay-up, the Coast Guard District Commander may grant an extension equal to the time the vessel has been out of commission, but in no case shall the extension exceed 1 year.

§ 31.10–25 Inspection covering repairs and alterations involving safety—TB/ALL.

No extensive alterations involving the safety of a tank vessel either in regard to hull or machinery shall be made without the approval of the Commandant. Before such alterations are carried out, copies of plans and specifications in triplicate for the work involved shall be forwarded to the Officer in Charge, Marine Inspection, in whose zone the repairs will be made, for submission to Headquarters for approval. If approved one set of the plans and specifications, properly stamped and dated, shall be returned to the owner or to the repair yard designated by the owner; one set to the Officer in Charge, Marine Inspection, who forwarded the plans and specifications to Headquarters; and one set shall be retained at Headquarters. If such plans and specifications are not approved, the Commandant shall promptly notify the owner or designated shipyard wherein they fail to comply with the regulations in this chapter. No extensive repairs to the hull or machinery which affect the safety of a vessel shall be made without the knowledge of the Officer in Charge, Marine Inspection.

§ 31.10–30 Stability requirements—TB/ALL.

(a) *Application.* The provisions of this section shall apply to the following tank vessels:

(1) Any tankship of 500 gross tons and over on an international voyage, construction or conversion of which is started on or after November 19, 1952.

(2) Any other vessel whose stability is questioned by the Commandant or the Officer in Charge, Marine Inspection.

(b) *Stability test.* (1) The stability of each new tank vessel or class of vessels to which this section pertains shall be subject to review by the Commandant to determine whether or not a stability test is required. Where such a review involving a comparison with existing similar vessels, clearly indicates that due to the vessel's proportions and arrangements more than sufficient metacentric height will be available in all probable loading conditions, a stability test will not be required. Consistent with the foregoing principle, tank vessels will ordinarily not be required to be inclined if they have a molded beam in excess of 11 feet plus 1.5 times the molded depth, and further, if those vessels over 300 feet in length have two or more longitudinal bulkheads and those of 300 feet and less have at least one longitudinal bulkhead.

(2) The Commandant may allow the stability test of a tank vessel to be dispensed with provided basic stability data are available from the stability test of a sister vessel and it is shown to the satisfaction of the Commandant that reliable stability information for the exempted vessel can be obtained from such basic data.

(c) *Plans required.* (1) The following plans are essential for use in determining whether or not a stability test is to be required and should be made available as early as possible:

Lines plan.
Curves of form.
General arrangement plan of all decks and levels.
Inboard and outboard profile.
Midship section.

(2) If it is determined that a stability test is required, the following additional plans will be required:

Capacity plan showing capacities and vertical and longitudinal centers of gravity of all tanks and cargo spaces.
Tank sounding tables.
Draft mark locations.

(d) *Information supplied to master.* (1) Vessels which are exempted from a stability test in accordance with the provisions of subparagraph (b)(1) of this section will be provided with a stability letter recording this fact.

(2) Vessels for which a stability test is required or which are exempted from such a test in accordance with subparagraph (b)(2) of this section shall be provided with information, based upon the results of the applicable stability test, which is such that the master can, by rapid and simple process, obtain accurate guidance as to the stability of the vessel under varying conditions of service. Where special regard to particular operating conditions is necessary to assure safety of the vessel, full information relative thereto shall be included. The information required by this paragraph shall be submitted to the Commandant. Upon approval of this information, a stability letter recording this fact will be provided to the vessel.

(e) *Stability letter.* (1) Each tank vessel subject to the requirements of this section shall have posted under glass in the pilothouse a stability letter issued by the Coast Guard before the vessel is placed in service.

(2) Stability letters issued in accordance with subparagraph (d)(2) of this section will set forth the master's responsibility for maintaining satisfactory stability conditions at all times.

(f) *Alterations.* Where any alterations are made to a tank vessel so as to materially affect the stability information supplied to the master, amended stability information shall be provided. If necessary the vessel shall have a new stability test.

§ 31.10–35 Permit to proceed to another port for repair—TB/ALL.

(a) The Officer in Charge, Marine Inspection, may issue a permit to proceed to another port for repair, Form CG–948, to a vessel if in his judgment it can be done with safety even if the certificate of inspection of the vessel has expired or is about to expire.

(b) Such permit will only be issued upon the written application of the master, owner or agent of the vessel.

(c) The permit will state upon its face the conditions under which it is issued and whether or not the vessel is permitted to carry freight or passengers. Passengers may not be carried if the certificate of inspection has expired.

(d) The permit shall be carried in a manner similar to that described in § 31.05–5 for a certificate of inspection.

(R.S. 4453, as amended; 46 U.S.C. 435)

§ 31.10–40 Inspection during trial trip—T/ALL.

On the trial trip of each new or converted tankship, an inspector shall be present to observe from the standpoint of safety in the carriage of flammable and/or combustible liquids in bulk, the operation of boilers, engines, steering gear, and auxiliaries; and if not satisfied with the performance of such boilers and machinery, appliances, and apparatus for stowage, he shall make such requirements as in his judgment will overcome any deficiencies which may have come under his observation.

§ 31.10–45 Inspection of crew accommodations—TB/ALL.

Crew's quarters shall be inspected to determine their sanitary condition. The Officer in Charge, Marine Inspection, upon completing such inspection, shall notify the master or officer in charge of the vessel of his findings,

which shall be entered in the vessel's log book.

(Sec. 4, 49 Stat. 1935, as amended; 46 U.S.C. 660a)

§ 31.10–50 Inspection of bilges—TB/ALL.

(a) When inspecting oil-burning vessels, either internal-combustion type or steam-driven type, the marine inspector shall examine the tank tops and bilges in the fireroom and engineroom to see that there is no accumulation of oil which might create a fire hazard.

(Interpret or apply R.S. 4488, as amended, 46 U.S.C. 481)

Subpart 31.15—Manning of Tank Vessels

§ 31.15–1 Licenced officers and crews—TB/ALL.

(a) The Officer in Charge, Marine Inspection, who inspects the vessel, shall make in the certificate of inspection for each tank vessel an entry of such complement of officers and/or crew as required by law and regulations in this subchapter, and which in the judgment of the Officer in Charge, Marine Inspection, will be necessary for her safe operation. The complement may be changed from time to time by endorsement on such certificate by an Officer in Charge, Marine Inspection, by reason of change of conditions or employment.

(b) In all cases where a certificate of inspection does not require at least two licensed officers, the Officer in Charge, Marine Inspection, shall enter in the certificate of inspection issued to any manned tank vessel subject to the regulations in this subchapter the number of the crew required to be certificated as tankermen. If the total complement of a tank vessel is either one or two persons, only one such person need be a certificated tankerman. If the total complement exceeds two, only two such persons need be certificated tankermen.

(R.S. 4463, as amended, sec. 2, 40 Stat. 549, as amended; 46 U.S.C. 222, 223)

§ 31.15–5 Tank barges—B/ALL.

(a) Tank barges need not be manned unless in the judgment of the Officer in Charge, Marine Inspection, such manning is necessary for the protection of life and property and for the safe operation of the vessel: *Provided, however,* That towing vessels, while towing barges which are not required to be manned, shall carry in the regular complement of the towing vessel and shall have on board at all times while towing, at least one licensed officer or certificated tankerman.

(b) Where the bulk liquid cargo to be transported is covered by the requirements of § 35.01–55 of this subchapter, the person in charge of the towing vessel or barge shall be provided with, and have on board, the information card required by § 35.01–55.

§ 31.15–6 Tank barges carrying bulk cargoes having dangerous characteristics in addition to flammability or combustibility—B/ALL.

(a) For those tank barges carrying a bulk liquid cargo covered by the requirements of § 35.01–55 of this subchapter, at least one member of the crew of the barge required to be manned pursuant to § 31.15–5 shall be especially qualified in the handling of the specific cargo to be carried. The Officer in Charge, Marine Inspection, shall be furnished satisfactory documentary evidence that such person is trained in and capable of performing competently the necessary operations which relate to the carriage and transfer of such cargo.

(Interpret or apply R.S. 4488, as amended; 46 U.S.C. 481)

§ 31.15–10 Towing vessels may carry persons in addition to crew—B/LBR.

(a) Towing vessels engaged in towing tank barges on the Great Lakes, inland waters, or rivers, may be authorized by the Coast Guard District Commander of the district to carry on board such number of persons in addition to its crew as shall be deemed necessary to carry on the legitimate business of such towing vessel or barge, not exceeding, however, one person to every net ton of the towing vessel.

(b) A Coast Guard District Commander granting a license to a vessel engaged in towing to carry persons in addition to its crew shall notify the Officer in Charge, Marine Inspection, in whose jurisdiction the vessel receiving the permit is engaged, and the Officer in Charge, Marine Inspection, shall keep a record of the same.

(Sec. 1, 24 Stat. 129, as amended; 46 U.S.C. 458)

Subpart 31.20—Waters Operated Over

§ 31.20–1 Waters—TB/ALL.

The certificate of inspection shall show the waters over which the tank vessel is permitted to operate, such as: all waters; oceans; coastwise; Great Lakes; bays, sounds, and lakes other than the Great Lakes; rivers; or inland waters tributary to the Gulf of Mexico.

Subpart 31.25—Load Lines

§ 31.25–1 Load lines required—TB/OCL.

All tank vessels of 150 gross tons or over navigating the oceans, coastwise waters, and Great Lakes are subject to the regulations in Parts 43 to 45, inclusive, Subchapter E (Load Lines) of this chapter.

Subpart 31.30—Marine Engineering

§ 31.30–1 Marine engineering regulations and material specifications—TB/ALL.

(a) All tank vessels are subject to the regulations contained in Parts 50 to 61, inclusive, of Subchapter F (Marine Engineering) of this chapter, whenever applicable, except as such regulations are modified by the regulations in this subchapter for tank vessels.

(b) Nuclear vessels shall comply with the applicable requirements in Subpart 57.30 of Part 57 of Subchapter F (Marine Engineering) of this chapter. The regulations covering the transportation and handling of radioactive materials as cargo are contained in Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

(Sec. 2, 23 Stat. 118, as amended, secs. 2, 633, 63 Stat. 496, 545; 46 U.S.C. 2, 14 U.S.C. 2, 633. Interpret or apply R.S. 4472, as amended, sec. 14, 29 Stat. 690, as amended, 41 Stat. 305, as amended, sec. 1, 2, 49 Stat. 1544, as amended, 46 U.S.C. 170, 363, 367)

Subpart 31.35—Electrical Engineering

§ 31.35–1 Electrical installations, lighting and power equipment, batteries, etc.—TB/ALL.

All tank vessels are subject to the regulations contained in Subchapter J (Electrical Engineering) of this chapter except as such regulations are modified by the regulations in this subchapter for tank vessels.

§ 31.35–5 Communications; alarm systems, telephone and voice tube systems, engine telegraph systems, etc.—TB/ALL.

All tank vessels are subject to the regulations contained in Subchapter J (Electrical Engineering) of this chapter except as such regulations are modified by the regulations in this subchapter for tank vessels.

Subpart 31.37—Inspection of Cargo Gear

§ 31.37–1 When made—TB/ALL.

(a) The specific tests and examinations shall be made at the intervals stated in the regulations in this subpart.

(b) A thorough examination of the assembled gear shall be made at least once in every year.

(c) An inspection to determine the condition and suitability of shipboard cargo gear will be made by a marine inspector at each inspection for certification. Inspections may be made at such other times as considered necessary by the Officer in Charge, Marine Inspection.

(d) For vessels fitted with cargo gear, an initial inspection of the assembled units under proof loads shall be conducted, followed by a complete dismantling or disassembling of such gear and a thorough examination of the parts to ascertain its condition. Subsequent tests of the assembled units under proof loads, followed by a dismantling or disassembling of such gear and a thorough examination shall be made once every 4 years, or oftener if necessary.

§ 31.37–3 Definitions of terms and words used in this subpart—TB/ALL.

(a) *Cargo gear.* The term "cargo gear" includes masts, stays, booms, winches, cranes, elevators, conveyors, standing and running gear forming that part of the shipboard cargo gear used in connection with the loading or unloading of dry cargo. This term does not include the gear used for handling cargo hoses or ship stores' only.

(b) *Dismantling or disassembling of gear.* The "dismantling" or "disassembling" of gear contemplated is the taking apart of units of gear to the extent necessary to determine the suitability of such gear for continued service and as

may be specifically required to carry out the intent of a particular provision in this subpart. After proof load tests, the disassembling need not include the sheaves and pins of the blocks included in the test unless there appears to be evidence of deformation or failure.

(c) *Thorough examination.* The "thorough examination" contemplated is a visual examination, supplemented if necessary by other means such as by a hammer test or by a test with electronic or ultrasonic devices.

(d) *Ton.* The word "ton" means a ton of 2,240 pounds.

(e) *Safe working load.* The "safe working load" (SWL) contemplated is the load the gear is approved to lift, excluding the weight of the gear itself.

§ 31.37–5 Tests and examinations of shipboard cargo gear—TB/ALL.

(a) For vessels fitted with cargo gear and without valid cargo gear certificates and registers issued by organizations or associations recognized by the Coast Guard, inspections shall be made by those competent persons described in paragraph (c) (1) and (2) of § 31.10–16, to determine the condition and suitability of the shipboard cargo gear. For the initial and subsequent quadrennial inspections, all the cranes, winches, hoists, derrick booms, derrick and mast bands, and all parts used in loading or unloading cargo shall be assembled in units and such assembled units shall then be tested under proof loads. The proof loads shall be handled for various types of units as required by specific regulations in this subpart. After the proof load tests of the assembled units of gear have been made, such gear shall be disassembled or dismantled so as to permit them to be thoroughly examined. The sheaves and pins of the blocks included in these proof load tests need not be removed unless there appears to be evidence of deformation or failure.

(b) For vessels fitted with cargo gear and holding valid cargo gear certificates and registers issued by organizations or associations recognized by the Coast Guard, the marine inspectors may accept such certificates as prima facie evidence of compliance with the requirements in this subpart. If an Officer in Charge, Marine Inspection, is in doubt as to the condition and suitability of shipboard cargo gear for such a vessel, the tests and examinations, or such portions thereof as deemed necessary, provided for in this subpart will be required.

(c) If any part or portion of the gear fails or becomes defective during such tests, such defective equipment shall be satisfactorily repaired or replaced.

§ 31.37–15 Cargo gear plans required when plans are not approved by a classification society—TB/ALL.

(a) For a new vessel or a vessel applying for initial inspection, the following plans of cargo gear are required to be submitted in triplicate to the Officer in Charge, Marine Inspection, for approval:

(1) Plans showing a stress diagram with the principal details of the gear.

(2) Plans containing a diagram showing the arrangement of the assembled gear and indicating the safe working load for each component part.

(b) The safe working load on which the design of any component part of the cargo gear is to be based, shall be taken as the maximum resultant load upon the component part in the design conditions assumed. The safe working load of the assembly is the load the gear is approved to lift, excluding the weight of the gear itself.

(c) One approved copy of each set of cargo gear plans shall be retained on the vessel.

§ 31.37–20 Cargo gear plans approved by a classification society—TB/ALL.

(a) The plans required by § 31.37–15 (a) need not be submitted to the Officer in Charge, Marine Inspection, for approval if such plans are or have been approved by the American Bureau of Shipping or similar classification society recognized by the Commandant.

(b) One approved copy of each set of cargo gear plans shall be retained on the vessel.

§ 31.37–25 Factors of safety—TB/ALL.

(a) In the design of the cargo gear, the safety factors in Table 31.37–25(a)

TABLE 31.37–25(a)

Safe working loads for component parts	Safety factors based on—		
	Ultimate strength	Yield point	Breaking test load
All metal structural parts, except steel booms:			
When the working load of the assembled gear is 10 tons or less	[1] 5	----------	----------
When the working load of the assembled gear is 13 tons or over	[1] 4	----------	----------
Steel booms:			
When the working load of the assembled gear is 10 tons or less	----------	[1] 3	----------
When the working load of the assembled gear is 13 tons or over	----------	[1] 2½	----------
Wooden structural parts	5	----------	----------
Chains	4½	----------	----------
Wire rope:			
For working loads 10 tons or under	----------	----------	5
For working loads over 10 tons	----------	----------	4
Fiber rope:			
When intended for running rigging	7	----------	----------
When intended for fixed gear and vangs	5	----------	----------

[1] For working loads between 10 and 13 tons, intermediate values of safety factors may be used.

taken in association with suitable design assumptions for actual loading conditions, shall be used and regarded as minima.

(b) The Commandant will give consideration to the use of factors of safety differing from those given in Table 31.37–25(a) where special materials or cargo gear of special design are to be used.

§ 31.37–30 Loose gear certificates and tests—TB/ALL.

(a) (1) Evidence of compliance with the proof load test requirements in this section for all chains, rings, hooks, links, shackles, swivels, blocks, and any other loose gear whether accessory to a machine or not, but which is used as ship's cargo gear, shall be listed on an appropriate certificate.

(2) This evidence of test and the recording thereof is required only once with respect to each article of gear so long as each article is identified and the certificates required are available on the vessel.

(3) Proof loads applied to the articles of loose gear shall be as shown in Table 31.37–30(a)(3).

(b) All chains, rings, hooks, links, shackles, swivels, blocks and any other loose gear, whether accessory to a machine or not, but which are used or intended for use as ship's cargo gear, shall bear a mark or number by which each piece can be identified when listed on a loose gear certificate. The safe working load "SWL" shall be marked on all blocks.

(c) The loose gear certificate shall show the distinguishing number or mark applied to the article of gear; a description of the article of gear; the date when the test proof load was applied; and the safe working load. The forms for loose gear certificates shall be as prescribed by and acceptable to associations or organizations approved by the Commandant and shall be suitable for the purposes described in this section.

(d) After being tested, all of the gear shall be examined to ascertain whether any part has been damaged, permanently deformed by the test, or has other visible defects. The pins and sheaves of all tested blocks shall be removed for this purpose. If damaged during these tests, such gear shall be satisfactorily repaired or replaced.

TABLE 31.37–30(a)(3)

Article of gear	*Proof load*
Chains, rings, hooks, links, shackles, swivels	Twice the safe working load.
Single sheave block	Four times the safe working load.[1]
Multiple sheave block with safe working load up to and including 20 tons.	Twice the safe working load.
Multiple sheave block with safe working load over 20 tons up to and including 40 tons.	20 tons in excess of the safe working load.
Multiple sheave block over 40 tons	One and a half times the safe working load.
Chain fall blocks used with roller chains (pitched chains), and rings, hooks, shackles, or swivels permanently attached thereto.	Do.

[1] The proof load applied to the block is equivalent to twice the maximum resultant load on the eye or pin when lifting the safe working load attached to a rope which passes around the sheave of the block. The proof load is, therefore, equal to four times the safe working load or twice the safe working load when the load is attached directly to the block instead of a rope passing around the sheave.

(e) The required examinations as set forth in paragraph (d) of this section may be accomplished by mechanical, electrical or other means provided the method employed is equal in efficiency to the visual examination of disassembled gear.

§ 31.37–35 Test and certification of wire rope—TB/ALL.

(a) All wire rope used as shipboard cargo gear shall be able to withstand a breaking test load of at least five times the safe working load. In the case of gear with a lifting capacity of over 10 tons, the breaking test load of wire rope shall be at least four times the safe working load. All wire rope shall be identified and described in a wire rope certificate. Such certificate shall be furnished and attested to by the manufacturer or a testing agency and shall certify:

(1) The breaking test load of a sample of the wire rope, which should be at least five times the safe working load or at least four times the safe working load if part of gear with a lifting capacity of over 10 tons;

(2) The name and address of the manufacturer;

(3) The diameter of the rope in inches and/or fractions thereof;

(4) The number of strands and the number of wires in each strand;

(5) The quality of the wire (e.g., improved plow steel);

(6) The date of the test; and,

(7) The load at which the sample broke.

(b) The forms for the wire rope certificate shall be prescribed by and acceptable to associations or organizations approved by the Commandant and shall be suitable for the purposes described in this section.

(c) In addition to the manufacturers' or testing agencies' attestations, a sample of the wire rope may be tested to destruction if required by the marine inspector when a visual inspection indicates an apparent defective condition.

§ 31.37–40 Proof test of cargo gear as a unit—TB/ALL.

(a) Winches with their accessory gear, including the derricks and attachments, at least once in each four years, shall be tested as a unit with proof loads exceeding the safe working load as set forth in Table 31.37–40(a).

TABLE 31.37–40(a)

Safe working load of assembled gear	*Proof load*
Not exceeding 20 tons	25 percent in excess.
Over 20 tons but not exceeding 50 tons.	5 tons in excess.
Over 50 tons	10 percent in excess.

(b) The proof load applied to winches and their gear shall be lifted with the ship's normal tackle, including the winches, and with the boom at an angle which should not be greater than 15 degrees to the horizontal or to the lowest angle approved in association with the design, or when these angles are impracticable, to the lowest practicable angle. When the load has been lifted, it shall be swung as far as possible in both directions.

(1) Where electrical winches are fitted with electromagnetic brakes, or where electrohydraulic winches are fitted with electromagnetic or hydraulic brakes at the winch, mechanical brakes for manual operation will not be required, but if so fitted shall be in satisfactory operating condition.

(2) Current for electric winch operation during the test shall be taken from the ship's circuits. Shore current may be used if it passes through the ship's switchboard.

(c) Cranes and other hoisting machines with their accessory gear at least once in each four years, shall be tested, with a proof load which shall exceed the safe working load as set forth in Table 31.37–40(a).

(d) The proof load applied to cranes and hoists shall be lifted, topped, and swung (slewed) as far as possible in each direction. If the boom of the crane has a movable radius, it shall be tested with a proof load as set forth in this section at the maximum and minimum radii of the boom. In the case of hydraulic cranes whose capacity is limited by pressure, and with which it is not possible to lift a load 25 percent in excess of the safe working load, the greatest possible load in excess of the safe working load shall be used. These tests and the amounts of the loads shall be recorded.

(e) After satisfactory completion of the proof load testing of the cargo gear in accordance with paragraphs (a) through (d) of this section, the cargo gear and all component parts shall be given a thorough visual examination, supplemented as necessary by other means such as a hammer test or with electronic or ultrasonic devices, to determine if any of the parts were damaged, deformed, or otherwise rendered unsafe for further use. If found defective, such gear shall be replaced.

(1) When the test is being conducted for the first time on a vessel, accessory gear shall be dismantled or disassembled for examination after the test. The sheaves and pins of the blocks included in this test need not be removed unless there appears to be evidence of deformation or failure.

(2) For subsequent tests such parts of the machinery and gear shall be dismantled and/or disassembled after the test as necessary to determine its suitability for continued service.

(f) Appropriate means shall be provided to prevent the foot of the boom from being accidentally lifted from the socket during the test.

(g) Vessels whose cargo gear has been in use but are without the valid registers and certificates described in § 31.10–16 will be inspected for defective cargo gear. The gear shall then be tested and examined as prescribed in this section. If the movable weights for proof testing are not reasonably available, a spring or hydraulic scale certified for accuracy may be used. Whenever such scales are used, the proof load shall be applied with the boom swung out as far as possible in one direction and then in the other direction, and at such intermediate positions as may be indicated. At any position, the indicator of the scale must maintain a constant reading under the proof load for a period of five minutes.

(h) On all types of winches and cranes efficient means shall be provided to stop and hold the proof load in any position, and the efficiency of such means shall be demonstrated.

(i) Electric winches, electrohydraulic winches fitted with electromagnetic or hydraulic brakes at the winch, or cranes shall be equipped so that a failure of the electric power shall stop the motion and set the brakes without any action on the part of the operator.

(2) Current for electric winches and cranes operation during the tests shall be taken from the ship's circuits. Shore current may be used if it passes through the ship's switchboard.

§ 31.37–45 Marking of booms and cranes—TB/ALL.

(a) The safe working load (abbreviated "SWL") for the assembled gear shall be marked on the heel of each boom, with the minimum angle to the horizontal for which the gear is designed. These letters and figures shall be in contrasting colors to the background and at least one inch in height.

(b) Where booms are rated at varying capacities depending on the radii, tables indicating the maximum safe working loads for the various working angles of the boom and the maximum and minimum radii at which the boom may be safely used shall be conspicuously posted near the controls and visible to the operator when working the gear.

§ 31.37–50 Use of wire rope and chains—TB/ALL.

(a) An eye splice made in any wire rope used as cargo gear, with or without a thimble, shall have at least three tucks with whole strands and two tucks with one half of the wire cut from the tucking strand: *Provided*, That this requirement shall not preclude the use of any other form of splice or connection if it is as efficient as the splice specified.

(b) Single wire rope cargo falls, wire rope pendants, topping lifts and preventers shall consist of clear lengths without splices except at the working ends. Wire rope clips shall not be used to form eyes in the working ends of single wire rope cargo falls.

(c) Wire rope shall not be used for shipboard cargo gear if in any length of 8 diameters, the number of visible broken wires exceeds ten percent of the total number of wires in the rope, or if the rope shows other signs of excessive wear, corrosion, kinking, or defect.

(d) Hoisting or sling chains used for shipboard cargo gear shall not be used if a length of chain has been stretched more than five percent of the original length, or the chain has become unsafe through overloading or faulty heat treatment, or whenever other external defects are evident.

(e) Chains used for shipboard cargo gear shall not be shortened by knotting, bolting, or wiring the links. The use of chains having a knot or kink as shipboard cargo gear is prohibited.

§ 31.37–55 Annealing—TB/ALL.

(a) Chains, hooks, rings, links, shackles, and swivels of wrought iron used as cargo gear shall be annealed at the following intervals:

(1) Wrought iron chains and gear in general use and of one half inch or less, at least once in every six months.

(2) All other wrought iron chains and gear, including topping lift chains, in general use, at least once in every twelve months.

(b) The annealing shall be done in a suitable closed oven and not over an open fire. Wrought iron shall be annealed at a temperature of between 1100° and 1200° Fahrenheit for a period of between 30 and 60 minutes. After being annealed, the article shall be allowed to cool slowly and shall be then tested completely for defects.

(c) Heat treatment of the cargo gear shall be done only by reputable firms having suitable equipment and personnel trained for this purpose. A certificate attesting to the annealing shall be furnished for all gear so treated.

(d) The heat treatment of chains, hooks, rings, links, shackles, and swivels of materials other than wrought iron used as cargo gear, if required, shall be effected in accordance with the manufacturer's instructions.

§ 31.37–60 Additions to gear—TB/ALL.

(a) When articles of loose gear and/or wire rope conforming with the requirements in this subpart are added to installed gear, or used as replacements in such gear from time to time, a record shall be maintained on the vessel which shall identify each article and the certificate accompanying it.

§ 31.37–65 Alterations, renewals, or repairs of cargo gear—TB/ALL.

(a) Whenever important repairs, renewals, or alterations are indicated or intended for the masts, booms, and permanent fittings of the cargo gear, such repairs, renewals, or alterations shall be undertaken only after compliance with § 31.10–25.

(b) Tests and examinations of the repairs, renewals, or alterations will be in accordance with § 31.37–40.

(c) When welding is used to lengthen, alter, or repair chains, rings, hooks, links, shackles, or swivels, they shall be properly heat treated and shall, before being again put into use, be tested and examined in accordance with the provisions of § 31.37–30.

§ 31.37–70 Responsibility of ship's officer for inspection of cargo gear—TB/ALL.

(a) All wire rope, chains other than bridle chains attached to booms or masts, and all rings, hooks, links, shackles, swivels, and blocks used in loading or unloading shall be visually inspected by a ship's officer designated for that purpose by the master.

(b) These inspections by a ship's officer shall be made at frequent intervals, and in any event not less than once in each month.

(c) Immediately after such an inspection by a ship's officer notations of such an inspection shall be made in record form which shall be in or kept with the cargo gear register if carried. In addition, the same notations of inspections together with the dates shall be entered in the Official Logbook for those vessels required to carry this record, or such information shall be kept with the log records maintained on vessels not required to carry the Official Logbook. (See § 31.37–75 for entries required to be kept.)

§ 31.37–75 Records regarding cargo gear—TB/ALL.

(a) The cargo gear records described in this subpart shall be maintained on the vessel and shall be made available to Coast Guard officials upon request. These records shall be kept for the periods of time they are valid and, in addition, until the next Coast Guard inspection for certification of the vessel. The certificates of manufacturers and/or testing laboratories, companies, or organizations shall be maintained on the vessel so long as the gear described in such certificates is on board the vessel.

(b) The records of all the inspections of cargo gear made by the ship's officers in accordance with § 31.37–70 shall be maintained on the vessel for periods of time which agree with those periods as covered by the current Coast Guard certificate of inspection issued to the vessel. These records shall show the dates of inspections, identify articles inspected, the conditions observed, and the name of the officer performing the inspection.

(c) The records of all tests and examinations conducted by or under the supervision of surveyors of the organizations or associations approved by the Commandant shall be maintained on the vessel.

(d) The Coast Guard will not issue cargo gear certificates and/or registers. The Coast Guard's records of inspections, tests, and examinations of a particular vessel's cargo gear made by a marine inspector or conducted under the supervision of the Coast Guard will be maintained in the Office of the Officer in Charge, Marine Inspection, having jurisdiction over the vessel at the time such work was performed. The original certificates or certified copies of certificates of manufacturers and/or testing laboratories, companies, or organizations for loose cargo gear, wire rope, or the annealing of gear shall be maintained on the vessel.

§ 31.37–80 Advance notice that cargo gear testing is desired—TB/ALL.

(a) The owner, agent, or master of a vessel shall give an advance notice when it is desired that the tests and examinations of cargo gear be made by or under the supervision of the marine inspectors. This advance notice shall be given to the Officer in Charge, Marine Inspection, in whose marine inspection zone the vessel is available for such inspection and examination.

(b) For the initial inspection and examination of cargo gear by the Coast Guard, the advance notice shall be to the cognizant Officer in Charge, Marine Inspection, as early as possible and shall include sketches and/or drawings showing each unit of cargo gear, the identification of component parts and the safe working loads. Copies of original certificates of manufacturers and/or testing laboratories, companies, or organizations maintained on the vessel may be accepted by the cognizant Officer in Charge, Marine Inspection, when satisfied such certificates properly describe the qualities of the component parts of the gear in question.

§ 31.37–85 Responsibility for conducting required tests and examinations—TB/ALL.

(a) The vessel's owners and/or operators shall furnish and pay the expenses required in conducting the tests and examinations prescribed by the regulations in this subpart, including the supplying of all instruments, other equipment, and personnel including personnel supervision for performance of all work required.

(b) The Coast Guard's participation in these required tests and examinations shall be confined to witnessing required tests and examinations with the view to determining whether or not the gear is satisfactory for the purpose intended. In the event it is determined that the gear is defective or unable to meet the standards set forth in this subpart, such gear, or portions thereof, shall be replaced to the satisfaction of the Officer in Charge, Marine Inspection, having jurisdiction over the vessel.

Subpart 31.40—Certificates Under International Convention for Safety of Life At Sea, 1960

§ 31.40–1 Application—T/ALL.

(a) The provisions of this subpart, with the exception of §§ 31.40–30 and 31.40–40(e), shall apply to all tankships on an international voyage other than nuclear vessels.

(b) The provisions of §§ 31.40–30, 31.40–35 and 31.40–40(e) shall apply to nuclear tankships on an international voyage.

§ 31.40–5 Cargo Ship Safety Construction Certificate—T/ALL.

(a) All tankships on an international voyage are required to have a Cargo Ship Safety Construction Certificate. This certificate shall be issued by the U.S. Coast Guard or the American Bureau of Shipping to certain vessels on behalf of the United States of America as provided in Regulation 12, Chapter I, of the International Convention for Safety of Life at Sea, 1960.

(b) All such tankships shall meet the applicable requirements of this chapter for tankships on an international voyage.

§ 31.40–10 Cargo Ship Safety Equipment Certificate—T/ALL.

(a) All tankships on an international voyage are required to have a Cargo Ship Safety Equipment Certificate.

(b) All such tankships shall meet the applicable requirements of this chapter for tankships on an international voyage.

§ 31.40–15 Cargo Ship Safety Radiotelegraphy Certificate—T/ALL.

(a) The application for a Cargo Ship Safety Radiotelegraphy Certificate is made on FCC Form 801 to the local office of the Federal Communications Commission.

(b) Where applicable, a Cargo Ship Safety Radiotelegraphy Certificate will be issued by the Federal Communications Commission to a tankship meeting its requirements for a tankship fitted with a radiotelegraph installation.

§ 31.40–20 Cargo Ship Safety Radiotelephony Certificate—T/ALL.

(a) The application for a Cargo Ship Safety Radiotelephony Certificate is made on FCC Form 801 to the local office of the Federal Communications Commission.

(b) Where applicable, a Cargo Ship Safety Radiotelephony Certificate will be issued by the Federal Communications Commission to a tankship meeting its requirements for a tankship fitted with a radiotelephone installation.

§ 31.40–25 Exemption Certificate—T/ALL.

(a) A tankship may be exempted by the Commandant from complying with certain requirements of the Convention under his administration upon request made in writing to him and transmitted via the Officer in Charge, Marine Inspection.

(b) When an exemption is granted to a tankship by the Commandant under and in accordance with the Convention, an Exemption Certificate describing such exemption shall be issued through the appropriate Officer in Charge, Marine Inspection, in addition to other required certificates.

§ 31.40–30 Nuclear Cargo Ship Safety Certificate—T/ALL.

(a) All nuclear tankships on an international voyage are required to have a Nuclear Cargo Ship Safety Certificate.

(b) All such ships shall meet the applicable requirements of this chapter for nuclear vessels on an international voyage.

(c) Nuclear vessels cannot be exempted from any requirements of the Convention.

§ 31.40–35 Posting of Convention certificates—T/ALL.

(a) The certificates described in this subpart, or certified copies thereof, when issued to a vessel shall be posted in a prominent and accessible place on the tankship.

(b) The certificates shall be carried in a manner similar to that described in § 31.05–5 for a certificate of inspection.

§ 31.40–40 Duration of Convention certificates—T/ALL.

(a) A Cargo Ship Safety Equipment Certificate shall be issued for a period of not more than 24 months.

(b) A Cargo Ship Safety Construction Certificate shall be issued for a period of not more than 60 months.

(c) A Cargo Ship Safety Radiotelegraphy Certificate and a Cargo Ship Safety Radiotelephony Certificate shall be issued for a period of not more than 12 months.

(d) An Exemption Certificate shall not be valid for longer than the period of the certificate to which it refers.

(e) The Nuclear Cargo Ship Safety Certificate shall be issued for a period of not more than 12 months.

(f) A Convention certificate may be withdrawn, revoked, or suspended at any time when it is determined the vessel is no longer in compliance with applicable requirements. (See § 2.01–70 of this chapter for procedures governing appeals.)

§ 31.40–45 American Bureau of Shipping—T/ALL.

(a) The American Bureau of Shipping, with its home office at 45 Broad Street, New York, N.Y., 10004, is hereby designated as an organization duly authorized to issue the "Cargo Ship Safety Construction Certificate" to certain tankships on behalf of the United States of America as provided in Regulation 12, Chapter I, of the International Convention for Safety of Life at Sea, 1960, and Executive Order 11239 and the certificate shall be subject to the requirements in this subpart. The American Bureau of Shipping is authorized to place the official seal of the United States of America on the certificate. This designation and delegation to the American Bureau of Shipping shall be in effect from May 26, 1965, until terminated by proper authority and notice of cancellation is published in the FEDERAL REGISTER.

(b) At the option of the owner or agent of a tankship on an international voyage and on direct application to the American Bureau of Shipping, the Bureau may issue to such tankship a Cargo Ship Safety Construction Certificate, having a period of validity of not more than 60 months after ascertaining that the tankship:

(1) Has met the applicable requirements of the Convention; and,

(2) Is currently classed by the Bureau and classification requirements have been dealt with to the satisfaction of the Bureau.

(c) When the Bureau determines that a tankship to which it has issued a Cargo Ship Safety Construction Certificate no longer complies with the Bureau's applicable requirements for classification, the Bureau shall immediately furnish to the Coast Guard all relevant information, which will be used by the Coast Guard to determine whether or not to withdraw, revoke or suspend the Cargo Ship Safety Construction Certificate.

(Sec. 25, 41 Stat. 998, as amended, sec. 701, 62 Stat. 731, as amended; 46 U.S.C. 881, 18 U.S.C. 701)

PART 32—SPECIAL EQUIPMENT, MACHINERY, AND HULL REQUIREMENTS

Subpart 32.01—Safety Requirements

Sec.
32.01–1 Means of escape—T/ALL.
32.01–5 Lifelines—TB/OCLB.
32.01–10 Rails—TB/ALL.
32.01–15 Guards at dangerous places—TB/ALL.

Subpart 32.05—Markings

32.05–1 Draft marks—TB/ALL.
32.05–5 Vessel's name on equipment—TB/ALL.
32.05–10 Name of tankship—T/ALL.
32.05–15 Name of tank barge—B/ALL.

Subpart 32.15—Navigation Equipment

32.15–1 Fog sound signal devices—TB/ALL.
32.15–5 Whistles—T/ALL.
32.15–10 Sounding machines—T/OCL.
32.15–15 Anchors for seagoing barge—B/OC.
32.15–20 Radiotelegraph and radiotelephone—T/ALL.
32.15–25 Radio direction finder—T/OC.

Subpart 32.20—Equipment Installations

32.20–1 Equipment installations on vessels during World War II—TB/ALL.
32.20–5 Pressure vacuum relief valves—TB/ALL.
32.20–10 Flame arresters—TB/ALL.
32.20–20 Liquid level gaging—T/ALL.

Subpart 32.25—General Alarm Systems

32.25–1 Alarm bells for tankships constructed on or after September 15, 1943—T/ALL.
32.25–5 Alarm bells for tankships constructed prior to September 15, 1943—T/ALL.
32.25–10 Alarm bells for manned barges—B/OC.

Subpart 32.30—Sound Powered Telephone, Voice Tube, and Engine Order Telegraph Systems

32.30–1 Voice tubes or telephone equipment—T/ALL.
32.30–5 Engine order telegraph equipment—T/ALL.
32.30–10 Inspections—T/ALL.

Subpart 32.35—Main and Auxiliary Machinery

32.35–1 Boilers and Machinery—TB/ALL.
32.35–5 Installation of internal combustion engines—TB/ALL.
32.35–10 Steering apparatus on tank vessels—TB/ALL.

Subpart 32.40—Accommodations

32.40–1 Crew accommodations on tankships of 100 gross tons or over constructed after January 1, 1938—T/ALL.
32.40–5 Crew accommodations on tankships of less than 100 gross tons and manned tank barges constructed after January 1, 1938—TB/ALL.
32.40–10 Crew accommodations on tankships of 100 gross tons or over constructed after March 4, 1915, and prior to January 1, 1938—T/ALL.
32.40–15 Crew accommodations on tankships and manned tank barges not otherwise provided for—TB/ALL.

Subpart 32.45—Electrical Installations

32.45–1 Requirements for tank vessels the construction or conversion of which is contracted for on or after November 19, 1955—TB/ALL.

Sec.
32.45–5 Requirements for tank vessels the construction or conversion of which was started on or after November 10, 1936, but prior to November 19, 1955—TB/ALL.
32.45–10 Requirements for tank vessels the construction or conversion of which was started prior to November 10, 1936—TB/ALL.

Subpart 32.50—Pumps, Piping, and Hose for Cargo Handling

32.50–1 Cargo pumps for tank vessels constructed on or after November 10, 1936—TB/ALL.
32.50–3 Cargo discharge—TB/ALL.
32.50–5 Cargo pump fittings and controls on tank vessels constructed on or after November 10, 1936—TB/ALL.
32.50–10 Cargo pumps on tank vessels with independent cargo tanks which were constructed prior to November 10, 1936—TB/ALL.
32.50–15 Cargo piping on tank vessels constructed on or after July 1, 1951—TB/ALL.
32.50–20 Cargo piping for tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.
32.50–25 Cargo pumps and piping on tank vessels constructed prior to November 10, 1936—TB/ALL.
32.50–30 Cargo hose—TB/ALL.
32.50–35 Remote manual shutdown for internal combustion engine driven cargo pump on tank vessels—TB/ALL.

Subpart 32.52—Bilge Systems

32.52–1 Bilge pumps on tank vessels constructed or converted on or after November 19, 1952—TB/ALL.
32.52–5 Bilge piping for pump rooms and adjacent cofferdams on tank vessels constructed or converted on or after November 19, 1952—TB/ALL.
32.52–10 Bilge pumps and piping on tank vessels constructed or converted prior to November 19, 1952—TB/ALL.

Subpart 32.55—Ventilation and Venting

32.55–1 Ventilation of tank vessels constructed on or after July 1, 1951—TB/ALL.
32.55–5 Ventilation of tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.
32.55–10 Ventilation for tank vessels constructed prior to November 10, 1936—TB/ALL.
32.55–15 Ventilation for hold spaces—TB/ALL.
32.55–20 Venting of cargo tanks of tankships constructed on or after July 1, 1951—T/ALL.
32.55–25 Venting of cargo tanks of tank barges constructed on or after July 1, 1951—B/ALL.
32.55–30 Venting of cargo tanks of tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.
32.55–35 Venting of cargo tanks on tank vessels constructed prior to November 10, 1936—TB/ALL.
32.55–40 Venting of cargo tanks fitted with inert-gas system—TB/ALL.
32.55–45 Venting of cofferdams and void spaces of tank vessels constructed on or after November 10, 1936—TB/ALL.

Subpart 32.57—Structural Fire Protection for Tank Vessels Contracted for on or After July 1, 1963

Sec.
32.57–1 Application—TB/ALL.
32.57–5 Definitions—TB/ALL.
32.57–10 Construction—TB/ALL.

Subpart 32.60—Hull Requirements for Tank Vessels Constructed on or After July 1, 1951

32.60–1 Scantlings, material, and workmanship—TB/ALL.
32.60–5 Subdivision of cargo space—TB/ALL.
32.60–10 Segregation of cargo; Grade A, B, C, or D—TB/ALL.
32.60–15 Segregation of cargo; Grade E—TB/ALL.
32.60–20 Pumprooms on tank vessels carrying Grade A, B, C, D and/or E liquid cargo—TB/ALL.
32.60–25 Living quarters—TB/ALL.
32.60–30 Tank vessels with independent tanks—TB/ALL.
32.60–35 Tank vessels carrying Grade A liquid cargo—TB/ALL.
32.60–40 Construction and testing of cargo tanks and bulkheads—TB/ALL.
32.60–45 Segregation of spaces containing the emergency source of electric power—TB/ALL.

Subpart 32.63—Hull and Cargo Tank Requirements for Tank Barges Constructed or Converted on or After July 1, 1964, and Carrying Certain Dangerous Bulk Cargoes

32.63–1 Application—B/ALL.
32.63–5 Barge hull classifications—B/ALL.
32.63–8 Alternative arrangements—B/ALL.
32.63–10 Rakes and coamings—B/ALL.
32.63–15 Subdivision and stability—B/ALL.
32.63–20 Hull structure—B/ALL.
32.63–25 Cargo tanks and supports—B/ALL.

Subpart 32.65—Hull Requirements for Tank Vessels Constructed on or After November 10, 1936, and Prior to July 1, 1951

32.65–1 Application—TB/ALL.
32.65–5 Scantlings, material, and workmanship—TB/ALL.
32.65–10 Subdivision of cargo space—TB/ALL.
32.65–15 Cofferdams—TB/ALL.
32.65–20 Pumprooms—TB/ALL.
32.65–25 Living quarters—TB/ALL.
32.65–30 Tank vessels with independent tanks—TB/ALL.
32.65–35 Tank vessels carrying Grade A liquids—TB/ALL.
32.65–40 Construction and testing of cargo tanks and bulkheads—TB/ALL.

Subpart 32.70—Hull Requirements for Steel Hull Tank Vessels Constructed Prior to November 10, 1936

32.70–1 Application—TB/ALL.
32.70–5 Hull requirements; general—TB/ALL.
32.70–10 Cofferdams—TB/ALL.
32.70–15 Pumprooms—TB/ALL.
32.70–20 Pump-engine compartment—TB/ALL.
32.70–25 Cargo tanks—TB/ALL.

Subpart 32.75—Hull Requirements for Wood Hull Tank Vessels Constructed Prior to November 10, 1936

32.75–1 Application—TB/ALL.
32.75–5 Hull requirements; general—TB/ALL.
32.75–10 Cargo tanks—TB/ALL.
32.75–15 Electric bonding and grounding for tanks—TB/ALL.
32.75–20 Hold spaces and bulkheads—TB/ALL.

Subpart 32.80—Tank Barges Constructed of Materials Other Than Steel or Iron

Sec.
32.80–1 General requirements—B/ALL.

Subpart 32.85—Lamp and Paint Rooms and Similar Compartments on Tankships

32.85–1 Fireproofing of lamp, oil and paint rooms—T/ALL.

AUTHORITY: The provisions of this Part 32 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026.

Subpart 32.01—Safety Requirements

§ 32.01–1 Means of escape—T/ALL.

On all tankships where the plans and arrangements will possibly permit, all passageways leading to living quarters, or places where anyone may be regularly employed, shall be provided with not less than two avenues of escape so located that if one of such avenues is not available another may be. The locality and arrangement of such additional means of escape shall be determined by the inspectors as will in their judgment best carry out the purpose for which this provision was made.

§ 32.01–5 Lifelines—TB/OCLB.

On all tank vessels where the distance is more than 150 feet between deck houses, a wire cable shall be stretched between the deck houses at all times when the vessel is loaded and being navigated, this cable to be not less than 5 feet from the deck; and there shall be attached at all times to the cable a traveler with a line of sufficient continuous length to insure its operation in order that communication between both ends of the vessel may be facilitated at all times: *Provided*, That in addition to the traveler with the endless whip, as many loose rings with lanyards attached may be placed on the cable as may be deemed necessary by the master in charge of the vessel: *Provided further*, That a fore and aft raised bridge shall be accepted in lieu of the wire cable and traveler.

§ 32.01–10 Rails—TB/ALL.

(a) All tank vessels, except unmanned tank barges, the construction or conversion of which is started on or after January 1, 1957, shall be fitted with fixed or portable rails on decks and bridges. All rails shall be in at least two courses, including the top, and shall be at least 36 inches high, and in no case shall the clear spaces between the courses exceed 18 inches. However, on tank vessels operating on ocean waters the outboard rails on all decks shall be in at least three courses, including the top, and shall be evenly spaced and shall be at least 36 inches high. All rails shall consist of solid or tubular sections or chains or wire rope or a combination thereof.

(b) For all tank vessels, except those navigating the rivers only, the construction or conversion of which was started

after September 11, 1946, and prior to January 1, 1957, rails on decks or bridges, shall be in at least two courses, including the top, and shall be at least 36 inches high.

§ 32.01–15 Guards at dangerous places—TB/ALL.

All exposed and dangerous places such as gears and machinery shall be properly protected with covers, guards or rails in order that the danger of accidents may be minimized. On vessels equipped with radio communication, the lead-ins shall be efficiently incased or insulated to insure against accidental shock. Such lead-ins shall be located so as not to interfere with the launching of lifeboats and liferafts.

Subpart 32.05—Markings

§ 32.05–1 Draft marks—TB/ALL.

(a) All tank vessels of 50 gross tons and over shall have the draft of the vessel plainly and legibly marked upon the stem and upon the sternpost or rudderpost or at any place at the stern of the vessel as may be necessary for easy observance. The draft shall be taken from the bottom of the keel at the marks to the surface of the water, the bottom of the mark to indicate the draft in feet.

(b) In cases where the keel does not extend forward or aft to the location of the draft marks, due to raked stem or cutaway skeg, the datum line from which the drafts shall be taken, shall be obtained by projecting the line of the bottom of the keel forward or aft, as the case may be, to the location of the draft marks.

(c) In cases where a vessel may have a skeg or other appendage extending locally below the line of the keel, the draft at the end of the vessel adjacent to such appendage shall be measured to a line tangent to the lowest part of such appendage and parallel to the line of the bottom of the keel.

§ 32.05–5 Vessel's name on equipment—TB/ALL.

The equipment of all tank vessels, such as fire hose, fire axes, lifeboats, liferafts, life preservers, and lifefloats, shall be painted or branded with the name of the vessel upon which they are used.

§ 32.05–10 Name of tankship—T/ALL.

Every tankship not documented by the Commissioner of Customs shall have the name marked upon each bow and upon the stern, and the home port shall also be marked upon the stern. The name shall be in a light color on a dark ground, or in a dark color on a light ground, and shall be distinctly visible. The smallest letters used shall be not less than 4 inches in size. In addition, every tankship shall have her name conspicuously displayed in distinct plain letters, of not less than 6 inches in size, on each outer side of the pilothouse.

§ 32.05–15 Name of tank barge—B/ALL.

Every tank barge not documented by the Commissioner of Customs shall have its name or number carved, punch-marked, or welded on the main beam, inside the cargo hatch, or other suitable permanent part of the vessel's structure for the purpose of identification. The vessel's name or number shall be so displayed at the highest part of the vessel's hull or permanent structure that the name or number can be seen from either side.

Subpart 32.15—Navigation Equipment

§ 32.15–1 Fog sound signal devices—TB/ALL.

(a) The efficient fog bell required upon vessels by law shall be held to mean a bell not less than 8 inches in diameter from outside to outside and constructed of bronze or brass or other material equal thereto in tone and volume of sound, and located where the sound shall be the least obstructed.

(b) In addition to the bell required in paragraph (a), all tankships of over 350 feet in length, other than those operating exclusively on the Great Lakes or the inland waters of the United States, shall be provided with a fog gong which will produce a sound easily distinguishable from the bell required by paragraph (a) and which shall have a range of audibility approximating that of the bell.

§ 32.15–5 Whistles—T/ALL.

(a) Each tankship shall be provided with an efficient whistle sounded by steam or by some substitute for steam to give the necessary whisite signals. All whistles shall be placed at an elevation of not less than 6 feet above the top of the pilothouse, where the clearance for passing under bridges will permit it. Tankships navigating the Red River of the North, Yukon, and similar rivers, and rivers whose waters flow in the Gulf of Mexico, and tankships of less than 100 gross tons may have their whistles located not less than 2 feet above the tops of their pilothouses. Such whistles or substitutes shall be satisfactory in sound and source of power for the purpose intended.

(b) On tankships contracted for on and after November 19, 1955 means shall be provided to operate the whistle from a position adjacent to the main steering station and from the steering station on top of the pilothouse where such steering station is fitted. Details of the whistle operating devices shall meet the requirements of Subparts 113.05 and 113.65 of Subchapter J (Electrical Engineering) of this chapter.

§ 32.15–10 Sounding machines—T/OCL.

All tankships of 500 gross tons and over shall be equipped with an efficient mechanical or electronic deep-sea sounding apparatus, in addition to the ordinary deep-sea hand lead. The mechanical or electronic deep-sea sounding apparatus above required shall be installed, kept in working order, and ready for immediate use: *Provided*, That tank vessels of less than 1,500 gross tons navigating the Great Lakes exclusively need not be equipped with deep-sea sounding apparatus as required by this section.

§ 32.15–15 Anchors for seagoing barge—B/OC.

Every seagoing barge shall be equipped with at least one anchor with suitable chain or cable to be at least equivalent to the requirements of the American Bureau of Shipping rules.

§ 32.15–20 Radiotelegraph and radiotelephone—T/ALL.

(a) Radiotelegraph and radiotelephone installations are required on certain tankships. Details of the application of these requirements, as well as the details of the installations, shall be as required by the statutes and regulations under the jurisdiction of the Federal Communications Commission.

(b) For the communication system required with the radiotelegraph and radiotelephone installations on a tank ship contracted for on or after November 19, 1955 see Subparts 113.05 and 113.30 of Subchapter J (Electrical Engineering) of this chapter.

§ 32.15–25 Radio direction finder—T/OC.

(a) All tankships of 1,600 gross tons and over on an international voyage or in ocean service shall be fitted with a radio direction finder. Details of the installation shall be as required by the statutes and regulations under the jurisdiction of the Federal Communications Commission. Such tankships of over 1,600 gross tons, but not over 5,000 gross tons, construction or conversion of which was started prior to November 19, 1952, need not meet the requirements of this section until November 19, 1954.

(b) For the communication system required with the radio direction finder installation on a tankship contracted for on or after November 19, 1955 see Subparts 113.05 and 113.30 of Subchapter J (Electrical Engineering) of this chapter.

Subpart 32.20—Equipment Installations

§ 32.20–1 Equipment installations on vessels during World War II—TB/ALL.

Boilers, pressure vessels, machinery, piping, electrical and other installations, including lifesaving, firefighting and other safety equipment, installed on vessels during the Unlimited National Emergency declared by the President on May 27, 1941, and prior to the termination of Title V of the Second War Powers Act, as extended (sec. 501, 56 Stat. 180, 50 U.S.C. 635), which do not fully meet the detailed requirements of the regulations in this chapter, may be continued in service if found to be satisfactory by the Commandant for the purpose intended. In each instance prior to final action by the Commandant, the Officer in Charge, Marine Inspection, shall notify Headquarters of the facts in the case, together with recommendations relative to suitability for retention.

§ 32.20–5 Pressure vacuum relief valves—TB/ALL.

The pressure vacuum relief valve shall be of a type and size approved by the Commandant for the purpose intended.

For specifications and procedures re approval, see Subpart 162.017 of Subchapter Q (Specifications) of this chapter.

§ 32.20–10 Flame arresters—TB/ALL.

Flame arrester shall be of a type and size approved by the Commandant for the purpose intended. For specifications and procedures re approval, see Subpart 162.016 of Subchapter Q (Specifications) of this chapter.

§ 32.20–20 Liquid level gaging—T/ALL.

On tankships, the construction or conversion of which is started on or after July 1, 1951, a method for determining the level of the liquid in a cargo tank without opening ullage holes, cargo hatches, or Butterworth plates, shall be provided on all tankships certificated for the carriage of Grade A liquids: *Provided*, That ullage holes fitted with sounding pipes tightly secured to the underside of the tank tops, opens at the bottom, and extending to within 18 inches or less of the bottom of the tank shall be considered as complying with the foregoing requirement.

Subpart 32.25—General Alarm Systems

§ 32.25–1 Alarm bells for tankships constructed on or after September 15, 1943—T/ALL.

(a) All tank ships of over 100 gross tons, the construction of which is begun on or after September 15, 1943, shall have all sleeping accommodations and machinery spaces equipped with a sufficient number of alarm bells so located as to warn all occupants.

(b) The bells shall be controlled by a manually operated contact maker located in the pilothouse, in an accessible location in the deck officers' quarters, and in the engineroom. Each of the contact makers in the latter two locations shall be protected against tampering by means of an enclosure provided with a breakable glass window.

(c) The alarm system installation shall meet the requirements of Subparts 113.05 and 113.25 of Subchapter J (Electrical Engineering) of this chapter, except that vessels the construction of which was started prior to November 19, 1955, need only meet the requirements of § 113.25–90 thereof and the number and location of the contact makers shall comply with paragraph (b) of this section.

§ 32.25–5 Alarm bells for tankships constructed prior to September 15, 1943—T/ALL.

(a) All tankships, the construction of which was begun prior to September 15, 1943, shall have all sleeping accommodations equipped with a sufficient number of alarm bells so located as to warn all the occupants. The alarm bells, if electric, shall be operated from an open switch from the pilothouse or bridge. The bells shall be of such size, character, and construction as to provide an alarm throughout the spaces for which they are provided.

(b) The alarm system installation shall meet the requirements of § 113.25–90 of Subchapter J (Electrical Engineering) of this chapter.

§ 32.25–10 Alarm bells for manned barges—B/OC.

Each tank barge of over 100 gross tons, where the crew is divided into watches for the purpose of steering the vessel, shall be provided with a suitable alarm bell installation.

Subpart 32.30—Sound Powered Telephone, Voice Tube, and Engine Order Telegraph Systems

§ 32.30–1 Voice tubes or telephone equipment—T/ALL.

(a) Tankships shall be equipped with an efficient means of communication between the pilothouse and (1) the engineroom, (2) the steering gear room, and (3) the emergency steering station.

(b) Where tankships are equipped with a gyro compass system and/or radar plan position indicator, an efficient means of communication shall be provided between the pilothouse and the master compass and/or radar plan position indicator when such equipment is remotely located from the pilothouse.

(c) Where tankships are equipped with a radio and/or a radio direction finder, an efficient means of communication shall be provided between the pilothouse and this equipment as covered in § 113.30–5(e) of Subchapter J (Electrical Engineering) of this chapter when such equipment is remotely located from the pilothouse.

(d) The efficient means of communication referred to in this section shall be either a voice tube or sound powered telephone system.

(e) Telephone and voice tube equipment and the installation thereof shall meet the requirements of Subparts 113.05 and 113.30 of Subchapter J (Electrical Engineering) of this chapter except that tank ships the construction of which was started prior to November 19, 1955, need only meet the requirements of § 113.30–90.

§ 32.30–5 Engine order telegraph equipment—T/ALL.

(a) Tankships shall be equipped with an efficient means of transmitting engine orders from the pilothouse to the engineroom and of transmitting acknowledgments of such engine orders from the engine room to the pilothouse.

(b) The efficient means of transmitting engine orders and installation of the equipment shall meet the requirements of Subparts 113.05 and 113.35 of Subchapter J (Electrical Engineering) of this chapter except that tankships the construction of which was started prior to November 19, 1955, need meet only the requirements of § 113.35–90.

§ 32.30–10 Inspections—T/ALL.

All communication equipment between the pilothouse, engineroom, steering gear room, and the emergency steering station shall be inspected and tested in accordance with the requirements of § 111.05–10(c)(16) and (d)(1) of Subchapter J (Electrical Engineering) of this chapter.

Subpart 32.35—Main and Auxiliary Machinery

§ 32.35–1 Boilers and Machinery—TB/ALL.

Boilers, main and auxiliary machinery, and piping systems shall conform to the requirements of Subchapter F (Marine Engineering) of this chapter, except as otherwise provided for in this subchapter.

§ 32.35–5 Installation of internal combustion engines—TB/ALL.

Each internal combustion engine located on the weather deck shall be provided with a ventilated metal hood or, where space permits, with a well-ventilated metal housing of sufficient size to allow for proper operation and maintenance.

§ 32.35–10 Steering apparatus on tank vessels—TB/ALL.

Tank vessels shall be provided with steering apparatus as required by Subpart 57.25 of Subchapter F (Marine Engineering) of this chapter.

Subpart 32.40—Accommodations

§ 32.40–1 Crew accommodations on tankships of 100 gross tons or over constructed after January 1, 1938—T/ALL.

On all tankships of 100 gross tons and over, the construction of which is begun after January 1, 1938, the minimum requirements relative to construction, location, and equipment of crew accommodations are as follows:

(a) *Sleeping quarters.* At least 120 cubic feet of space and not less than 16 square feet of deck areas shall be allotted to each member of the crew for sleeping purposes. In measuring sleeping quarters allotted to crews of vessels, the Officer in Charge, Marine Inspection, shall not deduct from the total volume or from the deck area any equipment contained therein which is provided for the exclusive use of the crew. Not more than one bunk shall be placed above another, and the lower bunk shall be at least 12 inches above the deck. The upper bunk shall be located as nearly as practicable midway between the lower bunk and the lower side of the deck beams overhead.

(b) *Toilet and washing facilities.* (1) Each such tankship shall be provided with at least one washbasin, one bathtub or shower, and one toilet for each eight members, or portion thereof, in the crew to be accommodated. The crew to be accommodated shall include all members who do not occupy rooms to which private facilities are attached.

(2) When the engineroom crew, exclusive of licensed officers and others separately provided for, exceeds eight, separate washing facilities shall be provided.

(3) Vessels contracted for after January 1, 1949, shall have the toilet rooms separate from the washrooms, and at least one washbasin shall be fitted in each toilet room.

(c) *Hospital accommodations.* (1) Each tank vessel which in the ordinary course of its trade makes voyages of more than 3 days' duration between ports and which carries a crew of 12 or more, shall be provided with a hospital space. This space shall be situated with due regard to the comfort of the sick so that they may receive proper attention in all weathers.

(2) The hospital shall be suitably separated from other spaces and shall be used for the care of the sick and for no other purposes.

(3) The hospitals shall be fitted with berths in the ratio of 1 berth to every 12 members of the crew or portion thereof who are not berthed in single-occupancy rooms, but the number of berths need not exceed 6.

(d) *Location, construction and equipment.* (1) Crew accommodations shall not be located forward of the collision bulkhead, or where there will be undue risk to members of the crew in getting to stations.

(2) Where crew quarters abut galley, boiler, or engineroom bulkheads, such bulkheads shall be insulated with fire-resistive material to reduce transmission of heat.

(3) Insofar as practicable, crew quarters shall be so located or constructed that they will be protected against objectionable odors of cargo, fuel tanks, paint lockers, oil rooms, bilges, toilets, etc.

(4) All crew spaces shall be adequately lighted, heated and ventilated. The lighting shall comply with the requirements of § 111.50–15 and Subpart 111.60 of Subchapter J (Electrical Engineering) of this chapter.

(5) Bare metal surfaces of ship's sides and metal weather decks overhead which are not decked over with wood externally, shall be covered with suitable fire-resistive material to aid in keeping the crew's quarters dry.

(6) In the ventilation of crew accommodations provisions shall be made for the ingress of fresh air and for the egress of impure air; it shall be adequate for the purpose intended, and so arranged as to be effective in any ordinary weather conditions, and to distribute fresh air without undue discomfort to the occupants. Where natural ventilation is provided, each inlet shall have an area of at least 6 square inches for each person accommodated, the outlet to be at least equal in size to the inlet. In no case shall any one such inlet or outlet have a cross sectional area of less than 24 square inches.

(7) Mechanical ventilation may be provided if such system is equal in effectiveness to the requirements for natural ventilation and is approved by the Commandant. For remote control of mechanical ventilation see §111.50–5 of Subchapter J (Electrical Engineering) of this chapter.

(8) Messrooms shall be provided for both officers and crew, and shall be separate from each other where space and conditions will permit. Such messrooms shall be sufficient in size to accommodate all persons allotted to such space: *Provided, however,* That this subparagraph need not apply to vessels operating on the Great Lakes, lakes, bays and sounds, or rivers.

(9) All washbasins, shower baths, or tubs required by the regulations in this subchapter shall be equipped with proper plumbing, including hot and cold running water. Washbasins for the crew may be located in the crew's sleeping quarters, if properly installed, equipped with proper plumbing for draining and supplied with hot and cold running water.

(10) All toilets shall be installed and equipped with the proper plumbing for flushing. Where more than one toilet is located in a space or compartment, each toilet shall be separated with a screen constructed of fire-resistive material to afford privacy. Such screens may be installed so as to be open at top and bottom for ventilation purposes.

(11) Floors of toilets and washrooms shall be covered with cement, tile, or other suitable covering.

(12) On each such tankship there shall be provided at least one sink or other suitable means for washing clothes.

(13) Each hospital shall have a toilet, washbasin, and bathtub or shower conveniently situated.

(14) A clothes locker shall be provided for each person accommodated of a size not less than 12" x 21" x 5' high and so placed as to be readily accessible.

(15) Living accommodations shall be properly screened to exclude insects.

§ 32.40–5 Crew accommodations on tankships of less than 100 gross tons and manned tank barges constructed after January 1, 1938—TB/ALL.

All tankships of less than 100 gross tons and all manned tank barges, the construction of which is begun after January 1, 1938, shall be provided with crew accommodations of sufficient size, adequate construction, and with suitable equipment to provide for the protection and accommodations of its crew in a manner practicable for the size, facilities and service of the vessel, and consistent with the principles underlying the requirements for crew accommodations on tankships of 100 gross tons or more.

§ 32.40–10 Crew accommodations on tankships of 100 gross tons or over constructed after March 4, 1915, and prior to January 1, 1938—T/ALL.

On all tankships of 100 gross tons or over the construction of which was begun after March 4, 1915, and prior to January 1, 1938, the crew accommodations shall be of a character and number in compliance with § 32.40–1 (a), (b), (c), except that separate washing facilities are not required where the engineroom crew, exclusive of licensed officers, and others separately provided for, does not exceed 10. In cases where an improvement is necessary in the sanitary conditions of such vessels, § 32.40–1(d) will also apply in principle insofar as space and conditions will permit.

§ 32.40–15 Crew accommodations on tankships and manned tank barges not otherwise provided for—TB/ALL.

All tankships and all manned tank barges not heretofore provided for shall have crew quarters and washing and toilet facilities in keeping with the age, size, facilities and service of the vessel, and suitable for the accommodations and protection of the crew.

Subpart 32.45—Electrical Installations

§ 32.45–1 Requirements for tank vessels the construction or conversion of which is contracted for on or after November 19, 1955—TB/ALL.

(a) *Application.* The electrical installation on a tank vessel the construction or conversion of which is contracted for on or after November 19, 1955 shall comply with the requirements contained in this section in addition to those contained in Subchapter J (Electrical Engineering) of this chapter except as such latter regulations are modified by this section. Specific additional requirements for tank vessels carrying Grade A, B, C or D liquid cargo are contained in paragraphs (h) and (i) of this section.

(b) *Cable location.* Where practicable, electric cable shall be located well inboard from the sides, preferably along or near the centerline, to reduce the risk of injury in the event of collision, but it shall be kept clear of cargo tank openings. Specific additional cable location requirements for cargo pump rooms and enclosed spaces immediately above or adjacent to cargo tanks are contained in paragraphs (f) and (h) of this section.

(c) *Equipment location.* Except where Grade E liquid cargo only is involved, switchboards, distribution panels, switches, fuses, and other circuit-interrupting or power devices shall not be installed in cargo pumprooms nor in enclosed spaces immediately above or adjacent to cargo tanks. Regardless of the grade of liquid cargo handled storage batteries shall not be located in cargo pumprooms.

(d) *Portable equipment.* Portable equipment shall be of an approved type. When the vessel is not gas free, no portable electrical equipment shall be used in the cargo or fuel oil tanks, the cargo pumprooms or any enclosed spaces immediately above or adjacent to the bulk cargo tanks, except that lighting may be effected by the use of approved explosion-proof, self-contained, battery-fed lamps.

(e) *Explosion-proof installations.* Where explosion-proof equipment is required, the equipment and installation thereof shall comply with § 111.60–40 of Subchapter J (Electrical Engineering) of this chapter.

(f) *Enclosed spaces.* (1) The lighting of enclosed spaces immediately above or adjacent to cargo tanks for Grade A, B, C or D liquid cargo shall be effected by means of approved explosion-proof or

magazine type lighting fixtures in accordance with the requirements of § 111.170-10(c) of Subchapter J (Electrical Engineering) of this chapter.

(2) Through runs of electric cable are permitted.

(g) *General cargo spaces.* (1) General cargo spaces located beyond the segregation spaces of tank vessels carrying Grade A, B, C or D liquid cargo shall have no special restrictions in regard to electrical installations.

(2) General cargo spaces, regardless of location, of tank vessels carrying Grade E liquid cargo only shall have no special restrictions in regard to electrical installations.

(h) *Cargo pumproom handling Grade A, B, C, or D liquid cargo.* (1) Lighting in cargo pumprooms handling Grade A, B, C, or D liquid cargo shall be accomplished either through permanently fixed glass lenses fitted in the bulkhead and/or overhead, or by the use of explosion-proof fixtures, except that explosion-proof fixtures may be installed only under certain conditions. For detail requirements see § 111.70-10 (c) of Subchapter J (Electrical Engineering) of this chapter.

(2) Through runs of electric cable, regardless of how they may be protected, are prohibited.

(i) *Weather decks of tank vessels handling Grade A, B, C, or D liquid cargo.* Motors, their control equipment, and other electrical equipment and installations located on or above the weather decks within 10 feet of the cargo tank openings, cargo pumproom doors or cargo pump room ventilation outlets, or cargo tank vent terminations shall be explosion-proof. Explosion-proof equipment installed in locations exposed to the weather shall be watertight or shall be enclosed in watertight housings, or protected against the entrance of water by other approved means.

§ 32.45-5 Requirements for tank vessels the construction or conversion of which was started on or after November 10, 1936 but prior to November 19, 1955—TB/ALL.

(a) *Application.* The requirements of this section shall apply to all tank vessels the construction or conversion of which was started on or after November 10, 1936, but prior to November 19, 1955.

(b) *General.* The electrical installation shall be in accordance with this section, and to the extent that such installation is not covered by this section it shall be at least equivalent to the Commandant's general requirements.

(c) *Existing arrangements.* Existing arrangements, materials, and facilities previously approved will be considered satisfactory so long as they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. For detailed requirements see § 111.70-90(a) of Subchapter J (Electrical Engineering) of this chapter minor repairs and minor alterations may be made to the same standard as the original installation.

(d) *New installations.* New installations or major replacements shall meet the applicable requirements of § 32.45-1.

(e) *Location of storage batteries.* Storage batteries shall not be located in cargo pumprooms. The space in which they are located shall be well ventilated and they shall be protected against mechanical and electrical injury including short circuiting and overloading. Batteries shall be secured against movement, and acid batteries shall be set in lead-lined trays at least 3 inches deep of at least 4-pound sheet lead.

(f) *Installations made during the Unlimited National Emergency.* Electrical equipment installed during the Unlimited National Emergency as defined in § 110.25-5 of Subchapter J (Electrical Engineering) of this chapter and not complying with the requirements in this subchapter may be continued in service if found to be satisfactory by the Commandant for the purpose intended.

(g) *Cargo pumprooms and enclosed spaces of tank vessels constructed on or after July 1, 1951, but prior to November 19, 1955*—(1) *Application.* The requirements of this paragraph shall apply to cargo pumprooms and enclosed spaces immediately above the bulk cargo tanks of tank vessels carrying Grade A, B, C or D liquid cargo, the construction or conversion of which vessels was started on or after July 1, 1951, but prior to November 19, 1955. There are no special restrictions in regard to the electrical installations in cargo pumprooms and enclosed spaces of tank vessels carrying only Grade E liquid cargo.

(2) *Cable location.* Through runs of electric cable are permitted.

(3) *Equipment.* No electric lighting or power circuit interrupting or power devices shall be installed in pumprooms. Enclosed spaces immediately above the bulk cargo tanks shall contain no electrical circuit interrupting or power devices.

(4) *Lighting.* Lighting shall be effected by means of approved explosion-proof or magazine type lighting fixtures. When the vessel is not gas free no portable lighting equipment shall be used except approved explosion-proof, self-contained, battery-fed lamps.

(h) *General cargo spaces of tank vessels constructed on or after July 1, 1951, but prior to November 19, 1955 and carrying Grade E liquid cargo only.* General cargo spaces, regardless of location, of tank vessels constructed on or after July 1, 1951, but prior to November 19, 1955, and carrying Grade E liquid cargo only, shall have no special restrictions in regard to electrical installations.

(i) *Cargo pumprooms and enclosed spaces of tank vessels constructed on or after November 10, 1936, but prior to July 1, 1951*—(1) *Application.* The requirements of this paragraph shall apply to cargo pumprooms for Grade A, B, C or D liquids and to enclosed spaces required to segregate Grade A, B, C or D liquid cargo tanks from other spaces, all on tank vessels the construction or conversion of which was started on or after November 10, 1936, but prior to July 1, 1951.

(2) *General.* The installation covering the cable, cable fittings and method of making wiring connections, lighting fixtures, and motors shall comply with the requirements of § 111.70-90(d) of Subchapter J (Electrical Engineering) of this chapter.

(3) *Ventilation.* The motor-driven ventilation system for the cargo pump motor when located in the pumproom is to be so interlocked that the pump motor cannot be started prior to a circulation of air. The air ducts are to lead to and from the atmosphere outside the pumproom and are to terminate not less than 3 feet above the deck and not less than 6 feet from any cargo tank vent. (See § 32.60-20.)

§ 32.45-10 Requirements for tank vessels the construction or conversion of which was started prior to November 10, 1936—TB/ALL.

(a) *Application.* The requirements of this section shall apply to all tank vessels the construction or conversion of which was started prior to November 10, 1936.

(b) *General.* The electrical installation shall be maintained in a safe and in a good mechanical condition, and shall comply with the regulations in effect when the vessel was built, or to the requirements of a recognized classification society. Any major change in the electrical installation or any conversion shall comply with the requirements of this subpart applicable to new vessels.

(c) *Pumprooms and enclosed spaces of tank vessels handling Grade A, B, C or D liquid cargo.* The electrical installation in the pumprooms and enclosed spaces immediately adjoining cargo tanks (except in pump enginerooms as provided in § 32.70-20) of tank vessels handling Grade A, B, C or D liquid cargo shall be made to comply with §§ 32.45-1 (b) and (c), 32.45-5(b) and (g) and §§ 111.55-1, 111.55-15 and 111.60-5 of Subchapter J (Electrical Engineering) all of this chapter, to the extent that the changes are, in the opinion of the Officer in Charge, Marine Inspection, necessary in the interest of safety.

Subpart 32.50—Pumps, Piping, and Hose for Cargo Handling

§ 32.50-1 Cargo pumps for tank vessels constructed on or after November 10, 1936—TB/ALL.

On all tank vessels, the construction or conversion of which is started on or after November 10, 1936, the cargo pumps shall be designed and installed to minimize the danger of sparking. Special care shall be exercised in the design of packing spaces in order to secure ample depth and accessibility of glands. Where cargo pump shafts pierce gastight bulkheads, stuffing boxes with readily accessible gastight glands shall be provided.

§ 32.50-3 Cargo discharge—TB/ALL.

(a) Pumps or other acceptable means shall be used to discharge cargo from gravity type cargo tanks vented at gauge pressures of 4 pounds per square inch or less.

(b) The use of compressed air as the primary means of discharging cargo from such tanks is prohibited.

§ 32.50–5 Cargo pump fittings and controls on tank vessels constructed on or after November 10, 1936—TB/ALL.

(a) On all tank vessels, the construction or conversion of which is started on or after November 10, 1936, where a cargo pump is capable of developing a pressure exceeding 125 pounds at the pump under shutoff head conditions (based on water), a suitable relief valve shall be installed between the pump and shutoff valve in the cargo pump discharge and piped back into the suction. The relief valve setting shall not exceed the pressure for which the piping system is designed.

(b) A pressure gage shall be installed for each pump discharge, and it shall be located at a point visible with respect to the pump controls.

§ 32.50–10 Cargo pumps on tank vessels with independent cargo tanks which were constructed prior to November 10, 1936—TB/ALL.

(a) Cargo pumps on tank vessels, the construction or conversion of which was started prior to November 10, 1936, may be located in a hold space containing independent cargo tanks or on deck. If the pump driving unit is of the type permitted in cargo pumprooms, it also may be located in the hold space. If other types of driving units are used, they shall be located on deck or in an engine compartment. If the pump drive shaft passes through decks or bulkheads into a hold space or pumproom, it shall be provided with suitable stuffing boxes at such points.

§ 32.50–15 Cargo piping on tank vessels constructed on or after July 1, 1951—TB/ALL.

(a) On all tank vessels, the construction or conversion of which is started on or after July 1, 1951, the cargo piping shall be:

(1) A fixed cargo piping system shall be installed on a tank vessel carrying Grade A, B, or C cargo. The piping shall be arranged so as to avoid excessive stresses at the joints. For sizes exceeding 2 inches in diameter, flanged, welded, or other approved types of joints shall be employed. Packing material shall be suitable for the cargo carried. Connections at bulkheads shall be made so that the plating does not form part of a flanged joint. Piping may be carried through bunker spaces and deep tanks provided it is run through a pipe tunnel. The tunnel may be omitted where the pipe is extra heavy, all joints are welded, and bends are installed to provide for expansion and contraction.

(2) Cargo piping, where installed in tank vessels carrying Grade D or E cargo only, shall conform with the requirements contained in subparagraph (1) of this paragraph.

(3) Cargo piping shall not pass through spaces containing machinery where sources of vapor ignition are normally present: *Provided*, That, in special cases the Commandant may permit the piping to pass through such spaces if Grade E liquids only are involved.

(b) Valve operating rods in cargo tanks shall be solid, except that tank barges having plug cocks inside the cargo tanks may have operating rods of extra heavy pipe with the annular space between the lubricant tube and the pipe wall sealed with a nonsoluble material to prevent penetration of the cargo. Valve operating rods shall be of ample size, well guided and supported, and attached to the valve stems in a manner so as to prevent the operating rods from working loose. Where the operating rods pass through a deck, gastight stuffing boxes shall be fitted. The leads of operating rods shall be as direct as possible. Valves shall be of suitable design for the intended service.

(c) All cargo loading and discharge hose connections shall be fitted with valves or blind flanges.

§ 32.50–20 Cargo piping for tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.

(a) On tank vessels, the construction or conversion of which is started on or after November 10, 1936, and prior to July 1, 1951, the piping shall be arranged so as to avoid excessive stresses at the joints. For sizes exceeding 2 inches in diameter, flanged, welded, or other approved types of joints shall be employed. Packing material shall be suitable for the cargo carried. Connections at bulkheads shall be made so that the plating does not form part of a flanged joint. Piping may be carried through bunker spaces and deep tanks provided it is run through a pipe tunnel. The tunnel may be omitted where the pipe is extra heavy, all joints are welded, and bends are installed to provide for expansion and contraction.

(b) Cargo piping shall not pass through spaces containing machinery where sources of vapor ignition are normally present: *Provided*, That in special cases the Commandant may permit the piping to pass through such spaces if Grade E liquids only are involved.

(c) Valve operating rods in the cargo tanks shall be solid and of ample size, well guided and supported, and attached to the valve stems in a manner to guard against their working loose. Where such valve rods pass through the deck, gastight stuffing boxes shall be fitted. The leads of valve rods shall be as direct as possible. All valves and fittings shall be of material, design, and manufacture for the intended service on the cargo system; either rising or nonrising stem valves may be used.

§ 32.50–25 Cargo pumps and piping on tank vessels constructed prior to November 10, 1936—TB/ALL.

On tank vessels, the construction or conversion of which was started prior to November 10, 1936, cargo pumps and piping which do not fully comply with the regulations in this subchapter shall be made as nearly equal to the requirements for tank vessels constructed between November 10, 1936, and July 1, 1951, as is necessary in the interest of safety. Cargo pipe lines may pass through cargo pump engine compartments provided no cargo valves are located therein.

§ 32.50–30 Cargo hose—TB/ALL.

Cargo hose, when carried on tank vessels, shall be of a grade suitable for oil service, and shall be designed to withstand the pressure of the shutoff head of the cargo pump or pump relief valve setting, less static head, but in no case less than 100 pounds per square inch.

§ 32.50–35 Remote manual shutdown for internal combustion engine driven cargo pump on tank vessels—TB/ALL.

(a) Any tank vessel which is equipped with an internal combustion engine driven cargo pump on the weather deck shall be provided with a minimum of one remote manual shutdown station, conspicuously marked, and located at the midpoint of such vessel, or 100 feet from the engine, whichever is the more practical. The remote quick acting manual shutdown shall be installed on the engine so as to provide a quick and effective means of stopping the engine (such as by cutting off the intake air).

(b) This regulation applies to all installations of this type on tank vessels, but for such installations now on existing tankships at the date of next biennial inspection or October 1, 1963, whichever occurs later.

Subpart 32.52—Bilge Systems

§ 32.52–1 Bilge pumps on tank vessels constructed or converted on or after November 19, 1952—TB/ALL.

The number and arrangement of bilge pumps on each tank vessel shall conform to the requirements of Subchapter F (Marine Engineering) of this chapter, except as hereinafter provided in this subpart.

§ 32.52–5 Bilge piping for pump rooms and adjacent cofferdams on tank vessels constructed or converted on or after November 19, 1952—TB/ALL.

(a) Provisions shall be made for removing drainage from the pumproom bilges and adjacent cofferdams. A separate bilge pump, ejector, or bilge suction from a cargo pump or cargo stripping pump may be provided for this purpose. The bilge pump shall not be located in nor shall the piping pass through spaces containing machinery where sources of vapor ignition are normally present.

(b) Where a bilge suction is provided from a cargo or stripping pump, a stop-check valve shall be fitted in the suction branch, and an additional stop valve shall be fitted also if the bilge suction branch can be subjected to a head of oil from the filling line.

(c) Means shall be provided for controlling the cargo or pump room bilge pumps and their suctions or discharges in order that a flooded pump room may be pumped out. Suitable portable or manually operated pumps may be accepted as complying with this provision, or alternatively, the pump controls shall be arranged so that they are operable from inside the pump room and either from an accessible position outside the

pump room, or from the pump room casing above the freeboard deck.

§ 32.52–10 Bilge pumps and piping on tank vessels constructed or converted prior to November 19, 1952—TB/ALL.

(a) On tank vessels, the construction or conversion of which was started prior to November 19, 1952, bilge pumps and piping which do not fully comply with the regulations of this subchapter shall be made as nearly equal to the requirements for tank vessels constructed on or after November 19, 1952, as is necessary in the interest of safety.

(b) Bilge suctions from hold spaces containing independent cargo tanks may be connected to cargo pumps or stripping pumps, provided the installation complies with the requirements of § 32.52–5(b).

Subpart 32.55—Ventilation and Venting

§ 32.55–1 Ventilation of tank vessels constructed on or after July 1, 1951—TB/ALL.

(a) On all tanks vessels, the construction or conversion of which is started on or after July 1, 1951, all enclosed parts of the vessel, other than cargo, fuel and water tanks, cofferdams and void spaces, shall be provided with efficient means of ventilation.

(b) Compartments containing machinery where sources of vapor ignition are normally present shall be ventilated in such a way as to remove vapors from points near the floor level or the bilges. Effective steam or air actuated gas ejectors, blowers or ventilators fitted with heads for natural ventilation, with at least one duct extending to immediately below the floor plates will be approved for this purpose. Machinery spaces below the freeboard deck, in which fuels with flash point of 110° F. or lower are used, shall be equipped with power ventilation. (See § 32.60–20 for other requirements concerning pumprooms.)

§ 32.55–5 Ventilation of tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.

(a) On tank vessels, the construction or conversion of which was started on or after November 10, 1936, and prior to July 1, 1951, all enclosed parts of the vessel, other than cargo, fuel, and water tanks and cofferdams, shall be provided with efficient means of ventilation.

(b) Pumprooms and compartments containing machinery where sources of vapor ignition are normally present shall be ventilated in such a way as to remove vapors from points near the floor level or the bilges. Effective steam or air actuated gas ejectors or blowers or ventilators fitted with heads for natural ventilation, will be approved for this purpose. (See § 32.65–20 for other requirements concerning pumprooms.)

§ 32.55–10 Ventilation for tank vessels constructed prior to November 10, 1936—TB/ALL.

Ventilation of tank vessels, the construction or conversion of which was started prior to November 10, 1936, shall be equal to the requirements of tank vessels constructed before July 1, 1951, where the changes are, in the opinion of the Officer in Charge, Marine Inspection, necessary in the interest of safety.

§ 32.55–15 Ventilation for hold spaces—TB/ALL.

Hold spaces containing independent cargo tanks shall be considered to be equivalent to cargo pumprooms and shall be ventilated and safeguarded as such.

§ 32.55–20 Venting of cargo tanks of tankships constructed on or after July 1, 1951—T/ALL.

(a) *Venting required.* (1) On all tankships, the construction or conversion of which is started on or after July 1, 1951, each cargo tank shall be equipped with a vent. The diameter of a vent shall be not less than 2½ inches.

(2) In any case where a venting system is required for a particular grade of liquid, the venting system permitted for a higher grade of liquid may be used instead.

(b) *Grade A liquids.* (1) Cargo tanks in which Grade A liquids are to be transported shall be fitted with a venting system consisting of a branch vent line from each cargo tank connected to a vent header which shall extend to a height above the weather deck equal to at least one-third the beam of the vessel and shall terminate at a comparable distance from any other living or working space, ventilator inlet, or source of ignition. When special conditions will prevent the vent line or header outlets being permanently installed at a height above the deck of one-third the beam of the vessel, then an adjustable system shall be provided which, when extended vertically, shall be capable of reaching a height of one-third the beam of the vessel.

(2) A weather hood may be installed at the vent outlet providing it is of such design as not to direct the flow of vapor below the horizontal.

(3) The branch vent lines shall consist of either:

(i) Pipe with no valves or other hindrances to a free flow of gas; or,

(ii) Piping fitted with a pressure vacuum relief valve, provided means are supplied for relieving all internal pressure on cargo tanks by fitting the valve with a positive means for opening its pressure valve to allow free passage of gases through the branch vent line or by the installation of a by-pass fitted with a manually operated stop valve.

(4) The vent header shall be fitted with a flame arrester or pressure vacuum relief valve. If a pressure vacuum relief valve is used in the header, means shall be provided for relieving all internal pressure on cargo tanks by fitting the valve with a positive means for opening its pressure valve to allow free passage of gases through the header or by the installation of a by-pass fitted with a manually operated stop valve. A suitable means of relieving pressure shall be fitted in the header in order to prevent excess pressure being built up in the tanks, in the event of overfilling of the latter. The vent header system shall be provided with suitable connections for flushing and draining. The vent header system shall be of sufficient capacity as to be able to carry off all displaced air and vapors during loading of the cargo tanks without opening of ullage plates, cargo hatches, etc. See § 32.20–20 for liquid level gaging requirements.

(c) *Grade B or C liquids.* Cargo tanks in which Grade B or C liquids are to be transported shall be fitted with either individual pressure-vacuum relief valves which shall extend to a reasonable height above the weather deck or shall be fitted with a venting system consisting of branch vent lines connected to a vent header which shall extend to a reasonable height above the weather deck and be fitted with a flame arrester or a pressure-vacuum relief valve. The vent header system, if fitted, shall be provided with suitable connections for flushing and draining, and if desired, stop valves may be placed in the individual branch vent lines provided that each stop valve is bypassed by a pressure-vacuum relief valve.

(d) *Grade D or E liquids.* Cargo tanks in which Grade D or E liquids only are to be transported shall be fitted with gooseneck vents and flame screens.

§ 32.55–25 Venting of cargo tanks of tank barges constructed on or after July 1, 1951—B/ALL.

(a) *Venting required.* (1) On all tank barges, the construction or conversion of which is started on or after July 1, 1951, each cargo tank shall be equipped with a vent. The diameter of a vent shall be not less than 2½ inches.

(2) In any case where a venting system is required for a particular grade of liquid, the venting system permitted for a higher grade of liquid may be used instead.

(b) *Grade A, B, or C liquids.* Cargo tanks in which Grade A, B, or C liquids are to be transported shall be fitted with either individual pressure-vacuum relief valves which shall extend to a reasonable height above the weather deck or shall be fitted with a venting system consisting of branch vent lines connected to a vent header which shall extend to a reasonable height above the weather deck and be fitted with a pressure-vacuum relief valve. The vent header system, if fitted, shall be provided with suitable connections for flushing and draining, and if desired, stop valves may be placed in the individual branch vent lines: *Provided,* That each such stop valve is bypassed by a pressure-vacuum relief valve.

(c) *Grade D or E liquids.* Cargo tanks in which Grade D or E liquids only are to be transported shall be fitted with gooseneck vents and flame screens.

§ 32.55–30 Venting of cargo tanks of tank vessels constructed between November 10, 1936, and July 1, 1951—TB/ALL.

(a) *Venting required.* On all tank vessels, the construction or alteration of which is started on or after November 10,

1936, and prior to July 1, 1951, each cargo tank shall be equipped with a vent. The details of the venting system shall meet the requirements of this section, or alternatively, the requirements of either § 32.55–20 or § 32.55–25, as applicable, shall be met.

(b) *Grade A liquids.* (1) Cargo tanks in which Grade A liquids are to be transported shall be fitted with a venting system consisting of branch vent line from each cargo tank connected to a vent header which shall extend to a reasonable height above the weather deck and be fitted with a flame arrester or pressure-vacuum relief valve. Each branch vent line may be provided with a manually operated control valve, provided it is bypassed with a pressure-vacuum relief valve or each cargo tank to which such a branch vent line is connected is fitted with an independent pressure-vacuum relief valve. The vent header system shall be provided with suitable connections for flushing and draining.

(2) In barges with independent tanks carrying Grade A liquids, separate discharge pipes may be fitted to each pressure-vacuum relief valve, or the pressure-vacuum relief valve may be elevated, so that in either case the discharge from such valve will not be less than 7 feet above the deck where practicable.

(c) *Grade B or C liquids.* Cargo tanks in which Grade B or C liquids are to be transported shall be fitted with individual pressure-vacuum relief valves or shall be fitted with a venting system consisting of branch vent lines connected to a vent header which shall extend to a reasonable height above the weather deck and be fitted with a flame arrester or a pressure-vacuum relief valve.

(d) *Grade D or E liquids.* Cargo tanks in which Grade D or E liquids only are to be transported shall be fitted with gooseneck vents and flame screens unless such tanks are vented by pressure-vacuum relief valves or a venting system of branch vent lines and a vent header.

§ 32.55–35 Venting of cargo tanks on tank vessels constructed prior to November 10, 1936—TB/ALL.

The venting of cargo tanks of tank vessels, the construction or alteration of which was started prior to November 10, 1936, shall be made to equal the requirements of tank vessels constructed before July 1, 1951, where the changes are, in the opinion of the Officer in Charge, Marine Inspection, necessary in the interests of safety: *Provided*, That on such vessels carrying Grade A cargo the requirements in § 32.55–30(b) shall be met.

§ 32.55–40 Venting of cargo tanks fitted with inert-gas system—TB/ALL.

A tank vessel equipped with an approved system for maintaining all cargo tank vapor spaces nonflammable shall be accepted in lieu of the requirements of §§ 32.55–20, 32.55–25, 32.55–30 or 32.55–35.

§ 32.55–45 Venting of cofferdams and void spaces of tank vessels constructed on or after November 10, 1936—TB/ALL.

(a) Except as provided in paragraph (b) of this section, on all tank vessels, the construction or conversion of which was started on or after November 10, 1936, cofferdams and void spaces shall be provided with gooseneck vents fitted with a flame screen or pressure-vacuum relief valves. The diameter of a vent shall be not less than 2½ inches.

(b) On unmanned tank barges not fitted with fixed bilge systems in the cofferdams and void spaces, vents for cofferdams and void spaces will not be required.

Subpart 32.57—Structural Fire Protection for Tank Vessels Contracted for on or After January 1, 1963

§ 32.57–1 Application—TB/ALL.

(a) The provisions of this subpart shall apply to all tank vessels contracted for on or after January 1, 1963.

§ 32.57–5 Definitions—TB/ALL.

(a) *Standard fire test.* A "standard fire test" is one which develops in the test furnace a series of time temperature relationships as follows:

5 minutes—1,000° F.
10 minutes—1,300° F.
30 minutes—1,550° F.
60 minutes—1,700° F.

(b) *"A" Class divisions.* Bulkheads or decks of the "A" Class shall be composed of steel or equivalent metal construction, suitably stiffened and made intact with the main structure of the vessel; such as shell, structural bulkheads, and decks. They shall be so constructed, that if subjected to the standard fire test, they would be capable of preventing the passage of flame and smoke for one hour.

(c) *"B" Class bulkheads.* Bulkheads of the "B" Class shall be constructed with approved incombustible materials and made intact from deck to deck and to shell or other boundaries. They shall be so constructed that, if subjected to the standard fire test, they would be capable of preventing the passage of flame and smoke for one half hour.

(d) *"C" Class divisions.* Bulkheads or decks of the "C" Class shall be constructed of approved incombustible materials, but need meet no requirements relative to the passage of flame.

(e) *Steel.* Where the term "steel or other equivalent metal" is used in this subpart, it is intended to require a material which, by itself or due to insulation provided, has structural and integrity qualities equivalent to steel at the end of the applicable fire exposure.

(f) *Approved material.* Where in this subpart approved materials are required, they refer to materials approved under the applicable subparts of Subchapter Q (Specifications) of this chapter, as follows:

Deck Coverings	164.006
Structural Insulations	164.007
Bulkhead Panels	164.008
Incombustible Materials	164.009
Interior Finishes	164.012

§ 32.57–10 Construction—TB/ALL.

(a) The hull, superstructure, structural bulkheads, decks, and deckhouses shall be constructed of steel. Alternately, the Commandant may permit the use of other suitable material in special cases, having in mind the risk of fire.

(b) Bulkheads of galleys, paint and lamp lockers, and emergency generator rooms shall be of "A" Class construction.

(c) The boundary bulkheads and decks separating the accommodations and control stations from cargo, and machinery spaces and from galleys, main pantries and storerooms other than small service lockers shall be of "A" Class Construction.

(d) Within the accommodation and service areas (i.e., Galleys, main pantries and storerooms other than small service lockers) the following conditions shall apply:

(1) Corridor bulkheads in accommodation areas shall be of "A" or "B" Class intact from deck to deck. Stateroom doors in such bulkheads may have a louver in the lower half.

(2) Elevator, dumbwaiter, and other trunks shall be of "A" Class construction.

(3) Bulkheads not already specified to be of "A" or "B" Class construction may be of "A", "B", or "C" Class Construction.

(4) The integrity of any deck in way of a stairway opening shall be maintained by means of "A" or "B" Class bulkheads and doors at one level. The doors shall be of the self closing type. Such doors shall be fitted with a suitable kickout panel in the lower half. Holdback hooks, or other means of permanently holding the door open will not be permitted. However, magnetic holdbacks operated from the bridge or from other suitable remote control positions are acceptable.

(5) Interior stairs, including stringers and treads shall be of steel or other suitable material having in mind the risk of fire. This is not intended to preclude the use of other material for nosing, walking surfaces, etc., over the steel.

(6) Except for washrooms and toilet spaces, deck coverings within accommodation spaces shall be of an approved type. However, overlays for leveling or finishing purposes which do not meet the requirements for an approved deck covering may be used in thicknesses not exceeding ⅜ of an inch.

(7) Ceilings, linings, and insulation, including pipe and duct laggins, shall be of approved incombustible material.

(8) Any sheathing, furring or holding pieces incidental to the securing of any bulkhead, ceiling, lining, or insulation shall be of approved incombustible materials.

(9) Combustible veneers, trim, decorations, etc., shall not be used in corridors or hidden spaces. This is not intended

to preclude the use of paint or an approved interior finish.

(e) Wood hatch covers may be used between cargo spaces or between stores spaces. Hatch covers in other locations shall be of steel or equivalent metal construction. Tonnage openings shall be closed by means of steel plates or equivalent metal construction.

(f) Nitrocellulose or other highly inflammable or noxious fume-producing paints or lacquers shall not be used.

Subpart 32.60—Hull Requirements for Tank Vessels Constructed on or After July 1, 1951

§ 32.60–1 Scantlings, material, and workmanship—TB/ALL.

(a) All tank vessels, the construction or conversion of which is started on or after July 1, 1951, shall conform to the requirements in this subpart in construction of hulls. The hull and deckhouses shall be of steel or iron construction except that the pilothouse and decks over quarters may be constructed of wood. Scantlings, material, and workmanship, subdivision of cargo spaces, fitting of cofferdams, and testing of tanks shall be at least equivalent to the requirements of the American Bureau of Shipping or other recognized classification society.

(b) See Subpart 32.57 for structural fire protection requirements for tank vessels contracted for on or after January 1, 1963.

§ 32.60–5 Subdivision of cargo space—TB/ALL.

The cargo space shall be divided into tight compartments as necessary to avoid excessive stresses and to provide stability.

§ 32.60–10 Segregation of cargo; Grade A, B, C, or D—TB/ALL.

(a) *General.* The galleys, living quarters, navigation spaces, general cargo spaces, boiler rooms, and enclosed spaces where sources of vapor ignition are normally present, shall be segregated from cargo tanks by cofferdams or pump rooms or tanks, either empty or used to carry liquid having a flashpoint of 150° F. or above, or deck spaces enclosed or open.

(b) *Cargo tank spaces.* Cargo tank spaces shall extend to the main deck, with hatches and vents located on the weather deck. Liquids having a flash point of not less than 150° F. may be carried in the bulk tanks located beyond the segregating cofferdams and/or pump rooms.

(c) *Enclosed spaces.* (1) Cargo and vent piping passing through enclosed spaces immediately above the bulk cargo tanks shall be continuous except that flanged joints connecting pipe sections will be permitted.

(2) No openings to cargo tank shall be permitted other than stuffing boxes through which valve control rods or permanently installed gage tapes extend and openings for use of tank cleaning machines. Openings for tank cleaning machines, when not in use, shall be kept closed by means of gastight bolted plates and when in use shall be made essentially gas and watertight by covers through which hose or pipe to the tank cleaning machines extend.

(3) The overhead in way of quarters shall be gastight.

(d) *Stowage spaces.* The spaces described in paragraph (c) of this section may be used for stowage purposes and for general cargo provided that adequate ventilation is furnished.

(e) *Openings.* Except as provided in paragraph (c) of this section, there shall be no manholes or other openings from cargo tanks to any other enclosed spaces. Any vents, sounding tubes, and similar piping passing through such tanks shall be run in a suitable trunk.

§ 32.60–15 Segregation of cargo; Grade E—TB/ALL.

(a) *General.* The galleys, living quarters, navigation spaces, general cargo spaces, boilerrooms, and enclosed spaces containing machinery, where sources of vapor ignition are normally present, shall be segregated from the cargo tanks by tight bulkheads and intervening spaces are not required.

(b) *Cargo tank spaces.* Cargo tank spaces can be terminated at any deck with hatches on the same deck, but the vent lines shall be extended to the weather deck. Butterworth openings and extension rods may be located on the tank top.

§ 32.60–20 Pumprooms on tank vessels carrying Grade A, B, C, D and/or E liquid cargo—TB/ALL.

(a) *Cargo pumps.* In tank vessels carrying Grade A, B, C, or D liquid cargo, cargo pumps shall be isolated from source of vapor ignition by gastight bulkheads. A gastight bulkhead between the pumproom and the pump engine room may be pierced for drive shaft and pump engine control rods provided such openings are fitted with stuffing boxes or other approved gland arrangement. A steam driven pump shall not be considered a source of vapor ignition provided the steam temperature does not exceed 500° F.

(b) *Ventilation for pumprooms on tank vessels the construction or conversion of which is started between July 1, 1951, and January 1, 1963.* (1) Pumprooms of all tank vessels, the construction or conversion of which is started between July 1, 1951, and January 1, 1963, shall be ventilated in such a way as to remove vapors from points near the floor level or bilges. Pumprooms on tankships handling Grades A, B, or C liquid cargo, with machinery located below the freeboard deck, shall be equipped with power ventilation. Pumprooms equipped with power ventilation shall have the ventilation outlets terminate more than six feet from any opening to the interior part of the vessel which normally contains sources of vapor ignition.

(2) For all tank vessels, the construction or conversion of which is started between October 1, 1959, and January 1, 1963, the power ventilation shall not produce a source of vapor ignition in either the pumproom or the ventilation systems associated with the pumproom. The capacity of power ventilation units shall be sufficient to effect a complete change of air in not more than 3 minutes, based upon the volume of the pumproom and associated trunks up to the deck at which access from the weather is provided.

(c) *Ventilation for pumprooms on tank vessels the construction or conversion of which is started on or after January 1, 1963.* (1) For all tank vessels, the construction or conversion of which is started on or after January 1, 1963, the cargo pumprooms shall be fitted in accordance with paragraphs (a) and (d) of this section. Cargo pumprooms on these vessels shall be ventilated in such a way as to remove vapors from points near the floor level or bilges. Cargo pumprooms on tank vessels handling Grade A, B, or C liquid cargo, shall be equipped with power ventilation of the exhaust type having capacity sufficient to effect a complete change of air in not more than 3 minutes based upon the volume of the pumproom and associated trunks up to the deck at which access from the weather is provided.

(2) The power ventilation units shall not produce a source of vapor ignition in either the pumproom or the ventilation systems associated with the pumproom. Inlets to exhaust ducts shall be provided and located near the floor level at points where concentrations of vapors may be expected. Ventilation from the weather deck shall be provided. Power supply ventilation may be fitted in lieu of natural ventilation, but when fitted shall be arranged to avoid turbulence in the cargo pumproom. Cargo pumprooms equipped with power ventilation shall have the ventilation outlets terminate more than six feet from any opening to the interior part of the vessel which normally contains sources of vapor ignition, and shall be so located as to minimize the possibility of recirculating contaminated air through the pumproom.

(3) Cargo pumprooms handling Grade D and/or E liquid cargo only shall be fitted with at least two ducts extended to the weather deck, one of which shall be extended to a point near the floor level. This does not preclude installation of power ventilation, if desired.

(d) *Access.* The access to a cargo pumproom in a tank vessel carrying Grade A, B, C, or D liquid cargo shall be from the open deck.

§ 32.60–25 Living quarters—TB/ALL.

(a) For living quarters the partitions and sheathing shall be of an approved fire resistive construction. The specification for incombustible materials is in Subchapter Q (Specifications) of this chapter.

(b) See Subpart 32.57 for structural fire protection for tank vessels contracted for on or after January 1, 1963.

§ 32.60–30 Tank vessels with independent tanks—TB/ALL.

(a) Independent cargo tanks may be located in hold spaces or in other cargo tanks; however, a working space of at

least 15 inches shall be maintained around each independent tank, or else provisions shall be made for moving such tanks to furnish such working space, except that less than 15 inches around such tanks may be permitted if in the judgment of the Officer in Charge, Marine Inspection, having jurisdiction, a satisfactory inspection of the cargo tanks and hull structure can be made.

(b) When an independent cargo tank is located in an enclosed space other than a cargo tank, such enclosed space shall be considered as equivalent to a pumproom and shall be safeguarded as such as required by this subpart.

(c) Cargo tanks independent of the hull structure shall be supported in saddles or on foundations of steel or other suitable material and securely attached in place to preclude the cargo from being damaged or shifting as a result of collision. The arrangement shall be such as to permit longitudinal and circumferential, or athwartship and vertical, expansion of the cargo tanks. Each tank shall be supported so as to prevent the concentration of excessive loads on the supporting portion of the shell.

§ 32.60–35 Tank vessels carrying Grade A liquid cargo—TB/ALL.

Grade A liquids having a Reid vapor pressure in excess of 25 pounds per square inch shall be transported in cargo tanks which are independent of the hull.

§ 32.60–40 Construction and testing of cargo tanks and bulkheads—TB/ALL.

(a) All cargo tanks vented at gage pressure of 4 pounds per square inch or less shall be constructed and tested as required by standards established by the American Bureau of Shipping or other recognized classification society. The design of cargo tanks integral with the hull and vented at a gage pressure exceeding 4 pounds per square inch but not exceeding 10 pounds per square inch gage pressure will be given special consideration by the Commandant.

(b) Cargo tanks vented at a gage pressure exceeding 10 pounds per square inch are considered unfired pressure vessels and shall be of cylindrical or similar design and meet the requirements of Parts 52 through 61 of Subchapter F (Marine Engineering) of this chapter.

§ 32.60–45 Segregation of spaces containing the emergency source of electric power—TB/ALL.

(a) The provisions of this section shall apply to all vessels contracted for on or after October 1, 1958.

(b) When a compartment containing the emergency source of electric power, or vital components thereof, adjoins a space containing either the ship's service generators or machinery necessary for the operation of the ship's service generators, all common bulkheads and/or decks shall be protected by approved "structural insulation" or other approved material. This protection shall be such as to be capable of preventing an excessive temperature rise in the space containing the emergency source of electric power, or vital components thereof, for a period of at least one hour in the event of fire in the adjoining space. Bulkheads or decks meeting Class A–60 requirements, as defined by § 72.05–10 of Subchapter H (Passenger Vessels) of this chapter, will be considered as meeting the requirements of this paragraph.

Subpart 32.63—Hull and Cargo Tank Requirements for Tank Barges Constructed or Converted on or After July 1, 1964, and Carrying Certain Dangerous Bulk Cargoes

§ 32.63–1 Application—B/ALL.

(a) The requirements of this subpart shall apply to all tank barges, the construction or conversion of which is started on or after July 1, 1964, and carrying bulk cargoes as follows:

(1) Flammable liquids having a Reid vapor pressure in excess of 25 pounds per square inch, absolute, in independent tanks (Part 32).

(2) Liquefied flammable gases (Part 38 of this subchapter).

(3) Flammable or combustible liquids having lethal characteristics (Class B or C poisons) (Part 39 of this subchapter).

(4) Certain flammable or combustible dangerous cargoes (Part 40 of this subchapter).

§ 32.63–5 Barge hull classification—B/ALL.

(a) Each barge subject to the provision of this subpart shall be assigned a hull type number. The Commandant will designate the barge hull types to be used for carrying cargoes in order to insure that the vessel is designed consistent with the degree and nature of the hazard of the commodity carried.

(b) For this purpose the barge hull types shall be as follows:

(1) *Type I barge hull.* Barge hulls classed as Type I are those designed to carry products which require the maximum preventive measures to preclude the uncontrolled release of the cargo to the waterways and/or atmosphere.

(2) *Type II barge hull.* Barge hulls classed as Type II are those designed to carry products which require substantial preventive measures to preclude uncontrolled release to the atmosphere, but whose uncontrolled release to the waterways does not constitute a longlasting public or operating personnel hazard, though local and temporary pollution may occur.

(3) *Type III barge hull.* Barge hulls classed as Type III are those designed to carry products of sufficient hazard to require a moderate degree of control.

§ 32.63–8 Alternative arrangements—B/ALL.

(a) Alternative arrangements, differing from those specifically required by this subpart, may be considered and approved by the Commandant, if it is demonstrated to his satisfaction that a degree of safety is obtained which is consistent with the intent of this subpart.

§ 32.63–10 Rakes and coamings—B/ALL.

(a) Each barge hull shall be constructed with a suitable bow form (length, shape, and height of headlog) to protect against diving at the maximum speed at which the barge is designed to be towed. In any integrated tow, only the lead barge need comply with this requirement. In any case, the operator of the towing vessel shall be guided by appropriate speed limitations.

(b) All open hopper type barge hulls shall be provided with coamings around the hopper space and, additionally, a 36-inch minimum height plowshare breakwater on the forward rake. Coamings shall have a minimum height of 36 inches forward graduated to a minimum height of 24 inches at midlength and 18 inches thereafter.

§ 32.63–15 Subdivision and stability—B/ALL.

(a) *General.* In addition to complying with the requirements of § 31.10–30 of this subchapter as applicable, Types I and II barge hulls shall comply with the applicable provisions of this section.

(b) *Types I and II barge hulls.* (1) Types I and II barge hulls shall be constructed with a complete watertight deck, or if of "open hopper type", of such construction that positive buoyancy and stability will be maintained when the barge is fully loaded and the hopper space is flooded to the height of the main deck. Credit may be given for the buoyancy, if any, of the immersed portion of the full cargo tanks when an effective arrangement for securing the tanks is provided.

(2) (i) Type I barge hulls shall retain positive buoyancy and stability after holing the bottom or side shell plating anywhere on its girth, including the intersection of a transverse and a longitudinal watertight bulkhead.

(ii) Type I box barge hulls, specifically designed for operation in an integrated tow, shall retain positive buoyancy and stability after holing the bottom shell plating anywhere on its girth, except in way of a transverse watertight bulkhead, or after holing the side shell plating in way of a transverse watertight bulkhead.

(3) Type II barge hulls shall retain positive buoyancy and stability after holing the bottom or side shell plating anywhere on its girth except in way of a transverse watertight bulkhead.

§ 32.63–20 Hull structure—B/ALL.

(a) *General.* In addition to complying with the requirements of § 32.60–1, as applicable, barge hulls of Types I and II shall comply with the provisions of this section.

(b) *Types I and II barge hull.* Under an assumed grounding condition such that the forward rake bulkhead rests upon a pinnacle at the water surface, the maximum hull bending stress shall not exceed the following limits:

(1) Independent tanks may be installed in such a manner that they do not contribute to the strength and stiff-

ness of the barge. In such case, the hull stress shall not exceed either 50 percent of the minimum ultimate tensile strength of the material or 70 percent of the yield strength when specified, whichever is greater.

(2) The Commandant may consider a reduction in hull stress when independent tanks are installed in such a manner as to contribute to the strength and stiffness of the barge and this is accounted for in determining the effective section modulus of the barge. In such case, the hull stress shall not exceed the percentage stress values prescribed in subparagraph (1) of this paragraph multiplied by the quantity $\left(1.5-\frac{SWT}{UTS}\right)$, where SWT is the stress calculated without including the effect of the tanks, and UTS is the minimum ultimate tensile strength of the material. The value SWT, however, shall in no case be more than 75 percent of UTS.

§ 32.63–25 Cargo tanks and supports—B/ALL.

(a) *General.* Saddles and hold-down securing straps for independent cargo tanks shall be designed to prevent tank failure due to loads induced in the saddles or straps by barge deflection.

(b) *Collision protection.* (1) All independent cargo tanks installed on Type I and Type II barge hulls shall be protected with suitable collision chocks or collision straps to withstand a longitudinal collision load of one and one-half times the weight of the tank and cargo. All other independent cargo tanks shall be provided with suitable collision chocks or collision straps to withstand a longitudinal collision load equal to the weight of the tank and cargo.

(2) All cargo tanks shall be so located as to reduce the likelihood of their being damaged in the event of collision. This protection shall be obtained by locating the cargo tanks not less than 4 feet from the side shell and box-end for Type I hulls and 3 feet for Type II barge hulls, and not less than 25 feet from the headlog at the bow for both types.

(c) *Cargo tank design*—(1) *Types I and II barge hulls.* (i) In addition to requirements provided for in applicable regulations for a specific commodity, cargoes subject to the provisions of this subpart shall be transported in cargo tanks meeting the requirements of this paragraph. Pressure vessel-type cargo tanks shall have sufficient additional strength so as to limit the maximum combined tank stress, including saddle horn and bending stresses, to 1.5 times the maximum allowable hoop stress in still water, and to the yield strength of the tank material or 70 percent of the minimum ultimate tensile strength of the tank material, if less, in the grounded condition as required by § 32.63–20(b).

(ii) Gravity type cargo tanks shall have sufficient additional strength to limit the maximum combined tank stress, including saddle horn and bending stresses, to the yield strength of the tank material or 70 percent of the minimum ultimate tensile strength of the tank material, if less, in the grounded condition as required by § 32.63–20(b).

(2) *Type III barge hulls.* In addition to the requirements of this paragraph, pressure vessel-type cargo tanks shall have sufficient additional strength so as to limit the maximum combined stress, including saddle horn and bending stresses, to 1.5 times the maximum allowable hoop stress.

Subpart 32.65—Hull Requirements for Tank Vessels Constructed on or After November 10, 1936, and Prior to July 1, 1951

§ 32.65–1 Application—TB/ALL.

The requirements in this subpart apply to all tank vessels, the construction or conversion of which was started on or after November 10, 1936, and prior to July 1, 1951.

§ 32.65–5 Scantlings, material, and workmanship—TB/ALL.

The hull and deck houses shall be of steel or iron construction except that the pilothouse and decks over quarters may be constructed of wood. Scantlings, material, and workmanship, subdivision of cargo spaces, fitting of cofferdams, and testing of tanks shall be at least equivalent to the requirements of the American Bureau of Shipping or other recognized classification society.

§ 32.65–10 Subdivision of cargo space—TB/ALL.

The cargo space shall be divided into tight compartments as necessary to avoid excessive stresses and to provide stability.

§ 32.65–15 Cofferdams—TB/ALL.

Tank vessels equipped to carry Grade A, B, C, or D liquids shall have their galleys, living quarters, general cargo spaces, boiler rooms, and enclosed spaces containing propelling machinery or other machinery where sources of vapor ignition are normally present, segregated from their cargo tanks by cofferdams or equivalent pumprooms, tanks, or air spaces.

§ 32.65–20 Pumprooms—TB/ALL.

(a) Tank vessels handling Grade A, B, C, or D liquids shall have their cargo pumps isolated from all sources of vapor ignition by gastight bulkheads. Totally enclosed motors of the "explosion proof" type, motors ventilated on both the intake and exhaust by ducts to atmosphere, and engines driven by steam shall not be considered to be sources of vapor ignition. The gastight bulkhead between the pumproom and the pump-engine compartment may be pierced by fixed lights, drive shaft and pump-engine control rods, provided that the shafts and rods are fitted with stuffing boxes where they pass through the gastight bulkheads. The access to a cargo pumproom handling such liquids shall be from the open deck. (See § 32.60–20.)

§ 32.65–25 Living quarters—TB/ALL.

Partitions and sheathing shall be of approved fire-resistive construction.

§ 32.65–30 Tank vessels with independent tanks—TB/ALL.

Independent cargo tanks may be located in hold spaces or in other cargo tanks but in all cases a working space of at least 15 inches shall be provided around such independent tanks, or else provisions shall be made for moving them to secure such space. When independent cargo tanks are located in an enclosed space other than a cargo tank, such enclosed space shall be considered as equivalent to a pumproom, and shall be safeguarded as such, as required in the regulations in this subchapter.

§ 32.65–35 Tank vessels carrying Grade A liquids—TB/ALL.

Cargo tanks for Grade A liquids having a Reid vapor pressure in excess of 25 pounds shall be independent of the hull.

§ 32.65–40 Construction and testing of cargo tanks and bulkheads—TB/ALL.

(a) All cargo tanks to be vented at gage pressures of 4 pounds per square inch or less shall be constructed and tested as required by the requirements of the American Bureau of Shipping or other recognized classification society.

(b) All cargo tanks to be vented at gage pressures above 4 pounds per square inch shall be considered as unfired pressure vessels and shall meet the requirements for such vessels as to construction and testing, as set forth in Parts 52 to 57, inclusive, of Subchapter F (Marine Engineering) of this chapter.

(c) Gastight bulkheads shall be subjected to a thorough hose test.

Subpart 32.70—Hull Requirements for Steel Hull Tank Vessels Constructed Prior to November 10, 1936

§ 32.70–1 Application—TB/ALL.

All steel hull tank vessels, the construction or conversion of which was started prior to November 10, 1936, shall conform to the requirements in this subpart.

§ 32.70–5 Hull requirements; general—TB/ALL.

The scantlings, material, and workmanship, the subdivision of cargo spaces, the arrangement of cofferdams, the testing of tanks and cofferdams, shall be at least equivalent to the requirements of a recognized classification society for the particular service specified in the application for the certificate of inspection and permit for the transportation of liquid inflammable cargoes in bulk as of the date when the tank vessel was built or as of the date when the vessel was converted into a tank vessel. In the absence of such classification requirements, the Officer in Charge, Marine Inspection, shall satisfy himself that the vessel's structure as specified in this section is safe for the service to be specified in its certificate of inspection.

§ 32.70–10 Cofferdams—TB/ALL.

Tank vessels carrying Grade A, B, or C liquids shall be required to conform to

the construction requirements in regard to vertical cofferdams in § 32.65–15, except that a dry cargo compartment shall be considered to be equivalent to a cofferdam, and except as provided for in § 32.70–20.

§ 32.70–15 Pumprooms—TB/ALL.

Tank vessels handling Grade A, B, C or D liquid cargo shall meet the requirements for tank vessels in § 32.65–20 except that the electrical installation shall comply with the requirements of § 32.45–10(c).

§ 32.70–20 Pump-engine compartment—TB/ALL.

No cofferdam will be required between a cargo tank and a compartment containing pumping engines and their auxiliaries which are used exclusively during pumping operations, provided the pumping engine compartment contains no cargo valves and is well ventilated and provided further that internal combustion exhaust within the compartment are completely water jacketed or insulated and that gasoline engine intakes are fitted with effective flame arresters.

§ 32.70–25 Cargo tanks—TB/ALL.

Cargo tanks shall comply with the conditions specified in §§ 32.65–30 and 32.65–35, and shall pass the tests required in § 32.65–40: *Provided, however,* That less than 15 inches around such tanks may be accepted if in the judgment of the Officer in Charge, Marine Inspection, making the inspection, a satisfactory inspection of the cargo tanks and hull structure can be made.

Subpart 32.75—Hull Requirements for Wood Hull Tank Vessels Constructed Prior to November 10, 1936

§ 32.75–1 Application—TB/ALL.

All wood hull tank vessels, the construction or conversion of which was started prior to November 10, 1936, shall conform to the requirements in this subpart.

§ 32.75–5 Hull requirements; general—TB/ALL.

The scantlings, material, and workmanship, and the fitting and fastening of parts shall be at least equivalent to the requirements of a recognized classification society for the particular service specified in the application for certificate of inspection and permit for the transportation of liquid flammable cargoes in bulk as of the date when the tank vessel was built, or as of the date when the vessel was converted into a tank vessel. In the absence of such classification requirements, the Officer in Charge, Marine Inspection, shall satisfy himself that the vessel's structure as specified in this section is safe for the service to be specified in its certificate of inspection.

§ 32.75–10 Cargo tanks—TB/ALL.

Cargo tanks shall be independent of the wood hull, shall be made of steel or iron, and shall pass the tests required in § 32.65–40 (a), (b). Where cargo tanks in wood hulls are not arranged to provide working space around them they shall be so constructed as to allow inspection of the hull, tanks, and bilges, and they shall be so installed that they can be moved to allow repairs to the hull structure and to themselves.

§ 32.75–15 Electric bonding and grounding for tanks—TB/ALL.

All independent cargo tanks in wood hull tank vessels shall be electrically bonded together with stranded copper cable of not less than No. 4 B and S gage and one end of this cable shall be grounded to a copper or brass plate of not less than 2 square feet in area and one-sixteenth inch in thickness and this plate shall be securely fastened to the hull, on the outside, at a point where it shall be covered by water when the tank vessel is unloaded.

§ 32.75–20 Hold spaces and bulkheads—TB/ALL.

In wood hull tank vessels containing independent cargo tanks for the transportation of Grade A, B, C, or D liquids, the hold spaces shall be considered as equivalent to a pumproom and shall be safeguarded and ventilated as such as required by § 32.65–20. Where the hold spaces contain equipment or operations which are sources of vapor ignition, such equipment or operations shall be isolated from other spaces by gastight bulkhead or, if it is impracticable to construct a gastight bulkhead, two structurally tight bulkheads without openings, separated by a well-ventilated air space 24 inches wide, where possible may be used.

Subpart 32.80—Tank Barges Constructed of Materials Other Than Steel or Iron

§ 32.80–1 General requirements—B/ALL.

All tank barges with hulls constructed of materials other than iron or steel, the construction or conversion of which was started prior to September 2, 1945, and to which certificates of inspection were issued prior to March 2, 1946, shall be considered the same as tank barges constructed prior to November 10, 1936.

Subpart 32.85—Lamp and Paint Rooms and Similar Compartments on Tankships

§ 32.85–1 Fireproofing of lamp, oil and paint rooms—T/ALL.

Lamp, oil and paint rooms shall be wholly and tightly lined with metal.

PART 33—LIFESAVING APPLIANCES

Subpart 33.01—General Lifesaving Requirements

Sec.
- 33.01–1 Inspection of lifesaving appliances—TB/ALL.
- 33.01–5 Construction of lifesaving equipment—TB/ALL.
- 33.01–15 Responsibility of master regarding lifesaving equipment—TB/ALL.
- 33.01–20 Approval for repairs and alterations—TB/ALL.
- 33.01–25 Factory inspection of lifesaving equipment—TB/ALL.
- 33.01–27 Weight test of lifeboat installation—T/ALL.
- 33.01–30 Approval of lifesaving appliances—TB/ALL.
- 33.01–35 Magazine chests for pyrotechnic equipment—T/ALL.

Subpart 33.05—Lifeboats, Liferafts, and Buoyant Apparatus Required

- 33.05–1 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which was started prior to November 19, 1952—T/OC.
- 33.05–2 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which was started on or after November 19, 1952, and prior to May 26, 1965—T/OC.
- 33.05–3 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which started on or after May 26, 1965—T/OC.
- 33.05–5 Lifeboats for barges; ocean—B/O.
- 33.05–15 Lifeboats for barges; coastwise—B/C.
- 33.05–20 Lifeboats and liferafts for tank vessels; Great Lakes—TB/L.
- 33.05–25 Lifeboats, liferafts, or buoyant apparatus for tank vessels; bays, sounds, lakes other than Great Lakes, and rivers—TB/BR.
- 33.05–30 Equipment for tank vessels on short voyages beyond certificated waters—TB/LB.
- 33.05–35 Wooden lifeboats prohibited on tank vessels—TB/ALL.

Subpart 33.07—Substitution of Inflatable Liferafts for Other Liferafts, Lifefloats, and Buoyant Apparatus on Certain Vessels Not on an International Voyage

- 33.07–1 Inflatable liferafts on barges—B/ALL.
- 33.07–5 Inflatable liferafts for other liferafts, lifefloats, and buoyant apparatus—T/ALL.
- 33.07–10 Inflatable liferafts for lifeboats on tankships under 500 gross tons—T/ALL.
- 33.07–15 Inflatable liferafts for lifeboats on certain tankships of 500 to 1,600 gross tons—T/ALL.
- 33.07–20 Inflatable liferafts for lifeboats on certain tankships of 1,600 to 3,000 gross tons—T/ALL.
- 33.07–25 Inflatable liferafts for lifeboats on certain tankships of 3,000 gross tons and upward—T/ALL.

Subpart 33.10—Lifeboat Handling Equipment Requirements

- 33.10–1 Lifeboat davits—TB/ALL.
- 33.10–5 Lifeboat winches—TB/ALL.
- 33.10–10 Blocks and falls—TB/ALL.
- 33.10–15 Disengaging apparatus—T/OCL.
- 33.10–20 Disengaging apparatus—T/BR and B/ALL.

Subpart 33.15—Equipment for Lifeboats, Liferafts, or Buoyant Apparatus

- 33.15–1 Lifeboat, liferaft or buoyant apparatus equipment; general—TB/ALL.
- 33.15–5 Required equipment for lifeboats—TB/ALL.
- 33.15–10 Description of equipment for lifeboats—TB/ALL.
- 33.15–15 Required equipment for rigid type liferafts and buoyant apparatus—TB/LBR.
- 33.15–16 Required equipment for inflatable liferafts—TB/ALL.
- 33.15–20 Description of equipment for life rafts and buoyant apparatus—TB/LBR.
- 33.15–25 Portable radiotelegraph apparatus—T/OC.

Sec.
33.15-90 Lifeboat, liferaft and buoyant apparatus equipment on tank vessels contracted for prior to May 26, 1965—TB/ALL.

Subpart 33.20—Stowage of Lifeboats, Liferafts, and Buoyant Apparatus

33.20-1 Davits and launching devices—TB/ALL.
33.20-3 Embarkation aids into inflatable liferafts—T/ALL.
33.20-5 Lifeboat davit falls—T/ALL.
33.20-10 Lifeboats and liferafts kept clear for launching—TB/ALL.
33.20-15 Stowage of lifeboats and liferafts—TB/ALL.

Subpart 33.25—Markings, Care, and Inspection

33.25-5 Numbering and marking of lifeboats—TB/ALL.
33.25-10 Marking of liferafts—TB/ALL.
33.25-15 Overhaul—TB/ALL.
33.25-20 Maintenance—TB/ALL.

Subpart 33.30—Manning of Lifeboats and Liferafts

33.30-1 Persons in charge of each lifeboat and liferaft—T/O.
33.30-3 Person in charge of each lifeboat or liferaft—T/CLB.
33.30-5 Manning of lifeboats and liferafts—TB/OCLB.

Subpart 33.35—Life Preservers

33.35-1 Number and type required—TB/ALL.
33.35-5 Distribution and stowage—TB/ALL.
33.35-10 Shipboard inspections—TB/ALL.
33.35-15 Requirements for life preservers—TB/ALL.

Subpart 33.40—Ring Life Buoys and Water Lights

33.40-1 Ring life buoys and water lights, general requirements—TB/ALL.
33.40-5 Number required on tankships—T/ALL.
33.40-10 Number required on tank barges—B/ALL.
33.40-15 Distribution and security—TB/ALL.

Subpart 33.45—Distress Signals

33.45-1 Distress signals—T/ALL and B/OC.
33.45-5 Parachute distress signals—T/OC.
33.45-10 Stowage of distress signals—TB/ALL.

Subpart 33.50—Signaling Lamp

33.50-1 Signaling lamp—T/O.

Subpart 33.55—Line-Throwing Appliances

33.55-1 Line-throwing appliances required—T/OC.
33.55-5 Accessibility—T/OC.
33.55-10 Equipment for line-throwing appliances—T/OC.
33.55-15 Service recommendations—T/OC.

AUTHORITY: The provisions of this Part 33 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply R.S. 4488, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 481, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-38, Oct. 26, 1959, 24 F.R. 8857, unless otherwise noted.

Subpart 33.01—General Lifesaving Requirements

§ 33.01-1 Inspection of lifesaving appliances—TB/ALL.

At each inspection for certification and at any other time as required by the Officer in Charge, Marine Inspection, all lifesaving appliances on a tank vessel shall be inspected.

§ 33.01-5 Construction of lifesaving equipment—TB/ALL.

All tank vessels subject to the regulations in this subchapter shall have lifeboats, disengaging apparatus, liferafts, life preservers, and all other lifesaving apparatus constructed in accordance with the regulations contained in the applicable subparts of Subchapter Q (Specifications) of this chapter: *Provided, however,* That all lifesaving apparatus which is of the character that complied with the rules and regulations of the Commandant, on vessels in existence at the time that the regulations in this subchapter are promulgated and have been in use on such vessels, may be continued in use so long as such existing lifesaving equipment and apparatus are found to be in good and workable condition. Where lifesaving equipment and apparatus are not found to be in good and workable condition, they shall be repaired or else replaced by lifesaving equipment and apparatus of the latest approved type, as required by the regulations in this subchapter and Subchapter Q (Specifications) of this chapter. Where lifesaving equipment and apparatus are found to be in good and workable condition but deficient as to quantity or numbers, the additional quantity or numbers required by the regulations in this subchapter shall be of the latest approved type.

§ 33.01-15 Responsibility of master regarding lifesaving equipment—TB/ALL.

It shall be the duty of the master or person in charge to see that the lifeboats, liferafts, davits, falls, life preservers, and other lifesaving appliances are at all times ready for use, and that all equipment for his vessel required by the regulations in this subchapter are provided, maintained, and replaced as indicated.

§ 33.01-20 Approval for repairs and alterations—TB/ALL.

No extensive repairs or alterations, except in emergency, shall be made to any lifeboat, lifeboat disengaging apparatus, life preserver, liferaft, or other appliance subject to inspection, without advance notice to the Officer in Charge, Marine Inspection. Such repairs and alterations shall so far as is practicable be made with materials and tested in the manner specified in this subchapter and applicable requirements in Subchapter Q (Specifications) of this chapter for new construction. Emergency repairs or alterations shall be reported as soon as practicable to the Officer in Charge, Marine Inspection, where the vessel may call after such repairs are made; nor shall any lifeboat or liferaft be reconditioned or used on a tank vessel other than that for which it was built, without notice to and supervision by the Officer in Charge, Marine Inspection, where such reconditioning or repairs are to be made.

§ 33.01-25 Factory inspection of lifesaving equipment—TB/ALL.

The Coast Guard District Commander where lifesaving apparatus is built shall detail an inspector to any place where lifeboats, liferafts, or buoyant apparatus are being built, who will inspect and examine carefully their construction and he shall satisfy himself that such lifeboats, liferafts, or buoyant apparatus are constructed in accordance with the drawings, or blueprints, and specifications furnished by the builders to the Coast Guard. When the inspector approves the construction of the lifeboat, life raft, or buoyant apparatus, he will stamp his initials, together with the letters "U.S.C.G." on a blank space on the plate required to be affixed to the unit by the builder. The initials of the inspector shall be satisfactory evidence to all parties interested that the unit has been constructed in accordance with the drawings, or blueprints, and specifications on file with the Coast Guard.

§ 33.01-27 Weight test of lifeboat installation—T/ALL.

(a) The following test shall be made at least once in each two-year period. If practicable, it shall be made at the inspection for certification or at a reinspection.

(b) Each lifeboat shall be lowered to near the water and then be loaded with its allowed capacity, evenly distributed throughout the length, and then be lowered into the water until it is afloat, and be released from the falls. In making this test, persons or dead weight may be used. The total weight used shall be at least equal to the allowed capacity of the lifeboat considering persons to weigh 165 pounds each.

§ 33.01-30 Approval of lifesaving appliances—TB/ALL.

(a) Any type of lifeboat or liferaft approved by the Commandant shall be considered as equivalent to the standard lifeboat or liferaft.

(b) Lifeboats shall be of an approved type and constructed in accordance with Subpart 160.035 of Subchapter Q (Specifications) of this chapter.

(c) A Class 1 motor lifeboat is one that is fitted with a compression-ignition engine, is capable of being readily started in all conditions, and has sufficient fuel for 24 hours continuous operation. The speed ahead in smooth water when loaded with its full complement of persons and equipment shall be at least 6 knots.

(d) Rigid type liferafts shall be of an approved type and constructed in accordance with Subpart 160.018 of Subchapter Q (Specifications) of this chapter.

(e) Buoyant apparatus shall be of an approved type and constructed in accordance with Subpart 160.010 of Subchapter Q (Specifications) of this chapter.

(f) Inflatable liferafts shall be of an approved type constructed in accordance with Subpart 160.051 of Subchapter Q (Specifications) of this chapter. On tankships on an international voyage, each inflatable liferaft shall have a car-

rying capacity of not less than 6 nor more than 25 persons.

(g) In general, a suitable rescue boat shall be a small lightweight boat of rigid construction, with built-in buoyancy and capable of being readily launched and easily maneuvered. Also it shall be of adequate proportion to permit taking an unconscious person on board without capsizing. A rescue boat and its installation shall be acceptable to the Officer in Charge, Marine Inspection, as suitable for the rescue of persons accidentally falling over the side, or for similar emergency purposes. The size, shape, installation, and other factors of suitability will be determined with due consideration of the size, arrangement, intended service and crew requirements of the vessel on which it is to be installed.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 33.01–35 Magazine chests for pyrotechnic equipment—T/ALL.

Tank ships required to carry pyrotechnic distress signals or line-throwing appliances shall be provided with a portable magazine chest. (See Subpart 160.038, portable magazine chests, of Subchapter Q (Specifications) of this chapter.) Magazine chests shall be secured above the freeboard deck away from heat. Stowage in enclosed spaces or adjacent to cargo tanks is prohibited.

Subpart 33.05—Lifeboats, Liferafts, and Buoyant Apparatus Required

§ 33.05–1 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which was started prior to November 19, 1952—T/OC.

(a) All tankships shall carry a sufficient number of lifeboats on each side to accommodate all persons on board: *Provided*, That such tankships of 350 feet in length or over in ocean service, having superstructure amidships and propelling machinery aft shall be provided with at least four lifeboats, one on each side in way of the after accommodations, and one on each side in way of amidship accommodations.

(b) No lifeboat shall be of less than 180 cubic feet measurement, except, in the case of coastwise vessels, if specifically approved by the Commandant.

(c) All tankships of 1,600 gross tons and over on an international voyage shall carry at least one Class 1 motor lifeboat on each side. The requirement of this paragraph shall not apply except for replacements, and then only if it can be done without change to existing davits, winches, and arrangements.

(d) Inflatable liferafts may be substituted for lifeboats on certain vessels not on an international voyage in accordance with Subpart 33.07.

(e) All tankships in ocean service, and all tankships of less than 1,600 gross tons on an international voyage shall carry inflatable liferafts of sufficient capacity to accommodate at least 50 percent of the persons on board. Those tankships having widely separated accommodation and/or working spaces shall have at least one liferaft in each such location.

§ 33.05–2 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which was started on or after November 19, 1952 and prior to May 26, 1965—T/OC.

(a) All tankships shall carry a sufficient number of lifeboats on each side to accommodate all persons on board: *Provided*, That such tankships of 3,000 gross tons and over, having a superstructure amidships and propelling machinery aft shall be provided with at least four lifeboats, one on each side in way of the after accommodations, and one on each side in way of amidship accommodations.

(b) No lifeboat shall be less than 24 feet in length, except where owing to the size of the tankship, or for other reasons, the Commandant may permit smaller lifeboats, but in no case shall they be less than 16 feet in length.

(c) All tankships of 1,600 gross tons and over on an international voyage shall carry at least one Class 1 motor lifeboat on each side. The requirement of this paragraph shall not apply except for replacements, and then only if it can be done without change to existing davits, winches, and arrangements.

(d) Inflatable liferafts may be substituted for lifeboats on certain vessels not on an international voyage in accordance with Subpart 33.07.

(e) All tankships in ocean service, and all tankships of less than 1,600 gross tons on an international voyage shall carry inflatable liferafts of sufficient capacity to accommodate at least 50 percent of the persons on board. Those tankships having widely separated accommodation and/or working spaces shall have at least one liferaft in each such location.

§ 33.05–3 Lifeboats and liferafts for tankships; ocean and coastwise; construction or conversion of which started on or after May 26, 1965—T/OC.

(a) All ocean and coastwise tankships shall carry a sufficient number of lifeboats on each side to accommodate all persons on board.

(b) All tankships of 3,000 gross tons and over on an international voyage shall carry not less than four lifeboats. Two lifeboats shall be carried aft and two amidships except that in tankships which have no amidships superstructure all lifeboats shall be carried aft: *Provided*, That, if in the case of tankships with no amidships superstructure it is impracticable to carry four lifeboats aft, the Commandant may permit instead the carriage aft of one lifeboat on each side of the ship. In such cases:

(1) Each lifeboat shall not exceed 26 feet in length;

(2) Each lifeboat shall be stowed as far forward as practicable, but at least so far forward that the after end of the lifeboat is 1½ times the length of the lifeboat forward of the propeller; and

(3) Each lifeboat shall be stowed as near the sea level as is safe and practicable.

(c) No lifeboat shall be less than 24 feet in length, except where owing to the size of the tankship, or for other reasons, the Commandant may permit smaller lifeboats, but in no case shall they be less than 16 feet in length.

(d) All tankships 1,600 gross tons and over on an international voyage shall carry on each side at least one Class 1 motor lifeboat.

(e) All tankships certificated for ocean service, and all tankships of less than 1,600 gross tons on an international voyage shall carry inflatable liferafts of sufficient capacity to accommodate at least 50 percent of the persons on board. Those tankships having widely separated accommodation and/or working spaces shall have at least one liferaft in each such location.

(f) Inflatable liferafts may be substituted for lifeboats on certain vessels not on an international voyage in accordance with Subpart 33.07.

§ 33.05–5 Lifeboats for barges; ocean—B/O.

(a) All tank barges which normally operate more than 20 miles offshore shall carry a sufficient number of lifeboats to accommodate all persons on board.

(b) No lifeboat shall be of less than 125 cubic feet measurement.

(c) Inflatable liferafts may be substituted for lifeboats on certain vessels in accordance with Subpart 33.07.

§ 33.05–15 Lifeboats for barges; coastwise—B/C.

(a) All tank barges which normally operate 20 miles or less offshore shall carry a sufficient number of lifeboats to accommodate all persons on board.

(b) No lifeboat on a tank barge of 100 gross tons or over shall be of less than 125 cubic feet measurement, except by approval of the Commandant. No lifeboat on a tank barge of less than 100 gross tons shall be of less than 90 cubic feet measurement, except by approval of the Commandant.

(c) Inflatable liferafts may be substituted for lifeboats on certain vessels in accordance with Subpart 33.07.

§ 33.05–20 Lifeboats and liferafts for tank vessels; Great Lakes—TB/L.

(a) All tank vessels operating on the waters of the Great Lakes shall carry a sufficient number of lifeboats to accommodate all persons on board.

(b) No lifeboat on a tank vessel of 100 gross tons or over shall be of less than 90 cubic feet measurement, except by approval of the Commandant. No lifeboat on a tank vessel of less than 100 gross tons shall be of less than 60 cubic feet measurement.

(c) All tankships of 300 gross tons and over, operating on the waters of the Great Lakes, shall carry in addition to their lifeboat equipment, one approved and fully equipped liferaft of suitable size, with one electric water light; the raft to be stowed in a manner to allow same to float clear in the event of sinking of the vessel: *Provided, however*, That all tankships of 300 gross tons or over operating on the waters of the Great Lakes which are equipped with lifeboats in accordance with § 33.05–1 or § 35.05–10 shall be exempt from this requirement. The electric water light need not be attached to the raft, but when the electric

water light is not attached to the raft, a snap hook shall be provided for this purpose.

(d) Inflatable liferafts may be substituted for lifeboats and liferafts on certain vessels in accordance with Subpart 33.07.

§ 33.05–25 Lifeboats, liferafts, or buoyant apparatus for tank vessels; bays, sounds, lakes other than Great Lakes, and rivers—TB/BR.

(a) All tank vessels, except those on an international voyage, operating exclusively on bays, sounds, lakes (other than the Great Lakes), rivers, harbors, or inland waters tributary to the Gulf of Mexico, shall carry lifeboats, liferafts, or buoyant apparatus of sufficient number to accommodate all persons on board.

(b) No lifeboat shall be of less than 60 cubic feet measurement.

(c) The minimum size of any piece of buoyant apparatus shall be such as to accommodate at least five persons.

(d) Inflatable liferafts may be substituted for lifeboats, liferafts and buoyant apparatus on certain vessels in accordance with Subpart 33.07.

(e) All tankships on an international voyage shall meet the applicable requirements of §§ 33.05–1 through 33.05–3.

§ 33.05–30 Equipment for tank vessels on short voyages beyond certificated waters—TB/LB.

(a) The Officer in Charge, Marine Inspection, may issue permits to tank vessels of less than 100 gross tons which are certificated for lake, bay, and sound routes, to engage on short voyages to points beyond such waters, but not more than 15 miles from port of refuge: *Provided*, That such vessels are equipped with a sufficient number of lifeboats, liferafts, or buoyant apparatus to accommodate all persons on board.

(b) No lifeboat shall be of less than 60 cubic feet measurement. The minimum size of any liferaft or piece of buoyant apparatus shall be such as to accommodate at least five persons.

(c) Inflatable liferafts may be substituted for lifeboats, liferafts and buoyant apparatus on certain vessels in accordance with Subpart 33.07.

§ 33.05–35 Wooden lifeboats prohibited on tank vessels—TB/ALL.

Lifeboats installed on tank vessels after September 1, 1943, shall be constructed of metal or other material approved by the Commandant. Internals, such as buoyancy tanks, water tanks, and provision and equipment lockers may be constructed of suitable materials other than metal which have been approved by the Commandant.

Subpart 33.07—Substitution of Inflatable Liferafts for Other Liferafts, Lifefloats, and Buoyant Apparatus on Certain Vessels Not On an International Voyage

§ 33.07–1 Inflatable liferafts on barges—B/ALL.

(a) On all tank barges inflatable liferafts may be substituted for lifeboats, other types of liferafts, lifefloats, and buoyant apparatus wherever they may be required.

(b) The capacity of inflatable rafts carried in place of other liferafts, lifefloats, and buoyant apparatus shall be sufficient to accommodate all persons on board.

(c) The substitution of inflatable liferafts shall not be made without prior approval of the Officer in Charge, Marine Inspection.

§ 33.07–5 Inflatable liferafts for other liferafts, lifefloats and buoyant apparatus—T/ALL.

(a) On all tankships inflatable liferafts may be permitted as substitutes for other types of liferafts, lifefloats and buoyant apparatus required by this subpart.

(b) The capacity of inflatable liferafts carried in place of other type liferafts, lifefloats and buoyant apparatus shall be at least equivalent to that required of equipment for which substitution is made.

(c) The substitution of inflatable liferafts shall not be made without prior approval of the Officer in Charge, Marine Inspection.

§ 33.07–10 Inflatable liferafts for lifeboats on tankships under 500 gross tons—T/ALL.

(a) On all tankships under 500 gross tons, inflatable liferafts may be substituted for all required lifeboats.

(b) The total capacity of the inflatable liferafts shall be at least equal to the total number of persons that the lifeboats would have been required to accommodate. Partial substitution is permissible provided the aggregate lifeboat and inflatable liferaft capacity is sufficient to accommodate the required number of persons carried.

(c) Where substitution of inflatable liferafts is made, a suitable rescue boat shall be provided. In the case of partial substitution, a lifeboat may serve as the rescue boat.

(d) The substitution of inflatable liferafts for lifeboats shall not be made without prior approval of the Officer in Charge, Marine Inspection.

§ 33.07–15 Inflatable liferafts for lifeboats on certain tankships of 500 to 1,600 gross tons—T/ALL.

(a) On all tankships of 500 gross tons and upwards to 1,600 gross tons inflatable liferafts may be substituted for all required lifeboats provided one approved lifeboat of a size acceptable to the Officer in Charge, Marine Inspection, suitable for rescue purposes, is installed.

(b) The aggregate lifeboat and inflatable liferaft capacity shall be at least equal to the total number of persons that the lifeboats would have been required to accommodate.

(c) The launching arrangement and location of the lifeboat to be used as rescue boat shall be such that it can be readily launched and shall be to the satisfaction of the Officer in Charge, Marine Inspection.

(d) The substitution of inflatable liferafts for lifeboats shall not be made without prior approval of the Officer in Charge, Marine Inspection.

§ 33.07–20 Inflatable liferafts for lifeboats on certain tankships of 1,600 to 3,000 gross tons—T/ALL.

(a) On all tankships of 1,600 gross tons and upwards to 3,000 gross tons inflatable liferafts may be substituted for all except two of the required lifeboats. These lifeboats shall be of a size acceptable to the Officer in Charge, Marine Inspection, and shall be suitable for rescue purposes. In all cases, two approved lifeboats, one on each side, shall be provided.

(b) The aggregate lifeboat and inflatable liferaft capacity shall be at least equal to the total number of persons that the lifeboats, for which substitutions are made plus those remaining on board, would have been required to accommodate.

(c) The substitution of inflatable liferafts for lifeboats shall not be made without prior approval of the Officer in Charge, Marine Inspection.

§ 33.07–25 Inflatable liferafts for lifeboats on certain tankships of 3,000 gross tons and upward—T/ALL.

(a) The Commandant may give special consideration to the substitution of approved inflatable liferafts for required lifeboats on tankships of 3,000 gross tons and over.

Subpart 33.10—Lifeboat Handling Equipment Requirements

§ 33.10–1 Lifeboat davits—TB/ALL.

(a) No type or make of mechanical or gravity davit shall be used unless it has first been approved by the Commandant. For construction of davits see Subpart 160.032 of Subchapter Q (Specifications) of this chapter.

(b) On any tank vessel the keel of which was laid after September 1, 1941, davits for lifeboats weighing in excess of 5,000 pounds when fully equipped (but without persons) shall be of the gravity type.

(c) On tank vessels of 1,600 gross tons and over on an international voyage, contracted for on or after May 26, 1965, all davits shall be of the gravity type.

(d) No davit arm or frame comprising mechanical or gravity davits shall be placed on board any vessel until all the requirements of this section and Subpart 160.032 of Subchapter Q (Specifications) of this chapter have been met.

(e) Whenever mechanical or gravity davits or parts of davits, such as davit arms, or frames, are installed on vessels, to take the place of davits, davit arms, or frames which have been damaged or broken, such davits or frames shall have the manufacturer's nameplate affixed thereto.

§ 33.10–5 Lifeboat winches—TB/ALL.

(a) When lifeboat winches are installed on tank vessels, wire falls shall be provided for each set of davits.

(b) On tankships of 500 gross tons and over in ocean or coastwise service, construction or conversion of which is started on or after November 19, 1952, lifeboat winches shall be provided for all lifeboats, where the deck on which the lifeboats are carried exceeds 20 feet from the lightest seagoing draft.

(c) Lifeboat winches proposed for use in new installations shall be of an approved type and constructed in accordance with Subpart 160.015 of Subchapter Q (Specifications) of this chapter.

(d) Suitable fabric covers shall be provided, so fitted over exposed mechanisms that ice formations may be readily broken adrift when necessary to operate the lifeboat winch.

(e) Installation: Lifeboat winches shall be so located that the operator can observe the movement of the lifeboat during the lowering operation. The lead of the falls to the lifeboat winch shall be in accordance with § 33.10–10 (g).

(f) Tests: Upon completion of the installation of all lifeboat winches, and before the vessel is certificated for service, the following tests and examinations shall be made in the presence of an inspector:

(1) Swing lifeboat out from chocks and lower to level for loading, at which point the lifeboat shall be loaded with dead weight equivalent tc the number of persons allowed (165 pounds per person) together with weight of equipment, plus 10 percent of the total load. The lifeboat should then be lowered to the water, stopping at approximately 6-foot intervals by action of the counterweight alone. During the test the following observations should be made:

(i) Brake action shall be smooth, but positive. Brakes exposed to the weather shall also be tested under the load lowering condition with the braking surface wetted.

(ii) Counterweight shall be capable of stopping and holding the lifeboat when released.

(iii) The lifeboat winch shall be capable of controlling the speed of lowering of the fully equipped lifeboat with its complement of persons on board to not more than 120 feet per minute. In addition, the speed of lowering of the fully equipped lifeboat without its complement of persons shall be not less than 40 feet per minute.

(iv) No part of lowering gear shall show any distress under load.

(v) Deck under lifeboat winch and davits must be of sufficient strength to prevent any undue stress of the deck under load.

(vi) Mechanical davits shall swing to extreme outboard position without slacking the lifeboat winch brake.

(vii) Action of governor brake and lowering speed permitted by same should be noted.

(viii) Determine that falls are of sufficient length to lower to light load line with vessel listed 15 degrees either way.

(2) A report of the results of the installation test covering all the above points shall be recorded.

§ 33.10–10 Blocks and falls for lifeboats—TB/ALL.

Blocks and falls installed after May 1, 1942, shall conform to the following requirements:

(a) All blocks, falls, fairleads, padeyes, fastenings, etc., used in connection with lifeboat gear shall be designed with a minimum factor of safety of six, based on the maximum working load.

(b) Where lifeboat winches are installed, not more than two-part wire falls shall be used, except in specific cases where three-part wire falls may be accepted. Where lifeboat winches are not used, the falls shall be of manila rope or equivalent but wire rope may not be used.

(c) Wire rope falls of 6 x 19 regular lay filler wire construction prelubricated at the factory with suitable neutral wire rope lubricant shall be accepted as standard. Any other type of wire superior or equally as good as the minimum standard specified may be used.

(d) Falls shall be of such length that the lifeboat may be lowered to the water with the vessel at the lightest seagoing draft, listed 15 degrees either way.

(e) All ocean and coastwise vessels and all other vessels of over 1,000 gross tons, not fitted with lifeboat winches, shall be provided with covered tubs, boxes, or reels for stowage of falls and with suitable lowering bitts in easily accessible positions; except that all ocean and coastwise, self-propelled vessels of over 1,000 gross tons, not fitted with lifeboat winches for which contracts for construction are let on or after September 2, 1945, shall be fitted with cruciform bitts in such position as will render lowering practicable.

(f) Where more than one lifeboat is served by the same set of davits, if the falls are of manila rope, separate falls shall be provided to serve each lifeboat.

(g) Such blocks as are necessary to allow the falls to lead fair in all positions of the davit shall be fitted. Sheaves for wire rope shall have a diameter at the base of the groove at least equal to 12 times the diameter of the rope.

(h) There shall be ample clearance between the cheeks of blocks in which manila rope is used. The width between the cheeks shall be half an inch greater than the diameter of new ropes when those ropes are 3¾ inches in circumference or greater; blocks for smaller ropes shall be designed with clearance in the same proportion.

(i) Means for lubrication shall be provided for all moving parts of blocks.

(j) Where lifeboat winches are provided on tank vessels, construction or conversion of which was started prior to November 19, 1952, there shall be at least 8 feet between the center of the drum and the center of the nearest sheave.

(k) Where lifeboat winches are provided on tank vessels, construction or conversion of which is started on or after November 19, 1952, the lead sheaves to the drums shall be so located as to provide fleet angles of not more than 8 degrees for grooved drums and not more than 4 degrees for nongrooved drums. By fleet angle is meant the angle included between an imaginary line from the lead sheave perpendicular to the axis of the drum and the line formed by the wire rope when led from the lead sheave to either extremity of the drum.

§ 33.10–15 Disengaging apparatus—T/OCL.

(a) *Type required.* (1) Lifeboats on all ocean, coastwise and Great Lakes tankships of over 3,000 gross tons, the construction or conversion of which is started on or after January 1, 1961, shall be fitted with mechanical disengaging apparatus of an approved type constructed in accordance with Subpart 160.033 of Subchapter Q (Specifications) of this chapter. Such disengaging apparatus shall be so arranged as to make it possible for the lifeboats to be launched while such vessels are under way or stopped, and for both ends of the lifeboat to be released simultaneously, under tension, by one person. The gears shall be capable of being released from one position in the lifeboat while the boat is fully loaded with allowed persons and equipment. Simultaneous release shall be effected by partially rotating a shaft which shall be continuous and extend from one point of contact with the hooks.

(2) Lifeboats on all ocean, coastwise and Great Lakes tankships of not over 3,000 gross tons shall be fitted with suitable disengaging apparatus. Mechanical disengaging apparatus, if fitted, shall be of approved type constructed in accordance with Subpart 160.033 of Subchapter Q (Specifications) of this chapter.

(3) Lifeboats on all ocean, coastwise and Great Lakes tankships of over 3,000 gross tons, the construction or conversion of which is started before January 1, 1961, shall be fitted with suitable disengaging apparatus. Mechanical disengaging apparatus, if fitted, shall be as follows:

(i) On all such tankships mechanical disengaging apparatus shall be of a type approved by the Commandant.

(ii) On all such ocean and coastwise tankships, the construction or conversion of which was started on or after July 1, 1961, the arrangement shall be as described in subparagraph (1) of this paragraph.

(b) *Replacement of lifeboats on vessels of over 3,000 gross tons.* (1) Re-

placement of lifeboats on ocean, coastwise and Great Lakes tankships of over 3,000 gross tons shall be in accordance with the following:

(1) All replacement lifeboats shall be fitted with approved mechanical disengaging apparatus constructed and arranged as described in paragraph (a)(1) of this section.

(2) Replacement of lifeboats in accordance with the provisions of this paragraph may be made on an individual lifeboat basis.

§ 33.10–20 Disengaging apparatus—T/BR and B/ALL.

(a) Lifeboats shall be fitted with suitable disengaging apparatus. Mechanical disengaging apparatus shall be of a type approved by the Commandant.

(b) Not more than one type of releasing gear shall be fitted in the lifeboats of a particular vessel unless otherwise approved by the Commandant.

Subpart 33.15—Equipment for Lifeboats, Liferafts, or Buoyant Apparatus

§ 33.15–1 Lifeboat, liferaft or buoyant apparatus equipment; general—TB/ALL.

(a) The provisions of this subpart with the exception of § 33.15–90 shall apply to all vessels contracted for on or after May 26, 1965. Vessels contracted for prior to May 26, 1965 shall meet the requirements of § 33.15–90.

(b) Equipment for lifeboats, liferafts, and buoyant apparatus shall be of good quality, efficient for the purpose they are intended to serve, and kept in good condition.

(c) Lifeboats, liferafts and buoyant apparatus shall be fully equipped before the vessel is navigated and the equipment shall remain in such lifesaving appliances throughout the voyage except as provided by § 33.25–15.

(d) It shall be unlawful to stow in any lifeboat, liferaft, or buoyant apparatus any article not required by this subpart unless such articles can be properly stowed so as not to reduce the seating capacity or space available to the occupants and so as not to adversely affect the seaworthiness of such appliances or, in the case of lifeboats, overload the davits or winches.

(e) Loose equipment, except boathooks in lifeboats, shall be securely attached to the lifesaving appliance to which it belongs.

§ 33.15–5 Required equipment for lifeboats—TB/ALL.

(a) The lifeboats for all tank vessels shall be equipped in accordance with Table 33.15–5 (a). For a description of the items contained in this table, and the units comprising the items, see the applicable paragraphs of § 33.15–10. The letter identification prefixing the item in the table corresponds to the paragraph designations in § 33.15–10.

mm	Cover, protecting	1	None	None	None
nn	Signals, lifesaving	1	None	None	None
oo	Deadlight kit	[5] 1	None	None	None

[1] Only 1 required on other than seagoing barges.
[2] Seagoing barges only.
[3] For description of unit see § 33.15–10.
[4] Lifeboats on barges need only carry 4 rowlocks.
[5] Vessels in coastwise service need only carry 1 unit for each 5 lifeboats or fraction thereof.
[6] Optional equipment. See § 33.15–10(jj), water.

§ 33.15–10 Description of equipment for lifeboats—TB/ALL.

(a) *Bailer.* The bailer shall have a lanyard attached and shall be of sufficient size and suitable for bailing.

(b) *Bilge pump.* Bilge pumps shall be of an approved type, constructed in accordance with Subpart 160.044 of Subchapter Q (Specifications) of this chapter. They shall be of the size given in Table 33.15–10 (b) depending upon the capacity of the lifeboat as determined by the six-tenths rule as described in § 160.035–9(b).

TABLE 33.15–10 (b)

Capacity of lifeboat, cubic feet		Bilge pump size
Over—	Not over—	
------	330	1
330	700	2
700	------	3

(c) *Boathooks.* Boathooks shall be of the single hook ballpoint type. Boathook handles shall be of clear grained white ash, or equivalent, and of a length and diameter as given in Table 33.15–10 (c).

TABLE 33.15–10 (c)

Length of lifeboat (feet)		Boathook handles	
Over—	Not over—	Diameter (inches)	Length (feet)
------	23	1½	8
23	29	1¾	10
29	------	2	12

(d) *Bucket.* The bucket shall be of heavy gage galvanized iron, or other suitable corrosion-resistant metal, of not less than 2 gallon capacity, and shall have a 6-foot lanyard of 12-thread manila attached.

(e) *Compass and mounting.* The compass and mounting shall be of an approved type, constructed in accordance with U. S. Coast Guard Specification dated December 14, 1944.

(f) *Ditty bag.* The ditty bag shall consist of a canvas bag and shall contain a sailmaker's palm, needles, sail twine, marline and marlinspike.

(g) *Drinking cups.* Drinking cups shall be enamel coated or plastic, graduated in ounces, and be provided with lanyards 3 feet in length.

(h) *Fire extinguisher.* Fire extinguishers shall be of an approved type (4 pounds CO_2 or 2 pounds dry chemical). One shall be attached to each end of the lifeboat.

(i) *First-aid kit.* The first-aid kit shall be of an approved type, constructed and fitted in accordance with Subpart 160.041 of Subchapter Q (Specifications) of this chapter.

(j) *Flashlight.* The flashlight shall be of an approved Type I, Size No. 3, constructed in accordance with Subpart 161.008 of Subchapter Q (Specifications) of this chapter. Three spare cells (or one 3-cell battery) and two spare bulbs, stowed in a watertight container, shall be provided with each flashlight. Batteries shall be replaced yearly during the annual stripping, cleaning, and overhaul of the lifeboat.

(k) *Hatchet.* Hatchets shall be of an approved type, constructed in accordance with Subpart 160.013 of Subchapter Q (Specifications) of this chapter. They shall be attached to the lifeboat by individual lanyards and be readily available for use, one at each end of the lifeboat.

(l) *Heaving line.* The heaving line shall be of adequate strength, 10 fathoms in length, and one inch in circumference. It shall be of such quality as to be buoyant after 24 hours submergence.

(m) *Jackknife.* The jackknife (with can opener) shall be of an approved type, constructed in accordance with Subpart 160.043 of Subchapter Q (Specifications) of this chapter.

(n) *Ladder, lifeboat gunwale.* The lifeboat gunwale ladder shall consist of 3 flat wood steps cut out for handholds. The steps shall be spaced 12 inches apart and fastened with ⅝ inch diameter manila rope. Each rope end shall be tied inside the lifeboat at about amidships with the ladder stowed on top of the side benches and ready for immediate use. Other suitable devices may be specifically approved.

(o) *Lantern.* The lantern shall contain sufficient oil to burn for at least 9 hours, and shall be ready for immediate use.

(p) *Lifeline.* The lifeline shall be properly secured to both sides of the lifeboat along its entire length, festooned in bights not longer than 3 feet, with a seine float in each bight, which float may be omitted if the line is of an inherently buoyant material and absorbs little or no water. The lifeline shall be of a size and strength not less than ⅜-inch diameter manila. The bights shall hang to within 12 inches of the water when the lifeboat is light.

(q) *Life preservers.* Life preservers shall be of an approved type, constructed in accordance with the applicable subparts of Subchapter Q (Specifications) of this chapter.

(r) *Locker.* The locker shall be suitable for the storage and preservation of the small items of equipment.

(s) *Mast and sail.* A unit, consisting of a standing lug sail together with the necessary spars and rigging, shall be provided in general agreement with Table 33.15–10 (s). The sails shall be of good quality canvas, colored Indian Orange (Cable No. 70072, Standard Color Card of America). Rigging shall consist of galvanized wire rope not less than 3/16 inch in diameter. The mast and sail shall be protected by a suitable canvas cover.

TABLE 33.15–10 (s)

Length of lifeboat (feet)		Standing lug sail							Mast [1]		Yard [1]	
Over—	Not over—	Area (square feet)	Luff and head lengths	Leach length	Foot length	Clew to throat	Ounces per square	Commercial designation No.	Length	Diameter (inches)	Length	Diameter (inches)
			Ft. In.	Ft. In.	Ft. In.	Ft. In.			Ft. In.		Ft. In.

31	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)	(2)

[1] Mast lengths measured from heel to center of upper halyard sheave. Mast diameters measured at thwart. Mast and yard shall be of clear-grained spruce, fir, or equivalent.
[2] Subject to special consideration.

(t) *Matches.* A box of safety matches in a watertight container stowed in an equipment locker or secured to the underside of the stern thwart if no locker is fitted.

(u) *Milk, condensed.* One pound of condensed milk shall be provided for such person the lifeboat is certified to carry, to be stowed in lockers or other compartments, providing suitable protection.

(v) *Mirrors, signaling.* Signaling mirrors shall be of an approved type.

(w) *Oars.* A unit, consisting of a complement of rowing oars and steering oar, shall be provided for each lifeboat in accordance with Table 33.15–10(w), except that motor-propelled and hand-propelled lifeboats need only be equipped with 4 rowing oars and steering oar. All oars shall be buoyant.

TABLE 33.15–10 (w)

Length of lifeboat (feet)		Number of oars		Length of oars (feet)	
Over—	Not over—	Rowing	Steering	Rowing	Steering
----	15	4	1	8	9
15	19	6	1	10	11
19	21	6	1	11	12
21	23	6	1	12	13
23	25	8	1	13	14
25	27	8	1	14	15
27	----	8	1	15	16

(x) *Oil, illuminating.* One quart of illuminating oil shall be provided in a metal container.

(y) *Oil, storm.* One gallon of vegetable, fish, or animal oil shall be provided in a suitable metal container so constructed as to permit a controlled distribution of oil on the water, and so arranged that it can be attached to the sea anchor.

(z) *Painter.* Painters shall be of manila rope not less than 2¾ inches in circumference, or equivalent, and of a length not less than 3 times the distance between the deck on which the lifeboat is stowed and the light draft of the vessel. For lifeboats on vessels in ocean, coastwise or Great Lakes service one of the painters shall have a long eye splice and be attached to the thwart with a toggle. The other painter shall be attached to the stem.

(aa) *Plug.* The automatic drain required in the lifeboat shall be provided with a cap or plug attached to the lifeboat by a suitable chain.

(bb) *Provisions.* Two pounds of hard bread or its approved equivalent shall be provided for each person the lifeboat is certified to carry. The provisions shall be packaged in hermetically sealed cans of an approved type. The cans shall be stowed in lockers or other compartments providing suitable protection.

(cc) *Rowlocks.* A unit, consisting of sufficient rowlocks and rowlock sockets for each oar required by Table 33.15–10 (w) plus 2 additional rowlocks. The rowlocks shall be attached to the lifeboat by separate chains so as to be available for immediate use, except that the two additional spare rowlocks shall be carried in the equipment locker or stowed near the stern if no locker is fitted. The rowlocks and rowlock sockets shall be distributed so as to provide the maximum amount of single banked oars practicable.

(dd) *Rudder and tiller.* The rudder and tiller shall be constructed in accordance with § 160.035–3(t) in Subpart 160.035 of Subchapter Q (Specifications) of this chapter.

(ee) *Sea anchor.* The sea anchor shall be of an approved type.

(ff) *Signals, distress, floating orange smoke.* Two approved floating orange smoke distress signals, constructed in accordance with Subpart 160.022 of Subchapter Q (Specifications) of this chapter. The service use of this equipment shall be limited to three years from date of manufacture, and replacement shall be made no later than the first annual stripping, cleaning, and overhaul of the lifeboat after the date of expiration.

(gg) *Signals, distress, red hand flare.* A unit, consisting of twelve approved hand red flare distress signals, in a watertight container, constructed in accordance with Subpart 160.021 or 160.023 of Subchapter Q (Specifications) of this chapter. The service use of this equipment shall be limited to three years from date of manufacture, and replace-

ment shall be made no later than the first annual stripping, cleaning, and overhaul of the lifeboat after the date of expiration.

(hh) *Signals, distress, red parachute flare.* A unit, consisting of twelve approved parachute red flare distress signals, with an approved means of projecting them, all contained in a portable watertight container; or twelve approved hand-held rocket-propelled parachute red flare distress signals contained in a portable watertight container. Construction shall be in accordance with Subparts 160.024 and 160.028 or 160.036 of Subchapter Q (Specifications) of this chapter. The service use of this equipment shall be limited to three years from date of manufacture, and replacement shall be made no later than the first annual stripping, cleaning, and overhaul of the lifeboat after the date of expiration.

(ii) *Tool kit.* The tool kit shall consist of at least the following tools contained in a suitable container:

(1) One 12-ounce ball peen hammer.
(2) One screwdriver with 6-inch blade.
(3) One pair 8-inch slip joint pliers.
(4) One 8-inch adjustable end wrench.

(jj) *Water.* (1) For each person the lifeboat is certified to carry, there shall be provided three quarts of drinking water consisting of nine approved hermetically sealed containers per person constructed and filled in accordance with Subpart 160.026 of Subchapter Q (Specifications) of this chapter. The service life of this equipment shall be limited to 5 years from date of packing, and replacement shall be made no later than the first annual stripping, cleaning, and overhaul of the lifeboat after date of expiration. Approved desalting kits capable of producing an equal amount of drinking water may be substituted for not more than one-third of the drinking water required to be carried.

(2) The drinking water containers shall be stowed in drinking water tanks, lockers, or other compartments providing suitable protection.

(kk) *Whistle, signaling.* The whistle shall be of the ball-type, of corrosion-resistant construction, with a 36-inch lanyard attached, and in good working order.

(ll) *Fishing kit.* The fishing kit shall be of approved type constructed in accordance with Subpart 160.061 of Subchapter Q (Specifications) of this chapter.

(mm) *Cover, protecting.* The protecting cover shall be of a highly visible color, and capable of protecting the occupants against injury by exposure.

(nn) *Table of lifesaving signals.* The table of lifesaving signals shall be in accordance with the provisions of Chapter V, Regulation 16, of the International Convention for Safety of Life at Sea, 1960, and shall be printed on water resistant paper.

(oo) *Desalting kit.* One or more approved desalting kits may be used as a substitute for one-third of the required amount of drinking water per person, and shall be constructed in accordance with Subpart 160.058 of Subchapter Q (Specifications) of this chapter.

§ 33.15–15 Required equipment for rigid type liferafts and buoyant apparatus—TB/LBR.

(a) The rigid type liferafts and buoyant apparatus for all vessels shall be equipped in accordance with Table 33.15–15 (a). For a description of the items contained in this table and the units comprising the items, see the applicable paragraphs of § 33.15–20. The letter identification prefixing the item in the table corresponds to the paragraph designation in § 33.15–20.

TABLE 33.15–15 (a)

Letter identification	Item	Liferaft		Buoyant apparatus—All waters
		Great Lakes	Lakes, bays, sounds, rivers,	
a	Boathook	1	1	None
b	Lifeline	[1] 1	[1] 1	[1] 1
c	Matches (boxes)	1	None	None
d	Oars (units)	[1] 1	[1] 1	None
e	Oil, storm (gallons)	1	None	None
f	Painter	1	[4] 1	[4] 1
g	Rowlocks (units)	[1] 1	[1] 1	None
h	Sea anchor	1	None	None
i	Signals, distress (units)	[2] 1	None	None
j	Water light	1	None	[5] 1

[1] Not required on Type A liferafts.
[2] For description of unit see § 33.15–20.
[3] Need only be 2 inches in diameter and of a length equal to the distance between the deck where stowed to the vessel's light draft plus 6 feet.
[4] Not required on buoyant apparatus for less than 25 persons.
[5] Applies to ocean, coastwise and Great Lakes routes.

§ 33.15–16 Required equipment for inflatable liferafts—TB/ALL.

(a) Inflatable liferafts shall be equipped with ocean service equipment for vessels on ocean and coastwise routes and with limited service equipment for vessels on Great Lakes, lakes, bays, sounds, and river routes in accordance with Subpart 160.051 of Subchapter Q (Specifications) of this chapter.

NOTE: Subpart 160.051 of this chapter requires the servicing of inflatable liferafts at approved servicing facilities. Included in the servicing at an approved facility is a complete inspection of the required equipment by a marine inspector.

§ 33.15–20 Description of equipment for liferafts and buoyant apparatus—TB/LBR.

(a) *Boathook.* Boathooks shall be of the single hook ball point type. Boathook handles shall be of clear grained white ash, or equivalent, not less than 8 feet long and 1½ inches in diameter.

(b) *Lifeline.* The lifeline shall be properly secured around the sides and ends of the liferaft, or buoyant apparatus, festooned in bights not longer than 3 feet, with a seine float in each bight, which float may be omitted if the line is of an inherently buoyant material and absorbs little or no water. The lifeline shall be of a size and strength not less than ⅜-inch diameter manila.

(c) *Matches.* A box of safety matches in a watertight container.

(d) *Oars.* A unit, consisting of 4 rowing oars and one steering oar not less than 8 feet in length, shall be provided for liferafts for 7 persons or more. For liferafts for 6 persons or less, a unit shall consist of 2 paddles not less than 5 feet in length.

(e) *Oil, storm.* One gallon of vegetable, fish, or animal oil shall be provided in a suitable metal container so constructed as to permit a controlled distribution of oil on the water, and so arranged that it can be attached to the sea anchor.

(f) *Painter.* Painters shall be of manila rope not less than 2¾ inches in circumference and of a length not less than 3 times the distance between the deck on which the liferafts are stowed and the light draft of the vessel.

(g) *Rowlocks.* A unit, consisting of 5 rowlocks attached to the liferaft by separate chains and ready for immediate use, together with proper rowlock sockets so arranged as to provide 4 rowing positions and 1 steering position with the liferaft floating either side up. Rowlocks and rowlock sockets are not required on liferafts for 6 persons or less.

(h) *Sea anchor.* The sea anchor shall be constructed of good quality canvas or other satisfactory material, and shall be not less than 2 feet in diameter.

(i) *Signals, distress.* (1) A unit, consisting of equipment as specified in subparagraph (2) or (3) of this paragraph. The service use of this equipment shall be limited to 3 years from date of manufacture, and replacement shall be made no later than the first inspection (biennial or reinspection) after the date of expiration.

(2) Twelve parachute red flare distress signals with an approved means of projecting them, all contained in a portable watertight container. Construction shall be in accordance with Subparts 160.024 and 160.028 or 160.036 of Subchapter Q (Specifications) of this chapter.

(3) Six approved hand red flare distress signals and 6 parachute red flare distress signals with an approved means of projecting them, all contained in a portable watertight container. Construction shall be in accordance with Subparts 160.021, 160.024 and 160.028 or 160.036 of Subchapter Q (Specifications) of this chapter.

(j) *Water light.* The water light shall be of an approved automatic electric type, constructed in accordance with Subpart 161.001 of Subchapter Q (Specifications) of this chapter. The water light shall be attached to the liferaft or buoyant apparatus by a 12-thread manila lanyard 3 fathoms in length.

§ 33.15–25 Portable radiotelegraph apparatus—T/OC.

(a) All tankships on an international voyage shall be provided with a portable radio apparatus complying with the requirements of the Federal Communications Commission unless at least one lifeboat on each side of the vessel is fitted with a fixed radio installation. Such

portable radio shall be kept in the radio room, chartroom, or other suitable location ready to be moved to one or other of the lifeboats in the event of an emergency; however, in tankships of 3,000 gross tons and over in which lifeboats are fitted amidships and aft, such equipment shall be kept in a suitable place in the vicinity of those lifeboats which are furthest removed from the ship's main transmitter.

§ 33.15–90 Lifeboat, liferaft and buoyant apparatus equipment on tank vessels contracted for prior to May 26, 1965—TB/ALL.

(a) Vessels contracted for prior to May 26, 1965, shall meet the following requirements:

(1) Except as specifically modified by this paragraph, the requirements of §§ 33.15–5 through 33.15–25 shall be complied with insofar as the number of items of equipment and the method of stowage of the equipment is concerned.

(2) Existing items of equipment previously approved, but not meeting the applicable specifications or requirements set forth in §§ 33.15–5 through 33.15–25 may be continued in service so long as they are maintained in a good condition to the satisfaction of the Officer in Charge, Marine Inspection.

(3) Lifeboats previously approved without automatic drain plugs shall have two plugs or caps attached to the lifeboat by separate chains.

(4) On tank vessels certificated for ocean or coastwise service, and contracted for prior to November 19, 1952, unless other approved means are provided to achieve the same purpose, three ½-inch diameter manila grablines shall be fitted extending from gunwale to gunwale under the keel to enable persons to cling or to climb upon the upturned lifeboat. The ends of each grabline shall be securely attached to the side benches or other permanent part of the lifeboat and each grabline shall be made up with figure eight knots spaced approximately 18 inches apart in order to provide hand grips. Means shall be provided for taking up any slack in the grablines.

(5) All new installations shall meet the applicable specifications or requirements of this part.

Subpart 33.20—Stowage of Lifeboats, Liferafts, and Buoyant Apparatus

§ 33.20–1 Davits and launching devices—TB/ALL.

(a) Tankships of 100 gross tons or more shall be equipped with separate davits for each lifeboat carried.

(b) Tankships of less than 100 gross tons and tank barges where lifeboats are carried shall provide means for the launching of such lifeboats by davits or crane or, where the freeboard is less than 6 feet when the vessel has no cargo aboard, by slide.

(c) On all tankships of 500 gross tons and over in ocean and coastwise service, the conditions set forth in subparagraphs (1) to (5), inclusive, of this paragraph shall apply. Tankships of 500 gross tons and over in Great Lakes service shall comply with the conditions set forth in subparagraphs (1) and (3) of this paragraph.

(1) An approved ladder, constructed in accordance with Subpart 160.017 of Subchapter Q (Specifications) of this chapter shall be provided at each set of davits to afford access to the lifeboats when waterborne.

(2) All davit installations shall have at least 2 lifelines fitted to a davit span. The lifelines shall be of such length as to reach the water at the lightest draft with the vessel listed 15 degrees either way.

(3) Suitable means shall be provided on vessels engaged on international voyages for illuminating the launching gear and the lifeboats during the process of launching the lifeboats from the stowed position until they are waterborne. Similar provisions shall be made on such vessels for the illumination of any liferaft stowage areas. For detailed requirements of such illumination for tank vessels contracted for on or after November 19, 1955, see Part 111 of Subchapter J (Electrical Engineering) of this chapter.

(4) On tankships the construction or conversion of which was started on or after November 19, 1952, where applicable, means shall be provided outside the machinery space to prevent the discharge of water into the lifeboats while they are being lowered. This shall consist of baffles to deflect the water down the vessel's side, reach rods or other means to close the discharge openings, or a remote means for stopping the pumps.

(5) Lifeboats on tankships contracted for on or after May 26, 1965, shall be fitted with skates or other suitable means to facilitate launching against an adverse list of up to 15 degrees. However, skates may be dispensed with if, in the opinion of the Commandant, the arrangements are such as to insure that the lifeboats can be satisfactorily launched without skates. For vessels contracted for prior to May 26, 1965, the foregoing shall apply unless in the opinion of the Officer in Charge, Marine Inspection, it is unreasonable or impracticable or the arrangement or construction of the vessel make their use unnecessary.

(d) Lifeboats shall not be placed in the bows of tankships. They shall be stowed in such positions as to insure safe launching.

(e) Suitable access to the lifeboats shall be provided to enable the crew to prepare the lifeboats for launching.

(f) Means shall be provided for bringing the lifeboats against the ship's side and holding them there so that persons may be safely embarked.

(g) On a tankship on which inflatable liferafts have been substituted for lifeboats, a launching device for each lifeboat to be used for rescue purposes shall be installed. Radial type davits or other means may be used in sheltered waters if acceptable to the Officer in Charge, Marine Inspection.

§ 33.20–3 Embarkation aids into inflatable liferafts—T/ALL.

(a) Where inflatable liferafts are substituted for lifeboats, unless freeboard at embarkation point is such that embarkation devices are not necessary, suitable arrangements shall be made for embarkation which shall include sufficient ladders or other suitable devices to facilitate embarkation into the inflatable liferafts when waterborne.

§ 33.20–5 Lifeboat davit falls—T/ALL.

All tankships over 1,000 gross tons shall be provided with covered tubs, boxes, or reels, in which to stow the running part of the lifeboat davit falls. Lifeboat falls shall not be painted.

§ 33.20–10 Lifeboats and liferafts kept clear for launching—TB/ALL.

The decks on which lifeboats or liferafts are carried shall be kept clear of freight or any other obstruction that would interfere with the immediate launching of the lifeboats or liferafts.

§ 33.20–15 Stowage of lifeboats and liferafts—TB/ALL.

(a) All the lifeboats and liferafts shall be stowed in such a way that they can be launched in the shortest possible time, and that, even under unfavorable conditions of list and trim from the point of view of the handling of the lifeboats and liferafts, it may be possible to embark in them as large a number of persons as possible.

(b) For tankships, arrangements shall be such that it may be possible to launch on either side of the vessel as large a number of lifeboats and liferafts as possible.

(c) Where practicable, lifeboat chocks shall be so fitted that the lifeboats they serve shall not require lifting before launching.

(d) Inflatable liferafts shall be stowed in such a manner that they will float free in the event of the vessel sinking. Stowage and launching arrangements shall be to the satisfaction of the Officer in Charge, Marine Inspection.

Subpart 33.25—Markings, Care and Inspection

§ 33.25–5 Numbering and marking of lifeboats—TB/ALL.

(a) The number of each lifeboat shall be plainly marked or painted on each side of the bow in figures 3 inches high; and, where lifeboats are carried on both sides of a vessel, the odd-numbered boats shall be stowed on the starboard side, and the even-numbered boats on the port side; i.e., lifeboat No. 1 shall be forward on the starboard side, and lifeboat No. 3 next abaft lifeboat No. 1; lifeboat No. 2 shall be forward on the port side and lifeboat No. 4 next abaft lifeboat No. 2, etc.

(b) The cubical contents and number of persons allowed to be carried on each lifeboat shall be plainly marked or painted on each side of the bow in letters and numbers 1½ inches high. For vessels on an international voyage, the vessel's port of registry shall be added in similar type letters. In addition, the number of persons allowed shall be plainly marked or painted on the top of at least two of the thwarts in letters and numbers 3 inches high.

(c) Such letters and numbers shall be dark on a light ground or light on a dark ground.

(d) The top of thwarts, side benches and footings of lifeboats shall be painted or otherwise colored international orange. The area in way of the red mechanical disengaging gear control lever, from the keel to the side bench, shall be painted or otherwise colored white, to provide a contrasting background for the lever. This band of white should be approximately 12 inches wide depending on the internal arrangements of the lifeboat.

(e) Where mechanical disengaging apparatus is used, the control effecting the release of the lifeboat shall be painted bright red and shall have thereon in raised letters either the words—"Danger—Lever Drops Boat," or the words—"Danger—Lever Releases Hooks."

§ 33.25–10 Marking of liferafts—TB/ALL.

(a) There shall be stenciled in a conspicuous place on each rigid type liferaft the number of persons the liferaft can carry.

(b) There shall be stenciled in a conspicuous place in the immediate vicinity of each inflatable liferaft the following:

INFLATABLE LIFERAFT NO. ------
------ PERSONS CAPACITY

These markings shall not be placed on the inflatable liferaft containers.

NOTE: § 160.051–8(a) of Subchapter Q (Specifications) of this chapter requires permanently attached nameplates on each inflatable liferaft and carrying case. The nameplate contains the following information: The name of manufacturer, approval number, manufacturer's model number, serial number and lot number, and the number of persons for which the inflatable liferaft is approved. In addition, the carrying case shall be marked "Ocean Service Equipment" or "Limited Service Equipment" as applicable, together with the marine inspector's initials, the date, and the letters "USCG."

§ 33.25–15 Overhaul—TB/ALL.

(a) All lifeboats, rescue boats, and rigid type liferafts shall be stripped, cleaned and thoroughly overhauled at least once in every year.

(b) Tank vessels in ocean or coastwise service having a sufficient number of lifeboats on each side to accommodate all persons on board may care for their lifeboats at sea: *Provided*, That a number of lifeboats sufficient to accommodate all persons on board are fully equipped and ready for use at all times.

(c) The lifeboat davits and falls shall be overhauled at least once in every year.

(d) Inflatable liferafts shall be serviced at an approved servicing facility in accordance with the provisions of Subpart 160.051 of Subchapter Q (Specifications) of this chapter. Inflatable liferafts shall be serviced at an approved servicing facility every 12 months or not later than the next vessel inspection for certification provided the total time since date of last servicing does not exceed 15 months. The period for servicing is computed from date of last servicing. Except in emergencies no servicing should be done aboard vessels. If at any time external damage is found to the container or straps or if the seal is broken, the Officer in Charge, Marine Inspection, shall be notified and the raft shall be serviced by an approved servicing facility.

NOTE: After the raft has been satisfactorily serviced in the presence of a marine inspector at an approved servicing facility, the raft is repacked and sealed and the carrying case stamped "PASSED" together with the date, port, and the marine inspector's initials.

§ 33.25–20 Maintenance—TB/ALL.

(a) Every lifeboat, liferaft, or piece of buoyant apparatus together with its equipment shall be kept in every respect in good condition and ready for immediate use.

(b) The material that may support the platform of a liferaft or buoyant apparatus shall be examined to determine that its strength is maintained.

(c) Air tanks shall be examined to see that they are in good condition but pressure need not be applied unless the inspector so desires to assure himself as to their condition.

(d) Disengaging apparatus, blocks and falls, if used, shall be determined to be in good condition.

(e) Disengaging apparatus, if used, shall be shown on the inspector's report, and if the inspector is unable to identify it by name, he shall take the matter up with the Coast Guard District Commander in order that such apparatus may be traced for identification and approval record.

Subpart 33.30—Manning of Lifeboats and Liferafts

§ 33.30–1 Persons in charge of each lifeboat and liferaft—T/O.

A licensed deck officer, an able seaman, or a certificated lifeboatman shall be placed in charge of each lifeboat or liferaft. He shall have a list of its lifeboatmen and other members of its crew which shall be sufficient for her safe management, and shall see that the men placed under his orders are acquainted with their several duties and stations. A second in command shall also be appointed which person shall be either a licensed deck officer, an able seaman or a certificated lifeboatman.

§ 33.30–3 Person in charge of each lifeboat or liferaft—T/CLB.

(a) A licensed deck officer, an able seaman, or a certificated lifeboatman shall be placed in charge of each lifeboat or liferaft.

(b) The person in charge shall have a list of its lifeboatmen and other members of its crew, which shall be sufficient for her safe management, and shall see that the men placed under his orders are acquainted with their several duties and stations.

§ 33.30–5 Manning of lifeboats and liferafts—TB/OCLB.

(a) There shall be for each lifeboat or liferaft a number of lifeboatmen at least equal to that specified as follows, provided, that vessels required to carry sufficient lifeboats on each side to accommodate all persons on board need only carry the lifeboatmen required for the lifeboats on one side:

(1) If the lifeboat or liferaft carries 25 persons or less, the minimum number of certificated lifeboatmen shall be 1;

(2) If the lifeboat or liferaft carries 26 persons and less than 41 persons the minimum number of certificated lifeboatmen shall be 2;

(3) If the lifeboat or liferaft carries 41 persons and less than 61 persons the minimum number of certificated lifeboatmen shall be 3.

(b) The allocation of the certificated lifeboatmen to each lifeboat and liferaft remains within the discretion of the master, according to the circumstances.

Subpart 33.35—Life Preservers

§ 33.35–1 Number and type required—TB/ALL.

(a) All tank vessels shall be provided with one approved life preserver for each person carried. An additional number of life preservers shall be provided for personnel on watch in the engineroom and pilothouse.

(b) In addition to the life preservers required by paragraph (a) of this section, all tankships on an international voyage shall be provided with approved type life preservers for 5 percent of the persons carried. The additional number of life preservers required for personnel on watch in the engineroom and pilothouse may be counted toward meeting this requirement.

(c) All life preservers on tankships of 500 gross tons and over on an international voyage shall be provided with a whistle of the ball-type, of corrosion-resistant construction, with a 3-foot lanyard attached, and in good working order. It shall be attached to the life preserver by the lanyard alone without hooks, snaps, clips, etc., and shall extend not less than 15 inches from the life preserver body. While stowed on the life preserver, the whistle lanyard shall be coiled and stopped-off.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 33.35–5 Distribution and stowage—TB/ALL.

Life preservers shall be distributed throughout the cabins, staterooms, berths, and other places convenient for each person on such tank vessels. The stowage of the additional number of life preservers shall be such that they are readily accessible to personnel on watch in the engineroom and pilothouse.

§ 33.35–10 Shipboard inspections—TB/ALL.

At each inspection for certification, or oftener if deemed necessary, the life preserver shall be examined by an inspector

to determine serviceability. When life preservers are found to be in accordance with the requirements, the inspector shall stamp them with the word "Passed," his initials, port, and date. Life preservers found not to be in a serviceable condition shall be removed from the vessel's equipment and, if beyond repair, shall be destroyed in the presence of the inspector.

§ 33.35–15 Requirements for life preservers—TB/ALL.

(a) The specifications regarding life preservers are in Subparts 160.001, 160.002, 160.005, 160.006, and 160.055 of Subchapter Q (Specifications) of this chapter.

(b) Cork and balsa wood life preservers, constructed in accordance with the applicable provisions of Subpart 160.003 or 160.004 and manufactured as approved life preservers prior to July 1, 1965, may be accepted as new or replacement equipment required by this subchapter if such life preservers are serviceable and in good condition to the satisfaction of the Officer in Charge, Marine Inspection: *Provided, however,* That such life preservers bearing basic Approval No. 160.003 or 160.004 shall not be considered as approved equipment meeting the requirements for those tankships on an international voyage, constructed or contracted for on or after May 26, 1965.

(c) All kapok and fibrous glass life preservers which do not have plastic-covered pad inserts, as required by Subparts 160.002 and 160.005 of Subchapter Q (Specifications) of this chapter, shall be removed from service.

Subpart 33.40—Ring Life Buoys and Water Lights

§ 33.40–1 Ring life buoys and water lights, general requirements—TB/ALL.

(a) All ring life buoys shall be of an approved type, constructed in accordance with Subpart 160.009 or 160.050 of Subchapter Q (Specifications) of this chapter.

(b) All water lights shall be of an approved automatic electric type, constructed in accordance with Subpart 161.001 of Subchapter Q (Specifications) of this chapter.

(c) All self-activated smoke signals shall be of an approved type, constructed in accordance with the requirements of Subpart 160.057 of Subchapter Q (Specifications) of this chapter, which shall be capable of producing smoke of a highly visible color for at least 15 minutes.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 33.40–5 Number required on tankships—T/ALL.

(a) The minimum number of approved 30-inch ring life buoys, and the minimum number of which shall have water lights attached, shall be in accordance with Table 33.40–5(a).

TABLE 33.40–5(a)

Length of tankship (feet)	Ocean		All services other than ocean	
	Minimum number of ring life buoys	Minimum number of ring life buoys in column 2 which shall have water lights attached	Minimum number of ring life buoys	Minimum number of ring life buoys in column 4 which shall have water lights attached
Column 1	Column 2	Column 3	Column 4	Column 5
Under 100	8	6	2	1
100 and under 200	8	6	4	2
200 and under 300	8	6	6	2
300 and under 400	12	6	12	4
400 and under 600	18	9	18	9
600 and under 800	24	12	24	12
800 and over	30	15	30	15

(b) One of the ring life buoys on each side of the vessel shall have secured to it a line at least 15 fathoms in length. On tankships on an international voyage, the line shall be of the buoyant type.

(c) On tankships on an international voyage, at least two of the ring life buoys with waterlights attached as required by Table 33.40–5(a), shall also be provided with an approved self-activated smoke signal and shall be capable of quick release from the bridge.

(d) On tankships on an international voyage, the ring life buoys required by this section shall be orange in color.

§ 33.40–10 Number required on tank barges—B/ALL.

All tank barges regardless of size, shall have at least two approved 30 inch ring life buoys on board: *Provided,* That unmanned barges are exempt from this section.

§ 33.40–15 Distribution and security—TB/ALL.

(a) All ring life buoys shall be placed so as to be readily accessible to the persons on board, and their positions plainly indicated so as to be known to all persons concerned.

(b) The ring life buoys shall always be capable of being cast loose, and shall not be permanently secured in any way.

Subpart 33.45—Distress Signals

§ 33.45–1 Distress signals—T/ALL and B/OC.

On every manned tank vessel of 150 gross tons and over there shall be carried twelve approved hand red flare distress signals in a watertight container, or twelve approved hand combination flare and smoke distress signals in a watertight container. Service use shall be limited to a period of three years from date of manufacture, and replacement of out-dated items shall be made at the first port of arrival in the United States where such distress signals are available, except that replacement shall be made in all cases within twelve months after the date of expiration. Distress signals not bearing date of manufacture shall not be carried. For specifications for these signals, see Subparts 160.021 and 160.023 of Subchapter Q (Specifications) of this chapter.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 33.45–5 Parachute distress signals—T/OC.

In addition to the equipment required by § 33.45–1, all tankships of 500 gross tons and over shall be provided with 12 approved hand-held rocket-propelled parachute red flare distress signals, contained in a portable watertight container, constructed in accordance with Subpart 160.036 of Subchapter Q (Specifications) of this chapter. Service use of the distress signals shall be limited to a period of three years from date of manufacture, and replacement of outdated items shall be made at the first port of arrival in the United States where such distress signals are available, except that replacement shall be made in all cases within 12 months after the date of expiration.

§ 33.45–10 Stowage of distress signals—TB/ALL.

All tank vessels required to carry pyrotechnic distress signals shall carry such signals in watertight containers near the pilothouse, on the navigator's bridge, or in some other suitable, readily accessible location other than in the lifeboats. In no case shall pyrotechnics be permitted to be carried in enclosed spaces, adjacent to cargo tanks or near sources of heat. Tank vessels required to carry a magazine chest may carry the distress signals in the magazine chest.

Subpart 33.50—Signaling Lamp

§ 33.50–1 Signaling lamp—T/O.

Tankships of over 150 gross tons engaged on international voyages shall be equipped with an efficient daylight signaling lamp. For detailed requirements see Subpart 113.60 of Subchapter J (Electrical Engineering) of this chapter.

Subpart 33.55—Line-Throwing Appliances

§ 33.55–1 Line-throwing appliances required—T/OC.

(a) All ocean and coastwise tankships of 150 gross tons and over shall be equipped with an approved line-throwing appliance and equipment auxiliary thereto, as specified in this subpart.

(b) Tankships of 500 gross tons or more shall be equipped with an approved line-throwing appliance and equipment auxiliary thereto, of the impulse-projected rocket type, the requirements for which are set forth in Subpart 160.040 of Subchapter Q (Specifications) of this chapter. Lyle gun type line-throwing appliances in service on or before July 1, 1951, may be continued in use so long as in good and serviceable condition: *Provided,* That any replacements shall

be made with a line-throwing appliance of the impulse-projected rocket type.

(c) Tankships of 150 gross tons and over and less than 500 gross tons shall be equipped with an approved line-throwing appliance and equipment auxiliary thereto, of the shoulder gun type or the impulse-projected rocket type, the requirements for which are set forth in Subparts 160.031 and 160.040, respectively, of Subchapter Q (Specifications) of this chapter. Lyle gun type line-throwing appliances in service on or before July 1, 1951, may be continued in use so long as in good and serviceable condition: *Provided*, That any replacements shall be made with a line-throwing appliance of the shoulder gun type or the impulse-projected rocket type.

(d) Service use of rockets shall be limited to a period of 4 years from date of manufacture, and replacement of outdated items shall be made at the first port of arrival in the United States where such rockets are available, except that replacement shall be made in all cases within 12 months after the date of expiration.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 33.55–5 Accessibility—T/OC.

The line-throwing appliance and its equipment shall be kept always easily and immediately accessible and read for use. No part of this equipment shall be used for any other purpose.

§ 33.55–10 Equipment for line-throwing appliances—T/OC.

The equipment enumerated below is required to be carried with the various types of line-throwing appliances:

(a) *Impulse-projected rocket type.* Four rockets (2 of which shall be of the buoyant type), 4 primer-ejector cartridges, 4 service lines (each of a length not less than that specified in the approval of the appliance carried, of 7/32-inch to 9/32-inch diameter, of flax or manila, and having a breaking strength of at least 500 pounds, to be kept in faking boxes or on reels), 1 auxiliary line (1,500 feet of 3-inch circumference manila), 1 can of oil, 1 cleaning brush, 12 wiping patches, and 1 set of instructions furnished by the manufacturer, all in a suitable case or box with the appliance, except that the service lines and the auxiliary line may be stowed in an accessible location nearby.

(b) *Shoulder gun type.* Ten (10) service projectiles, 4 service lines (each not less than 400 feet in length of 3/8-inch circumference flax or cotton and having not less than 250 pounds breaking strength, or each not less than 600 feet in length of 1/16-inch or more diameter woven or braided nylon, very flexible, having a breaking strength not less than 140 pounds, or equivalent, to be kept in faking boxes or reels), 25 cartridges, 1 cleaning rod with brush, 1 can of oil, 12 wiping patches and 1 set of instructions, all in a suitable case or box with the gun, with an auxiliary line (500 feet of 3-inch circumference manila) accessible for use.

(c) *Lyle gun type on existing tank vessels.* Six (6) service projectiles, 4 service lines (each 1,700 feet of 7/32-inch to 9/32-inch diameter flax or manila, having not less than 500 pounds breaking strength, in faking boxes or reels), 1 auxiliary line (1,500 feet of 3-inch circumference manila), 1 approved firing attachment (with accessories consisting of lanyard, wrench, washer to fit between barrel and shoulder of firing attachment, blank plug for screwing into gun when firing attachment is not in place, cartridge extractor, and 25 primers in watertight metal box), 18 bags (2½ ounces each) of black powder marked "One-half normal charge for Lyle gun, 2½ ounces black powder" in nonferrous metal screw top container, 25 paper wads, 1 ram rod, 1 wire brush, 1 can light petrolatum, 12 wiping patches, 1 tapered wooden plug for muzzle of gun when not in use, and 1 set of instructions furnished by the manufacturer of the gun, all in a suitable box or chest with the gun.

§ 33.55–15 Service recommendations—T/OC.

The following precautions and procedure are recommended for the use of line-throwing appliances and equipment:

(a) *Impulse-projected rocket type.* Follow the operating instructions and safety precautions furnished by the manufacturer.

(b) *Shoulder gun type.* Follow the operating instructions and safety precautions furnished by the manufacturer.

(c) *Lyle gun type on existing tank vessels.* (1) Service powder charge should be about 5 ounces of black powder, and the powder bags should be furnished to the vessel containing 2½ ounces of black powder and marked "one-half normal charge." Under extraordinary circumstances, 7½ ounces (three 2½-ounce bags) of black powder may be used.

(2) In making the line fast to the shank, pass it through the eye and take three or more half-hitches around its own part, leaving a loop of about 10 to 12 inches and taking the hitches about 6 inches apart. This will allow the line to slip slightly through the eye of the shank before the hitches fetch up, thus easing the strain on the line at the loop during the initial acceleration.

(3) A considerable bight led over the side is recommended wherever possible, as it will tend to lessen the jerk on the line at initial acceleration.

(4) At least a fathom of the line from the shank should be thoroughly wet before using to prevent burning.

(5) The faking box or reel should always be faced in the direction of the line of fire and placed abreast of the gun and as close to ship's side as possible. It is not advisable to place the line too close to the muzzle of the gun, as the concussion may lift several layers or coils from the top, causing a snarl which in turn may cause the line to part.

(6) Care should be taken in placing the equipment to prevent fouling of the line in rigging, ridge ropes, etc., which have a tendency to rise or jump up when the gun is fired.

(7) Having made the gun and equipment ready for use, the following procedure in firing is recommended: select a place where the gun may recoil without striking anything, or where it may be securely lashed down. Note the position of the vessel to be relieved, and the direction and approximate force of the wind, and then place the gun in position, making allowance for the drift of the line. Place the line on the windward side of the gun and about 3 feet from it. Make the line fast in the eye of the shank and insert the powder charge, projectile, and primer. In loading, make sure that the projectile is seated against the wad.

(8) After using, the line should be thoroughly dried before rewinding or faking.

PART 34—FIREFIGHTING EQUIPMENT

Subpart 34.01—Application

Sec.
34.01–1 General—TB/ALL.
34.01–5 Equipment installed but not required—TB/ALL.
34.01–10 Protection for unusual arrangements or special products—TB/All.

Subpart 34.05—Firefighting Equipment, Where Required

34.05–1 Fire main system—T/ALL.
34.05–5 Fire-extinguishing systems—T/ALL.
34.05–10 Portable and semiportable extinguishers—TB/ALL.
34.05–15 Sand—TB/ALL.
34.05–20 Fire axes—T/ALL.

Subpart 34.10—Fire Main System, Details

34.10–1 Application—TB/ALL.
34.10–5 Fire pumps—T/ALL.
34.10–10 Fire station hydrants, hose and nozzles—T/ALL.
34.10–15 Piping—T/ALL.
34.10–90 Installations contracted for prior to May 26, 1965—T/ALL.

Subpart 34.13—Steam Smothering System, Details

34.13–1 Application—T/ALL.
34.13–90 Installations contracted for prior to January 1, 1962—T/ALL.

Subpart 34.15—Carbon Dioxide Extinguishing Systems, Details

34.15–1 Application—T/ALL.
34.15–5 Quantity, pipe sizes, and discharge rates—T/ALL.
34.15–10 Controls—T/ALL.
34.15–15 Piping—T/ALL.
34.15–20 Carbon dioxide storage—T/ALL.
34.15–25 Discharge outlets—T/ALL.
34.15–30 Alarms—T/ALL.
34.15–35 Enclosure openings—T/ALL.
34.15–40 Pressure relief—T/ALL.
34.15–90 Installations contracted for prior to January 1, 1962—T/ALL.

Subpart 34.17—Fixed Foam Extinguishing Systems, Details

34.17–1 Application—T/ALL.
34.17–5 Quantity of foam required—T/ALL.
34.17–10 Controls—T/ALL.
34.17–15 Piping—T/ALL.
34.17–20 Discharge outlets—T/ALL.
34.17–25 Additional protection required—T/ALL.
34.17–90 Installations contracted for prior to January 1, 1962—T/ALL.

Subpart 34.20—Deck Foam System, Details

34.20–1 Application—T/ALL.
34.20–3 Cargo area definition—T/ALL.
34.20–5 Quantity of foam required—T/ALL.

Sec.
34.20-10 Controls—T/ALL.
34.20-15 Piping—T/ALL.
34.20-20 Discharge outlets—T/ALL.
34.20-90 Installations contracted for prior to January 1, 1962—T/ALL.

Subpart 34.25—Water Spray Extinguishing Systems, Details

34.25-1 Application—T/ALL.
34.25-5 Capacity and arrangement—T/ALL.
34.25-10 Controls—T/ALL.
34.25-15 Piping—T/ALL.
34.25-20 Spray nozzles—T/ALL.
34.25-90 Installations contracted for prior to January 1, 1964—T/ALL.

Subpart 34.50—Portable and Semiportable Extinguishers

34.50-1 Application—TB/ALL.
34.50-5 Classification—TB/ALL.
34.50-10 Location—TB/ALL.
34.50-15 Spare charges—TB/ALL.
34.50-90 Vessels contracted for prior to January 1, 1962—TB/ALL.

Subpart 34.55—Sand

34.55-1 Application—TB/ALL.
34.55-5 Amount required—TB/ALL.
34.55-10 Substitute—TB/ALL.

Subpart 34.60—Fire Axes

34.60-1 Application—T/ALL.
34.60-5 Number required—T/ALL.
34.60-10 Location—T/ALL.

AUTHORITY: The provisions of this Part 34 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply R.S. 4488, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 481, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-38, Oct. 26, 1959, 24 F.R. 8857.

Subpart 34.01—Application

§ 34.01-1 General—TB/ALL.

(a) The provisions of this part shall apply to all tank vessels except as otherwise noted in this part.

§ 34.01-5 Equipment installed but not required—TB/ALL.

(a) Where firefighting equipment is not required, but is installed, the equipment and its installation shall be of an approved type.

§ 34.01-10 Protection for unusual arrangements or special products—TB/ALL.

(a) The provisions of this part contemplate fire protection for tank vessels of conventional design carrying the usual liquid petroleum products in internal tanks. Whenever unusual arrangements exist or special cargoes are carried upon which the vessel's normal firefighting equipment will be ineffective, additional suitable firefighting equipment of approved type shall be carried.

Subpart 34.05—Firefighting Equipment, Where Required

§ 34.05-1 Fire main system—T/ALL.

(a) Fire pumps, piping, hydrants, hose and nozzles shall be installed on all tankships.

(b) The arrangements and details of the fire main system shall be as set forth in Subpart 34.10.

§ 34.05-5 Fire-extinguishing systems—T/ALL.

(a) Approved fire-extinguishing systems shall be installed on all tank ships in the following locations:

(1) *Dry cargo compartments.* A carbon dioxide or water spray system shall be installed for the protection of all dry cargo compartments. On vessels contracted for prior to January 1, 1962, a steam smothering system may be used in lieu thereof. In any case, where such dry cargo compartments are readily accessible by means of doors such spaces need be protected only by the fire main system.

(2) *Cargo tanks.* A deck foam system shall be installed for the protection of all cargo tank spaces. Where a deck foam system is installed, an approved inert gas, steam or other system may also be installed for purposes of fire prevention or inerting of cargo tanks. For vessels under 100 feet in length, the semiportable equipment required by footnote 1 of Table 34.10-5(a) will be considered as meeting the requirements of this subparagraph. On vessels contracted for prior to January 1, 1962, a steam smothering, inert gas, fixed foam or carbon dioxide system may be used in lieu of the deck foam system for the protection of the cargo tank spaces.

(3) *Lamp and paint lockers and similar spaces.* A carbon dioxide or water spray system shall be installed in all lamp and paint lockers, oil rooms, and similar spaces. Vessels contracted for prior to January 1, 1962, shall have a carbon dioxide, water spray, or steam smothering system. Vessels contracted for prior to November 19, 1952, shall have a carbon dioxide water spray, steam smothering, or foam system.

(4) *Pumprooms.* A carbon dioxide, inert gas, foam or water spray system shall be installed for the protection of all pumprooms. Vessels contracted for prior to January 1, 1962, and after July 1, 1951, shall have the same protection or a steam smothering system. For vessels contracted for prior to July 1, 1951, such systems are not required but if installed shall meet the requirements of this section.

(5) *Boilerrooms.* On tankships contracted for on or after November 19, 1952, a carbon dioxide or foam system shall be installed for the protection of all spaces containing oil fired boilers, either main or auxiliary, their fuel oil service pumps and/or such fuel oil units as the heaters, strainers, valves, manifolds, etc., that are subject to the discharge pressure of the fuel oil service pumps.

(6) *Machinery spaces.* A carbon dioxide system shall be installed for the protection of machinery spaces containing internal combustion propelling engines using fuel having a flashpoint of less than 110 degrees F.

(7) *Internal combustion installations.* If a fire-extinguishing system is installed to protect an internal combustion installation, the system shall be of the carbon dioxide type.

(8) *Enclosed ventilating system.* On tankships contracted for on or after January 1, 1962, where an enclosed ventilating system is installed for electric propulsion motors or generators, a carbon dioxide extinguishing system shall be installed in such system.

(b) The arrangements and details of the fire-extinguishing systems shall be as set forth in Subparts 34.10 through 34.20.

§ 34.05-10 Portable and semiportable extinguishers—TB/ALL.

(a) Approved portable and semiportable extinguishers shall be provided for all tank vessels.

(b) The type, size, location and arrangement of portable and semiportable extinguishers shall be as set forth in Subpart 34.50.

§ 34.05-15 Sand—TB/ALL.

(a) All spaces containing oil fired boilers shall have available in such spaces sand or an acceptable substitute.

(b) The arrangement and details of the carriage of the sand shall be as set forth in Subpart 34.55.

§ 34.05-20 Fire axes—T/ALL.

(a) Fire axes shall be provided on all tankships.

(b) The location and arrangement of fire axes shall be as set forth in Subpart 34.60.

Subpart 34.10—Fire Main System, Details

§ 34.10-1 Application—TB/ALL.

(a) On all tankships the provisions of this subpart, with the exception of § 34.10-90, shall apply to all fire main installations contracted for on or after May 26, 1965. Installations contracted for prior to May 26, 1965, shall meet the requirements of § 34.10-90.

(b) If a fire main system is installed on a tank barge, the system shall meet the intent of this subpart insofar as reasonable and practicable.

§ 34.10-5 Fire pumps—T/ALL.

(a) Tankships shall be equipped with independently driven fire pumps in accordance with Table 34.10-5(a).

TABLE 34.10-5(a)—FIRE PUMPS

Size vessel, L.O.A.		Minimum number of pumps	Powerful streams of water per pump	Minimum hydrant and hose size	
Over—	Not over—			Exterior stations	Interior stations
(*Feet*)	(*Feet*)			(*Inches*)	(*Inches*)
	100	[1]			
100	250	[2] 1	[3] 2	1½	1½
250	400	2	[3] 2	1½	1½
400	650	2	[3] 2	[4] 2½	1½
650		2	[3] 3	[4] 2½	1½

[1] Vessels of 65 feet and not over 100 feet shall be equipped with 2 B-V extinguishers. (Refer to Table 34.50-5(c).) Vessels under 65 feet shall be equipped with 1 B-V extinguisher. (Refer to Table 34.50-5(c).)

[2] Vessels of 1,000 gross tons and over on an international voyage shall have at least 2 fire pumps.

[3] From hydrants having greatest pressure drop between fire-pump(s) and nozzles.

[4] Where 2½-inch hydrant size is required, two 1½-inch outlets may be substituted therefor with two 1½-inch hoses.

(b) Each pump shall be capable of delivering simultaneously the number of streams of water required by Table

34.10–5(a) from the outlets having the greatest pressure drop between fire pump(s) and nozzles at a Pitot tube pressure of approximately 75 p.s.i. Where 1½-inch hose is permitted in lieu of 2½-inch hose by footnote 3 of Table 34.10–5(a), the pump capacity shall be determined on the basis that both hoses are used.

(c) On tankships of 1,000 gross tons and over on an international voyage, each required fire pump, while delivering water through the fire main system at a pressure corresponding to that required by § 34.10–15(e), shall have a minimum capacity of at least two-thirds of that required for an independent bilge pump if no length correction is taken for the cargo tank space. However, in no case shall the capacity of each fire pump be less than that otherwise required by this section.

(d) Fire pumps shall be fitted on the discharge side with relief valves set to relieve at 25 p.s.i. in excess of the pressure necessary to maintain the requirements of paragraph (b) of this section.

(e) Fire pumps shall be fitted with a pressure gage on the discharge side of the pumps.

(f) Fire pumps may be used for other purposes provided at least one of the required pumps is kept available for use on the fire system at all times. Unless specifically approved by the Commandant no branch lines shall be connected to the fire mains for other than fire, deck wash or tank cleaning purposes. Other discharge lines shall lead from a discharge manifold near the fire pump. In no case shall a pump having connection to an oil line be used as a fire pump.

(g) On all vessels where two fire pumps are required, they shall be located in separate spaces, and the arrangement of pumps, sea connections, and sources of power shall be such as to insure that a fire in any one space will not put all of the fire pumps out of operation. However, where it is shown to the satisfaction of the Commandant that it is unreasonable or impracticable to meet this requirement due to the size, or arrangement of the vessel, or for other reasons, the installation of a total flooding carbon dioxide system may be accepted as an alternate method of extinguishing any fire which would affect the powering and operation of at least one of the required fire pumps.

§ 34.10–10 Fire station hydrants, hose and nozzles—T/ALL.

(a) The size of fire station hydrants and hose required shall be as noted in Table 34.10–5(a).

(b) Fire hydrants shall be of sufficient number and so located that any part of living quarters, storerooms, working spaces and weather decks accessible to crew while at sea may be reached with two effective spray patterns of water, one of which shall be from a single 50-foot length of hose. In main machinery spaces all portions of such spaces shall be capable of being reached by at least 2 effective spray patterns of water, each of which shall be from a single 50-foot length of hose from separate outlets.

(c) The outlets at the fire station hydrant shall be limited to any position from the horizontal to the vertical pointing downward so that hose will lead horizontally or downward to minimize possibility of kinking.

(d) All fire station hydrants shall be equipped with spanners suitable for use on the hose at that station.

(e) Each fire station hydrant shall be provided with at least one length of hose with approved combination nozzle attached. A suitable hose rack or other device shall be provided. Hose racks on weather decks shall be located so as to afford protection from heavy seas. The hose shall be stored in the open or so as to be readily visible.

(f) The pipes and fire station hydrants shall be so placed that the fire hose may be easily coupled to them. All hydrants shall be so located as to be readily accessible. If deck cargo is carried, it shall not interfere with access to the fire station hydrants, and the pipes shall be arranged as far as practicable to avoid risk of damage by such cargo.

(g) Each fire station hydrant or "y" branch shall be equipped with a valve so that the hose may be removed while there is pressure on the fire main.

(h) Fire station hydrant connections shall be brass, bronze, or other equivalent metal. National Standard fire hose coupling threads shall be used for the 1½-inch and 2½-inch sizes, i.e., 9 threads per inch for 1½-inch hose and 7½ threads per inch for 2½-inch hose.

(i) Fire hose shall be 50 feet in length except on weather decks the hose shall be increased in length if necessary to enable a single length to be goose-necked over each side of the vessel. If two fire mains are installed on the weather decks, the length of hose shall be such that it may be goose-necked over the side from the nearest fire main.

(j) Fire hose when part of the fire equipment shall not be used for any other purpose than fire extinguishing, fire drills, and testing.

(k) Fire hose shall be connected to outlets at all times. However, in heavy weather on open decks where no protection is afforded the hose may be removed temporarily from the hydrant and stowed in an accessible location nearby. While in port, fire hose in way of cargo area shall be kept ready for immediate use. The fire hose may be temporarily removed when it will interfere with the handling of cargo.

(l) All lined and unlined hose installed after January 1, 1961, shall be of fire hose quality, in conformance with Underwriters' Laboratories, Inc., Standard 18 or 19, or Federal Specification JJ–H–571 or ZZ–H–451a Hose which bears the label of Underwriters' Laboratories, Inc., will be accepted as conforming to this requirement.

(m) Coupling shall conform to the requirements of paragraph (h) of this section.

(n) All fire hose, including those in the engine and boiler spaces, shall be fitted with approved combination nozzles, each having a solid stream orifice of not less than ⅞-inch diameter for the 2½-inch size and not less than ⅝-inch diameter for the 1½-inch size. The nozzle shall be capable of producing a solid stream or a high velocity spray and of being shut off.

(o) There shall be approved low velocity spray applicators conveniently located for use as required by Table 34.10–10(o). Each shall have the proper connection for mating its adjacent combination nozzle.

TABLE 34.10–10(o)—LOW VELOCITY SPRAY APPLICATORS

Location	Number	Length
Living spaces	1	4 or 6 feet.
Weather decks	4	10 or 12 feet.
Machinery spaces	2	4 or 6 feet.

§ 34.10–15 Piping—T/ALL.

(a) All piping, valves and fittings shall meet the applicable requirements of Subchapter F (Marine Engineering) of this chapter.

(b) An adequate number of valves shall be installed to isolate damaged sections of piping.

(c) All distribution valves shall be marked as required by § 35.40–10 of this subchapter.

(d) Tankships of 1,000 gross tons and over on an international voyage shall be provided with at least one international shore connection. Facilities shall be available enabling such a connection to be used on either side of the vessel. The international shore connection shall be in accordance with specification Subpart 162.034 of Subchapter Q (Specifications) of this chapter.

(e) For tankships on an international voyage, the diameter of the fire main shall be sufficient for the effective distribution of the maximum required discharge from two fire pumps operating simultaneously. This requirement is in addition to § 34.10–5(b). The discharge of this quantity of water through hoses and nozzles at a sufficient number of adjacent hydrants shall be at a minimum Pitot tube pressure of approximately 50 pounds per square inch.

§ 34.10–90 Installations contracted for prior to May 26, 1965—T/ALL.

(a) Installations contracted for prior to January 1, 1962, shall meet the following requirements:

(1) Existing arrangements, materials and facilities previously approved shall be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) Except as further modified by this paragraph, the details of the systems shall be in general agreement with §§ 34.10–5 through 34.10–15 insofar as is reasonable and practicable.

(3) Tankships of less than 500 gross tons shall be equipped with an efficient hand pump capable of delivering 50 gallons per minute or a power-driven pump of equivalent capacity. However, on

tankships of 20 gross tons or under where it is impracticable to install a hand or power-operated fire pump, or on tankships with only one man in the crew, at least one additional B–II fire extinguisher may be accepted in lieu of a fire pump.

(4) Tankships of 500 gross tons and over but not over 1,000 gross tons shall be provided with one independently power-driven pump.

(5) Tankships of over 1,000 gross tons shall be provided with two independently power-driven pumps.

(6) On tankships of 500 gross tons and over, the capacity of the combined fire pump installation shall be one-fifth gallon per minute per gross ton of the ship. The maximum total fire pump capacity required for any tankship shall be 800 gallons per minute.

(7) Fire pumps on tankships of 500 gross tons and over shall be capable of delivering two powerful jets of water simultaneously from the highest outlets on the fire main at a Pitot tube pressure of approximately 50 pounds per square inch through nozzles, each having an orifice of not less than ⅞-inch diameter where the internal diameter of the hose exceeds 1½ inches, and not less than ⅝-inch diameter where the internal diameter of the hose does not exceed 1½ inches.

(8) On oil-burning tankships, provided with two fire pumps, where the engine and fire rooms are not entirely separated by iron or steel bulkheads, or if fuel can drain from fireroom bilges into the engineroom, one of the fire pumps shall be located in an accessible space separate from the machinery compartment. On all tankships contracted for on or after November 19, 1952, the requirements of paragraph (f) of § 34.10–5 shall be met.

(9) Fire hydrant outlets shall have a minimum diameter of 1½ inches.

(10) On all tankships of 1,000 gross tons and over contracted for on or after July 1, 1951, but prior to January 1, 1962, the nozzles used on at least 2 hose lines in the boiler and machinery spaces shall be approved combination nozzles. In addition, an approved applicator equipped with a low velocity water spray tip, which is capable of being attached directly to the nozzle or the hose, shall be provided for each nozzle. Unless a self-cleaning strainer is contained within the nozzle itself and within the applicator where the applicator is attached directly to the hose, there shall be a self-cleaning strainer attached to the fire hydrant either directly or by means of a short length of hose, except where high and low velocity spray heads have large orifice openings.

(11) Fire hose lines in boiler and machinery spaces of vessels of 1,000 gross tons and over, contracted for prior to July 1, 1951, shall be provided with at least 2 suitable nozzles of an approved type which are capable of effectively extinguishing oil fires. Approved combination nozzles together with the applicator and low velocity spray head, will be acceptable for this purpose. The self-cleaning strainer may be fitted, but will not be required.

(12) At least 25 percent of the hydrants, exclusive of those in the boiler and machinery spaces, shall be fitted with approved combination nozzles, applicators with low velocity spray heads, and self-cleaning strainers as described in subparagraph (10) of this paragraph. Such nozzles shall be strategically located throughout the tankship.

(13) Where approved combination nozzles are used with fire lines other than required in subparagraphs (10) through (12) of this paragraph, the applicators, low velocity spray heads, and self-cleaning strainers may be fitted, but will not be required.

(14) Vessels contracted for on or after July 1, 1954, shall meet the requirements of § 34.10–10(h).

(b) Installations contracted for on or after January 1, 1962, but prior to May 26, 1965, shall meet the following requirements:

(1) Existing arrangements, materials, and facilities previously approved shall be considered satisfactory as long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs, and alterations may be made to the same standards as the original installation.

(2) The details of the systems shall be in general agreement with §§ 34.10–5 through 34.10–15 insofar as is reasonable and practicable.

Subpart 34.13—Steam Smothering System, Details

§ 34.13–1 Application—T/ALL.

(a) In accordance with § 34.05–5, steam smothering systems are not permitted on vessels contracted for on or after January 1, 1962, except as provided for under § 34.05–5(a)(2).

(b) Where a steam smothering system is already installed on a vessel contracted for prior to that date, the provisions of this subpart shall apply.

(c) This does not preclude the introduction of steam into such confined spaces as boiler casings or into tanks for steaming out purposes. Such installations are not to be considered as part of any required fire extinguishing system.

§ 34.13–90 Installations contracted for prior to January 1, 1962—T/ALL.

(a) Installations contracted for prior to January 1, 1962, shall meet the following requirements:

(1) Existing arrangements, materials and facilities previously approved will be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standard as the original installation.

(2) Steam shall be available from the main or auxiliary boilers, or from a shore source. The capacity of the steam supply shall be at least equal to one pound of steam per hour for each 12 cubic feet of the largest cargo compartment in the case of installations contracted for on or after November 19, 1952, and one pound of steam per hour for each 50 cubic feet of the largest cargo compartment in the case of installations contracted for prior to November 19, 1952.

(3) Where reasonable and practicable, the steam pressure shall be at least 100 p.s.i.

(4) The piping system shall meet the general requirements of this subparagraph insofar as is reasonable and practicable.

(i) All piping, valves, and fittings shall meet the applicable requirements of subchapter F (Marine Engineering) of this chapter. All valves and manifolds shall be marked as required by § 35.40–10.

(ii) The supply may be taken from any steam line having adequate capacity.

(iii) The distribution line to each compartment shall be fitted with a shut-off valve.

(iv) Provisions shall be made for draining the manifold and distribution lines to prevent them from freezing.

(v) The minimum size and number of branches to the various spaces shall be as given in Table 34.13–90(a)(4)(v). The distribution piping from the manifold to the branch lines shall have an area approximately equal to the combined areas of the branch lines served.

TABLE 34.13–90(a)(4)(v)

Volume of space in cubic feet		Number of branches to space	Pipe size of each branch, inches
Over—	Not over—		
----------	500	1	¾
500	5,000	1	1
5,000	15,000	1	1¼
15,000	and over	1	1½

(vi) The steam supply line to any distribution manifold shall be of sufficient size to supply all the branch lines to the largest compartment.

(vii) All controls and valves for the operation of the system shall be outside the space protected and shall not be located in any space that might be cut off or made inaccessible in the event of fire in any places protected.

(5) For the purpose of this paragraph, the term "largest cargo compartment" shall be considered as the cargo space, either liquid or dry, having the greatest volumetric measurement. In the case of liquid cargo tanks, the gross volume of the largest tank and all adjoining tanks shall be used for installations contracted for on or after November 19, 1952; for installations contracted for prior to November 19, 1952, the gross volume of the individual tanks shall be used. In the case of dry-cargo compartments, the gross volume shall be taken between adjacent watertight or firescreen bulkheads, and from tank top or lowest deck to the deckhead of the uppermost deck on which cargo may be carried, and if a trunk extends beyond such deckhead, the volume of the trunk shall be included.

(6) The valves to the tanks shall be left open at all times so that, in case of fire, it will be necessary only to open the master valve to insure a flow of steam into each tank, after which, the valves to the tanks which are not on fire may be closed; however, where the opening of such branch lines may cause contamination of cargo or cause the passage of gases or vapors between tanks or compartments, they may be kept closed.

(7) Piping for dry-cargo spaces, pump rooms, paint and lamp lockers, and similar spaces shall be run independent of the extinguishing system for the bulk cargo tanks. If this should be impracticable, valves shall be installed between the main bulk tank extinguishing system and other compartments served, such valves to be marked: "This valve to be kept closed except in case of fire."

(8) The master valve control shall be located above the uppermost complete deck having permanent means of closing all openings in the weather portions of the deck.

(9) Control valves for pumproom extinguishment systems shall be located adjacent to the pumproom exit.

(10) In pumprooms the outlets shall terminate just above the floor plates.

Subpart 34.15—Carbon Dioxide Extinguishing Systems, Details

§ 34.15–1 Application—T/ALL.

(a) Where a carbon dioxide extinguishing system is installed, the provisions of this subpart, with the exception of § 34.15–90, shall apply to all installations contracted for on or after January 1, 1962. Installations contracted for prior to January 1, 1962, shall meet the requirements of § 34.15–90.

(b) The requirements of this subpart are based on a "high pressure system," i.e., one in which the carbon dioxide is stored in liquid form at atmospheric temperature. Details for "low pressure systems," i.e., those in which the carbon dioxide is stored in liquid form at a continuously controlled low temperature, may be specifically approved by the Commandant where it is demonstrated that a comparable degree of safety and fire extinguishing ability is achieved.

§ 34.15–5 Quantity, pipe sizes, and discharge rates—T/ALL.

(a) *General.* (1) The amount of carbon dioxide required for each space shall be as determined by paragraphs (b) through (e) of this section.

(b) *Total available supply.* (1) A separate supply of carbon dioxide need not be provided for each space protected. The total available supply shall be at least sufficient for the space requiring the greatest amount.

(c) *Dry cargo spaces.* (1) The number of pounds of carbon dioxide required for each space shall be equal to the gross volume of the space in cubic feet divided by 30.

(2) Although separate piping shall be led to each cargo hold and 'tween deck, for the purpose of determining the amount of carbon dioxide required, a cargo compartment will be considered as the space between watertight or fire-screen bulkheads and from the tank top or lowest deck to the deck head of the uppermost space on which cargo may be carried. If a trunk extends beyond such deck, the trunk volume shall be included. Tonnage openings shall be considered as sealed for this purpose.

(3) Branch lines to the various cargo holds and 'tween decks shall not be less than ¾-inch standard pipe size.

(4) No specific discharge rate need be applied to such systems.

(d) *Enclosed ventilation systems for rotating electrical propulsion equipment.* (1) The number of pounds of carbon dioxide required for the initial charge shall be equal to the gross volume of the system divided by 10 for systems having a volume of less than 2,000 cubic feet, and divided by 12 for systems having a volume of 2,000 cubic feet or more.

(2) The piping for the initial charge shall be in accordance with Table 34.15–5(e)(4), and the discharge of the required amount shall be completed within 2 minutes.

(3) In addition to the above there shall be sufficient carbon dioxide available to permit delayed discharges of such quantity as to maintain at least a 25 percent concentration until the equipment can be stopped. If the initial discharge is such as to achieve this concentration until the equipment is stopped, no delayed discharge need be provided.

(4) The piping for the delayed discharge shall not be less than ½-inch standard pipe, and no specific discharge rate need be applied to such systems. On small systems, this pipe may be incorporated with the initial discharge piping.

(e) *Machinery spaces, pumprooms, paint lockers, and similar spaces.* (1) Except as provided in subparagraph (4) of this paragraph, the number of pounds of carbon dioxide required for each space shall be equal to the gross volume of the space divided by the appropriate factor noted in Table 34.15–5(e)(1). If fuel can drain from the compartment being protected to an adjacent compartment, or if the compartments are not entirely separate, the requirements for both compartments shall be used to determine the amount of carbon dioxide to be provided. The carbon dioxide shall be arranged to discharge into both such compartments simultaneously.

TABLE 34.15–5(e)(1)

Gross volume of compartment, cubic feet		Factor
Over—	Not Over—	
----------	500	15
500	1,600	16
1,600	4,500	18
4,500	50,000	20
50,000	----------	22

(2) For the purpose of the above requirement of this paragraph, the volume of a machinery space shall be taken as exclusive of the normal machinery casing unless the boiler, internal combustion propelling machinery, or fuel oil installations subject to the discharge pressure of the fuel oil service pump extend into such space, in which case the volume shall be taken to the top of the casing or the next material reduction in casing area whichever is lower. The terms "normal machinery casing" and "material reduction in casing area" shall be defined as follows:

(i) By "normal machinery casing" shall be meant a casing the area of which is not more than 40 percent of the maximum area of the machinery space.

(ii) By "material reduction in casing area" shall be meant a reduction to at least 40 percent of the casing area.

(3) For the purpose of the above requirements of this paragraph, the volume of a pumproom shall include the pumproom and all associated trunks up to the deck at which access from the weather is provided.

(4) For tankships on an international voyage contracted for on or after May 26, 1965, the amount of carbon dioxide required for a space containing propulsion boilers or internal combustion propulsion machinery shall be as given by subparagraphs (1) and (2) of this paragraph or by dividing the entire volume, including the casing, by a factor of 25, whichever is the larger.

(5) Branch lines in the various spaces shall be as noted in Table 34.15–5(e)(5).

TABLE 34.15–5(e)(5)

Maximum quantity of carbon dioxide required, pounds	Minimum pipe size, inches	Maximum quantity of carbon dioxide required, pounds	Minimum pipe size, inches
100	1½	2,500	2½
225	¾	4,450	3
300	1	7,100	3½
600	1¼	10,450	4
1,000	1½	15,000	4½
2,450	2	----------	----------

(6) Distribution piping within the space shall be proportioned from the supply line to give proper distribution to the outlets without throttling.

(7) The number, type and location of discharge outlets shall be such as to give a uniform distribution throughout the space.

(8) The total area of all discharge outlets shall not exceed 85 percent nor be less than 35 percent of the nominal cylinder outlet area or the area of the supply pipe, whichever is smaller. The nominal cylinder outlet area in square inches shall be determined by multiplying the factor 0.0022 by the number of pounds of carbon dioxide required, except that in no case shall this outlet area be less than 0.110 square inches.

(9) The discharge of at least 85 percent of the required amount of carbon dioxide shall be complete within 2 minutes.

§ 34.15–10 Controls—T/ALL.

(a) Except as noted in § 34.15–20(b), all controls and valves for the operation of the system shall be outside the space protected, and shall not be located in any space that might be cut off or made inaccessible in the event of fire in any of the spaces protected.

(b) If the same cylinders are used to protect more than one space, a manifold with normally closed stop valves shall be used to direct the carbon dioxide into the proper space. If cylinders are used to protect only one space, a normally closed stop valve shall be installed between the cylinders and the space except for systems of the type indicated in § 34.15-5(e) which contain not more than 300 pounds of carbon dioxide.

(c) Distribution piping to the dry cargo spaces shall be controlled from not more than two stations. One of the stations controlling the system for the main machinery space shall be located as convenient as practicable to one of the main escapes from the space. All control stations and the individual valves and controls shall be marked as required by § 35.40-10 of the subchapter.

(d) Systems of the type indicated in § 34.15-5(e) shall be actuated at each station by one control operating the valve to the space and a separate control releasing at least the required amount of carbon dioxide. These two controls shall be located in a box or other enclosure clearly identified for the particular space. Systems installed without a stop valve shall be operated by one control releasing at least the required amount of carbon dioxide.

(e) Where provisions are made for the simultaneous release of a given amount of carbon dioxide by operation of a remote control, provisions shall also be made for manual control at the cylinders. Where gas pressure from pilot cylinders is used as a means for releasing the remaining cylinders, not less than two pilot cylinders shall be used for systems consisting of more than two cylinders. Each of the pilot cylinders shall be capable of manual control at the cylinder, but the remaining cylinders need not be capable of individual manual control.

(f) Systems of the type indicated in § 34.15-5(e), which are of more than 300 pounds of carbon dioxide shall be fitted with an approved delayed discharge so arranged that the alarm will be sounded for at least 20 seconds before the carbon dioxide is released into the space. Such systems of not more than 300 pounds of carbon dioxide shall also have a similar delayed discharge, except for spaces which have a suitable horizontal escape.

(g) All distribution valves and controls shall be of an approved type. All controls shall be suitably protected.

(h) Complete but simple instructions for the operation of the system shall be located in a conspicuous place at or near the releasing control device.

(i) If the space or enclosure containing the carbon dioxide supply or controls is to be locked, a key to the space or enclosure shall be in a break-glass-type box conspicuously located adjacent to the opening.

§ 34.15-15 Piping—T/ALL.

(a) The piping, valves, and fittings shall have a bursting pressure of not less than 6,000 pounds p.s.i.

(b) All piping, in nominal sizes not over ¾-inch shall be at least Schedule 40 (standard weight) and in nominal sizes over ¾-inch, shall be at least Schedule 80 (extra heavy).

(c) All piping, valves, and fittings of ferrous materials shall be protected inside and outside against corrosion unless specifically approved otherwise by the Commandant.

(d) A pressure relief valve or equivalent set to relieve between 2,400 and 2,800 pounds p.s.i. shall be installed in the distributing manifold or such other location as to protect the piping in the event that all branch line shutoff valves are closed.

(e) All deadend lines shall extend at least 2 inches beyond the last orifice and shall be closed with cap or plug.

(f) All piping, valves, and fittings shall be securely supported, and where necessary, protected against injury.

(g) Drains and dirt traps shall be fitted where necessary to prevent the accumulation of dirt or moisture. Drains and dirt traps shall be located in accessible locations where possible.

(h) Piping shall be used for no other purpose except that it may be incorporated with the fire-detecting system.

(i) Piping passing through living quarters shall not be fitted with drains or other openings within such spaces.

(j) Installation test requirements are:

(1) Upon completion of the piping installation, and before the cylinders are connected, a pressure test shall be applied as set forth in this paragraph. Only carbon dioxide or other inert gas shall be used for this test.

(2) The piping from the cylinders to the stop valves in the manifold shall be subjected to a pressure of 1,000 pounds p.s.i. with no additional gas being introduced to the system, it shall be demonstrated that the leakage of the system is such as not to permit a pressure drop of more than 150 pounds per square inch per minute for 2-minute period.

(3) The individual branch lines to the various spaces protected shall be subjected to a test similar to that described in the preceding sub-paragraph with the exception that the pressure used shall be 600 pounds p.s.i. in lieu of 1,000 pounds p.s.i. For the purpose of this test, the distribution piping shall be capped within the space protected at the first joint ahead of the nozzles.

(4) In lieu of the tests prescribed in the preceding subparagraphs in this paragraph, small independent systems protecting spaces such as emergency generator rooms, lamp lockers, etc., may be tested by blowing out the piping with the air at a pressure of at least 100 pounds p.s.i.

§ 34.15-20 Carbon dioxide storage—T/ALL.

(a) Except as provided in paragraph (b) of this section, the cylinders shall be located outside the spaces protected, and shall not be located in any space that might be cut off or made inaccessible in the event of a fire in any of the spaces protected.

(b) Systems of the type indicated in § 34.15-5 (e), consisting of not more than 300 pounds of carbon dioxide, may have the cylinders located within the space protected. If the cylinder stowage is within the space protected, the system shall be arranged in an approved manner to be automatically operated by a heat actuator within the space in addition to the regular remote and local controls.

(c) The space containing the cylinders shall be properly ventilated and designed to preclude an anticipated ambient temperature in excess of 130 degrees F.

(d) Cylinders shall be securely fastened and supported, and where necessary, protected against injury.

(e) Cylinders shall be so mounted as to be readily accessible and capable of easy removal for recharging and inspection. Provisions shall be available for weighing the cylinders.

(f) Where subject to moisture, cylinders shall be so installed as to provide a space of at least 2 inches between the flooring and the bottom of the cylinders.

(g) Cylinders shall be mounted in an upright position or inclined not more than 30 degrees from the vertical. However, cylinders which are fitted with flexible or bent siphon tubes may be inclined not more than 80 degrees from the vertical.

(h) Where check valves are not fitted on each independent cylinder discharge, plugs or caps shall be provided for closing outlets when cylinders are removed for inspection or refilling.

(i) All cylinders used for storing carbon dioxide shall be fabricated, tested, and marked in accordance with the regulations of the Interstate Commerce Commission as noted in § 147.04-1 of Subchapter N (Dangerous Cargoes) of this chapter.

§ 34.15-25 Discharge outlets—T/ALL.

(a) Discharge outlets shall be of an approved type.

§ 34.15-30 Alarms—T/ALL.

(a) Spaces required to have a delayed discharge by § 34.15-10(f) which are protected by a carbon dioxide extinguishing system and are normally accessible to persons on board while the vessel is being navigated, other than paint and lamp lockers and similar small spaces, shall be fitted with an approved audible alarm in such spaces which will be automatically sounded before the carbon dioxide is admitted to the space. The alarm shall be conspicuously and centrally located and shall be marked as required by § 35.40-7 of this subchapter. Such alarms shall be so arranged as to sound during the 20-second delay period prior to the discharge of carbon dioxide into the space, and the alarm shall depend on no source of power other than the carbon dioxide.

§ 34.15-35 Enclosure openings—T/ALL.

(a) Except for cargo spaces, the operation of the carbon dioxide system shall automatically shut down any mechanical ventilation to that space. This will not be required where the carbon dioxide system is a secondary system in addition to another approved primary system protecting the space.

(b) Where natural ventilation is provided for spaces protected by a carbon

dioxide extinguishing system, provisions shall be made for easily and effectively closing off the ventilation.

(c) Means shall be provided for closing all other openings to the space protected from outside such space. In this respect, relatively tight doors, shutters, or dampers shall be provided for openings in the lower portion of the space. The construction shall be such that openings in the upper portion of the space can be closed off either by permanently installed means or by the use of canvas or other material which is normally carried by the vessel.

§ 34.15–40 Pressure relief—T/ALL.

(a) Where necessary, relatively tight compartments such as refrigeration spaces, paint lockers, etc., shall be provided with suitable means for relieving excessive pressure accumulating within the compartment when the carbon dioxide is injected.

§ 34.15–90 Installations contracted for prior to January 1, 1962—T/ALL.

(a) Installations contracted for prior to November 19, 1952, shall meet the requirements of this paragraph.

(1) Existing arrangements, materials, and facilities previously approved shall be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) The details of the systems shall be in general agreement with §§ 34.15–5 through 34.15–40 insofar as is reasonable and practicable, with the exception of § 34.15–5 (e)(1) through (3) covering spaces other than cargo spaces, which systems may be installed in accordance with subparagraphs (4) through (7) of this paragraph.

(3) For cargo tanks at least one pound of carbon dioxide shall be available for each 30 cubic feet of the largest cargo tank. The discharge of the required amount of carbon dioxide shall be complete within 5 minutes.

(4) In boilerrooms, the bilges shall be protected by a system discharging principally below the floor plates. Perforated pipe may be used in lieu of discharge nozzles for such systems. The number of pounds of carbon dioxide shall be equal to the gross volume of the boiler room taken to the top of the boilers divided by 36. In the event of an elevated boilerroom which drains to the machinery space, the system shall be installed in the engineroom bilge and the gross volume shall be taken to the flat on which the boilers are installed.

(5) In machinery spaces where main propulsion internal combustion machinery is installed, the number of pounds of carbon dioxide required shall be equal to the gross volume of the space taken to the underside of the deck forming the hatch opening divided by 22.

(6) In miscellaneous spaces other than cargo or main machinery spaces the number of pounds of carbon dioxide required shall be equal to the gross volume of the space divided by 22.

(7) Branch lines to the various spaces other than cargo and similar spaces shall be noted in Table 34.15–90(a)(7). This table is based on cylinders having discharge outlets and siphon tubes of ⅜-inch diameter.

TABLE 34.15-90(a)(7)

Number of cylinders		Nominal pipe size, inches
Over—	Not over—	
----------	2	¼-standard.
2	4	¾-standard.
4	6	1-extra heavy.
6	12	1¼-extra heavy.
12	16	1½-extra heavy.
16	27	2-extra heavy.
27	39	2½-extra heavy.
39	60	3-extra heavy.
60	80	3½-extra heavy.
80	104	4-extra heavy.
104	165	5-extra heavy.

(b) Installations contracted for on or after November 19, 1952, but prior to January 1, 1962, shall meet the requirements of this paragraph.

(1) Existing arrangements, materials, and facilities previously approved shall be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) The details of the systems shall be in general agreement with §§ 34.15–5 through 34.15–40 insofar as is reasonable and practicable with the exception that delayed discharges need not be provided for installations made prior to July 1, 1957.

Subpart 34.17—Fixed Foam Extinguishing Systems, Details

§ 34.17–1 Application—T/ALL.

(a) Where a fixed foam extinguishing system is installed, the provisions of this Subpart with the exception of § 34.17–90, shall apply to all installations contracted for on or after January 1, 1962.

(b) Installations contracted for prior to January 1, 1962, shall meet the requirements of § 34.17–90.

§ 34.17–5 Quantity of foam required—T/ALL.

(a) *Area protected.* (1) For machinery spaces and pumprooms, the system shall be so designed and arranged as to spread a blanket of foam over the entire tank top or bilge of the space protected. The arrangement of piping shall be such as to give a relatively uniform distribution over the entire area protected.

(2) Where an installation is made to protect an oil-fired boiler installation on a flat which is open to or can drain to the lower engineroom or other space, both the flat and the lower space shall be protected simultaneously. The flat shall be fitted with suitable coamings on all openings other than deck drains to properly restrain the oil and foam at that level. Other installations of a similar nature will be considered in a like manner.

(b) *Rate of application.* (1) The rate of discharge to foam outlets protecting the hazard shall be at least as set forth in this paragraph.

(2) For chemical foam systems with stored "A" and "B" solutions, a total of at least 1.6 gallons per minute of the two solutions shall be discharged for each 10 square feet of area protected.

(3) For other types of foam systems, the water rate to the dry-powder generators or air foam production equipment shall be at least 1.6 gallons per minute for each 10 square feet of area protected.

(c) *Supply of foam-producing material.* (1) There shall be provided a quantity of foam-producing material sufficient to operate the equipment at the minimum discharge rate specified in paragraph (b) of this section for a period of at least 3 minutes.

(d) *Separate supply of foam-producing material.* (1) A separate supply of foam-producing material need not be provided for each space protected. This includes a deck foam system. The total available supply shall be at least sufficient for the space requiring the greatest amount.

(e) *Water supply for required pumps.* (1) The water supply shall be from outside and completely independent of the space protected.

§ 34.17–10 Controls—T/ALL.

(a) The foam agent, its container, measuring devices, and other items peculiar to the system shall be of an approved type.

(b) The foam-producing material container and all controls and valves for the operation of the system shall be outside the space protected and shall not be located in such space as might be cut off or made inaccessible in the event of fire in any of the spaces protected. The control space shall be as convenient as practicable to one of the main escapes from the spaces protected, and shall be marked as required by § 35.40–10 of this subchapter. Where pumps are required, it shall not be necessary that they be started from the control space.

(c) Complete, but simple instructions for the operation of the system shall be located in a conspicuous place at or near the controls.

(d) The valves to the various spaces served shall be marked as required by § 35.40–10 of this subchapter.

§ 34.17–15 Piping—T/ALL.

(a) All piping, valves, and fittings shall meet the applicable requirements of Subchapter F (Marine Engineering) of this chapter.

(b) All piping, valves, and fittings of ferrous materials shall be protected inside and outside against corrosion unless specifically approved otherwise by the Commandant.

(c) All piping, valves, and fittings shall be securely supported, and where necessary, protected against injury.

(d) Drains and dirt traps shall be fitted where necessary to prevent the accumulation of dirt or moisture.

(e) Piping shall not be used for any other purpose than firefighting, drills and testing.

§ 34.17–20 Discharge outlets—T/ALL.

(a) Discharge outlets shall be of an approved type.

§ 34.17–25 Additional protection required—T/ALL.

(a) In order that any residual fires above the floor plates may be extinguished when a foam system is installed for the protection of machinery spaces, at least 2 fire hydrants, in addition to those required for the machinery space by Subpart 34.10, shall be installed outside of the machinery space entrance. Such hydrants shall be fitted with sufficient hose so that any part of the machinery space may be reached with at least 2 streams of water, and each hose shall be equipped with an approved combination nozzle and applicator.

§ 34.17–90 Installations contracted for prior to January 1, 1962—T/ALL.

(a) Installations contracted for prior to January 1, 1962, shall meet the following requirements:

(1) Existing arrangements, materials, and facilities previously approved shall be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) The details of the systems shall be in general agreement with §§ 34.17–5 through 34.17–20, insofar as is reasonable and practicable. Installations contracted for prior to November 19, 1952, need not comply with paragraph (a)(2) of § 34.17–5 and § 34.17–25. A 6-inch blanket of foam in 3 minutes for machinery spaces and pumprooms will be considered as meeting the requirements of § 34.17–5.

(3) Where a system is installed to protect a tank, it shall be so designed and arranged as to spread a blanket of foam over the entire liquid surface of the tank within the range of usual trim. The arrangement of piping shall be such as to give a relatively uniform distribution over the entire area protected.

(4) For tanks, the rate of discharge to foam outlets protecting the hazard shall be as set forth in § 34.17–5(b), except that the value of 1 gallon per minute shall be substituted in both cases for the value of 1.6 gallons per minute. The quantity of foam provided shall be sufficient to operate the equipment for 5 minutes.

(5) On installations installed prior to November 19, 1952, a semiportable foam generator using a dry-chemical mixture or mechanical foam in conjunction with the fire lines may be substituted for the fixed system subject to the following conditions:

(i) There shall be at least one fire pump of suitable capacity available which can be operated and controlled from outside the space protected.

(ii) Stop valves shall be installed in the line so that if any portion of the fire main is ruptured, the foam generator may still be operated. Connections for at least two fire hoses shall be provided between the pump and the stop valve.

(iii) If the foam system is of the portable or semiportable type, the apparatus and chemicals shall be stored in a readily accessible place protected from the weather.

Subpart 34.20—Deck Foam System, Details

§ 34.20–1 Application—T/ALL.

(a) Where a deck foam system is installed, the provisions of this subpart, with the exception of § 34.20–90, shall apply to all installations contracted for on or after January 1, 1962.

(b) Installations contracted for prior to January 1, 1962, shall meet the requirements of § 34.20–90.

§ 34.20–3 Cargo area definition—T/ALL.

(a) For the purpose of this subpart, the term "cargo area" is defined as the maximum beam of the vessel times the total longitudinal extent of the cargo tank spaces.

§ 34.20–5 Quantity of foam required—T/ALL.

(a) *Area protected.* Systems of this type are designed to give primary protection to the spaces over the cargo tanks.

(b) *Rate of application.* The water rate of the foam production equipment shall be at least 0.016 gallons per minute for each square foot of cargo area.

(c) *Supply of foam-producing material.* There shall be provided a supply of foam-producing material sufficient to operate the equipment at the required rate of application for a period of at least 15 minutes without recharging. If this equipment operates in excess of the required rate, the supply of foam-producing material shall be increased accordingly.

(d) *Separate supply of foam-producing material.* Where the same foam-producing material may be used for this system as well as a fixed foam system, separate supplies need not be provided for each space protected. The total available supply shall be at least sufficient for the space requiring the greatest amount.

(e) *Water supply.* Suitable pumps shall be provided capable of producing the required water rate. The fire pumps required by Subpart 34.10 may be used for this purpose; however, the operation of the deck foam system shall not interfere with the simultaneous use of the fire main system.

§ 34.20–10 Controls—T/ALL.

(a) The foam agent, its container, measuring devices, and other items peculiar to this system shall be of an approved type.

(b) The foam agent container and the main controls for operating the system shall be located in a protected space not likely to be made inaccessible in the event of a fire in any portion of the cargo area.

(c) Complete, but simple instructions for the operation of the system shall be located in a conspicuous place at or near the controls.

(d) All valves shall be marked as required by § 35.40–17.

§ 34.20–15 Piping—T/ALL.

(a) All piping, valves, and fittings shall meet the applicable requirements of Subchapter F (Marine Engineering) of this chapter.

(b) All piping, valves, and fittings of ferrous materials shall be protected inside and outside against corrosion unless specifically approved otherwise by the Commandant.

(c) Piping and outlet arrangements shall be such as to permit the required rate of application to any portion of the open deck of the cargo area using the mounted and/or hand-held appliances provided. For enclosed spaces application of at least 1.6 gallons per minute water rate for each 10 square feet of the enclosed area for 5 minutes will be acceptable. For the purpose of this paragraph, it shall be assumed that all piping is damaged in way of the fire and an adequate number of valves shall be fitted for isolating damaged sections of piping.

(d) All piping, valves, and fittings shall be securely supported, and where necessary, protected against injury.

(e) Drains and dirt traps shall be fitted where necessary to prevent the accumulation of dirt or moisture.

(f) Piping shall not be used for any other purpose than firefighting, drills, and testing.

§ 34.20–20 Discharge outlets—T/ALL.

(a) Discharge outlets shall be of an approved type.

(b) Mounted and/or hand held foam appliances shall be connected to the required outlets at all times except on open decks, where the location of the outlets is such that no protection is afforded for the equipment in heavy weather.

§ 34.20–90 Installations contracted for prior to January 1, 1962—T/ALL.

(a) Installations contracted for prior to January 1, 1962, shall meet the following requirements:

(1) Existing arrangements, materials, and facilities previously approved shall

be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) For installations contracted for prior to November 19, 1952, see § 34.17-90(a)(5).

(3) Installations contracted for on or after November 4, 1957, but prior to January 1, 1962, shall meet the requirements of §§ 34.20-5 through 34.20-20 insofar as is reasonable and practicable.

Subpart 34.25—Water Spray Extinguishing Systems, Details

§ 34.25-1 Application—T/ALL.

(a) Where a water spray extinguishing system is installed, the provisions of this subpart, with the exception of § 34.25-90, shall apply to all installations contracted for on or after January 1, 1964. Installations contracted for prior to January 1, 1964, shall meet the requirements of § 34.25-90.

§ 34.25-5 Capacity and arrangement—T/ALL.

(a) The capacity and arrangement shall be such as to effectively blanket the entire area of the space protected. The rate of discharge and the arrangement of piping and spray nozzles shall be such as to give a uniform distribution over the entire area protected.

(b) The spacing of the spray nozzles shall be on the basis of the spray pattern provided by the lowest pressure at any spray nozzle in the system. In no instance shall a system be designed for any spray nozzle to be operated at a pressure less than that for which it was approved. The maximum permissible height of the spray nozzle above the protected area shall not exceed that specified in its approval. Whenever there are obstructions to coverage by the spray patterns, additional spray nozzles shall be installed to provide full coverage.

(c) The water supply shall be from outside the space protected and shall in no way be dependent upon power from the space protected. The pump supplying water for the system shall either be reserved exclusively for the system or it may be one of the fire pumps, provided the capacity of the fire pump as set forth in Subpart 34.10 is increased by the required capacity of the system, so that this system may be operated simultaneously with the fire main system.

§ 34.25-10 Controls—T/ALL.

(a) There shall be one control valve for the operation of the system located in an accessible position outside the space protected. The control shall be located as convenient as practicable to one of the main escapes from the space protected, and shall be marked as required by § 35.40-18 of this subchapter. It shall not be necessary to start the pumps from the control space.

(b) Complete, but simple instructions for the operation of the system shall be located in a conspicuous place at or near the controls.

(c) The valve to the space protected shall be marked as required by § 35.40-18 of this subchapter.

§ 34.25-15 Piping—T/ALL.

(a) All piping, valves and fittings shall meet the applicable requirements of Subchapter F (Marine Engineering) of this chapter.

(b) Distribution piping shall be of materials resistant to corrosion, except that steel or iron pipe may be used if inside corrosion resistant coatings which will not flake off and clog the nozzles are applied. Materials readily rendered ineffective by heat of a fire shall not be used. The piping shall be subject to approval for each installation.

(c) All piping, valves, and fittings shall be securely supported, and where necessary, protected against injury.

(d) Drains, strainers, and dirt traps shall be fitted where necessary to prevent the accumulation of dirt or moisture.

(e) Threaded joints shall be metal to metal, with no thread compound used.

(f) Distribution piping shall be used for no other purpose.

(g) All piping shall be thoroughly cleaned and flushed before installation of the water spray nozzles.

§ 34.25-20 Spray nozzles—T/ALL.

(a) Spray nozzles shall be of an approved type.

§ 34.25-90 Installations contracted for prior to January 1, 1964—T/ALL.

(a) Installations contracted for prior to January 1, 1964, shall meet the following requirements:

(1) Existing arrangements, materials, and facilities previously approved shall be considered satisfactory so long as they meet the minimum requirements of this paragraph and they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. Minor repairs and alterations may be made to the same standards as the original installation.

(2) The details of the systems shall be in general agreement with §§ 34.25-5 through 34.25-20 insofar as is reasonable and practicable.

Subpart 34.50—Portable and Semiportable Extinguishers

§ 34.50-1 Application—TB/ALL.

(a) The provisions of this subpart, with the exception of § 34.50-90, shall apply to all vessels contracted for on or after January 1, 1962.

(b) All vessels contracted for prior to January 1, 1962, shall meet the requirements of § 34.50-90.

§ 34.50-5 Classification—TB/ALL.

(a) Portable and semiportable extinguishers shall be classified by a combination letter and number symbol. The letter indicating the type of fire which the unit could be expected to extinguish, and the number indicating the relative size of the unit.

(b) The types of fire will be designated as follows:

(1) "A" for fires in ordinary combustible materials such as mattresses, piles of wood, shavings, canvas, etc., where the quenching and cooling effects of quantities of water, or solutions containing large percentages of water, are of first importance.

(2) "B" for fires in combustible or flammable liquids such as gasoline, lubricating oil, diesel oil, greases, etc., where a blanketing or smothering effect is essential.

(3) "C" for fires in electrical equipment where the use of non-conducting extinguishing agent is of first importance so that electrical shock is not experienced by the firefighter.

(c) The number designations for size will start with "I" for the smallest to "V" for the largest. Extinguishers which have a gross weight of 55 pounds or less when fully charged are considered portable. Extinguishers which have a gross weight of more than 55 pounds when fully charged are considered semiportable and shall be fitted with suitable hose and nozzle or other practicable means so that all portions of the space concerned may be reached. Examples of size graduations for some of the typical portable and semiportable extinguishers are set forth in Table 34.50-5(c).

TABLE 34.50-5(c)

Classification type (Size)	Soda-acid and water (Gallons)	Foam (Gallons)	Carbon dioxide (Pounds)	Dry chemical (Pounds)
A-II	2½	2½		
B-I		1½	4	2
B-II		2½	15	10
B-III		12	35	20
B-IV		20	50	30
B-V		40	[1] 100	[1] 50
C-I			4	2
C-II			15	10

[1] For outside use, double the amount shall be carried.

§ 34.50-10 Location—TB/ALL.

(a) Approved portable and semiportable extinguishers shall be installed in accordance with Table 34.50-10(a). The location of the equipment shall be such as in the opinion of the Officer in Charge, Marine Inspection, will be most convenient in case of emergency. Where special circumstances exist, not covered by Table 34.50-10(a), the Officer in Charge, Marine Inspection, may require such additional equipment as he deems necessary for the proper protection of the vessel.

TABLE 34.50-10(a)—PORTABLE AND SEMIPORTABLE EXTINGUISHERS

Tank ships		Area	Tank barges	
Quantity and location	Classification (see § 34.50-5)		Classification (see § 34.50-5)	Quantity and location
		Safety Areas		
1 required	C-II	Wheelhouse and chartroom area.		None required.
1 required in vicinity of exit.	C-II [1]	Radio room		None required.
		Accommodation Areas		
1 required in each main passageway on each deck, conveniently located, and so that no room is more than 75 feet from an extinguisher.	A-II or B-II	Staterooms, toilet spaces, public spaces, offices, etc., and associated lockers, storerooms, and pantries.	A-II or B-II	1 required in vicinity of exit.
		Service Areas		
1 required for each 2,500 square feet or fraction thereof, suitable for hazard involved.	B-II or C-II	Galleys	B-II or C-II	1 required, suitable for hazard involved.
1 required for each 2,500 square feet or fraction thereof, suitable for hazard involved.	A-II or B-II	Stores areas, including paint and lamp rooms.		None required.
		Machinery Area [2]		
2 required [3]	B-II and B-V [4]	Spaces containing oil fired boilers, either main or auxiliary, or any fuel oil units subject to the discharge pressure of the fuel oil service pump.	B-II	1 required.
1 required for each 1,000 B.H.P., but not less than 2 nor more than 6. [5]	B-II and B-III	Spaces containing internal combustion or gas turbine propulsion machinery.		None required.
1 required [6] [7]				
1 required in vicinity of exit. [7]	B-II	Auxiliary spaces containing internal combustion or gas turbine units.	B-II	1 required in vicinity of exit. [7] [8]
1 required in vicinity of exit [9]	C-II	Auxiliary spaces containing emergency generators.		None required.
		Cargo Areas		
1 required in lower pumproom.	B-II	Pumprooms	B-II	1 required in vicinity of exit. [8]
None required		Cargo tank area	B-II and B-V	2 required. [10] 1 required. [8] [11]

[1] Vessels not on an international voyage may substitute 2 C-I.
[2] A C-II shall be immediately available to the service generator and main switchboard areas, and further, a C-II shall be conveniently located not more than 50 feet walking distance from any point in all main machinery operating spaces. These extinguishers need not be in addition to other required extinguishers.
[3] Vessels of less than 1,000 gross tons require 1.
[4] Vessels of less than 1,000 gross tons may substitute 1 B-IV.
[5] Only 1 required for vessels under 65 feet in length.
[6] If oil burning donkey boiler fitted in space, the B-V previously required for the protection of the boiler may be substituted. Not required where a fixed carbon dioxide system is installed.
[7] Not required on vessels of less than 300 gross tons if fuel has a flashpoint higher than 110° F.
[8] Not required on vessels of less than 300 gross tons.
[9] Not required if fixed system installed.
[10] If no cargo pump on barge, only one B-II required.
[11] Manned barges of 100 gross tons and over only.

(b) For additional portable extinguishers as a substitute for sand, see § 34.55-10.

(c) Semiportable extinguishers shall be located in the open so as to be readily seen.

(d) If portable extinguishers are not located in the open or behind glass so that they may be readily seen they may be placed in enclosures together with the fire hose, provided such enclosures are marked as required by § 35.40-25 of this subchapter.

(e) Portable extinguishers and their stations shall be numbered in accordance with § 35.40-25 of this subchapter.

(f) Hand portable or semiportable extinguishers which are required on their nameplates to be protected from freezing shall not be located where freezing temperatures may be expected.

§ 34.50-15 Spare charges—TB/ALL.

(a) Spare charges shall be carried on all vessels for at least 50 percent of each size and each variety, i.e. foam, soda-acid, carbon dioxide, etc., of portable extinguisher required by § 34.50-10(a). However, if the unit is of such variety that it cannot be readily recharged by the vessel's personnel, one spare unit of the same classification shall be carried in lieu of spare charges for all such units of the same size and variety. This section does not apply to unmanned barges.

(b) Spare charges shall be so packaged as to minimize the hazards to personnel while recharging the units.

§ 34.50-90 Vessels contracted for prior to January 1, 1962—TB/ALL.

(a) Vessels contracted for prior to January 1, 1962, shall meet the following requirements:

(1) The provisions of §§ 34.50-5 through 34.50-15 shall be met with the exception that existing installations may be maintained if in the opinion of the Officer in Charge, Marine Inspection, they are in general agreement with the degree of safety prescribed by Table 34.50-10(a). In such cases, minor modifications may be made to the same standard as the original installation: *Provided*, That in no case will a greater departure from the standards of Table 34.50-10(a) be permitted than presently exists.

Subpart 34.55—Sand

§ 34.55-1 Application—TB/ALL.

(a) The provisions of this part shall apply to all vessels having oil fired boilers, either main or auxiliary.

§ 34.55-5 Amount required—TB/ALL.

(a) On vessels of over 1,000 gross tons there shall be in each space containing oil fired boilers a metal receptacle containing not less than 10 cubic feet of sand, sawdust impregnated with soda, or other approved dry materials, together with a scoop or shaker for distributing the same. On vessels of 1,000 gross tons or less, at least 5 cubic feet of such materials shall be similarly carried.

§ 34.55-10 Substitute—TB/ALL.

(a) An additional B-II portable extinguisher may be carried in lieu of the sand required by this part.

Subpart 34.60—Fire Axes

§ 34.60-1 Application—T/ALL.

(a) The provisions of this subpart shall apply to all tankships.

§ 34.60-5 Number required—T/ALL.

(a) All tankships shall carry at least the minimum number of fire axes as set forth in Table 34.60-5(a). Nothing in this paragraph shall be construed as limiting the Officer in Charge, Marine Inspection, from requiring such additional fire axes as he deems necessary for the proper protection of the tankship.

TABLE 34.60-5(a)

Gross tons		Number of axes
Over—	Not over—	
----------	50	1
50	200	2
200	500	3
500	1,000	4
1,000	----------	5

§ 34.60–10 Location—T/ALL.

(a) Fire axes shall be distributed throughout the spaces so as to be most readily available in the event of emergency.

(b) If fire axes are not located in the open, or behind glass, so that they may readily be seen, they may be placed in enclosures together with the fire hose, provided such enclosures are marked as required by § 35.40–15 of this subchapter.

PART 35—OPERATIONS

Subpart 35.01—Special Operating Requirements

Sec.
35.01–1 Inspection and testing required when making alterations, repairs, or other such operations involving riveting, welding, burning, or like fire-producing actions—TB/ALL.
35.01–5 Sanitary condition and crew quarters—T/ALL.
35.01–10 Shipping papers—TB/ALL.
35.01–15 Carriage of persons other than crew—TB/ALL.
35.01–20 Pilot ladders—T/OC.
35.01–25 Aluminum and/or magnesium sacrificial anode installations—TB/ALL.
35.01–30 Reckless or negligent operation prohibited by law—TB/ALL.
35.01–35 Repairs and alterations to fire-fighting equipment—TB/ALL.
35.01–40 Prevention of oil pollution—TB/ALL.
35.01–45 Open hopper type barges—B/ALL.
35.01–50 Special operating requirements for tank barges carrying certain dangerous bulk cargoes—B/ALL.
35.01–55 Warning signs and information cards for those barges carrying bulk cargoes having dangerous characteristics in addition to flammability or combustibility—B/ALL.

Subpart 35.03—Work Vests

35.03–1 Application—TB/ALL.
35.03–5 Approved unicellular plastic foam work vests—TB/ALL.
35.03–10 Use—TB/ALL.
35.03–15 Shipboard stowage—TB/ALL.
35.03–20 Shipboard inspections—TB/ALL.

Subpart 35.05—Officers and Crews

35.05–1 Licensed officers and crews of tankships—T/ALL.
35.05–5 Master required on tankships—T/ALL.
35.05–10 Pilot required on tankships—T/LBR.
35.05–15 Watchman for a tank vessel—TB/ALL.
35.05–20 Physical condition of crew—TB/ALL.
35.05–25 Illness, alcohol, drugs—TB/ALL.

Subpart 35.07—Logbook Entries

35.07–1 Application—TB/ALL.
35.07–5 Logbooks and records—TB/ALL.
35.07–10 Actions required to be logged—TB/ALL.
35.07–15 Official log entries—TB/OC.

Subpart 35.10—Fire and Emergency Requirements

35.10–1 Station bills, muster lists, and line-throwing appliance drills—T/ALL.
35.10–5 Emergency signals; fire and lifeboat drills—T/ALL.
35.10–7 Electric power-operated lifeboat winches—T/ALL.
35.10–9 Posting placards containing instructions for launching and inflating inflatable liferafts—TB/ALL.
35.10–15 Emergency lighting and power systems—T/ALL.
35.10–20 Radio apparatus for lifeboats—T/OC.

Subpart 35.12—Placard of Lifesaving Signals and Breeches Buoy Instructions

35.12–1 Application—T/OCLB.
35.12–5 Availability—T/OCLB.

Subpart 35.15—Casualty or Accident Reports

35.15–1 Notice of casualty and voyage records—TB/ALL.
35.15–5 Reports by engineers of accidents involving boilers or machinery—T/ALL.
35.15–10 Reports when a state of war exists—T/ALL.

Subpart 35.20—Navigation

35.20–1 Notice to mariners; aids to navigation—T/OCLB.
35.20–5 Draft of tank ships—T/OC.
35.20–10 Steering gear test—T/ALL.
35.20–15 Steering orders—TB/ALL.
35.20–20 Master's and officer's responsibility—TB/ALL.
35.20–25 Unauthorized lights—T/ALL.
35.20–30 Flashing the rays of a searchlight or other blinding light—T/ALL.
35.20–35 Whistling—T/ALL.

Subpart 35.25—Engine Department

35.25–1 Examination of boilers and machinery by engineer—T/ALL.
35.25–5 Repairs of boilers and unfired pressure vessels and reports of repairs or accidents by chief engineer—TB/ALL.
35.25–10 Requirements for fuel oil—T/ALL.
35.25–15 Carrying of excess steam—TB/ALL.
35.25–20 Breaking of safety valve seal—TB/ALL.

Subpart 35.30—General Safety Rules

35.30–1 Warning signals and signs—TB/ALL.
35.30–5 Fires, matches, and smoking—TB/ALL.
35.30–10 Cargo tank hatches, ullage holes, and Butterworth plates—TB/ALL.
35.30–15 Combustible gas indicator—TB/ALL.
35.30–20 Emergency equipment—TB/ALL.
35.30–25 Explosives—TB/ALL.
35.30–30 Portable electrical equipment—TB/ALL.
35.30–35 Spark producing devices—TB/ALL.
35.30–40 Flammable liquid and gas fuels as ship's stores—TB/ALL.
35.30–45 Motion picture film—TB/ALL.

Subpart 35.35—Cargo Handling

35.35–1 Men on duty—TB/ALL.
35.35–5 Electric bonding—T/ALL.
35.35–10 Closing of scuppers and sea valves—TB/ALL.
35.35–15 Connecting for cargo transfer—TB/ALL.
35.35–20 Inspection prior to transfer of cargo—TB/ALL.
35.35–25 Approval to start transfer of cargo—TB/ALL.
35.35–30 "Declaration of Inspection" for tank ships—T/ALL.
35.35–35 Duties of senior deck officer during transfer operations—TB/ALL.
35.35–40 Conditions under which transfer operations shall not be commenced or if started shall be discontinued—TB/ALL.
35.35–42 Restrictions on vessel coming alongside a tank vessel while loading Grade A, B, or C cargo—TB/ALL.
35.35–45 Auxiliary steam, air, or electric current—B/ALL.
35.35–50 Termination of transfer operations—TB/ALL.
35.35–55 Transfer of other cargo or stores on tank vessels—TB/ALL.
35.35–60 Transportation of other cargo or stores on tank barges—B/ALL.
35.35–70 Maintenance of cargo handling equipment—TB/ALL.
35.35–75 Emergencies—TB/ALL.

Subpart 35.40—Marking of Fire and Emergency Equipment

35.40–1 General alarm contact maker—TB/ALL.
35.40–5 General alarm bells—TB/ALL.
35.40–6 Emergency lights—TB/ALL.
35.40–7 Carbon dioxide alarm—T/ALL.
35.40–10 Steam, foam, or CO_2 fire smothering apparatus—TB/ALL.
35.40–15 Fire hose stations—TB/ALL.
35.40–17 Foam hose/monitor stations—T/ALL.
35.40–18 Water spray systems—TB/ALL.
35.40–20 Emergency equipment—TB/ALL.
35.40–25 Fire extinguishers—TB/ALL.
35.40–30 Instructions for changing steering gear—TB/ALL.
35.40–35 Rudder orders—TB/ALL.
35.40–40 Vessel's name on equipment—TB/ALL.

Subpart 35.70—Power-Operated Industrial Trucks

35.70–1 Application—TB/ALL.
35.70–3 Alternates—TB/ALL.
35.70–5 Definitions of terms used in subpart—TB/ALL.
35.70–7 Approved power-operated industrial trucks—TB/ALL.
35.70–10 Permissible areas of use—TB/ALL.
35.70–15 Types of cargo permitted to be handled by trucks—TB/ALL.
35.70–20 Special operating conditions—TB/ALL.
35.70–25 Refueling—TB/ALL.
35.70–30 Charging or replacing batteries—TB/ALL.
35.70–35 Stowage of trucks aboard a vessel—TB/ALL.

AUTHORITY: The provisions of this Part 35 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply R.S. 4472, as amended, 4488, as amended, 4491, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 170, 481, 489, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–38, Oct. 26, 1959, 24 F.R. 8857, unless otherwise noted.

Subpart 35.01—Special Operating Requirements

§ 35.01–1 Inspection and testing required when making alterations, repairs, or other such operations involving riveting, welding, burning, or like fire-producing actions—TB/ALL.

(a) The provisions of "Standard for the Control of Gas Hazards on Vessels to be Repaired," NFPA No. 306, published by National Fire Protection Association, 60 Batterymarch Street, Boston, Mass., 02110, shall be used as a guide in conducting the inspections and issuance of certificates required by this section.

(b) Until an inspection has been made to determine that such operation can be undertaken with safety, no alterations, repairs, or other such operations involving riveting, welding, burning, or like fire-producing actions shall be made:

(1) Within or on the boundaries of cargo tanks which have been used to carry flammable or combustible liquid or chemicals in bulk, or within spaces adjacent to such cargo tanks; or,

(2) Within or on the boundaries of fuel tanks; or,

(3) To pipe lines, heating coils, pumps, fittings, or other appurtenances connected to such cargo or fuel tanks.

(c) Such inspections shall be made and evidenced as follows:

(1) In ports or places in the United States or its territories and possessions, the inspection shall be made by a marine chemist certificated by the National Fire Protection Association; however, if the services of such certified marine chemist are not reasonably available, the Officer in Charge, Marine Inspection, upon the recommendation of the vessel owner and his contractor or their representative, shall select a person who, in the case of an individual vessel, shall be authorized to make such inspection. If the inspection indicates that such operations can be undertaken with safety, a certificate setting forth the fact in writing and qualified as may be required, shall be issued by the certified marine chemist or the authorized person before the work is started. Such qualifications shall include any requirements as may be deemed necessary to maintain, insofar as can reasonably be done, the safe conditions in the spaces certified, throughout the operation and shall include such additional tests and certifications as considered required. Such qualifications and requirements shall include precautions necessary to eliminate or minimize hazards that may be present from protective coatings or residues from cargoes.

(2) When not in such a port or place, and a marine chemist or such person authorized by the Officer in Charge, Marine Inspection, is not reasonably available, the inspection shall be made by the senior officer present and a proper entry shall be made in the vessel's logbook.

(d) It shall be the responsibility of the senior officer present to secure copies of certificates issued by the certified marine chemist or such person authorized by the Officer in Charge, Marine Inspection. It shall be the responsibility of the senior officer present, insofar as the persons under his control are concerned, to maintain a safe condition on the vessel by full observance of all qualifications and requirements listed by the marine chemist in the certificate.

§ 35.01–5 Sanitary condition and crew quarters—T/ALL.

(a) It shall be the duty of the master and chief engineer of every tankship to see that such vessel and crew's quarters are kept in a sanitary condition.

(b) Crew quarters shall be kept in sanitary condition by daily cleaning and removal of rubbish, and by painting at regular intervals as needed. Floors shall be maintained in good condition to facilitate cleaning. Lighting, heating, and ventilation in quarters shall be maintained in satisfactory condition: *Provided, however,* That forced ventilation when installed may be closed down during transfer of cargo.

(c) Before making any important repairs to or changes in the electrical installation, an inspection shall be made as required by § 111.05–10(f) of Subchapter J (Electrical Engineering) of this chapter, and such changes or repairs shall (1) comply with the requirements of this Subchapter J and (2) have the approval of the chief engineer. Miscellaneous electrical appliances intended to provide additional artifical lighting, entertainment, and for personal use, etc., shall also be subject to the approval of the chief engineer.

§ 35.01–10 Shipping papers—TB/ALL.

Each loaded tank vessel shall have on board a bill of lading, manifest, or shipping document giving the name of the consignee and the location of the delivery point, the kind, grades, and approximate quantity of each kind and grade of cargo, and for whose account the cargo is being handled. The tank vessel shall not be delayed in order to secure exact quantities of cargo. Such manifests or bills of lading may be made out by the master, master of the towing vessel, owner, or agent of the owner: *Provided, however,* That in the case of unmanned barges where shipping papers are not available, an entry in the logbook of the towing vessel giving the name of the shipper and location of shipping point, the name of the consignee and location of delivery point, the approximate kind, grade, and quantity of cargo in each barge of the tow, and for whose account the cargo is being handled, shall be considered as complying with the requirements of this section.

§ 35.01–15 Carriage of persons other than crew—TB/ALL.

No person not connected with the operation of a tank ship or tank barge or not having legitimate business with said vessel, shall be permitted aboard while vessel is under way unless specifically allowed by its certificate.

§ 35.01–20 Pilot ladders—T/OC.

(a) On and after May 26, 1965, every tankship which normally employs a pilot shall have an approved type ladder for the use of the pilot in addition to the ladders required by § 33.20–1(c) of this subchapter. Pilot ladder installations shall be in accordance with the following:

(1) All pilot ladders shall be approved Type I (rope suspension) or Type II (chain suspension) ladders constructed in accordance with Subpart 160.017 of Subchapter Q (Specifications) of this chapter.

(2) Suitable spreaders, a man rope, and a safety line shall be kept readily available for use in conjunction with the pilot ladder whenever circumstances may so require.

(3) When used, the ladder shall be secured in a position so that each step rests firmly against the ship's side, and so the pilot can gain safe and convenient access to the ship after climbing not more than 30 feet. Whenever the distance from sea level is more than 30 feet, access from the pilot ladder to the ship shall be by means of an accommodation ladder or other equally safe and convenient means.

(4) Arrangements shall be such that the rigging of the ladder and the embarkation and debarkation of the pilot is supervised by a responsible officer of the ship, and that handholds are provided to assist the pilot to pass safely and conveniently from the head of the ladder into the ship or onto the ship's deck.

(5) At night a light shining over the side shall be available for use, and the deck at the position where the pilot boards the ship shall be adequately lighted.

(b) Tankships contracted for prior to May 26, 1965, shall meet the requirements of this section, except as follows:

(1) Existing pilot ladders not meeting the requirements of paragraph (a)(1) of this section may be continued in service so long as they are maintained in good condition to the satisfaction of the Officer in Charge, Marine Inspection. All new or replacement ladders shall meet the applicable requirements.

§ 35.01–25 Aluminum and/or magnesium sacrificial anode installations—TB/ALL.

(a) The installation of aluminum and/or magnesium sacrificial anodes in cargo tanks utilized for the carriage of flammable or combustible liquids in bulk is prohibited.

(b) All existing installations of aluminum and/or magnesium sacrificial anodes in cargo tanks utilized for the carriage of flammable or combustible liquids in bulk shall be removed at the first available opportunity but not later than October 1, 1964.

§ 35.01–30 Reckless or negligent operation prohibited by law—TB/ALL.

(a) Subsection 13 (a) of the Act of April 25, 1940, as amended (46 U.S.C. 526*l*), reads as follows:

> No person shall operate any motorboat or any vessel in a reckless or negligent manner so as to endanger the life, limb, or property of any person. To "operate" means to navigate or otherwise use a motorboat or a vessel.

(Interpret or apply sec. 17, 54 Stat. 166, as amended; 46 U.S.C. 526p)

§ 35.01–35 Repairs and alterations to firefighting equipment—TB/ALL.

(a) No extensive repairs or alterations, except in emergency, shall be made to any fire-extinguishing apparatus, or other appliance subject to inspection, without advance notice to the Officer in Charge, Marine Inspection. Such repairs or alterations shall so far as is practicable be made with materials and tested in the manner specified within the regulations in this subchapter and Subchapter Q (Specifications) of this chapter for new construction.

(b) Emergency repairs or alterations shall be reported as soon as practicable to the Officer in Charge, Marine Inspection, where the vessel may call after such repairs are made.

§ 35.01–40 Prevention of oil pollution—TB/ALL.

(a) All tank vessels shall be so operated as to meet the requirements of the Oil Pollution Act, 1924 (33 U.S.C. 431–

437). In addition, all tank ships shall be so operated as to avoid discharging any oil, oily ballast, or tank washings which may foul the surface of the sea, within any of the prohibited zones set forth in the Oil Pollution Act, 1961 (33 U.S.C. 1001–1015).

(Sec. 8, 75 Stat. 403; 33 U.S.C. 1007. Treasury Department Order 167–46, Nov. 6, 1961, 26 F.R. 10609)

§ 35.01–45 Open hopper type barges—B/ALL.

(a) With the exception of those open hopper type barges constructed or modified in conformance with the requirements of Subpart 32.63 of this subchapter, the special operating conditions in this section apply to all other open hopper type barges carrying bulk cargoes as follows:

(1) Flammable liquids having a Reid vapor pressure in excess of 25 pounds per square inch, absolute, in independent tanks (Part 32 of this subchapter).

(2) Liquefied flammable gases (Part 38 of this subchapter).

(3) Flammable or combustible liquids having lethal characteristics (Class B or C poisons) (Part 39 of this subchapter).

(b) All open hopper type barges, while carrying in bulk any of the cargoes described in paragraph (a) of this section, shall be operated in conformance with the provisions in this section. However, the provisions in this section are not applicable to such barges when empty (not necessarily cleaned or gas-freed).

(c)(1) Except as otherwise provided in this section, no such open hopper type barge shall be placed as a lead barge in any tow. Such barges shall be placed in protected positions within the tow so that the danger from diving or swamping will be minimized. Where, due to operating conditions, compliance with this subparagraph is impossible, the provisions of subparagraph (3) of this paragraph apply. The person in charge of the towing vessel shall be responsible for compliance with this subparagraph.

(2) No such open hopper type barge shall be moved from a loading facility unless all void spaces and bilges are substantially free of water. Periodic inspections and necessary pumping shall be carried out to insure the maintenance of such water-free conditions, in order to minimize the free surface effect in both the longitudinal and transverse directions. Except when otherwise considered necessary for inspection or pumping, all hatch covers and other hull closure devices for void spaces and hull compartments shall be closed and secured at all times. In the case of unmanned barges, the person in charge of the towing vessel shall be deemed to be in charge of the barge, and all requirements to be carried out on the barge shall be carried out by or under the direction of such person.

(3) When an open hopper type barge is in an exposed position, such that protection from swamping provided by adjoining barges cannot be obtained from location within the tow alone, it shall be the responsibility of the person in charge of the towing vessel to control speed so as to insure protection against diving and swamping of the barge, having due regard to its design and freeboard, and to the operating conditions.

(d) To show that special operating requirements apply to a specific open hopper type barge, additional placards or signs shall be displayed in at least four different locations on the barge when the cargoes described in paragraph (a) of this section are carried in any form in the cargo tanks. The placards or signs shall be posted on the barge approximately amidships on each side and near the centerline of each end, facing outboard. Racks, or other suitable means, for mounting such placards or signs shall be so arranged as to provide clear visibility and shall be protected from becoming readily damaged or obscured. The placards or signs shall be at least equal in dimensions to the ICC standard tank car "Dangerous" placard (10¾ inches square or larger), and shall display a circle (10 inches in diameter or larger) with alternating quadrants of white and red, and so mounted that the red quadrants are centered on the verticle axis. The shipper and/or owner of the barge shall be responsible for the installation of the required placards or signs, including maintenance of them while such barge is in temporary storage with cargo aboard. The person in charge of the towing vessel shall be responsible for the continued maintenance of the placards or signs while such barge is in transit.

§ 35.01–50 Special operating requirements for tank barges carrying certain dangerous bulk cargoes—B/ALL.

(a) The requirements of this section shall apply to all tank barges carrying bulk cargoes as follows:

(1) Flammable liquids having a Reid vapor pressure in excess of 25 pounds per square inch, absolute, in independent tanks (Part 32 of this subchapter).

(2) Liquefied flammable gases (Part 38 of this subchapter).

(3) Flammable or combustible liquids having lethal characteristics (Class B or C poisons) (Part 39 of this subchapter).

(4) Certain flammable or combustible dangerous cargoes (Part 40 of this subchapter).

(b) All tank barges constructed or modified in conformance with the requirements of Subpart 32.63 of this subchapter are exempt from the provisions of § 35.01–45.

(c) When it is necessary to operate box or square-end barges as lead barges of tows, the person in charge of the towing vessel shall control the speed to insure protection against diving and swamping of such barges, having due regard to their design and freeboard, and to the operating conditions.

(d) All barges, while carrying in bulk any of the cargoes described in paragraph (a) of this section, shall be operated in conformance with the provisions of this section. However, the provisions of this section are not applicable to such barges when empty and gas-freed.

(e) Barges shall not be moved from a loading facility unless all bilges and void spaces (except those used for ballasting) are substantially free of water. Periodic inspections and necessary pumping shall be carried out to insure maintenance of such water-free condition in order to minimize the free surface effects, both in the longitudinal and transverse directions. Except when otherwise considered necessary for inspection or pumping, all hatch covers and other hull closure devices for void spaces and hull compartments other than cargo spaces shall be closed and secured at all times.

(f) During the time the cargo tanks contain dangerous cargoes described in paragraph (a) of this section in any amount, in the liquid or gaseous state, the barge shall be under constant surveillance.

(1) A strict watch of each unmanned barge in tow shall be maintained from the towing vessel while underway.

(2) A towing vessel engaged in transporting such unmanned barges shall not leave them unattended. When a barge is moored, but not gas free, it shall be under the observation of a watchman who may be a member of the complement of the towing vessel, or a terminal employee, or other person. Such person shall be responsible for the security of the barge and for keeping unauthorized persons off the barge. Such person shall be provided with, read, and have in his possession for ready reference the information cards required by § 35.01–55.

(g) The owner, operator, master, or person in charge of any barge carrying dangerous cargoes described in paragraph (a) of this section shall insure that, while the barge is being towed and during cargo transfer operations, the persons as required by § 31.15–5 of this subchapter and § 35.35–1 and information cards as required by § 35.01–55 are provided.

§ 35.01–55 Warning signs and information cards for those barges carrying bulk cargoes having dangerous characteristics in addition to flammability or combustibility—B/ALL.

(a) The requirements of this section shall apply to all tank barges carrying bulk cargoes as follows:

(1) Liquefied flammable gases having significant hazards other than flammability (Part 38 of this subchapter).

(2) Flammable or combustible liquids having lethal characteristics (Class B or C poisons) (Part 39 of this subchapter).

(3) Certain flammable or combustible dangerous cargoes (Part 40 of this subchapter).

(b) Warning signs shall be displayed on the vessel, port and starboard, facing outboard without obstructions, at all times except when the vessel is gas free. The warning sign shall be rectangular and a minimum of three feet wide and two feet high. It shall be of sufficient size to accommodate the required alerting information, which shall be in black block style letters and numerals (characters) at least three inches high on a white background. The minimum spac-

ing between adjacent words and lines of characters shall be two inches. The minimum spacing between adjacent characters shall be one-half inch. All characters shall have a minimum stroke width of one-half inch and shall be a minimum of two inches wide, except for the letters "M" and "W" which shall be a minimum of three inches wide, and except for the letter "I" and the numeral "1", which may be one-half inch wide. The signs shall have a two-inch minimum white border clear of characters. The signs shall be maintained legible. The alerting information shall include the following:

(1) Danger.

(2) Categories of hazards: (This shall be as listed in the classification column in § 146.04-5 in Subchapter N (Dangerous Cargoes) of this chapter, and additional descriptive terms, as applicable).

(3) Cargo identification by name: (This name shall be as listed in § 146.04-5 in Subchapter N (Dangerous Cargoes) of this chapter. If not specifically listed by name, the common chemical name as shown on the information card shall be used).

(4) Prohibitions: (Necessary prohibitions, such as "No Smoking," etc.).

(c) An information card for each cargo being transported shall be carried on the bridge or in the pilothouse of the towing vessel readily available for use by the person in charge of the watch. Such information card shall also be carried aboard the barge when it is not gas free. The minimum card size shall be 7" by 9½". The card shall have legible printing on one side only. The following data shall be listed:

(1) *Cargo identification characteristics.* Identification of the cargo as listed in § 146.04-5 in Subchapter N (Dangerous Cargoes) of this chapter and its common chemical name if the chemical name is not so specifically listed, its appearance and odor. A statement of the hazards involved and instructions for the safe handling of the cargo and, as applicable, the need for special cargo environments.

(2) *Emergency procedures.* Precautions to be observed in the event of spills, leaks, or equipment or machinery breakdown and/or uncontrolled release of the cargo into the waterway or atmosphere. Precautions to be observed in the event of exposure of personnel to toxic cargoes.

(3) *Firefighting procedures.* Precautions to be observed in the event of a fire occurring on or in the vicinity of the barge, and an enumeration of firefighting media suitable for use in case of a cargo fire.

(d) In the event that a barge is or has been loaded with two or more dangerous cargoes described in paragraph (a) of this section and until the tanks containing such cargoes have been gas-freed, the following additional requirements shall be met:

(1) A warning sign, meeting the requirements of paragraph (b) of this section and setting forth the alerting information required by paragraphs (b) (1) and (4) of this section, shall be located amidships.

(2) The warning signs, meeting the requirements of paragraph (b) of this section and setting forth the alerting information required by paragraphs (b) (2) and (3) of this section, shall be so located that each sign positively identifies the contents of each tank.

(3) An information card for each cargo (see paragraph (c) of this section) shall be carried for ready reference aboard the barge.

Subpart 35.03—Work Vests

§ 35.03-1 Application—TB/ALL.

(a) Provisions of this subpart shall apply to all tank vessels.

§ 35.03-5 Approved unicellular plastic foam work vests—TB/ALL.

(a) Buoyant work vests carried under the permissive authority of this subpart shall conform to the specifications contained in Subpart 160.053 in Subchapter Q (Specifications) of this chapter.

§ 35.03-10 Use—TB/ALL.

(a) Approved buoyant work vests are considered to be items of safety apparel and may be carried aboard tank vessels to be worn by crew members when working near or over the water under favorable working conditions. They shall be used under the supervision and control of designated ship's officers. When carried, such vests shall not be accepted in lieu of any portion of the required number of approved life preservers and shall not be substituted for the approved life preservers required to be worn during drills and emergencies.

§ 35.03-15 Shipboard stowage—TB/ALL.

(a) The approved buoyant work vests shall be stowed separately from the regular stowage of approved life preservers.

(b) The locations for the stowage of work vests shall be such as not to be easily confused with that for approved life preservers.

§ 35.03-20 Shipboard inspections—TB/ALL.

(a) Each work vest shall be subject to examination by a marine inspector to determine its serviceability. If found to be satisfactory, it may be continued in service, but shall not be stamped by a marine inspector with a Coast Guard stamp. If a work vest is found not to be in a serviceable condition, then such work vest shall be removed from the vessel. If a work vest is beyond repair, it shall be destroyed or mutilated in the presence of a marine inspector so as to prevent its continued use as a work vest.

Subpart 35.05—Officers and Crews

§ 35.05-1 Licensed officers and crews of tankships—T/ALL.

No tankship of the United States shall be navigated unless she shall have in her service and on board such complement of licensed officers and crew, including certificated lifeboatmen and certificated tankermen where required by the regulations in this subchapter, separately stated, as called for in her certificate of inspection.

§ 35.05-5 Master required on tankships—T/ALL.

There shall be a duly licensed master on board every tankship of more than 150 gross tons, whenever such tankship is under way.

§ 35.05-10 Pilot required on tankships—T/LBR.

(a) No tankship shall be navigated unless she shall have in her service and on board either a licensed master or pilot as called for in her certificate of inspection.

(b) The navigation of every tankship above 150 gross tons shall be under the control of a first-class pilot, and every such pilot shall be limited in his license to the particular service for which he is adapted.

(c) A first-class pilot or a second-class pilot who has reached the age of 21 years may act as master or pilot in charge of the navigation of a tank ship not exceeding 150 gross tons. A second-class pilot is authorized to act as pilot in charge of a watch on any tankship within the tonnage specified in his license.

§ 35.05-15 Watchman for a tank vessel—TB/ALL.

(a) *Manned tank vessel.* At least one member of the crew of a manned tank vessel shall be on board at all times except when the vessel is gas free or is moored at a dock or terminal at which watchman service is provided.

(b) *Unmanned barge.* (1) A strict watch of each unmanned barge in tow shall be maintained from the towing vessel while under way.

(2) When a barge is moored but not gas free, at least one of the following precautions shall be taken:

(i) The barge shall be under the observation of a watchman who may be a member of the complement of the towing vessel, or a terminal employee, or other competent person responsible for the security of the barge and for keeping unauthorized persons off the barge; or,

(ii) All cargo tank hatches shall be clearly marked in not less than 3-inch lettering, "DANGER—KEEP OUT," and in addition all hatch covers shall be closed and dogged down, or otherwise secured, by a tool-operated device, such as a length of pipe, so that no person can open the hatch by use of bare hands alone.

§ 35.05-20 Physical condition of crew—TB/ALL.

No person shall be engaged as a member of the crew on a tank vessel if he is known by the employer to be physically or mentally incapable of performing the duties assigned him.

§ 35.05-25 Illness, alcohol, drugs—TB/ALL.

(a) No person, known by the individual in charge of a tank vessel to be under the influence of liquor or other stimulant, or to be ill to such an extent as to unfit him for any particular service

on the tank vessel, shall be allowed to perform such service while in such condition.

(b) When a member of the crew of a tank vessel which is loading bulk cargo of Grade A, B, or C arrives at the gangway and is observed to be in an intoxicated condition, he shall not be permitted to board the vessel without escort.

Subpart 35.07—Logbook Entries

§ 35.07–1 Application—TB/ALL.

(a) Except as specifically noted, the provisions of this subpart shall apply to all tank vessels.

§ 35.07–5 Logbooks and records—TB/ALL.

(a) *General—TB/ALL.* Under various statutes or by regulations in this subchapter, specified tank vessels shall have certain logbooks or records, and, when the occasion arises, it is the duty of the master or person in charge to place therein specific entries as required by law or regulations in this subchapter.

(b) *Official Logbook—TB/OC.* R.S. 4290, as amended (46 U.S.C. 201), states: "Every vessel making voyages from a port in the United States to any foreign port, or, being of the burden of 75 tons or upward, from a port on the Atlantic to a port on the Pacific, or vice versa, shall have an Official Logbook; * * *." This Official Logbook is furnished gratuitously to masters of United States' flag vessels by the Coast Guard, as Form CG–706B or CG–706C, depending upon the number of persons employed as crew. There is printed in the first several pages of this Official Logbook various acts of Congress relating to logbooks and the entries required to be made therein. When a voyage is completed, or after a specified period of time is completed, the Official Logbooks with required entries therein shall be filed with the Officer in Charge, Marine Inspection, at or nearest the port where the vessel may be.

(c) *Logs or records—TB/ALL.* For vessels other than those required to have Official Logbooks by R.S. 4290, the owners, operators, and/or masters are to supply their own logs or records in any form desired, which will be considered to take the place of the Official Logbooks and may be used for the purpose of making entries therein as required by law or regulations in this subchapter. Such logs or records are not filed with the Officer in Charge, Marine Inspection, but shall be kept available for review by a marine inspector for a period of one year after the date to which the records refer, except for separate records of tests and inspections of firefighting equipment which shall be maintained with the vessel's logs for the period of validity of the vessel's certificate of inspection.

§ 35.07–10 Actions required to be logged—TB/ALL.

(a) *General—TB/ALL.* The actions and observations noted in this section shall be entered in the Official Logbook or in logs or records considered to take place of the Official Logbooks. This section contains no requirements which are not made in specific laws or in other regulations in this subchapter, the items being merely grouped together for convenience.

(b) *Entries—T/ALL.* Entries shall be made in the logs of tankships with respect to the following:

(1) Fire and lifeboat drills. Weekly. See § 35.10–5.

(2) Electric power-operated lifeboat winches. Once in each three months. See § 35.10–7.

(3) Draft and load line marks. For tankships of 150 gross tons and over, prior to leaving port for ocean, coastwise, and Great Lakes voyages only. See 46 U.S. Code, sections 85e and 88e, and § 35.20–5.

(4) Steering gear tests. Prior to departure, or for tank ships on voyages of less than 48 hours duration or tankships operating on lakes, bays, sounds and rivers, once every week. See § 35.20–10.

(5) Fuel oil data. Upon receipt of fuel oil on board to be used as fuel. See § 35.25–10.

(6) Line-throwing appliances. Once every three months. See § 35.10–1(c).

(7) Inspections and tests of firefighting equipment. Once every year. See § 31.10–18 of this subchapter.

(8) Operation and inspection of the emergency lighting and power systems. Once in each week that the vessel is navigated. See § 35.10–15.

(9) Cargo gear inspections: At least once a month. See § 31.37–70 of this subchapter.

(c) *Entries—B/ALL.* Entries shall be made in the records for tank barges with respect to the following:

(1) Inspections and tests of firefighting equipment. Once every year. See § 31.10–18 of this subchapter.

(2) Draft and load line marks. For tank barges of 150 gross tons and over, prior to leaving port for ocean, coastwise, and Great Lakes voyages only. See 46 U.S. Code, sections 85e and 88e.

(3) Cargo gear inspections: At least once a month. See § 31.37–70 of this subchapter.

Subpart 35.07—Logbook Entries

§ 35.07–15 Official log entries—TB/OC.

(a) On vessels where an Official Logbook is required by R.S. 4290 (46 U.S.C. 201), all items relative to the crew and passengers, as well as with respect to any casualties which may occur, shall be entered in the Official Logbook as required by this law.

Subpart 35.10—Fire and Emergency Requirements

§ 35.10–1 Station bills, muster lists, and line-throwing appliance drills—T/ALL.

(a) It shall be the duty of the master of every tankship over 500 gross tons to cause station bills and muster lists to be prepared before the vessel sails, which shall be signed by the master, who shall be responsible for their preparation. The station bills and muster lists shall be posted in conspicuous places in several parts of the tankship, particularly in the crew's quarters, and must contain full particulars of the signals which will be used for calling the crew to their stations for emergency duties. Special duties shall be allotted to each member of the crew and the muster list shall show all these special duties and indicate the station to which each man must go and the duties he has to perform. The special duties should, as far as possible, be comparable to the regular work of the individual.

(b) The duties provided for by the muster lists should include:

(1) The closing of airports, watertight doors, fire doors, and fire screens, the covers and all valves of all scuppers, sanitary and other discharges which lead through the ship's hull below the margin line, and stopping the fans and ventilating systems.

(2) The extinction of fire.

(3) The equipment of lifeboats, liferafts, and buoyant apparatus and their preparation for launching.

(c) The master of a tankship equipped with a line-carrying gun shall drill his crew in its use every 3 months, but the actual firing of the gun on the tankship shall be discretionary with the master. Each drill shall be recorded in the ship's logbook.

§ 35.10–5 Emergency signals; fire and lifeboat drills—T/ALL.

(a) The fire-alarm signals shall be a continuous blast of the whistle for a period of not less than 10 seconds supplemented by a continuous ringing of the general alarm bells for not less than 10 seconds. For dismissal from fire-alarm stations, the general alarm bells should be sounded three times, supplemented by three short blasts of the whistle. The signal for lifeboat drill or lifeboat stations shall be more than six short blasts and one long blast of the whistle, supplemented by the same signal on the general alarm bells. Where whistle signals are used to direct the handling of lifeboats they shall be as follows:

(1) To lower lifeboats, one short blast of the whistle.

(2) To stop lowering the lifeboats, two short blasts of the whistle.

(3) For dismissal from lifeboat stations, three short blasts of the whistle: *Provided,* That on river tankships the whistle signals specified herein may be made on the ship's bell.

(b) The master of any tankship may establish such other emergency signal, in addition to the above, as will provide that all the officers and all the crew of the tankship will have positive and certain notice of the existing emergency.

(c) The master may organize a squad to be used for emergency duties (other than a general emergency), or crew practices, and the nature of the signals or other means for assembling the squad remains within the discretion of the master. Such signals should not conflict with the navigational signals or the signals used for a general alarm.

(d) It shall be the duty of the Master, or the mate, or officer next in command to conduct a fire and boat drill at least once in every week. At least one such fire and boat drill shall be held within 24

hours of leaving a port if more than 25 percent of the crew have been replaced at that port. In connection with these drills it shall be the duty of such officer to call all hands to quarters and (weather permitting) exercise them in the unlashing and swinging out of the lifeboats, the closing of all hand or power operated watertight doors which are in use at sea, closing all fire doors and fire screens, the use of fire pumps, and all other apparatus for the safety of life on board of such vessels with special regard for the drill of the crew in the method of adjusting life preservers; to see that all the equipments required by law are in complete working order for immediate use; and to see that lifeboat equipment is examined at least monthly to insure that it is complete. The fact of exercise of the crew as herein contemplated, shall be entered upon the ship's logbook.

(e) This section relating to fire and lifeboat drills contemplates that such drills shall be conducted precisely as though an emergency existed. To accomplish the purpose of this section, lifeboat covers and strongbacks shall be removed, plugs or caps put in place, boat ladders secured in position for use, painters carried forward and tended so as to provide a good lead and slack to hold the boat in position under the davits when in the water. Different groups of lifeboats shall be used in turn at successive boat drills and, if practicable and reasonable, every lifeboat shall be lowered at least once every three months. The person in charge of each lifeboat or liferaft should have a list of its crew and should see that the men under his orders are acquainted with their several duties. The motor and the hand-operated propeller gear of each lifeboat shall be operated for a period of not less than 5 minutes once at least in every 7 days, in order that it may be ready for service at any time. Such operation shall be made a part of the report of such drill. The hand pumps and fire pump shall be operated long enough and a sufficient number of outlets used to insure that such equipment is in order and effectual. When oxygen-breathing apparatus, gas masks, or other special equipment is carried, certain members of the crew shall be trained in the use of the equipment.

(f) The entries in the ship's logbook relating to the exercise of the crew in fire and lifeboat drills shall state the day of the month and the hour when so exercised, length of time of the drill, numbers on the lifeboats swung out and numbers on those lowered, number of lengths of fire hose used, a statement of the condition of all fire and lifesaving apparatus, and a report of the monthly examination of the lifeboat equipment. If in any week the required fire and boat drills are not held or only partial drills are held, an entry shall be made stating the circumstances and extent of the drills held.

(g) Any neglect or omission on the part of the officer in command of such vessels to strictly enforce the provisions of this section shall be deemed cause for proceedings under the provisions of R. S. 4450, as amended (46 U. S. C. 239), looking to a suspension or revocation of the license of such officer.

(h) It shall be the duty of the master to require the officers and crew of all tankships to perform the aforesaid drills and discipline in the presence of marine inspectors at intervals sufficiently frequent to assure the said inspectors, by actual observance, that the foregoing requirements of this section are complied with by the officers and the crew.

(i) A copy of these requirements (Form CG–809) shall be furnished to each tankship to which this subpart applies. This form shall be framed under glass and posted in a conspicuous place.

§ 35.10–7 Electric power-operated lifeboat winches—T/ALL.

(a) It shall be the duty of the master to see that all lifeboat winch control apparatus, including motor controllers, emergency switches, master switches, and limit switches, are examined at least once in each 3 months. The examination shall include the removal of drain plugs and/or the opening of drain valves in such appliances to assure that the enclosures are free of water.

(b) The date of the examination required by this section and the condition of the equipment shall be noted in the Official Logbook.

§ 35.10–9 Posting placards containing instructions for launching and inflating inflatable liferafts—TB/ALL.

(a) Every vessel equipped with inflatable liferafts shall have posted in conspicuous places which are regularly accessible to the crew and/or passengers, approved placards containing instructions for launching and inflating inflatable liferafts for the information of persons on board. The number and location of such placards for a particular vessel shall be as determined necessary by the Officer in Charge, Marine Inspection.

(b) Under the requirements contained in § 160.051–6(c)(1) of Subpart 160.051 in Subchapter Q (Specifications) of this chapter, the manufacturer of approved inflatable liferafts is required to provide approved placards containing such instructions with each liferaft.

§ 35.10–15 Emergency lighting and power systems—T/ALL.

(a) Where fitted, it shall be the duty of the master to see that the emergency lighting and power systems are tested and inspected at least once in each week that the vessel is navigated to be assured that the system is in proper operating condition.

(b) Internal combustion engine driven emergency generators shall be tested under load for at least 2 hours, at least once in each month that the vessel is navigated.

(c) Storage batteries for emergency lighting and power systems shall be tested at least once in each 6-month period that the vessel is navigated to demonstrate the ability of the storage battery to supply the emergency loads for 6 hours.

(d) The date of the tests required by this section and the condition and performance of the apparatus shall be noted in the vessel's Official Logbook or in logs or records considered to take the place of the Official Logbook.

§ 35.10–20 Radio apparatus for lifeboats—T/OC.

(a) It shall be the duty of the master to require that all batteries for all fixed and portable radio apparatus for lifeboats are brought up to full charge weekly if the batteries are of a type which require recharging.

(b) In any case, the transmitter shall be tested weekly using a suitable artificial aerial.

Subpart 35.12—Placard of Lifesaving Signals and Breeches Buoy Instructions

§ 35.12–1 Application—T/OCLB.

(a) The provisions of this subpart shall apply to all vessels on an international voyage, and all other vessels of 150 gross tons or over in ocean, coastwise or Great Lakes service.

§ 35.12–5 Availability—T/OCLB.

(a) On all vessels to which this subpart applies there shall be posted in the pilothouse and readily available to the deck officer of the watch a placard (Form CG–811) containing instructions for the use of breeches buoys and the lifesaving signals set forth in Regulation 16, Chapter V, of the International Convention for Safety of Life at Sea, 1960. These signals shall be used by vessels or persons in distress when communicating with lifesaving stations and maritime rescue units.

(b) A copy of Form CG–811 shall also be conveniently posted in the engineroom and crews quarters of all vessels to which this subpart applies.

Subpart 35.15—Casualty or Accident Reports

§ 35.15–1 Notice of casualty and voyage records—TB/ALL.

(a) The owner, agent, master, or person in charge of a vessel involved in a marine casualty shall give notice as soon as possible to the nearest marine inspection office of the United States Coast Guard whenever the casualty results in any of the following:

(1) Damage to property in excess of $1,500.00.

(2) Material damage affecting the seaworthiness or efficiency of a vessel.

(3) Stranding or grounding.

(4) Loss of life.

(5) Injury causing any person to remain incapacitated for a period in excess of 72 hours; except injury to harbor workers not resulting in death and not resulting from vessel casualty or vessel equipment casualty.

(b) The notice required by paragraph (a) of this section shall show the name and official number of the vessel involved, the owner or agent thereof, the nature and probable occasion of the casualty, the locality in which it occurred, the nature and extent of injury to persons and the damage to property.

(c) In addition to the notice required by paragraph (a) of this section, the person in charge of the vessel shall, as soon as possible, report in writing and in person to the Officer in Charge, Marine Inspection, at the port in which the casualty occurred or nearest the port of first arrival: *Provided*, That when from distance it may be inconvenient to report in person it may be done in writing only. The written report required for personal accident shall be made on Form CG–924E and submitted for each individual injured and each loss of life. For all other vessel casualties the written report shall be made on Form CG–2692.

NOTE: If filed without delay, the Form CG–924E or CG–2692 may also provide the notice required by paragraph (a) of this section.

(d) The owner, agent, master, or other person in charge of any vessel involved in a marine casualty shall retain such voyage records of the vessel as are maintained by the vessel, such as both rough and smooth deck and engineroom logs, bell books, navigation charts, navigation work books, compass deviation cards, gyrocompass records, stowage plans, record of draft, aids to mariners, radiograms sent and received, the radio log and crew and passenger lists. The owner, agent, master, or other officer in charge, shall make those records available to a duly authorized Coast Guard officer or employee for examination upon request.

(e) Whenever a vessel collides with a lightship, buoy, or other aid to navigation under the jurisdiction of the Coast Guard, or is connected with any such collision, it shall be the duty of the person in charge of such vessel to report the accident to the nearest Officer In Charge, Marine Inspection. No report on Form CG–2692 is required unless one or more of the results listed in paragraph (a) of this section occurs.

(f) The master of any nuclear vessel shall immediately inform the Commandant in the event of any accident or casualty to the nuclear vessel which may lead to an environmental hazard. The master shall also immediately inform the competent governmental authority of the country in whose waters the vessel may be in, or whose waters the vessel approaches in a damaged condition.

(Interpret or apply R.S. 4450, as amended, secs. 1, 2, 49 Stat. 1544, secs 13, 17, 54 Stat. 166, as amended, sec. 10, 18 Stat. 128, as amended; 46 U.S.C. 239, 367, 526L(c), 526p, 33 U.S.C. 361)

§ 35.15–5 Reports by engineers of accidents involving boilers or machinery—T/ALL.

It shall be the duty of the engineer in charge when an accident occurs to the boilers or machinery tending to render the further use of such boilers and machinery unsafe until repairs are made to report the same to the Officer in Charge, Marine Inspection, at the port in which the accident occurred or nearest the port of first arrival, immediately upon the arrival of the tankship at the first port reached subsequent to the accident.

§ 35.15–10 Reports when a state of war exists—T/ALL.

During the period when a state of war exists between the United States and any foreign nation, communications in regard to casualties or accidents shall be handled with caution and the reports shall not be made by radio or by telegram.

Subpart 35.20—Navigation

§ 35.20–1 Notice to mariners; aids to navigation—T/OCLB.

(a) Licensed officers are required to acquaint themselves with the latest information published by the United States Coast Guard and the United States Navy regarding aids to navigation, and neglect to do so is evidence of neglect of duty. It is desirable that vessels navigating oceans and coastwise and Great Lakes waters shall have available in the pilothouse for convenient reference at all times a file of the applicable Notice to Mariners. All vessels shall have charts of the waters on which they operate for convenient reference at all times.

(b) Notice to Mariners, published weekly by the United States Coast Guard, which contains announcements and information regarding aids to navigation and charts of waters of the United States, is available for free distribution at the following places: Field offices of the U. S. Coast Guard; U. S. Coast and Geodetic Survey field stations; and the Marine Division, Custom House. Notice to Mariners, published weekly by the U. S. Navy for the correction of charts, sailing directions, light lists, and other publications, and which includes foreign waters and certain waters of the United States, is available for free distribution at the Oceanographic Office, Branch Oceanographic Offices, or any of the agencies at seaboard ports, and is also on file in the United States consulates, where it may be inspected.

§ 35.20–5 Draft of tankships—T/OC.

The master of every tankship shall, whenever leaving port, enter the maximum draft of his vessel in the logbook.

§ 35.20–10 Steering gear test—T/ALL.

On all tankships making voyages of more than 48 hours' duration, the entire steering gear, the whistle, the means of communication, and the signaling appliances between the bridge or pilothouse and engineroom shall be examined and tested by a licensed officer of the vessel within a period of not more than 12 hours before leaving port. All such vessels making voyages of less than 48 hours' duration or operating on lakes, bays, sounds, and rivers shall be so examined and tested at least once in every week. The fact and time of such examination and test shall be recorded in the ship's logbook.

§ 35.20–15 Steering orders—TB/ALL.

(a) For all tank vessels fitted with rudders, the following steering orders shall be given in the direct sense as follows:

(1) "Right rudder" shall be given only when it is intended that the wheel, the rudder blade, and the head of the ship should go to the right.

(2) "Left rudder" shall be given only when it is intended that the wheel, the rudder blade, and the head of the ship should go to the left.

(b) Where rudder indicators are provided, they shall be installed consistent with the requirements in paragraph (a) of this section.

§ 35.20–20 Master's and officer's responsibility—TB/ALL.

Nothing in this part shall exonerate any master or officer in command from the consequences of any neglect to keep a proper lookout or the neglect of any precaution which may be required by the ordinary practice of seamen or by the special circumstances of the case.

§ 35.20–25 Unauthorized lights—T/ALL.

Any master or pilot of any vessel who shall authorize or permit the carrying of any light, electric or otherwise, not required by law that in any way will interfere with distinguishing the signal lights may be proceeded against in accordance with the provisions of R. S. 4450 (46 U. S. C. 239), as amended, looking to a revocation or suspension of his license.

§ 35.20–30 Flashing the rays of a searchlight or other blinding light—T/ALL.

Flashing the rays of a searchlight or other blinding light onto the bridge or into the pilothouse of any vessel under way is prohibited. Any person who shall flash or cause to be flashed the rays of a blinding light in violation of the above may be proceeded against in accordance with the provision of R. S. 4450, as amended (46 U. S. C. 239), looking to the revocation or suspension of his license or certificate.

§ 35.20–35 Whistling—T/ALL.

Unnecessary sounding of vessel's whistle is prohibited within any harbor limits of the United States. Whenever any licensed officer in charge of any tankship shall authorize or permit such unnecessary whistling, such officer may be proceeded against in accordance with the provisions of R. S. 4450, as amended (46 U. S. C. 239), looking to a revocation or suspension of his license.

Subpart 35.25—Engine Department

§ 35.25–1 Examination of boilers and machinery by engineer—T/ALL.

It shall be the duty of an engineer when he assumes charge of the boilers and machinery of a vessel to examine the same forthwith and thoroughly. If he finds any part thereof in bad condition, he shall immediately report the facts to the master, owner, or agent, and to the nearest Officer in Charge, Marine Inspection, who shall thereupon investigate the matter, and if the former engineer has been willfully negligent in the performance of his duties, he may be proceeded against under the provisions of R.S. 4450, as amended (46 U.S.C. 239), looking to a suspension or revocation of his license.

§ 35.25–5 Repairs of boilers and unfired pressure vessels and reports of repairs or accidents by chief engineer—TB/ALL.

(a) Before making any repairs to boilers or unfired pressure vessels, the chief engineer shall submit a report covering the nature of the repairs to the Officer in Charge, Marine Inspection, at or nearest to the port where the repairs are to be made.

(b) In the event of an accident to a boiler, unfired pressure vessel, or machinery tending to render the further use of the item itself unsafe until repairs are made, or if by ordinary wear such items become unsafe, a report shall be made by the chief engineer immediately to the Officer in Charge, Marine Inspection, or if at sea, immediately upon arrival at port.

§ 35.25–10 Requirements for fuel oil—T/ALL.

(a) Oil to be used as fuel to be burned under boilers on tankships shall have a flash point of not less than 150° F. (closed cup test).

(b) It shall be the duty of the chief engineer to make an entry in the log of each supply of fuel oil received on board, stating the quantity received, the name of the vendor, and the flash point (closed cup test) for which it is certified by the vendor.

(c) It shall be the further duty of the chief engineer to draw and seal at the time the supply is received on board, a half-pint sample of each lot of fuel oil, such sample to be preserved until that particular supply of oil is exhausted.

§ 35.25–15 Carrying of excess steam—TB/ALL.

It shall be the duty of the chief engineer of any tank vessel to see that a stream pressure is not carried in excess of that allowed by the certificate of inspection, and to see that the safety valves, once set and sealed by the inspector are in no way tampered with or made inoperative except as provided in § 35.25–20.

§ 35.25–20 Breaking of safety valve seal—TB/ALL.

If at any time it is necessary to break the seal on a safety valve for any purpose, the chief engineer shall advise the Officer in Charge, Marine Inspection, at the next port of call, giving the reason for breaking the seal and requesting that the valve be examined and adjusted by a marine inspector.

Subpart 35.30—General Safety Rules

§ 35.30–1 Warning signals and signs—TB/ALL.

(a) *Red warning signals.* During transfer of bulk cargo while fast to a dock, a red signal (flag by day and electric lantern at night) shall be so placed that it will be visible on all sides. While transferring bulk cargo at anchor, a red flag only shall be displayed.

(b) *Warning sign at gangway.* (1) Warning placards should be kept at hand for display while a vessel is fast to a dock during transfer of cargo, to warn persons approaching the gangway. The placard shall state in letters not less than 2 inches high substantially as follows:

WARNING

No open lights.
No smoking.
No visitors.

(2) Where poisonous cargoes are being transferred the warning sign shall also include the word "Poison" to indicate the nature of the liquid being handled. (See Part 39 of this subchapter.)

(c) *Warning sign in radio room.* A sign shall be placed in radio room warning against the use of radio equipment during transfer of Grade A, B, or C liquids, except by permission of senior deck officer.

(d) Additional warning signs required by cargoes having significant hazards other than flammability or combustibility are described in § 35.01–55.

(e) Additional placards or signs required in connection with the movement of certain open hopper type barges are described in § 35.01–45.

§ 35.30–5 Fires, matches, and smoking—TB/ALL.

(a) *General.* In making the determinations required under paragraphs (b), (c), and (d) of this section the senior deck officer on duty, who shall be a licensed officer or certificated tankerman, shall exercise his skill and experience with due regard to attendant conditions and circumstances, including consideration for location of shore side facilities, maintenance of mobility, provision for fire protection, state or change of winds, tides, sea, weather conditions, forces of nature and other circumstances generally beyond human control.

(b) *Boiler fires.* Boiler fires are normally permitted during cargo transfer operations: *Provided,* That prior to loading Grades A, B, and C cargoes, the senior deck officer on duty, who shall be a licensed officer or certificated tankerman, shall make an inspection to determine whether in his judgment boiler fires may be maintained with reasonable safety during the loading operation.

(c) *Galley fires.* Galley fires are normally permitted during cargo transfer operations: *Provided,* That prior to loading Grades A, B, and C cargoes the senior deck officer on duty, who shall be a licensed officer or certificated tankerman, shall make an inspection to determine whether in his judgment galley fires may be maintained with reasonable safety during the loading operation.

(d) *Smoking.* Smoking is prohibited on the weather decks of tank vessels when they are not gas free or are alongside docks. At other times and places the senior deck officer on duty, who shall be a licensed officer or certificated tankerman, shall designate when and where the crew may smoke: *Provided,* That prior to loading Grade A, B, or C cargo the master or senior deck officer on duty shall make an inspection to determine if and where, in his judgment, smoking may be permitted with reasonable safety during the loading operation.

(e) *Matches.* The use of other than safety matches is forbidden aboard tank vessels at all times.

§ 35.30–10 Cargo tank hatches, ullage holes, and Butterworth plates—TB/ALL.

No cargo tank hatches, ullage holes, or Butterworth plates shall be opened or shall remain open without flame screens, except under the supervision of the senior members of the crew on duty, unless the tank opened is gas free.

§ 35.30–15 Combustible gas indicator—TB/ALL.

(a) The provisions of this section shall apply only to United States flag vessels.

(b) Manned tank barges and tankships authorized to carry Grade A, B, C, or D liquids at any temperature, or Grade E liquids at elevated temperatures, shall be provided with a combustible gas indicator suitable for determining the presence of explosive concentrations of the cargo carried. An indicator which bears the label of Underwriters' Laboratories, Inc., Factory Mutual Engineering Division, or other organizations acceptable to the Commandant will be accepted as meeting this requirement.

§ 35.30–20 Emergency equipment—TB/ALL.

(a) All manned tank vessels having tanks which exceed 15 feet in depth, measured from the deck to the lowest point at which cargo is carried, all tankships on an international voyage, and all tankships of 1,000 gross tons and over shall be provided with an outfit as follows:

(1) One approved fresh air breathing apparatus, including belt and lifeline. The length of the airhose shall be sufficient to reach from the open deck, well clear of hatch or doorway, to any part of the holds, tanks, and, except as provided in the following subparagraph, the machinery spaces.

(2) If it is not practicable to reach all portions of the machinery space with the airhose of the fresh air breathing apparatus, an approved self-contained breathing apparatus with adequate lifeline shall be carried for use in the machinery space. In such case, the particular apparatus provided for the machinery space shall be used for no other purpose, shall be marked indicating the restriction to its use, and shall be stowed convenient to, but outside of the machinery space.

(3) One approved 3-cell, explosion-proof flashlight, constructed in accordance with Subpart 161.008 of Subchapter Q (Specifications) of this chapter.

(4) One fire ax.

(b) Approved self-contained breathing apparatus with adequate lifelines may be provided in addition to the equipment required in the preceding paragraph, and may be used in any space on the vessel.

(c) For tankships on an international voyage, lifelines shall be of steel or bronze wire rope. Steel wire rope shall be either inherently corrosion resistant or made so by galvanizing or tinning.

Each end shall be fitted with a hook with keeper having a throat opening which can be readily slipped over a ⅝-inch bolt. The total length of the lifeline shall be dependent upon the size and arrangement of the vessel, and more than one line may be hooked together to achieve the necessary length. No individual length of lifeline may be less than 50 feet in length. The assembled lifeline shall have a minimum breaking strength of 1,500 pounds.

§ 35.30–25 Explosives—TB/ALL.

Fulminates or other detonating compounds in bulk in dry condition; explosive compositions that ignite spontaneously or undergo marked decomposition when subjected for forty-eight consecutive hours to a temperature of 167° F. or more; compositions containing an ammonium salt and a chlorate; and other like explosives shall not be accepted, stored, stowed or transported on board tank vessels.

§ 35.30–30 Portable electrical equipment—TB/ALL.

Illumination may be obtained in any compartment by the use of approved explosion-proof, self-contained, battery-fed lamps. Otherwise, no portable electrical equipment of any type shall be used in bulk cargo tanks, fuel oil tanks, cargo pumprooms, or enclosed spaces immediately above or adjacent to bulk cargo tanks unless all the following conditions are met:

(a) The compartment itself is gas-free;

(b) The compartments adjacent and the compartments diagonally adjacent are either (1) gas-free, (2) inerted, (3) filled with water, (4) contain Grade E liquid and are closed and secured, or (5) are spaces in which flammable vapors and gases normally are not expected to accumulate; and

(c) All other compartments of the vessel in which flammable vapors and gases may normally be expected to accumulate are closed and secured.

§ 35.30–35 Spark producing devices—TB/ALL.

(a) Where Grades A, B, C, and D liquid cargoes are involved, power driven or manually operated spark producing devices shall not be used in bulk cargo tanks, fuel oil tanks, cargo pumprooms, or enclosed spaces immediately above or adjacent to bulk cargo tanks unless all the following conditions are met:

(1) The compartment itself is gas-free;

(2) The compartments adjacent and the compartments diagonally adjacent are either (i) gas-free, (ii) inerted, (iii) filled with water, (iv) contain Grade E liquid and are closed and secured, or (v) are spaces in which flammable vapors and gases normally are not expected to accumulate; and,

(3) All other compartments of the vessel in which flammable vapors and gases may normally be expected to accumulate are closed and secured.

(b) This section does not prohibit the use of small hand tools in such locations.

§ 35.30–40 Flammable liquid and gas fuels as ship's stores—TB/ALL.

(a) Flammable liquids and gases to be used as fuels for industrial trucks, lifeboats and other approved equipment shall be marked, labeled and stowed as follows:

(1) They shall be stowed in ICC specification containers, A.S.M.E. containers, or portable safety containers having the approval of a recognized testing laboratory, which containers are authorized for the contents.

(2) Containers shall be marked with the name of contents and shall be labeled in accordance with ICC requirements as follows:

(i) Flammable liquids—"Red Label"; or,

(ii) Flammable gases—"Red Gas label".

(3) Containers shall be stowed on or above the weather deck in locations designated by the master. ICC specification containers, A.S.M.E. containers, or portable safety containers having the approval of a recognized testing laboratory may be stowed below the weather deck in a paint or lamp locker provided such containers do not exceed 5 gallons capacity each.

(b) Diesel fuel shall be stowed in locations designated by the master.

§ 35.30–45 Motion picture film—TB/ALL.

(a) Only acetate or slow-burning film may be used. Nitrocellulose film is specifically prohibited.

Subpart 35.35—Cargo Handling

§ 35.35–1 Men on duty—TB/ALL.

(a) A sufficient number of the crew shall be on duty to perform cargo transfer operations.

(b) In the case of unmanned barges, the owners, masters or persons in charge of such barges shall insure that a person holding a valid license as master, mate, pilot, or engineer, or a certificated tankerman is on duty to perform transfer operations, which licensed person or certificated tankerman shall be considered as the person in charge of the unmanned tank barge. Where the bulk liquid cargo to be transferred is covered by the requirements of § 35.01–55, the Officer in Charge, Marine Inspection, shall be furnished satisfactory documentary evidence that such person is trained in, and capable of performing competently, the necessary operations which relate to the transfer of such cargo.

§ 35.35–5 Electric bonding—T/ALL.

A tank vessel may be electrically connected to the shore piping, through which the cargo is to be transferred, prior to the connecting of a cargo hose. This electrical connection, if made, shall be maintained until after the cargo hose has been disconnected and any spillage has been removed.

§ 35.35–10 Closing of scuppers and sea valves—TB/ALL.

Deck officer in charge shall see that all scuppers are properly plugged during transfer operations except on tank vessels using water for deck cooling. Sea valves shall be closed and lashed, or sealed to indicate that they should not be open during all cargo loading operations. Under no circumstances shall such valves be secured by locks.

§ 35.35–15 Connecting for cargo transfer—TB/ALL.

(a) Movement of the vessel shall be considered when making the cargo connections to insure safe cargo transfer. Suitable material shall be used in joints and in couplings when making connections to insure that they are tight. Under no circumstances shall less than three bolts be used in a bolted flanged coupling.

(b) When cargo connections are supported by ship's tackle, the senior deck officer on duty shall determine the weights involved in order to insure that sufficient tackles are used.

(c) Pans or buckets shall be placed under cargo hose connections on the tank vessel.

§ 35.35–20 Inspection prior to transfer of cargo—TB/ALL.

Prior to the transfer of cargo, the senior deck officer on duty, who shall be a licensed officer or certificated tankerman, shall inspect the vessel to assure himself that the following conditions exist:

(a) Warnings are displayed as required.

(b) No repair work in way of cargo spaces is being carried on without his permission.

(c) Cargo connections have been made as described in § 35.35–15 and cargo valves are set.

(d) All cargo connections for the loading of Grades A, B, and C cargoes have been made to the vessel's pipelines and not through open end hose in a hatch.

(e) In loading Grades A, B, and C cargoes, there are no fires or open flames present on the deck, or in any compartment which is located on, facing, open, and adjacent to that part of the deck on which cargo connections have been made.

(f) The shore terminal or the other tank vessel concerned has reported itself in readiness for transfer of cargo.

(g) All sea valves connected to the cargo piping system are closed.

(h) In loading Grades A, B, and C cargoes, that an inspection has been made to determine whether boiler fires can be maintained with reasonable safety.

(i) In loading Grades A, B, and C cargoes, that an inspection has been made to determine whether galley fires can be maintained with reasonable safety.

(j) In loading Grades A, B, and C cargoes, that an inspection has been made to determine whether smoking may be permitted with reasonable safety.

(k) On tankships the construction or conversion of which is started on or after July 1, 1951, which are to load or discharge Grade A cargo, all openings in the top of the tanks, except the branch vent lines and covers to ullage hole

sounding pipes, are tightly closed. (See §§ 32.20–20 and 32.55–20 of this subchapter.)

(l) On tankships the construction or conversion of which is started on or after July 1, 1951, which are to load or discharge Grade A cargo, the method for determining the liquid level in the tank without opening ullage holes, cargo hatches or Butterworth plates is in proper order. (See § 32.20–20 of this subchapter.)

§ 35.35–25 Approval to start transfer of cargo—TB/ALL.

When the senior deck officer on duty has assured himself that the requirements of §§ 35.35–20 and 35.35–30 have been met, he may give his approval to start operations.

§ 35.35–30 "Declaration of Inspection" for tankships—T/ALL.

After completing the inspection required by § 35.35–20 and prior to giving his approval to start the cargo transfer operation, the master or senior deck officer on duty shall fill in the following Declaration of Inspection in duplicate. The original of the Declaration of Inspection shall be kept aboard for the information of authorized persons. The duplicate, where required, shall be handed to the terminal superintendent or his representative, who shall on demand be given the opportunity to satisfy himself that the condition of the vessel is as stated in the Declaration of Inspection.

DECLARATION OF INSPECTION PRIOR TO BULK CARGO TRANSFER

Date _____

S _____ Port of _____

I, _____, being the master or senior deck officer in charge of the transfer of bulk flammable and combustible cargo about to be undertaken, do certify that I have personally inspected this vessel with reference to the following requirements set forth in § 35.35–20 and that opposite each of them I have indicated that the regulations have been complied with.

(1) Are warnings displayed as required?

(2) Is there any repair work in way of cargo spaces being carried on for which permission has not been given?

(3) Have cargo connections been properly made and are cargo valves properly set?

(4) Have all cargo connections for loading Grades A, B, and C cargoes been made to vessel's pipelines?

(5) Are there any fires or open flames present on the deck or in any compartment which is located on, facing, open and adjacent to the main deck of the vessel on which the cargo connections have been made?

(6) Has the shore terminal or other tank vessel concerned reported itself in readiness for transfer of cargo?

(7) Are sea valves connected to the cargo system closed?

(8) If Grades A, B, and C cargoes are to be loaded and boiler fires are lighted, has an inspection been made to determine that they may be operated with reasonable safety?

(9) If Grades A, B, and C cargoes are to be loaded and galley fires are lighted, has an inspection been made to determine that they may be operated with reasonable safety?

(10) If Grades A, B, and C cargoes are to be loaded, has an inspection been made to determine whether smoking is to be permitted?

(11) If smoking is to be permitted, have spaces been designated for this purpose?

§ 35.35–35 Duties of senior deck officer during transfer operations—TB/ALL.

The senior deck officer on duty shall control the operations as follows:

(a) Supervise the operations of cargo system valves.

(b) Start transfer of cargo slowly.

(c) Observe cargo connections for leakage.

(d) Observe operating pressure on cargo system.

(e) Observe rate of loading for the purpose of avoiding overflow of tanks.

§ 35.35–40 Conditions under which transfer operations shall not be commenced or if started shall be discontinued—TB/ALL.

Cargo transfer operations shall not be started or, if started, shall be discontinued under the following conditions:

(a) During severe electrical storms.

(b) If a fire occurs on the wharf or on the tanker or in the vicinity.

§ 35.35–42 Restrictions on vessel coming alongside a tank vessel while loading Grade A, B, or C cargo—TB/ALL.

(a) No vessel shall come alongside or remain alongside a tank vessel in way of its cargo tanks while it is loading Grade A, B or C cargo without having the permission of the officer-in-charge of the vessel which is loading.

(b) No vessel shall come alongside or remain alongside a tank vessel in way of its cargo tanks while it is loading Grade A, B or C cargo unless the conditions then prevailing are mutually acceptable to the officers-in-charge of cargo handling on both vessels.

§ 35.35–45 Auxiliary steam, air, or electric current—B/ALL.

When discharging cargo from one or more barges, the towing vessel may furnish steam, air, or electric current for pumps on barges or dock, but in no case shall the cargo pass through or over the towing vessel.

§ 35.35–50 Termination of transfer operations—TB/ALL.

(a) When transfer operations are completed the valves on cargo connections on the vessel shall be closed. The cargo connections shall be drained of cargo.

§ 35.35–55 Transfer of other cargo or stores on tank vessels—TB/ALL.

(a) Package goods, freight, and ships' stores shall not be loaded or discharged during the loading of Grade A, B, or C products except by permission of the senior deck officer on duty. Explosives as cargo shall not be loaded or carried on any tank vessel containing Grade A, B, or C cargo.

(b) Where package and general cargo is carried directly over bulk cargo tanks, it shall be properly dunnaged to prevent chafing of metal parts and securely lashed or stowed.

§ 35.35–60 Transportation of other cargo or stores on tank barges—B/ALL.

(a) Tank barges may be permitted to transport deck cargoes directly over bulk cargo spaces when the nature of such deck cargoes and the methods of loading and unloading same do not create an undue hazard. Such tank barges shall have their decks properly dunnaged to prevent chafing between the steel parts of the vessel and the deck cargo.

§ 35.35–70 Maintenance of cargo handling equipment—TB/ALL.

The cargo handling equipment shall be maintained by the tank vessel's personnel in accordance with the regulations in this subchapter, including the following:

(a) Cargo hose shall not be used in transfer operations in which the pressures are such that leakage of cargo occurs through the body of the hose.

(b) Cargo pump relief valves shall be tested at least once each year to determine that they function satisfactorily at the pressure at which they are set to open.

(c) Cargo pump pressure gage shall be tested at least once a year for accuracy.

(d) The cargo discharge piping of all tank vessels shall be tested at least once each year for tightness, at the maximum working pressure.

§ 35.35–75 Emergencies—TB/ALL.

In case of emergencies nothing in the regulations in this subchapter shall be construed as preventing the senior officer present from pursuing the most effective action in his judgment for rectifying the conditions causing the emergency.

Subpart 35.40—Marking of Fire and Emergency Equipment

§ 35.40–1 General alarm contact maker—TB/ALL.

Each general alarm bell contact maker located as required in § 32.25–1(b) shall be marked with lettering on a corrosion-resistant plate, or with a sign in red letters on a suitable background with the words "GENERAL ALARM."

§ 35.40–5 General alarm bells—TB/ALL.

General alarm bells shall be marked in not less than ½-inch red letters: "General Alarm—When Bell Rings Go to Your Station."

§ 35.40–6 Emergency lights—TB/ALL.

(a) All emergency lights shall be marked with a letter "E" at least ½ inch high.

§ 35.40–7 Carbon dioxide alarm—T/ALL.

Adjacent to all carbon dioxide fire extinguishing alarms installed after November 19, 1952, there shall be conspicuously marked: "WHEN ALARM SOUNDS VACATE AT ONCE. CARBON DIOXIDE BEING RELEASED."

§ 35.40–10 Steam, foam, or CO_2 fire smothering apparatus—TB/ALL.

Steam, foam or CO_2 fire smothering apparatus shall be marked "STEAM FIRE APPARATUS" or "FOAM FIRE APPARATUS" or "CO_2 FIRE APPARATUS," as appropriate, in not less than 2-inch red letters. The valves of all branch pipes leading to the several compartments shall be distinctly marked to indicate the compartments or parts of the vessel to which they lead.

§ 35.40–15 Fire hose stations—TB/ALL.

At each fire hose valve there shall be marked in not less than 2-inch red letters and figures "FIRE STATION 1," 2, 3, etc.

§ 35.40–17 Foam hose/monitor stations—T/ALL.

(a) At each required foam hose/monitor valve there shall be marked in not less than 2-inch red letters and figures: "FOAM STATION 1," 2, 3, etc.

§ 35.40–18 Water spray systems—TB/ALL.

(a) Water spray system apparatus shall be marked: "WATER SPRAY SYSTEM," as appropriate, in not less than 2-inch red letters.

(b) The control valve, and its control if located remotely, shall be distinctly marked to indicate the compartment protected.

§ 35.40–20 Emergency equipment—TB/ALL.

Lockers or spaces where emergency equipment is stowed shall be marked: "EMERGENCY EQUIPMENT" or "FRESH AIR BREATHING APPARATUS" as appropriate.

§ 35.40–25 Fire extinguishers—TB/ALL.

Each fire extinguisher shall be marked with a number and the location where stowed shall be marked in corresponding numbers in at least ½ inch figures.

§ 35.40–30 Instructions for changing steering gear—TB/ALL.

Instructions in at least ½ inch letters and figures shall be posted in the steering engineroom, relating in order, the different steps to be taken in changing to the emergency steering gear. Each clutch, gear wheel, lever, valve or switch which is used during the changeover shall be numbered or lettered on a brass plate or painted so that the markings can be recognized at a reasonable distance. The instructions shall indicate each clutch or pin to be "in" or "out" and each valve or switch which is to be "opened" or "closed" in shifting to any means of steering for which the vessel is equipped. Instructions shall be included to line up all steering wheels and rudder amidship before changing gears.

§ 35.40–35 Rudder orders—TB/ALL.

At all steering stations, there shall be installed a suitable notice on the wheel or device or in such other position as to be directly in the helmsman's line of vision, to indicate the direction in which the wheel or device must be turned for "right rudder" or "left rudder."

§ 35.40–40 Vessel's name on equipment—TB/ALL.

(a) The equipment of all tank vessels, such as fire hose, fire axes, lifeboats, life rafts, life preservers and buoyant apparatus, shall be painted or branded with the name of the vessel upon which they are used, except that inflatable liferafts shall be marked in accordance with § 33.25–10.

(b) For vessels on an international voyage, in addition to other markings required, the port of registry of the vessel shall be marked on all lifeboats, rigid liferafts, buoyant apparatus, and ring life buoys. On lifeboats, the name of the vessel and the port of registry shall be marked on each side of the bow.

Subpart 35.70—Power-Operated Industrial Trucks

§ 35.70–1 Application—TB/ALL.

(a) *Power-operated industrial trucks.* (1) Power-operated industrial trucks when carried on board vessels as part of the vessel's equipment for handling materials of any kind shall be in compliance with the applicable provisions of this subpart.

(2) Power-operated industrial trucks placed on board vessels for handling materials of any kind shall be in compliance with the applicable provisions of this subpart when such vessels are within the navigable waters of the United States, its territories and possessions but not including the Panama Canal Zone.

(b) *Vessels.* (1) Vessels shall be in compliance with the applicable provisions of this Subpart during those periods of time when power-operated industrial trucks are on board as a part of the vessel's equipment or when such trucks are placed on board for handling materials of any kind.

NOTE: As set forth in § 30.01–5(e), the regulations in this subpart are also applicable to foreign flag tank vessels.

§ 35.70–3 Alternates—TB/ALL.

(a) In cases of undue hardship resulting from unavoidable delays in bringing existing power-operated industrial trucks into compliance with the applicable provisions of this subpart, the Commandant may permit the use of alternate equipment, apparatus, or arrangement for such period of time, and to such extent, and upon such conditions as will assure, to the Commandant's satisfaction, a degree of safety consistent with the minimum standards as set forth in this subpart.

(b) The methods and procedures adopted in connection with the modification of existing equipment to meet required laboratory designations will be taken into consideration in granting permission to use alternate arrangements for a limited period of time.

§ 35.70–5 Definitions of terms used in subpart—TB/ALL.

(a) Power-operated industrial trucks are considered to be tractors, lift trucks and other specialized industrial trucks used for material handling on board a vessel.

(b) For the purposes of the regulations in this subpart, the words "flammable" and "inflammable" are interchangeable or synonymous terms.

§ 35.70–7 Approved power-operated industrial trucks—TB/ALL.

(a) Where approved power-operated industrial trucks are required by the regulations in this subchapter, such approved trucks shall have a specific designation of a recognized testing laboratory except in case of trucks powered by compressed air. The following laboratories are recognized for the specific type designations listed:

(1) Underwriters' Laboratories, Inc. (Mailing address, P.O. Box 247, Northbrook, Ill., 60062) for trucks having recognized testing laboratory type designations E, EE, EX, G, GS, LP, LPS, D, and DS.

(2) Factory Mutual Laboratories, Engineering Division, 1115 Boston-Providence Turnpike, Norwood, Mass., 02062, for trucks having recognized testing laboratory type designations E, EE, EX, G, GS, LP, LPS, D, and DS.

(b) Trucks powered by compressed air which is received through a flexible hose from a fixed source and having the air supply hose of the grounded type shall be considered of the approved type for purposes of this subpart.

(c) Description of recognized testing laboratory type designations are as follows:

(1) The "E" designated units are electrically powered units that have minimum acceptable safeguards against inherent fire hazards.

(2) The "EE" designated units are electrically powered units that have, in addition to all of the requirements for the "E" units, the electric motors and all other electrical equipment completely enclosed. In certain locations the "EE" unit may be used where the use of an "E" unit may not be considered safe.

(3) The "EX" designated units are electrically powered units that differ from the "E" and "EE" units in that the electrical fittings and equipment are so designed constructed and assembled that the units may be used in certain atmospheres containing flammable vapors or dusts.

(4) The "G" designated units are gasoline powered units having minimum acceptable safeguards against inherent fire hazards.

(5) The "GS" designated units are gasoline powered units that are provided with additional safeguards to the exhaust, fuel and electrical systems. They may be used in some locations where the use of a "G" unit may not be considered safe.

(6) The "LP" designated units are similar to the "G" units except that they are liquefied petroleum gas engine powered instead of gasoline powered.

(7) The "LPS" designated units are units similar to the "GS" units except that liquefied petroleum gas is used for fuel instead of gasoline.

(8) The "D" designated units are units similar to the "G" units except that they are diesel engine powered instead of gasoline engine powered.

(9) The "DS" designated units are diesel powered units that are provided with additional safeguards to the exhaust, fuel and electrical systems. They may be used in some locations where a "D" unit may not be considered safe.

(d) In addition to the construction and design safety features required in order to obtain a recognized laboratory type designation, approved power-operated industrial trucks shall have at least the following minimum safety features where applicable.

(1) Power-operated industrial trucks shall be equipped with a warning horn, whistle, or gong, or other device that can be heard clearly above the normal shipboard noises.

(2) Wherever power-operated industrial truck operation exposes the operator to danger from falling objects, the truck shall be equipped with a driver's overhead guard. Where overall height of the truck with forks in the lowered position is limited by head room conditions the overhead guard may be omitted.

NOTE: This overhead guard is only intended to offer protection from the impact of small packages, boxes, bagged material, etc., representative of the job application. It is impractical to build a guard of sufficient strength to withstand the impact of a capacity load since such a guard would constitute a safety hazard because its structure would be so large that it might interfere with good visibility and would weigh so much that it might make the truck top-heavy and unstable.

(3) Power-operated fork lift trucks which handle small objects or unstable loads shall be equipped with a vertical load back rest or rack which shall have height, width and strength sufficient to prevent the load, or part of it, from falling toward the mast when the mast is in a position of maximum backward tilt.

(4) The forks on power-operated fork lift trucks shall be secured to the carriage so that unintentional lifting of the toe shall not occur on such application where this lifting may create a hazard. The factor of safety of forks shall be at least 3 to 1, based on the elastic limit of the material.

(5) Fork extensions or other attachments shall be suitably secured to prevent unintentional lifting or displacement on primary forks.

(6) All exposed wheels shall be provided with guards to prevent the wheels from throwing particles at the operator.

(7) Unless the steering mechanism is of a type that prevents road reactions from causing the steering handwheel to spin, the steering knob, if used, shall be of a mushroom type to engage the palm of the operator's hand, or shall be arranged in some other manner to prevent injury. The knob shall be mounted within the perimeter of the wheel.

(8) All steering controls shall be confined within the clearances of the truck, or so guarded that movement of the controls shall not result in injury to the operator when passing obstructions, stanchions, etc.

§ 35.70–10 Permissible areas of use—TB/ALL.

(a) When the area on deck or in the hold in which power-operated industrial trucks are to be used has no bulk cargo vapors when tested but is an area in which such vapors could accumulate, these trucks may be used subject to the following conditions:

(1) Trucks used shall be suitable for type of cargo to be handled in accordance with § 35.70–15.

(2) Trucks used shall be suitable for areas in which vapors could accumulate in accordance with Table 35.70–10(a).

TABLE 35.70-10(a)

Type of truck	Grade of bulk cargo/vapors in vessel				
E					E
EE		B	C	D	E
EX	A	B	C	D	E
LP					E
LPS		B	C	D	E
G					E
GS		B	C	D	E
D					E
DS		B	C	D	E
Compressed air	A	B	C	D	E

(b) When a vessel is gas free, any approved truck can be used in any space except for restrictions as to types of cargo handled as specified in § 35.70–15.

§ 35.70–15 Types of cargo permitted to be handled by trucks—TB/ALL.

(a) Power-operated industrial trucks used for handling of packaged petroleum products shall be in accordance with Table 35.70–15(a).

TABLE 35.70-15(a)

Type of truck	Grade of packaged petroleum product				
E				D	E
EE		B	C	D	E
EX	A	B	C	D	E
LP				D	E
LPS		B	C	D	E
G				D	E
GS		B	C	D	E
D				D	E
DS		B	C	D	E
Compressed air	A	B	C	D	E

(b) Where dry cargo other than packaged petroleum products is to be handled by power-operated industrial trucks on board a tank vessel, types of trucks used shall be in accordance with § 97.70–10 of Subchapter I (Rules and Regulations for Cargo and Miscellaneous Vessels) of this Chapter, except that all trucks shall be approved.

(c) The use of power-operated industrial trucks may be further restricted due to bulk cargo and/or vapors as set forth in Table 35.70–10(a).

§ 35.70–20 Special operating conditions—TB/ALL.

(a) Permission shall be obtained from the senior deck officer on board before placing power-operated industrial trucks in operation on a tank vessel.

(b) The senior deck officer shall ascertain by portable carbon monoxide and explosive vapor meters, if necessary, that no hazardous gas concentrations exist before granting permission to operate power trucks.

(c) When power-operated industrial trucks are in use on board vessels subject to the regulations in this subchapter, they shall be in a safe operating condition.

(d) Spaces exposed to carbon monoxide or other hazardous vapors from the exhausts of power-operated industrial trucks shall have adequate ventilation. The concentration of carbon monoxide shall be kept below 100 parts per million in the holds and intermediate decks where persons are working. When necessary, portable blowers of adequate size and location shall be utilized.

(e) The parts and/or equipment of any power-operated industrial truck requiring replacement shall be replaced only by parts and/or equipment equivalent in safety when installed with those used in the original design.

(f) Any truck that emits sparks or flames from the exhaust system shall immediately be removed from service, and not again returned to service until the cause for the emission of such sparks or flames has been eliminated.

(g) When the temperature of any part of the truck is found to be in excess of a safe operating temperature, the truck shall be removed from service until such overheating has been corrected.

(h) Operation of trucks shall be halted immediately and the engines or motors secured, whenever an emergency condition arises aboard the vessel.

(i) Operation of trucks shall be halted immediately and the engines or motors secured in the event of breakage or leakage of containers used for the carriage of flammable liquids, flammable solids or oxidizing materials.

(j) The rated capacity of a truck shall at all times be posted on the truck in a conspicuous place and such capacity shall not be exceeded.

(k) At least one approved 2-pound dry chemical hand portable fire extinguisher, or its approved equivalent, shall be affixed to the truck in a readily accessible position or kept in close proximity available for immediate use.

(l) Vessel's fire-fighting equipment, both fixed (where installed) and portable, in vicinity of space being worked shall be kept ready for immediate use.

§ 35.70–25 Refueling—TB/ALL.

(a) *When permitted.* Power-operated industrial trucks are not permitted to be refueled in the hold of a vessel or on the weather deck except under the following conditions:

(1) Trucks using gasoline as fuel may be refueled in the hold or on the weather deck of a vessel only when such refueling is done with an acceptable portable non-spilling fuel handling system of not over 5 gallons capacity. Transfer of gasoline to these portable non-spilling fuel handling devices is not permitted on board the vessel.

(2) Power-operated industrial trucks using liquefied petroleum gas as fuel may be refueled in the hold or on the

weather deck of a vessel only when fitted with removable tanks and provided the hand-operated shutoff valve of the depleted tank is closed and the engine is run until it stalls from lack of fuel before the quick disconnect fitting is opened. In addition, the quick disconnect fitting shall be attached to the fuel tank before the hand-operated shutoff valve is reopened.

(3) Power-operated industrial trucks using diesel oil as fuel may be refueled on the weather deck or in the hold of a vessel by means of portable containers of not over 5-gallon capacity. These trucks may also be refueled on the weather deck of a vessel or portable containers refilled from a larger container provided a suitable pump is used for the transfer operation and a drip pan of adequate size is supplied.

(b) *General requirements.* The following conditions must be met when refueling power-operated industrial trucks in the hold of a vessel or on the weather deck under the circumstances listed in paragraph (a) of this section:

(1) Refueling shall be under the direct supervision of an experienced and responsible person specifically designated for such job by the person in charge of the loading or unloading of the vessel.

(2) No refueling shall be undertaken with less than 2 persons specifically assigned and present for the complete operation, at least one of whom shall be experienced in using the portable fire extinguishers required in the fueling area.

(3) At least one approved 4-pound dry chemical hand portable fire extinguisher, or its approved equivalent shall be provided at the scene of the fueling area. This is in addition to the portable extinguisher affixed to the truck in accordance with § 35.70-20(k).

(4) The location for refueling trucks shall be designated by the master or senior deck officer on board the vessel. "No Smoking" signs shall be posted in the area and smoking shall be prohibited.

(5) The location designated for refueling shall be adequately ventilated so as to insure against accumulation of a hazardous concentration of vapors. The ventilation requirements of § 35.70-20 (d) when trucks are operating shall also apply when trucks are being refueled.

(6) Truck engines of all trucks in the same hold shall be stopped before any truck in that hold is refueled and before any fuel handling devices or unmounted liquefied petroleum gas cylinders are placed in the hold.

(7) All fuel handling devices and unmounted liquefied petroleum gas containers shall be removed from the hold before any truck engine is started and the trucks again placed in operation.

§ 35.70-30 Charging or replacing batteries—TB/ALL.

(a) Battery charging or battery replacement on electric powered trucks shall not be accomplished on board the vessel in locations where vapors from Grades "A," "B," "C," or "D" cargo could accumulate.

(b) Locations on board vessel for battery charging or replacement shall be designated by the master of the vessel.

(c) Battery charging on board vessel shall be accomplished in accordance with the following provisions:

(1) The batteries shall be housed in a suitable, ventilated, portable metal container with a suitable outlet at the top for connection of a portable air hose, or shall be placed directly beneath a suitable metal hood with a suitable outlet at the top for connection of a portable air hose. The air hose shall be permanently connected to an exhaust duct leading to the open deck and terminate in a gooseneck or other suitable weather head. If natural ventilation is not practicable or adequate, mechanical means of exhaust shall be employed in conjunction with the duct. The air outlet on the battery container shall be equipped with an interlock switch so arranged that the charging of the battery cannot take place unless the air hose is properly connected to the box.

(2) If mechanical ventilation is used, an additional interlock shall be provided between the fan and the charging circuit so that the fan must be in operation in order to complete the charging circuit for operation. It is preferable that this interlock switch be of a centrifugal type driven by the fan shaft.

(3) The charging facilities may be part of the truck equipment or may be separate from the truck and located inside or outside the cargo hold. The supply or charging circuit (whichever method is used) shall be connected to the truck by a portable plug connection of the break-away type. This portable plug shall be so engaged with the truck battery charging outlet that any movement of the truck away from the charging station will break the connection between the plug and receptacle without exposing any live parts to contact with a conducting surface or object, and without the plug falling to the deck where it may become subject to injury.

(d) Suitable materials handling equipment shall be employed and adequate precautions taken to avoid damaging or short circuiting batteries and to avoid spillage of electrolyte.

(e) All unmounted batteries shall be removed from the hold where trucks will be operated before such operation commences.

§ 35.70-35 Stowage of trucks aboard a vessel—TB/ALL.

(a) Power-operated industrial trucks may be stowed in any location aboard a vessel provided the following conditions are met:

(1) Gasoline powered trucks shall have all the fuel expended from the system.

(2) Liquefied petroleum gas powered trucks shall have the fuel tanks removed and all the fuel expended from the system.

(b) Power-operated industrial trucks not meeting the conditions set forth in paragraph (a) of this section shall be stowed on the open deck except for intervals such as lunch hours, between work shifts, interdock and intraport movements. If stowed in a fixed metal enclosure located on or above the weather deck, such enclosure shall have access from the weather deck only and shall have adequate ventilation, so arranged as to remove vapors from both the upper and lower portions of the space.

PART 36—ELEVATED TEMPERATURE CARGOES

Subpart 36.01—General

Sec.
36.01-1 Scope of regulations—TB/ALL.
36.01-5 Certificate of inspection—TB/ALL.

Subpart 36.05—Cargo Tanks

36.05-1 Installation of cargo tanks—TB/ALL.
36.05-10 Protection of personnel—TB/ALL.

Subpart 36.10—Piping, Valves, Fittings, and Accessory Equipment

36.10-1 Cargo pump relief valves—TB/ALL.

Subpart 36.20—Vents and Ventilation

36.20-1 Flame screens—TB/ALL.
36.20-5 Ventilation of pumproom—TB/ALL.

Subpart 36.30—Periodic Inspections

36.30-1 Lagged tanks—TB/ALL.

AUTHORITY: The provisions of this Part 36 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply R.S. 4488, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 481, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-38, Oct. 26, 1959, 24 F.R. 8857, unless otherwise noted.

Subpart 36.01—General

§ 36.01-1 Scope of regulations—TB/ALL.

(a) The regulations in this part contain requirements for the transportation in bulk of materials considered to be Grade E liquids when shipped in molten form at elevated temperatures.

(b) The materials covered by this part shall meet the applicable regulations of this subchapter, except that materials having a flash point of 300° F. or above, shall be exempt from the requirements prescribed in the following sections of this subchapter:

(1) Inspection prior to making repairs—§ 35.01-1(b).

(2) Watchman for a tank vessel—§ 35.05-15.

(3) Warning sign at gangway—§ 35.30-1(b).

(4) Cargo tank hatches, ullage holes and Butterworth plates—§ 35.30-10.

(5) Men on duty—§ 35.35-1.

(6) Inspection prior to transfer of cargo—§ 35.35-20.

(7) Approval to start transfer of cargo—§ 35.35-25.

(8) "Declaration of inspection" for tank ships—§ 35.35-30.

(9) Transportation of other cargo or stores on tank barges—§ 35.35-60.

(c) The regulations governing the transportation in the solid state of materials referred to in § 36.01-1(a) are

contained in Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

§ 36.01–5 Certificate of inspection—TB/ALL.

(a) The certificate of inspection shall be endorsed for the carriage of elevated temperature cargoes as follows: "Inspected and approved for the carriage of Grade E combustible liquids when transported in molten form at elevated temperatures."

(R.S. 4421, as amended; 46 U.S.C. 339)

Subpart 36.05—Cargo Tanks

§ 36.05–1 Installation of cargo tanks—TB/ALL.

(a) All cargo tanks carrying liquids at elevated temperatures for the purpose of maintaining the material in the molten form shall be installed with the access openings located above the weather deck.

§ 36.05–10 Protection of personnel—TB/ALL.

(a) Decks, bulkheads, or other structure shall be insulated with an approved incombustible material, or other suitable means of protection shall be employed where practicable and necessary for the protection of personnel.

Subpart 36.10—Piping, Valves, Fittings, and Accessory Equipment

§ 36.10–1 Cargo pump relief valves—TB/ALL.

(a) Cargo pump relief valves and pressure gages may be omitted, however a suitable device shall be fitted to stop the pumping before the designed pressure of the piping is exceeded.

Subpart 36.20—Vents and Ventilation

§ 36.20–1 Flame screens—TB/ALL.

(a) Flame screens may be omitted in the vent lines on cargo tanks.

§ 36.20–5 Ventilation of pumproom—TB/ALL.

(a) Where personnel are required to enter pumprooms located below the weather deck under normal circumstances of handling cargo, such pumprooms shall be equipped with power ventilation.

Subpart 36.30—Periodic Inspections

§ 36.30–1 Lagged tanks—TB/ALL.

(a) Lagged tanks shall have part of the lagging removed on the lower portion of the cargo tanks as directed by the marine inspector, at least once every eight years for external examination.

PART 38—LIQUEFIED FLAMMABLE GASES

Subpart 38.01—General

Sec.
38.01–1 Scope of regulations—TB/ALL.
38.01–2 Transportation of portable cylinders or portable tanks containing or having previously contained liquefied flammable gases in dry cargo spaces—TB/ALL.
38.01–5 Certificate of inspection—TB/ALL.

Subpart 38.05—Design and Installation of Cargo Tanks

Sec.
38.05–1 Design and construction—TB/ALL.
38.05–5 Markings—TB/ALL.
38.05–10 Installation of cargo tanks—TB/ALL.
38.05–15 Cargo tanks on barges—B/ALL.
38.05–20 Lagging—TB/ALL.
38.05–25 Refrigerated systems—TB/ALL.

Subpart 38.10—Piping, Valves, Fittings and Accessory Equipment

38.10–1 Valves, fittings and accessories—TB/ALL.
38.10–5 Filling and discharge pipes—TB/ALL.
38.10–10 Cargo piping—TB/ALL.
38.10–15 Safety relief valves—TB/ALL.
38.10–20 Liquid level gaging devices—TB/ALL.

Subpart 38.15—Special Cargo Handling Requirements

38.15–1 Filling densities—TB/ALL.
38.15–5 Cargo hose—TB/ALL.

Subpart 38.20—Venting and Ventilation

38.20–1 Venting—T/ALL.
38.20–5 Venting—B/ALL.

Subpart 38.25—Periodic Tests and Inspections

38.25–1 Tests and inspections—TB/ALL.
38.25–5 Removal of defective tanks—TB/ALL.
38.25–10 Safety valves—TB/ALL.

AUTHORITY: The provisions of this Part 38 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026, unless otherwise noted.

Subpart 38.01—General

§ 38.01–1 Scope of regulations—TB/ALL.

(a) The regulations in this part contain requirements for the transportation of liquefied flammable gases in bulk in fixed pressure-vessel types of cargo tanks vented above 10 pounds per square inch gage except as otherwise provided for in paragraphs (b), (c) and (d) of this section.

(b) When liquefied flammable gases in bulk are transported in cargo tanks vented at 10 pounds per square inch gage or below, the Commandant may permit the use of alternate methods of storage if it is shown to his satisfaction that a degree of safety is obtained consistent with the minimum requirements of this part.

(c) The regulations in this part apply specifically to the carriage of those commodities defined as liquefied flammable gases and which have no significant hazard other than flammability. Additional safeguards may be necessary for liquefied flammable gases having other significant hazardous characteristics.

(d) The transportation "on deck" of liquefied flammable gases in portable cylinders and tanks and the transportation of empty cylinders and portable tanks previously used shall be in accordance with the requirements of Part 146 of Subchapter N (Dangerous Cargoes) of this chapter. The transportation of such containers "under deck" shall be in accordance with the requirements of § 38.01–2.

§ 38.01–2 Transportation of portable cylinders or portable tanks containing or having previously contained liquefied flammable gases in dry cargo spaces—TB/ALL.

(a) ICC cylinders, ICC Specification portable tanks, or other approved portable tanks containing liquefied flammable gases may be transported under deck, provided the following requirements are met:

(1) The cargo space shall be provided with efficient means of ventilation, be protected from artificial heat, and be readily accessible from hatches.

(2) Containers shall be stored in such a position that the safety relief device is in communication with the vapor space of the container. They shall be properly stowed, dunnaged and secured to prevent movement in any direction.

(3) Unless a method acceptable to the Commandant is used, the containers shall not be over-stowed in the same dry cargo space with other liquefied flammable gas containers, nor with other cargo.

(4) The containers shall be suitably protected against physical damage from other cargo, ship's stores, or equipment in such spaces.

(5) Cylinders shall have their valves protected at all times by one of the following methods:

(i) By metal caps securely attached to the cylinders and of sufficient strength to protect valve from injury.

(ii) By having the valves recessed into the cylinders or otherwise protected so that they will not be subject to a blow if the cylinder is dropped on a flat surface.

(6) Portable tanks shall have their valves protected at all times by a housing in accordance with the requirements under which they were manufactured.

(7) Electrical circuits in such cargo spaces shall meet the requirements of § 111.60–40 in Subchapter J (Electrical Engineering) of this chapter. If the electrical circuit does not meet such requirements, it must be de-energized by a positive means and not re-energized until the cargo has been removed and the space has been tested and found free of flammable vapor.

(8) During the stowage of portable cylinders or portable tanks in a hold or compartment, that is not fitted with electrical fixtures meeting the requirements of § 111.60–40, no means of artificial lighting shall be used within the space unless such equipment is of the explosionproof type. Electrical connections for portable lights shall be made from outlets on the weather deck. Hand flashlights used in the stowage area shall be of an approved type.

(9) The following dangerous cargoes shall not be stowed in the same hold or compartment with liquefied flammable gas containers:

(i) Class A, B, or C explosives.

(ii) Flammable solids.

(iii) Oxidizing materials.
(iv) Corrosive liquids.
(v) Poisonous articles.
(vi) Cotton and similar fibrous materials.

(R.S. 4472, as amended, 4488, as amended, 46 U.S.C. 170, 481. Treasury Dept. Order 167-38, Oct. 26, 1959, 24 F.R. 8857)

§ 38.01-5 Certificate of inspection—TB/ALL.

(a) The certificate of inspection shall be endorsed for the carriage of liquefied flammable gases as follows:

Inspected and approved for the carriage of liquefied flammable gases (1) at a pressure not to exceed ------ p.s.i. (the design pressure of the container) and (2) at temperatures not less than ---° F. and not to exceed ---° F. (Tanks approved to carry cargoes at either below or above ambient temperatures shall have the applicable limiting temperatures indicated on the certificate. Tanks designed to carry cargoes only at ambient temperatures should have the word "ambient" entered in these spaces.)

(R.S. 4421, as amended; 46 U.S.C. 399)

Subpart 38.05—Design and Installation of Cargo Tanks

§ 38.05-1 Design and construction—TB/ALL.

(a) The liquefied flammable gas tanks shall meet the requirements for Class I or Class II arc welded unfired pressure vessels, and shall be fabricated, inspected, and tested in accordance with the applicable requirements of Subchapter F (Marine Engineering) of this chapter, except as otherwise provided for in this part. In the design of the tank, consideration shall be given to the possibility of the tank being subjected to external loads. Consideration shall also be given to excessive loads that can be imposed on the tanks by their support due to static and dynamic forces under operating conditions or during testing. The design shall show the manner in which the tanks are to be installed, supported, and secured, and shall be approved prior to installation.

(b) Unlagged liquefied flammable gas tanks, where the cargo is transported, at or near ambient temperatures, shall be designed for a pressure of the gas at 115° F., or for the vapor pressure of the gas at the temperature of the surrounding cargo if higher than 115° F. The design shall also be based on the minimum internal proessure (maximum vacuum), plus the maximum external static head to which the tank may be subjected. Whenever surrounding cargo is at a greater temperature than the design temperature of the liquefied flammable gas tanks, the liquefied flammable gas cargo is to be such that the design pressure of the liquefied flammable gas tank is not exceeded.

(c) Where liquefied flammable gas tanks, in which the cargo is transported at or near ambient temperature, are lagged with an insulation material of a thickness to provide a thermal conductance of not more than 0.075 B.t.u. per square foot per degree Fahrenheit differential in temperature per hour, the tanks shall be designed for a pressure of not less than the vapor pressure of the gas at 105° F. The insulation material shall conform to the requirements of § 38.05-20. The design shall also be based on the minimum internal pressure (maximum vacuum) plus the maximum external static head to which the tank may be subjected.

(d) The refrigerated cargo tank requirements are:

(1) Liquefied flammable gas tanks in which the temperature is maintained below the normal atmospheric temperature by refrigeration or other acceptable means, shall be designed for a pressure of not less than 110 percent of the vapor pressure corresponding to the temperature of the liquid at which the system is maintained or the pressure corresponding to greatest dynamic or static loads expected to be encountered in service or during testing, whichever is greater. The material of the tank shall be approved by the Commandant for the minimum operating cargo temperature and this temperature shall be permanently marked on the tank as prescribed in § 38.05-5.

(2) If the tank is vented at 10 pounds per square inch gage or below, the unfired pressure vessel requirements as specified in paragraph (a) of this section do not apply. However, the requirements of § 38.01-1(b) shall apply.

(e) The shell and head thickness of liquefied flammable gas tanks shall not be less than 5/16-inch.

(f) Each liquefied flammable gas tank shall be provided with not less than a 15-inch by 23-inch or an 18-inch diameter manhole fitted with a cover located above the maximum liquid level and as close to the top of the tank as possible. Where access trunks are fitted to the tanks, the nominal diameter of the trunks shall be not less than 30 inches.

(g) Provision shall be made for electric bonding tanks and piping.

(R.S. 4433, as amended; 46 U.S.C. 411)

§ 38.05-5 Markings—TB/ALL.

(a) Upon satisfactory completion of tests and inspection, the following marking, at least 3/8 inch high, shall be stamped into a non-corrodible nameplate permanently attached to the tank:

(Name and address of manufacturer)
---- p.s.i.
(Design pressure)
---- p.s.i.
(Shop test pressure)
---- ° F.
(Minimum allowable cargo temperature) (Applicable to refrigerated cargo only)

(Inspector's No.) (Initials and CG symbol)

(Manufacturer's Serial No.)

(Date of manufacture)

(Water capacity, U.S. gallons)

(b) All tank inlet and outlet connections, except safety relief valves, liquid level gaging devices, and pressure gages, shall be labeled to designate whether they terminate in the vapor or liquid space. Labels of corrosion-resistant material may be attached to valves.

(c) All tank markings shall be permanently and legibly stamped in a readily visible position, and shall not be obscured by painting. If the tanks are lagged, the markings attached to the tank proper shall be duplicated on a corrosion-resistant plate secured to the outside jacket of the lagging.

§ 38.05-10 Installation of cargo tanks—TB/ALL.

(a) Liquefied flammable gas tanks shall be independent of the hull and shall be so arranged as to provide a minimum clearance of not less than 24 inches from the vessel's side and not less than 15 inches from the vessel's bottom to provide access for inspection. Reduced clearances will be considered by the Commandant in special cases if adequate safeguards can be demonstrated to protect against tank damage in the event of collision or grounding. Where more than one tank is installed, the distance between such tanks and between tanks and vessel's structure shall be adequate to permit access for inspection and maintenance of all tank surfaces and hull structure as approved by the Commandant. Alternate provisions may be made for moving such tanks to provide for adequate inspection and maintenance of the vessel's structure and tanks.

(b) The conditions regarding installation are:

(1) Liquefied flammable gas tanks may be located in cargo tanks or in other spaces which meet the requirements for cofferdams as defined in § 30.10-13. When liquefied flammable gas tanks are installed in cargo tanks, such cargo tanks may be used simultaneously or separately for the carriage of flammable or combustible liquids up to and including the grade for which the cargo tanks are otherwise certified in accordance with the requirements of this subchapter.

(2) The liquefied flammable gas tanks may be installed "on deck" or "under deck" with the tanks protruding above deck.

(3) Where the liquefied flammable gas tanks are installed in dry cargo holds and a portion of the tank extends above the weather deck, provision shall be made to maintain the weathertightness of the deck. The weathertightness of the upper deck need not be maintained on:

(i) Tankships operating on restricted routes which are sufficiently protected; or,

(ii) Open hopper type barges of acceptable design.

(4) Where the liquefied flammable gas tanks are installed in cargo tanks and a portion of the liquefied flammable gas tanks extend above the weather deck, the penetration shall be made gastight and watertight, and shall be such as to provide full compliance with the structural requirements including testing for the hull and integral tanks. In the application of the requirements for the hydrostatic test of the cargo tanks, the hydrostatic test shall

in no case be less severe than the worst anticipated service condition of the cargo loading. In the design and testing of the independent cargo tanks and integral cargo tanks, consideration shall be given to the possibility of the independent tanks being subjected to external loads.

(c) All liquefied flammable gas tanks shall be installed with the manhole openings located in the open above the weather deck.

(d) Liquefied flammable gas tanks shall be supported on foundations of steel or other suitable material and securely anchored in place to preclude the liquefied flammable gas tanks from shifting when subjected to external forces. Each tank shall be so supported as to prevent the concentration of excessive loads on the supporting portions of the shell or head as prescribed under § 38.05–1(a).

(e) No strength welding employed in the attachment of supports, lugs, fittings, etc., shall be done on tanks that require and have been stress relieved, unless authorized by the Commandant.

§ 38.05–15 Cargo tanks on barges—B/ALL.

(a) Special consideration may be given by the Commandant to the design of liquefied flammable gas tanks forming all or part of the structure of a tank barge where adequate provision is made to prevent damage to tanks in the event of collision or grounding.

(b) Sides of all tank barges shall be fitted with suitable guards as an added precaution against the cargo tanks becoming damaged as a result of collision.

§ 38.05–20 Lagging—TB/ALL.

(a) Where used, the insulation material shall be of an approved type complying with the requirements of Subpart 164.009 of Subchapter Q (Specifications) of this chapter. For low temperature service the insulation shall be specifically approved by the Commandant. When the insulation is in an enclosed space where ignition is precluded by approved means, the insulation may be "self extinguishing" as tested according to ASTM D–1962–59T "Flammability of Plastics, Foam and Sheeting." (This standard may be purchased from the American Society for Testing Materials, 1916 Race Street, Philadelphia, Pa., 19103.)

(b) All insulation shall be of a vapor-proof construction, or have a vapor-proof coating of a fire-retardant material acceptable to the Commandant. Unless the vapor barrier is inherently weather resistant, tanks exposed to the weather shall be fitted with a removable sheet metal jacket of not less than 0.083 inch thick over the vapor-proof coating and flashed around all openings so as to be weathertight. Weather resistant coatings shall have sheet metal over areas subject to mechanical damage.

(R.S. 4488, as amended, 4491, as amended; U.S.C. 481, 489. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 38.05–25 Refrigerated systems—TB/ALL.

(a) When a liquefied flammable gas is carried below atmospheric temperature under the requirements of § 38.05–1(d)(1) or (2), maintenance of the tank pressure below the design pressure shall be provided by one of the following means:

(1) A refrigeration or liquefaction system which regulates the pressure in the tanks. A standby compressor of a capacity equal to one of the working compressors shall be provided.

(2) A system whereby the vapors are utilized as fuel for shipboard use.

(3) A system allowing the liquefied flammable gas to warm up and increase in pressure. The insulation and tank design pressure shall be adequate to provide for a suitable margin for the operating time and temperatures involved.

(4) Other systems acceptable to the Commandant.

(b) A system whereby the vapors are vented to the atmosphere at sea only may be employed in conjunction with subparagraph (a)(1) of this section.

(c) When the tanks are insulated, the insulation shall conform to the requirements of § 38.05–20.

Subpart 38.10—Piping, Valves, Fittings and Accessory Equipment

§ 38.10–1 Valves, fittings and accessories—TB/ALL.

(a) All valves, flanges, fittings and accessory equipment for operation at atmospheric temperatures shall be of a type suitable for use with liquefied flammable gases, and shall be made of steel or Grade A malleable iron conforming to the requirements of Part 51 of Subchapter F (Marine Engineering) of this chapter: *Provided*, That where the cargo is carried at temperatures below atmospheric the valves, flanges, fittings and accessory equipment shall be of a type and material suitable for use with liquefied flammable gas at the minimum temperature to which they may be subjected, and shall be subject to approval by the Commandant. All valves, flanges, fittings and accessory equipment shall have a pressure rating at operating temperatures not less than the maximum pressure to which they may be subjected. Welded fittings shall be used wherever possible. The number of pipe joints shall be held to a minimum. Screwed joints in the cargo liquid and vapor lines are prohibited.

(b) Valve seat material, packing, gaskets, etc. shall be resistant to the action of the liquefied flammable gas. All flange and manhole cover gaskets shall be compressed asbestos, spiral-wound metal asbestos, metal jacketed asbestos, solid aluminum, corrugated steel, solid steel or iron, or other materials with equal or better resistance to fire exposure.

(c) Each tank shall be provided with the necessary fill and discharge liquid and vapor shutoff valves, safety relief valve connections, refrigeration connections where necessary, liquid level gaging devices, thermometer well and pressure gage and shall be provided with suitable access for convenient operation. Piping shall enter the cargo tanks above the weather deck except as otherwise permitted in this section. Connections to the tanks shall be protected against mechanical damage and tampering. Other openings in the tanks, except as specifically permitted by the Commandant, are prohibited. Cargo loading and discharge piping may be connected to the tanks below the weather deck, subject to approval by the Commandant, provided:

(1) A remotely controlled quick-closing shutoff valve is flanged to the tank outlet connection. The control mechanism for this valve shall meet the requirements of § 38.10–5(b).

(2) The piping which is below the weather deck shall be joined by welding, except for a flanged connection to the quick-closing shutoff valve and a flanged connection to the cargo pump.

(3) The design and arrangement of this piping, including the flange bolting, shall be such that excessive stresses will not be transmitted to the cargo tank outlet connection or the quick-closing valve, even in the event of abnormal displacement of the piping.

(4) Except for those vessels the design of which permits the exclusion of a weathertight deck over the tanks, the space in which such piping is located shall be accessible only from the weather deck and shall be vented to a safe location above the weather deck.

(d) All connections to tanks, except safety relief valves and liquid level gaging devices, except as provided in § 38.10–20(e), shall have manually operated shutoff valves located as close to the tank as possible. These valves are in addition to those required by § 38.10–5.

(e) Excess flow valves, where required by this section, shall close automatically at the rated flow of vapor or liquid as specified by the manufacturer. The piping, including valves, fittings and appurtenances protected by an excess flow valve, shall have a greater capacity than the rated flow of the excess flow valve.

(f) Liquid level gaging devices which are so constructed that outward flow of tank contents shall not exceed that passed by a No. 54 drill size opening, need not be equipped with excess flow valves.

(g) Pressure gage connections need not be equipped with excess flow valves if the openings are not larger than No. 54 drill size.

(h) Excess flow valves may be designed with a bypass not to exceed a No. 60 drill size opening to allow equalization of pressure.

(i) Suitable valves shall be installed on the cargo headers to relieve the pressure in the liquid and vapor lines to a safe location prior to disconnecting shore lines.

(j) Relief valves shall be fitted in liquid lines which may be subject to excessive pressure caused by liquid full condition and the escape from the relief valves shall be piped to a venting system or to a suitable vapor recovery system. Provision shall be made for the proper venting of all valves, fittings, etc., in which pressure buildup may occur, especially in refrigerated systems, because of an increase in product temperature.

(k) A pressure gage shall be located at the highest practicable point. A thermometer well where installed on the tank proper shall be attached to the shell by welding.

§ 38.10–5 Filling and discharge pipes—TB/ALL.

(a) Filling connection shall be provided with one of the following:

(1) A combination back pressure check valve and excess flow valve; or,

(2) One double or two single back pressure check valves; or,

(3) A positive shutoff valve in conjunction with either an internal back pressure check valve or an internal excess flow valve. This positive shutoff valve may be the one required by § 38.10–1(d).

(b) All other liquid and vapor connections to tanks, except filling connections, safety relief valves, liquid level gaging devices and pressure gages described in § 38.10–1, shall be equipped with automatic excess flow valves; or in lieu thereof, may be fitted with quick-closing shutoff valves of the fail-safe type which, except when necessary for operation of the system, shall remain closed. The control mechanism for the quick-closing shutoff valves shall be provided with a remote control in at least two locations and be of a type acceptable to the Commandant. In addition, such control mechanism shall be equipped with a fusible element designed to melt between 203° F. and 220° F., which will cause the quick-closing shutoff valve to close automatically in case of fire.

(c) The excess flow, quick-closing shutoff, or back pressure check valves shall be located on the inside of the tank or outside where the piping enters the tank. In the latter case, installation shall be made in such a manner that any undue strain will not cause breakage between the tank and excess flow, back pressure check, or internal stop valve.

(d) Where the filling and discharge connections are made through a common nozzle at the tank, and the connection is fitted with a quick-closing shutoff valve as required by paragraph (b) of this section, the back pressure check valve or excess flow valve is not required, provided however, a positive shutoff valve is installed in conjunction with the internal stop valve.

§ 38.10–10 Cargo piping—TB/ALL.

(a) The piping shall be designed for a working pressure of not less than the maximum pressure to which it may be subjected but in no case less than the design pressure of the cargo tanks. In the case of piping on the discharge side of the liquid pumps or vapor compressors, the design pressure shall not be less than the pump or compressor discharge relief valve setting; or, provided the piping is not protected by relief valves, the design pressure shall not be less than the total discharge head of the pump or compressor.

(b) Piping subject to tank pressure shall be seamless drawn steel or electric resistance welded steel. Pipe used in refrigerated tank systems shall be made of a material which is suitable for the minimum temperature to which it may be subjected and acceptable to the Commandant.

NOTE: Present U.S. Coast Guard requirements are that design temperature for materials considered to be suitable is 10° F. below the minimum operating temperature of the system.

(c) Where necessary, provision shall be made for expansion and contraction of piping by means of pipe expansion bends, packless type bellows or corrugated expansion joints. Suitable means shall be provided for controlling the expansion in the piping system. Slip type expansion joints are prohibited.

(d) Piping shall be provided with adequate support to take the weight of the piping off the valves and fittings and to prevent excessive vibration and stresses on tank connections.

§ 38.10–15 Safety relief valves—TB/ALL.

(a) Each tank shall be fitted with, or subject to approval by the Commandant connected to, one or more safety relief valves designed, constructed and flow-tested for capacity in conformance with Subpart 162.018 of Subchapter Q (Specifications) of this chapter.

(b) Each safety relief valve shall be set to start to discharge at a pressure not in excess of the design pressure of the tank.

(c) The safety relief valves shall have a combined relieving capacity sufficient to prevent a rise of pressure in the tank of more than 20 percent above the design pressure of the tank. The minimum rates of discharge of safety relief valves shall not be less than that determined by the following formula:

$$Q = 633{,}000 \frac{FA^{0.82}}{LC} \sqrt{\frac{ZT}{M}} \qquad (1)$$

or

$$Q = FGA^{0.82} \qquad (2)$$

where:

Q = Minimum required rate of discharge in cubic feet per minute of air at standard conditions (60° F. and 14.7 p.s.i.a.).

F = Fireproofing credit; $F = 1.0$, except when an approved fireproofing material of recommended thickness, or a metal screen wall is used, then $F = 0.5$. The Commandant may give special consideration to a reduction in F when considering the thermal conductance of the insulation and its stability under fire exposure.

M = Molecular weight of the cargo.

T = Temperature, degrees R (460 + temperature in degrees F. of gas at relieving conditions).

A = Total surface area of the cargo vessel in square feet which may be subjected to fire exposure.

$A = \pi \times (D \times U)$ for cylindrical tanks with hemispherical heads.

$A = \pi \times D(U + 0.3D)$, for cylindrical tanks with spherically dished or semiellipsoidal heads.

$A = \pi \times D^2$, for spherical tanks.

D = Outside diameter of the tank, in feet.

U = External overall length of the tank, in feet.

C = Constant based on the relation of the specific heats. (See A.S.M.E. "Unfired Pressure Vessel Code," section 8, page 176, which may be purchased from American Society of Mechanical Engineers, 345 East 47th Street, New York, N.Y., 10017.) (If K is not known, use $C = 315$.)

L = Latent heat of the material being vaporized at relieving conditions in B.t.u. per pound.

Z = Compressibility factor of the gas at relieving conditions (if not known, use $Z = 1.0$).

G = Constant for individual gas as shown in Table 38.10–15(c)(1).

TABLE 38.10–15(c)(1)

Relief valve setting	"G" constant for relieving conditions at 120 percent of relief valve setting
250 p.s.i.g.	53.6
90 p.s.i.g.	40.3
65 p.s.i.g.	38.6

(d) Safety relief valve connections shall be attached to the tank near the highest point of the vapor space. Shutoff valves shall not be installed between the tanks and safety relief valves, except manifolds for mounting multiple safety relief valves may be fitted with acceptable interlocking shutoff valves so arranged at all times as to permit the required capacity discharge through the open safety relief valves.

(e) Each safety relief valve shall be tested in the presence of a marine inspector before being placed in service. The tests shall satisfactorily indicate that the safety relief valves will start to discharge at a pressure not in excess of the maximum allowable pressure of the tank.

(R.S. 4491, as amended; 46 U.S.C. 489)

§ 38.10–20 Liquid level gaging devices—TB/ALL.

(a) Each tank shall be fitted with a liquid level gaging device of approved

design to indicate maximum level to which the tank may be filled with liquid at temperatures (1) between 20° F. and 130° F. for unrefrigerated service, and (2) within the operating temperature range for tanks operating below atmospheric temperature.

(b) Liquid level gaging devices may be of the following types: Rotary tube, slip tube, fixed tube, magnetic, automatic float, or similar types approved by the Commandant.

(c) All gaging devices shall be arranged so that the maximum liquid level for product being carried, to which the tank may be filled, is readily determinable. The maximum gallonage capacity as required by § 38.15–1 shall be:

(1) Marked on the tank, system nameplate, or gaging device; or,

(2) Shown in the ullage tables.

(d) Gaging devices that require bleeding of the product to the atmosphere, such as the rotary tube, fixed tube and slip tube, shall be so designed that the bleed valve maximum opening is not larger than a No. 54 drill size, unless provided with excess flow valve.

(e) Each automatic float, continuous reading tapegage, and similar type, shall be fitted with a shutoff device located as close to the tank as practicable. When an automatic float gaging device, which gages the entire height of the tank is used, a fixed tube gage set in the range of 85 percent to 90 percent of the water capacity of the tank shall be provided in addition as a means of checking the accuracy of the automatic float gage, or other alternate means acceptable to the Commandant may be used.

(f) A gaging device shall have a design pressure of at least that which is equal to the design pressure of the tank on which it is installed.

(g) For tanks operating at atmospheric temperature, the length of fixed tube device shall be designed to indicate the maximum level to which the tank may be filled, based on the volume of the product at 40° F. at its maximum permitted filling density for unlagged tanks and at 50° F. for lagged tanks. The maximum volume of the liquid at 60° F. may be obtained by determining the volume of the liquid at 40° F. or 50° F. for unlagged or lagged tanks, using the filling densities given in § 38.15–1 and correcting the liquid volumes at these temperatures to 60° F. by applying the volume correction factors in Table 38.10–20(g).

TABLE 38.10-20 (g)—VOLUME CORRECTION FACTOR

Specific gravity	Unlagged tanks	Lagged tanks
0.500	1.033	1.017
.510	1.031	1.016
.520	1.029	1.015
.530	1.028	1.014
.540	1.026	1.013
.550	1.025	1.013
.560	1.024	1.012
.570	1.023	1.011
.580	1.021	1.011
.590	1.020	1.010

(h) The method for calculating length of fixed tubes shall be:

$$\frac{\text{Water capacity of container} \times \text{Filling density}}{\text{Specific gravity} \times \text{Volume correction factor}} = \left\{\text{Maximum volume for which fixed length tube shall be set}\right.$$

(i) Gage glasses of the columnar type are prohibited.

(j) Flat sight glasses may be used in the design of automatic float continuous reading tape gages: *Provided*, That such glasses shall be made of high strength material suitable for the operating temperatures of not less than ½ inch in thickness and adequately protected by a metal cover.

Subpart 38.15—Special Cargo Handling Requirements

§ 38.15–1 Filling densities—TB/ALL.

The "filling density" is defined as the percent ratio of the weight of the gas in a tank to the weight of water the tank will hold at 60° F. The filling densities shall not exceed the ratios indicated in the Table 38.15–1.

TABLE 38.15-1—MAXIMUM PERMISSIBLE FILLING DENSITIES FOR TANKS OPERATING AT OR NEAR AMBIENT TEMPERATURE

Specific gravity at 60° F.	Maximum permitted filling density		
	Unlagged tanks—water capacity		Lagged tanks—all capacities
	1,200 gal. and under	Over 1,200 gal.	
0.473–0.480	38	41	42
0.481–0.488	39	42	43
0.489–0.495	40	43	44
0.496–0.503	41	44	45
0.504–0.510	42	45	46
0.511–0.519	43	46	47
0.520–0.527	44	47	48
0.528–0.536	45	48	49
0.537–0.544	46	49	50
0.545–0.552	47	50	51
0.553–0.560	48	51	52
0.561–0.568	49	52	53
0.569–0.576	50	53	54
0.577–0.584	51	54	55
0.585–0.592	52	55	56
0.593–0.600	53	56	57
0.601–0.608	54	57	58
0.609–0.617	55	58	59
0.618–0.626	56	59	60
0.627–0.634	57	60	61

NOTE: Increase in filling densities to provide for seasonal changes may be considered by the Commandant upon presentation of factual evidence that safe operation can be effected. The filling density for liquefied flammable gas tanks in which the temperature is maintained below the normal ambient temperature by refrigeration or other acceptable means shall be such that the tank will not be liquid full at a temperature corresponding with the vapor pressure of the start-to-discharge pressure setting of the relief valve.

§ 38.15–5 Cargo hose—TB/ALL.

(a) Flexible metal hose fabricated of seamless steel pipe and flexible joints of steel or bronze, or hose fabricated of other suitable material resistant to the action of liquefied flammable gas shall be fitted to the liquid and vapor lines during filling and discharging of the tanks. Hose used in refrigerated systems shall be suitable for the minimum temperature to which it may be subjected and shall be acceptable to the Commandant.

(b) Hose subject to tank pressure shall be designed for a bursting pressure of not less than five times the maximum safety relief valve setting of the tank.

(c) Hose subject to discharge pressure of pumps or vapor compressors shall be designed for a bursting pressure of not less than five times the pressure setting of the pump or compressor relief valve.

(d) Before being placed in service each new cargo hose, with all necessary fittings attached, shall be tested hydrostatically by the manufacturer to a pressure of not less than twice the maximum pressure to which it may be subjected. The hose shall be marked with the maximum pressure guaranteed by the manufacturer. The hose shall be marked with its maximum pressure, and with its minimum temperature when used in refrigerated service.

(R.S. 4488, as amended; 46 U.S.C. 481. Treasury Dept. Order 167–39, Oct. 26, 1959, 24 F.R. 8857)

Subpart 38.20—Venting and Ventilation

§ 38.20–1 Venting—T/ALL.

(a) Each safety relief valve installed on a cargo tank shall be connected to a branch vent of a venting system which shall be constructed so that the discharge of gas will be directed vertically upward to a point which shall extend to a height above the weather deck equal to at least one-third the beam of the vessel and to a minimum of at least 10 feet, and shall terminate at a comparable distance from any other living or working space, ventilator inlet, or source of vapor ignition. When special conditions will prevent the vent line header outlets being permanently installed at a height above the deck of one-third the beam of the vessel, then an adjustable system shall be provided which, when extended vertically, shall be capable of reaching a height of one-third the beam of the vessel.

(b) The capacity of branch vents or vent headers shall depend upon the number of cargo tanks connected to such branch or header capacity as provided for in the Table 38.20–1(b), and upon the total safety relief valve discharge capacity.

TABLE 38.20-1(b)—CAPACITY OF BRANCH VENTS OR VENT HEADERS

Number of cargo tanks:	*Percent of total valve discharge*
1 or 2	100
3	90
4	80
5	70
6 or more	60

(c) In addition to the requirements specified in paragraphs (a) and (b) of this section, the size of the branch vents or vent headers shall be such that the back pressure in the relief valve discharge lines shall not be more than 10 percent of the safety relief valve setting.

(d) Return bends and restrictive pipe fittings are not permitted.

(e) Vents and headers shall be so installed as to prevent excessive stresses on safety relief valve mountings.

(f) The vent discharge riser shall be so located as to provide protection against mechanical injury and such discharge pipes shall be fitted with loose raincaps or other suitable means to prevent entrance of rain or snow.

(g) No valve of any type shall be fitted in the vent pipe between the safety relief valve and the vent outlets.

(h) Suitable provisions shall be made for draining condensate which may accumulate in the discharge pipe. If an open drain is used, a means shall be provided to protect the tank, adjacent tanks, cargo piping, or equipment against impingement of the flame resulting from ignition of product escaping from the drain.

§ 38.20–5 Venting—B/ALL.

(a) Safety relief valves on cargo tanks in barges may be connected to individual or common risers which shall extend to a reasonable height above the deck. An alternate arrangement consisting of a branch vent header system as required by § 38.20–1 may be installed. In any case, the provisions of § 38.20–1 (d) through (h) shall apply.

(b) Arrangement specifically provided for venting cargo tanks forming a part of the hull on unmanned barges will be considered by the Commandant upon presentation of plans.

Subpart 38.25—Periodic Tests and Inspections

§ 38.25–1 Tests and inspections—TB/ALL.

(a) Each tank shall be subjected to the tests and inspections described in this section in the presence of a marine inspector, except as otherwise provided in this section.

(1) An internal examination shall be made at least once in each 8 calendar years of every tank.

(2) An external examination of unlagged tanks and the visible parts of lagged tanks shall be made at each inspection for certification and at such other times as considered necessary.

(3) Sufficient insulation shall be removed from insulated tanks at least once in each 8 calendar years to permit spot external examination of the tanks to the extent deemed necessary by the marine inspector or in lieu thereof the thickness of the tanks may be gaged by nondestructive means acceptable to the marine inspector without removal of the insulation.

(b) A hydrostatic test of 1½ times the allowable pressure as determined by the safety relief valve setting shall be made at any time that the marine inspector considers such hydrostatic test necessary to determine the condition of the tank.

(c) In the application of the requirements for the hydrostatic test of the cargo tanks, the hydrostatic test shall in no case be less severe than the worst anticipated service condition of the cargo loading.

(d) In the design and testing of the independent cargo tanks, consideration shall be given to the possibility of the independent tanks being subjected to external loads.

(R.S. 4453, as amended, 4488, as amended; 46 U.S.C. 435, 481. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 38.25–5 Removal of defective tanks—TB/ALL.

If a tank fails to pass the tests prescribed in this subpart, it shall be removed from service unless otherwise authorized by the Commandant.

§ 38.25–10 Safety valves—TB/ALL.

The safety relief valve discs shall be lifted from their seats in the presence of a marine inspector by either liquid, gas or vapor pressure at least once every four years to determine the accuracy of adjustment and, if necessary, shall be reset.

PART 39—FLAMMABLE OR COMBUSTIBLE LIQUIDS HAVING LETHAL CHARACTERISTICS

Subpart 39.01—General

Sec.

39.01–1 Scope of regulations—TB/ALL.
39.01–5 Certificate of inspection—TB/ALL.

Subpart 39.05—Design, Arrangement, and Installation of Cargo Tanks

39.05–1 Design, construction, and arrangement—TB/ALL.
39.05–5 Markings—TB/ALL.
39.05–10 Installation—TB/ALL.

Subpart 39.10—Piping, Valves, Fittings, and Accessory Equipment

39.10–1 Valves and accessories—TB/ALL.
39.10–5 Piping and fittings—TB/ALL.
39.10–10 Safety relief and pressure-vacuum relief valves—TB/ALL.
39.10–15 Gaging devices—TB/ALL.

Subpart 39.15—Special Cargo Handling Requirements

39.15–1 Warning sign at gangway—TB/ALL.
39.15–5 Cargo discharge—TB/ALL.
39.15–10 Pump room controls—TB/ALL.

Subpart 39.20—Venting and Ventilation

39.20–1 Venting—TB/ALL.
39.20–5 Ventilation—TB/ALL.

Subpart 39.25—Periodic Inspections and Tests

39.25–1 Hydrostatic tests and inspection—TB/ALL.
39.25–5 Removal of defective tanks—TB/ALL.
39.25–10 Safety valves—TB/ALL.

AUTHORITY: The provisions of this Part 39 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply R.S. 4472, as amended, 4488, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 170, 481, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026, unless otherwise noted.

Subpart 39.01—General

§ 39.01–1 Scope of regulations—TB/ALL.

(a) The regulations in this part contain requirements for the transportation of flammable or combustible liquids having lethal characteristics and defined as Class "B" or "C" poisons in §§ 146.25–10 and 146.25–15 of Part 146 of Subchapter N (Dangerous Cargoes) of this chapter. The regulations covering the transportation in portable tanks of flammable or combustible liquids having lethal characteristics and defined as Class "B" or "C" poisons are contained in Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

§ 39.01–5 Certificate of inspection—TB/ALL.

(a) Certificate of inspection shall be endorsed for the carriage of Class "B" or "C" poisonous liquids, as follows:

Inspected and approved for the carriage of flammable or combustible Class "B" or "C" poisonous liquids.

(R.S. 4421, as amended; 46 U.S.C. 399)

Subpart 39.05—Design, Arrangement, and Installation of Cargo Tanks

§ 39.05–1 Design, construction, and arrangement—TB/ALL.

(a) Cargo having a Reid vapor pressure not exceeding 14 pounds per square inch may be transported in tanks, cylindrical or rectangular, independent of the vessel's hull structure, or in tanks built integral with the vessel's hull and completely separated from the shell of the vessel by means of wing tanks, cofferdams, double bottoms or similar voids.

(b) Independent tanks shall be designed for a head of at least 8 feet above the top of the tank or the highest level the product may rise, whichever is the greater, using the specific gravity of the product to be carried. In general, plate less than 5/16 inch in thickness shall not be used in the fabrication of independent tanks unless otherwise approved by the Commandant.

(c) Tanks built integral with the vessel's hull shall conform with the scantling requirements of the American Bureau of Shipping.

(d) (1) Cargo tanks transporting liquids having a Reid vapor pressure exceeding 14 pounds per square inch, or vented at a gage pressure exceeding 4 pounds per square inch, or where air or water pressure is used to discharge the cargo, shall be fabricated as an arc-welded unfired pressure vessel and meet the applicable requirements of Parts 50 to 61, inclusive, of Subchapter F (Marine Engineering) of this chapter.

(2) Unfired pressure vessel cargo tanks shall be designed for a pressure of not less than the vapor pressure, in pounds per square inch gage, of the lading at 115° F., or the maximum air or water pressure used in discharging cargo, whichever is greater, but in no case shall the design pressure of such tanks be less than 30 pounds per square inch.

(3) The plate thickness of unfired pressure vessel type cargo tanks shall be not less than 5/16 inch. Dished heads shall be used in the design of the tanks.

(e) Each tank shall be provided with not less than a 15-inch by 18-inch or an 18-inch diameter manhole, fitted with a cover and located as close as possible

to the top of the tank. Where access trunks are fitted, the diameter or minimum dimension of the trunk shall be not less than 30 inches.

(R.S. 4433, as amended; 46 U.S.C. 411)

§ 39.05–5 Markings—TB/ALL.

(a) Upon satisfactory completion of tests and inspection, unfired pressure vessel tanks shall have markings as required by § 38.05–5(a) of this subchapter.

(b) In addition to the aforementioned markings, the following inscription shall be stamped on the tank, or a corrosion-resistant plate containing this data shall be securely attached thereto:

This tank shall not contain a product having a vapor pressure in excess of ____ p. s. i. gage at 115° F.

(c) All tank markings shall be permanently and legibly stamped in a readily visible position, and shall not be obscured by painting.

§ 39.05–10 Installation—TB/ALL.

(a) Cargo tanks independent of the hull shall be installed with a clearance of not less than 24 inches from the vessel's sides. A working space of not less than 15 inches shall be provided around and under each tank, or provision shall be made for moving the tanks to secure adequate clearance for inspection and maintenance.

(b) Independent tanks shall be mounted on substantial steel saddles securely held down and chocked. Tank saddles shall be designed so as to minimize the concentration of excessive loads at any point on the shell.

(c) Tanks may be located in hold spaces or in other cargo tanks meeting the requirements for cofferdams as prescribed in § 32.60–10 or § 32.65–15, and may be installed "on deck" or "under deck" with the tank protruding above deck. On installations where a portion of the tank extends through the weather deck, provision shall be made to maintain the watertightness of the deck. Where such tanks are installed in bulk liquid cargo tanks, the liquids in the surrounding tanks shall be inert to the toxic or poisonous liquids at temperatures of 100° F. and under, at atmospheric pressure.

(d) All tanks shall be installed with manhole openings and fittings located above the weather deck.

(e) No strength welding employed in the attachment of supports, lugs, fittings etc. shall be done on tanks that require and have been stress-relieved, unless authorized by the Commandant.

Subpart 39.10—Piping, Valves, Fittings, and Accessory Equipment

§ 39.10–1 Valves and accessories—TB/ALL.

(a) All shutoff valves and accessory equipment shall be of types suitable for use with the cargo to be carried. Gray iron castings shall not be employed in the construction of valves, fittings or flanges located outside the cargo tanks.

(b) All connections to tanks, except safety relief valves, pressure-vacuum relief valves, or gaging connections, shall have shutoff valves located as close to the tank as practicable.

§ 39.10–5 Piping and fittings—TB/ALL.

(a) Piping shall be suitable for use with the liquid cargo to be carried and shall conform to the requirements of Part 55 of Subchapter F (Marine Engineering) of this chapter. Piping shall be of seamless drawn material, except that electric resistance-welded steel piping will be acceptable.

(b) All pipe connections on pressure vessel tanks shall be grouped in the smallest practicable space and shall be located near the highest point on the tank. Alternate piping arrangements may be considered for approval by the Commandant.

(c) The pumps and cargo piping used for loading and discharging Class "B" or "C" poisons shall be independent of all other piping.

(d) Where multiple cargoes are carried, and the cargo piping conveying Class "B" or "C" poisons are led through cargo tanks containing other products the piping shall be encased in a tunnel.

(e) Where cargo lines for handling other products, or bilge and ballast piping are led through cargo tanks containing Class "B" or "C" poisons, the piping shall be encased in a tunnel.

(f) Where possible provision shall be made for expansion and contraction of piping by means of seamless steel pipe expansion bends. Corrugated expansion joints may be used, provided satisfactory evidence is shown that space limitations do not permit the use of expansion bends. Slip type expansion joints are prohibited.

§ 39.10–10 Safety relief and pressure-vacuum relief valves—TB/ALL.

(a) Each pressure vessel type cargo tank shall be fitted with one or more approved safety relief valves, set to start to discharge at a pressure of not less than 90 percent of the design pressure of the tank, but not in excess of the design pressure. Safety relief valves shall have sufficient relieving capacity to prevent a pressure rise exceeding 20 percent above the design pressure of the tank.

(b) Safety relief valves for pressure type cargo tanks shall be attached to the tank near the highest point of the vapor space.

(c) Gravity type cargo tanks shall be fitted with an approved pressure-vacuum relief valve of not less than 2½-inch size, which shall be set at a pressure of not less than 3 pounds per square inch, but not in excess of the design pressure of the tank.

(d) Pressure-vacuum relief valves for gravity type cargo tanks may be installed on the expansion trunk or in the branch vent line between the expansion trunk and the vent header.

§ 39.10–15 Gaging devices—TB/ALL.

A closed gaging system shall be provided for determining the liquid level within the tanks.

Subpart 39.15—Special Cargo Handling Requirements

§ 39.15–1 Warning sign at gangway—TB/ALL.

When transferring bulk cargo a warning sign as provided in § 35.30–1(b) of this subchapter shall be displayed to warn persons on board or in the vicinity of the tanks.

§ 39.15–5 Cargo discharge—TB/ALL.

The use of gas or liquid pressure to discharge the cargo from gravity type cargo tanks is prohibited. Gas or liquid pressure may be used to discharge the cargo from pressure vessel type cargo tanks, provided authorization is granted by the Commandant.

§ 39.15–10 Pump room controls—TB/ALL.

Cargo pumps, valves and fittings used for the transfer of Class "B" or "C" poisons and installed in pump rooms located below the weather deck shall be provided with means of operation from a position above the freeboard deck.

Subpart 39.20—Venting and Ventilation

§ 39.20–1 Venting—TB/ALL.

(a) Vent pipes shall be connected to each safety relief or pressure vacuum-relief valve. Tanks carrying Class "B" or "C" poisons shall be vented independent of tanks carrying other products. Tanks carrying the same class products may be connected to a vent header system or each tank may be vented independently.

(b) The vent riser shall extend to a height above the weather deck equal to at least one-third the beam of the vessel and shall terminate at a comparable distance from any other living or working space, ventilator inlet, or source of vapor ignition. When special conditions prevent the vent outlets from being permanently installed at a height above the deck of one-third the beam of the vessel, an adjustable system shall be provided which, when extended vertically, shall reach a height of one-third the beam of the vessel.

(c) The safety relief valve may be fitted with a bypass having the full capacity of the relief valve and equipped with a manually operated stop valve to permit equalizing pressures during filling and discharging operations.

§ 39.20–5 Ventilation—TB/ALL.

(a) Pump rooms located below the weather deck shall be fitted with power ventilation designed to assure sufficient air movement through the pump room to avoid accumulation of toxic vapors. The ventilation system shall be of the exhaust type having blower capacity sufficient to permit a change of air of at least 20 times per hour. At least two exhaust inlet ducts shall be provided and located near the floor level and at points where a concentration of toxic vapors may be expected. At least two fresh air inlet ducts shall be provided.

(b) Enclosed pump rooms located above the weather deck shall be fitted with power ventilation having an exhaust type blower of sufficient capacity to permit a change of air of at least 10 times per hour. The exhaust inlet ducts shall be located at points where a concentration of toxic vapors may be expected. At least one fresh air inlet duct shall be provided.

(c) The outlet duct exhausts shall terminate at a distance of at least six feet above the enclosed space or pump room and at least six feet from any entrance to the interior part of the vessel. The discharge end of the exhaust ducts shall be so located as to preclude the possibility of recirculating contaminated air through the pump room, or other spaces where personnel may be present.

Subpart 39.25—Periodic Inspections and Tests

§ 39.25–1 Hydrostatic tests and inspection—TB/ALL.

(a) Each pressure vessel tank shall be subjected to an internal examination biennially and to a hydrostatic test at the time of the periodic inspection on the fourth year after installation, and a like test shall be applied every fourth year thereafter.

(1) If there is evidence of corrosion or deterioration, the marine inspector may require additional internal examinations or hydrostatic tests at intermediate inspection periods.

(2) The hydrostatic test shall be equal to one and one-half times the design pressure. For lagged tanks the hydrostatic test shall be applied for a period of at least 20 minutes without pressure drop when portions of the jacket and lagging are not removed at intermediate inspection period.

(3) Lagged tanks shall have a portion of the jacket and lagging removed on the lower portion of the shell as directed by the marine inspector at least once every eight years for external examination.

(b) Gravity tanks and cargo tanks constructed integral with the vessel's hull shall be inspected as prescribed in Subpart 31.10 of Part 31 of this subchapter. Lagged gravity type tanks shall be examined as required by paragraph (a) of this section.

§ 39.25–5 Removal of defective tanks—TB/ALL.

If a pressure vessel fails to pass the tests prescribed in this subpart, or is deemed by the marine inspector to be unsuitable for continued use, it shall be removed from service unless otherwise authorized by the Commandant.

§ 39.25–10 Safety valves—TB/ALL.

(a) The safety relief valve discs shall be lifted from their seats in the presence of a marine inspector by either liquid, gas or vapor pressure at least once every four years to determine accuracy of adjustment and, if necessary, shall be reset.

(b) The setting and operation of the pressure-vacuum relief valves shall be checked in the presence of a marine inspector at the inspection for certification and at such other times as considered necessary.

PART 40—SPECIAL CONSTRUCTION, ARRANGEMENT, AND OTHER PROVISIONS FOR CARRYING CERTAIN FLAMMABLE OR COMBUSTIBLE DANGEROUS CARGOES IN BULK

Subpart 40.01—Application

Sec.

40.01–1 General—TB/ALL.
40.01–5 Effective date—TB/ALL.

Subpart 40.05—Ethylene Oxide

40.05–1 General—TB/ALL.
40.05–2 Tank vessel certification and other chargoes—TB/ALL.
40.05–5 How ethylene oxide may be carried—TB/ALL.
40.05–10 Design, construction and arrangement of cargo tanks—TB/ALL.
40.05–20 Installation of cargo tanks—TB/ALL.
40.05–30 Insulation—TB/ALL.
40.05–35 Cooling systems—TB/ALL.
40.05–40 Valves, fittings, and accessories—TB/ALL.
40.05–45 Liquid level gaging devices—TB/ALL.
40.05–50 Filling and discharge pipes—TB/ALL.
40.05–55 Cargo piping—TB/ALL.
40.05–60 Safety relief valves—TB/ALL.
40.05–65 Filling density—TB/ALL.
40.05–69 Venting—TB/ALL.
40.05–73 Ventilation—TB/ALL.
40.05–75 Cargo hose—TB/ALL.
40.05–80 Electrical bonding—TB/ALL.
40.05–83 Special cargo handling requirements—TB/ALL.
40.05–85 Information board—TB/ALL.
40.05–87 Tests and inspections—TB/ALL.

AUTHORITY: The provisions of this Part 40 issued under R.S. 4405, as amended, 4417a, as amended, 4462, as amended; 46 U.S.C. 375, 391a, 416. Interpret or apply sec. 3, 68 Stat. 675; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026, unless otherwise noted.

Subpart 40.01—Application

§ 40.01–1 General—TB/ALL.

(a) The provisions of this part shall apply to all vessels which carry in bulk any of the dangerous cargoes specifically noted in this part.

§ 40.01–5 Effective date—TB/ALL.

(a) The provisions in this part shall be in effect on and after January 1, 1964.

Subpart 40.05—Ethylene Oxide

§ 40.05–1 General—TB/ALL.

(a) Ethylene oxide transported under the provisions of this subpart shall be acetylene free.

(b) Ethylene oxide may be carried in tank barges or tankships in accordance with the provisions of this subpart.

(c) No other product may be transported in tanks certified for ethylene oxide except that the Commandant may approve subsequent transportation of other products and return to ethylene oxide service if tanks, piping and auxiliary equipment are adequately cleaned to the satisfaction of the marine inspector.

§ 40.05–2 Tank vessel certification and other cargoes—TB/ALL.

(a) The certificate of inspection shall be endorsed as follows:

"Inspected and approved for the carriage of ethylene oxide in tank number(s) _____"

(b) Unless authorized by the Commandant, no other kind of cargo except methane, ethane, propane, butane and pentane shall be on board a tank vessel certificated for the carriage of ethylene oxide at the same time ethylene oxide in either the liquid or vapor state is present in any cargo tank. Ethylene oxide tanks shall not be installed in tanks intended for any other cargo.[1]

(R.S. 4421, as amended, 4472, as amended, 46 U.S.C. 399, 170)

§ 40.05–5 How ethylene oxide may be carried—TB/ALL.

(a) Ethylene oxide shall be carried in fixed, independent, pressure vessel type cargo tanks, designed, constructed, arranged and if necessary equipped with machinery to maintain the cargo temperature below 90° F. except as otherwise provided for in paragraph (c) of this section.

(b) Ethylene oxide shall be loaded at a temperature below 70° F.

(c) When ethylene oxide is to be transported at or near atmospheric pressure, the Commandant may permit the use of alternate methods of storage if it is shown to his satisfaction that a degree of safety is obtained consistent with the minimum requirements of this subpart.

(R.S. 4488, as amended; 46 U.S.C. 481. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 40.05–10 Design, construction and arrangement of cargo tanks—TB/ALL.

(a) All cargo tanks shall be constructed of a carbon steel or stainless steel acceptable to the Commandant. Impurities of copper, magnesium and other acetylide-forming metals shall be kept to a minimum. The chemical composition of all steel used shall be submitted to the Commandant for approval prior to fabrication. Neither aluminum nor copper and other acetylide-forming metals, such as silver, mercury, magnesium, and their alloys shall be used as materials of construction for tanks or equipment used in handling ethylene oxide.

(b) Cargo shall be transported in cylindrical pressure vessel tanks, independent of the vessel's hull structure and so arranged as to provide a minimum clearance of not less than 24 inches from the vessel's side and not less than 15 inches from the vessel's bottom to provide access for inspection. When more than one tank is installed in a vessel, the distance between such tanks shall be not less than 15 inches unless otherwise approved by the Commandant.

(c) Cargo tanks shall meet the requirements of Class I arc-welded unfired

[1] Ethylene oxide may rearrange and/or polymerize violently, liberating large quantities of heat. A few of the most notable catalysts for this type of reaction are: anhydrous iron, tin and aluminum chlorides; pure iron and aluminum oxides; metallic potassium; alkali metal hydroxides; acids and organic bases. The speed of the reaction varies with the purity of the reactants, the temperature, the relative amount of each reactant, and the method of application.

pressure vessels and shall be fabricated, inspected and tested in accordance with the applicable requirements of Subchapter F (Marine Engineering) of this chapter.

(d) Cargo tanks shall be designed for the maximum pressure of vapor or gas used in discharging the cargo but in no case shall the design pressure of such tanks be less than the seventy-five (75) pounds per square inch gage. The tank shell and heads shall not be less than 5/16 inch thick. The design of tanks shall take into account the expected stresses due to internal pressure, static head and localized stress concentrations.

(e) Each tank shall be provided with not less than one 15- x 23-inch eliptical or 18-inch diameter manhole located above the maximum liquid level and as close as possible to the top of the tank. Where access trunks are fitted to the tanks, the diameter of the trunks shall be not less than 30 inches.

(R.S. 4433, as amended; 46 U.S.C. 411)

§ 40.05–20 Installation of cargo tanks—TB/ALL.

(a) Cargo tanks shall be located below deck in holds or enclosed spaces with the domes or trunks extended above the weather deck and terminating in the open. Provisions shall be made to maintain the watertightness of the deck by means of watertight seals around such domes or trunks. The holds or enclosed spaces, in which the ethylene oxide tanks are located, shall not be used for any other purpose. The weathertightness of the weatherdeck may not be required to be fully maintained on: (1) Tankships operating on restricted routes which are sufficiently protected; or, (2) Open hopper type barges of a suitable design approved for such service.

(b) All cargo tanks shall be installed with the manhole openings and all tank connections located above the weather deck in the open.

(c) Tanks shall be suitably mounted on steel supports and anchored in place and suitably electrically bonded to the hull. Each tank shall be so supported as to prevent the excessive concentration of loads on the supporting portion of the tank shell. Collision chocks shall be installed to prevent any longitudinal shifting of and damage to the cargo tanks in the event of collision. The design shall show the manner in which the tanks are to be installed, supported and secured in the barge or vessel and shall be approved prior to the installation of the tanks.

(d) No welding of any kind shall be done on cargo tanks or supporting structure unless authorized by the Commandant.

§ 40.05–30 Insulation—TB/ALL.

(a) All cargo tanks, piping, valves, fittings, etc., which may contain ethylene oxide in either the liquid or vapor phase, including the vent risers, shall be insulated. Flanges need not be covered, but if covered a small opening shall be left at the bottom of the flange cover to detect leaks. Insulation shall be of an approved incombustible material suitable for use with ethylene oxide, which does not signficantly lower the autoignition temperature and which does not react spontaneously with ethylene oxide. The insulation shall be of such thickness as to provide a thermal conductance of not more than 0.075 B.t.u. per square foot per degree fahrenheit differential in temperature per hour.

(b) Insulation shall be of an approved type complying with the requirements of Subpart 164.009 of Subchapter Q (Specifications) of this chapter. However, the Commandant may consider alternate proposals where it is demonstrated to his satisfaction that adequate protection against fire exposure will be provided. Insulation shall be of a vapor-proof construction, or shall have a vapor-proof coating of a fire-retardant material acceptable to the Commandant. All insulation, vapor barrier and adhesive material shall be of a type which does not lower the autoignition temperature of or react spontaneously with ethylene oxide. Insulation exposed to the weather shall have the vapor-proof coating covered with a removable sheet metal jacket, not less than 0.083-inch thickness, flashed around all openings so as to be weathertight. The sheet metal jacket may be omitted when the vapor barrier is inherently weather resistant. When a weather resistant vapor barrier is used, the insulation shall be protected by sheet metal in those areas subject to mechanical damage.

§ 40.05–35 Cooling systems—TB/ALL.

(a) When cooling systems are installed to maintain the temperature of the liquid below 90° F., at least two complete cooling plants, automatically regulated by temperature variations within the tanks shall be provided; each to be complete with the necessary auxiliaries for proper operation. The control system shall also be capable of being manually operated. An alarm shall be provided to indicate malfunctioning of the temperature controls. The capacity of each cooling system shall be sufficient to maintain the temperature of the liquid cargo at or below the design temperature of the system.

(b) An alternate arrangement may consist of three cooling plants, any two of which shall be sufficient to maintain the temperature of the liquid cargo at or below the design temperature of the system.

(c) Cooling systems requiring compression of ethylene oxide are prohibited.

§ 40.05–40 Valves, fittings, and accessories—TB/ALL.

(a) All valves, flanges, fittings, and accessory equipment shall be of a type suitable for use with ethylene oxide and shall be made of steel or stainless steel, or other materials acceptable to the Commandant. Impurities of copper, magnesium and other acetylide-forming metals shall be kept to a minimum. The chemical composition of all material used shall be submitted to the Commandant for approval prior to fabrication. Disks or disk faces, seats and other wearing parts of valves shall be made of stainless steel containing not less than 11 percent chromium. Mercury, silver, aluminum, magnesium, copper and their alloys shall not be used for any valves, gages, thermometers, etc. Gaskets shall be constructed of spirally wound stainless steel with "Teflon" or other suitable material. All packing and gaskets shall be constructed of materials which do not react spontaneously with or lower the autoignition temperature of ethylene oxide.

(b) The pressure rating of valves, fittings, and accessories shall be not less than the maximum pressure for which the cargo tank is designed or the shutoff head of the cargo pump, whichever is greater, but in no case less than 150 pounds per square inch, American Standards Association's standards. Welded fittings shall be used wherever possible and the number of pipe joints shall be held to a minimum. Threaded joints in the cargo liquid and vapor lines are prohibited.

(c) Each tank shall be provided with the necessary fill and discharge liquid and vapor shutoff valves, safety relief valves, liquid level gaging devices, thermometer well and pressure gage, which shall be accessible for convenient operation. All connections to tanks shall be made above the weather deck in the open to a trunk or dome and shall be protected against mechanical damage and tampering. Other openings in the tanks, except as specifically permitted by this part, are prohibited.

(d) All connections to the tanks, except safety relief valves, shall have manually operated shutoff valves located as close to the tank as possible. These valves are in addition to those required by § 40.05–50.

(e) Excess flow valves, where installed, shall close automatically at the rated flow of vapor or liquid as specified by the manufacturer. The piping, valves, fittings and appurtenances protected by the excess flow valves, shall have a greater flow capacity than the rated flow of the excess flow valve.

(f) Pressure gage connections need not be equipped with excess flow valves if the openings are not larger than No. 54 drill size.

(g) Excess flow valves may be designed with a bypass, not to exceed a No. 60 drill size opening, to allow equalization of pressure .

(h) Relief valves shall be fitted in liquid and vapor lines which may be subject to excessive pressure due to thermal expansion when the lines are liquid full. The escape from these relief valves shall be piped to the venting system.

(i) The pressure gage connection shall be located at the highest practical point in the vapor space of the tank.

(j) The thermometer well shall terminate in the liquid space and shall be attached to the shell by welding with the end of the fitting being provided with a gastight screwed plug or bolted cover.

§ 40.05–45 Liquid level gaging devices—TB/ALL.

(a) Each tank shall be fitted with a liquid level gaging device of approved

design to indicate the level to which the tank may be filled.

(b) Liquid level gaging devices may be the: Slip tube, magnetic, automatic float, or other types approved by the Commandant.

(c) Any gaging device that requires bleeding of the product to the atmosphere, such as the slip tube, shall be so designed that the bleed valve maximum opening is not larger than a No. 54 drill size, unless provided with an excess flow valve.

(d) The automatic float continuous reading tape gage, and similar types, shall be fitted with a shutoff valve located as close to the tank as practicable, which shall be designed to close automatically in the event of fracture of the external gage piping. An auxiliary gaging device shall always be used in conjunction with an automatic gaging device. This auxiliary device may be a duplication of the automatic device.

§ 40.05–50 Filling and discharge pipes—TB/ALL.

(a) Filling and discharge piping shall extend to within four inches of the bottom of the tank or sump pit if one is provided.

(b) In addition to the shutoff valve required by § 40.05–40(d), all tank connections larger than ½ inch inside pipe size, except safety relief valves and liquid level gaging devices, shall be fitted with either internal back pressure check valves or internal excess flow valves in conjunction with a quick closing stop valve operable from at least two remote locations. The quick closing stop valve shall be of the "fail safe" type acceptable to the Commandant and shall be equipped with a fusible plug designed to melt between 208° F. and 220° F., which will cause the quick closing valve to close automatically in case of fire. The quick closing valve shall be located as close to the tank as possible.

§ 40.05–55 Cargo piping—TB/ALL.

(a) Piping systems intended for ethylene oxide service shall not be used for any other product and shall be completely separate from all other systems. The piping system shall be designed so that no cross connections may be made either through accident or design.

(b) The piping system shall be designed for a working pressure of not less than the maximum pressure to which the system may be subjected, however, in no case shall the design pressure be less than 150 pounds per square inch. In the case of piping on the discharge side of the liquid pumps or vapor compressors, the design pressure shall be not less than the pump or compressor discharge relief valve setting; or, provided the piping is not fitted with relief valves, the design pressure shall not be less than the total discharge head of the pump or compressor.

(c) Piping shall be seamless drawn or electric resistance welded steel or stainless steel.

(d) Where necessary, provision shall be made for expansion and contraction of piping by means of seamless pipe expansion bends or offsets. Suitable means shall be provided for maintaining the piping in a fixed position.

(e) Piping shall be provided with adequate support to take the weight of the piping off the valves and fittings and to prevent excessive vibration.

§ 40.05–60 Safety relief valves—TB/ALL.

(a) Each tank shall be fitted with one or more approved safety relief valves designed, constructed and flow-tested for capacity in conformance with Subpart 162.018 of Subchapter Q (Specifications) of this chapter.

(R.S. 4491, as amended; 46 U.S.C. 489)

(b) Each safety relief valve shall be set to start to discharge at not less than 75 pounds per square inch gage, nor more than the design pressure of the tank.

(c) The safety relief valves shall have a combined relieving capacity sufficient to prevent a rise of pressure in the tank of more than 20 percent above the maximum allowable pressure when all the safety relief valves are discharging. The minimum rates of discharge of safety relief valves for tanks shall not be less than that determined by the following formula.

$$Q = 26.8A^{0.82} \quad (1)$$

where:

Q = Minimum required rate of discharge, in cubic feet per minute of standard air at 120 percent of the maximum set pressure of the safety relief valves. Discharge measured at 60° F. and atmospheric pressure (14.7 p.s.i.a.).

A = Total external surface area of the tank, in square feet.

$A = \pi(D \times U)$ for cylindrical tanks with hemispherical heads.

$A = \pi D(U + 0.3D)$, for cylindrical tanks with spherically dished or semi-ellipsoidal heads.

$A = \pi D^2$, for spherical tanks.

D = Outside diameter of the tank, in feet.

U = External over-all length of the tank, in feet.

(d) Safety relief valves shall be attached to the tank near the highest point of the vapor space. Shutoff valves shall not be installed between the tanks and safety relief valves except:

(1) Manifolds for mounting multiple safety relief valves may be fitted with acceptable interlocking shutoff valves so arranged that at all times the required relief valve capacity will be available to relieve internal pressure. The valving arrangement shall be such that no vapor will escape even if the "out of service" relief valve is removed.

(2) Auxiliary safety devices such as rupture discs or breaking pins, of suitable corrosion-resistant compatible material, may be installed between the tanks and the safety relief valves, subject to the approval of the Commandant.

(e) Each safety relief valve shall be tested in the presence of an inspector before being placed in service. The tests shall satisfactorily indicate that the safety relief valves will start to discharge at a pressure of not less than 75 pounds per square inch gage, nor greater than the design pressure of the tank.

§ 40.05–65 Filling density—TB/ALL.

(a) The filling density shall not exceed 83 percent. Filling density is defined as the ratio of the weight of material which may be loaded into the tank to the weight of water the tank will hold at 60° F. expressed as a percentage.

§ 40.05–69 Venting—TB/ALL.

(a) Tanks carrying ethylene oxide shall be vented through the safety relief valves independent of tanks carrying other products. Each safety relief valve installed on a cargo tank shall be connected to a venting system consisting of a branch vent from each cargo tank connected to a vent header which shall extend to a height above the weather deck to at least one-third the beam of the vessel and shall terminate at a comparable distance from any working or living space, ventilator inlet, or source of vapor ignition. When special conditions would prevent the vent line or header outlets being permanently installed at a height above the deck of one-third the beam of the vessel, then an adjustable system shall be provided which, when extended vertically, shall be capable of reaching a height one-third of the beam of the vessel. During loading and unloading operations the displaced ethylene oxide vapor shall be returned to the loading facility.

(b) The capacity of branch vents or vent headers shall depend upon the number of cargo tanks connected to such branch or header vents as provided for in Table 40.05–69(b), and upon the total safety relief valve discharge.

TABLE 40.05–69(b)—CAPACITY OF BRANCH VENTS OR VENT HEADERS

Number of cargo tanks	Percent of total valve discharge
1 or 2	100
3	90
4	80
5	70
6 or more	60

(c) In addition to the requirements specified in paragraphs (a) and (b) of this section, the size of the branch vents or vent headers shall be such that the back pressure in the relief valve discharge lines shall not be more than 10 percent of the safety relief valve setting.

(d) Return bends and restrictive pipe fittings are not permitted.

(e) Vents and headers shall be so installed as to prevent excessive stresses on safety relief valve mountings.

(f) The vent discharge riser shall be so located as to provide protection against mechanical damage and such discharge pipes shall be fitted with loose raincaps or other suitable means to prevent entrance of rain or snow. A weather hood may be installed at the vent outlet providing it is of such design as not to direct the flow of vapor below the horizontal.

(g) No shutoff valve of any type shall be fitted in the vent piping between the safety relief valve and the vent outlets.

(h) Suitable provision shall be made for draining condensate which may accumulate in the vent piping.

(i) The outlet of each vent riser will be fitted with acceptable corrosion-resistant flame screen of suitable material or a flame arrestor suitable for use with ethylene oxide.

(j) Safety relief valves on cargo tanks in barges may be connected to individual or common risers which shall extend to a height of not less than one-third the beam of the vessel but in no case less than seven feet above the deck. Alternate arrangements consisting of a branch vent header system may be installed. In any case, all other provisions of paragraphs (a) through (i) of this section apply.

§ 40.05–73 Ventilation—TB/ALL.

(a) All enclosed spaces within the hull shall be vented or ventilated in accordance with the provisions of this subchapter except as otherwise provided for in this subpart.

(b) The enclosed spaces on tankships and manned barges in which the cargo tanks are located shall be rendered inaccessible to personnel while the vessel is underway and shall be inerted by injection of a suitable inert gas or shall be well ventilated.

(c) The enclosed spaces on tankships and manned barges in which the cargo tanks are located, if an inerting system is not installed, shall be fitted with forced ventilation of such capacity to provide a complete change of air every three minutes and arranged in such a manner that any vapors lost into the space will be removed. The ventilation system shall be in operation at all times cargo is being loaded or discharged. No electrical equipment shall be fitted within the spaces or within 10 feet of the ventilation exhaust from these spaces.

(d) All ventilation machinery shall be of non-sparking construction and shall not provide a source of vapor ignition.

(e) Each vent shall be fitted with a flame screen of corrosion resistant wire which is suitable for use with ethylene oxide.

§ 40.05–75 Cargo hose—TB/ALL.

(a) Flexible metal hose fabricated of stainless steel or other acceptable material, resistant to the action of ethylene oxide, shall be fitted to the liquid and vapor lines during filling and discharging of the tanks.

(b) Hose subject to tank pressure shall be designed for a bursting pressure of not less than five times the maximum safety relief valve setting of the tank.

(c) Hose subject to discharge pressure of pumps or vapor compressors shall be designed for a bursting pressure of not less than five times the pressure setting of the pump or compressor safety relief valve.

(d) Before being placed in service, each new cargo hose, with all necessary fittings attached, shall be tested hydrostatically by the manufacturer to a pressure of not less than twice the maximum pressure to which it may be subjected in service. The hose shall be marked with the maximum pressure guaranteed by the manufacturer, and with the words "Certified For Ethylene Oxide".

(e) Cargo hose intended for ethylene oxide service shall not be used for any other products except those which are compatible with ethylene oxide.

(R.S. 4488, as amended; 46 U.S.C. 481. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 40.05–80 Electrical bonding—TB/ALL.

(a) Each cargo tank shall be electrically bonded to the hull. The vessel shall be electrically bonded to the shore piping prior to connecting the cargo hose. This electrical bonding shall be maintained until after the cargo hose has been disconnected and any spillage has been removed.

§ 40.05–83 Special cargo handling requirements—TB/ALL.

(a) Cargo shall be discharged by pumping or by displacement with nitrogen or other acceptable inert gas. In no case shall air be allowed to enter the system. During loading and unloading operations the vapor shall not be discharged to the atmosphere. Provisions shall be made to return all displaced vapor to the loading facility. The loading rate and the pressure applied to the tank to discharge the cargo shall be so limited that the safety relief valves will not be caused to open.

(b) The cargo shall be shipped under a suitable protective padding, such as nitrogen gas. When nitrogen gas is used, the gas padding system shall be so designed that the vapor space above the liquid cargo will be filled and maintained with a gas mixture of not less than 45 percent nitrogen. Other gases proposed for use as padding may be given consideration by the Commandant. Original charging only of protective gas padding at the loading facility is not considered adequate. A sufficient amount of spare inerting gas as approved by the Commandant shall be provided on the vessel in order to maintain the proper concentration of the gas in the event of normal leakage or other losses.

(c) Any padding gas selected should be at least 98.0 percent pure and free of reactive materials, such as ammonia, hydrogen sulfide, sulfur compounds, and acetylene.

(d) A water spray extinguishing system shall be provided in the area where loading and unloading operations are conducted. The system shall be designed to operate automatically in case of fire. The capacity and arrangement shall be of such as to effectively blanket the area in way of the loading manifold and exposed deck piping for ethylene oxide. The rate of discharge and the arrangement of piping and nozzles shall be such as to give a uniform distribution over the entire area protected. Additionally, means shall be provided for local and remote manual operation. The arrangement shall be such that any spilled cargo will be washed away. A water hose with pressure to the nozzle, when atmospheric temperatures permit, shall be connected ready for immediate use during filling and discharge operations and any spillage of ethylene oxide shall be immediately washed away.

(e) Prior to disconnecting shore lines, the pressure in the liquid and vapor lines shall be relieved through suitable valves installed at the loading header. The liquid and vapor discharged from these lines shall not be discharged to atmosphere.

(f) Prior to loading, a sample from the cargo tank will be taken to insure that the pad gas will meet the requirements of paragraph (b) of this section and that the oxygen content of the vapor space will be not more than 2.0 percent maximum. If necessary, a sample will be taken after loading to insure the vapor space meets this requirement.

(g) The owner, master or person in charge of any vessel subject to the provisions of this part shall insure that during cargo transfer operations the persons required by Subpart 35.35 of this subchapter shall be especially qualified in the handling of ethylene oxide.

(R.S. 4488, as amended; 46 U.S.C. 481. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 40.05–85 Information board—TB/ALL.

(a) A suitable information board shall be installed upon which shall be posted the information described in this section.

(b) The following information shall remain posted on board from time cargo transfer operations begin until the vessel is gas-free or changes cargo:

(1) Identification of the cargo.

(2) A description of the principal characteristics of the cargo.

(3) Instructions for the safe handling of the cargo, including operating procedures for maintaining the required cargo temperature.

(4) List and locations of all safety equipment.

(5) Emergency procedures.

(R.S. 4488, as amended; 46 U.S.C. 481. Treasury Dept. Order 167–38, Oct. 26, 1959, 24 F.R. 8857)

§ 40.05–87 Tests and inspections—TB/ALL.

(a) Each tank shall be subjected to the tests and inspections described in this paragraph in the presence of a marine inspector, except as otherwise provided in this section.

(1) An internal examination shall be made at least once in each four calendar years.

(2) Sufficient insulation shall be removed from the tank at least once in each four calendar years for spot external examination of the tank.

(3) A hydrostatic test of 1½ times the design pressure shall be made at least once in each four years at the time the internal examination is made and

at such other times as considered necessary by the marine inspector.

(4) The safety relief valves shall be tested by liquid, gas, or vapor pressure at least once every two years to determine the accuracy of adjustment and, if necessary, shall be reset. Ethylene oxide shall not be used as the testing medium.

(b) The cargo hose and piping shall be inspected and tested at least once in each two calendar years.

(1) The cargo hose and piping shall be subjected to a hydrostatic test of 1½ times the maximum pressure to which they may be subjected in service.

(2) If any leakage, seepage or distortion is noted at any time, the hose shall be removed from service and replaced and/or the piping shall be repaired.

(3) In those cases where the cargo hose used is not part of the vessel's equipment, the senior deck officer shall determine that the provisions of this paragraph have been met before using such hose. A certificate of test, supplied by the loading facility, will be considered as adequate for this determination.

(R.S. 4453, as amended, 4488, as amended; 46 U.S.C. 435, 481. Treasury Dept. Orders 120, July 31, 1950, 167-38, Oct. 26, 1959, 24 F.R. 8857)

Title 46—SHIPPING

Chapter I—Coast Guard, Department of the Treasury

SUBCHAPTER E—LOAD LINES

PART 43—FOREIGN OR COASTWISE VOYAGE [1]

Subpart 43.01—Administration

Sec.
43.01–1 Establishment of load lines.
43.01–5 Responsibility for administration.
43.01–10 Application of regulations.
43.01–13 Penalties for violations of load line acts.
43.01–15 Timber cargoes.
43.01–20 Tankers.
43.01–25 New and existing vessels.
43.01–30 Vessels of special type.
43.01–32 Stability.
43.01–35 Marks to indicate load lines.
43.01–40 Assignment and certification; assigning authority.
43.01–50 Surveys.
43.01–55 Annual inspection.
43.01–60 Application for assignment, renewal, and certification.
43.01–65 Application for annual inspection.
43.01–70 Equivalents.
43.01–75 Validity and renewal of certificates.
43.01–80 Forms of certificates.
43.01–85 Cancellation of certificate.
43.01–90 Zones and seasonal areas.
43.01–95 Logbook entries.
43.01–97 Control.
43.01–100 Approval of Commandant, U. S. Coast Guard.

Subpart 43.05—General Rules for Determining Maximum Load Lines of Merchant Vessels

43.05–1 Definitions.
43.05–5 Deck line.
43.05–10 Load line disk.
43.05–15 Lines used with disk.
43.05–20 Mark of assigning authority.
43.05–25 Details of marking.
43.05–30 Verification of marks.

Subpart 43.10—Conditions of Assignment of Load Lines

43.10–1 Construction of vessel.
43.10–5 Cargo and other hatchways not protected by superstructures.
43.10–10 Hatchway coamings.
43.10–15 Hatchway covers.
43.10–20 Hatchway beams and fore-and-afters.
43.10–25 Carriers or sockets.
43.10–30 Cleats.
43.10–35 Battens and wedges.
43.10–40 Tarpaulins.
43.10–45 Security of hatchway covers.
43.10–50 Cargo and other hatchways in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.
43.10–55 Hatchway coamings and closing arrangements.
43.10–60 Machinery space openings in exposed positions on freeboard and raised quarter-decks.
43.10–65 Machinery space openings in exposed positions on superstructure decks other than raised quarter-decks.
43.10–67 Machinery space openings in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.
43.10–70 Flush bunker scuttles.
43.10–75 Companionways.
43.10–77 Ventilators in exposed positions on freeboard and superstructure decks.
43.10–80 Air pipes.
43.10–85 Gangway, cargo, and coaling ports.
43.10–87 Scuppers and sanitary discharge pipes.
43.10–90 Air ports.
43.10–95 Guardrails.
43.10–97 Freeing ports.
43.10–100 Protection of crew.

Subpart 43.15—Load Lines for Steamers

43.15–1 Length (L).
43.15–5 Breadth (B).
43.15–7 Molded depth.
43.15–10 Depth for freeboard (D).
43.15–15 Coefficient of fineness (c).
43.15–17 Strength.
43.15–20 Height of superstructure.
43.15–25 Standard height of superstructure.
43.15–27 Length of superstructure (S).
43.15–30 Enclosed superstructure.
43.15–35 Superstructure bulkheads.
43.15–37 Class 1 closing appliances.
43.15–40 Class 2 closing appliances.
43.15–43 Temporary closing appliances.
43.15–45 General, relative superstructures.
43.15–47 Poop.
43.15–50 Raised quarter-deck.
43.15–53 Bridge.
43.15–55 Forecastle.
43.15–57 Trunk.
43.15–60 Enclosed superstructure with middle line openings in the deck not provided with permanent means of closing.
43.15–63 Deductions for superstructures.
43.15–65 Sheer, general.
43.15–67 Standard sheer profile.
43.15–70 Measurement of variations from standard sheer profile.
43.15–73 Correction for variations from standard sheer profile.
43.15–75 Addition for deficiency in sheer.
43.15–77 Deduction for excess sheer.
43.15–80 Standard round of beam.
43.15–83 Round of beam correction.
43.15–85 Summer freeboard.
43.15–87 Tropical freeboard.
43.15–90 Winter freeboard.
43.15–93 Winter North Atlantic freeboard.
43.15–95 Fresh-water freeboard.
43.15–97 Freeboard table for steamers.
43.15–98 Reduced freeboards for steamers having superior design and operational features, and engaged on United States coastwise and/or intercoastal voyages.

Subpart 43.20—Load Lines for Sailing Vessels

43.20–1 Lines to be used on sailing vessels in connection with the disk.
43.20–5 Conditions of assignment of sailing vessel load lines.
43.20–10 Computation of freeboard, sailing vessels.
43.20–15 Depth for freeboard, sailing vessels (D).
43.20–20 Coefficient of fineness, sailing vessels (c).
43.20–25 Superstructures in wood sailing vessels.
43.20–30 Deductions for sailing vessel superstructures.
43.20–35 Minimum freeboards for sailing vessels.
43.20–40 Freeboard table for sailing vessels.
43.20–45 Freeboard for wood sailing vessels.

Subpart 43.25—Load Lines for Steamers Carrying Timber Deck Cargoes

Sec.
43.25–1 Definitions.
43.25–5 Marks on the vessel's sides; timber cargo; timber load lines.
43.25–10 Construction of vessel; timber cargo.
43.25–15 Superstructures; timber cargo.
43.25–20 Machinery casings; timber cargo.
43.25–25 Double bottom tanks; timber cargo.
43.25–30 Bulwarks; timber cargo.
43.25–35 Deck openings covered by timber deck cargo.
43.25–40 Stowage; timber cargo.
43.25–45 Protection of crew, access to machinery space; timber cargo.
43.25–50 Steering arrangements; timber cargo.
43.25–55 Uprights; timber cargo.
43.25–60 Lashings; timber cargo.
43.25–65 Plans; timber cargo.
43.25–70 Computation of freeboard; timber cargo.

Subpart 43.30—Load Lines for Tankers

43.30–1 Tanker load line markings.
43.30–5 Construction of tanker.
43.30–10 Forecastle; tanker.
43.30–15 Machinery casings; tanker.
43.30–20 Gangway; tanker.
43.30–25 Protection of crew; access to machinery space; tanker.
43.30–30 Hatchways; tanker.
43.30–35 Ventilators; tanker.
43.30–40 Freeing arrangements; tanker.
43.30–45 Plans; tanker.
43.30–50 Computation of freeboard; tanker.
43.30–55 Deductions for detached superstructures; tankers.
43.30–60 Deduction for excess sheer; tanker.
43.30–65 Winter North Atlantic freeboard; tanker.
43.30–70 Freeboard table for tankers.
43.30–75 Freeboard table for tankers on United States coastwise and/or intercoastal voyages.

Subpart 43.35—Lumber Schooners

43.35–1 Load line marks for vessels specially constructed for the carriage of complete cargoes of timber (lumber schooner type).

Subpart 43.40—Zones and Seasonal Areas and Miscellaneous Requirements

43.40–1 Boundaries of the zones and seasonal areas.
43.40–5 Fees, travel expense.
43.40–10 Forms of load line certificates.
43.40–15 Titles of load line laws and rules regarded as equivalent to the British Board of Trade Rules, 1906.

AUTHORITY: The provisions of this Part 43 issued under sec. 2, 45 Stat. 1493, as amended, sec. 2, 49 Stat. 888, as amended; 46 U.S.C. 85a, 88a. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-46, October 19, 1962, 27 F.R. 10504.

Subpart 43.01—Administration

§ 43.01–1 Establishment of load lines.

(a) Load lines are established for merchant vessels of 150 gross tons or over in conformity with the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i), or the International Load Line Convention, 1930.

(b) Load lines for merchant vessels of 150 gross tons or over shall be pursuant to the regulations in this part when such vessels:

[1] See Part 44 for load line regulations applicable to coastwise load lines for steam colliers, tugs, barges, and self-propelled barges in special services and for Great Lakes vessels making foreign and coastwise voyages.

(1) Engage in foreign voyages by sea, or arrive within the jurisdiction of the United States or her possessions from foreign voyages by sea, in both cases the Great Lakes excepted; or,

(2) Engage in coastwise voyages by sea (domestic), the Great Lakes excepted.

(c) The load line regulations for merchant vessels which engage in voyages on the Great Lakes are in Part 45 of this subchapter. The load line regulations applicable to coastwise load lines for steam colliers, barges, and self-propelled barges in special services are in Part 44 of this subchapter.

(d) With respect to the enforcement of the regulations in this subchapter, the following rulings have been made:

(1) Vessels which engage in voyages from one port or place in the United States (including Alaska and Hawaii) to another port or place in the United States, or between ports or places in the same U.S. possession, and during such voyages pass outside the line dividing inland waters from the high seas are subject to the Coastwise Load Line Act.

(2) Vessels which engage in voyages from a port or place in the United States on the Atlantic Coast or Coast of the Gulf of Mexico to a port or place in the United States on the Pacific Coast (including Alaska and Hawaii), or vice versa, are subject to the Coastwise Load Line Act.

(3) Vessels which engage in voyages from one port or place in the United States to a port or place in a possession, or vice versa, or between ports or places in two different U.S. possessions, and pass outside the line dividing inland waters from the high seas are subject to the Coastwise Load Line Act, and the International Load Line Convention, 1930.

(4) Vessels which engage in voyages from a port or place in the United States or her possessions and pass outside the line dividing inland waters from the high seas and navigate on the high seas, and then return to the same port or place are subject to the Coastwise Load Line Act.

(5) Vessels which engage in foreign voyages and pass outside the line dividing inland waters from the high seas are subject to the Act of March 2, 1929, and the International Load Line Convention, 1930.

(6) Vessels which engage in voyages from a port or place in the United States to another port or place in the United States but during such voyages stop at a foreign port or place (the Canal Zone excluded) are considered to be on foreign voyages and subject to the requirements for such voyages.

(e) In concurrence with related Canadian regulations, the waters of the St. Lawrence River west of a straight line drawn from Cap de Rosiers to West Point Anticosti Island, and west of a line along 63° W. longitude from Anticosti Island to the north shore of the St. Lawrence River shall be considered as a part of the Great Lakes.

(f) This part shall not apply to merchant vessels on foreign voyages that are being towed and which are carrying neither cargo nor passengers.

§ 43.01–5 Responsibility for administration.

(a) Under the general direction and supervision of the Secretary of the Treasury, the Commandant of the United States Coast Guard is delegated the responsibility and authority for the administration of the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), the International Load Line Convention, 1930, and the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i).

§ 43.01–10 Application of regulations.

(a) No merchant vessel of the United States of 150 gross tons or over shall proceed to sea or arrive from the high seas (Great Lakes excepted), or operate on the high seas, and no foreign merchant vessel of 150 gross tons or over shall arrive or when within the jurisdiction of the United States shall proceed to sea (Great Lakes excepted) unless such vessel is:

(1) A foreign vessel and is exempted insofar as marking and certification of marks is concerned by section 5 of the Load Line Acts and § 43.01–97.

(2) A new vessel that:

(i) Has been surveyed in accordance with the provisions of § 43.01–50;

(ii) Complies with the provisions of this part as applicable to the type of vessel dealt with;

(iii) Has been marked in accordance with the provisions of this part; and,

(iv) Has had the marks certified as correct as provided by § 43.05–30.

(3) An existing vessel that:

(i) Has been surveyed, marked, and the marks certified, either under the provisions of this part, as applicable to the type of vessel, or under one of the sets of rules particularized in § 43.40–15;

(ii) Complies, as defined for the type of vessel, with the provisions of this part in principle and also in detail, as far as is reasonable and practicable, having regard to the efficiency of (*a*) the protection of openings, (*b*) guard rails, (*c*) freeing ports, and (*d*) means of access to crews' quarters provided by the existing arrangements, fittings, and appliances on the vessel.

(iii) Where it is neither reasonable nor practicable to comply with the provisions in this part in their entirety, the assigning authority will, in each case, report to the Commandant, U. S. Coast Guard, the specific matters in which the vessel is deficient, together with such recommendations as may seem desirable. Upon receipt of this report the Commandant shall determine such addition to the freeboard as will, in the judgment of the Commandant make the vessel as safe as if it had fully complied with this part.

CROSS REFERENCE: For definition of "a new vessel," and "an existing vessel," see § 43.01–25 (a).

§ 43.01–13 Penalties for violations of load line acts.

(a) The penalties for violation of various provisions of the load line acts or the regulations established thereunder are set forth in Title 46, U.S. Code, sections 85g and 88g. The Secretary of the Treasury by Treasury Department Order 167–48 has transferred to the Commandant of the United States Coast Guard authority to assess, collect, remit or mitigate any monetary penalty imposed under these laws.

(b) The master and/or owner of a vessel that is operated, navigated, or used in violation of the provisions of the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i), or the regulations in this part, will be subject to the penalties as set forth in law, and the vessel shall also be liable therefor. Depending upon the gravity of the violation, the Coast Guard may initiate any one or more of the following actions:

(1) Detain a vessel if deemed to be overloaded in violation of Title 46, U.S. Code, section 85c or 88c, in accordance with section 85f or 88f, and have the vessel surveyed by three disinterested surveyors.

(2) Assess and collect applicable monetary penalties for certain violations as provided in Title 46, U.S. Code, sections 85g and 88g.

(3) Initiate criminal prosecution for certain violations when required by Title 46, U.S. Code, section 85g or 88g.

(4) If there is a failure to pay monetary penalties assessed, initiate action of libel against the vessel involved.

(5) In addition to the foregoing actions described in this paragraph, any officer or seaman holding a valid Coast Guard license or merchant mariner's document and who may violate any provision of the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), the International Load Line Convention, 1930, or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i), or the regulations in this part, may be subject to proceedings seeking the suspension or revocation of such person's license or document under the provisions of Title 46, U.S. Code, section 239, and the regulations prescribed thereunder in Part 137 of Subchapter K (Marine Investigations and Suspension and Revocation Proceedings) of this chapter.

(6) In determining offenses the provisions of Title 46, U.S. Code, sections 85g and 88g, also provide that "Each day a vessel is in violation of this act it constitutes a separate offense."

(c) The procedures governing the assessment, collection, remission and mitigation of any monetary penalty imposed under Title 46, U.S. Code, section 85g or 88g, for a violation of either load line law or the applicable regulations in this part, as well as the appeal procedures to be followed, are in Subpart 2.50 of Part 2 of Subchapter A (Procedures Applicable to the Public) of this chapter.

§ 43.01–15 Timber cargoes.

(a) A steamer (other than a tanker or a vessel assigned load lines on a tanker basis) which has been surveyed and marked as provided by §§ 43.01–10, 43.05–1—43.15–97, may on application by

the owner be surveyed and marked with timber load lines applicable only when carrying timber deck cargoes, and the steamer when carrying a deck cargo complying with the provisions of §§ 43.25–5 to 43.25–70, may be loaded to the timber load line as determined by this part applicable to the voyage if being:

(1) A new steamer, it complies with the conditions and provisions prescribed in §§ 43.25–5—43.25–70.

(2) An existing steamer (other than one defined in § 43.01–15) if it complies with the conditions and provisions of §§ 43.25–5—43.25–70, (other than § 43.25–15), but the vessel shall comply in principle, so far as is reasonable and practicable, with the conditions and provisions prescribed by § 43.25–15: *Provided*, That in assigning a timber load line to an existing steamer there shall be made such additions to the freeboard as shall be reasonable, having regard to the extent to which such steamer falls short of full compliance with the conditions and provisions prescribed in § 43.25–15.

(b) Existing vessels propelled by either sail or steam which have been specially constructed to carry complete cargoes of timber (that is, of the lumber schooner type) when carrying a complete cargo of timber will be marked with a load line. This load line will be applicable to all seasons and zones, and the assignment of and the certification of the load line will be made after consideration of the vessel's experience in similar voyages and of the condition of the vessel and her appliances. The conditions of assignment as required by §§ 43.25–5—43.25–70, are to be complied with so far as is reasonable and practicable. The Commandant, U. S. Coast Guard, shall approve the assignment of a load line for vessels of this type when such line is determined by experience.

(c) Existing steamers which have been specially constructed to carry complete cargoes of timber (that is, steam lumber schooner type) will be surveyed and marked and the marks certified in accordance with the conditions and provisions of §§ 43.01–10, 43.05–1—43.15–97, and these marks will be applicable when the steamers are engaged on voyages laden with a cargo other than a complete timber cargo.

(d) Existing sailing vessels of the lumber schooner type will be surveyed and marked and the marks certified in accordance with the conditions and provisions of §§ 43.01–10, 43.20–1—43.20–45, and these marks will be applicable when engaged on a voyage laden with cargo other than a complete timber cargo.

CROSS REFERENCE: For approval of Commandant, U. S. Coast Guard, see § 43.01–100.

§ 43.01–20 Tankers.

(a) A steamer specially constructed for the carriage of liquid cargoes in bulk, which has been surveyed as provided by § 43.01–10, shall be marked with tanker load lines and the marks certified as correct if being:

(1) A new vessel, it complies with the conditions and provisions prescribed in §§ 43.30–1—43.30–75.

(2) An existing vessel, it complies with the conditions and provisions in §§ 43.30–5, 43.30–20—43.30–35, and, also in principle so far as is reasonable and practicable with §§ 43.30–10, 43.30–15, 43.30–40, providing that in assigning a tanker load line to an existing vessel such additions to the freeboard shall be made as is reasonable, having regard to the extent to which the vessel falls short of full compliance with the conditions and provisions prescribed in §§ 43.30–10, 43.30–15, and 43.30–40.

§ 43.01–25 New and existing vessels.

(a) For the purpose of marking and certification of load lines on the international form, a "new vessel" is one whose keel was laid on or after July 1, 1932, all other vessels being regarded as existing vessels.

(b) For the purpose of marking and certification of load lines on the coastwise form, a "new vessel" is one whose keel was laid:

(1) If of 4,000 gross tons and over, on or after November 27, 1935.

(2) If less than 4,000 gross tons, on or after August 27, 1936.

(3) All other vessels being regarded as existing vessels.

§ 43.01–30 Vessels of special type.

(a) For steamers over 300 feet in length possessing constructional features similar to those of a tanker which afford extra invulnerability against the sea, a reduction in freeboard from that determined under §§ 43.15–1—43.15–97, may be granted.

(b) The amount of such reduction shall be determined by the assigning authority in relation to the freeboard assigned to tankers, having regard to the degree of compliance with the condition of assignment laid down for these vessels and the degree of subdivision provided. The freeboard assigned to such a vessel shall in no case be less than would be assigned to the vessel as a tanker.

(c) Before assignment or certification of the load lines for vessels of special type, the approval of the Commandant, U. S. Coast Guard, shall be obtained.

CROSS REFERENCE: For approval of the Commandant, U. S. Coast Guard, see § 43.01–100.

§ 43.01–32 Stability.

(a) The rules of this part necessarily assume that the nature and stowage of the cargo, ballast, etc., are such as to secure sufficient stability for the vessel.

(b) Having regard for the fact that certain vessels, such as those carrying all their cargo as deck cargo, may need to have the amount of cargo and resulting draft limited by stability considerations, the load line assignments of vessels, which are subject to the stability test requirements contained in § 31.10–30 in Subchapter D (Tank Vessels) or in Subpart 93.05 in Subchapter I (Cargo and Miscellaneous Vessels) of this chapter, shall in no case be deeper than permitted by the results of such tests.

(c) Load line assignments to vessels not subject to inspection will also be made subject to the results of a stability test if the design and service of the vessels are such as to indicate the need for a draft limitation based thereon.

(d) Load line assignments made to vessels before the results of stability tests are known shall be regarded as conditional and subject to verification by the Commandant.

§ 43.01–35 Marks to indicate load lines.

(a) Marks to indicate the maximum mean drafts to which a vessel can be lawfully submerged, in the various circumstances and seasons, shall be permanently marked on each side of the vessel in the form, manner, and location provided by this part.

§ 43.01–40 Assignment and certification; assigning authority.

(a) The American Bureau of Shipping is appointed to assign load lines and to determine whether the position of and the manner of marking each vessel has been performed in accordance with this part and the applicable provisions in the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i). The American Bureau of Shipping is authorized to issue a load line certificate, certifying to the correctness of the marks, under its own hand and seal. Its mailing address is American Bureau of Shipping, 45 Broad Street, New York, N.Y., 10004.

(1) As provided in section 3 of the Act of March 2, 1929, as amended (46 U.S.C. 85b), and section 3 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88b), the Commandant, United States Coast Guard, may, at the request of a shipowner, appoint any other recognized classification society which he may approve, as the load line assigning authority.

(2) The American Bureau of Shipping, or other approved load line assigning agency, is authorized to renew from time to time by endorsement a load line certificate.

(3) Load line certificates will not be issued until the load line marks have been verified. This certificate will be issued in duplicate, one copy being delivered to the owner or master of the vessel and one copy, together with a summary of the data used to determine the load line, will be forwarded to the Commandant, United States Coast Guard, Washington, D.C., 20226. Each new vessel, after January 1, 1948, when receiving its first load line certificate, shall be also furnished a copy of the load line survey report, which shall be retained on board the vessel for the information of inspectors and surveyors when carrying out subsequent load line surveys.

(b) As referred to in this subchapter, the term "assigning authority" or "American Bureau of Shipping" shall refer either to that society or to such other society as may have been specifically approved by the Commandant as a load line assigning authority for the vessel concerned.

(c) The scale of maximum fees payable to the assigning authority for this service is contained in § 43.40–5.

§ 43.01–50 Surveys.

(a) *Steel vessels.* (1) The vessel is to be placed in drydock to determine the condition of the hull plating, etc.

(2) The holds, 'tween decks, peaks, bilges, engine and boiler spaces, and bunkers are to be examined to determine the condition of the framing, etc.

(3) Deep tanks and other tanks which form part of the vessel are to be examined internally.

(4) Where a double bottom is fitted, the tanks are to be examined internally. Where double bottom and other tanks are used for fuel-oil bunkers, such tanks need not be cleaned out, provided the surveyors are able to determine by an external examination that their general condition is satisfactory.

(5) The decks are to be examined.

(6) The hatch covers, hatch beams, and fore-and-afters, tarpaulins, battens and wedges, the hatchway and ventilator coamings, companionways, the engine and boiler casings, the superstructures on the freeboard deck, and all means of protecting the openings in the freeboard deck and superstructures and bulkheads are to be examined.

(7) All air pipe outlets, scuppers, sanitary discharges in the vessel's sides, and air ports are to be examined.

(8) All gangways, cargo, and coaling ports or other similar openings in vessel's sides are to be examined.

(9) Guard rails, gangways, and shutters in freeing ports are to be examined.

(10) All eye plates or similar fittings for timber deck cargo lashings and sockets for uprights are to be examined.

(11) Where, owing to the age and condition of the vessel, the surveyors deem it necessary, the shell and deck plating may be required to be drilled in order to ascertain the then thickness of such plating.

(b) *Wood vessels.* (1) The vessel is to be placed on a drydock or a slip way and the keel, stem, stern frame or stern post and outside planking are to be examined. Caulking is to be tried at such places about the planking as deemed necessary by the surveyors.

(2) Careful examination must be made for faulty fastenings and such bolts or treenails must be backed out, or otherwise dealt with, as may be deemed necessary by the surveyors.

(3) Careful examination is to be made of the entire structure and if considered necessary borings are to be made to ascertain the conditions of the materials; should these disclose cause for further examination, listings are to be made where required to satisfy the surveyors as to the true condition of the vessel.

(4) The holds, 'tween decks, peaks, bilges, engine and boiler spaces, and bunkers are to be examined.

(5) The decks are to be examined and bored where necessary.

(6) The hatch covers, hatch beams, fore-and-afters, tarpaulins, battens and wedges, the hatchway and ventilator coamings, companionways, the engine and boiler casings, the superstructures on the freeboard deck, and all means of protecting the openings in the freeboard deck and superstructures and bulkheads are to be examined.

(7) All air pipe outlets, scuppers, sanitary discharges in the vessel's sides, and air ports are to be examined.

(8) All gangways, cargo, and coaling ports or other similar fittings in the vessel's sides are to be examined.

(9) Guard rails, gangways, and shutters in freeing ports are to be examined.

(10) All eye plates or similar fittings for timber deck cargo lashings and sockets for uprights are to be examined.

(c) *Correction of deficiencies.* (1) Any such parts or fittings of the vessel as are found to be in an unsatisfactory condition are to be repaired or renewed in order to place the vessel in a seaworthy condition so as to be eligible for a load line certificate.

§ 43.01–55 Annual inspection.

(a) A vessel having been marked as provided by this part, and the mark certified as correct, will be inspected at intervals of approximately 12 months in order to insure the maintenance in an effective condition of the fittings and appliances for the:

(1) Protection of openings,

(2) guard rails,

(3) freeing ports,

(4) means of access to crews' quarters, and

(5) that there have not been alterations made to the hull or superstructures which would affect the calculations determining the position of the load lines.

(b) The American Bureau of Shipping is appointed to make this inspection and to report thereon to the owners of the vessel, a copy of this report being forwarded to the Commandant, U. S. Coast Guard, Washington, D.C., 20226.

(c) The scale of fees payable to the American Bureau of Shipping for this service is contained in § 43.40–5.

§ 43.01–60 Application for assignment, renewal, and certification.

(a) Application for assignment and certification of load line marks or for renewal of load line certificates shall be made in writing to the American Bureau of Shipping by the owners of the vessel.

(b) Application for the assignment of load lines to a foreign vessel belonging either to a country ratifying the International Load Line Convention, 1930, or to a country with which the United States has reciprocal load line agreement in effect shall be made by the Government to which the vessel belongs, otherwise load lines shall not be assigned such a vessel under this part.

§ 43.01–65 Application for annual inspection.

(a) Application for annual load line inspection required by § 43.01–55 shall be made in writing to the American Bureau of Shipping by the owners of a vessel.

§ 43.01–70 Equivalents.

(a) Where in this part it is provided that a particular fitting or appliance, or type thereof, shall be fitted or carried in a vessel, or that any particular arrangement shall be adopted, there may be substituted any other fitting or appliance or type thereof, or any other arrangement: *Provided*, That such fitting, appliance or arrangement shall be considered a suitable equivalent by the assigning authority and the approval of the Commandant, U.S. Coast Guard, for such substitution shall have been issued.

CROSS REFERENCE: For approval of Commandant, U. S. Coast Guard, see § 43.01–100.

§ 43.01–75 Validity and renewal of certificates.

(a) As the assignment of load lines is conditioned upon the structural efficiency of the vessel and upon the provision of effective protection to vessel and crew, every vessel required to be marked by the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), and Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88l), with load lines shall be surveyed by the assigning authority at least once in each 5 years to determine that the load lines are then correctly placed as required by this part. If the load line mark be found correct for the vessel in the condition she is then in, the certificate shall be renewed for such time as the condition of the vessel then warrants, but in no case for a longer period than 5 years and the facts shall be attested by endorsement upon the back of the certificate in the form shown in § 43.40–10.

(b) Foreign vessels belonging to countries which have not ratified the Load Line Convention and which have not been exempted pursuant to section 5 of the Load Line Act (45 Stat. 1493; 46 U. S. C. 85d) shall have their load line certificate limited to a period of 1 year. The certificate may be validated for additional 1-year periods: *Provided*, That the condition of the vessel then warrants, and the facts are attested by endorsement upon the back of the load line certificate by a surveyor of the American Bureau of Shipping or of the classification society issuing the certificate. The certificate will become void 5 years from date of issue, or at the expiration of the fourth yearly validation, whichever occurs first.

(c) The Commandant, U. S. Coast Guard, shall be notified of every renewal indorsement and the date of its expiration.

§ 43.01–80 Forms of certificates.

(a) The form of certificate certifying to the correctness of the load line mark assigned under the regulations in this part shall be as shown in § 43.40–10, as follows:

(1) International load line certificate issued to United States vessels engaged in foreign voyages, applicable as stated:

(i) Form A1 for general use.

(ii) Form A2 for sailing vessels.

(iii) Form A3, general use combined with timber deck cargo.

(2) For foreign vessels belonging to countries that have not ratified or acceded to the International Load Line Convention, 1930:

(i) Form B for general use.

(3) Coastwise load line certificate issued to United States vessels engaged

solely in coastwise voyages (other than special services provided for by Part 44 of this subchapter).

(i) Form C1 for general use.

(ii) Form C 3 for sailing ships.

(iii) Form C3, general use combined with timber deck cargo.

(iv) Form C4 for certain vessels above 300 feet in length in United States coastwise and/or intercoastal service.

(b) The assigning authority may provide forms similar to the above, these forms to be approved by the Commandant, U. S. Coast Guard, before being issued.

CROSS REFERENCE: For forms of load line certificates, see §§ 43.40–10, 44.05–35 of this subchapter.

§ 43.01–85 Cancellation of certificate.

(a) Notwithstanding the marking of a load line and the issuance of a load line certificate, the certificate will be canceled if:

(1) The annual load line inspection required by § 43.01–55 has not been carried out or that the items described under § 43.01–55 (a) (1), (2), (3), and (4) are not maintained in an effective condition.

(2) The survey required by § 43.01–50 has not been carried out or that any defects disclosed by the survey have not been corrected.

(3) Due to any cause the conditions of assignment have not been maintained as provided by this part, or alterations have been made to hull or superstructures which affect the calculations made to determine the location of the load line.

§ 43.01–90 Zones and seasonal areas.

(a) A vessel coming under the provisions of the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i), shall conform to the conditions applicable to the zones and seasonal areas as described in this part.

(b) A port located on the boundary line between two zones shall be regarded as within the zone from which the vessel arrived or into which the vessel departs.

(c) No vessel to which these acts apply shall be loaded so as to submerge the load line then applicable to her voyage. When loading a vessel in a favorable zone for a voyage on which the vessel will enter a less favorable zone, such allowance must be made that the vessel, when crossing into the less favorable zone, will conform to the regulations and freeboard for the less favorable zone.

§ 43.01–95 Logbook entries.

(a) It is the master's responsibility to have entered in the vessel's "Official Logbook" if carried, otherwise in a log considered as its official logbook, the data required by section 6 of the Act of March 2, 1929, as amended (46 U.S.C. 85e), or section 6 of the Coastwise Load Line Act of 1935, as amended (46 U.S.C. 88e). These logbook entries shall be made before a vessel departs from her loading port or place and consist of:

(1) A statement of the load line marks applicable to the voyage;

(2) A statement of the position of the load line mark, port and starboard, at the time of departing from a port or place; and,

(3) The actual drafts of the vessel, forward and aft, as nearly as the same can be ascertained, at the time of departing from a port or place.

§ 43.01–97 Control.

(a) The Collector of Customs or the Coast Guard District Commander may detain a vessel for survey if there is reason to believe that the vessel is proceeding on her journey in excess of the draft allowed by the regulations in this part as indicated by the vessel's load line certificate, or otherwise. The Coast Guard District Commander may detain a vessel if it is so loaded as to be manifestly unsafe to proceed to sea.

(b) If the Collector of Customs orders a vessel detained, he shall immediately inform the Coast Guard District Commander thereof, who shall thereupon advise the Collector of Customs whether or not he deems that the vessel may proceed to sea with safety. If the Coast Guard District Commander orders a vessel detained, such officer will furnish the Collector of Customs immediate notification of such detention. The clearance shall be refused to any vessel which shall have been ordered detained, which shall be in effect until it is shown that the vessel is not in violation of the applicable law and the regulations in this part.

(c) The detention of a vessel will be by written order of either the Coast Guard District Commander or the Collector of Customs, depending on who orders the detention. The detaining officer will immediately arrange for a survey in the manner prescribed by either section 7 of the Act of March 2, 1929, as amended (46 U.S.C. 85f), or section 7 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88f), whichever may be applicable in a particular case. Unless the owner or agent waives in writing and stipulates to accept the Coast Guard's survey, the detaining officer shall appoint three disinterested surveyors and, where practicable, one of them shall be from the Surveying Staff of the American Bureau of Shipping. Such surveyors shall conduct a survey to ascertain whether or not the vessel is loaded in violation of the applicable provisions in the Act of March 2, 1929, as amended (46 U.S.C. 85–85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i), and the regulations in this part. If the survey confirms the allegation that the vessel is in violation of either law or the regulations in this part, "the owner and agent shall bear the costs of the survey in addition to any penalty or fine imposed," as provided in these laws. Where such surveyors are appointed by the Collector of Customs, such appointment shall be with the approval of the Coast Guard District Commander.

(d) Whenever a vessel is detained, the master or owner may, within five days, appeal to the Commandant, United States Coast Guard, who may, if he desires, order a further survey, and may affirm, set aside, or modify the order of the detaining officer.

(e) Where a foreign vessel is detained, or any action is taken which would appear likely to result in legal proceedings being taken against such a vessel, the consul of the country to which the vessel belongs shall be informed as soon as possible of the circumstances of the case.

(f) Pursuant to the provisions of section 5 of the Act of March 2, 1929, as amended (46 U.S.C. 85d), and section 5 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88d), it is hereby certified that a vessel of a foreign country which has ratified the International Load Line Convention, 1930, shall be deemed a vessel of a foreign country as described in section 5 of these acts, and such a vessel shall be exempt from the provisions of the regulations in this part insofar as the marking of the load lines and the certificating thereof are concerned, only so long as such country similarly recognizes the load lines established by the regulations in this part, for the purpose of a voyage by sea: *Provided*, That the vessel is marked with load lines and has on board a valid load line certificate certifying to the correctness of the mark, the vessel shall not be loaded beyond the limits allowed by the certificate, the position of the load line of the vessel shall correspond with the certificate, the hull and superstructure shall not have been so materially altered as to affect the calculations on which the load line was based, and alterations have not been made so that the protection of openings, guardrails, freeing ports, and means of access to crew's quarters, have made the vessel manifestly unfit to proceed to sea without danger to human life.

§ 43.01–100 Approval of Commandant, U.S. Coast Guard.

(a) Where the active approval of the Commandant, U.S. Coast Guard is required in connection with this part, such information as will enable the Commandant, to obtain a comprehensive understanding of the question at issue shall be furnished and will remain with the Commandant, as a record.

Subpart 43.05—General Rules for Determining Maximum Load Lines of Merchant Vessels

§ 43.05–1 Definitions.

(a) *Steamer.* (1) The term "steamer" or "steamship" includes all vessels hav-

ing sufficient means for mechanical propulsion, except where provided with sufficient sail area for navigation under sails alone.

(2) A vessel fitted with mechanical means of propulsion and with sail area insufficient for navigation under sails alone may be assigned a load line under §§ 43.15–1—43.15–97.

(3) A lighter, barge, or other vessel without independent means of propulsion, when towed, is to be assigned a load line under §§ 43.15–1—43.15–97.

(b) *Sailing vessel.* The term "sailing vessel" includes all vessels provided with sufficient sail area for navigation under sails alone, whether or not fitted with mechanical means of propulsion.

(c) *Flush-deck vessel.* A flush-deck vessel is one which has no superstructure on the freeboard deck.

(d) *Superstructure.* A superstructure is a decked structure on the freeboard deck extending from side to side of the vessel. A raised quarter-deck is considered a superstructure.

(e) *Load line.* The load line is the line defining the maximum mean draft to which a vessel may be lawfully submerged. It is the lower limit of the freeboard as determined by the regulations in this part having regard to the various conditions and seasons.

(f) *Freeboard.* The freeboard assigned is the distance measured vertically downward at the side of the vessel amidships from the upper edge of the deck line to the upper edge of the load line.

(g) *Freeboard deck.* The freeboard deck is the deck from which the freeboard is measured, and is the uppermost complete deck having permanent means of closing all openings in weather portions of the deck in accordance with §§ 43.10–1—43.10–45. It is the upper deck in flush-deck vessels and vessels with detached superstructures. In vessels having discontinuous freeboard decks within superstructures which are not intact, or which are not fitted with class 1 closing appliances, the lowest line of the deck below the superstructure deck is taken as the freeboard deck.

(h) *Amidships.* Amidships is the middle of the length of the summer load waterline, as defined in § 43.15–1.

§ 43.05–5 Deck line.

(a) The deck line is a horizontal line 12 inches in length and 1 inch in breadth. It is to be marked amidships on each side of the vessel, and its upper edge is to pass through the point where the continuation outward of the upper surface of the freeboard deck intersects the outer surface of the shell. (See fig. 43.05–5(a).) Where the deck is partly sheathed amidships, the upper edge of the deck line is to pass through the point where the continuation outward of the upper surface of the actual sheathing at amidships intersects the outer surface of the shell.

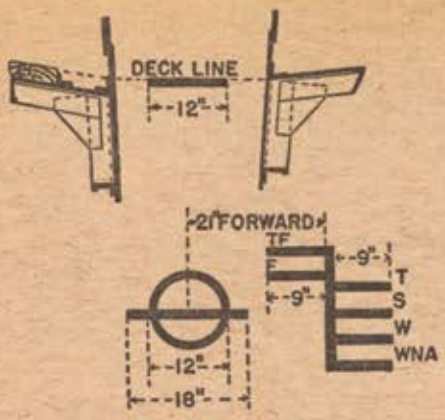

FIGURE 43.05–5(a)

§ 43.05–10 Load line disk.

(a) The load line disk is 12 inches in diameter and is intersected by a horizontal line 18 inches in length and 1 inch in breadth, the upper edge of which passes through the center of the disk. The disk is to be marked amidships below the deck line.

§ 43.05–15 Lines used with disk.

(a) The lines which indicate the maximum load line in different circumstances and in different seasons (see § 43.40–1) are to be horizontal lines, 9 inches in length and 1 inch in breadth, which extend from, and are at right angles to, a vertical line marked 21 inches forward of the center of the disk, except as provided otherwise in paragraph (d) of this section. (See Figure 43.05–5(a).)

(b) The following are the lines to be used:

(1) *Summer load line.* The summer load line is indicated by the upper edge of the line which passes through the center of the disk and also by a line marked "S."

(2) *Winter load line.* The winter load line is indicated by the upper edge of a line marked "W."

(3) *Winter North Atlantic load line.* The winter North Atlantic load line is indicated by the upper edge of a line marked "WNA."

(4) *Tropical load line.* The tropical load line is indicated by the upper edge of a line marked "T."

(5) *Fresh-water load lines.* The fresh-water load line in summer is indicated by the upper edge of a line marked "F." The difference between the fresh-water load line in summer and the summer load line is the allowance to be made for loading in fresh water at the other load lines. The tropical fresh-water load line is indicated by the upper edge of a line marked "TF."[3] (This provision for deeper loading in fresh water is not applicable to the Great Lakes.)

[3] Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

(c) Where the draft is restricted on a basis of subdivision or stability and this draft is less than any of the various seasonal drafts permitted by this part the center of the disk shall be located on the line of this restricted draft and it shall be applicable to all zones and seasons. If such a permissible maximum draft comes between the seasonal markings, the seasonal markings below shall also be added. A fresh-water load line may be marked forward of the disk as provided in this section.

(d) Domestic vessels eligible for operation at the freeboards indicated by §§ 43.15–87(b), 43.15–90(b), 43.15–98(a), or 43.30–1(b) shall have the related winter, summer, tropical, fresh, and tropical fresh water marks located abaft the disk and surmounted by the letter "C". (See Figure 43.05–15(d).) While a complete set of additional marks is shown by this Figure, vessels also marked forward of the disk in accordance with § 43.05–5(a) need show abaft the disk only those additional marks which are necessary. Vessels departing on foreign voyages shall only bear the load line marks forward of the disk marked in accordance with § 43.05–5(a).

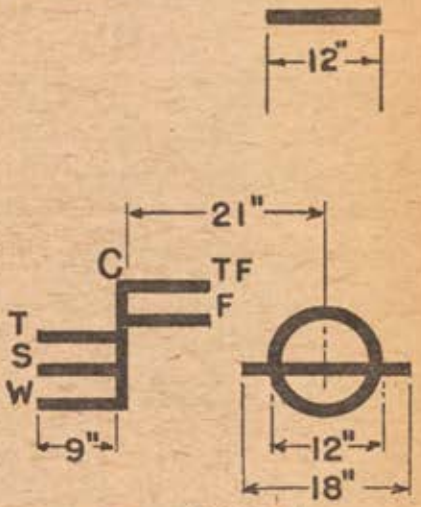

FIGURE 43.05–15(d)

§ 43.05–20 Mark of assigning authority.

(a) The authority by whom the load lines are assigned may be indicated by letters measuring about 4½ by 3 inches marked alongside the disk and above the centerline.

§ 43.05–25 Details of marking.

(a) The disk, lines, and letters are to be painted in white or yellow on a dark ground or in black on a light ground. They are also to be carefully cut in or center punched on the sides of iron and steel vessels, and on wood vessels they are to be cut into the planking for at least one-eighth of an inch. The marks are to be plainly visible, and, if necessary, special arrangements are to be made for this purpose.

§ 43.05–30 Verification of marks.

(a) The load lines certificate is not to be delivered to the vessel until a surveyor of the assigning authority has certified that the marks are correctly and permanently indicated on the vessel's side.

Subpart 43.10—Conditions of Assignment of Load Lines

§ 43.10–1 Construction of vessel.

(a) The assignment of load lines is conditional upon the vessel being structurally efficient and upon the provision of effective protection to vessel and crew.

(b) Sections 43.10–1—43.10–100 apply to vessels to which minimum freeboards are assigned. In vessels to which greater freeboards than the minimum are assigned, the protection is to be relatively as effective.

(c) Passenger vessels; subdivision and stability load lines: Where in passenger vessels the position of the maximum load lines is determined by the application of subdivision and stability regulations as provided in Part 46 of this subchapter the provisions of this part shall also be effective insofar as they are applicable.

§ 43.10–5 Cargo and other hatchways not protected by superstructures.

(a) The construction and fitting of cargo and other hatchways in exposed positions on freeboard and superstructure decks are to be at least equivalent to the standards laid down in § 43.10–10—43.10–45.

(b) Where hatch covers are of adequate metal construction, sealed watertight against pliable gaskets by dogs or other suitable means, as approved by the Load Line Assigning Authority, the application of the requirements of §§ 43.10–10—43.10–45 will be modified accordingly.

§ 43.10–10 Hatchway coamings.

(a) The height of hatchway coamings on freeboard decks is to be at least 24 inches above the deck. The height of coamings on superstructure decks is to be at least 24 inches above the deck if situated within a quarter of the ship's length from the stem, and at least 18 inches if situated elsewhere.

(b) Coamings are to be of steel, are to be substantially constructed and, where required to be 24 inches high, are to be fitted with an efficient horizontal stiffener placed not lower than 10 inches below the upper edge, and fitted with efficient brackets or stays from the stiffener to the deck, at intervals of not more than 10 feet. Where end coamings are protected, the requirements of this section may be modified.

§ 43.10–15 Hatchway covers.

(a) Covers to exposed hatchways are to be efficient, and where they are made of wood, the finished thickness is to be at least 2⅜ inches in association with a span of not more than 5 feet. The width of each bearing surface for these hatchway covers is to be at least 2½ inches.

§ 43.10–20 Hatchway beams and fore-and-afters.

(a) Where wood hatchway covers are fitted the hatchway beams and fore-and-afters are to be of the scantlings and spacing given in Table 43.10–20 (a1) where coamings 24 inches high are required, and as given in Table 43.10–20 (a2) where coamings 18 inches high are required. Angle bar mountings on the upper edge are to extend continuously for the full length of each beam. Wood fore-and-afters are to be steel shod at all bearing surfaces.

TABLE 43.10-20 (a1)—HATCHWAY BEAMS AND FORE-AND-AFTERS FOR VESSELS 200 FEET OR MORE IN LENGTH [1]

[Coamings 24 inches in height]

HATCHWAY BEAMS

Breadth of hatchway	Mounting	Beams with fore-and-afters, spacing center to center			Beams without fore-and-afters, spacing center to center

Length of fore-and-afters	Wood center fore-and-afters, spacing center to center						Wood side fore-and-afters, spacing center to center					
	3′ 0″		4′ 0″		5′ 0″		3′ 0″		4′ 0″		5′ 0″	
	D	B	D	B	D	B	D	B	D	B	D	B
	Inches	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*	*Inches*
6′0″	5½	7	6	7	6½	7	5½	5½	6	6	6½	6
8′0″	6½	7	7½	7	8	7	6½	6½	7½	7	8	7
10′0″	8	7	8½	8	9	9	8	7	8½	8	9	9

A = Plain angle. BP = Bulb plate. P = Plate. D = Depth. B = Breadth.

[1] In vessels not exceeding 100 feet in length, the depths of beams which are formed of plates and angles may be 60 percent of the depths given above; the depths of beams and steel fore-and-afters formed of bulb angle or bulb plate section may be 80 percent of the depths given above; the thickness of plates, bulb angles, and bulb plates should correspond to the thickness tabulated for the reduced depths with a minimum thickness of 0.30 inch; the depths and breadths of wood fore-and-afters may be 80 percent of those given in the tables for side fore-and-afters, but the center fore-and-afters must be not less than 6½ inches wide. In vessels between 100 feet and 200 feet in length, the sizes of the beams and fore-and-afters are to be determined by linear interpolation.

[2] Depths for hatchway beams are at the middle of the length and are measured from the top mounting to the lower edge. Depths for fore-and-afters are measured from the underside of the hatch covers to the lower edge. Sizes for intermediate lengths and spacing are obtained by interpolation. Where plates are specified, two angles of the size given for mountings, are to be fitted at the upper and at the lower part of the beam. Where bulb plates are specified, two angles, of the size given for mountings, are to be fitted at the upper part of the beam or fore-and-after. Where bulb angles are specified, one angle, of the size given for mountings, is to be fitted at the upper part of the section. Where the specified flanges of an angle are of different dimensions, the larger flange is to be horizontal.

TABLE 43.10-20 (a2)—HATCHWAY BEAMS AND FORE-AND-AFTERS FOR VESSELS 200 FEET OR MORE IN LENGTH [1]

[Coamings 18 inches in height]

A=Plain angle. BP=Bulb plate. P=Plate. D=Depth. B=Breadth.

[1] In vessels not exceeding 100 feet in length, the depths of beams which are formed of plates and angles may be 60 percent of the depths given above; the depths of beams and steel fore-and-afters formed of bulb angle or bulb plate section may be 80 percent of the depths given above; the thickness of plates, bulb angles, and bulb plates should correspond to the thickness tabulated for the reduced depths with a minimum thickness of 0.30 inch; the depths and breadths of wood fore-and-afters may be 80 percent of those given in the tables for side fore-and-afters, but the center fore-and-afters must be not less than 6½ inches wide. In vessels between 100 feet and 200 feet in length, the sizes of the beams and fore-and-afters are to be determined by linear interpolation.

[2] Depths for hatchway beams are at the middle of the length and are measured from the top mounting to the lower edge. Depths for fore-and-afters are measured from the under side of the hatch covers to the lower edge. Sizes for intermediate length and spacing are obtained by interpolation. Where plates are specified, two angles, of the sizes given for mountings, are to be fitted at the upper and at the lower part of the beam. Where bulb plates are specified, two angles, of the size given for mountings, are to be fitted at the upper part of the beam or fore-and-after. Where bulb angles are specified, one angle, of the size given for mountings, is to be fitted at the upper part of the section. Where the specified flanges of an angle are of different dimensions, the larger flange is to be horizontal.

§ 43.10–25 Carriers or sockets.

(a) Carriers or sockets for hatchway beams and fore-and-afters are to be of steel at least one-half inch thick, and are to have a width of bearing surface of at least 3 inches.

§ 43.10–30 Cleats.

(a) Strong cleats at least 2½ inches wide are to be fitted at intervals of not more than 2 feet from center to center; the end cleats are to be placed not more than 6 inches from each corner of the hatchway.

§ 43.10–35 Battens and wedges.

(a) Battens and wedges are to be efficient and in good condition.

§ 43.10–40 Tarpaulins.

(a) At least two tarpaulins in good condition, thoroughly waterproofed, and of ample strength, are to be provided for each hatchway in an exposed position on freeboard and superstructure decks. The material is to be guaranteed free from jute, and shall not be less than No. 4 cotton canvas or No. 6 hemp canvas before waterproofing, or shall be of suitable synthetic fabric as approved for this purpose by the Load Line Assigning Authority.

§ 43.10–45 Security of hatchway covers.

(a) At all hatchways in exposed positions on freeboard and superstructure decks ring bolts or other fittings for lashings are to be provided.

(b) Where the breadth of the hatchway exceeds 60 percent of the breadth of the deck in way of the hatchway, and the coamings are required to be 24 inches high, fittings for special lashings are to be provided for securing the hatchway covers after the tarpaulins are battened down.

§ 43.10–50 Cargo and other hatchways in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.

(a) The construction and fittings of such hatchways are to be at least equivalent to the standards laid down in § 43.10–55.

§ 43.10–55 Hatchway coamings and closing arrangements.

(a) Cargo, coaling, and other hatchways in the freeboard deck within superstructures which are fitted with class 2 closing appliances are to have coamings at least 9 inches in height and closing arrangements as effective as those required for exposed cargo hatchways whose coamings are 18 inches high.

(b) Where the closing appliances are less efficient than class 2, the hatchways are to have coamings at least 18 inches in height, and are to have fittings and closing arrangements as effective as those required for exposed cargo hatchways.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 43.15–37, 43.15–40.

§ 43.10–60 Machinery space openings in exposed positions on freeboard and raised quarter-decks.

(a) Such openings are to be properly framed and efficiently enclosed by steel casings of ample strength, and where the casings are not protected by other structures their strength is to be specially considered. Doors in such casings are to be of steel, efficiently stiffened, permanently attached, and capable of being closed and secured from both sides. The sills of openings are to be at least 24 inches above the freeboard deck and at least 18 inches above the raised quarter-deck.

(b) Fiddley, funnel, and ventilator coamings are to be as high above the deck as is reasonable and practicable. Fiddley openings are to have strong steel covers permanently attached in their proper positions.

§ 43.10–65 Machinery space openings in exposed positions on superstructure decks other than raised quarter-decks.

(a) Such openings are to be properly framed and efficiently enclosed by strong steel casings. Doors in such cases are to be strongly constructed, permanently attached, and capable of being closed and secured from both sides. The sills

of the openings are to be at least 15 inches above superstructure decks.

(b) Fiddley, funnel, and ventilator coamings are to be as high above the deck as is reasonable and practicable. Fiddley openings are to have strong steel covers permanently attached in their proper positions.

§ 43.10–67 Machinery space openings in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.

(a) Such openings are to be properly framed and efficiently enclosed by steel casings. Doors in such casings are to be strongly constructed, permanently attached, and capable of being securely closed. The sills of the openings are to be at least 9 inches above the deck where the superstructures are closed by class 2 closing appliances, and at least 15 inches above the deck where the closing appliances are less efficient than class 2.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 43.15–37, 43.15–40.

§ 43.10–70 Flush bunker scuttles.

(a) Flush bunker scuttles may be fitted in superstructure decks, and where so fitted are to be of iron or steel, of substantial construction, with screw or bayonet joints. Where a scuttle is not secured by hinges, a permanent chain attachment is to be provided. The position of flush bunker scuttles in small vessels in special trades is to be dealt with by each assigning authority.

§ 43.10–75 Companionways.

(a) Companionways in exposed positions on freeboard decks and on decks of enclosed superstructures are to be of substantial construction. The sills of the doorways are to be of the heights specified for hatchway coamings (see §§ 43.10–10, 43.10–55). The doors are to be strongly constructed and capable of being closed and secured from both sides. Where the companionway is situated within a quarter of the vessel's length from the stem, it is to be of steel and riveted to the deck plating.

§ 43.10–77 Ventilators in exposed positions on freeboard and superstructure decks.

(a) Such ventilators to spaces below freeboard decks or decks of superstructures which are intact or fitted with class 1 closing appliances are to have coamings of steel, substantially constructed, and efficiently connected to the deck by rivets spaced four diameters apart center to center, or by equally effective means. The deck plating at the base of the coamings is to be efficiently stiffened between the deck beams. The ventilator openings are to be provided with efficient closing arrangements.

(b) Where such ventilators are situated on the freeboard deck, or on the superstructure deck within a quarter of the vessel's length from the stem, and the closing arrangements are of a temporary character, the coamings are to be at least 36 inches in height; in other exposed positions on the superstructure deck they are to be at least 30 inches in height. Where the coaming of any ventilator exceeds 36 inches in height, it is to be specially supported and secured.

§ 43.10–80 Air pipes.

(a) Where the air pipes to ballast and other tanks extend above the freeboard or superstructure decks, the exposed parts of the pipes are to be of substantial construction; the height from the deck to the opening is to be at least 36 inches in wells on freeboard decks, 30 inches on raised quarter decks, and 18 inches on other superstructure decks. Satisfactory means are to be provided for closing the openings of the air pipes.

§ 43.10–85 Gangway, cargo, and coaling ports.

(a) Openings in the sides of vessels below the freeboard deck are to be fitted with watertight doors or covers, which, with their securing appliances, are to be of sufficient strength.

§ 43.10–87 Scuppers and sanitary discharge pipes.

(a) Discharges from scuppers and sanitary pipes led through the vessel's sides from spaces below the freeboard deck are to be fitted with efficient and accessible means for preventing water from passing inboard. Each separate discharge may have an automatic nonreturn valve with a positive means of closing it from a readily accessible position above the freeboard deck, or two automatic nonreturn valves without positive means of closing, provided the upper valve is situated so that it is always accessible for examination under service conditions. The positive-action valve is to be accessible and is to be provided with means for showing whether the valve is opened or closed.

(b) Conditional upon the type and the location of the inboard ends of such openings, similar provisions may be prescribed by the assigning authority as to discharge from spaces within enclosed superstructures.

(c) Where scuppers are fitted in superstructures not fitted with class 1 closing appliances they are to have efficient means for preventing the accidental admission of water below the freeboard deck.

§ 43.10–90 Air ports.

(a) Air ports to spaces below the freeboard deck or to spaces below the superstructure deck of superstructures closed by class 1 or class 2 closing appliances are to be fitted with efficient inside deadlights permanently attached in their proper positions so that they can be effectively closed and secured watertight.

(b) Where, however, such spaces in superstructures are appropriated to passengers other than steerage passengers or to crew, the air ports may have portable deadlights stowed adjacent to the air ports, provided they are readily accessible at all times on service.

(c) The air ports and deadlights are to be of substantial and approved construction.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 43.15–37, 43.15–40.

§ 43.10–95 Guardrails.

(a) Efficient guardrails or bulwarks are to be fitted on all exposed portions of freeboard and superstructure decks.

§ 43.10–97 Freeing ports.

(a) Where bulwarks on the weather portions of freeboard or superstructure decks form "wells" ample provision is to be made for rapidly freeing the decks of water and for draining them. The minimum freeing port area on each side of the vessel for each well on the freeboard deck and on the raised quarter-deck is to be that given by the following scale: The minimum area for each well on any other superstructure deck is to be one-half the area given by the scale. Where the length of the well exceeds 0.7 *L*, the scale may be modified.

SCALE OF FREEING PORT AREA

Length of bulwarks in "well" in feet:	*Freeing port area on each side in square feet*
15	8.0
20	8.5
25	9.0
30	9.5
35	10.0
40	10.5
45	11.0
50	11.5
55	12.0
60	12.5
65	13.0
Above 65	(1)

[1] One square foot for each additional 5 feet length of bulwark.

(b) The lower edges of the freeing ports are to be as near the deck as practicable and preferably not higher than the upper edge of the gunwale bar. Two-thirds of the freeing port area required is to be provided in the midship half of the well. In vessels with less than the standard sheer the freeing port area is to be suitably increased.

(c) All such openings in the bulwarks are to be protected by rails or bars spaced about 9 inches apart. If shutters are fitted to freeing ports, ample clearance is to be provided to prevent jamming. Hinges are to have brass pins.

§ 43.10–100 Protection of crew.

(a) Gangways, lifelines, or other satisfactory means are to be provided for the protection of the crew in getting to and from their quarters. The strength of houses for the accommodation of crew on flush deck steamers is to be equivalent to that required for superstructure bulkheads.

Subpart 43.15—Load Lines for Steamers [3]

§ 43.15–1 Length (L).

(a) The length used with the rules and freeboard tables is the length in feet on the summer load water line from the foreside of the stem to the afterside of the rudder post. Where there is no rudder post, the length is measured from the foreside of the stem to the axis of the rudder stock. For vessels with cruiser sterns, the length is to be taken as 96 percent of the total length on the designed summer load waterline or as the length from the foreside of the stem to the axis of the rudder stock if that be the greater.

§ 43.15–5 Breadth (B).

(a) The breadth is the maximum breadth in feet amidships to the molded line of the frame in iron or steel vessels and to the outside of the planking in wood or composite vessels.

§ 43.15–7 Molded depth.

(a) The molded depth is the vertical distance in feet, measured amidships, from the top of the keel to the top of the freeboard deck beam at side. In wood and composite vessels the distance is measured from the lower edge of the keel rabbet. Where the form at the lower part of the midship section is of a hollow character, or where thick garboards are fitted, the depth is measured from the point where the line of the flat of the bottom continued inwards cuts the side of the keel.

§ 43.15–10 Depth for freeboard (D).

(a) The depth used with the freeboard table is the molded depth plus the thickness of stringer plate, or plus

$$\frac{T\ (L-S)}{L} \qquad (1)$$

if that be greater, where

T is the mean thickness of the exposed deck clear of deck openings, and

S is the total length of superstructures as defined in § 43.15–27.

(b) Where the topsides are of unusual form, D is the depth of a midship section having vertical topsides, standard round of beam, and area of topside section equal to that in the actual midship section. Where there is a step or break in the topsides (that is, as in the turret-deck vessel) 70 percent of the area above the step or break is included in the area used to determine the equivalent section.

(c) In a vessel without an enclosed superstructure covering at least 0.6L amidships, without a complete trunk or without a combination of intact partial superstructures and trunk extending all fore-and-aft, where D is less than $\frac{L}{15}$, the depth used with the table is not to be taken as less than $\frac{L}{15}$.

§ 43.15–15 Coefficient of fineness (c).

(a) The coefficient of fineness used with the freeboard table is given by

$$c=\frac{35\Delta}{L.B.d_1} \qquad (1)$$

where Δ is the vessel's molded displacement in tons (excluding bossing) at a mean molded draft d_1 which is 85 percent of the molded depth.

(b) The coefficient c is not to be taken as less than 0.68.

§ 43.15–17 Strength.

(a) The assigning authority is to be satisfied with the structural strength of vessels to which freeboards are assigned.

(b) Vessels which comply with the highest standard of the rules of a classification society recognized by the Commandant, U. S. Coast Guard, shall be regarded as having sufficient strength for the minimum freeboards allowed under the regulations in this part.

(c) Vessels which do not comply with the highest standard of the rules of a classification society recognized by the Commandant, U. S. Coast Guard, shall be assigned such increased freeboards as shall be determined by the assigning authority, and for guidance the following strength moduli are formulated:

(1) *Material.* The strength moduli are based on the assumption that the structure is built of mild steel, manufactured by the open-hearth process (acid or basic), and having a tensile strength of 26 to 32 tons per square inch, and an elongation of at least 16 percent, on a length of 8 inches.

(2) *Strength deck.* The strength deck is the uppermost deck which is incorporated into and forms an integral part of the longitudinal girder within the half-length amidships.

(3) *Depth to strength deck (Ds).* The depth to strength deck is the vertical distance in feet amidships from the top of the keel to the top of the strength deck beam at side.

(4) *Draft (d).* The draft is the vertical distance in feet amidships from the top of the keel to the center of the disk.

(5) *Longitudinal modulus.* The longitudinal modulus $\frac{I}{y}$ is the moment of inertia I of the midship section about the neutral axis divided by the distance y measured from the neutral axis to the top of the strength deck beam at side, calculated in way of openings but without deductions for rivet holes. Areas are measured in square inches and distances in feet.

(i) Below the strength deck, all continuous longitudinal members other than such parts of underdeck girders as are required entirely for supporting purposes are included. Above the strength deck, the gunwale angle bar and the extension of the sheerstrake are the only members included.

(ii) The required longitudinal modulus for effective material is expressed by $f.\ d.\ B.$, where f is the factor obtained from Table 43.15–17(c) (5) (ii).

TABLE 43.15–17 (c) (5) (ii)

L	f	L	f	L	f
100	1.80	280	6.20	460	14.15
120	2.00	300	6.95	480	15.15
140	2.35	320	7.70	500	16.25
160	2.70	340	8.55	520	17.35
180	3.15	360	9.40	540	18.45
200	3.60	380	10.30	560	19.60
220	4.20	400	11.20	580	20.80
240	4.80	420	12.15	600	22.00
260	5.45	440	13.10		

(iii) For intermediate lengths, the value of f is determined by interpolation. This formula applies where L does not exceed 600 feet; B is between

$$\frac{L}{10}+5 \text{ and } \frac{L}{10}+20 \qquad (1)$$

both inclusive, and $\frac{L}{D_s}$ is between 10 and 13.5, both inclusive.

(6) *Frame.* For the purpose of the frame modulus, the frame is regarded as composed of a frame angle and a reverse angle each of the same size and thickness.

(7) *Frame modulus.* The modulus $\frac{I}{y}$ of the midship frame below the lowest tier of beams is the moment of inertia I of the frame section about the neutral axis divided by the distance y measured from the neutral axis to the extremity of the frame section, calculated without deduction for rivet and bolt holes. The modulus is measured in inch units.

(i) The required frame modulus is expressed by

$$\frac{s(d-t)\ (f_1+f_2)}{1{,}000} \qquad (2)$$

where:

s is the frame spacing in inches.

t is the vertical distance in feet measured at amidships from the top of the keel to a point midway between the top of the inner bottom at side and the top of the heel bracket (see fig. 43.15–17 (c) (7) (i)); where there is no double bottom, t is measured to a point midway between the top of the floor at center and the top of the floor at side.

f_1 is a coefficient depending on H, which, in vessels fitted with double bottoms, is the vertical distance in feet from the middle of the beam bracket of the lowest tier of beams at side to a point midway between the top of the inner bottom at side and the top of the heel bracket (see fig. 43.15–17 (c) (7) (i)); where there is no double bottom, H is measured to a point midway between the top of the floor at center and the top of the floor at side. Where the frame obtains additional strength from the form of the vessel, due allowance is made in the value of f_1.

f_2 is a coefficient depending on K, which is the vertical distance in feet from the top of the lowest tier of beams at side to a point 7 feet 6 inches above the freeboard deck at side, or, if there is

[3] The provisions of §§ 43.01–1—43.01–100, inclusive, and §§ 43.05–1—43.10–100, inclusive, apply to all vessels and for steamers, are further supplemented by §§ 43.15–1—43.15–98, inclusive. Steamers taking advantage of special classifications, such as tankers, steamers carrying timber deck cargo, lumber schooners, etc., are also subject to these requirements except as specifically modified in their separate classifications as set forth in the regulations.

TABLE 43.15-17 (c) (7) (i)

H in feet	0	7	9	11	13	15	17	19	21	23	25
f_1	9	11	12.5	15	19	24	29.5	36	43	51	59
K in feet	0	5	10	15	20	25	30	35	40	.....	.....
f_2	0	0.5	1.0	2.0	3.0	4.5	6.5	9.0	12.0	.....	.....

Intermediate values are obtained by interpolation.

a superstructure, to a point 12 feet 6 inches above the freeboard deck at side. (See fig. 43.15-17 (c) (7) (i).) The values of f_1 and f_2 are obtained from Table 43.15-17 (c) (7) (i).

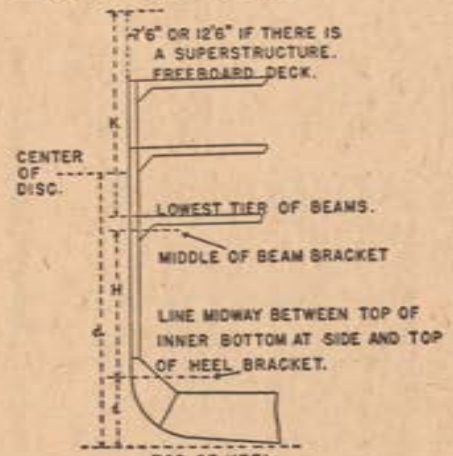

FIGURE 43.15-17 (c) (7) (i)

(ii) This formula applies where D is between 15 feet and 60 feet, both inclusive, B is between

$$\frac{L}{10}+5 \text{ and } \frac{L}{10}+20, \text{ both inclusive, } \frac{L}{D_s}$$

is between 10 and 13.5, both inclusive, and the horizontal distance from the outside of the frame to the center of the first row of pillars does not exceed 20 feet.

(iii) In single-deck vessels of ordinary form, where H does not exceed 18 feet, the frame modulus determined by the preceding method is multiplied by the factor f_3 where

$$f_3=0.50+0.05\ (H-8) \qquad (3)$$

(iv) Where the horizontal distance from the outside of the frame to the center of the first row of pillars exceeds 20 feet, the assigning authority is to be satisfied that sufficient additional strength is provided.

§ 43.15-20 Height of superstructure.

(a) The height of a superstructure is the least vertical height measured from the top of the superstructure deck to the top of the freeboard deck beams minus the difference between D and the molded depth. (See §§ 43.15-7, 43.15-10.)

§ 43.15-25 Standard height of superstructure.

(a) The standard height of a raised quarter-deck is 3 feet for vessels up to and including 100 feet in length, 4 feet for vessels 250 feet in length, and 6 feet for vessels 400 feet in length and above. The standard height of any other superstructure is 6 feet for vessels up to and including 250 feet in length and 7 feet 6 inches for vessels 400 feet in length and above. The standard height at intermediate lengths is obtained by interpolation.

§ 43.15-27 Length of superstructure (S).

(a) The length of a superstructure is the mean covered length of the parts of the superstructure which extends to the sides of the vessel and lie within lines drawn perpendicular to the extremities of the summer load waterline, as defined in § 43.15-1.

§ 43.15-30 Enclosed superstructure.

(a) A detached superstructure is regarded as inclosed only where:

(1) The enclosing bulkheads are of efficient construction. (See § 43.15-35.)

(2) The access openings in these bulkheads are fitted with class 1 or class 2 closing appliances. (See §§ 43.15-37, 43.15-40.)

(3) All other openings in sides or ends of the superstructure are fitted with efficient weathertight means of closing.

(4) Independent means of access to crew, machinery, bunker, and other working spaces within bridges and poops are at all times available when the bulkhead openings are closed.

§ 43.15-35 Superstructure bulkheads.

(a) Bulkheads at exposed ends of poops, bridges, and forecastles are deemed to be of efficient construction where the assigning authority is satisfied that, in the circumstances, they are equivalent to the following standard for vessels with minimum freeboards under which standard the stiffeners and plating are of the scantlings given in Table 43.15-35(a), the stiffeners are spaced 30 inches apart, the stiffeners on poop and bridge front bulkheads have efficient end connections, and those on after bulkheads of bridges and forecastles extend for the whole distance between the margin angles of the bulkheads.

TABLE 43.15-35 (a)—EXPOSED BULKHEADS OF SUPERSTRUCTURES OF STANDARD HEIGHT

Bridge front bulkheads, unprotected bulkheads of poops 0.4L or more in length		Bulkheads of poops partially protected or less in length than 0.4L		After bulkheads of bridges and forecastles	
Length of vessel	Bulb angle stiffeners	Length of vessel	Plain angle stiffeners	Length of vessel	Plain angle stiffeners
Feet	*Inches*	*Feet*	*Inches*	*Feet*	*Inches*
Under 160	5½ by 3 by 0.30.	Under 150	3 by 2½ by 0.30.	Under 150	2½ by 2½ by 0.26.

Length of vessel	Bulkhead plating [1]	Length of vessel	Bulkhead plating [1]	Length of vessel	Bulkhead plating [1]
Feet	*Inch*	*Feet*	*Inch*	*Feet*	*Inch*
200 and under	0.3	160 and under	0.24	160 and under	0.20
380 and above	.44	400 and above	.38	400 and above	.30

[1] For vessels intermediate in length the thicknesses of bulkhead plating are obtained by interpolation.

§ 43.15-37 Class 1 closing appliances.

(a) These appliances are of iron or steel, are in all cases to be permanently and strongly attached to the bulkhead, are framed, stiffened, and fitted so that the whole structure is of equivalent strength to the unpierced bulkhead, and are weathertight when closed. The means for securing these appliances are permanently attached to the bulkhead or to the appliances, and the latter are so arranged that they can be closed and secured from both sides of the bulkhead or from the deck above. The sills of the access openings are at least 15 inches above the deck.

§ 43.15-40 Class 2 closing appliances.

(a) These appliances are:

(1) Strongly framed hardwood hinged doors, which are not more than 30 inches wide nor less than 2 inches thick; or

(2) Shifting boards fitted for the full height of the opening in channels riveted to the bulkhead, the shifting boards being at least 2 inches thick where the width of opening is 30 inches or less, and increased in thickness at the rate of 1 inch for each additional 15 inches of width; or

(3) Portable plates of equal efficiency.

§ 43.15-43 Temporary closing appliances.

(a) Temporary closing appliances for middle line openings in the deck of an enclosed superstructure consist of

(1) A steel coaming not less than 9 inches in height efficiently riveted to the deck;

(2) Hatchway covers as required by § 43.10-15, secured by hemp lashings; and

(3) Hatchway supports as required by §§ 43.10–20, 43.10–25 and by Table 43.10–20 (a1) or 43.10–20 (a2).

§ 43.15–45 General, relative superstructures.

(a) Where exposed bulkheads of the ends of poops, bridges, and forecastles are not of efficient construction (see § 43.10–25), they are considered as nonexistent.

(b) Where in the side plating of a superstructure there is an opening not provided with permanent means of closing, the part of the superstructure in way of the opening is regarded as having no effective length.

(c) Where the height of a superstructure is less than the standard, its length is reduced in the ratio of the actual to the standard height. Where the height exceeds the standard, no increase is made in the length of the superstructure.

§ 43.15–47 Poop.

(a) Where there is an efficient bulkhead and the access openings are fitted with class 1 closing appliances (§ 43.15–37), the length to the bulkhead is effective. Where the access openings in an efficient bulkhead are fitted with class 2 closing appliances (§ 43.15–40) and the length to the bulkhead is $0.5L$ or less, 100 percent of that length is effective; where the length is $0.7L$ or more, 90 percent of that length is effective; where the length is between $0.5L$ and $0.7L$, an intermediate percentage of that length is effective; where an allowance is given for an efficient adjacent trunk (see § 43.15–57), 90 percent of the length to the bulkhead is to be taken as effective; 50 percent of the length of an open poop or of an open extension beyond an efficient bulkhead is effective.

§ 43.15–50 Raised quarter-deck.

(a) Where there is an efficient intact bulkhead, the length to the bulkhead is effective. Where the bulkhead is not intact, the superstructure is considered as a poop of less than standard height.

§ 43.15–53 Bridge.

(a) Where there is an efficient bulkhead at each end, and the access openings in the bulkheads are fitted with class 1 closing appliances, the length between the bulkheads is effective.

(b) Where the access openings in the forward bulkhead are fitted with class 1 closing appliances and the access openings in the after bulkhead with class 2 closing appliances, the length between the bulkheads is effective; where an allowance is given for an efficient trunk, adjacent to the after bulkhead (see § 43.15–57), 90 percent of the length is effective. Where the access openings in both bulkheads are fitted with class 2 closing appliances, 90 percent of the length between the bulkheads is effective. Where the access openings in the forward bulkhead are fitted with class 1 or class 2 closing appliances and the access openings in the after bulkhead have no closing appliances, 75 percent of the length between the bulkheads is effective. Where the access openings in both bulkheads have no closing appliances, 50 percent of the length is effective; 75 percent of the length of an open extension beyond the after bulkhead and 50 percent of that beyond the forward bulkhead are effective.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 43.15–37, 43.15–40.

§ 43.15–55 Forecastle.

(a) Where there is an efficient bulkhead and the access openings are fitted with class 1 or class 2 closing appliances, the length to the bulkhead is effective. Where no closing appliances are fitted and the sheer forward of amidships is not less than the standard sheer, 100 percent of the length of the forecastle forward of $0.1L$ from the forward perpendicular is effective; where the sheer forward is half the standard sheer or less, 50 percent of that length is effective; and where the sheer forward is intermediate between the standard and half the standard sheer, an intermediate percentage of that length is effective; 50 percent of the length of an open extension beyond the bulkhead or beyond $0.1L$ from the forward perpendicular is effective.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 43.15–37, 43.15–40.

§ 43.15–57 Trunk.

(a) A trunk or similar structure which does not extend to the sides of the vessel is regarded as efficient: *Provided*, That:

(1) The trunk is at least as strong as a superstructure.

(2) The hatchways are in the trunk deck, and comply with the requirements of §§ 43.10–1—43.10–45 and the width of the trunk deck stringer provides a satisfactory gangway and sufficient lateral stiffness.

(3) A permanent working platform fore and aft fitted with guardrails is provided by the trunk deck, or by detached trunks connected to other superstructures by efficient permanent gangways.

(4) Ventilators are protected by the trunk, by watertight covers or by equivalent means.

(5) Open rails are fitted on the weather portions of the freeboard deck in way of the trunk for at least half their length.

(6) The machinery casings are protected by the trunk, by a superstructure of standard height or by a deckhouse of the same height and of equivalent strength.

(b) Where access openings in poop and bridge bulkheads are fitted with class 1 closing appliances, 100 percent of the length of an efficient trunk reduced in the ratio of its mean breadth to B is added to the effective length of the superstructures. Where the access openings in these bulkheads are not fitted with class 1 closing appliances 90 percent is added.

(c) The standard height of a trunk is the standard height of a bridge.

(d) Where the height of the trunk is less than the standard height of a bridge, the addition is reduced in the ratio of the actual to the standard height; where the height of hatchway coamings on the trunk deck is less than the standard height of coamings (see § 43.10–10), a reduction from the actual height of trunk is to be made which corresponds to the difference between the actual and the standard height of coamings.

§ 43.15–60 Enclosed superstructure with middle line openings in the deck not provided with permanent means of closing.

(a) Where there is an enclosed superstructure with one or more middle line openings in the deck not provided with permanent means of closing (see §§ 43.10–1—43.10–45), the effective length of the superstructure is determined as follows:

(1) Where efficient temporary closing appliances are not provided for the middle line deck openings (see § 43.15–43), or the breadth of openings is 80 percent or more of the breadth B_1 of the superstructure deck at the middle of the opening, the vessel is considered as having an open well in way of each opening, and freeing ports are to be provided in way of this well. The effective length of superstructure between openings is governed by §§ 43.15–47, 43.15–53, 43.15–55.

(2) Where efficient temporary closing appliances are provided for middle line deck openings, and the breadth of openings is less than $0.8B_1$ the effective length is governed by §§ 43.15–47, 43.15–53, 43.15–55, except that where access openings in between deck bulkheads are closed by class 2 closing appliances, they are regarded as being closed by class 1 closing appliances in determining the effective length. The total effective length is obtained by adding to the length determined by subparagraph (1) of this paragraph the difference between this length and the length of the vessel modified in the ratio of

$$\frac{B_1-b}{B_1}$$ where b=breadth of deck opening

where

$$\frac{B_1-b}{B_1}$$ is greater than 0.5, it is taken as 0.5

§ 43.15–63 Deductions for superstructures.

(a) Where the effective length of superstructures is $1.0L$, the deduction from the freeboard is 14 inches at 80 feet length of vessels, 34 inches at 280 feet length, and 42 inches at 400 feet length and above; deductions at intermediate lengths are obtained by interpolation. Where the total effective length of superstructures is less than $1.0L$ the deduction is a percentage obtained from Table 43.15–63(a):

TABLE 43.15-63 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURES (E)

Superstructures	0	0.1L	0.2L	0.3L	0.4L	0.5L	0.6L	0.7L	0.8L	0.9L	1.0L	Line
	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	
All types with forecastle and without detached bridge	0	5	10	15	23.5	32	46	63	75.3	87.7	100	A
All types with forecastle and detached bridge [1]	0	6.3	12.7	19	27.5	36	46	63	75.3	87.7	100	B

[1] Where the effective length of a detached bridge is less than 0.2L the percentages are obtained by interpolation between lines B and A. Where no forecastle is fitted the above percentages are reduced by 5. Percentages for intermediate lengths of superstructures are obtained by interpolation.

§ 43.15–65 Sheer, general.

(a) The sheer is measured from the deck at side to a line of reference drawn parallel to the keel through the sheer line at amidships.

(b) In vessels designed to trim by the stern in service, the sheer may be measured in relation to the load line, provided an additional mark is placed at 0.25 *L* forward of amidships to indicate the assigned load line. This mark is to be similar to the load line disk amidships.

(c) In flush deck vessels and in vessels with detached superstructures the sheer is measured at the freeboard deck.

(d) In vessels with topsides of unusual form in which there is a step or break in the topsides, the sheer is considered in relation to the equivalent depth amidships. (See § 43.15–15.)

(e) In vessels with a superstructure of standard height which extends over the whole length of the freeboard deck, the sheer is measured at the superstructure deck; where the height exceeds the standard, the sheer may be considered in relation to the standard height.

(f) Where a superstructure is intact or access openings in its inclosing bulkheads are fitted with class 1 closing appliances (§ 43.15–37), and the superstructure deck has at least the same sheer as the exposed freeboard deck, the sheer of the enclosed portion of the freeboard deck is not taken into account.

§ 43.15–67 Standard sheer profile.

(a) The ordinates (in inches) of the standard sheer profile are given in Table 43.15–67 (a), where *L* is the number of feet in the length of the vessel.

TABLE 43.15-67 (a)

Station	Ordinate	Factor
A. P.[1]	0.1 *L*+10	1
1/6 L from A. P.	.0445*L*+ 4.45	4
1/3 L from A. P.	.011 *L*+ 1.1	2
Amidships	0	4
1/3 L from F. P.[2]	.022 *L*+ 2.2	2
1/6 L from F. P.	.089 *L*+ 8.9	4
F. P.	.2 *L*+20	1

[1] A. P.=After end of summer load waterline.
[2] F. P.=Fore end of summer load waterline.

§ 43.15–70 Measurement of variations from standard sheer profile.

(a) Where the sheer profile differs from the standard, the 7 ordinates of each profile are multiplied by the appropriate factors given in the table of ordinates. The difference between the sums of the respective products, divided by 18, measures the deficiency or excess of sheer. Where the after half of the sheer profile is greater than the standard and the forward half is less than the standard, no credit is allowed for the part in excess and the deficiency only is measured.

(b) Where the forward half of the sheer profile exceeds the standard, and the after portion of the sheer profile is not less than 75 percent of the standard, credit is allowed for the part in excess; where the after part is less than 50 percent of the standard no credit is given for the excess sheer forward. Where the after sheer is between 50 percent and 75 percent of the standard, intermediate allowances may be granted for excess sheer forward.

§ 43.15–73 Correction for variations from standard sheer profile.

(a) The correction for sheer is the deficiency or excess of sheer (see § 43.15–70(a)) multiplied by $0.75-\frac{S}{2L}$ where S is the total length of superstructure, as defined in § 43.15–27.

§ 43.15–75 Addition for deficiency in sheer.

Where the sheer is less than the standard, the correction for deficiency in sheer (see § 43.15–73) is added to the freeboard.

§ 43.15–77 Deduction for excess sheer.

(a) In flush deck vessels and in vessels where an enclosed superstructure covers 0.1 *L* before and 0.1 *L* abaft amidships, the correction for excess of sheer (see § 43.15–73) is deducted from the freeboard; in vessels with detached superstructures where no enclosed superstructure covers amidships, no deduction is made from the freeboard; where an enclosed superstructure covers less than 0.1 *L* before and 0.1 *L* abaft amidships, the deduction is obtained by interpolation. The maximum deduction for excess sheer is 1½ inches at 100 feet and increases at the rate of 1½ inches for each additional 100 feet in the length of the vessel.

§ 43.15–80 Standard round of beam.

(a) The standard round of beam of the freeboard deck is one-fiftieth of the breadth of the vessel.

§ 43.15–83 Round of beam correction.

(a) Where the round of beam of the freeboard deck is greater or less than the standard, the freeboard is decreased or increased respectively by one-fourth of the difference between the actual and the standard round of beam, multiplied by the proportion of the length of the freeboard deck not covered by enclosed superstructures. Twice the standard round of beam is the maximum for which allowance is given.

§ 43.15–85 Summer freeboard.

(a) The minimum freeboard in summer is the freeboard derived from the freeboard table after corrections for departures from the standards and after deduction for superstructures. The freeboard in salt water measured from the intersection of the upper surface of the freeboard deck with the outer surface of the shell is not to be less than 2 inches.

§ 43.15–87 Tropical freeboard.

(a) Except as provided in paragraph (b) of this section, the minimum freeboard in the tropical zone is the freeboard obtained by a deduction from the summer freeboard of one-fourth inch per foot of summer draft measured from the top of the keel to the center of the disk. The freeboard in salt water measured from the intersection of the upper surface of the freeboard deck with the outer surface of the shell is not to be less than 2 inches.

(b) For vessels 400 feet and above in length engaged in coastwise voyages, the area on the west coast of the United States eastward of a rhumb line from the point 30° N. latitude, 120° W. longitude to the point 33° N. latitude, 123° W. longitude, and a line thence along the meridian 123° W. longitude to its intersection with land at 38° N. latitude shall be considered an extension of the seasonal tropical zone as defined in § 43.40–1(f)(5)(ii), and the minimum freeboard is determined as in paragraph (a) of this section. For vessels above 300 feet and up to 400 feet in length engaged in coastwise voyages the minimum freeboard in this area during the tropical seasons is the freeboard obtained by deduction from the summer freeboard of $\left(\frac{L}{400}-0.75\right)$ inch per foot of summer draft, and it shall be noted on the coastwise load line certificate when this provision has been applied. The freeboard in salt water measured from the intersection of the upper surface of the freeboard deck with the outer surface of the shell is not to be less than 2 inches.

§ 43.15–90 Winter freeboard.

(a) Except as provided in paragraph (b) of this section, the minimum freeboard in winter is the freeboard obtained by an addition to the summer freeboard of one-fourth inch per foot of summer draft, measured from the top of the keel to the center of the disk.

(b) For vessels 400 feet and above in length engaged in coastwise voyages, the area on the east coast of the United States west of a line drawn south along the meridian at 68°30′ W. longitude from where it intersects the coast to 40° N. latitude, thence along a rhumb line to the point 36° N. latitude, 73° W. longitude shall be considered an extension of the summer zone and the minimum freeboard shall be the summer freeboard. For vessels above 300 feet and up to 400 feet in length engaged in coastwise voyages the minimum freeboard, when in this area, in winter, is the freeboard obtained by an addition to the summer freeboard of $\left(1.00-\frac{L}{400}\right)$ inch per foot of summer draft, and it shall be noted

on the coastwise load line certificate when this provision has been applied.

§ 43.15–93 Winter North Atlantic freeboard.

(a) The minimum freeboard for vessels not exceeding 330 feet in length on voyages across the North Atlantic from a port or place of departure north of latitude 36° N. to a port or place of arrival north of latitude 36° N., regardless of the route of the vessel while it is in either of the northern seasonal winter zones during the winter season, shall be the winter freeboard plus 2 inches. For vessels over 330 feet in length it is the winter freeboard.

§ 43.15–95 Fresh-water freeboard.

(a) The minimum freeboard in fresh water of unit density is the freeboard obtained by deducting from the minimum freeboard in salt water $\frac{\Delta}{40T}$ inches, where

Δ=displacement in salt water in tons at the summer load waterline, and T=tons per inch immersion in salt water at the summer load waterline.

(b) Where the displacement at the summer load waterline cannot be certified, the deduction is to be one-fourth inch per foot of summer draft, measured from the top of the keel to the center of the disk.

§ 43.15–97 Freeboard table for steamers.

(a) Table 43.15–97(a) gives the basic minimum summer freeboard for steamers which comply with the standards in this part.

TABLE 43.15–97 (a)—BASIC MINIMUM SUMMER FREEBOARD FOR STEAMERS

L (feet)	Freeboard (inches)	L (feet)	Freeboard (inches)
80	8.0	550	116.4
90	9.0	560	119.1
100	10.0	570	121.8
110	11.0	580	124.4
120	12.0	590	127.0
130	13.0	600	129.5

210	24.8	680	148.1
220	26.6	690	150.2
230	28.5	700	152.3
240	30.3	710	154.4
250	32.3	720	156.4
260	34.4	730	158.5
270	36.5	740	160.5
280	38.7	750	162.5
290	41.0	760	164.4
300	43.4	770	166.3
310	45.9	780	168.2
320	48.4	790	170.1
330	51.0	800	172.0
340	53.7	810	173.8
350	56.5	820	175.6
360	59.4	830	177.4
370	62.4	840	179.2
380	65.4	850	180.9
390	68.4	860	182.6
400	71.5	870	184.3
410	74.6	880	186.0
420	77.8	890	187.7
430	80.9	900	189.3
440	84.0	910	190.9
450	87.1	920	192.5
460	90.2	930	194.1
470	93.3	940	195.7
480	96.3	950	197.3
490	99.3	960	198.9
500	102.3	970	200.4
510	105.2	980	201.9
520	108.1	990	203.4
530	110.9	1,000	204.9
540	113.7	[1]	[1]

[1] Vessels above 1,000 feet are to be dealt with by the administration.

(b) The minimum freeboards for flush deck steamers are obtained by an addition to Table 43.15–97 (a) at the rate of 1½ inches for every 100 feet of length.

(c) The freeboards at intermediate lengths are obtained by interpolation.

(d) Where c exceeds 0.68, the freeboard is multiplied by the factor

$$\frac{c+0.68}{1.36} \quad (1)$$

(e) Where D exceeds $\frac{L}{15}$ the freeboard is increased by $\left(D-\frac{L}{15}\right)R$ inches, where R is $\frac{L}{130}$ at lengths less than 390 feet, and 3 at 390 feet length and above.

(f) In a vessel with an enclosed superstructure covering at least $0.6L$ amidships with a complete trunk or with a combination of intact partial superstructures and trunk which extends all fore and aft, where D is less than $\frac{L}{15}$ the freeboard is reduced at the above rate.

(g) Where the height of superstructures or trunk is less than the standard height, the reduction is in the ratio of the actual to the standard height.

(h) Where the actual depth to the surface of the freeboard deck amidships is greater or less than D, the difference between the depths (in inches) is added to or deducted from the freeboard.

§ 43.15–98 Reduced freeboards for steamers having superior design and operational features, and engaged on United States coastwise and/or intercoastal voyages.

(a) Subject to compliance with the additional conditions in paragraph (b) of this section but otherwise in accordance with the usual conditions of assignment, the freeboards of steamers over 370 feet in length, engaged in U.S. coastwise and/or intercoastal voyages, may be computed from the lesser tabular values given by the Table 43.15–98(a) in lieu of those given by Table 43.15–97(a).

TABLE 43.15–98(a)—REDUCED BASIC MINIMUM SUMMER FREEBOARDS FOR STEAMERS ON UNITED STATES COASTWISE AND/OR INTERCOASTAL VOYAGES

TABLE 43.15–98(a)—REDUCED BASIC MINIMUM SUMMER FREEBOARDS FOR STEAMERS ON UNITED STATES COASTWISE AND/OR INTERCOASTAL VOYAGES—Continued

L (feet)	Freeboard inches	L (feet)	Freeboard inches
910	167.3	970	174.4
920	168.5	980	175.5
930	169.7	990	176.6
940	170.9	1000	177.6
950	172.1	[1]	[1]
960	173.3		

[1] Vessels above 1,000 feet are to be dealt with by the administration.

(b) In order to be eligible for the reduced freeboards permitted by this section, vessels shall comply with the following supplementary conditions:

(1) Weather deck hatch covers shall be of steel construction, sealed watertight, without need for tarpaulins, as provided by § 43.10–5(b). Associated hatch coamings shall be at least of standard height, as provided by § 43.10–10.

(2) Vessels shall be fitted with forecastles having an efficient bulkhead with effective Class 1 or Class 2 closing appliances. Forecastles of standard height or greater shall extend for at least 0.07L. If a forecastle is of less than standard height, but not less than 5.5 feet in height, the product of its length and height, in feet squared, shall be at least equal to 0.50L+50 times the deficiency in height in feet. Forecastles may not be less than 5.5 feet in height for credit under this subparagraph.

(3) Alternatively, vessels not having creditable forecastles but having sufficient excess sheer forward, are eligible for these reduced freeboards. For this purpose the sheer in inches at ⅙L from the forward perpendicular shall be at least 0.089L+8.9+⅓ times the difference between the tabular freeboard obtained from Table 43.15–97(a) and that obtained from Table 43.15–98(a). Similarly, the sheer at the forward perpendicular shall be at least 0.2L+20 plus the difference between the tabular freeboards obtained from Tables 43.15–97(a) and 43.15–98(a).

(4) Vessels shall be subdivided and shall be operated with sufficient stability to maintain a one compartment standard of watertight subdivision and damage stability at drafts up to and including the resulting load draft. For determining compliance with this requirement, the specific standards laid down in Parts 73 and 74 of Subchapter H (Passenger Vessels) of this chapter, as they apply to a required factor of subdivision of 1.0, shall be used, with the exception however, that the cargo space permeabilities specified by §§ 73.10–5(c) and 74.10–15(c) of this chapter shall be suitably increased when the vessel is particularly engaged in the carriage of cargoes which result in a higher value. The related plans, calculations and data, including the stability instructions called for by Subpart 74.20, shall be submitted to the Commandant (MMT), who will then advise the American Bureau of Shipping, or other authorized assigning authority, as to the final acceptability of the subdivision at the proposed draft.

(5) Vessels shall be structurally suitable for the resulting load draft.

Subpart 43.20—Load Lines for Sailing Vessels [4]

§ 43.20–1 Lines to be used on sailing vessels in connection with the disk.

(a) Winter and tropical load lines are not marked on sailing vessels. The maximum load lines to which sailing vessels may be laden in salt water in winter and in the tropical zone is the center of the disk. (See fig. 43.20–1 (a).)

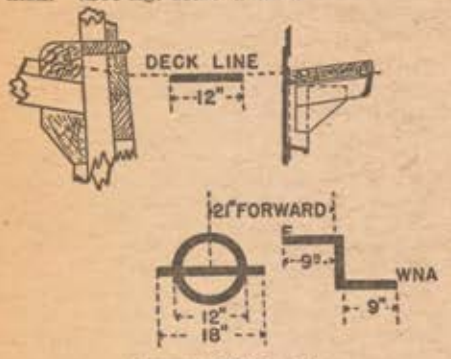

FIGURE 43.20–1 (a)

§ 43.20–5 Conditions of assignment of sailing vessel load lines.

(a) The conditions of assignment for sailing vessels are those contained in §§ 43.10–1—43.10–100.

§ 43.20–10 Computation of freeboard, sailing vessels.

(a) Freeboards are computed from the freeboard table for sailing vessels in the same manner as the freeboards for steamers are computed from the freeboard table for steamers, except as provided by §§ 43.20–15—43.20–45.

§ 43.20–15 Depth for freeboard, sailing vessels (D).

(a) In sailing vessels having a greater rate of rise of floor than 1½ inches per foot, the vertical distance from the top of keel (§ 43.15–7) is reduced by half the difference between the total rise of floor at the half breadth of the vessel and the total rise of 1½ inches per foot; 2½ inches per foot of half breadth is the maximum rate of rise for which a deduction is made.

(b) Where the form at the lower part of the midship section is of a hollow character, or thick garboards are fitted, the depth is measured from the point where the line of the flat of the bottom continued inwards cuts the side of the keel.

(c) The depth used with the freeboard table is to be taken as not less than $\frac{L}{12}$.

[4] The provisions of §§ 43.01–1—43.01–100 and 43.05–1—43.15–97, inclusive, apply to sailing vessels, except as modified by §§ 43.20–1—43.20–45, inclusive.

§ 43.20–20 Coefficient of fineness, sailing vessels (c).

(a) The coefficient used with the freeboard table for sailing vessels is to be taken as not less than 0.62 and not greater than 0.72.

§ 43.20–25 Superstructures in wood sailing vessels.

(a) In wood sailing vessels the construction and closing arrangements of superstructures for which deductions are made from the freeboard are to be to the satisfaction of the assigning authority.

§ 43.20–30 Deductions for sailing vessel superstructures.

(a) Where the effective length of superstructures on sailing vessels is 1.0L, the deduction from the freeboard is 3 inches at 80 feet length of vessel, and 28 inches at 330 feet length and above; deductions in intermediate lengths are obtained by interpolation. Where the total effective length of superstructures is less than 1.0L, the deduction is a percentage obtained from Table 43.20–30 (a).

TABLE 43.20–30 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURES (E)

Type of superstructures	0	0.1L	0.2L	0.3L	0.4L	0.5L	0.6L	0.7L	0.8L	0.9L	1.0L	Line
	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	
All types without bridge	0	7	13	17	23.5	30	47½	70	80	90	100	A
All types with bridge [1]	0	7	14.7	22	32	42	56	70	80	90	100	B

[1] Where the effective length of bridge is less than 0.2L, the percentages are obtained by interpolation between lines B and A. Percentages for intermediate lengths of superstructures are obtained by interpolation.

§ 43.20–35 Minimum freeboards for sailing vessels.

(a) No addition to the freeboard is required for winter freeboard, nor is a deduction permitted for tropical freeboard.

(b) An increase in freeboard of 3 inches is made for voyages across the North Atlantic north of latitude 36° N. during the winter months.

(c) In computing the fresh water freeboard for a wood vessel, the draft is measured from the lower edge of the rabbet of keel to the center of the disk.

§ 43.20–40 Freeboard table for sailing vessels.

(a) Table 43.20–40(a) gives the basic minimum summer, winter, and tropical freeboards for iron and steel flush deck sailing vessels, which comply with the standards in this part.

TABLE 43.20–40 (a)—MINIMUM SUMMER, WINTER, AND TROPICAL FREEBOARDS FOR IRON AND STEEL FLUSH DECK SAILING VESSELS

L (feet)	Freeboard	L (feet)	Freeboard	L (feet)	Freeboard
	Inches		Inches		Inches
80	9.2	170	28.2	260	50.8
90	11.0	180	30.6	270	53.5
100	12.9	190	33.0	280	56.3
110	14.9	200	35.4	290	59.1
120	17.0	210	37.9	300	61.9
130	19.1	220	40.4	310	64.7
140	21.3	230	42.9	320	67.6
150	23.5	240	45.5	330	70.5
160	25.8	250	48.1		

(b) The freeboards at intermediate lengths are obtained by interpolation.

(c) Where c exceeds 0.62 the freeboard is multiplied by the factor

$$\frac{c+0.62}{1.24} \quad (1)$$

(d) Where D exceeds $\frac{L}{12}$ the freeboard is increased by

$$\left(D-\frac{L}{12}\right)\times\left(1+\frac{L}{250}\right) \text{ inches.} \quad (2)$$

(e) Where the actual depth to the surface of the freeboard deck amidships is greater or less than D, the difference between the depths (in inches) is added to or deducted from the freeboard.

§ 43.20–45 Freeboard for wood sailing vessels.

(a) The freeboard for a wood sailing vessel is the final freeboard the vessel would obtain if she were of iron or steel, with the addition of such penalties as the assigning authority may determine, having regard to the classification, construction, age, and condition of the vessel.

Subpart 43.25—Load Lines for Steamers Carrying Timber Deck Cargoes [5]

§ 43.25–1 Definitions.

(a) *Timber deck cargo.* The term "timber deck cargo" means a cargo of timber carried on an uncovered part of a freeboard or superstructure deck. The term does not include wood pulp or similar cargo.

(b) *Timber load line.* A timber load line is a special load line to be used only when the vessel is carrying a timber deck cargo in compliance with the requirements in this subpart.

§ 43.25–5 Marks on the vessel's sides; timber cargo; timber load lines.

(a) The lines which indicate the maximum timber load lines in different circumstances and at different seasons are to be horizontal lines, 9 inches in length and 1 inch in breadth, which extend from and are at right angles to, a vertical line marked 21 inches abaft the center of the disk. (See fig. 43.25–5(a).) They are to be marked and verified similarly

[5] The provisions of §§ 43.01–1—43.01–100, inclusive, and §§ 43.05–1—43.15–97, inclusive, also apply to steamers marked to carry timber deck cargoes except as they are modified by §§ 43.25–1—43.30–5, inclusive.

to the ordinary load lines. (See §§ 43.05–20—43.05–30.)

(b) The summer timber load line is indicated by the upper edge of a line marked *"LS."*

(c) The winter timber load line is indicated by the upper edge of a line marked *"LW."*

(d) The winter North Atlantic timber load line is indicated by the upper edge of a line marked *"LWNA."*

(e) The tropical timber load line is indicated by the upper edge of a line marked *"LT."*

(f) The fresh water timber load line in summer is indicated by the upper edge of a line marked *"LF."* The difference between the fresh water timber load line in summer and the summer timber load line is the allowance to be made for loading in fresh water at the other timber load lines. The fresh water timber load line in the tropical zone is

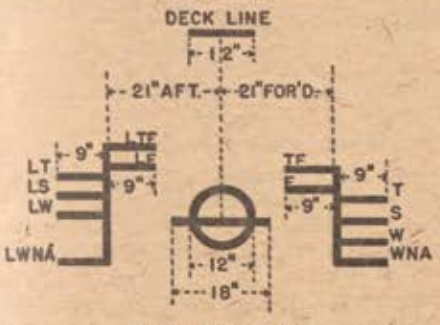

FIGURE 43.25–5 (a)

indicated by the upper edge of a line marked "LTF." [4]

§ 43.25–10 Construction of vessel; timber cargo.

(a) The structure of the vessel is to be of sufficient strength for the deeper draft allowed and for the weight of the deck cargo.

§ 43.25–15 Superstructures; timber cargo.

(a) The vessel is to have a forecastle of at least standard height and at least 7 percent of the length of the vessel, and, in addition, a poop, or a raised quarter deck with a strong steel hood or deckhouse fitted aft.

§ 43.25–20 Machinery casings; timber cargo.

(a) Machinery casings on the freeboard deck are to be protected by a superstructure of at least standard height, unless the machinery casings are of sufficient strength and height to permit of the carriage of timber alongside.

§ 43.25–25 Double bottom tanks; timber cargo.

(a) Double bottom tanks where fitted within the midship half length of the vessel are to have adequate longitudinal subdivision.

[4] Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

§ 43.25–30 Bulwarks; timber cargo.

(a) The vessel must be fitted either with permanent bulwarks at least 3 feet 3 inches high, specially stiffened on the upper edge and supported by strong bulwark stays attached to the deck in the way of the beams and provided with necessary freeing ports or with efficient rails of the same height as the above and of specially strong construction.

§ 43.25–35 Deck openings covered by timber deck cargo.

(a) Openings to spaces below the freeboard deck are to be securely closed and battened down. All fittings, such as hatchway beams fore-and-afters, and covers are to be in place. Where hold ventilation is needed, the ventilators are to be efficiently protected.

§ 43.25–40 Stowage; timber cargo.

(a) The wells on the freeboard deck are to be filled with timber stowed as solidly as possible, to at least the standard height of a bridge.

(b) On a vessel within a seasonal winter zone in winter, the height of the deck cargo above the freeboard deck is not to exceed one-third of the extreme breadth of the vessel.

(c) All timber deck cargo is to be compactly stowed, lashed, and secured. It must not interfere in any way with the navigation and necessary work of the vessel, or with the provision of a safe margin of stability at all stages of the voyage, regard being given to additions of weight, such as those due to absorption of water and to losses of weight such as those due to consumption of fuel and stores.

§ 43.25–45 Protection of crew, access to machinery space; timber cargo.

(a) Safe and satisfactory access to the quarters of the crew, to the machinery space, and to all other parts used in the necessary work of the vessel is to be available at all times. Deck cargo in way of openings which give access to such parts is to be so stowed that the openings can be properly closed and secured against the admission of water. Efficient protection for the crew in the form of guardrails, or lifelines, spaced not more than 12 inches apart vertically, is to be provided on each side of the deck cargo to a height of at least 4 feet above the cargo. The cargo is to be made sufficiently level for gangway purposes.

§ 43.25–50 Steering arrangements; timber cargo.

(a) Steering arrangements are to be effectively protected from damage by cargo and, as far as practicable, are to be accessible. Efficient provision is to be made for steering in the event of a breakdown in the main steering arrangements.

§ 43.25–55 Uprights; timber cargo.

(a) Uprights, when required by the nature of the timber, are to be of adequate strength and may be of wood or metal; the spacing is to be suitable for the length and character of timber carried, but is not to exceed 10 feet. Strong angles or metal sockets efficiently secured to the stringer plate or equally efficient means are to be provided for securing the uprights.

§ 43.25–60 Lashings; timber cargo.

(a) Timber deck cargo is to be efficiently secured throughout its length by independent overall lashings spaced not more than 10 feet apart.

(b) Eye plates for these lashings are to be riveted to the sheer strake at intervals of not more than 10 feet, the distance from an end bulkhead of a superstructure to the first eye plate being not more than 6 feet 6 inches. Additional eye plates may be fitted on the stringer plate.

(c) Overall lashings are to be in good condition and are to be not less than three-fourths inch close link chain or flexibile wire rope of equivalent strength, fitted with sliphooks and stretching screws, which are to be accessible at all times. Wire rope lashings are to have a short length of long link chain to permit the length of lashings to be regulated.

(d) When timber is in lengths less than 12 feet, the spacing of the lashings is to be reduced to suit the length of timber or other suitable provision made.

(e) When the spacing of the lashings is 5 feet or less, the size of the lashing may be reduced, but not less than one-half inch chain or equivalent wire rope is to be used.

(f) All fittings required for securing the lashings are to be of strength corresponding to the strength of the lashings.

(g) On superstructure decks, uprights, where fitted, are to be about 10 feet apart and are to be secured by athwartship lashings of ample strength.

§ 43.25–65 Plans; timber cargo.

(a) Plans showing the fittings and arrangements for stowing and securing timber deck cargoes in compliance with the foregoing conditions and §§ 43.25–1—43.25–60 are to be submitted to the assigning authority.

§ 43.25–70 Computation of freeboard; timber cargo.

(a) Where the assigning authority is satisfied that the vessel is suitable and that the conditions and arrangements are at least equal to the foregoing requirements for the carriage of timber deck cargo, the summer freeboards computed in accordance with the rules and tables in §§ 43.15–1—43.15–97, may be modified to give special timber freeboards by substituting the following percentages for those in § 43.15–63:

TABLE 43.25–70 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURES

	0	0.1*L*	0.2*L*	0.3*L*	0.4*L*	0.5*L*	0.6*L*	0.7*L*	0.8*L*	0.9*L*	1.0*L*
All types	Percent 20	Percent 30.75	Percent 41.5	Percent 52.25	Percent 63	Percent 69.25	Percent 75.5	Percent 81.5	Percent 87.5	Percent 93.75	Percent 100

(b) The winter timber freeboard is to be obtained by adding to the summer timber freeboard one-third of an inch per foot of the molded summer timber draft.

(c) The winter North Atlantic timber freeboards are the winter North Atlantic freeboards prescribed in § 43.15–93.

(d) The tropical timber freeboard is to be obtained by deducting from the summer timber freeboard one-quarter of an inch per foot of the molded summer timber draft.

CROSS REFERENCE: For requirements for the carriage of timber deck cargo, see §§ 43.25–1—43.25–65.

Subpart 43.30—Load Lines for Tankers [7]

NOTE: The term "tanker" includes all steamers specially constructed for the carriage of liquid cargoes in bulk.

§ 43.30–1 Tanker load line markings.

(a) Tankers assigned load lines computed in accordance with Table 43.30–70 (a) (valid for both United States' domestic and international voyages) shall be marked as provided by §§ 43.05–5 to 43.05–30, inclusive, and as shown in Figure 43.05–5(a).

(b) Tankers assigned load lines computed in accordance with Table 43.30–75 (a) (valid only for United States coastwise and/or intercoastal voyages) shall be marked abaft the disk as shown in Figure 43.05–15(d).

(c) Tankers marked in accordance with paragraph (b) of this section but which may also engage in foreign voyages may carry both the markings called for by paragraphs (a) and (b) of this section when on United States coastwise and/or intercoastal voyages, except that, in such cases, the line through the center of the disk shall correspond to the summer load line computed in accordance with Table 43.30–70(a). Tankers departing on foreign voyages shall only bear the marks forward of the disk called for by paragraph (a) of this section.

§ 43.30–5 Construction of tanker.

(a) The structure of the vessel is to be of sufficient strength for the increased draft corresponding to the freeboard assigned.

§ 43.30–10 Forecastle; tanker.

(a) The vessel is to have a forecastle of which the length is not less than 7 percent of the length of the vessel and the height is not less than the standard height.

§ 43.30–15 Machinery casings; tanker.

(a) The openings in machinery casings on the freeboard deck are to be fitted with steel doors. The casings are to be protected by an enclosed poop or bridge of at least standard height or by a deckhouse of equal height and of equivalent strength. The bulkheads at the ends of these structures are to be of the scantlings required for bridge front bulkheads. All entrances to the structures from the freeboard deck at to be fitted with effective closing appliances and the sills are to be at least 18 inches above the deck. Exposed machinery casings on the superstructure deck are to be of substantial construction, and all openings in them are to be fitted with steel closing appliances permanently attached to the casings and capable of being closed and secured from both sides; the sills of such openings are to be at least 15 inches above the deck. Fiddley openings are to be as high above the superstructure deck as is reasonable and practicable and are to have strong steel covers permanently attached in their proper positions.

§ 43.30–20 Gangway; tanker.

(a) An efficiently constructed permanent gangway of sufficient strength for its exposed position is to be fitted fore and aft at the level of the superstructure deck between the poop and midship bridge, and when crew are berthed forward, from the bridge to the forecastle, or other equivalent means of access may be provided to carry out the purpose of the gangway, such as passages below deck.

§ 43.30–25 Protection of crew; access to machinery space; tanker.

(a) Safe and satisfactory access from the gangway level to the quarters of the crew, the machinery space, and all other parts used in the necessary work of the vessel is to be available at all times. This section does not apply to pumprooms entered from the freeboard deck, when fitted with class 1 closing appliances.

CROSS REFERENCE: For class 1 closing appliances, see § 43.15–37.

§ 43.30–30 Hatchways; tanker.

(a) All exposed hatchways on the freeboard deck and on the deck of expansion trunks are to be closed watertight by efficient steel covers. Hatchways on the freeboard deck within a forecastle which is closed at the after end with a bulkhead and closing appliances no less effective than Class 2 may be fitted with wood covers, coamings, and closing appliances in accordance with § 43.10–55, provided hatchways on the forecastle deck are closed watertight by efficient steel covers.

§ 43.30–35 Ventilators; tanker.

(a) Ventilators to spaces below the freeboard deck are to be of ample strength or are to be protected by superstructures or equally efficient means.

§ 43.30–40 Freeing arrangements; tanker.

(a) Vessels with bulwarks are to have open rails fitted for at least half the length of the exposed portion of the weather deck or other effective freeing arrangements. The upper edge of the sheer strake is to be kept as low as practicable and preferably not higher than the upper edge of the gunwale bar.

(b) Where superstructures are connected by trunks, open rails are to be fitted for the whole length of the weather portions of the freeboard deck.

§ 43.30–45 Plans; tanker.

(a) Plans showing proposed fittings and arrangements are to be submitted to the assigning authority for approval.

§ 43.30–50 Computation of freeboard; tanker.

(a) When the assigning authority is satisfied that the foregoing requirements are fulfilled, the summer freeboard may be computed from the table for tankers; all corrections except those for flushdeck steamers, detached superstructures, excess sheer, and winter voyages across the North Atlantic are to be made in accordance with §§ 43.15–1—43.15–97.

§ 43.30–55 Deductions for detached superstructures; tankers.

(a) When the total effective length of superstructure is less than 1.0*L*, the deduction is a percentage of that for a superstructure of length 1.0*L*, and is obtained from Table 43.30–55(a).

TABLE 43.30–55 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURES

	0	0.1*L*	0.2*L*	0.3*L*	0.4*L*	0.5*L*	0.6*L*	0.7*L*	0.8*L*	0.9*L*	1.0*L*
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
All types	0	7	14	21	31	41	52	63	75.3	87.7	100

§ 43.30–60 Deduction for excess sheer; tanker.

(a) Where the sheer is greater than the standard, the correction for excess sheer (see § 43.15–73) is deducted from the freeboard for all tankers. Section 43.15–77 does not apply except that the maximum deduction for excess sheer is 1½ inches at 100 feet and increases at the rate of 1½ inches for each additional 100 feet in the length of the vessel.

§ 43.30–65 Winter North Atlantic freeboard; tanker.

(a) The minimum freeboard for tankers on voyages across the North Atlantic from a port or place of departure north of latitude 36° N. to a port or place of arrival north of latitude 36° N., regardless of the route of the vessel while it is in either of the northern seasonal winter zones during the winter season, shall be the winter freeboard plus an addition at a rate of one inch per 100 feet in length.

§ 43.30–70 Freeboard table for tankers.

(a) Table 43.30–70(a) gives the basic minimum summer freeboard for tankers which comply with the standards in this part.

[7] The provisions of §§ 43.01–1—43.01–100, inclusive, and §§ 43.05–1—43.05–97, inclusive also apply to tankers except as they are modified by §§ 43.30–1—43.30–70, inclusive.

TABLE 43.30-70(a)—BASIC MINIMUM FREEBOARD FOR TANKERS

L (feet)	Freeboard (inches)	L (feet)	Freeboard (inches)
190	21.5	610	110.1

[1] Vessels above 1,000 feet are to be dealt with by the Administration.

§ 43.30-75 Freeboard table for tankers on United States coastwise and/or intercoastal voyages.

(a) Tankers which are structurally qualified to be operated at the resulting deeper drafts may be assigned load lines, valid only for United States coastwise and/or intercoastal voyages, which have been computed on the basis of Table 43.30-75(a) in lieu of Table 43.30-70(a).

TABLE 43.30-75(a)—BASIC MINIMUM FREEBOARD FOR TANKERS ON UNITED STATES COASTWISE AND/OR INTERCOASTAL VOYAGES

L	Freeboard	L	Freeboard	L	Freeboard

[1] For vessels up to 300 feet the freeboards given by Table 43.30-70(a) apply.
[2] Vessels above 1,000 feet are to be specially considered.

Subpart 43.35—Lumber Schooners

§ 43.35-1 Load line marks for vessels specially constructed for the carriage of complete cargoes of timber (lumber schooner type).

(a) Load lines for existing vessels propelled by either sail or steam which have been specially constructed to carry complete cargoes of timber (that is, of the lumber schooner type) when carrying a complete cargo of timber will be marked with a load line as provided in § 43.01-15. The mark is illustrated by figure 43.35-1(a).

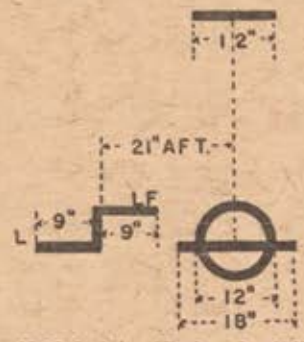

FIGURE 43.35-1 (a).—Timber load line for vessels constructed for the carriage of complete cargoes of timber.

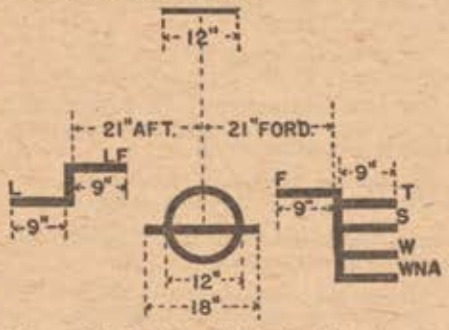

FIGURE 43.35-1 (b).—Timber load line in conjunction with steamer load line for vessels constructed for the carriage of complete cargoes of timber.

(b) Existing vessels which have been specially constructed to carry complete cargoes of timber (the lumber schooner type) and which carry cargoes other than complete timber cargoes, will be marked as provided in § 43.01-15, the marking is illustrated by figure 43.35-1 (b).

(c) The forward mark will be determined as provided in §§ 43.15-1—43.15-97 or §§ 43.20-1—43.20-45, as applicable to the type of vessel dealt with.

Subpart 43.40—Zones and Seasonal Areas and Miscellaneous Requirements

§ 43.40-1 Boundaries of the zones and seasonal areas.

(a) The southern boundary of the northern "winter seasonal" zone is a line drawn from the east coast of North America along the parallel of latitude 36° N. to Tarifa, in Spain; from the east coast of Korea along the parallel of latitude 35° N. to the west coast of Honshu, Japan; from the east coast of Honshu along the parallel of latitude 35° N. to longitude 150° W., and thence along a rhumb line to the west coast of British Columbia at latitude 55° N., Fusan (Korea) and Yokohama to be considered as being on the boundary line of the northern "winter seasonal" zone and the "summer" zone.

(b) The northern boundary of the "tropical" zone is a line drawn from the east coast of South America at lat. 10° N. along the parallel of lat. 10° N. to long. 20° W., thence north to lat. 20° N. and thence along the parallel of lat. 20° N. to the West Coast of Africa; a line from the east coast of Africa along the parallel of lat. 8° N. to the west coast of the Malay Peninsula, following thence the coast of Malay and Siam to the east coast of Cochin China at lat. 10° N., thence along the parallel of lat. 10° N. to long. 145° E., thence north to lat. 13° N. and thence along the parallel of lat. 13° N. to the west coast of Central America, Saigon to be considered as being on the boundary line of the "tropical" zone and the "seasonal tropical" area (4).

(c) The southern boundary of the "tropical" zone is a line drawn from the east coast of South America along the Tropic of Capricorn to the West Coast of Africa; from the east coast of Africa along the parallel of lat. 20° S. to the west coast of Madagascar, thence along the west and north coast of Madagascar to long. 50° E., thence north to lat. 10° S., thence along the parallel of lat. 10° S. to long. 110° E., thence along a rhumb line to Port Darwin, Australia, thence eastward along the coast of Australia and Wessel Island to Cape Wessel, thence along the parallel of lat. 11° S. to the west side of Cape York from the east side of Cape York at lat. 11° S. along the parallel of lat. 11° S. to long. 150° W., thence along a rhumb line to the point lat. 26° S., long. 75° W., and thence along a rhumb line to the west coast of South America at lat. 30° S., Coquimbo, Rio de Janeiro, and Port Darwin to be considered as being on the boundary line of the "tropical" and "summer" zones.

(d) The following regions are to be included in the "tropical" zone:

(1) The Suez Canal, the Red Sea, and the Gulf of Aden, from Port Said to the meridian of 45° E., Aden and Berbera to be considered as being on the boundary line of the "tropical" zone and the "seasonal tropical" area 2 (ii).

(2) The Persian Gulf to the meridian of 59° E.

(e) The northern boundary of the southern "winter seasonal" zone is a line drawn from the east coast of South America along the parallel of latitude 40° S. to longitude 56° W., thence along a rhumb line to the point latitude 34° S., longtitude 50° W., thence along the parallel of latitude 34° S. to the west coast of South Africa; from the east coast of South Africa at latitude 30° S. along a rhumb line to the point latitude 35°30′ S., longitude 118° E., off the southern coast of Australia, thence along a rhumb line to Cape Grim, Tasmania, thence along the north coast of Tasmania to Eddystone Point, thence along a rhumb line to the west coast of South Island, New Zealand, at longitude 170° E., thence along the west, south, and

east coasts of South Island to Cape Saunders, thence along a rhumb line to the point latitude 33° S., longitude 170° W.; and thence along the parallel of latitude 33° S. to the west coast of South America. Valparaiso, Capetown, and Durban to be considered as being on the boundary line of the Southern "seasonal winter" and "summer" zones.

(f) The remaining areas constitute the "summer" zones. The following areas are seasonal tropical areas:

(1) In the North Atlantic Ocean: An area bounded on the north by a line from Capa Catoche in Yucatan to Cape San Antonio in Cuba, by the South Cuban Coast to lat. 20° N. and by the parallel of lat. 20° N. to the point lat. 20° N., long. 20° W., on the west by the coast of Central America; on the south by the north coast of South America and by parallel of lat. 10° N., and on the east by the meridian of 20° W.

Tropical: 1st November to 15th July.
Summer: 16th July to 31st October.

(2) Arabian Sea: (i) North of lat. 24° N. Karachi is to be considered as being on the boundary line of this area and the seasonal tropical area below.

Tropical: 1st August to 20th May.
Summer: 21st May to 31st July.

(ii) South of lat. 24° N.

Tropical: 1st December to 20th May, and 16th September to 15th October.
Summer: 21st May to 15th September and 16th October to 30th November.

(3) Bay of Bengal:

Tropical: 16th December to 15th April.
Summer: 16th April to 15th December.

(4) In the China Sea: An area bounded on the west and north by the coast of Indo-China and China to Hong Kong, on the east by a rhumb line to the port of Sual (Luzon Island), and by the west coast of the Islands of Luzon, Samar, and Leyte to the parallel of 10° N., and on the south by the parallel of lat. 10° N., Hong Kong and Sual to be considered as being on the boundary of the "seasonal tropical" and "summer" zones.

Tropical: 21st January to 30th April.
Summer: 1st May to 20th January.

(5) In the north Pacific Ocean: (i) An area bounded on the north by the parallel of lat. 25° N., on the west by the meridian of 160° E., on the south by the parallel of lat. 13° N., and on the east by the meridian of 130° W.

Tropical: 1st April to 31st October.
Summer: 1st November to 31st March.

(ii) An area bounded on the north and east by the coast of California, Mexico, and Central America, on the west by the meridian of 120° W., and by a rhumb line from the point lat. 30° N., long. 120° W., to the point lat. 13° N., long. 105° W., and on the south by the parallel of lat. 13° N.

Tropical: 1st March to 30th June and 1st to 30th November.
Summer: 1st July to 31st October and 1st December to 28th/29th February.

(6) In the south Pacific Ocean: (i) An area bounded on the north by the parallel of lat. 11° S., on the west by the east coast of Australia, on the south by the parallel of lat. 20° S., and on the east by the meridian of 175° E., together with the Gulf of Carpentaria south of lat. 11° S. Mackay is to be considered as being on the boundary of the "seasonal tropical" and the "summer" zones.

Tropical: 1st April to 30th November.
Summer: 1st December to 31st March.

(ii) An area bounded on the west by the meridian of 150° W., on the south by the parallel of lat. 20° S., and on the north and east by the rhumb line forming the southern boundary of the tropical zone.

Tropical: 1st March to 30th November.
Summer: 1st December to 28/29th February.

(g) The following are seasonal winter areas: (1) Northern seasonal winter zone (between North America and Europe). (i) In the area within and to the northwards of the following line: A line drawn south from the coast of Greenland at long. 50° W. to lat. 45° N., thence along the parallel of lat. 45° N. to the meridian of 15° W., thence north to lat. 60° N., thence along the parallel of lat. 60° N. to the west coast of Norway, Bergen to be considered as being on the boundary line of this area and area subdivision (ii) of this subparagraph.

Winter: 16th October to 15th April.
Summer: 16th April to 15th October.

(ii) An area outside area subdivision (i) of this subparagraph and north of the parallel of lat. 36° N.

Winter: 1st November to 31st March.
Summer: 1st April to 31st October.

(2) Baltic (bounded by the parallel of latitude of the Skaw).

Winter: 1st November to 31st March.
Summer: 1st April to 31st October.

(3) Mediterranean and Black Sea.

Winter: 16th December to 15th March.
Summer: 16th March to 15th December.

(4) Northern "seasonal winter" zone (between Asia and North America, except Sea of Japan), south of 50° N.

Winter: 16th October to 15th April.
Summer: 16th April to 15th October.

(5) Sea of Japan between the parallels of lat. 35° N. and 50° N.

Winter: 1st December to 28th/29th February.
Summer: 1st March to 30th November.

(6) Southern "seasonal winter" zone.

Winter: 16th April to 15th October.
Summer: 16th October to 15th April.

§ 43.40–5 Fees, travel expense.

(a) *Scale of fees.* (1) Subject to the conditions as set forth in this paragraph, fees payable by owners will be charged for assignment of load line (including load line and condition survey, verification of markings and issuance of load line certificates) in accordance with Table 43.40–5 (a).

TABLE 43.40–5 (a)—FEES FOR ASSIGNMENT OF LOAD LINE

Size of vessel	Classed vessel [1]	Unclassed vessels
Under 200 gross tons	$30.00	$100.00
200 and under 400 gross tons	30.00	123.00
400 and under 700 gross tons	35.00	155.00
700 and under 1,000 gross tons	40.00	190.00
1,000 and under 1,500 gross tons	40.00	230.00
1,500 and under 2,500 gross tons	50.00	270.00
2,500 and under 3,500 gross tons	60.00	310.00
3,500 and under 5,000 gross tons	70.00	350.00
5,000 and under 6,500 gross tons	85.00	390.00
6,500 and under 8,000 gross tons	100.00	430.00
8,000 and under 10,000 gross tons	110.00	470.00
10,000 and under 12,000 gross tons	120.00	510.00
12,000 and under 15,000 gross tons	130.00	550.00
15,000 gross tons and above	140.00	590.00

[1] Classed vessel means vessel in class with the assigning authority.

(2) In the case of unclassed vessels newly built, where an extensive review of construction plans and attendance during construction by the Surveyors of the assigning authority may be required, in the case of existing unclassed vessels where necessary plans are not available, and in cases where alterations or repairs are made, which would require more than a normal attendance by the Surveyors, additional fees proportional to the amount of work involved may be charged.

(3) The provisions of this paragraph may be applied to either classed or unclassed vessels in cases where, due to alterations or changes in service, a new freeboard may be required.

(b) *Fees for renewal of load line certificates.* (1) For unclassed vessels the fees for condition survey and renewal of load line certificates shall be 50 percent of the scale in paragraph (a) of this section. In cases where alterations or repairs are made which would require more than a normal attendance by the Surveyors, additional fees, proportional to the amount of work involved may be charged.

(2) For classed vessels where the survey is carried out in conjunction with a survey required for maintenance of class and for which a fee is chargeable, no charge will be made for the survey, but an amount not exceeding $25 for the issuance of the new load line certificate may be charged.

(c) *Fees for annual load line inspection.* The fee for annual load line inspection shall be $25 for vessels not exceeding 2,000 gross tons, and $35 for vessels of more than 2,000 gross tons. Where alterations or repairs are made, which would require more than a normal attendance by the Surveyors, additional fees proportional to the work involved may be charged. In the case of a classed vessel no charge will be made for this inspection if carried out at the same time as a survey to the hull that is required for maintenance of class and for which a fee is chargeable.

(d) *Traveling expenses.* For all traveling expenses incurred in connection with the surveys described in this section there will be an additional charge.

§ 43.40–10 Forms of load line certificates.

INTERNATIONAL LOAD LINE CERTIFICATE

[FORM A1]

Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the International Load Line Convention, 1930.

[SEAL]
Issued by _____
Certificate No. _____
Name of ship _____ Official No. _____
Port of registry _____ Gross tonnage _____

FREEBOARD FROM DECK LINE		LOAD LINE
Tropical	(T)	_____ Above (S)
Summer	(S)	Upper edge of line through center of disk.
Winter	(W)	_____ Below (S)
Winter (North Atlantic)	(WNA)	_____ Below (S)

*Allowance for fresh water for all freeboards _____

(All measurements are to upper edges of the respective horizontal lines)

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the* _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been assigned in accordance with the Convention.

**This certificate remains in force until _____ issued at _____ on the _____ day of _____, 19____.

(Here follows the signature or seal and description of the assigning authority.)

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. Letters indicating the assigning authority are to be marked alongside the disk and above the center line. Periodic inspections are to be made at intervals of approximately twelve months.

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

**At the expiration of this certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so endorsed on the reverse side.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

(Reverse side of certificate)

ANNUAL INSPECTIONS

I have surveyed this ship for the purpose of seeing whether this certificate should remain in force and the survey has been completed to my satisfaction.

_____ _____ _____
(Signature of Surveyor) (Place) (Date)

I have surveyed this ship for the purpose of seeing whether this certificate should remain in force and the survey has been completed to my satisfaction.

_____ _____ _____
(Signature of Surveyor) (Place) (Date)

I have surveyed this ship for the purpose of seeing whether this certificate should remain in force and the survey has been completed to my satisfaction.

_____ _____ _____
(Signature of Surveyor) (Place) (Date)

I have surveyed this ship for the purpose of seeing whether this certificate should remain in force and the survey has been completed to my satisfaction.

_____ _____ _____
(Signature of Surveyor) (Place) (Date)

RENEWAL OF LOAD LINE CERTIFICATE

The provisions of the Convention being fully complied with by this ship, this certificate is renewed until _____, 19___.
Place _____
Date _____

ASSIGNING AUTHORITY
By _____
(Surveyor)

NOTES

1. The Winter North Atlantic Load Line applies for voyages across the North Atlantic Ocean north of latitude 36° N., during the winter months as defined by the Load Line Regulations. The periods during which the other seasonal load lines apply in different parts of the world are as stated in the Load Line Regulations.

2. This Load Line Certificate will be canceled by the Commandant, U. S. Coast Guard, if—

(a) The periodic inspections have not been carried out.

(b) Material alterations have been made to the hull or superstructures which would affect the calculations determining the position of the load lines.

(c) The fittings and appliances for the protection of the openings, guardrails, freeing ports, or the means of access to the crew's quarters have not been maintained in as effective a condition as they were when the Certificate was issued.

3. When this Certificate has expired or been canceled, it must be delivered to the Assigning Authority.

_____

INTERNATIONAL LOAD LINE CERTIFICATE

[Form A2]

Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the International Load Line Convention, 1930.

[SEAL]

Issued by _____
Certificate No. _____
Name of ship _____ Official No. _____
Port of registry _____ Gross tonnage _____

FREEBOARD FROM DECK LINE		LOAD LINE
Tropical, Summer, Winter		Upper edge of line through center of disk.
Winter—North Atlantic	(WNA)	Upper edge of line below center of disk.

Allowance for fresh water for all freeboards _____

(All measurements are to upper edges of the respective horizontal lines)

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been assigned in accordance with the Convention.

*This certificate remains in force until _____
Issued at _____ on the _____ day of _____, 19___

(Here follows the signature or seal and description of the assigning authority.)

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. Letters indicating the assigning authority are to be marked alongside the disk and above the centerline. Periodic inspections are to be made at intervals of approximately twelve months.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

(Reverse side of certificate to be prepared with notes and for endorsements as set forth for Form A1.)

*At the expiration of this certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so endorsed on the reverse side.

INTERNATIONAL LOAD LINE CERTIFICATE

[Form A3]

Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the International Load Line Convention, 1930.

[SEAL]

Issued by _____
Certificate No. _____
Name of ship _____ Official No. _____
Port of registry _____ Gross tonnage _____

FREEBOARDS FROM DECK LINE		LOAD LINE
Tropical	(T)	_____ Above (S)
Summer	(S)	Upper edge of line through center of disk.
Winter	(W)	_____ Below (S)
Winter (North Atlantic)	(WNA)	_____ Below (S)

*Allowance for fresh water for all freeboards _____

The timber freeboards given in this certificate are applicable only when this ship carries a timber deck cargo and complies with the special requirements of the Load Line Regulations regarding timber deck cargoes.

FREEBOARDS FROM DECK LINE		LOAD LINE
Tropical (Timber)	(LT)	_____ Above (S)
Summer (Timber)	(LS)	_____ Above (S)
Winter (Timber)	(LW)	_____ Above (S)
Winter North Atlantic (Timber)	(LWNA)	_____ Below (S)

(All measurements are to upper edges of the respective horizontal line)

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been assigned in accordance with the Convention.

LOAD LINE REGULATIONS

**This certificate remains in force until _____
Issued at _____ on the _____ day of _____, 19___

(Here follows the signature or seal and description of the assigning authority.)

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

**At the expiration of this certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so indorsed on the reverse side.

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. (The diagram showing the timber load line marks is to be inserted above by the assigning authority.) Letters indicating the assigning authority are to be marked alongside the disk and above the center line. Periodic inspections are to be made at intervals of approximately twelve months.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

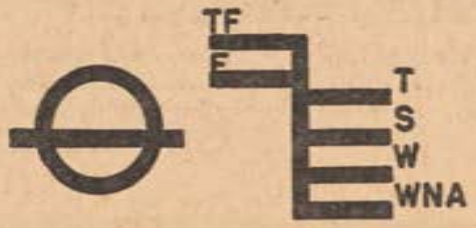
(Reverse side of certificate to be prepared with notes and for endorsements as set forth for Form A1.)

LOAD LINE CERTIFICATE

[Form B]

(To be issued to foreign vessels belonging to countries that have not ratified or acceded to the International Load Line Convention, 1930.)

Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the Load Line Act of March 2, 1929, as amended.



[SEAL]

Issued by _____
Certificate No. _____
Name of ship _____ Official No. _____
Port of registry _____ Gross tonnage _____

FREEBOARD FROM DECK LINE		LOAD LINE
Summer in tropical seas	(T)	_____ Above (S)
Summer	(S)	Upper edge of line through center of disk.
Winter	(W)	_____ Below (S)
Winter in North Atlantic	(WNA)	_____ Below (S)

*Allowance for fresh water for all freeboards _____

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been found to be correctly marked upon the vessel in manner and location as provided by the load line regulations of the Commandant, U. S. Coast Guard.

**This certificate remains in force until _____
Issued at _____ on the _____ day of _____, 19__

(Here follows the signatures or seal and the description of the authority issuing the certificate.)

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. Letters indicating the assigning authority are to be marked alongside the disk and above the centerlines. This certificate is limited to 1 year and must be renewed annually.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for renewal endorsements.)

(Reverse side of certificate)

RENEWAL OF LOAD LINE CERTIFICATE

The provisions of the regulations of the Commandant, U. S. Coast Guard, determining load lines being fully complied with by this ship, this certificate is renewed till _____ Place_____ Date_____

Signature or seal and description of assigning authority.

The provisions of the regulations of the Commandant, U. S. Coast Guard, determining load lines being fully complied with by this ship, this certificate is renewed till _____ Place_____ Date_____

Signature or seal and description of assigning authority.

NOTES

1. The Winter North Atlantic Load Line applies for voyages across the North Atlantic Ocean north of latitude 36° N., during the winter months as defined by the Load Line Regulations. The periods during which the other seasonal load lines apply in different parts of the world are as stated in the Load Line Regulations.

2. This Load Line Certificate will be canceled by the Commandant, U. S. Coast Guard if—

(a) Material alterations have been made to the hull or superstructure which would affect the calculations determining the position of the load lines.

(b) The fittings and appliances for the protection of the openings, guardrails, freeing ports, or the means of access to the crew's quarters have not been maintained in as effective a condition as they were when the Certificate was issued.

3. When this Certificate has expired or been canceled, it must be delivered to the Assigning Authority.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

**At the expiration of the certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so endorsed on the reverse side.

Assigning Authority
By _____
(Surveyor)

NOTES

1. The periods and areas during which the seasonal load lines apply are as stated in the Load Line Regulations.

2. This Load Line Certificate will be canceled by the Commandant, U. S. Coast Guard, if—

(a) The periodic inspections have not been carried out.

(b) Material alterations have been made to the hull or superstructures which would affect the calculations determining the position of the load lines.

(c) The fittings and appliances for the protection of the openings, guard rails, freeing ports, or the means of access to the crew's quarters have not been maintained in as effective a condition as they were when the Certificate was issued.

3. When this certificate has expired or been canceled, it must be delivered to the Assigning Authority.

COASTWISE LOAD LINE CERTIFICATE

[Form C2]

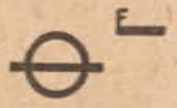
Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the Coastwise Load Line Act, 1935, as amended.

[SEAL]

Issued by _____

Certificate No. _____

Name of ship _____ Official No. _____



Port of registry _____ Gross tonnage _____

FREEBOARD FROM DECK LINE	LOAD LINE
Tropical Summer Winter _____	Upper edge of line through center of disk.

Allowance for fresh water for all freeboards _____

(All measurements are to upper edges of the respective horizontal lines.)

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been assigned in accordance with the Commandant, U. S. Coast Guard, Coastwise Load Line Regulations.

*This certificate remains in force until _____

Issued at _____ on the _____ day of _____, 19__.

(Here follows the signature or seal and description of the assigning authority.)

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. Letters indicating the assigning authority are to be marked alongside the disk and above the centerline. Periodic inspections are to be made at intervals of approximately twelve months.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

(Reverse side of certificate to be prepared with notes and for endorsements as set forth for Form C1.)

*At the expiration of this certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so indorsed on the reverse side.

COASTWISE LOAD LINE CERTIFICATE

[Form C3]

Issued under the authority of the United States of America, Commandant, U. S. Coast Guard, under the provisions of the Coastwise Load Line Act, 1935, as amended.

[SEAL]

Issued by _____

Certificate No. _____

Name of ship _____ Official No. _____

Port of registry _____ Gross tonnage _____

FREEBOARD FROM DECK LINE		LOAD LINE
Tropical	(T)	_____ Above (S)
Summer	(S)	Upper edge of line through center of disk.
Winter	(W)	_____ Below (S)

*Allowance for fresh water for all freeboards _____

The timber freeboards given in this certificate are applicable only when this ship carries a timber deck cargo and complies with the special requirements of the Load Line Regulations regarding timber deck cargoes.

FREEBOARDS FROM DECK LINE		LOAD LINE
Tropical (Timber)	(LT)	_____ Above (S)
Summer (Timber)	(LS)	_____ Above (S)
Winter (Timber)	(LW)	_____ Above (S) Below (S)

(All measurements are to upper edges of the respective horizontal lines.)

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been assigned in accordance with the Commandant, U. S. Coast Guard, Coastwise Load Line Regulations.

**This certificate remains in force until _____

Issued at _____ on the _____ day of _____, 19__.

(Here follows the signature or seal and description of the assigning authority.)

NOTES: (1) In accordance with the Load Line Regulations, the disk and lines must be permanently marked by center punch marks or cutting. (The diagram showing the timber load line marks is to be inserted above by the assigning authority.) Letters indicating the assigning authority are to be marked alongside the disk and above the centerline. Periodic inspections are to be made at intervals of approximately twelve months.

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

**At the expiration of this certificate, renewal should be obtained in accordance with the Load Line Regulations and if upon examination the ship is found to be in a satisfactory condition, this certificate will be extended and so endorsed on the reverse side.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

(Reverse side of certificate to be prepared with notes and for endorsements as set forth for Form C1.)

COASTWISE LOAD LINE CERTIFICATE

[Form C4; applicable to vessels assigned freeboards on the basis of 46 CFR 43.15–87, 43.15–90, 43.15–98, and/or 43.30–75]

Issued under authority of the United States of America, Commandant, U.S. Coast Guard, under the provisions of the Coastwise Load Line Act, 1935, as amended.

This Certificate is valid only for vessels on United States' coastwise and/or intercoastal voyages.

[SEAL]

PART 44—VARIANCE FOR STEAM COLLIERS, BARGES, AND SELF-PROPELLED BARGES (WHEN ENGAGED IN SPECIAL SERVICES ON COASTWISE AND INTER-ISLAND VOYAGES)

Subpart 44.01—Administration

Sec.
44.01–1 Establishment of load lines for special services.
44.01–5 Administration; special service.
44.01–10 Approval by Commandant, U. S. Coast Guard, of special service.
44.01–11 Assignment and marking load lines; special service.
44.01–12 Voyage limits; special service.
44.01–15 Special service certificate.
44.01–20 New and existing vessels; special service.

Subpart 44.05—Rules of Assignment; Special Service

44.05–1 General.
44.05–5 Definitions.
44.05–10 Load line markings.
44.05–15 Existing vessels.
44.05–20 Conditions of assignment.
44.05–25 Freeboards.
44.05–30 Load line certificate.
44.05–35 Form of load line certificate.

AUTHORITY: The provisions of this Part 44 issued under sec. 2, 49 Stat. 888, as amended; 46 U.S.C. 88a. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–48, October 19, 1962, 27 F.R. 10504.

Subpart 44.01—Administration

§ 44.01–1 Establishment of load lines for special services.

(a) Load lines are established for steam colliers, tugs, barges, and self-propelled barges engaged in special services in conformity with the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88i).

(b) Load lines for steam colliers, barges, and self-propelled barges engaged on specially limited coastwise voyages as described in § 44.01–12 shall be established pursuant to the regulations in this part.

(c) Variance for tugs is not permitted.

§ 44.01–5 Administration; special service.

(a) The administrative provisions of §§ 43.01–1—43.01–100 of this subchapter, relating to vessels engaged in foreign and coastwise voyages, where applicable, shall apply to vessels subject to this part except as modified in paragraph (b) of this section.

(b) Application for the assignment of load lines under this part for the types of vessels described in § 44.01–1 shall be made in writing to the American Bureau of Shipping unless another society has been specifically approved by the Commandant as a load line assigning authority. In the latter case application shall be made to the society so approved. Applications shall state the following information:

(1) Name of vessel and official number.
(2) Type of vessel (steam collier, barge, or self-propelled barge).
(3) Date keel was laid.
(4) Normal sea speed of vessel.
(5) Limits of voyage for which approval is requested.
(6) Normal maximum distance offshore in course of voyage.
(7) Length of voyage in days and nautical miles.
(8) Statement of weather conditions to be expected.
(9) Cargo to be carried.
(10) Whether vessel is to be operated manned or unmanned.

§ 44.01–10 Approval by Commandant, U.S. Coast Guard, of special service.

(a) Subject to the conditions contained in this part, the Commandant, U.S. Coast Guard, has determined that load lines at variance from the position fixed by the International Load Line Treaty, 1930, but not above the actual line of safety, may be assigned steam colliers, barges, or self-propelled barges (separately by class) for certain specifically limited coastwise voyages between ports of the continental United States or between islands of a group over which the United States has jurisdiction.

§ 44.01–11 Assignment and marking load lines; special service.

(a) The assignment and marking of special service load lines and certifications thereof shall be in accordance with this part to the satisfaction of the American Bureau of Shipping. The load line certificate shall define the voyage limits and seasonal restrictions governing the validity of the load lines.

§ 44.01–12 Voyage limits; special service.

(a) Special service load lines may be assigned for operation not more than a specified limited distance offshore which shall not exceed 20 nautical miles. The offshore distance shall be measured from the coastline except where a line of inland waters has been otherwise established.

(b) For continental United States ports, special service load lines may be issued for operation between but not to exceed the extreme port limits specified below, or for operation between intermediate ports within the extreme limits specified:

(1) Central and Northern Atlantic Coast—From Norfolk, Virginia, to Eastport, Maine.

(2) Southeast Atlantic Coast—From Key West, Florida, to Jacksonville, Florida, except that the special service load line shall not be valid for manned vessels during the hurricane season, i.e., July 1st to November 15th, both dates inclusive.

(3) Gulf of Mexico Coast—From the mouth of the Rio Grande River, Texas, to Key West, Florida, except that the special service load line shall not be valid for manned vessels during the hurricane season, i.e., July 1st to November 15th, both dates inclusive.

(4) Pacific Coast—From San Francisco, California, to San Diego, California.

(c) Assignment of special service load lines for voyage limits between the islands of a group over which the United States has jurisdiction shall be made only upon authorization by the Commandant, U.S. Coast Guard, after submittal to him of the information called for by § 44.01–5 (b).

§ 44.01–15 Special service certificate.

(a) The use of the special service load line certificate issued under this part is limited to voyages only as described in the certificate. If the vessel engages on any voyage not contemplated by the certificate where a load line is required, the load line prescribed by Part 43 of this subchapter shall govern.

(b) Vessels engaged on special services in the coastwise trade and the inter-island trade will be certificated on the form shown in § 44.05–35.

§ 44.01–20 New and existing vessels; special service.

(a) A new vessel marked with load lines for special service on a coastwise or inter-island voyage is a vessel whose keel was laid on or after September 28, 1937. An existing vessel is one whose keel was laid before that date.

Subpart 44.05—Rules of Assignment; Special Service

§ 44.05–1 General.

(a) The load line regulations in this part are complementary to those in Part 43 or Part 45 (Great Lakes load line regulations) of this subchapter, as reference is made thereto.

§ 44.05–5 Definitions.

(a) A steam collier is a vessel mechanically propelled, and specially designed for the carriage of coal in bulk.

(b) A towed barge is a vessel without sufficient means for self-propulsion and which requires to be towed.

(c) A self-propelled barge is a vessel mechanically propelled of the type specially designed for use in limited coastwise and Great Lakes service and capable of transiting interconnecting canals.

§ 44.05–10 Load line markings.

(a) The load line marks on the vessel's sides are to be in accordance with § 43.05–15 of this subchapter, figure 43.05–5(a). Seasonal markings such as "Winter North Atlantic" which are not applicable to the voyage will be omitted.

(b) In the case of vessels which engage in special services on coastwise voyages and voyages on the Great Lakes, the marks on the vessel's sides are to be in accordance with Figure 44.05–10(b), except that the lines marked "SW" and "MS" shall be used only where applicable.

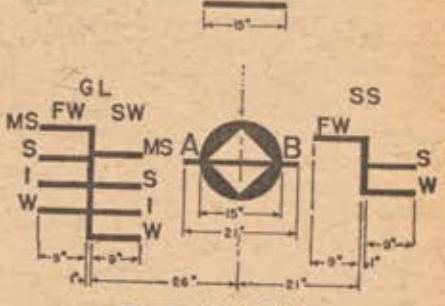

FIGURE 44.05–10(b).

(c) The load lines aft of the combined disk and diamond will be applicable for voyages on the Great Lakes and those on the forward side will be applicable to limited coastwise voyages. The summer line on the ocean will correspond to the summer line on the Lakes and the winter line on the ocean will correspond to the intermediate line on the Lakes.

(d) In the case of vessels which operate both on special service coastwise voyages and on unlimited coastwise voyages, the marks on the ship's sides are to be in accordance with figure 44.05–10 (d). The load lines aft of the disk will be applicable to voyages in special service coastwise or inter-island voyages and those on the forward side will be applicable to unlimited coastwise voyages. (A vessel marked for both special service and unlimited coastwise voyages and furnished with a load line certificate on the international form shall, when entering the foreign trade, arrange that the load line markings are in accord with the vessel's international load line certificate by the elimination of the marks aft of the disk.)

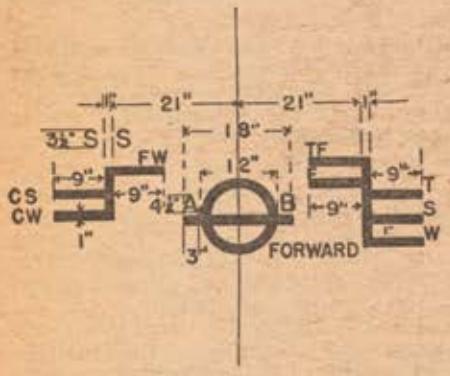

FIGURE 44.05–10 (d).

§ 44.05–15 Existing vessels.

(a) In assigning load lines to an existing vessel the provisions of the regulations in this part shall be complied with in principle and detail insofar as is reasonable and practicable, having regard to the proven efficacy of existing arrangements for a special service voyage, and having particular regard to the provision of sufficient means for the protection and safety of the crew.

(b) Where it is neither reasonable nor practicable to comply with this part in its entirety, the assigning authority will, in each case, report to the Commandant, U. S. Coast Guard, the specific matters in which the vessel is deficient with such recommendations as may seem desirable. Upon the receipt of this report the Commandant, U. S. Coast Guard, shall determine such addition to the freeboard as will, in the judgment of the Commandant, U. S. Coast Guard, make the vessel as safe as if it had fully complied with this part.

§ 44.05–20 Conditions of assignment.

(a) *Steam colliers.* The conditions of assignment for steam colliers shall be in accordance with the requirements of Part 43 of this subchapter and also with the supplementary requirements of §§ 43.30–1 to 43.30–70 of this subchapter in cases where a tanker freeboard is assigned, except that in the case of steam colliers constructed with bulwarks, the freeing port may be of a practically continuous slot type, located as low as possible, the clear area of the slot to be not less than 20 percent of the superficial area of the unpierced bulwarks. If, due to sheer, or other conditions, the assigning authority considers that extra local provision should be made for freeing decks of water, the slots are to be located so as to have maximum efficacy.

(b) *Towed barges.* The conditions of assignment for towed cargo barges where the cargo is carried under deck shall be in accordance with §§ 45.10–5 to 45.10–100 of this subchapter. In the case of tank barges and cargo barges carrying cargo only on deck, compliance will also be required with the supplementary conditions of §§ 45.20–1 to 45.20–70 of this subchapter. In the case of cargo barges of the open type, assignment will be limited to barges in unmanned operation and the construction of the vessel must be such as to satisfy the assigning authority that no unusual hazards will be experienced.

(c) *Self-propelled barges.* The conditions of assignment for self-propelled cargo barges carrying cargo under decks shall be in accordance with the provisions of §§ 45.10–5 to 45.10–100 of this subchapter. In the case of self-propelled tank barges and self-propelled cargo barges carrying cargo only on deck, compliance will also be required with the supplementary conditions of §§ 45.20–1 to 45.20–70 of this subchapter.

§ 44.05–25 Freeboards.

(a) *General.* (1) When the assigning authority is satisfied that the requirements of this part as applicable to the type of vessel under consideration are complied with the freeboards will be computed as described in this section.

(2) In the assignment of freeboards under this part, the provisions of § 43.01–32 relating to stability are applicable.

(b) *Steam colliers.* Steam colliers that have constructional features similar to those of a tanker which afford extra invulnerability against the sea may be assigned a reduction of freeboard from that determined under §§ 43.15–1 to 43.15–97 of this subchapter. The amount of such reduction shall be determined by the assigning authority, in relation to the freeboard assigned to tankers, having regard to the degree of compliance with the supplementary conditions of assignment laid down for these ships, but without regard to the degree of subdivision provided. The freeboard assigned to such a vessel shall in no case be less than would be assigned the vessel as a tanker, as determined by §§ 43.30–1 to 43.30–70 of this subchapter.

(c) *Towed cargo barges with cargo under deck.* The freeboard is to be computed under §§ 45.15–1 to 45.15–97 of this subchapter. The fresh water and seasonal markings where applicable are to be determined from §§ 43.15–1 to 43.15–97 of this subchapter.

(d) *Towed cargo barges with cargo only on deck.* The freeboard for barges of this type is to be computed in accordance with the requirements of §§ 45.20–1 to 45.20–70 of this subchapter. The fresh water and seasonal markings where applicable are to be the same as determined from §§ 43.15–1 to 43.15–97 of this subchapter.

(e) *Towed cargo barges of the open type.* The load line shall be placed where, in the judgment of the assigning authority, the draft will be such that no unusual hazard will be experienced. In general, drafts assigned will be such that the barge will remain afloat with a reasonable freeboard after flooding of the net available open space.

(f) *Towed tank barges.* The freeboard is to be computed in accordance with §§ 45.20–1 to 45.20–70 of this subchapter. The fresh water and seasonal markings where applicable are to be determined from §§ 43.15–1 to 43.15–97 of this subchapter.

(g) *Self-propelled cargo barges.* The freeboard is to be computed under §§ 45.15–1 to 45.20–15 of this subchapter. The fresh water and seasonal markings where applicable are to be determined from §§ 43.15–1 to 43.15–97 of this subchapter.

(h) *Self-propelled tank barges.* The freeboard is to be computed in accordance with §§ 45.20–1 to 45.20–70 of this subchapter. The fresh water and seasonal markings where applicable are to be determined from §§ 43.15–1 to 43.15–97 of this subchapter.

§ 44.05–30 Load line certificate.

(a) The load line certificates for a special service coastwise or special inter-island voyage shall be issued in addition to any other applicable load line certificates and shall be on the form shown in § 44.05–35.

§ 44.05–35 Form of load line certificate.

(a) Where no other Load Line certificate is issued:

LOAD LINE CERTIFICATE FOR A SPECIAL SERVICE COASTWISE OR INTER-ISLAND VOYAGE

Issued under the authority of the Commandant, U. S. Coast Guard, United States of America, under the provisions of the Coastwise Load Line Act of August 27, 1935 as amended.

[SEAL]

Issued by_____

Certificate No._____

This certificate is valid only for coastwise or inter-island voyages that are between the limits of_____ and_____ provided the vessel is engaged solely in the trade stated herein.

Ship_____ Official No._____

Port of registry_____ Trade of vessel_____

Gross tonnage_____

FREEBOARD FROM DECK LINE		LOAD LINE
Tropical_____	(T)	_____Above (S)
Summer_____	(S)	--Upper edge of line through center of disk.
Winter_____	(W)	_____Below (S)

*Allowance for fresh water for all freeboards (except on the Great Lakes)_____
The upper edge of the deck line from which these freeboards are measured is_____ inches above the top of the____deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been found to be correctly marked upon the vessel in manner and location as provided by the Load Line Regulations of the Commandant, U.S. Coast Guard, applicable to vessels engaged on this special service voyage.

**This certificate remains in force until _____ Issued at _____ on the _____ day of _____, 19____.

(Here follows the signature or seal and description of the assigning authority)

NOTES: (1) In accordance with the Load Line Regulations, the disk or diamond and the lines must be permanently marked by center punch marks or cutting.

(2) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, the provision for annual inspection endorsement and for renewal of the certificate is to be the same as for vessels engaged in the foreign trade.)

(b) Where the Special Service Load Line Certificate is issued in addition to a Great Lakes Load Line Certificate, the wording of the Special Service Load Line Certificate is to be identical to that given in paragraph (a) of this section, but the markings indicated in the form shall be replaced by the following markings:

(c) Where the Special Service Load Line Certificate is issued in addition to an Unlimited Coastwise or International Load Line Certificate, the wording of the Special Service Load Line Certificate is to be identical to that given in paragraph (a) of this section, but the markings indicated in the form shall be replaced by the following markings:

*Where seagoing steamers navigate a river or inland water, deeper loading is permitted corresponding to the weight of fuel, etc., required for consumption between the point of departure and the open sea.

**Upon the expiration of the certificate renewal must be obtained as provided by the Load Line Regulations and the certificate so endorsed. Endorsement should also be made in the spaces provided on the occasion of each annual inspection required by the Load Line Regulations.

PART 45—MERCHANT VESSELS WHEN ENGAGED IN A VOYAGE ON THE GREAT LAKES

Subpart 45.01—Administration

Sec.
45.01-1 Establishment of Great Lakes load lines.
45.01-5 Responsibility for administration.
45.01-10 Application of regulations.
45.01-13 Penalties for load line violations.
45.01-15 Tankers.
45.01-17 Cargo vessels.
45.01-20 Vessels of special design.
45.01-22 Stability.
45.01-25 Marks to indicate maximum load lines.
45.01-30 Assignment and certification of load lines; assigning authority.
45.01-35 Survey for the assignment of new load line and renewal of load line certificate.
45.01-40 Annual load line inspection.
45.01-45 Application for assignment, renewal, and certification of load line marks.
45.01-50 Application for annual load line inspections.
45.01-55 Equivalents.
45.01-60 Validity of certificates; renewal of certificates.
45.01-65 Form of certificate.
45.01-70 Cancellation of load line certificate.
45.01-75 Seasonal load lines.
45.01-80 Logbook entries.
45.01-85 Control.
45.01-90 Approval of the Commandant.

Subpart 45.05—General Rules for Determining Maximum Load Lines of Merchant Vessels on the Great Lakes

45.05-1 Definitions.
45.05-5 Deck line.
45.05-10 Load line diamond.
45.05-15 Lines to be used in connection with the diamond.
45.05-20 Mark of assigning authority.
45.05-25 Details of marking.
45.05-30 Verification of marks.

Subpart 45.10—Conditions of Assignment of Load Lines

45.10-1 Construction of vessel.
45.10-5 Cargo and other hatchways not protected by superstructures.
45.10-10 Hatchway coamings.
45.10-15 Hatchway covers.
45.10-20 Hatchway beams.
45.10-25 Carriers or sockets.
45.10-30 Cleats and fasteners.
45.10-35 Battens and wedges.
45.10-40 Tarpaulins.
45.10-45 Security of hatchway covers.
45.10-50 Cargo and other hatchways in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.
45.10-55 Hatchway coamings and closing arrangements.
45.10-57 Machinery space openings in exposed positions on freeboard and raised quarter-decks.
45.10-60 Machinery space openings in exposed positions on superstructure decks other than raised quarter-decks.
45.10-65 Machinery space openings in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.
45.10-67 Flush scuttles.
45.10-70 Companionways.
45.10-75 Ventilators in exposed positions on freeboard and superstructure decks.
45.10-77 Air pipes.
45.10-80 Gangway, cargo, and coaling ports, etc.
45.10-85 Scuppers and sanitary discharge pipes.
45.10-87 Air ports.
45.10-90 Guardrails.
45.10-95 Freeing ports.
45.10-100 Protection of crew.

Subpart 45.15—Load Lines for Steamers

45.15-1 Length (L).
45.15-5 Breadth (B).
45.15-7 Molded depth.
45.15-10 Depth for freeboard (D).
45.15-15 Coefficient of fineness (c).
45.15-17 Strength.
45.15-20 Height of superstructure.
45.15-25 Standard height of superstructure.
45.15-27 Length of superstructure (S).
45.15-30 Inclosed superstructure.
45.15-35 Superstructure bulkheads.
45.15-37 Class 1 closing appliances.
45.15-40 Class 2 closing appliances.
45.15-45 Temporary closing appliances.
45.15-47 Superstructures, general.
45.15-50 Poop.
45.15-55 Raised quarter-deck.
45.15-57 Bridge.
45.15-60 Forecastle.
45.15-65 Trunk.
45.15-67 Enclosed superstructure with middle line openings in the deck not provided with permanent means of closing.
45.15-70 Deductions for superstructures.
45.15-73 Sheer, general.
45.15-75 Standard sheer profile.
45.15-77 Measurement of variations from standard sheer profile.
45.15-80 Correction for variations from standard sheer profile.
45.15-83 Addition for deficiency in sheer.
45.15-85 Deduction for excess sheer.
45.15-87 Standard round of beam.
45.15-90 Round of beam correction.
45.15-93 Summer freeboard.
45.15-94 Midsummer freeboard.
45.15-95 Intermediate and winter freeboard.
45.15-96 Salt water freeboard.
45.15-97 Freeboard table for steamers.

Subpart 45.20—Load Lines for Tankers

45.20-1 Definition.
45.20-5 Marks on sides.
45.20-10 Construction.
45.20-15 Forecastle.
45.20-20 Machinery casings.
45.20-25 Gangway.
45.20-30 Protection of crew, access to machinery space, etc.
45.20-35 Hatchways.

Sec.
45.20-40 Ventilators.
45.20-45 Freeing arrangements.
45.20-50 Plans.
45.20-55 Computation of freeboard.
45.20-60 Deductions for detached superstructures.
45.20-65 Deduction for excess sheer.
45.20-70 Freeboard table for tankers.

Subpart 45.25—Fees and Form of Certificate

45.25-1 Fees.
45.25-5 Form of load line certificate.

AUTHORITY: The provisions of this Part 45 issued under sec. 2, 49 Stat. 888, as amended; 46 U.S.C. 88a. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-48, October 19, 1962, 27 F.R. 10504, unless otherwise noted.

Subpart 45.01—Administration

§ 45.01-1 Establishment of Great Lakes load lines.

(a) Load lines are established for merchant vessels of 150 gross tons or over when engaged on Great Lakes voyages in conformity with the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i).

(b) Load lines for merchant vessels of 150 gross tons or over when engaged on Great Lakes voyages shall be pursuant to the regulations in this part.

(c) The load line regulations for merchant vessels when engaged in foreign voyages (the Great Lakes excepted) or coastwise voyages are in Part 43 of this subchapter. The load line regulations applicable to coastwise load lines for steam colliers, barges, and self-propelled barges in specially limited coastwise voyages are in Part 44 of this subchapter.

(d) In concurrence with related Canadian regulations, the waters of the St. Lawrence River west of a straight line drawn from Cap de Rosiers to West Point Anticosti Island, and west of a line along 63° W. longitude from Anticosti Island to the north shore of the St. Lawrence River shall be considered as a part of the Great Lakes.

§ 45.01-5 Responsibility for administration.

(a) Under the general direction and supervision of the Secretary of the Treasury, the Commandant of the United States Coast Guard is delegated the responsibility and authority for the administration of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i).

§ 45.01-10 Application of regulations.

(a) No merchant vessel of the United States of 150 gross tons or over shall proceed on a voyage on the Great Lakes, or arrive from a voyage on the Great Lakes, or operate on the Great Lakes, and no foreign merchant vessel of 150 gross tons or over shall arrive from a voyage on the Great Lakes or shall proceed on a voyage on the Great Lakes, when within the jurisdiction of the United States, unless such vessel is:

(1) Marked with load lines under the load line regulations in Part 43 of this subchapter and has on board a valid load line certificate, or

(2) A foreign vessel exempted under section 5 of the Coastwise Load Line Act, 1935, or is marked and certificated as to load lines under the provisions of and in accordance with the International Load Line Convention 1930 and has on board a valid load line certificate, or

(3) A new vessel:

(i) Has been surveyed in accordance with the provisions of this part.

(ii) Complies with the provisions of this part as applicable to the type of vessel dealt with.

(iii) Has been marked in accordance with the provisions of this part.

(iv) Has had the marks certified as correct as provided by this part.

(A new vessel is one whose keel was laid on or after August 27, 1935.)

(4) An existing vessel:

(i) Has been surveyed, marked, and the marks certified either under the provisions of the regulations in this part as applicable to the type of vessel, or

(ii) Complies as defined for the type of vessel with the provisions of this part in principle and detail so far as is reasonable and practicable, having regard to the efficacy of the protection of openings, guard rails, freeing ports, and means of access to crews quarters, provided by the existing arrangements, fittings, and appliances of the vessel.

(b) Where it is neither reasonable nor practicable to comply with this part in its entirety, the assigning authority will, in each case, report to the Commandant, U. S. Coast Guard, the specific matters in which the vessel is deficient with such recommendations as seem desirable. Upon the receipt of this report the Commandant, U. S. Coast Guard, shall determine such addition to the freeboard as will, in the judgment of the Commandant, U. S. Coast Guard, make the vessel as safe as if it had fully complied with this part.

§ 45.01-13 Penalties for load line violations.

(a) For violations of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i), and the regulations in this subchapter, which apply to merchant vessels engaged in voyages on the Great Lakes, see § 43.01-13 of this subchapter for a description of the applicable penalties and procedures.

§ 45.01-15 Tankers.

(a) A steamer specially constructed for the carriage of liquid cargoes in bulk which has been surveyed as provided by § 45.01-10 shall be marked with tanker load lines and the marks certified as correct, if being:

(1) A new vessel, it complies with the conditions and provisions prescribed in §§ 45.20-10—45.20-70.

(2) An existing vessel, it complies with the conditions and provisions in §§ 45.20-10, 45.20-25—45.20-40 and, also, in principle so far as is reasonable and practicable, with §§ 45.20-15, 45.20-20, 45.20-45: *Provided*, That in assigning a tanker load line to an existing vessel such additions to the freeboard shall be made as is reasonable having regard to the extent to which the vessel falls short of full compliance with the conditions and provisions prescribed in §§ 45.20-15, 45.20-20, 45.20-45.

(b) For the purpose of the application of §§ 45.01-75, 45.05-15 and 45.15-94 there are included non-propelled tank barges of shipshape form specially constructed for the carriage of liquid cargoes in bulk.

§ 45.01-17 Cargo vessels.

For the purpose of §§ 45.01-75, 45.05-15 and 45.15-94 a cargo vessel is defined as a vessel either self-propelled or non-propelled of shipshape form constructed for the carriage of dry cargoes, and which is regularly engaged in the transportation thereof.

§ 45.01-20 Vessels of special design.

(a) Sand suckers and other vessels of special design that cannot be assigned load lines by direct application of the rules set forth in this subchapter, will be assigned load lines based on the individual consideration of each vessel. Before such vessels are marked and certified, the assigning authority shall obtain the approval of the Commandant, U. S. Coast Guard, as to the position of the load line marks.

(b) In the location of load lines on sand suckers and similar vessels, consideration will be given to the effect of flooding of open cargo spaces, and the draft permitted will not be in excess of that which, in the judgment of the assigning authority, with the approval of the Commandant, U. S. Coast Guard, provides a reasonable margin of safety under such circumstances.

(c) Open hopper type barges will be limited to unmanned operation over restricted routes.

§ 45.01-22 Stability.

(a) The rules of this part necessarily assume that the nature and stowage of the cargo, ballast, etc., are such as to secure sufficient stability for the vessel.

(b) Having regard for the fact that certain vessels, such as those carrying all their cargo as deck cargo, may need to have the amount of cargo and resulting draft limited by stability considerations, the load line assignments of vessels, which are subject to the stability test requirements contained in § 31.10-30 in Subchapter D (Tank Vessels) or in Subpart 93.05 in Subchapter I (Cargo and Miscellaneous Vessels) of this chapter, shall in no case be deeper than permitted by the results of such tests.

(c) Load line assignments to vessels not subject to inspection will also be made subject to the results of a stability test if the design and service of the vessels are such as to indicate the need for a draft limitation based thereon.

(d) Load line assignments made to vessels before the results of stability tests are known shall be regarded as conditional and subject to verification by the Commandant.

(R.S. 4417, as amended, 4417a, as amended, secs. 1, 2, 49 Stat. 1544, as amended; 46 U.S.C. 391, 391a, 367)

§ 45.01-25 Marks to indicate maximum load lines.

(a) Marks to indicate maximum mean drafts to which a vessel can be lawfully submerged, in the various circumstances

and seasons, shall be permanently marked on each side of the vessel in the form, manner, and location provided by this part.

§ 45.01–30 Assignment and certification of load lines; assigning authority.

(a) As provided in the Coastwise Load Line Act, 1935, the American Bureau of Shipping is appointed to assign load lines and to determine whether the position of and the manner of marking each vessel to which the act applies has been performed in accordance with this part, and is authorized to issue a load line certificate, certifying to the correctness of the marks under its own hand and seal. As provided in the aforesaid act, the Commandant, U. S. Coast Guard may, at the request of a shipowner, appoint any other recognized classification society which he may approve, as the load line assigning authority. The American Bureau of Shipping (Mailing address: 45 Broad Street, New York, N.Y., 10004), or other approved load line assigning agency, is authorized to renew from time to time by endorsement a load line certificate. Load line certificates will not be issued until the load line marks have been verified. This certificate will be issued in duplicate, one copy being delivered to the owner or master of the vessel and one copy, together with a summary of the data used to determine the load line will be forwarded to the Commandant, U.S. Coast Guard, Washington, D.C., 20226. In addition, each new vessel, when receiving its first load line certificate, shall be furnished a copy of the load line survey report which shall be retained on board to be available for the information of inspectors and surveyors when carrying out subsequent load line surveys.

(b) The agency appointed by the Commandant, U. S. Coast Guard, to assign load lines as provided by section 3 of the Coastwise Load Line Act, 1935 (49 Stat. 888; 46 U. S. C. 88b), is referred to in this part as the assigning authority.

(c) The fees to be charged by the assigning authority for services in connection with this part shall not exceed the scale of maximum fees as set forth in § 45.20–75.

(Sec. 2, 45 Stat. 1493, as amended; 46 U.S.C. 85a)

§ 45.01–35 Survey for the assignment of new load line and renewal of load line certificate.

(a) *Steel vessels.* (1) Unless specifically waived by the Commandant, U.S. Coast Guard, the vessel is to be placed in drydock to determine the condition of the hull plating and underwater connections.

(2) The holds, 'tween decks, peaks, bilges, engine and boiler spaces, and bunkers are to be examined to determine the condition of the structure.

(3) Deep tanks and other tanks which form part of the vessel are to be examined internally.

(4) Where a double bottom is fitted, the tanks are to be examined internally. Where double bottom and other tanks are used for fuel oil bunkers, such tanks need not be cleaned out, provided the surveyors are able to determine by an external examination that their general condition is satisfactory.

(5) The decks are to be examined.

(6) The hatch covers, hatch beams, and fore-and-afters, tarpaulins, battens and wedges, the hatchway and ventilator coamings, companionways, the engine and boiler casings, the superstructures on the freeboard deck, and all means of protecting the openings in the freeboard deck and superstructures are to be examined.

(7) All air pipe outlets, scuppers, sanitary discharges in the vessel's sides, and air ports are to be examined.

(8) All gangways, cargo, and coaling ports or similar openings in the vessel's sides are to be examined.

(9) Guardrails, gangways, and freeing ports are to be examined.

(10) Where, owing to the age and condition of the vessel, the surveyors deem it necessary, the shell and deck plating may be required to be drilled in order to ascertain the thickness of such plating.

(b) *Wood and composite vessels.* (1) Unless specifically waived by the Commandant, U. S. Coast Guard, the vessel is to be placed on a drydock or a slipway and the keel, stem, sternframe or sternpost, and outside planking are to be examined. Caulking is to be tried at such places about the planking as is deemed necessary by the surveyors.

(2) Careful examination must be made for faulty fastenings and such bolts or treenails must be backed out, or otherwise dealt with, as may be deemed necessary by the surveyors.

(3) Careful examination is to be made of the entire structure and, if considered necessary, borings are to be made to ascertain the conditions of the material; should these disclose cause for further examination, listings are to be made where required to satisfy the surveyors as to the true condition of the vessel.

(4) The holds, 'tween decks, peaks, bilges, engine and boiler spaces, and bunkers are to be examined.

(5) The decks are to be examined and bored where necessary.

(6) The hatch covers, hatch beams, fore-and-afters, tarpaulins, battens, and wedges, the hatchway and ventilator coamings, companionways, the engine and boiler casings, the superstructures on the freeboard deck, and all means of protecting the openings in the freeboard deck and superstructures are to be examined.

(7) All air pipe outlets, scuppers, sanitary discharges in the vessel's sides, and air ports are to be examined.

(8) Guardrails, gangways, and freeing ports are to be examined.

(c) *Correction of deficiencies.* Any such structure or parts or fittings of the vessel as are found to be in an unsatisfactory condition are to be rebuilt or repaired or renewed in order to place the vessel in a seaworthy condition so as to be eligible for a load line certificate.

§ 45.01–40 Annual load line inspection.

(a) A vessel having been marked as provided by this part, and the mark certified as correct, will be inspected at intervals of approximately 12 months in order to insure the maintenance in an effective condition of the fittings and appliances for the:

(1) Protection of openings,

(2) guardrails,

(3) freeing ports,

(4) means of access to crew's quarters, and that there have not been alterations made to the hull or superstructures, which would affect the calculations determining the position of the load lines.

(b) If upon examination the fittings and appliances are found to be in a satisfactory condition, the load line certificate will be endorsed to this effect. If it shall be found that alterations have been made to the hull or superstructures that affect the calculations determining the position of the load line, the matter shall be reported to the Commandant, U.S. Coast Guard, for appropriate action.

(c) The assigning authority shall make this inspection and report thereon to the owners of the vessel, and a copy of such report shall be forwarded to the Commandant, U. S. Coast Guard, Washington, D.C., 20226.

§ 45.01–45 Application for assignment, renewal, and certification of load line marks.

(a) Application for assignment and certification of load line marks or for renewal of load line certificates shall be made in writing to the assigning authority by the owners of the vessel.

§ 45.01–50 Application for annual load line inspections.

(a) Application for annual load line inspection required by § 45.01–40 shall be made in writing to the assigning authority by the owners of a vessel.

§ 45.01–55 Equivalents.

(a) Where in the regulations in this part it is provided that a particular fitting or appliance, or type thereof, shall be fitted or carried in a vessel, or that any particular arrangement shall be adopted, there may be substituted any other fitting or appliance or type thereof, or any other arrangement: *Provided*, That such fitting, appliance, or arrangement shall be considered a suitable equivalent by the assigning authority and the approval of the Commandant, U.S. Coast Guard, for such substitution shall have been issued.

§ 45.01–60 Validity of certificates; renewal of certificates.

(a) As the assignment of load lines is conditioned upon the structural efficiency of the vessel and upon the provision of effective protection to vessel and crew, every vessel required to be marked by the Coastwise Load Line Act, 1935, with load lines shall be surveyed by the assigning authority at least once in each 6 years to determine that the load lines are then correctly placed as required by this part. If the load line mark be found correct for the vessel in the condition she is then in, the certificate shall be renewed for such time as the condition of the

vessel then warrants, but in no case for a longer period than 6 years and the facts shall be attested by endorsement upon the back of the certificate in the form shown in § 45.25–5.

(b) The Commandant, U. S. Coast Guard, shall be notified of every renewal endorsement and the date of its expiration.

(c) Foreign vessels which have not been exempted pursuant to section 5 of the Load Line Act shall have their load line certificate limited to a period of 1 year. The certificate may be validated for additional 1-year periods (provided, after survey, the condition of the vessel is found to warrant such validation, and the facts are attested by endorsement upon the back of the load line certificate by a surveyor of the American Bureau of Shipping or of the classification society issuing the certificate.) The certificate will become void 5 years from date of issue, or at the expiration of the fourth yearly validation, whichever occurs first.

§ 45.01–65 Form of certificate.

(a) The form for certificates certifying to the correctness of the load line mark as required by the Coastwise Load Line Act, 1935, is shown in § 42.25–5.

§ 45.01–70 Cancellation of load line certificate.

(a) Notwithstanding the marking of a load line and the issuance of a load line certificate, the certificate will be cancelled if:

(1) The annual load line inspection required by § 45.01–40 has not been carried out or that the items described under § 45.01–40 are not maintained in an effective condition; or

(2) The survey required by § 45.01–35 has not been carried out, or that any defects disclosed by the survey have not been corrected; or

(3) Due to any cause the conditions of assignment have not been maintained as provided by the regulations in this part, or alterations have been made to hull or superstructures which affect the calculations made to determine the location of the load line.

§ 45.01–75 Seasonal load lines.

(a) For load line purposes there is hereby established for the Great Lakes a winter, intermediate, summer, and for tankers and cargo vessels (see §§ 45.01–15 and 45.01–17) a midsummer season, and load lines applicable to each season are established by the regulations in this part. The winter season shall be that period from November 1 through April 15 of the next year, the intermediate seasons from April 16 through April 30, and from October 1 through October 31, and the summer season from May 1 through September 30. The midsummer season shall be the portion of the summer season from May 1 through September 15 which shall be applicable only in those cases where midsummer season load lines are permitted. (All dates are inclusive.)

(b) For those vessels that are marked and certificated with load lines under the International Load Line Convention, 1930, the load line marks shall be applicable to voyages on the Great Lakes in accordance with Table 45.01–75 (b).

TABLE 45.01–75 (b)

Load line mark. salt water:	*Season applicable*
Tropical (T)	May 1–Sept. 30 (summer).
Summer (S)	Apr. 16–30, Oct. 1–31 (intermediate).
Winter (W)	Nov. 1–Apr. 15 (winter).

NOTE: In the case of cargo vessels and tankers as defined in §§ 45.01–15 and 45.01–17 loading to the tropical fresh water mark (TF) for the midsummer season may be authorized. In such cases a special supplementary certificate shall be issued.

(c) When engaged on voyages between the limits of Toledo Harbor and Port Huron, Michigan, cargo and tank vessels above 300 feet in length may load to their intermediate marks between October 1 and April 30, inclusive. Such vessels above 400 feet in length may load to their summer marks between September 16 and April 30, inclusive.

(d) Except as provided in paragraph (c) of this section, no vessel shall be loaded so as to submerge at any time the load line applicable to the season.

§ 45.01–80 Logbook entries required.

(a) It is the master's responsibility to have entered in the vessel's "Official Logbook" if carried, otherwise in a log considered as its official logbook, the data required by section 6 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88e). These logbook entries shall be made before a vessel departs from her loading port or place and consist of:

(1) A statement of the load line marks applicable to the voyage;

(2) A statement of the position of the load line mark, port and starboard, at the time of departing from a port or place; and,

(3) The actual drafts of the vessel, forward and aft, as nearly as the same can be ascertained, at the time of departing from a port or place.

§ 45.01–85 Control.

(a) The Collector of Customs or the Coast Guard District Commander may detain a vessel for survey if there is reason to believe that the vessel is proceeding on her journey in excess of the draft allowed by the regulations in this part as indicated by the vessel's load line certificate, or otherwise. The Coast Guard District Commander may detain a vessel if it is so loaded as to be manifestly unsafe to proceed.

(b) If the Collector of Customs orders a vessel detained, he shall immediately inform the Coast Guard District Commander thereof, who shall thereupon advise the Collector of Customs whether or not he deems that the vessel may proceed with safety. If the Coast Guard District Commander orders a vessel detained, such officer will furnish the Collector of Customs immediate notification of such detention. The clearance shall be refused to any vessel which shall have been ordered detained, which shall be in effect until it is shown that the vessel is not in violation of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88l), and the regulations in this subchapter.

(c) The detention of a vessel will be by written order of either the Coast Guard District Commander or the Collector of Customs, depending on who orders the detention. The detaining officer will immediately arrange for a survey in the manner prescribed by section 7 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88f). Unless the owner or agent waives in writing and stipulates to accept the Coast Guard's survey, the detaining officer shall appoint three disinterested surveyors, and where practicable, one of them shall be from the Surveying Staff of the American Bureau of Shipping. Such surveyors shall conduct a survey to ascertain whether or not the vessel is loaded in violation of the applicable provisions of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88l), and the regulations in this part. If the survey confirms the allegation that the vessel is in violation of the law or the regulations in this part "the owner and agent shall bear the costs of the survey in addition to any penalty or fine imposed," as provided in this law. When such surveyors are appointed by the Collector of Customs, such appointment shall be with the approval of the Coast Guard District Commander.

(d) Whenever a vessel is detained, the master or owner may, within five days, appeal to the Commandant, United States Coast Guard, who may, if he desires, order a further survey, and may affirm, set aside, or modify the order of the detaining officer.

(e) Where a foreign vessel is detained, or any action is taken which would appear likely to result in legal proceedings being taken against such a vessel, the consul of the country to which the vessel belongs shall be informed as soon as possible of the circumstances of the case.

(f) Pursuant to the provisions of section 5 of the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88d), it is hereby certified that a vessel of a foreign country which has ratified the International Load Line Convention, 1930, shall be deemed a vessel of a foreign country as described in section 5 of this act, and such a vessel shall be exempt from the provisions of the regulations in this part insofar as the marking of the load lines and the certificating thereof are concerned, only so long as such country similarly recognizes the load lines established by the regulations in this part, for the purpose of a voyage by sea: *Provided*, That the vessel is marked with load lines and has on board a valid load line certificate certifying to the correctness of the mark, the vessel shall not be loaded beyond the limits allowed by the certificate, the position of the load line of the vessel shall correspond with the certificate, the hull and superstructure shall not have been so materially altered as to affect the calculations on which the load line was based, and alterations have not been made so that the protection of openings, guardrails, freeing ports, and means of access to crew's quarters have made the vessel manifestly unfit to proceed to sea without danger to human life.

§ 45.01–90 Approval of the Commandant.

(a) Where the active approval of the Commandant, U.S. Coast Guard, is required in connection with this part, such information as will enable the Commandant, U.S. Coast Guard, to obtain a comprehensive understanding of the question at issue shall be furnished and will remain with the Commandant, U. S. Coast Guard, as a record.

Subpart 45.05—General Rules for Determining Maximum Load Lines of Merchant Vessels on the Great Lakes

§ 45.05–1 Definitions.

(a) *Steamer.* (1) The term "steamer" or "steamship" includes all vessels having sufficient means for mechanical propulsion, except where provided with sufficient sail area for navigation under sails alone.

(2) A vessel fitted with mechanical means of propulsion and with sail area insufficient for navigation under sails alone may be assigned a load line under §§ 45.15–1—45.20–1.

(3) A lighter, barge, or other vessel without independent means of propulsion, when towed, is to be assigned a load line under §§ 45.15–1—45.20–1, except steel tank barges specially constructed for the carriage of liquids in bulk and cargo barges having only small access hatches in the freeboard deck, the load lines for which may be calculated under §§ 45.20–10—45.20–70.

(b) *Flushdeck vessel.* A flushdeck vessel is one which has no superstructure on the freeboard deck.

(c) *Superstructure.* A superstructure is a decked structure on the freeboard deck extending from side to side of the vessel. A raised quarter-deck is considered a superstructure.

(d) *Load line.* The load line is the line defining the maximum mean draft to which a vessel may be lawfully submerged. It is the lower limit of the freeboard as determined by the regulations in this part having regard to the various conditions and seasons.

(e) *Freeboard.* The freeboard assigned is the distance measured vertically downward at the side of the vessel amidships from the upper edge of the deck line to the upper edge of the load line.

(f) *Freeboard deck.* The freeboard deck is the deck from which the freeboard is measured, and is the uppermost complete deck having permanent means of closing all openings in weather portions of the deck in accordance with §§ 45.10–1—45.10–45. It is the upper deck in flushdeck vessels and vessels with detached superstructures. In vessels having discontinuous freeboard decks within superstructures which are not intact, or which are not fitted with class 1 closing appliances, the lowest line of the deck below the superstructure deck is taken as the freeboard deck.

(g) *Amidships.* Amidships is the middle of the length of the summer load waterline, as defined in § 45.15–1.

CROSS REFERENCE: For class 1 closing appliances, see § 45.15–37.

§ 45.05–5 Deck line.

(a) The deck line is a horizontal line 15 inches in length and 1 inch in breadth. It is to be marked amidships on each side of the vessel, and its upper edge is to pass through the point where the continuation outward of the upper surface of the freeboard deck intersects the outer surface of the shell. (See fig. 45.05–5 (a).) Where the deck is partly sheathed amidships, the upper edge of the deck line is to pass through the point where the continuation outward of the upper surface of the actual sheathing at amidships intersects the outer surface of the shell.

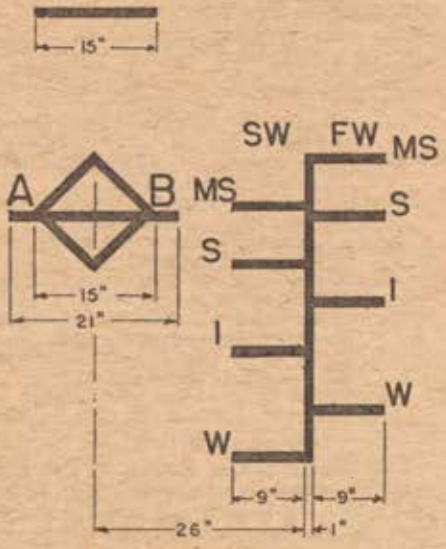

FIGURE 45.05–5(a).

NOTE: The line marked "MS" shall be used only when applicable to vessels defined in §§ 45.01–15 and 45.01–17.

§ 45.05–10 Load line diamond.

(a) The load line diamond is a square 15 inches on each diagonal with one diagonal vertical, the other horizontal, and is intersected by a horizontal line of 21 inches in length and 1 inch in breadth, the upper edge of which coincides with the horizontal diagonal of the diamond. The diamond is to be marked amidships below the deck line, port and starboard.

§ 45.05–15 Lines to be used in connection with the diamond.

(a) The lines which indicate the maximum load line in different seasons are to be horizontal lines, 9 inches in length and 1 inch in breadth, which extend from and are at right angles to a vertical line marked 26 inches forward of the center of the diamond. (See Figure 45.05–5(a).)

(b) The following are the lines to be used:

(1) *Midsummer load line.* The midsummer load line is indicated by the upper edge of a line marked "MS".

(2) *Summer load line.* The summer load line is indicated by the upper edge of the line which passes through the center of the diamond and also by a line marked "S".

(3) *Intermediate load line.* The intermediate load line is indicated by the upper edge of a line marked "I".

(4) *Winter load line.* The winter load line is indicated by the upper edge of a line marked "W".

(5) *Salt water load lines.* Ships which load in salt water of the St. Lawrence River and proceed to fresh water shall additionally be marked with horizontal lines, 9 inches in length and 1 inch in breadth extending from the vertical line referred to above towards the diamond. These lines shall be indicated as "S.W." marks and shall be additionally marked to indicate the corresponding Great Lakes season.

(c) Where the draft is restricted on a basis of subdivision or stability and this draft is less than any of the various seasonal drafts permitted by the regulations in this part, the center of the diamond shall be located on the line of this restricted draft and it shall be applicable to all seasons. If such a permissible maximum draft comes between the seasonal markings, the seasonal markings below shall also be added.

CROSS REFERENCE: For determining the salt water freeboard, see § 45.15–06.

§ 45.05–20 Mark of assigning authority.

(a) The authority by whom the load lines are assigned may be indicated by letters measuring about 4½ by 3 inches marked alongside the diamond and above the centerline.

§ 45.05–25 Details of marking.

(a) The diamond, lines, and letters are to be painted in white or yellow on a dark ground or in black on a light ground. They are also to be carefully cut in or center punched on the sides of iron and steel vessels, and on wood vessels they are to be cut into the planking for at least one eighth of an inch. The marks are to be plainly visible, and if necessary special arrangements are to be made for this purpose.

§ 45.05–30 Verification of marks.

(a) The load line certificate is not to be delivered to the vessel until a surveyor of the assigning authority has certified that the marks are correctly and permanently indicated on the vessel's side.

Subpart 45.10—Conditions of Assignment of Load Lines

§ 45.10–1 Construction of vessel.

(a) The assignment of load lines is conditional upon the vessel being structurally efficient and upon the provision of effective protection to vessel and crew.

(b) Sections 45.10–1—45.10–100 apply to vessels to which minimum freeboards are assigned. In vessels to which greater freeboards than the minimum are assigned, the protection is to be relatively as effective.

(c) Passenger vessels—Subdivision and stability load lines: Where in passenger vessels the positions of the maximum load lines are determined by the application of subdivision and stability regulations as provided in Part 46 of this subchapter pertaining to passenger vessels on the Great Lakes, the provisions of the regulations in this part shall also be effective insofar as they are applicable.

(R.S. 4491, as amended, sec. 5, 49 Stat. 1384, as amended; 46 U.S.C. 391, 369)

§ 45.10–5 Cargo and other hatchways not protected by superstructures.

(a) The construction and fittings of cargo and other hatchways in exposed positions on freeboard and superstructure decks are to be at least equivalent to the standards laid down in §§ 45.10–10—45.10–45.

(b) Where hatch covers are of adequate metal construction, sealed watertight against pliable gaskets by dogs or other suitable means, as approved by the Load Line Assigning Authority, the application of the requirements of §§ 45.10–10—45.10–45 will be modified accordingly.

§ 45.10–10 Hatchway coamings.

(a) The minimum height of hatchway coamings on freeboard decks is to be at least 18 inches above the deck. The minimum height of coamings on superstructure decks is to be at least 18 inches above the deck if situated within a quarter of the vessel's length from the stem, and at least 12 inches if situated elsewhere.

§ 45.10–15 Hatchway covers.

(a) On bulk freighters over 350 feet in length steel hatch covers are to be fitted to all exposed hatchways on the freeboard deck and they are to be of such thickness and provided with such stiffening as will enable them to be handled without deformation.

(b) Solid covers are to have stiffeners spaced not over 42 inches apart. The plating is to be not less than 0.24'' at 24-inch spacing and 0.36'' at 42-inch spacing with intermediate thicknesses at intermediate spacings. The stiffeners are not to be less effective than provided by angles, bulb angles or channels riveted or welded to the plate and having a section modulus in inches cubed not less than given by the formula:

$$I/y = S \times L^2 \times 0.025 \qquad (1)$$

where:

S = spacing of stiffeners in feet.
L = length in feet of the unsupported spans.
I = moment of inertia of the section.
y = distance from center of gravity of the section to the outermost strain fiber.

(c) Covers of the sliding plate type with flanges on one edge or with stiffeners riveted or welded to one edge shall have a sufficient number of sections so that when closed the spacing of the stiffeners does not exceed 42 inches. Plates are not to be less in thickness than required for solid steel covers in association with the spacing of the stiffeners when closed. The stiffening at the edge of the covers is not to be less effective than required above for solid covers. If hatch covers of the sliding plate type are used for spans exceeding 12'—1'', additional support must be provided, the details of which will be specially considered.

(d) Where wood hatch covers are used they are to be made of long leaf yellow pine or fir and the finished thickness is not to be less than 2¼ inches in association with a span of 6 feet. The width of each bearing surface is to be at least 2½ inches.

§ 45.10–20 Hatchway beams.

(a) Hatchways having wood covers are to be fitted with a system of main beams all extending in one direction or a system of main beams in association with auxiliary beams across the top of the main beams so arranged that the unsupported spans of the covers do not exceed 6 feet except where specially approved. The main beams may be of solid, rolled, or built shapes and the auxiliary beams may be either rolled shapes or timber of rectangular section. They are to have a section modulus in inches cubed of not less than given by the formula.

$$I/y = S \times L^2 \times C \qquad (1)$$

where:

S = the breadth of the area supported in feet.
L = the length of the unsupported spans in feet.
C = 0.03 for steel main beams where 18'' coamings are required.
C = 0.025 for steel auxiliary beams where 18'' coamings are required.
C = 0.025 for steel main beams where 12'' coamings are required.
C = 0.02 for steel auxiliary beams where 12'' coamings are required.
C = 0.15 for wood auxiliary beams where 18'' coamings are required.
C = 0.12 for wood auxiliary beams where 12'' coamings are required.
I = moment of inertia of the section.
y = distance from center of gravity of the section to the outermost strain fiber.

(b) Where rolled section beams are used the top flanges and the top angles in the case of built beams are to extend for the full length of the beams. Where wood auxiliary beams are used they are to be steel shod at all points where they bear on the main beams and at the ends.

§ 45.10–25 Carriers or sockets.

(a) Carriers or sockets for hatchway beams and fore-and-afters are to be of steel at least one-half inch thick, and are to have a width of bearing surface of at least 3 inches.

§ 45.10–30 Cleats and fasteners.

(a) Strong cleats at least 2½ inches wide or efficient clamping devices are to be fitted at intervals of approximately 2 feet from center to center; the end cleats are to be placed not more than 6 inches from each corner of the hatchway. Where steel sliding covers are fitted, patent fasteners of the "Mulholland type" or equal, spaced to suit the width of covers, may be used in place of cleats and wedges.

§ 45.10–35 Battens and wedges.

(a) Battens, wedges, or tarpaulin securing devices are to be efficient and in good condition.

§ 45.10–40 Tarpaulins.

(a) At least one tarpaulin in good condition, thoroughly waterproofed, and of ample strength, is to be provided for each hatchway in an exposed position on freeboard and superstructure decks. The material is to be guaranteed free from jute, and shall not be less than No. 4 cotton canvas or equal before waterproofing, or shall be of suitable synthetic fabric as approved for this purpose by the Load Line Assigning Authority.

§ 45.10–45 Security of hatchway covers.

(a) At all hatchways in exposed positions on freeboard or superstructure decks suitable provision is to be made for securing the covers after the tarpaulins are battened down.

§ 45.10–50 Cargo and other hatchways in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.

(a) The construction and fitting of such hatchways are to be at least equivalent to the standards laid down in §45.10–55 (a).

§ 45.10–55 Hatchway coamings and closing arrangements.

(a) Cargo, coaling, and other hatchways in the freeboard deck within superstructures which are fitted with class 2 closing appliances are to have coamings at least 9 inches in height and closing arrangements as effective as those required for exposed cargo hatchways.

(b) Where the closing appliances are less efficient than class 2, the hatchways are to have coamings at least 12 inches in height and are to have fittings and closing arrangements as effective as those required for exposed cargo hatchways.

(c) In the case of car ferries fitted with efficient "sea gates" extending above the freeboard deck at least to the height of a standard superstructure, coamings of less height may be fitted provided the hatches within superstructures are fitted with close fitting steel covers with efficient securing devices. When the openings in freeboard decks are not provided with closing devices the coamings are to extend above the freeboard deck at least to the height of a standard superstructure.

CROSS REFERENCE: For class 2 closing appliances, see § 45.15–40.

§ 45.10–57 Machinery space openings in exposed positions on freeboard and raised quarter-decks.

(a) Such openings are to be properly framed and efficiently enclosed by steel casings of ample strength, and where the casings are not protected by other structures their strength is to be specially considered; doors in such casings are to be of steel, efficiently stiffened, permanently attached, and capable of being closed and secured from both sides. The sills of openings are to be at least 18 inches above the freeboard deck and 12 inches on a raised quarter-deck.

(b) Fiddley, funnel, and ventilator coamings are to be as high above the deck as is reasonable and practicable. Fiddley openings are to have strong steel covers permanently attached in their proper positions. Engineroom skylights are to be of strong construction, preferably of steel.

§ 45.10–60 Machinery space openings in exposed positions on superstructure decks other than raised quarter-decks.

(a) Such openings are to be properly framed and efficiently enclosed by strong

steel casings. Doors in such cases are to be strongly constructed, permanently attached, and capable of being closed and secured from both sides. The sills of the openings are to be at least 9 inches above superstructure decks.

(b) Fiddley, funnel, and ventilator coamings are to be as high above the deck as is reasonable and practicable. Fiddley openings are to have strong steel covers permanently attached in their proper positions. Where the fiddley openings are more than 15 feet in height above the freeboard deck, covers need not be provided.

(c) Engineroom skylights are to be of strong construction, preferably of steel.

§ 45.10–65 Machinery space openings in the freeboard deck within superstructures which are fitted with closing appliances less efficient than class 1.

(a) Such openings are to be properly framed and efficiently enclosed by steel casings. Doors in such casings are to be strongly constructed, permanently attached, and capable of being securely closed. The sills of the openings are to be at least 6 inches above the deck where the superstructures are closed by class 2 closing appliances, and at least 12 inches above the deck where the closing appliances are less efficient than class 2.

CROSS REFERENCE: For class 2 closing appliances, see § 45.15–40.

§ 45.10–67 Flush scuttles.

(a) Flush scuttles, where fitted, are to be of iron or steel, of substantial construction, with screw or bayonet joints.

§ 45.10–70 Companionways.

(a) Companionways in exposed positions on freeboard decks and on decks of enclosed superstructures are to be of substantial construction. The sills of the doorways are to be 18 inches on freeboard decks and on superstructure decks within a quarter of the vessel's length from the stem and 12 inches on superstructure decks elsewhere. The doors are to be strongly constructed and capable of being closed and secured from both sides. Where the companionway is situated within a quarter of the vessel's length from the stem, it is to be of steel and riveted to the deck plating.

§ 45.10–75 Ventilators in exposed positions on freeboard and superstructure decks.

(a) Such ventilators to spaces below freeboard decks or decks of superstructures which are intact or fitted with class 1 closing appliances are to have coamings of steel, substantially constructed and sufficiently connected to the deck. The deck plating at the base of the coamings is to be efficiently stiffened between the deck beams. The openings of ventilator coamings are to be provided with efficient closing arrangements.

(b) Where such ventilators are situated on the freeboard deck, or on the superstructure deck within a quarter of the vessel's length from the stem, and the closing arrangements are of a temporary character, the coamings are to be at least 30 inches in height; in other exposed positions on the superstructure deck they are to be at least 24 inches in height. Where the coaming of any ventilator exceeds 36 inches in height, it is to be specially supported and secured.

§ 45.10–77 Air pipes.

(a) Where the air pipes to ballast and other tanks extend above the freeboard or superstructure decks, the exposed parts of the pipes are to be of substantial construction; the height from the deck to the opening is to be, when practical, at least 30 inches in wells on freeboard decks, 24 inches on raised quarter-decks, and 12 inches on other superstructure decks. Satisfactory means are to be provided for closing the openings of the air pipes. Where these heights may interfere with the working of the vessel a lower height may be approved provided the air pipe cap is properly protected and the air pipe is fitted with adequate means of closing.

§ 45.10–80 Gangway, cargo, and coaling ports, etc.

(a) Openings in the sides of vessels below the freeboard deck are to be fitted with watertight doors or covers, which, with their securing appliances, are to be of sufficient strength.

§ 45.10–85 Scuppers and sanitary discharge pipes.

(a) Discharges from scuppers and sanitary pipes led through the vessel's sides from spaces below the freeboard deck are to be fitted with efficient and accessible means for preventing water from passing inboard. Each separate discharge may have an automatic nonreturn valve with a positive means of closing it from a readily accessible position above the freeboard deck, or two automatic nonreturn valves without positive means of closing, provided the upper valve is situated so that it is always accessible for examination under service conditions. The positive-action valve is to be accessible and is to be provided with means for showing whether the valve is open or closed.

(b) Conditional upon the type and the location of the inboard ends of such openings, similar provisions may be prescribed by the assigning authority as to discharge from spaces within enclosed superstructures.

(c) Where scuppers are fitted in superstructures not fitted with class 1 closing appliances they are to have efficient means for preventing the accidental admission of water below the freeboard deck.

§ 45.10–87 Air ports.

(a) Air ports to spaces below the freeboard deck or to spaces below the superstructure deck of superstructures, closed by class 1 or class 2 closing appliances, are to be fitted with efficient inside deadlights permanently attached in their proper positions so that they can be effectively closed and secured watertight. Where, however, such spaces in superstructures are appropriated to passengers other than steerage passengers or to crew, the air ports may have portable deadlights stowed adjacent to the air ports, provided they are readily accessible at all times on service.

(b) The air ports and deadlights are to be of substantial and approved construction.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 45.15–37, 45.15–40.

§ 45.10–90 Guardrails.

(a) Efficient guardrails or bulwarks are to be fitted on all exposed portions of freeboard and superstructure decks.

§ 45.10–95 Freeing ports.

(a) Where bulwarks on the weather portions of freeboard or superstructure decks form "wells" ample provision is to be made for rapidly freeing the decks of water and for draining them. The minimum freeing port area on each side of the vessel for each well on the freeboard deck and on the raised quarter-deck is to be that given by the following scale: The minimum area for each well on any other superstructure deck is to be one-half the area given by the scale. Where the length of the well exceeds .7*L*, the scale may be modified.

TABLE 45.10-95 (a)—SCALE OF FREEING PORT AREA

Length of bulwarks in "well" in feet	Freeing port area on each side in square feet	Length of bulwarks in "well" in feet	Freeing port area on each side in square feet
15	8.0	45	11.0
20	8.5	50	11.5
25	9.0	55	12.0
30	9.5	60	12.5
35	10.0	65	13.0
40	10.5	Above 65	(1)

[1] 1 square foot for each additional 5 feet length of bulwark.

(b) The lower edges of the freeing ports are to be as near the deck as practicable and preferably not higher than the upper edge of the gunwale bar. Two thirds of the freeing port area required is to be provided in the midship half of the well. In vessels with less than the standard sheer the freeing port area is to be suitably increased.

(c) All such openings in the bulwarks are to be protected by rails or bars spaced about 9 inches apart. If shutters are fitted to freeing ports, ample clearance is to be provided to prevent jamming. Hinges are to have brass pins.

§ 45.10–100 Protection of crew.

Gangways, lifelines, or other satisfactory means are to be provided for the protection of the crew in getting to and from their quarters.

Subpart 45.15—Load Lines for Steamers [1]

§ 45.15–1 Length (L).

(a) The length used with the rules and the freeboard tables is the length in feet on the summer load waterline from the foreside of the stem to the afterside of the rudder post. Where there is no rud-

[1] The provisions of §§ 45.01–1–45.01–90, inclusive, and §§ 45.05–1–45.10–100, inclusive, apply to all vessels having Great Lakes load lines and, for steamers, are supplemented by §§ 45.15–1–45.15–97, inclusive. Tankers having Great Lakes load lines are also subject to these requirements except as specifically modified in §§ 45.20–1–45.20–70, inclusive.

der post, the length is measured from the foreside of the stem to the axis of the rudder stock. For vessels with cruiser sterns, the length is to be taken as 96 percent of the total length on the designed summer load waterline or as the length from the foreside of the stem to the axis of the rudder stock if that be the greater.

§ 45.15–5 Breadth (B).

(a) The breadth is the maximum breadth in feet amidships to the molded line of the frame in iron or steel vessels and to the outside of the planking in wood or composite vessels.

§ 45.15–7 Molded depth.

(a) The molded depth is the vertical distance in feet, measured amidships, from the top of the keel to the top of the freeboard deck beam at side. In wood and composite vessels the distance is measured from the lower edge of the keel rabbet. Where the form at the lower part of the midship section is of a hollow character, or where thick garboards are fitted, the depth is measured from the point where the line of the flat of the bottom continued inwards cuts the side of the keel.

§ 45.15–10 Depth for freeboard (D).

(a) The depth used with the freeboard table is the molded depth plus the thickness of stringer plate, or plus

$$\frac{T(L-S)}{L} \qquad (1)$$

if that be greater, where

T is the mean thickness of the exposed deck clear of deck openings, and

S is the total length of superstructures as defined in § 45.15–27.

(b) Where the topsides are of unusual form, D is the depth of a midship section having vertical topsides, standard round of beam, and area of topside section equal to that in the actual midship section. Where there is a step or break in the topsides (that is, as in the turret-deck vessel) 70 percent of the area above the step or break is included in the area used to determine the equivalent section.

(c) In a vessel without an enclosed superstructure covering at least $0.6L$ amidships, without a complete trunk or without a combination of intact partial superstructures and trunk extending all fore and aft, the depth to be used with the freeboard table is not to be less than $L/15$ in vessels below 350 feet in length, nor less than those tabulated below for lengths above 350 feet (minimum depths at intermediate lengths are obtained by interpolation).

TABLE 45.15-10 (a)—FREEBOARD TABLE

L	Minimum depth	L	Minimum depth	L	Minimum depth
350	23.35	450	27.65	550	30.20
375	24.70	475	28.40	575	30.70
400	25.80	500	29.05	600	31.15
425	26.80	525	29.65	625	31.60

§ 45.15–15 Coefficient of fineness (c).

(a) The coefficient of fineness used with the freeboard table is given by

$$c=\frac{\Delta}{L.B.d_1} \qquad (1)$$

Where Δ is the volume in cubic feet of the vessel's molded displacement excluding bossing at a mean molded draft d_1 which is 85 percent of the molded depth. The coefficient c is not to be taken as less than 0.68, nor more than 0.86.

§ 45.15–17 Strength.

(a) The assigning authority is to be satisfied with the structural strength of vessels to which freeboards are assigned.

(b) Vessels which comply with the highest standard of the rules of a classification society recognized by the Commandant, U. S. Coast Guard, shall be regarded as having sufficient strength for the minimum freeboards allowed under Commandant, U. S. Coast Guard, in this part.

(c) Vessels which do not comply with the highest standard of the rules of a classification society recognized by the Commandant, U.S. Coast Guard, shall be assigned such increased freeboards as shall be determined by the assigning authority, and for guidance the following strength moduli are formulated:

(1) *Material.* The strength moduli are based on the assumption that the structure is built of mild steel, manufactured by the open-hearth process (acid or basic), and having a tensile strength of 60,000 to 72,000 pounds per square inch, and a minimum elongation on a length of 8 inches of at least

$$\frac{1{,}500{,}000}{\text{Tensile strength}}$$

(2) *Strength deck.* The strength deck is the uppermost deck which is incorporated into and forms an integral part of the longitudinal girder within the half-length amidships.

(3) *Depth to strength deck (Ds).* The depth to strength deck is the vertical distance in feet amidships from the top of the keel to the top of the strength deck beam at side.

(4) *Draft (d).* The draft is the vertical distance in feet amidships from the top of the keel to the center of the diamond except in those cases where midsummer marks are granted, the draft to be used is the draft to the midsummer mark.

(5) *Longitudinal modulus.* The longitudinal modulus $\frac{I}{y}$ is the moment of inertia I of the midship section about the neutral axis divided by the distance y measured from the neutral axis to the top of the strength deck beam at side, calculated in way of openings but without deductions for rivet holes. Areas are measured in square inches and distances in feet.

(i) Below the strength deck, all continuous longitudinal members other than such parts of underdeck girders as are required entirely for supporting purposes are included. Above the strength deck, the gunwale angle bar and the extension of the sheerstrake are the only members included.

(ii) The required longitudinal modulus for effective material is expressed by f. d. B., where f is the factor obtained from the Table 45.15–17 (c) (5) (ii).

TABLE 45.15–17 (c) (5) (ii)

L	f	L	f	L	
100	1.70	280	5.70	460	11.10
120	1.95	300	6.30	480	11.70
140	2.20	320	6.90	500	12.30
160	2.50	340	7.50	520	12.90
180	2.90	360	8.10	540	13.50
200	3.40	380	8.70	560	14.10
220	3.90	400	9.30	580	14.70
240	4.50	420	9.90	600	15.30
260	5.10	440	10.50	620	15.90

(iii) For intermediate lengths, the value of f is determined by interpolation.

(iv) This formula applies where the ratio $\frac{L}{D_s}$ does not exceed 13.5 in vessels of 325 feet length and under and 19 in vessels of 600 feet length and above. Intermediate values between lengths of 325 feet and 600 feet length are to be obtained by interpolation.

(6) *Frame.* For the purpose of the frame modulus, the frame is regarded as composed of a frame angle and a reverse angle each of the same size and thickness.

(7) *Frame modulus.* The modulus $\frac{I}{y}$ of the midship frame below the lowest tier of beams is the moment of inertia I of the frame section about the neutral axis divided by the distance y measured from the neutral axis to the extremity of the frame section, calculated without deduction for rivet and bolt holes. The modulus is measured in inch units.

(i) The required frame modulus is expressed by

$$\frac{s\ (d-t)\ (f_1+f_2)}{1{,}000} \qquad (2)$$

where:

s is the frame spacing in inches.

t is the vertical distance in feet measured at amidships from the top of the keel to a point midway between the top of the inner bottom at side and the top of the heel bracket (see fig. 45.15–17 (c) (7) (i)); where there is no double bottom, t is measured to a point midway between the top of the floor at center and the top of the floor at the side.

f_1 is a coefficient depending on H, which, in vessels fitted with double bottoms, is the vertical distance in feet from the middle of the beam bracket of the lowest tier of beams at side to a point midway between the top of the inner bottom at side and the top of the heel bracket (see fig. 45.15–17 (c) (7) (i)); where there is no double bottom, H is measured to a point midway between the top of the floor at center and the top of the floor at side. Where the frame obtains additional strength from the form of the vessel, due allowance is made in the value of f_1.

f_2 is a coefficient depending on K which is the vertical distance in feet from the top of the lowest tier of beams at side to a point 7 feet, 6 inches above the freeboard deck at side, or, if there is a superstructure, to a point 12 feet 6 inches above the freeboard deck at side. (See fig. 45.15–17 (c) (7) (i).) The values of f_1 and f_2 are obtained from Table 45.15–17 (c) (7) (i).

TABLE 45.15-17 (c) (7) (i)

H in feet	0	7.0	9.0	11.0	13.0	15.0	17.0	19.0	21.0	23.0	25.0
f_1	9	11.0	12.5	15.0	19.0	24.0	29.5	36.0	43.0	51.0	59.0
K in feet	0	5.0	10.0	15.0	20.0	25.0	30.0	35.0	40.0	.....	.....
f_2	0	.5	1.0	2.0	3.0	4.5	6.5	9.0	12.0	.....	.....

NOTE: Intermediate values are obtained by interpolation.

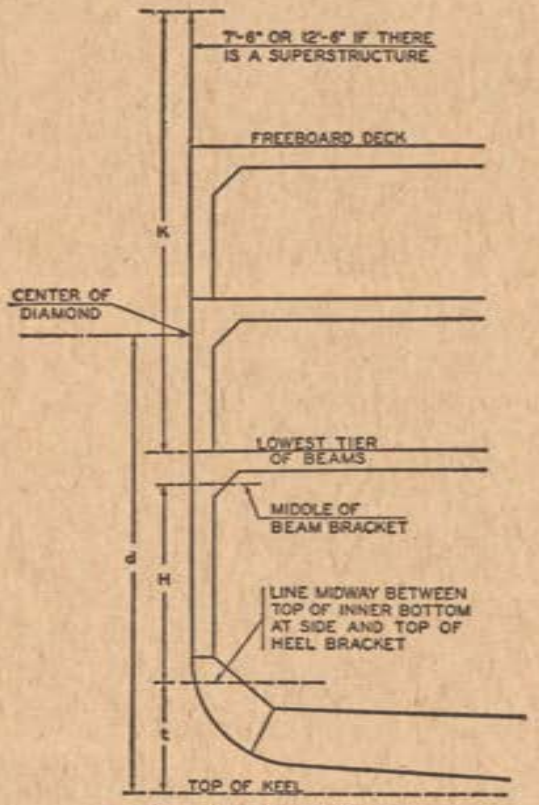

FIGURE 45.15-17 (c) (7) (i)

(ii) This formula applies where D is between 15 feet and 60 feet, both inclusive;

B is between $\frac{L}{10}+5$ and $\frac{L}{10}+20$, both inclusive;

$\frac{L}{Ds}$ is between 10 and 13.5, both inclusive; and the horizontal distance from the outside of the frame to the center of the first row of pillars does not exceed 20 feet.

(iii) In single-deck vessels of ordinary form, where H does not exceed 18 feet, the frame modulus determined by the preceding method is multiplied by the factor f_3 where

$$f_3=0.50+0.05\ (H-8)$$

(iv) Where the horizontal distance from the outside of the frame to the center of the first row of pillars exceeds 20 feet, the assigning authority is to be satisfied that sufficient additional strength is provided.

§ 45.15–20 Height of superstructure.

(a) The height of a superstructure is the least vertical height measured from the top of the superstructure deck to the top of the freeboard deck beam minus the difference between D and the molded depth. (See §§ 45.15–7, 45.15–10.)

§ 45.15–25 Standard height of superstructure.

(a) The standard height of a raised quarter-deck is 3 feet for vessels up to and including 100 feet in length, 4 feet for vessels 250 feet in length, and 6 feet for vessels 400 feet in length and above. The standard height of any other superstructure is 6 feet for vessels up to and including 250 feet in length and 7 feet 6 inches for vessels 400 feet in length and above. The standard height at intermediate lengths is obtained by interpolation.

§ 45.15–27 Length of superstructure (S).

(a) The length of a superstructure is the mean covered length of the parts of the superstructure which extend to the sides of the vessel and lie within lines drawn perpendicular to the extremities of the summer load waterline, as defined in § 45.15–1.

§ 45.15–30 Enclosed superstructure.

(a) A detached superstructure is regarded as enclosed only where:

(1) The enclosing bulkheads are of efficient construction. (See § 45.15–35.)

(2) The access openings in these bulkheads are fitted with class 1 or class 2 closing appliances. (See §§ 45.15–37, 45.15–40.)

(3) All other openings in sides or ends of the superstructure are fitted with efficient weathertight means of closing.

(4) Independent means of access to crew, machinery, bunker, and other working spaces within bridges and poops are at all times available when the bulkhead openings are closed.

§ 45.15–35 Superstructure bulkheads.

(a) Bulkheads at exposed ends of poops, bridges, and forecastles are deemed to be of efficient construction where the assigning authority is satisfied that, in the circumstances, they are equivalent to the following standard for vessels with minimum freeboards under which standard the stiffeners and plating are of the scantlings given in Table 45.15–35(a), the stiffeners are spaced 30 inches apart, the stiffeners on poop and bridge front bulkheads have efficient end connections, and those on after bulkheads of bridges and forecastles extend for the whole distance between the margin angles of the bulkheads.

TABLE 45.15-35 (a)—EXPOSED BULKHEADS OF SUPERSTRUCTURES OF STANDARD HEIGHT [1]

Bridge front bulkheads, unprotected bulkheads of poops 0.4L or more in length		Bulkheads of poops partially protected or less in length than 0.4L		After bulkheads of bridges and forecastles	
Length of vessel (feet)	Bulb angle stiffeners (inches)	Length of vessel (feet)	Plain angle stiffeners (inches)	Length of vessel (feet)	Plain angle stiffeners (inches)
Under 160	5½ x 3 x 0.32.	Under 150	8 x 2½ x 5/16.	Under 150	2¾ x 2¾ x ¼.
160	6 x 3 x 0.34.	150	3½ x 2½ x 5/16.	150	3½ x 2½ x ¼.
200	7 x 3 x 0.32.	200	4 x 3 x 5/16.	250	3½ x 3 x 5/16.
240	7 x 3 x 0.38.	250	5 x 3 x 5/16.	350 and above	4 x 3 x 5/16.
280	7 x 3 x 0.44.	300	5 x 3 x 3/8.		
320	8 x 3 x 0.40.	350	6 x 3½ x 3/8.		
360	8 x 3 x 0.46.	400	6 x 3½ x 7/16.		
400	9 x 3½ x 0.38.	450	7 x 3½ x 7/16.		
440	9 x 3½ x 0.50.	500 and above	7 x 3½ x ½.		
480	10 x 3½ x 0.40.				
520	10 x 3½ x 0.52.				
560 and above	10 x 3½ x 0.64.				

Length of vessel (feet)	Bulkhead plating (inch)	Length of vessel (feet)	Bulkhead plating (inch)	Length of vessel (feet)	Bulkhead plating (inch)
200 and under	0.3	150 and under	0.24	150 and under	0.20
380 and above	0.44	400 and above	0.38	400 and above	0.30

[1] For vessels intermediate in length the thickness of bulkhead plating is obtained by interpolation.

§ 45.15–37 Class 1 closing appliances.

(a) These appliances are of iron or steel, are in all cases to be permanently and strongly attached to the bulkhead, are framed, stiffened, and fitted so that the whole structure is of equivalent strength to the unpierced bulkhead, and are weathertight when closed. The means for securing these appliances are permanently attached to the bulkhead or to the appliances and the latter are so arranged that they can be closed and secured from both sides of the bulkhead or from the deck above. The sills of the access openings are at least 12 inches above the deck.

§ 45.15–40 Class 2 closing appliances.

(a) These appliances are (1) strongly framed hardwood hinged doors, which are not more than 30 inches wide nor less than 2 inches thick, or (2) shifting boards fitted for the full height of the opening in channels riveted to the bulkhead, the shifting boards being at least 2 inches thick where the width of opening is 30 inches or less, and increased in thickness at the rate of 1 inch for each additional 15 inches of width, or (3) portable plates of equal efficiency.

§ 45.15–45 Temporary closing appliances.

(a) Temporary closing appliances for middle line openings in the deck of an enclosed superstructure consists of: (1) a steel coaming not less than 9 inches in height efficiently riveted to the deck; (2) hatchway covers as required by § 45.10–15, secured by hemp lashings; and (3) hatchway supports as required by §§ 45.10–20, 45.10–25.

§ 45.15–47 Superstructures, general.

(a) Where exposed bulkheads at the ends of poops, bridges, and forecastles are not of efficient construction (see § 45.15–35), they are considered as nonexistent.

(b) Where in the side plating of a superstructure there is an opening not provided with permanent means of closing, the part of the superstructure in way of the opening is regarded as having no effective length.

(c) Where the height of a superstructure is less than the standard its length is reduced in the ratio of the actual to the standard height. Where the height exceeds the standard, no increase is made in the length of the superstructure.

§ 45.15–50 Poop.

(a) Where there is an efficient bulkhead and the access openings are fitted with class 1 closing appliances, the length to the bulkhead is effective. Where the access openings in an efficient bulkhead are fitted with class 2 closing appliances and the length to the bulkhead is 0.5 *L* or less, 100 percent of that length is effective; where the length is 0.7 *L* or more, 90 percent of that length is effective; where the length is between 0.5 *L* and 0.7 *L*, an intermediate percentage of that length is effective; where an allowance is given for an efficient adjacent trunk (see § 45.15–65), 90 percent of the length to the bulkhead is to be taken as effective; 50 percent of the length of an open poop or of an open extension beyond an efficient bulkhead is effective.

CROSS REFERENCE: For class 2 closing appliances, see § 45.15–40.

§ 45.15–55 Raised quarter-deck.

(a) Where there is an efficient intact bulkhead, the length to the bulkhead is effective. Where the bulkhead is not intact, the superstructure is considered as a poop of less than standard height.

§ 45.15–57 Bridge.

(a) Where there is an efficient bulkhead at each end, and the access openings in the bulkheads are fitted with class 1 closing appliances, the length between the bulkheads is effective.

(b) Where the access openings in the forward bulkhead are fitted with class 1 closing appliances and the access openings in the after bulkhead with class 2 closing appliances, the length between the bulkheads is effective; where an allowance is given for an efficient trunk, adjacent to the after bulkhead (see § 45.15–65), 90 percent of the length is effective. Where the access openings in both bulkheads are fitted with class 2 closing appliances, 90 percent of the length between the bulkheads is effective. Where the access openings in the forward bulkhead are fitted with class 1 or class 2 closing appliances and the access openings in the after bulkhead have no closing appliances, 75 percent of the length between the bulkheads is effective. Where the access openings in both bulkheads have no closing appliances, 50 percent of the length is effective; 75 percent of the length of an open extension beyond the after bulkhead and 50 percent of that beyond the forward bulkhead are effective.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 45.15–37, 45.15–40.

§ 45.15–60 Forecastle.

(a) Where there is an efficient bulkhead and the access openings are fitted with class 1 or class 2 closing appliances, the length to the bulkhead is effective. Where no closing appliances are fitted and the sheer forward of amidships is not less than the standard sheer, 100 per cent of the length of the forecastle forward of 0.1 *L* from the forward perpendicular is effective; where the sheer forward is half the standard sheer or less, 50 percent of that length is effective; and where the sheer forward is intermediate between the standard and half the standard sheer, an intermediate percentage of that length is effective; 50 per cent of the length of an open extension beyond the bulkhead or beyond 0.1 *L* from the forward perpendicular is effective.

CROSS REFERENCE: For class 1 and class 2 closing appliances, see §§ 45.15–37, 45.15–40.

§ 45.15–65 Trunk.

(a) A trunk or similar structure which does not extend to the sides of the vessel is regarded as efficient, *Provided*, That:

(1) The trunk is at least as strong as a superstructure;

(2) The hatchways are in the trunk deck, and comply with the requirements of §§ 45.10–1—45.10–45, and the width of the trunk deck stringer provides a satisfactory gangway and sufficient lateral stiffness;

(3) A permanent working platform fore and aft fitted with guardrails is provided by the trunk deck, or by detached trunks connected to other superstructures by efficient permanent gangways. On tank barges an efficient lifeline may be accepted in lieu of guardrails;

(4) Ventilators are protected by the trunk, by watertight covers, or by equivalent means;

(5) Open rails are fitted on the weather portions of the freeboard deck in way of the trunk for at least half their length;

(6) The machinery casings are protected by the trunk, by a superstructure of standard height, or by a deckhouse of the same height and of equivalent strength.

(b) Where access openings in poop and bridge bulkheads are fitted with class 1 closing appliances, 100 percent of the length of an efficient trunk reduced in the ratio of its mean breadth to *B* is added to the effective length of the superstructures. Where the access openings in these bulkheads are not fitted with class 1 closing appliances 90 percent is added.

(c) The standard height of a trunk is the standard height of a bridge.

(d) Where the height of the trunk is less than the standard height of a bridge, the addition is reduced in the ratio of the actual to the standard height; where the height of hatchway coamings on the trunk deck is less than the standard height of coamings (see § 45.15–10), a reduction from the actual height of trunk is to be made which corresponds to the difference between the actual and the standard height of coamings.

§ 45.15–67 Enclosed superstructure with middle line openings in the deck not provided with permanent means of closing.

(a) Where there is an enclosed superstructure with one or more middle line openings in the deck not provided with permanent means of closing (see §§ 45.10–1—45.10–45), the effective length of the superstructure is determined as follows:

(1) Where efficient temporary closing appliances are not provided for the middle line deck openings (see §§ 45.15–45), or the breadth of opening is 80 percent or more of the breadth B_1 of the superstructure deck at the middle of the opening, the vessel is considered as having an open well in way of each opening, and freeing ports are to be provided in way of this well. The effective length of superstructure between openings is governed by §§ 45.15–50, 45.15–57, 45.15–60.

(2) Where efficient temporary closing appliances are provided for middle line deck openings and the breadth of opening is less than 0.8 B_1, the effective length is governed by §§ 45.15–50, 45.15–57, 45.15–60, except that where access openings in 'tween deck bulkheads are closed

by class 2 closing appliances, they are regarded as being closed by class 1 closing appliances in determining the effective length. The total effective length is obtained by adding to the length determined by subparagraph (a) (1) of this section the difference between this length and the length of the vessel modified in the ratio of

$\frac{B_1-b}{B_1}$ where b=breadth of deck opening

where

$\frac{B_1-b}{B_1}$ is greater than 0.5 it is taken as 0.5.

§ 45.15–70 Deductions for superstructures.

(a) Where the effective length of superstructures is 1.0 L, the deduction from the freeboard is 14 inches at 80 feet length of vessel, 34 inches at 280 feet length, and 42 inches at 400 feet length and above; deductions at intermediate lengths are obtained by interpolation. Where the total effective length of superstructures is less than 1.0 L, the deduction is a percentage obtained from Table 45.15–70 (a).

TABLE 45.15-70 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURE (E)

Superstructures	0	0.1L	0.2L	0.3L	0.4L	0.5L	Line
	Per-cent	Per-cent	Per-cent	Per-cent	Per-cent	Per-cent	
All types with forecastle and without detached bridge	0	5	10	15	23.5	32	A
All types with forecastle and detached bridge [1]	0	6.3	12.7	19	27.5	36	B

Superstructures	0.6L	0.7L	0.8L	0.9L	1.0L	Line
	Per-cent	Per-cent	Per-cent	Per-cent	Per-cent	
All types with forecastle and without detached bridge	46	63	75.3	87.7	100	A
All types with forecastle and detached bridge [1]	46	63	75.3	87.7	100	B

[1] Where the effective length of a detached bridge is less than 0.2L the percentages are obtained by interpolation between lines B and A. Where no forecastle is fitted the above percentages are reduced by 5. Percentages for intermediate lengths of superstructures are obtained by interpolation.

§ 45.15–73 Sheer, general.

(a) The sheer is measured from the deck at side to a line of reference drawn parallel to the keel through the sheer line at amidships.

(b) In vessels designed to trim by the stern in service, the sheer may be measured in relation to the load line, provided an additional mark is placed at 0.25L forward of amidships to indicate the assigned load line. This mark is to be similar to the load line diamond amidships.

(c) In flush deck vessels and in vessels with detached superstructures the sheer is measured at the freeboard deck.

(d) In vessels with topsides of unusual form in which there is a step or break in the topsides, the sheer is considered in relation to the equivalent depth amidships (see § 45.15–10).

(e) In vessels with a superstructure of standard height which extends over the whole length of the freeboard deck, the sheer is measured at the superstructure deck; where the height exceeds the standard, the sheer may be considered in relation to the standard height.

(f) Where a superstructure is intact or access openings in its enclosing bulkheads are fitted with class 1 closing appliances, and the superstructure deck has at least the same sheer as the exposed freeboard deck, the sheer of the enclosed portion of the freeboard deck is not taken into account.

CROSS REFERENCE: For class 1 closing appliances, see § 45.15–37.

§ 45.15–75 Standard sheer profile.

(a) The ordinates (in inches) of the standard sheer profile are given in Table 45.15–75(a) where L is the number of feet in the length of the vessel.

TABLE 45.15-75 (a)

Station [1]	Ordinate	Factor
A. P.	0.1 L+10	1
1/6L from A. P.	0.0445 L+4.45	4
1/3L from A. P.	0.011 L+1.1	2
Amidships	+0	4
1/3L from F. P.	0.022 L+2.2	2
1/6L from F. P.	0.089 L+8.9	4
F. P.	0.2 L+20	1

[1] A. P.=After end of summer load waterline. F. P.=Fore end of summer load waterline.

§ 45.15–77 Measurement of variations from standard sheer profile.

(a) Where the sheer profile differs from the standard, the 7 ordinates of each profile are multiplied by the appropriate factors given in the table of ordinates. The difference between the sums of the respective products, divided by 18, measures the deficiency or excess of sheer. Where the after half of the sheer profile is greater than the standard and the forward half is less than the standard, no credit is allowed for the part in excess and the deficiency only is measured.

(b) Where the forward half of the sheer profile exceeds the standard, and the after portion of the sheer profile is not less than 75 percent of the standard, credit is allowed for the part in excess; where the after part is less than 50 percent of the standard, no credit is given for the excess sheer forward. Where the after sheer is between 50 percent and 75 percent of the standard, intermediate allowances may be granted for excess sheer forward.

§ 45.15–80 Correction for variations from standard sheer profile.

(a) The correction for sheer is the deficiency or excess of sheer (see § 45.15–77) multiplied by $0.75-\frac{S}{2L}$ where S is the total length of the superstructure, as defined in § 45.15–27.

§ 45.15–83 Addition for deficiency in sheer.

(a) Where the sheer is less than the standard, the correction for deficiency in sheer (see § 45.15–80) is added to the freeboard.

§ 45.15–85 Deduction for excess sheer.

(a) Where an enclosed superstructure covers 0.1L before and 0.1L abaft midships, the correction for excess of sheer (see § 45.15–80) is deducted from the freeboard; in vessels with detached superstructures where no enclosed superstructure covers amidships, no deduction is made from the freeboard; where an enclosed superstructure covers less than 0.1L before and 0.1L abaft amidships, the deduction is obtained by interpolation. The maximum deduction for excess sheer is 1½ inches at 100 feet and increases at the rate of 1½ inches for each additional 100 feet in the length of the vessel.

§ 45.15–87 Standard round of beam.

(a) The standard round of beam of the freeboard deck is one-fiftieth of the breadth of the vessel.

§ 45.15–90 Round of beam correction.

(a) Where the round of beam of the freeboard deck is greater or less than the standard, the freeboard is decreased or increased respectively by one-fourth of the difference between the actual and the standard round of beam, multiplied by the proportion of the length of the freeboard deck not covered by enclosed superstructures. Twice the standard round of beam is the maximum for which allowance is given.

§ 45.15–93 Summer freeboard.

(a) The minimum freeboard in summer is the freeboard derived from the freeboard table after corrections for departures from the standards and after deduction for superstructures. The freeboard measured from the intersection of the upper surface of the freeboard deck with the outer surface of the shell is not to be less than 2 inches.

§ 45.15–94 Midsummer freeboard.

(a) In the case of cargo vessels and tankers which comply fully with the provisions of § 45.15–17 as to strength of structure at the deeper draft, the Assigning Authority may permit a reduction in the freeboard for the midsummer season of an amount in inches not exceeding the product of 0.3 multiplied by the summer draft in feet, measured from the top of the keel to the center of the diamond. However, in no case shall the freeboard be less than 2 inches.

§ 45.15–95 Intermediate and winter freeboard.

(a) The minimum freeboards for the intermediate and winter seasons is obtained by an addition to the summer freeboard of a distance in inches obtained by multiplying the factors given in Table 45.15–95 (a) by the summer draft in feet measured from the top of the keel to the center of the diamond.

TABLE 45.15-95 (a)

Length between perpendiculars [1]	Factor for intermediate season	Factor for winter season
Under 400 feet	0.25	0.50
450 feet	.25	.65
500 feet	.35	.80
550 feet and above	.45	1.00

[1] Factors for intermediate lengths to be obtained by interpolation.

§ 45.15–96 Salt water freeboard.

(a) In the case of ships which load in salt water and proceed to fresh water, the minimum freeboards while in salt water for all seasons shall be increased by an amount equal to

$$\frac{\Delta}{4T} \text{ inches,}$$

where:

Δ = displacement in fresh water, in tons of 2,240 pounds at the summer load waterline;

T = tons of 2,240 pounds per inch immersion in fresh water at the summer load waterline.

(1) Where the displacement at the summer load waterline cannot be certified, the increase in freeboard shall be one-fourth of an inch per foot of summer draft measured from the top of the keel.

§ 45.15–97 Freeboard table for steamers.

(a) Table 45.15–97(a) gives the basic minimum summer freeboard for steamers which comply with the standards in this part.

TABLE 45.15-97(a)—BASIC MINIMUM SUMMER FREEBOARD FOR STEAMERS

L (feet)	Freeboard (inches)	L (feet)	Freeboard (inches)	L (feet)	Freeboard (inches)
80	7.2	310	42.2	540	107.4
90	8.0	320	44.0	550	110.0
100	8.9	330	47.0	560	112.6
110	9.9	340	49.5	570	115.1
120	11.0	350	52.1	580	117.6
130	12.1	360	54.8	590	120.0
140	13.3	370	57.6	600	122.3
150	14.5	380	60.5	610	124.5
160	15.7	390	63.4	620	126.7
170	17.1	400	66.4	630	128.8
180	18.5	410	69.4	640	130.8
190	19.9	420	72.4	650	132.8
200	21.4	430	75.4	660	134.7
210	23.0	440	78.5	670	136.7
220	24.6	450	81.5	680	138.7
230	26.3	460	84.5	690	140.7
240	28.1	470	87.5	700	142.6
250	29.9	480	90.5	710	144.6
260	31.8	490	93.4	720	146.5
270	33.8	500	96.3	730	148.4
280	35.8	510	99.1	740	150.3
290	37.8	520	101.9	750	152.1
300	40.0	530	104.7		

(b) The freeboards at intermediate lengths are obtained by interpolation.

(c) Where c exceeds 0.68, the freeboard is multiplied by the factor

$$\frac{c+0.68}{1.36}$$

(d) Where D exceeds or is less than $\frac{L}{15}$ the freeboard is increased or decreased accordingly, by $\left(D-\frac{L}{15}\right)R$ inches, where R is $\frac{L}{130}$ at lengths less than 390 feet, and 3 at 390 feet length and above, except that the depth to be used in the above correction is not to be taken at less than $L/15$ in vessels below 350 feet in length, nor less than those given in Table 45.15–97 (d), for lengths 350 feet and above. Minimum depths at intermediate lengths are obtained by interpolation.

TABLE 45.15-97 (d)

L	Minimum depth	L	Minimum depth	L	Minimum depth
350	23.35	450	27.65	550	30.20
375	24.70	475	28.40	575	30.70
400	25.80	500	29.05	600	31.15
425	26.80	525	29.65	625	31.60

(1) *Provided, however,* a vessel with an enclosed superstructure covering at least 0.6 L amidships, with a complete trunk, or with a combination of intact partial superstructures and trunk which extends all fore and aft, where D is less than $L/15$, the freeboard is reduced at the above rate. Where the height of superstructures or trunk is less than the standard height, the reduction is in the ratio of the actual to the standard height.

(e) Where the actual depth to the surface of the freeboard deck amidships is greater or less than D, the difference between the depths (in inches) is added to or deducted from the freeboard.

Subpart 45.20—Load Lines for Tankers [2]

§ 45.20–1 Definition.

(a) The term "tanker" includes all steamers specially constructed for the carriage of liquid cargoes in bulk.

§ 45.20–5 Marks on sides.

(a) The marks on the tanker's sides are to be as shown in Figure 45.05–5(a) and the lines as described in § 45.05–15.

§ 45.20–10 Construction.

(a) The structure of the vessel is to be of sufficient strength for the increased draft corresponding to the freeboard assigned.

§ 45.20–15 Forecastle.

(a) The vessel is to have a forecastle of which the length is not less than 7 percent of the length of the vessel and the height is not less than the standard height.

[2] The provisions of §§ 45.01–1—45.01–90, inclusive, and §§ 45.05–1—45.15–97, inclusive, shall apply to Great Lakes tankers except as they are modified by §§ 45.20–1—45.20–70, inclusive.

(b) A forecastle is not required in the case of self-propelled barges, tank barges, and cargo barges carrying cargo only on deck.

§ 45.20–20 Machinery casings.

(a) The openings in machinery casings on the freeboard deck are to be fitted with steel doors. The casings are to be protected by an enclosed poop or bridge of at least standard height, or by a deckhouse of equal height and of equivalent strength. These conditions may be modified in the case of self-propelled barges. The bulkheads at the ends of these structures are to be of the scantlings required for bridge front bulkheads. All entrances to the structures from the freeboard deck are to be fitted with effective closing appliances, and the sills are to be at least 18 inches above the deck. Exposed machinery casings on the superstructure deck are to be of substantial construction, and all openings in them are to be fitted with steel closing appliances permanently attached to the casings and capable of being closed and secured from both sides; the sills of such openings are to be at least 15 inches above the deck. Fiddley openings are to be as high above the superstructure deck as is reasonable and practicable and are to have strong steel covers permanently attached in their proper positions. Engineroom skylights are to be of substantial construction, fitted with strong glass lights, which may be required to be fitted with steel covers depending on their height above the freeboard deck.

§ 45.20–25 Gangway.

(a) An efficiently constructed permanent gangway of sufficient strength for its exposed position is to be fitted fore and aft at the level of the superstructure deck between the poop and midship bridge, and when crew are berthed forward from the bridge to the forecastle, or other equivalent means of access may be provided to carry out the purpose of the gangway, such as passage below deck.

(b) On towed tank barges a wire cable arranged and equipped to facilitate safe communication between both ends of the vessel at all times may be accepted in lieu of a permanent gangway.

§ 45.20–30 Protection of crew, access to machinery space, etc.

(a) Safe and satisfactory access from the gangway level to the quarters of the crew, the machinery space, and all other parts used in the necessary work of the vessel is to be available at all times. This section does not apply to pumprooms entered from the freeboard deck, when fitted with class 1 closing appliances. Deckhouses for the accommodation of the crew, pilothouses, etc., on the freeboard deck are to be of steel efficiently constructed and provided with port lights fitted with steel deadlights.

§ 45.20–35 Hatchways.

(a) All hatchways on the freeboard deck and on the deck of expansion trunks are to be closed watertight by efficient steel covers.

§ 45.20–40 Ventilators.

(a) Ventilators to spaces below the freeboard deck are to be of ample strength or are to be protected by superstructures or equally efficient means.

§ 45.20–45 Freeing arrangements.

(a) Vessels with bulwarks are to have open rails fitted for at least half the length of the exposed portion of the weather deck or other effective freeing arrangements. The upper edge of the sheer strake is to be kept as low as practicable and preferably not higher than the upper edge of the gunwale bar.

(b) Where superstructures are connected by trunks, open rails are to be fitted for the whole length of the weather portions of the freeboard deck.

§ 45.20–50 Plans.

(a) Plans showing proposed fittings and arrangements are to be submitted to the assigning authority for approval.

§ 45.20–55 Computation of freeboard.

(a) When the assigning authority is satisfied that the foregoing requirements are fulfilled, the summer freeboard may be computed from the table for tankers; all corrections, except those for flush-deck steamers, detached superstructures, and excess sheer, are to be made in accordance with §§ 45.15–1—45.20–1.

§ 45.20–60 Deductions for detached superstructures.

(a) When the total effective length of superstructure is less than 1.0 *L*, the deduction is a percentage of that for a superstructure of length 1.0 *L*, and is obtained from Table 45.20–60 (a).

TABLE 45.20–60 (a)—TOTAL EFFECTIVE LENGTH OF SUPERSTRUCTURES

	0	0.1*L*	0.2*L*	0.3*L*	0.4*L*	0.5*L*	0.6*L*	0.7*L*	0.8*L*	0.9*L*	1.0*L*
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
All types	0	7	14	21	31	41	52	63	75.3	87.7	100

§ 45.20–65 Deduction for excess sheer.

(a) Where the sheer is greater than the standard, the correction for excess sheer (see § 45.15–80) is deducted from the freeboard for all tankers. Section 45.15–85 does not apply except that the maximum deduction for excess sheer is 1½ inches at 100 feet and increases at the rate of 1½ inches for each additional 100 feet in the length of the vessel.

§ 45.20–70 Freeboard table for tankers.

(a) Table 45.20–70 (a) gives the basic minimum summer freeboard for tankers which comply with the standards in this part.

TABLE 45.20–70 (a)—BASIC MINIMUM SUMMER FREEBOARD FOR TANKERS

L (feet)	Freeboard	*L* (feet)	Freeboard	*L* (feet)	Freeboard
	Inches		*Inches*		*Inches*
80	6.4	220	22.8	360	48.5
90	7.2	230	24.3	370	50.6
100	8.1	240	25.9	380	52.7
110	9.1	250	27.5	390	54.9
120	10.1	260	29.2	400	57.1
130	11.1	270	30.9	410	59.4
140	12.2	280	32.7	420	61.7
150	13.3	290	34.5	430	64.1
160	14.5	300	36.4	440	66.5
170	15.8	310	38.3	450	69.0
180	17.1	320	40.2	460	71.5
190	18.5	330	42.2	(1)	(1)
200	19.9	340	44.3		
210	21.3	350	46.4		

[1] Tankers above 460 feet in length to be specially considered, and the assigned freeboards are to be approved by the Commandant, U. S. Coast Guard, before issuance of certificate.

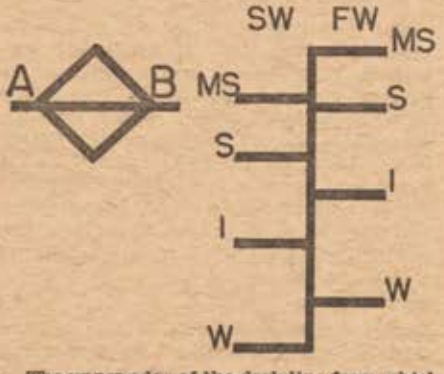
Subpart 45.25—Fees and Form of Certificate

§ 45.25–1 Fees.

(a) Fees payable by owners will be charged for the assignment of load line, renewal of load line certificates, and annual load line inspection, in accordance with the regulations set forth in § 43.40–5 of this subchapter.

§ 45.25–5 Form of load line certificate.

LOAD LINE CERTIFICATE FOR THE GREAT LAKES



[SEAL]

Issued under the authority of the Commandant, U.S. Coast Guard, United States of America, under the provisions of the act of August 27, 1935, as amended, to establish load lines for American merchant vessels of 150 gross tons or over engaged in trade on the Great Lakes of North America.

Ship _____
Certificate No. _____
Official No. _____
Gross tonnage _____
Port of registry _____

FREEBOARD FROM DECK LINE		LOAD LINE
Midsummer _____	MS	_____ above S
Summer _____	S	Upper edge of line through center of diamond.
Intermediate _____	I	_____ below S
Winter _____	W	_____ below S

Increase for salt water for all freeboards _____ inches.

The upper edge of the deck line from which these freeboards are measured is _____ inches above the top of the _____ deck at side.

This is to certify that this ship has been surveyed and the freeboards and load lines shown above have been found to be correctly marked upon the vessel in manner and location as provided by the load line regulations of the Commandant, U.S. Coast Guard, applicable to the Great Lakes.

This certificate[1] remains in force until _____ Issued at _____ on the _____ day of _____ 19__. (Here follows the signature, seal, if any, and the name of the authority issuing the certificate.)

NOTES: (1) In accordance with the Great Lakes Load Line Regulations the diamond and lines must be permanently marked by center punch marks or cutting. The "MS" load line shall be assigned only to those particular vessels that qualify under the regulations.

(2) The "SW" marks need only be assigned to Great Lakes vessels loading in salt water of the St. Lawrence River west of a straight line from Cap de Rosiers to West Point Anticosti Island, and west of a line along longitude 63 degrees west from Anticosti Island to the north shore of the St. Lawrence River. In such cases these limits shall be indicated on the certificate.

(3) The load line assignment given by this certificate necessarily assumes that the nature and stowage of cargo, ballast, etc., are such as to secure sufficient stability for the vessel. Accordingly, it is the owner's responsibility to furnish the Master of the vessel with stability information and instructions when this is necessary to maintenance of sufficient stability.

(On the reverse side of the load line certificate, or on a separate sheet attached and forming part of the certificate, provision is to be made for annual inspection and renewal endorsements.)

[1] Upon the expiration of the certificate, renewal must be obtained as provided by the Great Lakes Load Line Regulations and the certificate so endorsed.

PART 46—SUBDIVISION LOAD LINES FOR PASSENGER VESSELS

Subpart 46.01—Authority and Purpose

Sec.
46.01–1 Purpose.
46.01–5 Authority.
46.01–10 Responsibility for administration.
46.01–15 Application of regulations.
46.01–20 Penalties for violations.

Subpart 46.05—Definitions Used in This Part

46.05–1 Passenger vessel.
46.05–10 Foreign voyage.
46.05–15 Coastwise voyages.
46.05–20 Great Lakes voyage.
46.05–25 New passenger vessel.
46.05–30 Existing passenger vessel.

Subpart 46.10—Administration

46.10–1 Relaxation from regulations.
46.10–5 Load line requirements for subdivision.
46.10–10 Marks to indicate subdivision load lines.
46.10–15 Survey for the establishment and renewal of subdivision load line marks.
46.10–20 Application for the assignment and renewal of subdivision load lines.
46.10–25 Equivalents.
46.10–30 Subdivision load line certificates.
46.10–35 Validity of subdivision load line certificates.
46.10–40 Nonsubmergence subdivision load line (Great Lakes).
46.10–45 Nonsubmergence subdivision load lines in salt water.
46.10–50 Drills and inspections.
46.10–55 Logbook entries.

Sec.
46.10-60 Control.
46.10-65 Construction.
46.10-70 Plans and inspections of new and converted vessels.

Subpart 46.15—Subdivision Load Lines for Passenger Vessels Engaged in Foreign, Coastwise, and Great Lakes Voyages

46.15-1 Procedure for determination of subdivision load line.
46.15-5 Engineering requirements.
46.15-10 Subdivision load lines.

AUTHORITY: The provisions of this Part 46 issued under sec. 2, 45 Stat. 1493, as amended, sec. 2, 49 Stat. 888, as amended; 46 U.S.C. 85a, 88a. Interpret or apply R.S. 4490, as amended, sec. 3, 24 Stat. 129, as amended, 41 Stat. 305, as amended, sec. 5, 49 Stat. 1384, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 68 Stat. 675; 46 U.S.C. 482, 483, 363, 369, 367, 1333, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-48, Oct. 19, 1962, 27 F.R. 10504.

Subpart 46.01—Authority and Purpose

§ 46.01-1 Purpose.

(a) The purpose of the regulations in this part is to set forth uniform minimum requirements applicable to passenger vessels required to have subdivision load lines. These requirements deal with the following:

(1) Load line requirements applicable before a passenger vessel will be marked with and certificated as to subdivision load lines.

(2) Assigning, marking, and recording of subdivision load lines.

(3) Administration of subdivision load lines.

(4) Application of requirements to passenger vessels.

§ 46.01-5 Authority.

(a) The regulations regarding subdivision and subdivision load lines interpret or apply Title 46, U.S. Code, sections 85a, 88a, 363, 367, 369, 482, 483, and 1333, and Title 50, U.S. Code, section 198.

(b) The International Load Line Convention, 1930, and the applicable International Convention for Safety of Life at Sea, also establish minimum requirements for load lines and subdivision.

§ 46.01-10 Responsibility for administration.

(a) Under the general direction and supervision of the Secretary of the Treasury, the Commandant of the United States Coast Guard is delegated the responsibility and authority for the administration of load line requirements and to determine the position and to assure the correct marking of subdivision load lines on all passenger vessels subject to the applicable International Convention for Safety of Life at Sea, or the Act of March 2, 1929, as amended (46 U.S.C. 85-85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i).

§ 46.01-15 Application of regulations.

(a) The regulations in this part establish subdivision load lines required on passenger vessels engaged in foreign voyages, as well as on passenger vessels of 150 gross tons or over engaged in coastwise or Great Lakes voyages.

(b) When engaged in voyages subject to this part, no passenger vessel required to be marked with subdivision load lines shall depart from or arrive at any port or place under the jurisdiction of the United States, nor shall such United States vessel operate on the high seas nor the Great Lakes, unless such vessel has been marked with subdivision load lines in accordance with the regulations in this part, has on board a valid certificate certifying to the correctness of the location of such subdivision load line marks, and is otherwise in compliance with the applicable requirements of law and regulations in this part.

(c) No passenger vessel of the United States of 150 gross tons or over and subject to the Coastwise Load Line Act, 1935, as amended, shall engage in coastwise voyages or voyages on the Great Lakes unless such vessel has been marked with subdivision load lines in accordance with the regulations in this part and has on board a valid certificate certifying to the correctness of the location of such subdivision load line marks.

(d) No foreign passenger vessel belonging to a country that has ratified or acceded to the applicable International Convention for Safety of Life at Sea shall arrive or depart from any port or place under the jurisdiction of the United States, and no foreign passenger vessel of 150 gross tons or over subject to the Act of March 2, 1929, as amended (46 U.S.C. 85-85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i), shall arrive or depart from any port or place under the jurisdiction of the United States, including ports on the Great Lakes, unless such passenger vessel has been marked with subdivision load lines in accordance with the regulations in this part and has on board a valid certificate certifying to the correctness of the location of such subdivision load line marks.

(e) Subdivision load lines shall be marked on both sides of passenger vessels where determined and in a manner described in Subpart 46.15 as applicable to the vessel's service. The subdivision load line certificates shall be in accordance with §§ 46.10-30 and 46.10-35.

§ 46.01-20 Penalties for violations.

(a) Penalties for violations of the regulations in this part by passenger vessels of the United States engaged in foreign voyages shall be in accordance with those laws which require the inspection and certification of the vessel. In addition, for passenger vessels of 150 gross tons or over and subject to either the Act of March 2, 1929, as amended (46 U.S.C. 85-85g), or the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88-88i), which engage in voyages described in § 43.01-1 or 45.01-1, the penalties for violations of the regulations in this part shall be those set forth in the load line act applicable to the vessel.

(b) For a further description of the actions which may be taken see § 43.01-13 of this subchapter. The procedures governing the assessment, collection, remission and mitigation of any monetary penalty imposed for a violation of a law or the regulations prescribed thereunder in this part, as well as the appeal procedures followed, are in Subpart 2.50 of Part 2 of Subchapter A (Procedures Applicable to the Public) of this chapter.

Subpart 46.05—Definitions Used in This Part

§ 46.05-1 Passenger vessel.

(a) For the purpose of the regulations in this part, a vessel is a passenger vessel if:

(1) Engaged on an international voyage by sea, it carries or is authorized to carry more than 12 passengers; or,

(2) Engaged on a coastwise voyage by sea or a voyage on the Great Lakes, it carries or is authorized to carry more than 16 persons in addition to the crew.

§ 46.05-10 Foreign voyage.

(a) A foreign voyage for the purpose of marking passenger vessels with subdivision load lines is a voyage by sea between a port under the jurisdiction of the United States and a port of a foreign country, its colonies, territories, or protectorates, or conversely (a voyage exclusively on the Great Lakes excepted).

§ 46.05-15 Coastwise voyages.

(a) A coastwise voyage by sea, for the purpose of marking passenger vessels with subdivision load lines, is a voyage in which a vessel in the usual course of her employment proceeds from one port or place in the United States to another port or place in the United States or from a port or place in a possession to another port or place in the same possession, and passes outside the line dividing inland waters from the high seas (a voyage exclusively on the Great Lakes excepted), as well as a voyage in which a vessel proceeds from a port or place in the United States or her possessions and passes outside the line dividing inland waters from the high seas and navigates on the high seas, and then returns to the same port or place.

§ 46.05-20 Great Lakes voyage.

A Great Lakes voyage is any voyage from a United States port or place on the Great Lakes to another United States port or place on the Great Lakes or to a Canadian port or place on the Great Lakes, or conversely.

§ 46.05-25 New passenger vessel.

A new passenger vessel is a vessel whose keel was laid or was a vessel converted into a passenger vessel on or after November 19, 1952.

§ 46.05-30 Existing passenger vessel.

An existing passenger vessel in respect to its voyage is any passenger vessel that is not a new passenger vessel as defined in § 46.05-25.

Subpart 46.10—Administration

§ 46.10–1 Relaxation from regulations.

(a) New passenger vessels making foreign voyages by sea shall comply with the requirements in this part. An existing passenger vessel engaged in foreign voyages by sea may be permitted relaxation from the requirements of this part if, in the opinion of the Commandant, U. S. Coast Guard, such requirements are unreasonable or impracticable.

(b) A new passenger vessel making coastwise voyages by sea or making Great Lakes voyages shall comply with the requirements in this part. An existing passenger vessel making coastwise voyages by sea or Great Lakes voyages may be permitted relaxation from the requirements of this part if, in the opinion of the Commandant, U. S., Coast Guard, such requirements are unreasonable or impracticable.

§ 46.10–5 Load line requirements for subdivision.

(a) The load line requirements of Parts 43, 44, 45 of this subchapter as applicable to the passenger vessel and her service, shall be complied with before a passenger vessel will be marked with and certificated as to subdivision load lines.

§ 46.10–10 Marks to indicate subdivision load lines.

(a) Marks to indicate the maximum mean draft to which a passenger vessel may be lawfully submerged shall be permanently marked on each side of the passenger vessel in the form, manner, and location provided in this part.

(b) The Commandant, U.S. Coast Guard, shall determine the position of the subdivision load lines by the application of the requirements contained in this part and Parts 73 and 74 of Subchapter H (Passenger Vessels) of this chapter. The correct marking of subdivision load lines on passenger vessels shall be certified to by the American Bureau of Shipping as a classification society approved by the Commandant for such purpose.

(c) Certificates certifying to the correctness of subdivision load line marks shall not be furnished until it is determined that the marks have been correctly placed upon the passenger vessel.

(d) In the case of passenger vessels that are required by the International Convention for Safety of Life at Sea to have on board a safety certificate, the certification of subdivision load line marks shall be made by letter to the Commandant, U. S. Coast Guard, Washington, D.C., 20226.

§ 46.10–15 Survey for the establishment and renewal of subdivision load line marks.

(a) Every passenger vessel to be marked with and certificated for subdivision load lines must comply with the requirements as set forth in Subchapter H (Passenger Vessels) of this chapter for ocean, coastwise, and Great Lakes service as applicable to the particular vessel and the service in which she is to be employed.

(b) Every passenger vessel marked with a subdivision load line shall be subjected to the surveys specified in this paragraph. The details of the surveys or inspections indicated in subparagraphs (1) through (3) of this paragraph shall be as set forth in the applicable sections of Part 71 of Subchapter H (Passenger Vessels) of this chapter.

(1) A survey before the vessel is put in service.

(2) A periodical survey once every 12 months.

(3) Additional surveys as occasion arises.

(4) Surveys required by Parts 43, 44, or 45 of this subchapter.

§ 46.10–20 Application for the assignment and renewal of subdivision load lines.

(a) Application for assignment and renewal of subdivision load lines and certification thereof shall be made in writing to the Commandant, U.S. Coast Guard, Washington, D.C., 20226.

§ 46.10–25 Equivalents.

(a) Where in the regulations in this part it is provided that a particular fitting, appliance, apparatus, or type thereof, shall be fitted or carried in a vessel engaged on foreign voyages by sea or that any particular arrangement shall be adopted, there may be substituted any other fitting or appliance or type thereof or any other arrangement provided that the Commandant, U.S. Coast Guard, shall have been satisfied by suitable trials that the fitting, appliance, or apparatus, or type thereof, or that the arrangement substituted is at least as effective as that specified in this part.

(b) Where, in the application of the regulations in this part to passenger vessels engaged in coastwise voyages by sea and on Great Lakes voyages, it is desired to substitute other construction, arrangement, fitting, or appliance, or type thereof, such substitution may be made if approved by the Commandant, U. S. Coast Guard, provided the degree of safety provided by this part is obtained.

§ 46.10–30 Subdivision load line certificates.

(a) Passenger vessels engaged in foreign voyages by sea shall have their subdivision load lines certificated on the safety certificate required by the International Convention for Safety of Life at Sea, 1948. Safety certificates shall be issued by the Commandant, U. S. Coast Guard, Washington, D.C., 20226, for a period not to exceed one year. These vessels will also be provided with the load line certificate required by Part 43 of this subchapter, the minimum freeboard shown thereon to be not less than the minimum freeboard corresponding to the principal passenger condition. The fact that they are subdivision load lines is to be noted on the load line certificate.

(b) Passenger vessels engaged on coastwise voyages by sea or Great Lakes voyages shall have the position of their subdivision load lines recorded on a load line certificate in the form required by Parts 43 or 45 of this subchapter. The fact that they are subdivision load lines is to be noted on the load line certificate.

(c) A note shall be added to the load line certificate below the signature of the assigning authority in the following form:

> The bulkhead deck used for determining the position of the subdivision load lines certified above is _____ (here described bulkhead deck).

(d) Annual inspections of passenger vessels shall be as required by §§ 43.01–55 and 46.10–15 of this subchapter and renewal of passenger vessels' load line certificates shall be as required by § 43.01–75.

(e) Each new passenger vessel which receives its first load line certificate shall also be provided with a copy of the load line survey report as required by §§ 43.01–40 or 45.01–30 of this subchapter.

§ 46.10–35 Validity of subdivision load line certificates.

(a) Subdivision load line certificates issued to passenger vessels shall only be valid during the time for which the certificates are issued.

(b) If, due to any cause, the conditions as required by this part are changed, or the regulations in this part are not carried out, the load line certificate may be cancelled and the load lines considered nonexistent: *Provided*, That if the conditions causing the cancellation of the certificate are satisfactorily corrected, the load line certificate shall be reinstated for the remainder of its term.

(c) A valid subdivision load line certificate for foreign voyages by sea shall be valid for coastwise voyages by sea and Great Lakes voyages. A valid subdivision load line certificate for coastwise voyages by sea shall be valid for Great Lakes voyages but not for foreign voyages by sea. A valid subdivision load line certificate for Great Lakes voyages shall not be valid for foreign or coastwise voyages by sea.

§ 46.10–40 Nonsubmergence subdivision load line (Great Lakes).

(a) Passenger vessels on the Great Lakes of 150 gross tons or over shall not submerge the subdivision load line applicable to the voyage.

§ 46.10–45 Nonsubmergence subdivision load lines in salt water.

(a) Passenger vessels required to be marked with subdivision load lines, engaged on foreign and coastwise voyages other than the Great Lakes voyages, shall not submerge in salt water the subdivision load line applicable to the voyage. Passenger vessels engaged on ocean foreign or coastwise voyages may be marked with fresh water load lines. A passenger vessel on foreign or coastwise voyages (except Great Lakes voyages) may have an allowance made for the degree of brackishness of the water in which the vessel is floating but not for the weight of fuel, water, etc., required for consumption between the point of departure and the open sea, and no allowance is to be made for bilge or ballast

water that may be in the passenger vessel at the time of departure.

§ 46.10–50 Drills and inspections.

(a) For the required drills and inspections to be conducted on passenger vessels, see Subpart 78.17 of Subchapter H (Passenger Vessels) of this chapter.

§ 46.10–55 Log book entries.

(a) For required logbook entries to be made on passenger vessels, see Subpart 78.17 of Subchapter H (Passenger Vessels) of this chapter.

§ 46.10–60 Control.

(a) The Collector of Customs or the Coast Guard District Commander may detain a passenger vessel for a survey if there is reason to believe that such a vessel is proceeding on her journey in excess of the draft allowed by the regulations in this part as indicated by the vessel's load lines certified on the safety certificate, load line certificate, or otherwise. The Coast Guard District Commander may detain a passenger vessel if it is so loaded as to be manifestly unsafe to proceed to sea.

(b) When passenger vessels are subject to the Act of March 2, 1929 (46 U.S.C. 85–85g), the duties and responsibilities of the Collector of Customs or the Coast Guard District Commander and the procedures followed shall be the same as those stated in § 43.01–97 of this chapter.

(c) When passenger vessels are subject to the Coastwise Load Line Act, 1935, as amended (46 U.S.C. 88–88l), the duties and responsibilities of the Collector of Customs or the Coast Guard District Commander and the procedures followed shall be the same as those stated in § 43.01–97 or 45.01–85 of this subchapter, as applicable.

§ 46.10–65 Construction.

(a) The watertight subdivision of every passenger vessel shall be as efficient as possible, having regard to its intended service. This principle is given effect by the requirements of Part 73 of Subchapter H (Passenger Vessels) of this chapter which provide for variations in the standard of subdivision according to the length of the vessel and the degree to which the vessel approaches the exclusive passenger type, the highest standard being required in vessels of the greatest length engaged primarily in the carriage of passengers.

(b) Passenger vessels engaged in foreign voyages by sea or coastwise voyages by sea or voyages on the Great Lakes, to be marked with subdivision load lines shall comply with the requirements in this part.

§ 46.10–70 Plans and inspections of new and converted vessels.

(a) Plans for a new passenger vessel or a vessel to be converted to a passenger vessel shall be submitted to the Commandant as required by Subpart 71.65 of Subchapter H (Passenger Vessels) of this chapter.

(b) Inspections shall be made during the construction or conversion of the vessel as required by Subpart 71.20 of Subchapter H (Passenger Vessels) of this chapter.

(c) Upon completion of the construction or conversion of a passenger vessel, a stability test shall be performed and stability information shall be supplied to the operator as required by Part 74 of Subchapter H (Passenger Vessels) of this chapter.

Subpart 46.15—Subdivision Load Lines for Passenger Vessels Engaged in Foreign, Coastwise, and Great Lakes Voyages

§ 46.15–1 Procedure for determination of subdivision load line.

(a) The procedure for the determination of the subdivision load line as well as special construction features of the vessel shall be as set forth in Subpart 72.01 and Parts 73 and 74 of Subchapter H (Passenger Vessels) of this chapter.

§ 46.15–5 Engineering requirements.

(a) Bilge and ballast systems, piping, inlets and discharges, ash chutes, astern power, and auxiliary steering shall be in accordance with the provisions of Subchapter F (Marine Engineering) of this chapter.

§ 46.15–10 Subdivision load lines.

(a) Subdivision load lines shall be located by measuring vertically down from the deck line required by Part 43 of this subchapter.

(b) The length, width, and manner of marking the lines shall be as provided in Subpart 43.05 of this subchapter.

(c) No subdivision load line is to be placed so that the freeboard is reduced from that determined by the highest seasonal mark permitted by Part 43.

(d) When the highest subdivision load line is located on a vessel used as a passenger vessel in a position between the highest and lowest seasonal load line marks, the seasonal load line marks above the subdivision load line will be omitted and those below will be marked.

(e) When the freeboard from the highest subdivision load line on a vessel used as a passenger vessel is greater than the freeboard from the lowest load line permitted by Part 43 of this subchapter, the load lines required by Part 43 of this subchapter shall be omitted and the disk with its horizontal line located in line with the highest subdivision load line.

(f) One fresh water line shall be marked. When a subdivision and a normal load line are combined, the normal fresh water line only shall be used unless the position of the subdivision load line is such that confusion will result, in which case a subdivision fresh water line may be used, marked FW, and the normal fresh water line omitted.

(g) Subdivision load lines shall be aft of the vertical line. The vertical line shall be extended as necessary to connect the lowest and highest load lines marked on the vessel.

(h) When a vessel has spaces used for cargo and passengers alternatively so that the position of the subdivision load line varies with the service, subdivision load lines for the principal passenger condition shall be marked and denoted by C_1 and the alternative conditions marked and denoted by C_2, C_3, etc. The position of each load line and the conditions under which a particular load line is applicable shall be noted in the certificate.

(i) The principal passenger condition for a vessel having spaces used for passengers and cargo alternatively is the condition where only those spaces appropriated exclusively to passengers are taken into consideration for determination of the subdivision load line.

(j) For Great Lakes vessels, references to Part 43 shall read Part 45 and a "diamond" shall be substituted for the "disk". No "fresh water" line will be marked.

SUBCHAPTER F—MARINE ENGINEERING

PART 50—GENERAL PROVISIONS

Subpart 50.01—Basis and Purpose

Sec.

50.01–1 Authority.
50.01–5 Assignment of functions.
50.01–10 Purpose of regulations.
50.01–15 Application of regulations.

Subpart 50.10—Definition of Terms Used in This Subchapter

50.10–1 Commandant.
50.10–5 Coast Guard District Commander.
50.10–10 Officer in Charge, Marine Inspection.
50.10–15 Marine inspector or inspector.
50.10–20 Requirements.
50.10–25 Headquarters.

AUTHORITY: The provisions of this Part 50 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426–4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894; CGFR 56–28, July 24, 1956, 21 F.R. 5659; 167–38, Oct. 26, 1959, 24 F.R. 8857.

Subpart 50.01—Basis and Purpose

§ 50.01–1 Authority.

(a) The authority to prescribe regulations generally is set forth in R.S. 4405 and 4462, as amended (46 U.S.C. 375 and 416), as well as in other provisions of Title 52 of the Revised Statutes and acts amendatory thereof or supplemental thereto. Under the provisions of R.S. 4403, as amended (46 U.S.C. 372), the Commandant, United States Coast Guard superintends the administration of the vessel inspection laws and is required to produce a correct and uniform administration of the inspection laws, rules, and regulations.

§ 50.01–5 Assignment of functions.

By Reorganization Plan No. 3 of 1946, effective July 16, 1946, 3 CFR, 1946 Supp.,

the marine inspection functions of the former Bureau of Marine Inspection and Navigation and its officers and employees were transferred to the Commandant, United States Coast Guard. By Reorganization Plan No. 26 of 1950, effective July 31, 1950, 3 CFR, 1950 Supp., p. 178, the functions formerly vested in the Commandant, United States Coast Guard were transferred to the Secretary of the Treasury with certain specific exceptions. The Secretary of the Treasury by an order dated July 31, 1950 (15 F. R. 6521), delegated to the Commandant the functions formerly performed by him under Reorganization Plan No. 3 of 1946.

§ 50.01–10 Purpose of regulations.

The purpose of the regulations in this subchapter is to set forth uniform minimum requirements for marine engineering in accordance with the intent of Title 52 of the Revised Statutes and acts amendatory thereof or supplemental thereto, as well as to implement various International Conventions for Safety of Life at Sea and other treaties which affect the merchant marine. The regulations are necessary to carry out the provisions of law affecting inspected vessels and such regulations have the force of law.

§ 50.01–15 Application of regulations.

(a) The regulations in this subchapter contain specifications and requirements for materials, design, construction, installation, and inspection of machinery, boilers, unfired pressure vessels, safety valves and appurtenances, including piping systems, upon the strength and efficiency of which safety of life is dependent.

(b) The regulations in this subchapter apply to installations contracted for or built on or after July 1, 1935. The regulations in Subchapter G (Marine Engineering Installations Contracted for Prior to July 1, 1935) of this chapter apply only to installations contracted for or built prior to July 1, 1935.

(c) The regulations in this subchapter are not retroactive in effect, except as provided in paragraph (d) of this section or if specifically provided for in the regulation at the time it is amended or added. The regulations amended or added subsequent to July 1, 1935, are applicable to installations contracted for or built on or after the effective date of such regulations. For the purpose of recalculating the maximum allowable pressure of boilers, unfired pressure vessels and piping under the provisions of § 61.20–15 (f), the formulas found in this subchapter may be used for boilers, unfired pressure vessels and piping: *Provided*, That such recalculation shall not permit a higher pressure than that originally allowed by the regulations in effect at the time such work was contracted for or built.

(d) Where existing vessels are reboilered, the mountings and attachments shall be renewed in accordance with the regulations in this subchapter in effect at the time such work is contracted for. The existing steam piping shall be examined as provided for in § 55.07–5, and if found to be in good condition and complying with the minimum thickness required for the pressure and temperature design conditions at the time of installation of the new boiler, the piping may be continued in service.

(e) Items of equipment previously approved by the Commandant but not complying with the latest specifications and which are in good and serviceable condition may be continued in use until replacement is necessary.

Subpart 50.10—Definition of Terms Used in This Subchapter

§ 50.10–1 Commandant.

The term "Commandant means the Commandant of the Coast Guard.

§ 50.10–5 Coast Guard District Commander.

The term "Coast Guard District Commander" means an officer of the Coast Guard designated as such by the Commandant to command all Coast Guard activities within his district, which include the inspections, enforcement, and administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 50.10–10 Officer in Charge, Marine Inspection.

The term "Officer in Charge, Marine Inspection," means any person from the civilian or military branch of the Coast Guard designated as such by the Commandant and who under the superintendence and direction of the Coast Guard District Commander is in charge of an inspection district for the performance of duties with respect to the inspections, enforcement, and administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 50.10–15 Marine inspector or inspector.

The terms "marine inspector" or "inspector" mean any person from the civilian or military branch of the Coast Guard assigned under the superintendence and direction of an Officer in Charge, Marine Inspection, or any other person as may be designated for the performance of duties with respect to the inspections, enforcement, and the administration of Title 52, Revised Statutes, and acts amendatory thereof or supplemental thereto, and rules and regulations thereunder.

§ 50.10–20 Requirements.

The term "requirements" refers to process of manufacture, characteristic, physical and chemical properties, tests, workmanship, and finish of materials.

§ 50.10–25 Headquarters.

The term "headquarters" means the office of the Commandant, United States Coast Guard, Washington, D.C., 20226.

PART 51—MATERIALS

Subpart 51.01—General

Sec.
- 51.01–1 Statutory requirements.
- 51.01–5 Basic information requirements.
- 51.01–10 General classification of materials.
- 51.01–15 Inspection and testing of class A material.
- 51.01–20 Chemical analyses.
- 51.01–25 Certification of class B material.
- 51.01–30 Tension tests.
- 51.01–40 Retests.
- 51.01–45 Rejections.
- 51.01–50 Appeals.
- 51.01–55 Process of steel manufacture.
- 51.01–60 Stamping plates and specimens.
- 51.01–65 Stock plates.
- 51.01–70 Workmanship and finish.
- 51.01–75 Heat treatment.
- 51.01–80 Reclassification of materials.
- 51.01–85 Alternative materials.
- 51.01–90 Material specification standards.

Subpart 51.04—Marine Boiler Steel Plate

- 51.04–1 Scope.
- 51.04–5 Heat treatment.
- 51.04–10 Test specimens.
- 51.04–15 Marking.

Subpart 51.07—Staybolt and Rivet Steel

- 51.07–1 Scope.

Subpart 51.10—Steel Bars and Shapes

- 51.10–1 Scope.
- 51.10–5 Process.
- 51.10–10 Chemical composition.
- 51.10–15 Tensile properties.
- 51.10–20 Modification in elongation.
- 51.10–25 Bending properties.
- 51.10–30 Test specimens.
- 51.10–35 Number of tests.
- 51.10–40 Finish.
- 51.10–45 Marking.

Subpart 51.13—Staybolt and Rivet Iron

- 51.13–1 Scope.

Subpart 51.22—Flange and Firebox Steel Plates

- 51.22–1 Scope.

Subpart 51.23—Corrosion Resisting Steel Plate, Sheet and Strip for Unfired Pressure Vessels

- 51.23–1 Scope.

Subpart 51.24—Materials for Low Temperature Service

- 51.24–1 Scope.

Subpart 51.25—Carbon and Alloy-Steel and Wrought Iron Tubes

- 51.25–1 Scope.

Subpart 51.34—Carbon and Alloy-Steel and Wrought Iron Pipe

- 51.34–1 Scope.

Subpart 51.46—Steel Forgings

- 51.46–1 Scope.
- 51.46–5 Hydrostatic tests.

Subpart 51.49—Carbon and Alloy-Steel Bolting and Nut Material

- 51.49–1 Scope.

Subpart 51.58—Steel Castings

- 51.58–1 Scope.
- 51.58–5 Hydrostatic tests.

Subpart 51.61—Iron Castings

- 51.61–1 Scope.
- 51.61–5 Hydrostatic tests.
- 51.61–10 Markings.

Subpart 51.67—Copper and Copper-Alloy Plate

Sec.
51.67-1 Scope.

Subpart 51.70—Seamless Copper and Copper-Alloy Pipe

51.70-1 Scope.

Subpart 51.73—Seamless Copper and Copper-Alloy Tubes

51.73-1 Scope.

Subpart 51.76—Copper-Alloy Castings

51.76-1 Scope.
51.76-5 Hydrostatic tests.

Subpart 51.79—Aluminum-Alloy Plates and Sheets

51.79-1 Scope.

Subpart 51.80—Aluminum-Alloy Pipe and Tubes

51.80-1 Scope.

Subpart 51.81—Aluminum-Alloy Forgings

51.81-1 Scope.

Subpart 51.82—Aluminum-Alloy Bars, Rods, and Shapes

51.82-1 Scope.

Subpart 51.85—Nickel-Alloy Plates and Sheets

51.85-1 Scope.

Subpart 51.86—Nickel-Alloy Pipe and Tubes

51.86-1 Scope.

Subpart 51.90—Rigid Poly (Vinyl Chloride) (PVC) Materials

51.90-1 Scope.

AUTHORITY: The provisions of this Part 51 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426–4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-20, June 18, 1956, 21 F.R. 4894; CGFR 56-28, July 24, 1956, 21 F.R. 5659; 167-38, Oct. 26, 1959, 24 F.R. 8857.

Subpart 51.01—General

§ 51.01-1 Statutory requirements.

(a) Plates, bars, and shapes used as pressure parts of boilers intended for marine service shall be tested, inspected, and stamped by an inspector in accordance with the requirements of Title 52 of the Revised Statutes of the United States.

(b) Material used for pressure parts in the construction of pressure vessels other than boilers shall conform to the requirements of this part.

§ 51.01-5 Basic information requirements.

When ordering material for the construction of boilers or unfired pressure vessels to be installed on vessels subject to the inspection of the Coast Guard, boiler manufacturers shall, as far as practicable, furnish the following information to the manufacturer of the material and to the Officer in Charge, Marine Inspection, in the district where the boiler or unfired pressure vessel is to be fabricated:

(a) Name and location of manufacturer's works.

(b) Type and size of boiler or unfired pressure vessel.

(c) Manufacturer's serial or shop number.

(d) Design pressure.

(e) Name of shipyard and hull number.

(f) Vessel's name.

§ 51.01-10 General classification of materials.

(a) The materials to be used in the construction of boilers and unfired pressure vessels, piping, valves, fittings, and appurtenances below listed shall be of three general classes of which classes A and B shall be used for pressure parts and class C may be used for other parts as specified.

Class A: Tested materials manufactured under the supervision of the Coast Guard, tests of which shall be witnessed by an inspector.

Class B: Certified materials tested by the manufacturers, and certified by them as conforming to the requirements.

Class C: Materials for nonpressure parts of boilers or unfired pressure vessels such as castings for water-tube boilers, uptakes, furnace fronts, and operating equipment shall be of good commercial quality. No detail requirements are herein specified for materials in this class. Class C materials shall be accepted by inspectors without requiring tests or certification by manufacturers.

(b) Except as may be otherwise required, the classification of materials under classes A and B and the subparts of this part in which they are specified, are as follows:

CLASS A

Subparts	
51.04	Marine boiler steel plate.
51.07	Staybolt and rivet steel.
51.10	Steel bars and shapes.
51.13	Staybolt and rivet iron.

CLASS B

51.22	Flange and firebox steel plates.
51.23	Corrosion resisting steel plate, sheet, and strip for unfired pressure vessels.
51.24	Materials for low temperature service.
51.25	Carbon and alloy-steel wrought iron tubes.
51.34	Carbon and alloy-steel wrought iron pipe.
51.46	Steel forgings.
51.49	Carbon and alloy-steel bolting and nut material.
51.58	Steel castings.
51.61	Iron castings.
51.67	Copper and copper-alloy plate.
51.70	Seamless copper and copper-alloy pipe.
51.73	Seamless copper and copper-alloy tubes.
51.76	Copper-alloy castings.
51.79	Aluminum-alloy plates and sheets.
51.90	Rigid poly (vinyl chloride) (PVC) materials.

§ 51.01-15 Inspection and testing of class A material.

Inspectors shall have free entry at all times to those parts of the works where material subject to the regulations in this part is being manufactured. The manufacturer shall afford inspectors all reasonable facilities to satisfy them that the material is being manufactured in accordance with the requirements of the Commandant. Unless otherwise authorized, tests and inspection shall be made at the place of manufacture prior to shipment and shall be so conducted as not to interfere unnecessarily with the operation of the works. Inspectors shall assure themselves that test specimens are marked for positive identification with the materials which they represent. Unless otherwise specified, tests shall be made at ordinary temperature.

§ 51.01-20 Chemical analyses.

(a) A ladle analysis of each melt of class A materials shall be made by the manufacturer and a certified report thereof shall be furnished by him to the inspector upon request. This analysis shall be made from a test ingot taken during the pouring of the melt. The chemical composition thus determined shall conform to the specified requirements. This requirement shall apply also to the following class B materials:

(1) Flange and firebox quality steel plates specified in Subpart 51.22.

(2) Steel forgings specified in Subpart 51.46.

(3) Alloy-steel bolting material specified in Subpart 51.49.

(4) Steel castings specified in Subpart 51.58.

(5) Copper-alloy plate specified in Subpart 51.67.

(6) Copper-alloy castings specified in Subpart 51.76.

(b) A check analysis may be made at the discretion of the Commandant from test specimens representing material for which chemical composition is specified in any section of this part, in either class A or B. The chemical composition thus determined shall conform to the requirements.

§ 51.01-25 Certification of class B material.

(a) Certification of chemical analyses and physical tests of materials of class B shall be an affidavit by the manufacturer certifying that all materials of this class supplied by him for marine service do, or will conform to all the requirements of the regulations in this part applicable thereto.

(b) Materials in this class are not required to be tested in the presence of an inspector, but whenever deemed necessary by the Commandant, he may detail an inspector to witness such tests and satisfy himself that the requirements of the specification for class B materials are met.

§ 51.01-30 Tension tests.

(a) All tension tests shall be made on standard calibrated machines. The yield point in tension tests shall be determined by the drop of the beam or the halt in the gage of the testing machine. Except where otherwise specified in this part, the speed of the crosshead of the ma-

chine shall not exceed $\frac{1}{8}$ inch per minute per inch of gage length up to the yield point, nor shall it exceed ½ inch per minute per inch of gage length beyond the yield point. Any convenient speed of the crosshead may be used from the start of loading the test specimen until a value estimated as one-half of the yield point is reached. In determining the yield strength by use of an extensometer, the crosshead speed shall not exceed 0.025 inch per minute per inch of gage length. In the event the machine is stopped in taking readings, the speed may be exceeded in the take-up only. The ends of all test specimens shall be of form to fit the holders of the testing machine in such a way that the load will be axial.

(b) The test specimens and procedures employed for the mechanical testing of steel products covered by the specifications listed in this part shall be in conformance with A.S.T.M. A370–60T, except as otherwise provided for in this subchapter.

§ 51.01–40 Retests.

When the result of any of the physical tests specified for any of the materials does not conform to the requirements, two additional specimens may, at the request of the manufacturer, be taken from the same lot and tested in the manner specified, but in such case, both of the specimens shall conform to the requirements. In the case of tension tests, this retest shall be allowed if the percentage of elongation obtained is less than required, or if any part of the fracture is outside of the middle third of the gauge length. If any test specimen develops flaws, it shall be discarded and another specimen from the same lot substituted.

§ 51.01–45 Rejections.

Failure of the tests (or retests) specified in the regulations in this subchapter for each particular material shall be cause for rejection. Unless otherwise required, any rejection shall be reported by the inspector within 5 working days from the receipt of the test specimen. Acceptance of material on results of tests at the place of manufacture shall not prejudice the right to reject any of such material in which injurious defects are subsequently discovered. The manufacturer shall be promptly notified of such subsequent rejections, and the records shall be corrected.

§ 51.01–50 Appeals.

In case of dissatisfaction with the results of any test, the manufacturer may appeal to the Coast Guard District Commander from the decision of the Officer in Charge, Marine Inspection. Should the Coast Guard District Commander sustain the Officer in Charge, Marine Inspection, the manufacturer may appeal to the Commandant. Tested specimens which represent rejected material shall be retained for at least 30 days.

§ 51.01–55 Process of steel manufacture.

Unless otherwise officially authorized by the Commandant, all wrought steel to be used in the construction of boilers or unfired pressure vessels to be installed on vessels shall be manufactured by the open-hearth, electric furnace, or crucible process.

§ 51.01–60 Stamping plates and specimens.

(a) Class A plates shall be stamped by the manufacturer, before they are tested, with his name or trademark, the word "Marine", the letter indicating the grade of the steel, and the minimum tensile strength of the plate in pounds per square inch expressed in thousands. Inspectors shall permit cutting a plate into two or more parts before testing, but each part shall be stamped or matchmarked for identification before cutting. All plates accepted by the inspector as conforming to the requirements shall be stamped by him near the manufacturer's stamp with the official stamp of the Coast Guard, the initials of his name, and the serial number. All test specimens shall be ring-stamped or matchmarked for identification before being detached. Plates shall be stamped lengthwise in two places on one long side about 18 inches from the edges at the corners. Each butt strap shall be stamped lengthwise of the plate about the middle of the strap.

(b) The impression of the official stamp of the Coast Guard for stamping plates and specimens shall be as shown below:

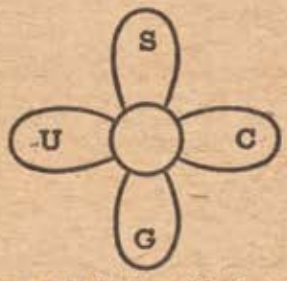


FIGURE 51.01–60 (b)—Official stamp.

§ 51.01–65 Stock plates.

Plates may be ordered to be carried in stock ashore or on shipboard for repairs to boilers and unfired pressure vessels. Such plates shall be inspected and tested at the place of manufacture and stamped for identification as stock plates. A test report for such plates shall be furnished to the Coast Guard District Commander of the district where the purchaser is located, with a copy to the purchaser. The Coast Guard District Commander shall furnish a copy thereof to the Officer in Charge, Marine Inspection, in the district where the material is kept in stock, and if the material is to be used by persons other than the original purchaser, they shall also be furnished with a copy of such report, for submittal by them to the Officer in Charge, Marine Inspection, in the district where the repairs are actually to be made before the material may be used. Vessels carrying such stock plates shall obtain and carry identification and test records of each plate. Where such plates are cut into pieces for repairs, the Officer in Charge, Marine Inspection, shall, upon request, stamp each piece so detached for identification with the original plate and a record of such stamping shall be made.

§ 51.01–70 Workmanship and finish.

All materials within the scope of the regulations in this subchapter shall be free from injurious defects and shall have a workmanlike finish.

§ 51.01–75 Heat treatment.

Some of the materials herein specified require heat treatment. This may consist of annealing, or of normalizing, or of normalizing followed by annealing, or of normalizing followed by a draw back to a temperature below the critical range. Annealing shall consist of allowing material to cool after forging or rolling to a temperature below the critical range, then reheating it to proper temperature to refine the grain and allowing it to cool in the furnace. Normalizing shall consist of allowing material to cool after forging or rolling to a temperature below the critical range, then reheating it to proper temperature to refine the grain and allowing it to cool in still air.

§ 51.01–80 Reclassification of materials.

When more than one grade is specified for any material or purpose and tests of a material of a superior grade fail to meet the requirements, such material may be reclassified and accepted as a specified lower grade if it fulfills the specified requirements for the latter. In such cases, the material shall be restamped or re-marked as required for proper identification, and revised records shall be made to cover it.

§ 51.01–85 Alternative materials.

If, in the development of industrial arts, other suitable or improved materials differing from those specified in this part are developed, their use will be given consideration, upon formal application to the Commandant with full information as to the characteristics of the material, and such scientific data and facts as may be necessary to establish the suitability and safety of the material for the use proposed. The material requirements in this subchapter are minimum requirements and are not intended to bar better materials.

§ 51.01–90 Material specification standards.

(a) The specifications prescribed in this part cover materials for use in the construction of boilers, unfired pressure vessels, piping, valves, fittings, and appurtenances, and shall comply with the standard specifications issued by the American Society for Testing Materials (A. S. T. M.), as listed in this part, subject to the limitations noted in the applicable subparts.

(b) Reference copies of all A. S. T. M. specifications listed in this part are available for reading purposes at U. S. Coast Guard Headquarters, Washington, D.C., 20226, and are on file with various Coast Guard District Commanders.

(c) The A. S. T. M. Standards referred to in this subchapter may be purchased

from the American Society for Testing Materials, 1916 Race Street, Philadelphia, Pa., 19103.

Subpart 51.04—Marine Boiler Steel Plate

§ 51.04–1 Scope.

(a) The material specifications covering marine boiler steel plate subject to class A inspection shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations given in this subpart:

TABLE 51.04-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
A201-61T	A and B	A201—A and B.
A212-61T	A and B	A212—A and B.
A204-61	A, B, and C	A204—A, B, and C.
A202-56	A	A202—A.
A203-61	A, B, D, E	A203—A, B, D, and E.
A225-56	A and B	A225—A and B.
A299-56	A	A299—A.
A302-56	A and B	A302—A and B.
A353-58	A and B	A353—A and B.
A357-58		A357—A.
A387-61T	A, B, C, D, E	A387—A, B, C, D, and E.

(b) Steel plates for any part of a boiler subject to pressure and exposed to the fire or products of combustion shall be of firebox quality, steel plates for any part of a boiler subject to pressure and not exposed to the fire or products of combustion shall be of either flange or firebox quality.

(c) The grades listed in paragraph (a) of this section are suitable for arc or gas welding, but are not suitable for forge welding.

(d) Sufficient discard from the top of each ingot shall be made at any stage of the manufacture, to secure freedom from piping and undue segregation in the finished product, but in no case shall the amount of top discard be less than 30 percent.

§ 51.04–5 Heat treatment.

(a) Plates over 2 inches in thickness, before being fabricated, shall be uniformly heat-treated to produce grain refinement. Heat treatment involving quenching in a liquid medium is prohibited. If this treatment is not done at the rolling mill, the testing shall be carried out in accordance with paragraph (d) of this section.

(b) When plates are heat-treated to produce grain refinement the test specimens and the plates shall be stamped "G. R." The tensile strength of the plates in the grain-refined state shall be not less than the minimum of the specified range.

(c) Orders to the plate manufacturer or the fabricator shall specify when plates subject to the requirements of this section are to be stress-relieved and when they are to be heat-treated for grain-refinement so that proper provision may be made for the treatment of test specimens.

(d) When a fabricator, equipped to perform the work, elects to do the required heat treatment of plates for grain refinement, he shall accept the plates on the basis of the mill tests. The plate manufacturer shall make the tests prescribed in this subpart. The tension and bend test specimens shall be prepared from full thickness pieces heat-treated under conditions he considers appropriate for grain refinement and to meet the test requirements. The manufacturer shall inform the fabricator of the procedure followed in treating the pieces at the mill for guidance in treating the plates. The required physical properties shall be determined after heat treatment of the plates on specimens prepared from pieces similarly and simultaneously treated with the plates. Pieces for two tension tests, one top and one bottom, shall be provided from each plate as rolled. These pieces shall be stamped by the inspector with his official stamp for identification.

NOTE: The term "plate as rolled" as used in this section and in § 51.04–10 (c) refers to the unit plate rolled from a slab or directly from an ingot in its relation to the location and number of specimens; not to its condition.

(e) In the case of plates over 2 inches in thickness which subsequently are to be stress-relieved, the test specimens for such plates shall, before testing, be stress-relieved following the heat treatment for grain refinement.

§ 51.04–10 Test specimens.

(a) For plates 2 inches and under in thickness, tension and bent test specimens shall be the full thickness of the material and shall be machined to the form and dimensions shown in figure 51.04–10(a); or the bend test specimen may be machined with both edges parallel.

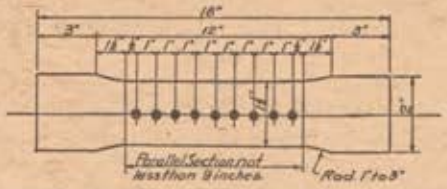

FIGURE 51.04–10 (a)—Standard rectangular tension-test specimen with 8-inch gauge length.

(b) For grade A or B plates over 2 inches and not over 4 inches in thickness, tension-test specimens may be the full thickness of the material and of the form shown in figure 51.04–10 (a); when adequate testing machine capacity is available.

(c) For plates over 2 inches in thickness, except as permitted in paragraph (b) of this section, tension-test specimens shall be machined to the form and dimensions shown in figure 51.04–10 (c); and the axis of each such specimen shall be located midway between the center and the top or bottom surface of the plate. The bend test specimens shall be at least 1½ inches in width, with both edges parallel, and may be reduced to 2 inches in thickness; but shall have one surface as rolled.

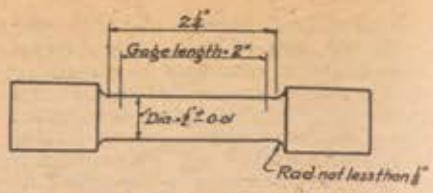

FIGURE 51.04–10 (c)—Standard round tension-test specimen with 2-inch gauge length.

§ 51.04–15 Marking.

The quality classification to be marked on all class A plates in accordance with § 51.01–60 shall be the word, "Marine" followed by the letter designating the grade of the steel.

Subpart 51.07—Staybolt and Rivet Steel

§ 51.07–1 Scope.

The material specifications covering staybolt and rivet steel subject to class A inspection shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.07-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
A31-55	A	A
A31-55	B	B
A202-56	A	C

Subpart 51.10—Steel Bars and Shapes

§ 51.10–1 Scope.

(a) The material specifications covering round steel bars and structural steel shapes subject to class A inspection shall comply with the following standard specification issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

A. S. T. M. designation:	Grade
A107–58T	1010 through 1030

§ 51.10–5 Process.

The steel shall be made by either or both of the following processes: open-hearth or electric-furnace.

§ 51.10–10 Chemical composition.

The steel shall conform to the following requirements as to chemical composition:

Phosphorus, maximum, percent:	
Acid	0.05
Basic	.04
Sulfur, maximum percent	.05

§ 51.10–15 Tensile properties.

The material shall conform to the following requirements as to tensile properties:

Tensile strength, p. s. i.	55,000 to 65,000
Yield point, p. s. i.	0.5 tensile strength
Elongation in 8 inches, minimum, percent	17.
Elongation in 2 inches, minimum, percent	20.

§ 51.10–20 Modification in elongation.

For material over ¾ inch in thickness, a deduction from the percentages of elongation specified in § 51.10–15 of 0.125 percent shall be made for each increase of 1/32 inch of the specified thickness above ¾ inch.

§ 51.10–25 Bending properties.

The bend test specimen shall stand being bent cold through 180° without cracking on the outside of the bent portion to an inside diameter which shall have the following relation to the thickness of the specimen:

TABLE 51.10-25—BENDING TEST

Thickness of material	Ratio of inside diameter of bend to thickness of specimen
¾ inch and under	½
Over ¾ to 1 inch, inclusive	1
Over 1 to 1½ inches, inclusive	1½
Over 1½ to 2 inches, inclusive	2½
Over 2 inches	3

§ 51.10–30 Test specimens.

(a) Test specimens shall be of the full thickness or diameter of material as rolled, except as specified in paragraphs (b) and (c) of this section.

(b) Test specimens for shapes and flats may be machined to the form and dimensions shown in figure 51.04–10 (a), or with both edges parallel.

(c) Test specimens for bars over 1½ inches in thickness or diameter may be machined to a thickness or diameter of at least ¾ inch for a length of at least 9 inches; or tension test specimens may conform to the dimensions shown in figure 51.04–10 (c). Bend test specimens may be 1 by ½ inch in section.

§ 51.10–35 Number of tests.

(a) One tension and one bend test shall be made from each melt; except that if material from one melt differs ⅜ inch or more in thickness, one tension and one bend test shall be made from both the thickest and the thinnest material rolled.

(b) If any test specimen shows defective machining or develops flaws, it may be discarded and another specimen substituted.

(c) If the percentage of elongation of any tension test specimen is less than that specified in § 51.10–15 and any part of the fracture is more than ¾ inch from the center of the gauge length of a 2-inch specimen, or is outside the middle third of the gauge length of an 8-inch specimen, as indicated by scribe scratches marked on the specimen before testing, a retest shall be allowed.

§ 51.10–40 Finish.

The finished material shall be free from injurious defects and shall have a workmanlike finish.

§ 51.10–45 Marking.

Bars shall, when loaded for shipment, be properly separated, and marked with the name or brand of the manufacturer and melt number for identification. The melt number shall be legibly marked on each test specimen.

Subpart 51.13—Staybolt and Rivet Iron

§ 51.13–1 Scope.

(a) The material specifications covering wrought iron bars for stays and staybolts and wrought iron rivets subject to Class A inspection shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.13-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
A84–60T	Staybolts	A
A152–60T	Rivets	B

Subpart 51.22—Flange and Firebox Steel Plates

§ 51.22–1 Scope.

(a) The material specifications covering carbon steel plate of flange and firebox quality, Class B, certified material, shall comply with the following standard specification issued by the American Society for Testing Materials:

TABLE 51.22-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
A285–67T	A (flange quality)	A
A285–67T	B (flange quality)	B

A285–67T	B (firebox quality)	B
A285–67T	C (firebox quality)	C
A410–61T		

Subpart 51.23—Corrosion Resisting Steel Plate, Sheet and Strip for Unfired Pressure Vessels

§ 51.23–1 Scope.

(a) The material specifications for corrosion resisting steel plate, sheet, and strip, Class B, certified materials, shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.23-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
A240–63	Type 302	Type 302.
A240–63	Type 304	Type 304.

A240–63	Type 430A	Type 430A.
A240–63	Type 430B	Type 430B.

Subpart 51.24—Materials for Low Temperature Service

§ 51.24–1 Scope.

(a) The material specifications for materials for service at low temperatures shall comply with the following standard specifications of the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.24-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	Materials
A300–58	Steel plates for pressure vessels for service at low temperatures.
A333–63T	Seamless and welded steel pipe for low temperature service.
A334–63T	Seamless and welded steel tubes for low temperature service.
A350–61T	Forged or rolled carbon and alloy steel flanges, forged fittings, and valves and parts for low temperature service.
A352–60T	Ferritic steel castings for pressure containing parts suitable for low temperature service.

(b) Acceptance of materials listed in this subpart will be contingent upon the impact properties of the material tested at such temperatures and by such methods as may be required by the Commandant.

Subpart 51.25—Carbon and Alloy-Steel and Wrought Iron Tubes

§ 51.25–1 Scope.

(a) The material specifications covering steel and iron tubes, Class B, certified material, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.25-1(a)—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade

§ 51.46–5 Hydrostatic tests.

Valves and pipe fittings shall be tested after machining to a hydrostatic pressure as required by § 61.30–5 of this subchapter.

Subpart 51.49—Carbon and Alloy-Steel Bolting and Nut Material

§ 51.49–1 Scope.

The material specifications covering carbon and alloy-steel bolts and nuts of class B, certified material, shall comply with the following standard specifications of the American Society for Testing Materials:

TABLE 51.49-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade

A351-63T	CK20	CK20

(b) Grades C5, C12, WCA, WCB, WC1, WC4, WC5, WC6, and WC9 are suitable for arc or gas welding. Other grades may be considered weldable when employing proper welding technique approved by the Commandant.

§ 51.58–5 Hydrostatic tests.

(a) Valves and pipe fittings shall be tested after machining to a hydrostatic pressure as required by § 61.30–5 of this subchapter.

(b) Pressure containing castings other than those specified in paragraph (a) in this section shall be tested to a hydrostatic pressure of 2 times the maximum allowable pressure and show no leaks.

Subpart 51.61—Iron Castings

§ 51.61–1 Scope.

The material specifications covering nodular cast iron, malleable iron and gray iron castings of Class B, certified material, used for pipe fittings, valves, flanges and manifolds, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.61-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
Nodular iron:		
A395-61	60-45-15	60-45-15.

A278-62T	Class No. 30	No. 30.
A278-62T	Class No. 35	No. 35.
A278-62T	Class No. 40	No. 40.
A278-62T	Class No. 50	No. 50.
A278-62T	Class No. 60	No. 60.

§ 51.61–5 Hydrostatic tests.

Castings intended for use as valves and pipe fittings shall be tested after machining to a hydrostatic pressure as required by § 61.30–5 of this subchapter.

§ 51.61–10 Markings.

Each nodular iron casting shall be legibly marked for material identification, either by casting or stamping, with the A. S. T. M. designation or grade.

Subpart 51.67—Copper and Copper-Alloy Plate

§ 51.67–1 Scope.

(a) The material specifications covering copper and copper-alloy rolled plate of class B, certified material, suitable for use as shells and tube sheets of heat exchangers and unfired pressure vessels, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.67-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
Copper:		
B11-61	Type ETP (tough pitch copper nonarsenical).	B11-1.
B11-61	Type DHP (phosphorized copper nonarsenical).	B11-2.
B11-61	Type ATP (tough pitch arsenical copper).	B11-3.
B11-61	Type DPA (phosphorized arsenical copper).	B11-4.
Copper-alloy:		
B96-61	Copper silicon alloy A or C	B96-A or C.
B169-55	Aluminum bronze alloy D	B169-D.
B171-58	Naval brass	B171-A.
B171-58	Admiralty metal	B171-B.
B171-58	Copper-nickel alloy 70-30	B171-C.
B171-58	Copper-nickel alloy 90-10	B171-D.
B171-58	Aluminum bronze alloy D	B171-E.
B171-58	Aluminum bronze alloy E	B171-F.
B-402	Copper-nickel alloy 70-30	B-402-A.
B-402	Copper-nickel alloy 90-10	B-402-B.

(b) When copper plates are to be welded, grades B11–2 and B11–4 only shall be employed.

Subpart 51.70—Seamless Copper and Copper-Alloy Pipe

§ 51.70–1 Scope.

The material specifications covering seamless copper and copper-alloy pipe, of class B, certified material, shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.70-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
B42-58	Seamless copper	B42
B43-58	Red brass	B43

Subpart 51.73—Seamless Copper and Copper-Alloy Tubes

§ 51.73–1 Scope.

(a) The material specifications covering seamless copper and copper-alloy tubes, of class B, certified material, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.73-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
B88-61	Copper Type K	B88-K.
B88-61	Copper Type L	B88-L.
B88-61	Copper Type M	B88-M.
B75-61	Oxygen-free copper	B75-D.
B75-61	Phosphorized copper Type DPL.	B75-A.
B75-61	Phosphorized copper Type DHP.	B75-B.
B75-61	Phosphorized arsenical copper Type DPA.	B75-C.
B111-60	Copper	B111-A.
B111-60	Arsenical copper	B111-B.
B111-60	Red brass	B111-C.
B111-60	Admiralty metal grades A, B, C, and D.	B111-D.
B111-60	Aluminum brass grade B.	B111-E.
B111-60	Aluminum bronze	B111-F.
B111-60	Copper-nickel 70-30	B111-G.
B111-60	Copper-nickel 80-20	B111-H.
B111-60	Copper-nickel 90-10	B111-I.

(b) When copper tubes are to be welded, deoxidized copper shall be employed.

Subpart 51.76—Copper-Alloy Castings

§ 51.76–1 Scope.

The material specifications covering bronze castings of class B, certified material, for pressure-containing parts of valves, pipe fittings, and similar appliances, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.76-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
B61-60	Steam or valve bronze.	2A.
B62-60	Composition bronze or ounce metal.	4A.
B143-61	Tin bronze, 1A	1A.
B143-61	Tin bronze, 1B	1B.

§ 51.76–5 Hydrostatic tests.

Castings intended for use as pipe flanges and flanged fittings shall be tested after machining to a hydrostatic test as required by § 61.30–5 of this subchapter.

Subpart 51.79—Aluminum-Alloy Plates and Sheets

§ 51.79–1 Scope.

(a) The material specifications covering aluminum-alloy plate and sheet of Class B, certified material, suitable for use as shells and tube sheets of unfired pressure vessels and heat exchangers, shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.79-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade		Coast Guard grade
	Alloy	Temper	
B209-61	1060	0	1060-0.
B209-61	1100	0	1100-0.

B209-61	5456	0	5456-0.
B209-61	6061	T6	6061-T6.

Subpart 51.80—Aluminum-Alloy Pipe and Tubes

§ 51.80–1 Scope.

(a) The material specifications covering aluminum-alloy pipe and tubes of Class B, certified materials shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.80-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade		Coast Guard grade
	Alloy	Temper	
B210-61	1060	0	1060-0.
B210-61	3003	0	3003-0.
B210-61	5154	0	5154-0.
B210-61	6061	T6	6061-T6.
B210-61	6063	T6	6063-T6.
B234-61	6061	T6	6061-T6.
B235-61	1060	0	1060-0.

B241-61	6061	T6	6061-T6.
B241-61	6063	T6	6063-T6.

Subpart 51.81—Aluminum-Alloy Forgings

§ 51.81–1 Scope.

(a) The material specifications covering aluminum-alloy forgings of Class B, certified materials, shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.81-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade		Coast Guard grade
	Alloy	Temper	
B247-61	3003	F	3003-F.
B247-61	6061	T6	6061-T6.
B247-61	6063	T6	6063-T6.

Subpart 51.82—Aluminum-Alloy Bars, Rods, and Shapes

§ 51.82–1 Scope.

(a) The material specifications covering aluminum-alloy bars, rods, and shapes of Class B, certified materials, shall comply with the following standard specifications issued by the American Society for Testing Materials:

TABLE 51.82-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade		Coast Guard grade
	Alloy	Temper	
B211-61	6061	0	6061-T6.
B221-61	5083	0	5083-0.
B221-61	5154	0	5154-0.
B221-61	5456	0	5456-0.
B221-61	6061	T6	6061-T6.

Subpart 51.85—Nickel-Alloy Plates and Sheets

§ 51.85-1 Scope.

(a) The material specifications covering nickel-alloy plates and sheets of Class B, certified materials, shall comply with the following standard specification issued by the American Society for Testing Materials:

TABLE 51.85-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
B127-61	Hot or cold rolled	B127.

Subpart 51.86—Nickel-Alloy Pipe and Tubes

§ 51.86-1 Scope.

(a) The material specifications covering nickel-alloy pipe and tubes of Class B, certified material, shall comply with the following standard specification issued by the American Society for Testing Materials:

TABLE 51.86-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
B163-61	Nickel copper alloy	B163.
B165-61		B165.

Subpart 51.90—Rigid Poly (Vinyl Chloride) (PVC) Materials

§ 51.90-1 Scope.

(a) The material specifications covering materials fabricated of rigid polyvinylchloride (PVC), Class B, certified materials, shall comply with the following standard specifications issued by the American Society for Testing Materials, subject to the limitations noted in this subpart:

TABLE 51.90-1—MATERIAL SPECIFICATIONS

A.S.T.M. designation	A.S.T.M. grade	Coast Guard grade
D1784-60T	Type I, Grade 1	
D1784-60T	Type I, Grade 2	
D1784-60T	Type II, Grade 1	
D1785-60T	Type I, Grade 1	
D1785-60T	Type I, Grade 2	
D1785-60T	Type II, Grade 1	

(b) PVC pipe that is to be used for potable water shall bear the seal of approval or NSF mark of the National Sanitation Foundation Testing Laboratory Incorporated, School of Public Health, University of Michigan, Ann Arbor, Mich., 48103.

PART 52—CONSTRUCTION

Subpart 52.01—Procedure and General Requirements

Sec.
52.01-1 Definitions.
52.01-5 Plans.
52.01-10 Automatically controlled packaged boilers.
52.01-15 Conditions for approval.
52.01-20 Appeals.
52.01-25 Certifications and affidavits of manufacturers.
52.01-30 Certification required for duplicate boilers or pressure vessels.
52.01-35 Auxiliary, donkey, and low-pressure heating boilers.
52.01-40 Materials and workmanship.
52.01-50 Boilers or pressure vessels of foreign vessels.
52.01-55 Request for increase in pressure.
52.01-60 Alternative materials or methods of construction.
52.01-70 Experimental determination of pressure rating.
52.01-75 Inspectors' decisions.
52.01-85 Alternative procedures to govern new designs or methods of construction.

Subpart 52.05—Cylindrical Shells

52.05-1 Definitions.
52.05-5 Materials.
52.05-10 Computations.
52.05-12 Maximum allowable stress.
52.05-13 Quality factors for steel castings.
52.05-15 Seamless pipe shells.
52.05-20 Electric-resistance welded pipe shells.
52.05-30 Externally fired boilers.

Subpart 52.10—Shell Joints

52.10-1 Type of shell joints.
52.10-5 Materials and workmanship.
52.10-8 Longitudinal riveted joints.
52.10-10 Efficiency of riveted joints.
52.10-15 Buttstraps and computations.
52.10-20 Circumferential joints.
52.10-25 Welded joints.

Subpart 52.15—Domes and Steam Chimneys

52.15-1 Definitions.
52.15-5 Materials and workmanship.
52.15-10 Computations.
52.15-15 Detail requirements.

Subpart 52.20—Dished Heads

Sec.
52.20-1 Definitions.
52.20-5 Materials and workmanship.
52.20-10 Computations.
52.20-15 Detail requirements.
52.20-20 Openings in dished heads.

Subpart 52.22—Flat Heads

52.22-1 Definitions.
52.22-5 Materials and workmanship.
52.22-10 Computations.
52.22-15 Openings in flat head.

Subpart 52.24—Access and Inspection Openings

52.24-1 Definitions.
52.24-5 Materials and workmanship.
52.24-10 Detail requirements.

Subpart 52.25—Openings and Reinforcements

52.25-1 Scope.
52.25-5 Materials and workmanship.
52.25-10 Unreinforced openings.
52.25-15 Computations.
52.25-20 Reinforced opening in shells and dished heads.
52.25-25 Reinforced openings in flat heads.
Sec.
52.25-30 Reinforcement limits.
52.25-35 Strength of reinforcement.
52.25-40 Reinforcement of multiple openings.
52.25-45 Welded connections.
52.25-50 Riveted connections.
52.25-55 Boiler nozzle neck thickness.

Subpart 52.30—Surfaces Required To be Stayed or Reinforced

52.30-1 Definitions.
52.30-5 Areas to be stayed.
52.30-10 Computations.

Subpart 52.35—Stays and Reinforcements

52.35-1 Definitions.
52.35-5 Materials.
52.35-10 Workmanship.
52.35-15 Computations.
52.35-20 Detail requirements.

Subpart 52.40—Tube Sheets of Water-Tube Boilers

52.40-1 Definitions.
52.40-5 Computations for curved tube sheet.
52.40-10 Reinforcement of ligaments.
52.40-15 Unsymmetrical ligaments.

Subpart 52.45—Combustion Chambers and Tube Sheets of Fire-Tube Boilers

52.45-1 Definitions.
52.45-5 Materials.
52.45-10 Computations.
52.45-15 Detail requirements.

Subpart 52.50—Furnaces and Flues

52.50-1 Definitions.
52.50-5 Materials.
52.50-10 Computations.
52.50-15 Detail requirements.

Subpart 52.55—Boiler and Superheater Tubes

52.55-1 Definitions.
52.55-5 Materials and workmanship.
52.55-10 Computations.
52.55-15 Detail requirements.

Subpart 52.60—Superheaters, Headers, Water Walls, and Economizers

52.60-1 Definitions.
52.60-10 Materials.
52.60-15 Computations.
52.60-20 Detail requirements.

Subpart 52.65—Safety Valves

52.65-1 Definitions.
52.65-5 General requirements.
52.65-15 Installation.

Subpart 52.70—Boiler Mountings and Attachments

52.70-1 Definitions.
52.70-5 Materials and workmanship.
52.70-10 Detail requirements.
52.70-25 Feed connections.
52.70-30 Blowoff connections.
52.70-35 Dry pipes.
52.70-40 Fusible plugs.
52.70-45 Pressure gauges.
52.70-50 Water indicators.
52.70-55 Salinometer cocks.

AUTHORITY: The provisions of this Part 52 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426-4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat.

675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b; 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894; CGFR 56–28, July 24, 1956, 21 F.R. 5659; 167–38, Oct. 26, 1959, 24 F.R. 8857.

Subpart 52.01—Procedure and General Requirements

§ 52.01–1 Definitions.

(a) *Main boiler.* A main boiler is a steam boiler used for generating steam for propulsion purposes on shipboard.

(b) *Auxiliary or donkey boiler.* An auxiliary or donkey boiler is a steam boiler used for all purposes on shipboard for which steam may be required other than propulsion.

(c) *Pressure vessel.* A pressure vessel is a vessel containing gases, vapors, or liquids under pressure. (See § 54.01–5 of this subchapter.)

(d) *Water-tube boiler.* A water-tube boiler is a steam boiler in which the boiler tubes contain water and steam, the heat being applied to the outside surface of the tubes; and is composed generally of drums, headers, and tubes.

(e) *Internally-fired fire-tube boiler (Scotch boiler).* An internally-fired fire-tube boiler is a steam boiler containing furnaces, one or more combustion chambers and tubes or flues, which are surrounded by water and through which the products of combustion pass from the furnace to the uptake. In such boilers no part of the shell is in contact with the fire or products of combustion.

(f) *Externally fired fire-tube or flue boiler (horizontal return tubular).* An externally fired fire-tube or flue boiler is a steam boiler, part of the outer shell of which is exposed to fire or to the products of combustion, and containing flues through which such products pass from the furnace to the uptake.

(g) *Factor of safety.* Factor of safety is the ratio of the ultimate strength of the material to the maximum allowable stress.

(h) *Pressure or p. s. i.* Pressure or p. s. i. is the gauge pressure or the pressure above the atmospheric pressure in pounds per square inch.

(i) *Design pressure.* Design pressure is the theoretical bursting pressure of the weakest part of a boiler, pressure vessel, or piping divided by its factor of safety.

(j) *Maximum allowable pressure.* The maximum allowable pressure of a boiler and its appurtenances or of an unfired pressure vessel shall be considered as the highest setting of the safety valves or relief valves.

(k) *Repair.* Repair is the restoration of any damaged or impaired part to an effective and safe condition.

(l) *Alteration.* Alteration is a structural modification of or departure from an approved design or existing construction.

(m) *Packaged boiler.* A packaged boiler is a steam boiler equipped, and shipped complete with fuel burning equipment, mechanical draft equipment, feed water apparatus and all necessary controls for manual or automatic operation, all completely mounted on a common base and requiring only to be connected to fuel, water and electric supplies to be ready for use.

(n) *Fired steam boiler.* A pressure vessel in which steam is generated by the application of heat resulting from the combustion of fuel is classed as a fired steam boiler.

(o) *Unfired steam boilers.* An unfired pressure vessel in which steam is generated is classed as an unfired steam boiler. (See § 54.03–27 of this subchapter for requirements for unfired steam boilers.)

§ 52.01–5 Plans.

(a) Manufacturers intending to fabricate boilers, unfired pressure vessels or appliances of riveted, welded, brazed, or seamless material to be installed on vessels subject to inspection by the Coast Guard, shall submit detail plans in triplicate which shall be fully descriptive of the pressure containing parts of such boilers, unfired pressure vessels, or appliances to be manufactured, to the Officer in Charge, Marine Inspection, having jurisdiction over the vessel. When due to location of the shipyard or design office, such a procedure would result in unnecessary delay in transmission, the plans may be forwarded directly to the Commandant (MMT), U.S. Coast Guard, Washington, D.C., 20226.

(b) The procedure specified in paragraph (a) of this section shall apply also to proposed alterations in boilers, unfired pressure vessels, or appliances of riveted, welded, brazed, or seamless material.

(c) In addition to the requirements specified in paragraph (a) of this section, manufacturers intending to fabricate packaged boilers to be installed on vessels subject to inspection by the Coast Guard shall submit detail plans, in triplicate, fully descriptive of the manual or automatic features of such boilers, to the Commandant (MMT), U. S. Coast Guard, Washington, D.C., 20226. Manufacturers intending to fabricate automatically controlled packaged auxiliary boilers shall submit plans and descriptive data, in quadruplicate, as specified in Subpart 162.026 of Subchapter Q (Specifications) of this chapter.

§ 52.01–10 Automatically controlled packaged boilers.

All automatically controlled packaged auxiliary boilers shall be designed, constructed and tested in conformance with the requirements of Subpart 162.026 of Subchapter Q (Specifications) of this chapter.

§ 52.01–15 Conditions for approval.

(a) Manufacturers of boilers and unfired pressure vessels to be installed on vessels subject to inspection by the Coast Guard shall make calculations of the pressure parts of such boilers and unfired pressure vessels using the formulas provided in this subchapter, and submit such calculations for approval together with the drawings required by § 52.01–5. In making calculations, the design stress shall not exceed the maximum allowable stresses for the material.

(b) When it is determined that the design of the boiler or unfired pressure vessel complies with the requirements of this subchapter and, in the case of boilers, with the requirements of Part 162 of Subchapter Q (Specifications) of this chapter, the drawings shall be approved for the maximum allowable pressure at which the boiler or unfired pressure vessels may be operated. If it is determined that the design does not comply with the specified requirements, the manufacturer will be notified by a written statement which will list the reasons for disapproval.

§ 52.01–20 Appeals.

In case the design is disapproved by the Officer in Charge, Marine Inspection, the manufacturer may appeal within 30 days, to the Coast Guard District Commander of the district, and should the Coast Guard District Commander sustain the Officer in Charge, Marine Inspection, the manufacturer may, within 30 days, further appeal to the Commandant. The decision of the Commandant shall be final.

§ 52.01–25 Certifications and affidavits of manufacturers.

(a) In requesting inspection of a new boiler or pressure vessel subject to inspection by the Coast Guard, the manufacturer shall file with the Officer in Charge, Marine Inspection, a certification of a data report in triplicate on Form CG–2935 for boilers or Form CG–2936 for unfired pressure vessels. (See § 61.45–5 or § 61.45–10 of this subchapter.)

(b) Manufacturers of class B materials, such as pipe, valves, flanges, fittings, traps, separators, castings, forgings, etc., or appliances, proposed for use on vessels subject to inspection by the Coast Guard, shall file at Headquarters affidavits duly executed on Form CG–935A certifying that such materials or appliances will be manufactured in accordance with the regulations in this subchapter. (See § 61.45–15 of this subchapter.)

§ 52.01–30 Certification required for duplicate boilers or pressure vessels.

A manufacturer desiring to construct any boiler or pressure vessel which is identical with a boiler or pressure vessel previously approved by the Officer in Charge, Marine Inspection, shall not be required to resubmit drawings, but shall submit to the Officer in Charge, Marine Inspection, a certificate that the proposed boiler or pressure vessel conforms in every respect with drawings previously approved. Such certificate shall contain the boiler or pressure vessel number, the drawing number or numbers, and the date of approval. If, upon examination, the Officer in Charge, Marine Inspection, ascertains that the said approved drawings meet the requirements specified in § 52.01–15, the

manufacture of such boiler or pressure vessel shall be authorized. In case of disapproval of the request by the Officer in Charge, Marine Inspection, the manufacturer shall have the right of appeal, as specified in § 52.01–20.

§ 52.01–35 Auxiliary, donkey, and low-pressure heating boilers.

(a) All auxiliary and donkey boilers shall be designed, constructed, installed, and inspected in accordance with the requirements specified in this subchapter for main boilers, and shall be subject to the same initial procedure and general requirements.

(b) Low-pressure steam and hot-water heating boilers, the maximum allowable pressure of which does not exceed 30 pounds per square inch, shall conform to the requirements of Part 53 of this subchapter. Boilers of this type, the maximum allowable pressure of which exceeds 30 pounds per square inch, shall conform to the requirements specified in this subchapter for main boilers.

§ 52.01–40 Materials and workmanship.

All materials to be used in any of the work specified in the various sections of this part shall be free from injurious defects and shall have a workmanlike finish. The construction work shall be executed in a workmanlike manner with proper tools or equipment and shall be free from defects which would impair strength or durability.

§ 52.01–50 Boilers or pressure vessels of foreign vessels.

(a) Boilers or pressure vessels of foreign vessels admitted to American registry shall be inspected in the same manner as boilers on American vessels. The hydrostatic test of such boilers or pressure vessels shall be one and one-half times the maximum allowable pressure under which they have been operated at the first United States inspection.

(b) This allowable pressure shall be accepted as the basis for determining the maximum allowable pressure where it is not practicable or possible to secure a record of the tests of the plates that entered into the construction of the boiler or pressure vessel. The Officer in Charge, Marine Inspection, may reduce the maximum allowable pressure if deemed necessary after a close examination of the general conditions or design of the boiler or pressure vessel.

§ 52.01–55 Request for increase in pressure.

(a) When the maximum allowable pressure of a boiler has been established, an increase in pressure shall not be granted unless the boiler design meets the requirements of this subchapter in effect at the time the boiler was contracted for or built; but in no case will a pressure increase be authorized for boilers constructed prior to the effective date of the regulations dated November 19, 1952, if the minimum thickness found by actual measurements shows that the boiler will have a factor of safety of less than 4½. The piping system, machinery, and appurtenances shall meet the present requirements of this subchapter for the maximum allowable pressure requested. An increase in pressure shall be granted only by the Commandant upon presentation of data or drawings proving that the requested increase in pressure is justified.

(b) When existing boilers are replaced by new boilers designed to operate at pressures in excess of the pressure allowed by the certificate of inspection, an increase in pressure shall not be authorized unless the boiler design, piping systems and machinery meet the requirements of this subchapter for the maximum pressure requested. An increase in maximum allowable pressure shall be granted only by the Commandant upon presentation of data or drawings proving that the boiler, piping system and machinery will operate safely at the desired maximum pressure of the system.

§ 52.01–60 Alternative materials or methods of construction.

If, in the development of industrial arts, improved materials or methods of construction are developed, their use in lieu of those specified will be given consideration upon formal application to the Commandant, with full information as to their characteristics, together with such scientific data and evidence as may be necessary to establish the suitability of such materials or methods of construction for the purpose intended.

§ 52.01–70 Experimental determination of pressure rating.

(a) Where approval is requested for a boiler structure, pressure vessel or any part thereof which, due to its irregular form, process of manufacture, or for any other reason, becomes a new or difficult subject of accurate mathematical analysis, the Commandant may require a full size specimen to be furnished for the purpose of making any tests which he may consider necessary to determine a safe and fair pressure rating for such pressure vessel or pressure part.

(b) In lieu of the proof hydrostatic tests as prescribed in Subpart 61.35 of this subchapter, the Commandant may permit the use of empirical formulas for determining the maximum allowable pressure of pressure vessels of irregular form, or where the stresses cannot be accurately determined. The empirical formulas shall be based upon proof hydrostatic test data acceptable to the Commandant.

§ 52.01–75 Inspectors' decisions.

When it becomes necessary for inspectors to make decisions on certain matters covered by the regulations in this subchapter, they shall in making their reports quote the section and paragraph number on which their decisions are based. Whenever it is necessary to make decisions in matters not specifically covered by the regulations in this subchapter, they shall in making their reports state clearly the reasons which caused them to arrive at such decisions.

§ 52.01–85 Alternative procedures to govern new designs or methods of construction.

When new procedures, designs, or methods of construction are submitted for approval, the Commandant is authorized to act regarding the approval or disapproval of such new developments for which no regulations have been provided.

Subpart 52.05—Cylindrical Shells

§ 52.05–1 Definitions.

(a) *Cylindrical shell.* The term "cylindrical shell," as used in the regulations in this subchapter means the cylinder forming the outer envelope of a boiler or other pressure vessel, or of a drum which is a part of a boiler consisting of one or more plates properly riveted, welded, or otherwise joined or of seamless construction as hereinafter specified. (This does not include curved tube sheets set forth in Subpart 52.40.)

(b) *Course.* A course is a section of a cylindrical shell which comes between circumferential joints.

§ 52.05–5 Materials.

(a) Plates shall be of marine boiler steel complying with subpart 51.04 of this subchapter, except that boilers designed for pressures not exceeding 150 pounds per square inch may be constructed of steel meeting the specifications of subpart 51.22 of this subchapter, and which are tested, inspected, and stamped in conformance with the requirements for class A materials.

(b) Boiler shells not exceeding 24 inches in diameter may be of seamless pipe or tubing in accordance with requirements of § 52.05–15. Boiler shells not exceeding 18 inches in diameter may be fabricated of electric-resistance butt-welded pipe in accordance with § 52.05–20.

§ 52.05–10 Computations.

(a)(1) *General.* The maximum allowable pressure and the minimum thickness of cylindrical shells subject to internal pressure shall be determined by the strength of the weakest course computed from the thickness and tensility of the material, the efficiency of the longitudinal joint, or of the ligament efficiency between the tube holes in the shell or drum (whichever is the least), the inside or outside radius of the course, and the maximum allowable stress.

(2) *Boiler shells.* (i) Cylindrical headers and drums up to and including 24 inches in outside diameter shall be computed in accordance with Formula (3).

(ii) Cylindrical shells larger than 24 inches in outside diameter, where the thickness of the shell does not exceed one-half of the inside radius, and the designed temperature does not exceed 900° F., Formula (1) shall be used. Where the thickness exceeds one-half of the inside radius, and for temperatures up to that of saturated steam at critical pressure (705.4° F.), Formula (2) shall be used.

(iii) The minimum thickness of boiler plates shall not be less than ¼ inch where the diameter of the shell is 36

inches and under and shall not be less than 5/16 inch when the diameter is over 36 inches and not greater than 54 inches, and not less than 3/8 inch for shell diameter exceeding 54 inches but not greater than 72 inches.

$$P=\frac{STE}{R+0.6T} \text{ or } T=\frac{PR}{SE-0.6P} \quad (1)$$

$$P=SE\left(\frac{R_o^2-R^2}{R_o^2+R^2}\right) \quad (2)$$

$$P=\frac{SE}{\frac{D}{2T}-y} \text{ or } T=\frac{PD}{2SE+2yP} \quad (3)$$

Where:

P = maximum allowable pressure, in pounds per square inch. The value of P in formula (3) shall not be taken as less than 100 p.s.i. for any condition of service or material.

S = maximum allowable stress, in pounds per square inch, taken from Tables 52.05-10(a) and 54.03-10(c) and subject to the limitations of § 52.05-12.

T = minimum thickness of the shell plates, in inches.

R = inside radius of the shell, in inches.

R_o = outside radius of the shell, in inches.

D = outside diameter of header or drum, in inches.

E = minimum efficiency of the longitudinal joints or of ligaments between tube holes or other openings.

y = a coefficient having values as follows:

Materials	Temperature, ° F.					
	900 and below	950	1,000	1,050	1,100	1,150 and above
Ferritic steels	0.4	0.5	0.7	0.7	0.7	0.7
Austenitic steels	0.4	0.4	0.4	0.4	0.5	0.7

[1] In general, the allowable "S" values in Table 52.05-10(a) except for welded pipe and tubing, and bolting, are based on one-fourth of the minimum of the specified tensile range of the material for temperatures of 650° and below; and on creep stress or stress-rupture for temperatures above 650° F.

[2] Intermediate values of "S" may be obtained by interpolation.

[3] Carbon-molybdenum alloy-steel plate, pipe, forging, and cast material shall be limited to a maximum temperature of 875° F.

[4] These stress values apply only when carbon content is 0.04 percent or higher.

[5] Higher values of maximum allowable stress for temperatures between 0° F. and 650° F. will be considered based on the proposed application.

[6] The minimum tensile strength employed not given in the specification; tensile strength value assumed.

[7] Permitted only for use as tube material in heat exchangers and tubing for hydraulic systems.

[8] This material limited to the construction of superheater, waterwall and economizer headers when used in boilers. Where welding fabrication is employed, a minimum preheat temperature of 300° F. shall be used.

[9] This material shall be limited to a temperature of 875° F. when used in the design of pressure vessels.

[10] Maximum allowable stress values for temperatures below 700° F. are as follows:

A.S.T.M. designation	Grade	For metal temperatures not exceeding °F.			
		−20 to 400	500	600	650
A213	T5	15,000	14,500	14,000	13,700
A182	F12	17,500	17,500	17,500	16,800
A182	F5	22,500	21,600	20,100	19,000

[11] Maximum allowable stress values for temperatures exceeding 650° F. will be considered based on the proposed application.

[12] These stresses include weld joint efficiency of 0.85.

[13] When material conforming to this specification is used in boiler, waterwall, economizer, and superheater tubes that are fully enclosed within the boiler setting, and in heat exchanger tubes, the maximum allowable stress may be used without weld joint efficiency of 0.85.

[14] Welding or brazing not permitted on liquid quenched and tempered materials.

[15] This stress not permitted for temperatures exceeding 450° F.

[16] Between temperatures of −20° to 400° F., stress values equal to the lower of the following will be permitted; 20 percent of the minimum tensile strength or 25 percent of the minimum yield strength.

[17] To these stresses a quality factor as specified in § 52.05-13 shall be applied.

[18] These stresses apply to the normalized material only.

§ 52.05-12 Maximum allowable stress.

(a) The maximum allowable stresses given in Tables 52.05-10 (a) and 54.03-10 (c) in Part 54 of this subchapter may be used in the formulas for determining the maximum allowable pressure and the minimum thickness of seamless or arc-welded shells which do not require staying, unstayed blank hemispherical and ellipsoidal heads with the pressure on the concave side, flat heads which do not require staying, bolting flanges, and reinforced openings in shells and heads of boilers and unfired pressure vessels, provided the fabrication complies with the following requirements:

(1) The pressure parts of boilers shall have a minimum thickness exceeding ½ inch, and to the calculated thickness as determined by the applicable design formula, a corrosion allowance of 0.1 inch shall be added.

(2) The pressure parts of unfired pressure vessels shall have a corrosion allowance of one-sixth of the calculated thickness, or 1/16 inch, whichever is smaller, added to the calculated thickness as determined by the applicable design formula, except that no additional thickness need be provided when acceptable corrosion resistant materials are employed.

(3) Backing strips fitted in way of longitudinal joints shall be removed and the weld surface and reinforcement of longitudinal and circumferential joints shall be prepared in accordance with § 56.05-5 (c) of this subchapter. For cylindrical shells subject to temperatures exceeding 800° F., all weld reinforcement on both the inside and outside of the shell at the longitudinal and circumferential joints shall be removed wherever possible.

(4) Class II welded pressure vessels which are not given a complete radiographic examination shall have portions of the welded joints examined by spot radiography as required by § 56.05-6 of this subchapter.

(5) The stresses due to hydrostatic head shall be taken into account in determining the minimum thickness of the shell or head of any pressure vessel. Additional stresses, imposed by effects other than internal pressure or static head, which increase the average stress over substantial sections of the shell or head by more than 10 percent of the allowable stress shall be taken into account. These effects include the weight of the vessel and its contents, method of support, impact loads, superimposed loads, localized stresses due to the reactions of supports, and stresses due to temperature gradient.

(b) The maximum allowable stress used in the formulas for determining the maximum allowable pressure and minimum thickness of the following pressure parts of boilers and unfired pressure vessels shall not exceed 80 percent of the values given in Tables 52.05–10 (a) and 54.03–10 (c) in Part 54 of this subchapter:

(1) Boiler shell or head thicknesses of ½ inch or less.

(2) Riveted or brazed shells or heads.

(3) Dished heads, other than hemispherical or ellipsoidal.

(4) Unstayed hemispherical or ellipsoidal heads with pressure on the convex side.

(5) Hemispherical and ellipsoidal heads with flanged-in or other unreinforced manholes.

(6) All stays, braces or parts requiring staying.

(c) Where the maximum allowable stress is limited to 80 percent of the values given in Table 52.05–10 (a) or 54.03–10 (c) in Part 54 of this subchapter, compliance with the provisions of paragraph (a) of this section is not required.

§ 52.05–13 Quality factors for steel castings.

(a) A quality factor as specified in this section shall be applied to the allowable stresses for steel casting materials as given in Table 52.05–10 (a), when used in special design of pressure parts.

(b) A factor not to exceed 80 percent shall be applied when a casting is produced only in accordance with the material specifications given in Subpart 51.58 of this subchapter.

(c) A factor not to exceed 90 percent may be used for castings which have been radiographed at all critical sections [1] and found free of injurious defects.

(d) Radiographing, where required shall conform to the requirements of § 56.05–5 of this subchapter.

(e) Serious defects shall be the basis for rejection of the casting. Defects which are not considered as impairing the strength of the castings may be repaired by welding in accordance with the applicable requirements of this subchapter for welding repairs to defective carbon-steel or alloy-steel castings.

(f) Castings to which a quality factor exceeding 80 percent is to be applied shall be marked as required by Subpart 51.58 of this subchapter, and in addition, the applicable quality factor shall be clearly stamped on the casting.

§ 52.05–15 Seamless pipe shells.

(a) Shells may be seamless pipe or tubing with or without integral heads for boilers and unfired pressure vessels provided the material conforms to Subpart 51.25 or 51.34 of this subchapter, except that Grades T83, P53–A and P–53B shall not be used for boiler shells exceeding 18 inches in diameter.

§ 52.05–20 Electric-resistance welded pipe shells.

(a) Shells may be fabricated of electric-resistance welded pipe or tubing made of open-hearth or electric furnace steel, as specified in Subpart 51.25 or 51.34 of this subchapter, not exceeding 24 inches in diameter for boiler shells and 30 inches in diameter for unfired pressure vessel shells. The maximum allowable stress values in Table 52.05–10(a) shall be substituted in Formulas (1) or (2) of § 52.05–10 for the values of SE.

(b) Holes for tubes, nozzles, or other openings shall not be drilled in the weld.

§ 52.05–30 Externally fired boilers.

The thickness of shell plates of externally fired boilers shall not exceed 0.45 inch.

Subpart 52.10—Shell Joints

§ 52.10–1 Type of shell joints.

The shells of boilers or unfired pressure vessels may be fabricated by riveting or welding.

§ 52.10–5 Materials and workmanship.

(a) The buttstraps of riveted joints shall be of steel conforming with the specifications and requirements for the shell plates.

(b) Rivets shall conform to the requirements of Part 51 of this subchapter, as follows:

Steel rivets	Subpart 51.07
Iron rivets	Subpart 51.13

(c) Rivet holes shall be drilled wholly and fairly, preferably in position. After drilling, plates and straps shall be disassembled, burrs removed, and edges of holes faired before the plates are riveted together. Drifting of rivet holes is prohibited.

(d) The calking edges of plates, buttstraps, and heads shall be beveled to an angle not sharper than 70° to the plane of the plate and as near thereto as practicable. Every portion of the unfinished surfaces of the calking edges of plates, buttstraps, and heads shall be planed or milled to a depth of not less than ¼ of the thickness of the plate, but in no case less than ⅛ inch. Calking shall be done with a tool of such form that there is no danger of scoring or damaging the plate underneath the calking edge, or splitting the calked sheet.

(e) Plates and shapes shall be so closely fitted, metal to metal, as to require a minimum of calking to obtain tightness.

(f) The seal welding of rivet heads to secure tightness is prohibited.

§ 52.10–8 Longitudinal riveted joints.

(a) The longitudinal joints of drums and shells of all boilers shall be of riveted double-butt strap construction, at least double-riveted.

(b) The longitudinal joints of externally fired fire-tube or flue boilers shall be located above the fire line of the setting.

(c) Boiler shell plates having longitudinal joints shall be rolled or formed by pressure, not blows, to the proper curvature.

(d) The maximum allowable pitch of rivets in longitudinal joints shall be such as to insure good calking.

(e) The distance between the center lines of any two adjacent rows of rivets in longitudinal joints or the "back pitch" measured at right angles to the direction of the joint, shall have the following minimum values:

(1) If $\frac{P}{d}$ is 4 or less, the minimum value shall be: 2d, or

(2) If $\frac{P}{d}$ is over 4, the minimum value shall be: $2d+0.1(P-4d)$

where:

P = Pitch of the rivets in outer row where a rivet in the inner row is located midway between two rivets in the outer row, in inches, or

P^1 = pitch of rivets in the outer row less pitch of rivets in the inner row where two rivets in the inner row is located between two rivets in the outer row, in inches.

d = diameter of the rivet holes, in inches.

(3) The "back pitch" of rivets shall be measured either on the flat plate before rolling or on the median line after rolling. The "back pitch" thus measured shall govern the locations of the rivet holes in the buttstraps. The diagonal ligaments between staggered rivets shall have the proper strength, as determined by figure 52.40–5 (c4).

(f) On longitudinal joints the distance from the center of rivet holes to the edge of the plate, except rivet holes in the ends of buttstraps, shall be not less than 1½ and not more than 1¾ times the diameter of the rivet holes, the distance to be measured from the center of the rivet holes to the calking edge of the plate before calking.

§ 52.10–10 Efficiency of riveted joints.

(a) The efficiency of riveted joints is the ratio which the strength of the joint bears to the strength of the solid plate. The efficiency of a riveted joint is determined by calculating the breaking strength of a unit section of the joint, considering each possible mode of failure separately, and dividing the lowest result by the breaking strength of the solid plate of a length equal to that of the section considered. It shall be computed in accordance with the following formulas:

(1) For plate section:

$$E=\frac{P-d}{P} \qquad (1)$$

(2) For rivet section:

$$E=\frac{Nas}{PST} \qquad (2)$$

(3) For combined efficiency of plate in second row and shearing strength of rivet in outer row:

$$E=\frac{p-d}{p}+\frac{nas}{PST} \qquad (3)$$

[1] Critical sections of a casting are defined as the sections where defects are usually encountered, such as the junction of risers, gates, or feeders to the castings, and at abrupt changes in section. All integrally cast bosses and all chaplets and internal chills shall be radiographed.

[1] It is assumed that the joints are of the usual construction where the rivets are symmetrically spaced.

(4) For combined efficiency of plate in second row and crushing strength of buttstrap in front of rivet in outer row:

$$E=\frac{p-d}{p}+\frac{ncdt}{PST} \quad (4)$$

where:

E = efficiency of riveted joint in ratio to solid plate.
P = pitch in inches of rivets in outer row.
p = pitch in inches of rivets in second row.
d = diameter of rivet hole, in inches.
N = total number of rivets per pitch P.
n = number of rivets in outer row per pitch P.
T = thickness of shell plate, in inches.
t = thickness of buttstrap, in inches.
a = sectional area of the driven rivet, in square inches.
c = crushing strength of plate in front of rivets. (Assumed as 95,000 pounds per square inch.)
S = tensile strength of plate in pounds per square inch.
s = shearing strength of rivets in pounds per square inch of sectional area, assumed as follows:

Iron rivets in single shear	38,000
Iron rivets in double shear	76,000
Steel rivets, grade A, in single shear	44,000
Steel rivets, grade A, in double shear	88,000
Steel rivets, grade B, in single shear	52,000
Steel rivets, grade B, in double shear	104,000
Alloy-steel rivets, grade C, in single shear	60,000
Alloy-steel rivets, grade C, in double shear	120,000

(b) Where the drums of water-tube boilers are pierced through the longitudinal buttstrap joint for the purpose of inserting tubes to connect the headers to the drum, the combined thickness of both buttstraps shall be taken in computing the efficiency of the ligament between tube holes. This efficiency shall in no case be less than that required for the riveted joint.

§ 52.10–15 Buttstraps and computations.

(a) The thickness of buttstraps shall be such as to permit efficient calking of the edges. Where the pitch of the rivets is so great as to make effective calking doubtful, as occurs in quadruple riveting, the edge should be scalloped around the outer rivets.

(b) The thickness of the outer buttstrap shall be not less than that determined by the following formula, but it shall in no case be less than ¼ inch:

$$t=\frac{5T(P-d)}{8(P-Kd)} \quad (1)$$

where:

t = thickness of outer strap, in inches.
T = required thickness of shell plate, in inches.
P = pitch of rivets in outer rows, in inches.
d = diameter of rivet holes, in inches.
K = ratio of pitch of rivets in outer row to minimum pitch in inner rows.

(c) The thickness of the inner buttstrap shall equal t plus 0.125 inch, but is not required to exceed the thickness of the shell plate.

(d) The thickness of buttstraps on drums of water-tube boilers pierced for the purpose of inserting tubes to connect the headers to the drums, shall be increased if necessary to maintain the efficiency on which the allowable pressure is based.

(e) Buttstraps shall be formed to the curvature of the shell by rolling or pressing.

§ 52.10–20 Circumferential joints.

(a) The minimum strength of circumferential joints attaching shells to heads of boilers or other pressure vessels shall bear the following ratios to that required for the longitudinal joints of the shell:

(1) Fifty percent when no part of the load on the head is supported by either tubes or stays.

(2) Forty percent when one-half or more of the load on the head is sustained by stay tubes, flues, or stays; except that circumferential head joints of externally fired fire-tube or flue boilers exposed to fire or to the products of combustion, shall have a minimum strength of not less than 50 percent of that of the longitudinal joint.

(b) The strength of the circumferential joints connecting courses of the shell shall be not less than 75 percent of that required for the longitudinal joints of the shell except that in the case of externally fired flue boilers the strength of circumferential joints need not exceed 60 percent of the strength of the longitudinal joint.

(c) Circumferential end joints of shell plates over ⅝ inch thick and circumferential joints connecting courses of shells, the required thickness of which is over ½ inch, shall be at least double riveted. Where the thickness of the shell plate exceeds 1⅜ inches for single-ended boilers, and 1⅜₁₆ inches for double-ended boilers, the circumferential seams connecting shell courses shall be triple riveted.

(d) On circumferential joints of shells having heads which are not supported by tubes or through stays, the distance from the center of rivet holes to the calking edges of the plates, shall be not less than 1½ and not more than 1¾ times the diameter of the rivet holes. The distance from the centers of rivet holes of circumferential joints to the edges of the plate in boilers having heads which are supported by tubes or through stays shall not be less than 1¼ times the diameter of the rivet holes.

(e) The distance between any two rows of rivets in a circumferential joint or the "back pitch" shall be not less than 1¾ times the diameter of the rivet hole.

§ 52.10–25 Welded joints.

(a) Drums, shells, or other cylindrical pressure parts and non-cylindrical pressure parts of boilers and unfired pressure vessels, except stays or braces as specified in Subpart 52.35, may be fabricated by means of arc or gas welding, provided the construction meets the requirements for material and design as specified in Parts 51 and 52 of this subchapter, and the welding conforms to the requirements of Part 56 of this subchapter.

(b) Arc or gas welding used in the fabrication of the pressure parts of boilers, as specified in paragraph (a) of this section, need not be radiographed, unless otherwise specified in this subchapter, provided the stress or load is carried by other construction which conforms to the requirements of the regulations in this subchapter, such as stays, staybolts, and stay tubes, and where the adequacy of the boiler design is not solely dependent upon the strength of the weld. Welding done under these provisions shall otherwise conform in all respects to Part 56 of this subchapter, unless otherwise specified in this subchapter.

(c) Arc or gas welding is permitted in the construction of boilers and unfired pressure vessels for the purpose of securing tightness in parts of riveted joints which are otherwise constructed fully in accordance with the regulations in this subchapter.

(d) The ends of inner butt-straps of riveted butt-strap longitudinal joints may be arc- or gas-welded to the edges of heads or of the adjoining shell plate, or to the circumferential butt-straps for tightness. When the butt-strap of a longitudinal joint does not extend the full length of the shell plates, the abutting edges of the shell plate may be welded provided the distance from the end of the butt-strap to the edge of the flange of the head or adjacent shell plate is not greater than 2½ inches.

(e) The longitudinal and circumferential joints of corrugated furnaces may be fabricated by arc welding in accordance with the requirements of § 52.50–15 (g).

(f) (1) A furnace in a fire-tube boiler may be attached to an outwardly flanged opening in a front tube sheet by a circumferential fillet weld, or, the furnace may be attached to either tube sheet by flaring the end which extends beyond the outside face of the head to an angle of 20 to 30 degrees, and using a circumferential fillet weld, provided:

(i) The area of the heads around the furnace is stayed by tubes or braces in accordance with the requirements of Subpart 52.35.

(ii) The joint is wholly outside the furnace.

(iii) The throat of the full fillet weld is not less than 0.7 times the thickness of the head.

(iv) Unless protected by refractory material, the furnace shall not extend beyond the outside face of the tube sheet a distance greater than the thickness of the tube sheet. Any excess shall be removed before welding.

(v) The welding conforms in all respects to Part 56 of this subchapter, except that radiographic examination is not required.

(2) A furnace may also be attached by a full penetration weld, provided the furnace extends through the full thickness of the tube sheet. The furnace shall not extend beyond the toe of the weld and the toe shall not project beyond the face of the tube sheet by more than ⅜ inch.

(g) Arc- or gas-welded construction may be used in lieu of riveted joints in

the fire boxes of internally-fired boilers provided the welds are located between two rows of staybolts, or in the case of flat surfaces, the weld is not less than one half of a staybolt pitch from the corner of the knuckle.

(h) The bottom edges of plates of vertical tubular and firebox types of boilers may be attached by full penetration butt welds provided the load due to internal pressure is carried by staybolting and the inside width of the waterleg does not exceed 4 inches. The plates may be considered as fully supported if the distance from the welds to the nearest row of staybolts is not more than one-half the pitch allowed by Subpart 52.35.

(i) Mud rings of plate material may be used in the construction of waterlegs of vertical fire-tube boilers and may be attached as shown in figure 52.22-10 (E), provided the width of the waterleg does not exceed 4 inches, and the thickness of the mud ring plate is at least ½ inch. The welding shall be stress-relieved, but radiographic examination is not required.

(j) Fire-tube boilers may be constructed by attaching an unflanged tube sheet to the shell or wrapper sheet by welding provided that:

(1) The tube sheet is supported by tubes or braces, or both, in accordance with the requirements of Subparts 52.30 and 52.35.

(2) The welded joint is wholly within the shell or wrapper sheet and forms no part thereof.

(3) The weld is a full penetration weld, of at least the full thickness of the tube sheet, applied from either or both sides.

(4) The shell or wrapper sheet, where exposed to primary furnace gases and not water cooled, does not extend more than ⅛ inch beyond the outside face of the tube sheet.

(5) The weld attaching a furnace or lower tube sheet of a vertical fire-tube boiler to the furnace sheet is wholly within the furnace sheet and ground flush with the upper or water side of the tube sheet.

(6) The welding conforms in all respects to Part 56 of this subchapter, except that radiographic examination is not required.

(7) This construction shall not be used on the rear head of a horizontal-return tubular boiler.

Subpart 52.15—Domes and Steam Chimneys

§ 52.15-1 Definitions.

(a) *Domes.* Domes are superstructures of shells, attached by riveting or welding. They generally consist of a cylindrical shell with one end flanged for attachment to the main shell and the other end closed by a head which may be integral with, riveted, or welded to the shell.

(b) *Steam chimneys.* Steam chimneys are superstructures of steam boilers which are fitted with a lining inside of which the products of combustion pass to the smokestack. They may be constructed in the form of a dome integral with the boiler or as independent steam vessels connected by piping to the boiler.

§ 52.15-5 Materials and workmanship.

(a) Steel plates used in the construction of domes and steam chimneys shall conform to the specifications and requirements for the shell plates.

(b) Rivets shall conform to the requirements of Part 51 as follows:

Steel rivets	Subpart 51.07
Iron rivets	Subpart 51.13

§ 52.15-10 Computations.

(a) The maximum allowable pressure and the minimum thickness of the shell of domes and steam chimneys shall be computed as specified for cylindrical shells in Subpart 52.05, employing the minimum efficiency of the joint.

(b) Flat surfaces of heads of domes and steam chimneys shall be stayed as specified for surfaces to be stayed or reinforced in Subparts 52.30 and 52.35.

(c) The maximum allowable pressure on unstayed steam chimney linings, or the minimum thickness of such linings, shall depend upon their type and shall be computed in accordance with the requirements for furnaces and flues specified in Subpart 52.50.

(d) A cylindrical surface exposed to external pressure and not entirely self-supporting shall be stayed in accordance with the requirements of Subparts 52.30 and 52.35, specifically § 52.30-10 (g).

(e) The strength of the rivets and of ligaments between rivets in the flange attaching a dome or steam chimney to a main shell shall be sufficient to give a factor of safety of not less than six against the full load acting on the head. This factor of safety may be reduced to not less than four when not less than 50 percent of the load on the head is carried by stays secured to the main shell.

(f) Domes attached to shells of boilers shall comply with the requirements for reinforced openings as specified in Subpart 52.25.

§ 52.15-15 Detail requirements.

(a) All domes and steam chimneys shall be so arranged that any water can drain back into the boiler.

(b) The diameter of a dome shall not exceed one-half of the diameter of the boiler shell.

(c) Flanges of domes shall be formed with a corner radius of at least twice the thickness of the plate for plates 1 inch in thickness or less, and at least three times the thickness of the plate, for plates over 1 inch in thickness.

(d) The longitudinal joints of a dome or steam chimney may be butt-welded and the dome flange may be double full-fillet lap-welded to shell, in lieu of riveting, provided the welding fully complies with the requirements of Part 56 of this subchapter, except that radiographic examination of the fillet welds may be omitted.

Subpart 52.20—Dished Heads

§ 52.20-1 Definitions.

(a) *Unstayed heads.* Unstayed heads are the ends of a pressure vessel shell. They may be either flat or dished. Heads may be integral with, riveted or welded, to the shell.

(b) *Dished heads.* Dished heads are heads formed to a segment of a sphere or to a hemispherical or elliptical section and may be attached to the shell so that the pressure will be either on the concave or on the convex side.

§ 52.20-5 Materials and workmanship.

(a) Steel plate used in the fabrication of dished heads shall conform to the specifications and requirements for the shell plates. Welding caps, conforming to the requirements of subpart 51.34 of this subchapter may be used as end closures in water drums and headers, provided the diameter does not exceed 24 inches. Flanged or dished heads if pressed or flanged cold shall be stress-relieved as required by § 56.01-70 of this subchapter after the cold forming operations are completed. Heads that are flanged or dished hot need not be stress-relieved.

NOTE: It is not mandatory in fresh and salt water service systems that flanged or dished heads be stress-relieved for use on compression tanks with an air cushion containing liquids operating at temperatures not exceeding 212° F.

(b) The inside radius of the bend of the flange formed on an unstayed dished head shall be not less than three times the thickness of the head and shall in no case be less than 6 percent of the outside diameter of the flanged portion of the head.

(c) Dished heads having the pressure on the convex side shall be formed to a true surface without flats.

(d) The heads here considered are of steel plate. Cast-steel, bronze and cast-iron heads may be used for unfired pressure vessels, but only where specifically authorized by the Commandant.

(e) The edge of the flange formed on a head shall be machined to a true surface. Where the flange is to be calked inside, the edge shall be beveled as specified for the edges of plates and straps in § 52.10-5. Care shall be taken in calking to avoid damaging the surface of the plate.

(f) The holes for rivets to attach the head to the shell shall, as far as practicable, be drilled in position, and the shell and head shall be taken apart after the holes are drilled, and burrs removed. In cases where holes cannot be drilled in position, the holes shall be examined after assembly and faired by reaming where necessary. (The requirements to take apart shell and head for removing burrs shall not apply to heads where the contact surfaces have been machined and the heads shrunk in place.)

§ 52.20-10 Computations.

(a) The maximum allowable pressure and the minimum thickness of blank unstayed spherically dished heads, hemispherical heads, or ellipsoidal heads having the pressure on the concave side shall be calculated by the following formulas:

(1) *Spherically dished heads.*

$$P=\frac{STE}{0.833R} \quad (1)$$

$$T=\frac{0.833PR}{SE} \quad (2)$$

(2) *Hemispherical heads.*

$$P=\frac{2STE}{R} \quad (3)$$

$$T=\frac{PR}{2SE} \quad (4)$$

where:

P = maximum allowable pressure, in pounds per square inch.

S = maximum allowable stress, in pounds per square inch, taken from tables 52.05–10 (a) and 54.03–10 (c), and subject to the limitations of § 52.05–12.

T = minimum thickness of the head, in inches.

E = efficiency of the weakest joint used in forming the head, including the head to shell joint for hemispherical heads only, for the following types:

Riveted joints = calculated riveted efficiency, § 52.10–10.

Welded joints = efficiency specified in table 56.01–30 (a).

Seamless shells with integral heads = 100 percent.

R = radius to which the head is dished or formed, measured on the concave side, in inches.

(3) *Ellipsoidal heads.* A blank head of a semi-ellipsoidal form in which half the minor axis (or the inside depth of the head not including the flange) is at least equal to one-fourth of the inside diameter of the head flange, shall be made at least as thick as the required thickness of the seamless shell of the same diameter, as specified in § 52.05–10.

(b) The radius to which a head is dished shall be not greater than the outside diameter of the flanged portion of the head. Where two radii are used, the longer shall be taken as the value of R in formulas (1) and (2) of this section.

(c) The maximum allowable pressure and minimum thickness of dished cast steel or bronze heads, where permitted, shall be calculated by the appropriate formulas in this section.

(d) The maximum allowable pressure and minimum thickness of cast-iron dished heads, where permitted, shall be calculated by the appropriate formulas in Part 54 of this subchapter for unfired pressure vessels.

§ 52.20–15 Detail requirements.

(a) Where the radius R to which a dished head is formed is less than 80 percent of the inside diameter of the shell, the thickness of a head with a flanged-in manhole opening shall be not less than the value found by making R, in Formulas (1) and (2) in § 52.20–10, equal to 80 percent of the inside diameter of the shell and with the added thickness for the manhole. The thickness calculated shall be the minimum thickness of a head with a flanged-in manhole opening for any form of head and the maximum allowable stress shall not exceed 80 percent of the values given in Table 52.05–10 (a) or 54.03–10 (c) in Part 54 of this subchapter.

(b) When dished heads are of a thickness less than called for by § 52.20–10 they shall be stayed as flat surfaces. Allowance may be made for the holding power of the spherical form provided the following conditions are met:

(1) The heads are at least two-thirds of the thickness required for unstayed dished heads;

(2) The heads are at least ⅞ inch in thickness;

(3) Through stays are used and attached to the dished head by outside and inside nuts; and,

(4) The maximum allowable pressure shall not exceed that calculated by the regulations for an unstayed dished head plus the pressure corresponding to the strength of the stays or braces obtained by Subpart 52.30, using 170 for the value of C.

(c) If a dished head concave to the pressure is formed with a flattened spot or surface, the diameter of the flat spot shall not exceed that allowed for flat heads as given by formulas (1) and (2) of § 52.22–10, and the minimum thickness shall be computed by these formulas, using $C=0.25$.

(d) When a spherically dished head has a flanged-in manhole or other access opening exceeding 6 inches in any dimension, the thickness of the head shall be increased by not less than 15 percent of the required thickness for a blank head computed by formula (2) of § 52.20–10, but in no case by less than ⅛ inch additional thickness over a blank head.

(e) If a flanged-in manhole which meets the requirements of § 52.20–20 is placed in a full-hemispherical head or ellipsoidal head, the thickness of the head shall be the same as for a head dished to a segment of a sphere, with the radius of dish equal to eight-tenths of the inside diameter of the shell and with the added thickness for the manhole as specified in paragraph (d) of this section.

(f) (1) Except as provided for in paragraphs (d) and (e) of this section, all openings which require reinforcement placed in an unstayed spherically dished head, or an ellipsoidal head, or in a full-hemispherical head, including all types of manholes except those of the integral flanged-in type, shall be reinforced in accordance with § 52.25–20.

(2) When so reinforced, the thickness of such a head may be the same as for a blank unstayed dished head.

(g) Where a spherically dished head has a flanged opening supported by an attached flue, an increase in the thickness over that computed by formula (2) of § 52.20–10 is not required.

(h) If more than one flanged-in manhole or access opening is inserted in a dished head, the thickness of which is calculated by paragraph (d) of this section, the minimum distance between the openings shall be not less than one-fourth of the outside diameter of the head.

(i) (1) The maximum allowable pressure and the minimum thickness of an unstayed dished head of any form excluding hemispherical heads, without manhole or handholes with the pressure on the convex side shall be calculated by Formulas (1) and (2) of § 52.20–10, but only 60 percent of the maximum allowable pressure thus determined shall be allowed.

(2) The maximum allowable pressure and minimum thickness of an unstayed hemispherical head without manhole or handholes with the pressure on the convex side shall be calculated by Formulas (3) and (4) of § 52.20–10, but only 60 percent of the maximum allowable pressure thus determined shall be allowed.

(j) No head, except a full-hemispherical head, shall be of a lesser thickness than that required for a seamless shell of the same diameter.

(k) When the flange of an unstayed dished head is machined to make a close fit into or onto the shell, the thickness shall be not reduced to less than 90 percent of that required for a blank head.

§ 52.20–20 Openings in dished heads.

(a) Flanged-in manhole openings in a dished head shall be flanged to a minimum radius measured on the inside of the plate of not less than ⅞ inch for plates up to and including 1⅛ inches in thickness, and for plates exceeding 1⅛ inches in thickness, the radius shall be increased proportionately. The minimum depth of the flange measured from the outside of the opening along the major axis shall be not less than three times the required thickness of the head, or the required thickness of the head plus three inches, whichever is less.

(b) A manhole opening may be reinforced by a riveted manhole frame or other attachment in lieu of flanging.

(c) Unreinforced openings (or openings with inherent reinforcement) in dished heads shall be governed by the following:

(1) The edge of any unreinforced opening, excluding rivet holes, shall come no closer to the line bounding the spherical or ellipsoidal portion of the head around a manhole than the distance equal to the thickness of the head, and in no case, except for water-column connections, shall it come within the part formed by the corner radius of a dished head.

(2) The maximum allowable diameter of any unreinforced opening in a head, except in a full-hemispherical head, shall not exceed that permitted by § 52.25–15 (a) for a shell of the same outside diameter as the outside diameter of the flange of the head, of the same thickness, allowable pressure and material as that in the head, nor shall it exceed 8 inches in any case.

(3) For unreinforced openings in full-hemispherical heads, the requirements of subparagraph (2) of this paragraph shall apply, except that the value of K shall be one-half the value given by the formula in § 52.25–15 (a).

(4) The minimum distance between the centers of any two unreinforced

openings, rivet holes excepted, shall be determined by the following formula:

$$L=\frac{A+B}{2(1-K)} \quad (2)$$

where:

L = distance between the centers of the two openings, measured on the surface of the head, in inches.

A and B = diameters of the two openings in inches.

K = same as defined in § 52.25–15 (a) for the equivalent shell described in subparagraph (2) of this paragraph.

Subpart 52.22—Flat Heads

§ 52.22–1 Definitions.

(a) *Unstayed heads.* Unstayed heads are the ends of a pressure vessel. They may be either flat or dished. Heads may be integral with, riveted, or welded to the shell. Unstayed flat heads may be used to close shells as permitted by § 52.22–10.

(b) *Stayed heads.* Stayed heads are heads supported in whole or in part by stays, furnaces, flues, tubes, etc.

§ 52.22–5 Materials and workmanship.

(a) Steel plate used in the fabrication of flat heads shall conform to the specifications and requirements for the shell plates, except that small end closures in headers may be made of material complying with subpart 51.22 of this subchapter.

(b) The heads here considered are of steel plate. Cast steel, cast iron or bronze heads may be used for pressure vessels other than boilers, but only where specifically authorized by the Commandant.

§ 52.22–10 Computations.

(a) The maximum allowable pressure and minimum required thickness of unstayed flat heads, cover plates, blind flanges, etc., shall be determined by the following formulas:

$$P=\frac{ST^2}{CD^2} \quad (1)$$

$$T=D\sqrt{\frac{CP}{S}} \quad (2)$$

where:

D = diameter, or shortest span, measured as indicated in figure 52.22–10, in inches.

P = maximum allowable pressure, in pounds per square inch.

T = minimum required thickness of plate, in inches.

S = maximum allowable stress, in pounds per square inch, taken from tables 52.05–10 (a) and 54.03–10 (c) and subject to the limitations of § 52.05–12.

C = 0.162 for plates rigidly riveted or bolted to shells, flanges, or side plates as shown in figure 52.22–10 (A); and for integral flat heads as shown in figure 52.22–10 (B) where dimension D does not exceed 24 inches and the ratio of thickness of the head to dimension D is at least equal to or greater than 0.05.

C = 0.25 for heads forged integral with or butt-welded to shells, pipes, or headers as shown in figures 52.22–10 (C) and (D), where the corner radius on the inside is not less than three times the thickness of the flange immediately adjacent thereto, and where the welding meets all the requirements for circumferential joints given in Part 56, including stress relieving and radiographic examination.

C = 0.50 for plates arc- or gas-welded to the inside of pressure vessels, pipes or headers and otherwise meeting the requirements for respective type of arc- or gas-welded vessels, including stress relieving but omitting radiographic examination. The plate shall be welded as shown in figure 52.22–10 (E), with a weld having a depth equal to two times the required thickness of a seamless shell, but not greater than the head thickness nor in any case less than 1.25 times the actual shell thickness, and where the weld is deposited in a welding groove with the root of the weld at the inner face of the head. The remainder of the head plate may be beveled to an angle not exceeding 45°.

$C=0.30+1.40\frac{Wh_g}{HD}$ for plates bolted to shells, flanges, or side plates, in such a manner that the setting of the bolts tends to dish the plate, and where the pressure is on the same side of the plate as the bolting flange, as shown in figures 52.22–10 (F) and (G), where:

W = flange design bolt load, in pounds.

h_g = radial distance from the bolt-circle diameter to the diameter D, in inches.

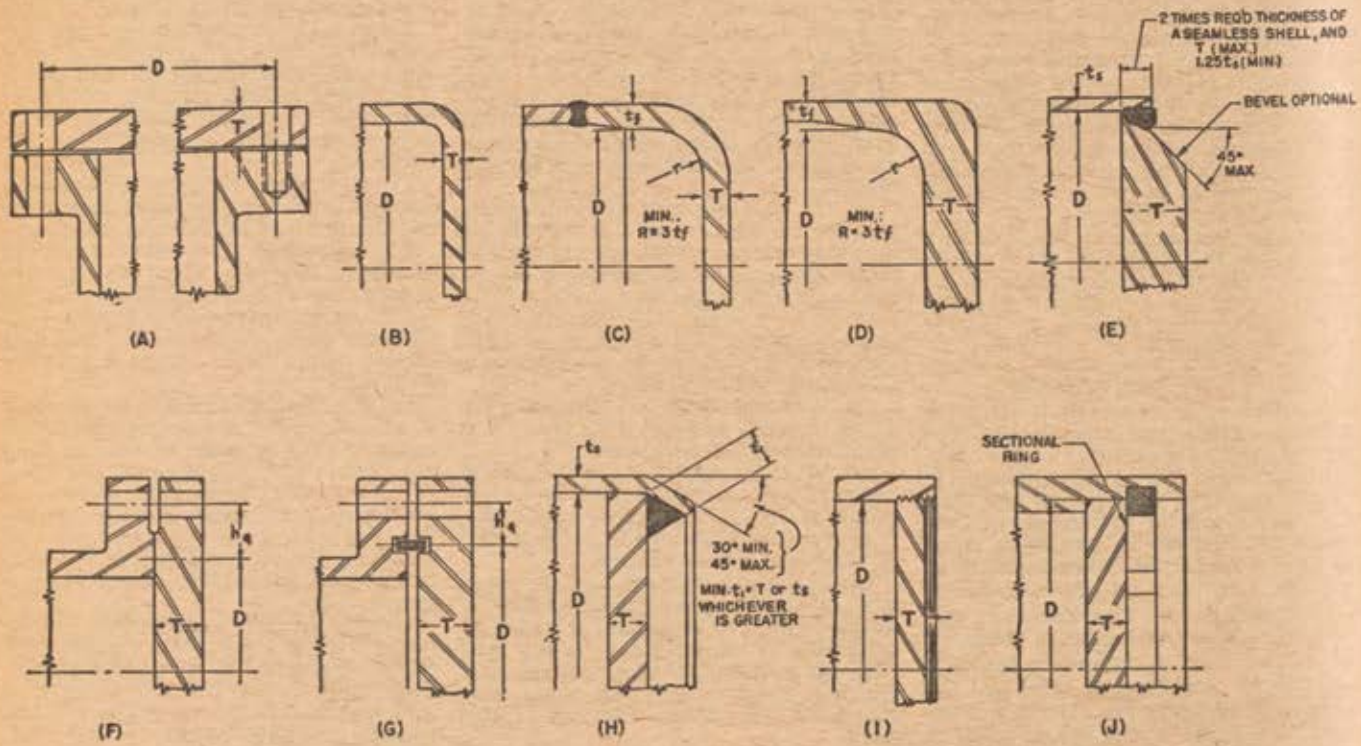

FIGURE 52.22–10—Acceptable types of flat heads.

H = total hydrostatic end force on area bounded by the mean diameter of the gasket or joint contact surface, in pounds.

D = diameter, or shortest span, measured as indicated in figure 52.22-10, in inches.

C = 0.50 for plates having a dimension D not exceeding 18 inches inserted into pressure vessels and welded thereto as shown in figure 52.22-10 (H), and otherwise meeting the requirements for the respective type of class II welded pressure vessel including stress relieving but omitting radiographic examination. The end of the pressure vessel shall be crimped over to an angle not less than 30° nor more than 45°. The throat of the weld shall be not less than the thickness of the shell or head, whichever is the greater.

C = 0.75 for plates screwed into the end of a pressure vessel having an inside diameter D not exceeding 12 inches, as shown on figure 52.22-10 (I), or for heads having an integral flange screwed over the end of a pressure vessel having an inside diameter D not exceeding 12 inches. The design of the threaded joint against failure by shear, tension, or compression resulting from the end force due to pressure shall be based on a factor of safety of at least 4 and the threaded parts are at least as strong as the threads for standard piping of the same diameter, and the head shall be welded to the pressure vessel by means of a seal weld.

C = 0.30 for plates inserted into the ends of pressure vessels and held in place as shown in figure 52.22-10 (J) where all possible means of failure, either by shear, tension, or compression, due to the hydrostatic end force, are resisted with a factor of safety of 4. Seal welding may be used, if desired.

§ 52.22–15 Openings in flat heads.

The reinforcement of openings in flat heads shall comply with the requirements of § 52.25–25.

Subpart 52.24—Access and Inspection Openings

§ 52.24–1 Definitions.

(a) *Openings.* Access or inspection openings, as defined in this subpart, are holes cut in the shells or heads of boilers or other pressure vessels for the purpose of inspection and cleaning.

NOTE: Openings in the shells or heads of boilers or other pressure vessels, including domes and steam chimneys, for other purposes than above defined (such as pipe connections and mountings) are covered in Subpart 52.25.

(b) *Manhole.* A manhole is an access opening in a boiler or unfired pressure vessel of sufficient size to permit an inspector to enter the vessel. Manholes may be of elliptical or circular shape.

(c) *Handhole.* A handhole is an opening in a pressure part of a boiler or unfired pressure vessel for the purpose of access or inspection, usually not exceeding 6 inches in longest dimension. The shapes of handholes may be circular, elliptical, or rectangular with rounded corners.

§ 52.24–5 Materials and workmanship.

(a) The cover plates for manholes shall be of rolled or forged steel conforming to the requirements of Subpart 51.04 or 51.46 of this subchapter. Handhole covers may be made of rolled, forged or cast steel conforming to the requirements of Subpart 51.04, 51.22, 51.46 or 51.58 of this subchapter.

(b) Manhole covers shall be marked with the manufacturer's name or trademark together with the maximum allowable pressure.

(c) Manhole and handhole yokes or dogs shall be of forged steel, pressed steel, or cast steel conforming to the requirements of Subpart 51.04, 51.22, 51.46 or 51.58 of this subchapter. The material of bolts securing yokes or dogs and cover plates shall conform to the requirements of Subpart 51.07 of this subchapter.

(d) When handhole or other access openings are made, a margin of not less than ¼ inch shall be left when punching operations are used, and not less than ⅛ inch shall be left when machine burning methods are employed. Such margins shall be machined or ground away to relieve the metal of any stresses which may be set up due to burning or punching operations.

(e) The minimum width of bearing surface for a gasket on a manhole opening shall be $1\frac{1}{16}$ inch. No gasket for use on a manhole or handhole of any boiler shall have a thickness greater than ¼ inch, when compressed.

§ 52.24–10 Detail requirements.

(a) All boilers or pressure parts thereof shall be provided with suitable manhole, handhole, or other inspection openings for examination and cleaning.

(b) Manhole openings shall be of elliptical form, the dimensions of which shall be not less than 10 by 16 inches or 11 by 15 inches. The size 12 by 16 inches should be used wherever practicable. Circular manholes having diameters of not less than 15 inches may be permitted.

(c) A handhole opening in a boiler shell or header shall be not less than 4 inches in any direction. This requirement does not apply to small access openings such as used in superheater headers.

(d) Inspection openings smaller than specified for handholes are permissible where a handhole is impracticable.

(e) Where elliptical openings are made in the shell of a boiler or other pressure vessel, the minor axis shall, as far as practicable, be placed longitudinally.

(f) All manholes, handholes, and inspection openings shall be closed by readily removable internal cover plates which shall be held by one or more girders or dogs and bolts. The cover plates shall be formed with a projection to fit within the opening with a radial clearance not exceeding $\frac{1}{16}$ inch at any point. This projection may be in form of a raised face which shall protrude straight out from the joint face within the opening not less than ½ inch on manholes or ⅜ inch on smaller cover plates.

(g) When a threaded opening is to be used for inspection or washout purposes, it shall be not less than 1 inch pipe size. The closing plug or cap shall be of nonferrous material, except for pressures over 250 p. s. i. or temperatures over 406° F.

(h) A manhole shall be located in the front head below the tubes of a horizontal-return tubular boiler 48 inches or over in diameter. Smaller boilers shall have either a manhole or a handhole below the tubes. There shall be a manhole in the upper part of the shell or head of a fire-tube boiler over 40 inches in diameter, except on a vertical fire-tube boiler, or except on internally fired boilers not over 48 inches in diameter. Smaller boilers shall have either a manhole or a handhole above the tubes.

(i) [Reserved]

(j) A vertical fire-tube boiler shall have not less than four handhole openings in the shell located as follows:

(1) One at or about the waterline or opposite the fusible plug.

(2) Three at or about the line of the crown sheet or lower tube sheet, and if internally fired, not less than three additional handholes at the lower part of the waterleg.

(k) If a vertical fire-tube boiler is equipped with manholes or other access openings through which adequate inspection may be made, the required handholes and/or inspection openings at the waterline and for the tube sheets may be omitted.

(l) All manholes, handholes, inspection and washout openings in a shell or head shall be designed in conformance with the requirements of Subpart 52.25 of this subchapter.

Subpart 52.25—Openings and Reinforcements [1]

§ 52.25–1 Scope.

(a) The regulations in this subpart apply to all openings in shells, headers or heads except as otherwise provided in paragraphs (b) and (c) of this section.

(b) Openings in a definite pattern, such as tube holes, may be designed in accordance with the requirements for ligaments in Subpart 52.40, provided the diameter of the largest hole in the group does not exceed that permitted by § 52.25–15.

(c) Calculations demonstrating compliance with the requirements of this subpart shall be made for all openings except:

(1) For single openings not greater than 2-inch pipe size in shells or headers

[1] The regulations governing openings as given in this subpart are based on the stress intensification created by the existence of a hole in an otherwise symmetrical section. The requirements are based on experience with vessels designed with safety factors of 4 and 5 applied to the ultimate strength of the shell material. External loadings such as those due to the movement of the ship, thermal expansion, or unsupported weight of connecting piping have not been evaluated and should be given consideration in unusual designs or under conditions of cyclic loading.

having an inside diameter not less than four times the diameter of the opening; and

(2) For tube holes arranged in a definite pattern as provided in paragraph (b) of this section.

(d) The requirements for reinforcement of openings are intended to apply to openings not exceeding the following dimensions: [3]

(1) For shells 60 inches in outside diameter or less, one-half the shell diameter but not over 20 inches.

(2) For shells over 60 inches in outside diameter, one-third the shell diameter, but not over 40 inches.

(e) Openings, as defined in this subpart, are holes cut in shells or heads of boilers or pressure vessels, including domes and steam chimneys, for the purpose of inspection and cleaning, and for the purpose of connecting nozzles or mountings to shells or heads of such boilers or pressure vessels.

(f) Manhole or other openings in a flat, stayed surface shall be deemed to be sufficiently reinforced if the plate is flanged inwards to a depth not less than that determined by § 52.20–20(a).

§ 52.25–5 Materials and workmanship.

(a) The material for reinforcing plates around openings shall conform to the requirements of the plate to be reinforced, except as otherwise provided in § 52.25–35. When they are locally heated for flanging or forming, they shall be properly annealed.

(b) A forged nozzle or forged flange, riveted or welded to the plate, may be considered as reinforcement, provided such fittings are properly designed to compensate for the material removed.

(c) Rivets used in securing reinforcing plates to the shell or other structural part shall conform to the requirements of Subpart 51.07 or 51.13 of Part 51 of this chapter.

(d) The inner radius of the bend of any flanged opening in heads, except manholes or other access openings as specified in § 52.20–20, shall be: for furnace attachments, not less than twice the thickness of the plate flanged; for flue attachments in externally fired boilers, not less than one and one-half times the thickness of the plate flanged.

(e) The riveted joint of a reinforcing plate fitted to an opening in the shell or other part of a boiler or other pressure vessel, shall be properly calked along the edge of the opening and the outer edge of the reinforcing plate as specified in Subpart 52.10 for riveted joints.

§ 52.25–10 Unreinforced openings.

Plain unreinforced openings in a definite pattern such as tube holes or openings with integral reinforcement shall not exceed the diameter determined by § 52.25–15, nor shall they exceed a diameter of 8 inches in any case.

§ 52.25–15 Computations.

(a) (1) The maximum diameter of an unreinforced opening as defined in § 52.25–10 shall be determined by the following formulas:

$$d = 2.75\sqrt{DT(1-K)} \quad (1)$$

$$K = \frac{PD}{1.82ST} \quad (2)$$

$$K = \frac{PD}{1.6ST} \quad (3)$$

where:

d = maximum allowable diameter of unreinforced openings, in inches.

T = actual full thickness of shell plate, in inches (including the 0.10 inch additional thickness).

D = outside diameter of the drum or shell, in inches.

S = maximum allowable stress as given in table 52.05–10 (a) or 54.03–10 (c) in pounds per square inch.

K = ratio of the computed stress in the solid plate to the maximum allowable stress.

P = maximum allowable pressure, in pounds per square inch.

(2) In determining the maximum size of an unreinforced opening in a shell, head, or header designed under the provisions of § 52.05–12(a), the value of K shall be computed by formula (2).

(3) In determining the maximum size of an unreinforced opening in a shell, or header designed under the provisions of § 52.05–12(c) in which the value of S is taken as not more than 80 percent of that given in Tables 52.05–10(a) and 54.03–10(c) in Part 54 of this subchapter, the value of K shall be computed by formula (3).

(b) The maximum diameter of unreinforced openings may be determined by use of diagrams, Figures 52.25–15 (b1) and 52.25–15 (b2).

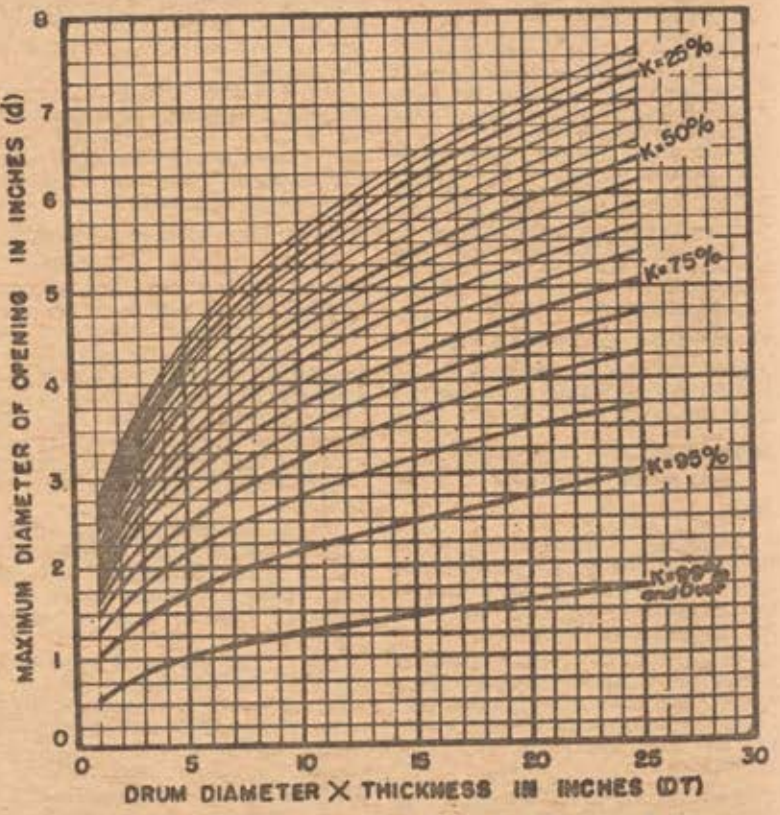

FIGURE 52.25–15 (b1)—Maximum diameter of openings with inherent reinforcement in cylindrical shells.

[3] For larger openings it is recommended that the reinforcement to be provided be distributed close to the opening and be at least equal to two-thirds of the required reinforcement within a distance of ¼ d on each side of the finished opening.

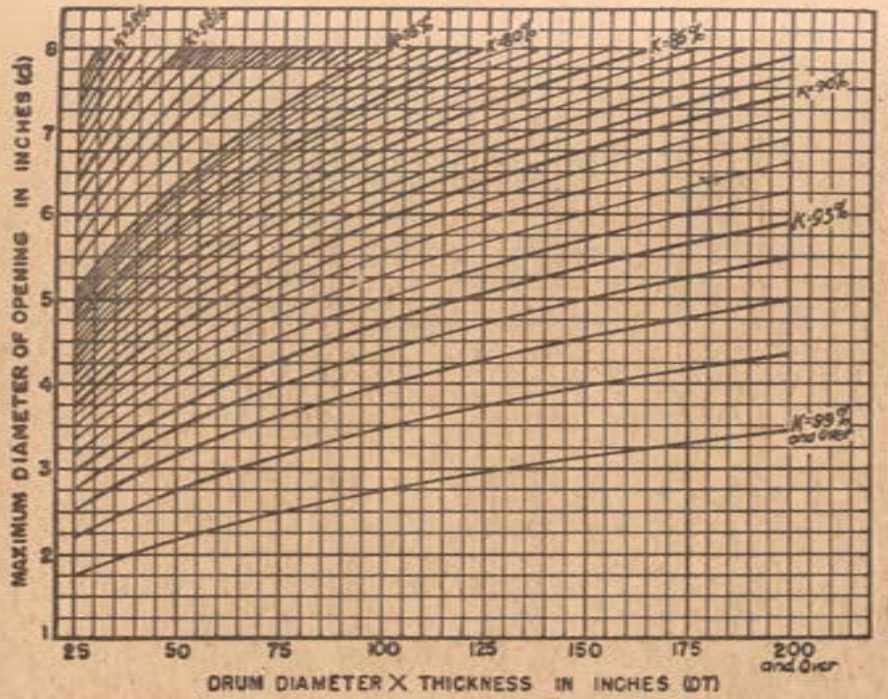

FIGURE 52.25-15 (b2)—Maximum diameter of openings with inherent reinforcement in cylindrical shells.

§ 52.25-20 Reinforced opening in shells and dished heads.

(a) The regulations in this section shall apply to all openings other than flanged-in openings in dished heads covered by § 52.20-15, openings in flat heads covered by § 52.25-25, and openings covered by § 52.25-1 (b) and (c).

(b) Reinforcement shall be provided in amount and distribution such that the area requirements for reinforcement are satisfied for all planes through the center of the opening and normal to the vessel surface. For a circular opening in a cylindrical shell, the plane containing the axis of the shell is the plane of greatest loading due to pressure.

(c) The total cross-sectional area of reinforcement in any given plane shall be not less than that prescribed by the following formula:

$$A = d \times T_r \times F \qquad (1)$$

where:

A = the required area of reinforcement, in square inches.

d = the diameter in the given plane of the finished opening, in inches.

T_r = the required thickness of a seamless shell, header or blank head, in inches, except that: (1) For spherically dished heads when the opening and its reinforcement are entirely within the spherical portion, T_r is the thickness required for a seamless hemispherical head of the same radius as that of the spherical portion; (2) for ellipsoidal heads when the opening and its reinforcement are located entirely within a circle the center of which coincides with the center of the head and diameter of which is equal to 80 percent of the shell inside diameter, T_r is the thickness required for a seamless hemispherical head of radius equal to 90 percent of the inside diameter of the shell.

F = 1.00 when the plane under consideration is on the longitudinal axis of a shell and for heads. For other planes in a shell or header the value of F shall be determined from figure 52.25-20(c).

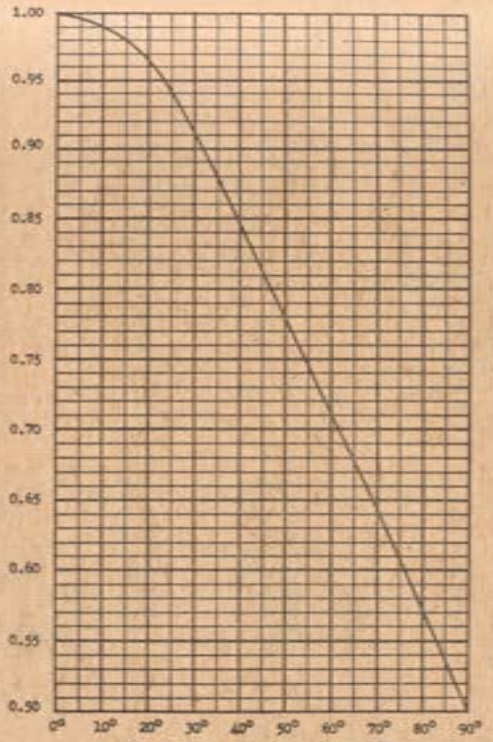

FIGURE 52.25-20 (c)—Chart for determining values of F.

§ 52.25-25 Reinforced openings in flat heads.

(a) Flat heads that have an opening with a diameter that does not exceed one-half of the head diameter or shortest span, as defined in § 52.22-10, shall have a total cross-sectional area of reinforcement not less than that given by Formula (1).

$$A = 0.5d \times T \qquad (1)$$

where:

A = the required area of reinforcement, in square inches.

d = diameter in the given plane of the finished opening, in inches.

T = minimum required thickness of plate, in inches, as determined from § 52.22-10.

(b) As an alternate to paragraph (a) of this section, the thickness of flat heads may be increased to provide the necessary reinforcement by using 2C in the place of C in the formulas for calculating head thickness in § 52.22-10. The value of $2C$ to be used in the formula need not exceed 0.75, except for the types of flat heads indicated by figures 52.22-10 (F) and (G).

(c) Flat heads that have an opening with a diameter that exceeds one-half of the head diameter, or shortest span, as defined in § 52.22-10, shall be designed as a flange.

§ 52.25-30 Reinforcement limits.

(a) The boundaries of the cross-sectional area in any plane normal to the vessel wall and passing through the center of the opening within which metal must be located in order to have value as reinforcement are designated as the limits of reinforcement for that plane.

(b) The limits of reinforcement, measured along the vessel wall, shall be

at a distance on each side of the axis of the opening equal to the greater of the following:

(1) The diameter of the finished opening.

(2) The radius of the finished opening plus the thickness of the vessel wall, plus the thickness of the nozzle wall.

(c) The limits of reinforcement, measured normal to the vessel wall, shall conform to the contour of the surface at a distance from each surface equal to the smaller of the following:

(1) Two and one-half times the shell thickness.

(2) Two and one-half times the nozzle wall thickness, plus the thickness of any added reinforcement exclusive of the weld metal on the side of the shell under consideration.

(d) (1) The metal thickness in the shell and nozzle wall in excess of the thickness required to resist pressure may be considered as reinforcement within the reinforcement limits given in this section.

(2) The area in the shell available as reinforcement shall be the larger of the values as given in the following formulas:

$$A_1 = (ET - FT_r)d \quad (1)$$

or,

$$A_1 = 2(ET - FT_r)(T + T_n) \quad (2)$$

where:

A_1 = area in the excess thickness in shell or head available for reinforcement, in square inches.

E = 1, when the opening is in the solid plate or when the opening passes through a circumferential joint in a shell (exclusive of head-to-shell joints); or the longitudinal joint efficiency when any part of the opening passes through any other welded joint.

T = Actual thickness of the shell or head, in inches.

T_r = Required thickness of the shell or head to resist pressure, as defined in § 52.25–20, in inches.

T_n = Actual thickness of the nozzle wall, in inches.

d = diameter in the plane under consideration of the finished opening, in inches.

F = factor from figure 52.25–20 (c).

(3) The metal thickness of the nozzle used for determining the area in the nozzle available as reinforcement shall be the difference between the actual thickness and the required minimum thickness to resist pressure. In this connection the required thickness of the nozzle may be determined by the same formula used in calculating the required thickness of the shell omitting, only in the case of boilers, the 0.1 inch additive thickness.

(4) Metal added as reinforcement and metal in attachment welds may be considered as reinforcement within the reinforcement limits.

(e) Figure 52.25–30 (e) illustrates limits of reinforcement for some typical openings.

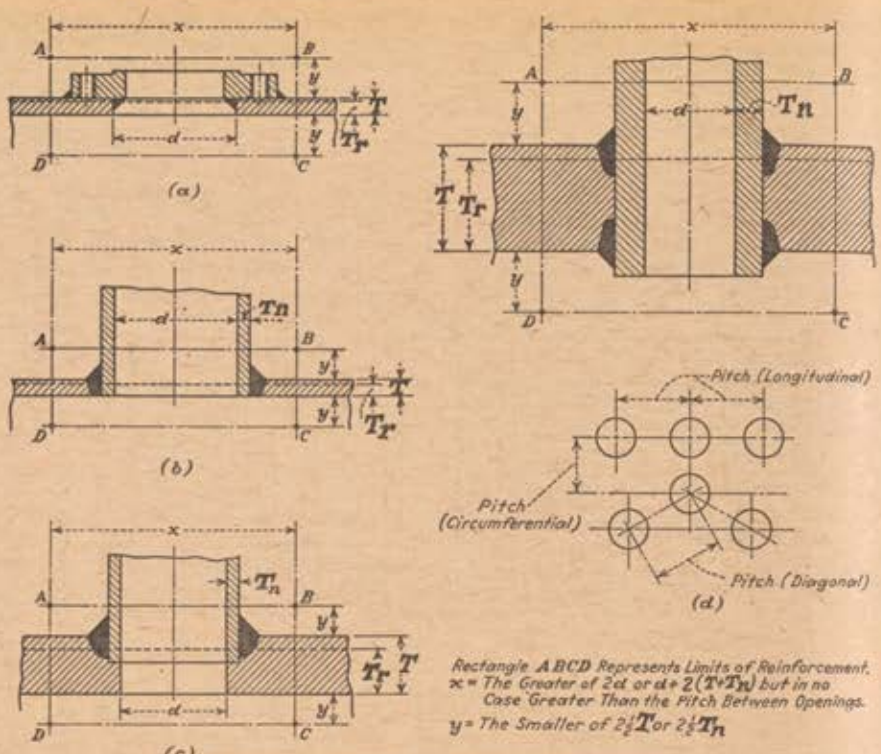

FIGURE 52.25–30 (e)—Limits of reinforcement.

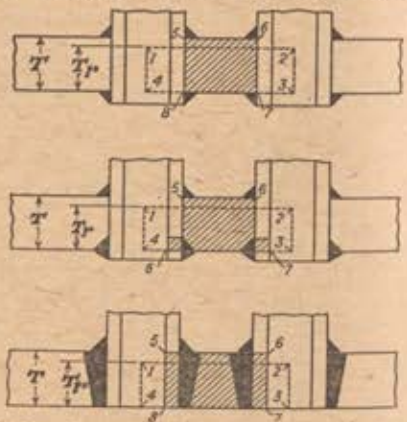
§ 52.25–35 Strength of reinforcement.

(a) Material used for reinforcement shall have an allowable stress value equal to or greater than that of the material in the vessel wall, except that material of lower strength may be used provided the area of reinforcement is increased to compensate for the lower allowable stress value of the reinforcement. No credit may be taken for the additional strength of any reinforcement having a higher allowable stress value than that of the vessel wall. Where pressure vessels are designed under the provisions of § 52.05–12 (c), the allowable stress value shall be taken as equivalent to 0.8 times the values shown in tables 52.05–10 (a) and 54.03–10 (c) in Part 54 of this subchapter.

(b) On each side of the plane defined in § 52.25–30(a), the strength of the attachment joining the vessel wall and reinforcement or any two parts of the attached reinforcement, shall be at least equal to the smaller of:



(1) The strength in tension of the cross section of the element of reinforcement being considered, or

(2) The strength in tension of the area of the unfinished opening, including any rivet or stud hole, in the shell or head based on T_r less the strength in tension of the reinforcing area which is integral in the vessel wall as permitted by § 52.25–30(d). The strength of the attachment shall be considered for its entire length on each side of the plane normal to the vessel wall.

§ 52.25–40 Reinforcement of multiple openings.

(a) Two adjacent openings shall have a distance between centers not less than 1⅓ times their average diameter.

(b) When any two or larger groups of adjacent openings which require

The Cross-Sectional Area Represented by 5, 6, 7, 8 Shall be at Least Equal to the Area of the Rectangle Represented by 1, 2, 3, 4 Multiplied by 0.7F, in which F is a value from fig. 52.25-20-(c) and Tr is the Required Thickness of a Seamless Shell.

FIGURE 52.25–40 (c)—Reinforcement of multiple openings.

reinforcement are so spaced that their limits of reinforcement overlap, the two or larger group of openings shall be reinforced in accordance with § 52.25–20 with a reinforcement that has an area equal to the combined area of the reinforcement required for the separate openings. No portion of the cross section shall be considered as applying to more than one opening or be evaluated more than once in a combined area.

(c) When a shell, drum or header has a series of holes in a definite pattern, the net cross-sectional area between any two finished openings within the limits of the actual shell wall, excluding the portion of reinforcing part not fused to the shell wall, shall equal at least 0.7 F of the cross-sectional area obtained by multiplying the center-to-center distance of the openings by the required thickness of a seamless shell, where the factor F is taken from figure 52.25–20 (c) for the plane under consideration. A typical illustration of the requirements prescribed in this paragraph is given in figure 52.25–40 (c).

§ 52.25–45 Welded connections.

(a) Sufficient welding shall be provided on either side of the plane through the center of the opening parallel to the longitudinal axis of the shell to develop the strength of the reinforcing parts through shear or tension in the weld, whichever is applicable. The strength of the groove welds shall be based on the area subjected to shear or to tension. The strength of fillet welds shall be based on the area subjected to shear (computed on the minimum leg dimension). The inside diameter of a fillet weld shall be used in figuring its length.

(b) The allowable stress values for groove and fillet welds and for shear in nozzle necks, in percentages of stress value for the vessel material, shall be in accordance with table 52.25–45(b).

TABLE 52.25–45 (b)—ALLOWABLE STRESS VALUES

	Stress-relieved	Not stress-relieved
	Percent	*Percent*
Nozzle-wall shear	70	70
Groove-weld tension	74	70
Groove-weld shear	60	56
Fillet-weld shear	49	46

(c) Reinforcing plates or saddles of nozzles attached to the outside of the vessel shall be provided with at least one telltale hole of ¼ inch maximum pipe tap size for testing tightness of welds that seal off the inside of the vessel. The telltale holes shall be left open when the vessel is in service.

(d) (1) The location and minimum size of attachment welds shall conform to the requirements shown in figure 52.25–45 (d), which illustrates some types of acceptable arc-welded connections.

(2) The symbols used in figure 52.25–45 (d) are defined as follows:

t = thickness of vessel shell or head, less corrosion allowance, in inches.
t_n = thickness of nozzle wall, less corrosion allowance, in inches.
t_e = thickness of reinforcing element, in inches.
t_w = dimension of partial-penetration attachment welds (fillet, single-bevel, or single-J) in inches.
t_c = the smaller of ¼ inch or 0.7 t_n. (Inside corner welds may be further limited by a lesser length of projection of the nozzle wall beyond the inside face of the vessel wall) in inches.
t_{min} = the smaller of ¾ inch or the thickness of either of the parts joined by a fillet, single-bevel or single-J weld, in inches.

(3) When nozzles or couplings are attached to boilers and unfired pressure vessels as shown in figure 52.25–45 (d), (a) and (c), and are welded from one side only, backing strips shall be used unless the inside of the joint can be visually inspected in order that the inspector may satisfy himself that complete penetration is obtained. When attachments as shown in figure 52.25–45 (d), (y) and (z), are employed they shall be limited to 2-inch pipe size for pressures exceeding 150 pounds per square inch.

(e) When the end faces of nozzles or manhole necks are to remain unwelded

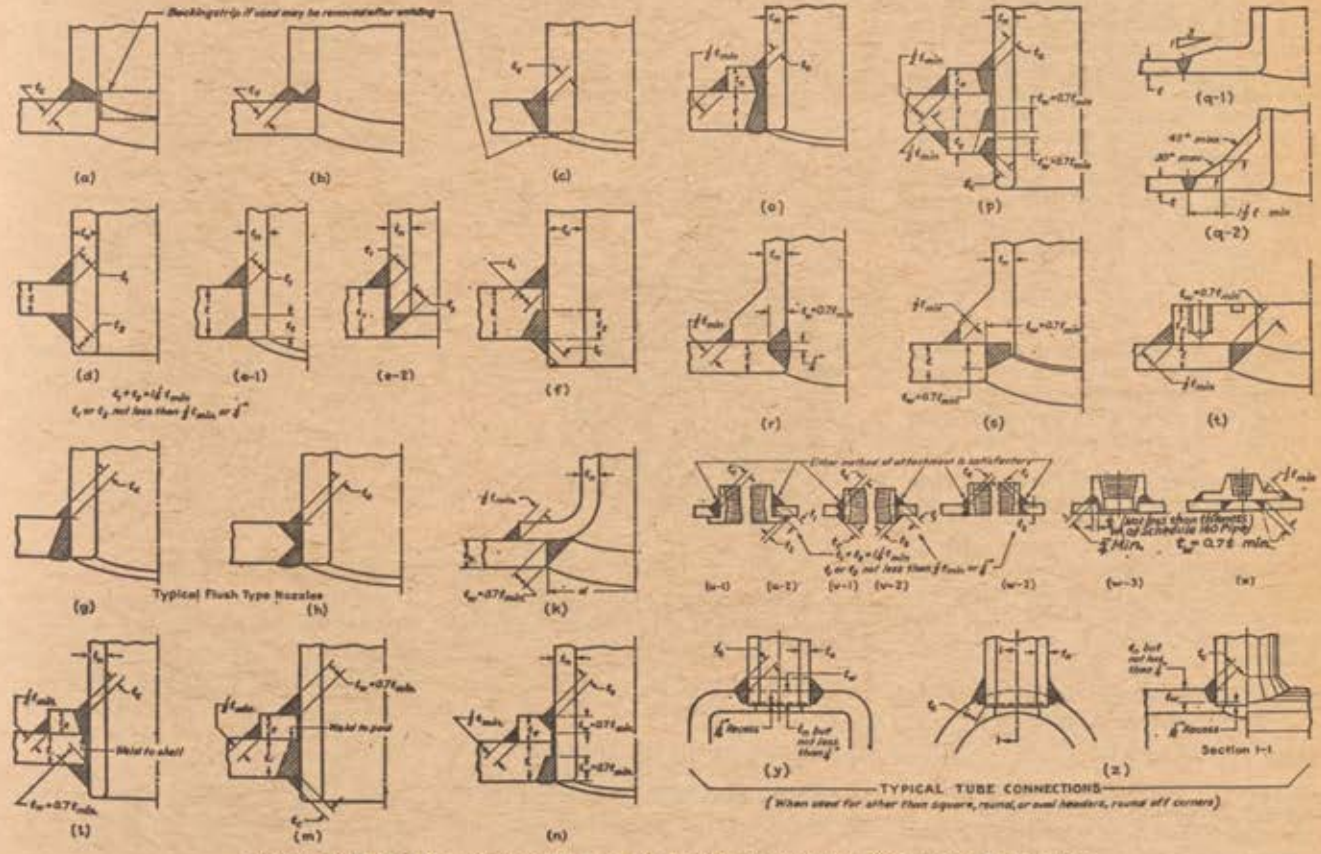


FIGURE 52.25–45 (d)—Acceptable types of welded connections to drums and headers.

in the completed vessel, these end faces shall not be cut by shearing unless at least ⅛ inch of the additional metal is removed by any method that will produce a smooth finish.

§ 52.25–50 Riveted connections.

(a) Openings for nozzles and other connections shall be far enough away from any main riveted joint so that the joint and the opening reinforcement plates do not interfere with one another.

(b) Welded connections which require stress-relieving and which are attached to vessels having seams of riveted construction shall be fabricated and stress-relieved prior to the making up or attachment of the courses by riveting. If they do not require stress-relieving and are attached after riveting, the welds shall be located at a distance from the riveted seam at least equal to the outside diameter of the attachment weld plus four times the thickness of the shell plate.

(c) For nozzle fittings having a bolting flange and an integral flange for riveting, the thickness of the flange attached to the pressure vessel shall not be less than the thickness of the neck of the fitting.

(d) The strength of rivets in tension in a flanged frame or ring riveted to the outside of a vessel shall be at least equal to that required to resist the load due to the maximum allowable working pressure with a factor of safety of 5 computed as follows:

(1) For outside calking the load shall be equal to the area bounded by the outside calking multiplied by the maximum allowable working pressure;

(2) For inside calking (and with no outside calking) the load shall be equal to the area bounded by the inside calking multiplied by the maximum allowable working pressure.

(e) The rivets attaching nozzles shall be so spaced as to avoid the possibility of the shell plate or the nozzle flange failing by tearing around through the rivet holes.

§ 52.25–55 Boiler nozzle neck thickness.

(a) The thickness of a boiler nozzle shall be not less than the thickness required for Schedule 80 pipe of the same diameter and in no case less than that determined by § 55.07–5 of this subchapter.

(b) The minimum thickness of a tube nipple when used in a reinforced opening on a boiler shall not be less than the required thickness of a boiler tube as determined by § 52.55–10 of this subchapter, but in no case less than the required minimum thickness of a tube nipple based on 600 p. s. i. internal pressure.

Subpart 52.30—Surfaces Required To Be Stayed or Reinforced

§ 52.30–1 Definitions.

Surfaces to be stayed or reinforced include the following:

(a) Flat plates, heads or areas thereof, such as segments of heads, wrapper sheets, furnace plates, side sheets, combustion chamber tops, etc., which are not self-supporting.

(b) Curved plates constituting the whole or parts of a cylinder subject to external pressure which are not entirely self-supporting.

CROSS REFERENCES: For unstayed flat heads, see Subpart 52.22. For flat tube sheets, see Subpart 52.45. For curved tube sheets, see Subpart 52.40.

§ 52.30–5 Areas to be stayed.

The area of a segment or other portion of a flanged head to be stayed shall be that enclosed by lines as follows:

(a) Where only plain tubes are used in the bounding rows, the line of area shall be at one-half the diameter of the tube in inches, plus 2 inches from the center of the row of tubes.

(b) Where stay tubes are used in the bounding rows, the line of area shall be at one-half the maximum allowable pitch of the stays required for the plate, measured from the center of the row to stay tubes.

(c) On the side of the segments bounded by the shell or furnaces, the lines of area shall be at a distance d from the shell, as shown by figure 52.30–5 (c) the distance d to be computed by the following formula:

$$d = \frac{5T}{\sqrt{P}} \qquad (1)$$

where:

d = distance from shell, furnaces or flues considered self-supporting, in inches.
T = Thickness of plate, in sixteenths of an inch.
P = maximum allowable pressure, in pounds per square inch.

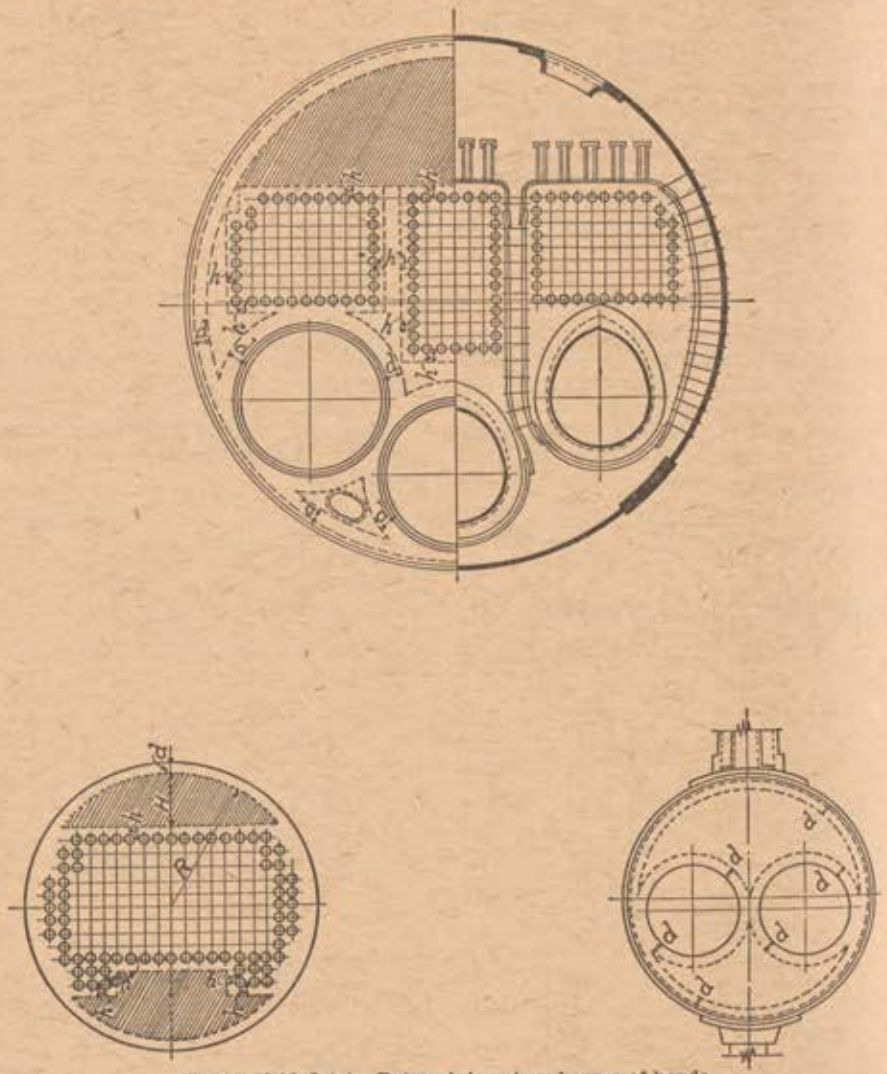

FIGURE 52.30–5 (c)—Determining stayed areas of heads.

(d) The value of h, as shown in figure 52.30–5 (c), shall be equal to one-half the diameter of the tube plus 2 inches where only plain tubes are used in the bounding row, or shall be equal to one-half the maximum allowable pitch of the stays required for the plate where stay tubes are used.

(e) Where the exact area of a circular segment of a flanged head cannot be readily ascertained by other accepted methods, the following formula may be

employed, using symbols indicated in Figure 52.30-5(c).

$$A=\frac{4H^2}{3}\sqrt{\frac{2R}{H}-0.6} \quad (2)$$

where:

A = area of segment which requires support, in square inches.
H = height of segment to self-supporting line, in inches.
R = radius of segment to self-supporting line, in inches.

(f) The area of a segment of an unflanged head to be stayed shall be the area enclosed by the shell and a line drawn 2 inches from the outside diameter of the tubes.

§ 52.30-10 Computations.

(a) The maximum allowable pressure and minimum thickness of plates supported by stays shall be determined by the following formulas:

(1) Surfaces without doubling plates:

$$P=\frac{CT^2}{p_1^2+p_2^2} \quad (1)$$

$$T=\sqrt{\frac{P(p_1^2+p_2^2)}{C}} \quad (2)$$

(2) Surfaces fitted with doubling plates:

$$P=\frac{C_1T_1^2}{p_1^2+p_2^2} \quad (3)$$

$$T_1=\sqrt{\frac{P(p_1^2+p_2^2)}{C_1}} \quad (4)$$

(3) Where doubling plates are used, the minimum allowable thickness shall be not less than 0.67 of the thickness of the plate reinforced and the maximum thickness shall not exceed 0.75 of the thickness of the plate reinforced.

(4) The maximum allowable pitch for stays in either direction shall be computed by the following formulas:

(i) Where stays are equally spaced in both directions:

$$p_1 \text{ or } p_2=\sqrt{\frac{CT^2}{2P}} \quad (5)$$

(ii) Where the pitch in one direction is greater than that in the other direction:

$$p_2=2\sqrt{\frac{CT^2}{5P}} \quad (6)$$

(iii) With the greater pitch thus determined for one direction, the maximum pitch in the other direction shall be computed by the formula:

$$p_1=\sqrt{\frac{CT^2}{P}-p_2^2} \quad (7)$$

(5) In no case shall p_2 be less than one-half p_1.

where:

P = maximum allowable pressure, in pounds per square inch.
T = thickness of plate, in sixteenths of an inch.
T_1 = combined thickness of plate and doubler or washer, in sixteenths of an inch.
p_1 = pitch of stays in one direction, in inches.
p_2 = pitch of stays in the other direction, in inches.
C and C_1 = coefficients based upon a minimum tensile strength of the plate, not less than 55,000 pounds per square inch, the kind of service to which subjected, and the method of construction, as follows:

Plates exposed to products of combustion:
C = 238 for plates under 7/16 inch in thickness, fitted with screw stays with nuts or welded collars, or stays attached to plates by welding.
C = 170 for plates 7/16 inch and over in thickness, fitted with screw stays with riveted heads.
C = 250 for plates 7/16 inch and over in thickness, fitted with screw stays with nuts or welded collars, or stays attached to plates by welding.
C = 190 for all plates fitted with stays secured by rivets.
C = 275 for plates fitted with stay tubes screwed and expanded in nests of tubes.
C = 320 for plates fitted with stay tubes screwed, expanded, and beaded in nests of tubes.
C = 185 for plates fitted with stay tubes screwed and expanded in bounding rows.
C = 225 for plates fitted with stay tubes screwed, expanded, and beaded in bounding rows.

Plates not exposed to products of combustion:
C = 274 for plates under 7/16 inch in thickness, fitted with screw stays with nuts or welded collars, or stays attached to plates by welding.
C = 190 for plates 7/16 inch and over in thickness, fitted with screw stays with riveted heads.
C = 290 for plates 7/16 inch and over in thickness, fitted with screw stays with nuts or welded collars, or stays attached to plates by welding.
C = 212 for all plates fitted with stays secured by rivets.
C = 340 for plates fitted with through stays with nuts on both inside and outside of plate.
C_1 = 175 for plates fitted with through stays with nuts inside and outside and having doubling plates covering the entire supported area.
C_1 = 145 for plates fitted with through stays, with nuts inside and outside and reinforced by washers efficiently riveted to the outside of the plate, the diameter of the washers to be not less than two-thirds the pitch of the stays.
C_1 = 155 for plates fitted with through stays, with inside and outside nuts and reinforced by doubling strips through which the stays are inserted, the width of the doubling strip to be not less than two-thirds of the pitch of the stays.
C_1 = 136 for plates fitted with screw stays and doubling strips between the rows of stays, the width of the doubling strip to be not less than two-thirds of the pitch of the stays.

(6) When a surface is supported by various types of stays for which different coefficients are provided, the average of the two coefficients for adjacent stays shall be used as the value of C or C_1 in the formulas.

(7) Riveted heads are not permissible on stays which are screwed into plates having a thickness of less than 7/16 inch. Such stays shall be fitted with nuts or welded collars.

(8) No plate less than 5/16 inch in thickness shall be used in stayed surface construction.

(b) Where two sheets are connected by stays and only one of them requires staying, the value of C or C_1 is governed by the thickness of the sheet to be stayed and the types of stays used.

(c) In determining the maximum distance between the center of a bounding line of tubes and the centers of adjacent stays, the value of C or C_1 given for the thickness of plate and type of stay or stay tube shall be used.

(d) In determining the maximum distance between a flanged edge and the centers of stays, the pitch which applies to the thickness of the plate and the type of stay may be increased up to 25 percent: *Provided*, That the increment shall not exceed the distance d determined by formula (1) in § 52.30-5.

(e) Where stayed plates are riveted to a flange, the distance from the center of the outermost stays to the center line of the rivets shall not exceed the pitch of the stays: *Provided*, That, where staybolts are adjacent to reinforced edges, such as around furnace doors, bottoms of fire boxes, etc., the maximum allowable pitch may be increased by the diameter of the staybolt hole.

(f) Where stays are fitted at the upper corners of fireboxes or combustion chambers, the distance d from the staybolt nearest the corner to the point of tangency of the corner curve, as shown by figure 52.30-10 (f), shall be determined by the following formula:

$$d=\frac{90T}{D}\sqrt{\frac{C}{2P}} \quad (8)$$

where:

C = applicable coefficient, as provided in paragraph (a).
d = distance from center of staybolt nearest the corner to the point of tangency of the curve.
T = thickness of plate, in sixteenths of an inch.
P = maximum allowable pressure, in pounds per square inch.
D = angle of tangents, in degrees.

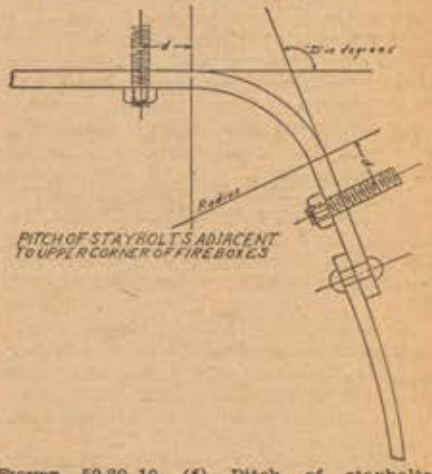

FIGURE 52.30-10 (f)—Pitch of staybolts adjacent to upper corners of fireboxes.

(g) (1) Curved surfaces subject to external pressure and not entirely self-supporting, shall be stayed in accordance with the requirements of this subpart and Subpart 52.35.

(2) Due allowance may be made for the strength inherent in the cylindrical form, except in the case of combustion chamber sheets, by providing that the maximum allowable pressure on a stayed

curved surface shall be the sum of the full pressure computed from formula (1) in this section for stayed plates, plus one-half of the pressure determined by formula (3) for curved plates in § 52.50–10 (b); or the full pressure allowable on the curved plate plus one-half of that allowed on the stayed surface, whichever gives the lower value.

Subpart 52.35—Stays and Reinforcements

§ 52.35–1 Definitions.

(a) *Through stay.* Through stay is a solid bar extended through both heads of a boiler and threaded at the ends for attachment by means of nuts. With this type of stay the ends are usually upset to compensate for the threading. (See figure 52.35–1(a).)

(b) *Solid screw staybolt.* Solid screw staybolt is a threaded bar screwed through the plates, the ends being riveted over or fitted with nuts or welded collars. (See figures 52.35–1 (b) and 52.35–1 (l).)

(c) *Hollow screw staybolt.* Hollow screw staybolt is a hollow threaded bar screwed through the plate, the ends being riveted over or fitted with nuts or welded collars. (See figure 52.35–1 (c).)

(d) *Flexible staybolt.* Flexible staybolt is a bar made with ball-and-socket joint on one end, the cup of the socket being screwed into the outside sheet and covered with a removable cap, the plain end of the staybolt being threaded, screwed through the inside sheet and riveted over. (See figure 52.35–1 (d).)

(e) *Sling stay.* Sling stay is a flexible stay consisting of a solid bar having one or both ends forged for a pin connection to a crowfoot or other structural fitting secured to the stayed plate. (See figure 52.35–1 (e).)

(f) *Crowfoot.* Crowfoot is a forged fitting with palms or lugs secured to the head to form a proper connection with a sling stay. (See figure 52.35–1 (f).)

(g) *Crowfoot stay.* Crowfoot stay is a solid bar stay terminating in a forged fork with palms or lugs for attachment to the plate. (See figure 52.35–1 (g).)

(h) *Diagonal stay.* Diagonal stay is a bar or formed plate forged with palms or lugs for staying the head of the boiler to the shell diagonally. (See figure 52.35–1 (h).)

(i) *Gusset stay.* Gusset stay is a triangular plate used for the same purpose as a diagonal stay and attached to the head and the shell by angles, flanges, or other suitable means of attachment. (See figure 52.35–1 (i).)

(j) *Dog stay.* Dog stay is a staybolt, one end of which extends through a girder, dog, or bridge, and is secured by a nut, the other end being screwed through the plate which it is supporting and riveted over or fitted with a nut or welded collar. (See figure 52.35–1 (j).)

(k) *Girder.* Girder is a bridge, built up of plates or structural shapes separated by distance pieces, a forging, or a formed plate, which spans an area requiring support, abutting thereon and supporting the girder stays or staybolts. (See figure 52.35–1 (k).)

(l) *Welded collar.* Welded collar is a beveled ring formed around the end of a screw stay by means of arc or gas welding. It is used in lieu of a nut. (See figure 52.35–1 (l).)

(m) *Reinforcement.* Reinforcement is a doubling plate, washer, structural shape, or other form for stiffening or strengthening a plate.

(n) *Stay tube.* Stay tube is a thick-walled tube used in fire-tube boilers to stay the tube sheets.

(o) *Telltale hole.* Telltale hole is a small hole having a diameter not less than 3/16 inch drilled in the center of a solid stay and extending to at least 1/2 inch beyond the inside surface of the sheet.

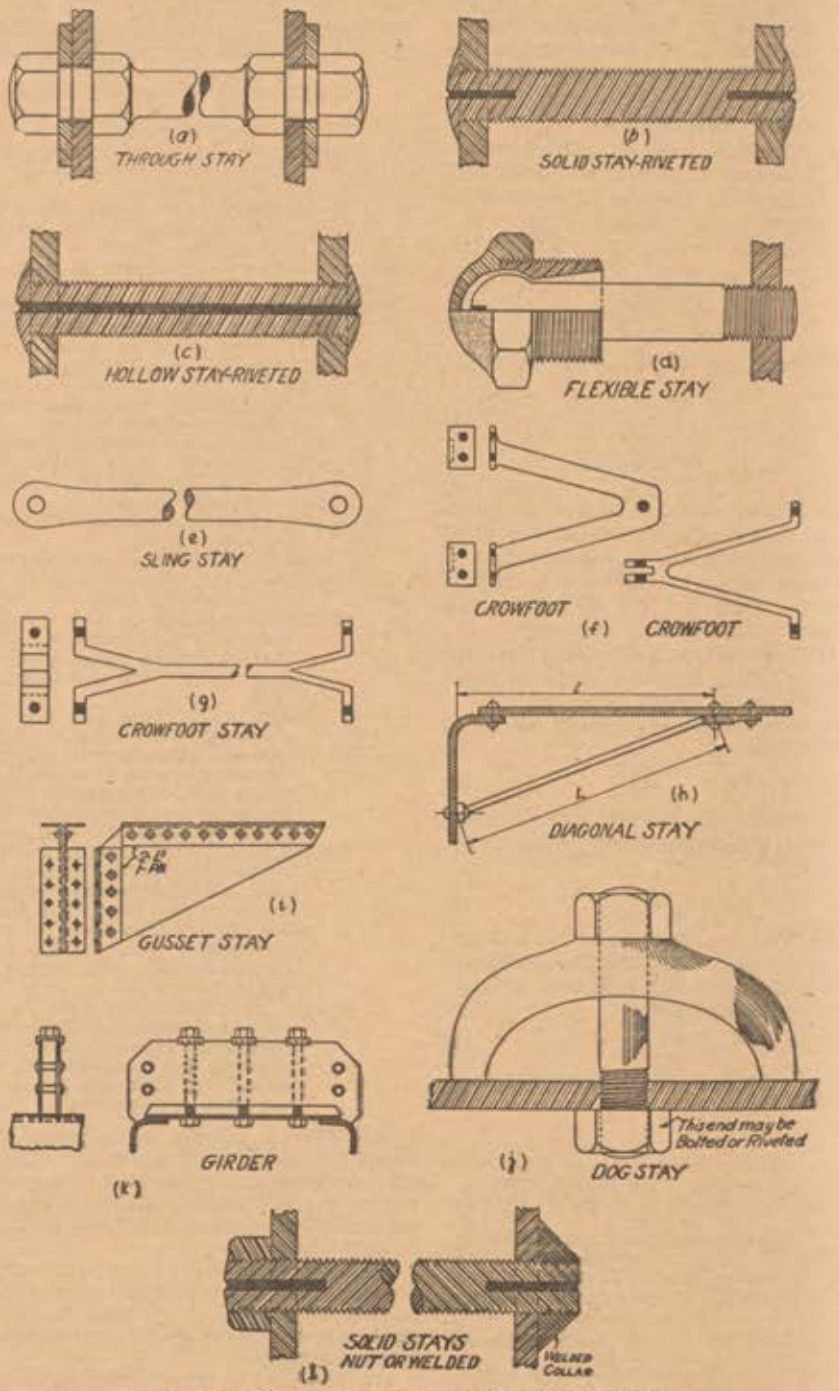

FIGURE 52.35–1—Acceptable types of boiler stays.

§ 52.35–5 Materials.

(a) Round bar stays which require no welding or forging other than upsetting at the ends for threading or to form eyes for use in conjunction with crowfeet, or similar fastenings, shall conform to the requirements of Subpart 51.07, 51.10, or 51.13 of this subchapter.

(b) Crowfeet, lugs, and similar connections for stays shall be forgings without welds conforming to the requirements of Subpart 51.46 of this subchapter.

(c) Forged-welded stays or parts thereof shall conform to the requirements of Subpart 51.13 of this subchapter. All welds in the body of the stay shall be made by the hammer-weld process.

(d) Stiffeners made of structural shapes shall conform to the requirements specified in Subpart 51.10 of this subchapter.

(e) Gusset and diagonal stays made of steel plate, also doubling plates and girders shall conform to the requirements specified in Subpart 51.04 of this subchapter.

(f) Stay tubes shall conform to the requirements of Subpart 51.25 of this subchapter.

(g) Rivets shall conform to the following requirements:

Steel rivets	Subpart 51.07
Iron rivets	Subpart 51.13

(h) Nuts for screw stays shall be made of steel, conforming to the requirements of Subpart 51.46 or 51.49, or, refined wrought iron, conforming to the requirements of Subpart 51.13 of this subchapter.

§ 52.35–10 Workmanship.

(a) The ends of stay bars and stay tubes which are upset for threading shall be subsequently annealed.

(b) Holes for screw staybolts shall be drilled and tapped fair and true and shall have a full thread.

(c) All holes for rivets shall be drilled and shall be slightly counter-sunk in order to form a fillet at point and head. Rivets shall be of sufficient length to fill the rivet holes completely and to form a head of proportionate strength to the body of the rivet.

(d) Holes for tubes or through stays may be made by punching a pilot hole in the center, but shall be machined to size by a rotating cutter, or otherwise be drilled from the solid plate.

(e) When jointed longitudinal stays are fitted between the back and front tube plates and connected by pins, such pins may be fitted slack in the holes, but the total clearance on both ends shall not exceed $\frac{1}{16}$ inch.

(f) Where stay tubes are used for supporting flat surfaces they shall be fitted with threads at both ends, screwed into the tube sheets and rolled tight with expanders, in addition to which they may be beaded. Making such tubes tight by calking is not permissible.

§ 52.35–15 Computations.

(a) The maximum allowable pressure and the required area of direct stays shall be computed by the following formulas (in making computations, the least sectional area of the stay shall be taken):

$$P = \frac{aC}{A} \quad (1)$$

$$a = \frac{PA}{C} \quad (2)$$

where:

P = maximum allowable pressure, in pounds per square inch.
A = area supported by the stay, in square inches.
a = required cross-sectional area of stay, in square inches.
C = coefficients based on the minimum tensile strength of the material used, as follows:
- C = 10,000 for solid steel through stays.
- C = 9,000 for solid steel screw stays having diameters of 1 inch and above.
- C = 9,000 for jointed steel stays.
- C = 8,000 for solid or hollow steel screw staybolts having diameters of 1 inch or less.
- C = 8,000 for refined wrought-iron stays or staybolts having diameters of 1 inch and above.
- C = 8,000 for steel stays formed from plates without welds.
- C = 7,500 for wrought-iron or steel stay tubes.
- C = 7,500 for flexible screw staybolts.
- C = 7,500 for refined wrought-iron screw staybolts having diameters less than 1 inch.
- C = 6,000 for welded refined wrought-iron stays.

(b) In computing the gross area supported by a stay, the pitch of the stays shall be used, but the least sectional area of the stay may be deducted therefrom to obtain the net area.

(c) Where stays are adjacent to the outer edge of the surface to be stayed and special allowances are made for the spacing, the area A shall be determined by deducting such parts of the surface as may be considered self-supporting in accordance with § 52.30–5.

(d) The required cross-sectional area of a diagonal stay shall be determined by the following formula:

$$a_1 = \frac{aL}{l} \quad (3)$$

where:

a_1 = required area of diagonal stay, in square inches.
a = required area of direct stay computed by formula (2) in this section, in square inches.
L = length of diagonal stay as shown by figure 52.35–1 (h), in inches.
l = length of line drawn at right angles to the surface to be supported, and extending to the center of the first rivet in the diagonal stay as shown by figure 52.35–1(h), in inches.

(e) The minimum sectional area of a gusset stay constructed of triangular plates secured to single or double rolled shapes along the two sides, shall be 10 percent greater than that determined by formula (3) in this section for diagonal stays.

(f) In determining the net cross-sectional area of drilled or hollow staybolts, the cross-sectional area of the hole shall be deducted if the diameter exceeds $\frac{5}{16}$ inch.

(g) Where a cylindrical shell is pierced by more than three holes for stays or other purposes on a line parallel with the axis of the shell, the relative strength of the ligaments between such holes shall not be less than that of the ligaments in the outer row of rivets in the longitudinal joint. If the construction necessitates a lower relative strength, this must be used for the value of E in the formula (1), (2), or (3) in § 52.05–10, for determining the maximum allowable pressure or minimum thickness of plate.

(h) The minimum sectional area of a pin subject to double shear shall be at least 80 percent of the required cross-sectional area of the stay.

(i) Each branch of a crowfoot or similar component part of a divided stay shall be proportioned to support at least two-thirds of the entire load.

(j) Eyes for pin connections shall be properly formed to the body of the stays. The minimum outside diameter of the eye shall be one and one-fourth times that of the pin. The minimum thickness of a single eye shall be the diameter of the pin; that of the double eye shall be two-thirds of the diameter of the pin; the cross-sectional area of any part of an eye shall be such that the two sides of a single eye shall equal at least one and one-fourth, and the four sides of a forked eye shall equal at least one and one-half times the strength of the body of a stay.

(k) The strength of the rivets connecting crowfoot braces, or any other type of reinforcement, shall equal one and one-half times the strength of the connecting stay.

(l) Palms, lugs, or flanges which are to be riveted, shall have a minimum width at the rivet hole exceeding the diameter of the rivet head, and shall have a cross-sectional area exclusive of the rivet hole not less than one and one-fourth times the required cross-sectional area of the body of the stay. Where there are two or more rivets located in the longitudinal axis of the stay, the strength of the palm or lug at the second or subsequent rivet hole may be reduced to not less than one and one-fourth times the combined strength of the rivet at that point and those beyond.

§ 52.35–20 Detail requirements.

(a) All screw staybolts, except flexible staybolts, shall have a telltale hole in the center of each end not less than $\frac{5}{16}$ inch diameter extending not less than $\frac{1}{2}$ inch beyond the inside of the plate.

(b) Joining of steel stays in the body by any process of welding is not permissible.

(c) The length of screw staybolts shall not exceed 20 diameters.

(d) Where the length of a boiler exceeds 18 feet, the through stays shall be supported in the middle.

(e) Where the heads of screw staybolts are riveted over, the end of the staybolt before riveting shall extend not less than $\frac{1}{4}$ inch from the surface of the plate to provide sufficient material for a substantial head.

(f) Arc welding may be used in lieu of threading or riveting for the attachment of stays or staybolts to plates in conformance with the following requirements:

(1) The stays or staybolts shall be inserted into holes through the plate, ex-

cept as provided for in subparagraph (5) of this paragraph, and the area of the weld in shear measured parallel to that portion of the stay extending through the plate shall be not less than 1.25 times the required cross-sectional area of the stay, but in no case shall the leg of the weld be less than ⅜ inch.

(2) The face of the weld shall not terminate below the outside surface of the plate.

(3) The ends of the stays or staybolts inserted through the plate shall not project more than ⅜ inch beyond surfaces exposed to the products of combustion.

(4) When flat heads are supported by diagonal stays protruding through the shell, the cross-sectional area of the portion of the stay extending through the shell shall not be less than 1.25 times the required cross-sectional area of the stay.

(5) Diagonal stays may be attached to the inner surface of the shell, but not the head, by fillet welds only, provided:

(i) The leg of the welds is not less than ⅜ inch;

(ii) The cross-sectional area of the portion of the stay welded to the shell and also the cross-sectional area of the fillet welds parallel to the axis of the shell, measured at the throat, are not less than 1.25 times the cross-sectional area of the stay;

(iii) The fillet welds shall be continuous around the full length of the sides and ends of the stay; and,

(iv) The palm end of the stay shall be hot formed to the radius of curvature of the shell.

(6) If the stay or staybolt is not normal to the plate, the point where the projection of the longitudinal center line of the stay or staybolt intersects the inner surface of the plate shall fall within the outer boundaries of the weld (projected if necessary).

(7) Welded collars may be used in lieu of nuts to attach screw staybolts to plates, provided the legs of the welds are of sufficient length to develop a strength of at least 25 percent of the staybolt, but in no case shall the legs of the welds be less than ¼-inch in length.

(8) The welding, except where welded collars are used, shall be stress-relieved in accordance with § 56.01-70 of this subchapter.

(9) Telltale holes are not required in stays or staybolts attached by welding, except where screw staybolts are used.

(g) The minimum thickness of nuts used in connection with screw stays shall be one-half of the diameter of the stay, but in no case less than ¾ inch. The stays shall be so placed in relation to the joints that the plates can be calked without removing the nuts.

(h) Nuts shall not be fitted to staytubes at the combustion chamber end.

(i) The ends of stays fitted with nuts shall not be exposed to the direct radiant heat of the fire.

(j) The minimum thickness of staytubes measured at the root of the threads shall be ¼ inch for marginal staytubes and $\frac{5}{16}$ inch for other staytubes.

Subpart 52.40—Tube Sheets of Water-Tube Boilers

§ 52.40-1 Definitions.

(a) *Curved tube sheet.* Curved tube sheet is a section of the shell of a boiler drum formed to an arc of a circle and perforated for nests of tubes.

(b) *Flat tube sheet.* Flat tube sheet is the tube plate of box headers of certain types of water-tube boilers.

(c) *Longitudinal ligament.* Longitudinal ligament is the minimum section of metal between two tube holes on a line parallel with the axis of the drum.

(d) *Circumferential ligament.* Circumferential ligament is the minimum section of metal between two tube holes on a line around the circumference of the drum.

(e) *Diagonal ligament.* Diagonal ligament is the minimum section of metal between two tube holes in adjacent rows, measured diagonally from one row to the other.

§ 52.40-5 Computations for curved tube sheet.

(a) The maximum allowable pressure and minimum thickness of a cylindrical shell pierced for tubes and of a curved tube sheet shall be calculated by formula (1), (2), or (3) of § 52.05-10, using the lowest value of E, determined in accordance with this section.

(b) (1) Where cylindrical shells are pierced by a single row of tubes or by two or more rows so placed in the cylindrical shell as not to be considered nests of tubes, as in a double buttstrap joint, or where reinforcing plates are fitted, the ligament efficiency between tube holes shall be computed by formula (1) of this section. For tube rows other than those placed on the longitudinal joint, the shell if necessary shall be either reinforced or increased in thickness.

(2) The relative strength of the ligaments between tube holes which come in a single line in a buttstrap joint or reinforced shell, shall be computed by the following formula:

$$E=\frac{(p-d)T_1}{pT} \qquad (1)$$

where:

E = relative strength of ligament.
p = pitch of tubes, in inches.
d = diameter[1] of tube holes, in inches.
T = thickness of shell, in inches.
T_1 = the aggregate thickness of the two buttstraps, or the shell and reinforcing plate, in inches.

[1] Where the tube hole is not of the straight bore type, the equivalent diameter shall be calculated by dividing the cross-sectional area of the removed metal by the material thickness.

(c) When a shell is pierced for tubes in a series of rows parallel to its axis, the efficiency of the ligament between the tube holes in any row shall be determined as follows:

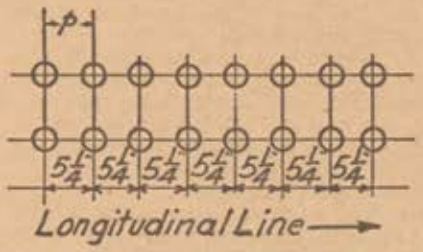

FIGURE 52.40-5 (c1)—Example of tube spacing with pitch of holes equal in every row.

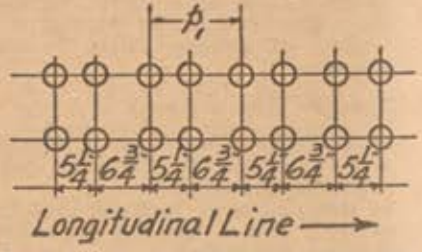

FIGURE 52.40-5 (c2)—Example of tube spacing with pitch of holes unequal in every second row.

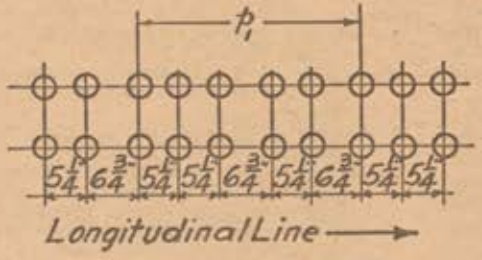

FIGURE 52.40-5 (c3)—Example of tube spacing with pitch of holes varying in every second and third row.

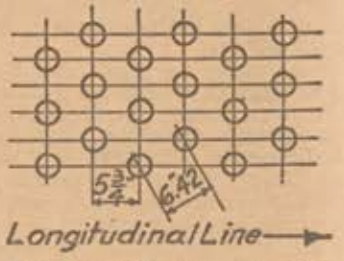

FIGURE 52.40-5 (c4)—Example of tube spacing with holes on diagonal lines.

(1) When the pitch of the tube holes in any row is uniform. (See figure 52.40-5 (c1).)

$$E=\frac{p-d}{p} \qquad (2)$$

(2) When the pitch of the tube holes in any row is not uniform. (See figures 52.40-5 (c2) and 52.40-5 (c3).) The calculations shall be made for a section of the row not exceeding the diameter of the shell.

$$E=\frac{p_1-nd}{p_1} \qquad (3)$$

(3) When the holes in one row are placed so as to form diagonal ligaments with the holes in an adjacent row. (See figure 52.40-5 (c4).) The efficiency of these ligaments shall be taken from the

diagram figure 52.40–5(c5). To use this diagram compute the value of $\frac{p_d}{p}$ and also the efficiency of the longitudinal ligament. Next find in the diagram, the vertical line corresponding to the longitudinal efficiency of the ligament and follow this line vertically to the point where the diagonal line representing the ratio of $\frac{p_d}{p}$ intersects. By projecting this line horizontally to the left on the edge of the diagram, the diagonal efficiency of the ligament may be read from the scale. If this efficiency is less than that of the longitudinal ligament it shall be used in computing the allowable pressure.

(4) The symbols used in the formulas in this paragraph mean:

E = relative strength of the ligament.
p = longitudinal pitch of tube holes, in inches.
p_d = diagonal pitch of tube holes, in inches.
p_1 = unit length of section of the row considered, in inches.
d = diameter [3] of tube holes, in inches.
n = number of tube holes in section p_1.

[3] Where the tube hole is not of the straight bore type, the equivalent diameter shall be calculated by dividing the cross-sectional area of the removed metal by the material thickness.

(d) The pitch of the tube holes shall be measured either on the flat plate before rolling or on the middle line of the plate after rolling.

(e) The strength of the circumferential ligaments between tube holes shall be at least one-half the required strength of the longitudinal ligaments.

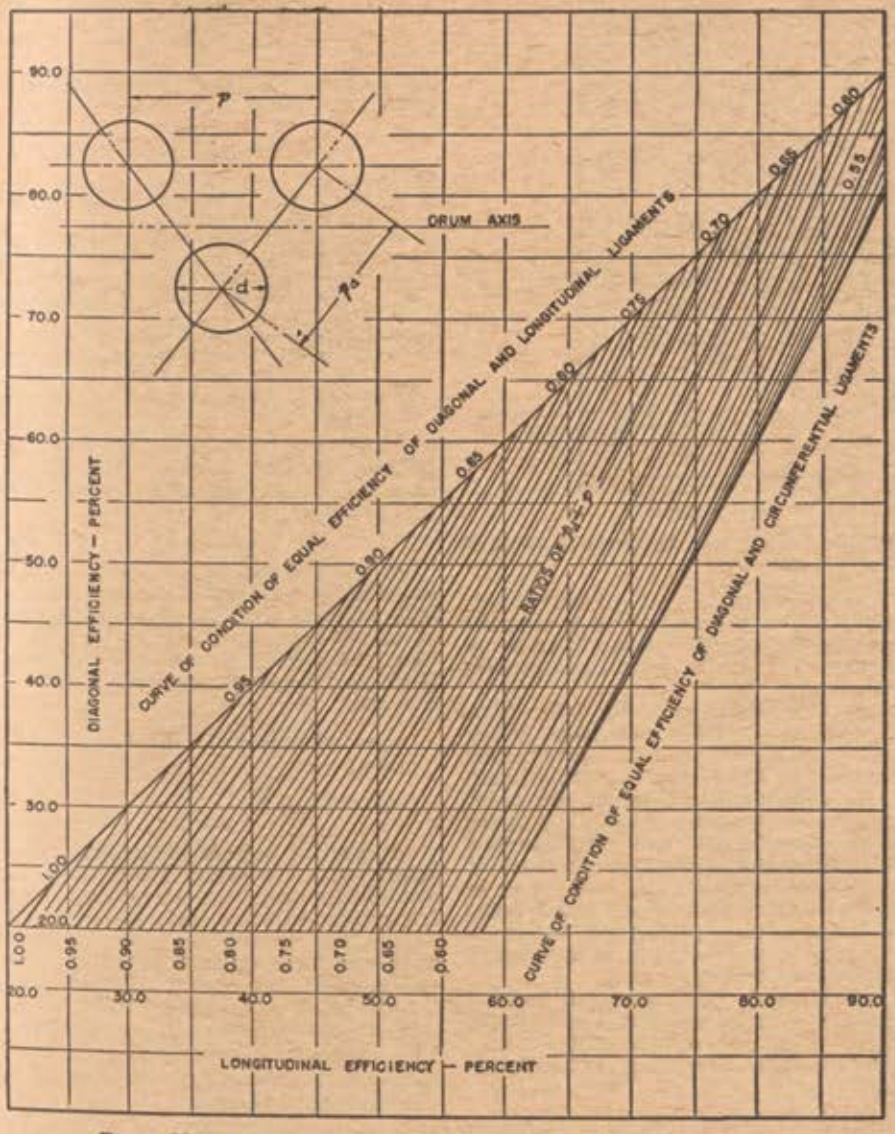

FIGURE 52.40–5 (c5)—Diagrammatic computation of diagonal efficiency.

(f) When the tube holes are not normal to the plate, the plate thickness shall be sufficient to provide a parallel seating not less than ⅜ inch depth between planes at right angles with the axis of the tube for tubes 2½ inches in diameter and under; for tubes having diameters over 2½ inches, the depth of the parallel seating shall not be less than ½ inch.

§ 52.40–10 Reinforcement of ligaments.

(a) Where reinforcing plates are applied to the drums of water-tube boilers to strengthen the shell at the point where the tubes enter, they shall be riveted to the shell, and where outside calking is used, the tubes shall be expanded into the inner and outer plates so that the rivets and tubes will hold the plates together in accordance with the regulations for stayed surfaces.

(b) The rivet spacing with respect to the tubes shall conform to the requirements of Subparts 52.30 and 52.35, using a value of 250 for C, and shall be based on a unit pressure equal to the pressure that can be carried by the inner plate with a factor of safety of 5. The shearing strength of the rivets securing the reinforcing plate on each side of the tube line shall be at least equal to the required strength of the ligament of the reinforcing plate between the tubes.

(c) The combined drum shell and reinforcing plate or plates, and riveted connections, shall have a factor of safety of not less than 5 in the ligaments when calculated in accordance with § 52.40–5. When reinforcing plates or butt-straps are exposed to the products of combustion, the joints shall be protected therefrom.

§ 52.40–15 Unsymmetrical ligaments.

(a) When tubes or holes are unsymmetrically spaced, the average ligament efficiency shall be not less than that required by this section, which applies to ligaments between tube holes and not to single openings. When this procedure results in lower efficiencies than those for symmetrical groups which extend a distance greater than the inside diameter of the shell as covered by § 52.40–5, the efficiencies computed by § 52.40–5 may be used.

(b) For a length equal to the inside diameter of the shell for the position which gives the minimum efficiency, the efficiency shall be not less than that on which the maximum allowable pressure is based.

(c) For a length equal to the inside radius of the shell for the position which gives the minimum efficiency, the efficiency shall be not less than 80 percent of that on which the maximum allowable pressure is based.

(d) For holes placed longitudinally along a shell but which do not come in a straight line, the requirements of this section shall apply, except that the equiv-

alent longitudinal width of a diagonal ligament shall be used. To obtain the equivalent width the longitudinal pitch of the two holes having a diagonal ligament shall be multiplied by the efficiency of the diagonal ligament. The efficiency to be used for the diagonal ligaments is given in figure 52.40–15 (d).

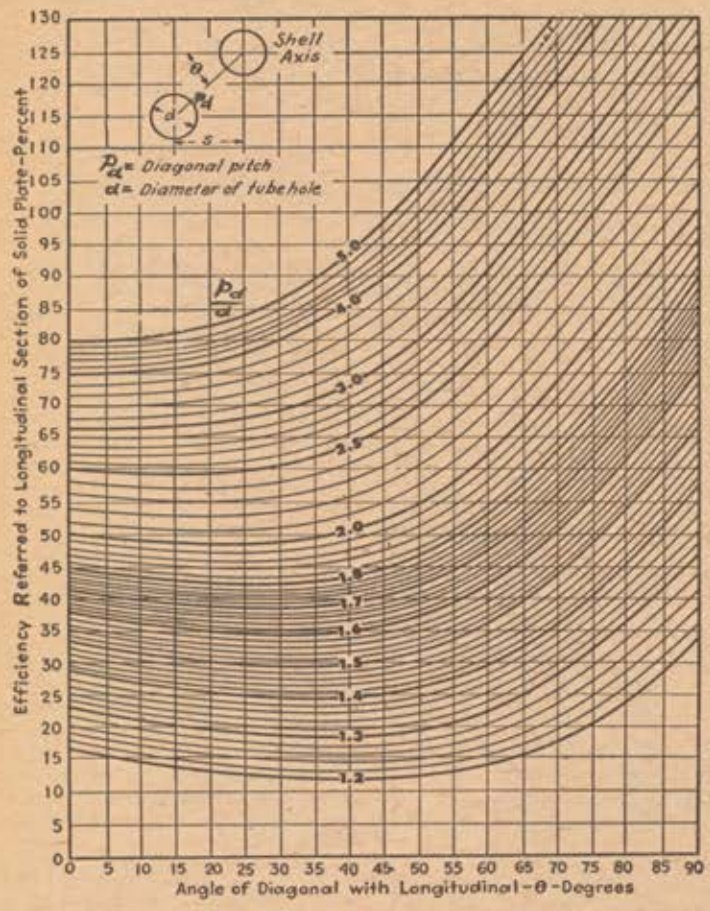

FIGURE 52.40–15 (d)—Diagram for determining efficiency of diagonal ligaments in order to obtain equivalent longitudinal efficiency.

Subpart 52.45—Combustion Chambers and Tube Sheets of Fire-Tube Boilers

§ 52.45–1 Definitions.

(a) *Combustion chamber.* Combustion chamber, within the meaning of this section, is that part of an internally fired boiler in which combustible gases may be burned after leaving the furnace.

(b) *Separate combustion chamber.* Separate combustion chamber is a combustible chamber which is connected to one furnace only.

(c) *Common combustion chamber.* Common combustion chamber is a combustion chamber connected to two or more furnaces in a boiler.

(d) *Crown or top plate.* Crown or top plate is the top of a combustion chamber and is usually supported by girder stays or by sling stays or braces.

(e) *Wrapper sheet.* Wrapper sheet is the side plate of any type of combustion chamber and also the bottom plate of a common combustion chamber.

(f) *Curved bottom plate.* Curved bottom plate is the bottom of a separate combustion chamber formed to an arc of a circle and usually designed to be self-supporting.

(g) *Combustion chamber tube sheet.* Combustion chamber tube sheet is the plate forming the end of a combustion chamber in which the tubes are secured.

(h) *Combustion chamber back sheet.* Combustion chamber back sheet is the plate opposite the tube sheet forming the back of the combustion chamber. It is usually stayed to the back head of the boiler by means of screw stay bolts, or, in the case of double-ended boilers, to the back of the combustion chamber of the other end of the boiler.

(i) *Structural stiffeners.* Structural stiffeners are rolled shapes or flanged plates which are used to stiffen a surface which is not entirely self-supporting.

§ 52.45–5 Materials.

(a) All plates forming parts of combustion chambers or fireboxes shall conform to the general specifications for the shell plates.

(b) Structural shapes of any form used for stays and reinforcements shall conform to the requirements of Subpart 51.10 of this subchapter.

§ 52.45–10 Computations.

(a) *Formulas.* The maximum allowable pressure and minimum thickness of all stayed parts of combustion chambers shall be computed in accordance with formulas provided in Subparts 52.30 and 52.35, except as follows:

(b) *Tube sheets.* (1) When the crown plate of a combustion chamber is supported by girders, transmitting the load to the tube plate and back sheet, thus subjecting the ligaments of the tube sheet to a compressive stress, the maximum allowable pressure shall be determined by formulas in Subparts 52.30 and 52.35, but shall not exceed that given by the following formula:

$$P=\frac{2CT(p-d)}{Lp} \qquad (1)$$

nor shall the thickness be less than that given by formula:

$$T=\frac{LpP}{2C(p-d)} \qquad (2)$$

where:

P = maximum allowable pressure, in pounds per square inch.
p = least horizontal pitch of tubes, in inches.
L = total length of combustion chamber over the tube sheet and back sheet, in inches.
T = thickness of tube plate, in inches.
C = 13,300 the allowable crushing stress in pounds per square inch.
d = inside diameter of plain tubes, in inches.

(2) Where tubes are staggered, the vertical distance between the center lines of tubes in adjacent rows shall not be less than

$$\tfrac{1}{2}\sqrt{2dp+d^2} \qquad (3)$$

(c) *Curved bottom plate without reinforcement.* (1) The maximum allowable pressure and minimum thickness of curved bottoms of separate combustion chambers without reinforcement shall be computed by the following formulas:

$$P=\frac{26}{R}(300T-1.03L) \qquad (4)$$

$$T=\frac{\frac{PR}{26}+1.03L}{300} \qquad (5)$$

(d) *Curved bottom plate with reinforcement.* (1) When the bottoms of combustion chambers are reinforced by structural stiffeners, such as angle or T bars, the minimum thickness of such bars shall be equal to 80 percent of the thickness of the plate reinforced, and the depth of web shall be equal to at least one-half the pitch of the stiffeners. The maximum allowable pressure and minimum thickness shall be computed by the following formulas:

$$P=\frac{(480T)^2}{2RL} \qquad (6)$$

$$T=\frac{\sqrt{2RLP}}{480} \qquad (7)$$

(2) The spacing and size of the rivets attaching the stiffeners to the plates shall comply with the requirements of Subparts 52.30 and 52.35, for stayed surfaces.

(e) *Symbols.* The symbols to be used in connection with the formulas in paragraphs (c) and (d) of this section are:

P = maximum allowable pressure, in pounds per square inch.
T = thickness of plate, in inches.
R = external radius to which plate is formed, in inches.
L = length of plate between supports measured on a line parallel to the axis of the boiler, in inches.

(f) *Girders or crown bars.* The maximum allowable pressure and the minimum thickness of crown bars or girders supporting the tops of combustion chambers shall be computed by the following formulas:

$$P = \frac{Cd^2T}{(L-p_2)p_1L} \quad (8)$$

$$T = \frac{PLp_1(L-p_2)}{Cd^2} \quad (9)$$

where:

P = maximum allowable pressure, in pounds per square inch.
L = length of girder between supports (from inside of tube sheets to inside of combustion chamber back plate), in inches.
p_1 = pitch between girders from center to center, in inches.
p_2 = pitch of supporting bolts, in inches. (Not to exceed maximum allowable pitch for plate thickness; see subpart 52.30.)
d = depth of girder, in inches.
T = thickness of girder, in inches (aggregate thickness where girder consists of 2 plates).
C = 6,800 where girder is fitted with one supporting bolt.
C = 10,300 where girder is fitted with two or three supporting bolts.
C = 11,400 where girder is fitted with four or five supporting bolts.
C = 12,200 where girder is fitted with six or more supporting bolts.

§ 52.45–15 Detail requirements.

(a) Where structural steel shapes or forged fittings are used to form connections between stays and plates that are not self-supporting, the eyes for rivet or pin connections in such fastenings shall comply with the requirements of § 52.35–15.

(b) Curved bottoms of common combustion chambers shall be considered a flat surface and stayed in accordance with the requirements of Subparts 52.30 and 52.35.

(c) When plates are flanged to form the combustion chamber and back connections, the minimum inner radius shall be not less than one and one-half times the thickness of the plate flanged.

Subpart 52.50—Furnaces and Flues

§ 52.50–1 Definitions.

(a) *Furnace.* Furnace, within the meaning of this subpart, is a firebox or a large flue in which the fuel is burned.

(b) *Corrugated furnace.* Corrugated furnace is a cylindrical shell wherein

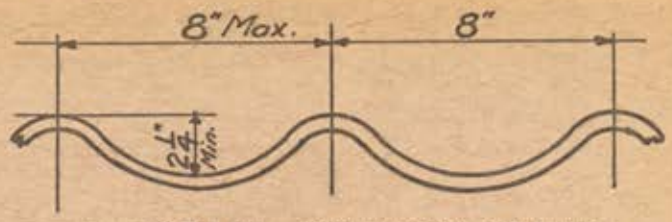

FIGURE 52.50–1 (b1)— Leeds suspension bulb furnace.

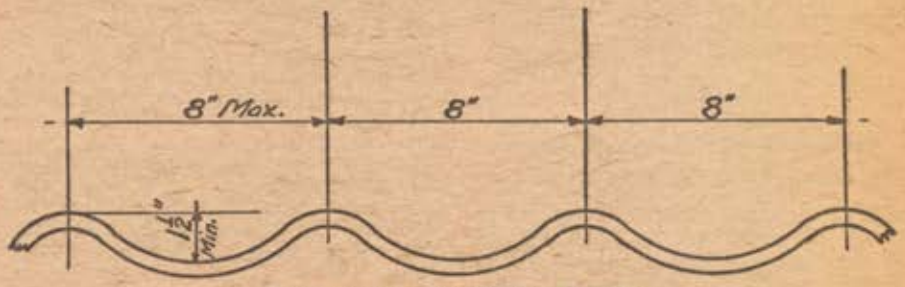

FIGURE 52.50–1 (b2)—Morison furnace.

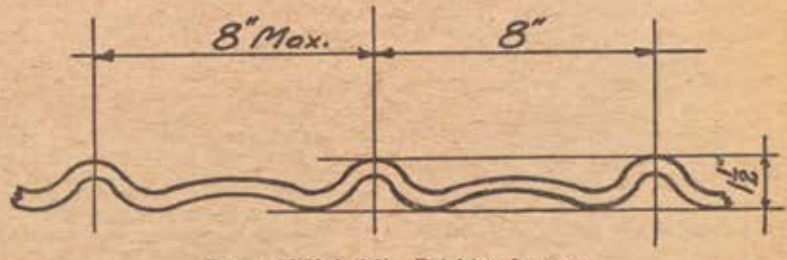

FIGURE 52.50–1 (b3)—Deighton furnace.

FIGURE 52.50–1 (b4)—Fox furnace.

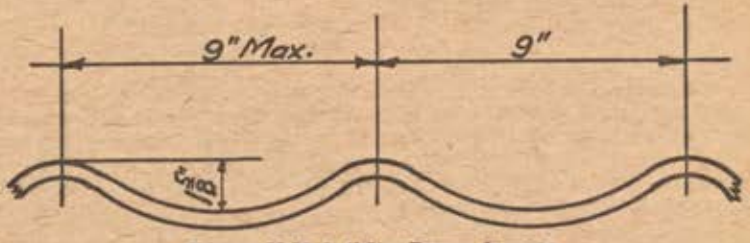

FIGURE 52.50–1 (b5)—Brown furnace.

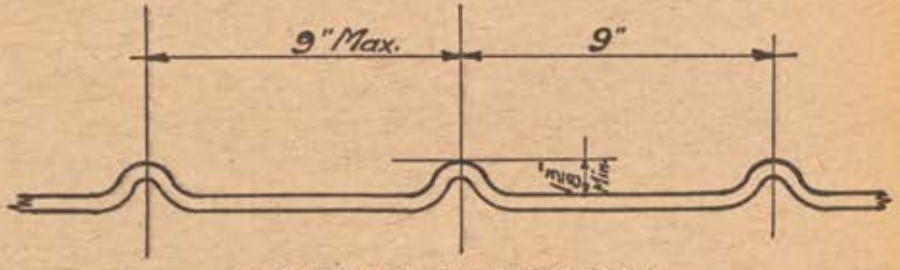

FIGURE 52.50–1 (c)—Purves ribbed furnace.

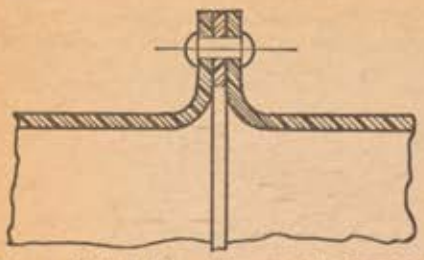

FIGURE 52.50–1 (d)—Adamson ring furnace.

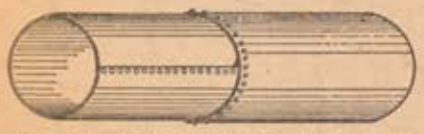

FIGURE 52.50–1 (e)—Circular riveted flue.

corrugations are formed circumferentially for additional strength and to provide for expansion. (See figures 52.50–1 (b1), 52.50–1 (b2), 52.50–1 (b3), 52.50–1 (b4), and 52.50–1 (b5).)

(c) *Purves ribbed furnace.* Purves ribbed furnace is a cylindrical shell in which ribs or projections are formed circumferentially to provide additional strength. (See figure 52.50–1 (c).)

(d) *Adamson ring furnace.* Adamson ring furnace is a cylindrical shell made in short sections, the ends of the sections being flanged and riveted together through a reinforcing ring. (See figure 52.50–1 (d).)

(e) *Plain furnace.* Plain furnace is a cylindrical shell usually made in sections joined by means of riveting or welding. (See figure 52.50–1 (e).)

(f) *Flues.* Flues are cylindrical shells made of seamless or welded tubing, or with a riveted longitudinal joint, the ends being attached by riveting or welding. Their purpose is to provide additional heating surface and to form a path for the products of combustion. (See figure 52.50–1 (e).)

§ 52.50–5 Materials.

(a) Steel plate used in the fabrication of furnaces or flues shall be of firebox quality and shall conform to the specifications and requirements for shell plates.

(b) Seamless, lap welded or electric resistance welded flues may be made of pipe complying with Subpart 51.34 of this subchapter.

§ 52.50–10 Computations.

(a) *Corrugated or ribbed furnaces.* (1) The maximum allowable pressure and minimum thickness of corrugated or ribbed furnaces shall be computed by the following formulas:

$$P=\frac{CT}{D} \quad (1)$$

$$T=\frac{DP}{C} \quad (2)$$

where:

P = maximum allowable pressure, in pounds per square inch.
T = minimum thickness of plate, in inches.
D = external diameter of furnace at bottom of corrugations, in inches.
C = coefficients, as follows:
C = 15,700 for Leeds suspension bulb furnace.
C = 14,700 for Morison or Deighton furnace.
C = 12,500 for Fox, Purves, or Brown furnace.

(2) The spacing and depth of the corrugations shall be in accordance with figures 52.50–1 (b1), 52.50–1 (b2), 52.50–1 (b3), 52.50–1 (b4), 52.50–1 (b5), and 52.50–1 (c), as shown in § 52.50–1. New furnaces shall be rolled to practically a true circle. The maximum distortion permissible from the true circle shall not exceed ¼ inch, and all new furnaces shall be measured by an inspector to ascertain that this tolerance has not been exceeded.

(b) *Adamson ring or plain furnaces.* The maximum allowable pressure and minimum thickness of furnaces of the Adamson ring or plain cylindrical types shall be computed by the following formulas:

$$P=\frac{52}{D}(300T-1.03L) \quad (3)$$

$$T=\frac{\frac{PD}{52}+1.03L}{300} \quad (4)$$

where:

P = maximum allowable pressure, in pounds per square inch.
D = external diameter of furnace shell, in inches.
L = length of a section for Adamson ring furnaces or riveted flues, or total length between centers of head rivet seams where the flues are made without circumferential joints, in inches.
T = thickness of plate, in inches.

(c) *Flues.* (1) The maximum allowable pressure and minimum thickness of plain riveted flues shall be computed by formulas (3) and (4) provided in paragraph (b) of this section. For seamless or welded flues not less than 6 nor more than 18 inches in outside diameter and subject to external pressure, the following formulas shall be used:

$$P=\frac{86670T-1386D}{5D} \quad (5)$$

$$T=\frac{D(5P+1386)}{86670} \quad (6)$$

where:

P = maximum allowable pressure, in pounds per square inch.
T = thickness of flue, in inches.
D = external diameter of flue, in inches.

(2) As a matter of convenience, table 52.50–10 is computed from the preceding formulas for seamless or welded flues.

TABLE 52.50–10—MAXIMUM ALLOWABLE PRESSURE AND MINIMUM THICKNESS OF SEAMLESS OR WELDED FLUES SUBJECT TO EXTERNAL PRESSURE

Outside diameter of flue, inches	Maximum allowable pressure in pounds per square inch						
	100	120	140	160	180	200	220
	Thickness of flue (inches)						
6	0.130	0.137	0.144	0.151	0.158	0.165	0.172
7	.152	.161	.169	.177	.185	.193	.201
8	.174	.184	.193	.202	.211	.221	.229
9	.196	.206	.217	.228	.238	.248	.258
10	.218	.229	.241	.253	.264	.276	.287
11	.239	.252	.265	.278	.290	.303	.316
12	.261	.275	.289	.303	.317	.331	.344
13	.283	.298	.313	.328	.343	.359	.373
14	.305	.321	.337	.354	.369	.386	.402
15	.326	.344	.361	.379	.396	.414	.430
16	.348	.367	.385	.405	.422	.441	.459
17	.370	.390	.409	.430	.448	.469	.488
18	.392	.413	.433	.455	.475	.497	.516

§ 52.50–15 Detail requirements.

(a) The minimum thickness of furnaces shall be 5/16 inch, and the maximum thickness of furnaces shall be 13/16 inch. When the frabricated thickness of a furnace exceeds 13/16 inch, acceptance of the furnace will be given special consideration by the Commandant.

(b) Where furnaces are constructed with riveted joints, the minimum efficiency of such joints shall not be less than 50 percent of the solid plate. Such joints may be of the lap-riveted type provided the furnace does not exceed 36 inches in length or height. All longitudinal riveted joints shall be located at the bottom of the furnace or flue.

(c) The thickness of corrugated and ribbed furnaces shall be ascertained by actual measurements taken by an inspector. Such furnaces shall be drilled by the manufacturer for a ⅜-inch pipe tap and fitted with a screw plug which can be removed by the inspector when taking measurements, the plug to be located as follows:

(1) *For Leeds, Morison, Deighton, Fox, and Brown types of furnaces.* At the crest of the waterside corrugation, not less than four corrugations from either end.

(2) *For Purves ribbed furnaces.* At the center of the second flat from either end.

(3) *Test plug.* Furnaces shall be installed so that the test plug is located at the bottom.

(d) (1) Adamson ring furnaces shall be made in sections not less than 18 inches and not more than 24 inches in length. They shall be flanged with a radius measured on the fire side of not less than three times the thickness of the plate and the flat portion of the flange outside of the radius shall be at least three times the diameter of the rivet holes.

(2) The distance from the edge of the rivet holes to the edge of the flange shall be not less than the diameter of the rivet holes and the diameter of the rivets before driving shall be at least ¼ inch larger than the thickness of the plate.

(3) The depth of the reinforcing ring between the flanges shall be not less than three times the diameter of the rivet holes and the ring shall be substantially riveted to the flanges.

(4) The fire edge of the ring shall terminate at or outside the point of tangency to the curve of the flange and the thickness of the ring shall be not less than ½ inch.

(e) When furnaces are flanged for attachment to the front head or rear tube sheet, the minimum inner radius shall be not less than twice the thickness of the furnace plate flanged.

(f) Where externally fired boilers are fitted with flues exceeding 5 inches in diameter the minimum water space between the flues and/or between the wall of a flue and the shell of the boiler, shall not be less than 3 inches, measured at the middle of the flue.

(g) Plain or corrugated furnaces may be constructed by arc welding. The longitudinal and circumferential joints shall be of the double-welded butt type, and the following modifications in the

requirements for Class I welded pressure vessels will be acceptable:

(1) The customary test plates need not be furnished, provided each furnace has sufficient material left on one end to obtain two guided side bend specimens, which shall not be detached until all the work and heat treatment on the furnace has been completed. One retest will be permitted for each specimen failing to meet the specified requirements.

(2) Radiographic examination of the furnace seam is not required, but will be accepted in lieu of the guided side bend specimens. If radiographs are taken, they shall meet the requirements of § 56.05–5 of this subchapter except that the films will not be retained by the Coast Guard.

Subpart 52.55—Boiler and Superheater Tubes

§ 52.55–1 Definitions.

(a) *Tubes.* Tubes, within the meaning of this subpart, are cylindrical shells of comparatively small diameter constituting the main part of the heating surface of a boiler or superheater.

(b) *Safe end.* Safe end is a short piece of boiler tube which is usually thicker than the ordinary tube and is welded to a tube of lighter gauge for the purpose of lengthening it.

(c) *Seamless tube.* Seamless tube is a tube without any longitudinal joint.

(d) *Electric-resistance-welded tube.* Electric-resistance-welded tube is a tube the longitudinal joint of which is made by the electric-resistance butt welding process and the tube is required to be normalized after welding.

(e) *Stay tube.* Stay tube is a thick-walled tube, the end of which is usually thickened by upsetting to compensate for threading. Such tubes are used for staying tube sheets into which they are screwed and expanded.

(f) *Expanding.* Expanding is the process of enlarging the end of a tube to make it fit tightly in the tube sheet.

(g) *Beading.* Beading is the process of turning over the protruding end of a tube after expanding to form a supporting collar for the tube sheet.

(h) *Bell-mouthing.* Bell-mouthing is the process of flaring the end of a tube beyond where it is expanded in the tube sheet.

§ 52.55–5 Materials and workmanship.

(a) Seamless steel boiler tubes shall comply with the requirements of Subpart 51.25 of this subchapter for such tubes.

(b) Electric-resistance-welded steel and iron boiler tubes shall comply with the requirements of Subpart 51.25 of this subchapter for such tubes.

(c) Tube holes shall be drilled full size in the solid plate. Tube holes may be counterbored where the metal is thicker than that required to obtain a proper bearing by expanding, so as to form narrow seats into which the tube ends can be properly expanded, provided there is space available to permit a proper amount of flare of the tube end.

(d) (1) The ends of tubes of fire-tube boilers shall be rolled tight in the tube sheet and the ends shall be beaded over; or the ends rolled, beaded and seal-welded around the edge of the bead; or the ends rolled and strength welded.

(2) Tube ends attached by rolling and strength welding shall comply with the following requirements:

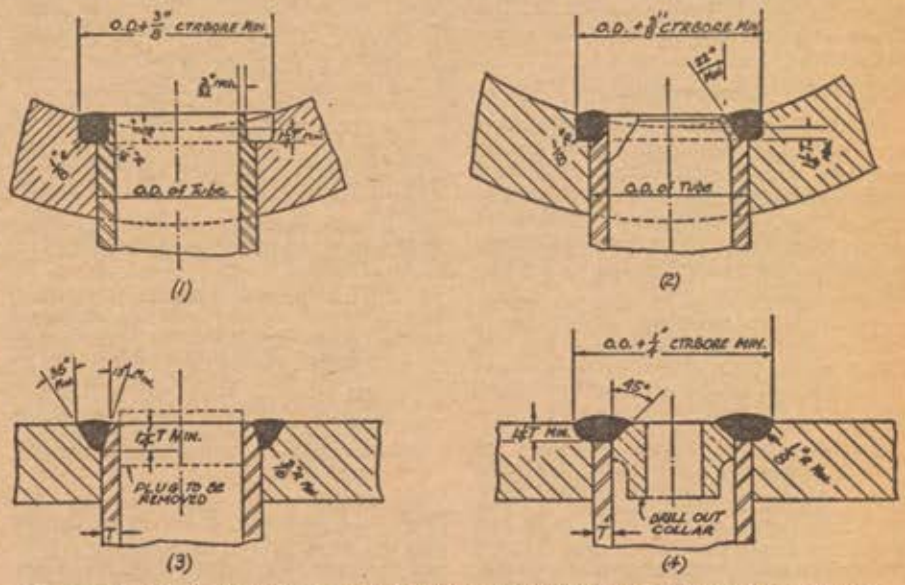

FIGURE 52.55–5(f)—Acceptable types of welded attachments of boiler tubes to headers.

(i) Where a bevel or chamfer is employed, the tube sheet shall be machined to a depth at least equal to the thickness of the tubes or ⅛ inch, whichever is greater, and not to exceed one-third of the tube sheet thickness. The projection of the tube beyond the tube sheet shall not exceed a distance equal to the tube thickness, and in no case more than one-third of the tube sheet thickness or ⅛ inch, whichever is greater.

(ii) Where no bevel or chamfer is employed, the tube shall extend beyond the tube sheet not less than a distance equal to 1¼ times the tube thickness, nor more than twice the tube thickness, but in no case shall the distance be less than ⅛ inch nor more than ¼ inch.

(iii) When any type of welded attachment is employed, the tube shall be rolled before welding and again rolled lightly after welding.

(3) The inner surface of tube holes in any form of attachment may be grooved or chamfered.

(e) (1) The ends of all tubes and nipples shall be expanded and flared not less than ⅛ inch over the diameter of the tube hole on all water-tube boilers and headers; or they may be flared not less than ⅛ inch, rolled and beaded; or flared, rolled and seal-welded; or rolled and seal-welded without flaring, provided the throat of the seal weld is not less than 5/16 inch nor more than ⅜ inch and the tubes are reexpanded after welding.

(2) The ends of all tubes and nipples of water-tube boilers and superheaters when not seal-welded shall project through the tube sheets or headers not less than ¼ inch nor more than ½ inch before flaring. Where the tubes enter at an angle, the maximum limit of ½ inch shall apply only at the point of least projection.

(3) If tubes and nipples are seal-welded they shall be reexpanded. Stress relieving shall not be used after welding.

(f) (1) Boiler tubes may be arc- or gas-welded to manifolds, headers or drums without being expanded, provided with the requirements of this paragraph. the welds are strength welds complying

(2) Economizer and waterwall tubes not exceeding 2 inches in size may be attached to headers by means of socket-welded joints, provided the depth of the socket is the maximum allowable but in no case less than ⅜ inch and the diameter is not greater than 1/64 inch above that of the tube. The throat dimension of the fillet weld shall be at least 1¼ times the tube wall thickness and the weld shall be deposited with a minimum of two layers. High amperage shall be employed with the electrode to obtain good penetration of the root pass.

(3) Boiler tubes, not exceeding 2 inches in size, may be attached to headers or drums by any of the acceptable types of groove welds as shown in Figure 52.55–5 (f). The welding grooves shall be of such depth and form as to insure full penetration of the weld metal. The

depth of the groove shall be at least 1¼ times the thickness of the tube, but in no case less than ⅛ inch in any direction. The welding procedure shall be submitted to the Commandant for consideration prior to the welding of superheater tubes of alloy material.

(4) Stress relief and radiographic examination of the welds are not required, except that the welds shall be examined by magnetic particle testing or other acceptable method, when alloy steel materials containing chromium are welded.

(5) Other types of welded attachments having strength equivalent to the above will be considered by the Commandant.

§ 52.55–10 Computations.

(a) (1) The maximum allowable pressure and the minimum thickness of seamless and electric-resistance-welded carbon and seamless alloy steel tubes or nipples subject to internal pressure for water-tube boilers, economizers and superheaters shall be computed by the following formulas:

$$P=S\left[\frac{2T-0.027D-2e}{D-2T+0.027D+2e}\right] \quad (1)$$

$$T=\frac{D}{2}\left(\frac{P}{P+S}\right)+0.0135D+e \quad (2)$$

where:

P = maximum allowable pressure, in pounds per square inch. Where the calculated maximum allowable pressure exceeds an even unit of 10 by more than 1, the next higher unit of 10 may be used.

S = Maximum allowable stress, in pounds per square inch, as given in Table 52.05–10 (a), at not less than the mean wall temperature, which in no case shall be taken as less than 700 degrees F. for tubes absorbing heat. The mean wall temperature of generating tubes shall be taken as the corresponding temperature of saturated steam at design conditions plus 50 degrees F. The mean wall temperatures of superheater tubes in each pass of a superheater shall be certified to by the boiler manufacturer. For tubes which do not absorb heat, the mean wall temperature shall be taken as the temperature of the liquid within the drum.

T = thickness of the tube wall, in inches.

D = outside diameter of the tube, in inches.

e = 0.04 over a length at least equal to the length of the seat plus 1 inch, for tubes expanded into tube seats, except:

e = 0 for tubes expanded into tube seats provided the thickness of the tube ends over a length at least equal to the length of the seat plus 1 inch is not less than the following:

0.095 inch for tubes 1¼-inch OD and smaller.

0.105 inch for tubes above 1¼-inch OD and up to 2-inch OD, inclusive.

0.120 inch for tubes above 2-inch OD and up to 3-inch OD, inclusive.

0.135 inch for tubes above 3-inch OD and up to 4-inch OD, inclusive.

0.150 inch for tubes above 4-inch OD and up to 5-inch OD, inclusive.

e = 0 for tubes strength-welded to headers and drums.

(2) Where tubes are expanded into drums or headers, table 52.55–10(a2) may be used in lieu of formula (1) or (2) for determining the maximum allowable pressure and minimum thickness of seamless or electric-resistance-welded low carbon steel tubes, provided the maximum mean wall temperature does not exceed 700° F.

(3) The thickness of the ends of tubes strength-welded to drums or headers need not be greater than the run of the tube as determined by formula (2), but the thickness of no tube, where expanded into headers or drums, shall be less than that given in table 52.55–10(a3).

TABLE 52.55–10 (a2)—MAXIMUM ALLOWABLE PRESSURES FOR SEAMLESS AND ELECTRIC-RESISTANCE WELDED LOW CARBON STEEL TUBES SUBJECT TO INTERNAL PRESSURE, WHERE EXPANDED INTO DRUMS OR HEADERS [1] [2]

4½								240	340	430	520	650	780	910	1,040
									260	340	420	530	650	760	880

[1] These values have been calculated by Formula (1) in § 52.55–10 (a) using allowable stress values at 700° F. for Grades T83–A, T192, and T178–A tubing.

[2] Where calculated allowable pressures exceed an even unit of 10 by more than 1, the next higher unit of 10 is given in the table.

[3] The maximum allowable pressures for electric-resistance-welded low carbon steel tubes shall be limited to boiler, waterwall, economizer, and superheater tubes that are fully enclosed within the boiler setting. For electric-resistance-welded tubing outside the boiler casing, the maximum allowable pressures shall not exceed 85 percent of the values listed in the table.

TABLE 52.55–10 (a3)—EXPANDED TUBES

Outside diameter, in inches:	*Minimum thickness of expanded tubes, in inches*
¾	0.055
1, 1⅛, 1¼	.065
1½	.075
1¾, 2	.085
2¼, 2½, 2¾	.095
3	.105
3¼, 3½, 3¾	.120
4	.135
4½	.150

(b) (1) The maximum allowable pressure and minimum thickness of seamless or welded boiler tubes less than 6 inches in diameter, and subject to external pressure, shall be computed by the following formulas:

$$P=\frac{14{,}000\ (T-0.065)}{D} \quad (4)$$

$$T=\frac{PD}{14{,}000}+0.065 \quad (5)$$

where:

P = maximum allowable pressure, in pounds per square inch.

T = thickness of tube, in inches.

D = external diameter of tube, in inches.

(2) As a matter of convenience, table 52.55–10 (b) has been computed from the preceding formulas.

TABLE 52.55–10 (b)—MAXIMUM ALLOWABLE PRESSURE AND MINIMUM THICKNESS FOR SEAMLESS OR WELDED BOILER TUBES LESS THAN 6" IN DIAMETER AND SUBJECT TO EXTERNAL PRESSURE

4½					220	260	300

§ 52.55–15 Detail requirements.

(a) Seamless or electric-resistance butt-welded tubes shall be used in all construction where the tubes are subject to internal pressure.

(b) Tubes may be lengthened or safe-ended by forge, electric-resistance, arc or gas butt-welding methods. Arc or gas butt welded joints exceeding 2½ inches shall be nondestructively tested as required by § 56.05–5 of this subchapter. Carbon steel tubing material shall be stress-relieved if arc welded, when the diameter exceeds 2½ inches. Alloy steel tubing shall be given a suitable preheat and postheat treatment to produce acceptable welds if deemed necessary by the Commandant.

Subpart 52.60—Superheaters, Headers, Water Walls, and Economizers

§ 52.60–1 Definitions.

(a) *Superheaters.* Superheaters, within the meaning of this subpart, are appliances for the purpose of increasing the temperature of steam.

(b) *Header.* Header is a hollow forging, pipe, or welded plate of cylindrical, square, or rectangular cross section, serving as a manifold to which tubes are connected.

(c) *Water wall.* Water wall is a series of tubes or elements spaced along or integral with a wall of a furnace to protect the wall and provide additional heating surface.

(d) *Economizer.* Economizer is a feed-water heater usually located in the uptake or casing of a boiler to absorb heat from the waste gases.

§ 52.60–10 Materials.

(a) Headers or fittings used in connection with these appurtenances, shall be constructed of steel plate conforming to the requirements of Subpart 51.04 of this subchapter; seamless steel pipe conforming to the requirements of Subpart 51.34 of this subchapter or of steel forgings conforming to the requirements of Subpart 51.46 of this subchapter.

(b) Carbon steel plate or forgings may be used for header end closures for metal temperatures not exceeding 800° F. For temperatures exceeding 800° F., the header end closures shall be wrought alloy steel material. The materials shall conform to the requirements of Subpart 51.04, 51.22 or 51.46 of this subchapter and limited to the grades of material listed in Table 52.05–10(a) of this subchapter.

(c) Alternate materials may be used in the construction of headers, provided such materials are approved by the Commandant for the particular application.

§ 52.60–15 Computations.

(a) The maximum allowable pressure of cylindrical headers shall be determined by Formula (3) in § 52.05–10.

(b) The maximum allowable pressure and minimum thickness of tubes shall be in accordance with the tables and formulas provided in Subpart 52.55.

§ 52.60–20 Detail requirements.

(a) *Superheater.* (1) The design pressure of a superheater integral with the boiler shall be not less than the highest setting of the drum safety valves, except that the superheater outlet connections may have a pressure rating conforming to § 52.70–10(e).

(2) Superheaters fitted in conjunction with water-tube boilers may be considered as a part of the boiler, provided the pipe between the boiler and superheater and between superheaters is made of seamless steel material having a minimum thickness computed by the formula specified for piping in § 55.07–5 of this subchapter. Fittings used in making such connections shall be of forged or cast steel.

(3) Superheater headers in which it is possible for water to accumulate shall be fitted with adequate means for draining.

(4) Superheaters designed for normal operating temperatures in excess of 850° F., at the superheater outlet shall be fitted with controls to insure that the maximum temperature does not rise more than 15° above the design conditions. Visual or audible alarms shall be provided.

(5) Arrangement shall be made for venting the superheater in order to permit steam circulation through the superheater when starting the boiler.

(b) *Economizer.* The design pressure of an economizer integral with the boiler and connected to the boiler drum without intervening stop valves shall be at least equal to 110 percent of the highest setting of the safety valves on the drum.

(c) *Headers.* Headers fabricated by means of arc or gas welding shall comply with the requirements of Part 56 of this subchapter for Class I welded pressure vessels.

Subpart 52.65—Safety Valves

§ 52.65–1 Definitions.

(a) *Safety valve.* Safety valve is a valve designed to open or close automatically to relieve excess pressure in the pressure vessel to which it is attached.

(b) *Spring-loaded safety valve.* Spring-loaded safety valve is a safety valve fitted with a spring which normally holds the valve disk in a closed position against the heat and allows it to open or close at predetermined pressures. Spring-loaded safety valves are characterized by pop action.

(c) *Pressure loaded safety valve.* Pressure loaded pilot actuated safety valve is one which is held in the closed position by steam pressure and controlled in operation by a pilot actuator valve.

(d) *Spring loaded pilot actuated safety valve.* Spring loaded, pilot actuated safety valve is one in which a spring is used in the conventional way to hold the disk against the seat, but which has a piston attached to the spindle and enclosed within a cylinder, which when subjected to a limiting or set pressure, unbalances the spring load thereby opening the valve.

(e) *Spring loaded pilot valve.* Spring loaded pilot valve is a conventional safety valve designed to actuate another spring loaded safety valve through a pressure transmitting line led from the body of the pilot valve.

(f) *Lever safety valve.* Lever safety valve is a safety valve having the disk held on its seat by the action of a weight hung on a lever which is pivoted on a fulcrum.

(g) *Relief valve.* Relief valve is a valve constructed on the general design of safety valves to relieve excess pressure. It may be used for service where an approved safety valve is not required by the regulations of this subchapter. (See § 54.07–5 of this subchapter.)

§ 52.65–5 General requirements.

(a) Each boiler and its superheater shall be provided with one or more approved safety valves designed, constructed and flow-tested in conformance with Subpart 162.001 in Subchapter Q (Specifications) of this chapter. Boilers of more than 500 square feet of water heating surface but without superheaters shall be fitted with at least two safety valves, and boilers with integral superheaters shall have at least two safety valves attached to the drum and one safety valve fitted to the superheater outlet. On river steam vessels whose boilers are connected in batteries without means of shutting off one boiler from another, each battery of boilers shall be treated as a single boiler and equipped with not less than two safety valves of equal size.

(b) Drum safety valves shall be set to relieve at a pressure not in excess of that allowed by the certificate of inspection. Where for any reason this is lower than the pressure for which the boiler was originally designed, an accumulation test, as provided for in paragraph (g) of this section, shall be conducted to insure that the relieving capacity of the safety valve is sufficient for the lower pressure.

(c) The setting of the superheater safety valve shall not exceed the design pressure of the machinery plus the pressure drop in the piping from the superheater outlet to the machinery. To prevent damage to the superheater, the drum safety valves shall be set at a pressure not less than that of the superheater safety valve setting plus 5 pounds minimum plus approximately the normal load pressure drop through the superheater. If there are no intervening valves between the superheater safety valve and boiler, the relieving capacity of the superheater safety valve rated in accordance with the requirements of Subpart 162.001, Subchapter Q (Specifications), may be included in determining the total required relieving capacity of the boiler, provided the drum safety valves have at least 75 percent of the aggregate relieving capacity required. The foregoing requirements do not apply when drum pilot actuated superheater safety valves are used. Installations em-

ploying pilot actuated safety valves will be given special consideration by the Commandant.

(d) In the event the maximum steam generating capacity of the boiler is increased by any means, the relieving capacity of the safety valves shall be checked by an inspector and if determined to be necessary, valves of increased relieving capacity shall be installed.

(e) The total rated relieving capacity of drum and superheater safety valves as certified by the valve manufacturer shall not be less than the maximum generating capacity of the boiler as certified by the boiler manufacturer. The safety valves shall be capable of discharging all the steam that can be generated without allowing the pressure to rise more than 6 percent above the set pressure of the valve.

(f) (1) The boiler manufacturer may certify the normal as well as the maximum generating capacity of the boiler. In the absence of such certification the minimum safety valve relieving capacity shall be determined upon the basis of the pounds of steam generated per hour per square foot of boiler heating surface and the waterwall heating surface, as given in the Table 52.65-5 (f) (1).

TABLE 52.65-5 (f) (1)—MINIMUM RELIEVING CAPACITY

Type of boiler	Minimum pounds of steam per hour per square foot of surface					
	Boiler heating surface			Water wall surface		
	Hand-fired	Stoker-fired	Oil, or pulverized fuel-fired	Hand-fired	Stoker-fired	Oil, or pulverized fuel-fired
Fire-tube	5	7	8	8	10	14
Water-tube	6	8	10	8	12	16

(2) In many cases a greater relieving capacity of safety valves must be provided than required by this paragraph, and in every case the requirements of paragraph (e) of this section shall be met.

(3) The heating surface shall be computed for that side of the boiler surface exposed to the products of combustion exclusive of the superheating surface. In computing the heating surface only the tubes, fireboxes, shells, tube sheets, and the projected area of the headers need be considered. For vertical fire-tube boilers, only that portion of the tube surface up to the middle gauge cock is to be computed. The minimum number and size of safety valves required shall be determined on the basis of the aggregate steaming capacity and the aggregate rated relieving capacity of the valves shall be in accordance with Subpart 162.001 in Subchapter Q (Specifications) of this chapter.

(g) An accumulation test shall be conducted in the presence of an inspector to determine the adequacy of protection provided by the aggregate relieving capacity of the boiler safety valves except in instances where possible damage to superheaters makes this impractical. During this test all steam outlet connections except the safety valves and such others as may be necessary to operate the boiler shall be closed and the fires forced to their maximum capacity for a period of 15 minutes for fire-tube boilers and 7 minutes for water-tube boilers.

(h) On new installations, the safety valve diameter for power boilers, superheaters, or unfired steam generators shall be not less than 1½ inches nor more than 4 inches. Safety valves of 4½ inches diameter may be used for replacements on existing boilers or unfired steam generators. The foregoing diameters apply to the valve inlet.

(i) Lever or weighted safety valves now installed may be continued in use and may be repaired, but when renewals are necessary, lever or weighted safety valves shall not be used. All such replacements shall conform to the requirements of Subpart 162.001 in Subchapter Q (Specifications) of this chapter.

(j) Gags or clamps for holding the safety valve disk on its seat shall be carried on board the vessel at all times.

§ 52.65-15 Installation.

(a) The final setting of boiler safety valves shall be checked and adjusted under steam pressure by an inspector who upon acceptance shall seal the valves. This requirement applies to drum and also superheater safety valves when the latter provide part of the required relieving capacity for the boiler.

(b) Except in the case of superheater valves, safety valves are not to be connected to any fitting with outlets for any purpose other than the escape of steam through the safety valve. They shall be connected directly to the boiler or as close thereto as possible and installed in an upright position with spindles vertical except in the case of especially designed and approved valves.

(c) No shutoff valves shall be placed between the required safety valves and the boiler or unfired steam generator, nor in the escape pipe between the safety valve and atmosphere, nor in the drain pipe from the safety valve.

(d) Twin valves, made by placing individual valves on Y bases, or duplex valves having two valves in the same body, shall be of equal size.

(e) (1) To insure safety valves being free, each safety valve shall have a substantial lifting device by which the valve disk may be positively lifted from its seat when the pressure in the boiler is 75 percent of that at which the valve is set to blow. Such mechanism shall be connected by suitable relieving gear so arranged that the controls may be operated from the fireroom or engineroom floor.

(2) When, due to high pressure, it is impracticable to fit a relieving gear to raise the safety valve from its seat in order to relieve the boiler of pressure, suitable piping and a valve having a relieving capacity of not less than the safety valve(s), may be connected from the boiler to the escape pipe or condenser. The valve shall be arranged to permit operation from the fireroom or engineroom floor.

(f) An independent open drain of a diameter not less than the required tapped drain opening in the valve body shall be run as directly as possible from the body of each boiler safety valve, or the drain from each boiler safety valve may be led to an independent header common only to boiler safety valve drains. The leakoff from drains or drain headers shall be led to suitable locations to avoid hazard to personnel.

Subpart 52.70—Boiler Mountings and Attachments

§ 52.70-1 Definitions.

(a) *Mountings.* Mountings, within the meaning of the regulations in this subchapter, are nozzle connections, distance pieces, valves, or fittings attached directly to the boiler.

(b) *Main stop valve.* Main stop valve is a valve usually connected directly to the boiler for the purpose of shutting off the steam from the main steam line.

(c) *Auxiliary stop valve.* Auxiliary stop valve is a valve usually connected directly to the boiler for the purpose of shutting off the steam from the auxiliary lines (including the whistle lines).

(d) *Manifold.* Manifold is a fitting with two or more branches having valves either attached by bolting or integral with the fitting.

(e) *Feed valve.* Feed valve is a valve in the feed-water line which controls the boiler feed.

(f) *Blow-off valve.* Blow-off valve is a valve connected directly to the boiler for the purpose of blowing out water, scum, or sediment.

(g) *Dry pipe.* Dry pipe is a perforated or slotted pipe placed in the highest part of the steam space of a boiler to prevent priming.

(h) *Water column.* Water column is a fitting or tube equipped with a water glass attached to a boiler for the purpose of indicating the water level.

(i) *Test cocks.* Test cocks are small cocks on a boiler for indicating the water level.

(j) *Salinometer cocks.* Salinometer cocks are cocks attached to a boiler for the purpose of drawing off a sample of water for salinity tests.

(k) *Fusible plugs.* Fusible plugs are plugs made with a bronze casing and a tin filling which melts at a temperature of 450° to 500° F. They are intended to melt in the event of low water and thus warn the engineer on watch.

§ 52.70-5 Materials and workmanship.

(a) Boiler mountings or attachments shall be made of steel forgings conforming to the requirements of Subpart 51.46 of this subchapter; steel castings conforming to the requirements of Subpart 51.58 of this subchapter; or, where the temperature does not exceed 450° F., they may be made of bronze castings conforming to the requirements of Subpart 51.76 of this subchapter.

(b) For temperatures exceeding 450° F., high strength or alloy steel bolting material complying with the requirements of Subpart 51.49 of this subchapter shall be employed. For temperatures

not exceeding 450° F., commercial carbon-steel bolting conforming to the requirements of Subpart 51.49 of this subchapter may be used.

(c) The use of cast iron for mountings, fittings, valves, or cocks, attached directly to boilers operating at pressures exceeding 30 p. s. i. is prohibited.

§ 52.70–10 Detail requirements.

(a) Boiler nozzles, mountings, and attachments having diameters over 1¼ inches shall be fitted with flanged or welded ends. Screwed ends shall not be used for pressures exceeding 600 p. s. i. and shall be limited to ¾-inch pipe size for pressures exceeding 150 p. s. i. Slip-on flanges and socket-welded connections may be used for sizes not exceeding 2 inches in diameter. Butt-welded flanges may be used without diameter limitation.

(b) Where stud bolts are used for the attachment of boiler connections, drilled holes to be tapped for straight threads shall not penetrate within one fourth of the wall thickness from the inside surface of the vessel. The depth of the threads shall be at least equal to 1½ times the diameter of the stud. Studded connections shall meet the requirements for reinforcement. No credit for reinforcement shall be allowed for any areas attached by studs only.

(c) Where pipes are screwed into the plating of the boiler, the minimum number of pipe threads permitted shall be in accordance with the following table:

TABLE 52.70–10 (c)—MINIMUM NUMBER OF PIPE THREADS FOR CONNECTIONS TO BOILER

Size of pipe connection, inches	1 and 1¼
Number of threads per inch	11½
Minimum number of threads required in opening	4
Minimum thickness of material required to give above number of threads (inches)	0.348

(d) The nearest steam stop valves and fittings attached to the boiler drum or superheater inlet shall have a pressure rating at least equal to the maximum set pressure of any safety valve on the boiler drum at the corresponding saturated steam temperature.

(e) The nearest steam stop valves and fittings attached to the superheater outlet shall have a pressure rating at least equal to the maximum set pressure of any safety valve on the superheater and at the normal operating superheated steam temperature. Where the superheater safety valve is of the drum pilot actuated type, the pressure rating shall be at least squal to 95 percent of the drum pilot safety valve setting at the normal operating steam temperature of the superheater outlet.

§ 52.70–25 Feed connections.

(a) Feed water shall not be discharged into a boiler against surfaces exposed to hot gases, to the radiant heat of the fire or close to a riveted joint.

(b) Feedwater nozzles of boilers with maximum allowable pressures of 400 pounds per square inch, or over, shall be fitted with sleeves or other suitable means employed to reduce the effects of metal temperature differentials.

§ 52.70–30 Blowoff connections.

(a) Boilers shall be fitted with a surface and a bottom blowoff valve or cock attached directly to the boiler or to a short distance piece. The surface blowoff valve shall be located within the permissible range of the water level, or fitted with a scum pan or pipe at this level. The bottom blowoff valve shall be attached to the lowest part of the boiler or fitted with an internal pipe leading to the lowest point inside the boiler. Water-tube boilers designed for pressures of 350 pounds per square inch or over are not required to be fitted with a surface blowoff valve. Boilers equipped with a continuous blowdown valve on the steam drum are not required to be fitted with an additional surface blowoff connection.

(b) Where blowoff pipes are exposed to radiant heat of the fire, they shall be protected by fire brick or other suitable heat-resisting material.

§ 52.70–35 Dry pipes.

Internal dry pipes may be fitted to stop valves and safety valves, provided such dry pipes have a wall thickness at least equal to standard commercial pipe thickness for their diameter. The area of the opening in such dry pipes shall be at least twice the nominal area of the dry pipe. Openings in dry pipes shall be as near as practicable to the valve and shall be slotted or drilled, the width of the slots to be not less than ¼ inch, or the diameter of the holes to be not less than ⅜ inch. Where dry pipes are used, they shall be provided with drains at each end to prevent an accumulation of water.

§ 52.70–40 Fusible plugs.

(a) All boilers, except water-tube boilers, and low-pressure heating boilers operating at pressures not in excess of 30 pounds per square inch, shall be fitted with fusible plugs manufactured from acceptable heats in accordance with Subpart 162.014 of Subchapter Q (Specifications) of this chapter.

(b) Vertical boilers shall be fitted with one fusible plug located in a tube not more than 2 inches below the lowest gauge cock.

(c) Externally fired, cylindrical boilers, with flues, shall have one plug fitted to the shell immediately below the fire line not less than 4 feet from the front end.

(d) Firebox, Scotch, and other types of shell boilers not specifically provided for, having a combustion chamber common to all furnaces, shall have one plug fitted at or near the center of the crown sheet of the combustion chamber.

(e) Double-ended boilers having individual combustion chambers for each end, which combustion chambers are common to all the furnaces in one end of the boiler, shall have one plug fitted at or near the center of the crown sheet of each combustion chamber.

(f) Boilers constructed with a separate combustion chamber for each individual furnace shall be fitted with a fusible plug in the center of the crown sheet of each combustion chamber.

(g) Boilers of types not herein provided for shall be fitted with at least one fusible plug of such dimensions and located in a part of the boiler as will, in the judgment of the inspector, best meet the purposes for which it is intended.

(h) Fusible plugs shall be so fitted that the smaller end of the filling is in direct contact with the radiant heat of the fire, and shall be at least 1 inch higher on the water side than the plate or flue in which they are fitted, and in no case more than 1 inch below the lowest permissible water level as defined in paragraph (i) of this section.

(i) The lowest permissible water level shall be determined as follows:

(1) Vertical fire-tube boilers, one-half of the length of the tubes above the lower tube sheets.

(2) Vertical submerged tube boiler, 1 inch above the upper tube sheet.

(3) Internally-fired fire-tube boilers with combustion chambers integral with the boiler, 2 inches above the highest part of the combustion chamber.

(4) Horizontal-return tubular and dry back Scotch boilers, 2 inches above the top row of tubes.

(5) The lowest permissible water level for all water-tube boilers shall be determined at the time drawings of the boilers are submitted for approval.

(j) (1) Fusible plugs shall be cleaned and will be examined by the marine inspector at each inspection for certification, and oftener, if necessary. If in the marine inspector's opinion the condition of any plug is satisfactory, it may be continued in use.

(2) When fusible plugs are renewed at other than the inspection for certification and no marine inspector is in attendance, the Chief Engineer shall submit a written report to the Officer in Charge, Marine Inspection, who issued the certificate of inspection informing him of the renewal. This letter report shall contain the following information:

(i) Name and official number of vessel.

(ii) Date of renewal of fusible plugs.

(iii) Number and location of fusible plugs renewed in each boiler.

(iv) Manufacturer and heat number of each plug.

(v) Reason for renewal.

(k) Fusible plugs shall not be permitted where the maximum steam temperature to which they are exposed exceeds 425° F.

§ 52.70–45 Pressure gauges.

(a) Each boiler shall have a steam gauge connected to the steam space or to the water column or its steam connection. The steam gauge shall be connected to a syphon or equivalent device of sufficient capacity to keep the gauge tube filled with water. Stop valves shall be provided at the connections to the boiler and at the gauge. Gauges shall be located where they can be easily seen.

(b) The gauge connections to the boiler, except the syphon, shall be not less than ¼ inch pipe size, but where ferrous pipe or tubing is used, they shall be not less than ½ inch inside diameter.

(c) The dial of the steam gauge shall be graduated to approximately double the pressure at which the safety valve is set, but in no case less than 1½ times this pressure.

(d) Each double-ended boiler shall be fitted with two steam gauges, one on either end of the boiler.

(e) The error in reading at any point on the gauge shall not exceed 1½ percent of the maximum reading to which the scale is graduated; except that the error in reading at the graduation indicating the steam pressure shall not exceed one-half of 1 percent of the maximum reading to which the scale is graduated.

§ 52.70–50 Water indicators.

(a) Each boiler shall have two independent means of indicating the water level in the boiler, one of which shall be a gauge glass. The secondary indicator may consist of a gauge glass, or other device approved by the Commandant, or where the maximum allowable pressure does not exceed 250 pounds per square inch, three test cocks attached directly to the head or shell of the boiler. Where the maximum allowable pressure exceeds 250 pounds per square inch, the gauge glasses shall be of the flat type instead of the common tubular type.

(b) Glass water gauges shall be so located that the lowest visible part of the glass is not lower than the lowest permissible water level, as determined by § 52.70–40 (l). The lowest gauge cock shall be located 2 inches higher than the lowest visible part of the gauge glass, except that for horizontal boilers 48 inches or less in diameter they may be located at the lowest permissible water level.

(c) Double-ended fire-tube boilers shall be equipped as specified in paragraphs (a) and (b) of this section, except that a water-gauge glass, and three water-gauge cocks shall be installed on each end of the boiler.

(d) Externally fired flue boilers, such as are used on central western river vessels, shall be equipped as specified in pargraphs (a) and (b) of this section, except that float gauges may be substituted for gauge glasses.

(e) Gauge glass connections, and pipe connections shall be not less than ½ inch pipe size. Each water-gauge glass shall be fitted with a globe or gate-valved drain piped to a safe discharge point. Water-gauge glasses shall be fitted with top and bottom shutoff valves of such through-flow construction as to prevent stoppage by deposits of sediments. Straight-run globe valves of the ordinary type so designed as to form pockets in which sediment may collect shall not be used on such connections.

(f) When water columns are provided they shall be fitted to the heads or shells of boilers or drums with shutoff valves attached directly to the boiler or drums, or if necessary, connected thereto by a distance piece both at the top and bottom of the water columns. Shutoff valves used in the pipe connections between the boiler and water column or between the boiler and the shutoff valves required by paragraph (e) of this section for gauge glasses, shall be locked or sealed open. Water column piping shall not be fitted inside the uptake, the smoke box, or the casing.

(g) No connections, except for regulators, drain, steam gauges, or appurtenances which do not permit the escape of an appreciable amount of steam or water therefrom, shall be placed on the pipes connecting a water column or gauge glass to a boiler.

§ 52.70–55 Salinometer cocks.

In vessels operating in salt water, each boiler shall be equipped with a salinometer cock or valve which shall be fitted directly to the boiler in a convenient position. They shall not be attached to the water gauge or water column.

PART 53—LOW-PRESSURE HEATING BOILERS

53.05–1 Scope.
53.05–5 Plan approval.
53.05–10 Installation.
53.05–15 Safety and relief valves.
53.05–20 Fittings and appliances.

AUTHORITY: The provisions of this Part 53 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426–4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894; CGFR 56–28, July 24, 1956, 21 F.R. 5659; 167–38, Oct. 26, 1959, 24 F.R. 8857.

Subpart 53.01—General

§ 53.01–1 Scope.

(a) The regulations in this part apply to the design and construction of steel plate and cast iron steam and hot water boilers used for heating or hot water supply, the maximum allowable pressure of which shall not exceed the following:

(1) For steel plate boilers—30 pounds per square inch.

(2) For cast iron boilers—15 pounds per square inch for steam boilers and 30 pounds per square inch for hot water boilers.

(b) Except as otherwise provided for in this part, steel plate and cast iron steam and hot water heating boilers designed, fabricated and stamped in conformance with the requirements of the American Society of Mechanical Engineers Rules for Low-Pressure Heating Boilers (A. S. M. E. Boiler and Pressure Vessel Code Section IV) may be accepted for installation on vessels subject to inspection provided the maximum allowable pressure does not exceed 15 pounds per square inch for steam boilers and 30 pounds per square inch for hot water boilers.

(c) The maximum water temperature of hot water boilers shall not exceed 250° F.

(d) When operating conditions exceed those specified in paragraph (a) of this section, steel plate boilers shall be designed and fabricated in accordance with the requirements of Part 52 of this subchapter.

Subpart 53.03—Steel Plate Heating Boilers

§ 53.03–1 Scope.

(a) The regulations in this subpart contain detail requirements for the design and construction of steel plate heating boilers.

(b) A. S. M. E. steel plate heating boilers accepted under the provisions of § 53.01–1 need not comply with the applicable requirements of this subpart except that safety valves, relief valves, fittings and appliances shall meet the requirements prescribed therein.

(c) Steam heating boilers of steel plate construction, the maximum allowable pressure of which exceeds 15 pounds per square inch shall comply in all respects with the requirements of this subpart.

§ 53.03–5 Plan approval.

(a) Manufacturers of steel plate heating boilers of riveted or welded construction to be installed on vessels subject to inspection by the Coast Guard shall submit to the Commandant drawings in triplicate fully descriptive of the boilers to be fabricated.

(b) In event of approval of the boiler by the Commandant, it will be assigned a type approval number, which shall be stamped or otherwise permanently attached to each boiler in accordance with the provisions of § 53.03–75.

(c) The manufacturer shall also, upon request, furnish such additional drawings and specifications as may be necessary for the use of each Coast Guard District Commander and Officer in Charge, Marine Inspection. Unless the design or material of the boiler is changed, no further drawings will be required.

(d) A. S. M. E. steel plate heating boilers accepted under the provisions of § 53.01–1 are not subject to type approval by the Commandant and are exempt from the requirements of this section.

§ 53.03–10 Materials.

(a) The material used in the fabrication of steel plate heating boilers shall conform to the requirements of Parts 51 and 52 of this subchapter for power boilers except where otherwise provided for in this subpart.

(b) Plates used for pressure parts of boilers subject to the radiant heat of the fire shall be of firebox quality steel conforming to the requirements of subparts 51.04 or 51.22 of this subchapter.

§ 53.03–15 Computations and design.

(a) The design pressure of boilers covered by this subpart shall not be less than 30 pounds per square inch.

(b) The maximum allowable pressure and the minimum thickness of the cylindrical shell and dished heads of steel plate boilers shall be determined in accordance with the requirements of Subparts 52.05, 52.20 and 52.22 of this subchapter, except that the maximum allowable stress shall not exceed 80 percent of the values given in table 52.05–10 (a) in Part 52 of this subchapter.

(c) The minimum thickness of any boiler plate under pressure shall be ¼ inch for unstayed surfaces and $\frac{5}{16}$ inch for stayed surfaces and tube sheets.

§ 53.03–20 Braced and stayed surfaces.

(a) The design pressure, minimum thickness of material, and pitch of stays for stayed surfaces shall be determined in accordance with the requirements of Subpart 52.30 of this subchapter using coefficients as follows:

C=170 for plates exposed to the products of combustion and fitted with screw stays with riveted heads or welded collars.

C=190 for plates as above but not exposed to the products of combustion.

C=238 for plates exposed to the products of combustion fitted with screw stays with single nuts outside of plate and also for stays fitted with washers of twice the diameter of the stay. The thickness of the washers shall not be less than that of the plates through which the stays project and to which they are welded. Stays shall be supported at intervals not exceeding 6 feet.

C=274 for plates as above but not exposed to the products of combustion.

(b) The maximum distance from a corner welded joint to the nearest row of stay bolts shall not exceed one-half the maximum allowable pitch as determined by Subpart 52.30 of this subchapter.

(c) The diameter of a screw stay shall be taken at the bottom of the thread or point of least diameter. No screwed stay or stay attached by arc welding, shall be made of stock less than ¾ inch in diameter.

§ 53.03–25 Areas to be stayed.

(a) The area of a segment of a flanged head to be stayed shall be the area enclosed by the lines drawn 2 inches from the tubes and 3 inches from the shell. For unflanged heads the area to be stayed shall be the area enclosed by the shell and a line drawn 2 inches from the tubes.

(b) The staying of unflanged heads of welded boilers is not required if the greatest distance measured along a radial line from the inner surface of the shell to a fully supported line or point does not exceed 1¼ times the maximum allowable pitch of the stays as determined by Subpart 52.30 of this subchapter. For boilers fabricated with the heads set inside of the shell plates so that the distance from the end of the shell to the outside face of the head is at least 3 times the shell thickness, staying is not required if the greatest distance measured as above does not exceed 1½ times the maximum allowable pitch of the stays. For the purposes of applying this paragraph, a fully supported point is a stay rod or tube extending through the head and welded, having sufficient area to meet the requirements of table 53.03–30, and having area of weld in shear at least 1¼ times the required area of the stay member. A fully supported line is the tangent to a row of rolled or welded tubes or welded stays complying with the requirements of Subpart 52.30 of this subchapter or a bent or welded corner joint.

§ 53.03–30 Allowable stresses for stays or braces.

The maximum allowable stresses for stays, staybolts, or braces shall be in accordance with table 53.03–30.

TABLE 53.03–30—MAXIMUM ALLOWABLE STRESSES FOR STAYBOLTS AND STAYS OR BRACES

Description of staybolts and stays or braces	Stresses (pounds per square inch)	
	For lengths between supports not exceeding 120 diameters [1]	For lengths between supports exceeding 120 diameters [1]
(a) Unwelded or flexible staybolts less than 20 diameters [1] long, screwed through plates with ends riveted over, or such staybolts welded in by the arc welding process	7,500	----------
(b) Hollow steel staybolts less than 20 diameters [1] long, screwed through plates with ends riveted over, or such staybolts welded in by the arc welding process	8,000	----------
(c) Unwelded stays or braces and unwelded portions of welded stays or braces	9,500	8,500

[1] Diameters taken at body of stay or brace.

§ 53.03–35 Boiler tubes.

(a) The minimum thickness of copper tubes for heating boilers shall be determined by the following formula:

$$T=\frac{D}{45}+0.03 \qquad (1)$$

where:

T=thickness of tube wall, in inches.

D=outside diameter of tube, in inches.

(b) Copper tubes thinner than No. 16 B. W. G. shall not be used.

(c) The minimum thickness of steel or wrought iron tubes for heating boilers shall be in accordance with table 53.03–35 (c).

(d) Tubes may be attached to tube sheets by rolling and beading, or by welding.

(e) Where rolled and beaded tubes are not normal to the tube sheets, the plates shall have sufficient thickness to provide a parallel seating of not less than ¼ inch in depth between planes at right angles with the axis of the tubes.

TABLE 53.03–35 (c)—STEEL OR WROUGHT IRON TUBE FOR HEATING BOILERS

Diameter (inches)	Minimum thickness of tubes (inch)
1 or over but less than 2½	0.095
2½ or over but less than 3¼	.105
3¼ or over but less than 4	.120
4 or over but less than 5	.135

§ 53.03–40 Riveted boilers.

Riveted joints of heating boilers shall conform to the requirements of Subpart 52.10 of this subchapter as specified for power boilers.

§ 53.03–45 Welded boilers.

(a) The design and construction of welded heating boilers shall conform to the applicable requirements prescribed in Part 56 of this subchapter for power boilers, except as specified in this subpart.

(b) Radiographic examination and stress relieving of welded joints are not required.

(c) Welded longitudinal shell joints shall be of the double welded butt type or of the single welded butt type fitted with a backing strip.

(d) The circumferential welded shell joints may be of the single or double welded butt type.

(e) Unstayed dished heads, either concave or convex to the pressure, with or without flanges, may be used, provided the diameter of the heads does not exceed 42 inches and the radius of the dish does not exceed 75 inches. For diameters exceeding 42 inches, dished heads shall have flanges not less than 1 inch in length, and shall meet the requirements for power boilers.

(f) Where stays or tubes are welded to plates which require staying, the attachment shall meet the following requirements:

(1) The stays shall be inserted into holes through the tube sheets and attached thereto by strength fillet welds. The size of the fillet weld attaching the stay to the plate shall be not less than the thickness of the plate being stayed, except for plates thicker than ⅜ inch, in which case the size of the fillet weld shall be ⅜ inch. The holes in the plate shall be countersunk or beveled by machining or pressing, or the stays may protrude through the plates or a combination of these methods may be used. The area of the weld, in shear, measured parallel to that portion of the stay in or extending through the plate shall be not less than 1¼ times the required cross-sectional area of the stay.

(2) The ends of stays inserted through plates shall not project more than ⅜ inch beyond surfaces exposed to the products of combustion.

(3) The welding shall be done in such manner that excessive weld deposits do not project beyond the surface of the plate at the root of the weld.

(g) Welded joints attaching unflanged heads, tube sheets, sides, or combustion chamber plates shall be of the single or double welded butt type where possible. Other acceptable types of attachments are the square tee double fillet welded joint and single or double bevel grooved joints.

(h) Unflanged plates of welded joints shall be beveled not less than 45° to permit complete penetration of the weld metal and shall have a fillet reinforcement whose throat dimension shall not be less than one and one-fourth times the thickness of the shell or head, whichever is the least.

§ 53.03–50 Boiler openings.

(a) Boilers shall be provided with suitable manhole or handhole openings or washout plug openings to permit internal inspection and removal of sediment. Where the size of the boiler is such that entrance is impractical manhole openings may be omitted.

(b) A manhole shall be placed in the front head below the tubes of a horizontal return tubular boiler 48 inches or over in diameter. There shall be a manhole in the upper part of shell or head of a fire-tube boiler over 48 inches in diameter, except a vertical fire-tube boiler, or a boiler used exclusively for hot-water heating where there is no steam space.

(c) Vertical fire-tube or similar type boilers shall have at least 3 handholes or washout plugs in the lower part of the water leg and at least 2 handholes or washout plugs near the line of the lower tube sheet.

(d) A fire door or other access opening not less than 11 by 15 inches or 10 by 16 inches or 15 inches in diameter shall be provided for the furnace of an internally fired boiler in which the least furnace dimension is 28 inches or over.

(e) Washout plugs shall be made of nonferrous material and be of not less than 2 inches pipe size.

(f) Washout openings may be used for return pipe connections and the washout plug placed in a tee so that the plug is directly opposite and as close as possible to the opening in the boiler.

(g) All threaded openings shall be tapped into material having a minimum thickness as specified for the various pipe sizes in table 53.03–50 (g).

TABLE 53.03–50 (g)—MINIMUM THICKNESS OF MATERIAL FOR THREADED CONNECTIONS

Pipe size (inches)	Minimum thickness of material or length of thread required (inch)
1 and under	¼
1¼ to 2, inclusive	5/16
2½	3/8
3 to 3½, inclusive	½

(h) Flanged pipe connections to boilers shall conform to the standards given in table 55.07–15 (e1) of Part 55 of this subchapter for the corresponding pipe sizes.

§ 53.03–55 Installation.

(a) Feed or makeup water shall not be discharged directly into any part of a boiler exposed to the radiant heat of the fire. Feed water shall not be introduced through the openings or connections used for the water column, the water gauge, or the gauge cocks.

(b) Hot water systems shall be so installed that there will be no opportunity for the fluid-relief column to be accidentally shut off.

(c) When a stop valve is used in the supply pipe connection of a single boiler, there shall be one used in the return pipe connection.

(d) A stop valve shall be used in each supply and return pipe connection if more than one boiler is connected to a common system.

(e) Provision shall be made for cleaning the interior of the return piping at or close to the boiler.

(f) When stop valves are used they shall be properly designated on tags of metal or other durable material as indicated by the following:

> Supply valve—Number ( ). Do not close without also closing return valve—Number ( ).

> Return valve—Number ( ). Do not close without also closing supply valve—Number ( ).

§ 53.03–60 Safety valves.

(a) Each steam heating boiler shall have one or more approved safety valves set to discharge at a pressure of not to exceed 30 p. s. i., and designed, constructed and flow-tested for actual capacity in conformance with Subpart 162.012 of Subchapter Q (Specifications) of this chapter.

(b) The minimum safety valve capacity in pounds per hour shall be determined by dividing the maximum B. t. u. output at the boiler nozzle obtained by the firing of any fuel, for which the unit is designed, by 1,000 or by multiplying the square feet of heating surface by 5. In many cases a greater relieving capacity of valves will have to be provided than the minimum specified by these regulations. In all cases the requirements of paragraph (c) of this section shall be met.

(c) The steam safety valve capacity for each boiler shall be such that with the fuel-burning equipment installed, the pressure cannot rise more than 6 percent above the maximum allowable pressure of the boiler. For set pressures not exceeding 15 p. s. i., the safety valve capacity may be such that with the fuel-burning equipment installed, the pressure cannot rise more than 5 pounds above the maximum allowable pressure.

(d) When operating conditions are changed, or additional boiler heating surface is installed, the safety valve capacity shall be increased, if necessary, to meet the new conditions and be in accordance with paragraph (c) of this section. The additional safety valves may be installed on the outlet piping provided there is no intervening valve.

§ 53.03–62 Relief valves.

(a) Each hot-water heating or hot-water supply boiler shall have one or more approved relief valves set to relieve at a pressure not to exceed 30 p. s. i., and designed, constructed and flow-tested for actual capacity in conformance with Subpart 162.013 of Subchapter Q (Specifications) of this chapter.

(b) The steam relieving capacity in pounds per hour shall be determined by dividing the maximum B. t. u. output at the boiler nozzle obtained by the firing of any fuel, for which the unit is designed, by 1,000 or by multiplying the square feet of heating surface by 5. In many cases a greater relieving capacity of valves will have to be provided than that minimum specified by the regulations in this subpart. In every case, the requirements of paragraph (c) of this section shall be met.

(c) The relief valve capacity for each boiler shall be such that with any fuel burning equipment installed the pressure cannot rise more than 3 pounds per square inch above the maximum allowable pressure of the boiler.

§ 53.03–63 Installation of safety and relief valves.

(a) Safety and relief valves shall be installed with the spindle vertical, if possible, and may be connected directly to the boiler, or to a fitting connected to the boiler by a close nipple, or to a Y base or valveless steam or water pipe between adjacent boilers, or to a valveless header connecting steam or water outlets in the same boiler. Safety and relief valves shall not be connected to an internal pipe in the boiler.

(b) When a Y base is used the inlet area shall be not less than the combined outlet areas.

(c) When the size of the boiler requires a safety or relief valve larger than 4 inches in diameter, two or more valves having the required combined capacity shall be used. When two or more valves are used on a boiler, they may be single, directly attached, or mounted on a Y base.

(d) No shutoff of any description shall be placed between the safety or relief valve and the boiler, nor on discharge pipes between such valves and the atmosphere.

(e) The escape from safety or relief valves shall be fitted with discharge piping so arranged that there is no danger of scalding operating personnel.

(f) The area of the discharge pipe shall be not less than the area of the valve or aggregate area based on the nominal diameters of the valves with which it connects. The discharge pipe shall be fitted with an open drain to prevent water from lodging in the upper

part of the valve or in the pipe. When an elbow is placed on a safety- or relief-valve discharge pipe, it shall be located close to the valve outlet.

§ 53.03–70 Fittings and appliances.

(a) *Steam gauges.* (1) Each steam boiler shall have a steam gauge connected to its steam space, or to its water column, or to its steam connection by means of a siphon or equivalent device exterior to the boiler and of sufficient capacity to keep the gauge tube filled with water and so arranged that the gauge cannot be shut off from the boiler except by a cock, with T or lever handle, placed in the pipe near the gauge. The handle of the cock shall be parallel to the pipe on which it is located when the cock is open.

(2) Connections to steam gauge siphon shall be of nonferrous metal when smaller than 1 inch pipe and longer than 5 feet between the siphon and point of connection of pipe to boiler, and also when smaller than ½ inch pipe size and shorter than 5 feet between the siphon and point of connection of pipe to boiler.

(3) The scale on the dial of the gauge shall be graduated to not less than 30 p. s. i. The gauge shall be provided with effective stops for indicating pointer at the zero point. The travel of the pointer from zero to 30 p. s. i. shall be at least 3 inches.

(b) *Water pressure gauges.* (1) Each hot water boiler shall have a pressure gauge connected to it or to its flow connection in such a manner, that it cannot be shut off from the boiler except by a cock, with T or lever handle, placed on the pipe near the gauge. The handle of the cock shall be parallel to the pipe on which it is located when the cock is open.

(2) Pressure gauge connections shall be of nonferrous material when smaller than 1 inch pipe size and longer than 5 feet between gauge and point of connection of pipe to boiler, and also when smaller than ½ inch pipe size and shorter than 5 feet between gauge and point of connection of pipe to boiler.

(c) *Thermometers.* (1) Each hot-water boiler shall have a thermometer so located and connected that the temperature may be read at the same time as the water pressure is being observed.

(2) The thermometer shall be so located that it shall at all times indicate the temperature in degrees Fahrenheit of the water in the boiler or near the outlet.

(d) *Temperature combustion regulator.* A temperature combustion regulator, which will control the rate of combustion to prevent the temperature of the water from rising above 250° F. at or near the outlet, or a thermostatic device which will relieve the pressure on the boiler when the temperature exceeds 250° F. shall be installed on each hot water heating boiler.

(e) *Pressure control regulator.* When a pressure control regulator is used, it shall operate and prevent the steam pressure from rising above 30 p. s. i.

(f) *Bottom blowoff.* Each boiler shall have a blowoff pipe connection fitted with a valve or cock of not less than ¾ inch pipe size connected to the lowest water space available.

(g) *Water gauge glasses.* Each steam boiler shall have one or more water gauge glasses attached to the water column or boiler by means of valved fittings with the lower fitting provided with a valve or pet cock.

(h) *Gauge cocks.* Each steam boiler shall have two or more gauge cocks located within the visible range of the water glass.

(i) *Water column pipes.* The minimum size of pipes connecting a water column to a steam boiler shall be 1 inch. No connections, except for regulator, drain or steam gauge, shall be attached to a water column or the piping connecting a water column to a boiler. If the water column or gauge glass is connected to the boiler by pipe and fittings, a T, or equivalent fitting, in which a drain valve and piping may be attached, shall be installed in the water piping connection at every right angle turn to facilitate cleaning.

(j) *Automatic low-water fuel cutoff.* (1) Each automatically-fired steam boiler shall be equipped with an automatic low-water fuel cutoff, so located as to automatically cut off the fuel supply when the surface of the water falls below the lowest safe water level. If a water-feeding device is installed in conjunction with the required low-water fuel cutoff, it shall be so constructed that the water inlet valve cannot feed water into the boiler through the float chamber and so located as to supply the required amount of feed-water when the surface of the water falls to the lowest safe water level. This point shall be not lower than the lowest visible part of the water glass.

(2) The fuel or feed-water control device may be attached direct to the boiler or to the tapped openings provided for attaching a water glass direct to a boiler, provided that such connections from the boiler are non-ferrous T's or Y's not less than ½-inch pipe size between the boiler and the water glass, so that the water glass is attached direct and as close as possible to the boiler. The straightway tapping of the Y or T shall take the water glass fitting, and the side outlet of the Y or T shall take the fuel cutoff or water-feeding device.

(3) Low water cutoff devices employing a float and float bowl shall have a vertical straightaway valved drain pipe at the lowest point in the water equalizing pipe connection by which the bowl and equalizing pipe can be flushed and the device tested.

§ 53.03–75 Hydrostatic tests, inspection, and stamping.

(a) Each boiler shall be subjected to a hydrostatic test pressure of not less than 60 pounds per square inch by the manufacturer.

(b) Shop inspection of A. S. M. E. approved heating boilers by a Coast Guard inspector is not required.

(c) Except as provided for in paragraph (b) of this section, heating boilers of steel plate construction, the maximum allowable pressure of which exceeds 15 p. s. i., shall be examined in the manufacturer's shop by an inspector while the boiler is subjected to the required hydrostatic test pressure. The inspector shall ascertain that there are no defects in workmanship and materials and that no defects have occurred due to the hydrostatic test.

(d) Steel plate heating boilers of the automatically controlled package type shall be subjected to such operating tests as may be prescribed by the Commandant.

(e) Upon completion of the hydrostatic test and inspection of heating boilers subject to shop inspection, and after such boilers are found acceptable, they shall be stamped in a suitable location so as to be readily visible, with the following data:

(Name of fabricator and serial number)

(Month and year fabricated)
---- P. s. i.
(Maximum allowable pressure) (Steam)
---- Pounds per hour
(Safety valve capacity, minimum)
Coast Guard approval No. and symbol ----
Inspector's initials ----

(f) After installation, each heating boiler shall be hydrostatically tested to twice the pressure at which the safety or relief valve is set to open.

Subpart 53.05—Cast-Iron Heating Boilers

§ 53.05–1 Scope.

(a) The regulations in this subpart contain requirements for the design and construction of cast iron heating boilers.

(b) A. S. M. E. cast iron heating boilers accepted under the provisions of § 53.01–1 shall comply with the applicable requirements for safety valves, relief valves, fittings and appliances prescribed in this part.

§ 53.05–5 Plan approval.

A.S.M.E. cast iron heating boilers accepted under the provisions of § 53.01–1 are not subject to type approval by the Commandant and are exempt from the requirements of this section.

§ 53.05–10 Installation.

The provisions of § 53.03–55 shall apply to cast iron boilers.

§ 53.05–15 Safety and relief valves.

(a) The provisions of §§ 53.03–60, 53.03–62 and 53.03–63 shall apply to cast iron heating boilers except as specified in this section.

(b) Safety valves shall be set to discharge at a pressure not to exceed 15 pounds per square inch and relief valves shall be set to discharge at a pressure not to exceed 30 pounds per square inch.

(c) Safety and relief valves for cast iron heating boilers shall be such that with any fuel burning equipment installed, the pressure cannot rise above the maximum allowable pressure more than 5 pounds per square inch for a steam boiler and three pounds per square inch for a hot water boiler.

§ 53.05–20 Fittings and appliances.

The provisions of § 53.03–70 shall apply to fittings and appliances for cast iron boilers, except that the pressure control regulator shall operate to prevent the steam pressure from rising above 15 pounds per square inch.

PART 54—UNFIRED PRESSURE VESSELS

Subpart 54.01—General Requirements

Sec.
54.01–1 Scope.
54.01–5 Definitions.
54.01–10 Plan approval.

Subpart 54.03—Design and Construction

54.03–1 Materials.
54.03–5 Workmanship and design.
54.03–10 Cylindrical shells and heads.
54.03–12 Cast-iron heads.
54.03–15 Tube sheets.
54.03–20 Heat exchanger tubes.
54.03–25 Bolted flanged connections.
54.03–27 Unfired steam boilers.
54.03–30 Evaporators.
54.03–35 Access and inspection openings.
54.03–40 Openings and reinforcements.

Subpart 54.07—Pressure-Relief Devices

54.07–1 General requirements.
54.07–5 Relief valves.
54.07–10 Safety valves.
54.07–15 Heat exchanger relief valves.
54.07–20 Rupture disks.
54.07–25 Safety relief valves.

AUTHORITY: The provisions of this Part 54 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426–4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965, Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167–14, Nov. 26, 1954, 19 F.R. 8026; 167–20, June 18, 1956, 21 F.R. 4894; CGFR 56–29, July 24, 1956, 21 F.R. 5659; 167–38, Oct. 26, 1959, 24 F.R. 8857, unless otherwise noted.

Subpart 54.01—General Requirements

§ 54.01–1 Scope.

(a) The regulations in this part contain detail requirements for the design and construction of unfired pressure vessels subject to inspection by the Coast Guard.

(b) The following classes of unfired pressure vessels are not subject to plan approval or shop inspection by the Coast Guard and are exempt from the requirements of this part:

(1) All unfired pressure vessels designed for a maximum allowable pressure not exceeding 15 pounds per square inch.

(2) Compression tanks containing water under pressures not exceeding 100 pounds per square inch and temperatures not exceeding 200 degrees F. Compression tanks containing water and fitted with a permanent air charging line subject to pressures not exceeding 15 pounds per square inch and temperatures not exceeding 200 degrees F.

(3) Condensers, jacket water coolers and lubricating oil coolers containing mediums at or below the pressures and temperatures specified in Table 54.01–1 (c).

(c) Unfired pressure vessels,[1] exclusive of those covered by paragraph (b) of this section, designed for a maximum allowable pressure exceeding 15 pounds per square inch shall comply with the requirements for materials, construction, welding, inspection and marking as specified in this subchapter, except such vessels may be exempt from shop inspection under any of the following conditions:

(1) When the internal volume does not exceed 5 cubic feet and the maximum allowable pressure does not exceed 100 p. s. i.

(2) When a pressure vessel contains mediums at or below pressures and temperatures specified in Table 54.01–1 (c).

TABLE 54.01–1 (c)—EXEMPTION OF UNFIRED PRESSURE VESSELS FROM SHOP INSPECTION

Service	Pressure—p. s. i.	Temperature, °F.
Steam, gas or vapors	15	----------
Fuel oil	100	150
Lubricating oil	100	200
Liquids, except fuel oil and lubricating oil.	100	200

(d) Unfired pressure vessels containing dangerous articles, substances or combustible liquids which are required by law or regulation to be carried in containers fabricated as a pressure vessel shall comply with the requirements for materials, construction, welding, inspection and marking as specified in this chapter, irrespective of pressure, temperature or capacity, except vessels containing such dangerous articles which are permitted by Subchapter N (Dangerous Cargoes) of this chapter, to be carried in containers constructed in accordance with the requirements of the Interstate Commerce Commission.

(e) Small unfired pressure vessels which do not fully comply with the requirements of this subchapter may be accepted by the Commandant for installation on vessels subject to inspection by the U. S. Coast Guard, provided:

(1) The failure of such unfired pressure vessels will not endanger the safety of the vessel.

(2) The internal volume does not exceed 5 cubic feet.

(3) The construction complies with the requirements of a recognized code, or tests as prescribed by the Commandant are carried out to prove that the design and fabrication are suitable for the intended application.

(4) Such unfired pressure vessels shall otherwise comply with the requirements for plan approval and marking as specified in this subchapter.

(f) Unfired pressure vessels, other than those containing compressed air, which do not fully comply with the requirements of this subchapter may be accepted for installation on vessels subject to inspection, provided:

(1) They are used exclusively in the handling and storage of petroleum and associated products obtained in offshore drilling operations.

(2) The design, fabrication, and stamping comply with the requirements of the API-ASME or ASME Code for Unfired Pressure Vessels.

§ 54.01–5 Definitions.

(a) *Unfired pressure vessel.* An unfired pressure vessel is a tank containing gas, vapor, or liquid, or a combination thereof, under pressure, and not exposed to the products of combustion.

(b) *Heat exchanger.* A heat exchanger is a device usually consisting of a shell and tubes or coils by which heat is transferred from one substance to another.

§ 54.01–10 Plan approval.

Manufacturers intending to fabricate unfired pressure vessels, heat exchangers, evaporators and similar appurtenances covered by the regulations in this part, to be installed on vessels subject to inspection by the Coast Guard, shall submit to the Officer in Charge, Marine Inspection, having jurisdiction over the vessel, detail plans in triplicate, which shall be fully descriptive of the pressure parts of such unfired pressure vessels. When due to location of the fabrication shop, such procedure would result in unnecessary delay in transmission, the plans may be forwarded directly to the Commandant (MMT) U. S. Coast Guard, Washington, D.C., 20226.

[1] The shell, tubes or coils of a heat exchanger shall be considered an unfired pressure vessel if such parts may be subjected to steam, gas or vapor pressures exceeding 15 pounds per square inch.

Subpart 54.03—Design and Construction

§ 54.03–1 Materials.

(a) Unfired pressure vessels and appurtenances covered by this part may be fabricated of material conforming to the specifications given in Part 51 of this subchapter and limited to the grades of material listed in table 52.05–10(a) in Part 52 of this subchapter and table 54.03–10(c) except as otherwise provided for in this part.

(b) Steel plate used for pressure parts of unfired pressure vessels may be of Class B material complying with the requirements of Subpart 51.04, 51.22 or 51.23 in Part 51 of this subchapter, except that in the case of unfired pressure vessels having maximum allowable pressures exceeding 700 pounds per square inch or temperatures exceeding 650° F. steel plate shall be of Class A material meeting the requirements of Subpart 51.04 in Part 51 of this subchapter.

(c)(1) Arc- or gas-welded pressure vessels over one inch in thickness, when constructed of steel plate complying with Subpart 51.04 of this subchapter conforming to specifications A202, A203, A204, A212, A225, A299, A302, and A387, Grade A, B, or C, shall conform to the requirements for Class I welded pressure vessels.

(2) Where vessels are constructed of steel plate, conforming to specifications A202, A203, A204, A212, A225, A299, A302, and A387, Grade A, B, or C, which do not exceed one inch in thickness, the requirements for Class II welded pressure vessels shall apply and the vessels shall be stress-relieved as required by § 56.01–70(h) of this subchapter.

(3) Arc- or gas-welded pressure vessels, when constructed of steel plate conforming to specifications A357, A387, Grades D and E, and A410, shall conform to the requirements for Class I pressure vessels.

(d) Carbon- and alloy-steel castings shall comply with the grades of material listed in table 52.05–10 (a) in Part 52 of this subchapter. The casting quality factor specified in § 52.05–13 of this subchapter shall be applied to the stresses given in table 52.05–10 (a).

(e) For electric resistance-welded pipe or tubing the stress values in table 52.05–10 (a) in Part 52 of this subchapter shall be substituted in the applicable design formulas for the factor SE.

(f) Unfired pressure vessels may be constructed of cast iron conforming to the applicable specifications of Part 51 of this subchapter under the following conditions:

(1) Cast iron shall not be used in the construction of shells and heads of pressure vessels where subject to steam pressures exceeding 30 pounds per square inch or where subject to gas or liquid pressures exceeding 125 pounds per square inch.

(2) The maximum allowable stress for cast iron as given in table 54.03–1 (f) shall be used in the applicable formula for unfired pressure vessels.

TABLE 54.03–1(f)—MAXIMUM ALLOWABLE STRESS FOR CAST IRON

Minimum tensile strength, p. s. i.:	*Maximum tensile stress, p. s. i.*
20,000	2,000
25,000	2,500
30,000	3,000
35,000	3,500
40,000	4,000
50,000	5,000

(g) Nonferrous materials may be used in the construction of unfired pressure vessels subject to the following conditions:

(1) The grade of materials shall be as specified in Part 51 of this subchapter, and as given in Table 54.03–10(c).

(2) The pressure and temperature limitations for bronze castings shall be as given in § 55.07–1(d) of this subchapter.

(3) Welding may be employed for aluminum alloy grades 6061–T6 and 6063–T6, provided welding procedure qualification tests are conducted in accordance with § 56.01–15 of this subchapter.

§ 54.03–5 Workmanship and design.

(a) Equipment covered by this part and constructed of plates with riveted or welded joints shall conform to all the requirements of Part 52 of this subchapter for such construction, except as provided otherwise in this part.

(b) Flanges cast integral with shells or heads shall have a fillet radius not less than the thickness of the necks to which they are attached.

(c) The corner radius of a cast unstayed dished head measured on the concave side of the head shall be not less than three times the thickness of the head, but in no case less than 6 percent of the outside diameter of the shell.

§ 54.03–10 Cylindrical shells and heads.

(a) The maximum allowable pressure of cylindrical shells and heads of unfired pressure vessels under internal pressure shall be determined by the applicable formulas given in Part 52 of this subchapter, except as provided otherwise in this part. The maximum allowable pressure of cylindrical shells shall be determined from Formula (1) of § 52.05–10 of this subchapter when the thickness does not exceed one-half of the inside radius, or the maximum allowable pressure does not exceed 0.385 SE. When the thickness of the shell exceeds one-half of the inside radius or when the maximum allowable pressure exceeds 0.385 SE, Formula (2) of § 52.05–10 of this subchapter shall be used.

(b) The minimum thickness of shell plates, heads or dome plates of seamless or welded construction shall be $\frac{3}{32}$ inch after forming and without allowances for corrosion. The minimum thickness, after forming, of any plate in a riveted pressure vessel shall be $\frac{7}{16}$ inch without corrosion allowance.

(c) The maximum allowable stresses for nonferrous materials shall be as given in table 54.03–10(c).

TABLE 54.03–10(c)—MAXIMUM ALLOWABLE STRESSES [1] FOR NONFERROUS MATERIALS

Specification	A.S.T.M. designation	Grade		Minimum tensile strength p.s.i.	Minimum yield strength p.s.i.	Notes	For metal temperatures not exceeding ° F.

[1] All stresses refer to the annealed condition of the material, unless otherwise specified. For wrought material, the allowable "S" values are based upon one-fourth of the minimum tensile strength or two-thirds of the minimum yield strength for temperatures of 150° F. and below, whichever is lower; and upon creep stress or stress-rupture at the higher temperatures. For cast material, the allowable "S" values are based upon one-fifth of the minimum tensile strength for temperatures of 150° F. and below; and upon creep stress or stress-rupture at the higher temperatures.
[2] The same stress may be employed for a temperature of 406° F.
[3] The minimum yield strength employed not included in the specification.
[4] For nominal thickness not greater than 2.00-inch.
[5] Strength of reduced tensile specimen to qualify welding procedures, see § 54.03-1(g)(3).
[6] This material limited to a maximum allowable temperature of 212° F.
[7] This material approved for tube plates only.
[8] For nominal thickness not greater than 2.50-inch.
[9] For nominal thickness not less than 0.25-inch.
[10] The minimum tensile strength employed not included in the specification.
[11] These stresses refer to the light drawn condition.
[12] The same stress may be employed for 320° F.
[13] The stress values given for this material are not applicable when either welding or thermal cutting is employed.
[14] To these stresses a casting quality factor of 0.80 shall be used. This is not intended to apply to valves and fittings complying with A.S.A. standards.
[15] This stress is not permitted for temperatures exceeding 306° F.
[16] The stresses refer to the stress relieved condition.
[17] The maximum operating temperature is (arbitrarily) set at 500° F., because harder temper adversely affects design stress in the creep rupture temperature range.

§ 54.03-12 Cast-iron heads.

(a) The maximum allowable pressure and minimum thickness of circular cast-iron blank spherically dished heads concave to the pressure shall be calculated by the following formulas:

$$P=\frac{ST}{0.6R} \quad (1)$$

$$T=\frac{0.6PR}{S} \quad (2)$$

where:

P=maximum allowable pressure, in pounds per square inch.
T=thickness of dished portion of the head, in inches.
R=radius to which the head is dished measured on the concave side of the head, in inches (not to exceed the inside diameter of the shell to which the head is attached).
S=maximum allowable tensile stress, as given in table 54.03-1 (f), in pounds per square inch.

(b) Cast-iron heads of semi-ellipsoidal form in which the inside depth of the head (one-half of the minor axis of the ellipse) is not less than one-quarter of the inside diameter of the shell to which the head is to be attached, shall have a thickness of at least that required for a cast-iron shell of the same diameter.

(c) Heads flatter than the limits prescribed in this section for dished heads shall be designed as flat plates.

(d) Cast-iron dished heads integral with the cast shell shall have a corner radius equal to at least three times the thickness of the head.

§ 54.03-15 Tube sheets.

(a) The maximum allowable pressure and the minimum thickness of tube sheets shall be calculated by the following formulas:

(1) Stationary or floating tube sheets of monoplate construction clamped between opposing contacts within the bolt circle and freely supported at edge with straight tubes attached by expanding.

$$P=\frac{ST^2}{0.25D^2} \quad (1)$$

$$T=D\sqrt{\frac{0.25P}{S}} \quad (2)$$

(2) Fixed or integral channel-tube sheets firmly secured all around edge, with straight tubes attached by expanding.

$$P=\frac{ST^2}{0.16D^2} \quad (3)$$

$$T=D\sqrt{\frac{0.16P}{S}} \quad (4)$$

(3) Bolted tube sheet having gaskets inside bolt circle, where the setting of the bolts tends to dish the tube sheet, with straight tubes attached by expanding.

$$P=\frac{ST^2}{D^2\left[0.30+\frac{1.4\ Whg}{HD}\right]} \quad (5)$$

$$T=D\sqrt{\frac{P\left[0.30+\frac{1.4\ Whg}{HD}\right]}{S}} \quad (6)$$

(4) Floating tube sheets which are of noncircular design with straight tubes attached by expanding.

$$P=\frac{ST^2}{0.50D^2} \quad (7)$$

$$T=D\sqrt{\frac{0.50P}{S}} \quad (8)$$

where:

P=maximum allowable pressure, in pounds per square inch.
S=maximum allowable stress, 80 percent of the value as given in tables 52.05-10(a) or 54.03-10(c), in pounds per square inch.
T=minimum thickness of unreinforced tube sheet, measured at bottom of partition groove, in inches.
D=mean gasket diameter for flanged attachment; inside diameter of shell when bolted attachment is not employed; or shortest span for noncircular tube sheets measured to center line of gasket if bolted construction is employed; or to point of support if welded construction is employed; in inches.
W=flange design bolt load, in pounds. (See § 54.03-25 (c).)
hg=radial distance from the bolt-circle diameter to the diameter D, in inches.
H=total hydrostatic end force on area bounded by the mean diameter of the gasket or joint contact surface, in pounds.

(b) The minimum thickness of a tube sheet in which tubes are attached by expanding shall be not less than the outside diameter of the tubes.

(c) Tube sheet of a thickness less than that required by paragraph (a) may be considered by the Commandant where stiffened by ribs secured to the tube sheet by continuous penetration or double fillet welds. Such stiffeners will not be considered effective for a distance exceeding 30 plate thicknesses in calculating the section modulus.

(d) Where tubes are welded or brazed to a tube sheet and no expansion joint is employed in the shell construction, consideration may be given by the Commandant to the use of a tube sheet of lesser thickness than required by the formulas in this section, provided the

tube pitch is adequate for welding or brazing.

(e) U-tube tube sheets shall have a thickness of at least 1.25 times the thickness required for tube sheets with straight tubes.

(f) The pitch of tubes attached to tube sheets by roller expanding shall be not less than that specified in Table 54.03–15 (f), except that a lesser tube pitch may be authorized for heat exchangers, the failure of which will not affect the safety of the vessel, provided the manufacturer demonstrates by tests prescribed by the Commandant, using the types of material and identical fabricating procedures to be employed in construction, that he can produce equipment of acceptable workmanship and free of leakage.

TABLE 54.03–15 (f)—MINIMUM PITCH OF TUBES

Outside diameter of tube, in inches	Pitch of tube, in inches
½ and below	⅝
⅝	13/16
¾	15/16
1	1¼
1¼	1⅝
1½	1⅞

(g) Some types of arc- or gas-welded tube sheet attachments which are acceptable are illustrated in figure 54.03–15 (g).

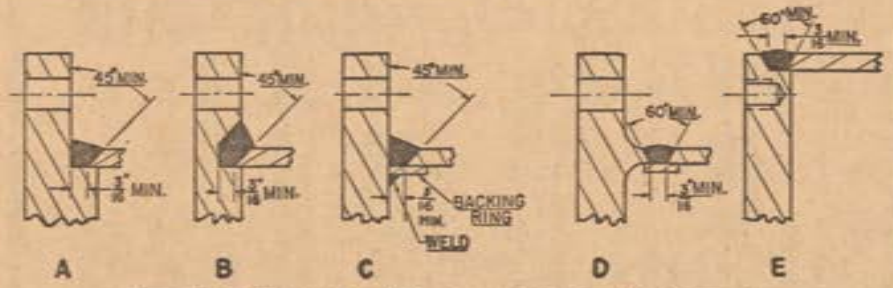

FIGURE 54.03–15 (g)—Acceptable types of tube sheet attachments.

§ 54.03–20 Heat exchanger tubes.

(a) The maximum allowable pressure and the minimum thickness of tubes for heat exchangers subject to internal pressure shall be calculated by the following formulas:

$$P = \frac{2.3\ ST}{D} - 0.036\ S \qquad (1)$$

$$T = \frac{D}{2.3\ S}(P + 0.036\ S) \qquad (2)$$

where:

P = maximum allowable pressure, in pounds per square inch.

S = maximum allowable stress, in pounds per square inch, as given in table 52.05–10 (a) or table 54.03–10 (c), at not less than the maximum expected mean wall temperature. The mean wall temperature is defined as the sum of the outside and inside surface temperatures divided by 2 where the temperature of the heating medium is considered to be for saturated steam at the design conditions and the temperature of the liquid or vapor being heated is the maximum temperature of the fluid at the hot terminal.

T = minimum thickness of the tube wall, in inches.

D = external diameter of the tube, in inches.

(b) Additional wall thickness above the minimum required by formula (2) of this section shall be provided as follows:

(1) When tubes act as stays, additional wall thickness shall be provided to carry the external load imposed upon the tubes.

(2) When tubes are expanded into the tube seats, at least one additional B. W. G. thickness shall be provided over a length at least equal to the width of the seat plus 1 inch.

(3) Bent tubes shall have the thickness increased when the radius is less than 5 times the outside diameter of the tube, to compensate for the reduction in wall thickness due to fabrication.

§ 54.03–25 Bolted flanged connections.

(a) *Scope.* (1) Bolted flanged connections conforming to the American Standard for Steel Pipe Flanges and Flanged Fittings (ASA B16.5) as given in Table 55.07–15 (e) (1) shall be used for connections to external piping and may be used for other flanged connections.

(2) Bolted flanged connections to pressure vessels and special flange designs other than those meeting the requirements of subparagraph (1) of this paragraph shall be designed in accordance with the requirements of this section.

(3) The regulations in this section may be applied to flanges having the gasket entirely within the inner edge of the bolt holes.

(4) This section shall not be construed to prohibit the use of other types of bolted flanged connections, such as flanges using full-face gaskets, or other means to provide effective restraint against flange deflection. Such designs may be used provided the design is acceptable to the Commandant.

(b) *Material.* (1) For temperatures not exceeding 450° F., commercial carbon-steel bolting material may be used for attaching heads, doors, covers, or flanges. Carbon-steel bolting and nut material shall comply with Subpart 51.49 of this subchapter. Bolting and nuts shall meet the minimum requirements of American Standard Coarse Thread Series. Nuts shall meet the requirements of American Standard Heavy Dimensions as given in Table 54.03–25 (b).

(2) For temperatures exceeding 450° F., high strength or alloy steel bolting and nut material complying with the requirements of Subpart 51.49 of this subchapter shall be employed. Nuts of the below classes shall not be used for temperatures exceeding the following: class 1, 750° F.; classes 2 and 2H, 800° F.; class 4, 900° F.; and class 3, 1,050° F. Bolting and nuts shall meet the minimum requirements of the American Standard Heavy Dimensions and the American Standard Threads for High Strength Bolting as given in table 54.03–25 (b). Washers are not required but when used shall be of forged rolled steel.

(3) Studs continuously threaded or bolts with the unthreaded portion reduced to the same diameter as that of the root of the thread, shall be employed when the temperature exceeds 450° F.

(4) Bolting shall have a length of thread engagement of not less than the normal thickness dimension of American Standard heavy nuts.

(5) In no case shall the size of a bolt be less than ½ inch in diameter.

(c) *Bolt loads*—(1) *Operating bolt load.* The minimum required operating

$b = \frac{1}{2}\sqrt{b_o}$, when $b_o > \frac{1}{4}$"

LOCATION OF GASKET LOAD REACTION

NOTE: The gasket factors listed only apply to flanged joints in which the gasket is completely within the inner edges of the bolt holes.

bolt load W_{m_1} shall be determined by formula (1) under maximum operating conditions.

$$W_{m_1} = H + H_p = 0.785\,G^2P + (2b \times 3.14\,GmP) \quad (1)$$

NOTE 1: Under maximum operating conditions the minimum required operating bolt load W_{m_1} is the load required to resist the hydrostatic end force H exerted by the maximum internal pressure upon the area bounded by the mean diameter of the gasket, and, in addition, maintain a compression load H_p on the gasket or joint-contact surface which experience has shown to be sufficient to insure a tight joint.

(2) *Initial bolt load.* The minimum required initial bolt load W_{m_2} shall be determined by formula (2) under atmospheric temperature conditions without consideration of internal pressure.

$$W_{m2} = H_y = 3.14\,bGy \quad (2)$$

NOTE 2: Under atmospheric temperature conditions without consideration of internal pressure, the minimum required initial bolt load W_{m_2} is the load H_y required to seat the gasket or joint-contact surfaces sufficiently to insure a tight joint.

(3) *Bolt areas.* (i) The total required bolt area A_m shall be determined from the greater of the values obtained from formula (3) under operating conditions, or from formula (4) under atmospheric temperature conditions without consideration of internal pressure.

$$A_{m_1} = \frac{W_{m_1}}{S_b} \quad (3)$$

$$A_{m_2} = \frac{W_{m_2}}{S_a} \quad (4)$$

(ii) The actual total cross-sectional area of the bolts A_b shall be not less than A_m.

(4) *Flange design bolt load.* The bolt load W used in the design of the flange shall be not less than the greater of the values obtained from formula (1) under maximum operating conditions, or from formula (5) under atmospheric temperature conditions without consideration of internal pressure.

$$W = \frac{(A_m + A_b)}{2} S_a \quad (5)$$

(5) *Nomenclature of bolt and flange design symbols.* The symbols used in this paragraph mean:

W_{m_1} = minimum required bolt load for maximum operating conditions, in pounds.
W_{m_2} = minimum required initial bolt load for atmospheric temperature conditions without consideration of internal pressure, in pounds.
W = flange design bolt load, in pounds.
H = total hydrostatic end force, in pounds.
H_p = total joint-contact-surface compression load, in pounds.
H_y = total joint-contact-surface-seating load, in pounds.
G = mean diameter of gasket or joint-contact-surface, in inches (except for lap joints with full face gasket, in which case it is midpoint of contact between flange and lap).
P = maximum allowable pressure, in pounds per square inch.
b = effective gasket or joint-contact-surface seating width, in inches (see table 54.03-25 (c1)).
$2b$ = effective gasket or joint-contact-surface pressure width, in inches (see table 54.03-25 (c1)).
N = possible contact width of gasket in inches (see table 54.03-25 (c1)).
w = width of local concentration on gasket, in inches (see table 54.03-25 (c1)).
m = limit contact compression factor (see table 54.03-25 (c1)).
y = gasket or joint-contact-surface unit seating stress, in pounds per square inch (see table 54.03-25 (c1)).
S_b = maximum allowable bolt stress at operating temperature, in pounds per square inch, as given in table 52.05-10 (a).
S_a = maximum allowable bolt stress at atmospheric temperature, in pounds per square inch, as given in table 52.05-10 (a).
A_m = total required cross-sectional area of bolts at root of thread or section of least diameter under stress, in square inches.
A_b = total actual cross-sectional area of bolts at root of thread or section of least diameter under stress, in square inches.

(d) *Shell flange attachments.* (1) The flanges covered by this paragraph are intended to be used for shell attachments to tube sheets, channels and end covers of unfired pressure vessels and heat exchangers.

(2) Except as otherwise provided for in this paragraph, shell flange attachments shall comply with the requirements of § 55.07-15(f) of this subchapter.

(3) Ring flanges of the type shown in Figures 55.07-15 (f3) and (f6) may be

used for pressures not exceeding 300 p.s.i. and temperatures not exceeding 650° F.

(4) Ring flanges of the plate or slip-on type welded to the shell by means of full penetration welds may be used for pressures not exceeding 600 p.s.i. and temperatures not exceeding 700° F. Some acceptable types of full penetration welded joints are shown in Figure 52.25-45(d), details (a), (b), (c), (g), and (h).

§ 54.03-27 Unfired steam boilers.

(a) Unfired pressure vessels in which steam is generated shall be classed as unfired steam boilers except that pressure vessels known as evaporators or heat exchangers may be classed as unfired pressure vessels.

(b) Unfired steam boilers shall be constructed in accordance with the requirements of Part 52 or 54 of this subchapter. When the maximum allowable pressure exceeds 30 p.s.i., unfired steam boilers shall comply with the requirements for Class I pressure vessels.

(c) Unfired steam boilers shall be fitted with an efficient water level indicator, a pressure gage and a blowdown valve.

(d) An approved safety valve shall be fitted on unfired steam boilers as required by § 54.07-10.

§ 54.03-30 Evaporators.

(a) An evaporator in which steam is generated shall be fitted with an efficient water level indicator, a pressure gauge, and a blowdown valve.

(b) An approved safety valve shall be fitted on evaporators as required by § 54.07-10.

§ 54.03-35 Access and inspection openings.

(a) All unfired pressure vessels for use with compressed air or where subject to internal corrosion shall be provided with suitable manhole, handhole, or other inspection openings for examination and cleaning.

(b) Unless otherwise specified in this subchapter, the access and inspection openings in the shell or head of an unfired pressure vessel shall comply with the requirements of Subpart 52.24 of this subchapter for power boilers.

(c) (1) Vessels not exceeding 12 inches in inside diameter are not required to have inspection openings.

(2) Vessels over 12 inches but not exceeding 16 inches in inside diameter need not be provided with inspection openings if the vessels are fitted with two pipe connections of at least 1½ inches in pipe size which can be disconnected for inspection.

(d) All unfired pressure vessels which require access or inspection openings shall be equipped as follows:

(1) Vessels over 12 inches but less than 18 inches in inside diameter shall have at least two plugged, threaded inspection openings of not less than 1½ inches pipe size.

(2) Vessels 18 to 36 inches, inclusive, in inside diameter shall have at least two threaded pipe plug inspection openings of not less than 2 inches pipe size, or two handholes, or one manhole.

(3) Vessels over 36 inches in diameter shall have a manhole, except those whose shape or use make it impracticable, in which case they shall have at least two 4 x 6 inch handholes or two handholes of equivalent area.

(4) When handholes or plugged openings are used for inspection openings in place of a manhole, where permitted, one handhole or one plugged opening shall be placed in each head or in the shell near each head.

(5) Removable heads or cover plates may be used in place of the required openings provided they are equal at least to the required size of the required inspection openings.

§ 54.03-40 Openings and reinforcements.

(a) Unless otherwise specified in this subchapter, openings and reinforcements in the shell or heads of unfired pressure vessels shall comply with the requirements of Subpart 52.25 in Part 52 of this subchapter for power boilers.

(b) The thickness of nozzles attached to shells or heads of unfired pressure vessels shall be not less than that required for Schedule 40 pipe of the same diameter, and in no case shall the nozzle wall thickness be less than that determined by § 55.07-5 of this subchapter.

(c) (1) Screwed and flanged piping connections to the outlets on a pressure vessel shall comply with the requirements of Part 55 of this subchapter, except as otherwise provided for in this paragraph.

(2) Plate or slip-on type flange attachments to nozzles with full penetration welds may be used for pressures not exceeding 600 p.s.i. and temperatures not exceeding 700° F.

(d) Some types of acceptable arc-welded connections to shells, drums or headers are illustrated in figure 52.25-45 (d) in Part 52 of this subchapter.

Subpart 54.07—Pressure-Relief Devices

§ 54.07-1 General requirements.

(a) Unfired pressure vessels, such as tanks, containing liquids, gases, or vapors, and in which steam is not generated, shall be protected by a relief valve set to relieve at a pressure not exceeding that for which the vessel is designed and of sufficient relieving capacity to prevent a pressure increase exceeding 10 percent above the maximum allowable pressure, except as provided for in paragraph (b) of this section.

(b) Where an additional hazard can be created by exposure of an unfired pressure vessel containing compressed gas to fire or other unexpected sources of external heat (for example, vessels used for the transportation of liquefied compressed gases) relief valves shall be capable of preventing the pressure from rising more than 20 percent above the maximum allowable pressure of the vessel. The minimum required relief valve capacities for liquefied compressed gases are in Part 38 of Subchapter D (Tank Vessels) and in Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

(c) Pressure-relief devices shall be constructed so that they can not be readily rendered inoperative, and shall be so located, and installed as to be readily accessible for inspection and repair.

(d) For certain pressure vessels containing substances that may render a relief valve inoperative, or where the installation of a relief valve is considered impracticable, the Commandant may authorize the use of a rupture disk in lieu of a relief valve, provided such pressure vessels contain liquids or vapors that are not lethal or noxious and the temperature of the contents does not exceed 212° F. When the use of rupture disks is approved by the Commandant, the installation shall comply with the requirements of § 54.07-20.

(e) The opening through all pipes and fittings between a pressure vessel and its pressure-relieving device shall have at least the area of the pressure-relieving device inlet, and in all cases shall have sufficient area so as not to unduly restrict the flow to the pressure-relieving device. The opening in the vessel shall be designed to provide direct and unobstructed flow between the vessel and its pressure-relieving device.

§ 54.07-5 Relief valves.

(a) All relief valves for use on unfired pressure vessels or on piping systems where approved safety valves are not required shall in general comply with the requirements for safety valve construction in Subpart 162.001 or 162.012 of Subchapter Q (Specifications) of this chapter and shall be designed to suitably meet the protection and service requirements for which they are intended, except that relief valves are not required to have huddling chambers for service other than steam.

(b) In no case shall the diameter of a relief valve be less than ½ inch.

(c) Cast iron may be employed in the construction of relief valves for pressures not exceeding 125 pounds per square inch and temperatures not exceeding 450° F. Seats or disks of cast iron are prohibited.

(d) Relief valves for steam or air service shall be provided with a substantial lifting device so that the disk can be lifted from its seat when the pressure in the vessel is 75 percent of that at which the valve is set to blow.

(e) If the design of a relief valve is such that liquid can collect on the discharge side of the disk, the valve shall be equipped with a drain at the lowest point where liquid can collect.

(f) The spring in a relief valve in service for pressures up to and including 250 pounds per square inch shall not be re-set for any pressure more than 10 percent above or 10 percent below that for which the relief valve is marked. For higher pressures, the spring shall not be re-set for any pressure more than 5 percent above or 5 percent below that for which the relief valve is marked.

(g) The capacities of relief valves shall be rated at pressures of 3 percent for steam, 10 percent for gases or vapors, and at 10 or 25 percent for liquids above

the pressure at which the valve is set to operate.

§ 54.07–10 Safety valves.

(a) An approved safety valve set to relieve at a pressure not exceeding that for which the shell is designed shall be fitted to all unfired steam boilers and evaporators, except the following:

(1) Unfired steam boilers and evaporators of the coil or tube type designed to operate with a steam inlet pressure not exceeding 15 p.s.i. gage.

(2) Evaporators of the atmospheric type designed for vapor discharge direct to a distiller with no shutoff valve in the discharge line. The distiller connected to atmospheric evaporators shall be fitted with a vent to obviate a buildup in pressure. In no case shall the vent be less than 1½ inches in diameter.

(b) Safety valves for use on unfired pressure vessels in which steam or pressure is generated shall comply with the requirements specified in Part 52 of this subchapter for power boilers when subject to pressures exceeding 30 p.s.i., and Part 53 of this subchapter for low pressure heating boilers when subject to pressures of 30 p.s.i. or less.

(c) The relieving capacity of evaporator safety valves required by paragraph (a) of this section shall be at least equal to the capacity of the orifice fitted in the steam supply to the evaporator. The orifice capacity shall be determined in accordance with Formula (1) or (2) as follows:

(1) Where the set pressure of the evaporator shell safety valve is 58 percent or less than the setting of the safety valve in the steam supply:

$$W = 51.45\ AP \qquad (1)$$

(2) Where the set pressure of the evaporator shell safety valve exceeds 58 percent of the setting of the safety valve on the steam supply:

$$W = 105.3\ A\sqrt{P_1\ (P - P_1)} \qquad (2)$$

where:

W = the required orifice capacity, in pounds per hour.
A = cross-sectional area of rounded entrance orifice, in square inches.[1]
P = set pressure of steam supply safety valve, in pounds per square inch, absolute.
P_1 = set pressure of evaporator shell safety valve, in pounds per square inch, absolute.

[1] The orifice shall be installed near the steam inlet of the coils or tubes and where no orifice is employed the area used in the formula shall be that of the inlet connection or manifold.

(d) The relieving capacity of safety valves on unfired steam boilers shall not be less than the maximum generating capacity of the unfired steam boiler as certified by the manufacturer.

(e) On new installations and where the orifice size of an existing unfired steam boiler or evaporator is increased, an accumulation test shall be made by closing all steam outlet connections except the safety valves for a period of five minutes. When conducting the accumulation test, the water shall be at the normal operating level and the steam pressure shall be at the normal operating pressure, and while under this test the pressure shall not rise more than six percent above the safety valve setting.

§ 54.07–15 Heat exchanger relief valves.

(a) A heat exchanger with liquid in the shell and the heating medium in the tubes or coils, shall be fitted with a liquid relief valve meeting the requirement of § 54.07–1.

(b) (1) A heat exchanger with steam in the shell and liquid in the tubes or coils at a pressure exceeding that in the shell, shall have a liquid relief valve fitted to protect the shell against excess pressure.

(2) The discharge capacity of such relief valves shall be calculated on the basis of the discharge from one tube using the difference in pressures between that in the shell and that in the tubes, and shall be not less than that determined by the following formula:

$$Q = 29.81\ KD^2\sqrt{P_1 - P_2} \qquad (1)$$

where:

Q = required relief valve discharge capacity, in gallons per minute, based on relief valve set pressure.
P_1 = pressure in the tube or coils, in pounds per square inch.
P_2 = set pressure of the shell relief valve, in pounds per square inch.
D = internal diameter of the largest tube or coil, in inches.
K = coefficient of discharge = 0.62.

§ 54.07–20 Rupture disks.

(a) Every rupture disk shall have a specified bursting pressure at a specified temperature, shall be marked with a lot number and shall be guaranteed by its manufacturer to burst at within 5 percent (plus or minus) of its specified bursting pressure.

(b) The specified bursting pressure at the coincident operating temperature shall be determined by bursting two or more specimens from a lot of the same material and of the same size as those to be used. The test shall be made in a holder of the same form and pressure area dimensions as that with which the disk is to be used.

(c) Where it is desired to minimize the loss by leakage through the safety or relief valve of liquids or vapors, the rupture disk may be installed between a safety or relief valve and the vessel, provided the following requirements are met:

(1) The bursting pressure of the disk does not exceed the maximum allowable pressure of the vessel.

(2) The connection between the rupture disk and the relief valve is provided with a pressure gauge, test cock, or free vent to atmosphere, to indicate when the rupture disk has leaked or burst.

(3) The opening provided through the rupture disk, after breakage, is sufficient to permit a flow equal to the capacity of the attached valve and there is no chance of interference with the proper functioning of the relief valve; but in no case shall this area be less than the inlet area of the relief valve.

§ 54.07–25 Safety relief valves.

(a) Unfired pressure vessels containing liquefied compressed gases and where required by the regulations of this subchapter, shall be fitted with one or more approved safety relief valves designed, constructed and flow-tested for capacity in conformance with Subpart 162.018 of Subchapter Q (Specifications) of this chapter.

(b) Each safety relief valve shall be set to start to discharge at a pressure not in excess of the maximum allowable pressure of the vessel and the combined relieving capacities of the safety relief valves shall be sufficient to prevent a rise of pressure in the vessel of more than 20 percent above the maximum allowable pressure when all the safety relief valves are blowing.

(c) The minimum rates of discharge of the safety relief valves for liquefied compressed gas service shall be not less than that required by the applicable regulations governing the transportation in bulk of the particular commodity.

NOTE: The requirements covering the transportation of liquefied petroleum gases in bulk may be found in Part 38 of Subchapter D (Tank Vessels) of this chapter. The requirements covering the transportation in bulk of certain liquefied compressed gases of a hazardous nature, but not considered flammable, may be found in Part 146 of Subchapter N (Dangerous Cargoes) of this chapter.

(d) (1) Except as otherwise specified in this paragraph, each safety relief valve shall be tested in the presence of an inspector before being placed in service. The tests shall satisfactorily indicate that the safety relief valves will start to discharge at a pressure not in excess of the design pressure of the tank.

(2) Safety relief valves fitted with a breaking pin and rupture disk need not be tested in the presence of a marine inspector before being placed in service. In lieu thereof, a certificate shall be furnished with the valve attested to by the manufacturer that the requirements of subparagraph (1) of this paragraph are met.

PART 55—PIPING SYSTEMS AND APPURTENANCES

Subpart 55.01—General

Sec.
55.01–1 Scope.
55.01–5 Definitions.
55.01–10 Plan approval.
55.01–15 Affidavit.

Subpart 55.04—Piping Classification

55.04–1 Scope.
55.04–5 Class I piping.
55.04–10 Class II piping.

Subpart 55.07—Detail Requirements

55.07–1 Material.
55.07–5 Design pressures and thickness of pipes.
55.07–6 Expansion and flexibility.
55.07–8 Variations in pressures and temperatures.
55.07–10 Valves and fittings.
55.07–15 Joints and flange connections.
55.07–20 Bolting.
55.07–25 Installation.

Subpart 55.10—Pumping Arrangements and Piping Systems

55.10–1 Steam and exhaust piping.
55.10–5 Safety and relief valve escape piping.

Sec.
55.10-10 Boiler-feed piping.
55.10-13 Condensate pumps.
55.10-15 Blowoff piping.
55.10-20 Circulating pumps.
55.10-25 Bilge and ballast piping.
55.10-30 Bilge pumps.
55.10-35 Fuel oil and cargo oil systems.
55.10-40 Fuel oil service systems.
55.10-45 Gasoline fuel systems.
55.10-50 Diesel fuel systems.
55.10-55 Lubricating oil system.
55.10-60 Vent piping.
55.10-65 Sounding pipes.
55.10-70 Overboard discharges and shell connections.

Subpart 55.13—Refrigeration Systems

Sec.
55.13-1 Scope.
55.13-5 Design pressure.
55.13-10 Pressure vessels and piping.
55.13-15 Tests.

Subpart 55.16—Liquefied Petroleum Gases for Cooking and Heating

55.16-1 Scope.
55.16-5 Definition.
55.16-10 Approvals.
55.16-15 Valves and safety relief devices.
55.16-16 Reducing regulators.
55.16-17 Piping and fittings.
55.16-18 Installation.
55.16-19 Tests.
55.16-20 Ventilation of compartments containing gas-consuming appliances.
55.16-25 Odorization.
55.16-30 Operating instructions.
55.16-35 Markings.

Subpart 55.17—Hydraulic Systems

55.17-1 Scope.
55.17-10 Design requirements.
55.17-15 Hydraulic fluid.
55.17-20 Tubing and pipes.
55.17-25 Hydraulic hose and fittings.
55.17-30 Accumulators.
55.17-35 Hydraulic cylinders.
55.17-40 Tests.

AUTHORITY: The provisions of this Part 55 issued under R.S. 4405, as amended, 4462, as amended; 46 U.S.C. 375, 416. Interpret or apply R.S. 4399, as amended, 4400, as amended, 4417, as amended, 4417a, as amended, 4418, as amended, 4421, as amended, 4426–4431, as amended, 4433, as amended, 4434, as amended, 4453, as amended, 4488, as amended, 4491, as amended, sec. 14, 29 Stat. 690, as amended, sec. 10, 35 Stat. 428, as amended, 41 Stat. 305, as amended, secs. 1, 2, 49 Stat. 1544, 1545, as amended, sec. 17, 54 Stat. 166, as amended, sec. 3, 54 Stat. 347, as amended, sec. 3, 70 Stat. 152, sec. 3, 68 Stat. 675; 46 U.S.C. 361, 362, 391, 391a, 392, 399, 404–409, 411, 412, 435, 481, 489, 366, 395, 363, 367, 526p, 1333, 390b, 50 U.S.C. 198; E.O. 11239, July 31, 1965, 30 F.R. 9671, 3 CFR, 1965 Supp. Treasury Department Orders 120, July 31, 1950, 15 F.R. 6521; 167-14, Nov. 26, 1954, 19 F.R. 8026; 167-20, June 18, 1956, 21 F.R. 4894; CGFR 56-28, July 24, 1956, 21 F.R. 5659; 167-38, Oct. 26, 1959, 24 F.R. 8857, unless as otherwise noted.

Subpart 55.01—General

§ 55.01-1 Scope.

(a) This part contains requirements for the various ships' piping systems and appurtenances.

(b) The respective piping systems installed on vessels shall have the necessary pumps, valves, regulating valves, safety valves, relief valves, flanges, fittings, pressure gauges, liquid level indicators, thermometers, etc., for safe and efficient operation of the vessel.

(c) Piping systems which do not fully comply with the requirements of this subchapter may be accepted for installation on vessels subject to inspection provided:

(1) They are limited to handling petroleum and associated products for use in offshore drilling operations.

(2) The design, material and fabrication comply with the requirements of the American Petroleum Institute (API) for such piping.

§ 55.01-5 Definitions.

(a) *Piping.* The word "piping" within the meaning of the regulations in this subchapter, refers to fabricated pipes or tubes with flanges and fittings attached, for use in the conveyance of vapors, gases, or liquids, regardless of whether the diameter is measured on the inside or the outside.

(b) *Nominal diameter.* The term "nominal diameter" as used in this part, except in § 55.07-5 (a), means the commercial diameter of the piping.

§ 55.01-10 Plan approval.

(a) Plans in triplicate for new construction and major alterations showing the respective piping systems shall be submitted to the Officer in Charge, Marine Inspection, in the district in which the vessel is to be built, or alterations are to be made, except that when, due to location of the shipyard or design office, such a procedure would result in unnecessary delay in transmission, the plans may be forwarded directly to the Commandant (MMT), United States Coast Guard, Washington, D.C., 20226.

(b) Piping materials and appliances such as pipe, tubing, fittings, flanges, and valves, except safety valves as specified by Subpart 52.65 of this subchapter, are not required to be specifically approved by the Commandant, but shall comply with the applicable requirements for materials, construction, markings, and testing. Drawings listing material specifications and showing details of welded joints for pressure-containing appurtenances of welded construction shall be submitted in accordance with paragraph (a) of this section.

(c) (1) Prior to installation aboard ship, arrangement drawings and diagrams of the following systems shall be submitted for approval.

(i) Steam piping (arrangement drawings of systems exceeding 125 p. s. i. only are required to be submitted for approval).

(ii) Boiler feed and blowoff piping.

(iii) Fuel oil service, transfer and fill piping.

(iv) Fire-extinguishing systems including fire main and sprinkler piping, steam smothering and inert gas and foam.

(v) Bilge and ballast piping.

(vi) Salt water tank cleaning piping.

(vii) Vent, sounding and overflow piping.

(viii) Cargo piping.

(2) Diagrams only of the following systems shall be submitted for approval:

(i) Steam and exhaust piping (systems not exceeding 125 p. s. i.).

(ii) Compressed air piping.

(iii) Steam drain piping.

(iv) Refrigeration piping.

(v) Lubricating oil piping.

(vi) Condenser circulating water piping.

(vii) Hydraulic oil piping.

(viii) Internal combustion engine fuel piping.

(ix) Safety valve escape piping.

(x) Plumbing, deck drains and overboard discharge piping.

(d) Standard drawings of the following piping fabrication details shall be submitted for approval:

(1) Sea suction and discharge connections.

(2) Fabricated valves and fittings (class I and class II piping).

(3) Welded pipe joints (class I and class II piping).

(e) The plans shall include a list of material furnishing pipe diameters, wall thicknesses, design pressure, material specifications, type, size and pressure rating of valves, flanges, and fittings. Where piping systems are intended to convey superheated steam, the temperature of same shall be indicated. Pump capacities and pump shutoff heads shall appear on the piping diagrams.

§ 55.01-15 Affidavit.

A manufacturer of pipe, tubing, valves, flanges, pipe fittings, castings, forgings, and bolting shall file with the Commandant a duly executed copy of form CG-935A, certifying that the product furnished by him conforms to all the requirements given in this subchapter.

Subpart 55.04—Piping Classification

§ 55.04-1 Scope.

Piping shall be divided into two classes, Class I and Class II.

§ 55.04-5 Class I piping.

(a) Class I piping includes the various systems conveying mediums exceeding either pressures or temperatures as set forth in Table 55.04-5.

TABLE 55.04-5—PRESSURE AND TEMPERATURE LIMITATIONS

Service	Pressure, pounds per square inch	Temperature ° F.
Lethal gases and liquids	Any	Any
Gases and vapors	150	650
Water	225	350
Fuel oil	150	150
Lubricating oil	225	400
Liquefied compressed gases	150	----------
Cargo oil, Grades A through D	225	150
Cargo oil, Grade E	225	400
Cargo oil, asphalt	225	400
Heat transfer oils	225	400
Molten sulfur	225	330

§ 55.04-10 Class II piping.

Class II piping shall include piping system conveying mediums at or below the pressures or temperatures specified in Table 55.04-5, except that exhaust piping from internal combustion engines may comply with the requirements for Class II piping.

Subpart 55.07—Detail Requirements

§ 55.07–1 Material.

(a) Materials used in the manufacture of pipe, valves, flanges, fittings or bolting shall conform with the requirements of this part, and shall comply with the respective specifications of Part 51 of this subchapter unless alternate equivalent material is approved by the Commandant.

(b) Pipe and flange materials are acceptable for the pressures and temperatures listed in Table 55.07–1(b).

TABLE 55.07–1(b)—PIPING MATERIALS [1]

Material specification subpart	A.S.T.M. specification	Grade	Maximum design		Limitation
			Pressure p.s.i.	Metal temperature ° F.

[1] The carbon content of the material listed in Table 55.07–1(b) shall not exceed 0.35 percent if welded fabrication is to be employed.
[2] Copper pipe shall not be used for hot oil service other than short flexible connections at the burners.
[3] Copper pipe shall be annealed prior to installation for Class I piping systems.
[4] Copper pipe fabricated with brazed longitudinal joints shall be limited to water or saturated steam service for the maximum pressure and temperature as indicated.
[5] These limitations apply only when plates are used as flange material. See Table 52.05–10(a) for maximum design temperatures of plate material used in the construction of pressure vessels.
[6] Not permitted for hubbed flanges. Ring type flanges may be machined from plate.

(c) Forged steel or cast steel, conforming to the requirements of Subparts 51.46 and 51.58 of this subchapter, may be used for the construction of valves and fittings for any system without pressure limitation, subject to the maximum design temperatures as specified in table 52.05–10 (a) in Part 52 of this subchapter. Grades F181–I and II, Subpart 51.46, may be used in the construction of valves and fittings for pressures and temperatures not exceeding those allowed for 300-pound service pressure rating for steel pipe flanges and flanged fittings.

(d) Bronze castings conforming to the requirements of Subpart 51.76, of this subchapter, for Grade 4A (ounce metal) may be used in the construction of valves and fittings for pressures not exceeding 150 pounds per square inch and temperatures not exceeding 366° F. Grade 2A (steam bronze) and Grades 1A and 1B (tin bronze) may be used for steam pressures not exceeding 300 pounds per square inch and temperatures not exceeding 450° F., and for hydraulic or compressed air service at higher pressures where the temperature does not exceed 150° F.

(e)(1) Malleable iron castings conforming to the requirements of Subpart 51.61 of this subchapter for Grade A1 or A2 material, may be used in the construction of valves and fittings for pressures not exceeding 300 pounds per square inch and temperatures not exceeding 450 degrees F. Grade B malleable iron may be used for pressures not exceeding 150 pounds per square inch and temperatures not exceeding 450 degrees F. Cast iron conforming to the requirements of Subpart 51.61 may be used in the construction of valves and fittings for maximum saturated steam service pressure of 125 pounds per square inch. Cast iron conforming to the requirements of Subpart 51.61 may also be used in the construction of valves and fittings for maximum liquid and gas service pressures of 100 pounds per square inch at 340 degrees F. and 150 pounds per square inch at 150 degrees F. or less. Intermediate values may be obtained by interpolation. For exceptions to these limits see subparagraphs (2), (3), and (4) of this paragraph.

(2) Malleable iron and cast-iron valves and fittings designed and marked for Class 300 refrigeration service may be used for such service, provided the pressure limitation of 300 pounds per square inch is not exceeded. Malleable iron flanges of this class may also be used in sizes 4 inches and smaller (oval and square design).

(3) Cast iron conforming to the requirements of Subpart 51.61 of this subchapter may be used in the construction of valves and fittings of special design for hydraulic systems. Prior to use of such valves and fittings for pressures exceeding 150 pounds per square inch, each design shall be subjected to a high shock test by a recognized testing laboratory as prescribed by the Commandant and shall show no fracture when subjected to the impact test.

(4) Nodular cast iron conforming to the requirements of Subpart 51.61 of this subchapter, Grade 60–45–15, may be used in the construction of valves and fittings complying with 125-pound and 250-pound cast iron standards, or 150-pound and 300-pound steel standards, and for temperatures not exceeding 650 degrees F. Adjusted pressure ratings for temperatures not exceeding 650 degrees F. shall be 80 percent of the steel ratings specified in ASA Standards listed in Table 55.07–15(e)(1), except as otherwise specified in this subchapter.

(f) Ferrous pipe used for salt-water service should be protected against corrosion by hot-dipped galvanizing or other suitable means.

(g) Carbon-steel bolting material conforming to the requirements of Subpart 51.49 of this subchapter may be used for temperatures not exceeding 450° F. For temperatures exceeding 450° F., alloy-steel bolting material as specified in Subpart 51.49 shall be employed.

(h)(1) Except as otherwise provided for in this paragraph, plastic pipe may be used for fresh and salt water supply to nonvital machinery and to all machinery fitted with a duplicate standby unit, and for other piping systems as may be authorized by the Commandant. Plastic pipe may be used in lines which lead through watertight decks or bulkheads provided a spool piece and shutoff valve constructed of an acceptable metallic material is fitted at the bulkhead. Such valves shall be operable from above the bulkhead deck. Plastic pipe shall not be used in any overboard discharge line outboard of the required overboard discharge valves.

(2) Plastic piping shall be limited to a maximum pressure of 150 p.s.i. and a maximum temperature of 140° F., or as may be authorized by the Commandant.

(3) Material used in the fabrication of plastic pipe shall be unplasticized rigid polyvinylchloride (PVC) or reinforced resins, or such other plastic material as may be authorized by the Commandant. The flammability of the plastic pipe shall not exceed the burning rate of the self-extinguishing type as determined by the standard ASTM test method (D-635).

(4) The wall thickness of plastic pipe shall not be less than Schedule 40 I. P. S. The pipe shall be designed to withstand a hydrostatic bursting pressure of not less than 5 times the maximum allowable pressure and shall have a minimum tensile strength of at least 5,000 p. s. i.

(5) Pipe joints shall be of the slip-sleeve, socket or screwed type. Screwed joints shall be used on pipe having at least Schedule 80 wall thickness.

(i) (1) Except as otherwise provided for in this paragraph, flexible hose and hose assemblies may be used for fresh and salt water supply to quarters, sanitary drains, cooling water supply to non-vital machinery and to all machinery fitted with a duplicate standby unit or duplicate piping system, and for other piping systems as may be authorized by the Commandant. Flexible hose may be used in lines which lead through watertight decks or bulkheads provided a spool piece and shutoff valve constructed of an acceptable metallic material are fitted at the bulkhead. Such valves shall be operable from above the bulkhead deck. Flexible hose shall not be installed outboard of the required overboard discharge valves.

(2) Nonmetallic flexible hose shall be fabricated with an inner tube and cover of synthetic rubber or other suitable material reinforced with wire braid. The material for the cover shall be fire-resistant. The inner tube shall be of seamless construction, uniform gage and shall be compatible with the substance carried therein.

(3) Piping systems using flexible hose shall be limited to a maximum pressure of 150 pounds per square inch except that short lengths of flexible hose may be installed in fuel and lubricating lines at or near machinery units and in pneumatic and hydraulic systems where flexibility is required. Unreinforced flexible hose may be used in water and pneumatic piping systems for pressures not exceeding 50 pounds per square inch. For flexible hose installed in hydraulic systems, see § 55.17-25.

(4) Flexible hose assemblies shall be designed for a bursting pressure of not less than 4 times the maximum allowable pressure.

(j) If it is desired to use materials other than those specified in this section, a request furnishing chemical and physical properties of the material which it is desired to employ shall be submitted to the Commandant for special consideration.

§ 55.07-5 Design pressures and thickness of pipes.

(a) (1) The maximum allowable pressure and minimum thickness of pipes shall be calculated by the following formulas:

$$P = \frac{2S\ (T-A)}{D-M\ (T-A)} \quad (1)$$

$$T = \frac{PD}{2S+MP} + A \quad (2)$$

where:

P = maximum allowable pressure, p. s. i.[1]

T = minimum wall thickness of pipe, inches.[2]

D = external diameter of pipe, inches.

S = Allowable fiber stress, p.s.i. When ferrous material is employed, the allowable fiber stress shall be 80 percent of the stresses as given in Table 52.05-10(a). When nonferrous material is employed, the allowable fiber stress shall be as given in Table 54.03-10(c).

M = Multiplier as given in Table 55.07-5(a).

A = Allowance for threading, grooving, and/or corrosion.

A = 0.05 inch for threaded pipe ¾ inch and below.

A = depth of thread h for threaded pipe 1 inch and above.

A = depth of groove for grooved pipe.

A = 0.05 inch for plain-end steel, wrought iron pipe or tubes, 1 inch size and smaller.

A = 0.065 inch for plain-end steel, wrought iron pipe or tubes, for sizes above 1 inch.

A = 0.00 inch for plain-end nonferrous pipe or tubes.

NOTE: The depth of thread h may be determined by the formula $h = 0.8/n$; where n = the number of threads per inch, or from the following values: $h = 0.100$ inch, 0.0696 inch, and 0.0571 inch, for 8, 11½, and 14 threads per inch, respectively. "Plain-end" includes pipe joined by flared compression couplings, lap joints, welding, etc., i. e., by any method that does not reduce the wall thickness of the pipe at the joint.

[1] When computing the allowable pressure for a pipe, the pipe wall thickness used in formula (1) shall not be more than the minimum thickness resulting from the application of mill tolerances prescribed in the applicable pipe specifications for the material to be employed, including tubing material when used for piping. For bent sections of pipe, the reduction in wall thickness due to fabrication, in addition to the mill tolerance, shall be subtracted from the nominal pipe wall thickness to obtain the minimum pipe wall thickness.

[2] The wall thickness to which the pipe or tubing is ordered shall not be less than the sum of the minimum wall thickness determined by formula (2), plus the mill tolerance, and the reduction in wall thickness due to bending.

TABLE 55.07-5 (a)—MULTIPLIER "M" VALUES[1]

Temperature ° F.	900 and below	950	1,000	1,050
Ferrous materials:				
Ferritic steels	0.8	1.0	1.4	1.4
Austenitic steels	0.8	0.8	0.8	0.8
Nonferrous materials	0.8	-----	-----	-----

[1] Intermediate values of "M" may be obtained by interpolation.

(2) The value of P in the formula shall not be taken at less than 150 p. s. i. for class I piping nor less than 50 p. s. i. for nonferrous class II piping; however, copper piping shall be of not less than 0.065 inch in thickness except for lines below 1 inch in diameter, nor shall ferrous material to be fabricated by welding be of a thickness less than 0.120 inch.

(b) (1) The design pressures of the steam piping connected to the boiler drum or to the superheater inlet header shall be not less than the highest pressure at which any drum safety valve is set to blow.

(2) The design pressure of the superheater outlet flange and the superheated steam piping beyond the superheater outlet shall be not less than the pressure at which the superheater safety valve is set to blow. Where the superheater safety valve is of the drum pilot actuated type, the design pressure shall be at least equal to 95 percent of the drum pilot safety valve setting. The S value for the material shall not exceed that permitted for the total steam temperature at the superheater outlet.

(c) Carbon steel or wrought iron pipe shall have a wall thickness of not less than standard weight pipe. Where the installation of light wall pipe is deemed satisfactory, the use of pipe having a wall thickness less than standard weight will be given special consideration by the Commandant.

(d) The outer walls of pipe bends after fabrication shall have a thickness of not less than that required by paragraph (a) of this section. If doubt exists as to the wall thickness being adequate, Class I piping having diameters exceeding 4 inches shall be drilled, gaged, and fitted with a screwed plug extending outside the pipe covering. Alternatively, a method of nondestructive examination such as the use of radiation measurement, ultrasonic or other acceptable method may be used. The nondestructive examination shall be employed where the design temperature exceeds 750° F. Prior to the use of nondestructive methods of examination by the above procedure, it shall be demonstrated by the user, in the presence of a marine inspector on specimens similar to those to be examined, that consistent results, having an accuracy of plus or minus 4 percent of the measurements secured by micrometers, are obtainable.

(e) The radius of a pipe bend measured from the centerline of the pipe shall be not less than three times the nominal pipe diameter, except for copper which shall have a radius of not less than twice the nominal pipe diameter.

(f) (1) Where pipe is pierced with tube holes the ligament efficiency of the tube holes shall be employed in the formulas in § 52.05-10 of this subchapter to determine the maximum allowable pressure of the piping. The pressure thus calculated shall in no case be greater than that allowed for the unpierced pipe.

(2) Where branch connections are welded to Class I piping, or to piping conveying steam at pressures exceeding 50 p. s. i., reinforcement of the pierced pipe shall be provided unless the connection is adequate for the design pressure. The amount of reinforcement required

shall be determined by § 52.25–20 of this subchapter.

(3) The longitudinal joint of a welded pipe shall not be pierced with holes.

(g) Sections of ferritic alloy steel piping shall be furnished in the full-annealed or normalized and drawn condition prior to installation. If the material is subject to hot bending or hot forming operations, the piping shall be re-normalized before welding. Following the normalizing treatment, piping over 2½ inches shall be re-drawn either before welding or after welding when a combined stress relief and drawn treatment may be performed simultaneously in the furnace. Material which is bent cold need not be re-normalized. The heat treatment of austenitic alloy steel piping subject to hot bending or other hot forming operations will receive special consideration by the Commandant. All scale shall be removed from normalized pipe prior to installation.

§ 55.07–6 Expansion and flexibility.

(a) Piping systems shall be designed to have sufficient flexibility to prevent thermal expansion or contraction from causing excessive stresses in the piping material, excessive bending moments at the joints, or excessive forces or moments at points of connection to equipment or at anchorage and guide points.

(b) Provision shall be made for expansion and contraction by changes in direction of pipe runs or by the use of expansion bends, loops, offsets, or movable joints that will provide adequate flexibility.

(c) Piping shall be installed to avoid excessive strains and shall be adequately supported by hangers or guides, so that the weight of the piping is not transmitted to valves and fittings, and the effects of vibrations, pitching and rolling of the vessel are minimized. Pipe supports shall be designed and arranged so as not to interfere with expansion and contraction of the piping and to insure that excessive forces and moments are not imposed on connected equipment. Anchors, pivots, and restraints shall be fabricated and installed to secure the desired points of piping in relatively fixed positions and freely permit expansion and contraction in opposite directions. Main junction points of piping subject to temperatures exceeding 450° F., which are not balance points, shall be fitted with fixed anchors. If considered as a balance point the junction point may be free to move in all directions, or may be guided to limit the movement in one or more directions if computations indicate excessive strain may occur in any of the branch pipes.

(d) A summary of the results of pipe stress calculations for the main and auxiliary steam piping where the design temperature exceeds 800° F., together with the arrangement piping drawings, shall be submitted for approval. Calculations shall be made in accordance with one of the recognized methods of stress analysis acceptable to the Commandant.

(e) Stress calculations shall be made to determine the magnitude and direction of the forces and moments at all terminal connections, anchor and junction points, as well as the resultant bending stress, longitudinal pressure stress, torsional stress, and combined expansion stress at all such points. The location of the maximum combined stress shall be indicated in each run of pipe between anchor points. Dimensional properties of pipe and fittings shall be based on nominal dimensions.

(f) (1) The combined expansion stresses shall be calculated by the following formula:

$$S_e = \sqrt{S_b^2 + 4S_t^2} \qquad (1)$$

where:

S_e = combined expansion stress, in pounds per square inch.

$S_b = \frac{iM_b}{Z}$ = resultant bending stress, in pounds per square inch.

$S_t = \frac{M_t}{2Z}$ = torsional stress, in pounds per square inch.

M_b = resultant bending moment, in inch-pounds.

M_t = torsional moment, in inch-pounds.

Z = section modulus of the pipe, cubic inches.

i = stress intensification factor (see § 55.07–6 (g)).

(2) The calculations for the combined expansion stress, S_e, shall be based on 100 percent of the thermal expansion, using the modulus of elasticity at room temperature (cold condition). No credit will be allowed for cold pull in computing the combined expansion stress.

(3) The combined expansion stress shall not exceed the allowable stress range as determined by the following formula:

$$S_A = 1.25S_c + 0.25S_h \qquad (2)$$

where:

S_A = allowable stress range, in p.s.i.

S_c = Allowable stress in cold condition, in p.s.i. (80 percent of S value given in Table 52.05–10(a) for piping material at 650° F.)

S_h = Allowable stress in hot condition, in p.s.i. (80 percent of S value give in Table 52.05–10(a) for piping materials at design temperatures.)

(4) The sum of the longitudinal stresses due to pressure, weight and other sustained external loadings shall not exceed S_h. Where the sum of these stresses is less than S_h, the difference between S_h and the sum may be added to the term 0.25 S_h in formula (2).

(g) Stress intensification factors for pipe bends and elbows, moduli of elasticity, and coefficients of thermal expansion shall conform to the values as specified in the American Standard Code for Pressure Piping (ASA B31.1).

(h) (1) The reactions in the hot condition, R_h, and cold condition, R_c, shall be calculated by the following formulas:

$$R_h = (1 - \tfrac{2}{3}C)\frac{E_h}{E_c}R \qquad (3)$$

$$R_c = CR \quad \text{or} \quad \left(1 - \frac{S_h}{S_e} \times \frac{E_c}{E_h}\right)R, \text{ whichever is greater.} \qquad (4)$$

The value $\frac{S_h}{S_e} \times \frac{E_c}{E_h}$ shall be less than unity.

where:

R_c and R_h = maximum reactions estimated to occur in the cold and hot conditions, respectively, pounds.

R = range of reactions obtained from the flexibility calculations corresponding to the full expansion range based on the modulus of elasticity at room temperature, pounds.

C = cold spring factor varying from zero for no cold spring to one for 100 percent cold spring.

S_e = maximum computed expansion stress.

E_c = modulus of elasticity in cold condition. (See § 55.07–6 (g).)

E_h = modulus of elasticity in hot condition. (See § 55.07–6 (g).)

(2) The reactions so computed shall not exceed the limits which the attached equipment can safely sustain.

(3) Cold spring may be taken into account in the calculations of the reactions in the hot and cold conditions: *Provided*, That, in the opinion of the Commandant, satisfactory provision is made to obtain the designed cold spring.

(i) Where it is desired to employ alloy steel pipe materials of better heat resistant properties than those specified in Part 51 of this subchapter, special consideration may be given by the Commandant for an increase in the maximum allowable stress range, if satisfactory evidence is furnished to establish the suitability of the material for the design temperature.

§ 55.07–8 Variations in pressures and temperatures.

(a) Superheater outlet flanges and superheated and desuperheated steam piping direct from the boiler shall be designed for not less than the maximum pressure and temperature to which they may be exposed in service under normal sustained operating conditions.

(b) Occasional increases in pressure and/or temperature are unavoidable and may be permitted without changing the normal design provided the corresponding stress in the pipe wall calculated by Formulas (1) and (2) of § 55.07–5 does not exceed 80 percent of the maximum allowable stress value given in Table 52.05–10(a) in § 52.05–10 of this subchapter for the actual expected temperature by more than the following allowance for the periods of duration indicated:

(1) Up to 15 percent increase above the S value during 10 percent of the operating period.

(2) Up to 20 percent increase above the S value during 1 percent of the operating period.

§ 55.07–10 Valves and fittings.

(a) All valves shall close with a right hand (clockwise) motion of the handwheels when facing the end of the valve stem. Valves shall be of the rising stem type preferably with the stem threads external to the valve body. Where operating conditions will not permit of such installations, the use of a non-rising stem valve will be permitted, provided indicators are fitted to show clearly whether same is opened or closed. Valves installed in cargo tanks of tank vessels are not required to be fitted with indicators.

(b) Valves of class I piping having diameters exceeding 2 inches shall have bolted, pressure seal, or breech lock bonnets and flanged or welding ends, except that socket type welding ends shall not be used where the diameter exceeds 2 inches. For diameters not exceeding 2 inches, screwed union bonnet valves or a type which will positively prevent the stem from screwing out of the body may be employed. Cast-iron valves with screwed-in or screwed-over bonnets are prohibited. Union bonnet type cast-iron valves shall have the bonnet ring made of steel, bronze or malleable iron.

(c) Valves, flanges, fittings and appurtenances shall be designed for the maximum pressure to which they may be subjected, but in no case shall the design pressure be less than 50 pounds per square inch. When butterfly or wafer type resilient seated valves are used for shell connections, the valve bodies shall be designed for 150 pounds per square inch. Large fabricated ballast manifolds connecting lines exceeding eight inches nominal pipe size may be designed for a pressure of not less than 25 pounds per square inch.

(d) Disks or disk faces, seats, stems and other wearing parts of valves shall be made of material possessing corrosion and heat-resisting qualities suitable for the service conditions to which they may be subjected.

(e) Valves, flanges, and fittings shall be marked in conformance with the requirements of MSS Standard SP–25–1960.[1]

(f) Plug cocks shall be constructed with satisfactory and positive means of preventing the plug from becoming loosened or removed from the body when the plug is operated. Cocks having plug locking arrangements depending on cotter pins are prohibited.

(g) Cocks shall be marked in a straight line with the body to indicate whether same are open or closed.

§ 55.07–15 Joints and flange connections.

(a) Flanged or butt-welded joints are required for Class I piping for diameters exceeding 2 inches, except as otherwise specified in this subchapter.

(b) Slip-on flanges in sizes not exceeding 2'' may be used without pressure limitations and for temperatures not exceeding 650 degrees F. Slip-on flanges in sizes exceeding 2'' may be used for pressures not exceeding the service pressure temperature ratings for the 300-pound ASA Standard and for temperatures not exceeding 650 degrees F. Screwed joints for Class I piping are not permitted for pipe diameters exceeding 2''.

(c) Forged or cast steel valves, flanges, and pipe fittings of the socket welding type, wherein the pipe is inserted into the socket and is secured by means of a strength fillet weld may be employed for pipe diameters not exceeding 2 inches for Class I piping and without diameter limitation for Class II piping.

(d) Valves, flanges and fittings may be attached to nonferrous pipe by means of soldering where the pressures do not exceed 10 pounds per square inch at 240° F. and 100 pounds per square inch at 150° F. For temperatures between 150° F. and 240° F. the pressure shall be proportionate. Silver brazing alloy shall be employed for temperatures and pressures exceeding the foregoing.

(e) (1) Flanges shall conform in strength at least to the dimensional standards listed in Table 55.07–15 (e1), except as otherwise specified in this subchapter.

TABLE 55.07–15(e1)—STANDARDS FOR FLANGED, BUTT-WELDING, AND SOCKET-WELDING VALVES, FITTINGS, AND PIPE FLANGES

Type	Pressure rating	Standard	Notes
Cast iron	125	ASA B16.1–1960	(1)
Do	250	ASA B16.2–1960	(2)
Bronze	150	ASA B16.24–1962	(3)

[5] American Standard Steel Butt-Welding Fittings, published by the American Society of Mechanical Engineers, 345 East 47th St., New York, N.Y., 10017.

[6] American Standard Steel-Socket Welding Fittings, published by the American Society of Mechanical Engineers, 345 East 47th St., New York, N.Y., 10017.

(2) (i) The adjusted service pressure-temperature ratings for steel pipe flanges and flanged valves and fittings shall conform to the ASA standards as listed in Table 55.07–15(e1), except as otherwise specified in this subchapter.

(ii) The pressure-temperature ratings specified in American Standard Steel Pipe Flanges and Flanged Fittings, ASA B16.5, require gaskets and flange facings conforming to the requirements of such standards. For flange facing-gasket combinations other than those specified in ASA B16.5, calculations shall be submitted indicating that the gaskets will result in no increase in bolt load or flange moment over those facing-gasket combinations specified in this paragraph. (For acceptable gasket dimensions and flange facings, see Figure 54.03–25(c1) of this subchapter and ASA B16.5.)

(f) Flanges shall be attached to the pipe by any method shown by figures 55.07–15 (f1) to 55.07–15 (f15), inclusive, or by any additional means that may be approved by the Commandant.

(1) *Figure 55.07–15(f1).* Flanges with screwed threads may be used for class I piping not exceeding 2 inches nominal pipe size. For class II piping, flanges with screwed threads may be used without diameter limitation.

(2) *Figure 55.07–15(f2).* 150-pound and 300-pound low-hubbed flanges with screwed threads plus the addition of a strength fillet weld of the size as shown may be used for Class I piping without diameter limitation for temperatures not exceeding 750 degrees F. The pressure shall not exceed the American Standard service pressure temperature rating as prescribed in Table 55.07–15(e1).

(3) *Figure 55.07–15(f3).* Slip-on flanges in sizes exceeding 2'' may be used for pressures not exceeding the service pressure temperature ratings for the 300-pound ASA standards and for temperatures not exceeding 650 degrees F. Slip-on flanges in sizes not exceeding 2'' may be used without pressure limitations and for temperatures not exceeding 650 degrees F.

(4) *Figure 55.07–15(f4).* Socket welding flanges may be used for class I piping of nominal pipe size not exceeding 2 inches. For class II piping, socket welding flanges may be used without diameter limitation.

(5) *Figure 55.07–15(f5)* Flanges machined from steel plate meeting the requirements of Subpart 51.22 may be used for Class II piping for pressures not exceeding 150 pounds per square inch and temperatures not exceeding 450° F. The machined flanges shall conform at least to the American Standard 150 pound flange dimensions.

(6) *Figure 55.07–15 (f6).* Steel plate flanges meeting the material and construction requirements listed in Figure 55.07–15 (f5) may be used for Class II piping for pressures not exceeding 150 pounds per square inch or temperatures not exceeding 650 degrees F. The flange shall be attached to the pipe as shown by Figure 55.07–15 (f6). The pressure shall not exceed the American Standard service pressure temperature rating as prescribed in Table 55.07–15(e1).

(7) *Figure 55.07–15 (f7).* Lap joint flanges (Van Stone) may be used for class I and class II piping. The Van Stone equipment shall be operated by qualified personnel and the ends of the pipe shall be heated from 1,650° F. to 1,900° F. dependent upon the size of the pipe prior to the flanging operation. The foregoing temperatures shall be carefully adhered to in order to prevent excess scaling of the pipe. The extra thickness of metal built up in the end of the pipe during the forming operation shall be machined to restore the pipe to its original diameter. The machined surface shall be free from surface defects and the back of the Van Stone lap shall be machined to a fine tool finish to furnish a line contact with the mating surface on the flange for the full circumference as close as possible to the fillet of the flange. The number of heats to be used in forming a flange shall be determined by the size of the pipe and not more than two push-ups per heat are permitted. The width of the lap flange shall be at least three times the thickness of the pipe wall

[1] The "Standard Marking System for Valves, Fittings, Flanges and Unions," is published by Manufacturers Standardization Society of the Valves and Fittings Industry, 420 Lexington Avenue, New York, N.Y., 10017.

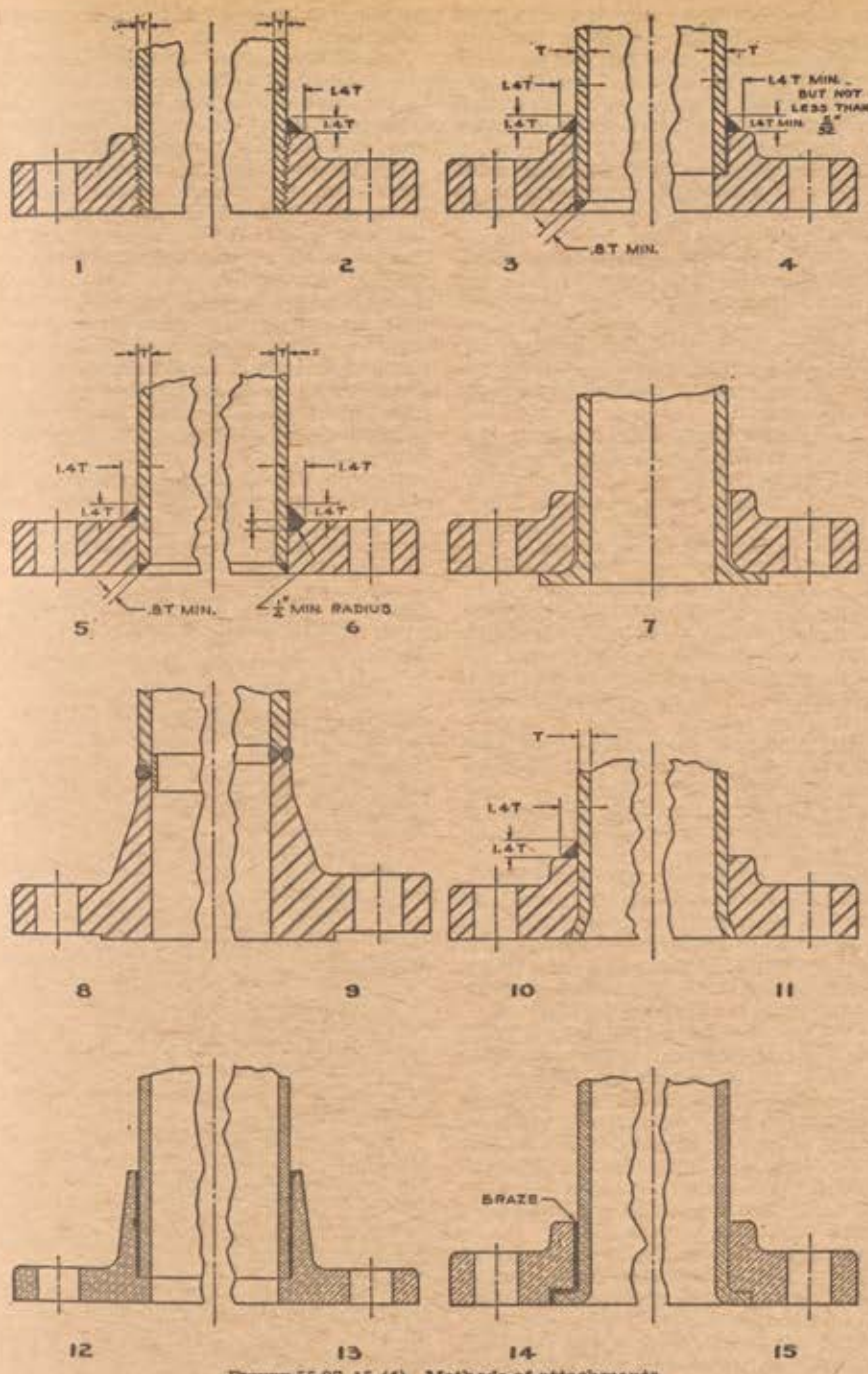

FIGURE 55.07-15 (f). Methods of attachments.

and the end of the pipe shall be properly stress-relieved after the flanging operation is completed. Manufacturers desiring to employ this type of joint shall demonstrate to an inspector that they have the proper equipment and personnel to produce acceptable lap joints.

(8) *Figure 55.07–15 (f8).* Welding neck flanges may be used on any piping provided the flanges are butt-welded to the pipe. The joint shall be welded as indicated by figure 55.07–15 (f8) and a backing ring employed which will permit complete penetration of the weld metal.

(9) *Figure 55.07–15 (f9).* Welding neck flanges may also be attached to pipe by a double-welded butt joint as shown by figure 55.07–15 (f9).

(10) *Figure 55.07–15 (f10).* Flanges may be attached by shrinking the flange on to the end of the pipe and flaring the end of the pipe to an angle or not less than 20°. A fillet weld of the size shown by figure 55.07–15 (f10) shall be used to attach the hub to the pipe. This type of flange is limited to a maximum pressure of 300 pounds per square inch at temperatures not exceeding 500° F.

(11) *Figure 55.07–15 (f11).* The flange of the type described and illustrated by figure 55.07–15 (f10), except with the fillet weld omitted, may be used for class II piping for pressures not exceeding 150 pounds per square inch and temperatures not exceeding 450° F.

(12) *Figure 55.07–15 (f12).* High-hub bronze flanges may be used for temperatures not exceeding 406° F. The hub of the flange shall be bored to a depth of not less than that required for a threaded connection of the same diameter leaving a shoulder for the pipe to butt against. A preinserted ring of silver brazing alloy having a melting point of not less than 1,000° F. and of sufficient quantity to fill the annular clearance between the flange and the pipe shall be inserted in the groove. The pipe shall then be inserted in the flange and sufficient heat applied externally to melt the brazing alloy until it completely fills the clearance between the hub and the flange of the pipe. A suitable flux shall be applied to the surfaces to be joined to produce a satisfactory joint. (For clearances of silver soldered joints, see § 56.10–30 (e) of this chapter.)

(13) *Figure 55.07–15 (f13).* The type of flange as described for figure 55.07–15 (f12) may be employed and in lieu of an annular groove being machined in the hub of the flange for the preinserted ring of silver brazing alloy, a bevel may be machined on the end of the hub and the silver brazing alloy introduced from the end of the hub to attach the pipe to the flange. (For clearances of silver soldered joints, see § 56.10–30 (e) of this chapter.)
